| 5. | Investments and Capital Markets Segment Results | 14 |
| 6. | Loss Mitigation Activity | 16 |
| 7. | Comparison of Actual Results to Projections of the Enterprises' Financial Performance | 17 |

The purpose of this report is to provide an overview of key aspects of the financial condition of Fannie Mae and Freddie Mac (the Enterprises) during conservatorship. The data in this report are derived primarily from the Enterprises' SEC filings and other publicly available sources. In some cases, FHFA adjusted the classification of certain data to provide comparability between the Enterprises. In other cases, the Enterprises' reporting methodologies changed over time. Therefore, the data in this report may not exactly match published figures.

Executive Summary

Mortgage Markets and the Enterprises' Market Presence

Seventy-two percent of all mortgage originations in the first half of 2012 were due to refinance volume. Refinances surged during the first half of 2012, in response to a sustained period of record low mortgage rates, enhancements to the Home Affordable Refinance Program (HARP), and lender reaction to the 10 basis point guarantee fee increase in April 2012. As a result, combined Enterprise mortgage-backed securities (MBS) issuance share grew to 77 percent in the first half of 2012.

Credit Quality of New Single-Family Business

The quality of new business remained high in the first half of 2012, as evidenced by average FICO credit scores around the 760 range. Both Enterprises have experienced an increase in new business with loan-to-value (LTV) ratios greater than 90 percent, due to refinance programs that support improving the housing market, including HARP.

Capital

For the first time since the start of the conservatorships in the third quarter of 2008, both Enterprises ended the second quarter of 2012 with positive net worth. Also for the first time in conservatorship, the Single-Family Credit Guarantee segment generated income in the second quarter of 2012, as a result of substantially lower provisions for credit losses, particularly at Fannie Mae. The Investments segment results continued to be positive in the second quarter of 2012 driven by low funding costs as a result of the low interest rate environment.

Single-Family Credit Guarantee Segment Results

In the first half of 2012, Fannie Mae generated credit-related income and Freddie Mac incurred substantially lower credit-related expenses, primarily due to substantially lower provisions for credit losses. Lower provisions for credit losses were driven by improvement in both national home prices and real estate owned (REO) disposition values, and the continued decrease in the seriously delinquent loan population.

Investments and Capital Markets Segment Results

The Investments and Capital Markets segment was a positive contributor to capital in the first half of 2012, as both Enterprises continued to benefit from low funding costs as a result of the low interest rate environment.

Loss Mitigation Activity

Since conservatorship, the Enterprises have completed approximately 2.4 million foreclosure prevention actions. Half of these actions were permanent loan modifications.

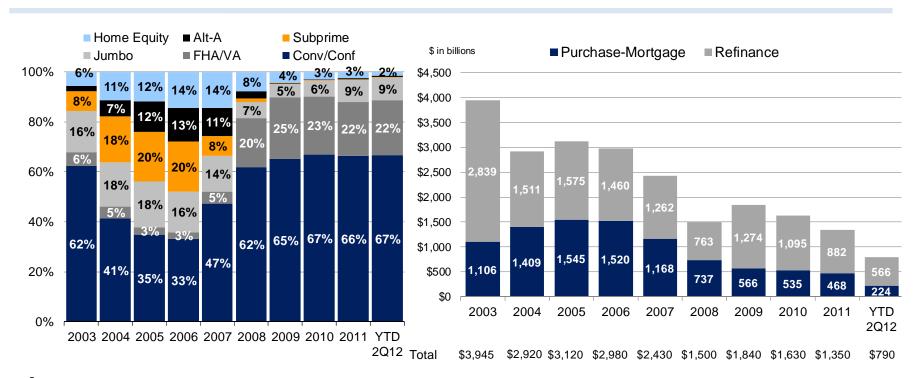

Projections of Financial Performance

The projected combined Treasury draws for the second half of 2011 and the first half of 2012 ranged from \$35 billion to \$91 billion. This compares to an actual combined draw of \$19 billion. The primary driver of the difference between actual and projected performance was lower than projected provisions for credit losses. Lower provisions for credit losses were mainly driven by improved portfolio quality reflected in lower delinquencies and lower LTV ratios, combined with higher REO disposition values.

