# ABSTRACT

*The Survey of Program Dynamics (SPD) Third Longitudinal File [machine-readable data file]/conducted by the U.S. Census Bureau. -Washington: U.S. Census Bureau [producer and distributor], 2006*

## **Type of File:**

Micro data; unit of observation is an individual.

## **Universe Description:**

The Survey of Program Dynamics (SPD) universe consists of the civilian non-institutionalized population living in the United States in March 1992 and/or March 1993. The institutionalized population, which is excluded from the population universe, is composed primarily of the population in the correctional institution and nursing homes (91 percent of the 4.1 million institutionalized people in Census 2000). The population universe also includes people living in group quarters, such as dormitories, rooming houses, and religious group dwellings. Crew members of merchant vessels, armed forces personnel living in military barracks, and institutionalized people such as correctional facility inmates and nursing home residents, were not eligible to be in the survey. Also, United States citizens residing abroad were not eligible to be in the survey. Foreign visitors who work or attend school in this country and their families were eligible, but all other foreign visitors were not eligible to be in the survey. With the exceptions noted above, people who were at least 15 years of age (adults) at the time of the interview were eligible to provide self and/or proxy interviews for the survey; while the data of people who were less than 15 years of age (children) at the time of the interview were collected from proxy interviews provided by the adults. The population universe is fully represented by a subset of the original sample people from the 1992 and 1993 Survey of Income and Program Participation (SIPP) panels and the people who joined their households or group quarters later as a resident, except those who were subsampled out because of cost constraints or leaving the universe associated with the SPD Bridge, and the SPD 1998 sample cut, and including the SPD Bridge non-interviewed households brought back in the SPD 2000, and the SIPP non-interviewed households brought back in the SPD 2001 and 2002.

## **Introduction:**

The Third SPD Longitudinal file is a fully edited file that provides socio-economic data for calendar years 1992 - 2001, except 1995. It is intended for longitudinal analyses of effects of welfare reform on individuals, families and households. The file can be linked to the SPD Second Longitudinal, the SPD First Longitudinal, the SPD 2002, the SPD

2001, the SPD 2000, the SPD 1999, the SPD 1998, the SPD 1997 Bridge and the 1992 and 1993 SIPP Panel files.

### **Subject-Matter Description:**

The file contains basic demographic, economic, and social characteristics data for each member of the households for eight or nine years depending on the panel. The 1992 panel contains data for 1992, 1993, 1994, 1996, 1997, 1998, 1999, 2000 and 2001. The 1993 Panel contains data for 1993, 1994, 1996, 1997, 1998, 1999, 2000 and 2001. There is no data available for 1995 because SIPP did not complete a years worth of data collection in either panel. The subject matter is described as follows:

#### **Demographic:**

Data on age, sex, race, ethnic origin, marital status, household relationship, education attainment, and veteran status. Demographic data refer to the time of the interview in 1997 for 1996 data year, in 1998 for 1997 data year, in 1999 for 1998 data year, in 2000 for 1999 data year, in 2001 for 2000 data year, in 2002 for 2001 data year and December for data years 1992, 1993, and 1994.

#### **Economic:**

- Work Experience - Comprehensive work experience information is given on the employment status, occupation, industry, weeks worked and hours per week worked, total income, and income components for people 15 years old and older. The data on employment refer to the preceding year.
- Income - Data covering income sources such as income from jobs, net income from businesses, farm or rent, pensions, dividends, interest, and social security payments. Data on income refer to the preceding year.
- Noncash benefits - Data covering noncash income sources such as food stamps, the school lunch program, employer-provided group health insurance plan, employer-provided pension plans, personal health insurance, Medicaid, Medicare, CHAMPUS/Tricare or military health care, and energy assistance. Most data on noncash benefits refer to the preceding year. However, some questions refer to the week before the interview.

### **Geographic Coverage:**

The geographic coverage area is the United States. The file contains codes for 41 individual states, plus the District of Columbia. *However, the sample is not designed to produce state estimates.* The SPD sample in the nine remaining states is identified in three groups for confidentiality reasons. The three groups are as follows: Maine and

Vermont; Iowa, North Dakota, and South Dakota; and Alaska, Idaho, Montana, and Wyoming.

### **Technical Description:**

**File Structure:** The file is a rectangular person-level file. Household and Family level variables are included on the record for every person in the household.

**File Size:** 129,677 Records

### **File Sort Sequence**

**of Sample Units:** SIPP panel number, Sample unit identification number, person number and entry ID.

### **Reference Materials:**

*Survey of Program Dynamics (SPD) Third Longitudinal File Technical Documentation.* The documentation includes this abstract, the data dictionary, an index to the data dictionary, relevant code lists, and general information on the SPD.

*Survey of Program Dynamics (SPD) 2002 Cross-Sectional File Technical Documentation.* The documentation includes an abstract, the data dictionary, an index to the data dictionary, relevant code list, questionnaire facsimiles, and general information on the SPD.

*Survey of Program Dynamics (SPD) 2001 Cross-Sectional File Technical Documentation.* The documentation includes an abstract, the data dictionary, an index to the data dictionary, relevant code lists, questionnaire facsimiles, and general information on the SPD.

*Survey of Program Dynamics (SPD) 2000 Cross-Sectional File Technical Documentation.* The documentation includes an abstract, the data dictionary, an index to the data dictionary, relevant code lists, questionnaire facsimiles, and general information on the SPD.

*Survey of Program Dynamics (SPD) 1999 Cross-Sectional File Technical Documentation.* The documentation includes an abstract, the data dictionary, an index to the data dictionary, relevant code lists, questionnaire facsimiles, and general information on the SPD.

*Survey of Program Dynamics (SPD) Second Longitudinal File Technical Documentation.* The documentation includes an abstract, the data dictionary, an index to the data dictionary, relevant code lists, and general information on the SPD.

*Survey of Program Dynamics (SPD) First Longitudinal File Technical Documentation.* The documentation includes an abstract, the data dictionary, an index to the data dictionary, relevant code lists, and general information on the SPD.

*Survey of Program Dynamics (SPD) 1998 Technical Documentation.* The documentation includes an abstract, the data dictionary, an index to the data dictionary, relevant code lists, questionnaire facsimiles, and general information on the SPD.

*Survey of Program Dynamics (SPD) 1997 Technical Documentation.* The documentation includes an abstract, the data dictionary, an index to the data dictionary, relevant code lists, questionnaire facsimiles, and general information on the SPD.

Note: The technical documentation is also available on the U. S. Census Bureau's SPD Internet site at <http://www.sipp.census.gov/spd> under "SPD Publications."

*Survey of Program Dynamics (SPD) Users' Guide.* The Users' Guide contains a general overview of the SPD file as well as chapters on the SPD survey design and content, editing and imputation, weighting and error estimation, and linking files. Copies are available from Marketing Services Office, Customer Services Center, U.S. Census Bureau, Washington, D.C. 20233. The SPD Users' Guide is available at the U.S. Census Bureau's SPD internet site at <http://www.sipp.census.gov/spd> under "SPD Publications" and "SPD Users' Guide."

*Survey of Income and Program Participation (SIPP) Users' Guide.* The Users' Guide contains a general overview of the SIPP files as well as chapters on the SIPP survey design and content, structure and use of cross-sectional, topical module and longitudinal files, linking waves and reliability of the data. Copies are available from Marketing Services Office, Customer Services Center, U.S. Census Bureau, Washington, DC 20233. The SIPP Users' Guide was revised and updated to include information on the original SIPP data products from the 1984 through 1993 Panels, as well as the new data products coming from the 1996 Panel. An updated version of the SIPP Users' Guide is also available at the U.S. Census Bureau's SIPP Internet site at <http://www.sipp.census.gov/sipp> under "SIPP Publications and "SIPP Users' Guide."

*Survey of Income and Program Participation Quality Profile.* The Quality Profile summarizes the SIPP sample design, sample selection, and data collection procedures. More importantly, the report also summarizes, in convenient form, what is known about the sources and magnitude of errors in estimates from the SIPP. Without such summaries, users seeking information about the quality of the SIPP estimates would need to search through a large body of literature, some of which is not easily accessible. The report covers both sampling and nonsampling error; however, the primary emphasis is on the latter. Copies of this report are available from Marketing Services Office, Customer Services Center, U.S. Census Bureau, Washington, DC 20233. An updated version of the SIPP Quality Profile is also available at the SIPP Internet site at

<<http://www.sipp.census.gov/sipp>> under "Source & Accuracy Quality Profile."

Additional information (that is, methodology, overview and data access) may also be obtained by visiting the SPD Internet site at <<http://www.sipp.census.gov/spd>> and the SIPP Internet site at <<http://www.sipp.census.gov/sipp>>.

### **Related Printed Reports:**

Related printed reports include working papers, compilations of papers presented at annual meetings of the American Statistical Association (*Proceedings of the American Statistical Association*), articles appearing in the *Journal of Economic and Social Measurement*, and reports in the P-70 series of the Current Population Reports. Some of these reports are available on the U.S. Census Bureau Internet site at <<http://www.census.gov>>, the SIPP Internet site at <<http://www.sipp.census.gov/sipp>>, and the SPD Internet site at <<http://www.sipp.census.gov/spd>>.

### **Related Electronic Data Files:**

The SIPP 1992 and 1993 Longitudinal files, the 1997 SPD Bridge file, the 1998 SPD file, the SPD First and Second Longitudinal files and the SPD 1999, 2000, 2001 and 2002 Cross-Sectional files, are available from Marketing Services Office, Customer Services Center, U. S. Census Bureau, Washington, D.C. 20233. Extract files of the SIPP 1992 and 1993 Longitudinal files are available for download from the SIPP Internet site at <<http://www.sipp.census.gov/sipp>> under "Access SIPP Data" using DATAFERRET. Extract files of the 1997 SPD Bridge file are available for download from the SPD Internet site at <<http://www.sipp.census.gov/spd>> under "Access Tools" using DATAFERRET.

### **File Availability:**

Files are available on CD-ROM (compact disc-readable) in ASCII; they may be ordered from Marketing Services Office, Customer Services Center using the order form at the end of this section. Call Customer Services at 301-763-INFO (4636) for price information. Information on the SPD and some SIPP files may be accessed on the Internet at <<http://www.census.gov/ftp/pub/mp/www/tape/mstap17c.html>>. The Third Longitudinal file, and the SPD 1999, 2000, 2001 and 2002 Cross-Sectional files are accessible on the SPD Internet site at <<http://www.sipp.census.gov/spd>> under "Access Tools" using the FERRET extraction system.

Note: The SPD 1998 data file is only available on CD-ROM because of confidentiality. To order the data file on CD-ROM call Customer Services at 301-763-4636.

**Additional Information:**

Additional information on particular subjects can be obtained by contacting an office listed below.

**CAUTION STATEMENT:**

*A note of caution about this file.* The weights on this file are longitudinal, therefore, they are only valid for estimates of the characteristics of the cohorts of people who were represented by the original sample persons from the SIPP 1992 and 1993 panels. An original sample person is a sample person who was a self or proxy respondent in Wave 1 of the SIPP 1992 or 1993 panel. Children born since the beginning of the SIPP panel to original sample persons also receive longitudinal weights.

The original sample has undergone a substantial amount of attrition from 1992 (or 1993) through 2002. As a result, estimates from this file are not as representative of the U.S. population as a cross-sectional survey would be. Therefore, results should be viewed with caution.

In addition, it should be noted that this file is based on seven different survey collection vehicles: the 1992/93 SIPP instruments that were used to produce data for 1992, 1993, and 1994, a

modified March CPS instrument that was used to collect data for calendar-year 1996, the 1998 SPD instrument that was used to collect data for calendar-year 1997, the 1999 SPD instrument that was used to collect data for calendar-year 1998, the 2000 SPD instrument that was used to collect data for calendar-year 1999, the 2001 SPD instrument that was used to collect data for calendar-year 2000 and the 2002 SPD instrument that was used to collect data for calendar-year 2001. Therefore, changes that are noted over time could be the result of the different survey instruments used to produce the estimates.

# OVERVIEW

## Why the Survey of Program Dynamics is Needed

On August 22, 1996, President Clinton signed legislation passed by Congress, and the Personal Responsibility and Work Opportunity Reconciliation Act of 1996 became Public Law 104-193. The legislation directed the U.S. Census Bureau to collect data necessary to evaluate the impact of the law from households previously interviewed in the 1992 and 1993 Survey of Income and Program Participation (SIPP) panels. Households were followed annually from 1997 to 2002, thus providing data for ten years. This survey, the Survey of Program Dynamics (SPD), will simultaneously describe the full range of state welfare programs along with social, economic, demographic and family changes that will help or limit the effectiveness of the reforms.

The goals of the welfare reform legislation are to end welfare dependence by promoting job preparation and work, encouraging the formation and maintenance of two-parent families, and providing states increased flexibility to achieve these goals. States are moving away from a welfare system based on entitlement toward one focused on assistance in finding employment and self-sufficiency. Thus, the primary goals of the SPD are to provide information on spells (occurrences) of actual and potential program participation over a ten-year period, 1992 to 2001, and to examine the causes of program participation and its long-term effects on the well-being of recipients, their families, and their children. The SPD is required by law to pay special attention to the issues of out-of-wedlock births, welfare dependency, the beginning and end of welfare spells, and the causes of repeat welfare spells. The SPD must also obtain information about the status of children. Researchers analyzing these data will use pre-reform characteristics of the population to control for preexisting differences among households in order to evaluate post-reform outcomes for the same people.

The SPD instrument has a core that essentially remains the same over the 1998-2002 period. Core data are collected on employment, income, program participation, health insurance and utilization, child

well-being, marital relationships, and parents' depression. The SPD also has topical modules that vary by year. An adolescent self-administered questionnaire (SAQ) was asked in 1998 and 2001. Additional child-related questions were asked in 1999 and 2002. Residential histories of children were collected in 2000.

Note: Because of confidentiality, the marital relationship and conflict, depression scale, and SAQ are not part of the public release file. To obtain the data, special arrangements are required. See section titled "Obtaining Access to Self-Administered Questionnaire Data" on page 3-49.

## Background of the Survey of Program Dynamics

Several years before the passage of the actual legislation, the U.S. Department of Health and Human Services and the U.S. Department of Agriculture (USDA is responsible for the food stamp program) invested substantial resources in having the U.S. Census Bureau develop a longitudinal survey to provide the data necessary to understand the effects of anticipated public policy changes on the population. Ideally, such a survey should be in place before reforms are effective to allow adequate assessment of baseline circumstances.

The data already collected in the 1992 and the 1993 SIPP panels provide extensive baseline (background) information from which to determine the effects of welfare reform. The SIPP is a longitudinal survey of households, interviewed at least nine times at four-month intervals, and followed if they have moved. The SIPP collects more detailed data than any other national survey on program eligibility, access and participation, transfer income, and in-kind benefits. Coupled with an extensive array of economic and demographic data (for example, employment and job transitions, income, and family composition), the 1992 and 1993 SIPP panels represent the pre-reform situation of households quite well.

By interviewing the same households as SIPP in the SPD, analysts will then have data for the baseline pre-reform period, the reform implementation period, and the medium-term post-reform period. Researchers require these data to assess short-term and medium-term consequences and outcomes for families and individuals. The use of the 1992 and 1993 SIPP panels doubles the sample size for certain groups of interest.

The topics that the retrospective SPD cover are an extension of those covered by the SIPP, but placed in an annual survey questionnaire, using guidance from such annual surveys as the March supplement to the Current Population Survey (CPS), the Panel Study of Income Dynamics, and the National Longitudinal Surveys.

## **SPD Status and Plans**

*Current plans.* SPD collected data for six calendar years, from 1996 through 2002. This will provide panel data for 9 years (1992-2001) when combined with the 1992 and the 1993 SIPP panel data. The U.S. Census Bureau's original plans were to have an instrument ready to test in the field concurrently with welfare reform. Because of legislation that was vetoed twice in 1995, the Census Bureau put its plans on hold. However, we were able to revive the project with funding received late in 1996. In its revived form, the SPD has 3 main components:

- (1) the 1992 and 1993 SIPP panels that cover the 1992-94 time period and part of 1995;
- (2) the 1997 Bridge survey covering 1996, provides the link between the 1992 and 1993 panels of the SIPP and the SPD, and includes "gap" questions to collect program participation data for 1995 for the 1992 SIPP panel; and
- (3) the core SPD starting in 1998, which includes topical modules that vary by year, and covers the 1997-2001 time period.

*SPD "Bridge" Survey.* Because the Census Bureau received funding for the SPD late in 1996, there was little time to develop a full-scale instrument. It was critical to collect income and program participation data in spring 1997 for calendar year 1996 from as many of the 1992 and 1993 SIPP households as the

Census Bureau could find. The SPD was first conducted between April and June of 1997. Data was collected for 1996 by administering a modified version of the annual March 1997 CPS demographic supplement, with a few new questions designed to collect 1995 program participation data for the 1992 SIPP panel (households and individuals were last interviewed in January 1995). All of the SIPP people interviewed in the first wave of the 1992 and 1993 SIPP panels and still being interviewed at the end of the panel (9 or 10 waves) were eligible for the SPD Bridge sample. The Census Bureau decided not to try to find people in the 1992 and 1993 panels who left the survey (attrited) because they felt that most analysts would need as much baseline data as possible. We reweighed the remaining sample to compensate for this loss.

