P R O C E E D I N G S

(10:10 a.m.)

OPENING REMARKS

CHAIRMAN COX: Good morning and welcome to the Securities and Exchange Commission. I am pleased to be here for this first meeting of the advisory committee on improvements to financial reporting, and I want to welcome all of the members of this committee and thank each of the members and the observers for agreeing to serve. I particularly want to thank the committee's chairman Bob Pozen for his leadership.

Earlier this week we celebrated the fifth anniversary of the Sarbanes-Oxley Act. The stated purpose of that act was to "protect investors by improving the accuracy and reliability of corporate disclosures." Among its many provisions the act rather presciently called for an examination of ways to combat growing complexity in financial reporting.

If you remember that in one of the paradigm cases that led to this landmark legislation, the Enron case, much of the fraud was hidden in a thicket of accounting complexity.

The act called for studies on the use of principles-based accounting systems and disclosures regarding off balance sheet transactions. These resulted in well

1 thought out reports to Congress on ways that financial  
2 reporting could be improved. Many of those reports have  
3 recommendations that have already been implemented or that  
4 are in the process of being implemented, but this work and  
5 these reports were just the beginning.

6           We've continued our efforts by joining with the  
7 FASB and with the PCAOB in an all out war on complexity in  
8 accounting. When it comes to giving investors the protection  
9 that they need, information is the single most powerful and  
10 important tool that we have. And surely we can't say that we  
11 have achieved our investor protection objectives, not only  
12 the mission of this agency but the very stated purpose of the  
13 Sarbanes-Oxley Act, if the information is provided in a way  
14 that isn't clearly understandable to the men and women who  
15 use it to make decisions.

16           The truth is that financial reporting has become  
17 overly complex. That means not only are financial statements  
18 difficult for investors to understand but also companies  
19 incur excessive cost as a result of complying with voluminous  
20 and overly prescriptive accounting and reporting rules. Your  
21 job on this committee is to help us end this destructive  
22 cycle and to get our financial reporting system back to first  
23 principles.

24           We're asking you to help us reduce complexity and  
25 all of its costly burdens. When it comes to financial

1 statements, most investors today would probably find  
2 themselves agreeing with Mark Twain who said, "the more you  
3 explain it, the more I don't understand it." That's why  
4 we've called on leaders from the private sector to advise us  
5 on what steps we need to take.

6           Empowering investors doesn't just mean better  
7 access to information. It also means access to information  
8 in a form that they can really use. So simply put the  
9 question is, once that SEC-mandated information is available,  
10 is it useful, is it understandable? And the answer, all too  
11 often, has been a resounding and frustrated "no,"  
12 particularly among individual investors at a time when over  
13 half of U.S. households own securities.

14           It's even more frustrating when the process of  
15 preparing that information by issuers involves unnecessary  
16 costs and procedures and uncertainty about what is required  
17 of them. That's why I am so pleased to have chartered this  
18 committee.

19           The Committee on Improvements to Financial  
20 Reporting already has a catchy acronym, CIFiR, which brings  
21 to mind the cryptographic tools of the intelligence  
22 community. Well, it shouldn't require a secret decoder ring  
23 to understand what's going on in your financial statements.

24           So with your help today we are opening up another  
25 front in our war on complexity by gathering the views of a

1 wide variety of constituents including preparers and users  
2 and those who assist and advise them. We look forward to  
3 this committee providing specific recommendations on how  
4 unnecessary complexity in the financial reporting system can  
5 be reduced and how the system can be made more useful to  
6 investors.

7           Your enabling charter describes several areas that  
8 the committee will focus on, including the current approach  
9 to setting financial accounting reporting standards, the  
10 current process of regulating compliance with those  
11 standards, factors that may drive unnecessary complexity and  
12 reduce transparency, and any lessons that can be learned from  
13 the growing use of international financial reporting  
14 standards.

15           I've also asked the committee as part of its  
16 consideration of our financial reporting system to focus on  
17 how technology might be used to address accounting complexity  
18 by making financial information more useful to a greater  
19 number of investors. For example, through the power of  
20 interactive data the opportunity exists to redesign the  
21 financial reporting system to deliver precisely the type and  
22 level of information that each individual investor needs.

23           I want to thank the members and observers once  
24 again for your participation on this advisory committee. I  
25 look forward to your work, as do my fellow commissioners, and

1 your thoughtful recommendations on this vitally important  
2 mandate.

3 I want now to turn it over to our Chief Accountant,  
4 Conrad Hewitt, for his introductory remarks.

5 ADDITIONAL INTRODUCTORY REMARKS

6 MR. HEWITT: Thank you, Chairman Cox and good  
7 morning to everyone. Also I'd like to welcome all of the  
8 committee members to the first meeting of the Advisory  
9 Committee on Improvements to Financial Reporting.

10 The formation of this committee has been a top  
11 priority for me. When I first interviewed with Chairman Cox  
12 over a year ago, becoming the Chief Accountant, he indicated  
13 his desire to form a committee to study how we could make  
14 improvements to our financial reporting system.

15 As part of this effort he wanted to see what could  
16 be done to reduce the complexity of financial reporting for  
17 the benefit of companies and investors. Based upon my  
18 experience on several boards and as chairman of several audit  
19 committees, I too thought this was a worthwhile endeavor and  
20 its one of the main reasons I am here.

21 I'm very happy to be able to address the committee  
22 and welcome it to the public.

23 Now the U.S. system of financial reporting has long  
24 been the most robust and transparent in the world. However  
25 in order for us to retain our position as the gold standard

1 we must from time to time step back and evaluate what changes  
2 may be necessary.

3           From my various roles as an auditor, director of a  
4 board, audit committee chairman and regulator over the years,  
5 it has become increasingly apparent to me that the current  
6 system has become overly complex. The financial reporting  
7 system needs to be improved to more effectively meet the  
8 needs of the entire spectrum of investors.

9           As you know, the Commission's mission is to protect  
10 investors, maintain fair, orderly and efficient markets and  
11 facilitate capital formation. Financial reporting permeates  
12 every aspect of this mission, making this committee an  
13 important element in supporting the Commission's role in the  
14 U.S. capital market.

15           Please consider the following. As Chairman Cox  
16 just mentioned, today equity securities are broadly held with  
17 approximately half of the American households investing in  
18 stocks. This presents a challenge. Investors have expressed  
19 concern that one-size-fits-all financial reports of today do  
20 not meet the needs of the spectrum of investors that rely on  
21 these reports.

22           Individual investors may be interested primarily in  
23 summarized, plain-English reports that are easily  
24 understandable, and may find it difficult to understand all  
25 of the underlying detail, including the financial reports

1 that are currently produced.

2           On the other hand, market analysts and other  
3 investment professionals may desire information at a far more  
4 granular level than is currently provided. Technology  
5 certainly must play a future role in delivering the  
6 customized level of information that different types of  
7 investors may desire and need.

8           Aside from the investors' concerns companies have  
9 expressed concerns with our current financial reporting  
10 system. Many companies assert that it's difficult to ensure  
11 compliance with the voluminous requirements contained in U.S.  
12 GAAP and SEC reporting rules when preparing financial  
13 reports.

14           In fact, during 2006, this past year, almost 10  
15 percent of the U.S. public companies restated their prior  
16 financial reports. To me this is an alarmingly high number  
17 and really has the potential to obscure those companies with  
18 serious underlying problems as opposed to those companies  
19 with unintentional misapplications of complex and nuanced  
20 accounting literature.

21           Restatements are costly to companies and can  
22 undermine the confidence of investors in our financial  
23 reporting system. So committee members, as you study these  
24 issues I encourage you to look beyond the accounting applied  
25 in the basic financial statements and footnotes. I believe

1 you should consider more broadly the array of information  
2 that investors need to make informed decisions.

3           Today the U.S. capital markets can run fairly  
4 orderly and efficiently, but only through the steady flow of  
5 comprehensive and meaningful information. As some have  
6 noted, the percentage of a company's market value that could  
7 be attributable to accounting book value has declined  
8 significantly from the days of a brick and mortar economy.

9           Thus, you as a committee may want to consider a  
10 more comprehensive business reporting model including both  
11 financial and nonfinancial key performance indicators. I  
12 think we all must also consider how to deliver all this  
13 information more timely.

14           In the twenty-first century, in a world where  
15 messages can be sent across the world in the blink of an eye,  
16 it is ironic that the analysis of financial information is  
17 still subject to many manual processes resulting in delays,  
18 increased costs and errors.

19           Now as you can see the improvement of financial  
20 reporting involves more than -- for example, an effort to  
21 trim down hundreds of pages of guidance on accounting for  
22 derivative instruments. Instead, to me, improvements to our  
23 financial reporting goes beyond the complexity debate to  
24 encompass the usefulness of financial reporting and the  
25 delivery of information to investors.

1           As you consider these issues I encourage you also  
2 to consider how you would define complexity and the scope of  
3 areas that you believe should be addressed as part of an  
4 effort to improve financial reporting. Throughout the next  
5 year I encourage you to consider the expertise and work  
6 performed by others in tackling the many facets of this  
7 issue.

8           Academics, organizations and private citizens alike  
9 have performed research and provided numerous recommendations  
10 that may bear on the matters you will deliberate. They will  
11 also continue to do so via the many opportunities for public  
12 comment that you as a committee will provide.

13           Now in some cases activities related to the many  
14 topics you will consider are already underway. For example,  
15 reconsideration of the conceptual framework by FASB and IASB,  
16 codification of U.S. GAAP by FASB, international convergence  
17 efforts, development of an enhanced business reporting  
18 framework and use of XBRL among others.

19           However I also encourage you to begin your  
20 considerations with a blank sheet of paper, an open mind that  
21 is not bound by past precedent, current activities, popular  
22 or fad views, opinions or political pressure. I suggest that  
23 maybe you want to think outside the box.

24           Now I recognize the ambitious nature of our goals  
25 and the enormous amount of work ahead of us. However with

1 the formation of this committee we have the potential to  
2 continue to improve our financial reporting system,  
3 solidifying the position of U.S. capital markets as the most  
4 transparent and reliable in the world.

5 I am confident that with your varied backgrounds,  
6 experience and points of views as well as the participation  
7 of those that you represent in this process we will be able  
8 to address the matters that lie before us.

9 In closing, for many years into the future  
10 investors should benefit from your recommendations. I  
11 sincerely appreciate your commitment to this committee. My  
12 staff and I look forward to working with you in this process  
13 and I personally thank you for joining this important  
14 committee.

15 With that, I'll turn the floor over to my deputy  
16 chief accountant Jim Kroeker who will call the meeting to  
17 order, and then he'll turn it over to the chairman, Bob  
18 Pozen.

19 Jim. Thank you, all.

20 MR. KROEKER: Thanks, Conrad.

21 I just wanted to echo the thanks that Conrad and  
22 Chairman Cox have already expressed to the committee members.  
23 Considering how to improve the usefulness of financial  
24 reporting is an extremely important endeavor and one that I  
25 and our staff look forward to working with the committee on.

1 In the interest of hearing directly from committee members on  
2 the discussion of the content of this meeting I won't make  
3 any additional remarks. Rather, I'll turn the floor over to  
4 the committee chair Bob Pozen.

5 Bob, the floor and the meeting is yours.

6 MR. POZEN: Thank you, and thank you, Con, for those  
7 excellent remarks. I'll just sit here in order to generate  
8 the committee quality of discussion that we hope to have this  
9 morning. I'll just make a few preliminary remarks and then  
10 move us into the discussion paper.

11 I would say that the reason why we need -- why do  
12 we need this committee? In my mind, there are three main  
13 reasons. One is, if we look at this from the preparers' and  
14 the auditors' point of view, those are the people who put  
15 together financial statements. As Con pointed out, we in  
16 2006 had about 10 percent of all U.S. companies that restated  
17 their financials.

18 This is a group of people who are trying very hard  
19 to get it right. They have a lot at stake in getting it  
20 right, yet we have this very, very high volume of financial  
21 restatements. So that shows that we aren't really giving  
22 enough guidance to people. We don't have these standards  
23 right.

24 When that many people try that hard and have that  
25 high an error rate it's not a good result. The second thing

1 is that we look at users. We see individual investors. Many  
2 individual investors tell us that when we get these 10-Ks or  
3 prospectuses they just can't read them, they put them in the  
4 trash. That's not a very good place for disclosure  
5 documents.

6           They want summaries. They want easy. They want  
7 something that they can grasp quickly.

8           On the other hand, if you talk to sophisticated  
9 investors they'll tell you that there's not enough  
10 information, and it's not in the right format, it doesn't go  
11 deep enough, there aren't enough indicators. So we have two  
12 groups that -- one of whom wants a much simpler format and  
13 another which wants a much more sophisticated format. We've  
14 been a one-size fits all and it doesn't seem to fit that  
15 well.

16           The third thing is the growth of press releases.  
17 For those of us on audit committees or companies it's like  
18 the press release has become the alternative communication  
19 vehicle. This is a vehicle which summarizes what the company  
20 has done in the last quarter of the last year and it also  
21 contains a lot of non-GAAP financials, which are the  
22 company's way of saying, "look, this is what's really  
23 important; these are our core earnings; let's strip out  
24 things like currency fluctuations," or things like that.

25           So I think these are three things that really

1 indicate that we have a problem. We have a very good system  
2 but we really need improvement. It's not so easy to solve  
3 these problems, or as we're going to say to decipher these  
4 problems. We have various pundits who say, well, what we  
5 need to do is just adopt the UK system of principles versus  
6 rules or the IFRS system of principles.

7 I think we all understand that in any of these  
8 systems they have rules as well as principles and the real  
9 question is how do you mix principles and rules. And I think  
10 it's also true in the U.S. litigation environment there is a  
11 desire for rules to protect people who are in good faith  
12 trying to get the system right.

13 So I think we can make some headway in that, but I  
14 don't believe that the principle versus rule distinction is  
15 the solution here. It's an aspect that we can look at, but  
16 we shouldn't believe that that's the answer.

17 The other thing that we have to recognize is some  
18 of the reason that we have complexity is because the economic  
19 transactions are complex. Some of the reasons we have  
20 complexity is because we have a difference of viewpoints  
21 between preparers and users. Most sophisticated users, for  
22 instance, would want more segments, but preparers don't want  
23 to have as many segments.

24 So these are very real and genuine tensions in the  
25 system and they are not easily resolved. But nevertheless

1 this committee will come to grips with these issues in, I  
2 believe, a very deep and fundamental way, and we are  
3 committed to coming out with proposals by next August.

4           And I would say the proposals I hope will have two  
5 characteristics. One is that they'll be doable; that is,  
6 they'll be easy to adopt. That first of all means that they  
7 will not require legislation. We should try to stay away  
8 from proposals that require legislation because  
9 Congress -- once things get into Congress it's a very  
10 difficult environment in order to implement something.

11           The second thing is that we do have the support of  
12 the SEC, FASB and PCAOB and we ought to take advantage of  
13 that. There have been many commissions in the last few years  
14 by different private groups, but those are commissions that  
15 have just basically decided they want to put forth their view  
16 to the agencies. Here the agencies have said we need help,  
17 we want your input and we are happy to have -- Con, your  
18 support, Bob Herz's support, Mark Olson's support and various  
19 staff members like Jim and Russ who will work with us.

20           So this is not a case in which we're going to come  
21 out of the blue with these proposals next August. We're  
22 going to have vetted them. We're going to have worked with  
23 people so that these will be, in my view, doable. The other  
24 thing is I would hope that the proposals would be focused.  
25 Focus, focus and focus as they say in real estate.

1           We cannot possibly address every single issue in  
2 financial reporting. This is a huge subject and there are  
3 many areas, many aspects of it, but we can focus on those  
4 areas where we think we can make substantial improvements.  
5 We want to identify those areas where there's a consensus  
6 that there is something wrong and we can improve it by doing  
7 various things.

8           And I think if we can focus on those areas and  
9 identify those areas that that will be a success. So this  
10 committee should not be judged at the end by whether we have  
11 100 recommendations. I hope we won't have 100  
12 recommendations. I'd rather see us have 10 or 12  
13 recommendations of things that are actually doable which  
14 really substantially increase performance.

15           Now I'd like to turn to the discussion paper. This  
16 is in the booklet that has been handed out to you with a very  
17 nice cover. And I should say that this represents my view  
18 and not the views of the Commission and it actually doesn't  
19 even represent the views of the committee because they hadn't  
20 seen it until a week or two ago.

21           But this discussion paper attempts to lay out five  
22 areas where the committee may choose to focus, and within  
23 that to delineate issues that could be addressed. The five  
24 main areas are substantive complexity, the standard setting  
25 process, number two, compliance audit, number three, delivery

1 of information, number four, and international coordination,  
2 number five.

3           Just to sort of help the group here in the  
4 audience, by substantive complexity we mean some of the  
5 things that Chairman Cox is talking about, why are these  
6 accounting standards so long, why are people having  
7 difficulty following them, difficulty comparing them, why are  
8 they so complex? In the standard setting process we're  
9 talking about how the FASB goes about adopting accounting  
10 standards and probably more importantly how they get  
11 interpreted down the line as people come to actually apply  
12 these standards either at the registrant level or at the  
13 industry level.

14           In the compliance audit area we're talking about  
15 how the audit process occurs, what happens between  
16 accountants and their companies and we're talking about how  
17 these financial statements are reviewed by Corp Fin here at  
18 the SEC and ultimately the inspection process at the PCAOB,  
19 the inspection process of auditors and the enforcement  
20 process at the SEC.

21           The fourth area we're looking at is information  
22 delivery. This is an area where we're talking about how we  
23 can take the body of information and deliver it to investors  
24 in formats and packages that are more appropriate to their  
25 needs. How can we go to summary prospectuses, how can we use

1 some of the things that Chairman Cox is doing in XBRL to make  
2 these financial statements more usable to different groups of  
3 investors?

4           And fifth is international. International  
5 coordination is very much on the Commission's plate. Just  
6 had a proposal on foreign registrants, and now there is a  
7 concept release on U.S. registrants. I think probably at  
8 least my initial suggestion is that we concentrate on the  
9 first four areas and wait a little to get into international  
10 coordination because we will then have the benefit of all the  
11 comments that will come in over the next few months on these  
12 two proposals.

13           So that's just an introduction to these areas, and  
14 I don't want to take up any more time. So we are now going  
15 to move to agenda item number four, which is comments on the  
16 discussion paper. And what I'm going to ask is that each  
17 member of the committee have an opportunity in five minutes  
18 or so to give their views as to whether these are good areas  
19 for the committee to look at, whether within these areas we  
20 should add, subtract or multiply issues and have a chance to  
21 give -- help scope out the work of the committee.

22           So I think our attempt here at the end of this  
23 session would be to reach more or less a consensus about what  
24 areas the committee is going to focus on and within that what  
25 are the issues that we are going to particularly try to

1 analyze.

2           So we're going to go in alphabetical order here and  
3 I'm going to also use this opportunity just to introduce a  
4 little more the members of the committee. I think on the SEC  
5 web site we have the full biography of all the committee  
6 members, and we do have a very distinguished group.

7           So going in alphabetical order we're going to start  
8 with Denny Beresford, who is the Ernst and Young professor of  
9 accounting at the University of Georgia. Mr. Beresford, as  
10 many of you know, was chairman of FASB for a decade between  
11 1987 and 1997. He also is a member of the audit committee of  
12 several large fortune 500 companies.

13           So I'm hoping that, Denny, you might be able to  
14 give us your views on the discussion paper and the issues  
15 before the committee. Thank you.

16                           COMMENTS ON DISCUSSION PAPER

17           MR. BERESFORD: Thanks, Bob.

18           I think my comments are maybe just a little broader  
19 than the paper, but I hope they'll inform the debate. First  
20 of all, I'm extremely proud to be part of this important  
21 advisory committee and I thank Chris Cox for appointing me.

22           My colleagues and friends in Athens, Georgia  
23 thought this was a very big deal until they realized that the  
24 SEC reference had nothing to do with college football. But  
25 this is a serious issue we face today and I don't want to

1 treat it lightly.

2           In the early 1990s when I chaired the FASB we  
3 developed our first notion of a strategic plan. The  
4 foundation of that plan was what we described as the three  
5 S's. Those S's stood for selective, simple and speed. Thus,  
6 the board and staff agreed that we needed to be more  
7 selective in choosing agenda projects and working only on  
8 topics that truly needed improved reporting, that we needed  
9 to simplify our standards in terms of complexity of  
10 solutions, length and understandability and that we needed to  
11 streamline our due process procedures.

12           We couldn't keep taking five years or more to  
13 develop new standards because outside support for change  
14 tends to erode over such a lengthy period. All board members  
15 signed off on that plan in relatively short order. However,  
16 as is clearly indicated by our being here today there was no  
17 real commitment to change by individual board members.

18           In the past four or five years following SEC and  
19 FASB initiatives on simplification and principles versus  
20 rules there certainly has been more effort on these  
21 confounding issues, but actual changes have been relatively  
22 modest, and other developments such as international  
23 convergence have created new challenges.

