## CONSUMER PRICE MOVEMENTS DECEMBER 2008

The Consumer Price Index for All Urban Consumers (CPI-U) decreased 1.0 percent in December, before seasonal adjustment, the Bureau of Labor Statistics of the U.S. Department of Labor reported today. The December level of 210.228 (1982-84=100) was 0.1 percent higher than in December 2007.

The Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W) decreased 1.2 percent in December, prior to seasonal adjustment. The December level of 204.813 (1982-84=100) was 0.5 percent lower than in December 2007.

The Chained Consumer Price Index for All Urban Consumers (C-CPI-U) decreased 1.3 percent in December on a not seasonally adjusted basis. The December level of 120.661 (December 1999=100) was 0.5 percent lower than in December 2007. Please note that the indexes for the post-2006 period are subject to revision.

### CPI for All Urban Consumers (CPI-U)

On a seasonally adjusted basis, the CPI-U decreased 0.7 percent in December, the third consecutive decline. The index is now only 0.1 percent higher than in December 2007. Declining energy prices, particularly for gasoline, again drove most of the decline. The energy index declined 8.3 percent in December. Within energy, the gasoline index fell 17.2 percent and accounted for almost 90 percent of the decrease in the all items index. The index for household energy declined 0.7 percent. Excluding energy, the index was virtually unchanged for the third straight month. The food index declined 0.1 percent in December, the first (cont.)

decrease since April 2006, as many meat, dairy, fruit, and vegetable indexes decreased. The index for all items excluding food and energy was virtually unchanged in December. Continuing decreases in the indexes for lodging away from home, airline fare, and new and used motor vehicles, along with downturns in the indexes for apparel and recreation, offset increases in other indexes including rent and owners' equivalent rent, medical care, and education.

For the 12 month period ending December 2008, the CPI-U rose 0.1 percent. This was the smallest calendar year increase since a 0.7 percent decline in 1954 and compares with a 4.1 percent increase for the 12 months ended December 2007. Consumer prices declined at a seasonally adjusted annualized rate (SAAR) of 12.7 percent in the fourth quarter of 2008. This followed increases during the first three quarters at rates of 3.1, 7.9, and 2.6 percent, respectively. The index for energy declined at a SAAR of 76.6 percent during the fourth quarter and fell 21.3 percent for the 12 months ending December after rising 17.4 percent during 2007. Petroleum-based energy prices declined 40.5 percent during 2008 while prices for energy services rose 7.7 percent. The food index rose 5.9 percent in 2008 compared to 4.9 percent in 2007, with grocery store food prices rising 6.6 percent in 2008 compared to 5.6 percent in 2007. In both cases, the 2008 increases were the largest since 1980. Among the grocery store food groups, the

2008 increases ranged from a low of 2.7 percent for dairy and related products to a high of 11.7 percent for cereals and bakery products.

Excluding food and energy, the CPI declined at a 0.3 percent SAAR during the last quarter of 2008, after increasing at rates of 2.0, 2.5, and 2.7 percent during the first three quarters, respectively. The 1.8 percent increase for all of 2008 compares to 2.4 percent during 2007 and is the smallest one-year increase since 2003. The smaller increase reflects slower advances in prices for shelter and medical care as well as a decline in the price of new and used motor vehicles. Shelter costs rose 1.9 percent in 2008 after increasing 3.1 percent in 2007, while medical care prices rose 2.6 percent in 2008 after increasing 5.2 percent in 2007. Prices for new and used motor vehicles declined 3.5 percent during 2008 after being virtually unchanged during 2007. The annual rates for selected groups for the last eight years are shown below.

The new vehicles index declined 0.4 percent and the index for used cars and trucks fell 0.8 percent. The index for public transportation declined 1.3 percent in December as the airline fare index decreased 1.2 percent. This was the fourth straight decline in the airline fare index, but it was still 1.4 percent higher than in December 2007.

The index for apparel turned down in December, declining 0.9 percent after rising 0.3 percent in November. Prior to seasonal adjustment, apparel prices fell 3.5 percent, and are 1.0 percent below their December 2007 level.

