FEDERAL-STATE JOINT BOARD STAFF RELEASES MONITORING REPORT

Comprehensive Report Tracks Trends Related to Universal Service

Washington, D.C. – The staff of the Federal-State Joint Board on universal service has released its most recent Monitoring Report on Universal Service. This report reflects information on the telephone industry filed with the Federal Communications Commission (FCC) through September 11, 2000.

The Report released today details the various universal service support mechanisms, which are projected to amount to over \$4.5 billion in 2000. The report presents current data in each of the eleven subject categories selected for monitoring, and includes the following information in each category:

- 1) **Industry revenues and contributions** - Industry revenues grew 9% in 1999, with the most rapid growth being for wireless services (32%) and competitive local exchange carriers (61%), and the slowest growth for incumbent local exchange carriers (4%) and toll service (3%);
- 2) **Low income support** - Lifeline support grew 5% in 1999 and Link Up support decreased 20%;
- 3) **High cost support** - Two new high cost support mechanisms have been implemented since October 1999: the forward-looking high cost model support (projected at \$219 million in 2000) and the interstate access universal service support (projected at \$325 million in 2000);
- 4) **Schools and libraries support** - Schools and libraries are making substantial use of their available support, with commitments totalling nearly \$2 billion for the second year of the program (July 1999 – June 2000);
- 5) **Rural health care support** - The demand for rural health care support has grown to \$5.4 million committed in the second year of the program (July 1999 – June 2000);
- 6) **Subscribership and penetration** - The percentage of households subscribing to telephone service reached an all-time high of 94.6% in March 2000;
- 7) **Rates and price indices** - Overall telephone rates increased 0.4% in 1999, which is less than the general rate of inflation (2.7%), with increases in local rates being offset by decreases in toll rates;

-- more --

- 8) **Network usage and growth** - Telephone usage continues to grow steadily (9% in 1998), with the largest growth rate in recent years being for local calls (11%);
- 9) **Quality of service** - The data show noticeable differences in the quality of service among carriers;
- 10) **Infrastructure** - The most rapid growth of infrastructure has been for fiber digital carrier transmission (1999 growth rate of fiber working channels was 31%); and,
- 11) **Revenues, expenses and investment** - For the larger local exchange carriers, percentage of net income that is attributable to interstate (33% on average in 1999) is greater than the interstate share of revenues (27%) or expenses (25%).

A monitoring program was established in the mid-1980's, at the recommendation of the separations Joint Board, to track trends related to universal service and related matters. Since then, the Joint Board staff has prepared Monitoring Reports at least once a year -- a compendium of hundreds of pages of statistical data on subscribership and penetration, loop costs, separations factors, universal service fund payments, etc. In 1998 the publication of this report was changed from the separations Joint Board staff to the universal service Joint Board staff, and the frequency was increased to twice a year. This is the third Monitoring Report from the universal service Joint Board staff.

The Monitoring Report is unique in that it is the only document that includes information on every local telephone company in the nation. The FCC has not imposed any new reporting burdens on any company to generate the information. Instead it uses data which the National Exchange Carrier Association collects for its own needs, data from the Bureau of Labor Statistics and other organizations, and publicly available ARMIS submissions. Another characteristic of the monitoring reports is that they are staff reports. They are not intended to be policy documents and contain only enough text to describe the tables.

A copy of the Report is available for inspection in the FCC's Reference Information Center, Courtyard Level, 445 12th Street, SW. The Report can be downloaded by section from the **FCC-State Link** internet site, which can be reached at <http://www.fcc.gov/ccb/stats> on the World Wide Web. Names for print image files: mrs00-0.pdf, mrs00-1.pdf, ..., mrs00-11.pdf for the introduction and each section separately. Names for condensed files in word processor (Word 97) and spreadsheet (Lotus 123 .wk4 or Excel 97) formats: mrs00-0.zip, mrs00-1.zip, ..., mrs00-11.zip.

Copies of the Report are available for purchase from the Commission's duplicating contractor, International Transcription Service, Inc. (ITS) at (202) 857-3800.

Universal Service Monitoring Report
CC Docket No. 98-202
September 2000

Introduction and Summary

This is the fourth report in a series of reports prepared by federal and state staff members for the Federal-State Joint Board in CC Docket No. 96-45 (Universal Service Joint Board). These reports contain information designed to monitor the impact of various universal service support mechanisms, and the methods used to finance them. These mechanisms were adopted by the Federal Communications Commission (Commission), based on recommendations from the Universal Service Joint Board. These reports are part of a monitoring program created by the Commission in 1997¹ to replace a similar program in CC Docket No. 87-339 that resulted in a series of nineteen Monitoring Reports. The current program incorporates most of the information that was collected under the previous program, and also new materials from the reports of the administrator of the universal service support mechanisms, the Universal Service Administrative Company (USAC). To enhance our monitoring ability, we have created an open docket², which allows data, materials, comments, and studies to be submitted by any interested party at any time.

The monitoring program has proven to be valuable, not only as a report on the effects of our regulatory policies, but also as a complete census of all incumbent local exchange carriers. Because smaller carriers generally are exempt from most Commission reporting requirements, the Monitoring Report incorporates data from several sources, including the National Exchange Carrier Association (NECA) and USAC. NECA, at the direction of the Commission, collects information in order to administer the access charge pools and to provide information to USAC to help administer the Universal Service Fund. USAC also collects information from all eligible carriers to administer the universal service support mechanisms. The Monitoring Report, therefore, contains the only available comprehensive data on all incumbent local exchange carriers, containing data on such matters as the number of telephone lines, calling volumes, and certain types of costs.

This report presents data for the eleven subject categories selected for monitoring. The first section provides information on the contributions to the universal service support mechanisms and industry revenues, on which those contributions are now based. The next four sections provide information on the various support mechanisms: low income support; high cost support; schools and libraries support; and rural health care support. The remaining six sections provide information on matters that might be affected by the support mechanisms: subscribership and penetration; rates and price indices; network usage and growth; quality of service; infrastructure; and revenues, expenses and investment.

Because the Monitoring Report is published twice a year and some of the information published

1 *Federal-State Joint Board on Universal Service*, CC Docket No. 96-45, *Report and Order*, FCC 97-157, para. 869 (released May 8, 1997).

2 CC Docket No. 98-202.

is filed only once a year, not all tables are published in every issue. We recommend that users keep the two latest issues to be certain they have all the latest information. In this report we only include tables for which we have new information, except for a few summary tables. The following are highlights of some of the material in this report. Section 1 provides an update on contributions to the universal service support mechanisms, and the industry revenues on which they are based. Section 2 includes the latest data on the Lifeline and Link-Up America programs. Section 3 includes the most recent projected payments for all of the high cost support programs, based on the quarterly reports from USAC. Section 4 includes updated data on the schools and libraries support. Section 5 includes updated data on the rural health care support. Section 6 includes the most recent Census data on subscribership from the Current Population Survey. It also includes data on telephone penetration by income by state. Section 7 includes updated Consumer Price Index and Producer Price Index data and other updated rate information. Section 8 includes the latest NECA data on access minutes, dial equipment minutes, and separations factors. Section 9 includes updated data on the quality of service from the Commission's Automated Reporting Management Information System (ARMIS) reports. Section 10 includes updated data on infrastructure from the ARMIS reports. Section 11 includes the latest information on revenues, expenses and investment from the ARMIS reports.

This report is based on information available to us as of September 11, 2000. This entire report is available electronically through the **FCC-State Link** internet site, which can be reached at <http://www.fcc.gov/ccb/stats> on the World Wide Web. It is available in both page image (.pdf) format and in a compressed (.zip) format, which, when unzipped yields word processing and spreadsheet files. In addition, information received well in advance of the next Monitoring Report will be made available on an interim basis in separate staff reports or in raw data files (such as most NECA filings used in the Monitoring Report) on the internet site. In addition, the ARMIS data are available on the ARMIS internet site, which can be reached at <http://www.fcc.gov/ccb/armis/db/>.

For ease of public reference, we ask that parties submitting materials for this docket provide a duplicate copy to the FCC's Reference Information Center,³ where copies of all materials filed in the docket are available for public reference.

3 Courtyard Level, 445 12th Street SW, Washington, DC 20554.

1. Industry Revenues and Contributions

Virtually all providers of telecommunications service are currently required to file the Form 499-A. Telecommunications Reporting Worksheets are not filed directly with the FCC but rather with the Universal Service Administrative Company (USAC), the data collection agent for the Form 499-A. By June 2000, the Form 499-A database contained whole-year 1999 data for 4,491 filers. In some cases, the 1999 revenue data are estimated due to late or inadequate filings by some service providers.

In the Form 499-A, each filer is required to report total, interstate and international revenues in two broad categories: service provided to Universal Service Worksheet filers for resale (carrier's carrier); and, service to de minimis filers and end users (end user). Filers must provide further breakdowns of local, wireless, and toll services. The Form 499-A requires each filer to categorize itself using one of the following categories:¹

- Competitive Access Provider (CAP) or Competitive Local Exchange Carrier (CLEC)
- Cellular, Personal Communications Service (PCS) and Specialized Mobile Radio (SMR) Wireless Telephony Service Provider
- Incumbent Local Exchange Carrier (ILEC)
- Interexchange Carrier (IXC)
- Local Reseller
- Operator Service Provider (OSP)
- Other Local Service Provider
- Other Mobile Service Provider
- Other Toll Service Provider
- Paging and Messaging Service Provider
- Payphone Provider
- Private Service Provider
- Pre-paid Calling Card Provider
- Satellite Service Provider
- Shared-Tenant Service Provider
- Specialized Mobile Radio - Dispatch
- Toll Reseller
- Wireless Data Service Provider

Fewer filer categories were listed on prior-year worksheets. In a few cases, filer categories were combined for tabulation purposes.

Filers were instructed to report the amounts actually billed to customers. This means that filers should report revenues net of discounts, but without making any adjustments to reflect

1 The detailed definitions of the filer categories are contained in the Form 499-A detailed filing instructions, (<http://www.fcc.gov/Forms/Form499-A/499a.pdf>).

uncollectible revenues or international settlement payments. Most filers should be able to report revenues in this manner using information contained in their corporate books of account. Some filers, however, have no business or regulatory requirements to record intrastate or international revenues separately from interstate revenues or to use the detailed revenue categories contained in the worksheets. In accordance with the worksheet instructions, many filers used safe harbor percentages to estimate the interstate portion of wireless revenues. Further, some filers reported unlikely amounts or amounts in unlikely categories. The totals reflect some corrections based on supplemental filer information. Nonetheless, desegregated data are likely to be less accurate than industry totals.

The revenue tables presented herein are based on information published in *Telecommunications Industry Revenues: 1999*, which is available at <http://www.fcc.gov/ccb/stats>.

Table 1.1 shows the major components of telecommunications revenues for 1999. Tables 1.2 and 1.3 compare 1999 revenues with revenues for prior years. Revenue data shown for 1992 through 1996 are derived from information filed on Telecommunications Relay Service (TRS) worksheets. Revenue data for 1997 and 1998 are derived from a combination of TRS worksheet and Universal Service worksheet data. These worksheets were replaced by the Form 499-A, which were filed for the first time on April 1, 2000. Table 1.4 illustrates how data from the Form 499-A are used to develop funding bases for the universal service, TRS, North American Numbering Plan Administration and local number portability contribution mechanisms.

Table 1.2 provides historic data for several categories of revenue. Because of reporting changes, data for 1997 through 1999 are not entirely consistent with data for prior years. For example, special access revenues were included with other access revenues prior to 1997 but are included with local private line services since then. Similarly, through 1996, filers reported as other local and mobile revenues substantial amounts of customer premises, billing and collection and other types of revenues that are excluded from contributions to the universal service support mechanisms. These revenues are now reported as non-telecommunications revenues. Table 1.2 contains estimates of the amounts of non-telecommunications revenues that had been reported in prior years. Based on staff estimates, the 1996 telecommunications revenues reported on TRS Worksheets would have been \$10.5 billion lower if revenues had been reported using current instructions.

Table 1.2 contains significant revisions to previously published data for non-operator switched toll and other toll data. Many filers erroneously reported substantial amounts of switched service revenues as other toll revenues. Each year, the amounts are reexamined and some may be reclassified based on staff research. Even so, the other toll category probably continues to contain some switched revenues, perhaps significant amounts in some years.

In 1997, filers were required to include inside wiring maintenance revenues as part of local exchange revenues. In 1998, filers were instructed to report these revenues as non-telecommunications service revenues. The local exchange service revenue data in Table 1.2 would

show a greater increase from 1997 to 1998 if the same reporting instructions had been used for each year.

Table 1.3 provides historic revenues for several classes of filers. Changes in reporting are relatively unimportant for toll carriers and for local service competitors. As explained above, however, the 1996 data contain about \$10.5 billion of non-telecommunications revenues, almost all of which were reported by incumbent local exchange carriers (ILECs) and wireless carriers. The local exchange service revenue data in Table 1.3 would show a greater increase from 1997 to 1998 if the same reporting instructions for inside wiring maintenance revenues had been used for each year.

Revenue data for individual filers are not available to the public. However, Tables 1.5 through 1.8 present detailed industry roll-ups by types of revenues and by types of filers. Table 1.5 provides a detailed breakout for each of the Form 499-A revenue categories used to report services provided to other filers for resale. Table 1.6 provides a detailed breakdown for each of the revenue categories used to report telecommunications service provided to end users. Table 1.7 combines data from Tables 1.5 and 1.6 with data on non-telecommunications revenues to develop total industry revenue data. Table 1.8 provides less detailed information, but for a greater breakdown by types of filers. The revenue categories presented in Tables 1.5 through 1.7 are explained in the Form 499-A filing instructions, which can be found on the FCC's website <http://www.fcc.gov/formpage.html>.

Program Requirements and Contribution Factors

On a quarterly basis, USAC submits funding requirements to the Commission for each of the Universal Service Mechanisms (currently High Cost, Low Income, Schools and Libraries, Interstate Access,² and Rural Health Care). For each program, USAC submits its anticipated funding needs with the Commission 60 days before the beginning of the quarter.

Tables 1.9a and 1.9b show program information for 1999 and 2000 respectively. The tables show anticipated revenue requirements to cover program demand, administrative costs, interest income (which offsets revenue requirements) and periodic true-ups for all Universal Service programs. Periodic true-ups occur for a variety of reasons, including the fact that actual receipts could differ from billings. Also, because not all the money that had been set aside for first-year commitments to Schools and Libraries will be disbursed, "periodic true-ups" for the Schools and Libraries mechanism include any application of balance from prior periods.³ On September 8,

2 The mechanism was created in *Access Charge Reform, Preice Cap Performance Review for Local Exchange Carriers, Low-Volume Long Distance Users, Federal-State Joint Board on Universal Service, Sixth Report and Order* in CC Docket Nos. 96-262 and 94-1, Report and Order in CC Docket No. 99-249, Eleventh Rpeort and Order in CC Docket No. 96-45, FCC 00-193 (rel. May 31, 2000), paras. 185-233.

3 Commission rules require that unused funds be credited back to contributors. This is done

2000, the Commission released proposed contribution factor for the fourth quarter of 2000 that accounts for the last of the (expected) unused balance from the first funding period.⁴

The Universal Service Administrator also collects and tabulates end user revenue data from the industry. Carriers submit revenue information to USAC using FCC Form 499. Carriers file first half of year revenue data on September 1. This information is used to determine contributions for the first two quarters of the following year. Carriers then file whole year data on the following March 31. First half-year data are then subtracted from the whole-year data, and the result — estimated second half revenue data — is used to bill contributions to be made in the third and fourth quarters. The Common Carrier Bureau takes these revenue figures and the program requirements submitted by USAC, and releases proposed fund factors on a quarterly basis. If, after 14 days, the Commission takes no action regarding the proposed contribution factors, the factors become effective.

On July 30, 1999, a three-judge panel of the United States Court of Appeals for the Fifth Circuit issued an opinion that altered some of the methodological calculations used by the Commission in its determination of Universal Service contribution factors. Contributions could no longer be partly based on the intrastate revenues of universal service contributors. Further, some international revenues were to be treated differently.

On September 9, 1999, the Commission filed a motion with the Court, which in part asked the Court to stay application of its mandate until the first quarter of 2000. This motion allowed the Commission to release fourth quarter contribution factors that were based the Commission's earlier application of the rules.⁵ The court's ruling, released on September 28, 1999 mandated that the Commission not apply the existing fourth-quarter contribution factors on or after November 1, 1999.

Before October 8, 1999, the Commission released two separate fund factors: one factor for the Schools and Libraries mechanism and the Rural Health Care Mechanism, and another factor for the High-cost and Low Income mechanisms. The separate factors reflected the Commission's position that contributions for the funds should be based on different sets of revenues. In light of the court decision, all of the Universal Service Mechanisms are now based on interstate end-user revenue. Interstate end-user revenue includes most international service end-user revenue. Excluded are revenues from calls that both originate and terminate in foreign points,

through reducing future fund factors to account for the unused revenue. See 47 CFR § 54.507.

4 Proposed Fourth Quarter 2000 Universal Service Contribution Factor. CC Docket No. 96-45, DA 00-2065.

5 Thus, the Schools and Libraries contribution factor was multiplied by intrastate, interstate and international end-user revenue.

and international revenue from carriers whose interstate end-user revenue represents 8% or less of their combined interstate and international end-user revenue.

Because all Universal Service Mechanisms are now based on the same revenue base, only one fund factor is needed. The first unified factor was released on October 8, 1999, and was applied to November and December revenues.⁶

By a recent order on access charges,⁷ the FCC has created a new Universal Service mechanism called Interstate Access. The mechanism makes explicit \$650 million worth of subsidies that were implicit within the previous access charges. The mechanism became effective on July 1, 2000. Reflecting this, Table 1.9b shows the relevant information for the Interstate Access mechanism starting in the third quarter of 2000.

Tables 1.9a and 1.9b also show the contribution bases for the fund factors. If all carriers provided correct data on the filing dates, end user revenue totals would be the same for the first two and last two quarters of each year. The revenue totals each quarter change because of late filings and corrections. The Commission takes the reported contribution base and reduces them by 1% to reflect the fact that some contributions will prove uncollectable. The result is the contribution base, which roughly equals the quarterly total program requirement divided by half of the half-year contribution base figure.

Carrier quarterly contributions to these support mechanisms are determined by multiplying the appropriate fund factor times one half of that carrier's end user revenue for that half year. For instance, consider a carrier's contribution into the Schools and Libraries mechanism and Rural Health Care mechanism for the second quarter of 1999. That carrier's contribution would be calculated by multiplying .0057 times one half of the amount of the end user revenue that it billed in the second half of 1998 for intrastate, interstate and international telecommunications services. The carrier's contribution into High Cost and Low Income mechanisms for the second quarter of 1999 would be calculated by multiplying .0305 times one half of its interstate and international telecommunications services billed in the first half of 1998.

6 Proposed Fourth Quarter 1999 Universal Service Contribution Factor for November and December 1999. CC Docket No. 96-45, DA 99-2109.

7 See *In re Access Charge Reform, Price Cap Performance Review for Local Exchange Carriers, Low-Volume Long Distance users, Federal-State Joint Board on Universal Service*, FCC 00-193 (rel. May 31, 2000).

