### **OFHEO Releases Annual Report to Congress**

**WASHINGTON, DC** — James B. Lockhart, Director of the Office of Federal Housing Enterprise Oversight (OFHEO) today released OFHEO's 2007 Report to Congress, detailing the agency's annual examination conclusions and regulatory oversight of government-sponsored enterprises (GSEs), Fannie Mae and Freddie Mac for the year 2006. The report concludes that both Enterprises "remain a significant supervisory concern."

"While both Enterprises made progress in correcting their problems, especially in systems, controls and financial reporting, it has taken much more time and money to correct than the GSEs or OFHEO expected," said Lockhart. "A key indicator of a successful remediation will be the timely filing of annual and quarterly financial statements by each company with a clean audit opinion based on a controls-based audit. I am pleased to report that both companies are working hard to achieve this goal, but they still have much to do."

In addition to the annual reports of examination for Fannie Mae and Freddie Mac, the report includes a review and summary of related topics, including:

- Financial performance of the GSEs
- OFHEO supervisory actions
- Remediation efforts
- Executive compensation
- OFHEO legislative recommendations
- OFHEO research and publications
- Accounting environment at the GSEs
- Historical data tables for the Enterprises

The full report is available at </media/annualreports/OFHEOReporttoCongress07.pdf>. To request a printed copy, please send an e-mail to [ofheoinquiries@ofheo.gov](mailto:ofheoinquiries@ofheo.gov) or call 202.414.6922.

# Report to Congress

2007

**OFFICE OF FEDERAL HOUSING  
ENTERPRISE OVERSIGHT**

---

1700 G Street, NW • Washington, DC 20552  
202.414.3800

March 30, 2007

Honorable Christopher Dodd  
Chairman  
Committee on Banking, Housing,  
and Urban Affairs  
United States Senate  
Washington, D.C. 20510

Honorable Richard Shelby  
Ranking Member  
Committee on Banking, Housing,  
and Urban Affairs  
United States Senate  
Washington, D.C. 20510

Honorable Barney Frank  
Chairman  
Committee on Financial Services  
United States House of Representatives  
Washington, D.C. 20515

Honorable Spencer Bachus  
Ranking Member  
Committee on Financial Services  
United States House of Representatives  
Washington, D.C. 20515

Dear Chairmen and Ranking Members:

I am pleased to transmit the 2007 Report to the Congress from the Office of Federal Housing Enterprise Oversight (OFHEO), which provides the findings of OFHEO's 2006 annual examinations. This report meets the statutory requirements of section 1319B of the Federal Housing Enterprises Financial Safety and Soundness Act of 1992 (Title XIII of P. L. 102-550). The views in this report are those of OFHEO and do not necessarily represent those of the President or the Secretary of Housing and Urban Development.

This report is my second one to the Congress. We accelerated the publication by over two months from previous years and plan to continue our efforts to provide more transparent and timely reportings.

Since the last report, OFHEO published a new five-year strategic plan that contains three strategic goals in support of the agency's mission, to ensure the safe and sound operation of Fannie Mae and Freddie Mac. These goals are:

1. Enhance supervision to ensure the Enterprises operate in a safe and sound manner, are adequately capitalized and comply with legal requirements;
2. Provide support for statutory reforms to strengthen our regulatory powers; and
3. Continue to support the national policy of an efficient secondary mortgage market which promotes homeownership and affordable housing.

The 2006 annual examinations of both Fannie Mae and Freddie Mac, contained in this report, detail the current condition of both Enterprises. OFHEO concludes that both companies remain a significant supervisory concern. OFHEO also concludes that in 2006 both companies made progress in correcting their problems, especially in systems, controls and financial reporting. Nonetheless, it has taken much more time and money to correct them than either the Enterprises or OFHEO

expected. Both companies are complying with a 30 percent additional capital requirement due to operational risk problems, and both are subject to specific limits on the growth of their portfolios. Despite these constraints necessitated by their operational weaknesses, their support of the mortgage market grew by 8 percent in 2006 to \$4.3 trillion as their guaranteed mortgage-backed securities (MBS) outstanding grew at double-digit rates.

A key indicator to OFHEO of a successful remediation will be the timely filing of annual and quarterly financial statements by each company with the Securities and Exchange Commission (SEC) with a clean audit opinion based upon a controls-based audit. I am pleased to report that both companies are working hard to achieve this goal, but they still have much to do.

As part of our second strategic goal, OFHEO has been working with the Congress and the Administration on legislation to reform the regulatory oversight of the housing government-sponsored enterprises (GSEs). I am pleased that the House Financial Services Committee has drafted, debated and passed out of committee a strong reform bill that strikes a balanced approach to needed statutory reforms. H.R. 1427 provides the basic building blocks of a strong, bank-like regulator for the GSEs. Those building blocks are:

- Strong enforcement powers similar to those of federal banking regulators;
- Strengthened housing GSE oversight as a result of combining OFHEO with the Federal Housing Finance Board (FHFB);
- Combining safety and soundness authority with mission authority in a single regulator;
- Full regulatory independence by being out of the appropriations process;
- Full authority over capital; and
- Ability to regulate the Enterprises' portfolios.

Now is the time for action on this important issue. OFHEO looks forward to continuing to assist the Congress and the Administration as the legislative process moves forward.

One of the ways in which OFHEO expands the national discussion of housing and homeownership is through its analysis of mortgage market developments and Enterprise activities. OFHEO's quarterly House Price Index (HPI) and related products provide important information about the state of the housing markets. As measured by the HPI, the nation's housing and mortgage markets experienced a marked deceleration in home prices in 2006. After two years of double-digit rates of appreciation nationally, house prices increased at a more moderate pace, 5.9 percent, from the fourth quarter of 2005 to the fourth quarter of 2006. That was the lowest appreciation rate since 1999.

This year will be one of challenges for the housing markets. OFHEO is working with the Enterprises to provide guidance on subprime and non-traditional mortgages. It should also be a year of significant progress as Fannie Mae and Freddie Mac accelerate their remediation programs. It is my hope that an enhanced new regulatory regime, as proposed by the Congress and the Administration, will be enacted to benefit OFHEO and all of the stakeholders in the nation's housing finance system.

Sincerely,

James B. Lockhart III  
*Director*

# Year in Review

## Housing Sector Retreats After Years of Solid Performance

The U.S. economy grew 3.1 percent over the course of 2006. It was the fourth consecutive year with more than 3 percent growth. The major contributors to the increase in real gross domestic product (GDP) in 2006 were personal consumption expenditures and nonresidential investments. Housing, which for several years had been a major contributor to real GDP, was a major drain on real GDP in 2006. Inflation, as measured by the Consumer Price Index, declined in 2006 to 2.5 percent, compared with 3.4 percent the year before. Labor market conditions continued to improve. The national unemployment rate declined to 4.6 percent, down from 5.1 percent the year before. That was the lowest level since 2000.

The Federal Reserve continued its tightening policy during the first half of 2006, but left rates unchanged in the second half of the year as inflationary pressures waned. The Federal Funds target rate ended the year at 5.25 percent, 100 basis points higher than at the start of the year and the highest level since 2001. Short-term yields increased as a result of the actions of the Federal Reserve. The one-year Constant Maturity Treasury (CMT) yield rose consistently during the first seven months of the year (more than 70 basis points), and peaked at 5.22 percent in July. Long-term interest rates behaved in a similar manner, but more moderately as the 10-year CMT yield peaked in May at 5.11 percent, and fell later in the year. Throughout 2006, the yield curve was relatively flat.

Mortgage interest rates followed the trend of long-term Treasury issues. According to

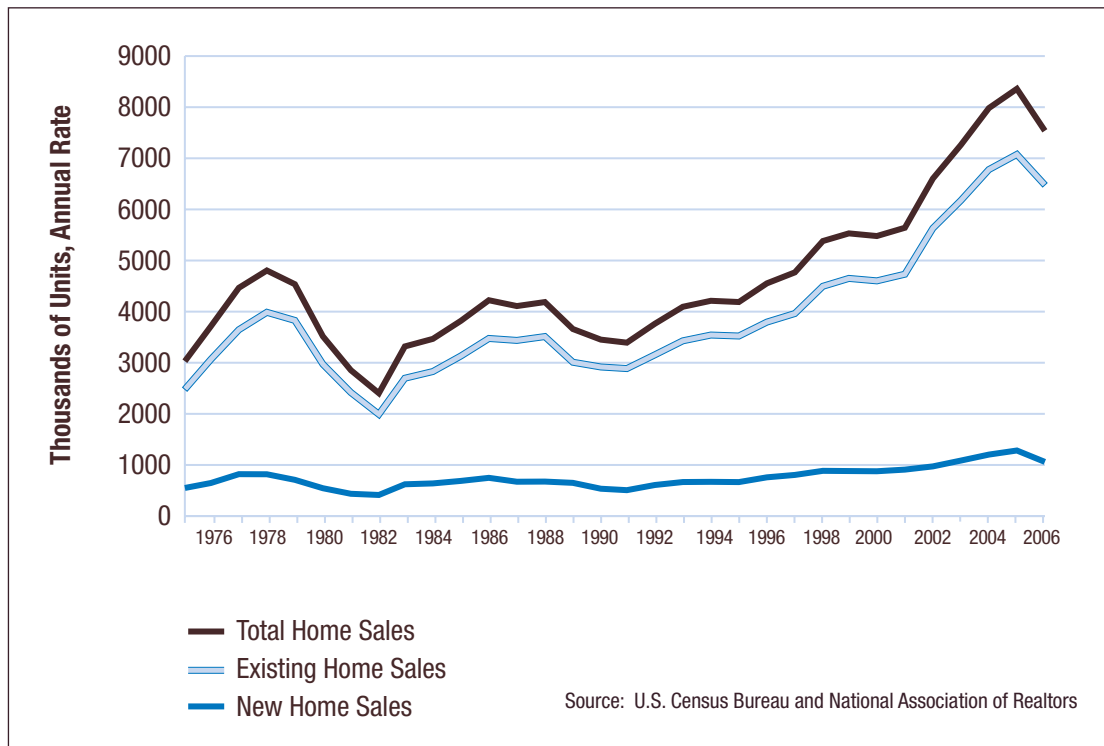

Chart 1 - Mortgage Interest Rates

Freddie Mac's Primary Mortgage Market Survey (PMMS), the average 30-year fixed-rate mortgage (FRM) commitment interest rate rose consistently until reaching a high of 6.76 percent in July. That was the highest level in four years. Rates declined in each successive month, to a low of 6.14 percent in December compared to 5.17 percent in December of 2005. For the year, the 30-year FRM commitment interest rate averaged 6.41 percent, 54 basis points above the average rate for 2005. The average commitment rate on one-year Treasury-indexed adjustable-rate mortgages (ARMs), following short-term rates, increased through July, before easing somewhat. For the year, the one-year ARM averaged 5.54 percent, 105 basis points higher than the year before (Chart 1).

Rising mortgage interest rates helped to cause activity in the housing sector to contract in 2006. Single-family housing starts declined sharply, by about 14 percent to 1.5 billion

**Chart 2 -  
Home Sales**

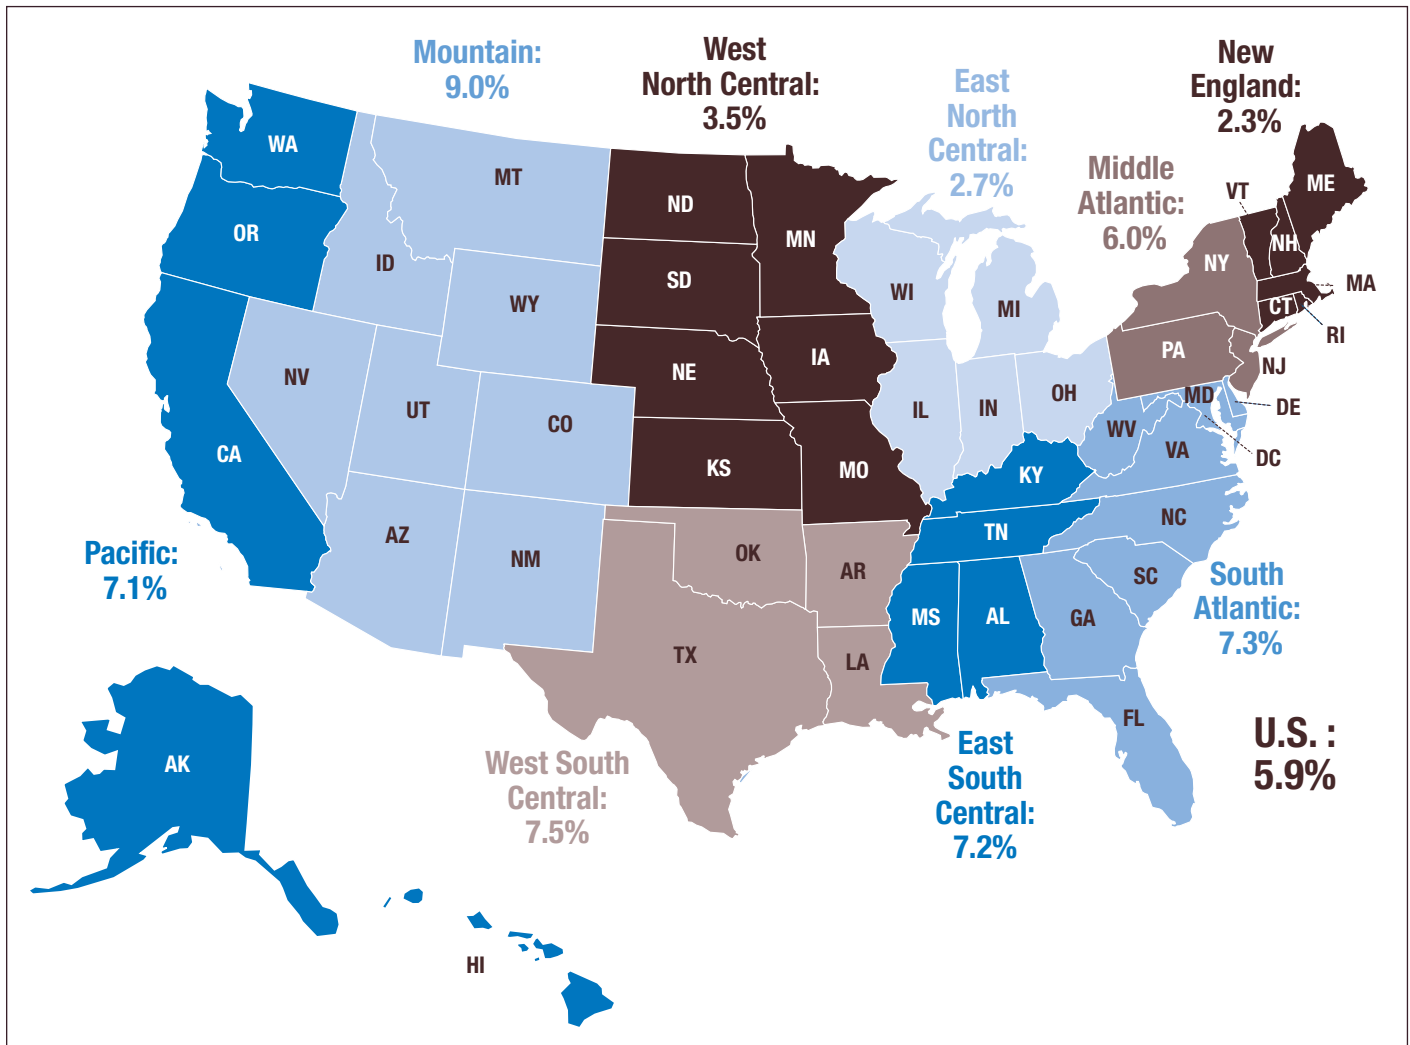

units. That was the lowest level since 2002. Housing inventory rose during most of the year as home sales declined. Sales of new single-family homes were down more than 17 percent, the largest decline since 1990. Sales of existing single-family homes declined 8.5 percent, the largest decline since 1982. Those sales combined totaled 7.5 million units, 9.8 percent below the 2005 level (Chart 2).

Following the pattern of home sales, according to *Inside Mortgage Finance*, originations of single-family mortgages fell about 4.5 percent in 2006, to \$2.98 trillion. However, that was the second highest volume ever. The decline was concentrated in ARM products which had flooded the market in recent years and which became less attractive as interest rates rose and the spread between FRMs and ARMs narrowed. The share of refinance originations was also down 14.4 percent to \$1.3 trillion, but remained strong given the rise in interest rates. Some ARM borrowers, whose mortgage rates reset, refinanced into FRMs.

A further indication of the cooling housing market was the decline in house price appreciation. While U.S. home prices rose throughout 2006, the rate of appreciation slowed as the demand for housing declined. After two successive years of double-digit rates of appreciation nationally, house prices as measured by OFHEO's quarterly House Price Index increased at a more moderate pace, 5.9 percent from the fourth quarter of 2005 to the fourth quarter of 2006. That was the lowest rate of appreciation since 1999 when prices rose 5.1 percent. All but one of the nine Census Divisions (West South Central) showed a decline in the rate of price appreciation. In absolute terms, the Pacific Census Division showed the greatest deceleration, with appreciation declining from 19.7 percent from the fourth quarter 2004 to the fourth quarter of 2005, to 7.1 percent from the fourth quarter of 2005 to the fourth quarter of 2006. However, in relative terms, the New England Census Division showed the greatest decline in appreciation over the same time period, falling approximately 77 percent, to 2.3 percent, which was lower than the rate of inflation (Map on page 4).

The National Association of Realtors' composite housing affordability index fell 5.1 percent in 2006, to 106.1. The lower affordability index reflects the increase in mortgage interest rates which caused the average mortgage payment to increase 8.8 percent more than offsetting the 3.2 percent growth in median family income. Continued high home prices in 2006 may have contributed to a slight decline in the homeownership rate, from 69.0 percent as of the end of the fourth quarter 2005, to 68.9 percent one year later. However, that rate was just slightly below the record level set in 2004 (69.2 percent). After declining slightly in 2005, the rental vacancy rate rose slightly in 2006, from 9.6 percent at the end of the fourth quarter 2005 to 9.8 percent one year later.

## Financial Performance of the Enterprises in 2006

Fannie Mae and Freddie Mac both continued to work on issues related to their accounting, systems and internal control problems in 2006 and some progress was made. Fannie Mae made progress in its restatement efforts with the December release of its 2004 10-K reflecting restated financials for 2002, 2003 and 2004 financial results. As a result of the restatement, Fannie Mae recorded a decrease in retained earnings of \$6.3 billion. Financial statements for 2005 are planned for release in 2007. Freddie Mac released 2005 results in May 2006. Although the Enterprise did not issue quarterly reports in 2006, it released 2006 results in March 2007 and is working toward returning to quarterly public reporting later in 2007.