24           Thus we obviously need a fresh way of looking at  
25 the challenges and a new commitment to dealing with them. In

1 short, while I am delighted that these high level resources  
2 are now being devoted to improving financial reporting we  
3 need to assure that this effort results in actions rather  
4 than just words. I certainly second what Bob said earlier.

5           At a recent audit committee chairman roundtable I  
6 attended, one of the members, the retired chief executive  
7 officer of a fortune 500 company gave his personal definition  
8 for the term GAAP. He said the GAAP means you need to follow  
9 this rule even though it doesn't make sense because otherwise  
10 you'll go to jail.

11           Now that's not exactly the highest form of praise  
12 for what has been an important part of my life for the past  
13 35 years. My point in mentioning this is that I feel  
14 strongly we must deal with the relevance of current and  
15 proposed GAAP rather than just its complexity. Let me give a  
16 couple of examples.

17           I'm on the board of Fannie Mae. We use derivatives  
18 extensively to hedge the spread between a very large mortgage  
19 asset portfolio and related borrowings. As you know from a  
20 lot of press coverage, the excruciating details of hedge  
21 accounting under Statement 133 are too problematic and  
22 therefore the resulting recognition of gains and losses  
23 currently in the income statement doesn't come close to  
24 reflecting the true economic performance of the company.

25           As another example, in the FASB's forthcoming

1 standard on business combination procedures, many aspects  
2 will be seen as nonsensical by businesspeople, particularly  
3 having to take legal and other directly related acquisition  
4 expenditures as current period expenses rather than being  
5 added to the costs of the acquisition and recording  
6 liabilities for less than likely legal contingencies at their  
7 supposed fair values and then marking them to market each  
8 quarter thereafter.

9           Can you imagine new tables in the Wall Street  
10 Journal listing current market values for lawsuits in  
11 process?

12           Complexity is a critical issue, and I sincerely  
13 hope that a number of actionable points will come from our  
14 committee's efforts, but we also need to keep in mind that  
15 accounting should be a practical activity. It's been  
16 described by the language of business and by some as a form  
17 of report card on a company's performance.

18           Using that report card analogy I can assure you  
19 that the system I've used to assign grades to students in the  
20 past ten years isn't considered perfect, but it's relatively  
21 simple and it's a good indication of actual performance. I  
22 hope that our work over the next year can help financial  
23 reporting better meet those same objectives.

24           Thanks, Bob.

25           MR. POZEN: Thank you, Denny. I guess I'd like to

1 next go to Susan Bies. Susan was governor of the Federal  
2 Reserve Board here in Washington from 2001 to 2007. Before  
3 that, Dr. Bies was Executive VP for Risk Management and Audit  
4 at First Tennessee National Corporation. So she brings both  
5 a lot of knowledge in terms of the regulatory process and a  
6 particular expertise in the banking area.

7 MS. BIES: Thank you, Bob. Sitting on this  
8 committee, while I've been both the preparer and I served on  
9 the EITF and I've been a regulator, I've been asked to really  
10 sort of reflect the regulator's perspective on the various  
11 issues that the committee will cover. And I wanted to sort  
12 of lay the ground around some issues that maybe are a little  
13 unique from a regulatory perspective.

14 So let me just raise the issues. I'm not going to  
15 attempt to answer them today.

16 One of the challenges around the complexity issue,  
17 as already been mentioned is the fact that there are a lot of  
18 different users of financial statements. If we look at the  
19 banking system in the United States, we worry very much as  
20 regulators about something called moral hazard. We want the  
21 market, the depositors, anyone who has got exposure to a bank  
22 to bear the risk that the bank could go under. We don't want  
23 a safety net to be there which would require another bailout  
24 like we had with the S&L crisis of the '80s.

25 But the typical consumer has a terrible time

1 understanding financial concepts in general -- witness what  
2 we're going through right now with subprime mortgages -- much  
3 less a corporate financial statement.

4           So how can we develop a framework that would allow  
5 a depositor to know how strong their bank is that they're  
6 choosing and yet provide the kind of information that  
7 regulators need and sophisticated investors in the market use  
8 -- those who buy the securities that are issued by the debt  
9 of those organizations. It's a real challenge, and also we  
10 have very complex organizations, very small little  
11 organizations. How do we balance the difficulty of the  
12 preparer's side of this too? And it's going to be something  
13 we'll talk more about.

14           The other challenge that I think we've got, and  
15 this really I think comes out very prominently in financial  
16 services, is that I think some of the places where we tend to  
17 have tension between preparers and some users of financial  
18 statements and I know around some of the standards that have  
19 been set in the past, really reflects the fact that we're  
20 asking preparers to put together financial information in a  
21 way that doesn't reflect how the business is managed or how a  
22 regulator would look at it.

23           Let me give you a couple examples. There is a big  
24 push to do fair value accounting around financial  
25 instruments. Now for trading book this makes perfect sense

1 because it's got tremendous turn. It's going to turn a  
2 couple times a day and so you really want to know what is  
3 realizable and what's at the end of the day sitting there  
4 which will be your gains and losses tomorrow when you pick up  
5 the books and start running again, so it makes perfect sense.

6 Well, what about a loan book that is not destined  
7 to be traded? There is no borrower who will ever pay more  
8 than they borrowed or any penny more than the interest they  
9 owe on the loan. So when we do a fair value on something  
10 that's never going to be traded all we're doing is creating  
11 timing differences, and we need to ask, is this appropriate  
12 and how do we distinguish between timing differences that  
13 will reverse and what is permanently earned income?

14 Bank regulators are struggling with this on the  
15 definition of capital for banks because we have some things  
16 that flow through fair value mark to market and go through  
17 the earnings statement, end up in equity, that we know will  
18 disappear the next day. And so the quality of capital is  
19 very important when we look at the leverage of an  
20 organization and its ability to sustain surprises.

21 This also raises issues about the operations in a  
22 service business as opposed to just a financial instrument  
23 itself. Mortgage servicing rights, for example, the  
24 accounting says, when you create them, because you're going  
25 to service mortgages that are sold in the pool, you recognize

1 all the gain up front.

2           Now during the dot com -- we got all upset when the  
3 dot com companies booked revenue from contracts up front. We  
4 thought it wasn't appropriate. And as a regulator I am  
5 concerned in the past that we were booking the fair value of  
6 the servicing rights without any regard whether that  
7 particular company had higher or lower costs to service or  
8 the quality of the mortgages or the size of the mortgages  
9 where they would actually -- more or less than the fair  
10 value, and so the operational numbers got mixed up.

11           And finally part of it is around risk. Markets are  
12 trying more and more to manage risk. I think some of the  
13 standards don't reflect current risk management practices.  
14 But more importantly we focus so much on a precise number and  
15 the precision I think implies more accuracy than we'll ever  
16 really accomplish in the world of financial instruments. And  
17 so we need to find a way to give supplemental disclosure  
18 around risks and make it more useful.

19           The last point I would like to say -- I really hope  
20 the committee does spend some time looking at technology.  
21 Two years ago the banking regulators did the first global  
22 project in the United States to have all 8,000 financial  
23 institutions use XBRL to do their financial reporting every  
24 quarter. We have found that this has greatly reduced errors.  
25 The processing time of call reports has gone from weeks to

1 days, so errors are caught quickly. And it allows us to do  
2 very fast comparisons to identify outlier banks.

3 Now clearly we have a fixed format so it's a little  
4 bit easier than it's going to be for all registrants, but at  
5 least it's a lesson that says, "this is a wonderful new  
6 technology," and I would hope that we can help encourage that  
7 that goes forward as part of work that we do going forward.

8 And again, I thank Chairman Cox for nominating me  
9 and naming me to this committee and I look forward to working  
10 with everyone.

11 MR. POZEN: Thank you very much, Susan. The third  
12 member of the committee will be Michael Cook. Michael is the  
13 retired chairman of Deloitte and he is a member of the board  
14 of directors of a number of companies, and I would say that  
15 in every company where he's a member of the board he winds up  
16 being either on the audit committee or a chairman of the  
17 audit committee.

18 Mike and I also had the pleasure of working  
19 together at Fidelity, so I'm glad to have Michael with us.

20 MR. COOK: Thank you, Bob. Like the others, I  
21 appreciate the invitation to be a part of this group. I  
22 applaud the mission of improving financial reporting. I  
23 think that's very necessary and very important.

24 I also applaud the breadth of the charge and the  
25 breadth of the issues that are covered in the discussion

1 paper. I for one have concerns that others do about  
2 complexity and delivery of information, but I would say those  
3 are not by any means the only issues that need to be dealt  
4 with -- and as promptly as some of these can be dealt with in  
5 the area of improving financial reporting.

6 For me they are part of the agenda but for me also  
7 the most important part of the agenda and a bigger issue is  
8 how do we make financial information, the financial reporting  
9 process more relevant and more useful to people who rely on  
10 the outputs of that system.

11 With that in mind I applaud also the charge to this  
12 committee that it is not limited to traditional financial  
13 statements or financial statement packages but rather the  
14 financial reporting process in the broadest sense because  
15 frankly I don't think in one year or maybe in the lifetime of  
16 many of us we can fix or deal with all the issues that exist  
17 with respect to financial reporting in the context of  
18 financial statements. We have to leave that to Bob and his  
19 colleagues at the FASB and colleagues at the IASB.

20 And hopefully some of those things can be  
21 addressed, but they are much more long term in nature than  
22 anything that we would do in one year. I would suggest the  
23 balance sheet is probably as illustrative of that as  
24 anything. It is coincidental today if the balance sheet  
25 represented the assets and liabilities of the corporation

1 other than in accordance with generally accepted accounting  
2 principles.

3           That is a result of many, many years of flawed  
4 accounting for business combinations. It is the absence of  
5 intangible assets, the limitations of the historical cost  
6 model. Put all those pieces together, we couldn't fix the  
7 balance sheet in 12 months or even come up with meaningful  
8 recommendations so I would urge that we, as Bob has  
9 suggested, focus our attention. Likewise footnotes, a  
10 statement of comprehensive income and so on have a lot more  
11 work to be done with them than we could possibly take on  
12 during the time frame that we have in mind.

13           I do think the place that we can give some very  
14 serious attention and develop some meaningful recommendations  
15 is the financial information which flows from -- it is not  
16 the income statement, it's not the cash flow statement, but  
17 it is the financial information that flows from those  
18 statements and makes its way to the investor community  
19 through two other processes. And I think these are the most  
20 important financial communications today and the ones where  
21 our attention would be best focused.

22           One is MD&A. MD&A, notwithstanding the  
23 considerable efforts of the SEC, still is burdened by  
24 excessive amounts of legalisms and legal discussion and  
25 boilerplate. But notwithstanding that general limitation

1 there is a lot of very meaningful information in the MD&A  
2 that tells people about the business and the future of the  
3 business and the liquidity in capital and things of that type  
4 that they would not be able to discern from the basic  
5 financial statements.

6 The information about important estimates and  
7 judgments and critical accounting policies is very useful,  
8 culls out the important from all the details that you find in  
9 the footnotes and says, this is what really matters to this  
10 company in preparing its financial reports.

11 MD&A, I applaud it, and I think we could give that  
12 some attention. I think the clear winner in the financial  
13 reporting sweepstakes today is the earnings release. This to  
14 me is where the companies that I am familiar with anyway  
15 provide the real information that is indispensable to the  
16 investor community.

17 The earnings release moves the market, often moves  
18 the market, often because it includes guidance. That's an  
19 entirely different subject, but it is rare in my recent  
20 experience that all of the GAAP-based compliance type  
21 financial reporting moves anything other than just confirming  
22 the information that has been previously issued through the  
23 earnings release process.

24 And here companies seek to put forth as best they  
25 can, and it is their best foot forward. I can say that as

1 well.

2           What they believe is meaningful information about  
3 period to period performance of the business that can be used  
4 to understand the core and could hopefully be used to predict  
5 the future -- and this means culling out nonrecurring items,  
6 irrelevant items, trying to make period-to-period analyses  
7 comparable, and then in combination with what I think is of  
8 great importance, business performance metrics and  
9 indicators, when that is combined with adjusted financial  
10 information in an earnings release you have what I believe is  
11 really a very meaningful financial communication.

12           The question, you might ask, is are audit  
13 committees paying enough attention to those communications?  
14 Are the rules that govern those communications sufficient?  
15 Is there value to be had by having auditors involvement with  
16 those communications as opposed to the historical financial  
17 statements? What should those performance indicators be?  
18 How can they be defined? It is not necessarily where the  
19 attention is being given from a control and standards and  
20 process standpoint, but it is what really does make a  
21 difference.

22           So I would just close with a thought I've expressed  
23 in forums like this elsewhere, which is kind of my view of  
24 the irony of Sarbanes-Oxley and everything that came with it  
25 and 404 perhaps in particular is -- everything about

1 Sarbanes-Oxley has to do with playing defense. Everything  
2 has to do with auditing and internal control and  
3 whistleblowing and certifications, everything to protect the  
4 integrity of the basic financial reporting package during a  
5 period of time in which that basic financial reporting  
6 package has declined in value, and I would say declined  
7 rapidly in value in terms of its usefulness to the people who  
8 rely on financial communications.

9           So I have said, gee, it's time to let the defense  
10 take a rest, get the defense off the field and let's play  
11 offense. Let's see what we can do to improve financial  
12 reporting, which is what I think this group is all about. So  
13 I say I'm delighted to be a part of the offense. I will try  
14 not to be too offensive in doing it, but I think there is  
15 great opportunity for us to do things that will really  
16 enhance financial reporting and make all that effort that  
17 we're spending on Sarbanes-Oxley and 404 and everything else  
18 worthwhile because we'll be protecting something that really  
19 matters.

20           Thanks, Bob.

21           MR. POZEN: Thank you. And Denny, I think you'll be  
22 glad to know that there was some football learning here to be  
23 gained about defense and offense. I'm sure you'll convey  
24 that to your friends there in Georgia.

25           Now we have Jeffrey Diermeier. Jeffrey is

1 president and CEO of the CFA Institute. This is the  
2 Institute for Certified Financial Analysts. And before he  
3 took that position he was the global CIO for UBS Global Asset  
4 Management.

5 So he is a very well positioned spokesman for the  
6 equity analysts who are surely one of the most sophisticated  
7 users of financial statements.

8 Thank you, Jeffrey.

9 MR. DIERMEIER: Mr. Chairman, fellow committee  
10 members, distinguished guests, Chairman Cox for nominating  
11 me, thank you very much.

12 So Mike, would this be the West Coast offense that  
13 we're trying to do here? A little run and gun?

14 Complexity, according to Webster's definition  
15 number two involves that which is hard to separate, analyze  
16 or solve. Simplicity, which is the black sheep of the  
17 complexity family, is, according to their definition number  
18 one, the state of being simple, uncomplicated or  
19 uncompounded. Uncompounded, interesting word.

20 It is my sincere pleasure to serve on this advisory  
21 committee as a representative of investment professionals for  
22 the purpose of putting forth recommendations to make  
23 financial reporting as uncomplicated and uncompounded as is  
24 practical.

25 I believe in the background section of the draft,

1 Mr. Chairman, we should acknowledge several points. First,  
2 we know there are limits of course to reducing complexity.  
3 Corporate activities can be hard to analyze, particularly  
4 when derivatives or other complex financial instruments are  
5 utilized for hedging or even non-hedging purposes or when  
6 firms, because of their origins or cultures have unique ways  
7 to describe something that is inherently the same.

8           Where complexity is a natural result of business  
9 processes, it may be that disclosure is the only effective  
10 antidote.

11           Second, another critical driver of complexity in  
12 our system, and this is particularly relevant to something  
13 like CFA Institute where most of our candidates -- excuse me,  
14 right now we have more candidates in Asia than in the United  
15 States -- is globalization.

16           Back to our earlier definitions. If companies  
17 around the world had multiple reporting standards the  
18 difficulty in performing analysis or in multiple preparations  
19 is compounded. Comparisons can become challenged.

20           Investing is an act of relative comparisons. Over  
21 my 30 years in the profession I have tried but failed to  
22 understand what absolute value would be without reference to  
23 a set of comparisons or benchmarks. The draft paper,  
24 discussion paper we are commenting on today does a very fine  
25 job of laying out, I think, the five major items that the

1 advisory committee should address. It is as comprehensive as  
2 it is ambitious.

3           The focus is on economic fundamentals. The  
4 statement that the two primary groups whose needs are  
5 addressed in financial reporting -- namely preparers and  
6 users -- is well put. The idea of setting these groups down  
7 in a best efforts basis where lobbying is minimized is  
8 important. I would offer two comments in that regard on that  
9 part of the draft.

10           First, the notion that preparers should want to  
11 reduce earnings volatility must be carefully interpreted. A  
12 key principle of risk management is that one does not  
13 artificially smooth those items that are inherently not  
14 smooth -- doing so invites excessive risk taking in what is  
15 called tail risk, and I know for a lot of time a lot of  
16 companies have been taught or told that it's important for  
17 them to reduce volatility, and they should try to reduce the  
18 business volatility but not the face volatility.

19           Second, users of financial statements also want  
20 information at reasonable costs. Despite a seemingly  
21 insatiable appetite for information from people like me,  
22 investors do not, as a general principle wish to burden firms  
23 with wasteful or expensive activities. A true owner would  
24 set out to achieve a proper balance.

25           I'd like to highlight some thoughts with regard to

1 the five subcommittees. As regards delivering financial  
2 information, I suggest that the current business reporting  
3 model should be reviewed to include a set of primary  
4 financial statements that are cohesive and aligned with each  
5 other. That is, items reported on the income and cash flow  
6 statements could be specifically linked or aligned with those  
7 items reported on the balance sheet, although I give pause  
8 after hearing Mike's comments about the state of the balance  
9 sheet today.

10 In addition, sufficiently disaggregated information  
11 could be reported to enable end users to discern and  
12 understand different economic activities. Such information  
13 would include management's discussion and analysis of  
14 financial and nonfinancial information, including key  
15 performance indicators. Properly tagged, this detailed,  
16 cohesive information could be easily accessed using  
17 technology like XBRL.

18 XBRL looks like a good tool that if properly  
19 executed allowing for comparability across firms could be of  
20 great use.

21 In terms of substantive complexity there is a base  
22 appeal to the notion that standards would require the same  
23 measurement and recognition attributes for economically  
24 similar transactions and activities. As a principle,  
25 shouldn't accounting options be limited based on the

1 economics?

2           As to audit process and compliance, the movement to  
3 principles-based standards is promising. Inherently  
4 professional judgment becomes a recurring part of the  
5 measurement and reporting process. Can't standard setters  
6 develop and promote a clear distinction between judgment and  
7 accounting choices? Could the need for bright lines and  
8 prescriptive rules disappear as standards based on principles  
9 accompanied by appropriate guidance are introduced?

10           Finally, in terms of the standard-setting process  
11 which ultimately provides the long-term framework that I  
12 think Mike was mentioning, I'd offer two comments. First,  
13 the least complex approach from a user or preparer  
14 standpoint, but certainly not from the standard setter's  
15 standpoint, would be to have one single global standard  
16 setter -- but because we're trying to be practical -- or its  
17 nearest equivalent.

18           Second, the standard setter should engage in a  
19 proper balance by inviting the primary preparers and users as  
20 well as the secondary groups mentioned, to provide the  
21 intellectual and experiential diversity like in this  
22 committee to ensure optimal decision making.

23           I look forward to working with the distinguished  
24 members of this committee as we attack the issues involved  
25 here today. Thank you.

1                   MR. POZEN: Well, thank you very much, Jeff.  
2                   That's a very wholesome explanation and you're representing  
3                   well the group of analysts who have the "insatiable appetite  
4                   for information." And I think they were very helpful  
5                   comments.

6                   We're now going to move to another committee member  
7                   from the investor side, Scott Evans, who is executive vice  
8                   president of TIAA-CREF. They are one of the largest pension  
9                   funds in the United States, managing over \$380 billion in  
10                  assets. And Mr. Evans is well versed in investments and  
11                  manages a big group there and I think is familiar with the  
12                  general viewpoint of pension funds in this respect.

13                  Scott, give us some remarks.

14                  MR. EVANS: Thanks very much, Bob. Thanks for  
15                  having me on this committee. I'd like to thank you and  
16                  Chairman Cox for giving me the opportunity to represent the  
17                  nation's pension funds in this important advisory committee.

18                  As stewards of the long-term savings of millions of  
19                  working Americans, pension funds serve a vital role in  
20                  providing long-term investment capital to public companies.  
21                  At my employer, TIAA-CREF, we manage the savings of 3.5  
22                  million participants in the academic, medical, cultural and  
23                  research fields.

24                  Like most pension funds we act in the direct  
25                  interest of the beneficiaries that we serve in the capital

1 markets. Pension funds represent the quintessential  
2 long-term owner for whom our system of public financial  
3 reporting is designed.

4           The FASB in its 2006 release, Conceptual Framework  
5 for Financial Reporting, states that the objective of  
6 financial reporting is to provide information that's useful  
7 to present for potential investors and creditors and others  
8 in making investment, credit and similar resource allocation  
9 decisions.