Consumer Price Index data for January are scheduled for release on Friday, February 20, 2009, at 8:30 A.M. (EST).

### CPI-U 12-Month Changes, 1998 to Present

## **Recalculated Seasonally Adjusted Indexes to be Available on February 18, 2009**

Each year with the release of the January CPI, seasonal adjustment factors are recalculated to reflect price movements from the just-completed calendar year. This routine annual recalculation may result in revisions to seasonally adjusted indexes for the previous 5 years. BLS will make available recalculated seasonally adjusted indexes, as well as recalculated seasonal adjustment factors, for the period January 2004 through December 2008, on Wednesday, February 18, 2009. This date is two working days before the scheduled release of the January 2009 CPI on Friday, February 20, 2009.

The revised indexes and seasonal factors will be available on the internet. The address is <http://www.bls.gov/cpi/cpisapage.htm>. Look under Seasonal Adjustment in the CPI and select Revised Seasonally Adjusted Indexes and Factors, 2004-2008.

For further information please contact Jeff Wilson by electronic mail at: [Wilson.Jeff@bls.gov](mailto:Wilson.Jeff@bls.gov) or by telephone at: (202) 691-5382.

## **C-CPI-U Index Revisions**

As scheduled, effective with release of data for January 2009, the Chained Consumer Price Index for All Urban Consumers (C-CPI-U) will undergo its seventh annual revision. C-CPI-U indexes for the 12 months of 2007 will be issued in final form, and values for the 12 months of 2008 will be revised and issued as interim. Calculation of the preliminary versions of the C-CPI-U - the initial version for January and the subsequent months of 2009 and the interim (revised initial) indexes for 2008 - will employ the 2005-06 expenditure weights also used in the CPI-U and CPI-W. Note that the final values of the C-CPI-U employ monthly expenditure weights corresponding to the price collection period in their calculation. Thus, in calculation of the final (revised interim) C-CPI-U values for the months of 2007, the biennial 2005-2006 expenditure weights will be replaced with separate monthly expenditure weights.

## **REPORT ON QUALITY CHANGES FOR 2009 MODEL VEHICLES**

### **Passenger Cars**

The value of quality changes for a sample of nine 2009 model year domestically produced passenger cars included in the Producer Price Index (PPI) for October averaged \$170.08, according to estimates by the Bureau of Labor Statistics (BLS) of the U.S. Department of Labor. This change represents 14.55 percent of the average \$1,168.77 increase in manufacturers' invoice prices for this year's models as compared with last year's models. The retail equivalent value of these quality changes averaged \$185.18, representing 14.08 percent of the average \$1,315.63 over-the-year increase in manufacturers' suggested list prices.

### **Light Trucks**

The value of quality changes for a sample of seventeen 2009 model year domestically produced light trucks included in the PPI for October averaged \$675.41. This change represents 40.65 percent of the average \$1,661.73 increase in manufacturers' invoice prices for this year's models as compared with last year's models. The retail equivalent value of quality changes for domestically produced light trucks averaged \$746.38, representing 39.48 percent of the average \$1,890.41 over-the-year increase in manufacturers' suggested list prices.

Estimates of the value of quality change are based on a review by the BLS of data supplied by producers for similarly equipped 2008 and 2009 domestically produced models priced for the Producer Price Index. Most of the estimates of quality changes in this release are derived from information supplied for the Producer Price Index for October. These data also form the basis of some of the new vehicle quality adjustments for the Consumer Price Index (CPI). However, it should be noted that, effective with the release of data for January 1999, changes made solely for the purpose of meeting air pollution standards are no longer considered quality improvements for CPI calculation purposes.

NOTE: Local area indexes are byproducts of the national CPI program. Each local index has a smaller sample size than the national index and is, therefore, subject to substantially more sampling and other measurement error. As a result, local area indexes show greater volatility than the national index, although their long-term trends are similar. Therefore, the Bureau of Labor Statistics strongly urges users to consider adopting the national average CPI for use in their escalator clauses.

NOTE: Index applies to a month as a whole, not to any specific date.

