

Appendix D

Appropriated Fund Wage and Survey Areas

a. Wage area makeup.

A wage area is a defined geographic area within which are found concentrations of Federal wage employees in combination with concentrations of private enterprise employment, and which is treated as a single unit for purposes of fixing and applying Federal wage rates. A wage area consists of two parts:

- (1) *Survey area.* That geographic area in which the establishments included in the locality wage survey are located; and
- (2) *Area of application.* That geographic area, including the survey area, and additional areas, in which wage schedules derived from a wage survey are uniformly applied to covered wage employees of all agencies. It generally includes at least some counties contiguous to the survey area and, where surveyable areas are widely separated, may include many counties.

b. Order of wage area definitions.

The wage area definitions which follow are in alphabetical order by State and alphabetically within a State by title of wage area. The definitions apply to all regular wage surveys and to all wage employees covered by regular schedules of the Federal Wage System. With a few exceptions each area is defined in terms of county units, independent cities, or, in the New England States, of entire township or city units. Each wage area consists of:

- (1) *Wage area title.* Wage areas usually carry the title of the principal city in the area. Sometimes, however, the area title reflects a broader geographic area, for examples Wyoming or Eastern Tennessee.
- (2) *Survey area definition.* Each county, independent city, or township in the survey area is listed.
- (3) *Area of application definition.* Each county, independent city, or township which in addition to the survey area is in the area of application is listed.