10           Since most institutional owners of public companies  
11 do not hold controlling stakes, we're dependent on management  
12 to communicate with us through the regulated medium of  
13 published financial reports and other public documents. As  
14 professional investors with a long-time horizon we are  
15 capable of making our own judgments and forecasts regarding  
16 future cash flows. However we expect company managements who  
17 act as our agents to communicate to us what they know.

18           It is far more important to us that disclosures  
19 enable shareholders to see the company through the eyes of  
20 management than that they strictly conform to a particular  
21 accounting theory or concept, for instance rules versus  
22 principles, stewardship versus decision usefulness. Although  
23 we're agnostic about these theoretical distinctions, we are  
24 passionate in our desire to improve the formal communication  
25 from company management to their owners.

1           Specifically we're hoping that this committee will  
2 rise above the temptation to focus narrowly on intellectual  
3 debate and seek instead to create a constructive climate  
4 where all interested parties work together to continually  
5 improve by testing and modifying approaches where necessary  
6 in an attempt to achieve consensus on taking practical  
7 forward steps toward our common goal of improved financial  
8 reporting.

9           As we embark on this year-long mission, I suggest  
10 that we keep several universal objectives in mind to test the  
11 relevancy of our suggested improvements. And I have five  
12 plays that I'd like to suggest for our West Coast offense  
13 here.

14           The first is transparency. As the steward of our  
15 assets, management should communicate what it knows about  
16 past and future state of company affairs to its shareholders.  
17 This communication need not be confined to financial  
18 statements but it must be timely and equally available to all  
19 shareholders.

20           The second is simplicity. Descriptions should be  
21 easily understood by nonprofessionals. Now as a Nobel prize  
22 winning former trustee at TIAA-CREF said to me just as I was  
23 about to talk to him about finance -- this guy was a  
24 scientist -- he said, "the greatest professors can always  
25 explain their work, no matter how complex, to any person, no

1 matter what their background." Corporate managements should  
2 be able to pass this same simple test.

3           The third play is consistency. Communications  
4 should be consistent from one period to the next.

5           Comparability, users should be able to compare one  
6 company's disclosures to those of users in similar fields of  
7 enterprise. All attempts should be made to fully utilize  
8 technology like XBRL, to make data available in standard  
9 format for quick and efficient dissemination and analysis.

10           And last but certainly not least, accountability.  
11 Because of the separation of ownership and control, managers  
12 of public companies are accountable to those who own the  
13 capital. Owners deserve to have enough information to  
14 evaluate the effectiveness with which their capital is being  
15 managed and at the same time management needs to be free to  
16 communicate their story in their own words. Overly  
17 prescriptive reporting requirements may serve to undermine  
18 the effectiveness of this communication.

19           I look forward to working with this esteemed group  
20 over the next 12 months, to recommend solid and lasting  
21 improvements in the reporting mechanisms that managers and  
22 owners use to communicate with each other. Thank you very  
23 much.

24           MR. POZEN: Thank you.

25           Now we move to the next person on our list, who is

1 Linda Griggs. Linda is a partner currently at Morgan Lewis,  
2 a Washington law firm. She also was at one time Chief  
3 Counsel in the Office of Chief Accountant, so we're glad to  
4 have you, Linda.

5 MS. GRIGGS: Thank you, Bob. I appreciate being  
6 named to this committee to represent securities lawyers. I  
7 also serve as chair of the law and accounting committee of  
8 the American Bar Association, so I expect to be able to use  
9 that committee to assist me in this endeavor.

10 I commend the Commission for forming this advisory  
11 committee. The financial reporting system in the United  
12 States has played a critical role in the making of the  
13 capital markets of the United States, highly credible,  
14 efficient and effective.

15 While our financial reporting system has been a  
16 gold standard, as Conrad mentioned, during the last 10 years  
17 financial statements have become increasingly difficult to  
18 prepare and to understand. These changes have resulted at  
19 least in part from the increasing trend towards value-based  
20 accounting, the clamor for more objective accounting rules to  
21 confront our litigious society and increasing complexity of  
22 transactions, including transactions involving multiple  
23 elements, requiring significant analysis to determine the  
24 timing of recognition and complicated products designed by  
25 ingenious investment bankers to address companies' economic

1 or financial needs.

2           For several years regulators, standard setters,  
3 accountants, investors and academics have expressed concern  
4 about the increasing complexity of accounting standards.  
5 Some have also questioned whether reported financial  
6 information continues to be useful and to reflect economic  
7 reality.

8           In an effort to reduce complexity the FASB has  
9 begun to adopt principles-based accounting standards. SFAS  
10 159, which permits companies to elect the fair value method  
11 of accounting for certain financial instruments is a recent  
12 example of a principles-based standard. But some registrants  
13 fail to understand those principles when they tried to  
14 implement FAS 159 and perhaps some of that failure to  
15 understand was because it's difficult to articulate  
16 principles.

17           Principles-based accounting standards requires an  
18 enormous effort by the standard setters to really articulate  
19 those standards in a way that people can interpret and  
20 follow. I believe that it is appropriate and timely for a  
21 thorough examination of ways to ensure that our financial  
22 reporting system continues to provide transparent and  
23 meaningful information to both preparers and users of that  
24 information without adversely affecting the ability of  
25 publicly held companies to compete in the global market.

1           The scope of the review contemplated for this  
2 committee is broad, perhaps impossibly so, but I believe it  
3 is consistent with the seriousness with which the commission  
4 views its mission of ensuring appropriate financial  
5 disclosures. I personally believe that our consideration of  
6 the benefits and disadvantages of the mixed attribute  
7 financial statements is crucial to rationalizing and  
8 increasing the transparency of our financial reporting  
9 system.

10           The establishment of a new value-based financial  
11 statement is an option that I think we should carefully  
12 consider. I also think we should consider whether there are  
13 ways to provide more meaningful financial information to  
14 investors. For example, should the financial disclosure rely  
15 more on information about the financial elements of business  
16 transactions rather than on the single bottom-line effect of  
17 those transactions and should the Commission's rules  
18 encourage or perhaps even require that the information in  
19 those press releases which, I agree with Mike Cook, have  
20 become increasingly the method by which managements tell  
21 their story? Should that information be required in SEC  
22 filings instead of now where there's almost an apparent  
23 discouragement of non-GAAP financial information to be in  
24 public filings?

25           Finally, no consideration of improvements to

1 financial reporting can ignore revenue recognition. One of  
2 the areas that has resulted in considerable enforcement  
3 action and may account for some problems for companies trying  
4 to compete in the global marketplace -- and I think we also  
5 need to look at the reasons for and the appropriateness for  
6 all of those restatements, the 10 percent of the financial  
7 statements that have been restated in the last year.

8 I look forward to working with Bob Pozen and the  
9 other members of the committee and the Commission Chief  
10 Accountant and Director of the Division of Corporation  
11 Finance and their staffs as well as the observers to the  
12 committee from the FASB, the PCAOB, the IASB, the Treasury  
13 and the Federal Reserve.

14 I think we can work on recommendations to improve  
15 the financial reporting system, and I look forward to this  
16 work. Thank you, Bob.

17 MR. POZEN: Thank you, Linda, for your intelligent  
18 and very thoughtful comments. I should have mentioned that  
19 you were head of the law and accounting committee at the ABA.  
20 I'm sorry I neglected that.

21 Now we have Joe Grundfest. Joe is, besides being a  
22 personal friend of mine, a distinguished professor at  
23 Stanford Law and Business. He's codirector of the Rock  
24 Center on Corporate Governance. He served four years as an  
25 SEC commissioner and he is likely to spark the most

1 discussions by a few very interesting remarks.

2 MR. GRUNDFEST: Interesting is always an interesting  
3 word in that context.

4 So let me begin, Bob, with two rhetorical questions  
5 that I offer for the purpose of perspective, and I'd like to  
6 pose to all of my fellow panelists. First question, who  
7 among us can name the great -- the truly great federal  
8 advisory act committees of all time? Okay. Second  
9 question -- my point, all right. Second, which committees  
10 have advanced the ball to make meaningful and lasting  
11 contributions and how and why?

12 Aha. My guess is that the vast majority of us  
13 can't think of a single federal advisory committee act  
14 committee that has actually made a meaningful and lasting and  
15 long-term contribution, and I suggest that we contemplate the  
16 reason why that is the case, we learn from that history and  
17 we do what we can, which may or may not be very much, to do  
18 our best to avoid that destiny.

19 And I think one of the important prescriptions that  
20 we need to follow is along the lines of one of Bob's favorite  
21 sayings here, is that we can't let the perfect be the enemy  
22 of the good, that I do think we have to be very focused and  
23 pragmatic in terms of what it is we're attempting to  
24 accomplish. I think it is improbable that we will be able to  
25 solve all of the world's problems in 12 months through this

1 committee, but I think it would be wonderful if we could  
2 advance the ball in an effective and pragmatic and doable  
3 way.

4 In other words, if we set the bar for ourselves low  
5 enough we will succeed, all right. And I strongly recommend  
6 that we have very, very -- from that perspective, low but  
7 useful expectations of ourselves.

8 Now with that by way of a rhetorical introduction,  
9 let me share with you one procedural suggestion and then five  
10 substantive observations. First a procedural suggestion.

11 We are not the fount of all knowledge and wisdom  
12 with regard to the issues that we are going to address. I  
13 understand that we have a web page, and that's really very  
14 lickety split and very nice. I think we need to figure out  
15 some way to make it easy to have people who are knowledgeable  
16 and want to share their views about the topics that we're  
17 wrestling with, share those views with us, whether that's  
18 some kind of incoming feature, setting up a blog, what have  
19 you.

20 We can all talk about that. But there are lots of  
21 other professors, students, knowledgeable people out there  
22 who probably have good ideas that they want to share with us  
23 about topics we're wrestling with. You know, my view is  
24 let's open it up. Anybody who's got a good idea, I want to  
25 hear it, and I want to figure out what we can do in order to

1 incorporate those ideas. So opening the tent that way I  
2 think is really going to be very important.

3 In terms of five areas where I think we can really  
4 make substantive contributions within that year and maybe go  
5 down as one of the great federal advisory act committees of  
6 all time -- the hall of fame. Remember, it's a small hall of  
7 not very much fame, all right; we'll call it the hall of  
8 non-ignominy.

9 The five substantive areas are in the following  
10 regions. One, probability. Two, technology. Three,  
11 liability. Four, theology. And five, formality. Very  
12 briefly.

13 First, probability. It is true that you cannot  
14 take a clear picture of a fuzzy object, yet financial  
15 statements repeatedly call for point estimates of probability  
16 distributions, therefore by definition financial statements  
17 always force you to lie, all right.

18 Take the simplest example, cash. How much cash do  
19 you have? Well, if you're in a big organization you can come  
20 up with a pretty tight point estimate of how much cash you  
21 have, but it's really a probability distribution with a very  
22 small variance. What are your securities worth? Well,  
23 you're forced to give a point estimate of a probability  
24 distribution. Depending upon the kind of security it's  
25 either a tight variance or a huge variance. We have no

1 mechanism for honestly describing the uncertainty that  
2 pervades all of these numbers.

3           Forgive me, that's preposterous. We're forcing  
4 people to give false representations of reality. We need a  
5 way to describe the probability estimates that are inherent  
6 not in some of these numbers but in all of these numbers.

7           Second, technology. We've heard for years now  
8 about the potential value of XBRL and there are situations  
9 where XBRL is being picked up and is being used to very great  
10 advantage. The banking industry where, number one, you've  
11 got highly standardized numbers, and number two the numbers  
12 are mandated. XBRL is not being picked up in the rest of the  
13 environment at any sort of meaningful pace at all.

14           XBRL is currently I think headed towards the fate  
15 of Esperanto, a better language that nobody speaks, all  
16 right. What we need to do is figure out how to handle the  
17 Esperanto problem for XBRL, and those of us who come from  
18 Silicon Valley and the software world, there's lots of great  
19 technology that never winds being picked up and adopted  
20 because it fails the marketing test.

21           XBRL is a marketing failure and a technological  
22 success. There are ways I think to go about turning it into  
23 a marketing success and I think what we need to do is have  
24 this committee look at ways to jump start adoption in that  
25 space.

1           Third, liability. If you think that the financial  
2 reporting process is not conducted with everybody looking  
3 over their shoulders and thinking about the possibility of  
4 being sued by the SEC or private class action litigation or  
5 what have you, you simply don't understand the reality.

6           The definition of GAAP that was earlier  
7 offered -- rules you need to follow even though they don't  
8 make sense because otherwise you will go to jail -- is a  
9 pretty good operative definition of GAAP because it's hard to  
10 explain them through any other coherent logical process. To  
11 the extent that this committee can help provide the judicial  
12 process with a better understanding of what's important and  
13 what's not important so that we can really drive meaningful  
14 information and take the liability second guessing out of the  
15 process -- I think that would be a great advantage.

16           Fourth point, theology; rules versus principles.  
17 Forgive me, but give me a break, all right. The reality is  
18 sometimes rules are best, sometimes rules are absolutely  
19 necessary. Other times standards are best. Sometimes  
20 standards are necessary because you really can't write rules.

21           It's also true that standards often as they are  
22 applied devolve into rules. Easy example, take the most  
23 standard-based principle in the law, the notion of a  
24 fiduciary standard. Well, you look at the Delaware  
25 jurisprudence applying the fiduciary standard to takeovers

1 and you realize that when it comes to breakup fees that  
2 standard has devolved into a rule, but if you keep the fee at  
3 less than three percent you're generally okay. You apply a  
4 standard often enough it generates a set of rules.

5 I think our goal here should be to try to get past  
6 the rules-principles rhetoric because I don't think it gets  
7 us anywhere and to try to explain when you use rules, when  
8 you use standards and how standards can intelligently be  
9 applied. And this is an area that of course feeds back into  
10 the question of liability in a very important way.

11 Last and maybe most important, the whole issue of  
12 formality. And by formality I mean the distinction between  
13 recognition and disclosure. Recognition means you got to  
14 take a number and you've got to plug it into these GAAP  
15 financial statements. Disclosure means you can take the  
16 number and disclose it in the footnotes or someplace else in  
17 the SEC filings.

18 Ladies and gentlemen, the reality is that some of  
19 the biggest battles arise when you move from disclosure to  
20 formal recognition. Once you go from disclosing the  
21 information, whether it's in MD&A, to forcing it to flow  
22 through the income statement.

23 There are ways, I think, where we can increase the  
24 credibility and the usefulness of nonrecognition items in a  
25 manner that can help diffuse the politics of some of the

1 recognition process, can help address some of these issues.  
2 And one question that I do think is fair for us to consider  
3 is whether we're asking the financial reporting process as  
4 formally defined by GAAP to do too much, for it to be  
5 answering to too many different masters and for it to  
6 actually try to estimate the real economic value of the  
7 business.

8 I don't think that that can be done. And if you  
9 ask somebody to do something that's impossible the odds are  
10 they will fail. And I think by setting that set of standards  
11 and objectives for the formal recognition reporting process  
12 we're putting our brethren in the accounting profession in a  
13 very, very difficult position because we're asking them to do  
14 something which has to fail.

15 So let me close very briefly by saying there have  
16 been several references to the West Coast offense. As a  
17 representative of Stanford where we lost Coach Walsh who is  
18 the inventor of the West Coast offense, let's remember the  
19 basic football philosophy -- short passes down the field with  
20 higher probability of success, that's what I suggest. If we  
21 complete these five relatively short passes we can score some  
22 points. Thank you.

23 MR. POZEN: Thank you, Joe. We'll definitely take  
24 your advice.

25 Now we have Greg Jonas. Greg is managing director

1 of Moody's, one of the most prominent credit rating agencies.  
2 Before joining Moody's he was at an audit firm and he also  
3 is -- at one point was executive director of the AICPA  
4 special committee on financial reporting. So we are glad to  
5 have Greg, who obviously has an interest in debt securities  
6 as well as equity securities. Thank you.

7 MR. JONAS: Bob, thank you. I'd like to echo first  
8 the comments that others have made about what a privilege it  
9 is to serve on this committee, and I appreciate very much the  
10 opportunity to do so.

11 Over the years I've had the pleasure of working  
12 with and for many of the people who are at the table here  
13 today, and I can assure all of you that I am by far not the  
14 brightest person in the room. My only hope is that being  
15 fairly simpleminded and deliberative about these things is  
16 actually an advantage when you're thinking about taking  
17 complexity out of a system.

18 I have been a student of financial reporting now  
19 for -- I hate to admit it -- about 25 years, and I have never  
20 seen, in that time period, such a critical time in the  
21 history of financial reporting. I think there's four reasons  
22 for this.

23 One is I've never seen a time when we have so many  
24 big ticket fundamental issues that are in play in the  
25 financial reporting system. For example, as we speak,

1 standards setters are debating what things get put on  
2 financial statements, how we measure these things, when they  
3 get taken off, how the display of financial statements ought  
4 to look to the reader, whether we should set principles or  
5 rules, and then throw in a couple minor little projects like  
6 rethinking leasing accounting and pension accounting and then  
7 some absolutely mind-numbing reconsideration of the  
8 foundations on which our models are based.

9           The second reason why I think this is a critical  
10 time is globalization of everything, including financial  
11 reporting. And I think what globalization is doing is it's  
12 calling in question the institutions that we have that were  
13 built at a time when each country had their own structures  
14 and their own institutions to support financial reporting.  
15 And we are calling to question whether those institutions are  
16 still relevant today.

17           A third reason why I think we are at a critical  
18 juncture are all the changes in the economy that have  
19 occurred over the last 25 years and among them globalization  
20 of markets, technology and unprecedented level of innovation.

21           And the fourth reason I think we find ourselves at  
22 this critical juncture, and frankly the critical reason why I  
23 think we're gathered around this table, is the unprecedented  
24 level of regulation in cost and weight that we have now  
25 before us in the financial reporting system.

1           I think what's occurred is that we have made  
2 improvement upon improvement upon improvement for 40 years  
3 and we've never stepped back and said, "does it all make  
4 sense in totality as a system?"

5           Two analogies come to mind. Many years ago I was  
6 involved in shop floor layout design, and it would not be  
7 uncommon to go to a factory floor and you'd absolutely see  
8 literally a spaghetti diagram of processes and techniques in  
9 place on the floor. And you ask, who would have designed  
10 such a thing of spaghetti? And the answer is, no one  
11 designed such a thing; it happened piece by piece by piece  
12 with each piece being relevant and well intentioned but the  
13 totality never being examined.

14           What we did in those days was eliminate, simplify  
15 and focus as a means to then improve. It was a necessary  
16 precedent to allow additional improvement -- was to take out  
17 weight.

18           A second analogy that I have happened to me just  
19 earlier this week, and we've all experienced this. You know,  
20 your computer slows down. The darn thing doesn't go as fast  
21 as it used to and it does it because your hard drive, I'm  
22 told, gets all clogged up with stuff. And then you  
23 got -- you're hanging on to too much stuff and so you got to  
24 defrag the hard drive, whatever that does. I think it allows  
25 the computer to put things in more efficient space. And then

1 you delete all your stuff that you don't need anymore.

2           And so I think, you know, we need to defrag here a  
3 little bit, again, as a way to improve and make room for  
4 improvement. And I believe we need improvement.

5           There are four areas that I think this committee  
6 can add particular value. One is reducing complexity, and I  
7 am most optimistic about our ability to do this because to my  
8 knowledge no committee such as this has ever gathered  
9 specifically to tackle that thorny issue. It has always been  
10 an afterthought.

11           You know, everybody likes to reduce complexity, but  
12 it has never been anybody's first job. This needs to be, in  
13 my mind, job one.

14           Second opportunity for help is delivery. I really  
15 think, because of technology, we can really improve how  
16 investors access information in a manner where one size does  
17 not fit all, which has been the traditional way we've  
18 delivered financial information forever.

19           The third area I think we can add value here is by  
20 making suggestions for a globalization of institutions  
21 critical to the financial reporting process. This is all new  
22 to all of us. Everybody is thinking about this now. The SEC  
23 is going to get a mountain of input very soon on these  
24 critical topics. I think we need to be a voice in that area  
25 as well.

1           And then finally I believe we can help with what I  
2 call excessive short-termism in the market. In my job at  
3 Moody's I often find myself listening to companies present  
4 their business plan to discuss their operations as they  
5 update us on the status of their financial affairs, and it is  
6 very, very often the case that at some point in the  
7 conversation the company almost confesses, although they  
8 don't mean it in that way, but it's kind of a shameful kind  
9 of thing that they say I'm having to take some short-term  
10 business actions that really are not in the long-term  
11 interests of my business.

12           And I think I'm not one who says we need to shoot  
13 the short-term investor. I think what makes a market is the  
14 fact that there are short-term investors and long-term  
15 investors. But I do believe that people tend to focus on the  
16 short-term in large part because we are not giving them the  
17 indicators that they need to really understand the value  
18 creation process and how that relates to the long term.