1 Mortgage Markets and the Enterprises' Market Presence

- 1.1 Primary Mortgage Market Trends—Mortgage Originations
 - Seventy-two percent of all mortgage originations in the first half of 2012 were due to refinance volume. Refinance volumes surged during the first half of 2012 in response to a sustained period of record low mortgage rates, enhancements to the Home Affordable Refinance Program (HARP), and increased volume ahead of the 10 basis point guarantee fee increase in April 2012.

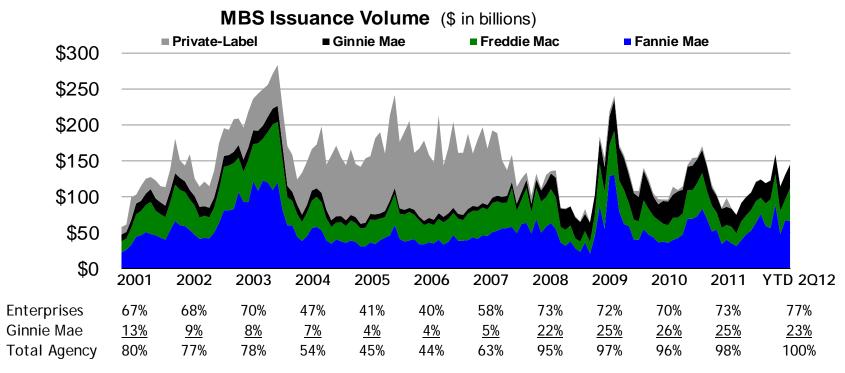

Figure 1.1 Mortgage Originations by Product Type (\$ in billions)

Source: Inside Mortgage Finance

- 1.2 Secondary Mortgage Market Trends—Mortgage-Backed Securities Issued
 - The Enterprises' market share of mortgage-backed securities (MBS) issuances for the first half of 2012 rose to 77 percent, driven by increased MBS issuance volumes in the first quarter of 2012, as lenders delivered mortgage products ahead of the April 1, 2012 guarantee fee increase. Ginnie Mae's market share fell to 23 percent. The Enterprises and Ginnie Mae continued to account for essentially all issuances of mortgage-backed securities.

Sources:

Inside Mortgage Finance, Inside MBS & ABS, Enterprises' Monthly Volume Summaries. Issuance figures exclude MBS issued backed by assets previously held in the Enterprises' portfolios.

2 Credit Quality of New Single-Family Business

- 2.1 Credit Characteristics of the Enterprises' New Single-Family Business
 - The credit quality of new Single-Family business remained high in the first half of 2012; however, new business with LTV ratios greater than 90 percent increased due to refinance programs targeting deeply underwater borrowers. The increase in the percentage of new business with LTV ratios greater than 90 percent primarily relates to the Enterprises' refinance programs, including HARP. Purchases of non-traditional and higher-risk mortgages continue to be very low and the average FICO credit score remained around the 760 range at both Enterprises.

Notes

¹ New business is defined as issuance of MBS/PC plus purchases of whole loans and does not include purchases of mortgage-related securities. ² Refer to sources for Alt-A definitions. Freddie Mac's 2010 figures include Alt-A purchases of \$1.5 billion due to a long-term standby commitment termination and a subsequent PC issuance. There was no change to the Alt-A exposure on these mortgages as a result of these transactions. Fannie Mae newly originated Alt-A loans acquired since 2009 consist of the refinancing of existing loans.

2.2 Performance of Non-Traditional and Higher-Risk Mortgages (mostly purchased pre-conservatorship)

Single-family serious delinquency rates remained high for the Enterprises' single-family credit guarantee portfolios;
however, serious delinquency rates continued to decline for all product categories in the second quarter of 2012, as
delinquent loans were resolved through loss mitigation activities or foreclosure, and new loans with stronger credit profiles
were acquired. Non-traditional and higher-risk mortgages, which account for a relatively small portion of the credit
guarantee portfolios, continue to show substantially higher serious delinquency rates than traditional mortgages.

Serious Delinquency - All loans in the process of foreclosure plus loans that are three or more payments delinquent (including loans in the process of bankruptcy).

