

## Overview of CFLR Multiparty Monitoring Process

**Hold Multiparty Meeting** - Identify common goals and monitoring concerns for the project. Construct communications framework outlining information transfer between project stakeholders.

**Develop Monitoring Plan** - Describe indicators to measure change built on reliable data collection methods. Specifically address where, when, and who will gather project data.

**Gather Data** - Collect pre-treatment measures, repeated measures, to determine post-treatment success. Ensure data is kept in a long-term safe place.

**Analyze Results** - Conduct reliable and simple calculations on data from local, regional, and national perspectives. Schedule multiparty team meetings to discuss and interpret results.

**Share Results** - Keep process transparent, adaptive, and flexible. Suggest tangible prescriptions when new information becomes available. Report results illustrating both success and failure.