19           So I greatly look forward to our many discussions  
20 and working with this group, and hopefully I can add some  
21 value along the way. Thank you, Bob.

22           MR. POZEN: Thank you. So we can defrag and  
23 decipher. We now have Chris Liddell, who is the CFO of  
24 Microsoft. Chris is responsible for Microsoft's worldwide  
25 financial organization. Before joining Microsoft he was the

1 CFO of International Paper, and he also was chief executive  
2 of Carter Holt, which is New Zealand's second largest listed  
3 company. I say that because you'll notice that he has a  
4 little bit of a Kiwi accent still in his presentation. Thank  
5 you.

6 MR. LIDDELL: Thanks, Bob. I wanted to first  
7 commend the SEC for bringing together a multi-disciplinary  
8 group like this to address what I consider to be a critical  
9 topic. I am personally delighted to be a member of the  
10 Advisory Committee and believe we have an extremely important  
11 task in recommending improvements to financial reporting.

12 As the background paper notes, the U.S. capital  
13 markets are the deepest and most liquid in the world and we  
14 have a collective responsibility as committee members over  
15 and above our individual roles to ensure this leadership  
16 position is retained.

17 Clearly, I do not want to prejudge any of the  
18 recommendations; however, I do have some preliminary  
19 observations. As chief financial officer of Microsoft, one  
20 of my main responsibilities is to communicate with our  
21 owners; and in doing so to ensure that our financial reports  
22 reflect the economic substance of our business.

23 When reviewing the discussion paper, I was struck  
24 by the fact that the need for financial reports to reflect  
25 the economic substance of business was listed as an objective

1 for each of the participants in financial reporting, and I  
2 fully endorse it as our primary objective.

3 I also agree with the other stated joint objectives  
4 that all participants should want clear guidelines that allow  
5 financial reports to be prepared and presented in a  
6 straightforward fashion, do not want reports to be  
7 subsequently deemed to be incorrect, and do not want  
8 companies to spend too much money in management time in  
9 preparing financial reports.

10 However, I see these as secondary and contributory  
11 to the primary purpose of clearly and as accurately as  
12 possible conveying economic substance. Further, what is  
13 critical at all participants' interests should be considered,  
14 my belief is that investors are the foremost group whose  
15 interest should be optimized for, especially where interest  
16 might conflict. I am an open advocate inside my company for  
17 shareholder value, and never lose sight of the fact that they  
18 are primarily to serve the interest of our shareholders.

19 I agree with the proposed areas of inquiry and the  
20 subcommittee's structure and focus. In terms of approach to  
21 what is clearly a diverse, complex, and multi-faceted  
22 problem, I take the same approach that I would inside our  
23 company and recommend a three-tier structure for our  
24 recommendations.

25 The first tier is what I described as "no regrets

1 changes," which have relatively no implementation costs and  
2 have a high degree of unanimity amongst the various  
3 stakeholders and participants. The second tier would be more  
4 ambitious changes that may have greater impact, but would  
5 also possibly have more substantial transition issues and/or  
6 suboptimal impact on some of the secondary stakeholders.

7           Lastly, I would put up what I described as game  
8 changing ideas that may have significant implementation  
9 issues and may require more study after the term of the  
10 Committee, but which hold the promise of not only continuing  
11 the U.S. capital market's current status, but in fact,  
12 extending its leadership position. My only caution is that  
13 any recommendations clearly consider any transition issues,  
14 have a long-term approach, i.e. that they be sustainable over  
15 a long period rather than be continually modified, and work  
16 well both in concept and in practice.

17           For example, we should resist changes which have  
18 the appearance of benefit, but whose costs are greater than  
19 those benefits and hence are not only unsustainable, but also  
20 not in the long-term interest of investors. Furthermore, all  
21 companies, even large ones, do not have unlimited human or  
22 financial resources. And, even if a recommended change  
23 passes the cost-benefit test, it should pass the secondary  
24 test as to whether it is the best use of those resources.

25           In terms of my role, I look forward to contributing

1 my experience, perspectives, and ideas to the Committee, and  
2 once again thank you for the opportunity to participate. I  
3 look forward to our further discussions.

4 Thank you.

5 CHAIRMAN POZEN: Thank you, Chris.

6 We now have remarks from Bill Mann. Bill is a  
7 senior analyst at Motley Fool, which I think represents a  
8 very important perspective of the individual investor and has  
9 put out an investment newsletter through the web and are I  
10 think very tuned in to some of the more recent developments  
11 about the dissemination of information.

12 Thank you.

13 MR. MANN: I am also from North Carolina, which is  
14 a basketball State. So if you all could explain to me the  
15 football analogies later, I'd really appreciate, because they  
16 are all just beyond me.

17 (Laughter.)

18 MR. MANN: Unlike most of the people here, my  
19 primary access and use of accounting has been as a consumer  
20 throughout my career and being at the Motley Fool and being  
21 as someone who picks stocks and recommends stocks to  
22 individuals, I see all the time the anxiety the people have  
23 that things are being hidden from them, that things are not  
24 being communicated, that managements are able again to hide  
25 things in plain view.

1           I think a very important component of this  
2 Committee, and it's been brought up a number of times, is  
3 that financial transactions are simply more complex in  
4 today's age. You know, I think as an allegory the  
5 Declaration of Independence was written on a single page,  
6 whereas, the regulations for footings or cement barriers in  
7 Fairfax County run 40 pages, which unfortunately I now know a  
8 lot about.

9           One of the interesting things -- we are in a fairly  
10 unique time. And the Motley Fool has been a company that has  
11 taken advantage of it and I believe has really assisted  
12 individual investors. And that is the rise of technology.  
13 If you think 15 years ago we had very limited access to  
14 documents, I think the technology has increased people's  
15 access to information.

16           But, I don't think it has increased people's levels  
17 of understanding of the financial documents or the  
18 information that's supposed to be put forth. I think that  
19 we're missing an opportunity to communicate to owners in a  
20 way that's useful to them and so I am delighted to that end  
21 to see the scope of Section 4 of our recommendations or of  
22 the position paper. Here's why.

23           We do a number of surveys and we've seen this over  
24 time; that less than 30% of all individual investors bother  
25 to read the annual reports of the companies that they own. I

1 actually think that the number is a little bit lower because  
2 even in an anonymous survey it's probably a little bit  
3 embarrassing to say that you do no more research on the  
4 companies that you own than you would the television that is  
5 in your living room. This to me is just horrifying.

6           In my role in speaking to our five million members  
7 and readers and people who access information through the  
8 Motley Fool, I wish I could say that I've received a lot of  
9 recommendations from individual investors about what would  
10 make the financial statements more useful. But I really  
11 haven't. Instead, I have a message that individual investors  
12 have in some ways given up.

13           There's a lot of cynicism. The companies are  
14 hiding things. This doesn't help any of us in the capital  
15 markets. One individual investor who I think a great deal of  
16 is named Michelle Leder. She writes a web site called,  
17 "footnoted.org." Basically, she finds opportunities and  
18 pitfalls in businesses by combing through the footnotes of  
19 financial statements. She's very good at what she does. And  
20 when I asked her about some of the things that would make  
21 financial reporting more simple, she said, "It would be  
22 simple. All you need to do is put me out of business. I  
23 should not have to do what I do."

24           Individual investors are not financial  
25 professionals by and large. That said, many of them are

1 extremely sophisticated. I think it's folly though to think  
2 that any investor is going to read a 500-page 10K, which many  
3 companies now are routinely turning out. I think that there  
4 is an enormous gap between the press releases, which, as has  
5 been mentioned, is the thing that tends to move the market  
6 and the filings themselves.

7 I think the SEC did a very smart thing a few years  
8 ago in reminding companies that they are liable for  
9 misstatements or for fraud in their press releases. However,  
10 one of my colleagues still describes company press releases  
11 as a game of fetch; as in, here's the ball, don't look  
12 anywhere else.

13 We have a tremendous opportunity here with this  
14 panel, particularly with the MD&A section of 10Ks. As part  
15 of the formal financial filing, it's an area where  
16 managements need to know that they have a lower level of  
17 legal liability than they do for say the audited financials.  
18 So I think about the comments that Mr. Cook made about the  
19 balance sheet. How helpful would it be for investors if  
20 management had the ability to give their own informative  
21 opinion of the current value of its assets in the context of  
22 the MD&A.

23 So, it's a delight for me to be here and I am  
24 honored to be working with this Advisory Committee.

25 CHAIRMAN POZEN: Thank you, very much, Bill.

1                   We now will hear from Ed McClammy. Ed is CFO and  
2                   Treasurer of Variant, which is global technology located in  
3                   Palo Alto. He's also served at the other companies, Quantum  
4                   and Lucky Stores, and at one time worked for an accounting  
5                   firm. He is representing mid-size companies.

6                   Thank you, Ed.

7                   MR. MCCLAMMY: Thanks, Bob.

8                   I'm pleased to be representing small and mid-sized  
9                   companies on the Committee. Clearly, I feel that the small  
10                  and mid-sized preparers have suffered probably the most  
11                  burden from the increased complexity of the financial  
12                  statements. And also coming from the perspective that I have  
13                  a background dealing with most of the elements in developing  
14                  the financial statements and started my career with the FASB.  
15                  So I've been on the standard setting side with a major  
16                  auditing firm and a preparer, and as an individual investor,  
17                  at least, from the investor perspective.

18                  So, primarily coming from today, I could talk about  
19                  this for hours coming from a mid-sized complex company that's  
20                  had to deal with the complexities.

21                  CHAIRMAN POZEN: Well, we're not going to give you  
22                  a few hours. Let's have the shortened version.

23                  (Laughter.)

24                  MR. MCCLAMMY: I probably won't even take my five  
25                  minutes today, so, just a couple of points that I want to

1 make. And when I think GAAP is being set by too many  
2 sources, clearly the amount and complexity of items that are  
3 coming out of the FASB, the emerging issues task force and  
4 the SEC from a formal basis have grown. But there's also,  
5 I'll put "GAAP" in quotes. There's also "GAAP" being  
6 generated, whether intended or otherwise, through SEC comment  
7 letters, either from and I say intended from sending messages  
8 or from people reacting to a comment for expediency sake in  
9 getting a filing done or otherwise, where I think they're  
10 agreeing.

11           And it may not have even been a point the SEC was  
12 making. Personally, I think in a lot of cases, it was  
13 probably just a question that people are adopting, and the  
14 major accounting firms are spreading through their  
15 organization: here is the SEC's thinking. If you don't want  
16 to comment, you should adopt this either in your disclosures  
17 or in your accounting.

18           So I think there's a lot of "GAAP" being created  
19 through that process and in addition to that we now have the  
20 Oversight Board, who I think again intended or otherwise are  
21 through their review processes creating GAAP from comments  
22 that they raised. That the accounting firms then roll out  
23 and say, we need to adopt this as a standard for "GAAP," or  
24 the firm could have a problem when the Oversight Board comes  
25 in for the next review.

1           So I think there's a clear sign of complexity that  
2 comes out of all of this when we ask accounting firms for  
3 advice on an accounting issue; and the local partners who  
4 deal with this all the time cannot give us an answer. They  
5 either have to go back to a subject matter expert or they  
6 have to go back to the home office. And I think through that  
7 process of going back to those people, we talked about having  
8 a view on the economic reality or reasonableness.

9           I think it turns into more conservatism as you go  
10 through that process, and we lose some of the economic  
11 reality as we go through it. Because all of a sudden  
12 everyone becomes concerned about being second guessed as they  
13 go through various review processes or being sued if  
14 something turns out to be different than the most likely  
15 outcome.

16           For an example of where I think second guessing has  
17 come in, I remember when I was in public accounting and  
18 helped companies prepare 10Qs, and they may have been five or  
19 ten or maybe even 15 pages long. They were very easy to pick  
20 up either the one you were looking at, or from a CFO's  
21 perspective to pick up the 10Q from a competitor or some  
22 other industry we were looking at getting involved in, and to  
23 fairly quickly get an update to what had been in the 10K.

24           And I think nowadays, because of all the second  
25 guessing and different requirements, it is more difficult

1 today to get through a 10Q than it was to get through a 10K  
2 several years ago, which I think is a reason why more of the  
3 10Qs and 10Ks are going in the trash can than are being read.  
4 I think the other thing this complexity has led to is more  
5 people relying on earnings releases, investor conference  
6 calls, and also relying more on an adjusted non-"GAAP"  
7 information than on "GAAP" information and SEC filings.

8           Several committee members have said, I think people  
9 feel like they get more reasonable, useful information from  
10 those sources, and more timely than they do out of the SEC  
11 filings with formal "GAAP" technical answers. So I think  
12 this is a clear indication that we have a problem and that  
13 the problem needs to be addressed. And I am pleased to be  
14 part of that.

15           Thanks, Bob.

16           CHAIRMAN POZEN: Well, thank you, Ed, for your very  
17 specific and concrete remarks. I tend to agree with you a  
18 lot that we have probably too much of GAAP running around and  
19 we need to sort of figure out what is and isn't GAAP and grab  
20 hold of it.

21           Now we have Ed Nusbaum. Ed is CEO of Grant  
22 Thornton. Sometimes it's called the small audit firm, but I  
23 think, more properly, a middle size firm that isn't quite in  
24 the big four. And Ed is representing auditors of middle-size  
25 and smaller companies. And I look forward to his remarks.

1           MR. NUSBAUM: Thank you, Chairman. First of all,  
2 like everyone has said before me, I am honored to be on this  
3 Committee and thank Chairman Cox for inviting me to join the  
4 Committee. I am particularly pleased and actually a little  
5 surprised with the consistency of the comments so far. We  
6 all seem to be sharing a lot of the same thoughts on what we  
7 need to do to improve our financial reporting model to  
8 eliminate complexity and to advance the process forward with  
9 simple focused ideas that can be accomplished.

10           I particularly think that Chief Accountant Hewitt  
11 addressed and laid out very clearly the issues of terms of  
12 complexity, in terms of the increasing number of  
13 restatements, and extending the role of this Committee to the  
14 usefulness of financial information and the need to improve  
15 the usefulness. And, particularly, his comments about  
16 looking at this with an open mind and a blank sheet of paper,  
17 which I think is exactly what we need to do. I believe that  
18 the paper you circulated, Chairman Pozen, does accurately  
19 state the issues. It provides a framework for where we need  
20 to go forward, and I think it provides a basis for us to  
21 commence our work.

22           Unfortunately, business has become infinitely  
23 faster, more complex, and more global than it has ever been  
24 before in our history, and we need to address that with our  
25 financial reporting model. The economic, legal, regulatory,

1 social, and technological changes have combined to threaten  
2 the relevance and reliability of the current model for  
3 reporting business and financial information. As an auditor,  
4 I see our work as a cornerstone for insuring the integrity of  
5 our capital markets.

6           We need the consistent flow of accurate and timely  
7 information to investors in order for them to make decisions;  
8 and, it's a three-pronged role. And that is, first, of  
9 course, the management to the preparers to share the  
10 responsibility, and as others have said, to prepare  
11 thoughtful and useful information. The auditors to assess  
12 the reliability of that information in a timely way and in a  
13 way that satisfies the needs of the users. And, finally,  
14 it's also the responsibility of the investors to help us  
15 formulate what information will be useful, whether it's  
16 performance indicators or information in press releases.

17           One observation is that coming from a firm, be it  
18 small in the eyes of the beholder, I guess; a firm that  
19 focuses on small and mid-size public companies in many ways.  
20 The world has changed in another way, and that is that the  
21 purvey of global operations used to be in the very largest of  
22 companies, but today, most small and mid-size public  
23 companies have international operations and have become  
24 global in their nature. Indeed, most private companies had  
25 become global in their operations. So we need to take a

1 global view in applying standards in everything that we do.

2           The convergence process for accounting and for  
3 auditing and other standards is a step in the right  
4 direction, but we need to accelerate that pace. In 2002 our  
5 firm Grant Thornton called for a global, principles-based  
6 approach to all standard-setting areas: accounting, auditing,  
7 and ethics standards. That need is even greater today.  
8 Those standards need to be clear, concise and appropriate,  
9 whether they're principles-based or have some rules within  
10 them. And I think we have to clarify that process.

11           The process for setting standards can be and should  
12 be improved, but I think one of the factors that has been  
13 mentioned by almost all of the people on this panel is the  
14 fact that hindsight is 20-20, and we have entered into an  
15 area where second-guessing has impacted our ability to  
16 produce accurate and timely financial information. Excessive  
17 exposure to legal liability and second-guessing, I believe,  
18 limits management's desire and the auditor's desire to  
19 provide transparent and useful information on a timely basis.

20           The number of restatements, and particularly the  
21 number of restatements with the smaller and mid-size  
22 companies, the non-accelerated filers, which have been  
23 increasing at a much more rapid pace than it has been for  
24 accelerated filers, is an indication of the problem  
25 associated with the complexity and the other issues impacting

1 second-guessing.

2           Going forward, I think the key was mentioned  
3 earlier, is how do we provide useful information on a broader  
4 basis to the users of financial information, information that  
5 they need for decision making. Financial statements and the  
6 audit reports do not currently provide the information  
7 necessary to make decisions, and we need to take a positive  
8 step through performance indicators and other information,  
9 useful financial information, using technology and items like  
10 XBRL to enhance the business reporting process.

11           I have been in this business almost 30 years and I  
12 am proud of the accomplishments at Grant Thornton and the  
13 advances the profession has made. But I think as Greg  
14 pointed out, now is the perfect time to look at all of those  
15 incremental advances that we have taken as a profession and  
16 reassess them so that we can come up with a better business  
17 reporting model applied on a global basis.

18           Thank you.

19           CHAIRMAN POZEN: Thank you, very much, Ed.

20           And now, in alphabetical order, we come to Jim  
21 Quigley, the other representative of definitely a large audit  
22 firm, Deloitte Touche. And Mr. Quigley has been an auditor  
23 of many large and multi-national companies, and he is a  
24 distinguished representative of the large auditors and as I  
25 said presently at Deloitte.

1 Thank you.

2 MR. QUIGLEY: Well, thank you, Bob.

3 I am delighted also to be a part of these  
4 discussions, and I am delighted to represent the auditors of  
5 the large multi-national companies in this process. As has  
6 been stated repeatedly, I believe investor confidence is  
7 essential for the effective capital markets. And I think  
8 those rely on and require relevant, reliable financial  
9 reporting and as has been said repeatedly, our current  
10 financial reporting system is not as effective as it could  
11 be, for sure. And I would even suggest that at times this  
12 system is in gridlock.

13 I am hopeful. I would like to be optimistic, but I  
14 am at least hopeful that our discussions will lead to  
15 recommendations that will improve the effectiveness of this  
16 system. And, I also believe that we need to consider the  
17 work of prior groups that had similar charters and try to  
18 understand why were those recommendations not implemented.  
19 And if we understand those obstacles, I think we can increase  
20 the likelihood that we can develop recommendations that will  
21 in fact find their way into implementation.

22 It is a unique opportunity for the accounting  
23 profession to be part of a broad-based group to study and  
24 contribute to what I hope will be meaningful solutions and  
25 some recommendations again that we can implement. I think we

1 need to examine the root causes that have led to this complex  
2 model that we have today, and I believe we need to look at  
3 the system if we truly want to be able to make improvements.  
4 The checks and balances that are referenced in the discussion  
5 paper are clearly in place. And I think if we don't look at  
6 the system, we're not going to be able to clear the gridlock  
7 out of the intersection.

8           It isn't simply about, let's have standard setters  
9 do 'X'. Let's have preparers take this action. Let's have  
10 auditors do this, or let's have regulators take some other  
11 action, because if in our effort at focused recommendations  
12 we look narrowly at only one participant in this system, I  
13 think there will be so much resistance to change that these  
14 recommendations won't find their way into implementation.

15           I also would like to see us through this process.  
16 Understand the sources and the nature of the escalating  
17 restatements that have been referenced. I think both the  
18 number and the type of restatements are a very important  
19 symptom of the gridlock that I refer to, and I think the  
20 restatements themselves are in fact a flashpoint that has  
21 contributed to the formation of this group. Is today's  
22 concept of materiality operational?

23           I looked at a recent study of restatements and less  
24 than 25% of them constituted a material restatement that is a  
25 material remeasurement of income by traditional measures.

1 And can we create an environment where reasonable judgments  
2 are both encouraged and then not second-guessed? I know the  
3 fear of second guessing influences the thinking and the  
4 actions of very talented professionals who have made this  
5 their life's work. And to come to a conclusion you do have  
6 to rely on subject-matter experts and the consultation  
7 process that has been referenced, it simply slows the  
8 process.

9           But yet I believe the complexity of the model we  
10 have today actually compels that, as well as the penalties  
11 that are inherent in that process. It's easy to advocate the  
12 principles-based system. I acknowledge the limitations that  
13 were earlier referred to with respect to limiting ourselves  
14 to such religious debates, if that's the right way to  
15 describe those. And it's easy to also become a strong  
16 advocate of encouraging professionals to exercise their  
17 judgment.