In May 2006, Fannie Mae agreed to a Consent Order with OFHEO to, among other things, limit the growth of its portfolio mortgage assets to the level held as of December 31, 2005 (\$727.7 billion), until OFHEO approves an increase. Fannie Mae also paid a \$400 million fine to the government as part of the Consent Order settlement. In August 2006, in response to OFHEO's recommendation, Freddie Mac announced that it had volunteered to limit the annual growth of its mortgage portfolio assets to no more than one-half percent each quarter above the level at June 30, 2006 (\$710.3 billion) until reaching a maximum of 2 percent. Freddie Mac agreed to keep the voluntary growth limit in place until it returned to producing and publicly releasing quarterly financial statements prepared in conformity with Generally Accepted Accounting Principles (GAAP).

The limits on portfolio growth and continued competition for mortgage assets (which compressed spreads and limited investment opportunities) resulted in a slight shrinkage in the mortgage portfolio assets of both Enterprises in 2006 (Chart 3). That was the second consecutive annual decline in Fannie Mae's mortgage portfolio, but the first annual decline experienced at Freddie Mac since 1987.

While the lack of asset growth and continued competitive pressures from other mortgage investors and securitizers limited the performance of their retained portfolios, both Fannie Mae and Freddie Mac increased their guarantee business at healthy rates in 2006 and, based on available information, both were profitable and their combined books of business grew 8 percent.

In 2006, Fannie Mae's net MBS outstanding increased by 11.4 percent, compared to 13.9 percent the prior year. Although net issuance of MBS declined by 5.6 percent, the decline was more than offset by a slowing of prepayments and declines of purchases of its own MBS. The Enterprise's total book of mortgage business increased 7.7 percent, compared with less than 1 percent of the year before, to \$2.53 trillion.

**Chart 3 -  
Enterprise  
Mortgage  
Asset  
Portfolios**

Although Freddie Mac’s MBS issuance volume declined about 10 percent in 2006, the decline was more than offset by the decreases in purchases of MBS into their own portfolio and the decline in liquidations. As a result, the Enterprise’s outstanding MBS increased 15.2 percent in 2006 compared to 14.3 percent the year before to \$1.12 trillion. Freddie Mac’s outstanding MBS represents 63 percent of Fannie Mae’s outstanding MBS. Freddie Mac’s total book of business also grew 8.4 percent, down from 11.9 percent the year before.

**Chart 4 -  
Enterprise  
Net MBS  
Outstanding**

Both Fannie Mae and Freddie Mac reported that they were profitable in 2006. After declining for three consecutive years, net income at Freddie Mac, measured in accordance with GAAP, rose about 4 percent in 2006, to \$2.2 billion. That increase occurred despite the sharp decline in net interest income (\$1.1 billion) which was driven by a continued decline in the net interest margin. The net interest margin was 18 basis points lower than in the previous year. The higher net income booked in 2006 reflects higher guarantee fee income, increased gains on early debt retirement, lower mark-to-market losses on derivatives and the guarantee asset, and a decrease in tax expenses. Freddie Mac also reported higher fair value earnings for 2006, \$2.5 billion compared to about \$1.0 billion the year before. Freddie Mac's GAAP and fair value results support the conclusion that its business remains economically sound.

Although Fannie Mae is a Securities and Exchange Commission (SEC) registrant, unlike Freddie Mac, continued remedial accounting work has prevented it from releasing GAAP earnings for 2006. However, estimated financial information provided by Fannie Mae for the quarterly capital report, based on the application of accounting policies currently under review, indicates that the Enterprise achieved a reasonable degree of profitability. That was achieved despite continued high administrative expenses associated with the restatement, upgrades to systems, attendant staffing requirements, and restrictions on the growth of the retained mortgage portfolio.

GAAP earnings as reported by Freddie Mac and as estimated by Fannie Mae continue to exhibit high levels of volatility from quarter-to-quarter and year-to-year. Both Enterprises had a loss in the third quarter last year and Freddie Mac did in the fourth quarter as well. These losses reflect, in part, GAAP's requirements to mark some balance sheet items to market, but not others, which creates difficulties in interpretation. In the case of Freddie Mac, those results also reflect the accounting for the guarantee asset and liability associated with its guarantee business.

Credit risk at both Fannie Mae and Freddie Mac remained low in 2006, but was increasing at year-end. At Freddie Mac, the single-family delinquency rate, which rose in the fourth quarter of 2005 following hurricanes Katrina and Rita, declined during most of 2006 and ended the year at 0.53 percent, 16 basis points lower than the year-end 2005 level. The experience at Fannie Mae was similar. The Enterprise's single-family delinquency rate at year-end was 0.65 percent, 14 basis points lower than at the end of the previous year.

With low interest rate volatility in 2006, interest rate risk was moderate-to-low at both Fannie Mae and Freddie Mac during most of the year. The duration gap at both Enterprises averaged zero months, and the portfolio market value sensitivity (PMVS) at Freddie Mac averaged one percent.

Because of the continued high state of operational risk, OFHEO continued to require both Enterprises to maintain core capital 30 percent higher than their regulatory minimum capital levels in 2006. At year-end, Freddie Mac's capital of \$36.2 billion exceeded its requirement by \$2.6 billion and amounted to 4.5 percent of its assets.

As a result of the restated financial results for 2002 and 2003, OFHEO reclassified Fannie Mae as significantly undercapitalized throughout 2002, 2003 and 2004. During 2006, Fannie Mae raised its core capital to \$42.3 billion, \$4.2 billion above the OFHEO-directed requirement.

# Supervisory Actions in 2006

## Enforcement

### Consent Orders

#### FANNIE MAE

On May 23, 2006, OFHEO and Fannie Mae entered into a Consent Order to settle matters related to accounting, internal control and other failures at the Enterprise that led to a restatement of earnings and significant losses to the Enterprise. OFHEO had previously entered into agreements with the Enterprise, but the Consent Order

superseded these agreements and avoided the need for enforcement actions against the Enterprise. Fannie Mae paid \$400 million to the government as part of the Order and agreed to numerous remedial steps. In addition to overseeing compliance with the Consent Order, OFHEO initiated administrative actions against certain separated senior officers for harm caused due to their conduct.

**Table 1: Articles of the May 23, 2006 Consent Order**

ARTICLE	DESCRIPTION
I.	Corporate Governance (16 issues)
II.	Board of Directors (7 issues)
III.	Capital Plans and Limitations on Certain Corporate Actions (5 issues)
IV.	Internal Controls (18 Issues)
V.	Accounting (8 issues)
VI.	Personnel (9 issues)
VII.	Compensation (4 issues)
VIII.	Reports, Data and Disclosures (4 issues)
IX.	Cooperation (6 issues)
X.	Reports to OFHEO (1 issue)
XI.	Penalty (2 issues)
XII.	Previous Agreements (1 issue)

#### FREDDIE MAC

OFHEO continued its oversight of the remediation efforts at Freddie Mac, also covered by a Consent Order dated December 9, 2003.

### Litigation

#### FANNIE MAE

On December 18, 2006, OFHEO initiated an administrative action against former Fannie Mae executives Franklin Raines, J. Timothy Howard and Leanne Spencer, seeking affirmative relief and civil money penalties for allegedly improper and unlawful conduct. Hearings are scheduled for early 2008.

OFHEO has been subpoenaed in a shareholder litigation case before a District of Columbia District Court against Fannie Mae and its former executives Franklin Raines, J. Timothy Howard and Leanne Spencer. The various subpoenas require OFHEO to review upwards of 21 million pages of documents and other materials. The District Court judge established a schedule and process for production of these materials.

## FREDDIE MAC

OFHEO continued its administrative action against former Freddie Mac executives Leland Brendsel and Vaughn Clarke. OFHEO responded to production motions and requests, including assembling of and reviewing for responsiveness and privilege, in excess of one million pages of documents. Hearings are scheduled for the fall of 2007.

---

# Compliance

## Consent Orders

### FANNIE MAE

OFHEO published its Report of the Special Examination of Fannie Mae on May 23, 2006. At the same time, OFHEO entered into a Consent Order with the Enterprise requiring extensive remediation by the Enterprise and limitations on corporate activities. Based upon evidence established during OFHEO's Special Examination and in the interests of compliance and cooperation, Fannie Mae signed the Consent Order with OFHEO.

The May 23, 2006 Order commits Fannie Mae to a significant number of remedial steps, including halting growth in its retained mortgage portfolio; reviewing current and former employees for disciplinary actions and possible restitution; implementing plans to resolve accounting, internal control, corporate governance and risk management weaknesses; maintaining the capital surplus requirement; agreeing to oversight by OFHEO of senior officer appointments; and committing to cooperate with OFHEO on any enforcement actions. Fannie Mae agreed to pay a \$400 million penalty to the government.<sup>1</sup>

The Consent Order is organized into 12 Articles, as shown in Table 1, having a total of 81 separate requirements. These requirements were developed by OFHEO to correct or eliminate specific deficiencies revealed during the Special Examination of Fannie Mae.

A previous agreement, entered into between OFHEO and Fannie Mae dated September 27, 2004 and a "Supplement to the Agreement of September 27, 2004" dated March 7, 2005, were also rolled into the May 23, 2006 Order.

**Consent Order Oversight.** As required by Section 1 of Article 1 of the May 23, 2006 Order, Fannie Mae had to prepare an annual compliance plan that detailed how the company would satisfy its obligations under the Order. On September 19, 2006, Fannie Mae's Board of Directors reviewed and approved the plan which was subsequently provided to OFHEO. The plan called for the establishment of a centralized program management office (PMO), to ensure coordination and consistent execution of remediation and reporting efforts. The PMO was placed under the leadership of Fannie Mae's Chief Compliance Officer who has served as the primary liaison with OFHEO. Each of the 81 issues contained in the Order was assigned to various OFHEO

<sup>1</sup> <http://www.ofheo.gov/media/pdf/settlementrelease.pdf>

management officials. These individuals, designated Executive Sponsors, are responsible for ensuring that Fannie Mae is in compliance with each Order requirement.

The 2006 Compliance Plan submitted to OFHEO was determined to be comprehensive and to reflect Fannie Mae management’s commitment to fulfill the requirements of the Consent Order. Since the Order has been in place, Fannie Mae’s Office of Compliance and Ethics has provided OFHEO management bi-weekly status and tracking reports and has conducted bi-weekly status meetings with OFHEO’s Office of Compliance. The two offices have worked cooperatively to ensure that all parties understand the intent of each Order item and to facilitate timely completion.

**Implementation Status of Consent Order.** Fannie Mae has dedicated extensive resources and taken significant actions toward achieving compliance with the Consent Order. OFHEO finds the Enterprise to be working diligently to improve Fannie Mae’s corporate culture and business operations.

As of December 31, 2006, Fannie Mae has been fully responsive to all deadlines established by the Order. For the purpose of characterizing Fannie Mae’s current implementation status of the Order, OFHEO utilizes the following categories in describing each of the 81 issues:

**Table 2: Consent Order Status Terminology**

CONSENT ORDER STATUS		DEFINITION
IN COMPLIANCE	Full Compliance	Fannie Mae has fully complied with the intent of the Order and no further actions are required.
	Ongoing Compliance	Fannie Mae has complied with the requirements of the Order, however, one or both of the following actions are still required: 1) The implementation of planned actions must still be validated by OFHEO. 2) Periodic reports are still required.
IN PROCESS		Fannie Mae is working toward achieving compliance with an issue, however, it has not provided an official response to OFHEO as the issue is not yet due.
PENDING REVIEW		Fannie Mae has provided an official response to OFHEO, however, one or more of the following actions has occurred: 1) OFHEO officials are currently reviewing materials submitted by Fannie Mae as its official response. 2) OFHEO has requested additional supporting documentation from Fannie Mae. 3) OFHEO has taken a position that Fannie Mae has not met the intent of the Order and both parties are working together to reach an agreement.
NON-COMPLIANCE		OFHEO has taken a position that Fannie Mae has not met the intent of the Order.

As of December 31, 2006, the implementation status of the May 23, 2006 Consent Order is as follows:

54	In Compliance
	(20 in Full Compliance) (34 in Ongoing Compliance)
9	In Process
18	Pending Review by OFHEO
0	Not in Compliance

**Table 3: Status of Consent Order (as of 12/31/06)**

The following chart illustrates the December 31, 2006 implementation status as distributed by the 12 Articles of the Order.

**Chart 5 - Status of Consent Order (as of 12/31/06)**

**Next Phase.** As of December 31, 2006, OFHEO recognizes that Fannie Mae has complied with 67 percent of the Order requirements. Approximately 22 percent of the Order issues submitted to OFHEO by Fannie Mae are pending review. In some cases, OFHEO has requested Fannie Mae provide additional supporting documentation or provide alternative solutions. Fannie Mae management has been receptive and cooperative with OFHEO management in developing solutions to satisfy the intent of the Order.

Of the issues designated to be in compliance, OFHEO has determined that Fannie Mae is in full compliance with 25 percent of the Order requirements and in ongoing compliance with an additional 42 percent of the Order requirements. Those designated to be in ongoing compliance with the Order generally fall into two categories. Many of the issues require Fannie Mae to submit quarterly, annual and other periodic statements or plans for specified or indefinite time periods. These issues will continue to be monitored and evaluated as necessary. Other issues required the submission of various action plans for approval by OFHEO. These plans have various implementation dates that will require an independent evaluation and validation by OFHEO examiners in the future.

### **FREDDIE MAC**

Freddie Mac is in satisfactory compliance with the Consent Order dated December 9, 2003, but one provision that remains open is the separation of the CEO and Chairman of the Board positions. The Board of Directors submitted a two-year transition plan to OFHEO in late 2006 that addresses this matter. OFHEO continues to monitor management's progress against a comprehensive plan to address key issues highlighted by the Consent Order, including strengthening internal controls, developing a risk management oversight program, improving the internal accounting function, augmenting the internal audit program and striving to make positive changes to the corporate culture.

---

## Other Supervisory Actions

### **Other Agreements**

In September 2005, both Fannie Mae and Freddie Mac entered into an agreement with OFHEO on matters pertaining to subordinated debt, public disclosure of credit and interest-rate risks and liquidity management.

Freddie Mac has implemented actions to meet the requirements in the September 2005 Agreement. During 2007, Freddie Mac will expedite the quarterly credit risk assessment disclosure.

Fannie Mae has implemented actions to meet the requirements in the September 2005 Agreement, and continues to improve its compliance by strengthening its liquidity contingency tests and expediting its interest-rate risk disclosures. The Enterprise expects to begin making interest-rate risk disclosures for 25 and 50 basis point yield curve moves with information for the second quarter of 2007.

## Executive Compensation

OFHEO's enabling statute and the Enterprise charter acts charge the Director of OFHEO with oversight responsibility in the area of executive compensation. OFHEO's statute requires the Director to prohibit an Enterprise from providing excessive compensation to any executive officer. Specifically, the statute provides that compensation must be reasonable and comparable with compensation paid by other similar businesses to executives having similar duties and responsibilities. "Similar businesses" include publicly held financial institutions or major financial services companies.

The Enterprise charter acts require the companies to obtain the prior approval of OFHEO's Director before entering into or changing termination agreements with their executive officers. The Director may not approve any such agreement unless the Director determines that the benefits provided are comparable to benefits provided under such agreements for officers of other public and private entities involved in financial services and housing interests who have comparable duties and responsibilities.

In addition to the requirements noted above, the Fannie Mae Capital Restoration Plan approved by OFHEO on February 17, 2005 requires that the Enterprise obtain OFHEO's prior approval for all payment of bonuses or other non-salary cash or stock-based awards to executive officers.

**OFHEO's corporate governance regulation includes several requirements in the area of executive compensation. Specifically, the rule:**

- Requires reasonable and appropriate compensation for directors, officers and employees, highlighting the need to avoid compensation incentives that excessively focus on short-term earnings;
- Requires that compensation programs consider risk management, compliance with the law and operational stability in addition to earnings; and
- Requires reimbursement by a senior officer if an accounting restatement is required under certain circumstances.

In 2006, OFHEO reviewed and rendered decisions on 21 requests for approval of compensation actions from Fannie Mae and Freddie Mac. These actions involved new hires, promotions, separation agreements, bonuses and other non-salary compensation. Seven of these 21 actions were taken pursuant to the guidelines set forth in Fannie Mae's February 2005 Capital Restoration Plan, which require approval of bonuses and long-term incentive awards to executive officers.<sup>2</sup>

<sup>2</sup> Subsequently in early 2007, as part of its review of issues raised by OFHEO's Report of the Special Examination (May 2006), the Enterprise acted to eliminate bonus payments to certain executives and to take disciplinary action against a number of individuals.

# Report of Annual Examination of Federal National Mortgage Association / Fannie Mae

---

## Examination Authority and Scope

### Examination Authority and Reporting Convention

This Report of Examination contains the results and conclusions of OFHEO's 2006 annual examination of the Federal National Mortgage Association ("Fannie Mae" or the "Enterprise") performed under section 1317(a) of the Federal Housing Enterprises Financial Safety and Soundness Act of 1992 (12 USC § 4517(a)). The OFHEO annual examination program assesses the Enterprise's financial safety and soundness and overall risk management practices. OFHEO utilizes a "CAMELSO" methodology (Capital Adequacy, Asset Quality, Management, Earnings, Liquidity, Sensitivity to Market Risk, and Operations), similar to that adopted by the federal depository institution regulators, to report examination results and conclusions to the Board of Directors and to Congress.

### 2006 Examination Scope

OFHEO's examination activities focused on: supervision provided by senior management, enterprise risk management and internal audit, corporate governance functions, internal controls, information technology, credit risk management, accounting practices and compliance with the requirements of the September 2005 Agreement and the May 2006 Consent Order. OFHEO supervisory activities also included reviews of asset quality, counterparty concentration risk management, market and interest-rate risk management practices, earnings performance, capital adequacy and liquidity.

*Fannie Mae  
remains a significant  
supervisory concern.*

---

## Examination Conclusions

The Enterprise remains a significant supervisory concern. Although progress has been made in correcting deficiencies, significant issues remain and are centered in data, systems, controls and risk measurement and management. Data and systems limitations have generated extensive deficiencies, the inability to measure several risks with the highest degree of accuracy and the inability to establish controls that meet industry standards in many areas. These limitations, coupled with incomplete metrics, adversely impact report accuracy and meaningfulness, impeding communication and the management of operations, risk and performance. Risk management deficiencies are most acute in the Housing and Community Development business unit and the management of counterparty exposure aggregation. Some limits in corporate policies

need strengthening and the development of many management policies and written procedures is in the initial stages. Several necessary positions in risk management and in model development and validation have been difficult to fill due to external factors.