Table 1.1: Total Telecommunications Industry Revenue: 1999 *
Reported on FCC Form 499-A Telecommunications Reporting Worksheets
 (Amounts Shown in Millions)

| | Carrier's Carrier Revenues ** | End-User Revenues ** | Total |
|----------------------------------|-------------------------------------|-------------------------|------------------|
| Local Service | \$33,156 | \$78,608 | \$111,764 |
| Wireless Service | 4,652 | 43,843 | 48,495 |
| Toll Service | 14,934 | 93,311 | 108,246 |

| Service Reported as: | | | |
| Intrastate | 22,293 | 134,919 | 157,212 |
| Interstate and International *** | 30,449 | 80,844 | 111,293 |
| Total | \$52,742 | \$215,763 | \$268,505 |

Source: Industry Analysis Division *Telecommunications Industry Revenues: 1999*

Note: Detail may not add to totals due to rounding.

- * Data include revenues for de minimis filers as well as for other carriers who are exempt from universal service contribution requirements.
- ** Carrier's carrier revenue is reported on the Form 499-A as sales to other universal service contributors for resale. This includes, for example, access services that local exchange carriers provide to toll carriers. Sales to de minimis carriers, customers, governments, non-profits and any other non-contributors are treated as end-user revenue. Filers contribute to the universal service funding mechanisms based on their end-user revenues.
- *** Revenues from calls that both originate and terminate in foreign points are reported as end-user revenue, but are not included in the universal service contribution base. Tables 5 through 8 show breakouts between interstate and international revenues based on Form 499-A filings. CFR §43.61 international traffic data reports appear to provide more reliable data for international revenues but do not provide the type of breakouts found herein.

Note: Data for 1992 through 1996 summarized from FCC Form 431 TRS Worksheets. Data for 1997 and 1998 primarily based on FCC Form 457 Universal Service Worksheets, with data from 1997 TRS Worksheets used for service providers not required to file a Universal Service Worksheet. Data for 1999 summarized from FCC Form 499-A Telecommunications Reporting Worksheets, which replaced both the Form 431 and the Form 457. Some data for prior years have been revised. Detail may not add to totals due to rounding.

- * TRS filers generally reported pay telephone revenue as local service revenue, access revenue or operator toll revenue. The Universal Service and Form 499-A worksheets contain a separate category for payphone coin revenue. Starting in 1997, payphone revenue includes payphone compensation received from toll carriers.
- ** TRS Worksheet filers generally reported special access revenue as access revenue. Reporting changes implemented with the Universal Service Worksheet explain the increase in local private line revenue and the fall in access revenue shown for 1997. TRS Worksheet filers included subscriber line charges with other access charges. Universal Service Worksheet filers report subscriber line charges in a separate category. The increase from 1997 to 1998 represents PICC charges levied by ILECs as well as \$1.2 billion of PICC pass-through charges levied by toll carriers.
- *** Significant amounts of enhanced service, billing and collection, CPE and other non-telecommunications revenues were reported in the TRS mobile and other local service categories through 1996. Universal Service Worksheet filers report these revenues in the non-telecommunications category. For prior years, the amounts of non-telecommunications revenue reported as mobile and other local revenue were estimated as 70% of the amounts that Tier 1 ILECs reported in ARMIS as miscellaneous and nonregulated revenues (currently account 5200 + account 5280) and 10% of amounts reported as mobile service revenue.
- **** Charges on end-user bills identified as recovering state or federal universal service contributions are reported separately from local, wireless and toll revenue. Reported amounts are apportioned between local, wireless and toll service based on the proportions of local, wireless and toll intrastate and interstate revenue by type of carrier.

Table 1.3: Telecommunications Revenue Reported by Type of Carrier

* Filers are asked to select for themselves a service provider category that best describes their operations. The choices have changed over the years. For example, most satellite service providers identified themselves as other toll carriers in their 1997 TRS worksheets because there was no separate category for satellite service providers.

** Significant amounts of enhanced service, billing and collection, CPE and other non-telecommunications revenues were reported on TRS worksheets by incumbent local exchange carriers (ILECs) and wireless carriers through 1996. Universal Service Worksheet filers report these revenues in the non-telecommunications category. For prior years, the amounts of non-telecommunications revenue reported as mobile and other local revenue were estimated as 70% of the amounts that Tier 1 ILECs reported in ARMIS as miscellaneous and nonregulated revenues (currently account 5200 + account 5280) and 10% of amounts reported as mobile service revenue.

*** Other adjustments include some amounts withheld to preserve confidentiality and revisions made after the initial publication of the data.

Table 1.4: Contribution Base* Revenues By Program: 1999
(Amounts Shown in Millions)

| | | 1999 |
|---|---|------------|
| Revenues subject to universal service contribution | | |
| | Interstate and international end-user revenue | \$80,844 |
| less | revenue for international - to - international service | 983 |
| less | international revenue excluded where interstate toll represents less than 8% combined interstate and international revenue | 333 |
| less | interstate and international revenue for 2,708 filers who are de minimis or otherwise exempt from universal service support requirements | <u>143</u> |
| equals | | 79,385 |
| Revenues subject to TRS contribution | | |
| | Interstate and international end-user revenues | 80,844 |
| less | interstate and international revenues for 160 filers who claim to be exempt from interstate telecommunications relay service (TRS) contribution requirements | 98 |
| less | interstate and international revenues for service provided for resale but reported as end user because it was provided to carriers that do not contribute to universal service support mechanisms | <u>55</u> |
| equals | | 80,691 |
| Revenues subject to NANPA contribution | | |
| | Total telecommunications service end-user revenues (including intrastate, interstate and international) | 215,763 |
| less | telecommunications revenues for 538 filers who claim to be exempt from North American Numbering Plan Administration (NANPA) contribution requirements | 766 |
| less | telecommunications revenues for service provided for resale but reported as end user because it was provided to carriers that do not contribute to universal service support mechanisms | <u>166</u> |
| equals | | 214,831 |
| Revenues subject to LNP contribution | | |
| | Total telecommunications service end-user revenues (including intrastate, interstate and international) | 215,763 |
| less | telecommunications revenues for 537 filers who claim to be exempt from local number portability administration (LNP) contribution requirements | 762 |
| less | telecommunications revenues for service provided for resale but reported as end user because it was provided to carriers that do not contribute to universal service support mechanisms | <u>166</u> |
| equals | | \$214,835 |

* This table shows how contribution bases differ for different programs and provides relative magnitudes, but does not provide the actual amounts used for determining contribution amounts. Amounts shown represent the amounts contained in the Form 499-A database at a point in time. The universal service administrator continues to receive additional and corrected filings. Exempt amounts were based on the filer certification statement contained in the Form 499-A filings. The fund administrators use carrier type, revenue type and additional information requested from filers to review exemption claims (and in some instances, failure to make claims.) The universal service fund administrator bills delinquent filers based on estimated revenue and therefore can include estimated revenue amounts in contribution base amounts. As a result of these factors, actual contribution bases have been based on slightly different amounts than those shown. Note also that universal service contribution factors are set quarterly. Factors for the first and second calendar quarters are based on revenues reported for the first half of the prior calendar year. Factors for the third and fourth quarter are based on revenues reported for the second half of the prior calendar year. Local number portability contribution amounts are determined by region of the country rather than on a nationwide basis.

* For the Schools & Libraries mechanism, Periodic True-ups includes application of unused fund balance from prior periods.

2. Low Income Support

In 1984, the Commission, in conjunction with the states and local telephone companies, established a Lifeline program designed to promote universal service by providing low-income individuals with discounts on the monthly cost of telephone service,¹ and it expanded that program in 1985.² In 1987, the Commission adopted Link Up America, designed to help low income households pay the initial costs of commencing service.³ In the Telecommunications Act of 1996 (1996 Act),⁴ Congress did not direct the Commission to take any particular actions on Lifeline and Link Up,⁵ but the Federal-State Joint Board created by the 1996 Act recommended expanding Lifeline and Link Up rules and the May 1997 Universal Service Order adopted expanded rules.⁶ In June 2000 the Commission further expanded the Lifeline and Link Up programs to address the particularly dire needs of those living on Indian reservations.⁷

7 *Federal-State Joint Board on Universal Service; Promoting Deployment and Subscribership in Unserved and Underserved Areas, Including Tribal and Insular*, XXth Report and Order And Memorandum Opinion & Order, CC Docket No. 96-45, Released

The Link Up America program, which supports affordable connection to the network, has added 9.4 million telephone subscribers since 1987. In 1999, an estimated 5.6 million subscribers paid reduced local rates under the low income provisions of the Lifeline programs.

The Commission's rules are designed to satisfy the 1996 Act's mandates that rates be "affordable" and access should be provided to "low-income consumers" in all regions of the nation. They also make the contribution and distribution of low-income support competitively and technologically neutral by requiring equitable and nondiscriminatory contributions from all providers of interstate telecommunications services, and by allowing all eligible telecommunications carriers to receive support for offering Lifeline and Link Up service.⁸

Eligibility for Lifeline and Link Up. In states that provide state Lifeline support, Lifeline and Link Up are available to all subscribers who meet those state standards. Although states have some latitude in selecting means tests, state commissions must establish narrowly targeted qualification criteria that are based solely on income or factors directly related to income for its low-income residents to be eligible for Lifeline and Link Up. In addition, a state with eligible residents of Tribal lands must ensure that its qualification criteria are reasonably designed to apply to eligible residents of Tribal lands within the state.⁹ To receive Lifeline and Link Up in a state that does not mandate state Lifeline support, a consumer must certify that they participate in one of the following five programs: Medicaid; food stamps; Supplemental Security Income (SSI); federal public housing assistance; or the Low-Income Home Energy Assistance Program (LIHEAP).¹⁰ In such states, carriers must obtain signed statements from consumers certifying that the consumer receives benefits from one of these programs, identifying the particular program and agreeing to notify the carrier if that consumer ceases to participate in the program or programs.¹¹

Eligible subscribers, living on federally recognized Indian reservations, qualify to receive federal Lifeline support if they certify that they receive benefits from one of the five national programs; or from one of four additional federal assistance programs: Bureau of Indian Affairs (BIA) general assistance, Tribally administered Temporary Assistance for Needy Families (TANF), National School Lunch Program's free lunch program, or Head Start (meeting the income qualifying standard); or based on the state eligibility standard.¹²

June 30, 2000.

8 *1997 Universal Service Order*, 12 FCC Rcd 8776, 8968-73. Also 47 U.S.C. § 254(d), (e).

9 47 C.F.R. § 54.409(a).

10 47 C.F.R. § 54.409(b).

11 47 C.F.R. § 54.409(b).

12 47 C.F.R. § 54.409(c).

Lifeline Support. Under the Commission's rules, there are four tiers of federal Lifeline support. The first tier represents a waiver of the federal subscriber line charge, which increased from \$3.50 to a maximum of \$4.35 per month on July 1, 2000.¹³ All eligible subscribers receive first tier support. Second tier support is a \$1.75 per month reduction in the basic local rate, and it is available if all relevant non-federal regulatory authorities approve such a reduction,¹⁴ which all states have done.

The third tier of federal support is based on the amount of additional state support mandated by the relevant state or otherwise provided by carriers. Federal support is available to match half the non-federal support provided, up to a maximum of \$1.75 in federal support to match \$3.50 in non-federal support, assuming that the carrier has all necessary approvals to pass on the full amount of this total support in discounts to subscribers.¹⁵

Eligible subscribers living on federally recognized Indian reservations also qualify to receive a fourth tier of Lifeline support if they meet the eligibility standards described above. Tier four support provides up to an additional \$25 per month towards reducing basic local service rates to \$1 per month. This enhanced support should bring basic rates down to \$1 for most Lifeline customers on reservations.

Link Up Support. The Commission's Link Up program provides qualified low-income individuals with a federally-financed 50% discount (up to a maximum \$30 discount) on initial connection charges. In addition, these subscribers can choose to schedule deferred payments of up to \$200 over a one year period, with the customary interest charges financed by federal support.

In addition to \$30 support on the first \$60 in initial connection charges, eligible residents of federally recognized Indian reservations can receive support to fully cover any charges between \$60 and \$130, representing up to a maximum of \$100 discounts on initial connection charges of \$130 or more.

Services. Basic service must include, at a minimum: single-party service, voice grade access to the public switched telephone network, Dual Tone Multifrequency signaling or its functional digital equivalent, access to emergency services, access to operator services, access to interexchange service, access to directory assistance, and toll limitation. The federal program compensates eligible telecommunications carriers for toll-limitation based on the carrier's incremental cost of providing toll-limitation services.¹⁶

14 47 C.F.R. § 54.403(a)(2).

15 47 C.F.R. § 54.403(a)(3).

16 *1997 Universal Service Order*, 12 FCC Rcd 8776, 8981 at para. 386.

Advertising. Carriers offering Lifeline and Link Up are also required to publicize the availability of those programs “in a manner reasonably designed to reach those most likely to qualify for support.”¹⁷

Support Mechanism. The federal portion of the program is funded by the federal universal service support mechanisms which include contributions from all interstate telecommunications carriers and providers of interstate telecommunications, including payphone aggregators and private network operators that offer service to others for a fee on a non-common carrier basis. These carriers and service providers may pass on the expenses of these charges to their customers. The federal programs, in the past, included matching local rate reductions approved by state utility commissions. States are no longer required to provide matching reductions.

The FCC monitors subscriber participation and telephone usage to determine program benefits and costs.¹⁸ Historical tables for subscribership and carrier payments by state can be downloaded by section from the FCC-State Link internet site, which can be reached on the World Wide Web at <http://www.fcc.gov/ccb/stats>.

Table 2.1 reports Lifeline monthly support by state or jurisdiction as of June 2000. The table shows both federal and state support, and indicates the additional contribution from the federal program to reduce local rates where states have authorized statewide or carrier specific intrastate local rate reductions. Table 2.1 indicates both the federal and state combined "minimum" local rate reduction. This table does not reflect changes in support that will result from the implementation of the CALLS order.¹⁹

Table 2.2 reports Low Income support, by state or jurisdiction, for Lifeline and Link Up payments between January 1998 and December 1999. Projected program payments for 2000 as reported in *State-By-State Telephone and Universal Service* are included in the table. Total carrier payments data include local rate reductions for the Presubscribed Interexchange Carrier Charges (PICCs), and the carrier's incremental cost of providing toll-limitation services (TLS) in each state or jurisdiction.

17 47 C.F.R. §§ 54.405(b), 54.411(d).

18 *1997 Universal Service Order*, 12 FCC Rcd 8776, 9218 at para. 869; *See Common Carrier Bureau Seeks Comment on Program to Monitor Impacts of Universal Service Support Mechanisms*, Public Notice, CC Docket No. 96-45, DA 98-580, IAD File No. 98-101 (rel. Apr. 24, 1998).

19 *Access Charge Reform, Price Cap Performance Review for Local Exchange Carriers, Low-Volume Long Distance Users, Federal-State Joint Board on Universal Service*, Sixth Report and Order in CC Docket Nos. 96-262 and 94-1, Report and Order in CC Docket No. 99-249, Eleventh Report and Order in CC Docket No. 96-45, FCC 00-193 (released May 31, 2000) (*CALLS Order*).

Table 2.3 reports total Lifeline and Link Up payments in 1999, for state or jurisdiction at the study area level. Local rate reductions for the PICCs, and the carrier's incremental cost of providing TLS are reported for 1999 by carrier USAC ID and Serving Area code identification. The serving area codes identify where more than one carrier provides Lifeline and Link Up assistance in the study area.

Table 2.4 provides Universal Service Administrative Company (USAC) quarterly support estimates for the Federal universal service programs in 2000. The low income support components include: Lifeline Assistance; Link Up; Incremental Toll Limitation; PICC Reimbursement; Prior Period Adjustments and Administrative Expenses.

Table 2.5 reports annual historical Lifeline subscribership data by state or jurisdiction from program inception through 1999. The first column combines data from 1985 through 1995, and reflects current adjusted state or jurisdiction totals.

Tables 2.6, 2.7, 2.9 and 2.10 explain National Exchange Carrier Association (NECA) and USAC Grand Totals. (1) The data represents actual amounts reported by local exchange carriers. These payments are final and not subject to further adjustment. (2) Payments are subject to change, and reflect the settlements adjustment periods.

Table 2.6 reports annual historical Lifeline payments to carriers in each state, and or jurisdiction and shows total reimbursements to each state or jurisdiction. The report provides Lifeline support totals for payments made to subscribers through local rate discounts. The payments shown in these tables include TLS and PICC data; however, these tables do not include state or local rate contributions.

Table 2.7 reports historical Lifeline support payments by study area for the years 1984 to 1999. Lifeline support payments between 1984 and 1995 are aggregated in the first column and reflect state data where states and carriers offered local rate discounts to low income households.

Table 2.8 reports historical subscriber participation in the Link Up program. The subscribership data monitors annual state connection assistance statistics for 1988 through 1999. Link Up program participation was first certified in 1987. Historical data for 1987 through 1994 is reported in the first column, and includes state and carrier data from those states that participated in the program in those years.

Table 2.9 reports historical payments to carriers participating in the Link Up program, and reflects reimbursements to carriers in each state. Historical time-series data provide a total of payments made to carriers as a result of rate discounts passed on to subscribers provided by the Link Up connection assistance programs. Payments in the first column reflect payments made to carriers between 1986 and 1995. The payments shown in these tables (1988-1999) do not include state or local rate contributions.

Table 2.10 reports annual historical data for the Link Up connection assistance payments by study area to carriers in each state or jurisdiction. The Link Up program includes connection discounts reflected in the reimbursements to local carriers.

NOTE: These dollars represent submitted claims to USAC for the time period January 1998 through April 21,2000, including true-ups reported to date. District of Columbia has reported data to USAC for the entire period in question, but has not, as of yet, been compensated for 1998 due to the fact that Eligible Telecommunications Carrier (ETC) status has not been granted retroactive to January 1998. Similarly, Nevada Bell began reporting Lifeline payments starting January 1999.

SOURCE: Universal Service Administrative Company.

1 Amounts are based on local carrier's actuals.

2 Payments are final and not subject to further adjustment.

3 Dollars reported are for companies requesting reimbursement. Approximately 99% have reported at this time. Data includes true-ups submitted through 4/2000. Lifeline dollars for 1998 and 1999 include toll limitation services (TLS) and presubscribed interexchange carrier charges (PICC).

1 Amounts are based on local exchange carrier's actuals.

2 Payments are final and not subject to further adjustment.

3 1998 data consists of Link-Up dollars only and may be subject to further revision. This data is as of April 2000.

4 1999 data consists of Link-Up dollars only and is subject to further revision. This data is as of April 2000.

3. High-Cost Support

The high-cost support mechanisms enable areas with very high costs to recover some of these costs from the support mechanisms, leaving a smaller remainder of the costs to be recovered through end-user rates. In this manner, the high-cost support mechanisms are intended to hold down rates and thereby further one of the most important goals of federal and state regulation -- the preservation and advancement of universal telephone service. This section of the report outlines the high-cost support mechanisms and provides data for these mechanisms. There currently are five high-cost support mechanisms. These include three existing mechanisms for embedded high-cost loop (HCL) support¹, Long-Term Support (LTS), and Local Switching Support (LSS). Two new mechanisms have been added since our last report. These are the forward-looking high cost model support and the interstate access universal service support.