2.3 Performance of Post-Conservatorship Business

 While not necessarily indicative of the ultimate performance, the improved credit characteristics of the new postconservatorship business is reflected in substantially lower cumulative default rates for the 2009 and newer vintages compared to the years leading up to conservatorship.

Figure 2.3 Cumulative Default Rate by Origination Year

4.3

5.6

NA

Notes

¹ Defaults include loan liquidations other than through voluntary pay-off or repurchase by lenders and include loan foreclosures, preforeclosure sales, sales to third parties and deeds-in-lieu of foreclosure. Cumulative Default Rate is the total number of single-family conventional loans in the guarantee book of business originated in the identified year that have defaulted, divided by the total number of single-family conventional loans in Fannie Mae's guarantee book of business originated in the identified year.

² Rates are calculated for each year of origination as the number of loans that have proceeded to foreclosure transfer or short sale and resulted in a credit loss, excluding any subsequent recoveries, divided by the number of loans in Freddie Mac's single-family credit guarantee portfolio originated in the identified year.

3. Capital

- 3.1 Capital Changes: January 1, 2008 June 30, 2012
 - At the end of 2007, the Enterprises had \$71 billion of combined capital. From the end of 2007 through the second quarter of 2012, the Enterprises' combined charges against capital have totaled \$262 billion, requiring Treasury support of approximately \$187 billion through draws under the Senior Preferred Stock Purchase Agreements. The Single-Family Credit Guarantee segment has been the largest contributor to charges against capital, accounting for \$213 billion, or 81 percent, of capital reduction to date. Senior preferred dividends on Treasury draws accounted for \$46 billion, or 17 percent, of capital reduction.

Figure 3.1 Capital Changes: January 1, 2008 – June 30, 2012 (\$ in billions)

Sources:

Fannie Mae segment earnings per Fannie Mae SEC disclosures for the relevant time periods. Freddie Mac's 2008 and 2009 comprehensive income (loss) by segment reflect revised methodology effective January 1, 2010.

Note

- Totals may not sum due to rounding.
- ¹ Capital is defined as stockholders' equity.
- ² Fannie Mae's figure includes common and preferred stock issuance pre-conservatorship.
- ³ Segment comprehensive income (loss) represents net income (loss) plus total other comprehensive income (loss) by segment.
- ⁴ Freddie Mac includes net interest income on investments in multifamily loans, net interest income on commercial mortgage-backed securities, and noninterest rate risk-related unrealized gains (losses) on commercial mortgage-backed securities in Multifamily Comprehensive Income (Loss), while Fannie Mae includes these items in Investments comprehensive income. Investments comprehensive income includes the impact of accounting changes for security impairments.
- ⁵ Included in total capital change for both Enterprises are losses attributable to the writedown of low income housing tax credits (LIHTC) investments to zero in the fourth quarter of 2009. The writedown of these LIHTC losses for Fannie Mae and Freddie Mac were \$5 billion and \$3 billion, respectively, and are included in Other. The establishment of a deferred tax asset valuation allowance, which reduced capital by \$21 billion for Frannie Mae and \$14 billion for Freddie Mac in 2008, is also contributing to the total capital change (valuation allowance has been allocated across segments).

3.2 Capital Changes: Second Quarter 2012

• During the second quarter of 2012, positive contributions to capital at both Enterprises, particularly from the Single-Family Credit Guarantee and Investments segments, more than offset senior preferred dividends paid to the Treasury. Both Enterprises ended the quarter with positive net worth, and as a result, neither Enterprise required a draw from the Treasury.

Figure 3.2 Capital Changes: March 31, 2012 – June 30, 2012 (\$ in billions)

| Capital Surplus (Deficit) | \$3 | \$1 | \$4 |
| Treasury Senior Preferred draw ³ | - | - | - |

Sources:

Fannie Mae and Freddie Mac SEC disclosures for the quarter ended June 30, 2012.

