GUIDE TO INDUSTRY CLASSIFICATIONS FOR INTERNATIONAL SURVEYS, 2002

*Industry classifications adapted from the 2002 North American
Industry Classification System (NAICS)*

The international surveys industry (ISI) classifications described here are to be used when completing the industry classification items in BEA's surveys of direct investment and services. The classifications and their code numbers were adapted by BEA from the 2002 North American Industry Classification System (hereafter referred to as the "2002 NAICS"). Industry classifications in the previous version of this guide were adapted from the 1997 North American Industry Classification System.

Reflecting the changes made to the NAICS for 2002, the new 2002 NAICS-based ISI classifications differ from the 1997 NAICS-based ISI classifications for the Construction, Wholesale Trade, and Information sectors. If you have activities in these sectors, please classify them carefully using the new ISI codes. In the Construction sector, changes were made to better reflect similar production processes (in accordance with the NAICS conceptual framework); in the Wholesale Trade sector, changes were made to differentiate between businesses that take title to goods and those that do not, and to better capture the emergence of business-to-business electronic markets; and in the Information sector, new classifications were added to recognize new and emerging activities, particularly for Internet-related activities and telecommunications services.

For reporting on BEA surveys, 205 individual ISI classifications were adapted from the 2002 NAICS, and each has been assigned a four-digit numerical code. (The previously used NAICS-based 1997 ISI classifications had 197 four-digit codes.) The titles of some ISI classifications, by themselves, may not be sufficiently descriptive to classify certain activities. More information on the content of each classification is provided. For some classifications, a "NOTE" given after the definition lists closely related activities NOT included in the classification being defined and the ISI codes for those activities.

For the convenience of those U.S. reporters familiar with the 2002 NAICS, the 2002 NAICS code or codes that correspond to a given ISI classification are shown in parentheses under the heading of each ISI classification. Because differences between a given ISI classification and the corresponding 2002 NAICS classification(s) may exist, the detailed definitions of the ISI classifications should be consulted when completing industry classification items in the survey.

MANUFACTURING

The manufacturing sector (ISI codes 3111–3399) comprises businesses engaged in the mechanical, physical, or chemical transformation of materials, substances, or components into new products. The assembling of component parts of manufactured products is considered manufacturing, except in cases where the activity is classified in Construction (e.g., structures).

Manufacturing businesses acquire materials that are products of agriculture, forestry, fishing, mining, and quarrying as well as products of other manufacturing businesses. A business may process the materials itself or may contract with another manufacturer to perform the processing on materials which they provide to the other manufacturer. Both types of businesses are included in manufacturing.

The product produced by a manufacturer may be finished for final consumption or it may be a material input for an entity engaged in further manufacturing. For example, the product of an alumina refinery is the input used in the primary production of aluminum; primary aluminum is the input to an aluminum wire drawing plant; and aluminum wire is the input for a fabricated wire product manufacturer.

Within the manufacturing sector, the individual industries generally reflect distinct production processes related to material inputs and production equipment. In the machinery area, where assembling is a key activity, parts and accessories for manufactured products are classified in the industry of the finished manufactured item when they are made for sale separately. For example, a replacement refrigerator door would be classified with refrigerators and an attachment for a piece of metal working machinery would be classified with metal working machinery. However, components and inputs from other manufacturers are classified based on the production function of the component manufacturer.

Some borderline activities that are classified in manufacturing are:

Apparel jobbing (assigning of materials to contract factories or shops for fabrication or other contract operations) as well as contracting on materials owned by others	Mass production of computer software or video tapes from a master copy
Aircraft and aerospace research and development	Milk bottling and pasteurizing

	Wood preserving

Some borderline activities that are not classified in manufacturing are:

The construction of structures and fabricating operations performed at the site of construction by contractors is classified in Construction (ISI codes 2360–2380).

The breaking of bulk and redistribution in smaller lots, including packaging and repackaging products, such as liquors or chemicals; the customized assembly of computers; sorting of scrap; mixing paints to customer order; and cutting metals etc. to customer order are classified in Wholesale or Retail Trade (ISI codes 4231–4540).

Publishing and the combined activity of publishing and printing is classified in Information (ISI codes 5111–5191). Although the activity performed is the transformation of information into a product, the value of the product to the consumer lies in the information content, not in the format in which it is distributed (i.e., the book, the software diskette).

3111 Animal foods (2002 NAICS code 3111)

WHOLESALE TRADE

The wholesale trade sector (ISI codes 4231–4251) comprises businesses engaged in wholesaling merchandise, generally without transformation, and rendering services incidental to the sale of merchandise.

The wholesaling process is an intermediate step in the distribution of merchandise. Wholesalers are organized to sell or arrange the purchase or sale of (a) goods for resale (goods sold to other wholesalers or retailers), (b) capital or durable nonconsumer goods, and (c) raw and intermediate materials and supplies used in production.

Wholesalers sell merchandise to other businesses and normally operate from a warehouse or office. These warehouses and offices are characterized by having little or no display of merchandise. In addition, neither the design nor the location of the premises is intended to solicit walk-in traffic. Wholesalers do not normally use advertising directed to the general public. Customers are generally reached initially via telephone, in-person marketing, or by specialized advertising that may include Internet and other electronic means.

Although in general, wholesaling normally denotes sales in large volumes, durable nonconsumer goods may be sold in single units. Sales of capital or durable nonconsumer goods used in the production of goods and services, such as farm machinery, medium and heavy duty trucks, and industrial machinery are included in wholesale trade.

The sector comprises two main types of wholesalers: (1) merchant wholesalers that sell goods on their own account and (2) business to business electronic markets, agents, and brokers that arrange sales and purchases for others generally for a commission or fee.

The unique characteristics of information and cultural products, and of the processes involved in their production and distribution, distinguish businesses in the Information sector from those in other sectors. Some of these characteristics are:

- 1. Unlike traditional goods, an "information or cultural product" such as an on-line newspaper or a television program does not necessarily have tangible qualities, nor is it necessarily associated with a particular form.**
- 2. Unlike traditional services, the delivery of informational and cultural products does not require direct contact between the supplier and the consumer.**
- 3. The intangible property aspect of information and cultural products makes the processes involved in their production and distribution different from goods and services. Only those possessing the rights to these works are authorized to reproduce, alter, improve, and distribute them.**
- 4. Distributors of information and cultural products often add value to the products they distribute. For instance, broadcasters may add advertising to the original product. This capacity means that unlike other distributors of goods and services, some information distributors may derive revenue not from the sale of the distributed product to the final consumer, but from those who pay for adding information to the original product.**
