

3. High-Cost Support

The high-cost support mechanisms enable areas with very high costs to recover some of these costs from the support mechanisms, leaving less costs to be recovered through state rates. In this manner, the high-cost support mechanisms are intended to hold down local rates and thereby further one of the most important goals of federal and state regulation -- the preservation of universal telephone service. This section of the report outlines the high-cost support mechanisms and provides and discusses data for these mechanisms. There are three high-cost support mechanisms. These are the Universal Service Fund (USF), Long-Term Support (LTS), and Local Switching Support (LSS).

The USF deals with non-traffic sensitive (NTS) "local loop costs" -- a term that refers to the costs of outside telephone wires, poles, and other facilities that link each telephone customer's premises to the public switched telephone network. NTS costs are allocated between the state and interstate jurisdictions because all local loops can be used for making and receiving both state and interstate telephone calls. Historically, the interstate allocation was made using the Subscriber Plant Factor (SPF).¹ At present this factor is 25% for most companies.² The average cost per loop, however, varies significantly among LECs. The expense adjustment allows those study areas³ with an average cost per loop that exceeds 115% of the national average to allocate an additional portion of their NTS costs to the interstate jurisdiction and to have those costs recovered by the USF.⁴ Table 3.1 shows the percentages of additional allocation of NTS costs to the interstate jurisdiction.⁵ The USF was implemented during a period in which the basic

1 The Subscriber Plant Factor is defined in section 36.154 (e) of the Commission's rules. It was frozen in 1981 and then transitioned to 25% between 1985 and 1993, subject to the limitations in section 36.154 (f) of the Commission's rules.

2 Table 8.21 shows the few study areas where the transition from the historical SPF factor to 25% was not complete by the end of 1996. These are the study areas for which the limitations in section 36.154 (f) of the Commission's rules apply.

3 A study area is an operating company's operations in one state.

4 In January 1988, high-cost assistance was retargeted to increase benefits to small and medium sized LECs. This retargeting took the form of changes in the additional interstate cost allocation for such LECs. The old and new high-cost formulas are compared in Table 3.1 of the Monitoring Reports in CC Docket No. 87-339.

5 For example, suppose the national average cost per loop is \$240 and a company with 10,000 loops has a cost per loop of \$420, or 175% of the national average. Then for the portion of their costs between \$276 (115% of the national average) and \$360 (150% of the national average) they would receive 65% of those costs [.65 times (\$360 - \$276) = \$54.60], plus they would receive 75% of their costs over \$360 [.75 times (\$420 - \$360) = \$45], resulting in USF support totalling \$99.60 per loop, or \$996,000 total support.

interstate allocation of loop costs was shifted from a level based on the historical SPF to the present flat allocation factor of 25%. Both of these changes were phased in between 1985 and 1993.

Table 3.2 shows the actual payments that have been made through the USF since its inception. The first column indicates the year in which the NTS costs were incurred. The second column indicates the year in which the USF payments were made. The third column indicates the amount of those payments, based on the product of the transition factor shown in the fourth column and the full amounts (calculated from the formulas in Table 3.1) shown in the fifth column. The last two columns of the table show the annual growth rates in the actual payments and the full transition payments based on the payment formulas. Any deviations in the USF amounts shown in Table 3.2 from amounts reported elsewhere (including the amounts shown in Tables 3.8, 3.9, 3.14, 3.15, 3.19, and 3.24) are due to subsequent quarterly data revisions and true-ups.⁶

In December 1993, the Commission, at the recommendation of the separations Joint Board, imposed a cap on USF payments.⁷ The cap is indexed to the rate of growth in the national total of working exchange loops. It is being implemented by adjusting the national average cost per loop used to calculate each study area's high-cost assistance (using the current formula from Table 3.1) from the true average value to whatever base value is required to achieve the cap. For 1998 payments, the cap was achieved by adjusting the base value cost per loop from the national average of \$247.34 to \$248.82. A further limitation on the size of the fund was implemented on January 1, 1998, by limiting the amount of allowed corporate operations expenses.⁸ In addition, some study areas have had the amount of USF payments capped as a condition of Commission approval of mergers or sales or acquisitions of exchanges.

