Summary Report 1997

Doctorate Recipients from United States Universities

Survey of Earned Doctorates

SPONSORED BY THE NATIONAL SCIENCE FOUNDATION, THE NATIONAL INSTITUTES OF HEALTH, THE NATIONAL ENDOWMENT FOR THE HUMANITIES, THE U.S. DEPARTMENT OF EDUCATION, AND THE U.S. DEPARTMENT OF AGRICULTURE

Highlights

This report presents data on recipients of research doctorates awarded by U.S. universities from July 1, 1996, through June 30, 1997. This information is taken from the 1997 Survey of Earned Doctorates, an annual census of new doctorate recipients.

- The 382 universities in the United States that conferred research doctorates awarded 42,705 doctorates during the 19961997 academic year, an increase of 0.7 percent over 1996. This is the highest one year total ever, 32 percent higher than the corresponding figure of a decade ago. It continues an upward trend in Ph.D.s awarded that began in 1986.

- The number of doctorates awarded by broad field in 1997 was greatest in life sciences, in which 8,213 Ph.D.s were conferred. The numbers conferred in the other broad areas for 1997 were 6,917 in social sciences; 6,574 in physical sciences; 6,497 in education; 6,052 in engineering; 5,387 in humanities; and 3,065 in business and other professional fields. Growth over the past decade has been greatest in engineering (63 percent growth since 1987).

- Women received 17,322 doctorates, or 40.6 percent of all doctorates granted in 1997. This is the highest percentage ever for women, continuing a 30year upward trend. In 1997 women ranged between 40 and 63 percent of degree recipients in life sciences, social sciences, humanities, education, and business/other professional fields. In the physical sciences and engineering, they constituted 22.1 and 12.4 percent, respectively.

- Between 1996 and 1997 doctorates awarded to U.S. racial/ethnic minority groups increased from 8.4 to 9.0 percent of all doctorates granted, and from 12.9 to 14.3 percent of doctorates awarded to U.S. citizens. Among the 23,021 doctorates earned in 1997 by U.S. citizens who identified their race/ethnicity (97.1 percent), 1,335 doctorates were earned by blacks; 1,328 by Asians; 1,028 by Hispanics; and 149 by American Indians. Broad fields with the largest percentages of minorities were education, in which blacks were the predominant minority group, and engineering, in which Asians were the largest minority group.

- U.S. citizens received 70.8 percent of all doctorates earned in 1997 by individuals who identified their citizenship status (91.5 percent of recipients reported their citizenship). This is up slightly from the previous six years, when the U.S. percentage was about 68 percent, but probably reflects more underreporting of citizenship rather than any substantive change. China was the country of origin for the largest number of non U.S. doctorates in 1997 with 2,408; followed by India with 1,368; Taiwan with 1,209; Korea with 1,071; and Canada with 403. The percentage of doctorates earned by U.S. citizens ranged from 47.3 percent in engineering and 58.0 percent in physical sciences, to 91.0 percent in education and 82.6 percent in humanities.

- Median time to degree since the baccalaureate was 10.5 years in 1997, down slightly from 10.8 years in 1996. Median time to degree since first enrollment in any graduate program was 7.3 years, similar to the 1996 figure of 7.2 years. The typical doctorate recipient received his or her Ph.D. at age 33 years.

- More than half—53.9 percent—of doctorate recipients received the majority of their financial support for graduate education from programor institution based sources such as university fellowships or teaching and research assistantships. With regard to loans as a source of financial aid, 49.1 percent of doctorate recipients reported some level of educational indebtedness at completion of the Ph.D, 1.7 percentage points higher than the average for the preceding three years.

- Ph.D.s reporting definite postgraduation commitments (at graduation) for employment or continued study was 67.4 percent in 1997. Of those, about 72 percent will work and 28 percent will continue their studies. For U.S. citizens and those holding permanent visas, 49.1 percent of those with firm employment commitments noted academe as their planned work sector; about one fourth indicated industry or selfemployment; 7.3 percent said some level of government; the remaining 18.9 percent checked "other."

NOTICE

This report is based on research conducted by the National Opinion Research Center (NORC) with the support of the National Science Foundation (NSF), the National Institutes of Health (NIH), the National Endowment for the Humanities (NEH), the U.S. Department of Education (USED), and the U.S. Department of Agriculture (USDA) under NSF Contract No. SRS-9712655. Opinions, findings, conclusions, or recommendations expressed in this publication are those of NORC and do not necessarily reflect the views of the sponsoring agencies.

Additional data from the Survey of Earned Doctorates and the Doctorate Records File are available free on request. (See inside back cover.) For a fee, off-the-shelf tables on the baccalaureate origins of Ph.D.s by major field of doctorate and tables on the citizenship, race/ethnicity, and sex of Ph.D.s by fine field are available to requesters. Customized tables can also be prepared at cost. For more information, please contact:

Sanderson, A., and B. Dugoni. 1999. *Summary Report 1997: Doctorate Recipients from United States Universities.* Chicago: National Opinion Research Center. (The report gives the results of data collected in the Survey of Earned Doctorates, sponsored by five federal agencies: NSF, NIH, NEH, USED, and USDA, and conducted by NORC.)

ACKNOWLEDGMENTS

Although the report series and the SED are not new, this is the first survey year for which the National Opinion Research Center (NORC) at the University of Chicago has been responsible for preparing the hard-copy and electronic versions of the data tables and the descriptive overview. Prior to this year, these tasks were handled, and handled well, by the National Research Council (NRC). NORC gratefully acknowledges the support, cooperation, and guidance received from its NRC colleagues during the transition year. Responsibility for actual data collection was shared between NRC and NORC. For the subsequent survey year- July 1997 through June 1998-NORC has total responsibility for distributing, collecting, and data-entering the SED questionnaire, as well as producing *Summary Report 1998.* Special appreciation is expressed to Peter Henderson, Project Manager, Eileen Milner, Prudy Brown, John Hines, Charlotte Kuh, and Marilyn Baker at NRC. The following NORC staff members worked on the transition of the project: Norman Bradburn, Senior Vice President for Research; Laura Knapp, Associate Project Director; Lance Selfa, Research Analyst; Syed Ahsan, Coordinator for the Data Preparation Center; Susan Dauber, Data Quality Analyst; Alison Baldwin, Research Assistant; Isabel Guzman-Barron, Administrative Assistant; Rebecca Hanson, Survey Statistician; Sharnia Bullock, Data Preparation Supervisor, and the Production Center Staff; Lisa Lee, Survey Methodologist; Whitney Moore, Survey Statistician; Javier Porras, Survey Statistician; and Karen Veldman, Administrative Assistant. Overall responsibility for directing the SED project at NORC was shared during the past year by Patricia Green and Thomas Hoffer, Project Directors.

The conduct of the SED, the maintenance of the resulting data file, and the publication of this report are funded jointly by the National Science Foundation (NSF), the National Institutes of Health (NIH), the National Endowment for the Humanities (NEH), the U.S. Department of Education (USED), and the U.S. Department of Agriculture (USDA). The survey's relevance to national policy issues has increased, thanks to constructive reviews of the design and analysis of the survey by Paul Seder (NIH), Nancy Schantz (USED), Peter Muscato (USDA), Jeffrey Thomas (NEH), and Mary Golladay (NSF). Susan Hill (NSF), Director of the Doctorate Data project, provided guidance and direction during the preparation of this report.

SED questionnaires are distributed by and returned to various academic officers at the nation's doctorate-granting universities (for forwarding to NORC). The project gratefully acknowledges the support and assistance of graduate deans and their staffs, registrars, dissertation secretaries, and other administrators who participate in the SED effort and contribute to its success.

LIST OF FIGURES

*** IMPORTANT NOTICE ***

The estimates reported for the Survey of Earned Doctorates (SED) are simple tabulations of all available information with no adjustment for nonresponse. Therefore, differences in response rates from year to year can produce numerical fluctuations that are unrelated to real trends.

Although response to the SED has been as high as 95 to 98 percent over time, it declined to 92 percent during the 1980s. In an effort to improve the response rate, the survey methodology was modified in the years after 1989. Response rose, stabilizing around 95 percent for 1991 to 1995. However, the response rate for 1996 was 92.8 percent. The 1997 rate was 90.8 percent. (Note: These percentages represent *self-report rates,* that is, the proportion of questionnaires completed by doctorate recipients.) While survey forms containing partial information filled in by either the doctoral institution or staff of the National Opinion Research Center are not included in these rates, tables in this report incorporate the available data from these forms.) The self-report rate for 1997 may increase slightly in the next year if additional questionnaires are received from doctorate recipients. See page 121 in Appendix C for a table giving survey response rates from 1966 to 1997.

Item response rates have shown a parallel improvement since 1990—a natural consequence of the increase in the overall self-report rate, as well as a result of format revisions to the questionnaire and follow-ups for missing information. In 1990, new follow-up procedures were implemented to increase coverage of several variables: birth year, sex, race/ethnicity, citizenship status, country of citizenship, baccalaureate year and institution, and postgraduation plans. Response rates for these variables have since improved—especially for citizenship and race/ethnicity, resulting in an increase in the reported numbers of minority Ph.D.s. However, for 1997 the citizenship rate is lower than it has been in the most recent years.) Whether or not individuals completed the survey questionnaire, the following four data items are available for most all recipients: sex, Ph.D. institution, Ph.D. field, and Ph.D. year.

The data for a given year are updated the following year with any responses received *after* survey closure. Post-survey adjustment was most significant for 1990 and 1991 Ph.D.s, with the largest impact on the number of blacks. For both of these years the total number of black Ph.D.s increased by about 7.5 percent in the year after survey closure. The survey cycle was then extended to allow receipt of more follow-up information before closure, resulting in much smaller post-survey adjustments for 1992, 1993, 1994, and 1995 data (a 1.4 percent increase in black Ph.D.s for 1992, a 0.2 percent increase for 1993, a 0.5 percent increase for 1994, and a 1.5 percent increase for 1995).

Adjustments to data are presented in reports subsequent to the initial report for a survey. For example, updates for 1994 appeared in *Summary Report 1995.* Updates to 1997 data will be presented in next year's report.

In using SED data, the reader should keep in mind that numerical trends are affected by fluctuations in response rates. Increasing or decreasing numbers in a citizenship or racial/ethnic group reflect to some degree any change in both overall response and item response.

SUMMARY REPORT 1997
DOCTORATE RECIPIENTS FROM UNITED STATES UNIVERSITIES

Introduction

Summary Report 1997, Doctorate Recipients from United States Universities, is the thirty-first in a series of reports on research doctorates awarded by colleges and universities in the United States[1]. The data presented and discussed in this report are from the annual Survey of Earned Doctorates (SED), a census of research doctoral recipients who earned their degrees between July 1, 1996, and June 30, 1997. This survey has been conducted since 1958; five Federal agencies sponsor the survey and the report. All survey responses become part of the Doctorate Records File (DRF), a virtually complete database on doctorate recipients from 1920 to 1997.

For the most part, the current report employs the same model and presents the same type of data as National Research Council (NRC) has for its recent editions. However, a few caveats and points of departure in *Summary Report 1997* are worth noting. First, the overall response rate for the 1997 survey was 90.8 percent, slightly lower than the 92.8 percent achieved in 1996. In a few item areas, missing data could affect the reliability of the conclusions; those areas are mentioned explicitly when they appear.

Second, readers will note three changes in the report this year:

1. Although the figures and tables remain approximately the same, in the accompanying text we have not provided as many "bullet points" or details denoting principal findings. Because of the myriad of possible permutations, we have chosen to err on the side of brevity and let individual readers take what is important for their selected purposes from the data. In addition, year-to-year fluctuations may be less important, and even less accurate, than a longer term perspective, especially when small differences in response rates, rather than substantive changes within and across institutions, may be producing the observed variations. As a substitute for these highlighted points, we have provided short background summaries or contexts for the data series, where appropriate.

[1] The Survey of Earned Doctorates collects information on *research* doctorates only. This differs from the institutional collection of numbers of degrees done by the U.S. Department of Education on *all* doctorates. For an evaluation of the differences, see National Science Foundation, 1993, *Science and Engineering Doctorates 1960-1991,* NSF 93-301, Detailed Statistical Tables, Washington, D.C., pp. 2-6.

2. At various junctures we have provided complementary information on measures of central tendency (such as a mean or median); in some cases knowing something about the variability of these measures is not only helpful, it may be more important than the average itself. Where appropriate, complementary information on the variation will be expanded upon in future reports.

3. Just as it makes sense to distinguish among various broad fields of study and citizenship when comparing data on levels and sources of graduate financial aid, time to degree, and postdoctoral commitments and employment plans, it may be valuable to make comparisons across institution type and size as well. While there is arguably no single best way for segmenting the institutional doctoral universe, a convenient approach is to use the 1994 Carnegie Classification of Higher Education categories, which classify institutions on the basis of the overall number of doctorates awarded, the number of fields represented, and the level of annual Federal support. Different institutions may attract different types of students, who in turn may be more diverse with regard to enrollment status (full- versus part-time enrollment), age, sources of support, and subsequent employment goals and expectations. Thus, for a few selected variables, the tabular displays and discussions include distinctions by institutional category. Such delineations may also be expanded in subsequent years.

Finally, in addition to the basic tables and SED data that readers normally expect to see each year, the summary reports periodically have included special sections devoted to issues of particular importance. Within the last ten years, topics have included baccalaureate origins of doctorate recipients, differences by broad academic field, time to degree, ethnic minority and female doctorates, and postgraduation plans. For the *Summary Report 1997*, a special section is devoted to an expanded look at the dimensions of international participation in U.S. doctoral programs. This section reflects continuing interest in international students specifically, as well as the broader issues of globalization of graduate education and of the world's economies. In terms of sheer numbers and percentages, international students are a significant component of doctoral education in the United States, with almost 30 percent of all doctorates earned by non-U.S. citizens (in some individual fields that figure exceeds 50 percent).

Any assessments of aggregate numbers and averages for doctoral students must be viewed in context. For example, the level and type of financial support varies enormously by field of study—the experience of students in the physical sciences bears little resemblance to that of their peers in the humanities. Context is even more important when comparisons turn to international versus "domestic" students (domestic from the vantage point of U.S. universities and Federal and private sponsoring agencies in the United States). The fact that international

students are more concentrated in science and engineering than are U.S. students means that raw comparisons of times to degree, ratios of male-to-female students, and postdoctoral plans may be misleading. Furthermore, even within broad fields of study, distribution of financial aid varies significantly by citizenship category because of the regulations governing eligibility for certain types of support, such as national fellowship and loan programs. And, of course, the decision as to the type and location of postgraduate study or employment is not independent of the home country's restrictions with regard to visa status, the state of its own labor markets for highly skilled workers, and other public policies that affect incentives and alternatives.

ORGANIZATION

Summary Report 1997 begins with a review of aggregate trends in research doctorates awarded by U.S. universities, followed by discussions with regard to field, focusing on the seven broad fields in which doctorate recipients earned their degrees.

The discussion continues with sections examining trends in doctorate awards by sex, race/ethnicity, and citizenship, and concludes with sections describing time-to-degree statistics, sources of financial support during graduate school, and the postgraduation status and plans of doctorate recipients at the time the degree is awarded. *A special section provides a detailed profile of non-U.S. citizen doctorate recipients.*

The brief narratives of key survey findings in these sections are accompanied by figures displaying selected trend data. The numbers and percentages from which the figures are drawn are provided in a set of tables that follow the main text. Relevant tables are referenced at the bottom of the figures.

Basic tables of data on 1997 doctorate recipients are displayed in Appendix A, and trend data on the 1987-1997 Ph.D. cohorts are presented in Appendix B. Appendix C provides technical notes that include response rates and other information related to tables and figures in the body of the report. Appendix D contains a copy of the SED questionnaire used for the 1996-1997 academic year.

Trends in Doctorate Recipients

Overall Numbers and Rates of Growth. U.S. universities awarded 42,705 research doctorate degrees[2] during the 1996-1997 academic year (July 1, 1996, through June 30, 1997). This is the highest one-year total ever, 32 percent higher than the corresponding figure of a decade ago, and 10 percent higher than the total for 1992, five years ago. For the longer time period of 1957—the year of Sputnik—to 1997, the annual rate of increase in earned doctorates has been 4.1 percent: first a steep growth from 1957 to1973, a "saddle" until the late 1980s, and then a steady upward trend for the last 10 years. However, 1990 was the only year since 1972 in which the growth rate exceeded the long-term average. Figures 1 and 2 and Tables 1 and 2 provide complementary visual depictions and the raw data for these observed trends. The extent to which field of study, sex, citizenship, and race/ethnicity contributed to the overall growth trends are discussed in appropriate sections below.

The annual growth rate from 1996 to 1997, 0.7 percent, was less than the growth rate for the preceding 12-month period (1.6%), and the lowest for any year since 1985. However, this also marks the twelfth consecutive year of increase in the number of doctorates earned, something not seen since the double-digit annual growth period of the 1960s and early 1970s. (It was not until 1989 that the total annual doctorates awarded again reached the 1973 peak of 33,755; this 16-year interval showed some years of modest annual increases, punctuated by several years with larger percentage declines.)

By way of comparison to other graduate/professional programs for the 1996-1997 academic year, 15,907 M.D. degrees were awarded, a number that has held steady in recent times despite a fall in the number of applications to medical school. In that same year, 40,140 J.D. degrees were awarded by U.S. law schools (virtually unchanged for the past several years). In 1995-1996, 93,982 MBA degrees were conferred by the nation's business schools (1996-1997 data are not yet available)[3] .

[2] Doctorates are reported by academic year (from July 1 of one year through June 30 of the following year) and include *research* and *applied-research doctorates* in all fields. Doctoral degrees such as the Ph.D., D.Sc., and Ed.D. are covered by this survey; professional degrees (e.g., M.D., D.D.S., J.D., Psy.D.) are not. A full list of included degrees can be found on the last page of the report. For convenience throughout this report, "Ph.D." is used to represent any of the doctoral degrees covered by the survey.

[3] Data furnished to NORC by the three respective professional associations.

Doctorate-Granting Institutions and Doctorates per Institution. The number of universities–382–that awarded doctorates in 1997 has remained approximately the same for the last few years and may have leveled off after increasing steadily since the early 1960s. The 1997 figure is more than double the 1961 number of 174, with the intervening period witnessing increases in the number of doctorate-granting institutions almost every year, as shown in Table 3. (There are 126 medical schools in the United States, 181 law schools, and more than 700 business programs that award MBA degrees.)

The average number of doctorates awarded per institution has increased slowly over the last decade, but it is still lower than the peak period of the early 1970s, when it had doubled in the space of just 12 years. The 1997 figure of 112 is the highest in the 1990s, but the annual number of degrees per institution has remained within a relatively narrow band for the last 30 years. (See Table 3.)

See Table 2, Page 49.

SOURCE: NSF/NIH/NEH/USED/USDA, Survey of Earned Doctorates.

However, there is considerable dispersion around that overall average and the inter-institutional variation in the aggregate, as well as in the distribution of degrees by broad field area. The variation may be more interesting than the measure of central tendency (in this case, the mean), which is not a particularly informative figure for institutional or public-policy decision making. For example, only 109 of the 382 institutions awarding doctorates in 1997 granted more than the average number, but they accounted for 76.8 percent (32,810) of all doctorates awarded in that year. These 109 institutions granted over 300 doctorates on average while the remaining 273 institutions granted an average of only 36 doctoral degrees.

More than anything else, this range simply points out the enormous heterogeneity across the rich landscape of higher education in the United States. About 2,000 colleges and universities award at least a baccalaureate degree, and about 400 grant some type of doctorate. The Carnegie

Classification of Higher Education, developed by Clark Kerr in 1970 and modified over time, groups American colleges and universities by their primary academic mission. Institutions are classified according to the highest degree conferred and, for institutions that offer the doctorate, the number of doctorates awarded, the academic disciplines represented, and the dollar volume of the institution's Federal support.

Currently 236 universities fall into the four principal Carnegie groups of research doctorate institutions, and more than 150 institutions fall into an "other" category representing comprehensive colleges and universities, and specialty schools of religion and theology, medicine and health, engineering, business, art and music, and so forth. Table 4 shows the number of universities granting doctorates in 1997 by Carnegie classification, the number and percent of all doctorates awarded within each grouping, and the average number of doctorates awarded by broad category. Figure 3 provides a visual summary of the same information.