HCL support deals with non-traffic sensitive (NTS) "local loop costs" -- a term that refers to the costs of outside telephone wires, poles, and other facilities that link each telephone customer's premises to the public switched telephone network. NTS costs are allocated between the state and interstate jurisdictions because all local loops can be used for making and receiving both intrastate and interstate telephone calls. Historically, the interstate allocation was made using the Subscriber Plant Factor (SPF).² This factor is now 25% for all companies. The average cost per loop, however, varies significantly among LECs. The expense adjustment allows those study areas³ with an average unseparated cost per loop that exceeds 115% of the national average to allocate an additional portion of their NTS costs to the interstate jurisdiction and to have those costs recovered by HCL support.⁴ Table 3.1 shows the percentages of additional allocation of NTS costs to the interstate jurisdiction.⁵

-
- 1 This was formerly referred to as the Universal Service Fund, and still bears that name in the Commission rules. It is now referred to as high cost loop support to avoid confusion with the new, more comprehensive universal service support mechanisms that the Commission developed to implement the 1996 Act. See 47 CFR § 36.601.
 - 2 The Subscriber Plant Factor is defined in section 36.154 (e) of the Commission's rules. It was frozen in 1981 and then transitioned to 25% between 1985 and 1993, subject to the limitations in section 36.154 (f) of the Commission's rules.
 - 3 A study area is usually an operating company's operations in one state. Holding companies may own multiple operating companies and thus have multiple study areas in a state. Study area boundaries were frozen as of November 15, 1984. Any subsequent change requires a Commission waiver of this freeze.
 - 4 In January 1988, high-cost assistance was retargeted to increase benefits to small and medium sized LECs. This retargeting took the form of changes in the additional interstate cost allocation for such LECs. The old and new high-cost formulas are compared in Table 3.1 of the Monitoring Reports in CC Docket No. 87-339.
 - 5 For example, suppose the national average cost per loop is \$240 and a company with 10,000 loops has a cost per loop of \$420, or 175% of the national average. Then for the portion of their costs between \$276 (115% of the national average) and \$360 (150% of the national

HCL support was implemented during a period in which the basic interstate allocation of loop costs was shifted from a level based on the historical SPF to the present flat allocation factor of 25%. Both of these changes were phased in between 1985 and 1993.

Table 3.2 shows the actual payments that have been made through HCL support since its inception. The first column indicates the year in which the NTS costs were incurred. The second column indicates the year in which HCL support payments were made. The third column indicates the amount of those payments, based on the product of the transition factor shown in the fourth column and the full amounts (calculated from the formulas in Table 3.1) shown in the fifth column. The last two columns of the table show the annual growth rates in the actual payments and the full transition payments based on the payment formulas. Any deviations in HCL support amounts shown in Table 3.2 from amounts reported elsewhere are due to subsequent quarterly data revisions and true-ups.

In December 1993, the Commission, at the recommendation of the Joint Board in CC Docket 80-286, imposed a cap on HCL support payments.⁶ The cap is indexed to the rate of growth in the national total of working exchange loops. It is being implemented by adjusting the national average cost per loop used to calculate each study area's high-cost assistance (using the current formula from Table 3.1) from the true average value to whatever base value is required to achieve the cap. For 1998 payments, the cap was achieved by adjusting the base value cost per loop from the national average of \$247.34 to \$248.82. A further limitation on the size of the fund was implemented on January 1, 1998, by limiting the amount of allowed corporate operations expenses.⁷ In addition, some study areas have had the amount of HCL support payments capped as a condition of Commission approval of mergers or sales or acquisitions of exchanges. Those study areas are listed in Table 3.3 (study areas that had limits in 1999 but do not have them in 2000) and Table 3.4 (study areas that have limits in 2000). These study areas were ones for which there were limits as of July 2000. However, on August 3, 2000, the Common Carrier Bureau adopted an order removing all remaining caps for individual study areas, retroactive to January 1, 2000.⁸

On May 7, 1997, the Commission extended the current high-cost support mechanisms for rural carriers at least until January 1, 2001, and for other carriers until January 1, 1999.⁹ The implementation

average) they would receive 65% of those costs [.65 times (\$360 - \$276) = \$54.60], plus they would receive 75% of their costs over \$360 [.75 times (\$420 - \$360) = \$45], resulting in HCL support totaling \$99.60 per loop, or \$996,000 total support.

6 The cap is in section 36.601(c) of the Commission's rules. It is calculated as if all companies are participating in HCL, including the non-rural companies now covered by the forward-looking cost model. The amount of the payments for 1996 was below the cap.

7 The limitations are specified in section 36.621(a)(4) of the Commission's rules.

8 *Petitions for Waiver Concerning the Definition of "Study Area" Contained in Part 36 Appendix-Glossary of the Commission's Rules*, Order, CC Docket No. 96-45 (released August 4, 2000).

9 *Federal-State Joint Board on Universal Service*, Report and Order, released May 8, 1997,

date for the forward-looking cost models for non-rural LECs was subsequently delayed until January 1, 2000. For non-rural carriers, the current support mechanisms have now been replaced with new ones using forward-looking costs instead of embedded costs. On November 23, 1998, the Federal-State Joint Board on Universal Service (Joint Board) recommended that a forward-looking cost model should be used to determine federal support, but that the Commission should continue to measure costs at a study area level, rather than at a more disaggregated level that had previously been recommended.¹⁰ They also made other recommendations regarding the shared jurisdictional responsibility for high cost support and a provision to hold states harmless, so that no non-rural carrier will receive less federal high-cost assistance than the amount it would receive from explicit federal support mechanisms. Many of these other recommendations were adopted by the Commission on May 27, 1999.¹¹ At the same time, the Commission sought further comment on whether costs should be measured at the study area level.

On October 21, 1999, based on recommendations from the Joint Board, the Commission adopted a new high-cost support mechanism for non-rural carriers.¹² The new mechanism is based on the forward-looking costs of providing supported services¹³ as determined by the Commission's cost model.¹⁴ For each state, the cost model calculates the wire center average forward-looking cost per line incurred by non-rural carriers to provide supported services. These wire center average costs are then averaged at the statewide level to determine the statewide average forward-looking cost per line. The forward-looking support mechanism provides support to non-rural carriers in those states that have a

para. 203-204.

- 11 *Federal-State Joint Board on Universal Service*, CC Docket No. 96-45, *Seventh Report & Order and Thirteenth Order on Reconsideration*, FCC 99-119 (released May 28, 1999).
- 12 *High-Cost Methodology Order*, FCC 99-306.
- 13 The services eligible for federal universal service support are listed in section 54.101 of the Commission's rules. 47 C.F.R. § 54.101.
- 14 The cost model consists of: (1) a model platform, which contains a series of fixed assumptions about network design and engineering; and (2) input values for the model platform, such as the cost of network components, e.g., cables and switches, as well as various capital cost parameters. The Commission adopted the model platform in the *Platform Order* released in October 1998. *Federal-State Joint Board on Universal Service*, CC Docket No. 96-45, *Forward-Looking Mechanism for High-Cost Support for Non-Rural LECs*, CC Docket No. 97-160, Fifth Report and Order, 13 FCC Rcd 21323 (1998) (*Platform Order*). The Commission adopted input values in the *Inputs Order* released in November 1999. *Federal-State Joint Board on Universal Service*, CC Docket No. 96-45, *Forward-Looking Mechanism for High-Cost Support for Non-Rural LECs*, CC Docket No. 97-160, Tenth Report and Order, FCC 99-304 (rel. Nov. 2, 1999) (*Inputs Order*).

statewide average forward-looking cost per line greater than the national benchmark, which is set at 135 percent of the national average forward-looking cost per line.¹⁵

After determining the total amount of forward-looking support provided to non-rural carriers in a particular state, the support is then targeted to individual wire centers that have forward-looking costs in excess of the benchmark.¹⁶ Under the targeting approach, the amount of support provided to a non-rural carrier serving a particular wire center depends on the relative costs in that wire center and the number of lines served by the carrier. By comparing the relative costs in various above-benchmark wire centers, the targeting approach enables the Commission to provide greater amounts of support to carriers serving lines in wire centers with costs further above the benchmark. Thus, unlike providing a uniform per line statewide support amount, the targeting approach provides support in an amount commensurate with the cost of service, thereby encouraging carriers to serve high-cost areas.

The Commission also adopted a transitional “hold-harmless” measure to prevent rate shocks and disruptions in state rate designs when the new mechanism takes effect. As adopted, no non-rural telephone company would receive less support than it received under the existing embedded HCL support mechanism during the transition period. The Joint Board has recommended that interim hold-harmless support be phased down beginning January 1, 2001.¹⁷ Additionally, state commissions must certify by October 1, 2000 that carriers are eligible to receive hold-harmless support amounts in 2001.

LTS is related to interstate non-traffic sensitive costs. LTS provides support to the members of the National Exchange Carrier Association (NECA) common line pool, to allow them to charge a below-cost carrier common line (CCL) rate that is uniform for all companies in the pool. Prior to 1989, all LECs were required to be part of the NECA common line (CL) pool, and CCL rates were uniform nationwide. On April 1, 1989, companies were permitted to withdraw from the NECA CL pool and provide jurisdictionally specific CCL access charges.¹⁸

To reduce disparities in CCL rates among LECs after companies were permitted to withdraw from the CL pool, two support mechanisms were set up. Transitional support consisted of payments from low-cost companies that withdrew from the pool to high-cost companies that withdrew from the

15 *High-Cost Methodology Order*, FCC 99-306 at paras. 10 and 55. The forward-looking support mechanism provides support for all intrastate costs that exceed the benchmark. *High-Cost Methodology Order*, FCC 99-306 at paras. 60 - 63. Intrastate costs account for 76 percent of all forward-looking costs estimated by the model. *High-Cost Methodology Order*, FCC 99-306 at para. 63. Therefore, the forward-looking mechanism provides support for 76 percent of the forward-looking costs that exceed the benchmark. *High-Cost Methodology Order*, FCC 99-306 at para. 63.

16 *High-Cost Methodology Order*, FCC 99-306 at paras. 68-76.

17 See *Federal-State Joint Board on Universal Service*, CC Docket No. 96-45, Recommended Decision, FCC 00J-1 (released June 30, 2000.)

18 See previous Monitoring Reports for a detailed list of which companies are no longer in the NECA CL pool.

pool. The transition period has ended. Long term support (LTS) originally consisted of payments to the NECA CL pool from companies that withdrew from the NECA CL pool. Companies remaining in the NECA pool have identical CCL rates, which were formerly equal to the average CCL rate of the price cap companies. Effective January 1, 1998, the funds for LTS now come from the new federal universal service support mechanisms. At the same time, the NECA pool rate no longer was made equal to the average price cap rate. Rather, the amount of LTS that a NECA pool member is eligible to receive in 1998 is the 1997 level of LTS (the difference between 1997 CCL revenue requirements and the sum of 1997 CCL revenues using the NECA pool rate and 1997 subscriber line charge revenues) multiplied by the rate of growth of the national average NTS cost per loop.

Nationwide pool results provided by NECA for 1999 are shown in Tables 3.5 and 3.6. Table 3.5 summarizes the CL pool revenues and expenses for the year 1999, as well as a comparison with the corresponding figures for 1998. Table 3.6 has comparable figures for NECA's voluntary traffic sensitive pool.

Table 3.7 provides a history of LTS payments. The data are based on the annual NECA NTS pool report (see Table 3.5) from February of the following year.

LSS is related to traffic sensitive local switching costs. The local switching support is now recovered through the universal service support mechanisms, rather than through higher traffic-sensitive access charges. Until 1997, this support was based on dial equipment minute (DEM) weighting. LSS provides support to LECs with study areas of 50,000 or fewer access lines, to help defray the higher switching costs of small LECs. The portion of these costs that are normally allocated to interstate is determined by the ratio of interstate to total dial equipment minutes, known as the DEM factor. However, local exchange carrier study areas with 50,000 access lines or fewer had that portion multiplied by a weighting factor, which was determined by the number of access lines in the study area.¹⁹ The resulting weighted DEM factor (which was not permitted to exceed .85) allowed these study areas to recover a greater portion of their local switching costs from interexchange carriers in the form of higher access charges.²⁰

Beginning in 1998, the LSS factor is calculated as the difference between the 1996 weighted DEM factor and the 1996 unweighted DEM factor. It is subject to the limit that the sum of the DEM factor and the LSS factor shall not exceed .85. Also, if the number of lines has increased since 1996 across one of the limit values of 10,000 or 20,000 or 50,000 lines, the 1996 weighted DEM factor used for computing the LSS factor is adjusted to reflect the weighting factor appropriate for the new number of lines. Table 3.8 provides a history of LSS payments since 1993.

On May 31, 2000, the Commission established an explicit interstate access universal service support mechanism for price cap carriers to replace the implicit support previously collected through

19 The weighting factors, which became effective in 1993, are shown in Table 3.6 of the December 1998 and June 1999 Monitoring Reports.

20 The weighted and unweighted DEM factors are shown in section 8 of this report.

interstate access charges.²¹ Like LTS, the purpose of this new mechanism is to provide explicit support to ensure reasonably affordable interstate rates. This is in contrast to the Commission's other high-cost support mechanisms, which provide support to enable states to ensure reasonably affordable and comparable intrastate rates. The new mechanism provides support to carriers serving lines in areas where they are unable to recover their permitted revenues from the newly revised subscriber line charges. The support is fixed at an aggregate annual amount of \$650 million. It is targeted to the density zones that have the greatest need for it. It is provided on a portable, per-line basis. It is available on a competitively neutral basis to any eligible telecommunications carrier serving a supported customer, regardless of the technology used by that carrier. Because of the newness of this mechanism, no data are yet available for it.

Each of the universal service support mechanisms are administered by the Universal Service Administrative Company (USAC), an independent subsidiary of NECA. As part of its administration of these support mechanisms, USAC files quarterly reports with the Commission. These reports include quarterly projections of the amounts to be paid for each program, along with true-ups (differences between actual payments and projections) for prior periods, administrative expenses and interest income. The report for the second quarter of 2000 was filed on February 1, 2000; the report for the third quarter of 2000 was filed on May 2, 2000; and the report for the fourth quarter of 2000 was filed on August 2, 2000.²² Table 3.9 summarizes the annual amounts for the high-cost programs for 1998 through 2000 and the quarterly amounts for 2000.²³ Table 3.10 provides a summary by state of the total amounts for 2000 of these projected payments. These values are based on the filing for the fourth quarter, which includes revisions for the first three quarters. The values in this table do not take into account the new non-rural support mechanisms. Table 3.11 provides preliminary estimates, by state, of the high cost support using the new non-rural forward-looking high cost model support mechanism, along with the hold-harmless support.²⁴

The next four tables in this section are data for individual study areas. Tables 3.12 through 3.15 are derived from the quarterly USAC filings. Table 3.12 has High Cost Loop Support payments. The

21 *Access Charge Reform, Price Cap Performance Review for Local Exchange Carriers, Low-Volume Long Distance Users, Federal-State Joint Board on Universal Service, Sixth Report and Order in CC Docket Nos. 96-262 and 94-1, Report and Order in CC Docket No. 99-249, Eleventh Report and Order in CC Docket No. 96-45, FCC 00-193 (released May 31, 2000) (CALLS Order).*

22 The filing dates for projections for previous quarters can be found in the June 1999 Monitoring Report.

23 These are based on Exhibit 3 of the October 1997 report, Appendix M5 of the August 2000 report, and Exhibit 5 of the other reports. The third quarter 2000 amount for interstate access support was provided in the text of a June 2, 2000 revised filing.

24 The estimates for the new high cost model support are based on filings for the first and third quarters on May 2, 2000 and for the second and fourth quarters on August 2, 2000. The hold-harmless and rural support amounts are calculated from the quarterly data in Table 3.15.

values in this table are based on embedded costs and do not take into account the new non-rural support mechanisms. Table 3.13 has Long Term Support payments. Table 3.14 has Local Switching Support payments. Table 3.15 has the total support payments for all three programs. Each of these tables contains the annual amounts projected for 1998, 1999, and 2000 and the quarterly amounts projected for the four quarters of 2000. Table 3.14 shows the actual payments after true-ups for 1998 as well as the latest projections for that year, and the difference between the two. The 1998 totals in Table 3.15 incorporate the actual payments for that year from Table 3.14. Table 3.16 provides preliminary estimates, by study area, of the high cost support using the new non-rural forward-looking high cost model support mechanism, along with the hold-harmless support.²⁵

25 The apparent anomaly of and US West-Wyoming getting both high-cost model support and hold-harmless support is the result of the hold-harmless amount being greater in the first quarter and the model amount being greater for the rest of the year. The difference between the high cost model totals in Tables 3.11 and 3.16 are due to the cost model support amounts being smaller than the hold-harmless amounts for US West-Wyoming and GTE South-Kentucky in the first quarter. Table 3.11 reflects the actual support using the model, while Table 3.16 reflects what the model support would have been if there had not been hold-harmless support.

Table 3.1

Embedded High-Cost Loop Fund Formulas
(Used Since 1988)

| 1997 | 1999 | \$864,137,436 | 1 | \$929,535,267 | 4.45% | 7.36% |
| 1998 | 2000 | \$893,786,856 | 1 | \$1,026,499,393 | 3.43% | 10.43% |

Notes: Payments for 1986 though 1997 are final and not subject to further adjustment.

Payments for 1998 through 2000 are as of the June 2000 settlement cycle and subject to change due to the 24-month settlements adjustment window.

Payments for 1994, 1995, and 1997 through 2000 are limited by the USF Cap. Amounts shown in the Projected Payments at Full Transition column are before application of the USF Cap.

Payments for 1996 were also limited by the USF Cap. However, since the USF Cap limit was \$776,942,246, there was no impact on actual payments. Amount in the Projected Payments at Full Transition column are actual payments.

Payments for 2000 are calculated as if all non-rural companies have only hold-harmless support, and not forward-looking cost support.

TABLE 3.5

NATIONAL EXCHANGE CARRIER ASSOCIATION, INC.
SUMMARY OF COMMON LINE POOL RESULTS

| Line Item (Note 1) | Pool Year (Note 2) | | Percentage Change (Note 3) |
|---|--------------------|---------------|----------------------------|
| | 1998 | 1999 | |
| Carrier Common Line (CCL) Earned Revenues | | | |
| Premium | 289,781,794 | 342,386,900 | 18.15% |
| Non-Premium | 1,164,668 | 687,683 | -40.95% |
| Special Access Surcharge | 577,643 | 600,914 | 4.03% |
| CCL Net Realized Uncollectibles | 43,816 | 36,888 | -15.81% |
| CCL Net Earned Revenue | 291,480,289 | 343,638,609 | 17.89% |
| End User Net Earned Revenue (Note 4) | 492,650,517 | 527,554,053 | 7.08% |
| Total Common Line Net Earned Revenues | 784,130,806 | 871,192,662 | 11.10% |
| Long Term Support | 472,564,542 | 472,774,206 | 0.04% |
| Total Common Line Revenues | 1,256,695,348 | 1,343,966,868 | 6.94% |
| NECA Administrative Costs | 20,958,188 | 21,174,330 | 1.03% |
| Average Schedule Company Settlements | 257,671,676 | 266,331,000 | 3.36% |
| Common Line Expenses and other Taxes | 669,720,791 | 743,963,990 | 11.09% |
| Common Line Adjusted Federal Income Tax | 75,965,504 | 65,857,983 | -13.31% |
| Total Common Line Expenses | 1,024,316,159 | 1,097,327,303 | 7.13% |
| Common Line Residue for Distribution (Note 5) | 232,379,189 | 246,639,565 | 6.14% |
| Common Line Average Net Investment | 1,888,151,194 | 1,945,221,547 | 3.02% |
| Common Line Residue Ratio (Note 6) | 12.31% | 12.68% | 3.02% |

Note 1: All of the individual line items include some estimates and are subject to further adjustments under current NECA procedures.