Management has devoted substantial effort to address the Enterprise's deficiencies, but corrective programs are in varying stages of completion and many are in their initial stages. Financial statements for the years 2002 through 2004 were completed, but substantial work remains to complete years 2005 and 2006 and become a current filer. Significant progress has been made in initiatives needed to launch corrective programs in such areas as corporate policies, organizational structure, personnel numbers and expertise, risk measurement, and controls that correct or partially mitigate many deficiencies. In addition, the independent oversight functions have appropriate expertise and authority and have been key drivers in addressing control and risk management issues in the business units. Management has demonstrated its ability to plan, prioritize, monitor and control major projects. These efforts have built the foundation for future progress.

The Enterprise has: (1) a qualified and active Board of Directors and senior management team with a supervisory program that is incomplete but improving; (2) operations with significant control deficiencies that adversely impact risk management and expansion into new products; (3) weaknesses in several areas of credit-risk management but strong asset quality; (4) a minimally satisfactory interest-rate risk management program with deficiencies in interest-rate risk measurement; (5) satisfactory management of liquidity; (6) fair earnings; and (7) adequate regulatory capital. Current and future earnings are adversely impacted by declining net interest margins and competitive pressures. Structural and economic issues in the mortgage markets and the Enterprise's desire to expand activities in higher-risk products heighten the importance of developing economic capital measures to better quantify risks and performance, as well as stronger financial performance measurement and attribution analysis.

---

## Matters Requiring Board Attention

Key matters highlighted in this report requiring strong Board oversight are:

- **Project Management.** Monitor project management for operations, information technology, internal control and measurement of risk and performance. Evaluate the enterprise-wide plan for the prioritization and coordination of projects, and the impact and reason for delays. Ensure interim processes and controls are completed and regularly audited until long-term, sustainable solutions for data and systems are finalized. Ensure appropriate project management in all key areas of change.
- **Management Communications.** Ensure appropriate management completes its formal structure for decision protocol and the escalation of issues; business unit risk management; optimized pricing and measurement of risks and performance; and the coordination and rationalization of activities among the business units.

- **Interest Rate Risk.** Approve strengthened corporate limits for interest rate risk. Ensure business unit policies and written procedures are completed and that all policies and limits are periodically updated and incorporated into business practices.
- **Management Reporting.** Ensure management improves the reporting of risks, performance, and operational issues through the use of accurate information and enterprise-wide and business unit metrics and summary reports for the Board and senior management that highlight key information and issues.
- **Infrastructure.** Ensure management has completed an infrastructure that has sufficient data, information technology systems, controls, reports and personnel in place before the Enterprise significantly engages in new products.
- **Internal Controls.** Monitor management's progress toward remediating the significant number of internal control deficiencies to enable the release of accurate and timely financial statements. This remediation should permit a return to controls-based auditing and ensure a sustainable control environment for financial reporting.

---

## Board and Management Supervision

### Board of Directors

The Board improved its structure and operations during the year through better policies, strengthened organizational structure and expertise and better information flow with the business units and independent oversight functions. Continued oversight by the Board is needed to ensure the appropriate planning, prioritization, control and completion of the myriad projects and changes in progress. Risk and performance metrics are incomplete, preventing or impeding effective and standardized communication.

Corporate policies were approved around year-end 2005 and were largely satisfactory. The Board's annual review is expected to result in needed improvements in some limits, such as strengthened interest-rate risk limits.

The Board's structure was strengthened through a revised committee structure and increased Board independence. The charters were rewritten for all six committees. The two new committees address risk management, and technology and operations. Independence was improved with independent directors on the Compliance Committee, and the separation of the positions for CEO and Chairman of the Board in 2005. Six new Board members brought needed expertise in accounting, finance and business operations.

Communication was improved through more accurate and complete management presentations, candid information from independent oversight functions and improved

reports in areas such as internal audit and interest rate risk. However, communication will remain impaired until management, the Housing and Community Finance Committee and the Risk Policy and Capital Committee complete the development of corporate metrics for risk, performance and operations.

## Management and Human Resources

Management's supervision program is incomplete, and uncorrected deficiencies continue to adversely impact or impede effective supervision and decision making for the Enterprise. Management made significant progress in building a program that will allow for improvement in the future, but many programs and corrective actions are in their initial stages.

Deficiencies in management are centered in controls, communication and information used in managing risk, performance and operations. Corporate policies are largely complete but some corporate limits need strengthening, and management policies and written procedures are in varying stages of completion.

Communication has improved, but the inadequate escalation of a few issues indicated continued weaknesses in the information flow from middle management. Issues in data and systems coupled with varying quality in report content and format impact the quality and meaningfulness of many summary and executive management reports. The issues in reports and metrics impede a comprehensive understanding of all key issues by all executive management and the optimization of risk and performance management.

During the year, some business activities were poorly managed or little progress was made on projects. The lack of a satisfactory vendor management program coupled with the large increase in vendors fostered excessive costs. Aggregated counterparty credit risk was improperly reported, reducing the effectiveness in managing counterparty risk. Significant efforts failed to generate a complete program to correct deficiencies in the Acquisitions, Development and Construction (ADC) program during 2006 due to the magnitude of necessary changes. Although management expended significant efforts to correct these deficiencies once the issues were discovered or understood, much work remains to be done.

In several areas, management has made significant progress in addressing deficiencies in controls and building a structure and programs which will allow for future improvements. Corrective projects were initiated for major deficiencies in all business lines. Critical projects were satisfactorily planned and prioritized and addressed both interim solutions as well as long-term programs to address the Enterprise's deficiencies. However, progress varied widely due to the focus and resource demands needed to address financial reporting and disclosure issues. Efforts appropriately focused on the restatement project, accounting policies and control issues in the Controller department, but delayed several critical but lower-priority projects needed for current production.

*Deficiencies in management are centered in controls, communication and information used in managing risk, performance and operations.*

**Major progress was made in several areas, which include:**

- Revising and implementing new organizational structures for management committees, business units and independent oversight, and providing independent oversight with appropriate authority.
- Significantly improving the coordination and communication among business units as well as new and long-time personnel. Improving accountability for management and staff.
- Improving Board-level risk policies and limits.
- Hiring management and staff who bring needed expertise in industry standards.
- Remediating the identified Sarbanes-Oxley control deficiencies.
- Formalizing the delegations of authority for Senior Vice Presidents and higher-level executives, which was complete at year-end 2006.
- Initiating quality control programs, such as the pilot leading to corporate-wide use of Lean Six Sigma Concept.

Management has substantially improved the number and expertise of management and staff. Personnel numbers have increased by about 18 percent over the past two years, with the increase focused on staff to strengthen controls, governance and risk management. Over 35 percent of senior management positions and 53 percent of all officer positions are filled with outside hires. Management continues its efforts to fill vacancies, which are centered in model development and validation and in risk management in Housing and Community Development. Delays in hiring have largely been due to external factors.

## **Enterprise Risk Management**

The Chief Risk Officer (CRO) division was substantially improved during 2006, and the function accelerated improvements during the last half of 2005 as the permanent management team was hired. The CRO is addressing issues associated with the newness of the function, which include insufficient staffing levels and independent metrics, reports and risk measurement. Risk officers in the business units monitor risk and coordinate risk management with the CRO division, Internal Audit and the Compliance and Ethics division, but improvements are needed in expertise and time devoted to risk management.

The CRO division has been instrumental in improving business unit controls and standards, and introducing discipline and formal limits and approval processes for controlling risks and activities. Management and staff are technically strong and worked with the business units to incorporate industry standards or best practices into their policies, operations and risk management. The independence of the CRO division will remain compromised until its work in building out the business units' programs is complete and it has access to reports that are produced independent from the business units.

## Audit

During 2006, OFHEO did not rely on completed audits to support examination activities but will evaluate the appropriateness of reliance on Internal Audit work in 2007. The Audit department exhibited weakness during most of the year due to a program with deficiencies or inefficiencies in policies, quality and numbers of management and staff and its programs for managing the audits and the department's administration. However, Audit management's significant efforts and continual improvements throughout the year addressed the department's deficiencies, culminating in a satisfactory program at year-end 2006.

The Audit department exhibited deficiencies throughout its program that stemmed from former management. The new Chief Audit Executive developed a program that prioritized and corrected the issues. Major accomplishments include appropriate independence and authority, satisfactory risk assessment methodology applied to a sufficiently granular audit universe, meaningful communication and reports for the Board and business unit management, the build out of the audit management team and efforts that have significantly contributed to the improvement of business unit controls and standards.

---

## Operations

Operational risk is high and controls are weak but improvements were made in 2006. Poor or manually-intensive controls for many processes continue to represent moderate to significant deficiencies throughout the Enterprise. Manual controls have reasonably addressed several significant deficiencies but many cannot be fully corrected for years until improved and integrated systems fully automate processes.

### Control issues noted during 2006 include:

- Controls in many areas are manually intensive and/or do not meet industry standards primarily due to systems deficiencies. Many corrective actions provide the best controls possible in the current systems environment, but cannot fully mitigate the risks in reconciliations, report accuracy and segregation of duties. Some mitigating controls have not been proven sustainable. Material weaknesses exist in systems access controls.
- Management policies and written procedures used to communicate and standardize controls are incomplete. Metrics for risk, performance and operations are being developed but additional work is needed to define the metrics before this project can be completed.
- Many reports are not meaningful due to deficiencies in accuracy, timeliness or report content. Summary or executive management reports do not provide or highlight all needed information. In addition, the Chief Risk Officer division does not have access to reports produced independently of the business units.

Management has devoted substantial effort to improve controls, but corrective programs are in varying stages of planning and implementation. Management has established the foundation for programs that have addressed several deficiencies and has plans to improve operational processes and controls and Information Technology (IT) data and systems over time. Significant progress has been made in initiatives needed to launch the corrective programs in such areas as policies, staffing and organizational structure. In addition, management has demonstrated its ability to plan, prioritize, monitor and control projects. Deficiencies in vendor management were addressed with actions that focused on both the specific issue and the root cause to address its impact on other Enterprise activities.

**Major areas of improvement or accomplishments include:**

- The restatement project was satisfactorily planned, implemented and controlled using end-to-end work streams, which will help in completing the 2005 and 2006 financial statements. Many deficiencies in controls for Sarbanes-Oxley requirements have been addressed. However, significant work remains to rework restatement operations into catch-up and get-current operations, incorporate accounting functions that comply with Generally Accepted Accounting Principles (GAAP), and then integrate with existing production operations.
- By late 2006, operations were centralized in an independent business unit, Technology, Data, and Operations (TDO). TDO has been reorganized and new management is developing plans to address deficiencies in operations IT.
- Corporate policy for operations is complete, but management policies and written procedures will require substantial effort to complete.
- The CRO, Internal Audit, Chief Compliance Officer and the Sarbanes-Oxley review function are building and coordinating independent oversight of operational activities.
- Many issues in end-user computing were satisfactorily addressed and controlled.
- Controls in Treasury operations were improved to reasonably mitigate deficiencies identified in wire transfer segregation of duties.

## **Information Technology**

Most of the Enterprise's back-end and accounting applications are aging platforms and legacy business applications. That has significantly contributed to an ineffective internal control environment. The systems are able to provide stable performance for traditional loan product transactions, but this is due to the significant level of support provided by experienced teams that can address production challenges. Systems limitations have contributed to the inability to establish segregation of duties controls that meet industry standards and to deficiencies in conducting and controlling accounting and transaction processing and reconciliation. Data repository and platform deficiencies impact the ability to produce accurate and timely performance and risk information for internal use and external disclosures. Significant work remains to integrate restatement, catch-up and

get-current operations and GAAP-compliant accounting functions with current production operations.

Resources remained strained throughout 2006 due to the cumulative effect of maintaining normal business operations and improvements while also addressing inconsistent data repositories, legacy platforms and applications that are unable to meet changing business, market and regulatory requirements. As work on past financial statements is completed, employees will devote more time to other critical assignments and their regular jobs and consultants will be released. However, the plan to transfer knowledge to employees as consultants leave is not complete. As management properly continues to reduce administrative expenses, care should be taken to ensure adequate resources are available to continue the improvements in this area.

Business continuity and crisis management are well controlled with recovery plans and redundant data, systems and locations.

**Management's efforts have improved but not fully addressed deficiencies, and programs are in varying stages of improvement:**

- By late 2006, the management of the Enterprise's technology and business operations was centralized in an independent business unit. TDO, this new business unit, has been reorganized and has new management.
- TDO has developed comprehensive plans to address or mitigate control deficiencies and data quality, but many aspects of these plans have not been finalized or fully implemented. New TDO management is reviewing plans for integrating data management requirements with data center architecture plans. Full implementation of the plans will take years.
- All data used in the restatement were scrubbed for quality, but not all data used within Fannie Mae have been scrubbed. Unscrubbed data are used internally in some areas such as interest-rate risk measurement, creating some level of inaccuracy in model results. Management expects data used for financial reporting will be made accurate as financial statements are timely filed. Other data will take more than one year to correct.
- Aggressive but achievable plans for many IT projects were executed primarily by contractors that doubled the IT staff. Deficiencies in contractor selection and management led to inefficiencies and adverse events. Management began improving the process after these events.
- Projects to develop systems for Servicer and Investor Reporting (SIR), Federal Reserve Daylight Overdraft requirements and the segregation of funds used to make payments on debt and MBS were well planned, appropriately integrating IT and business unit interests. However, the SIR project suffered several delays due to restatement staffing requirements.

*...management initiated a stronger program to address its data issues and revise the plan to evaluate and improve IT throughout the Enterprise.*

In late 2006, management initiated a stronger program to address its data issues and revise the plan to evaluate and improve IT throughout the Enterprise. Management expects major progress in improving both data and IT during 2007.

### **Compliance**

The new Compliance and Ethics division made substantial progress in building its organizational structure and initiating programs to meet its function. However, significant work remains in completing its projects and coordinating an efficient program with the business units. Major accomplishments include: coordinating with the Board and management compliance committees; completing the employee code of conduct; coordinating Consent Order compliance; and making substantial progress in formalizing delegations of authority, standardizing policies and procedures, establishing a centralized policy repository and improving regulatory protocol with OFHEO.

### **Accounting**

Management has completed an evaluation of the Enterprise's accounting policies, and has provided OFHEO with some of the documents required to comply with OFHEO's accounting guidance. However, significant risks remain in that Fannie Mae is currently not producing timely quarterly and annual financial reports. The current financial reporting environment has proven stable enough to produce financial statements related to the restatement, but the Enterprise is not currently under the tight reporting timeframes that would be required of a timely filer and therefore it remains to be seen if the processes it is developing are robust enough to handle the task.

Fannie Mae made progress in 2006 toward returning to timely financial reporting by completing the restatement of 2002, 2003 and select 2004 information. The Deloitte & Touche report accompanying the restatement disclaimed an opinion on management's assessment of the effectiveness of the company's internal control over financial reporting as of December 31, 2004, because of a scope limitation. The Enterprise's external auditor's report also expressed an adverse opinion on the effectiveness of the Enterprise's internal control over financial reporting as of December 31, 2004, because of material weaknesses and the effects of a scope limitation. Deloitte & Touche issued an unqualified opinion on Fannie Mae's 2004 financial statement.

The Enterprise has begun effecting change in its control environment, which is the foundation for all other components of internal control. However, a significant number of control deficiencies still remain. Given the control deficiencies that are applicable to the financial statements, remediation efforts remain a critical concern. The Enterprise has made significant progress on the implementation of Section 404 of the Sarbanes-Oxley Act of 2002 (SOX); however, the Enterprise's SOX remediation is still in progress. The Enterprise is making significant progress toward closing its pervasive high- and medium-ranked 2005 deficiencies; nevertheless, remediation of some control deficiencies remains incomplete.

## Model Risk

The significant shift in business unit and Chief Risk Officer (CRO) resources to the restatement has appropriately focused efforts on developing and validating financial reporting models, which represent many of the Enterprise's highest-risk models. However, this shift caused significant delays in developing, implementing and/or validating other models that represent high to moderate risk. Validation work has been expedited with an incomplete CRO staff coupled with the use of consultants. Management plans to transition model development staff from restatement and catch-up efforts as their work is completed, which should allow the results of their work on current production models to be in effect by late 2007. However, the results from several models cannot achieve the highest degree of accuracy until TDO addresses the Enterprise's data quality issues.

Significant progress has been made toward the development of a revised model risk management program. The program design is satisfactory, but work remains in implementing a fully functional program. Organizational structure and processes redesigned include model development, operation, independent validation, documentation and other controls. Corporate policies are satisfactory and written procedures are incomplete but in progress. The model inventory is complete, and progress was made in independently validating key models and some types of documentation. Program implementation has been slowed by restatement and catch-up efforts and the need for additional qualified developers in the Business Analytics and Decisions department.

---

## Asset Quality and Credit Risk Management

The overall asset quality is strong with all loan and security portfolios exhibiting favorable quality and performance throughout 2006. Credit risk increased slightly from growth in sub-prime and other non-traditional products, but currently represents a low impact to earnings and capital. Credit risk from sub-prime and non-traditional loans, and securities collateralized by them is maintained at low levels through underwriting standards, credit enhancements and/or position limits. Counterparty credit risk represents significant exposure for the Enterprise.

Credit risk management has improved, but significant deficiencies centered in Housing and Community Development (HCD) and counterparty credit risk management continue to impede its effectiveness. The business units expended substantial effort in correcting deficiencies during 2006, but progress varied significantly among projects and business units. Many of HCD's projects are in their initial stages. Data and systems issues continue to adversely impact report quality in nearly all areas of credit risk. HCD's Risk Office, with oversight from the CRO division, was a key driver in correcting many issues in risk management, with the CRO helping to compensate for insufficient levels of risk management personnel in the business unit. Anti-fraud detection methodologies were improved for both single- and multifamily loans.

## **Single-Family Business**

Asset quality is strong due to a book of business that is mostly comprised of traditional mortgage products. Delinquencies remain low and manageable, with the serious delinquency rate at about 0.61 percent of the book and losses at about 0.016 percent. Losses due to Hurricane Katrina were low and less than originally estimated. Higher-risk products such as interest-only, sub-prime, Alt-A and negative amortization loans are growing, but are currently about 20 percent of the book of business. New initiatives target product growth in some higher-risk products.

Deficiencies remain in policies, staffing and report quality. Many of the policies and written procedures are outdated or incomplete. Additional staff is needed in risk management and some business units, with the deficiency most acute in Single-Family Credit (SFC), which includes the management of counterparties for single-family loans. Systems permit adequate service to clients for traditional loan products, but their deficiencies impact the Enterprise's ability to quickly introduce new products or enhancements. In addition, data and systems deficiencies continue to impact report design, accuracy and functionality. Delegations of authority were approved at higher management levels, but must be completed for management at lower levels.