18           But I believe as long as we have a rules-based  
19 approach to regulation, a rules-based approach to  
20 enforcement, a rules-based approach to litigation, a  
21 principles-based system, and one that is underpinned by  
22 professional judgment, will remain only an aspiration. Thus,  
23 the reason that I think we have to look at this total system,  
24 if in fact we want to improve its effectiveness, I am  
25 hopeful that we will be able to develop actionable

1 recommendations that will help us clear this gridlock and  
2 improve the effectiveness of the system. And I look forward  
3 to being part of the discussions and participating actively  
4 to try to accomplish that objective.

5 Thank you, Bob.

6 CHAIRMAN POZEN: Thank you, very much Jim. Now we  
7 will have remarks from David Sidwell. David is the CFO of  
8 Morgan Stanley and before that spent time at an audit firm.  
9 He obviously is very well-versed in securities markets  
10 representing securities brokers and dealers.

11 Thank you, David.

12 MR. SIDWELL: Thank you. I'm glad you didn't use  
13 the word "investment" bank, based on a prior commentary.

14 (Laughter.)

15 It's also unfortunate having lost many of the  
16 comments which have been so good have already been said, so I  
17 am going to keep my comments short. I really would like to  
18 add to everyone my thanks to being invited to participate in  
19 this. It is an honor. I also think the paper you have  
20 prepared is well-written. I think the approach is good. I  
21 do also agree with the comment you made at the beginning,  
22 Bob, that we really do have to come up with a doable set of  
23 recommendations. This could be boiling the ocean, and we  
24 have to avoid doing that. Let's make some progress on those  
25 things we can make a difference on.

1           A number of commentators have also mentioned by way  
2 of process that we should get input from other groups and I  
3 think that is hugely important. This is not a new issue and  
4 there are many people who have ideas and thoughts that we  
5 could find very useful. So I do think we need as a process  
6 matter to find ways of soliciting and considering the  
7 thoughts of others.

8           Two opening statements would be that I do actually  
9 think the case of change is very well made, so hopefully we  
10 won't have to spend much time on saying, is there a need to  
11 do something differently. I think we have heard, and it was  
12 very encouraging that Chairman Cox and Con made the statement  
13 so clear about the mandate of getting this issue of  
14 complexity. As a preparer and the other preparers at the  
15 table may join me on this, it's little disheartening when  
16 you produce 120-page documents, which you have enough  
17 difficulty understanding, and if the actual investors don't  
18 find it useful, that's not our goal.

19           We want to have as preparers a good dialogue with  
20 investors, a good dialogue that really is explaining what  
21 we're doing as a business and the trends we see. It is not  
22 to get mired down in the complexity of a footnote that is  
23 hard enough as a preparer to understand, and I am sure, it is  
24 much more difficult for an investor.

25           I think we also would probably agree that the goal

1 is pretty simple. It should be sustainable, good financial  
2 statements, good disclosures which facilitate the capital  
3 markets. The issue is actually how you get there. I think  
4 in terms of doable for me, there are a few errors in focus.  
5 I do think that the time is right when you think about the  
6 work FASB is doing on conceptual framework, the work that is  
7 going on with the international standard setters to really  
8 get at some of the fundamental concepts as building blocks.

9 I think we have to begin to move in a much more  
10 global fashion. I know that may be a little inconsistent  
11 with the doable world, but I think we are in a global world  
12 and we have to think in terms that we get a set of standards  
13 that are going to stand up just as well in the U.S. as they  
14 will in China or elsewhere.

15 So I think there's a huge opportunity for FASB,  
16 IASB, and all other standard-setters to really work together  
17 on getting to this point of a reasonable set of financial  
18 standards and disclosures that support a good understanding  
19 of performance.

20 A sort of second practical one from my perspective  
21 is as we think about standards everyone is focused on that  
22 there are a number of standards that are very complex, a huge  
23 amount of interpretation; 133, 140, ones that affect my  
24 space, particularly. But I think in other industries you'd  
25 think about other standards, and we should really look at

1 ways of simplifying those standards. I think a very doable  
2 action would be to say what are the standards where the rules  
3 are the most complex. And we have, I think, some  
4 opportunities there to make a difference. Again, using the  
5 convergence project may be a good way at getting after that.

6 I think the third point, and I think that we've  
7 heard like we have to get at the underlying system, but it  
8 isn't just the standards. It is then going to be the whole  
9 process about when is a judgment that somebody makes around  
10 the application of a standard and when isn't it, and who has  
11 the ability to proliferate, and I use that word judiciously  
12 because I think we do proliferate who passes a judgment on  
13 how should it be interpreted. Is it an SEC speech? Is it a  
14 FASB staff member answering a phone call? Is it a letter  
15 that's written?

16 How does that work? Because at the end of the day,  
17 again, wearing my preparer hat that makes life very  
18 difficult, and I think probably if we were to spend time on  
19 that issue, I think it could really bear a lot of fruit. I  
20 understand this is a complex world, that you have to deal  
21 with that complexity. However, I am not sure that having  
22 again a body of interpretive guidance published by so many  
23 different places really helps that. And as a preparer,  
24 again, trying to have people say based in Hong Kong comply  
25 with U.S. GAAP is difficult when they have to rely on that

1 body of guidance.

2           The last comment I think I would like to make is  
3 just to one that I know and am going to deal with, but  
4 obviously, a lot of this is defensive plays around protection  
5 on the part of many of the participants in the process around  
6 litigation, not something that we can necessarily do  
7 something about. But maybe if we don't see this as a  
8 conflict between preparers, regulators, and the other  
9 participants in the system, and more so where we have a  
10 shared goal of doing this better, maybe we can make it a  
11 little bit more of a joint effort.

12           So thank you for the opportunity to give you those  
13 comments.

14           CHAIRMAN POZEN: Thank you, David.

15           I did want to say one thing. I don't think, since  
16 there is the Levitt Committee on auditor liability, we won't  
17 be addressing those proposals, but I think legal liability  
18 will come up in a number of contexts, and I think we should  
19 not shy away from dealing with that. But just the specific  
20 proposals for auditor liability, we'll let that Committee run  
21 with it.

22           I would like now to move to Tom Weatherford. Tom  
23 serves on the boards of a number of technology-related  
24 companies in the West Coast and he was at one point the CFO  
25 of another company. And he's here to represent small and

1 mid-size companies. And we're glad to have you, Tom.

2 MR. WEATHERFORD: Thanks very much.

3 First, it is an honor to be a part of this  
4 Committee. Second, I think that I can basically say and  
5 summarize my thoughts very easily. I agree with everything  
6 everyone said.

7 (Laughter.)

8 MR. WEATHERFORD: It has been consistent, but I  
9 think that one of the things that is lost when we look at  
10 standards is not only the complexity of the standards, but  
11 which companies have the capability inside to actually deal  
12 with these standards.

13 I mean, I receive this every quarter. This is from  
14 one of the big four. It's a standard-setter update. It's 24  
15 pages of pronouncements, consensus, staff positions,  
16 executive drafts, proposals and reports from the FASB, EITF,  
17 ACSEC, SEC, PCAOB, IASB and GASB. It's just very complex,  
18 and that's only one quarter's worth of updates. So for small  
19 companies, it's overwhelming. A hundred-million-dollar  
20 company just does not have the capability of a \$10 Billion  
21 company, and yet when the standard is created, it's created  
22 as though all companies have expertise equally within the  
23 corporation.

24 I also believe, having dealt with international  
25 accounting all my life, thirty-two years in finance, five

1 years as a audit committee chair, that the rapid  
2 globalization of markets today dictate that we should have  
3 one standard. The economic substance of a Chinese company is  
4 basically the same as the economic substance of a U.S.  
5 company. A French software company has the same issues in  
6 terms of revenue recognition as a U.S. software company.  
7 They may have better food, but the same challenges on revenue  
8 recognition.

9           Many companies today are on multiple markets. I am  
10 on the board of several companies that are on multiple  
11 markets in the U.S. and other countries, and they have to  
12 deal with one set of accounting standards for that market and  
13 another set that can be overwhelming, not only for the  
14 company, but the chairman of the audit committee trying to  
15 deal with this. So one standard makes a lot of sense. And  
16 how we evolved to that: if 100 countries can use IFRS, why  
17 can't the U.S. use something like that?

18           In addition to that, I think that standards need to  
19 be simple. When you have preparers trying to understand a  
20 standard, auditors trying to interpret the standard, and in  
21 today's environment you can't depend on using the auditors  
22 like you could in the old days, it's more of a hands-on. So  
23 you are left alone. Many times I've had financial analysts  
24 call me up when I was a CFO, and after I retired, say, Tom,  
25 can you explain what this means, an accounting term, so I can

1 know if this company is cooking the books or not.

2           So even the users today are confused. So we could  
3 have a simple set of rules in plain English so to speak, as  
4 we do our MD&A and 10Qs. I think it would help in many ways.  
5 I've never used a 10Q to run a company as a CFO, so if you  
6 look at a 10Q the way it's structured today, if CFOs don't  
7 use it and CEOs do not use it to run a company, how can  
8 investors use it to analyze a company and understand the  
9 workings of a company. It's become so complex with so much  
10 legalese in it and so much repeating of the same thing, page  
11 after page, and the risk factors, which if you read the risk  
12 factors you wouldn't invest in any company. So there needs  
13 to be a simple way for analysts, for investors, whether  
14 they're sophisticated or individual investors, to really  
15 analyze a company.

16           In addition to that, whether we have principles or  
17 rules-based, the thing that is disappearing is the ability of  
18 judgment at the local level. Today, there is more oversight.  
19 There is more second-guessing and a lot of it is unintended.  
20 A lot of it is perception, but it's there today where the  
21 auditors today you can't count on your audit partner to give  
22 you a recommendation that will stick. In fact, there's a  
23 risk factor floating around silicon valley. It's a joke,  
24 that says, we can't guarantee that our results are correct,  
25 because our guy in national is too busy to answer our

1 questions to tell us how to do this.

2           And I think there's some truth in that in the sense  
3 that everything seems to go to national today. And I think  
4 it's because of the complexity of some of the standards, but  
5 it's also because there's the punitive side if an audit  
6 partner, especially junior audit partners, get it wrong, even  
7 though it's an honest mistake. So we could have a balance  
8 there. If we could have a true oversight of these  
9 committees, I think that would help. And this is not about  
10 cost. This is about giving preparers and auditors the time  
11 to really analyze what makes sense. We are taking so much  
12 time analyzing pronouncements and standards, which really  
13 don't effect the bottom line, that we don't really have time  
14 to do the old balance sheet review. And I could give you  
15 many examples of that.

16           So, as a member of this committee, what I would  
17 like to do is to try to push towards a simplification, to  
18 take every type of organization that's here represented today  
19 and have us work together, a way of doing this a lot simpler,  
20 because I believe that it is too complex. And, as a result,  
21 it's made it even harder for investors and preparers and  
22 auditors to do their job properly.

23           Thank you, Mr. Chairman. Thank you.

24           CHAIRMAN POZEN: Peter Wallison, who's out of the  
25 country, apologizes. He couldn't make it today. He, as many

1 of you know, was General Counsel of the Treasury and has been  
2 involved quite extensively in XBRL and interactive data for  
3 financial reporting. So he is an expert in that area and  
4 will be involved with the Committee.

5 I do want to give the observers a chance if you  
6 want to make a short comment. Bob, I don't know whether you  
7 wanted to say something.

8 This is Bob Herz, Chairman of FASB, and also  
9 long-time senior partner in audit firms.

10 MR. HERZ: Yeah, thank you.

11 To me this is kind of like a dream come true,  
12 because I've been asking for an effort like this for probably  
13 the last two years. So, again, I thank not only Bob but I  
14 thank each of you. And hearing everything around the table,  
15 back on a lot of my own thoughts on the whole system, you  
16 know, if I were to go about trying to think about this and  
17 how to go about it, I'm big on kind of thinking about things  
18 in product development terms.

19 We have to start from scratch almost and create a  
20 product that met the needs of the market, you know, what  
21 attributes would it have and how would we go about doing  
22 that. Then we'd kind of compare that with the current state  
23 and think about what are the constraints on creating this  
24 dream product. Now that may be over ambitious, but it may be  
25 a way to also kind of frame this to whether or not the

1 recommendations you come up with actually improve the state  
2 of the world towards the objectives that everybody seems to  
3 be trying to meet.

4           So I would encourage, although this is kind of a  
5 regulated area, to think as a little blank sheet of paper out  
6 of the box. My way of doing that is to think about what  
7 product or sets of products would we try to market to the  
8 market and will they be bought.

9           CHAIRMAN POZEN: Okay, I think also Mark Olson, the  
10 Chairman of PCAOB, I don't know whether you wanted to add a  
11 few comments.

12           MR. OLSON: Bob, just first let me second Bob  
13 Herz's comment.

14           Over a year ago, when I became Chairman of the  
15 PCAOB, one of the first visitors I had was Bob Herz, who was  
16 suggesting the need for this Committee and was hoping that he  
17 could count on the support from the PCAOB. A couple of  
18 comments; first of all, I'm glad to hear you talk about  
19 focusing as being critical, because as you read the  
20 discussion draft, what it leaves out is the enormity of the  
21 challenge that you've laid out and the relevance of a limited  
22 time frame.

23           I think Linda was the first one that made the  
24 comment about the fact that it's quite a large task. And  
25 Nusbaum had said that he can sense just from the comments

1 that he's heard so far that there has been a certain focusing  
2 take place. And I think that that's useful, because I think  
3 we're going to have to do that first in order to achieve the  
4 objective.

5           A second perspective: most of the talk,  
6 appropriately, is focusing on the relevance and the clarity  
7 of financial reporting so that it's meaningful to the various  
8 audiences based on their needs and on their sophistication,  
9 and on their perspective.

10           But there's another element, too, in the U.S., and  
11 we're very proud of the confidence in the markets that we  
12 have. And the SEC and the PCAOB were both created by the  
13 Congress at a time when that confidence went away. And  
14 rather than playing the role of defense, hopefully, if we're  
15 doing it right, we're playing the role of referee. So that,  
16 when we get questions such as are we second-guessing, we are  
17 instead reinterpreting that role. Is the appropriate amount  
18 of professional skepticism being applied as opposed to the  
19 second-guessing.

20           So we get it out of sort of the backyard playground  
21 amateur approach to a much more sophisticated level of  
22 judgment consistent with, you know, what is happening now in  
23 the capital markets. But just going around the room  
24 listening to the various perspectives, shareholder, issuers,  
25 audit firms, analysts, underwriters and now regulators, the

1 symbiotic effect of having that many players involved in this  
2 process will almost surely make it somewhat complex. And so  
3 I really welcome the opportunity for us to try to sort  
4 through that complexity to help achieve our respective goals.

5           When we were first invited to participate, it was  
6 almost like being invited to a party that said, you are  
7 invited to a party. What can you bring? Because of what the  
8 SEC was asking for was not simply our involvement, but for  
9 our staff support. And Greg Skates, who was going to be  
10 involved in the process has become familiar with the term,  
11 secondment, recently. But in addition to myself, I am very  
12 pleased that Charlie Niemeier, one of our other board  
13 members, and also Dan Goelzer, who is not here, will be very  
14 much involved. We're very pleased to be included in the  
15 process and look forward to our involvement from the  
16 perspective that I just mentioned.

17           Thanks, Bob.

18           CHAIRMAN POZEN: Thank you.

19           I think Arthur Leder sitting in for Charles Holm  
20 from the Fed, did you want to say anything, Arthur?

21           MR. LEDER: Bob, in the interest of time, I yield  
22 my time in order to get us to the next discussion point.

23           So, I don't have anything to say other than Charlie  
24 regrets not being here. He had another commitment and we  
25 greatly support the efforts of the SEC and the Committee to

1 improve financial reporting.

2 CHAIRMAN POZEN: Thank you.

3 Kristen Jaconi from the U.S. Treasury Department.

4 MS. JACONI: Well, we want to thank the SEC for  
5 including us in this Committee, and in the discussion paper,  
6 two Treasury initiatives were mentioned. One of them is a  
7 restatement study, and of course Con Hewitt had mentioned the  
8 alarmingly high number of restatements in the past decade.

9 We of course will share the results of that study,  
10 probably first quarter of 2008, and then we are also forming  
11 an advisory committee to study the sustainability of the  
12 auditing profession. That will probably begin in the Fall,  
13 and perhaps recommendations released by early Summer. And  
14 again we'll share those recommendations with you.

15 CHAIRMAN POZEN: Thank you. I think John White  
16 who's the Director of the Division of Corporation Finance  
17 here at the SEC and a very distinguished securities lawyer  
18 might want to say a few words.

19 MR. WHITE: I am very pleased that all of you are  
20 here undertaking this job. I guess I just wanted to comment  
21 real briefly on the two roles that we play here from the  
22 perspective of Corporation Finance. We are the group here at  
23 the SEC that actually reviews the financial statements that  
24 we are talking about here. But not just the financial  
25 statements, but all of the other financial and non-financial

1 disclosures about 4,000 companies a year. And so we are  
2 really looking forward to your help and suggestions on that  
3 front.

4           The other role we have is that we are the group  
5 that proposes a large number of the new rules to the  
6 Commission, and so I guess I am really looking to Joe  
7 Grundfest and some of his comments.

8           We would really appreciate your giving us some  
9 things that are practical and useful and that we can  
10 realistically propose to the Commission in the time frames we  
11 are talking about, and so on, because we are the guys that  
12 actually are going to implement this in many cases. And, so,  
13 please give us something that we can do in a realistic and  
14 practical way.

15           Thank you.

16                                           CONCLUSIONS AND NEXT STEPS

17           CHAIRMAN POZEN: Thank you.

18           Let me make an attempt here in the modest amount of  
19 time we have left to sort of summarize and get a little  
20 discussion on some of the points that have been made here.  
21 First, starting with a process issue Joe mentioned to open  
22 the tent, and I think the ideas I see coming out of this and  
23 just sort of want to run them by the Committee and get some  
24 other thoughts on this is the paper that you have in this  
25 little booklet, I think we were intending with the

1 Committee's agreement to put it out for comment in the sense  
2 of trying to solicit input as to the scope of the Committee's  
3 work. So that was one idea.

4 A second idea which Joe is talking about is having  
5 more of a blog, more of communication, and I think that's a  
6 good idea. My main thought about that is that maybe as the  
7 work of the Committee progresses and we have some more  
8 focused questions that we could do that, I am a little  
9 concerned about opening it up too early, because we might get  
10 a lot of stuff all over the place. But I do think the idea  
11 of using the web site proactively or through blogs and maybe  
12 one of the things that I think we can ask the working groups  
13 as they go along is for the next public meeting is to try to  
14 formulate some sort of request for comment through these  
15 blogs that's focused, so we can get that benefit.

16 A third thing is that the idea here would be to  
17 have most of the public meetings open meetings in Washington.  
18 But I do think we would like to have a meeting in New York  
19 and a meeting in the Midwest and a meeting on the West coast.  
20 And so I think we would try to arrange these meetings so that  
21 at least part of the time those meetings we could have  
22 testimony from people who the Committee felt really had  
23 something to offer.

24 And I think that we need again to make sure we  
25 don't just have a gab fest. You know, sometimes I've been at

1 some of these testimonies where they sort of go on and on and  
2 on, but if we can figure out, I'd encourage each of the  
3 working groups to figure out who in particular they would  
4 find to be a very useful person to testify on a focused  
5 subject.

6 I don't think it's really helpful to have somebody  
7 give a general view about all the financial system. That's  
8 our job. But if somebody, for instance, was a real expert on  
9 XBRL and could address some issues that really could be  
10 useful for the whole Committee on understanding the  
11 implications of that, and I think some of the other things  
12 people have said about press releases, and there are a number  
13 of topics that could be done. So I think people ought to  
14 think about getting participants to testify in sort of a more  
15 or less focused way.

16 The fourth thing, which I guess has come up, Joe  
17 probably focused it in terms of what else has been done and  
18 is being done, I guess I do think the fact that the Treadway  
19 Commission still is remembered. I think the answer is that  
20 the Treadway Commission wins the prize for the advisory  
21 committee that still is referred to in a number of SEC rule-  
22 making proceedings.

23 MR. LIDDELL: But it wasn't a federal advisory act  
24 committee.

25 CHAIRMAN POZEN: It wasn't a federal advisory act

1 committee. Okay, we were not sure of that. Anyway, it may  
2 or may not have come before we were all subject to the  
3 wonderful rules of FACA. But it was in the nature of an  
4 advisory committee and it did have a big effect. And I think  
5 it led to COSO. I think we'll ask the staff. We'll ask Jim  
6 and Russ to take a look at other advisory committees to see  
7 what they recommended and why it did or did not come about  
8 and I think, more broadly, to look at other studies that have  
9 been done so that we should at least recreate the wheel and  
10 have a good sense in these areas of what other studies have  
11 been done.