Note 2: The Pool Year is the calendar year. The 1998 Pool Year data is reported as of February 28, 1999. The 1999 Pool Year data is reported as of February 29, 2000.

Note 3: Year to year changes are affected by changes in the number of companies participating in NECA tariffs, sales and acquisitions of assets by participating companies, average schedule to cost conversions, and mid-year tariff changes in rate levels.

Note 4: Amount includes End User SLC Waiver Revenue for NECA Tariff participants.

Note 5: Residue for Distribution is Total Revenues less Total Expenses.

Note 6: Residue Ratio is calculated by dividing the amount of Residue for Distribution by the amount of Average Net Investment and multiplying by 100.

TABLE 3.6

NATIONAL EXCHANGE CARRIER ASSOCIATION, INC.
SUMMARY OF TRAFFIC SENSITIVE POOL RESULTS

| Line Item (Note 1) | Pool Year (Note 2) | | Percentage Change (Note 3) |
|---|--------------------|-------------|----------------------------|
| | 1998 | 1999 | |
| Traffic Sensitive Earned Revenue (Note 6) | 670,033,859 | 664,721,851 | -0.79% |
| Local Switching Support (Note 6) | 295,469,997 | 278,294,099 | -5.81% |
| Traffic Sensitive Net Realized Uncollectibles | 131,731 | 98,489 | -25.23% |
| Traffic Sensitive Net Earned Revenue | 965,372,125 | 942,917,461 | -2.33% |
| Total Traffic Sensitive Revenues | 965,372,125 | 942,917,461 | -2.33% |
| NECA Administrative Costs | 15,448,417 | 15,713,016 | 1.71% |
| Average Schedule Company Settlements | 407,032,066 | 369,582,395 | -9.20% |
| Traffic Sensitive Expenses & Other Taxes | 375,207,475 | 407,479,535 | 8.60% |
| Traffic Sensitive Adjusted Federal Income Tax | 34,771,047 | 30,555,428 | -12.12% |
| Total Traffic Sensitive Expenses | 832,459,005 | 823,330,374 | -1.10% |
| Traffic Sensitive Residue For Distribution (Note 4) | 132,913,120 | 119,587,087 | -10.03% |
| Traffic Sensitive Average Net Investment | 874,544,818 | 905,415,933 | 3.53% |
| Traffic Sensitive Residue Ratio (Note 5) | 15.20% | 13.21% | -13.09% |

Note 1: All of the individual line items include some estimates and are subject to further adjustments under current NECA procedures.

Note 2: The Pool Year is the calendar year. The 1998 Pool Year data is reported as of February 28, 1999. The 1999 Pool Year data is reported as of February 29, 2000.

Note 3: Year to year changes are affected by changes in the number of companies participating in NECA tariffs, sales and acquisitions of assets by participating companies, average schedule to cost conversions, and mid-year tariff changes in rate levels.

Note 4: Residue for Distribution is Total Revenues less Total Expenses.

Note 5: Residue Ratio is calculated by dividing the amount of Residue for Distribution by the amount of Average Net Investment and multiplying by 100.

Table 3.7

Long Term Support Payment History

| Payment Year | Payments (\$ Millions) | Annual Growth In Payments |
|--------------|------------------------|---------------------------|
| 1989 | \$235.7 | |
| 1990 | \$262.6 | 11.40% |
| 1991 | \$271.7 | 3.49% |
| 1992 | \$305.7 | 12.51% |
| 1993 | \$322.7 | 5.53% |
| 1994 | \$346.6 | 7.44% |
| 1995 | \$382.3 | 10.27% |
| 1996 | \$425.6 | 11.35% |
| 1997 | \$469.5 | 10.31% |
| 1998 | \$476.3 | 1.45% |
| 1999 | \$473.2 | -0.66% |
| 2000 | \$479.1 | 1.26% |

Notes: Payments for 1989 through 1992 and 1994 through 1997 are as reported by NECA as of the end of February of the following year.

Payments for 1989 are for nine months only (program began April 1).

Payments for 1993 are as subsequently revised by NECA.

Payments for 1998 and 1999 are latest revisions provided by USAC.

Payments for 2000 are projections provided by USAC.

Table 3.8

Local Switching Support Payment History

| Payment Year | Payments (\$ Millions) | Annual Growth In Payments |
|--------------|------------------------|---------------------------|
| 1993 | \$311.0 | |
| 1994 | \$303.9 | -2.28% |
| 1995 | \$325.3 | 7.04% |
| 1996 | \$348.0 | 6.98% |
| 1997 | \$350.6 | 0.75% |
| 1998 | \$387.3 | 10.46% |
| 1999 | \$382.9 | -1.13% |
| 2000 | \$390.8 | 2.08% |

Notes: Payments for 1993 - 1997 are estimates of DEM weighting impacts.

Payments for 1993 are as estimated in the May 1996 Monitoring Report in CC Docket No. 87-339.

For companies not in NECA's common line and traffic sensitive pools, an estimate was developed using the study area specific 4th quarter 1998 Local Switching Support amounts. The 1998 levels were reduced by 5% per year to determine the 1994 - 1997 amounts.

Payments for 1998 and 1999 are latest revisions provided by USAC.

Payments for 2000 are projections provided by USAC.

Table 3.9

High-Cost Programs Fund Size Projections and Prior Year Actuals
(in Millions of Dollars)

| Programs | Total 1998 | Total 1999 | Total 2000 | 1st Quarter 2000 | 2nd Quarter 2000 | 3rd Quarter 2000 | 4th Quarter 2000 |
|--|---------------|---------------|---------------|------------------|------------------|------------------|------------------|
| High Cost Loop Support | 827.3 | 864.1 | 897.8 | 223.6 | 224.0 | 224.6 | 225.7 |
| Long Term Support | 476.3 | 473.2 | 479.1 | 119.8 | 119.7 | 119.8 | 119.9 |

4. Schools and Libraries Support

Eligible schools and libraries can receive telecommunications services, Internet access, and internal connections at discounts that range from 20 percent to 90 percent. The level of the discount is based on eligibility for the national school lunch program, location in a rural area, the total amount of money requested by all eligible schools and libraries, and the total amount of funds available for the mechanism.

These schools and libraries are eligible to receive support for services that qualify as telecommunications services, Internet access, or internal connections. Schools and libraries may not receive discounts for items such as asbestos removal, teacher training, telephone handsets, personal computers, fax machines, or modems.

The Schools and Libraries Division (SLD) of USAC determines the eligibility and discount level for which schools and libraries are eligible. All eligible applicants must submit three separate forms to the Schools and Libraries Division in sequential order to participate in the program. First, eligible schools and libraries must file FCC Form 470, which describes the services an applicant intends to purchase. Except under limited circumstances, Form 470 is posted to the SLD web site¹ for 28 days so that providers have an opportunity to submit competing bids to perform the services. After selecting a service provider and contracting for services, applicants must file FCC Form 471, which details services for which a contract has been signed. Applicants must then submit FCC Form 486, which confirms that the applicants' technology plan has been approved, and that the contracted services have begun. Service providers must then complete the FCC Form 473 (Service Provider Annual Certification Form). USAC then performs another review of the documentation. If satisfactory, USAC authorizes payment. If the service provider built the applicant's discount into the bill that the applicant paid, then the Administrator will disburse funds to the service provider after the service provider submits the FCC Form 474 (Service Provider Invoice Form). If, however, the service provider billed the applicant for the entire amount up front, then the applicant must file FCC Form 472 (Billed Entity Applicant Reimbursement Form) before the Administrator disburses money to the service provider. The service provider must then reimburse the applicant before depositing the funds from the Administrator.

In June of 1998, the funding year for schools and libraries was changed from a calendar year cycle (January 1 - December 31) to a fiscal year cycle (July 1 - June 30).² For transition purposes, the first funding period was the 18-month period that ran from January 1, 1998 through June 30, 1999. The second funding period ran from July 1, 1999 through June 30, 2000. Subsequent funding periods will run from July 1 to June 30 of the following calendar year.

In the first funding period, the USAC was directed to collect and disburse no more than \$1.925 billion for the schools and libraries program. In the first funding period, requests exceeded available funding, so the Commission established rules governing funding commitments in such situations. The rules are designed to ensure that schools and libraries receive discounts for telecommunications services

1 The posted FCC Forms 470 can be viewed at <http://www.sl.universalservice.org>.

2 *Fifth Reconsideration Order*, 13 FCC Rcd at 14916 and 14920, paras. 1 and 8.

and Internet access services before internal connections, and that the neediest schools and libraries (i.e., those eligible for an 80 or 90 percent discount) receive funding priority within any discount category.

Under the Commission's rules of priority, when the filing window closes, the Administrator will calculate total requests for support submitted during that filing window. If total requests exceed total support available in that funding year, SLD will: 1) Calculate the requests for telecommunications services and Internet access for all discount categories. These services shall receive first priority for funding; 2) Allocate the remaining funds to the requests for support for internal connections, beginning with the most disadvantaged schools and libraries, (those eligible for a 90 percent discount); (3) Commit remaining funds for internal connections to the applicants at each descending discount level until there are no funds remaining (i.e. 89%, 88%, etc).

If the remaining funds are not sufficient to support all of eligible discount requests within a particular discount level, the Administrator will divide the total amount of remaining support available by the amount of support requested within that discount level to produce a pro-rata factor. That is, each of the schools and libraries within that discount level will receive the same proportion of the support they requested.

The filing window (for FCC Forms 470 and 471) for the first funding period ran from January 30, 1998 to April 15, 1998. The Administrator received more than 30,000 FCC Forms 471, requesting \$2.02 billion. Although USAC completed its initial review of year one applications in February 1999 it has continued to grant year one commitments where schools and libraries have mounted successful appeals. USAC reports that as of June 30, 2000, it had committed a total of \$1.735 billion for schools and libraries in all 50 states, the District of Columbia, American Samoa, Puerto Rico, and the Virgin Islands, and that it had disbursed \$1.392 billion.³

The administrator believes that it will not disburse all of the \$1.735 billion of the first period funding commitments. USAC reports that some applicants have given no indication that the indicated services have been or will be provided, and that some applicants did not use the entire amount of their funding commitment. USAC expects that \$448 million that had been collected for Year 1 will not be disbursed.⁴ As of June 30, 2000, \$277.8 million of the \$448 million has been used to offset collections in subsequent quarters.⁵

In June of 1999, the Commission set the size of the second funding and future funding periods of the Schools and Libraries program equal to \$2.25 billion.⁶ The filing period for the second funding year

3 Universal Service Administrative Company *Federal Universal Service Programs, Fund Size Projections and Contribution Base for the Fourth Quarter 2000*, page 27.

6 47 C.F.R. § 54.507 (a).

(July 1, 1999 - June 30, 2000) ran from December 1, 1998 through April 6, 1999. Because the \$2.25 billion cap was sufficient to cover all applicants that filed before April 6, 1999, USAC continued to accept year 2 funding applications until March 1, 2000. About 32,000 parties submitted both FCC forms 470 and 471 during the original 127-day filing window. As of June 30, 2000, SLD had committed \$1.988 billion,⁷ authorized \$804.355 million for disbursement, and actually disbursed \$782.5 million. Regarding the second funding year applications that were received after the filing window closed, but were received by March 1, 2000, USAC reports that it will issue funding commitments to those applicants after it issues commitments to applicants in the third funding year. Therefore, second year funding commitments may rise in the future.⁸

The filing period for the third funding year (July 1, 2000 – June 30, 2001) began on November 10, 1999, and closed on January 19, 2000. USAC reports that 36,350 applications were received within the filing window, asking for \$4.721 billion.⁹ As of June 30, 2000, USAC had committed \$1.026 billion.¹⁰ No third year funds have been disbursed as of June 30, 2000.

USAC supplied the Commission with funding commitments information for all three funding years. There were four types of applicants: libraries (or library consortia), schools, school districts, and other consortia. USAC submitted the list of schools and libraries to which SLD issued funding commitment letters as of August 8, 2000. Table 4.1a summarizes the first funding period commitments by state and by type of applicant. Similarly, Tables 4.1b and 4.1c summarize the second and third funding period commitments, respectively. Tables 4.2a, 4.2b and 4.2c are based on the same data as Tables 4.1a, 4.1b and 4.1c, and show on a state by state basis, funding commitments for the three types of services: internal connections, Internet access, and telecommunications & dedicated access. Because the data in these tables show commitments through August 8, 2000, the commitment totals in these tables differ from the commitment totals reported above, which reflect commitments made through June

7 The 1.988 billion figure was arrived at by adding the 1.958 billion dollars of commitments reported by USAC last quarter (see Universal Service Administrative Company, *Federal Universal Service Programs, Fund Size Projections and Contribution Base for the Third Quarter 2000*, page 27) and the additional 30 million dollars of funding commitments that USAC reports in this quarter (see Universal Service Administrative Company, *Federal Universal Service Programs, Fund Size Projections and Contribution Base for the Fourth Quarter 2000*, page 28).

8 Universal Service Administrative Company *Federal Universal Service Programs, Fund Size Projections and Contribution Base for the Fourth Quarter 2000*, page 28.

9 According to USAC, larger funding requests from larger applicants and a 12% increase in the number of applicants has caused the total funding requests to nearly double from the prior year. Universal Service Administrative Company *Federal Universal Service Programs, Fund Size Projections and Contribution Base for the Second Quarter 2000*, page 25.

10 Universal Service Administrative Company *Federal Universal Service Programs, Fund Size Projections and Contribution Base for the Fourth Quarter 2000*, page 29.

30, 2000. The lists of funding commitments are too lengthy to include in this report, but are available at our web site.¹¹

Tables 4.3a and 4.3b summarize the fund disbursements by the nature of how USAC was billed (whether through the school/library, or by the service provider directly), and by type of service provider business. Table 4.3a summarizes the first funding period, and Table 4.3b summarizes the second funding period. As of June 30, 2000, no disbursements have been made for the third funding year. USAC also provided a complete list of funding authorizations on behalf of individual schools and libraries (funding authorizations are the penultimate step before funds are actually disbursed). The file is available at the FCC's Web site.¹²

Table 4.4 shows, for the second funding period, and by state, the total amount of funding commitments, the estimated contributions towards Schools and Libraries funding commitments, estimated contributions towards USAC's Schools and Libraries-related administrative expenses, and the net revenue the state receives.¹³ As of August 8, 2000, USAC had issued \$1.989 billion of funding commitments. In addition, administrative expenses for the second funding period were expected to be \$30.9 million. The far right column of Table 4.4 shows each state's share of total contributions towards the schools and libraries program and towards administration expenses.¹⁴ Each state's share of contributions is based on data from Table 2.3 of *State-by-State Telephone Revenue and Universal Service Data*. The amount that consumers in a given state pay into the fund was calculated by taking that state's share of contributions times the total amount of commitments. The same was done for administrative expenses.

11 The spreadsheet is compressed, and can be found on the FCC-State Link web site at <http://www.fcc.gov/ccb/stats>. Funding commitments for all three years are in the file <SLCom9-2000.zip >.

12 The list of authorizations was broken out by funding period, and is available in one zipped spreadsheet on the FCC-State Link web site at <<http://www.fcc.gov/ccb/stats>>. The file is named <SLDisb9-2000.zip>. The first tab of the spreadsheet contains information for the first funding period; the second tab contains information for the second funding period.

13 The same information for the first funding period (January 1, 1998 – June 30, 1999) can be found in Table 4.4 of the December 1999 Monitoring Report.

14 Carriers make the actual payments into the fund. The size of the each carrier's payment into the fund is a function of that carrier's prior-year's end-user revenues. The carriers generally pass the amount of their contributions through to their customers, based on a percentage of their bill. Because the Commission has good estimates of state by state revenue, the amount of contributions coming from consumers in each state can be estimated.

Table 4.1a

Schools and Libraries Funding Commitments by State and by Type of Applicant

Notes:

⁽¹⁾ This column sums to a negative number because of administrative costs.⁽²⁾ State's share of contributions is based on data from Table 2.3 of *State-by-State Telephone Revenue and Universal Service Data*. Carriers make payments into the fund, and generally pass the charges through to their customers, based on a percentage of their bill. The method of determining carrier contributions into Universal Service was recently changed by the FCC. These figures account for the fact that starting in November 1999, carrier contributions are based on interstate revenues, instead of interstate and intrastate revenues. See Public Notice CC Docket No 96-45, released October 8, 1999.

5. Rural Health Care Support

The portion of Universal Service support designated for health care providers is designed to allow rural health care providers to purchase telecommunications services at the same rates that health care providers located in urban areas pay for those services.¹ The Commission's Universal Service rules permit eligible² health care providers to receive support for any telecommunications service³ and for long distance charges for the distance between the rural health care provider and the nearest large city.⁴ The Commission defined "nearest large city" as the closest city in the state with a population of at least 50,000.⁵ In addition, any health care provider that cannot obtain toll-free Internet access is entitled to receive the lesser of \$180 of toll charges per month, or the toll charges incurred for 30 hours per month, for telecommunications access to an Internet service provider.⁶

An eligible rural health care provider must first submit FCC Form 465 (description of services requested and certification form) to the Rural Health Care Division (RHCD).⁷ The RHCD then determines eligibility, and then posts the Form 465 on its Web site for 28 days, so that eligible service providers may bid for the projects.⁸

After 28 days, the rural health care provider may contract with the most cost-effective bidder. The service provider then fills out FCC Form 468 (verification of services to be provided), and submits it to the rural health care provider. The rural health care provider must then complete FCC Form 466 (services ordered and certification form). The rural health care provider must then submit both FCC forms to RHCD.

Upon receipt and approval of FCC Forms 466 and 468, the RHCD sends a funding commitment letter to the rural health care provider that notifies it of the preliminary approval of the request for support, and provides an estimate of the amount of support that can be expected. The rural

1 See 47 U.S.C. § 254(h)(1)(A).

2 See 47 C.F.R. § 54.601(a).

3 For the first two funding periods, health care providers may employ transmission services at speeds up to 1.544 Mbps. The Commission removed the bandwidth cap for the third and future funding periods.

4 See 47 C.F.R. § 54.601(c).

5 See 47 C.F.R. § 54.605(c).

6 See 47 C.F.R. § 54.621.

7 The Rural Health Care Corporation merged into the Universal Service Administrative and became the Rural Health Care Division on January 1, 1999. See *Eighth Order on Reconsideration*, adopted November 19, 1998, para. 12.