SFC made progress in addressing the large number of operational, control and risk management deficiencies. In addition, progress has been made in codifying and implementing policies and written procedures. Business processes were significantly improved in the National Underwriting Center and the National Business Center. Loss management at the National Servicing Organization is now satisfactory.

Management completed or significantly improved several functions near the end of 2006. It will require time to determine the effectiveness of the changes. Executive management made progress in addressing issues in accountability and authority. The credit policy and limits for SFC and counterparty were completed at year-end 2006, and the business centers are in the process of completing policies to help standardize their practices. Management is re-engineering the credit-risk management framework to build out processes and formalize authorities. Issues in report accuracy, content and format are being evaluated by SFC. Staff numbers and expertise were improved in SFC, but vacancies remain. The quality assurance function for Product Acquisition Strategy and Support has nearly completed process flows and document procedures for the lender and investor channels. The loan loss reserve methodology used for all of Fannie Mae's mortgage products is reasonable.

## **Housing & Community Development (HCD) – Multifamily Business**

The multifamily portfolio's problem loans had a low impact on earnings during 2006 with serious delinquencies at 0.08 percent of the total portfolio and losses at 0.00006 percent. Losses were unusually low due to higher than expected sale prices of Other Real Estate Owned (REO) properties, workouts in the Gulf Coast hurricane-affected areas and low loss severity levels on defaulted loans.

HCD exhibits numerous deficiencies in controls, reports, policies and written procedures and staff numbers and expertise. Data and systems issues coupled with a low degree of automation adversely impact the efficiency of operations and the accuracy, completeness and timeliness of risk management reports, compromising the ability to manage risks and make business decisions. These deficiencies were material in the Acquisitions, Development and Construction (ADC) program, and the program was closed until program deficiencies are corrected. Staff vacancies remain throughout HCD and are primarily in risk management.

HCD management has developed a remediation plan and has made progress in correcting several of the division's deficiencies, but many projects are in their initial stages of correction and full implementation of the new program will take two to three years. The HCD risk management team, with oversight from the CRO division, has been taking steps that appear likely to ensure HCD's improvements will meet industry standards. HCD's efforts have focused on a complete revision of policies and the organizational structure, and the build-out of the operations and the credit-risk management functions. The entire portfolio was risk-rated by year-end 2005. The Loss Mitigation unit provides improved and expanded coverage for problem assets. The HCD quality-control process was improved and expanded to provide better coverage of HCD loans. Vacancies are being filled, but external factors have slowed progress.

## **Liquidity and Retained Mortgage Portfolios**

The liquidity investment portfolio exhibited high credit quality. In the retained portfolio, asset quality is strong, with product losses controlled by collateral, insurance and/or first loss coverage. Private-label securities are restricted to AAA-rated product until program deficiencies are addressed. Traditional single-family, fixed-rate mortgages and securities collateralized by those mortgages represent about 48 percent of the portfolio and all fixed-rate product represents about 70 percent of the retained portfolio. Adjustable-rate mortgages (ARMs), floaters, hybrids and multifamily product are about 30 percent of the retained portfolio. Private-label securities make up about 10 percent of the portfolio and are mostly comprised of floating-rate product. These categories overlap.

Systems deficiencies affect analysis and proactive management of the portfolio by preventing the generation of reports with sufficient granularity for the product sub-sectors of the portfolio. In addition, accounting and operational constraints for whole loans impedes active management planned in the future and may adversely impact return optimization. Management of private-label securities has improved with revised policies and timely watchlist reports. However, a stronger program is needed before private-label securities rated lower than AAA are purchased. The CRO is a key driver in incorporating industry standards and the use of benchmarks in portfolio management.

## Enterprise Counterparties

Risk from counterparties and concentrations in similar types of counterparties represent a significant risk for the Enterprise. The top nine mortgage servicers process 71 percent of the servicing book. The Enterprise's single largest servicing counterparty is Countrywide, which services 21 percent of the \$2.1 trillion servicing book and 20 percent of the \$90 billion private-label securities portfolio. Mortgage insurers also represent a significant level of counterparty risk for the Enterprise, with the top seven companies providing insurance for 17 percent of the \$2.5 trillion book of business.

*The CRO and business unit risk managers are correcting program deficiencies.*

The business units use basic practices in several aspects of risk management for individual counterparties. Counterparties are evaluated with credit-risk ratings, financial statement analysis and/or on-site visits. Risks from servicers are further managed with on-site reviews of operations and contract compliance as well as monitoring and coordination to address problem loans. Policies provide limits for individual counterparties based on a percentage of capital.

The program to identify, aggregate and communicate counterparty risk is ineffective, but deficiencies are being addressed by an effort led by the CRO.

### Program deficiencies include:

- Exposure to individual counterparties is not properly aggregated, creating errors of varying degrees of magnitude. Limits adequately controlled the risk that was actually measured for individual counterparties, however, 15 types of counterparty risk were not captured in the measurement.
- The Risknet system requires manual input, increasing the potential for errors. This proprietary system should be replaced with a vendor system that can provide cost-effective functionality.
- Deficient Board reports do not provide complete or accurate information on aggregated exposure to counterparties.

Poor accountability and communication has contributed to the inconsistent escalation of problems in counterparty risk and other credit risk issues. Management's efforts culminated in formalized delegations of authority and better communication by year-end 2006.

The CRO and business unit risk managers are correcting program deficiencies. The CRO and the newly created Potential Future Exposure Committee have identified previously uncaptured sources of counterparty risk. Improved exposure identification and measurement is underway, and the existing methodology is in use until better methods are established. The CRO began to improve the reports and aggregate and monitor the risks in late 2006.

---

## Liquidity

Liquidity risk is low due to ample asset liquidity relative to net cash needs and management that is effective but requires improvement in minor to moderate issues with limits and operations. Portfolio securities provide strong coverage of Fannie Mae's net cash needs beyond 90 days, with the calculation using conservative values for the portfolio securities. Management has consistently maintained the liquidity investment portfolio in excess of 5 percent of portfolio assets. Asset liquidity places a high reliance on repurchase agreements (repo).

Board policies provide guidance for responsibilities, short-term funding, liquidity investment portfolio credit quality and the use of a severe scenario which assumes no new debt issuance for 90 days. Board and management policies were revised during 2006 to address requirements detailed in examinations and the September 2005 Agreement. The revised policies are expected to be formally approved in 2007.

Processes and controls for obtaining asset liquidity are satisfactory but inefficient and increase the potential for errors. Cash management processes are satisfactory due to recently improved automation of cash forecasting which provides real-time monitoring of receipts and disbursements. However, the new repo funding process is not fully automated or intuitive, and the old system is proven but is only useful for moving large blocks of collateral during stress events. Management implemented processes during the year which largely mitigated the repo operational impediments. Manual controls for wire transfer are adequate, but won't meet industry standards until operations are fully automated. Liquidity operations reorganization and centralization into the independent operations business line was completed near year-end 2006.

Liquidity is satisfactorily managed, with liquidity issues appropriately escalated through key management, the CRO and committees, based on set triggers. Reports used in the day-to-day management of liquidity are satisfactory and include cash flow forecasts, assets available for repo or sale and funding maturity concentrations. Although compliance with the conservative 90-day net funding coverage is analyzed and reported, the analysis could be strengthened with additional, more realistic scenarios.

---

## Sensitivity to Market Risk

Management adequately controls interest rate risk with a minimally satisfactory risk management program that bases decisions on analytical tools and some assumptions and data that require improvement. Operations are generally satisfactory but are inefficient in several areas, and manual controls reduce many key risks until processes are more fully automated. The Board policy satisfactorily addresses responsibilities and provides a limit for interest rate risk. Although risk is managed and reported, the limit structure should be expanded to more formally control and communicate risk tolerance levels. Limits are expected to be fully addressed during 2007, but several issues remain in systems and data and will require up to one year for correction.

Risk management practices control interest rate risk with reasonable accuracy. Data and/or systems deficiencies required manually intensive and inefficient generation of information that introduced some level of uncertainty in interest-rate risk measurement. During 2006, the completed first phase of the Portfolio Data System Project improved risk measurement for debt, automated daily risk reporting and provided an audit trail for assumptions. The Project's targeted completion by year-end 2007 is expected to address many of the data and systems issues and improve risk measurement. However, risk measurement will not achieve the highest degree of accuracy until data quality issues are resolved.

Significant deficiencies in several fundamental controls for Capital Markets operations are being or have recently been corrected or mitigated. However, many deficiencies stemming from systems limitations will require roughly one year to correct due to their prioritization with the restatement and other significant projects and integration with other systems. Operations management has reduced the risk in many critical control deficiencies with mitigating processes. The revision or creation of management policy and written procedures and the creation and retention of documentation should be completed during 2007.

Management continues a program of effective risk management practices and communication of interest rate risk within Capital Markets. Risk is controlled and communicated through daily/weekly meetings of management and risk committees and Board and management reports that provide sufficient information to understand the risk profile. Additional interest-rate risk limits are expected to be added to policies in 2007.

The portfolios and related funding unhedged by derivatives represent a high level of risk. The quantity of risk for the portfolio hedged with derivatives is moderate due to the level of exposure from a significant move in longer-term interest rates. Management appropriately measures the interest rate risk from the retained portfolio and funding, but does not also measure interest rate risk for the entire Enterprise, which would allow management and the Board to understand the full impact of interest rate risk on economic earnings and capital. The current measurement covers the retained portfolio and related funding, but does not include cash flows from the guarantee fee business.

---

## Earnings

Financial information for 2005 and 2006 is unaudited, preliminary and includes estimates subject to revision upon completion and audit of the Enterprise's financial statements for those years. Fannie Mae's most recent publicly-disclosed financial statements are for the year ended December 31, 2004.

Earnings for 2006 were fair. Fannie Mae's core business continues to provide sources of significant recurring earnings. Earnings have been volatile, primarily as a result of mark-to-market changes in the value of the derivatives portfolio. Fannie Mae's earnings have been impacted negatively by limitation of the growth of the retained mortgage portfolio;

a lower net interest margin; and higher administrative expenses as a result of restatement costs, regulatory compliance efforts and higher staff levels and compensation. Growth in the guarantee business partially offset these factors, supported by an annual increase in outstanding MBS of 11.4 percent.

---

## Capital

OFHEO classified Fannie Mae as adequately capitalized for the four quarters of 2006. OFHEO formally classifies capital adequacy quarterly in accordance with Subtitle B of the Federal Housing Enterprises Financial Safety and Soundness Act of 1992 and with the requirements set forth in OFHEO's minimum and risk-based capital regulations. The Enterprise is required by federal statute to meet both minimum and risk-based capital standards to be classified as adequately capitalized. The Enterprise is adequately capitalized and maintains satisfactory cushions above statutory, regulatory and OFHEO-directed capital levels. OFHEO continues to evaluate and monitor the capital surplus, in part due to the evidence of significant operational risk and control weaknesses cited throughout this report. Capital planning processes are satisfactory and assess risks throughout the company, although methods of measurement and analysis can be enhanced.

Fannie Mae remains subject to the requirements imposed by the Consent Order dated May 23, 2006 and the Capital Restoration Plan approved February 17, 2005. The Capital Restoration Plan required Fannie Mae to achieve a 30 percent capital surplus over the minimum capital requirement by September 30, 2005 (OFHEO-directed capital requirement). Fannie Mae is required to maintain a capital surplus above the OFHEO-directed requirement on an ongoing basis. Fannie Mae met the initial September 30, 2005 requirement of 30 percent surplus and it has continued to maintain the surplus throughout 2006. The Consent Order also directed Fannie Mae to limit growth of its portfolio mortgage assets. Fannie Mae has complied with the growth restrictions and appropriately incorporated these restrictions into its capital plan. During 2006, OFHEO emphasized the importance of maintaining the capital surplus in excess of the OFHEO-directed requirement given the lack of timely financial filing by Fannie Mae and the continued operational weaknesses. OFHEO also emphasized the importance of tying future common stock dividend increases with significant achievement of milestones to correct identified weaknesses, including becoming a timely financial statement filer.

On March 30, 2007, OFHEO announced that it had classified Fannie Mae as adequately capitalized as of December 31, 2006. As of that date, the core capital of the Enterprise exceeded its OFHEO-directed capital requirement by \$4.163 billion, representing a 10.9 percent surplus over the OFHEO-directed capital requirement. The December 31, 2006 capital results incorporate adjustments for the accounting impacts identified in the company's 2004 SEC Form 10-K, which was filed with the Securities and Exchange Commission on December 6, 2006. OFHEO classified Fannie Mae as adequately capitalized for the preceding three quarters of 2006. Fannie Mae's capital plan describes

how the Enterprise expects to maintain a surplus over the OFHEO-directed capital requirement through a combination of controlled growth and earnings retention.

**Table 4 -  
Fannie Mae  
Minimum Capital  
Requirements,  
2006**

**(Dollars in billions)\***

	Mar-06	Jun-06	Sep-06	Dec-06
Core Capital	40.333	42.037	42.008	42.295
Statutory Capital Requirement	28.708	29.419	29.010	29.332
OFHEO-directed Capital Requirement	37.320	38.245	37.714	38.131
Surplus (based on OFHEO-directed Requirement)	3.013	3.792	4.294	4.163
Ratio to OFHEO-directed Capital Requirement	8.1%	9.9%	11.4%	10.9%

\* Numbers may not add due to rounding

During 2006, Fannie Mae continued to enhance and refine its capital planning processes and produced an acceptable capital plan on a quarterly basis. However, OFHEO communicated a need for enhancements to the capital plan and management initiated action to incorporate those enhancements appropriately and in a timely manner. Inconsistencies in the capital planning process were evident during 2006, highlighting the need to ensure better coordination and communication of corporate capital actions. Weekly management reports, which include current and projected capital trends and actions, provide senior management and the Board with effective tools to manage the capital position above OFHEO-directed requirements. Fannie Mae has conservatively managed the capital cushion during the ongoing financial restatement process to better ensure its ability to respond to unknown risks.

OFHEO's capital classification of Fannie Mae is based on Fannie Mae's best estimate of its financial condition, as certified and represented as true and correct to the best of Fannie Mae management's belief and knowledge. The December 31, 2006 capital classification, even though it incorporates adjustments for the accounting impacts identified in the 2004 10-K, remains subject to revision pending Fannie Mae's submission of audited 2006 financial statements and corresponding regulatory capital reports. First, second and third quarter 2006 capital classifications also remain subject to revision pending the submission of audited 2006 financial statements.

# Report of Annual Examination of Federal Home Loan Mortgage Corporation / Freddie Mac

---

## Examination Authority and Scope

### Examination Authority and Reporting Convention

This Report of Examination contains the results and conclusions of OFHEO's 2006 annual examination of the Federal Home Loan Mortgage Corporation ("Freddie Mac" or the "Enterprise") performed under section 1317(a) of the Federal Housing Enterprises Financial Safety and Soundness Act of 1992 (12 USC § 4517(a)). The OFHEO annual examination program assesses the Enterprise's financial safety and soundness and overall risk management practices. OFHEO currently utilizes a "CAMELSO" methodology (Capital Adequacy, Asset Quality, Management, Earnings, Liquidity, Sensitivity to Market Risk, and Operations), similar to that adopted by the federal depository institution regulators, to report examination results and conclusions to the Board of Directors and to Congress.

### 2006 Examination Scope

OFHEO's examination activities focused on: oversight provided by the Board of Directors and senior management, enterprise risk management activities, corporate governance functions, internal controls, accounting practices, new product development, internal audit and compliance with the requirements of the Consent Order the Enterprise executed on December 9, 2003. OFHEO supervisory activities also included reviews of asset quality, market and interest-rate risk management practices, earnings performance, capital adequacy, information technology and liquidity.

*Freddie Mac  
remains a significant  
supervisory concern.*

---

## Examination Conclusions

The Enterprise remains a significant supervisory concern. While efforts toward improvement are underway, senior management continues to revise plans and re-engineer processes to strengthen internal controls and remediate six material weaknesses and a number of significant deficiencies. Leadership from the Board and senior management is challenged as they strive to reshape the corporate culture, publish accurate and timely financial statements, implement long-term sustainable processes, improve overall governance and risk management capabilities, enhance information technology controls and stabilize the organizational structure.

Intensive efforts by the Board and management have been made to address internal control weaknesses; however, several key initiatives to remediate the control environment have not progressed as planned. Progress throughout 2006 was adversely impacted by the volume and complexity of issues, less than effective project management capabilities, and inconsistent execution in key segments of the comprehensive plan. Long-term resolution of identified issues will continue to require substantial efforts on the part of Enterprise personnel. The Board and management must continue to focus on needed cultural and organizational improvements identified in the internally-prepared, root-cause analysis to ensure historically weak operating practices are strengthened. Improvements to systems capabilities, information processing controls and the successful implementation of re-engineered business processes will be necessary to restore the overall control environment to a satisfactory condition.

The Enterprise has: (1) a qualified and active Board of Directors; (2) a senior management team committed to resolving internal controls weaknesses and returning to timely financial reporting; (3) adequate capital; (4) strong asset quality and credit risk management; (5) effective management of interest rate and liquidity risks; and (6) adequate earnings. During 2006, efforts to improve the risk management capabilities across the Enterprise commenced, and the new governance structure should provide the ability to better manage risk across the organization. Earnings volatility continues and results primarily from mark-to-market gains/losses on the guarantee asset and the elimination of hedge accounting for financial derivatives. Longer-term earnings prospects may be adversely impacted by declining net interest margins and competitive pressures. Structural and economic issues in the mortgage markets heighten the importance of continuously refining economic capital measures to better quantify risks and assess financial performance returns.

---

## Matters Requiring Board Attention

Key matters highlighted in this report requiring strong Board oversight are:

- **Internal Controls.** The Board should continue to oversee management's progress toward remediating widespread internal control weaknesses to enable the release of accurate and timely financial statements, permit a return to controls-based auditing and build sustainable internal control governance processes.
- **Information Technology.** The Board should ensure that technology-related issues identified in this report are addressed. Key challenges include gaining a deeper understanding of the key application controls, improving general controls, implementing a systems development process, improving contingency planning and developing a sustainable data and architecture strategy.
- **Credit Risk Management.** Continued close monitoring of credit portfolio trends is necessary as higher volumes of non-traditional credit products were purchased during 2006. Although these credit products are within current limits, these products exhibit higher than historical credit risk.

- **Corporate-wide Change Management.** The Board should continue to monitor management's efforts to: improve capabilities to effectively manage enterprise-wide change programs, gain a more in-depth understanding of the complexity of and resolution strategies for control weaknesses and support an environment that values strong internal controls and risk management functions.
- **Risk Oversight Functions.** The Enterprise Risk Management functions and the Internal Audit department made significant strides to strengthen their respective units and define appropriate governance structures. Continued Board support during the ongoing evolution of these functions and the implementation of the risk control self-assessment process will be necessary.