12           And I would say as a "C" matter under that, "A"  
13 being other advisory committees, "B" other studies. I know  
14 that there are some ongoing efforts, that the Center of Audit  
15 Quality has held a number of meetings in which they have  
16 tried to solicit from investors what are you really  
17 interested in. And financial statements I know the AICPA, I  
18 think they have some sort of, I don't know if it's a survey  
19 or study about what people think when they read the audit  
20 opinion, what they think they're getting there.

21           So I think we should have the benefit of what's  
22 been done. That's a chunk of this just in terms of process,  
23 so I was going to stop there and ask anyone on the Committee  
24 whether they had any other suggestions as to a process basis  
25 of things that they would like to see us do.

1           Well, I think what I've mapped out is actually  
2 quite a big program in terms of just getting the background.  
3 But I think what we'll do is try to think of some public  
4 meetings in some of them in the future as being partly  
5 meetings of our own to discuss this, and partly ways to get  
6 participants in front of the Committee.

7           A second thing just somebody raised, and I think it  
8 may have been Jeff but I'm not totally sure, about  
9 priorities. I think we were trying to say that we have two  
10 main groups, the investors and preparers, who are affected by  
11 financial reporting. I think, and people should express  
12 their view that I think that we would probably agree as a  
13 Committee that between those the priority should be on  
14 investors. I think this is what Chris may have said, rather  
15 than preparers.

16           On the other hand, I think we ought to recognize  
17 that the preparer community has to bear the brunt of some of  
18 this. And so if we asked all of Jeff's analysts what they  
19 wanted, they would come up with a very long list, since I  
20 know we're on portfolio management and analysts. And so we  
21 need to be constrained in a practical way of what is  
22 reasonable for the preparers to publish.

23           And third of all, I think we ought to recognize  
24 that there are sort of various groups which we think of as  
25 intermediaries, auditors on the preparer's side and analysts

1 and people like Motley Fool on the investors side for these  
2 have to be run through. So I don't know whether that seems  
3 reasonable from the point of view of the Committee in terms  
4 of just people want to reach some sort of preliminary  
5 viewpoint on that.

6 I don't know whether Jeff or Chris want to comment  
7 on that?

8 MR. LIDDELL: Yeah, I'm happy to just endorse what  
9 you said and repeat what I said. From my point of view,  
10 investors are the primary group who we are trying to optimize  
11 for here. So in the case of conflict we should be optimizing  
12 around them, but with the practical overlay that it has to be  
13 done on a cost-benefit basis. Certainly, when I talk to  
14 investors, they initially start with a wish list that's as  
15 long as your arm. But when you actually come down to the  
16 practical suggestions that they have about what they really  
17 want to see, it's a much more finite list.

18 And when they do accept the fact that there are  
19 costs involved in getting a longer wish list and they really  
20 don't want to have to bear those costs to get the incremental  
21 amount of information. So I think investors is the right  
22 paradigm to take here, but applied in a very practical sense.

23 CHAIRMAN POZEN: Jeff?

24 MR. DIERMEIER: Yeah, I guess I would only add that  
25 that makes perfect sense. The financial reports are for the

1 investors. The assumption is that inside the company there  
2 is all the information that you possibly could have by  
3 definition at the disposal of management. So from that  
4 standpoint, management is not in the dark in terms of what  
5 information might be available.

6 So from that standpoint, I think it gets a slight  
7 priority edge to the end users in terms of financial  
8 reporting so to speak. But your comment about, you know,  
9 obviously there has to be a check balance there in terms of  
10 what the preparers can actually come up with in a  
11 cost-effective basis is pretty critical.

12 CHAIRMAN POZEN: Yes, Denny?

13 MR. BERESFORD: There's one constituency that isn't  
14 represented here that has a great interest, and that's the  
15 academic constituency. I guess Joe and I--

16 MR. POZEN: Some lawyer is going to have to tell us  
17 whether a legitimate constituency for the purposes of this,  
18 we were told, you know, in this theology that we're not sure  
19 whether they represent it. But, we'll be glad to have you  
20 double in that role.

21 MR. BERESFORD: I apologize to the act or whatever  
22 it should be, but my point is that I certainly agree with the  
23 idea of the privacy of the interest of the investors. And of  
24 course, Chris made the point of cost benefit. I think we  
25 also have to take into consideration the doability of some of

1 the things that we're talking about here. I'm thinking in  
2 terms of educating students. I think that maybe we haven't  
3 kept up to date with some of the things that we should be  
4 doing, but to be very honest, the complexity of the  
5 accounting model is beyond even the masters of accounting,  
6 specialist-type students, these days.

7 I met yesterday at FNMA with a couple of people who  
8 spent full time, they're very senior people in the  
9 organization in the accounting area, they spend full time on  
10 securitization transactions. They have 20 people in the  
11 accounting policy area to try to make sure that they cross  
12 all the t's and dot all the i's and so forth. So I think  
13 that we just have to take into consideration the practicality  
14 of many of these issues. It might be nice to do some  
15 additional things, but sometimes they're beyond our human  
16 abilities.

17 CHAIRMAN POZEN: I think your point is very well  
18 taken and I don't know whether anyone else wanted to comment  
19 in this area.

20 MR. COOK: A comment just supporting Denny's view  
21 and also encouraging maybe in responding to John's comment  
22 about give us things that are practical and actionable and so  
23 on. I don't know what is actionable and practical, but there  
24 has to be some understanding on our part what kind of  
25 flexibility might be there. I harken back to the mid-1980s.

1 There was a lot of time spent by the firm and by the SEC and  
2 by FEI on the concept of summary reporting, and substituting  
3 a summary report, a condensed version in plain English for  
4 the extensive compliance type disclosures, and it never  
5 really took off.

6 An interesting anecdote was offered by the CEO of  
7 one company in opposition or in contrast with the product of  
8 the company that made cookies. And they offered a box of  
9 cookies or the annual report. Take your pick. And 93% of  
10 the people voted for the cookies, because they said, we'll  
11 eat the cookies, and we don't get any value out of the annual  
12 report.

13 So we were trying at that time, just to make this  
14 point, trying to find a way to substitute a communication  
15 that would be useful for a communication that was not  
16 receiving any marketplace acceptance. And it never went  
17 anywhere, because we couldn't get beyond the point of  
18 everything else would have to be provided the way it had  
19 always been provided, and this would just be an add on. And  
20 companies said, gee, it's a good idea, but I don't want to  
21 pay for an add on. And so it died in the mid-'80s, late-80s,  
22 despite being a concept that seemed to have a lot of value.

23 What can we learn about the ability to implement  
24 ideas about streamlining communication processes and so on,  
25 so we don't just make a recommendation. Somebody says,

1 that's nice, but sorry. We can't do that because we've got  
2 17 reasons why that won't work.

3 What's out there John?

4 MR. WHITE: Well, one thing you might want to look  
5 at, I know we have not been saying nice things about past  
6 FACAs. But the Small Public Company Advisory Committee,  
7 which presented their report in April of last year, we did  
8 put forth, and I think they had like 25 recommendations  
9 separate from their 404 recommendations. But this May, which  
10 would be I guess 13 months later, we have just recommended to  
11 the Commission, and they have put out I think about seven or  
12 eight hundred pages of proposals off of their  
13 recommendations.

14 And what you'll see is we just kind of picked  
15 pieces of their recommendations that we thought were  
16 realistic that could be done in an effective and a practical  
17 way. I mean, that's at least an example of where we had a  
18 recent committee who's given us a lot of recommendations, and  
19 at least as a first wave we tried to pick what we think we  
20 can do out of it.

21 But those haven't been adopted yet. I mean,  
22 obviously, those proposals have just come out.

23 CHAIRMAN POZEN: And have flexibility to look at  
24 them.

25 MR. WHITE: Yeah, I mean, that's just an example of

1 seeing where you really have a good one.

2 CHAIRMAN POZEN: That's good, very good. Bob?

3 MR. HERZ: I echo Mike's comments, because in my  
4 former incarnation, probably 7 or 8 years ago, I actually  
5 chaired a group to look at integrating and streamlining the  
6 whole financial reporting package, and SEC GAAP redundancies,  
7 and that. And we started to take a kind of a nascent look at  
8 technology and the possible things like click-downs and  
9 tiering of information.

10 And one of the barriers at that point was that the  
11 difference between the legal regulations around what was in  
12 financial statements, audited versus MD&A versus other,  
13 started to create at that time was called "in the envelope,  
14 out of the envelope" kinds of issues. And we were told  
15 that's going to be difficult to modify. So if we're going to  
16 really look at this tiering of information issue and summary  
17 information, all of those kinds of things that are now  
18 cloaked in the regalia of different forms of legal protection  
19 and liability, I think there needs to be flexibility in that,  
20 I think, just thinking down the line, if we're going to think  
21 about those kinds of potential solutions.

22 CHAIRMAN POZEN: Well, that's a good segue. I was  
23 going to try to summarize in each of these four areas sort of  
24 some of what I had heard, and just if I didn't hear it  
25 correctly, people should feel free to come in. And so

1 picking up on this whole area of information delivery, I  
2 think I heard some very important points about wanting to  
3 allow summaries, and I think the point that Bob Herz just  
4 made is the critical point. Whether it's the summary or it's  
5 a selective array of information that's, you know, sort of a  
6 business indicator for a particular industry, one of the key  
7 questions is going to have to be the liability issues; that a  
8 lot of the willingness of issuers and registrants to do this,  
9 by its very nature, the investor is getting a partial.

10           And there has to be some notion that if the  
11 investor, whether it's through hyperlink or getting a full  
12 prospectus or full annual report, that they will be deemed to  
13 have gotten the full document. Because otherwise people can  
14 be very afraid to have these essentially subsets of  
15 information. And I think that's the key question that that  
16 group is going to have to look at. Another key question  
17 which I think a number of people have read is that XBRL has a  
18 lot of potential. The difference between potential and  
19 realization is huge, and I think that as Susan points out  
20 that in the banking area, it's been very successful. It's an  
21 easier environment to work in, but I think there is something  
22 really to be learned from that.

23           Some of the things that people want from XBRL are  
24 more standardized to the extent for instance you could have  
25 industry performance indicators that were agreed upon by an

1 industry, but to some degree, you have real customization  
2 where the analyst community wants a degree of customization  
3 that, you know, would provide some real challenges in terms  
4 of how that's done.

5 I think I heard two other things in this whole  
6 area. One is the importance of the MD&A and sort of trying  
7 to, if anything, expand that and give people more comfort,  
8 give the writers more comfort that they can be expansive and  
9 they are sort of free-writing. And I am sort of interested,  
10 John, about your experiments at free-writing in the 33 Act  
11 area where you've been allowing people to deviate a little  
12 from the standard sort of language in these prospectuses.

13 So I think that that's an area -- both MD&A and the  
14 free-writing, which is something that's now allowed in the 33  
15 Act process where before it was highly  
16 stylized -- free-writing might be viewed as allowing in  
17 writing what people used to say on road shows. But maybe  
18 that's too cynical a view.

19 And I think a fourth thing which quite a few people  
20 have mentioned is we have a lot to learn from the press  
21 release. We have a lot to learn from the earnings release.  
22 We need to make that a central part of our inquiry, because  
23 the press release represents sort of what the companies and  
24 the analysts are jointly thinking of. This is what's really  
25 important; and, you know, you're stripping out, whether it be

1 stripping out one-time events or stripping out currency  
2 fluctuations into some sort of concept of core earnings,  
3 however it's defined, and then these other things.

4 So those were four things that I heard in the  
5 information delivery area, though I believe that the press  
6 release, also, I think, has implications for the substantive  
7 complexity group.

8 But I am going to just stop there, and take  
9 people's comments on that.

10 Yes, Greg?

11 MR. JONAS: Bob, just first I'd like to echo I  
12 think that's an excellent summary of the display here at the  
13 delivery part of the program.

14 Your comments about MD&A are particularly relevant  
15 to me as I think of the many, as I mentioned before, meetings  
16 that companies come to give us updates on their business and  
17 the huge contrast between a face-to-face discussion with  
18 management versus what we read in MD&A. And typically in the  
19 face-to-face meeting, management delivers a book that are  
20 pictures, graphs and charts. And what management does is  
21 then put their color around those graphs and charts, and it's  
22 wonderfully clear. It's really insightful. A lot of the  
23 things in the graphs and charts don't have dollar signs in  
24 front of them, a lot of non-financial data. But it's just  
25 the marked contrast between the clarity of the face-to-face

1 meetings with the pictures versus what we see in MD&A, and  
2 hopefully we can get some of that clarity into that reporting  
3 process.

4 CHAIRMAN POZEN: That's very good.  
5 Anyone else want to add something?

6 MR. DIERMEIER: Bob, if I could add something,  
7 because I think maybe your first point on all summaries,  
8 maybe you were trying to get to the smaller, the less  
9 sophisticated, the serious investment amateur so to speak.  
10 But it seems like there seems to be some focus on that  
11 element as opposed to just the professional investor.

12 And as I try to think about this, the only way I  
13 can see getting at that is literally, I think, there may be  
14 questions about segmenting these individual investors in  
15 terms of what they try to get out of the financial  
16 statements, what they're doing. Many individual small  
17 investors are not trying to pick a stock the same way we  
18 might do it in the institutional world. Their portfolio  
19 might be dominated by single stocks they wouldn't allot, or  
20 it might be that they're just trying to get exposure to an  
21 area of the marketplace.

22 So, I think it might be helpful for these  
23 individual investors in these reportings to actually think  
24 about the segments themselves that they come from, because  
25 that might inform our discussion.

1           MR. GRUNDFEST: Greg, with regard to your  
2 observation about how the information you get in these  
3 face-to-face meetings is typically infinitely more valuable  
4 than reading a 'K' or a 'Q' or a press release is exactly  
5 right, and we have to understand two reasons why that's the  
6 case.

7           Number one, a lot of the information you get,  
8 companies wouldn't want to have disclosed to their  
9 competitors. All right, so we have to understand that in  
10 every situation when we're talking about disclosure here, one  
11 of the other balances is anything you put in your 'Q' your  
12 competitors are going to read. All right, you know, people  
13 go through the exhibits to S-1s in Silicon Valley, you know,  
14 a little bit like they're the hottest, steaming novel that  
15 you'll ever see.

16           Because the information that's required to be  
17 disclosed has real competitive value, and a lot of companies  
18 don't like going through the S-1 process, because they say,  
19 look at everything we have to disclose to all of our  
20 competitors. It's going to be a road map for how we're doing  
21 our business, then you compete with us. So, you know,  
22 understand there's a little bit of yin and yang in this.

23           And then second you've got the litigation  
24 environment. It is relatively easy to sit with you and talk  
25 about metrics that don't have dollar signs associated,

1 because you understand how those translate to dollar signs.

2           If I am going to do the same slide show and try to  
3 explain all of the stuff in a way that I can feel comfortable  
4 that I'm not later going to be sued in hindsight with regard  
5 to the information I'm describing, I'm not going to present  
6 the same information the same way. So that would suggest we  
7 need to think potentially about broader safe harbors for  
8 certain types of disclosures if we hope to call them forth.

9           CHAIRMAN POZEN: Well, I think that's a well-taken  
10 statement and it leads us into the third area, the compliance  
11 audit area, where I think legal liability is there. And it's  
12 there both in terms of class actions and it's there in terms  
13 of SEC enforcement.

14           And I think that while we're not going to be  
15 proposing something for auditors, I think we need to think  
16 through that. I also heard a number of people refer to  
17 restatements, and we will take advantage of the Treasury  
18 study of restatements and understand that.

19           A third thing I heard is Linda is making good  
20 example of revenue recognition, which may be a good case  
21 study in terms of trying to understand how people get  
22 themselves into trouble and why and whether there's anything  
23 we can do about that.

24           The fourth thing, which I think in many ways the  
25 most important but the most difficult is there are quite a

1 few people who use the phrase second guessing, and I think  
2 everyone is concerned about second guessing and I think it  
3 relates partly to what I call the judgment element of  
4 principles versus rules, because I guess Mark if I were to  
5 say that the one thing that comes out of AS-5 now is that the  
6 auditors should use more judgment, but if the auditors use  
7 more judgment and then somebody comes in and second-guesses  
8 them, then they are going to feel like they're just being set  
9 up.

10           And I think one of the tasks of this Committee in  
11 that particular work group and a very challenging task is to  
12 try to understand how it is that we build a system that  
13 encourages judgment from auditors. But obviously, PCAOB  
14 can't be in the position of just saying, okay, you exercise  
15 judgment, you're automatically right. On the other hand,  
16 there's got to be a degree of discretion there. There's got  
17 to be some ability to make choices, and I think that's one of  
18 the things where, you know, that we'll really have to grapple  
19 with.

20           We look forward to a full and free discussion on  
21 that point. I guess all we can say is the exercise of  
22 judgment of auditors is now elevated to a new level.  
23 Everyone's in favor of that until someone gets zinged in an  
24 inspection. I don't know whether a lender or anyone else  
25 wanted to say anything else about this third area of

1 compliance and audit.

2 MS. GRIGGS: Well, I guess someone else mentioned  
3 materiality as being one of the issues that may be necessary  
4 to grapple with in dealing with restatements. I know a lot  
5 of our clients have restated for reasons that may not be  
6 material to a sophisticated investor, but that's a hard  
7 judgment to make. And so, is there a way to try to come to  
8 grips with making those judgments, which cash flow  
9 statements, which is my particular bugaboo, don't need to be  
10 restated, even though somebody classified amounts incorrect.

11 CHAIRMAN POZEN: Well, I think that's an excellent  
12 point and Greg may be able to help us, because I think  
13 Moody's and a lot of other people look at a lot of these  
14 restatements and maybe put out a report sometimes; make a  
15 judgment.

16 Because there are so many technical restatements (I  
17 don't know what the right term is) and try to understand what  
18 restatements are really making major financial changes versus  
19 ones that seem to be of a more technical nature.

20 MR. JONAS: You know, Bob, I think in a nutshell  
21 it's entirely possible that amounts could be very large and  
22 error could be very large and the market wouldn't care. That  
23 happens, for example, when the amount happens to not hit  
24 metrics the market believes are the drivers of value.

25 CHAIRMAN POZEN: And I think a number of us have

1 been in situations where we've had to restate where the  
2 ultimate bottom line wasn't actually changed, as you say, but  
3 some aspect of how you got there changed, and timing and  
4 these sorts of things.

5           So I guess one way to look at this is we might want  
6 to understand which situations the market reacts to as they  
7 are telling you something about the significance. And the  
8 other thing that I think is involved with that is trying to  
9 figure out other ways to deal intelligently with the  
10 mistakes. I mean, because it's not that we're trying to make  
11 believe that there weren't mistakes or perhaps maybe in  
12 certain things, it's not so much mistakes, but sort of new  
13 understandings of certain accounting principles, whether it  
14 is a way to deal with that prospectively rather than have  
15 this enormous number of retroactive. At least in my mind, I  
16 think, one of the measures of success of this Committee is if  
17 five years later the number of restatements has been reduced  
18 because we've given people better guidance and we've also  
19 defined what are the really important things that change  
20 versus not.

21           Just to try to summarize going backwards, is the  
22 areas of rule making and standard process. I think we heard  
23 a number of people basically saying in one form or another  
24 there's too much GAAP parading around. Obviously, what FASB  
25 does in a very succinct and quick manner is GAAP.

1           But as somebody said, if you ask your audit firm  
2 what's GAAP, you get this long essay and it includes  
3 something that somebody gleaned from an SEC comment letter  
4 and because they dealt with it in an enforcement proceeding,  
5 something happened, and then maybe even something that  
6 accounting fellow said in a speech or something that came up  
7 through EITF, so I think that we need to have a much more  
8 disciplined process, and I know Bob Herz agrees with this.  
9 We surely don't want to stop lots of people from  
10 interpreting, commenting, kibitzing, whatever way you want to  
11 say it, but we need a better sense of what actually is GAAP.  
12 And then it's almost like everything else should have a stamp  
13 on it. This is not GAAP, this is our views. You know this,  
14 so you can have auditing firms or organizations that put out  
15 guides or their views.

16           I think we have to be a lot clearer distinguishing  
17 what's GAAP from what's not GAAP, and people have done these  
18 things. And I think the other thing you hear is because FASB  
19 takes so long and comes out with these standards that are  
20 quite complex, that the reason this is happening is because  
21 people are seeking guidance, that they can't find it in these  
22 long statements, and they also want it in a more timely  
23 manner.

24           And I think that both Con and John are providing on  
25 a registrant basis some ability to deal with that. Now,

1 people may fear that and that's something we ought to  
2 explore, but I think there are ways through your processes to  
3 get reactions on a registrant basis about whether this  
4 particular way of accounting makes sense. I think the bigger  
5 problem that we need to grapple with is the sort of what I  
6 call intermediate level issues, which aren't registrant  
7 specific. But they are not global, but they are sort of  
8 areas as people think through these statements where maybe  
9 you get a whole new type of derivative that comes up or you  
10 get a whole area that people just haven't thought about being  
11 within FAS 140, and now people are thinking of it as FAS 140.

