CertAlert

Issued July 1, 2008   Number SO-08-06

This CertAlert pertains to:
All 14 CFR part 139 Airport Operators

New! e-NOTAM Website

The electronic NOTAM (e-NOTAM) system is now available to all airports authorized to issue NOTAMs in the United States (excluding Alaska).
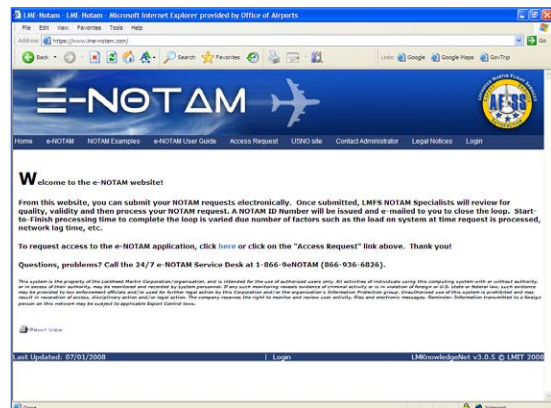

The e-NOTAM system is a web-based NOTAM notification method that lets user enter NOTAM information directly into a web page form and transmit the information to a NOTAM specialist at Flight Service. It eliminates wait times that you have when you use a telephone to call in NOTAMs, call to see if faxed NOTAMs were received, or call to see if NOTAMs were issued.

The e-NOTAM System does **not** interface with the U. S. NOTAM System. When you enter NOTAM information in the online form, a Flight Service Specialist will get it and process the NOTAM for entry to the U.S. NOTAM System. After you submit your data, you can check the "NOTAM HISTORY" display of the eNOTAM System for NOTAM status and number. You can choose to have the same information emailed to you.

Use of the e-NOTAM System is voluntary. You may still use the toll-free NOTAM phone number: 877-4US-NTMS (877-487-6867).

Please visit the e-NOTAM web site at
https://www.lme-notam.com to learn more about the
features of eNOTAM. (Note that you need the "**s**" in
the "https" part of the web address.)

To use the e-NOTAM process, go to the web site
select the "Request Access" menu link. Follow the
simple instructions. The Lockheed Martin Flight
Services Program Office will verify your authority
and send an e-mail with further instructions and a
username and password to get you started.

The e-NOTAM system strives to give an accurate, timely dissemination of NOTAMs, and safe operations for the flying public. For further information or if you have questions, contact CJ Carter at 571-223-3196.