Finding people who move is critical to the success of the SPD survey, particularly because we focus on the low-income population. The SIPP staff have developed many procedures that help find movers. Fortunately, the CPS staff implemented a "mover module" in January 1997 to track people leaving formerly-interviewed CPS households. This also was crucial to the SPD. The Census Bureau was able to track most movers.

*1998 SPD.* During the first half of 1997, the University of California at Berkeley created the first SPD instrument. The instrument was programmed in the CASES authoring language used for computer-assisted Census Bureau surveys. The Census Bureau carried out a pretest in October 1997 using 400 retired (no longer in use) 1996 CPS households in 4 of its regions. After this test, the Census Bureau modified the questionnaire to correct questionnaire and instrument problems. The 1998 SPD also used a self-administered, audio cassette, adolescent questionnaire (SAQ). The SAQs were broken up into two separate cassettes--one for youths 12 to 13 years old and the other for youths 14 to 17.

Using the fully-developed computer-assisted interview instrument, annual data collection occurs once each year in May through mid-July, with annual recall for the preceding calendar year. The 1998 survey included a set of retrospective questions covering 1997 for all people aged 15 and older in the household. The topics covered were:

- Basic demographic and social characteristics, including educational enrollment and work training, functional limitations and disability, and health care use and health insurance;
- Basic economic characteristics, including employment and earnings, income sources and amounts, assets, liabilities, and program eligibility information, and food security;
- Information about children, including their school enrollment and enrichment activities, disability and health care use, contact with absent parent, care arrangements, and payment of child support on their behalf; and,
- Two SAQs: a few questions for adults focusing on marital relationship and conflict and a depression scale, and a lengthy questionnaire for adolescents aged 12 to 17 focusing on such issues as family conflict, educational aspirations, crime-related violence, substance abuse, and sexual activity. The adolescent SAQ was developed in collaboration with the Child and Family Research Network.

*1999 SPD.* The extended measures of child well-being questions were asked in 1999. In addition, five other new sections of questions were included: substance abuse, health care utilization while uninsured, food expenditures, positive behavior/social competence, and family routines.

*2000 SPD.* In the 2000 SPD, we collected the core SPD data and the Residential History topical module that collected data on with whom children have lived and the reasons for changes in living arrangements. We added 3,500 non-interviewed households from the 1997 Bridge to the sample for SPD 2000 - 2002 data collections.

*2001 SPD.* In the 2001 SPD, we again collected the adolescent SAQ. We also added back approximately 5,540 non-interviewed household from the 1992 and 1993 SIPP panels (in addition to the 3,500 from the 1997 Bridge) for the 2001 and 2002 data collections.

*2002 SPD.* In the 2002 SPD, we asked the extended child well-being questions again. Due to budget constraints, we reduced the sample by one-third evenly across the entire sample and household interview statuses (approximately 10,000 households).

## SPD Content

The SPD has two core components in addition to topical modules. The two components consist of adult questions and child-related questions. The topical modules include the adolescent SAQ, the children's residential history, and children's extended measure of well-being questions.

### The Adult Questions cover:

*Employment and earnings, income, and program eligibility.* For each person age 15 or over in the household, the SPD collects a detailed account of work-related activities in the past calendar year, including weeks they worked, weeks on layoff, and weeks spent looking for work. In addition, the SPD collects information for up to four jobs in the previous calendar year including annual earnings from each job.

Next, the SPD collects income data, including data on cash and non-cash transfer programs. In addition to measuring economic well-being, these questions help examine changes in the characteristics of transfer programs resulting from welfare reform. These questions are similar to those in the SIPP. First an inventory is completed of all the types of income received in the previous calendar year for all household members age 15 or over at the person level. For example, we ask, "Did anyone in this household receive unemployment compensation?" If they answer "yes," we ask who received it. After collecting this inventory, the SPD moves on to the "Amounts" section. In this section, the months during the previous calendar year in which the person received the income as well as the amount the person received are collected. It is important to track the number of months the person received the income so that researchers can examine the impact of time limits associated with welfare reform.

In addition to income, information about assets and debts are collected. These include items such as the value of homes, cars, stocks, bonds, mutual funds, and payments made to support children living outside the household. These questions are included because assets and debts are key components in economic well-being and are also critical to measuring program eligibility.

*Educational enrollment and work training.* Questions on educational enrollment are asked of people 18 and over about the current academic year. People 15 to 17

are included in the childrens' school enrollment questions since the childrens' series of questions are more appropriate for that age group. The adult questions on educational enrollment track the progress of adults toward receiving high school or high school equivalency degrees as well as college, graduate and professional degrees. The work training questions focus on whether adults received any work training designed to help them look for a job or to train them for a new job.

*Disability, health care utilization, and health insurance.* Questions on disability, health care utilization and health insurance are condensed versions of a similar series included as topical modules in the SIPP. The health care utilization and health insurance questions are included to measure changes in the health care system and how the changes affect accessibility to government health insurance such as Medicaid and Medicare as well as private and employer-provided insurance, utilization of health services, and outcomes.

*Food security.* This series of questions is taken from the USDA-sponsored Food Security Supplement to the CPS and is intended to measure the subjective experience of hunger. The questions are used as a scale to measure the severity of hunger in a household. Direct changes in the food stamp program account for nearly half the total federal cost savings under the legislation. Additionally, the food stamp benefits of legal immigrants and able-bodied people ages 18-50 years old without dependents are affected by changes in the legislation. Measuring the food security status of a household provides a direct indicator of well-being.

*Family stability.* Another objective of welfare reform is to encourage marital and family stability. Answers to questions on these subjects provide indicators of marital happiness and of overall stress, both of which can contribute to marital and family harmony or instability. Changes in program participation and employment can have a large effect on marital and family stability.

### **The Child questions cover:**

We attempt to interview the mother or designated parent when asking questions about children.

*Children's school enrollment and enrichment activities.* The SPD asks questions about school enrollment and

enrichment activities, including extracurricular enrichment activities, which add to the overall portrait of the child's development. The extent to which parents have the financial resources or the time to devote to such activities may be strongly influenced by their program participation and employment in the labor market. These questions provide the basis to study the effects of welfare reforms on key outcomes through its influence on children's exposure to enrichment activities.

*Disability, health care utilization, and child care.* These questions are similar to those asked about adults. Additionally, a key objective of welfare reform is to encourage single mothers to enter or re-enter the labor force, so child care is an important issue to measure. The amount of time children spend in child care and the type of care they receive, as well as the stability of care arrangements, has been linked with child well-being.

*Child support and contact with an absent parent.* Enforcement of child support and contact with an absent parent has been highlighted as a cornerstone of welfare reform. The answers to these questions will allow researchers to examine the nature of the awards and whether the awards are being followed or enforced. Child support payments are also an important factor in determining the economic status of children living in single-parent families.

*The adolescent SAQ* is designed to provide information which can be used to evaluate several provisions of the TANF program. Included among these provisions are: states may not give benefits to unwed teenage parents who are not living with an adult and attending school; states receive bonuses for reducing illegitimate births, funding to develop abstinence education programs, and funds to devote to family planning. Questions in the SAQ which may be used to evaluate the success of these programs focus on dating histories, sexual initiation, contraception, and childbearing, and knowledge of welfare rules.

*Parental employment.* Employment of all able-bodied parents is a goal of the 1996 welfare reform law. However, parental employment may reduce the amount of monitoring and support parents can give their children, leading to increased rates of delinquency or poor school achievement. In order to measure these

potential consequences, the SAQ includes indicators of adolescents' behaviors and relationships. The indicators focus on adolescents' housework and chores, substance use and problem behaviors, family routines, relationships between children and parents (both co-resident and non-resident parents), and parents' monitoring of adolescents' social and school behavior.

## Technical Issues

This section deals with technical issues that affect the administration and usefulness of the survey.

*Subsampling.* The response rate for the 1997 SPD Bridge survey was 81.7 percent. This yielded a base sample of 29,619 households interviewed. However, the budget for the survey is \$10 million per year, which only allowed us to select a subsample of 19,139 households in 1998. The households were subsampled from interviewed households from the 1997 Bridge survey based upon the following household characteristics:

- all households with income less than 150 percent of poverty, and all households with incomes between 150 percent and 200 percent of poverty with children were selected for the sample with certainty;
- households with incomes above 200 percent of poverty with children were subsampled at a 90 percent rate;
- households with incomes between 150 percent and 200 percent of poverty without children were subsampled at an 82 percent rate; and households with incomes above 200 percent of poverty without children were subsampled at a 27 percent rate.

Later, in order to increase the degree of representativeness of the SPD sample after the 1998 sample cut, we added approximately 3,500 non-interviewed households from the SPD Bridge to the sample for the SPD 2000-2002 data collections, and approximately 5,500 non-interviewed households from the SIPP 1992 and 1993 panels to the SPD 2001 and 2002 data collections. However, due to budget constraints, we reduced the sample size for the SPD 2002 data collection by one-third evenly across the sample and household interview statuses. Since the SPD 2002 sample cut is evenly across the sample and

household non-interview statuses, the degree of representativeness of the sample remains the same but its reliability level for producing estimates decreases due to its sample size reduction.

*Weighting and database development.* The SPD is designed exclusively to support longitudinal analysis of the impact of welfare reform. It represents the behavior and characteristics of people in two fixed cohorts over a period up to ten years. One cohort represents the population as it existed in March 1992 from the 1992 panel of the SIPP and the other is the population as of March 1993 from the 1993 panel. This is not a traditional longitudinal survey in that it does not repeat the same measure throughout the period. Furthermore, the sample is divided into two parts, each with a different reference period. As a result of adding the SPD Bridge and the SIPP 1992/1993 panels non-interviewed households to the SPD sample, the SPD sample becomes more similar to the traditional longitudinal survey sample and more conducive for producing cross-sectional estimates for 2001 and 2002.

## Data Products

Given the design and our budget constraints, we have designed a series of data products to focus scarce resources on just the data products the users need most. These are:

- A 1998 interim, unedited calendar year file. This file is designed to support preliminary analysis of income and program participation among the original cohort.
- Three longitudinal files. The longitudinal files will contain fully edited, consistently-formatted, and longitudinally-processed core variables derived from the information collected over periods of time. The three longitudinal files will contain data for the following years:
  - First file - 1992 - 1994, 1996 - 1997
  - Second file - 1992 - 1994, 1996 - 1999
  - Third file - 1992 - 1994, 1996 - 2001
- Minimally edited cross-sectional files, 2001-2002. These files will contain all remaining SPD variables not contained on the longitudinal files. Depending on funding, fully edited cross-sectional files for 1998-2002 will be released.

*Longitudinal Data.* The core information common throughout the data collection (although with varying reference periods and question phrasing) consists of basic demographics, labor force activity, income, and program participation. The three longitudinal files will reflect these data, and maintain consistency and similar variable names across time when possible. The longitudinal variables can be supplemented by matching information collected from the calendar year SPD files and from topical modules in the SIPP.

The longitudinal files will be based on people in the original sample, as with SIPP longitudinal files. They will reflect the original cohort plus people with whom these people resided over the length of the SPD survey. On the longitudinal files, the variables are replicated to reflect the number of years of data collection from the SIPP and the SPD. The information repeated across several SPD data collections will appear in the person record following the data common across the SIPP panels, the 1997 Bridge Survey, and the SPD.

For the SPD longitudinal data, person weights will be developed for people belonging to the initial cohorts who continued to be interviewed for as long as they remain with the SIPP/SPD universe as defined by the 1992/1993 SIPP panels (see section 9, Source and Accuracy Statement). We refer to this group of people as the longitudinal sample. Other people to be included in the data file will have zero weights. Their presence in the data file is to facilitate development of household and family characteristics of the people in the longitudinal sample. This will permit the user to construct contextual information on the cohort sample member's household and economic circumstances.

Children born to original sample members after the two cohorts were defined, will be included in the longitudinal file and assigned a nonzero person-based longitudinal weight, so they will appear to be members of the longitudinal sample (even though technically they are not). Thus, the data files will reflect a dynamic population over the ten-year period rather than two fixed cohorts of the population.

The first longitudinal file contains data covering the 1992/1993 through 1997 time frame except for 1995, because the SIPP does not have a complete data set for 1995. Data from the 1992 and 1993 SIPP panels, the 1997 Bridge survey, and the 1998 SPD survey are used for this first longitudinal file.

The second longitudinal file repeats the first and extends the reference period to 1999 (adding in the 1999 and the 2000 SPD data collections). The third longitudinal file will add the data for 2000 and 2001 reference periods collected in the 2001 and the 2002 SPD. The second longitudinal file was expanded to include variables on eligibility. The third longitudinal file also include variables on eligibility.

The third longitudinal file contains basic sample persons (1992-1994, 1996-2001) plus the 1997 Bridge Non-interview sample persons (1992 -1994, 1999, 2000, 2001) and the SIPP 1992/1993 Non-interview sample persons (1992-1994, 2000, 2001).

*Cross-sectional Files.* The 2001 cross-sectional file contains primarily unedited data for most questions asked in the 2001 SPD survey. The 2002 cross-sectional file also contains primarily unedited data for most questions asked in the 2002 SPD survey.

*The Two Interim Calendar Year Files.* So that the research community can make some preliminary assessment of the immediate impact of welfare reform, we have issued two interim files. The 1997 SPD Bridge survey interim file is identical to the March CPS in format (hierarchical record file), however, the 1998 interim file is in person year format. They contain special weights corresponding to the cohort, and the link-variables needed to merge with the 1997 SPD Bridge and earlier SIPP data. The 1998 SPD interim file contains primarily unedited data for all questions asked in the SPD survey. These are intended to be used for research purposes only and not to be used for cross-sectional analysis.

## FILE INFORMATION

### Geographic Coverage

State codes are shown except for nine states which are collapsed into three groups. The three state groupings are as follows: Maine and Vermont; Iowa, North Dakota and South Dakota; and Alaska, Idaho, Montana, and Wyoming. The sample was not designed to produce state level estimates. State codes are primarily useful in relating a respondent's reciprocity of benefits to welfare reform thresholds and policies which may vary from state to state.

### Identification Number System/Match Key Variables

The SPD identification scheme uses match key variables designed to uniquely identify individuals, provide a means of linking data for the same individuals across files, and grouping individuals into households and families across files over time. The various components of the identification scheme are listed below:

SIPP Panel Number	SIPP_PNL
Sample Unit Identification Number	PP_ID
Entry ID	PP_ENTRY
Person Number	PP_PNUM
Address ID	ADDIDE(2,3,4,7,8,9,0,1,X)
SIPP_PNL, PP_ID, ADDID	IHHKEY(92,93,94,97,98,99,00,01,02)

### File Match Keys

This file includes match keys to merge with SPD and 1992/1993 SIPP data. These match keys link data for each person between the 1992 and 1993 SIPP Panels, the 1997 SPD Bridge, the 1998 SPD file, the first and second SPD longitudinal files and the 1999, 2000, 2001 and 2002 Cross-sectional files.

Use the following variables to match back at the person level:

SIPP Panel Number	SIPP_PNL
Sample Unit Identification Number	PP_ID
Person Number	PP_PNUM
Entry ID	PP_ENTRY

Use the following variables to match back at the household level:

SIPP Panel Number	SIPP_PNL
Sample Unit Identification Number	PP_ID
Address ID	ADDIDE(2, 3, 4, 7, 8,9,0,1,X)

The SIPP panel number identifies the panel in which the respondent participated. The sample person should either have an entry of 1992 or 1993 for their panel number.

The sample unit identification number was created by scrambling together the Primary Sampling Unit, segment, and serial numbers used for Census Bureau administrative purposes. These identifiers are constructed in the same manner as the 1992 and 1993 SIPP panel files, to enable matching to these files. To uniquely identify a household, you must use the sample unit identification (ID) number, the address ID, and the SIPP panel number. The sample unit identification number, the address ID, and the SIPP panel number can be used to link all households back to the original household.

The entry ID represents the address of the person at the time he/she was first interviewed and does not change even if the person moves. It is used in conjunction with the person number to uniquely identify people within the sample unit. This variable is the number 011 for all original sample people. For additional sample people, this variable can be 011 or greater than 011 depending on the current address ID of the unit which the new sample person joined. For example, a person who moves into a household with an ADDIDEX of 011 will receive an PP\_ENTRY of 011. Whereas, a person who enters a household spawned in 2002 (ADDIDEX=161) will have a PP\_ENTRY of 161.

The person numbers represent the wave the person entered the sample. Person numbers such as 0101 and 0102 are assigned in Wave 1 of the SIPP. Person numbers such as 0201 and 0202 are assigned to people added to the roster in Wave 2 of the SIPP. People added to the roster in the 2002 SPD have person numbers 1601 and 1602 and following sequentially as needed. People added to the roster in the 2001 SPD have person numbers 1501 and 1502 and following sequentially as needed. People added to the roster in the 2000 SPD have person numbers 1401 and 1402 and following sequentially as needed. People added to the roster in the 1999 SPD have person numbers 1301 and 1302 and following sequentially as needed. People added to the roster in the 1998 SPD have person numbers 1201 and 1202 and following sequentially as needed. People added to the roster in the 1997 SPD Bridge have person numbers 1101 and 1102 and following sequentially as needed.

