The emergence of privacy as a workplace issue presents all information professionals with new challenges. Issues of content, access and protection are having a multi-dimensional impact in all sectors of government and business. New compliance mandates are also bringing security issues into sharper focus for librarians and other information professionals, attorneys, and anyone whose position requires them to be sensitive to privacy issues.

Join your colleagues for a discussion of

- New requirements, such as breach notification, training, and oversight, and their affect on records and information programs.
- The creation of a culture of privacy in the workplace.
- The legal and ethical obligations to protect information versus insuring the public's right to access.
- Definitions of what is personal information and what measures are required to it.
- Future trends in information privacy.
