 $^{^{1}\,}$ The incidence rates represent the number of injuries and illnesses per 100 full-time workers and were calculated as: (N/EH) x 200,000, where

= number of injuries and illnesses

EΗ = total hours worked employees during the calendar year

200,000 = base for 100 equivalent full-time workers (working 40 hours per week, 50 weeks per year)

NOTE: Because of rounding, components may not add to totals. Dash indicates data do not meet publication guidelines.

 $^{^2\,}$ Days-away-from-work cases include those that result in days away from work with or without job transfer or restriction. $^3\,$ Data cover all 50 States.