NOTE: Local area indexes are byproducts of the national CPI program. Each local index has a smaller sample size than the national index and is, therefore, subject to substantially more sampling and other measurement error. As a result, local area indexes show greater volatility than the national index, although their long-term trends are similar. Therefore, the Bureau of Labor Statistics strongly urges users to consider adopting the national average CPI for use in their escalator clauses.

NOTE: Index applies to a month as a whole, not to any specific date.

# Technical Notes

## Brief Explanation of the CPI

The Consumer Price Index (CPI) is a measure of the average change in prices over time of goods and services purchased by households. The U.S. Bureau of Labor Statistics (BLS) publishes CPIs for two population groups: (1) The CPI for Urban Wage Earners and Clerical Workers (CPI-W), which covers households of wage earners and clerical workers that comprise approximately 32 percent of the total population and (2) the CPI for All Urban Consumers (CPI-U) and the Chained CPI for All Urban Consumers (C-CPI-U), which cover approximately 87 percent of the total population and include, in addition to wage earner and clerical worker households, groups such as professional, managerial, and technical workers, the self-employed, short-term workers, the unemployed, and retirees and others not in the labor force.

The CPIs are based on prices of food, clothing, shelter, and fuels, transportation fares, charges for doctors' and dentists' services, drugs, and other goods and services that people buy for day-to-day living. Prices are collected in 87 urban areas across the country from about 50,000 housing units and approximately 23,000 retail establishments—department stores, supermarkets, hospitals, filling stations, and other types of stores and service establishments. All taxes directly associated with the purchase and use of items are included in the index. Prices of fuels and a few other items are obtained every month in all 87 locations. Prices of most other commodities and services are collected every month in the three largest geographic areas and every other month in other areas. Prices of most goods and services are obtained through personal visits or telephone calls by BLS trained representatives.

In calculating the index, price changes for the various items in each location are averaged together with weights that represent their importance in the spending of the appropriate population group. Local data are then combined to obtain a U.S. city average. For the CPI-U and CPI-W, separate indexes also are published by size of city, by region of the country, for cross-classifications of regions and population-size classes, and for 27 local areas. Area indexes do not measure differences in the level of prices among cities; they measure only the average change in prices for each area since the base period. For the C-CPI-U, data are issued only at the national level. It is important to note that the CPI-U and CPI-W are considered final when released, but the C-CPI-U is issued in preliminary form and is subject to two annual revisions.

The index measures price change from a designated reference date. For the CPI-U and the CPI-W, the reference base is 1982–84 = 100.0. The reference base for the C-CPI-U is December 1999=100.0. An increase of 16.5 percent from the reference base, for example, is shown as 116.5. This change also can be expressed in dollars as follows: the price of a base-period market basket of goods and services in the CPI has risen from \$10 in 1982–84 to \$11.65.

For further details, visit the CPI homepage on the Internet at <http://www.bls.gov/cpi> or contact our CPI Information and Analysis Section at (202) 691-7000.

### Calculating index changes

Movements of the indexes from one month to another usually are expressed as percent changes, rather than changes in index points, because index point changes are affected by the level of the index in relation to its base period, whereas percent changes are not. The example shown in the box on this page illustrates the computation of index point and percent changes.

Percent changes for 3-month and 6-month periods are expressed as annual rates and are computed according to the standard formula for compound growth rates. These data indicate what the percent change would be if the current rate were maintained for a 12-month period.

#### *Index point change*

CPI	202.416
Less previous index	201.800
Equals index point change	.616

#### *Percent change*

Index point difference	.616
Divided by the previous index	201.800
Equals	0.003
Results multiplied by one hundred	0.003 x 100
Equals percent change	0.3

## Regions defined

The states in the four regions are listed below.

The Northeast--Connecticut, Maine, Massachusetts, New Hampshire, New York, New Jersey, Pennsylvania, Rhode Island, and Vermont.

The Midwest--Illinois, Indiana, Iowa, Kansas, Michigan, Minnesota, Missouri, Nebraska, North Dakota, Ohio, South Dakota, and Wisconsin.