Notes

- Totals may not sum due to rounding.
 ¹ Capital is defined as stockholders' equity. Available capital is defined as beginning capital plus Treasury draw related to prior quarter's deficit.
- ² Represents net income (loss) plus total other comprehensive income (loss) by segment. Freddie Mac includes net interest income on investments in multifamily loans, net interest income on commercial mortgage-backed securities, and non-interest rate risk-related unrealized gains (losses) on commercial mortgage-backed securities in Multifamily comprehensive income (loss), while Fannie Mae includes these items in Investments comprehensive income (loss).
- ³ Reflects requested Treasury draws related to current quarter deficit, to be received during the next quarter. Enterprises' draw requests are rounded up to the nearest \$1 million.

4. Single-Family Credit Guarantee Segment Results

- 4.1 Single-Family Credit Guarantee Segment Results
 - Both Enterprises reported a significant decrease in the provision for credit losses in the first half of 2012. Fannie Mae
 generated income from the Single-Family Credit Guarantee segment for the first half of 2012. Provisions for credit losses
 decreased at both Enterprises driven by improvements in national home prices and REO disposition values, and the
 continued decrease in the seriously delinquent loan population.

Sources:

Fannie Mae segment earnings per Fannie Mae SEC disclosures for the relevant time periods. Effective in the first quarter 2010, Fannie Mae changed the presentation of segment financial information; prior periods were not revised. Freddie Mac segment comprehensive income (loss) for 2008 and 2009 reflect revised methodology effective January 1, 2010. Enterprise segment comprehensive income (loss) since 2010 is not comparable with prior periods due to the adoption of accounting standards for consolidations, effective January 1, 2010.

Notes

Totals may not sum due to rounding.

¹ Consists of guarantee fee income, trust management income, net interest income, and other income. Guarantee fee revenue of \$3.9 billion for Fannie Mae year-to-date was offset by net interest expense of \$0.6 billion primarily related to interest income not recognized for non-accrual loans.

² The provision for credit losses is the recognition of estimated incurred losses and increases the loan loss reserve. Fannie Mae's figures have been adjusted to exclude losses on credit-impaired loans acquired from MBS trusts.

³ Losses on credit-impaired loans acquired from MBS/PC Trusts.

⁴ Consists of investment gains (losses), fair value losses (Fannie Mae), administrative expenses, other expenses, and at Freddie Mac, segment adjustments.

⁵ Represents segment earnings (loss) and, for periods after 2008, total comprehensive income (loss), net of taxes, for the Single-Family Credit Guarantee segment.

4.2 Loan Loss Reserves

• Loan loss reserves decreased at both Enterprises during the second quarter of 2012, particularly at Fannie Mae, but remain high. The decrease in loan loss reserves was driven by the decrease in the provision for credit losses, resulting in charge-offs exceeding the provision for credit losses at both Enterprises for the quarter. Differences in the magnitude of loan loss reserves stemmed from differences in the size and credit quality of the Enterprises' single-family credit guarantee portfolios. Fannie Mae's single-family credit guarantee portfolio is larger than Freddie Mac's and has historically reflected higher serious delinquency rates.

Figure 4.2 Loan Loss Reserves (\$ in billions)

4.3 Credit Losses

 Non-traditional and higher-risk mortgages concentrated in the 2006 and 2007 vintages, and mortgages originated in California, Florida, Arizona and Nevada continue to account for a disproportionate share of credit losses (charge-offs and foreclosed property expenses). However, the proportion of losses coming from non-traditional products continued to decline in the second quarter of 2012 as these vintages aged.

5. Investments and Capital Markets Segment Results

- 5.1 Investments and Capital Markets Segment Results
 - In the first half of 2012, the Investments and Capital Markets segment was a positive contributor to capital as both Enterprises continued to benefit from low funding costs as a result of the low interest rate environment. Gains and losses on derivatives and trading securities during the first half of 2012 were muted.

Sources:

Fannie Mae segment earnings per Fannie Mae SEC disclosures for the relevant time periods. Effective in the first quarter 2010, Fannie Mae changed the presentation of segment financial information; prior periods were not revised. Freddie Mac segment comprehensive income (loss) for 2008 and 2009 reflect revised methodology effective January 1, 2010. Enterprise segment comprehensive income (loss) since 2010 is not comparable with prior periods due to the adoption of accounting standards for consolidations effective January 1, 2010.

Notes

Totals may not sum due to rounding.