---

## Board and Management Supervision

### Board of Directors

The Board actively oversees the affairs of the Enterprise. Board and committee materials are satisfactory. All Board committee charters were reviewed and amended during the year, primarily to clarify and enhance risk management and technology oversight responsibilities. Corporate and divisional policies and procedures regarding financial reporting responsibilities are in place and a quality assurance review for financial information presented to the Board was implemented in 2006. The Board must continue to provide the necessary oversight to ensure that the remediation of the internal control weaknesses and cultural transformation initiatives are effective and that strategic priorities are clearly defined and articulated.

The number of Board and committee meetings held during 2006 met or exceeded the New York Stock Exchange (NYSE) listing standards, OFHEO's corporate governance regulations and Freddie Mac's Corporate Governance Guidelines. All but two of Freddie Mac's directors are independent, and all members of the Audit, Governance, and Compensation committees are independent as required for listed companies. Term limits and age restrictions are in effect. Of the 13 Directors currently serving, one board member exceeded those limits; however, this member was granted a temporary extension and will leave the Board during 2007. OFHEO will continue to monitor the Enterprise's transition plans to separate the positions of Chairman and Chief Executive Officer.

### Management and Human Resources

Over the past three years, virtually the entire executive management team has been replaced. This level of change was appropriate to improve corporate governance, replace underperforming employees, strengthen risk oversight functions and foster a culture of accountability. During 2006, the new executive management team made strides to improve communication, instill a sense of accountability and focus efforts on critical issues facing the Enterprise. Despite these efforts, the internally-prepared, root-cause analysis and the conclusions reached during OFHEO's supervisory activities indicate further efforts are required.

### Management will be challenged to address:

- Improving capabilities to effectively manage enterprise-wide change programs;
- Gaining a more in-depth understanding of the complexity of and resolution strategies for control weaknesses;
- Supporting an environment that values strong internal controls and risk management functions; and
- Addressing employee workloads and turnover of critical staff.

Progress in the human capital field is evidenced by the filling of all executive management positions, a reduced corporate-wide, voluntary turnover rate and an improved capability to attract external hires. The Enterprise continues to face shortages in staff expertise and efforts are underway to further develop leadership competencies at critical positions. Within certain segments of the Enterprise, limited numbers of subject matter experts are on hand to effectively cover simultaneous high-priority initiatives and baseline projects.

## Enterprise Risk Management

The Enterprise Risk Management (ERM) function was substantially enhanced during 2006. The newly implemented governance structure should provide the necessary foundation to ensure the timely identification and communication of current and emerging risks across the Enterprise. All employees currently have a risk management component in their employee performance evaluations and management plans to provide training to foster the risk management culture across the Enterprise. Efforts to more clearly define roles and responsibilities, refine policies and establish appropriate risk limits are also underway.

During 2007, ERM plans to further strengthen the capability of the group to independently produce risk metrics, assist in the development and implementation of an economic capital framework to consistently measure risk and performance and further aggregate financial and non-financial risks. Concerted efforts are also planned to better integrate risk management activities with the planning process, implement the redesigned risk controls, continue a self-assessment process, collect operational loss data, and build out the root-cause analysis capabilities.

## Audit

During 2006, OFHEO did not rely on the work of internal audit. Significant progress was made during 2006 to address prior recommendations and conduct pre-implementation reviews of new systems initiatives. During 2006, internal audit management continued progress toward developing a full cycle audit plan, completing and implementing scheduled enhancements in the audit methodology, augmenting staff and further developing a quality assurance program.

The Audit Committee actively oversees the internal audit function. The Audit Committee met 11 times during 2006. The General Auditor has sufficient interaction with the Audit Committee on a regular basis including periodic executive sessions during Audit Committee meetings. The content of reports prepared by the General Auditor for Audit Committee meetings is sufficient.

The General Auditor is qualified and independent. Since the General Auditor's arrival in April 2006, improvement opportunities for internal audit have been identified and enhancements to the internal audit function have started to materialize. The General Auditor appears to have the necessary skills and leadership abilities to effect further needed improvements.

---

## Operations

Operational risk is high and continues to be a primary supervisory concern. Throughout 2006, Freddie Mac was not able to produce accurate and timely quarterly financial statements. All internal control-related material weaknesses and significant deficiencies identified during 2005 or prior years' annual audits remain outstanding. The internal control structure remains fragmented, incomplete, and in some cases, undocumented. In addition, current systems limitations did not permit an effective and reliable quarterly close process. Remediation of control weaknesses including independent testing is required (controls must be complete and documented) before management and OFHEO can opine on the effectiveness of the control structure.

The Comprehensive Plan (the primary project to return the company to timely financial reporting, improve the control environment and permit reliance on internal controls over financial reporting by the external auditor) suffered during 2006 from ineffective planning and inconsistent execution. The original plan was submitted in April 2006 and continues to be revised. Aggressive time schedules, lack of independent quality assurance, inadequate management reporting, cultural issues of responsibility and accountability and project management deficiencies contributed to insufficient progress toward achieving the Plan's overall objectives. Although management and staff have worked hard to mitigate and remediate known control weaknesses, as of December 31, 2006, no remediation activity has been tested and verified to be effective.

*Operational risk  
is high and continues  
to be a primary  
supervisory concern.*

The Comprehensive Plan includes: remediating known control weaknesses, the end-to-end business process review, close process improvements and information technology general control remediation. Since control weaknesses are widespread and pervasive across the Enterprise, identifying control gaps and remediating most of the known material weaknesses are linked to successful completion of the end-to-end business process review. At the same time, process improvements are needed to achieve a timely, sustainable financial close process compliant with regulatory requirements. In addition, Information Technology General Controls (ITGC) must be operating effectively before management can rely on

automated information without time-consuming substantive review procedures and manual processes. The Comprehensive Plan requires continued Board and executive management involvement to ensure activities are properly sequenced, achieve plan objectives and resolve competition for resources, especially subject matter experts.

During 2006, management and staff completed formal root-cause analyses over eight events that contributed to delays producing the 2005 financial statements. They also began root-cause analyses over project management deficiencies in 2006. These exercises are important aids to understanding cultural issues, control deficiencies and business process failures that can help to limit the risk of recurrence. Management approved permanent staffing for a root-cause/problem analysis function in Operational Risk Oversight to provide an ongoing analysis capability.

Although considerable efforts are under way to remedy weaknesses in internal controls related to financial reporting, additional control weaknesses may exist elsewhere in the Enterprise. Plans to identify, assess and strengthen non-financial controls are commencing. These controls may include, but are not limited to, business continuity planning, business and risk performance measures and operating effectiveness metrics.

## **Information Technology**

Successful resolution of a number of the material weaknesses and significant deficiencies depend on information technology remediation efforts. Weaknesses continue in information technology systems development and delivery, information security, end-user computing systems, data quality, and change management.

The establishment of reliable Information Technology General Controls (ITGC) is necessary to establish the overall control environment. Limited progress in documenting and strengthening ITGC occurred during 2006. Late in 2006, management revised the plan to fully document and commence remediation of these controls. The ITGC project intends to document ITGC under the *Control Objectives for Information and related Technology* (COBIT) framework, verify effectiveness of controls in place and remediate weaknesses. Under the plan, ITGC control gaps will be identified in 2007 with remediation extending into 2008.

The lack of an effective systems development lifecycle methodology contributed to delays with the implementation of strategic technology upgrades and replacements. Throughout 2006, issues surfaced related to implementation of automation projects designed to replace legacy technology systems, improve controls and allow for shortened schedules for the monthly financial close processes. Interim measures to improve systems implementations include the establishment of the Targeted Quality Control function in December 2006. Management plans to adopt a systems development life-cycle methodology during 2007.

Weaknesses in core systems capabilities and slow replacement of legacy systems have required a heavy reliance on end-user computing (EUC), spreadsheets and manual processes in the financial close processes. During 2006, progress was made to inventory and implement EUC's controls; however, final completion of an effective EUC control framework was delayed and is now anticipated to be completed in 2007.

Overall data quality remains a concern. Management has begun developing data quality standards; however, some of the business plans are under development and more detailed plans suggest that efforts to bring the Enterprise into compliance with these plans are resource intensive and may not be scalable for all areas. Also, existing point-to-point systems architecture (existing systems and data infrastructure) compounds the problem related to improving data quality. Development of a long-term plan for systems architecture and improved systems development methodology controls would strengthen the remediation of data quality issues.

The current business continuity planning needs strengthening. Management has made progress with system recovery capabilities for higher-risk functions through the outsourcing of the settlement and custody functions and the establishment of an out-of-region wire transfer room.

## Accounting

Management is nearing completion of its effort to codify and update its significant accounting policies. However, significant work remains to develop complete accounting policies and procedures. Completion of this project will be a necessary step to demonstrate that approved accounting policies are incorporated into automated systems and operational procedures. OFHEO continues to closely monitor the resolution of a number of simplifying accounting assumptions that are used as part of the financial reporting process. Recruiting efforts continue as the Enterprise seeks to attract additional qualified accounting expertise.

The Enterprise still faces the challenge of becoming a registrant with the Securities and Exchange Commission (SEC). Currently, the Enterprise is not subject to the reporting schedules that would be expected of a timely filer, and therefore management must ensure that processes being developed are robust enough to handle this task.

In June 2006, the Enterprise issued its Information Statement and Annual Report to Stockholders for the Fiscal Year ended December 31, 2005. Based on the continued existence of material weaknesses on December 31, 2005, the Enterprise concluded that its internal controls over financial reporting were not effective on December 31, 2005. The external auditors, PricewaterhouseCoopers LLP, did not report on management's assessment of the effectiveness of the Enterprise's internal control over financial reporting as of December 31, 2005, or the effectiveness of the company's internal controls over financial reporting as of December 31, 2005.

Freddie Mac reported its 2006 financial results on March 23, 2007. On that date it published its Annual Report with audited financial statements.

*Freddie Mac still faces the challenge of becoming a registrant with the Securities and Exchange Commission.*

*Freddie Mac reported its 2006 financial results on March 23, 2007.*

## Model Risk

Model risk governance has improved. Further efforts are necessary to upgrade governance practices for model development and enhance the quality of independent model risk oversight.

In 2006, the Enterprise approved new model-related policies that strengthened model risk oversight. A number of significant models implemented over the past decade were not developed under a consistent and controlled development process. Management's progress in harmonizing and implementing procedures and practices with the new policies should improve the model development process throughout the Enterprise.

Independent model risk oversight is provided through the Modeling & Methods (M&M) group. M&M's authorities and scope of responsibility are now articulated in a written charter and policies. M&M is in the process of developing standards to achieve compliance with the newly adopted charter and policies. Once implemented, this group should provide meaningful independent evaluations of the quality of the business units' model development practices, the degree of adherence to corporate policy and professional standards. Efforts have been strengthened to ensure management resolves M&M findings in a timely and complete manner. M&M must continue to assess the sufficiency of staffing and other resources to fulfill its new, more broadly defined responsibilities. Management has exhibited the willingness and has taken steps to address the shortcomings identified and to enhance independent model risk oversight.

---

## Asset Quality and Credit Risk Management

The Enterprise's overall asset quality is strong. All portfolios currently exhibit favorable quality and performance metrics. The Enterprise prudently manages exposures to significant counterparties (e.g., seller/servicers, mortgage insurers and derivatives counterparties) and monitors top seller/servicer and mortgage insurer concentrations.

There are no immediate signs of significant deterioration in credit performance trends; however, expected default costs are increasing. Over the past several years, significant shifts in the mix of mortgage originations and the composition of the retained portfolio have occurred as the market continues to produce mortgages with higher-risk profiles. As the portfolio seasons, adverse changes in house price appreciation, mortgage rates or unemployment levels could negatively impact future performance.

During 2006, the governance structure improved significantly with the creation of the Governance, Nominating and Risk Oversight Committee, the Enterprise Risk Management Committee and the Credit Risk Subcommittee along with Board-approved credit policy and limits, and the delineation of roles, responsibilities and authorities for Credit Risk Oversight and for business line functions.

Underwriting standards and credit administration practices are prudent, although opportunities for improvement were identified. Line management and Enterprise Risk Management are in the process of addressing recommendations related to the

enhancement of business line credit policy and procedure development and implementation, data collection and reporting improvements, staffing issues and segregation of duties.

The Enterprise made concerted efforts to comply with OFHEO's 2005 mortgage fraud reporting regulation and related policy guidance. Recommendations for the Enterprise to augment several processes contained in the policy guidance include reporting of loan-level repurchases, prompt submission of the Mortgage Fraud Information Notice (MFIN), reporting of supplemental or corrected MFINs, and internal controls and procedures.

### **Single-Family Business**

Management has expanded the Enterprise's purchase and guarantee of higher-risk mortgages. In order to increase market share, meet mission goals, stay competitive and be responsive to sellers' needs, the Enterprise has increased the use of credit policy waivers and exceptions. Untested and alternative market products accounted for approximately 24 percent of 2006 new purchases and currently comprise 11 percent of the total single-family mortgage portfolio. Internal measures of credit quality reflect that the quality of incremental new purchases declined in 2006 as evidenced by a rise in expected default costs.

Current portfolio performance metrics reflect a low level of serious delinquencies and credit losses. Serious delinquencies remain low. The average mark-to-market loan-to-value ratio is estimated at 57 percent. Net credit losses in 2006 totaled \$203 million versus \$141 million in 2005. The largest segment of net credit losses is attributable to economic conditions in the North Central region. Hurricane Katrina losses continue to be low.

The Enterprise is in the process of updating its single-family credit policy to reflect its current credit risk appetite and corresponding strategies, and the Credit Risk Oversight group has increased its attention to credit policy waivers and exceptions.

### **Multifamily Business**

The multifamily credit portfolio remains sound. With improvements in vacancy levels and rent growth, the market was strong throughout 2006. The multifamily bond-equivalent rating for 2005 and for September 2006 year-to-date purchases was A- versus a 2006 full-year target of BBB+.

December 2006 delinquencies were up and were reported at 0.05 percent at the end of 2006 versus 0.00 percent at the end of 2005. The average mark-to-market debt-coverage ratio was 1.62 versus 1.61 for 2005, and only 15.7 percent of the portfolio had a mark-to-market debt coverage ratio less than 1.15 versus 16.1 percent of the portfolio for 2005. December 2006 net credit losses totaled \$3.7 million—0.67 basis points of the active multifamily unpaid principal balance.

## Liquidity and Contingency Portfolios

At December 31, 2006, the liquidity and contingency portfolio contained assets with credit-ratings of AAA (50 percent), AA (33 percent), and A (17 percent), exhibiting the high credit quality necessary in a liquidity portfolio. Credit quality of marketable securities in the liquidity and contingency portfolio remained consistently strong with more than 99 percent of the asset-backed securities at AAA and less than 1 percent rated A.

## Investment Portfolios

During 2006, the composition of the retained mortgage portfolio (excluding the liquidity portfolio) was stable, with agency products representing approximately 65 percent total unpaid principal balance and non-agency products representing 35 percent. Through June, the unpaid principal balance of the agency securities portfolio grew by approximately 2 percent and non-agency securities grew by approximately 4 percent. This contrasts with 2005 when the non-agency securities portfolio grew by 39 percent for the year.

As of July 1, 2006 the Enterprise initiated a voluntary commitment to limit the growth of the retained mortgage portfolio to 2 percent annually on the basis of Generally Accepted Accounting Principles (GAAP). During the second half of 2006, the market tightened and the Enterprise managed the retained mortgage portfolio to protect against the possibility of market value gains that could result in GAAP growth in excess of the 2 percent annual limitation. The agency securities portfolios declined by approximately 6 percent and the non-agency securities portfolios declined by approximately 4.5 percent.

During 2006, net purchases of non-agency floating-rate securities outweighed net purchases of non-agency and agency fixed-rate and agency floating-rate securities. Non-agency floating-rate securities experienced significantly faster prepayment speeds relative to other securities. The Enterprise purchased higher volumes of non-agency floating-rate securities because of their positive impact on affordable housing goals and the risk/return profile.

As of September 30, 2006, roughly 99 percent of the mortgage asset-backed portfolio was rated AAA, and 98 percent was internally rated as having either excellent or good coverage for current delinquencies.

## Enterprise Counterparties

Credit Risk Oversight provides oversight of aggregate counterparty risks and exposures at the Enterprise level for all counterparties and maintains a Counterparty Watch List. All three business lines—Single-family, Multifamily and Investments and Capital Markets—manage their counterparties with a particular focus on each business line's top counterparties. Single-family's ten largest counterparties represent 69 percent of the business' total exposures. Multifamily's ten top customers (seller/servicers) represent approximately 69 percent of the business' portfolio unpaid principal balance with the top customer representing 19 percent of portfolio unpaid principal balance. The ten top borrowers represent 14 percent of portfolio unpaid principal balance with the top borrower representing 4 percent of portfolio unpaid principal balance. At the business

level, Investments and Capital Markets represents roughly 81 percent of the Enterprise's counterparty exposures while Single-family represents 17 percent and Multifamily represents 1 percent. For Investments and Capital Markets, fed funds represent the largest counterparty exposure.

---

## Liquidity

Management adheres to sound practices for managing liquidity. The Enterprise is not vulnerable to funding difficulties at this time, and earnings and capital exposure from the liquidity risk profile is low. The Enterprise has access to sufficient sources of funds to meet present and anticipated liquidity needs.

Management is able to effectively forecast liquidity needs and sources and to identify, measure, monitor and control the Enterprise's liquidity position. Management has enhanced liquidity management practices during 2006 to better forecast short- and long-term liquidity needs. Liquidity management policies and procedures are being revised to support the enhanced processes. A satisfactory liquidity contingency plan is in place. Management has consistently maintained its liquidity and contingency portfolio at a prudent level, consistent with policy and OFHEO regulations. Risk limits are in place to ensure sufficient liquidity levels, and an independent risk oversight group evaluates limits, exposures and pertinent metrics on a daily, weekly and monthly basis. Management conducts liquidity event testing on a periodic basis, and the results indicate that the Enterprise should be able to withstand severe liquidity events.

During the second quarter of 2006, the short-term investment portfolios in the liquidity and contingency, the working capital and the money market portfolios increased approximately \$30 billion, reflecting efforts beginning in May to increase short-term investments in anticipation of the July 20, 2006, Federal Reserve's Payment System Risk Policy change. The second half of 2006 saw the reduction of the \$30 billion in short-term investments as the Enterprise gained greater efficiency in managing its daily cash position. The temporary growth of the low-risk, short-term investments was a prudent step in ensuring Freddie Mac's ability to comply with the July Federal Reserve overdraft policy change.