8 The forms may be viewed at <http://www.rhc.universalservice.org>

health care provider must respond by submitting FCC Form 467 (receipt of service confirmation form) to verify the type of services provided and date that the services began. RHCD then sends a support schedule to the carrier. The carrier provides support to the rural health care provider, then invoices RHCD for the support, and upon approval, RHCD instructs USAC to reimburse the carrier.

For the first funding period (January 1, 1998 to June 30, 1999), the Rural Health Care Division established a 75-day filing window for FCC Forms 465. The window opened on May 1, 1998, and closed on July 14, 1998. Because there were more than sufficient funds available to support all qualified applicants that applied before July 14, 1998, RHCD continued to accept Forms 465 until June 30, 1999. In the Universal Service Order, the Commission placed a \$400 million cap on the amount that could be collected for the rural health care mechanism for each year. The Commission later determined that USAC could collect no more than \$100 million for the 1998 funding period.⁹

USAC reports that all activity for the first funding year has been completed. As of March 31, 2000, all eligible applications had been processed, and that \$3.398 million had been committed.¹⁰ Of that \$3.398 million, it disbursed \$3.375 million, or all but about \$22,800 of the funds set aside for those providers.¹¹

On May 27, 1999, the FCC adopted the *Twelfth Order on Reconsideration*, establishing a \$12 million commitment and collection level for the second funding period of the Rural Health Care Support Mechanism.¹² The second funding period was from July 1, 1999 through June 30, 2000. The RHCD began accepting applications for the second funding period on March 1, 1999. USAC reports that as of June 30, 2000, it received 1,234 FCC Forms 465, and that it has committed \$5.4 million, of which \$300,000 has been authorized for disbursement. USAC estimates that when it completes processing for all of the applications, it will have committed approximately \$6.7 million for the second funding period.¹³

The third program year began on July 1, 2000, and runs through June 30, 2001. The filing window for FCC Forms 465 opened on March 30, 2000, and closed on June 7, 2000. As of June 30,

11 Universal Service Administrative Company *Federal Universal Service Programs Fund size Projections & Contributions Base for the Third Quarter 2000*, Appendix 12C and 12D.

12 *Twelfth Order on Reconsideration* in CC Docket 96-45, adopted May 27, 1999, released May 28, 1999.

13 Universal Service Administrative Company *Federal Universal Service Programs Fund size Projections & Contributions Base for the Fourth Quarter 2000*. Page 25. USAC reports that of the 1,243 Forms 465 that have been filed, 1,097 have been posted, 29 are under review, 25 have been denied due to ineligibility, and 92 have been withdrawn.

2000, 840 FCC Forms 465 had been received. USAC estimates that program demand will be \$10.1 million for year 3¹⁴, which is below the \$400 million funding cap set by the FCC.¹⁵

In 1999, The FCC adopted two orders that significantly changed the Universal Service support program for rural health care providers. The Fifteenth Order on Reconsideration is mostly applicable to the third and future funding periods. This order 1) removed the funding cap for individual telemedicine locations; 2) ended the 1.544 Mbs of bandwidth restriction and authorized support for any commercially available telecommunications service; 3) simplified the application process by allowing discounts to be based on actual long distance charges instead of basing them on a comparison of tariffed rates in urban and rural areas; and 4) affirmed the ability of rural health care providers to join consortia and allowed new members to be added to a consortium at any time.¹⁶ The Fourteenth Order on Reconsideration eliminated the requirement that rural health care providers receive services from eligible telecommunications carriers.¹⁷ For more information on the Universal Service Program for Rural Health Care providers, visit the RHCD Web site: <http://www.rhc.universalservice.org>.

USAC provides information on funding commitments and all funding authorizations made during each of the funding periods.¹⁸ These files are available at the FCC Website.¹⁹ Table 5.1a and 5.1b summarize funding commitments and authorizations on a state-by-state basis. Table 5.1a shows that in the first funding year, \$3.398 million was committed, and that \$3.375 million was disbursed. Table 5.1b shows that as of June 30, 2000, \$5.396 million has been committed, and that \$290,000 had been authorized for disbursement. Table 5.2 shows first funding year disbursements to rural health care providers in each state, estimated contributions towards those disbursements, contributions towards administrative expenses for the Rural Health Care Mechanism, and the net revenue to entities within each state.

14 Universal Service Administrative Company *Federal Universal Service Programs Fund size Projections & Contributions Base for the Fourth Quarter 2000*. Page 26.

15 See 47 C.F.R. § 54.623(a).

16 *Fifteenth Order on Reconsideration* in CC Docket 96-45 adopted September 30, 1999 and released November 1, 1999.

17 *Fourteenth Order on Reconsideration* in CC Docket 96-45 adopted September 21, 1999 and released November 3, 1999.

18 Funding authorizations are the penultimate step before payment is actually made.

19 Funding commitments and authorizations for disbursements the first two funding years are available in the file RHCJune2000.zip. The file is located under the “National Exchange Carrier Association Data” link at <<http://www.fcc.gov/ccb/stats>>.

| Totals | 3,398,219 | 3,398,219 | 3,101,000 | -3,101,000 ⁽¹⁾ | 100.0% |

⁽¹⁾ Commitments less Contributions sums to a negative number because of administration costs.

⁽²⁾ State's share of contributions is based on data from Table 2.3 of *State-by-State Telephone Revenue and Universal Service Data*. Carriers make payments into the fund, which generally pass the charges through to their customers. The method of determining carrier contributions into Universal Service was recently changed by the FCC. These figures account for the fact that starting in November 1999, carrier contributions are based on interstate revenues, instead of interstate and intrastate revenues. See *Public Notice* CC Docket No 96-45, Released October 8, 1999.

6. Subscribership and Penetration

The number and percentage of households that have telephone service represent the most basic measures of the extent of universal service. Continuing analysis of telephone penetration statistics allows us to examine the aggregate effects of Commission actions on households' decisions to maintain, acquire or drop telephone service. This section presents comprehensive data on telephone penetration statistics collected by the Bureau of the Census under contract with the Federal Communications Commission. Along with telephone penetration statistics for the United States and each of the states from November 1983 to March 2000, data are provided on penetration based on various demographic characteristics. This section also updates information on telephone penetration by income by state.¹ This information is designed to help evaluate the degree of success of making telephone service available to low-income households in each state.

The most widely used measure of telephone subscribership is the percentage of households with telephone service, sometimes called a measure of telephone penetration. Prior to the 1980s, precise measurements of telephone subscribership received little attention. Traditionally, telephone penetration was measured by dividing the number of residential telephone lines by the number of households. Measures of penetration based on the number of residential lines, however, became subject to a large margin of error as more households added second telephone lines and more consumers acquired second homes. By 1980, the traditional penetration measure (residential lines divided by the number of households) reached 96%, while the number of households reporting that they had telephones in the 1980 census was 92.9%.

Recognizing the need for precise periodic measurements of subscribership, the Commission requested that the Bureau of the Census include questions on telephones as part of its Current Population Survey (CPS), which monitors demographic trends between the decennial censuses. This survey is a staggered panel survey in which the people residing at particular addresses are included for four consecutive months in one year and the same four months in the following year. Use of the CPS has several advantages: it is conducted every month by an independent and expert agency, the sample is large, and the questions are consistent. Thus, changes in the results can be compared over time with a great deal of confidence.

Unfortunately, the results of the CPS cannot be directly compared with the penetration figures contained in the 1980 and 1990 decennial censuses. This is due to differences in sampling and survey methodologies and because of differences in the context in which the questions were asked. The 1990 decennial census reported 94.8% of all households in the United States had telephones, whereas the CPS data showed a penetration rate of 93.3% for 1990. This difference is statistically significant and appears to indicate that the CPS value may be on the low side and the decennial census value may be on the high side, with the truth lying somewhere in between. In the 2000 decennial census the telephone question was changed from asking whether there was a telephone instrument to asking whether there was telephone service.

1 This information was included in the FCC report, "Telephone Penetration by Income by State," released March 30, 2000. That report contains information on the number of households in each state as well as the percentages reported here.

The specific questions asked in the CPS are: "Is there a telephone in this house/apartment?" and, if the answer to the first question is "no," this is followed up with, "Is there a telephone elsewhere on which people in this household can be called?" If the answer to the first question is "yes," the household is counted as having a telephone "in unit." If the answer to either the first or second question is "yes," the household is counted as having a telephone "available." Although the survey is conducted every month, not all questions are asked every month. The telephone questions are asked once every four months, in the month that a household is first included in the sample and in the month that the household reenters the sample a year later. Since the sample is staggered, the reported information for any given month actually reflects responses over the preceding four months. Aggregated summaries of the responses are reported to the Commission, based on the surveys conducted through March, July, and November of each year. The CPS later provides the Commission with the raw data files containing all the responses to all of the questions on the CPS questionnaires in those months.²

The Census Bureau data are based on a nationwide sample of about 48,000 households in the 50 states and the District of Columbia. (The CPS does not cover outlying areas that are not states, such as Puerto Rico, Guam, the Virgin Islands, and the Northern Mariana Islands. Because a sample is used, the estimates are subject to sampling error. For the nationwide totals, changes in telephone penetration between consecutive reports of less than 0.4% may be due to sampling error and cannot be regarded as statistically significant.³ As explained below, when comparing the same month in two consecutive years, changes of less than or equal to 0.3% are not statistically significant. When comparing annual averages, changes of less than or equal to 0.2% are not statistically significant. The annual averages are the average of the three surveys of the year in question. For individual states or other subgroups of the U.S. population, the amount of sampling variability is much greater, because the sample sizes are smaller.

Once a year, in March, the CPS augments its sample with about 2,500 additional Hispanic households, and supplements its survey with additional questions, which include detailed information about income.⁴ In the July and November surveys, only broad income categories are reported. (These are the categories that appear in Table 6.5.)

The data in this section are not seasonally adjusted. Seasonal analysis of the data indicates that, for the nation as a whole, there is no significant seasonal variation in these data.

Census Bureau figures for March 2000, the most recent data available, show that the

2 Tables 6.3, 6.9, and 6.15 of this section are derived from these raw data files.

3 The determination of the statistical significance of a change over time is discussed below. The critical value is dependent on the sizes of the samples from which the change is computed.

4 The responses from the additional Hispanic households are not included in Tables 6.4 through 6.8, but they are included in Table 6.9. Thus, in some cases, there may be small discrepancies between the percentages in Table 6.4 and Table 6.9.

percentage of households subscribing to telephone service is 94.6%, which is up 0.6% from March 1999. This increase is statistically significant. As a result of this and an increasing number of households, 1.1 million households were added to the nation's telephone system between March 1999 and March 2000.

This section includes figures showing subscribership percentages by state, by householder's age and race, by household size, by income, and for adult individuals by labor force status. The March 2000 data show that 95.2% of adult individuals in the civilian non-institutionalized population have a telephone in their household. This figure is up 0.2% from the March 1999 level. This increase is not statistically significant.

This section contains fifteen tables and nine charts presenting penetration statistics for various geographic and demographic characteristics. The charts and the first three tables present summaries of the available information. Tables 6.4 through 6.9 present more detailed information. In Tables 6.4 through 6.8, only the annual averages are included for the years 1984 through 1996. March, July, and November data for those years are available in Monitoring Reports in CC Docket No. 87-339. Tables 6.10 through 6.15 provide information necessary to determine the statistical significance of changes in the penetration rates over time.

Table 6.1 summarizes the telephone penetration for the United States, combining information on the number of households with the penetration rates.

Chart 6.1 depicts the nationwide penetration rates for households graphically over time.

Table 6.2 summarizes the telephone penetration rates by state, showing the rates for November 1983 and March 2000, the change between those two months, and an indication as to whether the change is statistically significant. The statistical significance of a change is determined not only by the magnitude of that change, but also by the sizes of the samples used to estimate the change.

Many households that do not currently have service are ones that formerly had service but were disconnected for non-payment. Through December 1998, eighteen states had implemented a policy where local telephone companies are prohibited from disconnecting their consumers from the local telephone network as long as the consumers pay the local portion of their telephone bills. Such a policy is called a "do not disconnect" (DND) policy. Local telephone companies have traditionally billed their customers for local service as well as for long distance service provided by AT&T or other companies.

Most local telephone companies continue to act as billing agents for long distance carriers, and many local telephone companies bill for other services too, including enhanced services and pay-per-call services (900 and 976 numbers). Local telephone companies make excellent billing and collection agents for three reasons: they send their customers a bill every month, their operating systems have been designed to collect for others, and the demand for local telephone service is very strong.

If a local telephone company is unimpeded by a state DND policy, it can present its customer with an ultimatum: either pay the phone bill in its entirety (local charges plus long distance and other types of charges), or be disconnected from the network entirely. The consumer may not be given the option of paying just the local charges, which would allow the consumer to remain connected to the local network. If the local telephone company allowed the consumer to remain connected to the local

network, but blocked the consumer from making toll calls, the consumer would still be able to make local and emergency calls, and receive long distance calls. Some consumers cannot pay their entire phone bill and they become disconnected from the network, even though they could pay their local telephone charges.⁵

In states with a DND policy, consumers that pay the local portion of their bill⁶ cannot be disconnected from the local telephone network. The long distance or other companies with unpaid charges can, of course, discontinue their services to those customers who don't remit payment. Typically the customer will enter an arrangement, such as toll blocking, to prevent further use of the services unpaid for, until they are paid.

An earlier analysis of DND policies showed that the length of time the DND policy has been in effect affects the penetration rate.⁷ Table 6.3 compares penetration rates of states without DND policies as of December 1998 with states that had them for less than five years and states that had them for more than five years. It shows that penetration increases between March 1984 and March 1999 have been greater for states that have had DND policies in effect for more than five years than for either of the other two groups. However, it also shows that the penetration increases have been smaller for states that have had DND policies for less than five years than for states with no DND policy. These findings indicate that a DND policy might not have a noticeable beneficial effect on penetration until it has been in effect for several years. We solicit comments on these preliminary findings.

Chart 6.2 depicts the states with March 2000 penetration rates (as shown in Table 6.2) more than 1% below the national average, within 1% of the national average, or more than 1% above the national average.

Chart 6.3 depicts changes in household penetration rates by state (as shown in Table 6.2) between the November 1983 and March 2000 rates. States with statistically significant increases are shown, along with other states with increases or decreases. There were no states with statistically significant decreases.

Chart 6.4 depicts the relationship between telephone penetration and household income, using

5 Some states have a "soft dialtone", which is a dialtone that allows people with disconnected phone service to call 911, and to call the local telephone company so that service can be re-established.

6 In some states with a do not disconnect policy, the local telephone company has discretion on how to apply any funds that the consumer remits, unless the consumer specifies which portion of the bill is being paid. In such states, the local telephone company may decide to prorate any payment evenly across all charges. Upon finding that the local telephone charges were not paid in full, the local telephone company may then lawfully decide to disconnect that consumer, even though the consumer has sent the local telephone company sufficient money to cover the local charges on the bill.

7 See *Monitoring Report*, CC Docket No. 98-202, December 1999, section 6.

March 2000 penetration rates, for all households, and for households headed by white, black, and Hispanic persons. It is based on data in Table 6.5.

Chart 6.5 depicts the relationship between telephone penetration and household size, using March 2000 penetration rates, for all households, and for households headed by white, black, and Hispanic persons. It is based on data in Table 6.6.

Chart 6.6 depicts the relationship between telephone penetration and householder's age, using March 2000 penetration rates, for all households, and for households headed by white, black, and Hispanic persons. It is based on data in Table 6.7.

Chart 6.7 depicts the relationship between telephone penetration and labor force status for civilian non-institutionalized adults, using March 2000 penetration rates, for all households, and for white, black, and Hispanic persons. It is based on data in Table 6.8.

Chart 6.8 depicts the nationwide penetration rates for civilian non-institutionalized adults graphically over time. It is also based on data in Table 6.8.

Chart 6.9 shows the telephone penetration rates in March of each year through 1999 for each of five income categories for the total United States. It is based on data in Table 6.9. The income categories (expressed in March 1984 dollars) are: \$9,999 or less; \$10,000 - \$19,999; \$20,000 - \$29,999; \$30,000 - \$39,999; and \$40,000 or more. These categories were chosen because they are of approximately equal size, both in terms of income ranges and the number of households in each category. As can be seen from the chart, most income categories have experienced increases in penetration over time, with the largest increases being in the lowest income categories. The changes between 1984 and 1997 are statistically significant for the two lowest income categories and for all households, but not for the three highest income categories.⁸ Not all of the increases in the national total penetration rate can be explained by increases in real income, because real income increases are reflected in the movement of households between categories. Thus penetration changes within each income category represent changes holding real income constant.

Table 6.4 shows the Current Population Survey responses for the United States and for each state beginning with November 1983. Because the Current Population Survey began collecting this data only in 1983, comparable values are not available prior to November 1983. For each of the surveys, the column headed "Unit" indicates the percentage of households for which there is a telephone in the housing unit. The column headed "Avail." indicates the percentage of households which have telephone service available for incoming calls, either in the housing unit or elsewhere (such as at work or at a neighbor's home).

Table 6.5 shows the nationwide penetration rates for households by income and the race of the householder. It shows a strong relationship between income and penetration. Caution should be taken in comparing these figures over time, because these income levels are not adjusted for inflation. Thus, the same nominal income level at two points in time will reflect different real incomes in terms of

8 See footnote 9 for the critical values for these significance tests.

purchasing power. Also, the income categories have changed over time due to the changing value of the dollar. Consequently, when evaluating penetration changes by income levels over time, Table 6.9 should be used.

Table 6.6 shows the nationwide penetration rates for households by the size of the household and the race of the householder. It shows that penetration is higher for households of 2 to 5 people than it is for single-person households or those with 6 or more people.

Table 6.7 shows the nationwide penetration rates for households by the age and race of the householder. It shows that the penetration rate is lowest for young and nonwhite households.

Table 6.8 shows the nationwide penetration rates for all persons that are at least 15 years old in the civilian non-institutionalized population by their race and employment status. Since this table is for individual adults rather than households, the total penetration rates are different from those in the previous tables. It shows that penetration is lowest among the unemployed.

Table 6.9 shows the penetration rates for each of the income categories shown in Chart 6.9 for each state for March of each year through 1998. The more detailed information from the March surveys makes it possible to adjust the income categories for inflation. The relative levels of the March Consumer Price Index for all items (as reported in Table 7.4) were used to make the inflation adjustment. Thus, for example, \$10,000 in March 1984 dollars had the same purchasing power as \$15,809 in March 1998 dollars. The precise current dollar values in each year are reported at the end of Table 6.9.

Tables 6.10 through 6.14 present the critical values at the 95% confidence level for testing the statistical significance of changes over time in the earlier tables. These critical values are relevant because changes less than or equal to the values shown are likely to be due to sampling error and thus cannot be regarded as demonstrating that a change in telephone penetration has occurred. In some cases these critical values are very large because the sample sizes are very small for these subcategories, rendering the estimated penetration rates unreliable. Because there is an overlap of half of the sample from year to year, but no overlap in the sample between surveys that are four months apart, annual changes are less subject to variations in sampling error. Consequently, the critical values should be multiplied by 0.8 when making a comparison for the same month in two consecutive years. When comparing the annual averages, the critical values should be multiplied by 0.5774, since these averages are based on three surveys and hence have a lower standard error. When comparing annual averages of two consecutive years, the critical values should be multiplied by .46, taking into account both of the above factors.