As can be seen in Figure 3, Research I universities account for slightly less than a quarter of all doctorate-granting institutions, but collectively they award more than two-thirds of all doctorates; the Research I universities average 327 doctoral degrees per institution, whereas those in the other four institutional groups average only 47.

As noted above, the number of doctorate-granting institutions has substantially increased over the last 25 years. That growth has occurred in all Carnegie classifications categories, but mainly within Research I, Doctoral II, and Other (that is, comprehensive universities and specialized institutions); the number of doctorate-granting institutions categorized as Research II or Doctoral I has not grown over this period.

Doctorates by Broad Field. Of considerable national and institutional interest is the distribution of the 42,705 doctorates by academic field, and comparisons by field with prior years' distributions. Understanding the levels and trends in doctoral education by broad field of study (and by citizenship, race/ethnicity, and sex) is of paramount importance to faculty and academic administrators, Federal and private sponsors of doctoral education (and the SED), research and development interests, and others involved in policy decisions that affect graduate education and the nation's highly trained work force.

For 1997, as in previous single years, the overall 0.7 percentage gain in number of earned doctorates was not evenly distributed across academic fields. Figures 4 and 5 and Table 5 provide graphic depictions and data in five-year intervals from 1967 to 1997. Within science and engineering (S & E), the number of doctorates fell by 1 percent from 1996 to 1997, with three of

the four categories showing declines (the social sciences alone had a gain−1.5 percent).[4] Between 1992 and 1997, the combined S & E area showed a gain of 9.8 percent, matching exactly the percentage increase for all doctoral fields in that time span. Among specific S & E fields, only chemistry and agricultural sciences registered losses over that five-year period.

Within the traditional arts and sciences fields, the humanities had the largest percentage increase in doctorates, 5.3 percent, between 1996 and 1997; the number of doctorates was also higher for the major disciplines within the humanities. Over the longer five-year period from 1992 to 1997, the rate of increase in doctorates for the humanities—21.2 percent—was more than double the average across all fields.

In groupings familiar to many graduate school deans (in part because of similarities with regard to sources and levels of financial aid, time to degree, and other demographic characteristics, as well as the traditional purviews of these academic administrators), there were 14,787 doctorates awarded in the physical and life sciences in 1997, and 12,304 in the humanities and social sciences, a decrease of 1.0 percent and an increase of 3.1 percent, respectively, over 1996. For the five-year period 1992-1997, both of these broad groupings showed gains in the number of doctorates, 8.6 percent and 15.4 percent, respectively.

The 4 percent decline in engineering doctorates from 1996 to 1997 represents the first annual negative rate of change in that field since 1986, although the number of engineering doctorates—6,052—is the second largest total ever.

Education registered a 2.7 percent decline in Ph.D.s conferred from 1992 to 1997, but in the same five-year period, areas of doctoral study that fall into the professional and other grouping exhibited a 14.6 percent increase in degrees awarded.

When compared over a much longer period, the gains in all major fields are substantial (see Table 5). From 1967 to 1997, in the aggregate, the number of doctorates doubled. The largest broad category in 1967—the physical sciences, computer sciences, and mathematics—grew 51.7 percent by 1997, but is now only the third largest of the seven groupings. Within the physical sciences, 40 percent of the 30-year gain came from just one field−computer science, which awarded no doctorates until the 1970s.

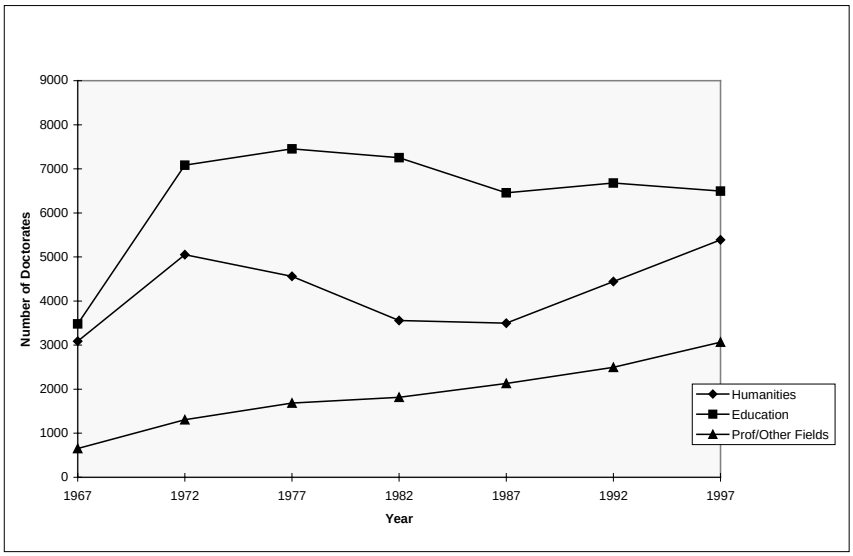
Figure 5
Education, humanities, and professional/other doctorates awarded by broad field, 1967-1997



See Table 5, Page 51.

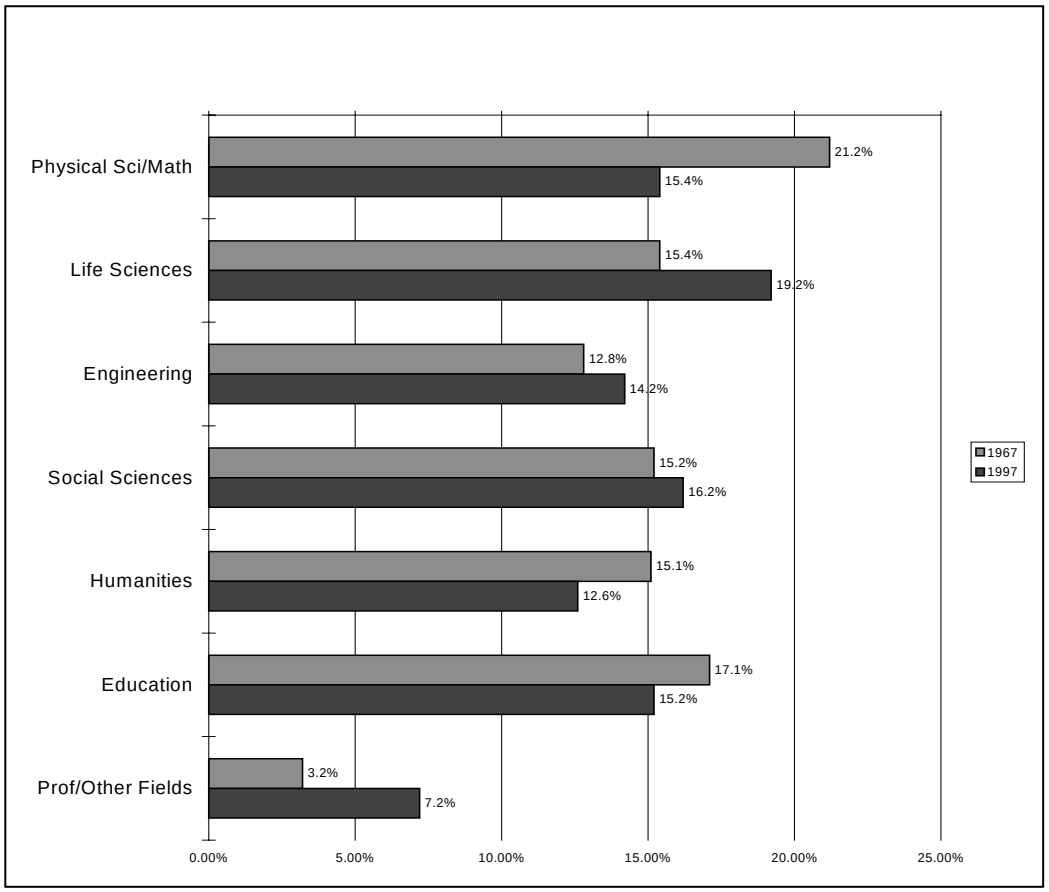
SOURCE: NSF/NIH/NEH/USED/USDA, Survey of Earned Doctorates.

The number of doctorates granted in engineering, life sciences, and the social sciences all more than doubled between 1967 and 1997, with the biological and health sciences showing the largest gain. In some social sciences, as well as in the humanities and education, much of the 30-year increase occurred between 1967 and 1972, and in fact, the absolute numbers have held steady or have actually decreased since then, as illustrated in Figures 4 and 5. Within the professional fields, the greatest gains have been in business/management.

The rates of increase (and, in some instances, decrease) within major fields of study have changed the relative size of these broad groupings over time. For example, in 1967, 21.2 percent of all doctorates were awarded in the physical sciences; for 1997 that share was 15.4 percent. Figure 6 shows the relative proportions of the seven broad categories. For the four S & E fields combined, however, the 1967 and 1997 shares are almost identical—64.6 percent in 1967 and 65.0 percent 30 years later.

Figure 6

Distribution of Ph.D. recipients by broad field: 1967 and 1997 compared



See Table 5, Page 51.

SOURCE: NSF/NIH/NEH/USED/USDA, Survey of Earned Doctorates.

Sex. Women received 17,322 doctorates, or 40.6 percent of all doctorates granted in 1997, both the highest percentage ever and the highest absolute number for women, continuing a 30-year upward trend. (During World War II the proportion of female doctorates increased, and then under the G.I. Bill, the proportion decreased; the percentage fluctuated between 10 and 12 percent for the next decade before it began a steady upward climb in the mid-1960s.) In fact, the increase in the number of female recipients represents one of the most remarkable changes over time: 20 percent higher than in 1992, 52 percent above the total of a decade ago, and a seven-fold increase since 1967. (See Figure 7 and Tables 6 and 7.) The highest one-year total for doctorates awarded to men remains the 1972 number of 27,754; the 1997 total is about 1 percent below the corresponding figure for 1996.

In most major field areas, women continue to exhibit both higher absolute numbers and increasing percentage gains relative to men. Between 1996 and 1997, women registered gains in absolute numbers of doctorates received in five of the seven major fields of study (compared with gains for men in only two fields), and as percentage of doctorates awarded, women increased relative to men in six of the seven categories. Only in the humanities, where females already constitute almost half of all doctoral recipients, did the male percentage increase exceed that for females from 1996 to 1997. (See Figure 8 and Table 6.)

In spite of recent and longer term changes, the sex distribution of doctorates by major academic field remains somewhat bi-modal: In 1997 women ranged between 40 and 63 percent of degree recipients in five fields (and averaged 50.8 percent across these five divisions); in the physical sciences (including mathematics and computer sciences) and engineering, they constituted 22.1 percent and 12.4 percent of doctoral recipients, respectively. (See Figure 8 and Table 6.)

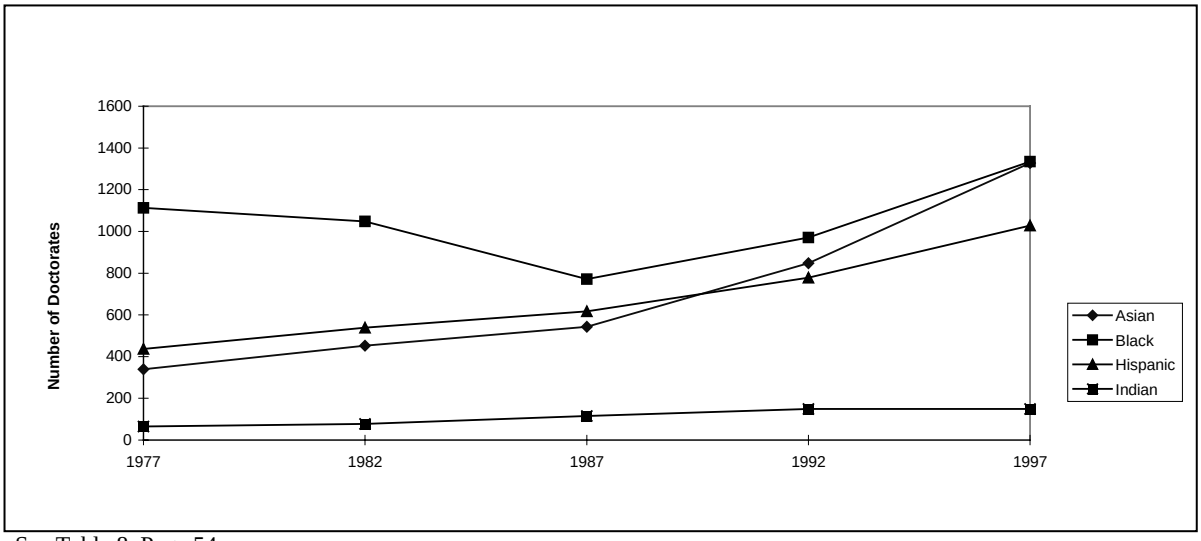
See Table 6, Page 52.
SOURCE: NSF/NIH/NEH/USED/USDA, Survey of Earned Doctorates.

Race/Ethnicity. Between 1996 and 1997 the percentage of doctorates awarded to U.S. racial/ethnic minority groups increased from 8.4 percent to 9.0 percent of all doctorates awarded, and from 12.9 percent to 14.3 percent of doctorates awarded to U.S. citizens. (See Table 8.) Comparisons of U.S. minority Ph.D.s between 1996 and 1997 must note that known racial/ethnic identities in the survey declined from 98.8 percent in 1996 to 97.1 percent for 1997 (in absolute numbers the missing racial/ethnic identifier increased from 343 in 1996 to 807 in 1997). However, the reported number of doctorates received by minorities for 1997 increased in three of the four racial/ethnic categories—for American Indians it was lower—and the direction of the percentage changes would not have been affected significantly by the lower item-response rate for race/ethnicity.

The total number of U.S. minority doctorates for 1997—3,840—is 8.4 percent higher than the number for 1996, 39.8 percent higher than the 1992 figure, and 87.7 percent above the total for 10 years ago. Within racial/ethnic category, when measured on a one-year, five-year or

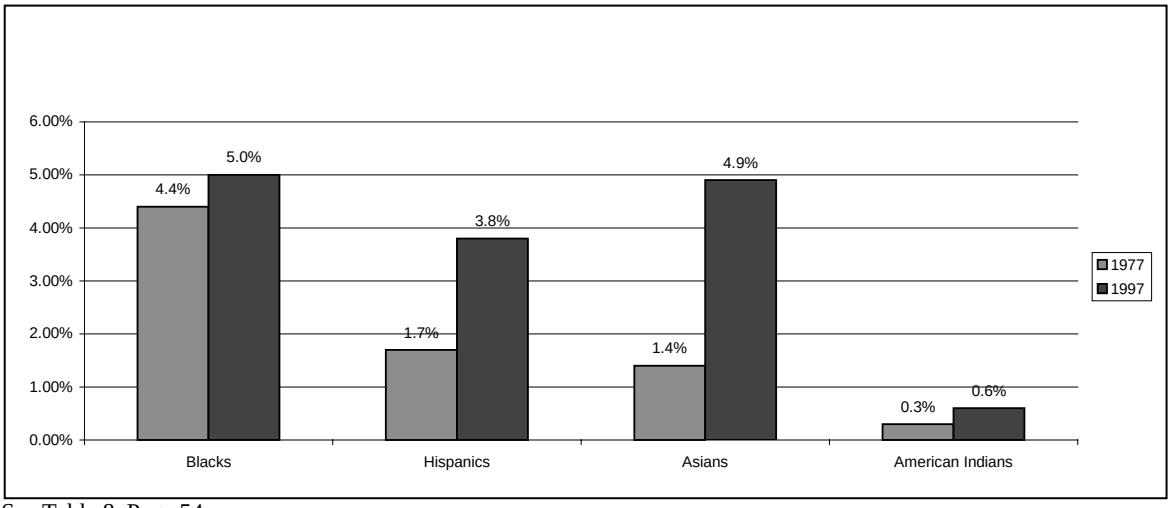
ten-year basis, Asian Americans show the largest percentage gains. However, black, Hispanic, and American-Indian percentage increases are also sizable—73.2 percent, 66.6 percent and 30.0 percent, respectively, between 1987 and 1997; by contrast, U.S. white doctorate recipients grew in number by 12.5 percent for that same 10-year period. Over a longer period—1977 to 1997—while the number of doctorates awarded to whites remained the same, the number earned by the combined minority grouping doubled. (See Figures 9 and 10 and Table 8.)

Figure 9
Minority Ph.D.s among U.S. citizens by race/ethnicity,1977-1997



See Table 8, Page 54.
SOURCE: NSF/NIH/NEH/USED/USDA, Survey of Earned Doctorates.

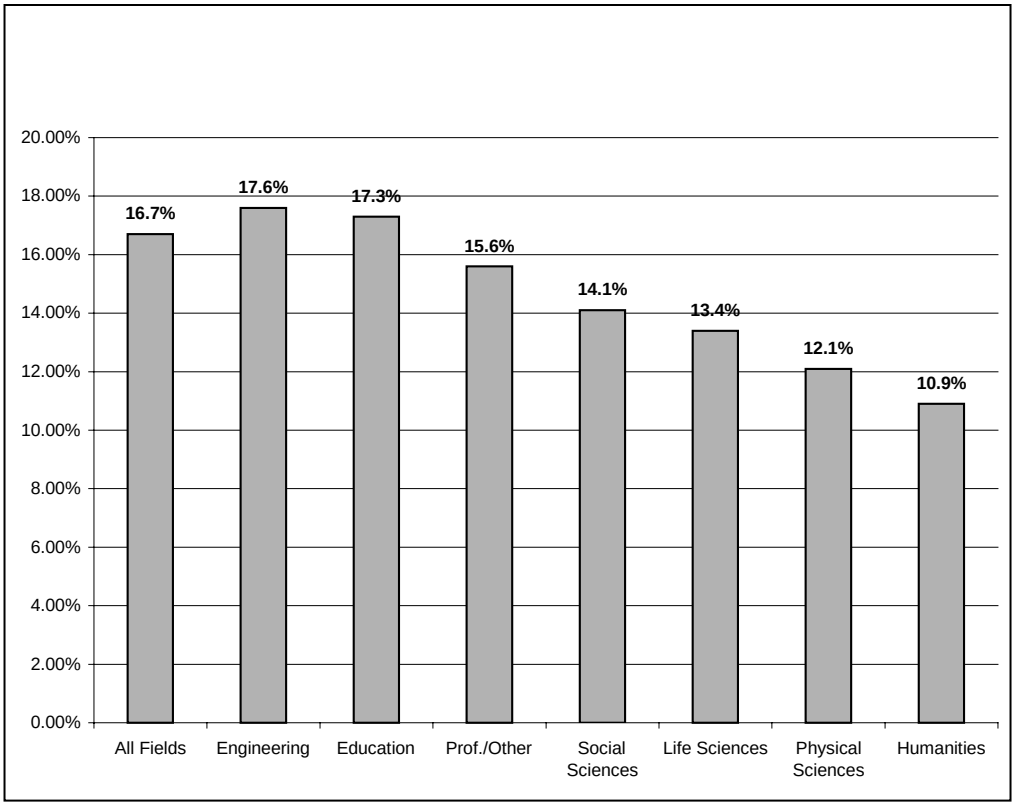
Figure 10
Percentage of doctorates earned by U.S. minorities, 1977 and 1997



See Table 8, Page 54.
SOURCE: NSF/NIH/NEH/USED/USDA, Survey of Earned Doctorates.

The number of Asian-American doctorates increased across all major fields. For the most part, blacks and Hispanics also exhibited gains, while American-Indian numbers declined. Within the S & E category, both black and Hispanic doctorates grew between 1996 and 1997 (7.9 percent and 2.2 percent, respectively), although in absolute numbers, they remain low. (See Figure 11 and Table 9.)

Figure 11
Percentage of doctorates earned by U.S. minorities by broad field, 1997



See Table 9, Page 55.
SOURCE: NSF/NIH/NEH/USED/USDA, Survey of Earned Doctorates.

Across major fields, Asian-American students are concentrated in the physical and life sciences and engineering (over 50 percent of Asian Americans are in the latter two categories), whereas the social sciences and education are the two largest fields for the other three ethnic minority groups: 63 percent of blacks are either in education or the social sciences; the corresponding figures for Hispanics and American Indians are 46.2 percent and 52.7 percent, respectively (see Table 9).

Tables 10 and 11 list the leading baccalaureate and doctoral institutions for each of the four U.S. racial/ethnic minority groups over the last few years, by absolute number of degrees (not relative to the size of the respective student bodies).

