Subject: Re: Message to John Ohly

Thanks Steve

I think this is good. If the other members of the team are happy with it then we should go ahead and respond. Also, it will be good to provide a NOAA point of contact for John Ohley to reach.

Bill Lukas

Good Morning Kathleen, et.al.,

The draft below was prepared by Sky Bristol (I made a few additions

1608445212-5115-18137-179-87

and modifications) as a potential response to questions from John Ohny that sky received last week. We need the help of the OC to manage this response and look to you for guidance on next steps.

Sky and the other organizations who have been associated with the tool are in the process of preparing documentation we hope to complete fairly soon. However, at present there is no formal document ready for distribution. The team does have a robust paper trail to documents requirements and decisions.

Please advise on how you'd like me to coordinate with NOAA at this end. Let Sky and I know how we can assist in this process.

Thank you,
Steve

Subject: Re: Message to John Ohly

I'm thinking something along these lines:

The Deepwater Horizon MC252 Gulf Incident Oil Budget Calculator is a joint effort of scientists and engineers from government, academia, and industry. The development of the tool has included leadership from NOAA who have provided a team federal and independent oil fate and behavior scientists, from the US Coast Guard who have responsibility for fate of oil tracking and data input, from NIST who has provided a team of statisticians, and from USGS who has contributed a team of computer scientists. The scientific paper that details the calculations and assumptions, documents the model, and provides the basis for the technological tool is still undergoing approval processes through government channels for final publication. The overall model and its underlying assumptions have been through rigorous scientific review by a multi-organization team of experts whose work will be cataloged as part of the peer review process.

The data that have been used in the calculator include direct measurements and estimates made in the field and recorded in the tool by USCG personnel with National Incident Command. The underlying daily data and the actual scientific program used to calculate the oil budget will be made available as part of the final report that is in draft.

As overall scientific lead for the Oil Budget Calculator, questions

1608445212-5115-18137-179-87

about the model can be referred to _____ with the National Oceanic and Atmospheric Administration.

I heard that Bill is out of pocket today on leave. Mark Miller heads home to Seattle tomorrow. Gohn has given us some room with her email. She bcc'd me. Let's work together to get a draft together. It may not get sent tomorrow based on OC support. They actually send the response.

About to hop the subway.

Steve,

Here's how Kathleen decided to handle this for now. I'll draft a response predicated on NOAA/NIST moving forward with some form of public release of the model.

Can you help work that angle there with Mark Miller in particular. I have not heard from Bill Lehr or been able to reach him via the number I had. I've just sent another email plea that was copied to you.

John,

We apologize for the delay in responding to your questions below. Sky is actually not the right person to provide answers to these questions, but we are tracking the answers down and will get them to you as soon as we can. I will be out of the office for a few days, so my colleague Bill Lukas [cc'ed on this message] will likely be following up if we have anything for you before I return.

cheers,

Kathleen

Subject: Follow-up Question

Good Afternoon Sky,

Thank you again for your assistance yesterday

1608445212-5115-18137-179-87
afternoon. While I

understand you may be quite busy right now, I am
still interested in

understanding two points:

1. Do you all intend to publish/make
public the specific
data/calculations/statistical model used for the
report?

2. What was the peer-review process for
the reports (ie who
was involved, how it was executed)?

Any information you can share would be greatly
appreciated.

Regards,
John