Table 6.15 shows the sample sizes on which the estimates of Table 6.9 are based. The sampling variability is inversely related to the square root of the sample size. The critical values for individual income categories in Table 6.9 can therefore be estimated by taking the critical value for the state "In Unit" total and multiplying it by the square root of the ratio of the sample size for the state total to the sample size for the income category. In most cases the critical value for an individual income category will be between two and three times the critical value for the state total.⁹ In some cases these

9 For example, using this methodology to calculate critical values for comparing the 1984 and

critical values are very large because the sample sizes are very small for these subcategories, thereby rendering the estimated penetration rates unreliable. The values in these tables have been revised substantially since our last report as a result of the first revision made by CPS in their estimates of sampling variability since they began collecting the telephone information.

1999 values for the United States Total, the critical values are 0.8% for the \$9,999 or less, the \$10,000 - \$19,999, and the \$40,000 or more categories, 0.9% for the \$20,000 - \$29,999 categories, and 1.1% for the \$30,000 - \$39,999 category. These compare with 0.4% for all households.

Table 6.1

Household Telephone Subscribership in the United States

| Date | Households (millions) | Households with Telephones (millions) | Percentage with Telephones | Households without Telephones (millions) | Percentage without Telephones |

7. Rates and Price Indices

This section contains information on telephone price indices and rate levels.¹ It describes and presents a series of price indices maintained by the Bureau of Labor Statistics (BLS). It also discusses rate levels and changes in average rate levels.

A. Telephone Service Price Indices

The BLS collects a variety of information on telephone service as part of three separate programs -- the Consumer Price Index (CPI), the Producer Price Index (PPI), and the Consumer Expenditure Survey. They can be found on the internet at <http://www.bls.gov/datahome.htm> on the World Wide Web. The monthly price indices represent prices sampled in the middle of the month.

A Consumer Price Index for telephone services was first published in 1935.² Since that time, telephone prices have tended to increase at a slower pace than most other prices. Table 7.1 shows long-run changes in the Consumer Price Indices for all items, all services, telephone services, each of the seven major categories that currently constitute the overall CPI, and several services that are often characterized as public utilities. The price of telephone service has increased less rapidly than the prices of most of these categories when viewed over a long period of time. Chart 7.1 shows the levels of the overall CPI and the CPI for telephone services over time.

The CPI index of telephone services is based on a "market basket" intended to represent the telephone-related expenditures of a typical urban household. It includes both local and long distance services. The annual rate of change during recent years is shown in Table 7.2 for the overall CPI (which measures the impact of inflation on consumers), and the CPI for telephone services. In addition, Table 7.2 shows the Gross Domestic Product chain-type price index (which reflects inflation throughout the economy) prepared by the Bureau of Economic Analysis. Chart 7.2 shows the changes in the overall CPI and the CPI for telephone services over time.

For 1999 the nation's overall level of prices (measured by the CPI for all items) rose by 2.7%. The CPI for telephone services rose by 0.4% during 1999. The CPI for telephone services is composed of three subindices. During 1999, the local service component (including subscriber line charges) rose by 2.8%, while the price index for interstate toll calls fell by 0.7%, and the price index for state toll calls fell by 1.6%. The changes in these subindices over time are shown in Chart 7.3.

1 For more detailed information, see *Reference Book of Rates, Price Indices, and Household Expenditures for Telephone Service*, published by the FCC's Industry Analysis Division in June 1999.

2 BLS publishes two sets of Consumer Price Indices. The CPI-U, used herein, is based on expenditures of all urban consumers. The CPI-W series is based on expenditures of urban wage earners and clerical workers.

The Bureau of Labor Statistics publishes a number of price indices related to local telephone service, two of which are important to the monitoring program. The CPI index of local telephone charges is based on a broadly defined "market basket" of local services that includes monthly service charges, message unit charges, leased equipment, installation, service enhancements (such as tone dialing and call waiting), taxes, subscriber line charges, and all other consumer expenditures associated with local telephone services except long distance charges. In contrast, the PPI index of monthly residential rates is much more narrowly defined. It is based only on monthly service charges for residential service, optional tone dialing service, and subscriber line charges. It excludes taxes and all other telephone service charges. The annual rates of change for these two indices are presented in Table 7.3.

CPI data are available for intrastate toll and interstate toll services since December 1977. Table 7.3 also presents the annual changes in these series for recent years.

Price indices are less reliable when industries are changing rapidly. For example, in 1992, long distance carriers began to increase basic long distance rates while at the same time greatly expanding their range of discount offerings aimed at medium and heavy users of long distance service. The fixed market basket of toll calls measured for the CPI did not fully reflect these discounts. In 1998, the CPI for telephone services was altered to include cellular telephone services, making the new index not directly comparable to prior years. In 1995, BLS made major changes to the PPI telephone series, and there are no data after July 1995 comparable with prior data. At that time the BLS introduced revenue-weighted telephone price indices. The new indices categorize the telephone industry into much finer detail, though the new series are not comparable to the old in many categories. Because of these sorts of difficulties, measures of average revenues are sometimes used as alternatives to price indices.

Monthly data for the CPI telephone indices are shown in Table 7.4. Monthly data for the new CPI indices are shown in Table 7.5, and the current PPI indices are shown in Table 7.6.³

B. Information on Rate Levels

Local rates are regulated by state regulatory agencies and vary greatly from area to area. Characterization of any rate as "typical" is therefore difficult. Table 7.7 presents average local residential rates in urban areas. The price indices published by the BLS indicate percentage changes in the price of the telephone services. The BLS does not publish the actual level of rates. The averages shown in Table 7.7 are based on an FCC survey using the same sampling areas and weights used by the BLS in constructing the Consumer Price Index. In October 1999 the national average for the representative total residential service charge was \$19.87 monthly. The average charge for connecting new phone service was \$43.88.

Table 7.8 presents average monthly local rates for single-line business customers in urban areas. Like the residential rates presented above, they are based on a FCC survey using the same

3 The discontinued Producer Price Indices through July 1995 can be found in Table 5.6 of the May 1997 Monitoring Report in CC Docket No. 87-339.

sampling areas and weights used by the BLS in constructing the Consumer Price Index. In October 1999, the representative average monthly charge was \$41.00, while the average charge for connecting phone service was \$72.48. Table 7.9 presents comparable data for businesses with a key system line, showing an average monthly charge of \$50.09 in October 1999, and an average connection charge of \$176.67. Table 7.10 presents comparable data for business with a PBX trunk, showing an average monthly charge of \$53.65 in October 1999 and an average connection charge of \$176.26.

Basic schedule rates of AT&T, MCI, and Sprint for representative directly dialed interstate long distance calls are shown on an annual basis for 1980 through 1999 in Table 7.11 for residential customers and Table 7.12 for business customers. Higher charges apply to other types of calls, such as those using operator assistance. Lower prices are available through calling plans and other volume discounts. In 1993, AT&T first began to charge different rates to residential and business customers. Since 1984, as a result of telephone rates becoming less distance sensitive, basic schedule charges for directly dialed interstate calls have fallen for calls over longer distances and risen for calls over shorter distances.

Table 7.13 contains average revenue per minute for interstate calls. From 1984 to 1994, AT&T's average revenue per minute declined from 32 cents per minute to 18 cents per minute -- a drop of over 40%. Table 7.13 also shows revenue-per-minute estimates calculated by the FCC staff for all carriers. These estimates show that billed revenue per minute has continued to decline for both international and domestic services.

C. Subscriber Line and Access Charges

Long distance companies rely on the loops, switches, and transport facilities of local telephone companies for access to their customers. As a result, local telephone companies recover a portion of their costs from long distance companies accessing their networks. Both the manner in which these access charges have been assessed and the proportion of the costs they have recovered have varied considerably over time.

In the early 1980s, AT&T provided about three-quarters of the nation's local telephone service and almost all interstate long distance service. Because revenue sharing was largely an internal process for AT&T, it was able to charge prices above cost for long distance calls and share the revenues with local telephone companies. These transfers, while reducing the pressures on the local companies to raise monthly local rates, contributed to inefficiently high long distance rates. The high rates were responsible for suppressing demand for long distance calls and inducing large corporations to bypass the public switched network. Moreover, while such revenue sharing arrangements were sustainable in an industry where one firm monopolized both long distance and local service, they were not compatible with a competitive long distance industry.

In mid-1984 the FCC, in cooperation with a Federal-State Joint Board comprised of both federal and state regulators, introduced sweeping changes to the way that local companies charged for their services. The historic method of sharing revenues was replaced with a new system of access charges that provided a uniform method for local telephone companies to charge for the origination and termination of interstate traffic on their local networks. In

particular, monthly subscriber line charges (SLCs) were introduced to recover a portion of the fixed costs of the local telephone companies' loops directly from end users on a per-line basis. Since local telephone companies were required to reduce their charges to long distance carriers -- dollar for dollar -- the introduction of SLCs permitted reductions in implicit subsidies from long distance service to local service. The rebalancing of prices between local service and interstate long distance calls during the 1980s had a fundamental impact on the telephone industry as the price of long distance service fell and the volume of long distance calling surged.

In mid-1997, as part of its implementation of the 1996 Telecommunications Act, the FCC introduced further interstate access charge reform. Presubscribed interexchange carrier charges (PICCs) were created in order to allow local carriers to recover the remaining portion of their fixed loop costs from long distance carriers on a per-line, instead of a per-minute, basis. Flat cost recovery on a per-line basis not only eliminates the remaining inefficiency in the pricing of long distance access, but allows local companies to recover costs in a competitively neutral manner, consistent with the goals of the 1996 Act. A further access charge reform was adopted on May 31, 2000, which eliminated the PICC and consolidated it with the SLC. This took effect on July 1, 2000.⁴

Average monthly SLCs and PICCs are shown in Table 7.14 and average per-minute rates charged to long distance carriers are shown in Table 7.15. Both tables report historical averages for all local exchange carriers (LECs) that file access tariffs subject to price-cap regulation and LECs in the National Exchange Carrier Association (NECA) pool. These LECs control over 98% of the industry's regulated access lines. Current per-line charges and per-minute charges are reported for each of the carriers in Tables 7.16 and 7.17, respectively.

The averages in Table 7.15 clearly illustrate the effectiveness of access reform in reducing the prices long distance carriers pay per minute for access to the local telephone companies' networks. The reductions in per-minute access prices over time have been a major contributing factor to reductions in long distance prices.

4 Although the changes took effect on July 1, some companies made subsequent adjustments to their tariffs, which did not take effect until August 11.

Source: Bureau of Labor Statistics.

* CPI toll indices represent rates for households. Through 1994, PPI toll indices represent rate changes for both business and residential consumers. Since 1995, PPI indices reflect rates for residential customers.

** The PPI telephone indices were revised in June of 1995. The series are not comparable. Due to substantial month to month variation in the new PPI indices, PPI price levels are determined using a five-month weighted average.

Source: Industry Analysis Division, *Monitoring Report* and access tariff filings.

* This table shows average rates (weighted by access lines) for all local exchange carriers (LECs) that file access tariffs subject to price-cap regulation and all LECs in the National Exchange Carrier Association (NECA) pool.

** Prior to 1/01/98 carriers did not charge separate subscriber line charge (SLC) rates for primary and non-primary residential lines. Therefore, the residential and single-line business average SLCs reported prior to 1/01/98 include all residential SLC charges. The average residential and single-line business SLC rate as of 1/01/98 excludes non-primary residential SLC charges. Non-primary SLC charges are now reported separately, except for the LECs in the NECA pool, which continue to charge a single residential SLC. Under price-cap regulation, as of July 1, 2000, the caps on SLCs for primary residential and single-line business, non-primary residential, and multiline business and Centrex lines equal \$4.35, \$7.00, and \$9.20, respectively. For NECA pool companies, the residential SLC cap is \$3.50, while the multiline business and Centrex SLC cap equals \$6.00.

*** On 1/01/98 price-cap carriers began to charge presubscribed interexchange carrier charges (PICCs). The reported PICCs are averages per line including both price-cap and NECA pool lines. While carriers do not charge different rates for Centrex and multiline business SLCs, they do charge different PICC rates for these lines. Therefore, the average multiline business and Centrex PICC rates are reported separately. However, multiline business line counts, used to compute average PICC rates, include Centrex lines for LECs in the NECA pool, which do not charge PICCs or distinguish in access filings between the two line types. On 7/01/00 price-cap carriers stopped charging residential and single line business PICCs. Therefore, under price-cap regulation, as of July 1, 1999, the caps on PICCs for primary residential and single-line business, non-primary residential, and multiline business lines equal \$0.00, \$0.00, and \$4.31, respectively. Centrex groups of 9 or fewer lines are capped at the multiline business PICC rate of \$4.31 per group. Centrex groups with more than 9 lines are capped \$0.48 per line (1/9th the multiline business rate).

Source: Industry Analysis Division, *Monitoring Report* and access tariff filings.

* This table shows average rates (weighted by minutes of use) for all local exchange carriers (LECs) that file access tariffs subject to price-cap regulation and all LECs in the National Exchange Carrier Association (NECA) pool. The average rates reported here do not include the average revenue per minute from subscriber line charges (SLCs) or primary interexchange carrier charges (PICCs), which are reported in Table 1.1.

** Non-traffic sensitive charges include charges assessed on a per-month per-unit basis. Prior to 07/01/94 these charges were included in the average traffic-sensitive rates.

*** The total charge per conversation minute consists of charges on the originating end of the call, which are adjusted for dialing and call setup time, plus charges on the terminating end. Originating charges per conversation minute equal the carrier common line charge per originating access minute plus the traffic-sensitive charge per switched minute, both multiplied by 1.07 to account for dialing and call setup time, plus the non-traffic-sensitive charge per switched minute. Terminating charges per conversation minute equal carrier common line charges per terminating access minute plus both traffic-sensitive and non-traffic-sensitive charges per switched minute.

* This table shows average rates (weighted by access lines) for all local exchange carriers (LECs) that file access tariffs subject to price-cap regulation and all LECs in the National Exchange Carrier Association (NECA) pool. Rates are composites of all regions and subsidiaries of each local exchange carrier. No information is available for those carriers that are not in the NECA pool, but are subject to rate-of-return regulation.

** Access line counts measure lines that companies report as qualified to receive subscriber line charges (SLCs). ISDN-BRI lines, which are charged non-primary SLC and PICC rates are included in the non-primary residential line counts. ISDN-PRI lines, which are charged rates equal to five times the multiline business SLC and PICC rates, are multiplied by five and added to multiline business counts.

* This table shows average rates (weighted by minutes of use) for all local exchange carriers (LECs) that file access tariffs subject to price-cap regulation and all LECs in the National Exchange Carrier Association (NECA) pool. Rates are composites of all regions and subsidiaries of each local exchange carrier. No information is available for those carriers that are not in the NECA pool, but are subject to rate-of-return regulation. The average rates reported here do not include the average revenue per minute from subscriber line charges (SLCs) or primary interexchange carrier charges (PICCs), which are reported in Table 1.1.

** Non-traffic sensitive charges include charges assessed on a per-month per-unit basis. Prior to 07/01/94 these charges were included in the average traffic-sensitive rates.

*** The total charge per conversation minute consists of charges on the originating end of the call, which are adjusted for dialing and call setup time, plus charges on the terminating end. Originating charges per conversation minute equal the carrier common line charge per originating access minute plus the traffic-sensitive charge per switched minute, both multiplied by 1.07 to account for dialing and call setup time, plus the non-traffic-sensitive charge per switched minute. Terminating charges per conversation minute equal carrier common line charges per terminating access minute plus both traffic-sensitive and non-traffic-sensitive charges per switched minute.

8. Network Usage and Growth

To monitor use of the public switched telephone network, the National Exchange Carrier Association (NECA) provides quarterly reports to the Commission on the volume of interstate access minutes of use (MOU) passing through the local switches. To supplement this information, local telephone companies that settle on a cost basis also provide, on an annual basis, their dial equipment minutes (DEM) and factors. The Joint Board recognizes that much of this information is not otherwise collected by any single entity and that reports should be received and consolidated by NECA.

The data reported in this section include new annual data for 1998 and revisions of the data that were contained in our previous reports.¹ Also included are the latest quarterly estimates of industry total access minutes, through the first quarter of 2000. The minutes reported here are those minutes that pass through the incumbent local exchange carriers' switches.

Beginning with data for 1999, local switching access minutes are now reported instead of CCL access minutes for non-participants in the NECA common line tariff. Also, only total minutes are being reported and we no longer receive monthly data. NECA now reports total local switching minutes quarterly instead of the monthly carrier common line (CCL) access minutes, which were previously reported and shown in prior monitoring reports. There are three reasons for this.

First, access reform changes that were implemented on January 1, 1998, have already caused the CCL rates for some price-cap incumbent local exchange carriers (ILECs) to go to zero, and will eventually cause the CCL rates for all price-cap ILECs to go to zero. Since ILECs derive their reported CCL rates by dividing the CCL revenue by the CCL rate, this presents a reporting problem where a price-cap ILEC's CCL rates are zero.²

Second, the amount of non-premium minutes in the quarterly reports has declined to a level where it is no longer significant. Non-premium minutes for 1984, which was the first period for which data are available, represented 13% of the total access minutes. For 1998, non-premium minutes represented only 0.07% of the total minutes.

Third, quarterly data, rather than monthly data, are sufficient and less burdensome for the carriers to maintain.

Table 8.1 presents NECA's latest available information on local switching access minutes for interstate traffic that pass through the ILECs' switches. Quarterly data are shown for totals of the tier 1 carriers, the non-tier 1 carriers, and the industry. These figures do not include the minutes from the closed end of WATS or toll-free (800/888/877) calls. Table 8.2 provides quarterly industry total access minutes back to mid-1984.

Table 8.3 summarizes annual data for the total industry for 1980 through 1998 on local, state,

1 Data for 1999 are scheduled to be submitted by NECA on March 1, 2001.

2 Because the revenues are also zero, this calculation becomes zero divided by zero, which is undefined.

interstate, and total DEM minutes. It also shows annual percentage growth rates and the distribution between categories of usage. Table 8.4 summarizes industry total lines.³ Table 8.5 shows the average daily line usage. It is calculated from the values in Tables 8.3 and 8.4.

The NECA compilation of data provided at the study area level appears in Tables 8.6 through 8.12. These tables provide annual data for the years 1995 through 1998.⁴ In order to be responsive to state concerns, the study areas are sorted by state, and state totals or averages (where applicable) are provided. Within each state's listing, the study areas are arranged in numerical order by their NECA study area code.⁵ The second column identifies whether a study area is part of a Tier 1 cost company, a Tier 2 cost company, or an average schedule company (designated by a 1, 2, or A, respectively). The data in these tables are revised and supersede the usage data in previous reports.⁶ Table 8.6 provides data on interstate access minutes of use. This table includes data for the study areas of average schedule companies. Tables 8.7 through 8.10 provide data on dial equipment minutes for cost companies only. Table 8.7 has local minutes; Table 8.8 has state toll minutes; Table 8.9 has interstate minutes; and Table 8.10 has total minutes.

Tables 8.11 and 8.12 present data on interstate separations factors. Table 8.11 presents DEM factors for the years 1995 through 1998. These are the ratios of interstate DEM to total DEM. Table 8.12 presents weighted (or transitional) DEM factors.