The South--Alabama, Arkansas, Delaware, Florida, Georgia, Kentucky, Louisiana, Maryland, Mississippi, North Carolina, Oklahoma, South Carolina, Tennessee, Texas, Virginia, West Virginia, and the District of Columbia.

The West--Alaska, Arizona, California, Colorado, Hawaii, Idaho, Montana, Nevada, New Mexico, Oregon, Utah, Washington, and Wyoming.

## Energy prices

Prices usually are available for the U.S. city average, 13 large metropolitan areas, the 4 census regions, 3 size classifications, and 10 areas reflecting the 4 census regions cross-classified by the 3 population sizes. However, not all energy commodities and services are used in every area of the country. Fuel oil, for example, is not a common heating fuel in some urban areas, particularly in the South and West. Where no average prices are available, the designation NA appears. This designation also appears if the data sufficiency criteria have not been met in any given month. For example, if there are fewer than five usable fuel oil prices for a published city or region size class, no fuel oil prices for the area will be published.

All prices are collected monthly by BLS representatives in the urban areas priced for the CPI. Prices for natural gas and electricity include fuel and purchased gas adjustments and all applicable taxes. Fuel oil and gasoline prices include applicable Federal, State, and local taxes.

*Natural gas and electricity.* Natural gas prices are reported in therms, which are a measure of heating value. Electricity prices are given in kilowatt hours (kwh). For both utility services, the consumption ranges specified in table P2 are the upper and lower limits of the bill sizes priced for the CPI. The average prices per therm and per kilowatt hour are calculated from bills priced within these ranges. It should be noted that bills priced for the CPI not only are for different consumption amounts, but may also be calculated from different types of residential rate schedules. *The average prices per therm and per kilowatt hour are not, therefore, generally suitable for use in place-to-place price comparisons.* The average prices for 40 and 100 therms of natural gas, and for 500 kilowatt hours of electricity (shown in table P1) are calculated from a special price collection program. They are not used in the calculation of the CPI. Because heating and air-conditioning requirements vary by geographic location, climate, and weather conditions, it cannot be inferred that these consumption amounts represent those used by a typical residential consumer. These bills are used merely to track price changes over time for constant amounts of consumption, and to provide continuity with prices of natural gas and electricity formerly published in conjunction with the unrevised CPI.

*Fuel oil.* Only #2 fuel oil (home heating oil) is priced. (See table P1.) Prices are collected, in most cases, for quantities greater than 1 gallon. These prices are converted to a gallon price for this program. Fuel oil prices reflect discounts for quantity or quick payment.

*Gasoline and automotive diesel fuel.* Gasoline and diesel prices, shown in table P3, are collected at the pump from a sample of full service, miniservice, and self-service gas stations. Approximate British Thermal Unit (BTU) values for some energy items are as follows, according to the source indicated:

1 therm = 100,000 BTUs (U.S. Department of Energy)

1 kwh = 3,412 BTUs (Edison Electric Institute)

1 gallon #2 fuel oil = 140,000 BTUs (U.S. Department of Energy)

## Food and beverage prices

Actual weighted average prices for food and beverages are calculated each month at the national level and for the four census geographic regions, as shown in table P4. As a result of changes in price collection methodology and sample sizes, average prices for individual cities cannot, in general, be produced. It is hoped, however, that regional average prices will help to satisfy the need for local area data. It should be noted that the average prices for food in this report reflect variations in brand, quality, and size among geographic areas. Users of average food prices should be aware that these differences exist.

Because a number of food commodities are not available in all areas on a year-round basis, prices will not appear in some months for some regions or for the U.S. city average. In other instances, sufficient prices may not be available due to temporary

disruptions in supplies. Where no average prices are available, the designation NA appears. When a price is not available from an individual store in any month, an estimated price will be calculated for the missing item and used in computing the average price. For cases in which the proportion of estimated prices used to calculate the average is considered too high, the average price is not published, and NA appears for that item in the table.

Because of space limitations in the table, the description for each item is abbreviated. Detailed specifications are available from BLS information offices or from the Washington office, upon request.