*Management adheres to sound practices for managing liquidity.*

---

## Sensitivity to Market Risk

Overall interest-rate risk exposures are acceptable and management is effective. During 2006, Enterprise management was able to identify, measure, monitor and control the sensitivity to market risk in a manner commensurate with the nature and complexity of the Enterprise's activities. Measures of rate sensitivity gauge the degree to which changes in interest rates can adversely affect the Enterprise's earnings and fair value.

Given the nature of the Enterprise's business, fair value and earnings are highly sensitive to changes in rates and spreads. The Enterprise relies primarily on financial derivatives (in conjunction with callable debt) to maintain interest-rate risk exposures within desired ranges. Financial derivatives instruments are highly sensitive to changes in rates and that volatility is reflected in the Enterprise's financial statements because hedges are marked-to-market through income and most assets and liabilities are not. Sensitivity analyses and stress testing indicate that the Enterprise's market value of equity is adequately protected against sudden significant changes in rates and in spreads between certain rates.

Board-approved asset/liability management (ALM) policies and limits are designed to ensure that management maintains interest-rate risk exposures within prudent boundaries and avoids the need to engage in large rebalancing activity. The Board revisits these policies and limits at least annually, and several senior management committees and subcommittees, as well as an independent market risk oversight group, exercise ongoing oversight and monitoring of Enterprise exposures relative to established limits and thresholds. In addition, two Board committees monitor the Enterprise's results against approved limits and performance objectives. Decision-making authority is formally delegated and effectively communicated within the organization at least annually. Risk measurement is performed both in-house and through an outside service provider. Management reports provide the information necessary to inform and support decision-making at appropriate levels of the organization.

Publicly-reported measures of interest rate risk—Portfolio Market Value Sensitivity (PMVS-Level and PMVS-Yield Curve) and duration gap—reflect that management kept exposures stable and within applicable limits and operating thresholds throughout 2006. PMVS expresses the degree to which the market value of equity is impacted by adverse parallel (50 basis point) and non-parallel shifts (12.5 basis point shifts at the two-year and 10-year points) in the London Interbank Offered Rate (LIBOR) curve. Additional, nonpublic, quantitative measures of interest rate risk, including convexity, vega, key rate duration and basis risk exposure, reflect that management maintained exposures within applicable internal limits/thresholds as well.

In January 2006, OFHEO issued a letter requiring a divestiture plan for certain commercial mortgage-backed securities structures that were not allowed under the Enterprise's charter; management has completed the sale of those securities. Management also remediated several matters pertaining to investments in non-agency home equity asset-backed securities floaters. In addition, the Board and management have augmented oversight of a variety of issues pertaining to the Asset/Liability Management group's position taking on levels of rates, spreads and volatility reported internally under asset liability management returns. The significant and volatile impact these activities have on fair value continue to warrant appropriate scrutiny to ensure that they are properly authorized, measured, monitored/reported and subject to appropriate limits. The Enterprise has committed to reviewing and enhancing its public disclosures to adequately describe the risk-taking activities which are currently grouped and reported within its ALM and hedging functions.

---

## Earnings

Earnings performance for 2006 was fair. GAAP net income during the period 2002 to 2005 ranged from a high of \$10.1 billion to a low of \$2.1 billion reflecting a steady downward trend since 2002. A similar negative trend is exhibited in the change in fair value of common equity before capital transactions, which declined from \$5.6 billion in 2002 to \$1.0 billion in 2005. In 2006, net income increased to \$2.2 billion from \$2.1 billion in 2005.

Earnings have been volatile as a result of mark-to-market gains/losses on the guarantee asset and the derivatives portfolio. Declining interest rates caused mark-to-market losses on both the guarantee asset and the derivatives portfolio during the second half of 2006.

Long-term declines in earnings are due to a number of factors, some of which are recurring and are likely to have a dampening effect on future earnings. Competitive pressures along with a declining net interest margin will likely impact future earnings. A flattening yield curve, increased competition for mortgages and the re-funding of lower-coupon fixed-rate debt that either matured, was called or was repurchased, contributed to the downward pressure on the net interest margin in 2006. Since 2004, the net interest margin has declined by about 60 basis points, to 0.57 percent in the fourth quarter of 2006. If current market conditions continue, Freddie Mac expects the net interest margin to decline in 2007 as lower coupon debt matures. Administrative expenses of approximately \$1.6 billion were slightly higher than in 2005.

The core guarantee business continues to provide significant recurring earnings; however, significant sources of revenue are concentrated in several mortgage lenders. Guarantee fee income increased by \$0.2 billion in 2006. Guarantee fee growth was supported by an average annual increase in outstanding participation certificates of 15.2 percent. The loan loss reserve increased during 2006 from \$414 million to \$420 million.

---

## Capital

OFHEO classified Freddie Mac as adequately capitalized for the four quarters of 2006. OFHEO formally classifies capital adequacy quarterly in accordance with Subtitle B of the Federal Housing Enterprises Financial Safety and Soundness Act of 1992 and with the requirements set forth in OFHEO's minimum and risk-based capital regulations. The Enterprise is required by federal statute to meet both minimum and risk-based capital standards to be classified as adequately capitalized. The Enterprise is adequately capitalized and maintains satisfactory cushions above statutory, regulatory and OFHEO-directed capital levels. OFHEO continues to evaluate and monitor the capital surplus, in part due to the evidence of significant operational risk and control weaknesses cited throughout this report. Capital planning processes are satisfactory and assess risks throughout the company, although methods of measurement and analysis can be enhanced.

OFHEO imposed a capital surcharge of 30 percent of the minimum capital requirement in January 2004 due to increased operational risk. OFHEO also concurred with the Enterprise's decision to limit retained mortgage portfolio growth as recommended by OFHEO, further enhancing the capital adequacy of Freddie Mac. During 2006, OFHEO emphasized the importance of maintaining a capital surplus in excess of the OFHEO-directed requirement given the lack of timely financial filing and the continued operational weaknesses. The Enterprise has maintained the surplus above the OFHEO-directed requirement since inception of the agreement. The Enterprise has also remained in compliance with the mortgage portfolio limits and appropriately incorporates these restrictions into its capital plan.

On March 30, 2007, OFHEO announced that it had classified Freddie Mac as adequately capitalized as of December 31, 2006. As of that date, the core capital of the Enterprise exceeded its OFHEO-directed capital requirement by \$2.573 billion, representing a 7.7 percent surplus over the OFHEO-directed capital requirement. OFHEO classified Freddie Mac as adequately capitalized for the preceding three quarters of 2006. Freddie Mac's capital plan describes how the Enterprise expects to maintain a surplus over the OFHEO-directed capital requirement through a combination of controlled growth and earnings retention.

**Table 5 -  
Freddie Mac Minimum  
Capital Requirements,  
2006**

**(Dollars in billions)\***

	Mar-06	Jun-06	Sep-06	Dec-06
Core Capital	37.591	38.123	37.035	36.170
Statutory Capital Requirement	25.488	26.484	25.979	25.844
OFHEO-directed Capital Requirement	33.134	34.430	33.773	33.597
Surplus (based on OFHEO-directed Requirement)	4.457	3.693	3.262	2.573
Ratio to OFHEO-directed Capital Requirement	13.5%	10.7%	9.7%	7.7%

\* Numbers may not add due to rounding

During 2006, the Enterprise continued to enhance and refine its capital planning processes and produced an acceptable capital plan on a quarterly basis.

*During 2006, the Enterprise continued to enhance and refine its capital planning processes and produced an acceptable capital plan on a quarterly basis.*

OFHEO communicated a need for enhancements to the capital plan and management incorporated these enhancements appropriately and in a timely manner. Weekly management reports, which include current and projected capital trends and actions, provide senior management with effective tools to manage the capital position above OFHEO-directed requirements.

Freddie Mac reported 2006 financial results on March 23, 2007. OFHEO reaffirmed the capital classifications for the first three quarters of 2006 based upon the final accounting and capital data for those respective periods.

# Accounting

During 2006, neither Enterprise was able to provide the public with timely financial information. Freddie Mac has been unable to produce timely financials since 2002 and Fannie Mae since 2004. Both Enterprises continued to suffer from problems with accounting systems and internal controls. Fannie Mae is currently working to produce 2005 and 2006 financial information by the second half of this year, while Freddie Mac is working to produce quarterly statements in 2007.

The need to focus on internal control and systems problems continues to inhibit the Enterprises' ability to respond to changes in the market, the economy and accounting standards. To help understand the new challenges facing the Enterprises, it is helpful to review the accounting environment that existed pre-restatement and the difficult lessons learned from the past.

---

## The Changing Accounting Model

Historical cost has long been the predominant valuation model, and accounting standard-setters have used this model as a foundation for standard-setting. However, there has been an ongoing debate within the accounting profession and among financial statement users over the usefulness of financial statements prepared using the historical cost/accrual accounting model versus using a fair value model. Proponents of the historical cost/accrual accounting model argue that historical cost numbers are more reliable and are objectively verifiable and that the proper matching of revenue and expense leads to a more realistic picture of income in the short run. They also argue that fair value injects volatility into earnings that represents liquidation values that are not likely to be realized by a going concern. On the other hand, proponents of fair value argue that fair value—defined as the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date—better reflects the economic reality of a firm by showing the volatility that actually exists rather than showing artificially smooth numbers. In the 1980s, a push toward a fair value model emerged from these discussions.

As a result of this debate, in 1986 the Financial Accounting Standards Board (FASB) initiated a project related to Financial Instruments and Off-Balance-Sheet Financing, the purpose of which was to improve the disclosure of the value of financial instruments. In 1987, FASB issued an Exposure Draft on Disclosures about Financial Instruments. After receiving numerous comment letters, FASB concluded that the disclosure issues should be considered in separate phases. The first phase of that project addressed financial instruments with off-balance-sheet credit risk or market risk and all financial instruments with concentration of credit risk. The second phase addressed disclosure of other information about financial instruments.

In 1990, FASB issued Statement of Financial Accounting Standards (SFAS) No. 105, *Disclosure of Information about Financial Instruments with Off-Balance-Sheet Risk and*

*Financial Instruments with Concentrations of Credit Risk.* SFAS 105 established requirements for all entities to disclose information principally about financial instruments with off-balance-sheet risk of accounting loss. In 1991, FASB issued SFAS 107, *Disclosures about Fair Value of Financial Instruments*, the second phase of its 1986 project. SFAS 107 requires disclosures of the fair value of all financial instruments, both assets and liabilities recognized and not recognized in the statement of financial position. Following the release of SFAS 107 both the debate surrounding fair value and the inclusion of fair value concepts within FASB statements heightened.

Since 1991 the accounting profession has witnessed a shift away from the historical cost model toward the fair value model. Over this 15-year period, the accounting profession has seen a progressive increase in the inclusion of fair value concepts in the accounting literature. At present 68 FASB or Accounting Principles Board pronouncements require or allow fair value measures. It is interesting to note that three of four SFAS issued in 2006 (SFAS 155, *Accounting for Certain Hybrid Financial Instruments*, SFAS 156, *Accounting for Servicing of Financial Assets* and SFAS 157, *Fair Value Measurement*) dealt primarily with fair value. The trend continues in 2007 with the recently issued SFAS 159, *The Fair Value Option for Financial Assets and Financial Liabilities*.

*Since 1991 the accounting profession has witnessed a shift away from the historical cost model toward the fair value model.*

The challenge that all companies faced over the past 15 years and will continue to face in the future is producing meaningful financial statements that use a mix of historical cost and fair value. This is often referred to as a mixed-attribute accounting model. While FASB has required greater use of fair value measurements in financial statements because it perceives that information to be more relevant to investors and creditors than historical cost information, FASB's gradual approach to adopting a fair value model has resulted in the current mixed-attribute model. Under the current model, some financial instruments are measured based on historical cost, some at amortized cost, some at lower of cost or market and some at fair value. For those instruments measured at fair value, the change in fair value is sometimes recognized in earnings and sometimes in accumulated other comprehensive income (AOCI), which is a component of stockholders equity. This changing accounting landscape has been particularly challenging to the Enterprises.

---

## Past Accounting

The extraordinary financial success and rapid growth of both Enterprises in the 1990s contributed to a belief among management and employees that they were "best in class" and that their heavy emphasis on steady, strong growth in earnings per share could be maintained indefinitely. During this period of rapid growth, the Enterprises tended to focus more on business innovations than back-end accounting systems and the people necessary to implement and maintain them.

When faced with a changing accounting model that might challenge this steady record of earnings growth and the existing accounting systems, both Enterprises chose a path of “creative accounting” rather than adhering to then-issued (fair value) accounting standards that, by their very nature, would reveal the volatility of the Enterprises’ business.

The use of inappropriate accounting strategies to achieve steady earnings growth began in the mid-1990s. Both Fannie Mae and Freddie Mac inappropriately applied SFAS 91, *Accounting for Nonrefundable Fees and Cost Associated with Originating or Acquiring Loans and Initial Direct Costs of Leases*, establishing amortization policies that allowed them to avoid current-period volatility. Also during this period, both Enterprises maintained loan loss reserves that were unjustifiably high relative to actual and projected credit losses.

The preoccupation of Fannie Mae and Freddie Mac with steady earnings growth and achieving earnings targets was well established by 1998, when FASB issued SFAS 133 *Accounting for Derivative Instruments and Hedging Activities*, an accounting standard that was certain to inject volatility into the timing of earnings recognition. SFAS 133 requires that derivatives be carried on the balance sheet at fair value. Changes in a derivative’s fair value are included in earnings, unless the derivative is designated and qualifies for hedge accounting. Hedge accounting provides a means for a matching of the earnings effect of a derivative and the related designated hedged transaction, thereby mitigating the impact of marking-to-market the derivative.

The accounting framework in SFAS 133 (fair value accounting) brought significant changes to prior accounting practices, which were historical cost/accrual-based. SFAS 133 eliminated the concept of synthetic accounting, a concept that essentially allowed derivatives to be accounted for on an accrual basis together with the related hedge item, in order to “synthetically” replicate a fixed or floating-rate instrument, as applicable. Synthetic accounting was an accounting treatment followed by many entities, including the Enterprises, prior to SFAS 133. Some entities, such as broker-dealers and investment companies, account for most or all of their assets and liabilities at fair value, with changes therein flowing through earnings. When such entities use derivatives to manage risk, they often achieve a natural offset in earnings due to the mark-to-market of both the derivatives and the assets/liabilities that give rise to the risk. The Enterprises, as well as most banks and finance companies, apply a mixed attribute model to accounting for most financial assets and liabilities. Thus the introduction of fair value accounting for derivatives under SFAS 133 had the potential to create significant earnings volatility unless hedge accounting was used.

Both Enterprises faced significant challenges in qualifying for hedge accounting. Due to the extensive documentation and effectiveness calculation requirements, hedge accounting under SFAS 133 was most easily adopted by entities with simple, passive hedging approaches in which hedges are established and allowed to run their course. However, Fannie Mae’s and Freddie Mac’s hedging approaches were neither simple nor passive. The complexities of funding a large mortgage portfolio and managing the associated interest rate risk necessitated an active, dynamic hedging approach to respond to changing market conditions and portfolio rebalancing requirements. Such an environment adds significant complexity to the administrative and systems requirement

to support hedge accounting. Despite the challenges noted above, the Enterprises had a strong desire to retain the smooth earnings results that had been possible under accrual-based accounting, and neither wanted to invest money in new accounting systems that would be necessary to meet the requirements for hedge accounting under SFAS 133.

During the late 1990s and early 2000s, both Fannie Mae and Freddie Mac spent significant time and resources to develop strategies that would mitigate the earnings volatility created by the changing accounting landscape. While SFAS 133 presented the largest potential for overall earnings volatility, many other accounting changes that were taking place put pressure on the Enterprises' ability to produce steadily increasing earnings. These other changes included revising accounting standards for asset transfers and securitizations (SFAS 140, *Accounting for Transfers and Servicing of Financial Assets and Extinguishment of Liabilities*) and impairments (SFAS 115, *Accounting for Certain Investment in Debt and Equity Securities* and EITF 99-20, *Recognition of Interest Income and Impairment on Purchased and Retained Beneficial Interest in Securitized Financial Assets*). An area of particular concern at both Enterprises was that of "other than temporary impairments." Generally Accepted Accounting Principles (GAAP) require that Interest-Only (IO) securities, financial assets that are particularly sensitive to changes in interest rates, and Buy-Ups (BUs), which are price adjustments the Enterprises pay to increase the guarantee fee rate lenders pay for the Enterprise's guarantee of MBS backed by the lender's mortgages, be recorded at fair value with changes in fair value recorded in earnings if the items are carried as trading securities or in AOCI if they are carried as available-for-sale (AFS) securities. If unrealized losses on the AFS securities were judged to be other than temporary, then an impairment must be recognized through earnings. The Enterprises both incorrectly accounted for IO securities and BUs, masking the earnings volatility that proper accounting would have reflected.

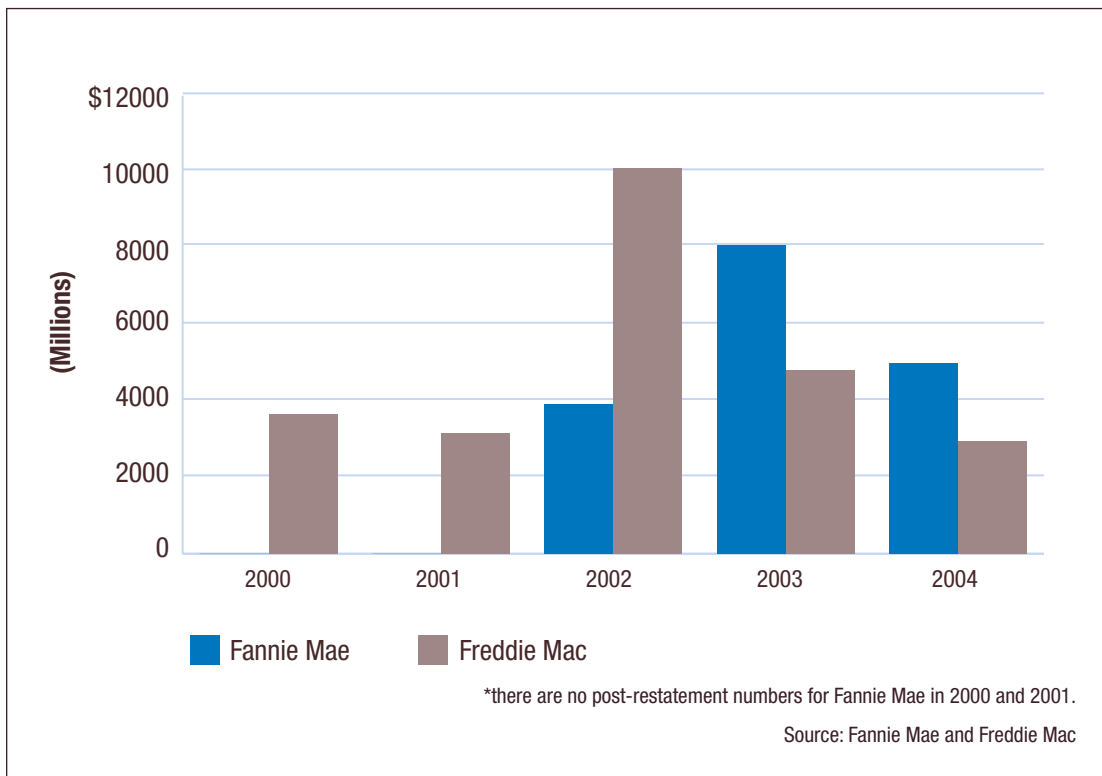

The tone set by then-senior management to produce smooth, steady earnings growth at a time when the changing accounting standards, if applied properly, would have revealed the true volatility of earnings set the stage for financial restatements at both Enterprises. In January 2003 Freddie Mac announced it would restate financial results for the years ended 2000, 2001 and 2002. It did so in November 2003 and has since produced 2003-2005 financial results and just recently produced 2006 results. In December 2004 the SEC concurred with OFHEO examination findings and required Fannie Mae to restate financial results for the years ended 2002, 2003 and 2004. Fannie Mae produced restated results in December 2006 and is currently working to produce 2005 financials. Chart 6 presents the steady earnings growth portrayed by the pre-restatement numbers for both Fannie Mae and Freddie Mac.