Table 8.13 provides a cross-reference table of the NECA state codes that are part of their study area codes.

The following descriptions of minutes of use measures are based on information provided by NECA:

Access MOU are "earned MOU" which are derived by dividing the earned revenues by the corresponding rate. This definition of access minutes is in agreement with the tariff review plan and ARMIS reports. Access minutes of use generating revenues have been discounted, which can produce distortions in revenue amounts. Further, revenues are normalized to include changes in terminating/originating and percent interstate use factors, billing adjustments, and the imputations of

3 These lines are loops reported for the universal service high cost loop support. These were most recently reported in the December 1999 Monitoring Report, Table 3.12.

4 Similar data (for cost companies) going back to 1992 appear in the June 1999 Monitoring Report, data going back to 1984 appear in the May 1993 Monitoring Report, and data going back to 1980 appear in the January 1992 Monitoring Report.

5 A study area is usually an operating company's operations in one state. The first two digits of the NECA study area code identify the state, and the remaining four digits identify the study area. The numerical code for each state is shown in Table 8.13.

6 In cases where study areas have merged, the historical data have been restated to reflect the merger.

access charges (where applicable). Revenues are also calendarized, which will change derived minutes.

Access MOU include only the domestic portion of international calls. Similarly, WATS and toll-free (800/888/877) calls are counted only on one end of the call.⁷ Finally, minutes include time for incomplete calls and setup time.

⁷ WATS calls generate access minutes only at the terminating end of the call and toll-free (800/888/877) calls generate access minutes only at the originating end of the call; both types of minutes are counted in the terminating minutes.

9. Quality of Service

This section summarizes various kinds of service quality data filed by certain local exchange telephone companies in April 2000 covering the 1999 calendar year. The Federal Communications Commission (FCC or Commission) does not impose service quality standards, *per se*, on communications common carriers. Rather, the Commission annually monitors carrier-submitted data and publishes the most recent quality of service available in this data section prior to releasing a separate report on recent quality of service trends.¹ The data contained here provides an initial view of the most current quality of service data including customer-initiated trouble reports and company responses. This section publicizes information about company performance and, specifically, statistics about company responsiveness to network failures and associated consumer complaints. We include, in the tables following the text of this section, company comparison data about various service parameters including installation, maintenance, switch downtime, and trunk blocking, along with associated customer perception data.

Background

At the end of 1983, anticipating AT&T's imminent divestiture of its local operating companies, the Commission directed the Common Carrier Bureau to establish a monitoring program that would provide a basis for detecting adverse trends in network service quality. Throughout 1985, the Bureau modified the service quality reporting requirements to reduce unnecessary paperwork and to ensure that needed information would be provided in a more uniform format. The data were received semiannually, typically in March and August, and formed the basis for FCC summary reports published in June 1990 and July 1991.

With the implementation of price-cap regulation for certain local exchange carriers, the Commission made several major changes to the service quality monitoring program beginning with reports filed in 1991. First, the Commission expanded the class of companies filing reports to include non-Bell carriers subject to price-cap regulation.² Second, the Commission included service quality reports as part of the Automated Reporting Management Information System (ARMIS).³ Third, the Commission ordered significant changes to the kinds of data reported.⁴ Following these developments,

1 The last report was released December 1, 1999 (mimeo number 96662), which covered data for 1996, 1997 and 1998.

2 *See Policy and Rules Concerning Rates for Dominant Carriers*, Second Report and Order, 5 FCC Rcd 6786, 6827-31 (1990) (*LEC Price Cap Order*) (establishing the current service quality monitoring program and incorporating the service quality reports into the ARMIS program), Erratum, 5 FCC Rcd 7664 (Com. Car. Bur. 1990), *modified on recon.*, 6 FCC Rcd 2637 (1991); *aff'd sub nom.*, *Nat'l Rural Telecom Ass'n v. FCC*, 988 F.2d 174 (D.C.Cir. 1993).

3 *LEC Price Cap Order*, 5 FCC Rcd 6786, 6827-30. The ARMIS database includes a variety of mechanized company financial and infrastructure reports in addition to the quality-of-service reports. Most data are available disaggregated to a study area or state level.

4 *LEC Price Cap Order*, 5 FCC Rcd 6786, 6827-30; *See Policy and Rules Concerning*

the Commission released service quality summary reports in February 1993, March 1994, March 1996, September 1998, and December 1999. Pursuant to requirements in the Telecommunications Act of 1996⁵ the Commission reduced the frequency of the filed data from quarterly to annual submissions.⁶ In May 1997 relevant definitions were clarified further and these changes have been reflected starting with data covering the 1997 calendar year.⁷ This section represents an early view of data filed for 1999, which are subject to revision by the companies.

Data

The source data used in preparing this section can be extracted from an online database maintained on FCC website at www.fcc.gov/ccb/armis/db. The data are also available from ITS, Inc., at (202) 857-3800. Selected paper filings are available in the Common Carrier Bureau public reference room at 445 12th Street, SW, Washington, D.C. 20554.

The data presented in this section summarize ARMIS 43-05 and 43-06 carrier filings for 1999 and represent an initial view of the data. The tables accompanying this section highlight many of the data elements now received. Tables include data from each major holding company: the regional Bell companies, GTE (including Contel), and Sprint.⁸

Rates for Dominant Carriers, Memorandum Opinion and Order, 6 FCC Rcd 2974 (Com. Car. Bur. 1991) (*Service Quality Order*), reconsideration 6 FCC Rcd 7462 (Com. Car. Bur. 1991). Previously the Common Carrier Bureau had collected data on five basic service quality measurements from the Bell Operating Companies. These were customer satisfaction levels, dial tone delay, transmission quality, on time service orders, and percentage of call blocking due to equipment failure.

5 Telecommunications Act of 1996, Pub. L. No. 104-104, 110 Stat. 56 (1996 Act).

6 Orders implementing filing frequency and other reporting requirement changes associated with implementation of the Telecommunications Act of 1996 are as follows: *Implementation of the Telecommunications Act of 1996: Reform of Filing Requirements and Carrier Classifications*, Order and Notice of Proposed Rulemaking, 11 FCC Rcd 11716 (rel. Sep. 12, 1996); *Revision of ARMIS Quarterly Report (FCC Report 43-01) et al.*, Order, 11 FCC Rcd 22508 (Com. Car. Bur., rel. Dec. 17, 1996); *Policy and Rules Concerning Rates for Dominant Carriers*, Memorandum Opinion and Order, 12 FCC Rcd 8115 (rel. May 30, 1997); *Revision of ARMIS Annual Summary Report (FCC Report 43-01) et al.*, Order, 12 FCC Rcd 21831 (Com. Car. Bur., rel. Dec. 16, 1997).

7 See *Policy and Rules Concerning Rates for Dominant Carriers*, Memorandum Opinion and Order, 12 FCC Rcd 8115 (rel. May 30, 1997).

8 In February 1992, United Telecommunications Inc. became Sprint Corporation [Local Division]; and in March 1993, Sprint Corporation acquired Centel Corporation. Although Bell Atlantic and NYNEX merged in August 1997, the tables continue to reflect the merged entities separately. Similarly, SBC, Pacific Telesis and Ameritech facilities are shown separately despite the merger of the SBC and Pacific in April 1997 and SBC and Ameritech in October 1999. Bell Atlantic's recent with GTE and its new name Verizon Communications is not reflected in

The data items summarized in the tables largely contain raw data measurements that are not scaled by company indexing processes. This removes a degree of procedural variation among companies. For example, companies file a fairly extensive amount of raw data about switching outages, including outage durations and number of lines affected.

The data summarized in this section contain sums, or weighted averages, of data reported by states or study areas and may be useful in assessing overall trends. Where information is reported in terms of percentages or average time intervals, data presented here are based on a composite of individual study area data that are calculated by weighting the percentage or time interval figures. For example, we weight the percent of commitments met by the corresponding number of orders provided in the filed data.⁹

The items contained in the tables are summarized below. Installation, maintenance and customer complaint data are shown in Table 9.1, and switch downtime and trunk servicing data are shown in Table 9.2. Installation and maintenance data are presented separately for services provided to end users and for interexchange carrier access facilities. Outage data categorized by cause are shown in Table 9.3. Customer perception data are contained in Table 9.4 and the associated survey sample sizes are contained in Table 9.5.

This section has attempted to display data elements that have remained roughly comparable over the past few years. More detailed information on the raw data from which this section has been developed is contained on the Commission's website for the ARMIS database noted above. In addition, complete data descriptions are available in the Commission Orders referenced above.¹⁰ The row numbers and columns associated with the raw source data in the ARMIS 43-05 report are included in the descriptions below.¹¹

this report, which reflects carrier status as of the end of 1999.

9 Company composite data were typically recalculated on a consistent basis from study area data, as a number of company supplied composites could not be confirmed. Although the companies have prepared their own company rollups, we have discovered various inconsistencies or inaccuracies in some of these company-prepared composites. We have therefore weighted data involving percentages or time intervals in order to arrive at the more consistent composite data shown in the tables and expect that the companies will want to review their procedures for preparing composites. Parameters used for weighting in this section were appropriate for the composite being calculated and were based on the raw data filed by the carriers but are not necessarily shown in the tables. For example, we calculate composite installation interval data by summing the individual study area results multiplied by the number of installation orders reported for each study area and then dividing the result by the total number of orders.

10 See footnote 6, *supra*.

11 For rows 110-121 in the raw machine readable data sets, column a or aa is the first column; for rows 130 to 151, column d or ad is the first column; for rows 180 to 190, column k or ak is the first column; for rows 200 to 214, column n or an is the first column; for rows 220 to 319 and

1. Percent of Installation Commitments Met

Percent of installations that were met by the date promised by the company to the customer. It is presented separately for residential and business customers' local service (row 132, columns f and i or af and ai, respectively) and access services provided to carriers (row 112, columns a and c or aa and ac).

2. Average Installation Interval (in days)

Average interval (in days) between the installation service order and completion of installation. It is shown separately for access services provided to carriers (row 114, column a and c or aa and ac) and for residential and business customers' local service (row 134, columns f and i or af and ai, respectively). Data on intervals for missed installations (rows 113 and 133) were replaced by average interval described above.

3. Average Repair Interval

Average time (in hours) for the company to repair access lines and service subcategories for switched access, high-speed special access, and all special access. Only data for switched and special access services provided to carriers are presented. (See row 121, column a and c or aa and ac.)

4. Initial Trouble Reports per Thousand Access Lines

Calculated as the total count of trouble reports reported as "initial trouble reports," divided by the number of access lines in thousands. (Note that multiple calls within a 30 day period associated with the same problem are counted as a single initial trouble, and the number of

333-500, column t is the first column; and for rows 320 to 332, column aa or da is the first column. The companies also file printed copies of their submissions where rows 110-121 are designated as Table I, rows 130-170 are designated as Table II, rows 180-190 are designated as Table III, rows 200-214 are designated as Table IV, rows 220-319 and 333-500 are designated as Table IV-A, and rows 320-332 are designated as Table V. Note that some of the row numbers in the data such as rows 142, 143 and 160 do not appear in numerical order. In addition to definitional wording changes, most of which are minor, rows 111, 131, 160 and 170 (missed installations for customer reasons and subsequent trouble reports) have been added with the 1997 data; however, not all companies have populated the added rows. Many column designations have also been changed and most column labels are now preceded by the letter "a". The reader should note that there are variations in numbers of switches and access lines in the various ARMIS reports that may lead to inconsistencies when comparing data sources; however, these variations are not believed to be significant enough to alter the observations made in this section. Because the entire row and column descriptions and definitions for each year in question are too voluminous to reproduce here, the reader should refer to the relevant Commission Order referenced in a prior footnote describing requirements for the specific data year of interest.

access lines reported and used in the calculation is the total number of access lines divided by 1,000.) This item is subcategorized by Metropolitan Statistical Areas (MSA) (the sum of row 141, column d or ad and row 141, column g or ag divided by the sum of row 140, column d or ad and row 140, column g or ag); non-MSA (the sum of row 141, column e or ae and row 141, column h or ah divided by the sum of row 140, column e or ae and row 140, column h or ah); residence (row 141, column f or af divided by row 140, column f or af); and business (row 141, column i divided by row 140, column i or ai). Note that access lines for data filed in 1997 were requested in whole numbers, but were requested in thousands for prior years.

5. Found or Verified Troubles per Thousand Access Lines

Calculated as described in item 4, above. Represents the number of trouble reports in which the company identified a problem (row 141, column j or aj less row 143, column j or aj divided by row 140, column j or aj).

6. Repeat Troubles as a percent of Initial Trouble Reports

Calculated as the number of initial trouble reports acted on that recur, or remain unresolved, within 30 days of the initial trouble report, divided by the number of initial trouble reports as described above (row 142, column j or aj divided by row 141, column j or aj). Provides a measure of the effectiveness of the company in resolving troubles at the outset. Subcategorized by MSA, non-MSA, residence, and business. (Also refer to the discussion of data qualifications that follows.)

7. Complaints per Million Access Lines

The number of residential and business customer complaints, per million access lines, reported to state or federal regulatory bodies during the reporting period. (Total residence complaints are calculated as the sum of row 331, column aa and row 332, column aa; total business complaints are calculated as the sum of row 321, column aa or da and row 322, column aa or da).

8. Number of Access Lines, Trunk Groups and Switches

The count of in-service access lines (row 140, column j or aj), trunk groups (row 180, column k or ak), and switches (the sum of row 200, column n or an and row 201, column n or an or the sum of row 210, column n or an through row 214, column n or an). Trunk groups only include common trunk groups between Local Exchange Carrier (LEC) access tandems and LEC end offices. When comparing current data herein with data in prior reports the reader should note that access lines were reported in thousands in pre 1997 data submissions. Starting with 1997 data submissions access line data was requested in whole numbers. Data for 1995 was annualized as the average of quarterly data.

9. Switches with Downtime

Number of network switches experiencing downtime and the percentage of the total number of company network switches experiencing downtime (row 210, column o or ao through row 214, column o or ao or the sum of row 200, column o or ao and row 201, column o or ao).

10. Average Switch Downtime in Seconds per Switch

Total switch downtime divided by the total number of company network switches indicates the average switch downtime in seconds per switch. Shown for all occurrences (the sum of row 200, column p or ap and row 201, column p or ap, multiplied by 60 and divided by the sum of row 200, column n or an and row 201, column n or an) and for unscheduled occurrences greater than 2 minutes (data derived from rows 220 through 319 and rows 333 through 500, columns t through z in the source data divided by the sum of rows 200 and 201, column n or an).

11. Unscheduled Downtime Over 2 Minutes per Occurrence

Number of occurrences of more than 2 minutes in duration that were unscheduled, the number of occurrences per million access lines, the average number of minutes per occurrence, the average number of lines affected per occurrence, the average number of line-minutes per occurrence in thousands, and the outage line-minutes per access line. For each outage, the number of lines affected was multiplied by the duration of the outage to provide the line-minutes of outage. The resulting sum of these data represents total outage line-minutes. This number was divided by the total number of access lines to provide line-minutes-per-access-line, and, by the number of occurrences, to provide the line-minutes-per-occurrence. This categorizes the normalized magnitude of the outage in two ways and provides a realistic means to compare the impact of such outages between companies. A separate table is provided for each company showing the number of outages and outage line-minutes by cause. (These items are derived from data in rows 220 through 319 and 333 through 500, columns t through z, in the source data).

12. Scheduled Downtime Over 2 Minutes per Occurrence

Determined as in item 11, above, except that it consists of scheduled occurrences. (These items are derived from data contained on rows 220 through 319, and rows 333 through 500, columns t through z, in the source data).

13. Percent of Trunk Groups Meeting Design Objectives

This data item provides the percentage of trunk groups exceeding an industry standard for blocking over the reporting interval (the sum of rows 189 and 190, column k, divided by row 180, column k for 1995 data and the sum of rows 189 and 190, column ak divided by row 180 column ak starting with 1996 data). The trunk groups measured and reported are interexchange access facilities. These represent only a small portion of the total trunk groups in service.

Qualifications

The data presented in this section are a first view of recently filed. As in the past we have identified several pitfalls and general qualifications in using quality of service data that are presented below.

Overall, we caution readers to be aware of potential methodological shortcomings and inconsistencies associated with use of the service quality data presented in this section. First, carriers periodically revise submitted data as problems are discovered and data presented here may contain errors or may not reflect the latest updates. Second, although the data are subject to an initial screening by Commission staff and certain problems may have been corrected in carrier-submitted revised filings, there are still potential flaws in the data that will only become apparent when users subject the data to further analysis or compare it with data from other sources.¹²

Third, Commission staff have recalculated holding company totals or data composites and these might not match company-filed totals or composites.¹³ This is primarily due to calculation variations regarding, *e.g.*, percentages or average intervals that require weighting in the calculations. Carriers have updated earlier filings numerous times. The data presented here typically reflect data updates to the most recent ARMIS filing of April 2000. We therefore caution the reader that some of the problems that may be discovered in connection with the data presented here resulted from differences in aggregation methodologies, errors including data irregularities, or data revisions that either could not be used or were not available in time for use in this section.¹⁴

Fourth, outage measurements should be considered in context. For example, the average number of lines affected per event would tend to favor a company with a larger number of smaller or remote switches with lower line counts per switch, while the average outage duration might favor a company with larger switches. Thus, using the average number of lines per event measurement, one 25,000 line switch that is out of service for five minutes would appear to have a greater service impact than ten 2,500 line switches that are out of service for five minutes. That is why we present a grouping

12 For example, small variations between GTE prepared composites and those that we calculated independently appear to have been caused by inclusion or exclusion of data from study areas such as Micronesia (GTMC) and Alaska (GTAK).

13 Recent Commission orders have modified definitions in the data collection process in an attempt to remove perceived ambiguities. We note, however, that because this section contains many items whose composites are calculated as weighted sums or averages, we have recalculated company composites for this section to improve consistency and we have pointed out general cautions in using the data. We expect that this will be useful to the companies in their review of internal processes associated with calculation of composites and may enable us to use company-calculated composites in the future.

14 We have noted in some cases that total access lines as reported in the last column of row 140 does not agree with the sum of the first column entry of rows 320 and 330. Variations in access line and switch counts may affect normalized outage data reported in the tables. In some instances irregularities inherent in the underlying data at the study area level may have resulted in other undetected errors in the calculated composites.

of outage measurements that include the outage line-minutes per event and per 1,000 access lines. We have also added the number of outages per switch as another metric for measuring a company's performance.

Except in the calculation of company composites, we have not, in most cases, deleted or adjusted data. It is expected that the process of data correction will continue as problems are further identified and corrected.