Citizenship. Although the aggregate number of doctorates awarded increased by 0.7 percent between 1996 and 1997, breakdown by citizenship (see Table 12) shows declines in all three categories—U.S. citizens, permanent residents, and those holding temporary visas—a seeming impossibility explained by the higher than usual "unknown" citizenship category. This is the one area in which this year's slightly smaller overall response rate matters, not only for the sake of accuracy and completeness, but because the distribution of doctoral awards between U.S. and non-U.S. citizens is of considerable national and institutional interest. Given that international doctoral students are not distributed across fields of study in the same proportion as U.S. students, the uncertainty in citizenship affects to some extent the conclusions that can be drawn from several data series in this report, and, of course, from the special section on international doctorate recipients.

Other non-response items are either consistent with figures from recent years or are thought not to contain any particular bias. (For example, 384 values for sex are missing, but nothing in the data suggests that those values are distributed differently than the known 59 percent male–41percent female total.) However, there is evidence that underreporting of citizenship status was not random but, in fact, was heavily tilted toward the two non-U.S. citizen groupings, permanent residents and those on temporary visas. With respect to reported citizenship, the U.S. citizen figure dropped by 0.3 percent between 1996 and 1997; the figures for permanent residents and those on temporary visas fell by 22.6 percent and 11.8 percent, respectively, declines too large to be consistent with known enrollment patterns or observed fluctuations in prior years.

The missing citizenship numbers have averaged more than 1,000 per year for many years, but for 1997 the total jumped to 3,647 (versus 1,299 for 1996). Part of the increase stems from the lower overall response rate this year. However, since some of the survey information is provided by the institutions rather than the individual respondents (which has always been the case), visa status may not be known by the graduate schools and thus is not reported. Item non-responses are fairly uniform across the whole questionnaire, so there is no evidence that survey respondents are refusing to provide their citizenship status.

If all of the missing citizenship cases are assumed to be either permanent residents or those on temporary visas, then U.S. citizens received 64.8 percent of all doctorates in 1997.

Under the same assumption, this 1997 number compares with 65.4 percent for 1996 and approximately 66 percent for each of the preceding five years. If the unknown citizenship numbers are distributed across the three citizenship groups in the same proportion as for known citizenship, then the U.S. percentage would rise to 70.8, compared with 67.5 percent for 1996 and about 68 percent for the prior five years. These percentages represent the upper and lower bounds to the biases from the missing citizenship records.

Given that U.S. citizen doctorate recipients as a percentage of those with reported citizenship has remained virtually unchanged for the last several years (at 67.6 percent), an assumption of stability for 1997 as well does not seem unwarranted. That would put the estimated number of U.S. doctorate recipients in 1997 at 28,673 and non-U.S. citizen recipients at 13,742. Extrapolating from recent trends in the distribution between permanent residents and temporary visa holders, these would be approximately 4,122 in the former category and 9,620 in the latter.

All other SED citizenship summary information, including distribution according to field of study, country, and institutions, and a demographic profile, are presented in the special section on international students at the end of the *Survey Report 1997*.

Time to Degree. The amount of time taken by doctoral students to earn their degree can be expressed in various ways. The three ways cited most often, and reported in annual *Summary Reports*, are total elapsed time between receipt of the baccalaureate and granting of the doctorate (Total Time To Degree, TTD); number of years the student is actually registered in a doctoral program (Registered Time to Degree, RTD); and the age at which the doctorate is awarded.

None of these three “clock times” is a precise measure of the time and effort needed to complete a doctorate, nor a gauge of income foregone (or years of earnings remaining). Ideally one would want to capture and exclude years that a student took off for personal reasons or to work, periods in which she or he was enrolled in a program other than the one in which the doctorate was earned, and the amount of time the student may have been gainfully employed professionally (perhaps even full time) while completing final degree requirements. The data currently collected by the SED do not permit such “fine tuning” and the kinds of analyses researchers and policy makers might find most useful.

The RTD measure is often influenced by individual institutional policies governing registration requirements and the availability of financial aid for advanced degree candidates. Other contributing factors are the benefits of and alternatives to being registered for the

individual student, such as eligibility for graduate student housing, health insurance coverage, and availability of loans (and deferrals of loan repayments). This measure also does not distinguish between part-time and full-time enrollment.

Some of the elapsed time may be caused by behavioral factors. The candidate might be weighing of the costs and benefits of being awarded the degree, and thus no longer officially being a graduate student, before actually completing the academic requirements. As noted above, that could mean loss of health or housing benefits, and starting of the "loan clock." Securing an academic position or successfully acquiring a job, especially when the job market is soft, may be easier while still a graduate student (as opposed to being officially unemployed or working in an interim nonacademic position). In such cases, candidates may be "marking time" by remaining in a position to complete the degree in short order whenever the right job opening materialized.

Nevertheless, the three complementary measures of time to degree, when combined with other survey questions (such as the student's main activity immediately prior to earning the doctorate), offer useful insights into the path and process of doctoral study.

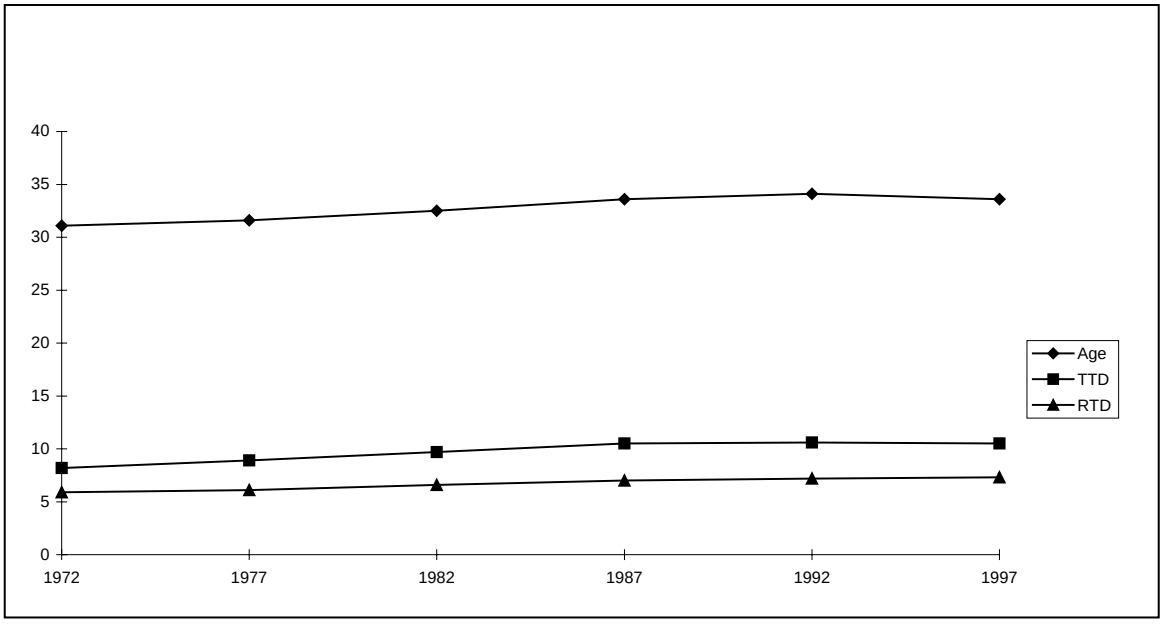
In addition, time to degree is generally reported as an average, with the median as the measure of central tendency employed (because it is less influenced than the mean would be by extremely large values—such by someone who very late in life went back to graduate school or completed a doctorate). Often a measure of dispersion can be as or more important than, or at least provide a good complement to, the measure of an average. In the *Summary Report 1997* we have included one of many ways to display variation in the time to degree—by five-year age groupings—along with the more traditional three measures, first in the aggregate, and then delineated by broad field of study, citizenship, sex, and race/ethnicity.

For 1997 doctoral recipients, the median number of years from the baccalaureate to Ph.D. was 10.5. For males, the median was 10.0 years; for females, 11.5 years. The sex gap is largely due to the disproportionate distribution of recipients by field of study—within broad academic areas, such as S & E fields, total time to degree is similar for men and women (although median times are longer for women in the humanities and professional fields). (See Tables 16 and 17.)

The 1997 median time to degree of 10.5 years is slightly lower than it was for the 1996 doctoral cohort (10.8 years) and about the same as it was 5 years and 10 years ago. The upward trend in total time to degree leveled off in the mid-1980s, and total time has been approximately the same since then (see Figure 12). A variation around that steady average is noticeable, however, by field of study, sex, citizenship status, and race/ethnicity. Apart from education and

the professional/other category, which have decidedly different career trajectories, variation in TTD ranges from 8.7 years in engineering to 11.7 years in the humanities.

Figure 12
Median years to doctorate from baccalaureate award, and age at doctorate, 1972-1997



See Table 16, Page 61.
SOURCE: NSF/NIH/NEH/USED/USDA, Survey of Earned Doctorates.

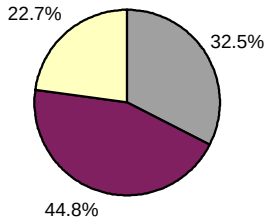
Time to degree measured by actual time registered in the student's doctoral program (RTD) was 7.3 years in 1997, similar to the 1996 figure of 7.2 years. For the last decade, the median registered time has remained approximately constant, at or just above 7 years (see Figure 12). In most instances, the variation by broad field category and demographic characteristic—sex, citizenship, and/or race/ethnicity—hovers within one year of the median.

The typical doctorate recipient in 1997 received his or her degree at 33 years of age (33.6), 0.5 years less than in 1996 but the same as it was 10 years ago. Figure 12 illustrates the slight upward drift, and then a leveling-off, in median age in five-year intervals from 1972 to 1997, a trend that mirrors the TTD and RTD.

As Figure 13 and Table 18 show, there is considerable variation around the median number of years. About a third (32.5 percent) of doctorate recipients are between 21 and 30 at the time the degree is awarded; 44.8 percent are between 31 and 40; and 22.7 percent are over 40 years of age.

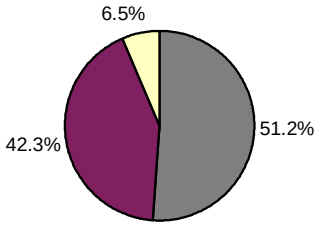
Figure 13
Age distribution at doctorate by field of study, 1997

All Fields



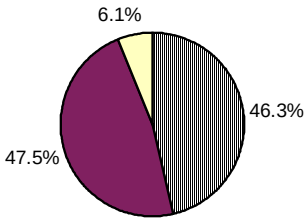
TTD = 10.5 years **RTD = 7.3 years**

Physical Sciences



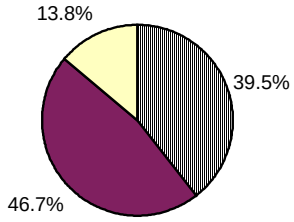
TTD = 8. years **RTD = 6.8 years**

Engineering



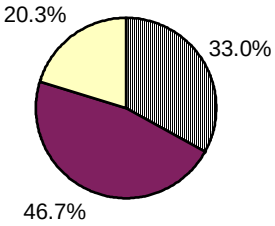
TTD = 8.7 years **RTD = 6.5 years**

Life Sciences



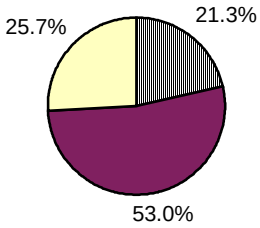
TTD = 9.2 years **RTD = 7.0 years**

Social Sciences



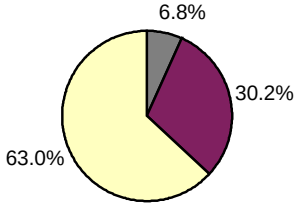
TTD = 10.0 years **RTD = 7.5 years**

Humanities



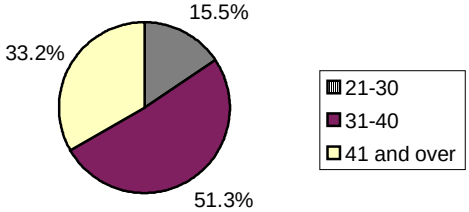
TTD = 11.7 years **RTD = 8.6 years**

Education



TTD = 20.0 years **RTD = 8.4 years**

Prof/Other



TTD = 13.5 years **RTD = 8.0 years**

See Table 18, Page 63.

SOURCE: NSF/NIH/NEH/USED/USDA, Survey of Earned Doctorates.

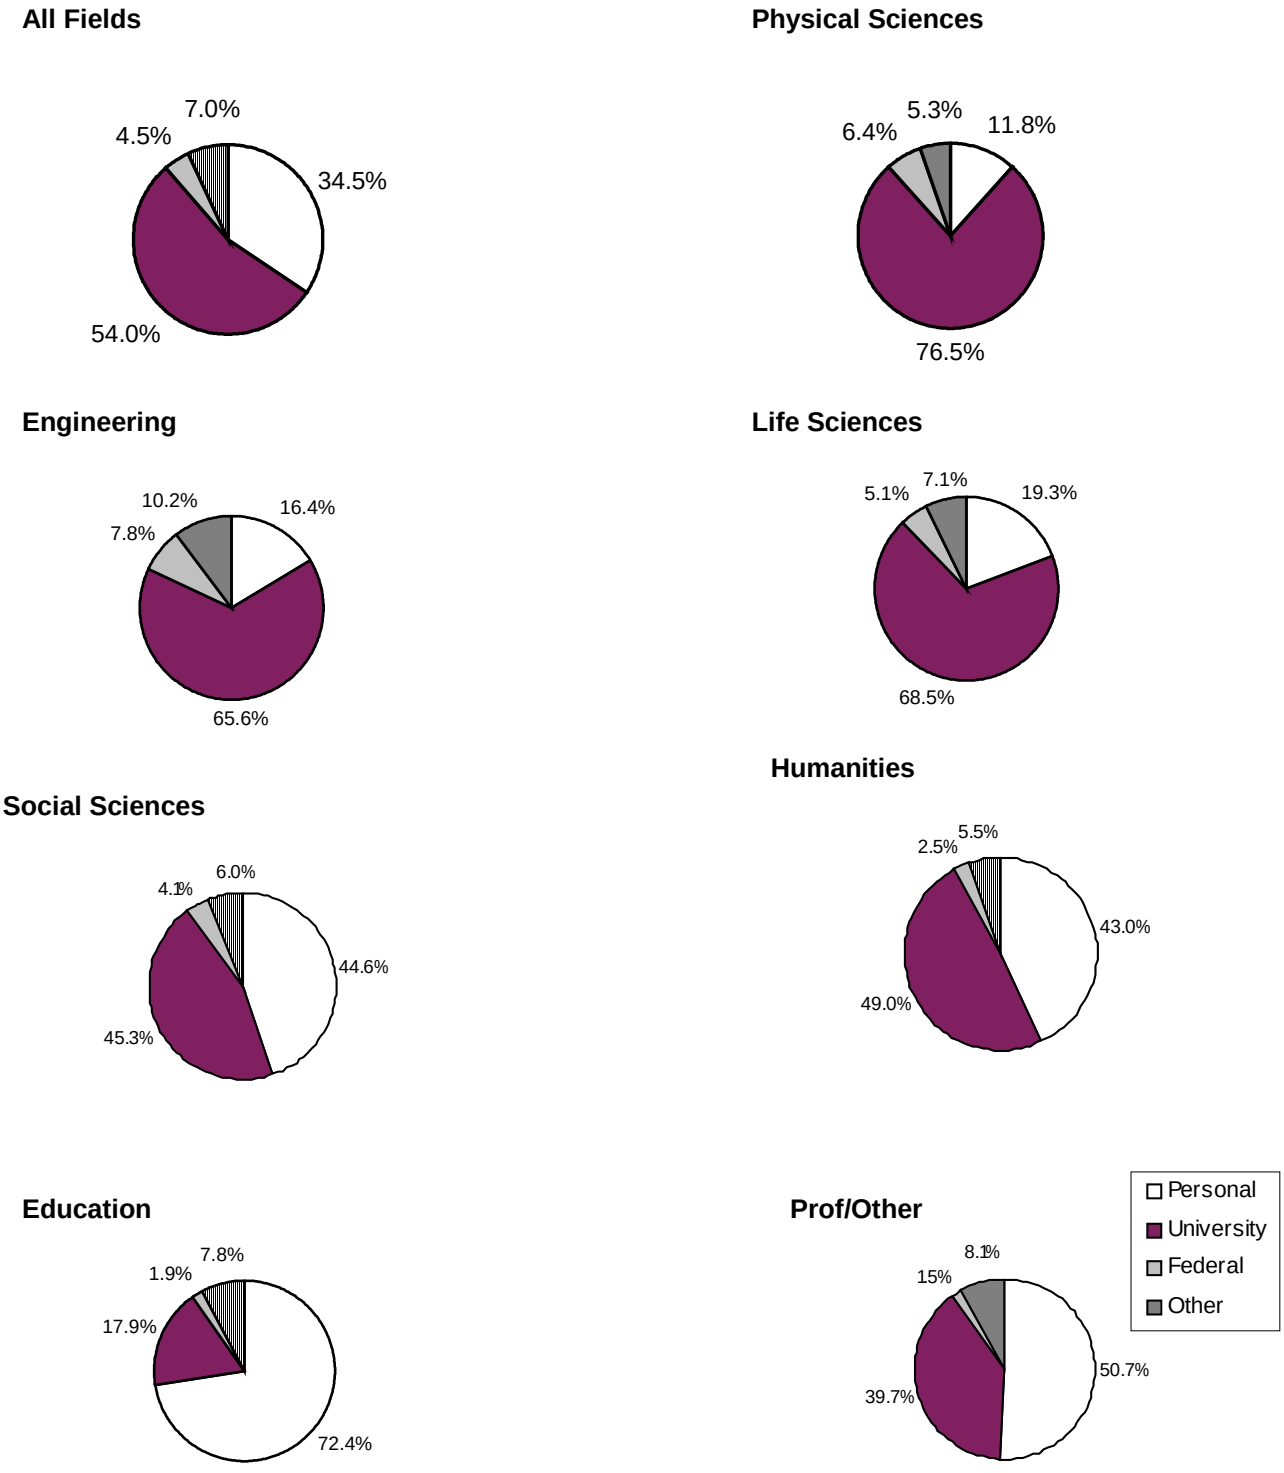
With regard to broad field of study, over 50 percent (51.1 percent) of doctorate recipients in the physical sciences (including mathematics and computer science), earn their degrees by age 30. In engineering that percentage is 46.3; for the life sciences and social sciences, it is 39.5 and 33.0, respectively. By contrast, only 21.3 percent of humanities recipients have their degree by age 30, with more than half (53.3 percent) of the degrees being awarded to recipients in their 30s. In education, only 6.8 percent earn their doctorate by age 30; almost 45 percent of education doctorates go to those over the age of 45. In the professional/other category, 15.5 percent of doctorates are awarded to those age 30 and younger.

Financial Support. About a third (34.5 percent) of 1997 doctorate recipients reported that their personal or family resources, which includes borrowing, savings, and part-time non-academic earnings, were the primary sources they used to finance their doctoral studies. More than half—53.9 percent—received the majority of their support from such program- or institution-based sources as university fellowships or teaching and research assistantships. Federal, state, foreign government, and employer contributions were the principal sources of financial support for the remaining 11.5 percent of the cases. (See Figure 14 and Table 19.)

Overall, women were more dependent on personal resources than were men (43.2 percent versus 28.6 percent), and U.S. citizens more than those on permanent or temporary visas. However, such statistics are influenced enormously by field of study, where there are such decidedly different patterns and expectations with regard to graduate financial aid, rendering aggregate comparisons virtually meaningless. For example, within the physical sciences (including mathematics and computer sciences), 76.5 percent of doctoral recipients reported university funds as their primary source of financial assistance, and the percentages for men and women were almost identical. In addition, international students are more highly concentrated in academic programs—S & E fields—where traditionally the vast proportion of doctoral students receive financial aid, and teaching and research assistantships are prevalent; that they would report lower percentages in using their own resources is not surprising.

Furthermore, since international students are not eligible for many sources of support—NIH traineeships, NSF fellowships, other agency or private fellowship competitions, participation in U.S. government loan programs—and visa restrictions limit off-campus employment (and spousal employment), non-U.S. citizens (that is, those on permanent or temporary visas) are more reliant on university sources of support than are U.S. citizens within every broad field of study.

