

Northeast Natural Gas Regions

Overview:

Market Description

Natural gas use is increasingly important to the Northeast. Though traditionally the Northeast has been a winter peaking region, increased reliance on natural-gas fired generation has evened out annual gas use. Increased dual requirements for natural gas as a space heat fuel and utilization of gas-fired plants has imposed greater challenges on the Northeast, compared to other regions, in aligning commercial and operating conditions between the gas and power industries. The Northeast has little indigenous production (mainly in the Appalachian basin) and none in New England. The Northeast relies upon conventional and LNG storage to meet peak-day gas needs. Despite increased gas use for power generation, pipeline utilization remains highly seasonal; major regional pipelines often operate at high load factors during the winter resulting in basis differentials to upstream liquid trading points that may greatly exceed firm transportation tariff levels. LNG plays a critical role in the overall supply mix and accounts for up to 30 percent of peak-day gas needs in New England. Market participants in the Northeast can draw upon the nation's most extensive portfolio of dual, gas-oil fired power plants to flexibly respond to market price and load changes.

Geography

States covered: Connecticut, Delaware, Maine, Maryland, Massachusetts, New Hampshire, New Jersey, New York, Pennsylvania, Rhode Island, West Virginia, and Vermont.

Major Trading Hubs

Algonquin Citygates, Columbia Gas Appalachia, Texas Eastern M3, Transco Zone 6 NY, and, Transco Zone 6 Non-NY.

Federal Energy Regulatory Commission • Market Oversight @ FERC.gov

Storage

State Capacity: New York, Pennsylvania, and West Virginia accounted for 100 percent of total conventional storage capacity in the Northeast in 2005. New England has no conventional storage capacity, but it has about 18.4 Bcf of LNG storage capacity – 3.4 Bcf at the Everett terminal and the remainder at satellite storage locations throughout New England. New York and New Jersey add about 3.2 Bcf and 3.7 Bcf of LNG related storage capacity, respectively.

Aquifer Capacity: 0%

Depleted Field Capacity: 99%

Salt Cavern: 1%

Total Capacity: Northeast has 18 percent of total US storage capacity.

Major Storage Pipelines and Capacity:

Columbia System: 246 Bcf

Dominion: 290 Bcf

National Fuels: 69 Bcf

Demand by Sector (2005):

- Residential: 38%
- Commercial: 21%
- Industrial: 33%

State: New York, New Jersey, and Pennsylvania make up 68 percent of total Northeast demand and about 12 percent of total U.S. demand.

Northeast Total: 3.5 Tcf annually (or 9.9 Bcfd) which makes up 18 percent of total U.S. daily demand.

Consumer Total: 14.4 million, which is approximately 21 percent of total consumers in the U.S.

Key Consuming States: New York, New Jersey, and Pennsylvania make up 71 percent of total consumers in the Northeast and about 15 percent of total consumers in the U.S.

Residential Consumers: 91%

Federal Energy Regulatory Commission • Market Oversight @ FERC.gov

Production

State: Northeast gas production concentrated in Pennsylvania and West Virginia; together they account for 87 percent of total Northeast production. Nationally, however, these supplies equal about 2 percent of total U.S. production.

Total: Total Northeast production equals 0.4 Bcf/d; it makes up 2 percent of total U.S. daily production.

Yearly Change: Northeast regional gas production in 2005 declined about 4 percent from 2004; much of this decline is attributable to declines in Pennsylvania production which declined 15 percent.

Prices

Transco Zone 6 NY	2005	2006
Average Price	\$10.03	\$7.36
Average Basis	\$1.17	\$0.63
Highest Daily Price	\$28.12	\$10.75
Lowest Daily Price	\$6.24	\$3.93

Pipeline Flows

Average Daily Northwest Deliveries to the Midwest: 6.9 Bcf/d (2005) 6.6 Bcf/d (2006)

Major Pipelines: Transco, Texas Eastern and Columbia carry a significant amount of gas from the Gulf coast to the Northeast.

Average Daily Midwest Deliveries to the Northeast: 1.6 Bcf/d (2005) 1.6 Bcf/d (2006)

Major Pipelines: Columbia, Texas Eastern and Dominion move gas from the Midwest to the Northeast.

Imports and Exports

Average Daily Imports from Canada into the Northeast:

2005: 2.8 Bcfd

2006: 2.7 Bcfd

Major Importers: Maritimes and Northeast pipeline, Tennessee Gas Pipeline and Iroquois Gas Transmission System flow the majority of the gas from Canada to the Northeast. Together, they represent the following percentages of pipeline gas imports:

2005: 83%

2006: 85%

Average Daily LNG Send out:

2005: 0.3 Bcfd

2006: 0.3 Bcfd

Note: Represents daily receipts from Everett to Tennessee and Algonquin. Excludes volumes delivered via truck, consumed at Mystic or other distribution.

Focal Points

Gas Imports Decline: Based on analysis of available capacity data from pipelines, northeast gas imports from Canada declined 5.8 percent in 2006, falling to 2.5 Bcfd from 2.6 Bcfd. Several factors accounted for declining net imports, including high gas storage levels in the United States, increased regional gas production from the Appalachian Basin, improvements in post-hurricane supplies from the Gulf of Mexico, mild weather in the United States, and structural demand growth in Canada.

Mid-Atlantic Capacity: The LNG facility at Cove Point, Md., boosted pipeline capacity by 433 MMcfd in April 2005 by adding compressors on the Dominion Cove Point East project. Transcontinental Gas Pipe Line Corp. added 150 MMcfd of capacity to its system in New Jersey via looping.