On May 7, 1997, the Commission extended the current high-cost support mechanisms for rural carriers at least until January 1, 2001, and for other carriers until January 1, 1999.⁹ The implementation date for the forward looking cost models for non-rural LECs has subsequently

6 The amounts shown in Tables 3.7 through 3.12 and 3.17 through 3.22 are based on year-end data. However, pursuant to section 36.612 of the Commission's rules, carriers have the option of updating their data on a rolling year basis at the end of any quarter.

7 The cap is in section 36.601(c) of the Commission's rules. It has been extended until July 1, 1999 for all carriers, and thereafter for rural carriers until the effective date of the new forward looking cost models, to be adopted in CC Docket No. 96-45. The amount of the payments for 1996 was below the cap.

8 The limitations are specified in section 36.621(a)(4) of the Commission's rules.

been delayed until July 1, 1999. After that time the current support mechanisms will be replaced with new ones using forward looking costs instead of embedded costs.

The second high-cost support mechanism, LTS, is also related to non-traffic sensitive costs. LTS provides support to the members of the National Exchange Carrier Association (NECA) common line pool, to allow them to charge a below-cost carrier common line (CCL) rate that is uniform for all companies in the pool. Prior to 1989, all LECs were required to be part of the NECA common line (CL) pool, and CCL rates were uniform nationwide. The transition to jurisdictionally specific CCL access charges occurred on April 1, 1989. The following LECs withdrew from the CL pool on that date: Ameritech, Bell Atlantic, BellSouth, Centel, Cincinnati Bell, Continental Telcom, GTE, NYNEX, Pacific Telesis, Rochester Telephone, Seneca-Gorham Telephone, Southern New England Telephone, Southwestern Bell, US West, United Telephone System, and Warwick Valley.¹⁰ On July 1, 1990, Great Plains Communications and Hughes Telephone also withdrew from the NECA CL pool. On July 1, 1991, Lincoln Telephone and Telegraph and Rochester Telephone's other cost study areas also withdrew from the NECA CL pool. On July 1, 1994, Citizens Utilities withdrew from the NECA CL pool.

To reduce disparities in CCL rates among LECs after companies were permitted to withdraw from the CL pool, two support mechanisms were set up. Transitional support consisted of payments from low-cost companies that withdrew from the pool to high-cost companies that withdrew from the pool. The transition period has now ended. Long term support (LTS) originally consisted of payments to the NECA CL pool from companies that withdrew from the NECA CL pool. Companies remaining in the NECA pool have identical CCL rates, which were formerly equal to the average CCL rate of the price cap companies. Effective January 1, 1998, the funds for LTS now come from the new federal universal service support mechanisms. At the same time, the NECA pool rate no longer was made equal to the average price cap rate. Rather, the amount of LTS that a NECA pool member is eligible to receive in 1998 is the 1997 level of LTS (the difference between 1997 CCL revenue requirements and the sum of 1997 CCL revenues using the NECA pool rate and 1997 subscriber line charge revenues) multiplied by the by the rate of growth of the national average NTS cost per loop.

Nationwide pool results provided by NECA for 1997 are shown in Tables 3.3 and 3.4. Table 3.3 summarizes the CL pool revenues and expenses for the year 1997, as well as a comparison with the corresponding figures for 1996. Table 3.4 has comparable figures for NECA's voluntary traffic sensitive pool.

Table 3.5 provides a history of LTS payments. The data for 1989 through 1997 are based on the annual NECA NTS pool report (see Table 3.3) from February of the following year. The

10 Several of these companies now have common ownership. These include Seneca-Gorham and Rochester (now known as Frontier), Centel and United, Continental and GTE, Pacific Telesis and Southwestern Bell, and NYNEX and Bell Atlantic.