Figure 14
Primary sources of financial support for doctorate recipients, 1997



See Table 19, Page 64.

SOURCE: NSF/NIH/NEH/USED/USDA, Survey of Earned Doctorates.

Across the physical sciences, life sciences, and engineering, between two-thirds and three-fourths of 1997 doctorate recipients listed university-based aid as their principal form of support, with the summation of personal sources around 15 percent. In the humanities and social sciences, university and personal sources were both listed for about 45 percent of the students. In education, where part-time enrollment and extended time periods (see above under time to degree) are more common, almost three-fourths of doctoral recipients relied on their own resources to complete their degrees.

With regard to loans as a source of financial aid, 49.1 percent of doctorate recipients reported some level of educational indebtedness at completion of the Ph.D. (See Tables 20 and 21.) The corresponding figure for 1996 was 47.7 percent; it was 47.3 percent in both 1995 and 1994. The survey loan question does not distinguish between undergraduate and graduate education. Also, it is not possible to attribute any specific dollar level or percent participation in official loan programs versus interfamilial support, formal or informal. Furthermore, non-U.S. citizens are not eligible to borrow from Federal or other governmental loan programs, which influences aggregate participation figures.

Finally, the question does not address whether a student had incurred high levels of debt for earlier education, perhaps for his or her undergraduate studies, but had paid them off by the time of entrance into graduate school. For doctoral students in education, whose time to degree is lengthy and part-time enrollment traditional, even prior graduate school loans might have been retired by the time the doctorate was awarded. Thus, reported educational indebtedness can both overstate and understate the extent of borrowing as a source of financial aid. (The *1998 Summary Report* will examine these indebtedness issues in more detail.)

As expected, loan indebtedness varies by citizenship and field of study. It does not vary significantly by sex. Variations in indebtedness by racial/ethnic category, like overall variations in the sources of graduate financial aid (see discussion above, Figure 14, and Table 19), must be viewed in the context of field distributions.[5]

Of those who borrow, 40.5 percent have debt levels of $10,000 or less; 24.6 percent indicated indebtedness between $10,000 and $20,000; 14.3 percent had outstanding loans of $20,000 to $30,000; and 20.4 percent owed at least $30,000.

[5] Rapoport, Alan I. “What is the Debt Burden of New Science and Engineering Ph.D.s?” Issue Brief, NSF 98-318, National Science Foundation, Division of Science Resources Studies. Arlington, VA. July 8, 1998.

Postgraduation Status and Plans. For the 1997 survey year, 88.3 percent of doctorate recipients provided information on their postgraduation plans. This percentage is lower than for 1996 (90.9 percent) and continues the slight downward trend over time (20 years ago the overall figure was 93.7 percent, but for the S&E fields it was 90.4 percent). More than two-thirds—67.4 percent—of new doctorate recipients reported definite commitments for employment or continued study; in 1996 the corresponding figure was 67.5 percent. (See Tables 22 and 23. Note that in these two tables, "definite" and "seeking" are the only distinctions allowed, so the percentages for a given year are not independent and thus will sum to 100 percent for field, sex, citizenship, or race/ethnicity; the same is true for the absolute numbers in Tables 24 and 25.)

Humanities doctorate recipients revealed the lowest percentage (56.3 percent) of definite postgraduate plans, and education the highest (72.8 percent). The part-time enrollment and the lengthy time-to-degree period in education probably mean that many recipients were already employed in their profession at the time they received their degrees. Men and women indicated similar commitment rates (the small difference observed is attributable to field-of-study distributions); non-U.S. citizens had lower percentages; and among U.S. citizens, Asian Americans had the lowest commitment rate of the four racial/ethnic groupings.

Of those doctorate recipients reporting definite commitments, approximately 72 percent will work and 28 percent will continue their studies. The 72 percent figure is slightly higher than in recent years (which have generally been around 70.5 percent), but the overall percentage is highly sensitive to the distribution of fields of study. In academic fields where formal postdoctoral training is expected, such as in the life sciences, the employment figure drops to 38.7 percent, whereas in the humanities, education, and professional fields, it averages about 95 percent. Field distributions also account for most of the observed variation by sex, citizenship, and race/ethnicity. (See Tables 22 and 23.)

Table 26 contains data on the postdoctoral location—United States or elsewhere—for doctorate recipients by citizenship, visa status, and broad field of study. A discussion of some of these data is contained in the special section on international doctorate recipients that follows.

Employment. For U.S. citizens and those holding permanent visas, 49.1 percent of those with firm employment commitments noted academe as their planned work sector. About one-fourth, 24.7 percent, indicated industry or self-employment; 7.3 percent said some level of government; the remaining 18.9 percent checked "other." There was considerable variation by field of doctorate, with more than three-fourths of those in the humanities with an academic position but only 15.4 percent of engineering doctorate recipients intending to work in academe.

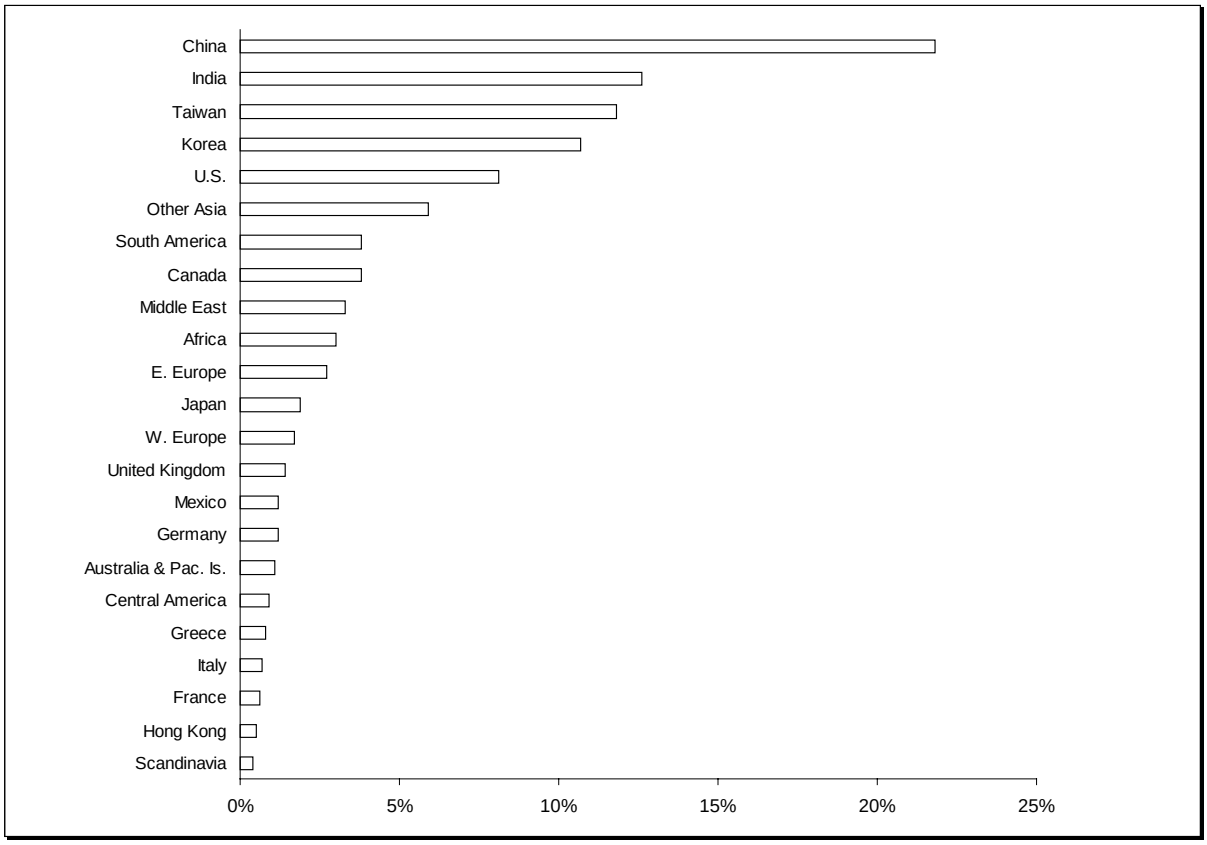
A Profile of International Students

As noted in the main section of this report, the higher than normal non-response rate to the citizenship question on the 1997 Survey of Earned Doctorates makes some of the percentages and trends difficult to know with sufficient certainty. These data include the number and distribution of non-U.S. citizen doctorate recipients, the one-year and five-year trends, distributions by country and/or institution, and post-graduation plans. The 1997 total of 3,647 (8.5 percent) missing citizenship identifiers exceeds the previous high of 2,652 (7.7 percent) in 1989. However, as discussed below, careful examination and manipulation of the summary figures offer acceptably reliable information for some data series, including the areas noted. In addition, this section contains material not found in previous summary report discussions or tables.

Demographic Profile. The vast majority of non-U.S. citizens who received their doctorates from U.S. universities began their college careers outside the United States, a not unexpected finding. Only 8 percent of non-U.S. citizens who were awarded research doctorates in 1997 began their undergraduate studies at a U.S. college or university. In absolute numbers, however, that means approximately 1,000 non-U.S. citizen doctorate recipients started college in the United States. Countries with 25 or more doctorate recipients who also studied in the United States as undergraduates were India (57 recipients), Iran (56), Canada (45), Korea (39), Malaysia (35), China (31), Hong Kong (30), Japan (28), and the United Kingdom (25). Nearly 60 percent began their collegiate studies in Asia (with 22 percent in China, 13 percent in India, 12 percent in Taiwan, and 11 percent in Korea). (See Figure 2-1 and Table 2-1.)

China continues to be the nation of citizenship for the largest number of non-U.S. citizen doctorate recipients. (See Table 14.) India, Taiwan, Korea, and Canada round out the top five countries, and these five account for more than half of all non-U.S. citizen doctorate recipients in 1997. The list of the top 30 countries remains almost identical to that for 1996, with Australia and the Republics of the former Yugoslavia being the only two new entrants (replacing Sri Lanka and Nigeria).

Figure 2-1
Country/region of undergraduate college entry for 1997 non-U.S. citizen Ph.D. recipients

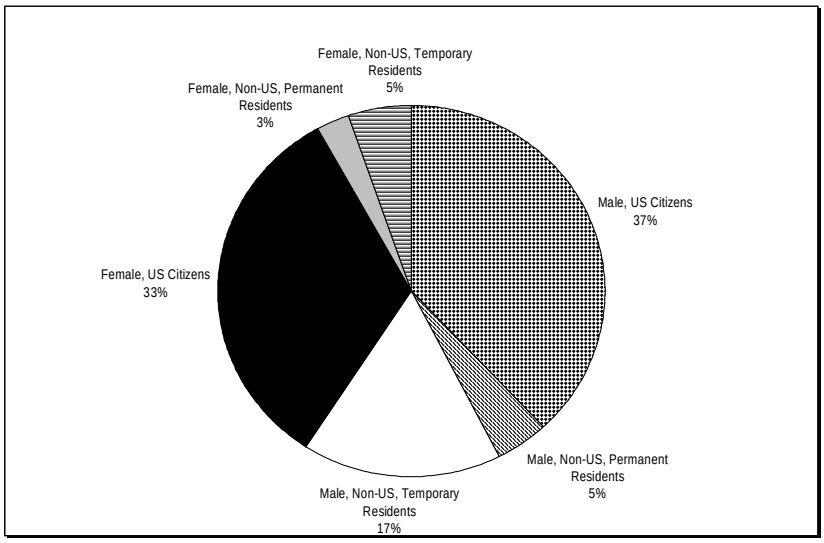


See Table 2-1, Page 72.

SOURCE: NSF/NIH/NEH/USED/USDA, Survey of Earned Doctorates.

Female non-U.S. citizens have increased their share of all doctorates significantly since 1970. Although large in terms of the percentage increase, in absolute numbers the current level of international females remains relatively small, with non-U.S. women being awarded only 7 percent of research doctorates in 1997. Sex differences are in part related to differences in field of study, where the areas most populated by international students, S & E fields, historically have large concentrations of males. (See Figures 2-2 and 2-3 for the distribution of 1997 doctorate recipients by citizenship status and sex.)

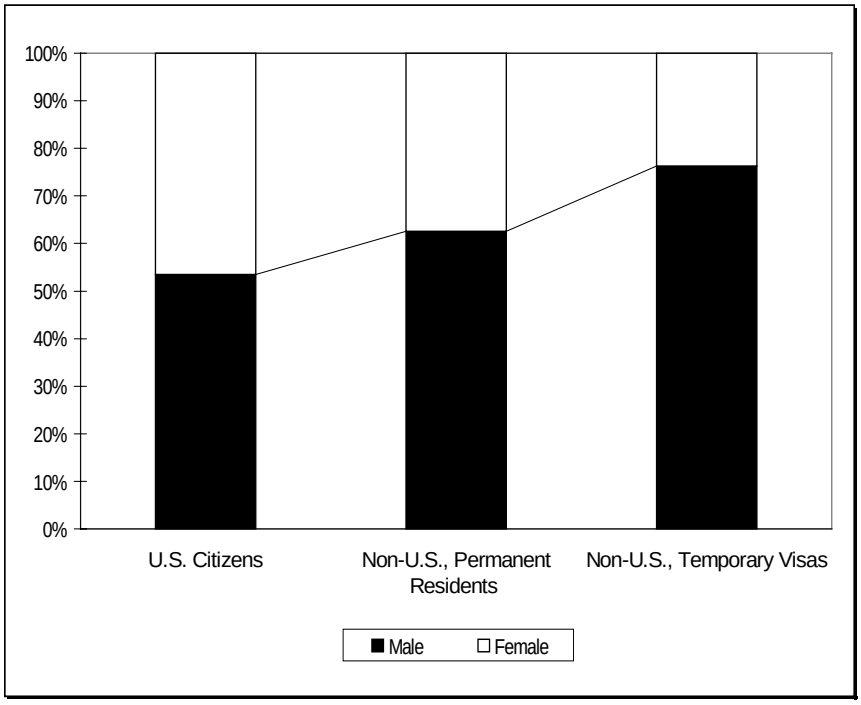
Figure 2-2
1997 Ph.D. recipients by citizenship status and sex



See Table 2-2, Page 72.

SOURCE: NSF/NIH/NEH/USED/USDA, Survey of Earned Doctorates.

Figure 2-3
Sex of 1997 Ph.D. recipients by citizenship status



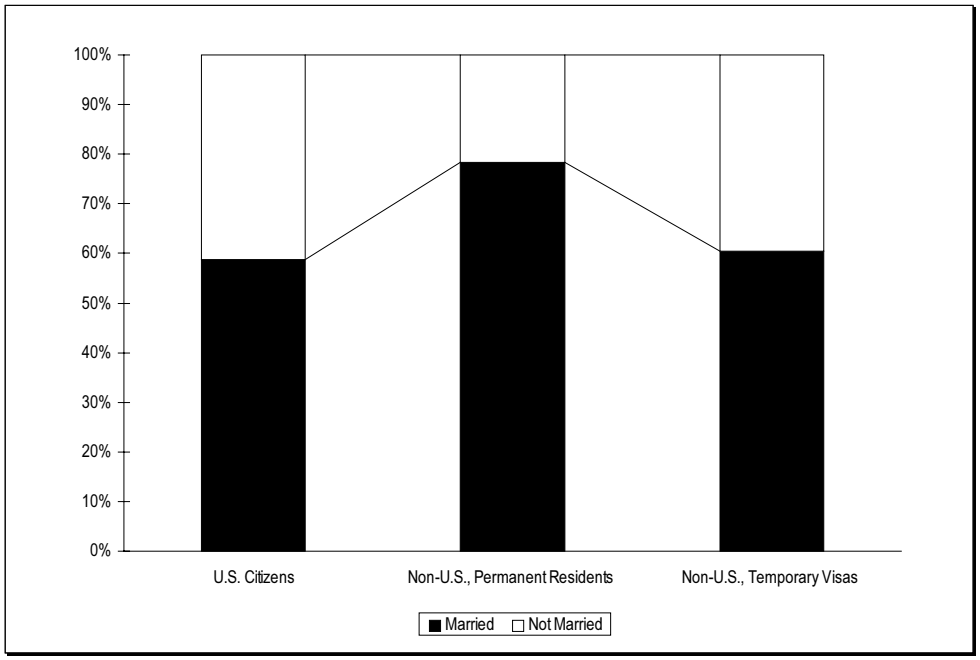
See Table 2-2, Page 72.

SOURCE: NSF/NIH/NEH/USED/USDA, Survey of Earned Doctorates.

Of those with known marital status, 61 percent of doctorate recipients in 1997 were married (marital status is unknown for 11.4 percent of recipients). Non-U.S. citizens who were permanent residents reported a higher rate of marriage (78 percent) than U.S. citizens (59 percent) or those with temporary visas (60 percent). (See Figure 2-4.)

Figure 2-4
Marital status of 1997 Ph.D. recipients by citizenship status

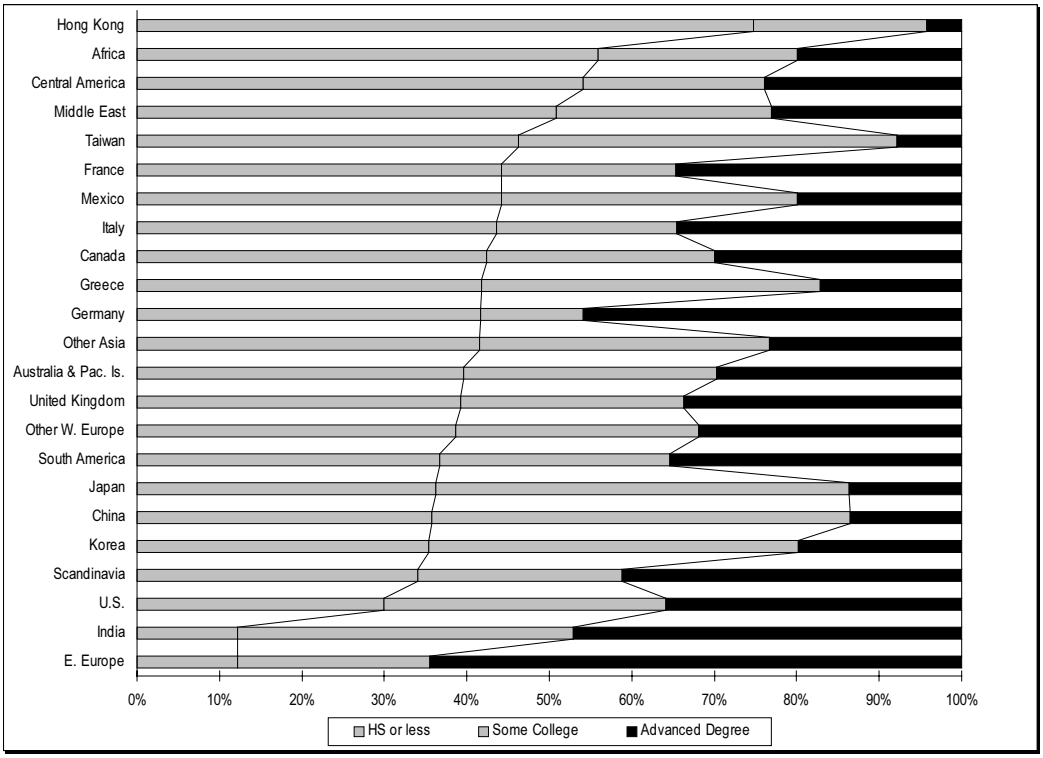
See Table 2-3, Page 72.



SOURCE: NSF/NIH/NEH/USED/USDA, Survey of Earned Doctorates.

Thirty percent of U.S. citizens who earned doctorates in 1997 reported that their fathers had only a high school diploma or had not completed high school; students from Japan and the Scandinavian region reported similar proportions of fathers with a high school education only (36 percent and 34 percent, respectively). Recipients from Western European countries, Australia, and Canada reported higher proportions of fathers with less formal education, ranging from 39-45 percent of respondents who provided information on family educational backgrounds. Doctorate recipients from geographic regions with developing economies—the Middle East, Central America, and Africa—reported the highest proportions of fathers with a high school diploma or less. Perhaps surprisingly, recipients from Hong Kong reported the highest proportion—approximately 75 percent—in this category; China had the same proportion as U.S. citizens. At the other end of the educational spectrum, doctorate recipients from Eastern Europe and India had the smallest proportions of fathers with a high school education or less. (See Figure 2-5.)

