

Why you should be  
extra pleased with  
yourself every time  
you flush that toilet.

*I'm For  
Water*

If you're for water like me, then you know that upgrading your toilet to a WaterSense labeled model can save thousands of gallons every year. In fact, if only 10 percent of American homes upgraded to WaterSense labeled toilets, faucets and showerheads, we could save about 150 billion gallons per year nationwide. So, join me and thousands of our neighbors in the We're for Water campaign. Together we can stand up for water by making simple changes at home.
