No. 10-192

October 27, 2010

NRC INVITES NOMINATIONS FOR THE ADVISORY COMMITTEE ON REACTOR SAFEGUARDS

The U.S. Nuclear Regulatory Commission is seeking qualified candidates for appointment to its Advisory Committee on Reactor Safeguards (ACRS). The ACRS is an advisory group, required by the Atomic Energy Act of 1954, as amended. The ACRS provides independent technical review of, and advice on, matters related to the safety of existing and proposed nuclear facilities and on the adequacy of proposed reactor safety standards. It also advises the Commission on issues in health physics and radiation protection.

The ACRS's primary focus is on safety issues associated with the operation of 104 commercial nuclear power plants in the United States and regulatory initiatives including risk-informed and performance-based regulations, license renewal, power uprates, new reactor applications and the use of mixed-oxide and high-burnup fuels. In addition, the ACRS may be requested to provide advice on radiation protection, radioactive waste management and earth sciences in the agency's licensing reviews for fuel fabrication, enrichment and waste disposal facilities.

ACRS is giving increased emphasis to its work on safety issues associated with new reactor designs and technologies. These include passive system reliability and thermal hydraulic phenomena, use of digital instrumentation and control, international codes and standards for use in multinational design certifications, materials and structural engineering, reactor core performance, nuclear materials and radiation protection.

The Commission looks to fill two vacancies on the ACRS, and seeks candidates with at least 10 years of broad experience in either of the following areas: nuclear plant operations with demonstrated experience and integrated knowledge of nuclear power plant electrical, mechanical, and control systems, and; a distinguished record of achievement in one or more areas of nuclear science and technology.

The current ACRS membership includes individuals who possess specific technical expertise along with a broad perspective in addressing nuclear safety concerns. Committee members are selected from a variety of engineering and scientific disciplines, such as risk assessment, digital instrumentation and control, chemistry, mechanical, civil and nuclear engineering, materials sciences, health physics, and earth sciences.

Candidates with pertinent graduate-level education will be given additional consideration.

Committee members are appointed to four-year terms and normally serve no more than three terms. The Commission seeks to fill these vacancies as a result of this request. Criteria used to evaluate candidates include:

- education and experience,
- demonstrated skills in nuclear science and technology and/or nuclear plant operations,
- the ability to solve complex technical problems, and
- the ability to work collegially on a board, panel, or committee.

Consistent with the requirements of the Federal Advisory Committee Act, the Commission seeks candidates with varying views and diverse backgrounds so that the membership on the committee is balanced in terms of the points of view represented and functions to be performed by the Committee. Candidates will undergo a thorough security background check to obtain the security clearance that is mandatory for all ACRS members.

Candidates for ACRS appointments are not prohibited from being involved in or having financial interests related to NRC-regulated aspects of the nuclear industry. However, because conflict-of-interest considerations may restrict the participation of a candidate in ACRS activities, the degree and nature of such restriction on an individual's activities as a member will be considered in the selection process. Each qualified candidate's financial interests must be reconciled with applicable federal and NRC rules and regulations prior to final appointment. This may require divestiture of securities or discontinuance of certain contracts or grants. Information regarding these restrictions will be provided upon request.

Interested individuals should submit résumés describing their educational and professional background including any special accomplishments, publications, and professional references. Candidates should also provide their current mailing address, telephone number, and e-mail address. All candidates will receive careful consideration. Appointment will be made without regard to factors such as race, color, religion, national origin, sex, age, or disabilities. Candidates must be citizens of the United States and be able to devote approximately 100-130 days per year to Committee business.

Résumés will be accepted through January 25, 2011. Résumés should be sent to Ms. Brandi Hamilton, ACRS, Mail Stop T2E-26, U.S. Nuclear Regulatory Commission, Washington, DC 20555-0001, or e-mail Brandi.Hamilton@nrc.gov.