Figures 2-5
Father's educational attainment by country of citizenship for 1997 Ph.D. recipients



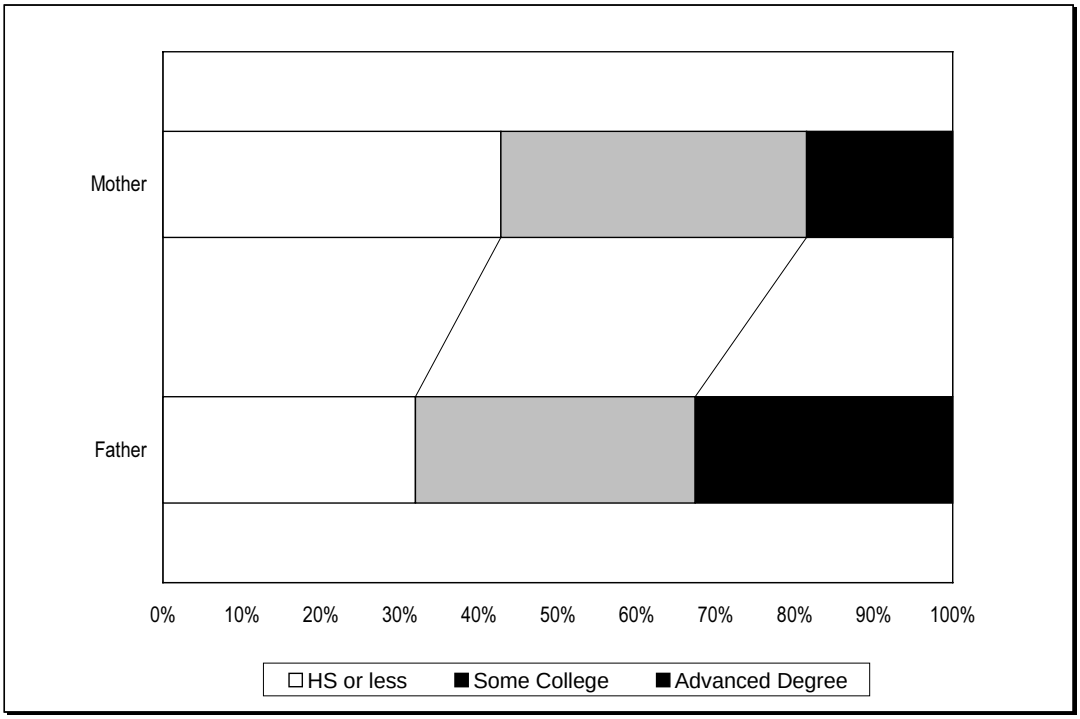
See Table 2-4, Page 73.

SOURCE: NSF/NIH/NEH/USED/USDA, Survey of Earned Doctorates.

The proportion of fathers with more formal education than high school—those earning an M.A., Ph.D. or professional degree—was 36 percent for U.S. citizens. Scandinavia, Germany, and India exceeded this level, and Eastern European doctorate recipients reported the highest proportion of their fathers with advanced degrees—65 percent.

Regardless of citizenship status, mothers of doctorate recipients have less formal education than the fathers. (See Figure 2-6.) Forty three percent of mothers, compared with 32 percent of fathers, had a high school education or less. Almost twice as many fathers as mothers (33 percent versus 18 percent) had earned advanced degrees. Mothers of doctorate recipients from the United States had, in general, more formal education than mothers of international recipients. Only 37 percent of U.S. doctorate recipients reported that their mothers had a high school education or less; Eastern Europe was the only region with a lower percentage in this category (17 percent). (See Figure 2-7.)

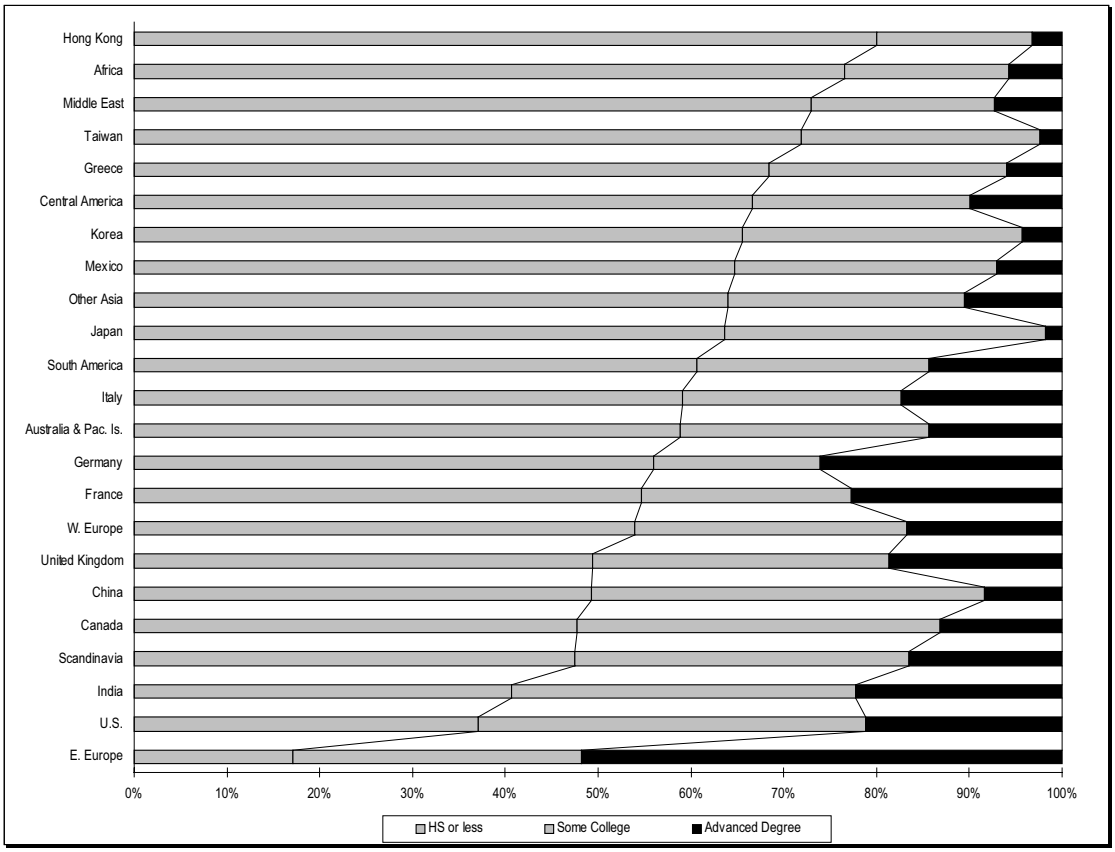
Figure 2-6
Parents' educational attainment by sex for 1997 Ph.D. recipients



See Table 2-5, Page 73.
SOURCE: NSF/NIH/NEH/USED/USDA, Survey of Earned Doctorates.

Totals, Trends, and Distributions. Table 12 provides basic aggregate and broad-field summary statistics by citizenship. Because of the number of citizenship responses missing, it appears that the number of non-U.S. citizens receiving doctorates declined from 13,275 in 1996 to 11,390 for 1997. In fact, the 1997 figure would then represent the lowest one-year total since 1992 (11,846). As noted in the main report, these conclusions undoubtedly result from the non-response, and a non-response bias, with regard to known citizenship for 1997 doctorate recipients.

Figure 2-7
Mother's educational attainment by country of citizenship for 1997 Ph.D. recipients

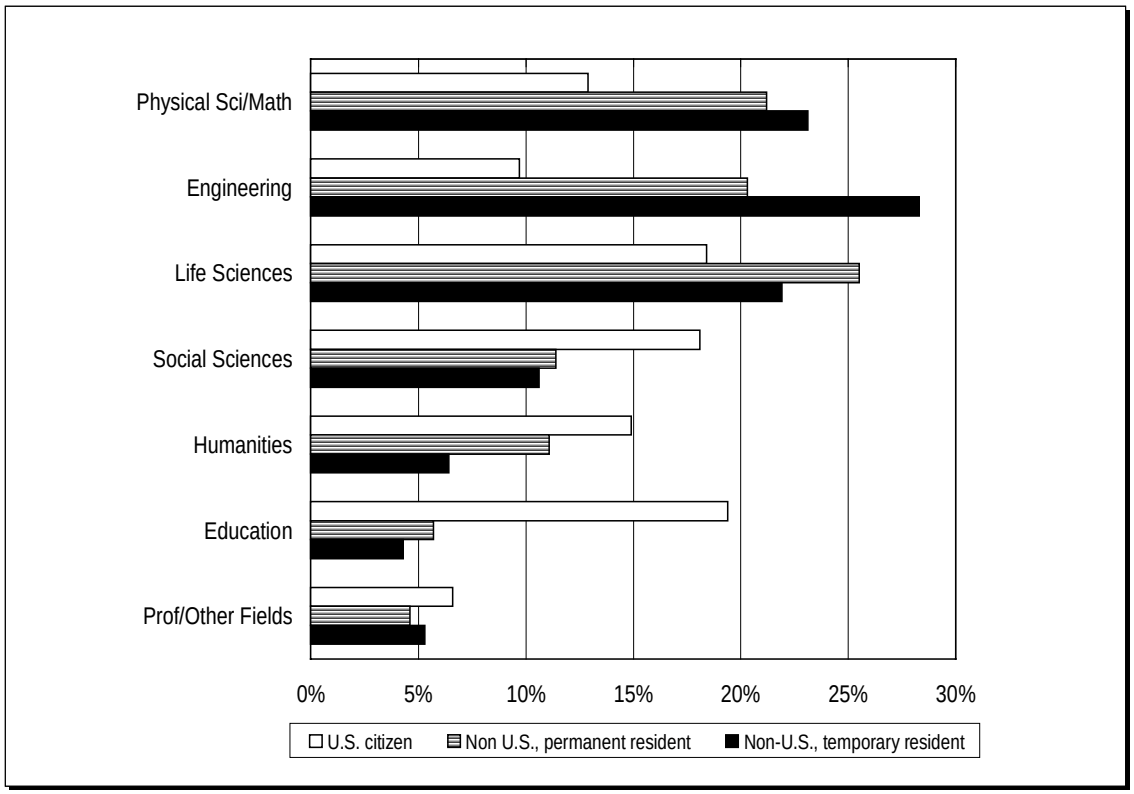


See Table 2-6, Page 74.

SOURCE: NSF/NIH/NEH/USED/USDA, Survey of Earned Doctorates.

In 1997, the S & E fields granted 65 percent of all doctorates. For U.S. citizens, 59.1 percent of the total doctorates awarded were in those fields; for permanent residents, 78.4 percent of their total were awarded in those fields; and for doctorate recipients on temporary visas, 83.9 percent of their total were in those fields. Within the four S & E categories, the largest number doctorates were granted in the life sciences. For U.S. citizens the largest single field was education, with the life and social sciences close behind. For permanent residents, the life sciences represented the largest broad field of study, followed by the physical sciences and engineering. Temporary visa holders earned more degrees in engineering, then the physical and life sciences. (See Figure 2-8).

Figure 2-8
Broad field of study by type of citizenship for 1997 Ph.D. recipients

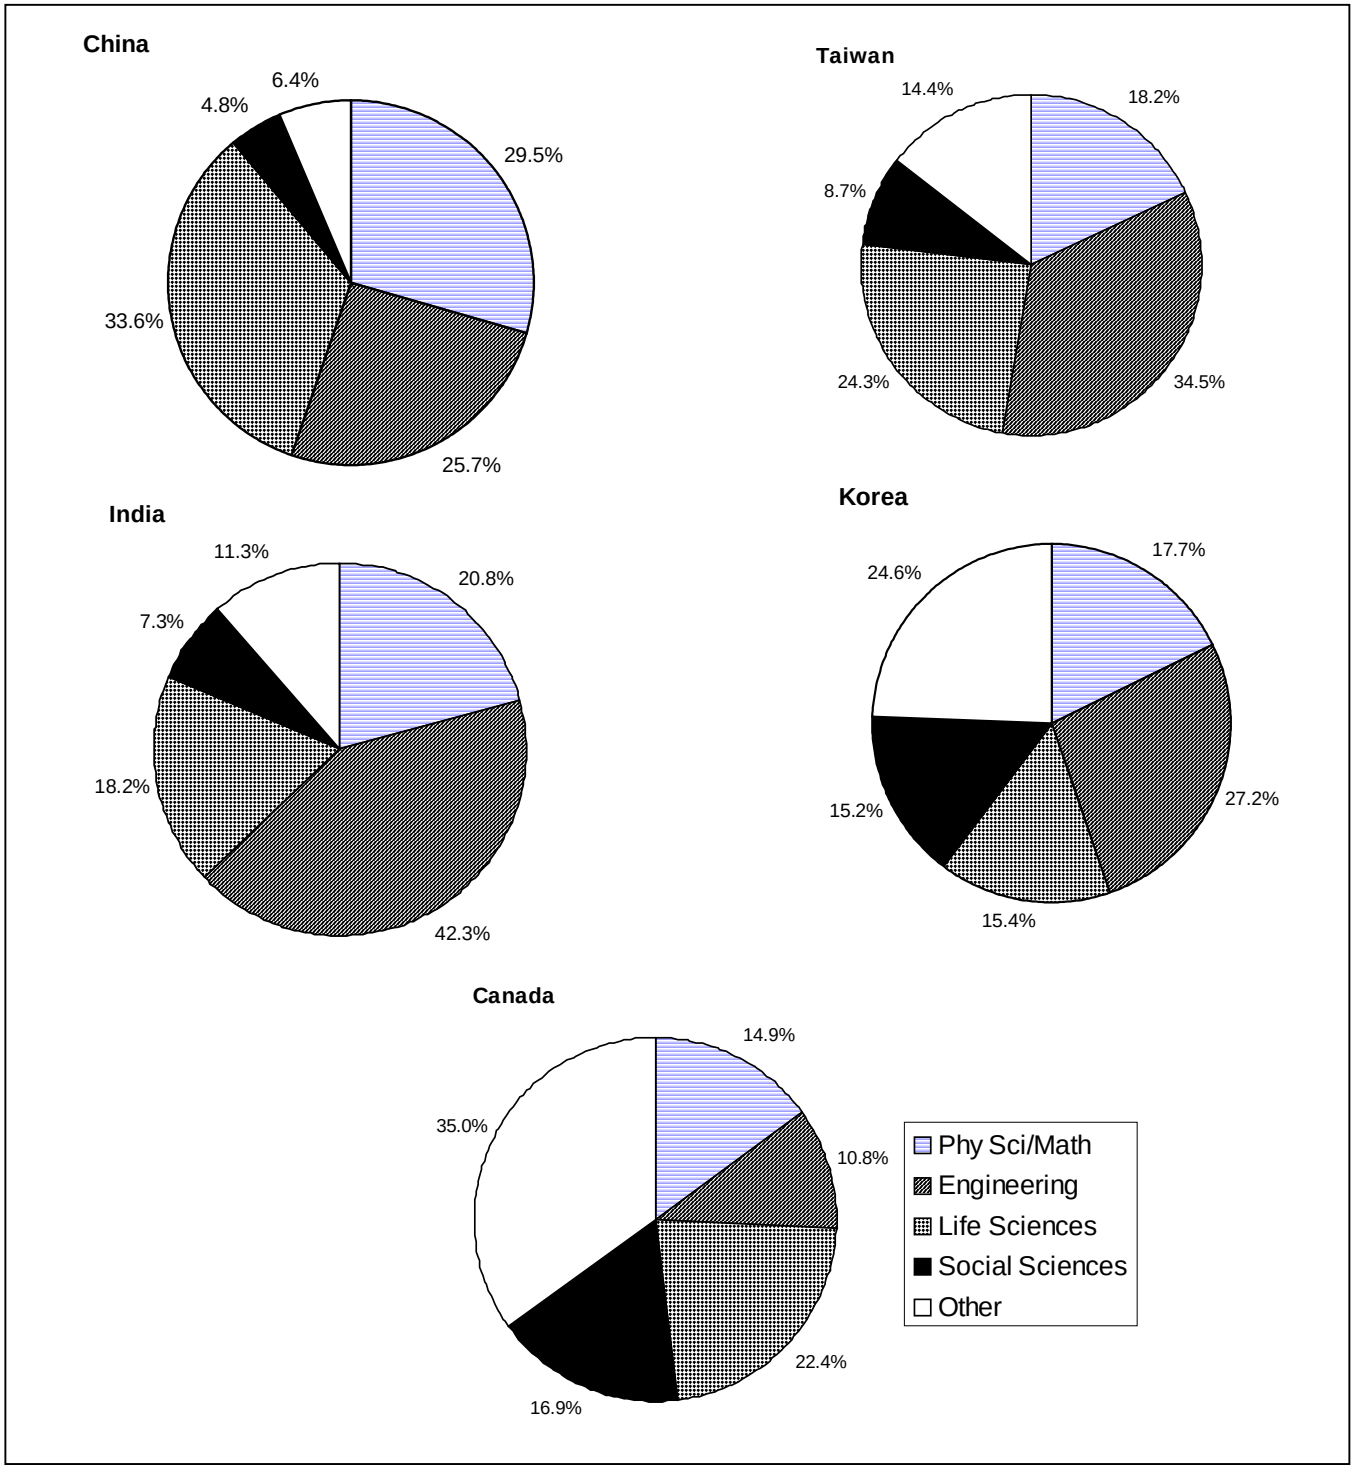


See Table 2-7, Page 74.
SOURCE: NSF/NIH/NEH/USED/USDA, Survey of Earned Doctorates.

Because international doctoral students are more concentrated in S & E disciplines than are U.S. students, and they vary in terms of representation within those four broad fields, such disproportionate representations must be factored into consideration of other dimensions of the student and the process. For example, graduate financial aid, sex, time to degree, and postgraduate decisions all vary by broad field of study. The differences by citizenship observed may simply reflect the choice of major field.

For the five largest countries of origin for non-U.S. citizen doctorate recipients—China, Taiwan, India, Korea, and Canada—30.2 percent of the degrees were awarded in engineering, followed by the life sciences (24.9 percent) and physical sciences (22.7 percent), although there is considerable variation among countries (see Figure 2-9).

Figure 2-9
Distribution of international doctorate recipients by broad field of study for leading countries of origin, 1997



See Table 2-8, Page 75.

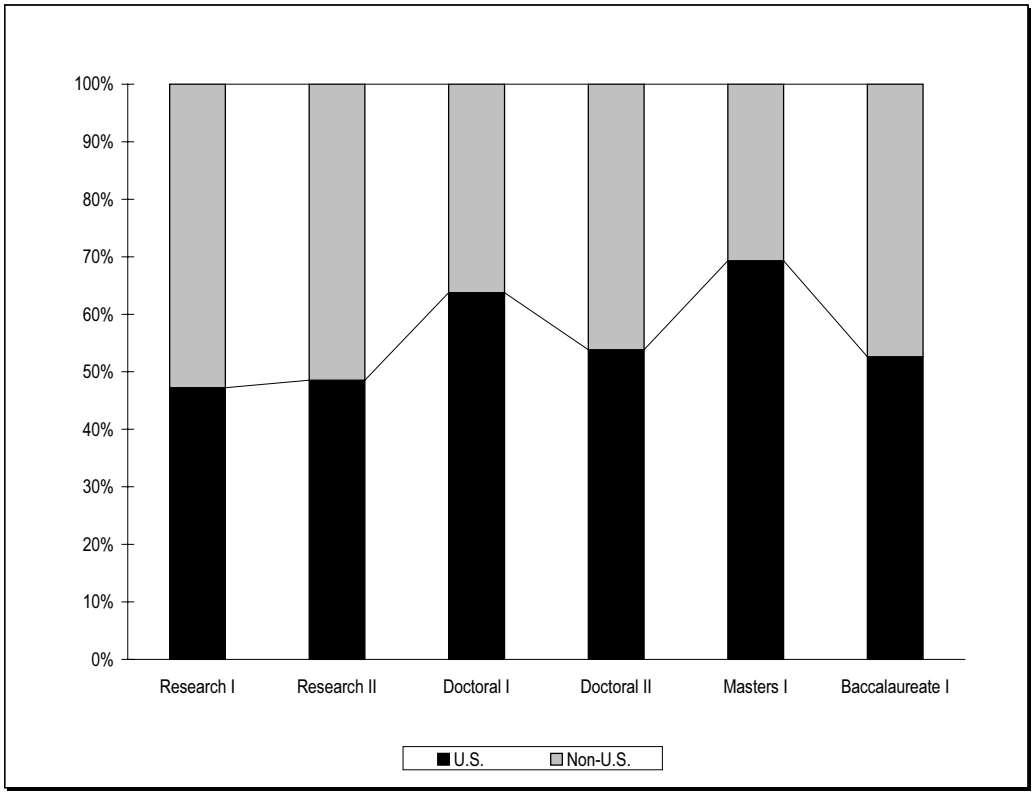
SOURCE: NSF/NIH/NEH/USED/USDA, Survey of Earned Doctorates.