The address ID is a three digit code that identifies the various household addresses associated with the same sample unit identification number. The first two digits of the address ID code indicate the wave or year in which that address was first interviewed. The third digit sequentially numbers that split into multiple households and have the same address ID. The address ID code is 011 for all sample addresses that are the same as in Wave 1 of the 1992 and 1993 SIPP panels. As the SIPP sample people move to new addresses, new address ID codes are assigned. For example, any new address to which sample unit members moved during the 2002 SPD is numbered from 161 to 169.

Households are defined at each cross sectional time point in this file: 1992, 1993, 1994, 1997, 1998, 1999, 2000, 2001 and 2002. If you would like to look at the household configuration in any given year, use the IHHKEY variable appropriate for that year. For example, to look at the 1999 household structure, use IHHKEY99. The IHHKEY variables are a concatenation of SIPP\_PNL; PP\_ID and ADDID for a specific year. For example, IHHKEY99 is SIPP\_PNL; PP\_ID and ADDIDE9.

The unique household identifier is a 15 digit code which can be matched to the longitudinal files. The first three digits identify the SIPP Panel (B12 for the 1992 SIPP Panel or B13 for the 1993 SIPP Panel). The next nine digits identify the sample unit identification number, and the last three digits identify the current address ID.

## **File Structure**

The file is a rectangular person-level file. Household and Family level variables are included on the record for every person in the household.

## **Edits**

The third longitudinal file is a fully edited and imputed data set.

## **Topcoding of Variables**

To protect against the possibility that a user may recognize the identity of a SPD respondent with a very high income, income from every source is topcoded so that no individual amounts above \$100,000 are revealed. This topcode amount is consistent with the topcoding for the 1992 and 1993 SIPP panels. Other economic variables are topcoded at the 97 percentile level, meaning the top 3 percent of values are not disclosed. Variables that have been topcoded will have a "T" in the second to the right position. NOTE: Aggregate amounts (PTOTVLR, PERNVLR, etc.) use topcoded amounts as input.

We topcode age by bottom coding year of birth. For the Third Longitudinal SPD file no age will be older than 92.

## **Weighting**

The SPD panel universe is initially represented by all of the original sample people from the SIPP panels 1992 and 1993. Each and everyone of these original sample people has an initial weight. A description of the SIPP panel 1992 and 1993 samples, the SPD Bridge (1997) sample, and the SPD 1998, 1999, 2000, 2001, and 2002 samples are provided in the Source and Accuracy Statement section. As a background for describing the weighting procedure for the SPD third longitudinal file, all of the SPD sample components are briefly described below.

Each SPD sample collected annual socioeconomic and health insurance data from the previous year from the sample households but collected demographic data for the current year similar to the March supplement of the Current Population Survey (CPS). Therefore, the March CPS instrument (questionnaire) was used directly for collecting data from the SPD Bridge sample. For the data collection of other SPD samples (SPD 1998 through SPD 2002), the March CPS instrument was used with necessary modifications, mainly to accommodate additional topics included in the data collection.

The first SPD sample was fielded in 1997 and is referred to as the SPD Bridge. It consisted of the sample households that were interviewed in the last waves of the SIPP Panels 1992 and 1993 and their spawned households up to the time of SPD Bridge data collection. The last interview

waves for SIPP Panel 1992 were wave 9 for rotation 1 and wave 10 for rotations 2, 3, and 4. The last interview wave for SIPP Panel 1993 is wave 9 for all four rotations.

Due to budget constraints, a sample cut was made for SPD 1998. All SPD Bridge non-interviewed sample households were excluded from the SPD 1998 sample. In addition, the SPD Bridge interviewed households and the SPD Bridge type B non-interviewed households (entirely institutionalized households) were classified into six strata based on the primary family income level and the presence of children under age 18 in the household as described in the Source and Accuracy Statement section. Households were randomly selected, from each of the six strata at a sampling rate specified in the Source and Accuracy Statement section, to be included in the SPD 1998 sample (plus the households spawned from them up to the SPD 1998 data collection time). The sampling rate was also referred to as the *1998 sample cut factor* and denoted by *SCF98*. The SPD 1998 sample and their subsequently spawned households as a whole were referred to as **the SPD basic sample component** or **the SPD core sample component**.

The SPD 1999 sample was a direct carryover from the SPD basic sample component (the SPD 1998 sample plus their spawned households up to the time of SPD 1999 data collection). Thus, the SPD 1999 sample consisted of only the SPD basic sample component (like the SPD 1998 sample).

SPD Bridge Type A (direct and indirect interview refusal) and Type D (moved to an unknown address) non-interviewed households were partially brought back and added to the SPD 2000 sample in order to increase its degree of representativeness. The SPD Bridge Type A and Type D non-interviewed households were classified into five strata based on the primary family income level and the presence of children under age 18 in the household as described in the Source and Accuracy Statement section. (The SPD Bridge non-interviewed households were classified into five strata instead of six strata like the SPD core sample component because the SPD Bridge Type B non-interviewed households were included as a stratum by themselves among the six strata in the SPD 1998 sample cut for creating the SPD core sample component.) Households were randomly selected, from each of the five strata at a sample rate specified in the Source and Accuracy Statement section, to be included in the SPD 2000 sample (plus the households spawned from them up to the SPD 2000 data collection time). This sampling rate was also referred to as *the Bridge non-interviewed sample cut factor* and denoted by *SCFBNI*. These added sample households and their subsequently spawned sample households as whole were referred to as **the SPD Bridge non-interviewed sample component**. Thus, the SPD 2000 sample consisted of the SPD basic sample component and the SPD Bridge non-interviewed sample component.

SIPP Panels 1992 and 1993 (wave 2 and beyond) Type A and Type D non-interviewed households were partially brought back and added to the SPD 2001 sample in order to increase further its degree of representativeness. The SIPP Type A and Type D non-interviewed households were classified into five strata based on the primary family income level and the presence of children under age 18 in the household in wave 1 as described in the Source and Accuracy Statement section. Households were randomly selected, from each of the five strata at a sampling rate specified in the Source and Accuracy Statement section, to be included in the SPD 2001 sample (plus the households spawned from them up to the SPD 2001 data collection

time). This sampling rate was also referred to as *the SIPP non-interviewed sample cut factor* and denoted by *SCFSNI*. These added sample households and their subsequently spawned sample households as a whole were referred to as **the SIPP 1992/1993 non-interviewed sample component**. Thus, the SPD 2001 sample consisted of the SPD basic sample component, the SPD Bridge non-interviewed sample component, and the SIPP 1992/1993 non-interviewed sample component.

Due to budget constraints, a sample cut was made for SPD 2002. SPD 2001 interviewed and Type A, B, and D non-interviewed households were classified into six strata based on the primary family income level and the presence of children under age 18 in the household as described in the Source and Accuracy Statement section. Households were randomly selected, from each of the six strata at a sampling rate specified in the Source and Accuracy Statement section, to be included in the SPD 2002 sample (plus the households spawned from them up to the SPD 2002 data collection time). The sampling rate was also referred to as the *2002 sample cut factor* and denoted by *SCF02*.

The original (100-level) sample people (including children) who (a) permanently (continuously) became a non-interviewed sample person starting at any point after wave 1 in the SIPP panel 1992 or 1993 for one or more of the following reasons: through death, moving out of the country, being institutionalized, and living in armed forces barracks, and (b) did not return later to the SPD core sample component or the SPD Bridge non-interviewed sample component or the SIPP 1992/1993 non-interviewed sample component, were classified as a ***pre SPD panel universe leaver*** (or a 1992/1993 SIPP panel universe leaver). To account for these pre SPD panel universe leavers, they were added as another sample component to the SPD third longitudinal file for internal users and the SPD third longitudinal file for public users. This sample component was referred to as the ***pre SPD panel universe leaver sample component***.

In the SPD 1998 sample cut, an SPD Bridge sample household not interviewed in the SPD Bridge (1997) because of the entire household being deceased *or* moving out of the country *or* moving to live in armed forces barracks was excluded from being selected into the SPD 1998 during the SPD 1998 sample cut. A sample household not interviewed because of the entire household being deceased *or* moving out of the country *or* moving to live in armed forces barracks was referred to as a ***type C\* non-interviewed sample household***. Similarly, in bringing back some of the SPD Bridge non-interviewed sample households into the SPD 2000 sample (the SPD Bridge non-interviewed sample component), the SPD Bridge type C\* non-interviewed sample households were also excluded from being selected. Therefore, by definition, an original sample person in the SPD Bridge sample who belonged to an SPD Bridge type C\* non-interviewed sample household and did not return later to the SPD core sample component or the SPD Bridge non-interviewed sample component or the SIPP 1992/1993 non-interviewed sample component was classified as an SPD panel universe leaver. These SPD panel universe leavers were referred to as the ***pre 1998 SPD panel universe leavers*** (to distinguish them from the pre SPD panel universe leavers). For easy reference later, the pre 1998 SPD panel universe leavers as a whole were referred to as the ***pre 1998 SPD panel universe leaver sample component***. By definition, the pre 1998 SPD panel universe leaver sample component included only the original sample persons belonging to a type C\* non-interviewed Bridge sample household but did not include the following two additional groups (labeled as group A1 and group A2) of the pre 1998 SPD panel universe leavers. Namely, group A1 consisted of the original sample people

belonging to an interviewed SPD Bridge sample household who either died or permanently moved out of the country or permanently moved to live in armed forces barracks during the period between the ending of the SIPP 1992/1993 panel and the fielding of the SPD Bridge sample. Group A2 consisted of the original sample people who (a) belonged to a non-interviewed SPD Bridge sample household that was not type C\* and was not qualified to be selected (sub-sampled) into the SPD Bridge non-interview sample component because it was not a type A (direct/indirect refusal) non-interviewed household or a type D (moved to an unknown address) non-interviewed household, and (b) either died or permanently institutionalized or permanently moved out of the country or permanently moved to live in armed forced barracks during the period between the ending of the SIPP 1992/1993 panel and fielding of the SPD Bridge sample. [Like the type C\* pre 1998 SPD panel universe leavers, group A1 and group A2 also have no representation in the SPD Bridge non-interview sample component.] Hereinafter, the pre 1998 SPD panel universe leavers in group A1 and group A2 are referred to as ***not-type-C\* pre 1998 SPD panel universe leavers***. Unfavorably, the not-type-C\* pre 1998 SPD panel universe leavers could not be directly accounted for because of the following two reasons. Reason 1 - the SPD Bridge survey instrument (same as the CPS March survey instrument) could not identify the not-type-C\* pre 1998 SPD panel universe leavers (group A1 and group A2) as reflected in the definition of the variable RSNNIE7 in the data dictionary. Reason 2 - data were not collected for the period between the ending of the SIPP 1992/1993 panel and prior to fielding the SPD Bridge (1997) sample, thus, no data is available even just for partial identification of the not-type-C\* pre 1998 SPD panel universe leavers (group A1 and group A2). However, this necessary exclusion of the not-type-C\* pre 1998 SPD panel universe leavers should have a practically negligible effect for the following three reasons: (a) the not-type C\* SPD panel universe leavers are only a part of all pre 1998 SPD panel universe leavers, (b) the number of all pre 1998 SPD panel universe leavers is only a fraction of all types of SPD panel universe leavers accrued over the course of 10 years (from 1992 through 2002), and (c) the not-type-C\* pre 1998 SPD panel universe leavers was also indirectly and optimally accounted for through the non-interview weight adjustment and the second stage (post-stratification) weight adjustment.

[Note that, unlike the SPD Bridge sample, the survey instrument used for the SPD 1998 sample through SPD 2002 sample can identify the not-type-C\* SPD panel universe leavers in the period between the fielding of the SPD 1998 and the fielding of the SPD 2002 as reflected in the definition of the variables RSNNIE8, RSNNIE9, RSNNIE0, RSNNIE1, and RSNNIE1X in the data dictionary.]

Similarly, in the SPD 2002 sample cut, (a) the type C\* non-interviewed sample households in the SPD 2001 sample were excluded from being selected (sub-sampled) into the SPD 2002 sample, and (b) the non-interviewed sample households in the SPD 2001, for any reasons other than type C\* (defined in the second preceding paragraph), type A (direct/indirect refusal) or type B (entire household institutionalized) or type D (moved to an unknown address), were also excluded from being selected (sub-sampled) into the SPD 2002 sample. Hereinafter, a non-interviewed sample household for any reasons other than type C\*, type A, type B, and type D is referred to as ***a type O\* non-interview sample household***. [For example, a non-interviewed sample household due to only children remained in the household is a type O\* non-interviewed sample households.] Namely, the type C\* and type O\* non-interviewed sample households in the SPD 2001 sample were not represented in the SPD 2002 sample. The type C\* non-interviewed households in the SPD 1998 sample were not carried over to the SPD 1999, 2000, and 2001 samples. Similarly,

the type C\* non-interviewed sample households in the SPD 1999 sample were not carried over to the SPD 2000 and 2001 samples; and the type C\* non-interviewed sample households in the SPD 2000 sample were not carried over to the SPD 2001 samples. Consequently, like type C\* non-interviewed sample households in the SPD 2001 sample, the type C\* non-interviewed sample households in the SPD 1998, 1999, and 2000 samples were not represented in the SPD 2002 sample as well. On contrary, the type O\* non-interviewed sample households in the SPD 1998 sample were carried over to the SPD 1999, 2000, and 2001 samples; the type O\* non-interviewed sample households in the SPD 1999 sample were carried over to the SPD 2000 and 2001 sample; and the type O\* non-interviewed sample households in the SPD 2000 were carried over to the SPD 2001 sample. Therefore, the type O\* non-interviewed sample households in the SPD 1998, 1999, and 2000 samples were directly represented (carried over) in the SPD 2001 sample.

Based on the discussion in the previous paragraph, the original sample people who belonged (a) a type C\* non-interviewed sample household in the SPD 1998 sample and did not return later to the SPD 1999 sample or the SPD 2000 sample or the SPD 2001 sample or the SPD 2002 sample, *or* (b) a type C\* non-interviewed sample household in the SPD 1999 sample and did not return later to the SPD 2000 sample or the SPD 2001 sample or the SPD 2002 sample, *or* (c) a type C\* non-interviewed sample household in the SPD 2000 sample and did not return later to the SPD 2001 sample or the SPD 2002 sample, *or* (d) a type C\* non-interviewed sample household in the SPD 2001 sample and did not return later to the SPD 2002 sample are classified as the SPD panel universe leavers occurring/being-identified in the period between the fielding of the SPD 1998 sample and the fielding of the SPD 2001 sample (prior to the SPD 2002 sample cut). Hereinafter, these SPD panel universe leavers are referred to as ***the type C\* pre 2002 SPD panel universe leavers***. Similarly, the original sample people who (a) belonged to a type O\* non-interviewed sample household in the SPD 2001 sample and (b) died or permanently institutionalized or permanently moved to live in armed forced barracks or permanently moved out of the country in the period between the fielding of the SPD 1998 sample and the fielding of the SPD 2001 sample and did not return later to the SPD 2002 sample are also classified the SPD panel universe leavers occurring/being-identified in the period between the fielding of the SPD 1998 sample and the fielding of the SPD 2001 sample (prior to the SPD 2002 sample cut). Hereinafter, these SPD panel universe leavers are referred to as ***the type O\* pre 2002 SPD panel universe leavers***. [Note that only the type O\* non-interviewed households in the SPD 2001 sample are considered in classifying the type O\* pre 2002 SPD panel universe leavers because the type O\* non-interviewed sample households in the SPD 1998, 1999, and 2000 samples were directly represented (carried over) as described in the previous paragraph.] Therefore, the complete set of the SPD panel universe leavers occurring/being-identified in the period between the fielding of the SPD 1998 sample and the fielding of the SPD 2001 sample (prior to the SPD 2002 sample cut) are composed of the type C\* pre 2002 SPD panel universe leavers and the type O\* pre 2002 SPD panel universe leavers. Hereinafter, an SPD panel universe leaver belonging to this complete set is referred to as ***a pre 2002 SPD panel universe leaver*** and this complete set per se is referred to as ***the pre 2002 SPD panel universe leaver sample component***.

By definition, the pre 2002 SPD panel universe leaver sample component is a part (subset) of the SPD core sample component, the SPD Bridge non-interviewed sample component, and the SIPP 1992/1993 non-interviewed sample component, prior to the 2002 sample cut. In addition, the pre 2002 SPD panel universe leavers in either the SPD 1998 sample or the SPD 1999 sample

belonged only to the SPD core sample component (because the SPD 1998 and 1999 samples consisted of only the SPD core sample component). The pre SPD 2002 panel universe leavers in the SPD 2000 sample belonged either to the SPD core sample component or the SPD Bridge non-interviewed sample component (because the SPD 2000 consisted of both the SPD core sample component and the SPD Bridge non-interview sample component). Lastly, the pre SPD 2002 panel universe leavers in the SPD 2001 sample belonged either to the SPD core sample component or the SPD Bridge non-interviewed sample component or the SIPP 1992/1993 non-interviewed sample component (because the SPD 2002 sample consisted of all of the three sample components).