### **Seasonally adjusted and unadjusted data**

Because price data are used for different purposes by different groups, the Bureau of Labor Statistics publishes seasonally adjusted as well as unadjusted changes each month.

For analyzing general price trends in the economy, seasonally adjusted changes are usually preferred since they eliminate the effect of changes that normally occur at the same time and in about the same magnitude every year--such as price movements resulting from changing climatic conditions, production cycles, model changeovers, holidays, and sales.

The unadjusted data are of primary interest to consumers concerned about the prices they actually pay. Unadjusted data also are used extensively for escalation purposes. Many collective bargaining contract agreements and pension plans, for example, tie compensation changes to the Consumer Price Index before adjustment for seasonal variation.

Seasonal factors used in computing the seasonally adjusted indexes are derived by the X-12-ARIMA Seasonal Adjustment Method. Seasonally adjusted indexes and seasonal factors are computed annually. Each year, the last 5 years of seasonally adjusted data are revised. Data from January 2003 through December 2007 were replaced in January 2008. Exceptions to the usual revision schedule were: the updated seasonal data at the end of 1977 replaced data from 1967 through 1977; and, in January 2002, dependently seasonally adjusted series were revised for January 1987-December 2001 as a result of a change in the aggregation weights for dependently adjusted series. For further information, please see "Aggregation of Dependently Adjusted Seasonally Adjusted Series," in the October 2001 issue of the CPI Detailed Report.

The seasonal movement of All items and 54 other aggregations is derived by combining the seasonal movement of 73 selected components. Each year the seasonal status of every series is reevaluated based upon certain statistical criteria. If any of the 73 components change their seasonal adjustment status from seasonally adjusted to not seasonally adjusted, not seasonally adjusted data will be used in the aggregation of the dependent series for the last 5 years, but the seasonally adjusted indexes will be used before that period. Note: 48 of the 73 components are seasonally adjusted for 2008.

Seasonally adjusted data, including the All items index levels, are subject to revision for up to five years after their original release. For this reason, BLS advises against the use of these data in escalation agreements.

Effective with the calculation of the seasonal factors for 1990, the Bureau of Labor Statistics has used an enhanced seasonal adjustment procedure called Intervention Analysis Seasonal Adjustment for some CPI series. Intervention Analysis Seasonal Adjustment allows for better estimates of seasonally adjusted data. Extreme values and/or sharp movements which might distort the seasonal pattern are estimated and removed from the data prior to calculation of seasonal factors. Beginning with the calculation of seasonal factors for 1996, X-12-ARIMA software was used for Intervention Analysis Seasonal Adjustment.

For the seasonal factors introduced in January 2008, BLS adjusted 20 series using Intervention Analysis Seasonal Adjustment, including selected food and beverage items, motor fuels, electricity and vehicles. For example, this procedure was used for the Motor fuel series to offset the effects of events such as damage to oil refineries from Hurricane Katrina.

For a complete list of Intervention Analysis Seasonal Adjustment series and explanations, please refer to the article "Intervention Analysis Seasonal Adjustment", located on our website at: <http://www.bls.gov/cpi/cpisapage.htm>.

CPI information is available from BLS electronically, through publication subscriptions, and via telephone and fax through automated recordings. Information specialists also are available in the national and information offices to provide help and to respond to questions.

### Electronic access to CPI data

[BLS on the Internet](#). Through the Internet, BLS provides free, continuous access to published CPI data and press releases. The most recent month's CPI is made available immediately at the time of release. Additionally, a database called LABSTAT, containing current and historical data for the CPI, is accessible.

*World Wide Web*. BLS maintains a Web site at <http://www.bls.gov> on the Internet. This BLS homepage provides access to LABSTAT, as well as links to program-specific homepages. The CPI homepage <http://www.bls.gov/cpi/> provides other CPI information, as well as indexes. This includes a brief explanation of methodology, frequently asked questions and answers, contacts for further information, and explanations of how the CPI program handles special items, such as medical care and housing. In addition, CPI press releases and historical data for metropolitan areas can be accessed by linking to the regional office home pages from the main BLS Web site listed above.