¹ Consists of guarantee fee expense, trust management income, net interest income, and other income.

² Figures consist of debt extinguishment losses, debt foreign exchange gains (losses), debt fair-value losses, investment gains (losses), and hedged mortgage assets gains, net.

³ Consists of administrative expenses, other expenses, and at Freddie Mac, segment adjustments.

⁴ Includes extraordinary losses /noncontrolling interest.

⁵ Amount for 2008 includes consolidated changes in unrealized gains (losses) on available for sale securities, net of taxes. Effective April 2009, includes adjustments for otherthan-temporary impairments, net of taxes, included in accumulated other comprehensive income due to a change in accounting standards for impairments. At Freddie Mac, amount also includes the change in unrealized gains (losses), net of taxes, related to cash flow hedge relationships.

5.2 Security Impairments

• Freddie Mac's non-agency portfolio is larger than Fannie Mae's, generally causing higher levels of security impairments. A substantial portion of both Enterprises' security impairments during the first half of 2012 was from 2006 and 2007 vintage subprime securities.

Fannie Mae and Freddie Mac management reports.

6. Loss Mitigation Activity

- The Enterprises have traditionally worked with delinquent borrowers to mitigate credit losses in situations where the borrower demonstrates the willingness and ability to cure the delinquency. Loss mitigation actions include home retention actions (loan modifications, repayment plans and forbearance plans), and home forfeiture actions (short sales and deeds-in-lieu).
- The Enterprises have completed approximately 2.4 million foreclosure prevention actions since the start of conservatorship in September 2008. Half of these actions have been permanent loan modifications.
- More information on the Enterprises' loss mitigation activities can be found in FHFA's Second Quarter 2012 Foreclosure Prevention Report.

7. Comparison of Actual Results to Projections of the Enterprises' Financial Performance

7.1 Comparison of Actual Results to Projections of the Enterprises' Financial Performance

- FHFA published updated projections of the Enterprises' financial performance in October 2011. The purpose and approach of these projections can be found in FHFA's Projections of the Enterprises' Financial Performance, October 2011.
- October 2011 projections are not expected outcomes, but rather modeled projections in response to "what if" exercises based on assumptions about Enterprise operations, financial market conditions, and house prices.
- The combined projected Treasury draws for the Enterprises for the second half of 2011 and the first half of 2012 ranged from \$35 billion to \$91 billion. The actual combined Treasury draw for the second half of 2011 and the first half of 2012 was \$19 billion.
- The primary driver of the difference was lower than projected credit-related expenses, mostly due to a substantially lower provision for credit losses. The main drivers of lower provisions for credit losses were improved portfolio quality reflected in lower delinquencies and lower LTV ratios, coupled with higher REO disposition values.

Figure 7.1 Actual versus Projected Treasury Draws through 2Q12 (\$ in billions)

| | Cumulative Treasury Draw | throug | ted Draw gh 2Q12 nario 1 | throug | ed Draw gh 2Q12 nario 2 | throug | ed Draw gh 2Q12 nario 3 | | al Draw gh 2Q12 |
|-------------|--------------------------------|--------------------|---------------------------------------|--------------------|---------------------------------------|--------------------|---------------------------------------|--------------------|---------------------------------------|
| | As of 6/30/2011 | Additional Draw | Cumulative Draw as of 6/30/2012 |
| Fannie Mae | \$103.8 | \$26 | \$130 | \$31 | \$135 | \$67 | \$171 | \$12.4 | \$116.1 |
| Freddie Mac | 65.2 | 9 | <u>75</u> | <u>10</u> | <u>76</u> | _24 | 89 | 6.2 | 71.3 |
| Total | \$169.0 | \$35 | \$204 | \$41 | \$210 | \$91 | \$260 | \$18.5 | \$187.5 |

Numbers may not foot due to rounding.

- 7.2 Impact of Actual Results on Future Projections of the Enterprises' Financial Performance
 - Mortgage defaults pushed out to later periods could reduce projected losses if home prices improve or increase projected losses if home prices worsen.
 - The Enterprises' future financial performance is heavily dependent on the performance of the U.S. housing market. Trends observed in the second half of 2011 and the first half of 2012 should not be used to extrapolate future projections.