12           So those are areas, and I don't know whether its  
13 through the EITF or through rule-making proceedings or other  
14 things, so it seems like that's an area where the Committee  
15 could on the one hand get a much more disciplined and narrow  
16 definition of GAAP. And, on the other hand, get a sort of  
17 more enunciated and articulated way for people to get  
18 guidance faster at different levels. So that's what I heard  
19 in a variety of different forms. I would be glad to take  
20 anyone's comments on that.

21           Susan?

22           MS. BIES: I want to second the comments that  
23 you're making. And I think one of the projects that I know  
24 Bob's group is working on is this codification, and I think  
25 that's essential. I mean, there needs to be. It's getting

1 so complex and so many projects and there have in the past  
2 been too many accounting rule setters. We need to find a way  
3 that someone who is trying to figure out what is the way to  
4 look at the accounting treatment for a transaction to go to  
5 it.

6 Right now, you have to go through it by standard,  
7 and I think it's importance in the staff speeches for the SEC  
8 and all the things people have said. I think also as you  
9 just mentioned is a lot of this comes into confusion because  
10 of the innovation. There's new kinds of products, there's  
11 new service streams of building business revenue. They also  
12 create gray areas and what old accounting can apply to new  
13 innovations. And until that gets settled through a rule-  
14 making process, someone has to account for it.

15 So I think there needs to be a way and maybe  
16 through something that is out of the codification project or  
17 something like that that helps people focus on what are the  
18 relevant issues they ought to apply to a transaction that may  
19 be innovative.

20 CHAIRMAN POZEN: Okay, thank you. And then, yes,  
21 Denny?

22 MR. BERESFORD: Just one other small point. I am  
23 reminded by it sitting next to Sue.

24 I think that one issue that hasn't been mentioned  
25 is what I would call regulator GAAP, that particularly in the

1 loan loss provision in banks, I think we've had for a long  
2 time a disconnect between what the bank regulators insist on  
3 and their version of GAAP versus what the FASB thinks should  
4 be the case.

5 We talked around this for a long time, but that's  
6 one specific example. I think there are other cases that the  
7 regulators basically say you shouldn't follow anything other  
8 than GAAP, but it's their version of GAAP.

9 MR. COOK: Bob, could I ask a question on this -- I  
10 don't know quite where this fits, but it sounded familiar as  
11 we were talking about too many GAAPs and too many rules. The  
12 question, and I just don't know the full scope of the  
13 codification project, but who will consider or where will we  
14 consider the issue of sunrise/sunset -- taking a look at  
15 these standards -- taking a look at things that have been  
16 there. The point Greg made -- we've been adding things on  
17 for 40 years, but we rarely if ever take things away. So we  
18 have segment information. We just by rote keep producing  
19 this segment information and for many people they say it  
20 really isn't useful. Then when they do go to their earnings  
21 release they put out segment information -- revenue  
22 segmentation -- that is very useful, that is never produced  
23 in their GAAP financial statements. They are still cranking  
24 out these capital expenditures by this and by that.

25 Bob, does this bring -- does this come up in the

1 codification? Do we look to see if --

2 CHAIRMAN POZEN: I think it is listed within the  
3 standard setting working group that how to deal with existing  
4 standards, subsetting is listed within that group for working  
5 purposes.

6 MR. HERZ: I think there's two issues here. The  
7 codification is just to put all these multiple forms of GAAP  
8 in an integrated form. It won't read like a novel but it  
9 will all be in one place by topic so you don't have to figure  
10 out where it was.

11 And the SEC guidance that they believe is mandatory  
12 will be in a separate section by topic so it may force some  
13 discipline on them because they will be contributing to the  
14 codification as well. Anything that's not in the  
15 codification will not be GAAP, and therefore will only be one  
16 level of GAAP at that, what is in the codification.

17 The second issue, I think is really an issue of our  
18 processes, our agenda as to whether or not you think whether  
19 we go through and do things, setting agenda properly looks at  
20 the efficacy, cost effectiveness of existing standards on a  
21 timely basis or not. And I very much welcome that kind of  
22 input.

23 MR. COOK: I was thinking, Bob, and I think that  
24 would be helpful, but I wasn't thinking just about an  
25 individual standard but information content which adds to

1 complexity just by volume. Segment information, what I refer  
2 to the statement of comprehensive income, which is  
3 incomprehensible to most people. What would make that  
4 statement go away if nobody found it useful and yet it is  
5 part of the complexity because people are producing it? I  
6 was looking for --

7 CHAIRMAN POZEN: I think we're not going to ask Bob  
8 to give you the definitive answer but I do think --

9 MR. COOK: No, no. I wasn't looking for that. I  
10 was just asking where are we going to look at the question.

11 CHAIRMAN POZEN: I think we will look at the  
12 question of sunseting and grandfathering and these things in  
13 the working group on standard setting.

14 John.

15 MR. WHITE: A couple of random comments. One, the  
16 smaller business advisory committee recommended to us that we  
17 eliminate all the small business forms, hundreds of pages of  
18 forms. That's one of the recommendations that we have put  
19 before the whole system, to just change the whole system, to  
20 get rid of a ton of stuff.

21 A couple of other thoughts that came to me. In  
22 terms of the timing of your recommendations, I mean I'm  
23 looking at some of the things we're thinking about doing.  
24 We're moving, for example, on XBRL and future XBRL rule  
25 making. we're going to be doing stuff before next August is

1 my guess and so if you wait until a year from now to give us  
2 suggestions that's going to be behind the curve that we're  
3 operating on. So you should not lose track of making the  
4 interim recommendations.

5           Again, you'll see that the other advisory committee  
6 I'm referring to made some interim recommendations that we  
7 accepted. And so just to put that in your toolbox, I would  
8 think you probably should think about that.

9           CHAIRMAN POZEN: Well, we do -- I think one of the  
10 people you may not have realized that's been seconded to be a  
11 staffer on that group is someone from your group, so  
12 hopefully that will help us get into the -- time frame.

13           MR. WHITE: Really?

14           CHAIRMAN POZEN: I did want to mention that.

15           MR. WHITE: You should have mentioned that.

16           I guess just a couple of other, again, random  
17 thoughts for you to think about. I guess when I started 15  
18 months ago there were -- we had posted 500 sets of comment  
19 letters. We have now posted something like 10,000 sets of  
20 comment letters. We thought we were doing a good thing from  
21 a transparency standpoint but I kind of listened to this and  
22 I -- maybe you should think about what it means to  
23 have -- because we literally have put up -- most of those  
24 comment letters have come up in a little less than a year.

25           CHAIRMAN POZEN: I guess we need to think about the

1 difference between soliciting comments and compiling  
2 summaries versus just having all those raw comments out  
3 there. That's a good point.

4 MR. WHITE: I mean one of the things that we have  
5 thought about where we're doing targeted comments like on the  
6 new executive comp rules, we're doing a specific review  
7 project there where we're looking at hundreds of companies,  
8 we have actually held up putting out any comment letters  
9 until we have looked at a large number of companies, we've  
10 gone through a first review, we've learned how we think the  
11 comments ought to work and now we're going back and relooking  
12 at all those letters before we put out any of them in hopes  
13 of having some consistency in the comments when we do put  
14 them out.

15 But I mean there are some possibilities.

16 CHAIRMAN POZEN: No, those are very useful  
17 suggestions.

18 MR. WHITE: The final one, on the liability front, I  
19 think we are open to figuring out ways to at least try to  
20 work with you and I'll just say, phase things in. I mean in  
21 the XBRL area where we certainly are focusing on, in the  
22 voluntary program, that information is coming in not the  
23 normal liability way. In the 404 area where we have for all  
24 the smaller companies the management report coming in in the  
25 first year and the audit report coming in in the second year,

1 those management reports are always coming in in a furnished  
2 way instead of filed, just in a phase in way from a liability  
3 standpoint, just to throw out some more possibilities that  
4 I -- and we are great believers in incorporation by  
5 reference, by the way. So I mean I think -- you give us some  
6 recommendations like that I think we --

7 CHAIRMAN POZEN: Good. That's great.

8 In the interest of time here, just the last area,  
9 the substantive complexity area. I guess that' the area  
10 where we heard a lot of genuine and I think well founded  
11 criticism of complexity, not so clear exactly how you solve  
12 that problem.

13 I think people are pointing out that on the other  
14 hand economic transactions are more complex, and there are  
15 differences between users and preparers. I guess my sense is  
16 that that committee might -- there have been a number of, I  
17 think, useful points. Maybe one way is approach this area by  
18 looking in depth at a few examples.

19 I think Denny mentioned business combinations as an  
20 area where -- unclear whether that's becoming complex  
21 unnecessarily, the fudge being in unnecessarily.

22 I think Linda mentioned 159. 159 is an alternative  
23 standard for using mark-to-market or historic in certain  
24 circumstances and how that turned out. Did that just produce  
25 more complexity by allowing people to have alternatives and

1 then people then fought about whether the alternatives were  
2 being stated in accordance with the principles?

3           And I think obviously hedge accounting is another  
4 area. The last thing I would say here and then another  
5 comment is I think that Joe makes an interesting point about  
6 whether there are areas where we're assuming or we're sort of  
7 making believe like there's one simple point when it's really  
8 a distribution of probabilities.

9           MR. GRUNDFEST: Let me go to that for a moment  
10 because complexity is not always a bad thing because  
11 sometimes if you're going to honestly describe a complicated  
12 transaction you have to give a complicated answer, and it's  
13 foolish to expect that everybody is going to be able to  
14 understand a complicated, honest answer. And by forcing  
15 somebody to give a simple yes/no answer to a complicated  
16 question, you can be forcing somebody to lie. I don't think  
17 that's where we want to go.

18           So complexity is not necessarily the enemy. I  
19 think what we have to look for -- look, when complexity is  
20 used to obscure, when complexity is used to evade, well, then  
21 you know it's a variant on fraud, and that's a very bad  
22 thing. But sometimes we try to derive simplicity in such a  
23 way that it really gets in the way of comprehension, all  
24 right, and we shouldn't do that.

25           Very simple point, you know, the army of 20 people,

1 you know, trying to figure out how to do  
2 securitizations -- well, you could probably fire half of  
3 them, all right, or have them do higher valued things for  
4 society like revenue recognition, I don't know. You could  
5 reassign them to do other things if instead of saying, you  
6 know, we had to put this transaction in one pigeonhole and  
7 one pigeonhole only, if instead we could say, you know, we  
8 can look at this transaction and fairly characterize it one  
9 way, a, b, or, c, for the following reasons, and then let's  
10 just explain that to the world. It has a variety of  
11 different characteristics, all right, and let's explain that  
12 honestly. You try to force this characterization into one  
13 pigeonhole you're going to make us all nuts and its never  
14 going to fit in there in a very comfortable way, and then  
15 we've got to document the reason why we put it in and then  
16 we've got a team of 20 people.

17           So this sense of false precision, this sense of  
18 false certainty I think is an enemy to the process and  
19 there's a level at which people in the audit profession and  
20 the standards setting profession I think have a hard time  
21 letting go. Maybe sometimes things are black and white all  
22 right, and not all black and not all white, and we need ways  
23 to describe that.

24           CHAIRMAN POZEN: Well, I think that's probably a  
25 good summary of our challenges in dealing with complexity.

1 We all are against unnecessary or undue complexity, but on  
2 the other hand it may be the case that in other areas in  
3 order to accurately reflect the substance of what's going on  
4 we need more sensitivity analysis or more pro rata approach,  
5 I mean things that sort of reflect that these aren't all or  
6 nothing.

7 I think -- this will prove to be a very difficult  
8 area, but I think that this is something we might approach by  
9 looking at specific examples and understanding them because  
10 I'm not sure that abstract discussions in this area really  
11 get us that far.

12 And I'd just say one more thing, which I think is  
13 in 159, this more general problem of what's mark to market  
14 and historical cost is another area where we really have to  
15 look closely at how we can do that better. Again, a very  
16 difficult area.

17 So I think that we surely have a brief that's broad  
18 enough. And I think back to what Joe was saying, I think we  
19 will try to make ourselves famous as an advisory committee by  
20 coming up with a small number of proposals that are doable.  
21 We intend to work closely with John and Con to try to make  
22 sure that this isn't just done at the very end. But we'll  
23 understand where your processes are and try to make this as  
24 useful a group as possible.

25 So I think we've run a little over time but I

1 think -- if anyone else wanted to say anything? So then why  
2 don't -- we're going to close at this point. Jim, I don't  
3 know whether you have to bless us to close.

4 MR. KROEKER: I think Bob, committee members,  
5 observers, thank you very much and the meeting is adjourned.

6 CHAIRMAN POZEN: Thank you, very much.

7 (The meeting was concluded at 11:50 a.m.)

CERTIFICATION

I hereby certify the accuracy of this record of the proceedings of the SEC Advisory Committee on Improvements to Financial Reporting.

  
\_\_\_\_\_  
Robert C. Pozen  
Committee Chair

\_\_\_\_\_  
Date 9/19/07

**EXHIBIT A**

**Open Meeting of the  
SEC Advisory Committee on Improvements to Financial Reporting**

**Auditorium, Room L002, SEC Headquarters  
Washington, D.C.**

**Thursday, August 2, 2007, Beginning at 10:00 A.M.**

**AGENDA**

- I. SEC Chairman Welcome and Introductory Remarks
- II. Additional Opening Remarks and Introductions
  - a. Conrad W. Hewitt, Chief Accountant
  - b. Robert Pozen, Committee Chair
- III. Presentation of Discussion Paper
- IV. Comments on Discussion Paper
- V. Conclusions and Next Steps
- VI. Adjourn (expected no later than 1 P.M.)

## **EXHIBIT B**

# **Discussion Paper for Consideration by the SEC Advisory Committee on Improvements to Financial Reporting**

**By Committee Chair Robert Pozen<sup>1</sup>**

**Draft dated July 31, 2007**

## **Introduction**

This white paper is provided as an outline for consideration and discussion by the Securities and Exchange Commission's Advisory Committee on Improvements to Financial Reporting (CIFiR). The purpose of the document is to provide a working outline, including a discussion of issues, views and potential consideration points that the Committee could evaluate. Additionally, the outline is structured in 5 key areas that could serve as a model for organizing the work of the Committee into subcommittees.

## **Background**

The U.S. capital markets are the deepest and most liquid in the world. The acknowledged success of the U.S. capital markets, and their contribution to the nation's economic vitality, has been due in no small measure to the availability of relevant, reliable, readily understandable, and timely financial information. However, while the U.S. financial reporting system has become the most complete and well developed in the world, some parts of the system may not be fully aligned with changes in the economy, business operations, technology and investor needs, leaving room for improvement.

The strength of the U.S. financial reporting system lies in no small part in its inherent checks and balances, including the different perspectives of participants in the markets — direct participants (e.g., companies and investors), regulators, independent standard setters, and other third parties (e.g., attorneys, accountants and auditors). But these different and sometimes conflicting perspectives have contributed to some of the problems in the system, including its extreme complexity and the resulting need to consider how the usefulness of reported financial information can be improved.

The SEC has charged the Committee with examining the U.S. financial reporting system to identify ways to improve the system of financial reporting. In considering this mandate, the Committee will consider ways to both reduce unnecessary complexity and make information more useful and understandable for investors. More specifically, the Committee's charter identifies the following as areas of inquiry for the Committee:

- The current approach to setting financial accounting and reporting standards, including (a) the principles-based vs. rules-based standards, (b) the inclusion within standards of exceptions, bright lines, and safe harbors, and (c) the process for providing timely guidance on implementation issues and emerging issues;

---

<sup>1</sup> This draft discussion paper was prepared by Committee Chair Robert Pozen. It does not necessarily reflect any position or regulatory agenda of the Commission or its staff.

- The current process of regulating compliance with accounting and reporting standards;
- The current system for delivering financial information to investors and accessing that information;
- Other environmental factors that drive unnecessary complexity, including the possibility of being second-guessed, the structuring of transactions to achieve an accounting result, and whether there is a hesitance by professionals to exercise professional judgment in the absence of detailed rules;
- Whether there are current accounting and reporting standards that do not result in useful information to investors, or impose costs that outweigh the resulting benefits; and
- Whether the growing use of international accounting standards has an impact on the relevant issues relating to complexity of U.S. accounting and reporting standards and the usefulness of the U.S. financial reporting system.

As the Committee proceeds with its evaluation, it may wish to consider the financial reporting system in light of the needs of two primary groups – those who prepare the financial information and those who use the information – while taking into account the overall environmental impact of two secondary groups – those who opine on the information being presented and those who regulate our financial reporting system.

Those who prepare financial information generally want:

- Clear instructions on what subjects to cover in financial reports;
- Not to be later second guessed by regulators, litigants, etc. in situations where reasonable/good faith judgments were made;
- Financial reports to reflect the economic realities of the business, with enough flexibility to reflect the special situation of both the company and the industry;
- To reduce period-to-period volatility of earnings to the extent feasible (for example, in situations where the volatility is driven by changes in estimates but where such volatility has not resulted in a “realized” gain or loss); and
- To prepare required financial information at a reasonable cost, in terms of dollars and management time.

Those who are users of financial information generally want:

- To understand the financial reports, at the level of detail that is desired by each type of user;
- To be able to rely on the integrity of the financial reports (and not be told later they were incomplete, misleading or actually wrong);
- The financial reports to reflect the economic substance of the business, regardless of technical rules;

- Financial reports to reflect, to the extent feasible, actual changes in market values from period to period; and
- The reports to be delivered in a format that makes it easy to compare one company to another.

Those who opine on the specific financial information presented generally want:

- Clear instructions on what subjects to cover in financial reports;
- Not to be later second guessed by regulators, litigants, etc. in situations where reasonable/good faith judgments were made;
- The financial reports to reflect the economic substance of the business; and
- To make a reasonable profit opining on financial information at a reasonable cost.

Those who regulate the system generally want:

- A financial reporting system that provides protection to investors, promotes market efficiency and facilitates capital formation
- Clear instructions on what subjects to cover in financial reports;
- To be able to rely on the integrity of the financial reports;
- The financial reports to reflect the economic substance of the business; and
- All of the above to be accomplished at a reasonable cost to society in relation to the benefits to be achieved.

While the list of objectives above is only illustrative and certainly not all inclusive, one can observe that the objectives of those involved in our financial reporting system are consistent in many respects. All participants want clear guidelines that allow financial reports to be prepared and presented in a straightforward fashion, do not want financial reports to be subsequently deemed to be incorrect, want the financial reports to reflect the economic substance of the business, and do not want companies to spend too much money and management time on preparing financial reports.

However, the Committee should recognize that some of the goals of participants within our financial reporting system may conflict. For example, preparers often want less volatility in earnings implying less fair value measures, while users generally prefer that more assets and liability reflect their current values. This places tension on the desire to have financial reports that reflect the economic substance of the entity. Further, users may prefer a uniform format that makes comparisons easy, while preparers may want special rules that allow them to present what they believe are the unique aspects of their industry or company.

Upon conclusion of the Committee's work, the Committee will provide written recommendations to the Chairman of the SEC on how to improve the financial reporting system in the U.S. These recommendations may cover many aspects of the financial reporting system for the Commission to consider, including recommendations that involve the Financial Accounting Standards Board (FASB), the Public Company

Accounting Oversight Board (PCAOB), and other appropriate organizations. In order to facilitate the Committee in forming these recommendations, the Committee will create subcommittees. The subcommittees will report their recommendations and advice to the Committee for full discussion and deliberation. The proposed subcommittees are listed below. Follow that listing of proposed subcommittees is a proposal regarding their objectives and some preliminary topics the subcommittees may wish to consider.

- I. Substantive Complexity
- II. Standard Setting Process
- III. Audit Process and Compliance
- IV. Delivering Financial Information
- V. International Coordination

### **I. Substantive Complexity**

This subcommittee will study the causes and impact of complexity on financial accounting and reporting standards, including: (1) principles-based vs. rules-based standards; (2) inclusion within standards of exceptions, bright lines and safe harbors; and (3) the concerns of fair value measurement attributes and related earnings volatility. This subcommittee may wish to consider the following:

#### **Principles-Based Standards**

Some commentators have suggested that the US should adopt more principles than detailed rules as a way to reduce complexity. However, other commentators have argued that both preparers and users may prefer bright line rules to avoid second guessing in the U.S. regulatory and litigation environment. In considering the need for principles and rules, the subcommittee may wish to evaluate the recent efforts of the FASB to move to a more principles-based approach while retaining implementation guidance. As a reference point, the subcommittee may wish to begin with the SEC staff's 2003 report to Congress mandated by the Sarbanes-Oxley Act of 2002 on a principles-based approach to standard setting in the U.S., and the FASB's related response.