**Chart 6 -  
Net Income**

In contrast to the steady growth shown in Chart 6, Chart 7 presents the volatile earnings reflected in the GAAP-compliant restated numbers. As Fannie Mae has not, and does not plan to, restate earnings for 2000 and 2001, those columns are excluded from Chart 7.

**Chart 7 -  
Net Income  
Post-  
Restatement**

---

## Future State

Current management at both Enterprises has made progress toward timely filings, establishing GAAP-compliant accounting policies and remediating many control deficiencies. However, both management teams face significant challenges as they move toward timely filing, remediate the remaining control deficiencies and build robust accounting systems while continuing to deal with a changing accounting environment.

### Recent Fair Value Standards

As mentioned previously, four recent SFAS issued by FASB dealt primarily with fair value. Three of the four standards (SFAS 155 (2006), SFAS 157 (2006) and SFAS 159 (2007)) have the potential to have significant impact on both Enterprises. SFAS 155, *Accounting for Certain Hybrid Financial Instruments*, requires that certain MBS and other interests in securitized financial assets be analyzed for embedded derivatives. It also provides an election to record financial assets and liabilities at fair value with changes reflected in earnings if they would otherwise be subject to derivatives accounting. The application of this standard provides the potential for additional financial instruments to be carried on the Enterprises' balance sheets at fair value with the change in fair value flowing through earnings. Adoption of this standard will require systems modifications and development at both Enterprises.

SFAS 157, *Fair Value Measurements*, provides guidance for using fair value to measure assets and liabilities by defining fair value. It also establishes a framework for measuring fair value and expands disclosures related to fair value measurements. While SFAS 157 does not require any new fair value measurements, it does require the use of market participant information when it is reasonably available without undue cost and effort. Therefore, the Enterprises will need to determine the availability of market-based information, the cost and effort involved in obtaining this information and the cost of the additional disclosure requirements. Adoption of this standard will also require systems modifications and development at a time when personnel and systems resources are at a premium as the Enterprises work toward becoming timely filers.

SFAS 159, *The Fair Value Option for Financial Assets and Financial Liabilities*, provides entities with an irrevocable election to record financial instruments at fair value on a contract-by-contract basis with changes in fair value recognized in earnings. One goal of this standard is to reduce complexity in accounting and volatility in earnings caused by the mixed-attribute accounting model. This standard has the potential to significantly change the financial statements of both Enterprises by measuring and recording most financial assets and liabilities at fair value. The standard also has the potential to create inconsistency in accounting between the Enterprises should they choose different options in the adoption process. Adoption of this standard could also require systems modifications and development during 2007.

## Proposed Standards

Further, while not yet final, other proposed accounting changes have the potential to affect the Enterprises. These include changes regarding derivatives disclosures and a proposed amendment to SFAS 140, *Accounting for Transfers and Servicing of Financial Assets and Extinguishment of Liabilities*.

The proposed derivatives disclosures statement provides guidance on enhanced disclosure requirements related to derivatives. The proposed statement's overall goal is more transparency such that financial statement users could better assess the overall risk of derivatives from both a quantitative and qualitative perspective. Adoption of this standard could also require significant systems modifications and development in 2007.

Lastly, a proposed amendment to SFAS 140, while still in the deliberative stage, has the potential to prompt significant accounting changes at one or both Enterprises. Depending on its final form, the amendment could dramatically change the way Freddie Mac issues its Participation Certificates and/or it could restrict the use of Qualified Special Purpose Entities, which would have a larger impact on Fannie Mae. A new Exposure Draft of the proposed amendment is scheduled for release in the second quarter of 2007. This Exposure Draft has the potential to have a significant effect on both the measurement and recording of assets and liabilities on the Enterprises' financial statements and to create a need for systems modification and development, all at a time when personnel and systems resources are at a premium.

*...other proposed accounting changes have the potential to affect the Enterprises.*

---

## Fair Value Implementation

In summary, while all entities today still face a mixed-attribute accounting model, at least in the area of financial instruments, FASB has made substantial progress in the move toward fair value. In the 1980s and 1990s when Fannie Mae and Freddie Mac faced the beginning of this changing accounting landscape, they chose to minimize the changes and maintain the status quo through creative accounting that did not adhere to GAAP. This created an environment that led to restatements at both Enterprises.

The current management at Fannie Mae and Freddie Mac face equally challenging changes in the market, the economy and the accounting environment. Both Enterprises provide a year-end fair value balance sheet as a supplemental non-GAAP measure, stating that when used in conjunction with their GAAP financial statements this fair value measurement could serve as a valuable tool for investors. Both Enterprises also identified fair value measurement as a critical accounting policy in their most recently released financial statements, emphasizing the fact that fair value measurement has become a critical component of the current mixed-attribute model. With the newly released SFAS

159, *The Fair Value Option for Financial Assets and Financial Liabilities*, these measurements have the potential to become even more important to the Enterprises.

OFHEO believes fair value is an important measure of available capital because it reflects changes in the fair value of the assets as well as the derivatives and debt used to manage the risk inherent in those assets. By way of contrast, OFHEO's current core capital measure is a mixed-attribute measure. Therefore, OFHEO will be closely monitoring the process used by the Enterprises in adopting SFAS 159 as well as monitoring the measurement process used to produce the supplemental non-GAAP fair value balance sheet.

# Regulations and Guidances

---

## Regulations

On October 27, 2006, OFHEO published in the *Federal Register* a final regulation requiring the Enterprises to establish and maintain record retention programs to ensure that complete and accurate records are readily accessible by OFHEO for examination and other supervisory purposes. The regulation also requires the Enterprises to establish internal controls, procedures for holding documents and controlling their production and training programs to ensure the adequacy and effectiveness of the record retention program. In addition, the regulation directs Enterprise management to evaluate the program for its adequacy and effectiveness at least every three years and to report findings to the Boards of Directors and OFHEO.

On December 14, 2006, OFHEO published in the *Federal Register* a final regulation making technical amendments to Appendix A to Subpart B of the OFHEO risk-based capital (RBC) regulation at C.F.R. 1750. The amendments enhance the accuracy and transparency of the calculation of the RBC requirement for the Enterprises and update the RBC regulation to incorporate previously-approved new activities treatments.

---

## Guidances

OFHEO issued examination guidance PG-06-001, dated November 8, 2006, setting forth guidance and standards relating to the **corporate governance** of the Enterprises consistent with the oversight responsibilities of OFHEO under the Federal Housing Enterprises Financial Safety and Soundness Act of 1992 and the OFHEO corporate governance regulation at 12 C.F.R. 1710. The guidance replaces OFHEO examination guidance PG-05-002, issued on May 20, 2005. Except for certain accounting standards, the guidance retains all provisions of the earlier guidance. Among other things, the guidance includes provisions that provide definitions, broadens relevant experience for Board members, and expands the responsibilities of the corporate heads of compliance and internal investigation and the Board of Directors. The guidance also addresses the need to separate the risk management function from the control function of an Enterprise and the establishment of an Enterprise management compliance control coordination committee. Additionally, the guidance indicates that the Enterprises should establish policies and procedures relating to delegations of authority.

OFHEO issued examination guidance PG-06-002, dated November 8, 2006, setting forth OFHEO expectations regarding actions covered by the OFHEO **executive compensation** regulation at 12 C.F.R. 1770 and the OFHEO corporate governance regulation at 12 C.F.R. 1710. The guidance provides standards for Enterprise compensation programs and employment agreements with executive officers and addresses the responsibilities of the

Board of Directors regarding the Compensation Committee. The guidance also provides for certified submission of executive compensation comparability information and the submission of a comparability study every five years.

OFHEO issued examination guidance PG-06-003, dated November 8, 2006, setting forth examination guidance and standards relating to the **accounting practices** of the Enterprises consistent with the oversight responsibilities of OFHEO under the Federal Housing Enterprises Financial Safety and Soundness Act of 1992 and the OFHEO corporate governance regulation at 12 C.F.R. 1710. The guidance addresses elements drawn from earlier corporate governance guidance and provides a stand-alone set of standards for use by the Office of the Chief Accountant of OFHEO. The guidance indicates that the Enterprises should establish and maintain accounting policies and procedures that properly reflect Generally Accepted Accounting Principles (GAAP), and provides for the periodic review of the policies and procedures. The guidance includes a description of the responsibilities of the Board Audit Committee and provides for a change for the lead and concurring/coordinating audit partner and rotation of the external audit firm on a prescribed schedule. Additionally, the guidance provides for an Enterprise to create a system whereby accounting policies are subject to continuous review and are fully disclosed to the Board Audit Committee.

## Notices

On February 6, 2006, OFHEO published in the *Federal Register* its notice of intent to establish three new Privacy Act systems of records: the Emergency Contingency Plan and Personnel Locator system, the Mortgage Fraud system and the Computer Systems Activity and Access Records system. The Emergency Contingency Plan and Personnel Locator system will maintain emergency contact information for use in developing and implementing an emergency plan, including a continuity of operations plan. The Mortgage Fraud system will maintain information on mortgage fraud or possible mortgage fraud involving the Enterprises. The Computer Systems Activity and Access Records system will maintain, plan and manage computer system services and will ensure security and proper use of OFHEO electronic information and computer systems and services.

On April 19, 2006, OFHEO published in the *Federal Register* a Notice of Regulatory Review that responded to comments received from the public as to whether existing regulations had become inefficient or burdensome (12 C.F.R. Ch. XVII).

On July 11, 2006, OFHEO published in the *Federal Register* a Notice of Intent to establish a new system of Privacy Act records titled "Telecommunications System." The system will be used to verify telecommunications usage, official and unofficial, of OFHEO, resolve billing discrepancies and prevent and discipline any detected misuse.

On December 5, 2006, OFHEO published in the *Federal Register* a No FEAR Act Notice that provides notice to its employees, former employees and applicants for employment about the rights and remedies available to them under the Federal anti-discrimination and whistleblower protection laws. The notice complies with the requirements of the Notification and Federal Employees Antidiscrimination Retaliation Act, as implemented by the regulations of the Office of Personnel Management.

### **Memoranda of Understanding**

On May 12, 2006, OFHEO and the U.S. Treasury Department's Financial Crimes Enforcement Network (FinCEN) entered into an agreement to facilitate the sharing of information by OFHEO of its examination findings regarding actual or suspected mortgage fraud with FinCEN. FinCEN will include this information in its database of Bank Secrecy Act information which may then be queried by law enforcement officials.

On November 6, 2006, OFHEO and the Office of Thrift Supervision (OTS) entered into an agreement that provides for the sharing of information between the agencies. The Memorandum of Understanding (MOU) is based on statutory authorities of OTS and OFHEO that provide for interagency cooperation and interaction, such as the sharing of proprietary data, in furtherance of their statutory purposes. The uses of data are governed by statutes addressing trade secrets and confidentiality, and each party agreed to maintain the confidentiality of data and information provided by the other party.

On December 11, 2006, OFHEO and the Federal Housing Finance Board (FHFB) entered into an agreement that provides for the sharing of information, practices and resources between the agencies relevant to each agency's supervisory responsibilities. The MOU is based on statutory authorities of FHFB and OFHEO that provide for interagency cooperation and interaction, such as the sharing of proprietary data, in furtherance of their statutory purposes. The MOU also provides for collaboration, cooperation and participation in examinations under certain conditions and sets forth the establishment of working groups to initiate the process of addressing subjects of mutual interest. Each party agreed to maintain the confidentiality of data and information provided by the other party.

## OFHEO Research and Publications

During 2006, OFHEO continued to focus its research plans and activities on topics that assist the agency in achieving its three strategic goals, which the agency revised and published in September in its Strategic Plan for Fiscal Years (FY) 2006-2011: 1) enhance supervision to ensure the Enterprises operate in a safe and sound manner, are adequately capitalized and comply with legal requirements; 2) provide support for statutory reforms to strengthen our regulatory powers; and 3) continue to support the national policy of an efficient secondary mortgage market which promotes homeownership and affordable housing.

OFHEO continued to place a priority on research and analysis of issues for its internal use, primarily related to analyzing risk and capital adequacy and improving the House Price Index. OFHEO also continued its practice of publishing reports and papers, and posting information on its web site to better inform interested parties about the issues OFHEO addresses regarding the Enterprises and the secondary mortgage market. The papers and reports are the result of research and analysis accomplished throughout the year. OFHEO research papers and reports are available at [www.ofheo.gov](http://www.ofheo.gov). OFHEO researchers also presented papers and led discussions at professional and industry conferences on topics related to housing finance and regulation of the Enterprises.

---

### Report of the Special Examination of Fannie Mae

In May 2006, OFHEO issued its Report of the Special Examination of Fannie Mae. The report was the product of more than two years of in-depth review involving nearly eight million pages of documents.

#### The report found the following:

- Fannie Mae senior management promoted an image of the Enterprise as one of the lowest-risk financial institutions in the world and as “best in class” in terms of risk management, financial reporting, internal control and corporate governance.
- Fannie Mae reported extremely smooth profit growth and hit announced targets for earnings-per-share precisely each quarter between 1998 and 2004. Those achievements were illusions deliberately and systematically created by the Enterprise’s senior management with the aid of inappropriate accounting and improper earnings management.
- During that period, a large number of Fannie Mae’s accounting policies and practices did not comply with Generally Accepted Accounting Principles (GAAP). The Enterprise also had serious problems of internal control, financial reporting and corporate governance.

- By deliberately and intentionally manipulating accounting to hit earnings targets, senior management maximized the bonuses and other executive compensation they received, at the expense of shareholders.
- Fannie Mae's Board of Directors contributed to those problems by failing to be sufficiently informed and failing to act independently of its chairman and other senior executives; by failing to exercise the requisite oversight over the Enterprise's operations; and by failing to discover or ensure the correction of a wide variety of unsafe and unsound practices.
- The Board's failures continued in the wake of revelations of accounting problems and improper earnings management at Freddie Mac and other high-profile firms, the initiation of OFHEO's special examination and credible allegations of improper earnings management made by an employee of the Enterprise's Office of the Controller.
- Senior management did not make investments in accounting systems, computer systems, other infrastructure and staffing needed to support a sound internal control system, proper accounting and GAAP-consistent financial reporting. Those failures came at a time when Fannie Mae faced many operational challenges related to its rapid growth and changing accounting and legal requirements.

The report also prescribed corrective actions to ensure the safety and soundness of the Enterprise. Many of these actions were included in a Consent Order of May 23, 2006, which is detailed elsewhere in this report.

---

## Research Products

OFHEO released several research products during 2006. In February, OFHEO issued a staff working paper, "Removing Appraisal Bias from a Repeat-Transactions House Price Index: A Basic Approach." The paper presents a "bias-neutral" approach to house price indices and demonstrates the different results. "Mortgage Markets and the Enterprises in 2005," a research paper released in September 2006, reviewed developments in the housing sector, activity in the primary and secondary mortgage markets and the financial performance of Fannie Mae and Freddie Mac in 2005. The paper is the most recent in an annual series. OFHEO also published an update to the data tables (through the third quarter of 2006), and to the assumptions used in developing the data estimates, in an OFHEO research paper, "Single-Family Mortgages Originated and Outstanding, 1990 - 2004." OFHEO research papers and staff working papers are authored by OFHEO economists and analysts.

In April 2006, OFHEO released an update to the public version of the software used to run the risk-based capital stress test, along with a stylized data set to use in the model. By running the data for this hypothetical firm through the stress test model, the public can better understand the sensitivities and implications of the stress test.

---

## Conforming Loan Limit

Since 2005 OFHEO has calculated and published the maximum conforming loan limit for single-family mortgages purchased by Fannie Mae and Freddie Mac. On November 15, 2006, OFHEO announced procedures to be followed in determining the conforming loan limits for 2007 in the event the Federal Housing Finance Board (FHFB) reported a decrease in house prices from October 2005 to October 2006.

Later in November, OFHEO announced that, effective January 1, 2007, the maximum conforming loan limit for single-family mortgages would remain at the 2006 level of \$417,000 for one-unit properties for most of the U.S. In 2007, the conforming loan limits for larger properties are as follows: two-unit mortgages are limited to \$533,850; three-unit mortgages: \$645,300; and four-unit mortgages: \$801,950. The limit in statutorily designated high-cost areas (Alaska, Guam, Hawaii and the U.S. Virgin Islands) is 50 percent higher, for example, \$625,500 for a one-unit, single-family mortgage. For second mortgages, the 2007 limit is \$208,500 (\$312,750 in the designated high-cost areas).

---

## House Price Index

OFHEO also continued quarterly publication of its House Price Index (HPI), which uses Enterprise data to calculate changes in house prices for the nation as a whole, nine Census Divisions, the 50 states and the District of Columbia and 381 Metropolitan Statistical Areas or Metropolitan Divisions. The HPI is based on an analysis of data from over 32 million repeat transactions over the past 32 years. OFHEO developed the index as a key input for its risk-based capital stress test. The HPI is now regularly reported by media organizations throughout the nation and used by researchers to analyze house price behavior (Map on page 59).