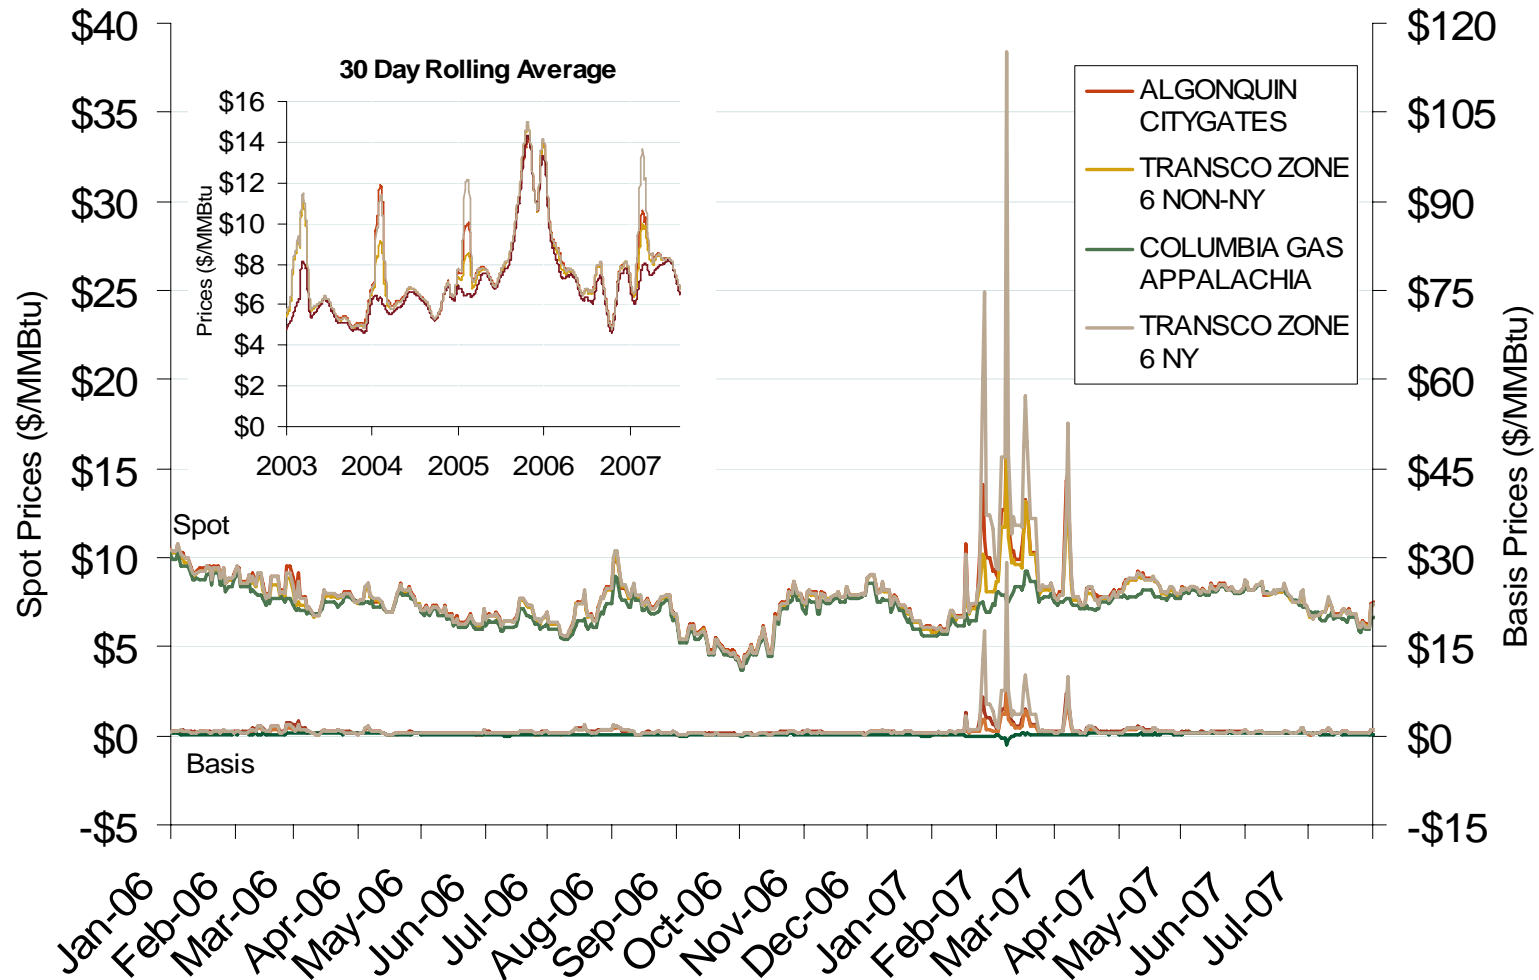

Production Rises: Pipeline information indicates that Appalachian natural gas production grew 13 percent in 2006, to 1,055 MMcfd from 934 MMcfd.

Yearly Average of Spot Hub Prices

Annual Average Day Ahead Prices (\$/MMBtu)

	2005	2006	5-Years
Algonquin citygates	\$9.75	\$7.40	\$6.87
Transco Z6 NY	\$10.04	\$7.36	\$6.90
Transco Z6 non-NY	\$9.63	\$7.30	\$6.71
Columbia-Appalachia	\$9.18	\$6.97	\$6.30