1998 value is based on the sum of the four quarterly prospective payment figures for 1998, and thus are subject to revision and do not include subsequent true-ups.

The third high-cost support mechanism, LSS, is related to traffic sensitive local switching costs. The local switching support is now recovered through the universal service support mechanisms, rather than through higher traffic-sensitive access charges. Until 1997, this support was based on dial equipment minute (DEM) weighting. LSS provides support to LECs with study areas of 50,000 or fewer access lines, to help defray the higher switching costs of small LECs. The portion of these costs which are normally allocated to interstate is determined by the ratio of interstate to total dial equipment minutes, known as the DEM factor. However, local exchange carrier study areas with 50,000 access lines or fewer had that portion multiplied by a weighting factor, which was determined by the number of access lines in the study area. The weighting factors, which became effective in 1993, are shown in Table 3.6. The resulting weighted DEM factor (which was not permitted to exceed .85) allowed these study areas to recover a greater portion of their local switching costs from interexchange carriers in the form of higher access charges.¹¹

Beginning in 1998, the LSS factor is calculated as the difference between the 1996 weighted DEM factor and the 1996 unweighted DEM factor. It is subject to the limit that the sum of the DEM factor and the LSS factor shall not exceed .85. Also, if the number of lines has increased since 1996 across one of the limit values of 10,000 or 20,000 or 50,000 lines, the 1996 weighted DEM factor used for computing the LSS factor is adjusted to reflect the weighting factor appropriate for the new number of lines.

Each of the three universal service support mechanisms are administered by the Universal Service Administrative Company (USAC), presently an independent subsidiary of NECA. As part of their administration of these support mechanisms, USAC filed quarterly reports on October 31, 1997; January 30, 1998; May 1, 1998; and July 31, 1998. These reports included quarterly projections of the amounts to be paid for each program, along with true-ups (differences between actual payments and projections) for prior periods, administrative expenses and interest income. Table 3.7 summarizes the total amounts for the high-cost programs for each quarter and for the year.¹² Table 3.8 provides a summary by state of the total amounts for the year of these projected payments. It should be noted that these projections do not include subsequent true-ups, because the true-ups are not identified by individual program. An indication of the magnitude of these true-ups can be seen for all programs combined in Table 3.7. However, some of those true-ups relate to prior years. For the USF the impact of the true-ups can be seen by comparing

11 The weighted and unweighted DEM factors are shown in section 8 of this report.

12 These are based on Exhibit 3 of the October report and Exhibit 5 of the other reports. The USF amount for the first quarter and the LSS amount for the second quarter were adjusted slightly to make them consistent with the individual company data.

the amount in Table 3.2, which includes the true-ups, with the amount in Table 3.8, which does not include them.

As part of the administration of the USF program, NECA collects certain cost data from LECs that provide service to approximately 98% of the nation's subscribers.¹³ Each year NECA collects NTS cost and loop data from the previous year, and uses that information to distribute high-cost assistance in the following year. On October 1, 1997, NECA reported new data for 1996, and revised data for previous years.¹⁴ State totals based on that report, covering cost data for 1996, are presented in Table 3.9. This table shows unseparated NTS costs (Revenue Requirement), the number of loops, and costs per loop. It also shows the expected Universal Service Fund payments for 1998, based on 1996 data, using the high-cost formula and the cap discussed above. The final column shows the percentage of the total USF that goes to companies in the state.

Table 3.10 shows the changes, from the revised data for 1995 to the newly reported data for 1996, for state totals, of the unseparated NTS revenue requirement, the number of loops, the revenue requirement per loop, and the Universal Service Fund payments. The phrase, "payments in later year" in the last column refers to the fact that the payments are made two years after the costs are incurred; in this case, in the years 1997 and 1998.