#### **Competing Principles**

Complexity may be created not by the adoption of principles versus rules, but rather as a result of competing principles. For example, U.S. GAAP is not consistent on the appropriate measurement attribute to use for valuing financial assets and liabilities. In areas like financial assets and liabilities, there are two basic principles: lower of cost or market, and fair value. The appropriate method to use in U.S. GAAP may be based on a specific industry, a specific transaction, a registrant expectation, or a registrant choice. To many it would be less complex to choose one approach, but many disagree which approach is most appropriate considering both relevance and reliability. More and more compromises are made, and these compromises lead to greater complexity as lines are drawn or judgments are made to delineate when one approach applies and the other does not. This subcommittee may wish to consider to what extent mixed measurement attributes (fair value versus historical cost) have increased complexity and

reduced transparency, and what changes should be made within our capital markets to allow for more consistent measurement attributes.

### **Preparers vs. Users**

Complexity also may result from conflicts between the objectives of preparers and users. From the perspective of sophisticated users, financial reports would be more useful if they contained more segment information in multi-line businesses. However, most companies are reluctant to have more reporting segments because this may involve the disclosure of competitively sensitive information. This subcommittee may wish to consider whether enhanced information would improve the usefulness of financial reporting in our capital markets.

### **Industry Specific Exceptions**

Many industries have successfully obtained special treatment or exemptions from general accounting standards from the FASB or the SEC. While such exemptions or special treatment increase complexity, they, in many cases, may help preparers within these industries present their financial reports in ways that, in their view, better reflect the economic substance of their businesses than the general standards. This subcommittee may wish to consider whether industry specific accounting or disclosure is useful to our capital markets.

### **Alternative Accounting Policies**

Currently, GAAP allows for entities to elect alternative accounting treatment for various transactions that may be economically similar. Most recently, the FASB issued SFAS 159, Fair Value Option, that allows companies to irrevocably elect to record certain types of assets and liabilities at fair value. This election is an instrument by instrument election. Other explicit options are currently present in U.S. GAAP. Providing companies with options may be a useful compromise when there are acceptable alternatives, but it makes it more difficult for users to compare companies. The subcommittee may wish to consider whether alternative accounting policies are useful to our capital markets.

### **Sensitivity Analysis**

Financial reports are currently presented in a way that may over-simplify an issue with a complex range of results. In certain areas of accounting, the assumptions drive the results – for example, accounting for unfunded liabilities of defined benefit funds. Yet the range of permissible assumptions – for example, discount rates and mortality experience – is quite large. While sensitivity analyses are utilized to some degree, the subcommittee may wish to consider whether further sensitivity analyses would reduce complexity.

## **II. Standard Setting Process**

This subcommittee will study the standard setting process and may wish to consider the following:

### **U.S. GAAP Hierarchy**

Presently, all U.S. public companies must follow U.S. GAAP to be in compliance with applicable securities laws and regulations. Over the years, U.S. GAAP has been developed by many different recognized and unrecognized organizations. In the most recent past, these recognized organizations have included the SEC, the FASB, the Emerging Issues Task Force (EITF), and the American Institute of Certified Public Accountants (AICPA) Accounting Standards Executive Committee (AcSEC). For public companies, the authority to set GAAP resides with the SEC. The SEC has historically looked to private sector bodies to provide standards for financial reporting by public companies, and since 1973 the FASB has been recognized by the Commission for this role, absent any contrary determination by the Commission. In addition, the SEC at times will develop interpretive application and disclosure guidance for public companies. The FASB also allows for the EITF, which is subject to its own oversight by the FASB and the SEC, to develop interpretive application guidance to existing U.S. GAAP.

The FASB has undertaken a significant project to develop a comprehensive and integrated codification of all existing accounting literature organized by subject matter that would become an easily retrievable single source for all of U.S. GAAP. This project may provide a useful roadmap for identifying those areas in U.S. GAAP that could be simplified.

### **Characteristics of the FASB**

Currently in the U.S., accounting standards for public companies are established by the FASB, absent any contrary determination by the Commission, and the FASB is subject to oversight by the SEC. The Board consists of three members from public accounting, two from preparers, one from academia, and one user. While each member of the Board brings different experiences and perspectives, they are selected based on their expertise in financial reporting and are expected to make decisions based on what they believe will improve financial reporting rather than representing any one constituent group. All members of the Board must sever all ties and remain independent. The subcommittee may wish to consider the characteristics of Board members and the Board selection process.

### **FASB Standard Setting Process**

The FASB has an open due process through which the Board obtains input from many constituents, issues proposals and receives extensive further input in the format of comment letters and holds public meetings with constituents. The Board makes all decisions on its accounting standards in public through open debate prior to reaching conclusion. This process can take many years, but was designed to provide constituents maximum input into the decisions of the Board. Currently, a simple majority vote is needed to complete projects. The Board publishes all decisions via board minutes on its website and as a basis for conclusions within all significant standards.

The FASB develops major standards based on a conceptual framework. This conceptual framework was designed by previous Boards to act as fundamentals on which future financial accounting and reporting would be based. The conceptual framework, however, is not complete and is not consistent with all of existing U.S. GAAP. To address these issues, the FASB currently has a major project on its agenda jointly with the International Accounting Standards Board (IASB) to improve the conceptual framework and to readdress some major accounting standards where the application is not consistent with the conceptual framework or does not provide sufficiently transparent financial reporting. Areas being considered in this joint project include pensions, leasing, liabilities and equity, revenue recognition, and financial statement presentation.

Accounting standards resulting from the FASB process often leave open many questions of interpretation. The underlying reason for the need for interpretation generally results from either a misunderstanding of the stated principle or rule, or a concern that others will express a different view of the application of the principle or rule within the standard. The FASB staff offers a service to respond to inquiries, but exercises caution in answering some inquiries due to the establishment of precedent. Sometimes the FASB or FASB staff is asked to formally amplify or clarify a set of interpretive issues within an accounting standard. These interpretations were previously published as FASB staff question and answer documents with little Board oversight and no public comment period. Currently, these interpretations are primarily done through FSPs (FASB staff positions), which are discussed and debated with Board members at a public meeting and exposed for comment.

The subcommittee may wish to consider the process for setting standards and developing interpretations, including the FASB's voting procedures and the methods used by the FASB or the FASB staff to: (1) set their agenda, (2) set their priorities, (3) deliberate, (4) communicate, and (5) respond to technical inquiries.

### **Interpretive Guidance - EITF**

In the mid 1980s, the FASB formed the EITF. The original charter of the EITF was to act as an advisory group to the Board to educate the Board on emerging issues so that the Board could decide whether interpretive guidance was necessary. Shortly after its creation, the EITF's charter was revised to allow for members of the EITF to develop authoritative interpretive guidance. The types of issues addressed by the EITF range from very specific to very broad, but are expected to be completed by the Task Force within one year. The EITF may only interpret existing standards and does not have the authority to amend or replace existing standards. Members of the EITF represent all significant constituents and include large and small preparers, large and small audit firms, and users. These members are volunteers and do not sever ties with their current employers or firms. The Chairman of the EITF is a member of the FASB staff and all documents produced for the EITF are developed by the FASB staff. A conclusion by the EITF is reached if not more than 3 members object. Currently, all

conclusions by the EITF are exposed for public comment and are ratified by the FASB. This subcommittee may wish to consider the role of the EITF and whether that role should be changed to one of an advisory group.

### **Interpretive Guidance – SEC**

The Commission itself sometimes addresses accounting issues directly. In addition, SEC staff primarily through the Office of the Chief Accountant (OCA) communicates to the public in various forms about accounting issues, including staff accounting bulletins, letters to industry, speeches, and other educational material. These sources of information often are viewed by the SEC staff as confirmations of existing accounting standards, but have led to restatements by public registrants. The OCA also receives requests from specific registrants for pre-review of accounting issues. These requests are often considered by others in determining their own accounting policies.

The SEC's Division of Corporation Finance reviews and comments on financial reports filed by public issuers that are not investment companies. The Division has a process for making its comment letters public upon completion of the review process. Through the Division's filing review process and its now more transparent process making comment letters publicly available on the SEC's website, the staff of Corporation Finance can have a significant influence on how accounting standards are interpreted.

The SEC's Division of Enforcement, in the course of its investigatory and settlement negotiation processes, often explains the staff's views of a registrant's accounting conclusion. The Division's communications in this regard have been viewed by some as representing views applicable to all companies and not just with respect to the individual facts and circumstances involving the party involved in the particular enforcement investigation.

This subcommittee may wish to consider the extent to which the SEC should publish interpretive guidance, as well as the communication methods used to describe the activities of the SEC or the SEC staff.

### **Interpretive Guidance – Other**

Many organizations, including large accounting firms and the AICPA, publish detailed educational material regarding accounting. These publications are widely used and presumed to be correct by their readers, but may turn out to be not always consistent or accurate. When an inconsistency or inaccuracy is discovered, the authors of the education material often seek clarity from the FASB or SEC staffs. This subcommittee may wish to consider whether the FASB or SEC should be involved reviewing or providing this type of guidance.

### **The Use of Cost-Benefit Analysis in Standard Setting**

Determining the costs and benefits of a new accounting standard or rule involves difficult predictions. Often, the true costs and benefits may not be able to be fully

known or understood until after the new standard or rule is fully implemented. The processes and practices both pre- and post-issuance may differ among organizations that set accounting standards and rules. The subcommittee may wish to review the existing cost-benefit analysis practices of appropriate organizations to determine if changes should be recommended.

### **Existing Standards**

This subcommittee also may wish to consider whether to review two or three previously issued standards or rules to understand both the cost-benefit analysis that was utilized prior to the standard or rule's exposure to public comment and the cost-benefit analysis that was utilized prior to adoption of the standard or rule. This subcommittee may wish to review whether any changes by the standard setter as a result of a given cost-benefit analysis or for ease of implementation actually reduced the costs of application or increased the benefits. Finally, the subcommittee may wish to consider two or three existing standards and determine whether any changes might be made to the standards to reduce the actual costs of application or improve the benefit to users.

### **III. Audit Process and Compliance**

This subcommittee will study the current process of regulating compliance with the accounting and reporting standards and other environmental factors that drive unnecessary complexity, including the possibility of being second-guessed, the structuring of transactions to achieve an accounting result, and whether there is a hesitance on the part of professionals to exercise professional judgment in the absence of detailed rules. This subcommittee may wish to consider the following:

#### **Financial Restatements**

A significant number of restatements have occurred in the U.S. financial markets over the past few years. Some have attributed these restatements to more rigorous interpretations of accounting and reporting standards by preparers, outside auditors, the SEC, and the PCAOB, while others believe the concept of materiality (and discussions regarding materiality in SEC Staff Accounting Bulletins 99 and 108) is applied too broadly. Many believe that this increased volume of restatements makes it more difficult for securities analysts and other users of financial information to determine the significance of a restatement. Further, some have expressed concern that the high volume of restatements could lead to an environment where users of financial reports begin discounting the importance of restatements (for example, if restatements are viewed to be routine).

The U.S. Treasury has announced it is commissioning a study to determine why the volume of financial restatements has risen so sharply, and this subcommittee should monitor the U.S. Treasury's work in this regard. This subcommittee also may wish to consider the reasons for an increase in restatements. For example, the subcommittee might consider whether the increase is a result of: (1) a broad application of the definition of materiality (including the application of materiality

guidance in situations where errors do not impact the “bottom line”); (2) more rigorous auditing or enforcement; (3) second guessing by the SEC, the PCAOB, or outside auditors; (4) increasingly detailed accounting standards; or (5) inappropriate application of standards by preparers/auditors. Further, the subcommittee may wish to consider whether there are alternative methods to communicate with the capital markets for certain types of accounting errors (including consideration of the potential for prospective methods to deal with making changes to historical accounting practices).

### **Use of Judgment**

Any move toward reducing complexity and increasing transparency should consider the role of preparer and auditor judgment as it relates to the reduction of prescriptive application guidance. For example, one approach to consider could be whether to expand the use of accounting and auditing standards that allow for more judgment in application. The subcommittee should also consider the role of disclosure in such an environment. For example, some have suggested that more latitude should be provided in standards, with the caveat that more disclosure is provided about the alternative(s) that were considered and why the selected alternative was applied. This subcommittee may wish to consider whether an increase in the use of judgment (elimination of bright lines and detailed application guidance) would result in increased usefulness of financial reports, including the potential impact on comparability. Furthermore, the subcommittee may wish to consider whether an increase in judgment on the part of preparers and auditors is impacted by not knowing or understanding how these groups will be judged by the SEC, the PCAOB or others.

### **PCAOB**

The PCAOB is required to inspect annually all registered public accounting firms that provide audit reports for more than 100 public companies, and at least triennially registered public accounting firms that provide audit reports for fewer than 100 issuers. Reports on these inspections have been produced in many cases more than one year after the completion of the inspections. Pursuant to the Sarbanes-Oxley Act, a portion of the results of the inspections are made available publicly, and certain nonpublic portions of the reports may remain nonpublic if the firm responds to the criticisms to the Board’s satisfaction within a given time period.

Similar to the FASB, the PCAOB receives requests for guidance on how audits should be carried out. In the case of internal control reviews, the PCAOB issued a series of questions and answers, which were generally well received. Nevertheless, these questions and answers were issued without advance notice or public comment, despite the fact they were intended to have general applicability.

This subcommittee may wish to consider the PCAOB’s inspection process and how the process impacts registrant and auditor behavior. The subcommittee may also want to consider whether this creates the need for additional auditing and

accounting interpretive guidance, as well as the process on how such guidance is issued.

### **SEC – Corporation Finance**

The SEC is required to review filings by listed public issuers on a regular and systemic basis, as well as review all public companies required to file reports at least once every three years. These reviews may be time consuming and are conducted by the SEC Division of Corporation Finance. A perception may exist that consultation with the OCA does not generally occur unless the registrant requests such consultation. This subcommittee may wish to understand the process the SEC uses to review registrants' public filings, including the process for providing comments and the level of review and coordination with the various departments of the SEC. Furthermore, the subcommittee may wish to consider whether and how the process impacts registrant and auditor behavior and creates the need for additional auditing and accounting interpretive guidance.

### **SEC – Division of Enforcement**

The Division of Enforcement has broad authority to open an informal inquiry into a registrant's financial reporting or an auditor's application of professional standards with respect to registrant reporting. Formal investigations that provide subpoena authority are made only after approval by the Commission. The OCA is generally consulted before consideration by the Commission of a recommendation by the Division of Enforcement involving financial reporting or auditor misconduct. This subcommittee may wish to understand the process the SEC uses to open an enforcement investigation, including the level and timing of coordination with the various departments of the SEC. Furthermore, the subcommittee may wish to consider how the process impacts registrant and auditor behavior and affects the need for additional auditing and accounting interpretive guidance.

### **Audit Firms**

This subcommittee may wish to consider whether the behavior of audit firms creates or results in unnecessary complexity. For example, to promote efficient and effective audits, audit firms have created various tools and controls so that a uniform policy is applied throughout their organizations. These include checklists, audit programs, training, and networks of subject matter experts. These subject matter experts tend to view their particular issue as very important and may insist on a uniform national policy, even if the recommended approach is not applied uniformly in practice by others outside the firm. This subcommittee may wish to consider the impact that these practices have on promoting judgment and transparent reporting in the capital markets.

### **Sustainability of the Audit Profession**

Legal risks faced by audit firms and registrants clearly influence their behavior in preparing and auditing financial reports, including their willingness to exercise judgment and to show flexibility in applying accounting rules. With respect to

audit firms, the U.S. Treasury has announced its intention to establish an advisory committee to study the sustainability of a strong and vibrant public company auditing profession. Treasury has announced that the committee is to study, among other things, the ability to attract and retain the human capital necessary to meet developments in the business and financial reporting environment; audit market competition and concentration; and the financial resources of the auditing profession, including the effect of existing limitations on auditing firms' structure. This subcommittee should be aware of how litigation and potential litigation influence behavior and may wish to consider the work of the Treasury's committee, but should not attempt to develop proposals that duplicate the work of that committee.

#### **IV. Delivering Financial Information**

This subcommittee will study the current system for delivering financial information to investors and accessing that information. This subcommittee may wish to consider the following:

##### **Tiering of Information**

Different groups of investors exist in our capital markets and may have different needs for information from financial reports. The individual investor may be interested mainly in a journalistic outline of the key points about the progress of the business. By contrast, a sophisticated investor may be interested in a full discussion of management's choice of assumptions underlying the financial reports as well as a comparative analysis of particular financial indicators versus a peer universe. Many have suggested tiering the information with a journalistic summary at the beginning and more detailed analyses as the reader continues to read. Within the context of the Internet, this could mean a summary page, together with hyperlinks to more detailed information on particular topics.

##### **Tagging of Information**

The SEC is engaged in a major project to introduce interactive data tagging technology for the informational content of financial reports, such as through the use of XBRL, so that users have the ability to quickly and easily focus on the important information they desire in these reports. Moreover, tagging of information may allow investors to customize their needs based on their desired level of detail. The tagging of information can be focused on performance metrics for carrying out the strategy of a specific company and could be designed along the lines of a balanced scorecard. The tagging of information can be organized into a variety of standard formats for key performance indicators (KPIs) organized by industry. An existing project for the development of these KPIs is being undertaken by a non-profit consortium on enhanced business reporting (originally started under the AICPA). The subcommittee may wish to study these developments and consider whether additional recommendations can be made to improve the usefulness of financial reporting in these areas.

### **Press Releases and Website Disclosure**

Press releases and corporate websites have become important forms of communication for many public companies. For example, some companies post or issue press releases to report interim and annual results and in doing so often release non-GAAP financial measures. These operating results are often issued well before the formal operating results and disclosure are required to be filed with the SEC, and they may contain additional information that is not required to be filed. Recently as a result of implementing the Sarbanes-Oxley Act, the SEC revised its rules and regulations concerning the public disclosure of non-GAAP financial measures, including in press releases and earnings webcasts, and whether press releases also must be filed versus furnished with the SEC. This subcommittee may wish to consider the underlying reasons why press releases and web disclosures—and the information contained in them—are used by our capital markets in order to determine if additional performance indicators would be useful for our capital markets. In addition, the subcommittee may wish to consider the experience of issuers with disclosure of non-GAAP information and the use of press releases and corporate websites in connection with their financial reports. The continued demand for these disclosures by issuers may suggest that the required formats for reporting financial information are not serving all the needs of preparers and users.

### **Legal Issues**

To provide various forms of communications that meet the needs of different investor groups, there may be a need to consider the legal liabilities for different types of information – e.g., MD&A versus audited income statements – and for the different communication methods used to provide them. For example, this subcommittee may wish to look at the experience with "free writing" in public offerings whereby issuers can communicate new developments or pieces of information that may not be included in the formal prospectus. Further, this subcommittee may wish to look at the various attempts to provide a summary prospectus in the mutual fund industry.

## **V. International Coordination**

This subcommittee should consider whether the growing use of international accounting standards has an impact on the relevant issues relating to complexity of U.S. accounting standards and the usefulness of the U.S. financial reporting system (for example, by identifying best practice employed internationally). As it relates to the acceptance of International Financial Reporting Standards, or IFRS, in the U.S. capital markets, the SEC has issued a proposing release to permit the use of IFRS by foreign private issuers without a U.S. GAAP reconciliation. In addition, the SEC has voted to issue a concept release on whether U.S. issuers should be allowed the choice to use IFRS to satisfy their SEC reporting requirements. The SEC expects to receive important feedback on these initiatives that could be considered by this subcommittee. Each of the four other subcommittees should consider whether there are areas or international best practice that should be evaluated by the international subcommittee for implementation in the U.S. financial reporting system. Given the timing of the expected comment letter process on

the Commission's initiatives, and in order of the other subcommittees to identify areas of focus, the substantive research and analysis of this subcommittee will not begin until early 2008. While the nature of the items considered by this committee has not been fully developed, the subcommittee may wish to consider the following:

### **Standard Setting Approach**

This committee should consider whether there are "best practices" employed by the IASB in the standard setting process. For example, many believe the IASB takes an approach based more on principles rather than detailed rules, but the IASB, like the FASB, nevertheless does have conflicting principles and controversies based on volatility and the increased use of fair value. Many have observed that the accounting standards promulgated by the FASB are too lengthy. This is partly because the FASB includes in its standards not only the text, but also its history and the responses to significant comments on the initial proposal and implementation guidance. By contrast, IFRS generally include only the text in its accounting standards. The FASB has already started to work together with the IASB in formulating new accounting standards or revising existing standards in the hopes that future standards will be converged. The subcommittee may wish to consider a few examples where the FASB and the IASB are working together to determine if the process is effective and efficient to meet the needs of our capital markets.

### **Regulation**

The enforcement of accounting standards outside the U.S. may be quite different depending on the particular jurisdiction from the enforcement policies and practices within the U.S. The subcommittee may wish to consider these differences and determine whether the U.S. system could benefit from any lessons from the foreign experience.

## **EXHIBIT C**

## **Index of Written Statements Received**

Listed below are the written statements received by the Advisory Committee before its first meeting on August 2, 2007 and the dates of receipt.

Aug. 1, 2007 Walter P. Schuetze

Aug. 1, 2007 Ralph D. Allen, Managing Partner, BeaconAdvisors, Financial Communication experts, South Salem, New York

Jul. 28, 2006 Gordon E. Goodman, Trading Control Officer, Occidental Petroleum