This section presents data that reflect several different ways of measuring switch outages, including line-minutes-per-access line and line-minutes-per-event. Outage line-minutes is a measure that combines both duration and number of lines affected in a single parameter. We derived this parameter from the raw data by simply multiplying the number of lines involved in each outage by the duration of the outage, summing the resulting values and dividing the sum by the total number of access lines or events. Because outage measurements tend to exhibit more variability than other measurements, we have shown in the tables several ways of presenting the results. Improvements in responding to outages by some of the reporting companies may be associated with efforts to improve switch reliability, including working with manufacturers to replace poorly performing switches and to improve performance of existing ones.¹⁵

Because performance within any single data category may vary widely over time, evaluating a given company's performance by looking at a single measurement may be misleading, especially considering that long lead times might be needed to correct certain problems or that corrections might already be underway. On the other hand, problems that are observed in several service quality measurement categories could also reflect overall service deterioration. We believe that customer complaint and perception levels should be viewed in the context of other measures of performance. However, we have found that it is practically impossible to ascertain whether changes in aggregate customer complaint levels result from developments in a single problem area or reflect a perception of a wider ranging set of problems. For these reasons and because data is now filed annually rather than quarterly we recommend the use of both trend and pattern analysis of the data.

Finally, one of the measurements for which service quality data are collected is the number of service affecting troubles reported by customers. Because of the various classifications of trouble reports, the Commission's May 1997 Order addressed problems relating to subtleties in the definitions associated with the terms "initial" and "repeat" trouble reports.¹⁶ This and other issues were addressed

15 GTE representatives previously expressed concerns about presentation of its outage data in this section, asserting that the raw number of outages taken out of context would result in GTE appearing worse than other companies due to the large number of small and remote switches in its territory. The use of a menu of data elements as a description of outage performance actually tends to portray performance more equitably for all companies and reduces reporting bias that would tend to result from a more limited description of the data.

16 This issue was discussed in the last report on service quality and was addressed in recent Commission orders. *See Policy and Rules Concerning Rates for Dominant Carriers*, Memorandum Opinion and Order, 12 FCC Rcd 8115, 8133 (rel. May 30, 1997); *Revision of ARMIS Annual Summary Report (FCC Report 43-01) et al.*, Order, 12 FCC Rcd 21831, 21835 (Com. Car. Bur., rel. Dec. 16, 1997). *See also* Federal Communications Commission,

in an October 1993 Order modifying filing requirements and were the subject of further clarification and expansion in subsequent orders leading to the reporting of a new category of recurring trouble reports.¹⁷

All of these reflections and observations essentially relate to the issue of maintaining the necessary continuity of data measurements. While an attempt has been made to preserve continuity up to this point, detection of errors and changes in reporting requirements that are deemed necessary will introduce discontinuities into certain time series data or eliminate certain items of data entirely.

We note that changes in service quality measurements may be dictated by changes in technology and that the companies periodically wish to change their internal measurement procedures, from which regulatory data are drawn, adding difficulty to long-term measurements.¹⁸ In some cases procedural changes in the data measurement and collection process may be subtle enough so that they are not immediately noticeable in the data. Significant changes in company procedures, however, usually result in noticeable and abrupt changes in data levels. It appears that at least some of these changes are not reported to the Commission. These factors tend to limit the number of years of data available to track service quality trends and will affect the frequency and availability of summary reports that are prepared by the Commission. Although the Commission has made every effort to standardize and rationalize data reporting over the years, given the number of changes to the reporting regimes and predictable future changes, one should not assume exact comparability on all measurements for data sets as they are presented year by year.

It is our experience that service reliability data are, by their nature, subject to a greater volatility than other types of company data. As a general rule, one should be cautious about interpreting individual measurements until one develops a sense of what the data measurements disclose about company performance.

Industry Analysis Division, *Quality-of-Service for the Local Operating Companies Aggregated to the Holding Company Level*, released March 22, 1996 (mimeo 60268) for further discussion.

17 See *Policy and Rules Concerning Rates for Dominant Carriers*, Memorandum Opinion and Order, 8 FCC Rcd 7474, ¶ 26 and attachments (1993). See also *Revision of ARMIS Annual Summary Report (FCC Report 43-01) et al.*, 12 FCC Rcd 21831 (introducing reporting of "subsequent" troubles).

18 For those interested in trending customer perception data in this section with that available in prior Reports it should be noted that Bell Atlantic, for example, reported changes to its customer perception surveys that were reflected in its post-1990 data, and Pacific Telesis had noted changes effective in January 1992.

Table 9.1: Company Comparison -- Installation, Maintenance, & Customer Complaints -- 1999

| Company | Bell Atlantic North | Bell Atlantic South | BellSouth | SBC Ameritech | SBC Pacific | SBC Southwestern | US West | GTE | Sprint |
|--|---------------------|---------------------|-----------|---------------|-------------|------------------|---------|-------|--------|

10. Infrastructure

The infrastructure information contained in this report is based upon data collected by the FCC as part of its price-cap monitoring procedures.¹ This summary is intended to highlight changes in the use of technology in the local telephone company plant.

The data (ARMIS 43-07 reports²) upon which this infrastructure summary is based are filed April 1 for the previous calendar year. This infrastructure report includes data through 1999.³ The most recent data were filed in April 2000.

Background

The data items presented here summarize ARMIS Report 43-07, which is filed by local exchange carriers subject to mandatory price-cap regulation. The information contained in this report is for the years 1991 through 1999.

The ARMIS 43-07 reports are filed only by those local exchange companies originally subject to mandatory price-cap regulation--the Bell operating companies (BOCs) and the telephone operating companies owned by GTE.⁴ Together, these large companies provide service to more than 90% of the nation's telephone lines. The data are generally filed at the study area level, which typically consists of a company's operations within a state. The state-by-state data are available from the Commission's ARMIS web page at <http://www.fcc.gov/ccb/armis/db/> on the World Wide Web.

The information summarized in this report is organized into two tables: Table 10.1 shows switching system data and gross plant expenditures covering all types of plant. Table 10.2 shows transmission system data. Each table contains segments for each of the regional Bell operating companies, one for the companies owned by GTE, and two that summarize data for all the BOCs and

-
- 1 These procedures were established in CC Docket No. 87-313.
 - 2 ARMIS, an acronym for Automated Reporting Management Information System, is a publicly available repository of financial, plant, demand, and quality-of-service data. Additional infrastructure data are contained in the ARMIS 43-08 report. See *Statistics of Communications Common Carriers*, published annually by the FCC's Industry Analysis Division for a compilation of 43-08 infrastructure data.
 - 3 See *Infrastructure of the Local Operating Companies Aggregated to the Holding Company Level*, released April 24, 1994 for data for the years 1989 and 1990. Those early years have not been included in this report because some of the data apparently contain discrepancies and are inconsistent with the later years. Reports containing data for the early years can be found in the infrastructure section of the FCC-State Link internet site at <http://www.fcc.gov/ccb/stats> on the World Wide Web under the file names INFRA99.ZIP, INFRA98.ZIP, INFRA95.ZIP, and INFRA93.ZIP.
 - 4 See *Policy and Rules Concerning Rates for Dominant Carriers*, CC Docket No. 87-313, 5 FCC Rcd 6786 (1990) (LEC Price Cap Order), *Erratum*, 5 FCC Rcd 7664 (1990), and 8 FCC Rcd 7474 (1993).

all reporting companies. The data summarized for each holding company reflect the aggregate of data filed for individual states or study areas and should be useful in assessing overall trends.

In some cases, refiled data may cause values to differ from prior summary reports. Totals associated with GTE and Contel entities have been aggregated into a single GTE composite. Similarly, NYNEX data are included in the Bell Atlantic Total Company data.

Description of the Technologies and Analysis of the Data

The data in the attached tables provide a historical series for a variety of plant elements that illustrate the deployment of technology in the networks of the major local exchange carriers.⁵ The data items provide a picture of the technologies currently in use. For example, although the issue of fiber in the local loop has gained a great deal of attention because of its potential for facilitating development of wideband video services, the progression of lower data-rate digital technologies to greater numbers of customers through an increased use of digital local access has been occurring for some time. Both switching and transmission technologies provide the building blocks that make this possible. In the switch, Signaling System 7 (SS7) provides a means for networks and interoffice switches to communicate with each other. This system uses separate digital links outside the voice channel to accomplish this. Other elements in the data relating to equal access switches and touch-tone capable switches show that nearly all switches now are equipped for both equal access and touch-tone dialing.

A useful overall measure of company activity is the dollar amount of total gross capital expenditures, which increased about 14% for the BOCs in 1999 and 2.5% in 1998. The data reported includes all plant additions on both switching and transmission facilities motivated by modernization, replacement and growth.⁶ Total gross capital expenditures should therefore continue to be an important overall parameter in assessing deployment of infrastructure in the local service business. Because construction expenditures may ultimately affect quality of service levels, broad long term changes in the relationship between construction expenditures and access line growth should be of continued interest.

Although there is considerable interest in digital switching, the term "digital switch" by itself is often misleading and does not address the important issues of switching capability and modularity which allows for lower-cost upgrading and capacity expansion. For example, while most network switches are currently classified as digital stored-program-controlled-switches, this classification by itself does not

5 A number of irregularities including several time series anomalies were noted in the data. Not all data revisions were available in time for inclusion in this report. GTE indicates that at least some of the discrepancies have resulted from system changes made to its data collection systems over the past year. BellSouth indicates that ISDN capable line data (row 490) reflects a change in methodology. Prior data was based on equipped central office pairs. Data for 1999 is based on working lines.

⁶ The data is provided as a single number in the ARMIS 43-07 report and includes additions to plant accounts 2110, 2210, 2220, 2230, 2310, 2410, 2680, and 2690.

indicate whether the switch has ISDN or SS7 capability and does not address the issue of modularity that allows lower-cost expansion. Because there are multiple capabilities that may be available in modern digital switches, assessment of digital switching proliferation requires one to look at more than a single statistic. While there are no across-the-board relationships between modularity and switch capability, many of the switches with ISDN capability also tend to be modular in design and can often be upgraded with software that can facilitate lower-cost expansion. ARMIS data currently mandated and being collected only cover circuit switches that provide a dedicated path through the network for the duration of a call, not routers or switches that are used in connection with frame relay, ATM and internet services that are specifically designed to handle data packets or bursts. Information on call routers (packet switches), frame relay and ATM switches is not currently collected but would more accurately portray deployment of current technology than the simple digital/analog categories

ISDN technology provides the service protocols and channel designations for digital services to customers and can convey voice, computer data or compressed video. Basic-rate ISDN services are provided as two 64-kilobit data channels and one 16-kilobit control channel associated with each basic-rate access line. The control channels allow the transfer of special information between the switch and the customer, unavailable with in-band signaling, as well as advanced network-control features currently used in a number of enhanced services. Primary rate ISDN provides the capacity of twenty-three 64-kilobit data channels and one 64-kilobit control channel. Availability of the service is significant and expanding, and newer services are now available that offer broadband digital capability using special terminal equipment that enhances the capability of existing copper access lines.⁷ Readers interested in more disaggregated information may wish to examine data at a more localized level than presented here.⁸

In the aggregate, there was a very small increase (less than 1%) in the number of ISDN-capable switches in 1999 following a 15% increase in 1998 and a 22% increase in 1997. The number of ISDN-capable switches has doubled since 1994 and has gone up more than five-fold since 1991 but now with the availability of xDSL access technologies ISDN appears to be growing much more slowly.⁹

7 These services are generally referred to as xDSL (Digital Subscriber Loop) services. Limited data on the proliferation of xDSL terminal equipment by incumbent carriers are contained in Table 8 of our most recent *Fiber Deployment Update*, released September 9, 1999.

8 Individual study-area data are also available to address more localized issues. This information is available on the ARMIS Web page at <http://www.fcc.gov/ccb/armis/db/> on the World Wide Web.

9 The companies can promote network modernization along with the systematic growth of high bandwidth services by attracting new customers to digital services with a wider range of digital consumer choices at a variety of data rates and cost. Data trends suggest that rate adjustments and service offerings that promote ISDN as an entry level digital alternative to the broader bandwidth xDSL services might be an effective way to increase the overall market for digital services and allow greater penetration of digital facilities in less urbanized areas. New service offerings at ISDN data rates, could, for example, include a lower cost entry-level non-switched digital service geared to internet users.

Although switch capabilities and modularity tend to vary by vendor, these switches tend to be better able to deal with the changing characteristics of telecommunication traffic.¹⁰

The companies typically report the number of access lines that can be connected to ISDN service within each wire center or switch. Because ISDN is a digital service, it is equipped to handle communication between computers without the need to first convert the signal to an analog form. Early on it was primarily marketed as a medium for enhanced voice services and was primarily targeted to business users. It has become an increasingly attractive alternative for residential customers and small businesses needing a second line for a computer, and therefore its pricing in relation to the cost of two analog lines can significantly affect proliferation of the service. Not all transmission lines are capable of ISDN or higher rate digital operation. Thus, information on lines capable of handling ISDN data rates was added to the ARMIS 43-07 filing requirements starting with end-of-year 1997 data. This data will be helpful in assessing the capability of existing incumbent carriers to provide basic digital services and is included with this year's summary.

Many of the companies had installed digital switches in response to the equal-access requirements of divestiture. Today, nearly 100% of the Bell company switching entities have equal-access. Although 98% of the BOCs' switches are digital stored-program-controlled switches, only about one-third have ISDN capability. The companies generally have been responding to increased interest in ISDN service and internet use by replacing or upgrading existing switches for ISDN capability.¹¹

A number of transmission elements are included in the tables. These illustrate the rapid development of fiber capacity in terms of terminations, sheath kilometers, and links. The number of sheath kilometers of fiber has more than doubled from 1991-1999, with over a half million fiber sheath kilometers being reported in 1999. The number of sheath kilometers of copper has remained steady at about 5.2 million and other sheath data, in relative terms, are not significant.

Table 10.2 also highlights the relative magnitude of equipped and working channels, providing an indication of termination equipment utilization. In both cases, copper has grown about 15% from 1991 to 1999, whereas fiber has increased over five-fold. Analog links have almost disappeared, and the number of interoffice fiber carrier links has surpassed the number of copper carrier links. Although data on links and channels show that circuits connecting local central offices could typically be provided on only two fibers, the economics of fiber deployment have resulted in deployments of typical fiber cables containing more than 40 fibers. This suggests that there is a significant amount of fiber capacity currently unused in the *interoffice* transmission plant.¹²

10 Continuing changes in demand patterns for new access lines, and in the character of telephone traffic from pure voice traffic to a changing mix of voice and data, underscore the desirability of targeted improvement to the switching infrastructure. Use of easily upgradeable switching systems will be increasingly important.

11 New marketing, pricing and regulatory approaches designed to promote greater ISDN use by smaller business and residential customers will also promote the use of broadband capabilities and result in improvements to the local infrastructure.

12 A large portion of the cost of fiber deployment is associated with labor and installation rather

Although the overall level of growth in fiber has been high, its use in the local loop at present is relatively small. The BOCs had an installed base of about 189 million copper-pair mainframe terminations in their central offices for local loop use in 1999. About 2 million BOC fiber terminations had been installed by end-of-year 1999. The data show that growth in central office fiber terminations increased about 10% during 1999 as compared to about 21% in 1998; however customer DS-1 and DS-3 terminations on fiber facilities increased dramatically in 1999 as compared to 1998. Over the longer term, fiber and hybrid copper/fiber systems will likely become increasingly important in the local loop as the number of high-quality copper pairs available to support digital services declines.

than with the cable itself. Thus, the incremental cost of installing a larger fiber cable is typically relatively small. This suggests that the sheath-kilometer parameter shown in the attached tables may be a better measure of fiber coverage than fiber kilometers. In general, care should be exercised in interpreting aggregate fiber data when determining, for example, whether fiber is concentrated in certain parts of a company's service area with relatively little fiber elsewhere. See *FCC Fiber Deployment Update - End of Year 1998*, released September 9, 1999.

11. Revenues, Expenses, and Investment

This section provides information on revenues, expenses and investment by major local telephone companies. The information included in this section is calculated from some of the summary information in ARMIS. The original data plus more detailed data can be found in the ARMIS reports, which are available for public access on the ARMIS internet site (<http://www.fcc.gov/ccb/armis/db/>).

The source of the data in this section is ARMIS 43-01 Annual Summary Report, prescribed for every local exchange carrier with operating revenues in 1998 in excess of \$119 million. The report is filed on a study area basis and includes data on revenues, expenses and investment to enable the Commission to monitor the carriers' operations.¹ For this section, information was derived from ARMIS 43-01 data for 1999.

Table 11.1 shows Revenues and Other Operating Items.

Table 11.2 shows Expenses and Taxes.

Table 11.3 shows Gross Investment.

Table 11.4 shows Total Investment Reserves--row 1890 of the ARMIS report.

Table 11.5 shows Net Income which is the difference between
Table 11.1--Revenues and Other Operating Items and
Table 11.2--Expenses and Taxes.

Table 11.6 shows Average Net Investment--row 1910 of the ARMIS report--which is the difference between

Table 11.3--Gross Investment and
Table 11.4--Total Investment Reserves.

Tables 11.7 and 11.8 show the detailed items that when aggregated constitute
Table 11.1--Revenues and Other Operating Items.

Table 11.7 shows Total Operating Revenues--row 1090 of the ARMIS report.

Table 11.8 shows Other Operating Income or Loss--row 1290 of the ARMIS report.

Tables 11.9 through 11.11 show the detailed items that when aggregated constitute
Table 11.2--Expenses and Taxes.

1 11 Tier 1 carriers furnished the data for 128 study areas used in this report. The data covers all 50 states (except Alaska), the District of Columbia, and the Commonwealth of Puerto Rico. Smaller carriers that, in the aggregate, serve about 7% of the nation's telephone lines do not file ARMIS data.

Table 11.9 shows Total Operating Expenses--row 1190 of the ARMIS report.

Table 11.10 shows Total Non-operating Items--row 1390 of the ARMIS report.

Table 11.11 shows Taxes (Federal, State and Other)--rows 1490, 1590, and 1595 of the ARMIS report.²

Tables 11.12 and 11.13 show the detailed items that when aggregated constitute Table 11.3--Gross Investments.

Table 11.12 shows Total Plant Investment--row 1690 of the ARMIS report.

Table 11.13 shows Total Other Investments--row 1790 of the ARMIS report.

Each table in this section contains columns headed "Subject to Separations", "Intrastate", and "Interstate".³ The "Subject to Separations" column reflects the total amount that is subject to separations allocations between the state and interstate jurisdictions pursuant to Part 36 of the Commission's Rules. The "Interstate" and "Intrastate" columns reflect the amounts allocated to the interstate and state jurisdictions pursuant to those rules. In some instances, the "Interstate" column also reflects FCC prescribed adjustments made after the separations process. These adjustments are made only at the interstate level; consequently, the "Intrastate" and "Interstate" columns may not necessarily add up to the "Subject to Separations" column.

Each table also contains a column headed "Percent Interstate". The data in this column is calculated by dividing the data in the "Interstate" column by the data in the "Subject to Separations" column.

Table 11.6--Average Net Investment--has one additional column headed "Interstate Rate of Return". The data in this column is calculated by dividing the data in the "Interstate" column of Table 11.5--Net Income--by the data in the "Interstate" column of Table 11.6.

2 Beginning in 1999, mid-sized companies (carriers other than the Bell operating companies and GTE subsidiaries) no longer report taxes to different governments separately. Therefore, Table 11.11 shows the sum of rows 1490 and 1590 for the Bell operating companies and GTE subsidiaries and row 1595 for mid-sized companies.

3 These are reported in columns (f), (g), and (h) in the ARMIS 43-01 reports. The numbers are in thousands of dollars.
