Columns designated x.y report regressions that are variations on those reported in Table x Column y of main text. Panel C regressions are identical to corresponding regressions in Tables 3 and 4. Standard errors in parenthesis are robust to spatial correlation using the Conley spatial estimator discussed in the text. Bold type signifies coefficients statistically different from zero at the 0.05 level; italic type signifies coefficients statistically different from zero at the 0.10 level.

R <sup>2</sup>	0.522	0.313	0.402	0.508	0.264	0.380	0.554

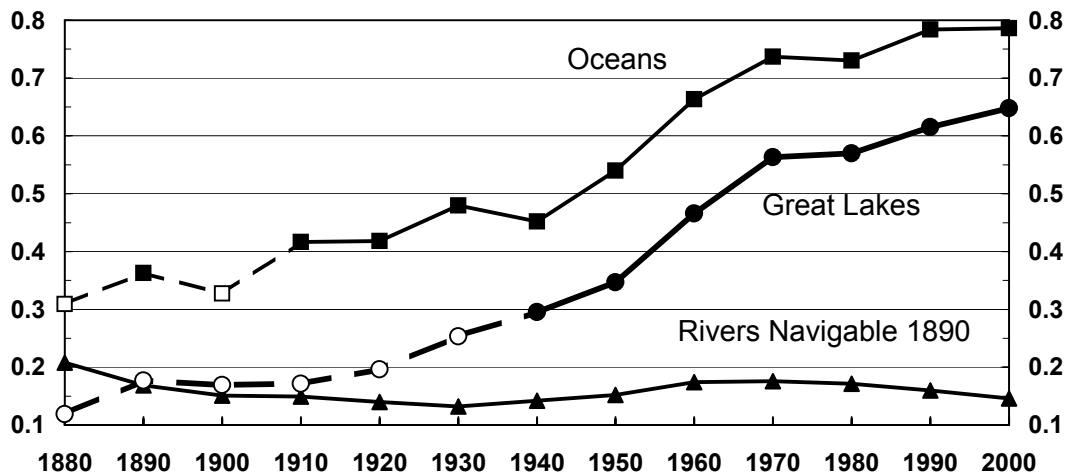

Columns designated x.y report regressions analogous to those reported in Table x Column y of main text except for using the alternative listed natural harbor proxy. The Panel A regressions are thus identical to the corresponding regressions in Table 7. Standard errors in parenthesis are robust to spatial correlation using the Conley spatial estimator discussed in the text. Bold type signifies coefficients statistically different from zero at the 0.05 level; italic type signifies coefficients statistically different from zero at the 0.10 level.

## Supplemental Figure 1: Coastal Concentration of U.S. Population (Alternate Navigable River Designation)

### A. Population Density Relative to Continental U.S.

### B. Partial Correlation Coefficients of Pop. Density

The ocean and Great Lakes categories are made up of counties with centers within 80 km of the respective coast; the navigable river category is made up of counties with centers within 40 km of a river navigable in 1890 according to Fogel (1964). Panel A shows the aggregate population density of each of the categories relative to that of the continental United States in the same year. For Panel A, counties that were included in the ocean or Great Lakes categories were excluded from the navigable river one. Panel B reports coefficients on category dummy variables from regressing  $\log(1+\text{population density})$  on these along with weather and topography variables as enumerated in the text. Open points (connected by dashed lines) represent coefficients not significant at the 0.05 level (using standard errors robust to spatial correlation as described in the text).