Note that, the size of cohort type O\* of the pre 2002 SPD panel universe leavers should be small and should be much smaller than the size of cohort type C\* of the pre 2002 SPD panel universe leavers because the number of type O\* non-interviewed sample households is typically small in comparison with the number of other type of non-interviewed sample households.

Analytically, the five sample components: the SPD core sample component, the SPD Bridge non-interviewed sample component, the SIPP 1992/1993 non-interviewed sample component, the pre SPD panel universe leaver sample component, and the pre 1998 SPD panel universe leaver sample component, along with their combined panel and sample cut or subsampling factors), all together *fully represented* all of the original sample people from the SIPP panels 1992 and 1993 up to the SPD 2001. Similarly, the six sample components: the SPD core sample component, the SPD Bridge non-interviewed sample component, the SIPP 1992/1993 non-interviewed sample component, the pre SPD panel universe leaver sample component, the pre 1998 SPD panel universe leaver sample component, and the pre 2002 SPD panel universe leaver sample component, along with their combined sample and sample cut or subsampling factors, *all together fully represented* all of the original sample people from the SIPP panels 1992 and 1993 up to the SPD 2002. Therefore, only the original sample people in these six sample components need to be considered in the weighting process associated with the SPD panel universe, for the SPD third longitudinal file.

Within the SPD core sample component, the SPD Bridge non-interviewed sample component, and the SIPP 1992/1993 non-interviewed sample component, the SPD panel universe leavers were classified as described below.

As discussed earlier, the SPD Bridge (1997) was fielded using the CPS instrument (questionnaire) for its data collection almost without any modifications. The CPS instrument was not designed to include or follow any sample persons who used to live in an interviewed sample household in the previous interview month (cycle) but did not live in this interviewed sample household in the current interview month (cycle) for any reasons (e.g., died, moved to live elsewhere, etc.). Thus, an original sample person who used to live in an SPD Bridge interviewed sample household (during the SIPP panel 1992/1993) but no longer lived in this sample household during the SPD Bridge interview cycle was excluded (by the SPD Bridge/CPS instrument) from the sample household's member roster without recording the reason for which he/she was not interviewed, i.e., his/her reason for being non-interviewed in the SPD Bridge is *indeterminate (not known)*. Consequently, the SPD Bridge interview outcomes (including reasons for non-interview) of the original sample persons in the SPD core (basic) sample component and the SPD Bridge non-interviewed sample component were not considered in

classifying their SPD panel universe leaver statuses. However, for the SPD 1998 through the SPD 2002, the SPD instrument was modified to follow the original sample persons who moved and to record the non-interview reasons of each individual sample person.

The SPD Bridge non-interviewed sample component was fielded again in 2000 (as part of the SPD 2000 sample) through the SPD 2002 (for the portion that survived the 2002 sample cut). Therefore, the SPD panel universe leaver statuses of the original sample persons in the SPD Bridge non-interviewed sample component were classified based only on the SPD 2000 through the SPD 2002. Similarly, the SIPP 1992/1993 non-interviewed sample component was fielded in the SPD 2001 (as part of the SPD 2001 sample) through the SPD 2002 (for the portion that survived the 2002 sample cut). Therefore, the SPD panel universe leaver statuses of the original sample persons in the SIPP 1992/1993 non-interviewed sample component were classified based only on the SPD 2001 and the SPD 2002.

Based on the above discussion, an original sample person belonging to the SPD core sample component was classified as a **2000 SPD panel universe leaver** if he/she continuously (permanently) became a non-interviewed sample person starting at any point between the SPD 1998 and the SPD 2000 for one or more of the following reasons: through death, moving out of the country, being institutionalized, and living in armed forces barracks. Similarly, an original sample person belonging to the SPD core sample component was classified as a **2001 SPD panel universe leaver** if he/she continuously (permanently) became a non-interviewed sample person starting at any point between the SPD 1998 and the SPD 2001 for one or more of the following reasons: through death, moving out of the country, being institutionalized, and living in armed forces barracks. Lastly, an original sample person belonging to the SPD core sample component and *surviving the SPD 2002 sample cut* was classified as a **2002 SPD panel universe leaver** if he/she continuously (permanently) became a non-interviewed sample person starting at any point between the SPD 1998 and the SPD 2002 for one or more of the following reasons: through death, moving out of the country, being institutionalized, and living in armed forces barracks.

An original sample person belonging to the SPD Bridge non-interviewed sample component was classified as a **2000 SPD panel universe leaver** if he/she became a non-interviewed sample person in the SPD 2000 for one of the following reasons: through death, moving out of the country, being institutionalized, and living in armed forces barracks. Similarly, an original sample person belonging to the SPD Bridge non-interviewed sample component was classified as a **2001 SPD panel universe leaver** if he/she continuously (permanently) became a non-interviewed sample person starting at any point between the SPD 2000 and the SPD 2001 (or equivalently, in the SPD 2000 and the SPD 2001 or in the SPD 2001) for one or more of the following reasons: through death, moving out of the country, being institutionalized, and living in armed forces barracks. Lastly, an original sample person belonging to the SPD Bridge non-interviewed sample component and *surviving the SPD 2002 sample cut* was classified as a **2002 SPD panel universe leaver** if he/she continuously (permanently) became a non-interviewed sample person starting at any point between the SPD 2000 and the SPD 2002 for one or more of the following reasons: through death, moving out of the country, being institutionalized, and living in armed forces barracks.

An original sample person belonging to the SIPP 1992/1993 non-interviewed sample component was classified as a **2001 SPD panel universe leaver** if he/she became a non-interviewed sample

person in the SPD 2001 for one of the following reasons: through death, moving out of the country, being institutionalized, and living in armed forces barracks. Similarly, an original sample person belonging to the SIPP 1992/1993 non-interviewed sample component and *surviving the SPD 2002 sample cut* was classified as a **2002 SPD panel universe leaver** if he/she continuously (permanently) became a non-interviewed sample person starting at any point between the SPD 2001 and the SPD 2002 (or equivalently, in the SPD 2001 and the SPD 2002 or in the SPD 2002) for one or more of the following reasons: through death, moving out of the country, being institutionalized, and living in armed forces barracks. *Note that there was no 2000 SPD panel universe leaver in the SIPP 1992/1993 non-interviewed sample component because this sample component was fielded for the first time in 2001 (as part of the SPD 2001 sample).*

In the weighting processes for the SPD first and second longitudinal files, only the SPD core sample component was employed to eventually represent the SPD panel universe. Unlike the SPD first and second longitudinal files, to increase the degree of representativeness and reliability level of both the traditional and quasi-longitudinal panel weight sets (for making estimates), the weighting processes for the SPD third longitudinal file employed all six sample components (the SPD core sample component, the SPD Bridge non-interviewed sample component, the SIPP 1992/1993 non-interviewed sample component, the pre SPD panel universe leaver sample component, the pre 1998 SPD panel universe leaver sample component, and the pre 2002 SPD panel universe leaver sample component) as mentioned above.

The SPD panel universe was initially represented by all of the original (100-level) sample people for the SIPP Panels 1992 and 1993. Each and every one of these original sample people had an initial weight assigned per a procedure described later in this section (the Weighting section). Due to non-response in both the SIPP and the SPD, the sample cuts in the SPD 1998 and the SPD 2002, and the partial bringing back of the SPD Bridge non-interviewed sample households since the SPD 2000 and the SIPP 1992/1993 non-interviewed sample households, the initial weights of the respondents (including the pre SPD, pre 1998 SPD, pre 2002 SPD, and SPD panel universe leavers classified as a respondent) had to be adjusted to significantly compensate for the bias induced by the longitudinal non-respondents (including the pre SPD and SPD panel universe leavers not classified as a longitudinal respondent) based on the weighting process described later in this section (the Weighting section). Through the weighting process, the SPD panel universe was eventually represented by the original sample people who have longitudinal positive weights. Since the SIPP 1992/1993 non-interviewed sample component and the pre SPD panel universe leaver sample component are not part of the SPD Bridge (1997) sample, the demographic and socioeconomic characteristics of the original sample people in these two sample components needed for the weighting process were obtained from the cross-sectional and/or longitudinal files of the SIPP Panels 1992 and 1993.

For conciseness, we also referred to each of the six sample components as follows:

*Sample Component 1* - The SPD core (basic) sample component.

*Sample Component 2* - The SPD Bridge non-interviewed sample component.

*Sample Component 3* - The SIPP 1992/1993 non-interviewed sample component.

*Sample Component 4* - The pre SPD panel universe leaver sample component.

*Sample Component 5* - The pre 1998 SPD panel universe leaver sample component.

*Sample Component 6* - The pre 2002 SPD panel universe leaver sample component. [Note that sample component 6 is a part (subset) of sample components 1, 2, and 3 prior to the SPD 2002 sample cut. The part of sample component 6 that belongs to sample component 1 is labeled as sample component 16, the part of sample component 6 that belongs to sample component 2 is labeled as sample component 26, and the part of sample component 6 that belongs to sample component 3 is labeled as sample component 36. By definition, sample component 6 consists of sample component 16, sample component 26, and sample component 36. Such partition of sample component 6 serves as a means to fully describe the association of sample component 6 with sample component 1, sample component 2, and sample component 3.]

All key terms used in the weighting process described in the section (the Weighting section) were provided in the Glossary section.

There were two sets of weights provided for the sample people on the SPD third longitudinal file. These two sets of weights were referred to as *the traditional longitudinal panel weight set* and *the quasi-longitudinal panel weight set* as described in this section (the Weighting section), respectively.

For conciseness, a sample person was classified (or referred to) as *interviewed* at a given time (i.e., a wave in the SIPP or a year in the SPD) if he/she was a self or proxy or imputed respondent at that given time.

### **Traditional Longitudinal Panel Weight Set**

To fully utilize the SPD core sample component for both before and after the SPD 2002 sample cut, two weights were created for the traditional longitudinal panel weight set. Let *SPDTLW01* stand for the first weight and *SPDTLW02* stand for the second weight. *SPDTLW01* covers the SIPP Panels 1992 and 1993 up to the SPD 2001, and *SPDTLW02* covers the SIPP Panels 1992 and 1993 up to the SPD 2002. Each of *SPDTLW01* and *SPDTLW02* supercedes the traditional longitudinal panel weight (*SPDLNWGT*) provided on the SPD first and second longitudinal files. (Note that the SPD third longitudinal file also supercedes the SPD first and second longitudinal files.)

Namely, for *SPDTLW01*, only the original sample people belonging to one of the following cohorts have a positive *SPDTLW01* ( $SPDTLW01 > 0$ ).

*Cohort TLW01A* - The original sample people who belonged to sample component 1 (the SPD core sample component), and had *positive* SIPP 1992/1993 longitudinal panel weights (which implies he/she was classified as a SIPP 1992/1993 longitudinal panel interviewed sample person), and were interviewed in the SPD Bridge (1997) and the SPD 1998 through the SPD 2001.

*Cohort TLW01B* - The original sample people who belonged to sample component 1 (the SPD core sample component), and had *positive* SIPP 1992/1993 longitudinal panel weights (which implies he/she was classified as a SIPP 1992/1993 longitudinal panel interviewed sample person), and were interviewed or were institutionalized or moved to live in armed forces barracks or moved out of the country in each SPD cycle (the SPD Bridge, the SPD 1998, ...) *until* they became a 2001 SPD panel universe leaver.

*Cohort TLW01C* - The original sample people who belonged to sample component 4 (the pre SPD panel universe leaver component) and had *positive* SIPP 1992/1993 longitudinal panel weights (which implies he/she was classified as a SIPP 1992/1993 longitudinal panel interviewed sample person).

*Cohort TLW01D* - The original sample people who belonged to sample component 5 (the pre 1998 SPD panel universe leaver sample component), and had *positive* SIPP 1992/1993 longitudinal panel weights (which implies he/she was classified as a SIPP 1992/1993 longitudinal panel interviewed sample person).

All other sample people (original and non-original) have a zero SPDTLW01 ( $SPDTLW01 = 0$ ). The initial weights of the original sample people in (1) the SPD core sample component but not belonging to cohorts TLW01A or TLW01B defined above, (2) the SPD Bridge non-interviewed sample component, (3) the SIPP 1992/1993 non-interviewed sample component, (4) the pre SPD panel universe leaver sample component but not belonging to cohort TLW01C, and (5) the pre 1998 SPD panel universe leaver sample component but not belonging to cohort TLW01D, along with their combined panel and sample cut or subsampling factors, were transferred to the original sample people in cohorts TLW01A to TLW01D (defined above) through the non-interview weight adjustment process as described later in this section (the Weighting section). The non-interview adjusted weights of this group (cohorts TLW01A to TLW01D) of original sample people were then further adjusted to match a set of controls (benchmark population estimates) for the SPD panel universe (defined in the Glossary section) to obtain the final weights based on the second stage weight adjustment process as described later in this section (the Weighting section). As a result of this weighting, the SPD panel universe is represented by the original sample people who have positive SPDTLW01 (on the SPD third longitudinal file) for the period between 1992 through 2001.

For SPDTLW02, only the original sample people belonging to one of the following cohorts have a positive SPDTLW02 ( $SPDTLW02 > 0$ ).

*Cohort TLW02A* - The original sample people who belonged to sample component 1 (the SPD core sample component), survived the SPD 2002 sample cut, and had positive SIPP 1992/1993 longitudinal panel weights (which implies he/she was classified as a SIPP 1992/1993 longitudinal panel interviewed sample person), and were interviewed in the SPD Bridge (1997), and the SPD 1998 through SPD 2002.

*Cohort TLW02B* - The original sample people who belonged to sample component 1 (the SPD core sample component), survived the SPD 2002 sample cut, and had *positive* SIPP 1992/1993 longitudinal panel weights (which implies he/she was classified as a SIPP 1992/1993 longitudinal panel interviewed sample person), and were interviewed or were

institutionalized or moved to live in armed forces barracks or moved out of the country in each SPD cycle (the SPD Bridge, the SPD 1998, ...) *until* they became a 2002 SPD panel universe leaver.

*Cohort TLW02C* - The original sample people who belonged to sample component 4 (the pre SPD panel universe leaver component), and had *positive* SIPP 1992/1993 longitudinal panel weights (which implies he/she was classified as a SIPP 1992/1993 longitudinal panel interviewed sample person).

*Cohort TLW02D* - The original sample people who belonged to sample component 5 (the pre 1998 SPD panel universe leaver sample component) and had *positive* SIPP 1992/1993 longitudinal panel weights (which implies he/she was classified as a SIPP 1992/1993 longitudinal panel interviewed sample person).

*Cohort TLW02E* - The original sample people who belonged to both sample component 1 (the SPD core sample component), and sample component 6 (the pre 2002 SPD panel universe leaver sample component), and had *positive* SIPP 1992/1993 longitudinal panel weights (which implies he/she was classified as a SIPP 1992/1993 longitudinal panel interviewed sample person), and were interviewed or were deceased or were institutionalized or moved to live in armed forces barracks or moved out of the country in each of the SPD Bridge and the SPD 1998 through the SPD 2000. [Note that the SPD 2001 interview outcomes were not used in defining cohort TLW02E because, by definition, a pre 2002 SPD panel universe leaver had to remain to be or just became an SPD panel universe leaver in the SPD 2001 sample.]

All other sample people (original and non-original) will have a zero SPDTLW02 (SPDTLW02 = 0). The initial weights of the original sample people in (1) the SPD core sample component *but not belonging* cohorts TLW02A, TLW02B, or TLW02E defined above, (2) the SPD Bridge non-interviewed sample component, (3) the SIPP 1992/1993 non-interviewed sample component, (4) the pre SPD panel universe leaver sample component but not belonging to cohort TLW02C, and (5) the pre 1998 SPD panel universe leaver sample component but not belonging to cohort TLW02D, along with their combined panel and sample cut or subsampling factors, were transferred to the original sample people in cohorts TLW02A, TLW02B, TLW02C, TLW02D and TLW02E (defined above) through the non-interview weight adjustment process as described later in this section (the Weighting section). The non-interview adjusted weights of this group (cohorts TLW02A to TLW02E) of original sample people were then further adjusted to match a set of controls (benchmark population estimates) for the SPD panel universe (defined in the Glossary section) to obtain the final weights based on the second stage weight adjustment process as described later in this section (the Weighting section). As a result of this weighting, the SPD panel universe is represented by the original sample people who have positive SPDTLW02 (on the SPD third longitudinal file) for the period between 1992 through 2002.

By definitions, SPDTLW01 and SPDTLW02 can be used for longitudinal analyses or estimates of time variant characteristics between or within the time period spanning from 1992 through 2001, and from 1992 thru 2002, respectively. For longitudinal analyses between or within the time period spanning from 1992 through 2001, SPDTLW01 is preferred to SPDTLW02 because there are more original sample people with positive SPDTLW01 than those with positive

SPDTLW02. Thus, for an estimate that can be made based on either SPDTLW01 or SPDTLW02, SPDTLW01 will render a more accurate standard error for the estimate than SPDTLW02.

