

Bird Impact Data from DOI-ERDC Database Download 7 Dec. 2010

These verified data are a proportion of the total unverified data in the daily reports.

The Service is working as quickly as possible to review all of data in order to match up the verified numbers with the unverified numbers reported daily. However, there will continue to be a gap in the two sets of data as the quality assurance/quality control process is completed, which takes one to two weeks for each bird.

Based on our experience with oil spills and the behavior of migratory birds, we expect that the number of oiled birds collected may represent only a portion of the total birds affected by the spill. We are addressing these and other injury-related issues through our ongoing NRDA studies.

Approximately 10% of the grand total represents live birds that later died, so those individuals are counted twice. We are linking those records and will report a revised grand total when the QA/QC process for those links is completed.

All data should be considered provisional, incomplete, and subject to change.

	Grand Total	Not Visibly Oiled			Visibly Oiled			Unknown Oiling		
		Dead	Live	Total	Dead	Live	Total	Dead	Live	Total
All Species	8064	3113	960	4073	2067	1058	3125	864	2	866
