FLIS PROCEDURES MANUAL
MANAGEMENT STATISTICS
SEPTEMBER 2009

CHAPTER 1 INTRODUCTION

14.1.1 GENERAL

The Management Statistics System offer a wide range of statistical information to support the needs of all levels of logistics managers. FLIS Management Statistics data is stored in a database of approximately 130 tables. Updates to the database are processed on a daily basis to ensure the most current information.

Management Statistics On-Line are grouped into three categories: **LOLA, LOGISTICS AND TRANSACTIONS.**

LOGISTICS STATISTICS: Provides counts of NSNs or certain conditions within the NSN.

8 of 18 - Currently Available

LOLA STATISTICS: LOLA statistics provide counts of on-line inquiries.

Available

TRANSACTIONS STATISTICS: Provides counts of batch input and output and other data relative to transaction processing.

2 of 4 - Currently Available

For any questions or additional copies, you may contact the DLA Virtual Contact Center at emailor 1-877-352-2255: Commercial 1-269-961-7766, or DSN 661-7766, and then press option 3, and then press option 2 for assistance. You may also contact the Management Stats Team at email J6B Stats or:

Len Spano, DSN 661-4090/Commercial (269)-961-4090
Dik Kloko, DSN 661-5717/Commercial (269)-961-5717

14.1.2 ADDITIONAL FEATURES OF THE STATS SYSTEM

- a. If the stats required are not available on-line, we can now provide ADHOC reports tailored to your specific requirements, upon request.
- b. For a tailored report a select statement from one or more tables using data elements, variables or text in a structured query language or form will provide valid information of counts request.
- c. The Management Stats team can also produce timed reports (monthly, etc).

14.1.4 ACCESSING MANAGEMENT STATISTICS

a. **WHAT YOU NEED TO DO:** Access to the FLIS on-line Management Statistics application is controlled through the User ID codes and Passwords. If you don't have a User ID, contact the DLA Virtual Contact Center at 1-877-352-2255, Commercial 1-269-961-7766 or DSN 661-7766, press option 3, and then press option 2 for assistance.

b. **“HOW TO” INFORMATION:**

(1) QUICK REFERENCE ACCESS STEPS:

Before accessing the on-line MGMT STATS, you must first access LOGRUN. (The procedures for doing this will vary between service/agency/activity.)

- a. If you are accessing LOGRUN via DLANET, the address is ALIDIS.
- b. If you are using DDN, the address for TN 3270 is MFLP.CSD.DISA.mil
- c. If you are using DDN and/or dial-up, the address is MFLP.CSD.DISA.mil

(2) AT THE LOGON SCREEN:

- a. “Tab” from command line to User ID line (See Screen 1 on the following page.)
- b. Enter your assigned seven character User ID.
- c. Press TAB key (or your equivalent).
- d. Enter your password, press ENTER.

NOTE: You may receive a screen before the LOGRUN SELECTION MENU. After reading the information, type END or press (PF03/F3).

(3) LOGRUN MENU SCREENS:

- a. On the LOGRUN Menu (Screen 2) to access Management Statistics hit the appropriate PF key for LOGRUN/LOLA as shown on the TND screen. Example: PF04.
- b. On the Logistics On-LINE Remote Network Main Menu (Screen 3) place the cursor on the line in front of the words “Management Statistics” press the enter key.
- c. On the Management Statistics Main Menu (Screen 4) place the cursor on the line in front of the statistics. Appendix A will provide screen layouts by the type of statistic.

APPENDIX F

DESCRIPTION OF MANAGEMENT STATISTICS ON LINE

TRANSACTIONS

Document Identifier Code (DIC) Input/Output - This statistics provides a basic tool to identify major transaction return conditions for corrective action. Only one input DIC, one output DIC, and one return code (if applicable) is counted.

Priority Indicator Code (PIC) - The PIC statistic provides summaries of the usage of PICs for all input transactions received by DLSC.

Provisioning Screening - This statistic provides volume and relationship data to various management levels for all items being recommended or considered for procurement. "Screening" uses NSNs or references numbers as the major inquiry mode.

Transaction Timing - This statistic is a tool that provides management data on transaction performance and average hours in the system. Also reflected are the total number of transactions processed by DIC, the time required for processing, transactions that fail to process on time, and average processing time.

LOGISTICS

Abbreviated Master Reply Code (MRC) - This statistic will provide a count of NSNs associated with a specific MRC related to an INC within a FIIG.

Acquisition Method/Acquisition Method Suffix Code (AMC/AMSC) - This statistic counts total parts introduced, transferred, deleted, and total parts in the system. Only DOD PICA items are counted by the appropriate commodity.

Commercial and Government Entity Code (CAGE) - This statistic is used to monitor various types of activity against a CAGE code such as: NSN, Reference Numbers, etc. Counts are provided by CAGE Code against the number of NSNs, Reference Numbers, INC, and FSC

Demilitarization (DEMIL) - This statistic provides counts of NSNs with specific DEMIL/NIIN status code relationships.

Document Availability Code (DAC) - This statistic is a tool for monitoring the number of NSNs with limited rights DACs. Counts reflect type of item identification, total NSN population and reference numbers assigned by a Service/Agency (S/A).

Federal Catalog System Goals (FCS) - This statistic provides counts and percentages of NSNs with regard to descriptive item identification, Approved Item Names (AIN), and reference numbers.

Federal Catalog System Quality Status - This statistic is a tool for measuring S/A performance in three primary areas of item identification: Type of Item Identification, Approved Item Names, and Reference Numbers.

Federal Item Identification Guide (FIIG) Count - This statistic provides a count of INCs within a specific FIIG and total counts of NSNs against a FIIG.

Federal Supply Class/Item Name Code (FSC/INC) - This statistic provides a count of NSNs associated with an INC within an FSC.

Freight - Freight Classification Code (FCC) statistics data is summarized to provide counts of NSNs against an FCC and the number of NSNs against a designated Item Name Code (INC) associated with an FCC.

Item Commonality - This statistic reflects common management of NSNs throughout all S/A's by all levels of management and all classes.

Item Name - This statistics provides counts of NSNs by INC, NSNs with AINs, NSNs with NAINs and the percent of NAINs. These counts are also broken out by new and reinstated NSNs.

Item Standardization Code (ISC) - This statistic provides ISC data on all U. S. Government NSNs. It provides counts relating to System, Federal Supply Group (FSG), Federal Supply Class (FSC), NSNs with managers, and NSNs without managers.

>**Management Responsibility** - This statistics shows the nature and location of item management responsibility for all U. S NSNs. Types of information are: Beginning Inventory, Additions, Deletions, Ending Inventory, Amount of Net Change, and Percentage of Net Change to the Beginning Inventory.

Major Organizational Entity Rules (MOE Rules) - This statistic provides counts of NSNs by MOE rule and counts of collaborators and receivers by S/As.

NSN Population - This statistic provides population counts on NSNs within FSC, within Federal Item Identification Guide (FIIG), within INC by Type of Item Identification, and whether managed or non- managed.

Reparability Codes - This statistic provides information on reparability code usage by S/A. Counts of NSNs by reparability code by level of authority will be portrayed.

Type II Management Status - This statistic provides counts of NSNs by types of item identification. Department, Activity and LOA counts are summarized by all classes, assigned classes, non-assigned classes and by individual class.