The advantage of using SPDTLW01 (SPDTLW02) for analyses and estimates as opposed to the quasi-longitudinal panel weights (described in the Quasi-longitudinal Panel Weight Set section) is that all of the original sample people with positive SPDTLW01 (SPDTLW02) have more data across time from 1992 to 2001 (1992 to 2002) than other cohorts of original sample people. However, any analyses and estimates using SPDTLW01 (SPDTLW02) are automatically limited to using only the data collected from the original sample people who were interviewed in each and every wave of either the SIPP Panel 1992 or 1993, and in the SPD 1997 through SPD 2001 (the SPD 1997 through SPD 2002). Therefore, this limitation precludes us from taking advantage of the data collected from the original sample people who were interviewed in wave 1 of the SIPP Panel 1992 or 1993, and were interviewed in part of the SPD 1997 through SPD 2001 (2002) in the entire SPD sample (the SPD core, SPD Bridge non-interviewed, and SIPP 1992/1993 non-interviewed sample components combined) as accounted for in the quasi-longitudinal panel weight set. The data from these original sample people is particularly useful for more accurate evaluation (in terms of larger effective sample size) of their gross changes between 1993 (prior to the welfare reform) and the year 2000 or 2001 or 2002 (after the welfare reform). Consequently, the quasi-longitudinal panel weight set was derived to take advantage of the data from these original sample people (as described in the Quasi-longitudinal Panel Weight Set section).

### **Special Weight Assignment Associated with SPDTLW01 for Some Non-original Sample Children**

To provide a means for estimating the annual or calendar characteristics of young children using the data on the SPD third longitudinal file based on SPDTLW01, the characteristics of the non-original (200+ level) sample children *born after* wave 1 of the SIPP Panels 1992 and 1993 must be also taken into account. To enable an accounting for the characteristics of these non-original sample children in any annual estimates, positive weights were assigned (based on SPDTLW01) to a cohort of these non-original sample children in the following manner. For each non-original sample child aged nine and below in 2001 if originated from the SIPP Panel 1992, and aged eight and below in 2001 if originated from the SIPP Panel 1993, and if the child's designated parent is an original sample person with positive SPDTLW01, a positive weight associated with the traditional longitudinal panel weight SPDTLW01 was assigned to the child based on a procedure described later in the Procedure for Calculating the Traditional Longitudinal Panel Weight SPDTLW01 and Its Associated Annual Weight SPDTAW01 section. This SPD annual weight is denoted by *SPDTAW01*. Since SPDTAW01 was adjusted to match various population controls (benchmark estimates) in June 2001 for children aged nine and below, the weights of these non-original children (SPDTAW01) together with the traditional longitudinal panel weight (SPDTLW01) of the original sample adults and children enable the users to make annual estimates of young children's characteristics up to 2001, and the annual estimates for 2001 are theoretically more accurate than other earlier years (because of the June 2001 population controls). Due to this and the

derivation method of SPDTAW01, the annual weight SPDTAW01 should be used for estimating any pre 2001 and 2001 annual characteristics of young children associated with the SPD traditional longitudinal panel weight. (Note that, as mentioned earlier, the SPD third longitudinal file along with its longitudinal weights supersede the SPD first and second longitudinal files along with their longitudinal weights including the associated annual weights for young children.)

### **Special Weight Assignment Associated with SPDTLW02 for Some Non-original Sample Children**

To provide a means for estimating the annual or calendar characteristics of young children using the data on the SPD third longitudinal file based on SPDTLW02, the characteristics of the non-original (200+ level) sample children *born after* wave 1 of the SIPP Panels 1992 and 1993 must be also taken into account. To enable an accounting for the characteristics of these non-original sample children in any annual estimates, positive weights were assigned (based on SPDTLW02) to a cohort of these non-original sample children in the following manner. For each non-original sample child aged ten and below in 2002 if originated from the SIPP Panel 1992, and aged nine and below in 2002 if originated from the SIPP Panel 1993, and if the child's designated parent is an original sample person with positive SPDTLW02, a positive weight associated with the traditional longitudinal panel weight SPDTLW02 was assigned to the child based on a procedure described later in the Procedure for Calculating the Traditional Longitudinal Panel Weight SPDTLW02 and Its Associated Annual Weight SPDTAW02 section. This SPD annual weight is denoted by *SPDTAW02*. Since SPDTAW02 was adjusted to match various population controls in June 2002 for children aged ten and below, the weights of these non-original children (SPDTAW02) together with the traditional longitudinal panel weight (SPDTLW02) of the original sample adults and children enable the users to make annual estimates of young children's characteristics up to 2002, and the annual estimates for 2002 are theoretically more accurate than other earlier years (because of the June 2002 population controls). On the basis of the derivation methods of SPDTAW01 and SPDTAW02, (a) the annual weight SPDTAW02 is preferred for estimating any 2002 annual characteristics of young children associated with an SPD traditional longitudinal panel weight, and (b) the traditional annual weight SPDTAW01 is preferred for estimating any pre 2002 characteristics of young children associated with an SPD traditional longitudinal panel weight. (Note that, as mentioned earlier, the SPD third longitudinal file along with its longitudinal weights supersede the SPD first and second longitudinal files along with their longitudinal weights including the associated annual weights for young children.)

An description on (a) how to use SPDTAW01 and SPDTAW02 for making annual estimates of young children's characteristics and (b) the advantage and disadvantage of using SPDTLW01 versus using SPDTLW02 for making an annual estimate was provided in a subsection titled "Estimation" and in table 8 of the Source and Accuracy Statement section.

## Procedure for Calculating the 2001 SPD Traditional Longitudinal Panel Weight

### SPDTLW01 and its Associated Annual Weight SPDTAW01

The procedure used for calculating the 2001 SPD traditional longitudinal panel weight SPDTLW01 and its associated longitudinal annual weight SPDTAW01 of the sample people on the SPD third longitudinal file is summarized in the seven steps provided below. (Note that the calculation procedure for SPDTAW01 is in step 7.)

**STEP 1** – March 1993 was chosen as the reference point in time (control date) for the SPD panel universe used for measuring the effect of the welfare reform. Namely, the SPD panel universe consists of persons (including children) residing in the United States households and persons living in group quarters in March 1993. (Note that persons living in military barracks and institutions, such as prisons and nursing homes, are excluded.) The SPD panel universe is represented by combining the SIPP Panels 1992 and 1993 into one sample. The effect of the welfare reform can be assessed based on the various longitudinal (time dependent) characteristics of the people in the SPD panel universe.

**STEP 2** – An initial weight (IW) was assigned to each of the original sample persons (including children). An original sample person is a person who at the time of wave 1 interview resided in an interviewed sample household or group quarter. The inverse of this initial weight represents the probability of an original sample person residing in an interviewed Wave 1 sample household in either the SIPP Panel 1992 or 1993, depending on which SIPP panel he/she originally belonged. Thus, by definition, the initial weights were expressed as follows:

Each SIPP Panel 1992 original sample person received an initial weight of his/her SIPP Panel 1992 household base weight  $\times$  his/her SIPP Panel 1992 Wave 1 household non-interview adjustment factor.

Each SIPP Panel 1993 original sample person received an initial weight of the SIPP Panel 1993 household base weight  $\times$  his/her SIPP Panel 1993 Wave 1 household non-interview adjustment factor.

For every sample person who either is not an original sample person (200+ level) or is an original sample person but does not belong to one of the sample components 1 through 5 (defined earlier), his/her 2001 SPD traditional longitudinal panel weight SPDTLW01 was assigned as zero ( $SPDTLW01 = 0$ ) and he/she was then excluded from further processing in the weighting calculation with respect to SPDTLW01.

**STEP 3** – Since each of the SIPP Panels 1992 and 1993 (samples) is a nationally representative sample by itself, combining them into one sample reduces the weight of each panel sample person proportionately to their sample sizes. The two SIPP Panels 1992 and 1993 started in wave 1 and ended in their last wave with approximately the same sample sizes, and their wave-by-wave sample sizes (total eligible households), household response rates, and Type A and Type D non-response rates were

approximately the same for both panels. Based on the sample selection procedure (described earlier), the SPD Bridge sample also consisted of approximately equal number of sample households from each of SIPP Panels 1992 and 1993. Likewise, the SIPP 1992/1993 non-interviewed sample component also consisted of approximately equal number of Type A and Type D non-interviewed sample households from each of SIPP Panels 1992 and 1993. Therefore, a combined panel factor (*CPF*) of 0.5 was assigned to each original sample person in sample components 1 through 5. Namely, the weight (*CPAW*) of each original sample person after accounting for the panel combining effect was expressed in terms of *IW* and *CPF* as

$$CPAW = IW \times CPF.$$

**STEP 4** - The weight *CPAW* of each of the original sample person in sample components 1 to 5 was adjusted to account for the sample cut or subsampling effect in the following manner. Let *EIWTL01* denote the weight to be obtained from this adjustment. By the definition of *EIWTL01* specified below, *EIWTL01* represents *the effective initial weight* of each original sample person in sample components 1 to 5 prior to the non-interview weight adjustment in the 2001 SPD traditional longitudinal panel weighting process. Namely, *EIWTL01* was defined as described below.

*For sample component 1 - the SPD core sample component,*

$$EIWTL01 = CPAW \times SCF98 = IW \times CPF \times SCF98,$$

where *SCF98* represents the SPD 1998 sample cut factor.

*For sample component 2 - the SPD Bridge non-interviewed sample component,*

$$EIWTL01 = CPAW \times SCFBNI = IW \times CPF \times SCFBNI,$$

where *SCFBNI* represents the subsampling factor associated with the SPD Bridge sample component.

*For sample component 3 - the SIPP 1992/1993 non-interviewed sample component,*

$$EIWTL01 = CPAW \times SCFSNI = IW \times CPF \times SCFSNI,$$

where *SCFSNI* represents the subsampling factor associated with the SIPP 1992/1993 non-interviewed sample component.

*For sample component 4 - the pre SPD panel universe leaver sample component,*

$$EIWTL01 = CPAW = IW \times CPF.$$

*For sample component 5 - the pre 1998 SPD panel universe leaver sample component,*

$$EIWTL01 = CPAW = IW \times CPF.$$

**STEP 5** – The original sample persons in the five sample components were divided into two groups as follows: the first group consisted of the original sample persons who were qualified as *the 2001 SPD traditional longitudinal panel interviewed sample persons*. The second group consisted of the original sample persons who were *not* qualified as the 2001 SPD traditional longitudinal panel interviewed sample persons. Hereinafter, the second group is referred to as *the 2001 SPD traditional longitudinal panel non-interviewed sample persons*.

*For sample component 1 - the SPD core sample component*, (a) an original sample person *belonging to* cohorts TLW01A or TLW01B (defined earlier) is a 2001 SPD traditional longitudinal panel *interviewed* sample person, and (b) an original sample person *not belonging to* cohorts TLW01A or TLW01B is a 2001 SPD traditional longitudinal panel *non-interviewed* sample person.

*For sample component 2 - the SPD Bridge non-interviewed sample component*, each of these original sample persons is a 2001 SPD traditional longitudinal panel *non-interviewed* sample person (because all of the original sample persons in the SPD Bridge non-interviewed sample component belonged to a Type A or Type D non-interviewed sample household in the SPD Bridge and their missing data were not imputed for the SPD Bridge, the SPD 1998, and the SPD 1999).

*For sample component 3 - the SIPP 1992/1993 non-interviewed sample component*, each of these original sample persons is a 2001 SPD traditional longitudinal panel *non-interviewed* sample person (because all of the original sample persons in the SIPP 1992/1993 non-interviewed sample component belonged to a Type A or Type D non-interviewed sample households in the SIPP panel 1992 or 1993 and their missing data were not imputed for the SIPP panel 1992/1993, the SPD Bridge, and the SPD 1998 through the SPD 2000).

*For sample component 4 - The pre SPD panel universe leaver sample component*, (a) an original sample person *belonging to* cohort TLW01C (defined earlier) is a 2001 SPD traditional longitudinal panel *interviewed* sample person, and (b) an original sample person *not belonging to* cohort TLW01C is a 2001 SPD traditional longitudinal panel *non-interviewed* sample person.

*For sample component 5 - The pre 1998 SPD panel universe leaver sample component*, (a) an original sample person *belonging to* cohort TLW01D (defined earlier) is a 2001 SPD traditional longitudinal panel *interviewed* sample person, and (b) an original sample person *not belonging to* cohort TLW01D is a 2001 SPD traditional longitudinal panel *non-interviewed* sample person.

The 2001 SPD traditional longitudinal panel non-interview adjustment factors ( $F_{TLW01}$ ) were calculated.  $F_{TLW01}$  served as a means to appropriately transfer the weights from the 2001 SPD traditional longitudinal panel non-interviewed persons to the 2001 SPD traditional longitudinal panel interviewed persons with similar demographic and economic characteristics. Herein, the similarity in demographic and economic characteristics among the sample persons were classified based on the following

variables: age, race, ethnicity, education, labor force status, employment status, income types, assets, and income level. Namely, the 2001 SPD traditional longitudinal panel non-interview adjusted weights (NIAWTL01) were then assigned in the following manner.

For each 2001 SPD traditional longitudinal panel *interviewed* person (defined earlier), his/her NIAWTL01 was assigned in terms of EIWTL01 (obtained in step 4) and  $F_{TLW01}$  as shown in the equation below.

$$NIAWTL01 = EIWTL01 \times F_{TLW01}$$

For each 2001 SPD traditional longitudinal panel non-interviewed person (defined earlier), his/her traditional longitudinal panel weight SPDTLW01 was assigned as zero ( $SPDTLW01 = 0$ ) and he/she was then excluded from further processing of the weighting calculation with respect to SPDTLW01.

**STEP 6** – The second stage ratio estimation was performed for computing the final weights (SPDTLW01) for the 2001 SPD traditional longitudinal panel interviewed persons. The second stage ratio estimation principally involved raking to match a set of SPD population estimates with a corresponding set of controls at a representative control date. The controls are available for the classifications based on the following demographic variables: age, sex, race, ethnicity, householder living with or not living with relative, and non-householder related to or not related to householder. As described in Step 1, the representative control date for the SPD panel universe is March 1993. The control population estimates are from the CPS population estimates produced for March 1993. The second stage ratio adjustment served as a means to improve the population coverage of the SPD sample. The classification of the sample persons into groups for the second stage ratio estimation also served as a post-sampling stratification. Therefore, as a by-product of the second stage ratio estimation, the variance estimates of the estimates based on the SPD sample are generally improved as well.

The positive weights obtained after the second stage adjustment are the final weights (SPDTLW01) for the 2001 SPD traditional longitudinal panel interviewed persons.

**STEP 7** – As described earlier, the annual weight SPDTAW01 associated with the 2001 SPD traditional longitudinal panel weight (SPDTLW01) was derived for making annual estimates of the characteristics of young children based on the data on the SPD third longitudinal file.

For all sample people except the non-original young sample children (person number > 200), their longitudinal annual weights SPDTAW01 were assigned equal to their 2001 SPD traditional longitudinal panel weights SPDTLW01 (i.e.,  $SPDTAW01 = SPDTLW01$ ).

For the non-original young sample children whose designated parents are non-original sample persons, their longitudinal annual weights were assigned as zero (i.e.,  $SPDTAW01 = 0$ ).

For each non-original young sample child whose designated parent was an original sample person, the following intermediate weight, SPDTXW01, was created by assigning it equal to his/her designated parent's weight SPDTAW01. Namely,  $SPDTXW01 = SPDTAW01$  of the child's designated parent. Hereinafter, the non-original young sample children whose designated parents are original sample people are referred to as *the weighted non-original young sample children associated with SPDTLW01*.

The intermediate weights SPDTXW01 of the weighted non-original young sample children associated with SPDTLW01 were then adjusted to match various controls in June 2001 for children aged nine and below. This adjustment yielded their final longitudinal annual weights SPDTAW01.

### **Procedure for Calculating the 2002 SPD Traditional Longitudinal Panel Weight SPDTLW02 and its Associated Annual Weight SPDTAW02**

The procedure used for calculating the 2002 SPD traditional longitudinal panel weight SPDTLW02 and its associated longitudinal annual weight SPDTAW02 of the sample people on the SPD third longitudinal file is summarized in the seven steps provided below. (Note that the calculation procedure for SPDTAW02 is in step 7.)

**STEP 1** – Choose March 1993 as the reference point in time (control date) for the SPD panel universe used for measuring the effect of the welfare reform. Namely, the SPD panel universe consists of persons (including children) residing in the United States households and persons living in group quarters in March 1993. (Note that persons living in military barracks and institutions, such as prisons and nursing homes, are excluded.) The SPD panel universe is represented by combining the SIPP Panels 1992 and 1993 into one sample. The effect of the welfare reform can be assessed based on the various longitudinal (time dependent) characteristics of the people in the SPD panel universe.