Distribution by Institution. More than two-thirds (67.4 percent) of all doctorate recipients earn their degrees at one of the 88 Research I (Carnegie classification) institutions. The 1997 SED data reveal that international students are more likely to receive their Ph.D.s from Research I universities than are U.S. citizens, 73.5 percent to 66.7 percent, respectively. (See Figure 2-10.) While 30 institutions account for approximately 35 percent of all doctorates awarded annually, the concentration is significantly higher for non-U.S. citizens: 30 institutions grant 50 percent of all doctorates awarded to international students, with the University of Wisconsin-Madison and the University of Texas-Austin having the largest totals. (See Table 15A for the top 25 institutions in terms of the absolute numbers of international doctorates awarded.) In terms of proportions of international doctorates, 18 institutions granted more than 50 percent of their doctorates to non-U.S. citizens; of those awarding at least 25 doctorates, New Jersey Institute of Technology and Polytechnic University in New York had the largest percentage of international doctorates. (See Table 15B.)

International students may be disproportionately represented in Research I universities for many reasons, including perceived prestige or name recognition abroad, size of the institution, the possibility of more financial aid, and/or simply because of the academic fields represented in Research I institutions. For example, if Research I universities have larger programs in the S & E fields, the fields in which international students are more likely to be enrolled (because of their own or their home countries' preferences), this could produce the observed skewness. Indeed, 74.5 percent of all S & E doctorates are awarded by Research I institutions; for doctorates granted in non-S&E fields, Research I institutions grant 61.7 percent.

Time to Degree. However time to degree is measured—elapsed time since the baccalaureate (TTD), registered time in the doctoral program (RTD), or age at receipt of the doctorate—international students (those with temporary visas) take 1-2 years less than U.S. citizens and permanent residents. The aggregate numbers are 10.7 years for U.S. citizens, 11.3 years for permanent residents, and 9.7 years for those holding temporary visas. Once these figures are corrected for field of study, the field-specific TTD figures converge and/or change rankings. In all four broad S & E fields, TTD is less for U.S. citizens than for either permanent residents or temporary visa holders. The same holds for RTD. (See Table 17.)

Figure 2-10
1997 Ph.D. recipients by degree-granting institution's Carnegie classification and by citizenship status

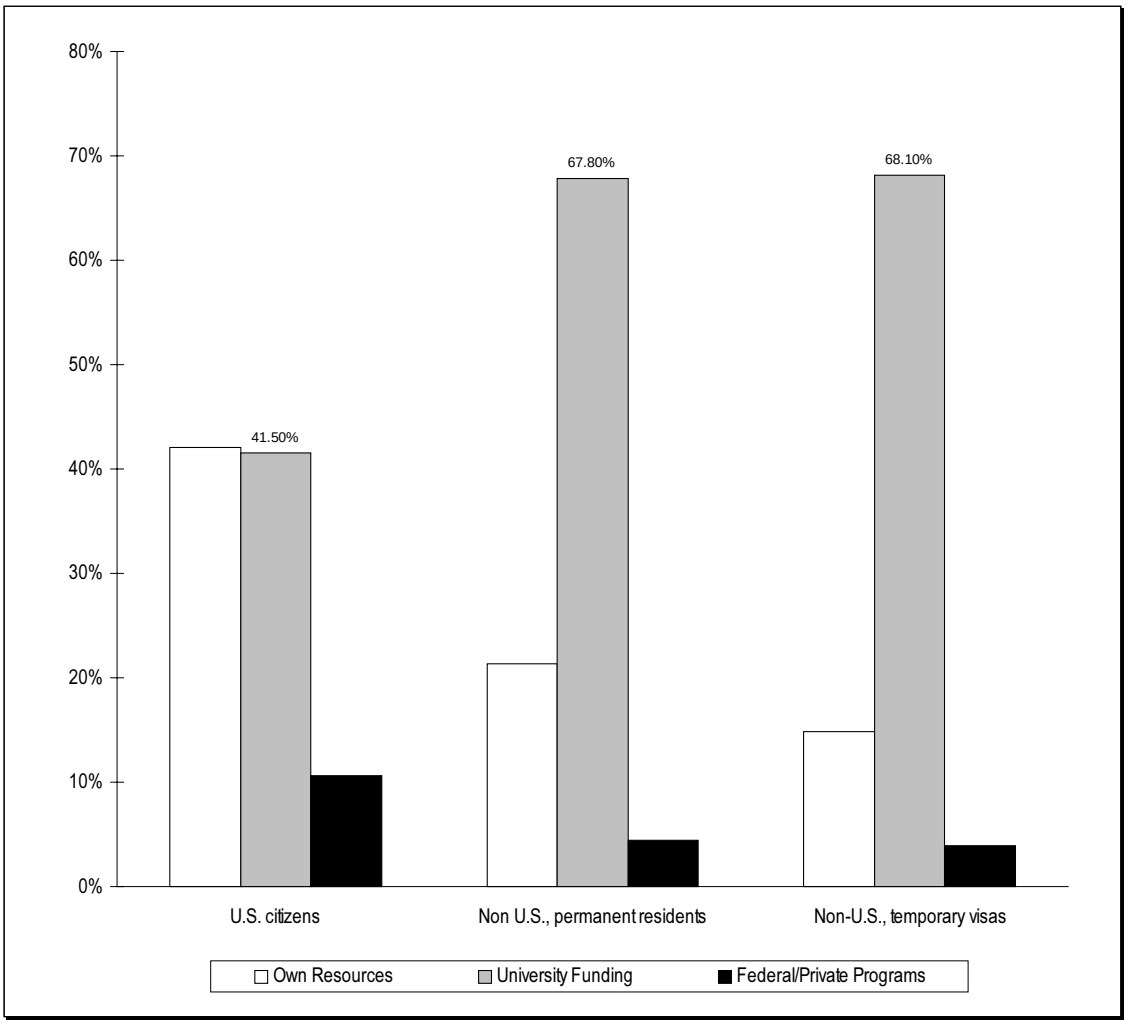


See Table 2-9, Page 75.
SOURCE: NSF/NIH/NEH/USED/USDA, Survey of Earned Doctorates.

The same pattern emerges when considering average age at award of the doctorate. For example, the median age at receipt of doctorate for international students is 32.3 years; for U.S. citizens and permanent residents, the median age is 34.2 and 34.0 years, respectively. With regard to dispersion around that median, overall about a fourth of doctorate recipients received their degree at least 15 years after completing their baccalaureate work; about 32 percent of U.S. citizens and permanent residents had an elapsed time of 15 years or more, compared with 8 percent for those holding temporary visas. Within S & E fields, U.S. citizens and permanent residents seem to be disproportionately represented in the tails of the distributions—a higher percentage finish within 6 years of the baccalaureate and a larger percentage also take at least 15 years; international students are more concentrated in the middle ranges. The extent to which this reflects differences in focus, financial constraints, or visa restrictions cannot be discerned from the data.

Financial Support. Overall, 34.5 percent of doctorate recipients reported using their own resources (including spousal and family)—loans, savings, and part-time non-academic earnings—as the primary source to finance their doctoral studies. More than half of them (53.9 percent) received the majority of their support from program- or institution-based sources (university fellowships, and teaching and research assistantships). Federal, state or foreign government and employer contributions account for the remainder (11.5 percent). (See Figure 2-11 and Table 19.)

Figure 2-11
Primary source of support by type of citizenship for 1997 Ph.D. recipients



See Table 19, Page 64.
SOURCE: NSF/NIH/NEH/USED/USDA, Survey of Earned Doctorates.

Non-U.S. citizen doctorate recipients reported higher rates of support through university-based funding than did U.S. students: 72.2 percent of students with permanent visas and 71.0 percent of students on temporary visas reported receiving university fellowships, teaching assistantships, or research assistantships as their primary source of graduate financial aid. U.S. citizen doctorate recipients listed those sources only 46.7 percent of the time. (See Table 19.) Since international students are not eligible for such sources of graduate support as NIH traineeships, NSF fellowships, and other national fellowship competitions, and in many instances spouses are also not allowed to work, their reliance on institutional support is not unexpected. Furthermore, visa application regulations preclude an international student being able to meet cost-of-education requirements with borrowing or off-campus employment. The implication of these restrictions is that program- or university-based financial aid is guaranteed at the outset. In addition, international students are more heavily concentrated in the S & E fields, where the vast proportion of doctoral students receive support; teaching and research assistantships are the traditional sources in those fields.

Overall, 42.1 percent of U.S. citizen doctorate recipients reported that their own resources constituted their principal means of support. Within broad field area, this source was listed by only 15.8 percent of American doctoral students in the physical sciences, by 18.4 percent in engineering, and by 23.5 percent in life sciences. On the other hand, 49.3 percent of domestic social sciences doctoral students and 45.5 percent of U.S. students in the humanities relied principally on their own (and/or family) financial resources. For permanent residents and those on temporary visas in the physical and life sciences and engineering, personal and/or family resources were the main source of support less than 10 percent of the time. (See Figure 2-12 and Table 19.)

In terms of program- or institutional-based aid, in the physical and life sciences and engineering, about one-fourth of U.S. students (25.6 percent), permanent residents (24.4 percent), and those on temporary visas (27.2 percent) relied on teaching assistantships as the principal source of support. U.S. citizens were more likely to hold university fellowships, while non-U.S. citizens were more likely to have research assistantships. In the humanities and social sciences, where teaching assistantships are the most prevalent form of support, the distribution of support by citizenship category is remarkably similar, with approximately 60 percent of students receiving their main graduate financial aid from this source; only about one-fourth held university fellowships, and one-sixth were given research assistantships.

Postgraduation Plans. Of the 9,803 non-U.S. citizen doctorate recipients who provided a postdoctoral location, 68.8 percent indicated that they would remain in the United States for employment or continuing study; of those with definite commitments, 73.6 percent intended to remain in the United States—97.7 percent for permanent residents and 67.5 percent of those on temporary visas. (see Tables 26 and 27).[6] However, this incidence differed by country of citizenship, ranging from a high of 95 percent for China and 91 percent for India down to 39 percent for Korea. In absolute numbers of international doctorate recipients planning to remain in the United States immediately after receipt of the degree, the five countries with the largest numbers were China (1,976); India (1,131); Taiwan (639); Korea (387); and Canada (239). (See Figure 2-13.)

Whereas one-fourth of U.S. citizen doctorate recipients with definite commitments indicated that they were continuing their studies after receipt of the Ph.D., 33.8 percent of permanent residents and 39.0 percent of those holding temporary visas reported immediate plans for study instead of employment. Of those planning to remain in the United States, 34.9 percent of permanent residents and almost half (48.3 percent) of those on temporary visas indicated plans for postdoctoral study rather than employment as their immediate commitment. (See Tables 26 and 27.)

About 27 percent (2,661) of non-U.S. citizen doctorate recipients indicated plans to return to their home country. Of the nearly 10,000 international doctorate recipients who indicated a postdoctoral location, fewer than 400 (395) of those not returning to their home country were bound for somewhere other than the United States; in other words, 94.5 percent of the non-U.S. citizen doctorate recipients planned to remain in the United States.

Only Korea and Mexico had immediate "return rates" that exceeded 50 percent (59.5 percent and 51.0 percent). China and India had the lowest return rates (2.2 percent and 5.6 percent) of any country.

[6] With respect to postdoctoral activity and location, the survey does not distinguish short-term versus long-term plans or expectations. An "immediate" plan or commitment could thus be temporary.

Figure 2-13
Percent of 1997 Ph.D. recipients who report U.S. as postdoctoral location by country of citizenship

NOTE: N represents those Ph.D.s with known primary support; percentages are based on these numbers. Because nonresponse to primary source of support is much greater than for other variables and fluctuates from year to year, the reader is advised not to compare percentages in this table with those published in earlier reports. The overall nonresponse rate for primary source of support was 12.8 percent in 1997, compared to 12.1 percent in 1996, 25.2 percent in 1995, 27.6 percent in 1994, 33.8 percent in 1993, and 30.3 percent in 1992. See technical notes in Appendix C for further information

"Personal" includes loans as well as own earnings and contributions from spouse/family. Federally funded research assistantships (RAs) are grouped under "University" because not all recipients of such support are aware of the actual source of funding. For further definition of "Federal" support, see item A11 on the survey questionnaire in Appendix D. "Other" support includes U.S. nationally competitive fellowships, business/employer funds, foreign government and state government sources.
*Asians includes Pacific Islanders. American Indians includes Alaskan Natives.
†Includes mathematics and computer sciences.

APPENDIXES

APPENDIX CONTENTS

APPENDIX A: The Seven Basic Tables, 1997

Appendix A includes the following seven tables:

A-1 Number of Doctorate Recipients, by Gender and Subfield, 1997
A-2 Number of Doctorate Recipients, by Citizenship, Race/Ethnicity, and Subfield, 1997
A-3 Statistical Profile of Doctorate Recipients, by Major Field, 1997
A-4 Statistical Profile of Doctorate Recipients, by Race/Ethnicity and Citizenship, 1997
A-5 Sources of Graduate School Support for Doctorate Recipients, by Broad Field and Gender, 1997
A-6 State of Doctoral Institution of Doctorate Recipients, by Broad Field and Gender, 1997
A-7 Institutions Granting Doctorates, by Major Field, 1997

TABLE A-1 and TABLE A-2: Tables A-1 and A-2 display data for the most recent year by subfield of doctorate. Field groupings may differ from those in reports published by federal sponsors of the Survey of Earned Doctorates (SED). The "general" field categories—e.g., "chemistry, general"—include individuals who either received the doctorate in the general subject area or did not indicate a particular specialty field. The "other" field categories—e.g., "chemistry, other"—include individuals whose specified doctoral discipline was not among the specialty fields listed.

Table A-1 presents data by doctoral specialty and gender. Table A-2 displays doctoral specialty by citizenship and race/ethnicity. For a detailed description of the racial/ethnic variable, see the explanatory note for Table A-4.

TABLE A-3: Table A-3 is composed of three 2-page tables. The first table includes data on *all* research doctorate recipients from the most recent year; the other two tables present the same data by gender. Field groupings may differ from those in reports published by federal sponsors of the SED. Terms requiring definition are as follows:

Percentage with Master's: The percentage of doctorate recipients in a field who received a master's degree in any field before earning the doctorate.

Median Age at Doctorate: One-half received the doctorate at or before this age. A recipient's age is obtained by subtracting the month/year of birth from the month/year of doctorate. (See note on next page.)

Median Time Lapse: "Total Time" refers to the total calendar time elapsed between the month/year of baccalaureate and the month/year of doctorate. "Registered Time" refers to the actual time in attendance at colleges and universities between receipt of the baccalaureate and the doctorate. Enrollment includes years of attendance not related to a recipient's doctoral program.

NOTE about medians: *The method of computing medians has been revised. Beginning with Summary Report 1994,* ***months*** *(of birth, baccalaureate, and doctorate) are included in the calculations; medians presented in earlier reports were based only on years. Some medians would be the same regardless of the method of computation, but the new method generally computes slightly different results than are obtained by the old method. While variation is small (usually one or two decimal places), the reader should consider these differences when comparing medians presented in this report with those in earlier reports.*

Postgraduation Plans: Each year's doctorate recipients provide information on post-graduation employment or study plans in response to items B1 through B9 on the survey form. Since the questionnaire is filled out around the time the doctorate is awarded, a recipient's plans are subject to change. However, comparisons with the longitudinal Survey of Doctorate Recipients (SDR) have shown SED data to be a reasonable indicator of actual employment status in the year following the doctorate, although results vary by sector. (The SDR is a follow-up employment survey of a sample of doctorate recipients in science, engineering, and, until 1995, humanities fields.)

In Table A-3 the postgraduation plans of doctorate recipients are grouped as follows: "Postdoctoral Study Plans" (fellowship, research associateship, traineeship, other), "Planned Employment after Doctorate" (educational institution, industry, etc.), and "Postdoctoral Plans Unknown." These categories include recipients who were still negotiating or seeking positions at the time of survey completion, as well as those whose plans were definite. The sum of these lines equals 100 percent for each column, with allowance for rounding: for example, 19.5 percent of all engineers had postdoctoral study plans, 70.8 percent planned to be employed, and 9.6 percent did not report their post-graduation plans, totaling 100 percent. The study and employment rows are further subdivided. The data on study plans show that 6.1 percent of all engineers planned to pursue postdoctoral fellowships; 12.3 percent, research associateships; 0.8 percent, traineeships; and 0.3 percent, some other form of postdoctoral study. These percentages sum to 19.5 percent, the proportion of engineers who reported plans for postdoctoral study. The employment row is similarly subdivided by type of employer. The percentages for these rows add to 70.8 percent—the proportion of engineering Ph.D.s who planned employment. The category for educational institutions includes elementary and secondary schools as well as colleges and universities, and the category for government includes military service.

The four lines of data beginning with "Definite Postdoctoral Study" distinguish between individuals who had definite postgraduation plans at the time of survey completion (item B1: "Am returning to, or continuing in, predoctoral employment" or "Have signed contract or made definite commitment") and those who were still seeking employment or postdoctoral study (item B1: "Am negotiating with one or more specific organizations," "Am seeking position but have no specific prospects," or "Other"). These four lines, when added to the prior line, "Postdoctoral Plans Unknown," total 100 percent with allowance for rounding. The two lines "Definite Postdoctoral Study" and "Seeking Postdoctoral Study" add to give the percentage for "Postdoctoral Study Plans"; the two lines "Definite Employment" and "Seeking Employment" add to give the percentage for "Planned Employment After Doctorate."

Percentages showing the distribution of doctorate recipients by postdoctoral work activity and region of employment are based only on the number of recipients who had *definite employment* commitments at the time they completed the questionnaire. These percentages exclude recipients who planned postdoctoral study (as described above) and recipients who were still *seeking* employment at the time they completed the questionnaire. (Note that the rows on specific postdoctoral study and employment plans discussed earlier include individuals whose plans were *not definite*.) Revisions to the questionnaire format beginning in 1990 resulted in higher rates of nonresponse to the item on work activity through 1993, when the rate was 15.1 percent. The questionnaire was revised again in 1994, and nonresponse subsequently dropped to 11.9 percent in 1994 and 10.7 in 1995. A final revision in 1995 dropped the nonresponse for this item to just 3.4 percent in 1997.

The U.S. regions of employment shown in Table A-3 include the following states and territories:

New England:	Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, Vermont
Middle Atlantic:	New Jersey, New York, Pennsylvania
East North Central:	Illinois, Indiana, Michigan, Ohio, Wisconsin
West North Central:	Iowa, Kansas, Minnesota, Missouri, Nebraska, North Dakota, South Dakota
South Atlantic:	Delaware, District of Columbia, Florida, Georgia, Maryland, North Carolina, South Carolina, Virginia, West Virginia
East South Central:	Alabama, Kentucky, Mississippi, Tennessee
West South Central:	Arkansas, Louisiana, Oklahoma, Texas
Mountain:	Arizona, Colorado, Idaho, Montana, Nevada, New Mexico, Utah, Wyoming
Pacific & Insular:	Alaska, California, Hawaii, Oregon, Washington, American Samoa, Guam, Puerto Rico, Trust Territory, Virgin Islands

TABLE A-4: Table A-4 contains data by race/ethnicity and citizenship for selected variables included in Tables A-3 and A-5. Field groupings may differ from those in reports published by federal sponsors of the SED.