Since 2004, OFHEO has compared the HPI, an index that includes mortgages used for both purchases and refinancings, with an index based solely on purchase price data to isolate the effect of refinancing on the overall HPI (see Chart 8). OFHEO also periodically features reports on timely issues in the quarterly HPI report. For example, responding to frequent public requests for rural price indicators, the report covering data through the third quarter of 2006 published a state-by-state review of price trends in rural markets. The analysis compared urban and rural trends and measured the correlation in urban-rural price movements within states.

The report covering data through the second quarter closely analyzed the ongoing deceleration in housing markets. The report found that the deceleration was most extreme in areas of the country that had experienced the greatest home price appreciation during the early part of this decade. Recent price trends were studied in detail for the two states with the greatest appreciation since mid-2004. Monthly house price indexes were calculated for those states and month-to-month appreciation figures were estimated. The

## OFHEO House Price Index Percentage Growth by State Fourth Quarter 2005 - Fourth Quarter 2006

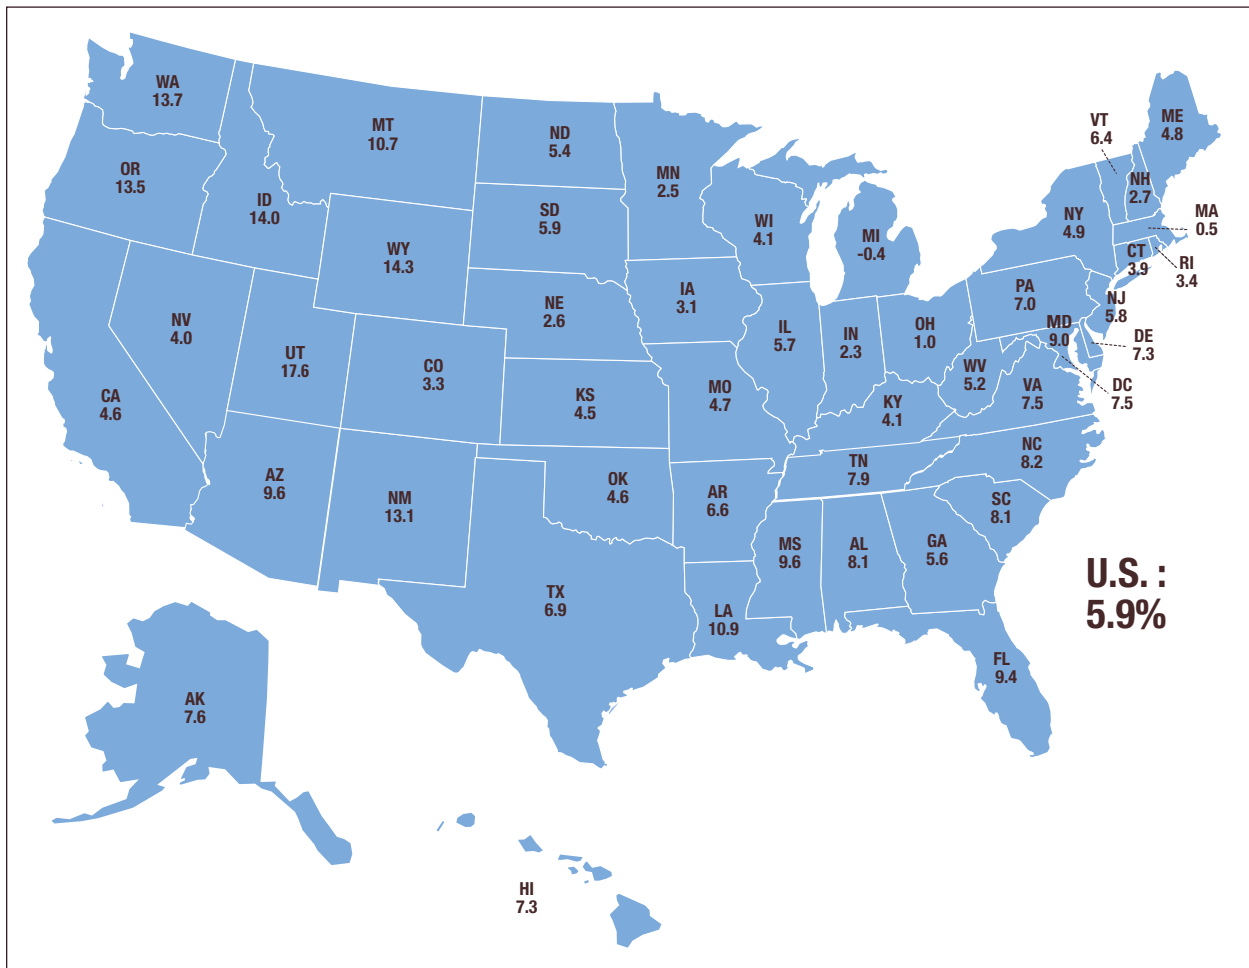

Chart 8 -  
House Price  
Appreciation

results revealed that monthly appreciation rates in those states had been in steady decline since early 2005. Earlier reports in 2006 examined the impact of cash-out refinancings on the HPI and the effects of Hurricane Katrina on house prices in areas surrounding those that were hardest hit.

---

## OFHEO Performance and Program Assessment

In November, OFHEO published its annual Performance and Accountability Report (PAR), which describes OFHEO's accomplishments and how OFHEO met its performance goals during Fiscal Year 2006. The PAR also contains OFHEO's audited financial statements for the fiscal year.

Working jointly with the Office of Management and Budget, OFHEO also completed its first Program Assessment Rating Tool (PART) assessment. The PART measures the effectiveness of government programs and develops improvement plans. OFHEO scored as a performing program with a rating of "adequate," the middle of five possible rating categories.

### **Significant findings included the following:**

- In recent years, OFHEO's program has improved its effectiveness in identifying and addressing significant and systemic issues at the Enterprises that need attention.
- The program's effectiveness is restricted by limited statutory authority. OFHEO lacks express powers similar to those of other safety and soundness regulators.
- One of the factors affecting OFHEO's PART rating is that, as of Fiscal Year 2006, OFHEO had not yet implemented certain bank regulator-like risk measures. OFHEO is now using such measures and will report at the end of Fiscal Year 2007 on how the Enterprises performed.
- OFHEO is the only safety and soundness regulator whose funding is subject to the timing and amount approved in an annual appropriations bill. Budget flexibility is critical to ensuring the agency can adapt and respond quickly to changing circumstances at either Enterprise.

# OFHEO's Financial Operations

---

## OFHEO's Budget

The business operations of OFHEO are not financed by taxpayer funds. The annual operating budget, however, undergoes the federal budgetary and appropriations process and is constrained by the amount appropriated by Congress and signed into law by the President. The amount provided for by the appropriations process is offset in the federal budget by semi-annual assessments from Fannie Mae and Freddie Mac.

Congress is considering legislation that would transfer all resources available to OFHEO to a new, strengthened housing government-sponsored enterprise regulator, which would operate outside of the appropriations process. Absent legislative change, however, OFHEO will continue to be subject to the appropriations process.

The Administration proposed an FY 2007 budget of \$67.6 million, but Congress passed a year-long Continuing Resolution (CR) in mid-February funding OFHEO at its FY 2006 level of \$60 million. OFHEO is continuing its efforts to seek \$7.6 million in supplemental funding in FY 2007 to cover unbudgeted litigation costs, but is being forced to curb its planned hiring of supervision personnel.

The Administration proposed an FY 2008 budget of \$66 million to fund OFHEO's operations. Depending on the final outcome for FY 2007 funding and developments in ongoing administrative and federal court cases, OFHEO may seek to amend upward the FY 2008 request to support unbudgeted requirements for legal services associated with litigation in these cases.

---

## Unqualified Audit Opinion in Fiscal Year 2006

The certified public accounting firm of Dembo, Jones, Healy, Pennington, and Marshall audited OFHEO's FY 2006 financial statements. The firm issued an unqualified audit opinion on those financial statements, issued 45 days after fiscal year-end, and found no material weaknesses in internal controls or instances of non-compliance with applicable laws and regulations. While not required by law, OFHEO voluntarily began obtaining outside audit reviews of its financial statements in FY 1998. 2006 represents the ninth straight year OFHEO has received a clean, unqualified audit opinion.

<sup>1</sup> Information included for 2002, 2003 and 2004 has been restated to reflect changes in Fannie Mae's accounting policies as described in its Annual Report on Form 10-K for the year ended December 31, 2004. Information included in the table and footnotes for periods 2005 and 2006 are subject to change pending the preparation and completion of Fannie Mae's 2005 and 2006 financial statements and required audits.

<sup>2</sup> Beginning in 1998, the guaranty liability for Fannie Mae MBS held in the portfolio is classified as a liability.

<sup>3</sup> Gross retained portfolio net of unamortized purchase premium, discounts and cost basis adjustments, and, beginning in 2002, fair value adjustments on available-for-sale and trading securities. The amounts for 1999 through 2001 include certain loans held for investment that were previously classified as non-mortgage investments.

<sup>4</sup> Data reflects unpaid principal balance net of unamortized purchase premium, discounts and cost basis adjustments and fair value adjustment on available-for-sale securities. Values for years 1999 through 2001 excludes investments designated for securitization and resale. Prior to 1982, the majority of non-mortgage investments consisted of U.S. government securities and agency securities.

<sup>5</sup> The sum of (a) the stated value of outstanding common stock (common stock less treasury stock); (b) the stated value of outstanding noncumulative perpetual preferred stock; (c) Fannie Mae's paid-in capital; and (d) retained earnings, less treasury stock. Core capital excludes AOCI.

<sup>6</sup> Total Fannie Mae MBS held by third parties. Excludes Fannie Mae MBS in the retained mortgage portfolio. Beginning in 2006, includes securities guaranteed by Fannie Mae that are backed by Ginne Mae collateral.

<sup>7</sup> Beginning in 2006, includes Grantor Trusts and REMICs as well as stripped MBS backed by Fannie Mae certificates.

<sup>1</sup> Information included for 2002, 2003 and 2004 has been restated to reflect changes in Fannie Mae's accounting policies as described in its Annual Report on Form 10-K for the year ended December 31, 2004.

<sup>2</sup> Data reflects unpaid principal balance net of unamortized purchase premium, discounts and cost basis adjustments and fair value adjustment on available-for-sale securities. Values for years 1999 through 2001 excludes investments designated for securitization and resale. Prior to 1982, the majority of non-mortgage investments consisted of U.S. government securities and agency securities.

<sup>3</sup> As of 1999, Repurchase Agreements consist primarily of overnight investments that mature daily.

<sup>1</sup> Information included for 2002, 2003 and 2004 has been restated to reflect changes in Fannie Mae's accounting policies as described in its Annual Report on Form 10-K for the year ended December 31, 2004.

Information included in the table and footnotes for periods 2005 and 2006 are subject to change pending the preparation and completion of Fannie Mae's 2005 and 2006 financial statements and required audits.

<sup>2</sup> Beginning with 1998, data include all seriously delinquent conventional loans with and without primary mortgage insurance and/or credit enhancement. Prior to 1988, data include all seriously delinquent loans for which Fannie Mae has primary risk of loss. Data prior to 1992 include loans in relief or bankruptcy, even if the loans are less than 90 days delinquent.

<sup>3</sup> Beginning in 1998, data include all loans and securities 60 days or more past due and is calculated based on mortgage credit book of business. Data prior to 1998 include loans for which Fannie Mae has primary risk of loss.

<sup>4</sup> Credit losses are charge-offs, net of recoveries and foreclosed property expense (income); average balances used to calculate ratios subsequent to 1994; quarterly data are annualized.

<sup>5</sup> Real estate owned balances reflect end-of-period amounts. Beginning with 1995, data reflect adoption of SFAS 114.

<sup>6</sup> Beginning in 2000, "credit-enhanced" is expanded to include primary mortgage insurance. Prior to 2000, reflect proportion of the retained mortgage portfolio with additional recourse from a third party to accept some or all of the expected losses on defaulted mortgages.

N/A = not available

<sup>1</sup> Information included for 2002, 2003 and 2004 has been restated to reflect changes in Fannie Mae's accounting policies as described in its Annual Report on Form 10-K for the year ended December 31, 2004. Information included in the table and footnotes for periods 2005 and 2006 are subject to change pending the preparation and completion of Fannie Mae's 2005 and 2006 financial statements and required audits.

<sup>2</sup> Since 3Q 2005, OFHEO has directed Fannie Mae to maintain an additional 30% capital in excess of the statutory Minimum Capital Requirement. The Minimum Capital Requirement and Minimum Capital Surplus numbers stated in this chart do not reflect the inclusion of the additional 30% capital requirement. Minimum Capital Surplus is the difference between Core Capital and Minimum Capital Requirement.

<sup>3</sup> Total Capital is Core Capital plus the total allowance for loan losses and guaranty liability for MBS, less any specific loss allowances.

<sup>4</sup> The Risk-Based Capital Requirement is the amount of Total Capital that an Enterprise must hold to absorb projected losses flowing from future adverse interest rate and credit risk conditions and is specified by the Federal Housing Enterprise Financial Safety and Soundness Act of 1992.

<sup>5</sup> The difference between Total Capital and the Risk-Based Capital Requirement.

<sup>6</sup> Stock price at the end of the period multiplied by the number of outstanding common shares.

<sup>7</sup> Common dividends paid as a percentage of net income available to common stockholders.

<sup>1</sup> For the period 2001 through 2003, data are based on restated and revised financial results.

<sup>2</sup> Based on unpaid principal balances and excludes mortgage loans and mortgage-related securities traded, but not yet settled.

<sup>3</sup> Loans purchased from lenders. Excludes purchased non-Freddie Mac MBS and repurchased Freddie Mac MBS and structured securities.

<sup>4</sup> Not included in total mortgages. For the period 2002 through the current period, amounts include non-Freddie Mac mortgage-related securities purchased for structured securities (e.g. alternative structured securities and structured securities backed by Ginnie Mae MBS). For 2001, amounts include alternative structured securities and exclude structured securities backed by Ginnie Mae MBS.

<sup>1</sup> For the period 2001 through 2003, data are based on restated and revised financial results.

<sup>2</sup> Based on unpaid principal balances and excludes mortgage loans and mortgage-related securities traded, but not yet settled.

<sup>3</sup> Includes MBS and structured securities backed by non-Freddie Mac mortgage-related securities. For the period 2002 through the current period, includes structured securities backed by Ginnie Mae MBS. For years prior to 2002, excludes structured securities backed by Ginnie Mae MBS.

<sup>4</sup> Includes activity related to multiclass structured securities, primarily Real Estate Mortgage Investment Conduits (REMICs) as well as principal-only strips and other structured securities. These amounts exclude resecuritizations of MBS into single-class securities, but include resecuritization of MBS into multiclass securities.

<sup>1</sup> For the period 2001 through 2003, data are based on restated and revised financial results.

<sup>2</sup> For years 2002 through the current period, includes total administrative expenses, realized losses on certain guarantees and other expenses. For years 2001 and 2000, includes salaries and employee benefits, occupancy expenses and other expenses.

<sup>3</sup> For years 2002 through the current period, defined as provision for credit losses and real estate-owned operations income/expense. For years 2000 and 2001, include only the provision for credit losses.

<sup>4</sup> Ratio computed as annualized net income available to common stockholders divided by the simple average of beginning and ending stockholders' equity, net of preferred stock (at redemption value).

<sup>1</sup> For the period 2001 through 2003, data are based on restated and revised financial results.

<sup>2</sup> Based on unpaid principal balances and excludes mortgage loans and mortgage-related securities traded, but not yet settled. Represents MBS and structured securities that are held by third parties. For years prior to 2002, includes MBS and structured securities in Freddie Mac's cash and investments portfolio.

<sup>3</sup> Excludes "Reserve for losses on mortgage loans held-for-investment."

<sup>4</sup> Based on fair value. Consists of Freddie Mac's cash and investments portfolio, excluding cash and cash equivalents and mortgage-related securities within that portfolio.

<sup>5</sup> The sum of (a) the stated value of outstanding common stock, (b) the stated value of outstanding noncumulative perpetual preferred stock, (c) paid-in capital, and (d) retained earnings, less Treasury stock.

<sup>1</sup> For the period 2000 through 2003, data are based on restated and revised financial results, except for the credit-enhanced share of the total mortgage portfolio in 2000.

<sup>2</sup> Based on the number of mortgages 90 days or more delinquent or in foreclosure. Rates for years 2000 through the current period are based on the total single-family loans in the Retained portfolio and Total Guaranteed PCs and Structured Securities issued, excluding that portion of Structured Securities that is backed by Ginnie Mae MBS. Includes delinquencies on mortgage loans where Freddie Mac has transferred primary or full default risk to various third parties as well as structured securities backed by alternative structured securities.

<sup>3</sup> Based on net carrying value of mortgages 60 days or more delinquent or in foreclosure.

<sup>4</sup> Credit losses equal to REO operations expense (income) plus Charge-offs, net. Calculated as credit losses (gains) divided by the average total mortgage portfolio, excluding non-Freddie Mac mortgage-related securities and that portion of structured securities that is backed by Ginnie Mae MBS.

<sup>5</sup> Based on the total mortgage portfolio excluding non-Freddie Mac mortgage-related securities and that portion of issued structured securities that is backed by Ginnie Mae MBS.

<sup>6</sup> Includes loans for which the lender or a third party has retained primary default risk by pledging collateral or agreeing to accept losses on loans that default. In many cases, the lender's or third party's risk is limited to a specific level of losses at the time the credit enhancement becomes effective.

Source: Freddie Mac and OFHEO

- <sup>1</sup> For the period 2001 through 2003, data are based on restated and revised financial results.
- <sup>2</sup> Since 4Q 2003, OFHEO has directed Freddie Mac to maintain an additional 30% capital in excess of the statutory Minimum Capital Requirement. The Minimum Capital Requirement and Minimum Capital Surplus numbers stated in this chart do not reflect the inclusion of the additional 30% capital requirement. Minimum Capital Surplus is the difference between Core Capital and Minimum Capital Requirement.
- <sup>3</sup> Total capital includes Core Capital and general reserves for mortgage and foreclosure losses.
- <sup>4</sup> The Risk-Based Capital Requirement is the amount of Total Capital that an Enterprise must hold to absorb projected losses flowing from future adverse interest rate and credit risk conditions and is specified by the Federal Housing Enterprise Financial Safety and Soundness Act of 1992.
- <sup>5</sup> The difference between Total Capital and Risk-Based Capital Requirement.
- <sup>6</sup> Stock price at the end of the period multiplied by the number of outstanding common shares.
- <sup>7</sup> Common dividends paid as a percentage of net income available to common stockholders. For 3Q06 and 4Q06 net income available to common stockholders was a loss thus this calculation is not applicable.
- <sup>8</sup> Based on unrevised data. OFHEO determined risk-based capital resubmissions are not required.