**STEP 2** – An initial weight (IW) was assigned to each of the original sample persons (including children). An original sample person is a person who at the time of wave 1 interview resided in an interviewed sample household or group quarter. The inverse of this initial weight represents the probability of an original sample person residing in an interviewed Wave 1 sample household in either the SIPP Panel 1992 or 1993, depending on which SIPP panel he/she originally belonged. Thus, by definition, the initial weights were expressed as follows:

The SIPP Panel 1992 original sample persons received their initial weight of the SIPP Panel 1992 base weight  $\times$  the SIPP Panel 1992 Wave 1 household non-interview adjustment factor.

The SIPP Panel 1993 original sample persons received their initial weight of the SIPP Panel 1993 base weight  $\times$  the SIPP Panel 1993 Wave 1 household non-interview adjustment factor.

For every sample person who is (a) not an original sample person (200+ level) or (b) an original sample person *not belonging* to one of sample components 1 through 5 (defined earlier) or (c) an original sample person belonging to sample components 1 through 3 but not surviving the SPD 2002 sample cut and not belonging to sample component 6, his/her 2002 SPD traditional longitudinal panel weight SPDTLW02 was assigned as zero (SPDTLW02 = 0) and he/she was then excluded from further processing in the weighting calculation with respect to SPDTLW02.

**STEP 3** – Since each of the SIPP Panels 1992 and 1993 (samples) is a nationally representative sample by itself, combining them into one sample reduces the weight of each panel sample person proportionately to their sample sizes. The two SIPP Panels 1992 and 1993 started in wave 1 and ended in their last wave with approximately the same sample sizes, and their wave-by-wave sample sizes (total eligible households), household response rates, and Type A and Type D non-response rates were approximately the same for both panels. Based on the sample selection procedure (described earlier), the SPD Bridge sample also consisted of approximately equal number of sample households from each of SIPP Panels 1992 and 1993. Likewise, the SIPP 1992/1993 non-interviewed sample component also consisted of approximately equal number of Type A and Type D non-interviewed sample households from each of SIPP Panels 1992 and 1993. Therefore, a combined panel factor (CPF) of 0.5 was assigned to each original sample person who *either* was in sample components 1 through 3 and survived the SPD 2002 sample cut *or* was in sample components 4 through 6. (As pointed out earlier, by definition, sample component 6 is a subset of sample components 1 through 3.) Namely, the weight (CPAW) of each original sample person after accounting for the panel combining effect was expressed in terms of IW and CPF as

$$\text{CPAW} = \text{IW} \times \text{CPF}.$$

**STEP 4** – The weight CPAW of each of the original sample persons in sample components 1 to 6 was adjusted to account for the sample cut or subsampling effect in the following manner. Let *EIWTL02* denote the weight to be obtained from this adjustment. By definition of *EIWTL02* specified below, *EIWTL02* represents the effective initial weight of each original sample person who *either* was in sample components 1 through 3 and survived the SPD 2002 sample cut *or* was in sample components 4 through 6, prior to the non-interview weight adjustment in the 2002 SPD traditional longitudinal panel weighting process. Namely, *EIWTL02* was defined as described below.

*For sample component 1 - the SPD core sample component (applied only to the original sample persons who survived the SPD 2002 sample cut),*

$$\text{EIWTL02} = \text{CPAW} \times \text{SCF98} \times \text{SCF02} = \text{IW} \times \text{CPF} \times \text{SCF98} \times \text{SCF02},$$

where SCF98 and SCF02 represent the SPD 1998 and 2002 sample cut factors, respectively.

*For sample component 2 - the SPD Bridge non-interviewed sample component (applied only to the original sample persons who survived the SPD 2002 sample cut),*

$$EIWTL02 = CPAW \times SCFBNI \times SCF02 = IW \times CPF \times SCFBNI \times SCF02,$$

where SCFBNI represents the subsampling factor associated with the SPD Bridge sample component.

*For sample component 3 - the SIPP 1992/1993 non-interviewed sample component (applied only to the original sample persons who survived the SPD 2002 sample cut),*

$$EIWTL02 = CPAW \times SCFSNI \times SCF02 = IW \times CPF \times SCFSNI \times SCF02,$$

where SCFSNI represents the subsampling factor associated with the SIPP 1992/1993 non-interviewed sample component.

*For sample component 4 - the pre SPD panel universe leaver sample component,*

$$EIWTL02 = CPAW = IW \times CPF.$$

*For sample component 5 - the pre 1998 SPD panel universe leaver sample component,*

$$EIWTL02 = CPAW = IW \times CPF.$$

*For the part of sample component 6 (the pre 2002 SPD panel universe leaver sample component) belonging to sample component 1 (the SPD core sample component),*

$$EIWTL02 = CPAW \times SCF98 = IW \times CPF \times SCF98.$$

*For the part of sample component 6 (the pre 2002 SPD panel universe leaver sample component) belonging to sample component 2 (the SPD Bridge non-interviewed sample component),*

$$EIWTL02 = CPAW \times SCFBNI = IW \times CPF \times SCFBNI.$$

*For the part of sample component 6 (the pre 2002 SPD panel universe leaver sample component) belonging to sample component 3 (the SIPP 1992/1993 non-interviewed sample component),*

$$EIWTL02 = CPAW \times SCFSNI = IW \times CPF \times SCFSNI.$$

**STEP 5** - The original sample persons who *either* are in sample components 1 through 3 and survived the SPD 2002 sample cut *or* are in sample components 4 through 6 were divided into two groups as follows: the first group consisted of the original sample persons who were qualified as *the 2002 SPD traditional longitudinal panel interviewed sample persons*. The second group consists of the original sample persons who were *not* qualified as the 2002 SPD traditional longitudinal panel interviewed sample persons.

Hereinafter, the second group is referred to as *the 2002 SPD traditional longitudinal panel non-interviewed sample persons*.

*For sample component 1 - the SPD core sample component (applied only to the original sample persons who survived the SPD 2002 sample cut), (a) an original sample person belonging to cohorts TLW02A or TLW02B (defined earlier) is a 2002 SPD traditional longitudinal panel interviewed sample person, and (b) an original sample person (who survived the SPD 2002 sample cut) not belonging to cohorts TLW02A or TLW02B is a 2002 SPD traditional longitudinal panel non-interviewed sample person.*

*For sample component 2 - the SPD Bridge non-interviewed sample component (applied only to the original sample persons who survived the SPD 2002 sample cut), each of these original sample persons is a 2002 SPD traditional longitudinal panel non-interviewed sample person (because all of the original sample persons in the SPD Bridge non-interviewed sample component belonged to a Type A or Type D non-interviewed sample households in the SPD Bridge and their missing data were not imputed for the SPD Bridge, the SPD 1998, and the SPD 1999).*

*For sample component 3 - the SIPP 1992/1993 non-interviewed sample component (applied only to the original sample persons who survived the SPD 2002 sample cut), each of these original sample persons is a 2002 SPD traditional longitudinal panel non-interviewed sample person (because all of the original sample persons in the SIPP 1992/1993 non-interviewed sample component belonged to a Type A or Type D non-interviewed sample household in the SIPP panel 1992 or 1993 and their missing data were not imputed for the SIPP panel 1992/1993, the SPD Bridge, and the SPD 1998 through the SPD 2000).*

*For sample component 4 - The pre SPD panel universe leaver sample component, (a) an original sample person belonging to cohort TLW02C (defined earlier) is a 2002 SPD longitudinal panel interviewed sample person, and (b) an original sample person not belonging to cohort TLW02C is a 2002 SPD traditional longitudinal panel non-interviewed sample person.*

*For sample component 5 - The pre 1998 SPD panel universe leaver sample component, (a) an original sample person belonging to cohort TLW02D (defined earlier) is a 2002 SPD traditional longitudinal panel interviewed sample person, and (b) an original sample person not belonging to cohort TLW02D is a 2002 SPD traditional longitudinal panel non-interviewed sample person.*

*For sample component 6 - The pre 2002 SPD panel universe leaver sample component, (a) an original sample person belonging to sample component 1 and cohort TLW02E (defined earlier) is a 2002 SPD traditional longitudinal panel interviewed sample person, (b) an original sample person belonging to sample component 1 but not belonging to cohort TLW02E is a 2002 SPD traditional longitudinal panel non-interviewed sample person, (c) an original sample person belonging to sample component 2 is a 2002 SPD traditional longitudinal panel non-interviewed sample person, and (d) an original sample*

person *belonging to* sample component 3 is a 2002 SPD traditional longitudinal panel *non-interviewed* sample person.

The 2002 SPD traditional longitudinal panel non-interview adjustment factors ( $F_{TLW02}$ ) were calculated.  $F_{TLW02}$  served as a means to appropriately transfer the weights from the 2002 SPD traditional longitudinal panel non-interviewed persons to the 2002 SPD traditional longitudinal panel interviewed persons with similar demographic and economic characteristics. Herein, the similarity in demographic and economic characteristics among the sample persons were classified based on the following variables: age, race, ethnicity, education, labor force status, employment status, income types, assets, and income level. Namely, the 2002 SPD traditional longitudinal panel non-interview adjusted weights (NIAWTL02) were then assigned in the following manner.

For each 2002 SPD traditional longitudinal panel *interviewed* person (defined earlier in this step), his/her NIAWTL02 was assigned in terms of EIWTL02 (obtained in step 4) and  $F_{TLW02}$  as shown in the equation below.

$$NIAWTL02 = EIWTL02 \times F_{TLW02}$$

For each 2002 SPD traditional longitudinal panel non-interviewed person (defined earlier), his/her traditional longitudinal panel weight SPDTLW02 was assigned as zero ( $SPDTLW01 = 0$ ) and he/she was then excluded from further processing of the weighting calculation with respect to SPDTLW02.

**STEP 6** – The second stage ratio estimation was performed for computing the final weights (SPDTLW02) for the 2002 SPD traditional longitudinal panel interviewed persons. The second stage ratio estimation principally involved raking to match a set of SPD population estimates with a corresponding set of controls from a representative control date. The controls are available for the classifications based on the following demographic variables: age, sex, race, ethnicity, householder living with or not living with relative, and non-householder related to or not related to householder. As described in Step 1, the representative control date for the SPD panel universe is March 1993. The control population estimates are from the CPS population estimates produced for March 1993. The second stage ratio adjustment served as a means to improve the population coverage of the SPD sample. The classification of the sample persons into groups for the second stage ratio estimation also served as a post-sampling stratification. Therefore, as a by-product of the second stage ratio estimation, the variance estimates of the estimates based on the SPD sample are generally improved as well.

The positive weights obtained after the second stage adjustment are the final weights (SPDTLW02) for the 2002 SPD traditional longitudinal panel interviewed persons.

**STEP 7** – As described earlier, the annual weight SPDTAW02 associated with the 2002 SPD traditional longitudinal panel weight (SPDTLW02) was derived for making annual estimates of the characteristics of young children based on the data on the SPD third longitudinal file.

For all sample people except the non-original young sample children (person number > 200), their longitudinal annual weights SPDTAW02 were assigned equal to their 2002 SPD traditional longitudinal panel weights, SPDTAW02 (i.e.,  $SPDTAW02 = SPDTLW02$ ).

For the non-original young sample children whose designated parents are non-original sample persons, their longitudinal annual weights were assigned as zero (i.e.,  $SPDTAW02 = 0$ ).

For each non-original young sample child whose designated parent is an original sample person, the following intermediate weight, SPDTXW02, was created by assigning it equal to his/her designated parent's weight SPDTAW02. Namely,  $SPDTXW02 = SPDTAW02$  of the child's designated parent. Hereinafter, the non-original young sample children whose designated parents are original sample people are referred to as *the weighted non-original young sample children associated with SPDTLW02*.

The intermediate weights SPDTXW02 of the weighted non-original young sample children associated with SPDTLW02 were then adjusted to match various controls in June 2002 for children aged ten and below. This adjustment yielded to their final longitudinal annual weight (SPDTAW02).

### **Quasi-longitudinal Panel Weight Set**

To fully utilize the data collected from all six components of the SPD sample (sample component 1 - the SPD core sample component, sample component 2 - the SPD Bridge non-interviewed sample component, sample component 3 - the SIPP 1992/1993 non-interviewed sample component, sample component 4 - the pre SPD panel universe leaver sample component, sample component 5 - the pre 1998 SPD panel universe leaver sample component, and sample component 6 - the pre 2002 SPD panel universe leaver sample component) for analyses and estimates of the longitudinal characteristics of the SPD panel universe, a quasi-longitudinal panel weight set was created in the following manner. Namely, the quasi-longitudinal panel weight set enables us to fully make direct use of all data collected from the original sample people who were not interviewed in every wave of the SIPP panel 1992 or 1993, and every one of the SPD 1997 through the SPD 2001 or the SPD 2002 as delineated later at the end of this section (the Quasi-longitudinal Panel Weight Set section). The quasi-longitudinal panel weight set consisting of (a) *the 2000 quasi-longitudinal panel weight* denoted by *SPDQLW00*, (b) *the 2001 quasi-longitudinal panel weight* denoted by *SPDQLW01*, and (c) *the 2002 quasi-longitudinal panel weight* denoted by *SPDQLW02* were developed as discussed below. Each of SPDQLW00, SPDQLW01, and SPDQLW02 was derived such that,

- (a) analytically, SPDQLW00 is applicable for analyses and estimates of the longitudinal characteristics of the people in the SPD panel universe covering any time spans or any two points in time within the period between 1992 and 2000, provided the analyst can appropriately approximate or impute any relevant missing data,

- (b) analytically, SPDQLW01 is applicable for analyses and estimates of the longitudinal characteristics of the people in the SPD panel universe covering any time spans or any two points in time within the period between 1992 and 2001, provided the analyst can appropriately approximate or impute any relevant missing data, and
- (c) analytically, SPDQLW02 is applicable for analyses and estimates of the longitudinal characteristics of the people in the SPD panel universe covering any time spans or any two points in time within the period between 1992 and 2002, provided the analyst can appropriately approximate or impute any relevant missing data.

Data imputation is not needed for data year 1999 collected in the SPD 2000 if SPDQLW00 is used because an original sample person has a positive SPDQLW00 only if he/she was *either* interviewed (self, proxy, or imputed) in the SPD 2000 *or* an SPD panel universe leaver associated with SPDQLW00 (his/her data was no longer collected due to no longer belonging to the SPD panel universe associated with SPDQLW00), and all other sample people will have a zero SPDQLW00. Similarly, data imputation is not needed for data year 2000 collected in the SPD 2001 if SPDQLW01 is used, and data imputation is not needed for data year 2001 collected in the SPD 2002 if SPDQLW02 is used.

The derivation of SPDQLW00 and SPDQLW01 involved only sample components 1 through 5 because the SPD 2002 sample cut took place in 2002. For the derivation of SPDQLW00, sample component 3 was involved or needed even though it was not fielded in 2000 (not included in the SPD 2000 sample) for the following two reasons: (a) The SPD panel universe (prior to the SPD 2002 sample cut) is jointly represented by sample component 1 through sample component 5, and (b) by definition (described in step 5 of the Procedure for Calculating the 2000 SPD Quasi-longitudinal Panel Weight SPDQLW00 and Its Associated Annual Weight SPDQAW00 section), the original sample people in sample component 3 were classified as the 2000 SPD quasi-longitudinal panel non-interviewed sample people, thus, their effective initial weights (defined in step 4 of the Procedure for Calculating the 2000 SPD Quasi-longitudinal Panel Weight SPDQLW00 and Its Associated Annual Weight SPDQAW00 section) must be transferred to the original sample people who are the 2000 SPD quasi-longitudinal panel interviewed, in the non-interview weight adjustment process (described in step 5 of the Procedure for Calculating the 2000 SPD Quasi-longitudinal Panel Weight SPDQLW00 and Its Associated Annual Weight SPDQAW00 section).

The derivation of SPDQLW02 involved all six sample components (sample components 1 through 6). As pointed out earlier (in the Weighting section), sample component 6 is a part (subset) of sample components 1, 2, and 3. As described below, the quasi-longitudinal panel weights SPDQLW00, SPDQLW01, and SPDQLW02 were derived such that SPDQLW00 is applicable only for the longitudinal analyses between 1992 and 2000, SPDQLW01 is applicable only for the longitudinal analyses between 1992 and 2001, SPDQLW02 is applicable only for the longitudinal analyses between 1992 and 2002.

For the 2000 SPD quasi-longitudinal panel weight SPDQLW00, only the original sample people belonging to one of the following cohorts have a positive SPDQLW00

(SPDQLW00 > 0).

*Cohort QLW00A* - The original sample people who belonged to sample component 1 (the SPD core sample component), and were *not* a 2000 SPD panel universe leaver, and were interviewed in the SPD 2000.

*Cohort QLW00B* - The original sample people who belonged to sample component 1 (the SPD core sample component), and *were* a 2000 SPD panel universe leaver.

*Cohort QLW00C* - The original sample people who belonged to sample component 2 (the SPD Bridge non-interviewed sample component), and were *not* a 2000 SPD panel universe leaver, and were interviewed in the SPD 2000.

*Cohort QLW00D* - The original sample people who belonged to sample component 2 (the SPD Bridge non-interviewed sample component), and *were* a 2000 SPD panel universe leaver.

*Cohort QLW00E* - All of the original sample people who belonged to sample component 4 (the pre SPD panel universe leaver sample component).

