September 16, 2011

## **CORRECTED: NRC SEEKS PUBLIC INPUT ON DRAFT GENERIC LETTER REGARDING UPDATED SEISMIC ANALYSES FOR U.S. NUCLEAR REACTORS**

(This press release corrects the docket number for submitting comments through [regulations.gov](http://regulations.gov) and provides the updated deadline for submitting comments.)

The Nuclear Regulatory Commission staff is seeking public comments on a draft Generic Letter that would require U.S. nuclear power plants to re-examine their sites' seismic risk and provide that information to the NRC.

Comments on the draft letter, published today in the [Federal Register](http://www.federalregister.gov) and available on [regulations.gov](http://regulations.gov), will be accepted until Nov. 15. The draft letter is available in the agency's electronic document database, [ADAMS](http://www.adams.gov), by entering ML111710783 in the database's search engine. The staff expects to hold a public meeting on the draft letter in mid-October to gather comments; meeting details will be announced separately in the next several weeks.

The letter represents the next step in the staff's ongoing multi-year examination of updated seismic hazard information for the eastern and central United States, through the NRC's Generic Issues program. This effort, labeled GI-199, began long before the events at the Fukushima Dai-ichi nuclear plant in Japan and the recent Virginia earthquake. GI-199 was prompted by the seismic analyses included in applications from 2003 related to new reactor activity. The NRC issued an Information Notice in September 2010 regarding GI-199, including the agency's conclusion that existing plant designs safely account for possible earthquakes. The notice is available in [ADAMS](http://www.adams.gov) by entering ML101970221 in the database's search engine. More information on GI-199 is available on the NRC [website](http://www.nrc.gov).

Interested parties can submit comments on the draft letter through [regulations.gov](http://regulations.gov), using docket number **NRC-2011-0204**. Comments can also be submitted, referencing **NRC-2011-0204**, by mail to Cindy Bladey, Chief, Rules, Announcements, and Directives Branch (RADB), Division of Administrative Services, Office of Administration, Mail Stop: TWB-05-B01M, U.S. Nuclear Regulatory Commission, Washington, DC 20555-0001. Comments via fax can be sent to RADB at 301-492-3446.

The NRC staff will consider the comments before finalizing the Generic Letter, which the staff expects to issue near the end of the year. The draft letter's approach would have U.S. nuclear power plants perform their analysis within either one or two years, depending on the analysis method used, and deliver their results to the NRC. The agency will then determine whether additional actions are necessary.
