Product information, including uses/applications and source(s) of imports:

The subject product is a reactive liquid resin system in acetate solvent that is used in the production of solder mask formulations of various types. The resins have both acrylate and carboxylic acid functionality. Solder masks shield bare copper traces in printed circuit boards (PCBs) with a protective overlay of thin thermoset adhesive; this film protects the traces from the elements, and from shorting out during the soldering process. Solder masks are generally readily identifiable by the distinctive green film traces on PCBs. The resin is imported from Japan.

Technical comments:³

The Commission suggests that the article description on page 1 of this report be used because it deletes “(9CI)” and presents the CAS number in front of the HTS subheading number.

³ The Commission may express an opinion on the HTS classification of a product to facilitate consideration of the bill. However, by law, only the U.S. Customs Service is authorized to issue a binding ruling on this matter. The Commission believes that the U.S. Customs Service should be consulted prior to enactment of the bill.