*Cohort QLW00F* - All of the original sample people who belonged to sample component 5 (the pre 1998 SPD panel universe leaver sample component).

All other sample people (original and non-original) have a zero SPDQLW00 (SPDQLW00 = 0). The initial weights of the original sample people (1) in the SPD core sample component but not belonging to cohorts QLW00A or QLW00B, (2) in the SPD Bridge non-interviewed sample component but not belonging to cohorts QLW00C or QLW00D, and (3) in the SIPP 1992/1993 non-interviewed sample component, along with their combined panel and sample cut or subsampling factors, were transferred to the original sample people in cohorts QLW00A to QLW00F (defined above) through the non-interview weight adjustment process described later in the Procedure for Calculating the 2000 SPD Quasi-longitudinal Panel Weight SPDQLW00 and Its Associated Annual Weight SPDQAW00 section. [Note that all of the original sample people in sample components 4 and 5 (cohorts QLW00E and QLW00F) have a positive SPDQLW00.] The non-interview adjusted weights of this group (cohorts QLW00A to QLW00F) of original sample people were then further adjusted to match a set of controls (benchmark population estimates) for the SPD panel universe (defined in the Glossary section) to obtain the final weights based on the second stage weight adjustment process described later in the Procedure for Calculating the 2000 SPD Quasi-longitudinal Panel Weight SPDQLW00 and Its Associated Annual Weight SPDQAW00 section. As a result of this weighting, the SPD panel universe can be represented by the original sample people who have positive SPDQLW00 (on the SPD third longitudinal file) for the period between 1992 through 2000. However, to use SPDQLW00 to estimate a characteristic for a data year other than the 1999 data year (collected in the SPD 2000), if a sample person with positive SPDQLW00 was not interviewed in that data year, the characteristic of the sample person for that data year is blank (missing) on the SPD third longitudinal file. Consequently, it needs to be approximated or imputed based on his/her available data

from other data years by the data users.

For the 2001 SPD quasi-longitudinal panel weight SPDQLW01, only the original sample people belonging to one of the following cohorts have a positive SPDQLW01 (SPDQLW01 > 0).

*Cohort QLW01A* - The original sample people who belonged to sample component 1 (the SPD core sample component), were *not* a 2001 SPD panel universe leaver, and were interviewed in the SPD 2001.

*Cohort QLW01B* - The original sample people who belonged to sample component 1 (the SPD core sample component) and *were* a 2001 SPD panel universe leaver.

*Cohort QLW01C* - The original sample people who belonged to sample component 2 (the SPD Bridge non-interviewed sample component), were *not* a 2001 SPD panel universe leaver, and were interviewed in the SPD 2001.

*Cohort QLW01D* - The original sample people who belonged to sample component 2 (the SPD Bridge non-interviewed sample component) and *were* a 2001 SPD panel universe leaver.

*Cohort QLW01E* - The original sample people who belonged to sample component 3 (the SIPP 1992/1993 non-interviewed sample component), were *not* a 2001 SPD panel universe leaver, and were interviewed in the SPD 2001.

*Cohort QLW01F* - The original sample people who belonged to sample component 3 (the SIPP 1992/1993 non-interviewed sample component) and *were* a 2001 SPD panel universe leaver.

*Cohort QLW01G* - All of the original sample people who belonged to sample component 4 (the pre SPD panel universe leaver sample component).

*Cohort QLW01H* - All of the original sample people who belonged to sample component 5 (the pre 1998 SPD panel universe leaver sample component).

All other sample people (original and non-original) have a zero SPDQLW01 (SPDQLW01 = 0). The initial weights of the original sample people (1) in the SPD core sample component but not belonging to cohorts QLW01A or QLW01B, (2) in the SPD Bridge non-interviewed sample component but not belonging to cohorts QLW01C or QLW01D, and (3) in the SIPP 1992/1993 non-interviewed sample component but not belonging to cohorts QLW01E or QLW01F, along with their combined panel and sample cut or subsampling factors, were transferred to the original sample people in cohorts QLW01A to QLW01H (defined above) through the non-interview weight adjustment process described later in the Procedure for Calculating the 2001 SPD Quasi-longitudinal Panel Weight SPDQLW01 and Its Associated Annual Weight SPDQAW01 section. [Note that all of the original sample people in sample components 4 and 5 (cohorts QLW01G and QLW01H) have a positive SPDQLW01.] The non-interview adjusted

weights of this cohort of original sample people were then further adjusted to match a set of controls (benchmark population estimates) for the SPD panel universe (defined in the Glossary section) to obtain the final weights based on the second stage weight adjustment process described later in the Procedure for Calculating the 2001 SPD Quasi-longitudinal Panel Weight SPDQLW01 and Its Associated Annual Weight SPDQAW01 section. As a result of this weighting, the SPD panel universe can be represented by the original sample people who have positive SPDQLW01 (on the SPD third longitudinal file) for the period between 1992 through 2001. However, to use SPDQLW01 to estimate a characteristic for a data year other than the data 2000 (collected in the SPD 2001), if a sample person with positive SPDQLW01 was not interviewed for that data year, then the characteristic of the sample person for that year is blank (missing) on the SPD third longitudinal file. Consequently, it needs to be approximated or imputed based on his/her available data from other data years by the data users.

For the 2002 SPD quasi-longitudinal panel weight SPDQLW02, only the original sample people belonging to one of the following cohorts have a positive SPDQLW02 (SPDQLW02 > 0).

*Cohort QLW02A* - The original sample people who belonged to sample component 1 (the SPD core sample component), survived the SPD 2002 sample cut, were *not* a 2002 SPD panel universe leaver, and were interviewed in the SPD 2002.

*Cohort QLW02B* - The original sample people who belonged to sample component 1 (the SPD core sample component), survived the SPD 2002 sample cut, and *were* a 2002 SPD panel universe leaver.

*Cohort QLW02C* - The original sample people who belonged to sample component 2 (the SPD Bridge non-interviewed sample component), survived the SPD 2002 sample cut, were *not* a 2002 SPD panel universe leaver, and were interviewed in the SPD 2002.

*Cohort QLW02D* - The original sample people who belonged to sample component 2 (the SPD Bridge non-interviewed sample component), survived the SPD 2002 sample cut, and *were* a 2002 SPD panel universe leaver.

*Cohort QLW02E* - The original sample people who belonged to sample component 3 (the SIPP 1992/1993 non-interviewed sample component), survived the SPD 2002 sample cut, were *not* a 2002 SPD panel universe leaver, and were interviewed in the SPD 2002.

*Cohort QLW02F* - The original sample people who belonged to sample component 3 (the SIPP 1992/1993 non-interviewed sample component), survived the SPD 2002 sample cut, and *were* a 2002 SPD panel universe leaver.

*Cohort QLW02G* - All of the original sample people who belonged to sample component 4 (the pre SPD panel universe leaver sample component).

*Cohort QLW02H* - All of the original sample people who belonged to sample component 5 (the pre 1998 SPD panel universe leaver sample component).

*Cohort QLW02I* - All of the original sample people who belonged to (a) sample component 1 (the SPD core sample component) and sample component 6 (the pre 2002 SPD panel universe leaver sample component) or (b) sample component 2 (the SPD Bridge non-interviewed sample component) and sample component 6 or (c) sample component 3 (the SIPP 1992/1993 non-interviewed sample component) and sample component 6. Note that, by definition, all of the original sample people belonging to sample component 6 are 2002 SPD quasi-longitudinal panel universe leavers.

All other sample people (original and non-original) have a zero SPDQLW02 (SPDQLW02 = 0). The initial weights of the original sample people (1) in the SPD core sample component, surviving the SPD 2002 sample cut, but not belonging to cohorts QLW02A or QLW02B, (2) in the SPD Bridge non-interviewed sample component, surviving the SPD 2002 sample cut, but not belonging to cohorts QLW02C or QLW02D, and (3) in the SIPP 1992/1993 non-interviewed sample component, surviving the SPD 2002 sample cut, but not belonging to cohorts QLW02E or QLW02F, along with their combined panel and sample cut or subsampling factors, were transferred to the original sample people in cohorts QLW02A to QLW02I (defined above) through the non-interview weight adjustment process described later in the Procedure for Calculating the 2002 SPD Quasi-longitudinal Panel Weight SPDQLW02 and Its Associated Annual Weight SPDQAW02 section. [Note that all of the original sample people in sample components 4 through 6 (cohorts QLW02G through QLW02I) have a positive SPDQLW02.] The non-interview adjusted weights of this cohort of original sample people will then be further adjusted to match a set of controls (benchmark population estimates) for the SPD panel universe (defined in the Glossary section) to obtain the final weights based on the second stage weight adjustment process described later in the Procedure for Calculating the 2002 SPD Quasi-longitudinal Panel Weight SPDQLW02 and Its Associated Annual Weight SPDQAW02 section. As a result of this weighting, the SPD panel universe can be represented by the original sample people who have positive SPDQLW02 (on the SPD third longitudinal file) for the period between 1992 through 2002. However, to use SPDQLW02 to estimate a characteristic for a data year other than the data 2001 (collected in the SPD 2002), if a sample person with positive SPDQLW02 was not interviewed for that data year, then the characteristic of the sample person for that year is blank (missing) on the SPD third longitudinal file. Consequently, it needs to be approximated or imputed based on his/her available data from other data years by the data users.

For analyses and estimates of the longitudinal characteristics of people in the SPD panel universe, the advantage and disadvantage of using the traditional longitudinal panel weights (SPDTLW01 and SPDTLW02) versus using the quasi-longitudinal panel weights (SPDQLW00, SPDQLW01, and SPDQLW02) can be determined in the following manner. The advantage of using the traditional longitudinal panel weights is that all of the original sample people with positive SPDTLW01 (SPDTLW02) have more data across time from 1992 to 2001 (2002) than other cohorts of original sample people. However, any analyses and estimates using SPDTLW01 (SPDTLW02) will automatically be limited to using only the data collected from the original sample people who were interviewed in each and every wave of either the SIPP panel 1992 or 1993, and in SPD 1997 through 2001 (2002). Therefore, this limitation precludes us from taking advantage

of the data collected from the original sample people who were not interviewed in every wave of the SIPP panel 1992 or 1993, and every one of the SPD 1997 through the SPD 2001 (2002). Consequently, the quasi-longitudinal panel weight set (SPDQLW00, SPDQLW01, and SPDQLW02) is developed to take advantage of the data from these original sample people as discussed above. A detailed discussion of the advantage and disadvantage of using the traditional longitudinal panel weights (SPDTLW01 and SPDTLW02) versus the quasi-longitudinal panel weights (SPDQLW00, SPDQLW01, and SPDQLW02) is available in the Source and Accuracy Statement section.

### **Special Weight Assignment Associated with SPDQLW00 for Some Non-original Sample Children**

To provide a means for estimating the annual or calendar characteristics of young children based on the data on the SPD third longitudinal file based on SPDQLW00, the characteristics of the non-original (200+ level) sample children *born after* wave 1 of the SIPP Panels 1992 and 1993 must be also taken into account. To enable an accounting for the characteristics of these non-original sample children in any annual estimates, positive weights were assigned (based on SPDQLW00) to a cohort of these non-original sample children in the following manner. For each non-original sample child aged eight and below in 2000 if originated from the SIPP Panel 1992, and aged seven and below in 2000 if originated from the SIPP Panel 1993, and if the child's designated parent is an original sample person with positive SPDQLW00, a positive weight associated with the quasi-longitudinal panel weight SPDQLW00 was assigned to the child based on the procedure described later in the Procedure for Calculating the 2000 SPD Quasi-longitudinal Panel Weight SPDQLW00 and Its Associated Annual Weight SPDQAW00 section. This SPD annual weight is denoted by *SPDQAW00*. Since SPDQAW00 was adjusted to match various population controls (benchmark estimates) in June 2000 for children aged eight and below, the weights of these non-original children (SPDQAW00) together with the quasi-longitudinal panel weight (SPDQLW00) of the original sample adults and children enable the users to make annual estimates of young children's characteristics up to 2000, and the annual estimates for 2000 are theoretically more accurate than other earlier years (because of the June 2000 population controls). Due to this and the derivation method of SPDQAW00, the annual weight SPDQAW00 should be used for estimating any pre 2000 and 2000 annual characteristics of young children associated with the SPD quasi-longitudinal panel weight. (Note that, as mentioned earlier, the SPD third longitudinal file along with its longitudinal weights supersede the SPD first and second longitudinal files along with their longitudinal weights including the associated annual weights for young children.)

### **Special Weight Assignment Associated with SPDQLW01 for Some Non-original Sample Children**

To provide a means for estimating the annual or calendar characteristics of young children based on the data on the SPD third longitudinal file based on SPDQLW01, the characteristics of the non-original (200+ level) sample children *born after* wave 1 of the SIPP Panels 1992 and 1993 must be also taken into account. To enable an accounting for the characteristics of these non-original sample children in any annual estimates, positive

weights were assigned (based on SPDQLW01) to a cohort of these non-original sample children in the following manner. For each non-original sample child aged nine and below in 2001 if originated from the SIPP Panel 1992, and aged eight and below in 2001 if originated from the SIPP Panel 1993, and if the child's designated parent is an original sample person with positive SPDQLW01, a positive weight associated with the quasi-longitudinal panel weight SPDQLW01 was assigned to the child based on the procedure described later in the Procedure for Calculating the 2001 SPD Quasi-longitudinal Panel Weight SPDQLW01 and Its Associated Annual Weight SPDQAW01 section. This SPD annual weight is denoted by *SPDQAW01*. Since SPDQAW01 was adjusted to match various population controls (benchmark estimates) in June 2001 for children aged nine and below, the weights of these non-original children (SPDQAW01) together with the quasi-longitudinal panel weight (SPDQLW01) of the original sample adults and children enable the users to make annual estimates of young children's characteristics up to 2001, and the annual estimates for 2001 are theoretically more accurate than other earlier years (because of the June 2001 population controls). On the basis of the derivation methods of the annual weights SPDTAW00 and SPDTAW01, (a) the annual weight SPDQAW01 is preferred for estimating any 2001 annual characteristics of young children associated with an SPD quasi-longitudinal panel weight, and (b) the annual weight SPDQAW00 is preferred for estimating any pre 2001 annual characteristics of young children associated with an SPD quasi-longitudinal panel weight. (Note that, as mentioned earlier, the SPD third longitudinal file along with its longitudinal weights supersede the SPD first and second longitudinal files along with their longitudinal weights including the associated annual weights for young children.)

### **Special Weight Assignment Associated with SPDQLW02 for Some Non-original Sample Children**

To provide a means for estimating the annual or calendar characteristics of young children based on the data on the SPD third longitudinal file based on SPDQLW02, the characteristics of the non-original (200+ level) sample children *born after* wave 1 of the SIPP Panels 1992 and 1993 must be also taken into account. To enable an accounting for the characteristics of these non-original sample children in any annual estimates, positive weights were assigned (based on SPDQLW02) to a cohort of these non-original sample children in the following manner. For each non-original sample child aged ten and below in 2002 if originated from the SIPP Panel 1992, and aged nine and below in 2002 if originated from the SIPP Panel 1993, and if the child's designated parent is an original sample person with positive SPDQLW02, a positive weight associated with the quasi-longitudinal panel weight SPDQLW02 was assigned to the child based on the procedure described later in the Procedure for Calculating the 2002 SPD Quasi-longitudinal Panel Weight SPDQLW02 and Its Associated Annual Weight SPDQAW02 section. This SPD annual weight is denoted by *SPDQAW02*. Since SPDQAW02 was adjusted to match various population controls (benchmark estimates) in June 2002 for children aged ten and below, the weights of these non-original children (SPDQAW02) together with the quasi-longitudinal panel weight (SPDQLW02) of the original sample adults and children enable the users to make annual estimates of young children's characteristics up to 2002, and the annual estimates for 2002 are theoretically more accurate than other earlier years (because of the June 2002 population controls). On the basis of the derivation methods

of the annual weights SPDTAW00, SPDTAW01, and SPDQAW02, (a) the annual weight SPDQAW02 is preferred for estimating any 2002 annual characteristics of young children associated with an SPD quasi-longitudinal panel weight, (b) the annual weight SPDQAW01 is preferred for estimating any 2001 annual characteristics of young children based on an SPD quasi-longitudinal panel weight, and (c) the annual weight SPDQAW00 is preferred for estimating any pre 2001 annual characteristics of young children associated with an SPD quasi-longitudinal panel weight. (Note that, as mentioned earlier, the SPD third longitudinal file along with its longitudinal weights supersede the SPD first and second longitudinal files along with their longitudinal weights including the associated annual weights for young children.)

### **Procedure for Calculating the 2000 SPD Quasi-longitudinal Panel Weight SPDQLW00 and its Associated Annual Weight, SPDQAW00**

The procedure used for calculating the 2000 SPD quasi-longitudinal panel weight SPDQLW00 and its associated longitudinal annual weight SPDQAW00 of the sample people on the SPD third longitudinal file is summarized in the seven steps provided below. (Note that the calculation procedure for SPDQAW00 is in step 7.)