Tables 3.11 through 3.14 present state summaries of the historical information filed for 1992 through 1996 in the 1997 filing. Table 3.11 shows the unseparated NTS revenue requirements for each year. Table 3.12 shows the number of loops. Table 3.13 shows the unseparated NTS revenue requirement per loop. Table 3.14 shows the Universal Service Fund payments.

The remaining tables in this section are data for individual study areas. Tables 3.15 through 3.18 are derived from the quarterly USAC filings. Table 3.15 has Universal Service Fund payments. Table 3.16 has Long Term Support payments. Table 3.17 has Local Switching Support payments. Table 3.18 has the total support payments for all three programs. Each of these tables contains the amounts projected for each quarter and the total for the year. Subsequent true-ups are not included.

13 These are the carriers that settle on a cost basis. Costs for the remaining LECs, which settle on an average schedule basis, are attributed by NECA on the basis of those carriers' average number of loops per exchange.

14 As this report was being completed, NECA filed new data on October 1, 1998. The amount of time needed to process that information exceeded the time available to include it in this report. The information from that filing will be included in the next Monitoring Report, which will be available in the spring of 1999.

Table 3.19 contains individual study area data for 1996 for unseparated NTS costs (Revenue Requirement), the number of loops, and costs per loop. It also shows the expected Universal Service Fund payments for 1998, based on 1996 data, and the percentage of the national total USF that goes to the study area. In the second column of Table 3.19, the types are cost (C) and average schedule (A), indicating the form of settlements used by that study area. In addition to the name of the study area, the name of the holding company (if any) is also shown. Table 3.20 shows the percentage changes for each of these amounts for individual study areas. In the USF columns in this table, the entry "ERR" indicates that the USF was zero in the first year and positive in the second year.

Tables 3.21 through 3.24 present individual study area data for the historical information filed for 1992 through 1996 in the 1997 filing. Table 3.21 shows the unseparated NTS revenue requirements for each year. Table 3.22 shows the number of loops. Table 3.23 shows the unseparated NTS revenue requirement per loop. Table 3.24 shows the Universal Service Fund payments.

In compiling the historical data, it is necessary to account for changes that have occurred in the study areas over time. These changes are noted in Table 3.25.¹⁵ In cases where study areas have merged, the pre-merger data for all of the merged study areas have been combined and reported as the data for the surviving study area. In cases where there has been an ownership change resulting in a code number change, the pre-change data is reported under the new code number and name. In the case of newly created study areas, pre-creation data is reported as 0. In Table 3.20, percentage changes in the case of mergers are comparisons of the surviving study area data with the consolidated pre-merger data, and percentage changes in the case of newly created study areas formerly served by another company are comparisons of a consolidation of the new data for both companies with the old data for the former company. No attempt has been made to adjust for sales of exchanges between study areas that were in existence both before and after the sale.

Each year NECA submits detailed account data used to calculate the unseparated revenue requirement per loop for each study area which settles on a cost basis, and total attributed revenue requirements for study areas that settle on an average schedule basis. In their filings since 1993, in addition to submitting such information for the latest year, NECA also submitted revised information for the four preceding years. The detailed account data are not reported here, but the most recent revision of the data for each year since 1988 is available in electronic form

15 Because the study areas were matched between years by study area code number, changes in only the name of the company are not included in this list. Because of the two year difference between when the costs are incurred and when the USF payments are made, the timing of the changes does not always match the year in which the change appears in the NECA data files. The dates in Table 3.15 indicate the years when the changes actually occurred.

Notes: Payments for 1986 through 1995 are final and not subject to further adjustment.

Payments for 1996, 1997 and 1998 are as of the July 1998 settlement cycle and subject to change due to the 24-month settlements adjustment window.

Payments for 1994, 1995, 1997 and 1998 are limited by the USF Cap. Amounts shown in the Projected Payments at Full Transition column are before application of the USF Cap.

Payments for 1996 are also limited by the USF Cap. However, since the USF Cap limit is \$776,942,246, there is no impact on actual payments. Amount in the Projected Payments at Full Transition column are actual payments.
