Hi Chris,

Haven't forgotten about you... still waiting to hear back from NOAA.

One thing I can clarify now. Will not need someone to review the JAG report that I sent you. We would probably start with the next one.

Mark

Subject: Reviewers

Hi Mark,

Many of our scientists are willing to review documents if they fall into their realm of expertise and if they can meet the turnaround requirements. The best way to facilitate that might be for me to act like an editor and arrange potential reviewers for specific documents. For the JAG report you sent me, I suggest:

Brad Butman bbutman@usgs.gov  
Jingping Xu jpx@usgs.gov

These are both thoughtful generalists and have agreed to review the document (based on my description of it), if asked (although Jingping travels to Asia next week). In addition, Tom Lorensen tlorenson@usgs.gov is a hydrocarbon geochemist with experience with natural seeps, and would be another good reviewer for this or other documents.

As far as actual participation on the JAG, the most obvious candidates would be me or Rich Signell, with a couple of others in the wings. Maybe we should not try to do that yet...but I do think a mechanism for closer contact with that group would be good.

Chris