The racial/ethnic question has undergone several revisions over the years. In 1977 it was modified to correspond to a standard question format recommended by the Federal Interagency Committee on Education and adopted by the Office of Management and Budget (OMB) for use in federally sponsored surveys; an explanation of the effect of these changes is detailed on page 13 of *Summary Report 1977.* (Note: Changes in the OMB guidelines prompted the moving of persons having origins in the Indian subcontinent from the white category to the Asian category.) In 1980 the item was further revised in two ways: (1) the Hispanic category was subdivided into Puerto Rican, Mexican American, and other Hispanic to provide more detail for users of the

racial/ethnic data, and (2) respondents were asked to check only one racial category. (Before 1980 doctorate recipients could check more than one category to indicate their race.) The item was modified again in 1982 to separate the questions on race and ethnicity. Since then respondents have been asked to first check one of the four racial group categories (American Indian, Asian, black, or white) and then indicate whether or not they are Hispanic. In Table A-4, Ph.D.s who reported Hispanic heritage, regardless of racial designation, are included in one of three Hispanic groups: Puerto Rican, Mexican American, or other Hispanic. The remaining survey respondents are then counted in the respective racial groups. (Note: Doctorate recipients who checked the category "American Indian or Alaskan Native" are identified as American Indian in this report.)

NOTE about median age and time lapse (to doctorate): *The method of computing medians has been revised. Beginning with Summary Report 1994,* ***months*** *(of birth, baccalaureate, and doctorate) are included in the calculations; medians presented in earlier reports were based only on years. Some medians would be the same regardless of the method of computation, but the new method generally computes slightly different results. While variation is small (usually one or two decimal places), the reader should consider these differences when comparing medians presented in this report with those in earlier reports. See explanatory information on Table A-3 for further description.*

In the section of "Graduate School Support" a recipient counts in more than one category if support was received from multiple sources. Because a student counts more than once for sources of support, the vertical percentages sum to more than 100 percent. See the explanatory note on Appendix Table A-5 for further detail. (Data on the *primary* source of support for doctorate recipients are presented in the body of the report.)

The other sections in Table A-4 correspond to many of those in Appendix Table A-3. The reader is referred to the explanatory note on Table A-3 for additional information.

TABLE A-5: Table A-5 displays data reported in item A11 on sources of financial support received during graduate school, by broad field and gender of recipient. Field groupings may differ from those in reports published by federal sponsors of the SED.

A recipient counts in more than one category in Table A-5 if support was received from multiple sources. Because a student counts once for each of his/her sources of support, the vertical percentages sum to more than 100 percent. (Data on the *primary* source of support for doctorate recipients are presented in the body of the report.)

Beginning with *Summary Report 1990*, federal research assistantships (RAs) have been aggregated with university RAs and shown under "University Research Assistant" in Table A-5. (Focus groups of doctoral candidates have indicated uncertainty as to the source of their RA funding; it is therefore likely that some RAs have incorrectly identified support provided by the federal government as university rather than federal.) The reader is advised *not* to compare sources of support data presented in the 1990-1997 *Summary Reports* with data in earlier reports

because percentages appear higher for university support and lower for federal support in tables where all RAs are aggregated as "University Research Assistants."

The data in Table A-5 should be interpreted as follows: 448 male doctorate recipients in the physical sciences in 1997 reported financial support from federal fellowships or traineeships during graduate school. This number is 9.5 percent of the male physical sciences Ph.D.s who answered the question on sources of support, and 17.4 percent of all males in *any* field who reported federal fellowship or traineeship support.

TABLE A-6: Table A-6 shows, by broad field and gender, the number of persons receiving a doctorate in the most recent year from institutions in each of the 50 states, the District of Columbia, and Puerto Rico. Field groupings may differ from those in reports published by federal sponsors of the SED. See inside the back cover for a description of field groupings as reported in this table; see the questionnaire's Specialties List at the back of the report for the names and codes of the subfields included.

TABLE A-7: Table A-7 displays data by doctorate-granting institution and major field. It includes all institutions in the United States (the 50 states, the District of Columbia, and Puerto Rico) that awarded doctoral degrees in the most recent year. Field groupings may differ from those in reports published by federal sponsors of the SED and from departmental designations at institutions.

NOTE: Field groupings may differ from those in reports published by federal sponsors of the Survey of Earned Doctorates. See last page of report for a description of fields in this table. Physical Sciences includes Mathematics and Computer Sciences, as well as Physics/Astronomy, Chemistry, and Earth/Atmospheric/Marine Sciences. Refer also to the explanatory note for this table. Calculations in this table exclude 651 respondents with missing data for doctoral field.
*Includes 384 respondents not reporting sex. ★Includes 2-year, 4-year and foreign colleges and universities, medical schools, and elementary/secondary schools.
+Includes only recipients with definite employment plans.

NOTE: Field groupings may differ from those in reports published by federal sponsors of the Survey of Earned Doctorates. See last page of report for a description of fields in this table. Physical Sciences includes Mathematics and Computer Sciences, as well as Physics/Astronomy, Chemistry, and Earth/Atmospheric/Marine Sciences. Refer also to the explanatory note for this table. Calculations in this table exclude 366 male respondents with missing data for doctoral field.

★Includes 2-year, 4-year and foreign colleges and universities, medical schools, and elementary/secondary schools.

+Includes only recipients with definite employment plans.

NOTE: Field groupings may differ from those in reports published by federal sponsors of the Survey of Earned Doctorates. See last page of report for a description of fields in this table. Physical Sciences includes Mathematics and Computer Sciences, as well as Physics/Astronomy, Chemistry, and Earth/Atmospheric/Marine Sciences. Refer also to the explanatory note for this table. Calculations in this table exclude 329 female respondents with missing data for doctoral field.

★Includes 2-year, 4-year and foreign colleges and universities, medical schools, and elementary/secondary schools.

+Includes only recipients with definite employment plans.

NOTE: Field groupings may differ from those in reports published by federal sponsors of the Survey of Earned Doctorates.

* Includes 384 individuals who did not report their sex and 3,647 individuals who did not report their citizenship at time of doctorate.

† In this table a recipient counts once in each source category from which he or she received support. Since students indicate multiple sources of support, the vertical percentages sum to more than 100 percent. Data on the "primary" source of support for doctorate recipients are presented in the Summary Report.

★ Because federal support obtained through the university cannot always be determined, no distinction is made between federal and university research assistants in this table. Both types of support are grouped under "University Research Assistant." Federal loans are counted in the categories for loans.

\# Includes 2-year, 4-year, and foreign colleges and universities, medical schools, and elementary/secondary schools.

\+ Includes only recipients with definite employment plans.

NOTE: In this table a recipient counts once in each source category from which he or she received support. Since students indicate multiple sources of support, the vertical percentages sum to more than 100 percent. Data on the "primary" source of support for doctorate recipients are presented in the body of the Summary report. Field groupings may differ from those in reports published by federal sponsors of the Survey of Earned Doctorates.

* Excludes 384 individuals for whom sex was not reported.

★ V denotes vertical percentage; H denotes horizontal percentage.

+ Because federal support obtained through the university cannot always be determined, no distinction is made between federal and university research assistants in this table. Both types of support are grouped under "University Research Assistant." Federal loans are counted in the categories for loans.

The 4,451 Ph.D.s who did not report sources of support are omitted from this total. Percentages are based only on known responses.

APPENDIX B: Trend Tables, 1987-1997

Appendix B includes the following two tables:

B1: Number of Doctorate Recipients, by Subfield, 1987-1997
B2: Number of Doctorate Recipients, by Sex, Race/Ethnicity, and Citizenship, 1977, 1982, and 1987-1997

TABLE B-1: Table B-1 presents data for the most recent decade by subfield of doctorate. In general, the subfields correspond to the fields on the questionnaire's Specialties List located at the back of this report; some, however, do not appear on the current Specialties List because they are no longer included in the survey taxonomy. A dash (-) in a column indicates that the field was not on the Specialties List for that year.

Field groupings in this table may differ from those in reports published by federal sponsors of the Survey of Earned Doctorates (SED); see inside the back cover for a description of field groupings as reported in these tables. The "general" field categories—for example, "chemistry, general"—include individuals who either received the doctorate in the general subject area or did not indicate a particular specialty field. The "other" field categories—for example, "chemistry, other"—include individuals whose specified doctoral discipline was not among the specialty fields.

The seven tables in Appendix A present additional information on the most recent cohort of Ph.D.s by field of doctorate.

TABLE B-2: Table B-2 displays, by sex and citizenship, data on the race/ethnicity of doctorate recipients for 1977, 1982 and the past decade. Table B-2 contains three panels, each displayed on a separate page. The first panel includes all doctorates; the others disaggregate the data by sex.

New follow-up procedures implemented in 1990 and later years have increased coverage of several variables, including citizenship and race/ethnicity. One result has been greater postsurvey adjustment to racial/ethnic data than in earlier years. (Note: The greatest adjustment was to the numbers of black Ph.D.s in 1990 and 1991—an increase of about 7.5 percent each year.)

The racial/ethnic question has undergone several revisions over the years. In 1977 it was modified to correspond to a standard question format recommended by the Federal Interagency Committee on Education and adopted by the Office of Management and Budget (OMB) for use in federally sponsored surveys; an explanation of the effect of these charges is detailed on page 13 of *Summary Report 1977*. (Note: Changes in the OMB guidelines prompted the moving of persons having origins in the Indian subcontinent from the white category to the Asian category.) In 1980 the item was further revised in two ways: (1) the

Hispanic category was subdivided into Puerto Rican, Mexican American, and other Hispanic to provide more detail for users of the racial/ethnic data, and (2) respondents were asked to check only one racial category. (Before 1980 doctorate recipients could check more than one category to indicate their race.) The item was modified again 1982 to separate the questions on race and ethnicity. Since then respondents have been asked to first check one of four racial group categories (American Indian, Asian, black, or white) and then indicate whether or not they are Hispanic. In Table B-2, *Ph.D.s who reported Hispanic heritage, regardless of racial designation, are counted as Hispanic*. The remaining survey respondents are then counted in their respective racial groups. (Note: Doctorate recipients who checked the category "American Indian or Alaskan Native" are identified as American Indian in this report.)

Tables A-2 and A-4 in Appendix A present additional information on the most recent cohort of Ph.D.s by race/ethnicity.

APPENDIX C: Technical Notes

I. Survey Response Rates

SURVEY RESPONSE RATES*

Year	Self-Report Rate	Year	Self-Report Rate
1966	96.3	1982	95.3
1967	97.3	1983	95.5
1968	97.6	1984	95.1
1969	96.6	1985	94.8
1970	98.1	1986	93.5
1971	97.5	1987	93.1
1972	97.3	1988	92.9
1973	97.5	1989	92.3
1974	94.2	1990	93.6
1975	97.3	1991	94.6
1976	97.2	1992	95.1
1977	96.6	1993	94.7
1978	96.3	1994	94.6
1979	96.4	1995	94.1
1980	96.2	1996	92.8
1981	95.7	1997	90.8

* The rates for 1965-1996 reflect late responses. The rate for 1997 may increase slightly in the next year if additional questionnaires are received after survey closure. Self-report rates for 1980-1997 are determined from the "source of response" indicator in the doctorate records. Because this indicator was not coded prior to 1980, survey forms for 1965-1979 are assumed to be self-reported if "month signed" or "marital status" is present. "Marital status" is not available from sources other than the doctorate recipient.

As shown in the table above, 90.8 percent of 1997 recipients of U.S. doctorates completed survey forms. This percentage is referred to as the "self-report" rate. For the remaining doctorate recipients, "skeleton" records were created using basic information obtained from doctorate granting institutions or from commencement programs. This skeleton information includes Ph.D. institution, Ph.D. field, Ph.D. year, and sex of Ph.D. recipient. With regard to the latter, it should be noted that sex was not always available even for survey respondents. Every effort was made to obtain this information for as many respondents as possible. For a small percentage, this could not be done with confidence. Thus, there are missing data for many of the tabulations involving sex in this year's report. In previous years, whenever sex was missing, the data were assigned to "male." In 1997, this practice was discontinued. However, for consistency with previously published results from earlier reports, this procedure

was used for years prior to 1997 in all trend tables. The tabulations involving sex for 1997 exclude missing cases.

Wherever possible this report includes data from all Ph.D. records whether complete or skeletal; thus the reported total number of Ph.D. recipients for 1997 (42,705) includes both respondents and non-respondents. Response rates are highest for tabulations involving these variables: Ph.D. institution, Ph.D. field, Ph.D. year, and sex of Ph.D. recipient.

II. Item Response Rates

The table on the following pages shows the response rates for each item in the Survey of Earned Doctorates for 1997. The numbers and percentages shown in the tables and figures in the body of the Summary Report are based only on the number of doctorate recipients who responded to the applicable survey items. For cross-tabulations, the response rate for a given tabulation will lie between the response rates for the items involved in the tabulation.

NOTE: NA = not available.

*Because this field is not applicable to all doctorate recipients, the response rate will always be under 100%.

**There are no Carnegie Codes for Research Institute of Scripps Clinic/CA (new in FY 1994), Annenberg Research Institute/PA (not doctorate-granting after FY 1992), St. Stephens College/MA (defunct), and Woodstock College/NY (defunct).

***The percentage represents the race/ethnic groups standardly reported by OSEP/NRC; multiple and "other" races are excluded.

****As of FY 1996, the percentage includes recipients who said they had no primary source of support.

*****The percentages on the first line are based on the total doctoral cohort for a fiscal year. The percentages on the second line (enclosed in parentheses) are based on the number of recipients who reported plans for postdoctoral employment.

*The percentages on the first line are based on the total doctoral cohort for a fiscal year. The percentages on the second line (enclosed in parentheses) are based on the number of recipients who reported plans for postdoctoral study.

**The percentages on the first line are based on the total doctoral cohort for a fiscal year. The percentages on the second line (enclosed in parentheses) are based on the number of recipients who reported plans for postdoctoral employment.

***In the 1997 dataset, this variable is broken into three parts (PDLOC, PDOCCODE, AND PDFORGN). The 1997 response rate is based on the presence of a valid value for any of the three subparts. This parallels what was reported for earlier rounds.

III. Derived Variables

The following derived variables deserve further explanation.

Postdoctoral Plans to Stay in the United States

In 1997, the planned postdoctoral location of Ph.D. recipients was coded in a new variable called PDLOC coded using FIPS codes for U.S. states and territories and countries. Values of PDLOC less than 100 indicate a postdoctoral location in the United States.

For years prior to 1997, this variable is based on PDAFFIL. If the first character of PDAFFIL is numeric, the respondent has indicated a planned postdoctoral affiliation in the United States. Non-numeric values in the first position of PDAFFIL (except "R") indicate non-U.S. locations. A value of "R" for PDAFFIL signifies the respondent's refusal to provide information.

For the interested user, the following is the SAS code used to produce "USPLAN" as an index of plans to stay in the United States following the Ph.D. using PDAFFIL1 (a variable created using the first character of PDAFFIL).

```
usplan=2;
if pdaffil1 in ("0","1","2","3","4","5","6","7","8","9") then usplan=1;
if pdaffil1 eq "R" then usplan=.;
if pdaffil1 eq " " then usplan=.;
```

Firm Postdoctoral Plans

Postdoctoral Plans are coded using the values of PDOCSTAT which indicate that the Ph.D. recipients postdoctoral plans were definite at the time the survey was completed. That is, codes 0, 1, or A on PDOCSTAT indicate that the respondent had definite postdoctoral plans, whereas codes 2, 3, and 4 indicate that the respondent was still seeking to determine postdoctoral placement.

The following is the SAS code used to derive FIRMPLAN from PDOCSTAT :

```
if pdocstat in ("0","1","A") then firmplan=1;    /* Definite */
if pdocstat in ("2","3","4") firmplan=2;    /* Seeking */
if pdocstat eq " " then firmplan=.;
```

Firm Plans to Stay in the United States

This variable is derived from USPLAN and FIRMPLAN. A respondent was coded as having firm plans to stay in the United States if the reported postdoctoral location was in the United States and the reported postdoctoral plans were coded "definite."

The following is the SAS code that creates the variable FIRMUS from USPLAN and FIRMPLAN as described above.

```
firmus=2;
if (usplan eq 1 and firmplan eq 1) then firmus=1;
if usplan eq . or firmplan eq . then firmus=.;
```

Primary Source of Graduate School Support

In 1995 the response rate to the question on primary sources of financial support was 74.8 percent. In 1996 and 1997, the response rate jumped to 87.9 and 87.2 percent, respectively. This increase in response was due to a revision of the questions on sources of support. In 1995 and earlier years the questionnaire asked the respondent to identify *and* rank their sources in one question. Starting in 1996, the questionnaire asked the respondent to identify all sources of support in one question and in a separate question asked them to indicate their primary and secondary sources. The separate question on primary/secondary sources also provided the opportunity to denote that the doctorate recipient had no primary or secondary sources of support.

Race/Ethnicity

Adjustments to numbers: Readers should keep in mind that fluctuations in numbers for a racial/ethnic group reflect to some degree any upward or downward change in both overall survey response and response to the racial/ethnic item. Since 1990 response to race/ethnicity has shown great improvement -- a result of new procedures for following up missing information. Race/ethnicity was not followed up prior to 1990.

All follow-up responses received before survey closure are included in the data presented in the *Summary Report* for that survey. Responses arriving after closure are included in the next year's report. The extension of survey closure dates in the past four years has allowed most follow-up responses to be received in time to be included in the *Summary Reports* for those surveys. Postsurvey adjustments were greatest for 1990 and 1991 data, much less for 1992, and minimal for 1993. In 1994 response to the racial/ethnic item reached 97 percent by survey closure -- the highest rate ever. Any postsurvey adjustments for 1997 data will be included in next year's report, but they are expected to be very slight because of the extended closure. Updated numbers for all recent years appear in Appendix Table B-2 in this report.

History of the racial/ethnic question: Although this item was first introduced to the Survey of Earned Doctorates in 1973, over 25 percent of recipients in 1973 and about 13 percent in 1974 either completed earlier questionnaires or provided unusable responses. Since 1975 the racial/ethnic data have been more reliable, with response rates ranging from 90.1 to 97.1 percent (the latter in 1994). The information on race/ethnicity presented in this report is limited to the period 1977 to 1997.

The racial/ethnic question has undergone several revisions over the years. In 1977 it was modified to correspond to a standard question format recommended by the Federal Interagency Committee on Education and adopted by the Office of Management and Budget (OMB) for use in federally sponsored surveys; and explanation of the effect of these changes is detailed on page

13 of *Summary Report 1977*. (Note: Changes in the OMB guidelines prompted the reclassification of persons having origins in the Indian subcontinent from the white category to the Asian category.) In 1980 the question was further revised in two ways: (1) the Hispanic category was subdivided into Puerto Rican, Mexican American, and other Hispanic, and (2) respondents were asked to check only one racial category. (Before 1980 doctorate recipients could check more than one category to indicate their race.) The item was modified again in 1982 to separate the questions on race and ethnicity. Since then, respondents have been asked to first check on of the four racial group categories (American Indian, Asian, black, or white) and then indicate whether or not they are Hispanic. *In this report, Ph.D.s who reported Hispanic heritage are classified as Hispanic regardless of their racial designations*; the remaining Ph.D.s are then counted in the respective racial groups. (Note: Doctorate recipients who checked the category "American Indian or Alaskan Native" are identified as "American Indian" in this report.)

Time to Doctorate

Total time to degree (TTD): TTD measures the total elapsed time between the baccalaureate and the doctorate (including time not enrolled in school.) TTD can be computed only for individuals whose baccalaureate year is known. Baccalaureate year is often obtained from commencement programs or doctorate institutions when not reported by the recipient.
Months are now included in the computation (see note below).

Registered time to degree (RTD): RTD gauges the time in attendance at colleges and universities between receipt of the baccalaureate and the doctorate. Enrollment may include years of attendance not related to a recipient's doctoral program. RTD can only be computed for individuals who provided all years of college attendance after the baccalaureate.
Months are now included in the computation (see note below).