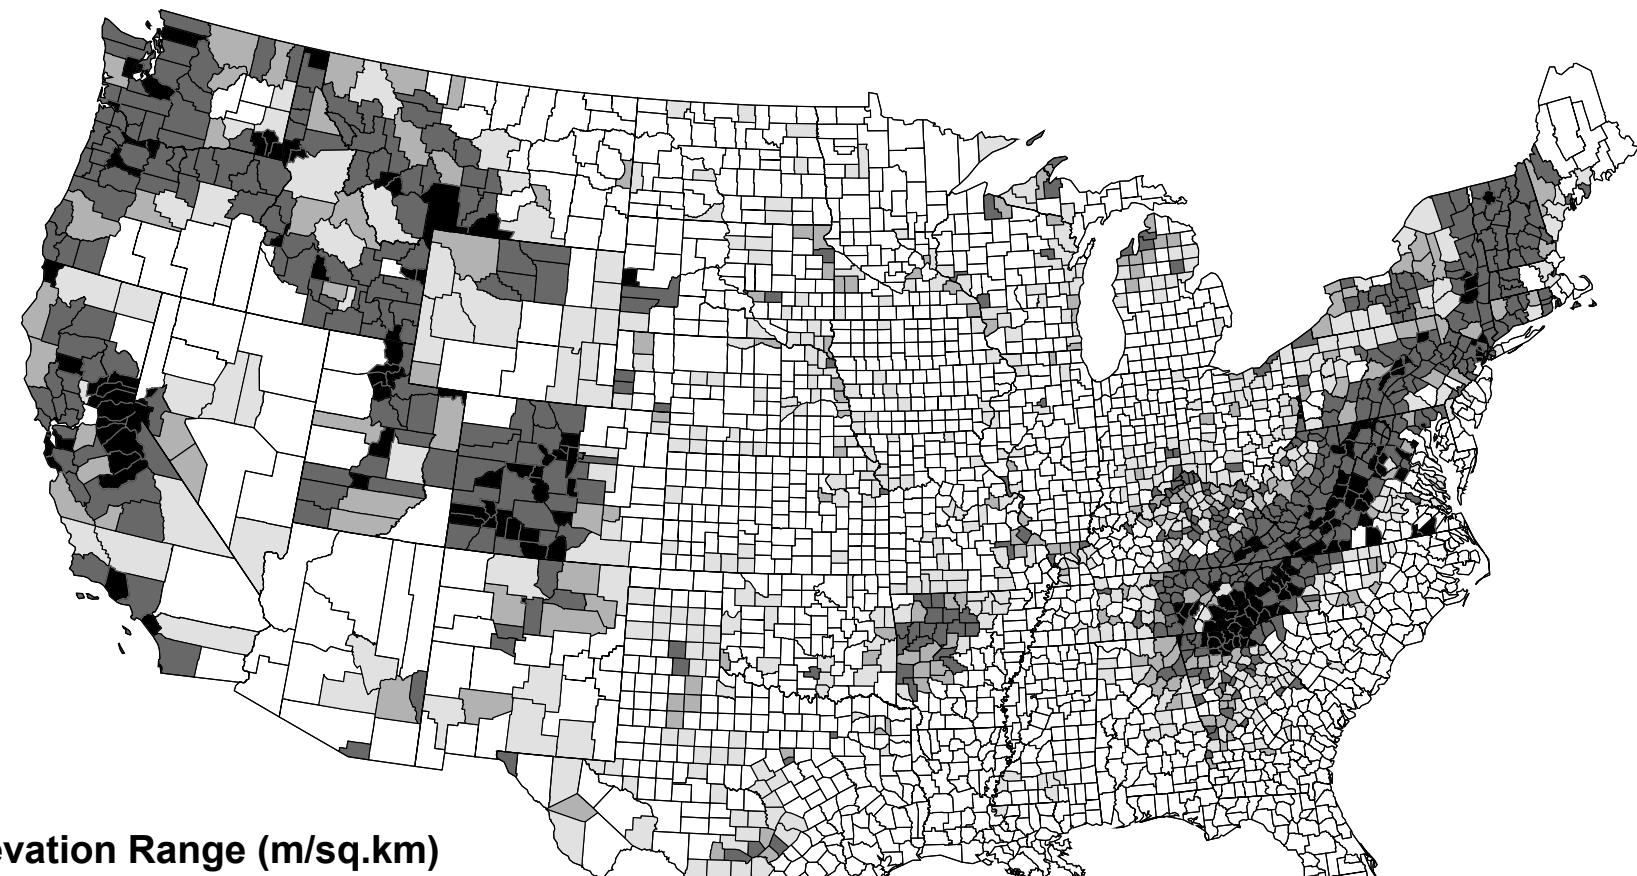

# Supplemental Map 1: Historically Navigable Rivers

Rivers enumerated by Fogel (1964) as navigable in 1890

## Supplemental Map 2: Topographical Control Variable

Standard deviation of county elevation divided by county area

**Elevation Range (m/sq.km)**