Note about medians: *The method of computing medians has been revised. Beginning with* Summary Report 1994, ***months*** *(of birth, baccalaureate, and doctorate) are included in the calculations whenever available; if months are missing, only years are used in the calculations. (However, medians are not computed for years prior to 1969 because doctorate month is unavailable for all Ph.D.s.) Medians presented in previous* Summary Reports *were based only on years. Some medians would be the same regardless of the method of computation, but the new method generally computes slightly different results. While differences are small (usually one- or two-tenths of a year), readers should consider these differences when comparing medians presented in the report with those in earlier reports.*

APPENDIX D

Survey of Earned Doctorates Questionnaire, 1996-1997

Please print your name in full:

Last Name	Suffix (e.g., Jr.)	First Name	Middle Name

Cross reference: ***Birth name or former name legally changed***

This information is solicited under the authority of the National Science Foundation Act of 1950, as amended. ALL INFORMATION YOU PROVIDE WILL BE TREATED AS CONFIDENTIAL and used only for research or statistical purposes by your doctoral institution, the survey sponsors, their contractors, and collaborating researchers for the purpose of analyzing data, preparing scientific reports and articles, and selecting samples for a limited number of carefully defined follow-up studies. Your social security number is also solicited under the NSF Act of 1950, as amended. Providing it is also voluntary. It is used for survey quality control, program evaluation, and for matching with other databases. Any information publicly released (such as statistical summaries) will be in a form that does not personally identify you. Your response is voluntary and failure to provide some or all of the requested information will not in any way adversely affect you.

The time needed to complete this form varies according to individual circumstances, but the average time is estimated to be 20 minutes. If you have comments regarding this time estimate, you may write to the National Science Foundation, 4201 Wilson Blvd., Arlington, VA 22230, Attention: NSF Reports Clearance Officer.

OMB No.: 3145-0019
Approval Expires 6/30/97

NATIONAL SCIENCE FOUNDATION
4201 WILSON BOULEVARD
ARLINGTON, VIRGINIA 22230

To the Doctorate Recipient:

Congratulations on earning a doctoral degree! This is an important accomplishment for you. Your accomplishment is also significant for both this nation and others, as the new knowledge generated by research doctorates enhances the quality of life in this country and throughout the world. Because of the importance of persons earning research doctorates, several Federal agencies — listed on the cover — sponsor this Survey of Earned Doctorates.

The basic purpose of this survey is to gather objective data about doctoral graduates. These data are important in improving graduate education both at your home institution and beyond. Often, decisions made by governmental and private agencies to develop new programs, or to support present ones, are based in part on the data developed from this survey.

This form is distributed by the Graduate Deans and is filled out by all persons who have completed the requirements for a research doctoral degree. Please print your name on the cover if you have not already done so, and then complete this questionnaire and return it to the Graduate Dean. The confidentiality of the information you provide is carefully protected.

On behalf of the sponsoring Federal agencies and the National Research Council, I thank you for your participation in this survey.

Best wishes,

Dr. Kenneth M. Brown
Director, Division of Science Resources Studies

INSTRUCTIONS

Thank you for taking the time to complete this important questionnaire. Directions are provided for each question. Because not all questions will apply to everyone, you may be asked to skip certain questions.

- If you have not already done so, please print your name on the front cover.
- Either a pen or pencil may be used.
- When answering questions that require marking a box, please use an "X."
- If you need to change an answer, please make sure that your old answer is either completely erased or clearly crossed out.
- On pages 8 and 9 (inside the back cover) is a Specialties List for classifying your field(s) of specialization in Questions A2, A10, B5, and B9.

Thanks again for your help; we really appreciate it.

PART A - Education

A1. What is the title of your dissertation?

Please mark (X) this box if the title below refers to a performance, project report or a musical or literary composition required instead of a dissertation

Title _____

_____

_____

_____

_____

A2. Using the Specialties List (pages 8-9), please write the name and number of the field of your dissertation research.

Name of field _____

Number of field ___

A3. After receiving your first bachelor's degree (or equivalent), and including the period spent on your dissertation, how many years were you a full-time student ?

___ Years (whole numbers)

A4. Please check the category that most fully describes your employment or study status during the year immediately before the award of the doctorate.

Mark (X) one

0 Full-time employed → *GO to A5*
1 Held fellowship
2 Held assistantship
3 Part-time employed
4 Not employed
5 Other - *Specify* ↴

_____

SKIP to A6

A5. *(IF FULL-TIME EMPLOYED)* What type of position did you hold?

Mark (X) one

6 College or university, faculty
7 College or university, non-faculty
8 Elementary or secondary school, teaching
9 Elementary or secondary school, non-teaching
11 Industry or business
12 Other - *Specify* ↴

_____

A6. In what state or country was the high school/ secondary school that you last attended?

State (if U.S.)

_____

OR

Country (if not U.S.)

_____

A7. When did you graduate from high school/ secondary school?

Month ___ **19** ___ Year

A8. Please name the department (or interdisciplinary committee, center, institute, etc.) of the university that supervised your doctoral program.

Mark (X) box if none

_____

_____
Department/Committee/Center/Institute/Program

A9. Please name the school or college within the university that supervised your doctoral program.

Mark (X) box if not applicable

_____

_____
School or College within University

A10. Please list below, chronologically, all colleges (including 2-year) and graduate institutions you have attended and each degree earned (if any). Be sure to give the years attended for ALL institutions attended. Include your doctoral institution(s) and degree at the end.

Mark (X) box if bachelor's degree (or equivalent) was never received

Mark (X) box if master's degree (or equivalent) was never received

EXAMPLE Institution and Location	Years Attended		Field of Study		Degree (if any)		
			Use Specialties List, pages 8-9			Granted	
Institution / Branch or City / State or Province / Country (if not U.S.)	From	To	Field Name	Number	Title	Mo.	Yr.
Indian Institute of Technology / *Madras* / *India*	*83*	*85*	*Mechanical Engineering*	*345*	—	—	—
University of California / *Berkeley* / *CA*	*85*	*87*	*Mechanical Engineering*	*345*	*B.S.*	*6*	*87*

If you have attended more than six institutions of higher education, please continue this list on the back cover. Be sure to include your doctoral institution.

A11. This question is about your sources of support during graduate school. Did you receive support from the following sources?

Mark (X) Yes or No for each	Yes	No
OWN/FAMILY RESOURCES		
01 Own Earnings	1	2
02 Spouse's Earnings	1	2
03 Family Contributions	1	2
UNIVERSITY-RELATED		
10 Teaching Assistantship	1	2
11 Research Assistantship	1	2
12 University Fellowship	1	2
14 College Work-Study	1	2
19 Other - *Specify*	1	2
FEDERAL RESEARCH ASSISTANTSHIP		
22 NIH	1	2
32 NSF	1	2
52 USDA	1	2
62 Other Federal - *Specify*	1	2
OTHER FEDERAL SUPPORT		
21 NIH Traineeship/Fellowship	1	2
29 Other HHS	1	2
33 NSF Fellowship	1	2
40 Patricia Roberts-Harris Fellowship-formerly G*POP (Department of Education)	1	2
44 Title VI Foreign Language	1	2
49 Other Dept. of Education	1	2
53 USDA Fellowship	1	2
55 NEH	1	2
60 Veterans Administration	1	2
61 Fulbright Fellowship	1	2
69 Other Federal - *Specify*	1	2
U.S. NATIONALLY COMPETITIVE FELLOWSHIPS (NON-FEDERAL)		
70 Ford Foundation	1	2
71 Rockefeller Foundation	1	2
73 Mellon Foundation	1	2
78 Other Fellowship - *Specify*	1	2
STUDENT LOANS		
80 Guaranteed Student Loan (Stafford Loan)	1	2
81 Perkins Loan - formerly NDSL	1	2
89 Other Loan - *Specify*	1	2
OTHER SOURCES		
90 Business/Employer	1	2
91 Foreign (Non-U.S.) Government	1	2
92 State Government	1	2
99 Other - *Specify*	1	2

A12. Which TWO sources gave you the most support?

From A11, enter numbers of primary and secondary sources

a. ____ Primary source of support

Mark (X) if no primary source

b. ____ Secondary source of support

Mark (X) if no secondary source

A13. When you receive your doctoral degree, how much money will you owe that is directly related to your undergraduate and/or graduate education (tuition and fees, living expenses and supplies, transportation to and from school)?

0 None
1 $5,000 or less
2 $5,001 - $10,000
3 $10,001 - $15,000
4 $15,001 - $20,000
5 $20,001 - $25,000
6 $25,001 - $30,000
7 $30,001 or more

PART B - Postgraduation Plans

B1. How definite are your immediate postgraduate plans?

Mark (X) one

0 Am returning to, or continuing in, predoctoral employment → ***GO to B2, page 5***
1 Have signed contract or made definite commitment for other work or study → ***GO to B2, page 5***
2 Am negotiating with one or more specific organizations → ***SKIP to B3, page 5***
3 Am seeking position but have no specific prospects → ***SKIP to B3, page 5***
4 Other - *Specify* → ***SKIP to B3, page 5***

B2. Please name the organization and geographic location where you will work or study.

Name

City | State (if U.S.) | Country (if not U.S.)

SKIP to B4

B3. In what state or country do you intend to live after graduation?

Mark (X) one

0 in U.S. → State _____

1 not in U.S. → Country _____

B4. What best describes your immediate postgraduate plans?

Mark (X) one

0 Postdoctoral fellowship
1 Postdoctoral research associateship
2 Traineeship
3 Other study - *Specify* _____

4 Employment (other than 0,1,2,3)
5 Military service
6 Other - *Specify* _____

SKIP to B7

B5. Please use the Specialties List (pages 8-9) to enter the name and number of your postdoctoral field.

Name of field _____

Number of field ___

B6. What will be the main source of financial support for your postdoctoral study/research?

Mark (X) one

0 U.S. Government
1 College or university
2 Private foundation
3 Nonprofit, other than private foundation
4 Other - *Specify* _____

6 Unknown

SKIP to C1, page 6

B7. For what type of employer will you be working?

Mark (X) one

EDUCATION
a U.S. 4-year college or university other than medical school
b U.S. medical school
c U.S. junior or community college
d Elementary or secondary school
e Foreign institution

GOVERNMENT
f Foreign government
g U.S. federal government
h U.S. state government
i U.S. local government

PRIVATE SECTOR
j Nonprofit organization
k Industry or business
l Self-employed

OTHER
m Other - *Specify* _____

B8. From the list below, please indicate what your primary and secondary work activities will be by entering the numbers of your selections in the appropriate boxes:

Enter numbers from below:

a. Primary Activity

b. Secondary Activity

0 Research and development
1 Teaching
2 Administration
3 Professional services to individuals
5 Other - *Specify* _____

B9. Please use the Specialties List (pages 8-9) to enter the name and number of the field in which you will be working.

Name of field _____

Number of field ___

PART C - Background Information

C1. Are you -

1 Male
2 Female

C2. What is your marital status?

Mark (X) one

0 Single, never married
1 Married
2 Separated, divorced, widowed

C3. Not including yourself, how many dependents do you have - that is, how many others receive at least one half of their support from you?

Number

C4. What is the highest educational attainment of your mother and father?

Mark (X) one for each parent	Mother	Father
Less than high school/ secondary school	1	1
High-school/secondary-school graduate	2	2
Some college	3	3
Bachelor's	4	4
Master's	5	5
Professional	6	6
Doctorate	7	7

C5. What is your place of birth?

State (if U.S.)

OR

Country (if not U.S.)

C6. What is your date of birth?

Month Day Year

19

C7. What is your citizenship status?

Mark (X) one

U.S. Citizen:

0 Native Born
1 Naturalized → ***SKIP to C9***

Non-U.S. Citizen:

2 With a Permanent U.S. Resident Visa
3 With a Temporary U.S. Resident Visa

C8. *(IF A NON-U.S. CITIZEN)* Of which country are you a citizen?

(Specify country of present citizenship)

C9. Are you a person with a disability?

1 Yes
2 No → ***SKIP to C11***

C10. *(IF YES)* Which of the following categories describes your disability?

1 Visual
2 Orthopedic (mobility)
3 Auditory (hearing)
4 Vocal
5 Other - *Specify*

C11. Are you Hispanic?

1 Yes → ***GO to C12, page 7***
2 No → ***SKIP to C13, page 7***

C12. *(IF YES TO C11)* **Which of the following describes your Hispanic origin or descent?**

0 Mexican American
1 Puerto Rican
2 Other Hispanic - *Specify* ↴

_____

C13. What is your racial background?

Mark (X) one

0 American Indian or Alaskan Native
1 Asian or Pacific Islander
2 Black
3 White

C14. Please provide a permanent address through which you could always be reached:

Care of (if applicable)

Number and Street

City/Town | State or Province | Zip Code or Postal Code

Country (if outside U.S.)

C15. Please fill in your U.S. Social Security Number: ___ - ___ - ____

C16. Please sign and date.

Signature | Date

Mark (X) box if you would like a summary of the results of this survey (available as funding permits)
Results of the Survey of Earned Doctorates can be found on the National Science Foundation's World Wide Web home page at http://www.nsf.gov/sbe/srs/stats.htm

Did you remember to put your name on the front cover?

Please turn to the back cover to make any additional comments you may have about this survey.

SPECIALTIES LIST

INSTRUCTIONS: The following field listing is to be used in responding to items A2, A10, B5, and B9. If you choose a field marked with an asterisk (*), please write in your field of specialization in the space provided in those items.

AGRICULTURAL SCIENCES

000 Agricultural Economics
002 Agricultural Business & Mgmt.
005 Animal Breeding & Genetics
010 Animal Nutrition

Comments About This Survey

Thank you for completing the questionnaire. Please return it to the GRADUATE DEAN for forwarding to The Office of Scientific and Engineering Personnel, National Research Council, TJ 1019, 2101 Constitution Avenue, N.W., Washington, D.C. 20418. Should you need to call us, our number is 1-800-242-5674.

APPENDIX E: Field Classification and Research Degree Titles

The appendix tables present data according to the following field classifications. Appendix Tables A-1 and A-2 and Appendix Table B-1 display all subfields that are on the survey Specialties List. Appendix Tables A-4, A-5, and A-6 show data by seven broad fields only. Appendix Tables A-3 and A-7 include the additional field groupings indicated below.

SCIENCES

Physical Sciences (400-599)
- Physics and Astronomy (500-505, 560-579)
- Chemistry (520-539)
- Earth, Atmospheric, and Marine Sciences (510-519, 540-559, 590-599)
- Mathematics (420-499)
- Computer Sciences (400410)

} Combined in Table A-7

Engineering (300-399)

Life Sciences (000-299)
- Biological Sciences (100-199)
  - Biochemistry (100)
  - Other Biological Sciences (103-199)
- Health Sciences (200-299)
- Agricultural Sciences (000-099)

Social Sciences (600-699)
- Psychology (600-649)
- Economics and Econometrics (666, 668)
- Anthropology and Sociology (650, 686)
- Political Science and International Relations (674,678)
- Other Social Sciences (652-662, 670, 672, 682, 690-699)

} Combined in Table A-7

NONSCIENCES

Humanities (700-799)
- History (700-719)
- English and American Language and Literature (732-734)
- Foreign Languages and Literature (740-769)
- Other Humanities (720-729, 736-739, 770-799)

} Combined in Table A-7

Education (800-899)

Professional and Other Fields (900-999
- Business and Management (900-939)
- Other Professional Fields (940-989)
- Other Fields (999)

NOTE: Doctorate recipients indicate their fields of specialty. Their choices may differ from departmental names.

TITLES OF RESEARCH DEGREES INCLUDED IN THE SURVEY OF EARNED DOCTORATES

DA/DAT	**Doctor of Arts/Arts in Teaching**	**DMM**	**Doctor of Music Ministry**
DArch	**Doctor of Architecture**	**DMSc**	**Doctor of Medical Science**
DAS	**Doctor of Applied Science**	**DNSc**	**Doctor of Nursing Science**
DBA	**Doctor of Business Administration**	**DPA**	**Doctor of Public Administration**
DChem	**Doctor of Chemistry**	**DPE**	**Doctor of Physical Education**
DCJ	**Doctor of Criminal Justice**	**DPH**	**Doctor of Public Health**
DCL	**Doctor of Comparative Law/Civil Law**	**DPS**	**Doctor of Professional Studies**
DCrim	**Doctor of Criminology**	**DrDES**	**Doctor of Design**
DED	**Doctor of Environmental Design**	**DRE**	**Doctor of Religious Education**
DEng	**Doctor of Engineering**	**DRec/DR**	**Doctor of Recreation**
DEnv	**Doctor of Environment**	**DSc/ScD**	**Doctor of Science**
DESc/ScDE	**Doctor of Engineering Science**	**DScD**	**Doctor of Science in Dentistry**
DF	**Doctor of Forestry**	**DScH**	**Doctor of Science and Hygiene**
DFA	**Doctor of Fine Arts**	**DScVM**	**Doctor of Science in Veterinary Medicine**
DGS	**Doctor of Geological Science**	**DSM**	**Doctor of Sacred Music**
DHL	**Doctor of Hebrew Literature/Letters**	**DSSc**	**Doctor of Social Science**
DHS	**Doctor of Health and Safety**	**DSW**	**Doctor of Social Work**
DHS	**Doctor of Hebrew Studies**	**EdD**	**Doctor of Education**
DIT	**Doctor of Industrial Technology**	**JCD**	**Doctor of Canon Law**
DLS	**Doctor of Library Science**	**JSD**	**Doctor of Juristic Science**
DM	**Doctor of Musk**	**LScD**	**Doctor of Science of Law**
DMA	**Doctor of Musical Arts**	**PhD**	**Doctor of Philosophy**
DME	**Doctor of Musical Education**	**RhD**	**Doctor of Rehabilitation**
DMin/DM	**Doctor of Ministry**	**SJD**	**Doctor of Juridical Science**
DMiss	**Doctor of Missiology**	**STD**	**Doctor of Sacred Theology**
DML	**Doctor of Modem Languages**	**ThD**	**Doctor of Theology**

NSF Publications from the Doctorate Data Project

DATA BRIEFS	ISSUE BRIEFS	REPORTS
Healthy Economy Yields Even Lower Unemployment Rate for Doctoral Scientists and Engineers	Ph.D. Unemployment Trends: Cause for Alarm?	Science and Engineering Doctorate Awards: 1997
Doctorate Awards Declining in Some Science and Engineering Fields	What's Happening in the Labor Market for Recent Science and Engineering Ph.D. Recipients?	Science and Engineering Doctorate Awards: 1997
Despite Increases, Women and Minorities Still Underrepresented in Undergraduate Science and Engineering Education	Is the Gender Gap in Unemployment Disappearing?	Characteristics of Doctoral Scientists and Engineers in the U.S.: 1997 Early Release Tables
Doctoral Awards Increase in S&E Overall, But Computer Science Declines for First Time	What is Happening to Academic Employment of Scientists and Engineers?	Characteristics of Doctoral Scientists and Engineers in the U.S.: 1995
Employment of Scientists and Engineers Reaches 3.2 Million in 1995	International Mobility of Scientists and Engineers to the United States Brain Drain or Brain Circulation	Who is Unemployed? Factors Affecting Unemployment Among Individuals with Doctoral Degrees in Science and Engineering
Data Sources and Publications Sources	IWhat is the Debt Burden of New Science and Engineering Ph.D.'s?	Science and Engineering State Profiles: 1997
These publications contain data from the annual Survey of Earned Doctorates (a universe survey on the education of research doctorates) and the biennial Survey of Doctorate Recipients (a longitudinal sample survey of workforce characteristics).	Are Forms of Financial Support and Employment Choices of Recent Science and Engineering Ph.D.'s Related?	Doctoral Scientists and Engineers in the U.S.: 1995 Profile
Complete electronic information on these surveys and publications maybe obtained from www.nsf.gov/sbe/stats.htm.	Does the Educational Debt Burden of Science and Engineering Doctorates Differ by Race/Ethnicity and Sex?	Statistical Profiles of Foreign Doctoral Recipients in Science and Engineering: Plans to Stay in the United States
Written reports may be ordered online at www.nsf.gov/home/orderpub.htm or by calling 301-947-2722.	Has the Use of Postdocs Changed?	Women, Minorities, and Persons with Disabilities in Science and Engineering: 1998
For further information please contact Susan T. Hill, Director, Doctorate Data Project, sthill@nsf.gov.	Degrees and Occupations: How Do They Change?	Science and Engineering Degrees: 1966-96
	How Much Does the U.S. Rely on Immigrant Engineers?	Science and Engineering Degrees, by Race/Ethnicity of Recipients: 1989-96
	What Follows Postdoctorate Experience? Employment Patterns of 1993 Postdocs in 1995	SESTAT: A Tool for Studying Scientists and Engineers in the United States