**STEP 1** – Choose March 1993 as the reference point in time (control date) for the SPD panel universe used for measuring the effect of the welfare reform. Namely, the SPD panel universe consists of persons (including children) residing in the United States households and persons living in group quarters in March 1993. (Note that persons living in military barracks and institutions, such as prisons and nursing homes, are excluded.) The SPD panel universe is represented by combining the SIPP Panels 1992 and 1993 into one sample. The effect of the welfare reform can be assessed based on the various longitudinal (time dependent) characteristics of the people in the SPD panel universe.

**STEP 2** – An initial weight (IW) was assigned to each of the original sample persons (including children). An original sample person is a person who at the time of wave 1 interview resided in an interviewed sample household or group quarter. The inverse of this initial weight represents the probability of an original sample person residing in an interviewed Wave 1 sample household in either the SIPP Panel 1992 or 1993, depending on which SIPP panel he/she originally belonged. Thus, by definition, the initial weights were expressed as follows:

Each SIPP Panel 1992 original sample person received an initial weight of his/her SIPP Panel 1992 household base weight  $\times$  his/her SIPP Panel 1992 Wave 1 household non-interview adjustment factor.

Each SIPP Panel 1993 original sample person received an initial weight of his/her SIPP Panel 1993 household base weight  $\times$  his/her SIPP Panel 1993 Wave 1 household non-interview adjustment factor.

For every sample person who is not an original sample person (200+ level) or is an original sample person but does not belong to one of sample components 1 through 5

(defined earlier), his/her 2000 SPD quasi-longitudinal panel weight SPDQLW00 was assigned zero ( $SPDQLW00 = 0$ ) and he/she was then excluded from further processing in the weighting calculation with respect to SPDQLW00.

*Note that, in the derivation of SPDQLW00, sample component 3 is needed for the two reasons described earlier in the Quasi-longitudinal Panel Weight Set section, even though it was not fielded in 2000 (not included in the SPD 2000 sample).*

**STEP 3** – Since each of the SIPP Panels 1992 and 1993 (samples) is a nationally representative sample by itself, combining them into one sample reduces the weight of each panel sample person proportionately to their sample sizes. The two SIPP Panels 1992 and 1993 started in wave 1 and ended in their last wave with approximately the same sample sizes, and their wave-by-wave sample sizes (total eligible households), household response rates, and Type A and Type D non-response rates were approximately the same for both panels. Based on the sample selection procedure (described earlier), the SPD Bridge sample also consisted of approximately equal number of sample households from each of SIPP Panels 1992 and 1993. Likewise, the SIPP 1992/1993 non-interviewed sample component also consisted of approximately equal number of Type A and Type D non-interviewed sample households from each of SIPP Panels 1992 and 1993. Therefore, a combined panel factor (CPF) of 0.5 was assigned to each of the original sample persons in sample components 1 through 5. Namely, the weight (CPAW) of each original sample person after accounting for the panel combining effect was expressed in terms of IW and CPF as

$$CPAW = IW \times CPF.$$

**STEP 4** - The weight CPAW of each of the original sample person in sample components 1 through 5 was adjusted to account for the sample cut or subsampling effect in the following manner. Let  $EIWQL00$  denote the weight to be obtained from this adjustment. By definition of  $EIWQL00$  specified below,  $EIWQL00$  represents *the effective initial weight* of each original sample person in sample components 1 through 5 prior to the non-interview weight adjustment in the 2000 SPD quasi-longitudinal panel weighting process. Namely,  $EIWQL00$  was defined as described below.

*For sample component 1 - the SPD core sample component,*

$$EIWQL00 = CPAW \times SCF98 = IW \times CPF \times SCF98,$$

where SCF98 represents the SPD 1998 sample cut factor.

*For sample component 2 - the SPD Bridge non-interviewed sample component,*

$$EIWQL00 = CPAW \times SCFBNI = IW \times CPF \times SCFBNI,$$

where SCFBNI represents the subsampling factor associated with the SPD Bridge sample component.

*For sample component 3 - the SIPP 1992/1993 non-interviewed sample component,*

$$EIWQL00 = CPAW \times SCFSNI = IW \times CPF \times SCFSNI,$$

where SCFSNI represents the subsampling factor associated with the SIPP 1992/1993 non-interviewed sample component.

*Note that, in the derivation of SPDQLW00, sample component 3 is needed for the two reasons described earlier in the Quasi-longitudinal Panel Weight Set section, even though it was not fielded in 2000 (not included in the SPD 2000 sample).*

*For sample component 4 - the pre SPD panel universe leaver sample component,*

$$EIWQL00 = CPAW = IW \times CPF.$$

*For sample component 5 - the pre 1998 SPD panel universe leaver sample component,*

$$EIWQL00 = CPAW = IW \times CPF.$$

**STEP 5** - The original sample persons in the five sample components were divided into two groups as follows: the first group consisted of the original sample persons who were qualified as *the 2000 SPD quasi-longitudinal panel interviewed sample persons*. The second group consists of the original sample persons who were *not* qualified as the 2000 SPD quasi-longitudinal panel interviewed sample persons. Hereinafter, the second group is referred to as *the 2000 SPD quasi-longitudinal panel non-interviewed sample persons*.

*For sample component 1 - the SPD core sample component, (a) an original sample person belonging to cohorts QLW00A or QLW00B (defined earlier) is a 2000 SPD quasi-longitudinal panel interviewed sample person, and (b) an original sample person not belonging to cohorts QLW00A or QLW00B is a 2000 SPD quasi-longitudinal panel non-interviewed sample person.*

*For sample component 2 - the SPD Bridge non-interviewed sample component, (a) an original sample person belonging to cohorts QLW00C or QLW00D (defined earlier) is a 2000 SPD quasi-longitudinal panel interviewed sample person, and (b) an original sample person not belonging to cohorts QLW00C or QLW00D is a 2000 SPD quasi-longitudinal panel non-interviewed sample person.*

*For sample component 3 - the SIPP 1992/1993 non-interviewed sample component, an original sample person belonging to the SIPP 1992/1993 non-interviewed sample component is a 2000 SPD quasi-longitudinal panel non-interviewed sample person. (Note that this sample component was fielded in 2001. Thus none of its original sample people were interviewed in SPD 2000.)*

Note that, in the derivation of SPDQLW00, sample component 3 is needed for the two reasons described earlier in the Quasi-longitudinal Panel Weight Set section, even though it was not fielded in 2000 (not included in the SPD 2000 sample).

*For sample component 4 - the pre SPD panel universe leaver sample component, an original sample person belonging to cohort QLW00E is a 2000 SPD quasi-longitudinal panel interviewed sample person. Note that, by definition of QLW00E, all original sample people belonging to sample component 4 are 2000 quasi-longitudinal panel interviewed sample persons.*

*For sample component 5- the pre 1998 SPD panel universe leaver sample component, an original sample person belonging to cohort QLW00F is a 2000 SPD quasi-longitudinal panel interviewed sample person. Note that, by definition of QLW00F, all original sample people belonging to sample component 5 are 2000 quasi-longitudinal panel interviewed sample persons.*

The 2000 SPD quasi-longitudinal panel non-interview adjustment factors ( $F_{QLW00}$ ) were calculated.  $F_{QLW00}$  served as a means to appropriately transfer the weights from the 2000 SPD quasi-longitudinal panel non-interviewed persons to the 2000 SPD quasi-longitudinal panel interviewed persons with similar demographic and economic characteristics. Herein, the similarity in demographic and economic characteristics among the sample persons were classified based on the following variables: age, race, ethnicity, education, labor force status, employment status, income types, assets, and income level. Namely, the 2000 SPD quasi-longitudinal panel non-interview adjusted weights (NIAWQL00) were then assigned in the following manner.

For each 2000 SPD quasi-longitudinal panel *interviewed* person (defined earlier), his/her NIAWQL00 was assigned in terms of EIWQL00 (obtained in step 4) and  $F_{QLW00}$  as shown in the equation below.

$$NIAWQL00 = EIWQL00 \times F_{QLW00}$$

For each 2000 SPD quasi-longitudinal panel non-interviewed person (defined earlier), his/her quasi-longitudinal panel weight SPDQLW00 was assigned as zero ( $SPDQLW00 = 0$ ) and he/she was then excluded from further processing of the weighting calculation with respect to SPDQLW00.

**STEP 6** - The second stage ratio estimation was performed for computing the final weights (SPDQLW00) for the 2000 SPD quasi-longitudinal panel interviewed persons. The second stage ratio estimation principally involved raking to match a set of SPD population estimates with a corresponding set of controls from a representative control date. The controls are available for the classifications based on the following demographic variables: age, sex, race, ethnicity, householder living with or not living with relative, and non-householder related to or not related to householder. As described in step 1, the representative control date for the SPD panel universe is March 1993. The control population estimates are from the CPS population estimates produced for March 1993. The second stage ratio adjustment served as a means to improve the population coverage of the SPD sample. The classification of the sample persons into groups for the second stage ratio estimation also served as a post-sampling stratification. Therefore, as a by-product of the second stage ratio estimation, the variance estimates of the estimates based on the SPD sample are generally improved as well.

The positive weights obtained after the second stage adjustment are the final weights (SPDQLW00) for the 2000 SPD quasi-longitudinal panel interviewed persons.

**STEP 7** - As described earlier, the annual weight SPDQAW00 associated with the 2000 SPD quasi-longitudinal panel weight (SPDQLW00) was derived for making annual estimates of the characteristics of young children based on the data on the SPD third longitudinal file.

For all sample people except the non-original young sample children (person number > 200), their longitudinal annual weights SPDQAW00 were assigned equal to their 2000 quasi-longitudinal panel weights SPDQLW00 (i.e., assign  $SPDQAW00 = SPDQLW00$ ).

For the non-original young sample children whose designated parents are non-original sample persons, their longitudinal annual weights were assigned as zero (i.e.,  $SPDQAW00 = 0$ ).

For each non-original young sample child whose designated parent is an original sample person, the following intermediate weight, SPDQXW00, was created by assigning it equal to his/her designated parent's weight, SPDQAW00. Namely,  $SPDQXW00 = SPDQAW00$  of the child's designated parent. Hereinafter, the non-original young sample children whose designated parents are original sample people are referred to as *the weighted non-original young sample children associated with SPDQLW00*.

The intermediate weights SPDQXW00 of the weighted non-original young sample children associated with SPDQLW00 were then adjusted to match various controls in June 2000 for children aged eight and below. This adjustment yielded their final longitudinal annual weights SPDQAW00.

### **Procedure for Calculating the 2001 SPD Quasi-longitudinal Panel Weight SPDQLW01 and its Associated Annual Weight SPDQAW01**

The procedure used for calculating the 2001 SPD quasi-longitudinal panel weight SPDQLW01 and its associated longitudinal annual weight SPDQAW01 of the sample people on the SPD third longitudinal file is summarized in the seven steps provided below. (Note that the calculation procedure for SPDQAW01 is in step 7.)

**STEP 1** – Choose March 1993 as the reference point in time (control date) for the SPD panel universe used for measuring the effect of the welfare reform. Namely, the SPD panel universe consists of persons (including children) residing in the United States households and persons living in group quarters in March 1993. (Note that persons living in military barracks and institutions, such as prisons and nursing homes, are excluded.) The SPD panel universe is represented by combining the SIPP Panels 1992 and 1993 into one sample. The effect of the welfare reform can be assessed based on the various longitudinal (time dependent) characteristics of the people in the SPD panel universe.

**STEP 2** – An initial weight (IW) was assigned to each of the original sample persons (including children). An original sample person is a person who at the time of wave 1

interview resided in an interviewed sample household or group quarter. The inverse of this initial weight represents the probability of an original sample person residing in an interviewed Wave 1 sample household in either the SIPP Panel 1992 or 1993, depending on which SIPP panel he/she originally belonged. Thus, by definition, the initial weights were expressed as follows:

Each SIPP Panel 1992 original sample person received an initial weight of his/her SIPP Panel 1992 household base weight  $\times$  his/her SIPP Panel 1992 Wave 1 household non-interview adjustment factor.

The SIPP Panel 1993 original sample persons received an initial weight of his/her SIPP Panel 1993 household base weight  $\times$  his/her SIPP Panel 1993 Wave 1 household non-interview adjustment factor.

For every sample person who is not an original sample person (200+ level) or is an original sample person but does not belong to one of sample components 1 through 5 (defined earlier), his/her 2001 quasi-longitudinal panel weight SPDQLW01 was assigned as zero ( $SPDQLW01 = 0$ ) and he/she was then excluded from further processing in the weighting calculation with respect to SPDQLW01.

**STEP 3** – Since each of the SIPP Panels 1992 and 1993 (samples) is a nationally representative sample by itself, combining them into one sample reduces the weight of each panel sample person proportionately to their sample sizes. The two SIPP Panels 1992 and 1993 started in wave 1 and ended in their last wave with approximately the same sample sizes, and their wave-by-wave sample sizes (total eligible households), household response rates, and Type A and Type D non-response rates were approximately the same for both panels. Based on the sample selection procedure (described earlier), the SPD Bridge sample also consisted of approximately equal number of sample households from each of SIPP Panels 1992 and 1993. Therefore, a combined panel factor (CPF) of 0.5 was assigned to each of the original sample persons in sample components 1 through 5. Namely, the weight (CPAW) of each original sample person after accounting for the panel combining effect was expressed in terms of IW and CPF as

$$CPAW = IW \times CPF.$$

**STEP 4** - The weight CPAW of each of the original sample person in sample components 1 to 5 was adjusted to account for the sample cut or subsampling effect in the following manner. Let  $EIWQL01$  denote the weight to be obtained from this adjustment. By definition of  $EIWQL01$  specified below,  $EIWQL01$  represents *the effective initial weight* of each original sample person in sample components 1 to 5 prior to the non-interview weight adjustment in the 2001 SPD quasi-longitudinal panel weighting process. Namely,  $EIWQL01$  is defined as described below.

*For sample component 1 - the SPD core sample component,*

$$EIWQL01 = CPAW \times SCF98 = IW \times CPF \times SCF98,$$

where SCF98 represents the SPD 1998 sample cut factor.

*For sample component 2 - the SPD Bridge non-interviewed sample component,*

$$\text{EIWQL01} = \text{CPAW} \times \text{SCFBNI} = \text{IW} \times \text{CPF} \times \text{SCFBNI},$$

where SCFBNI represents the subsampling factor associated with the SPD Bridge sample component.

*For sample component 3 - the SIPP 1992/1993 non-interviewed sample component,*

$$\text{EIWQL01} = \text{CPAW} \times \text{SCFSNI} = \text{IW} \times \text{CPF} \times \text{SCFSNI},$$

where SCFSNI represents the subsampling factor associated with the SIPP 1992/1993 non-interviewed sample component.

*For sample component 4 - the pre SPD panel universe leaver sample component,*

$$\text{EIWQL01} = \text{CPAW} = \text{IW} \times \text{CPF}.$$

*For sample component 5 - the pre 1998 SPD panel universe leaver sample component,*

$$\text{EIWQL01} = \text{CPAW} = \text{IW} \times \text{CPF}.$$

**STEP 5** - The original sample persons were divided into two groups as follows: the first group consists of the original sample persons who were qualified as *the 2001 SPD quasi-longitudinal panel interviewed sample persons*. The second group consists of the original sample persons who were *not* qualified as the 2001 SPD quasi-longitudinal panel interviewed sample persons. Hereinafter, the second group is referred to as *the 2001 SPD quasi-longitudinal panel non-interviewed sample persons*.

*For sample component 1 - the SPD core sample component,* (a) an original sample person *belonging to* cohorts QLW01A or QLW01B (defined earlier) is a 2001 SPD quasi-longitudinal panel *interviewed* sample person, and (b) an original sample person *not belonging to* cohorts QLW01A or QLW01B is a 2001 SPD quasi-longitudinal panel *non-interviewed* sample person.

*For sample component 2 - the SPD Bridge non-interviewed sample component,* (a) an original sample person *belonging to* cohorts QLW01C or QLW01D (defined earlier) is a 2001 SPD quasi-longitudinal panel *interviewed* sample person, and (b) an original sample person *not belonging to* cohorts QLW01C or QLW01D is a 2001 SPD quasi-longitudinal panel *non-interviewed* sample person.

*For sample component 3 - the SIPP 1992/1993 non-interviewed sample component,* (a) an original sample person *belonging to* cohorts QLW01E or QLW01F (defined earlier) is a 2001 SPD quasi-longitudinal panel *interviewed* sample person, and (b) an original sample person *not belonging to* cohorts QLW01E or QLW01F is a 2001 SPD quasi-longitudinal panel *non-interviewed* sample person.

*For sample component 4 - the pre SPD panel universe leaver sample component, an original sample person belonging to cohort QLW01G is a 2001 SPD quasi-longitudinal panel interviewed sample person. Note that, by definition of QLW01G, all original sample people belonging to sample component 4 are 2001 quasi-longitudinal panel interviewed sample persons.*

*For sample component 5 - the pre 1998 SPD panel universe leaver sample component, an original sample person belonging to cohort QLW01H is a 2001 SPD quasi-longitudinal panel interviewed sample person. Note that, by definition of QLW01H, all original sample people belonging to sample component 5 are 2001 quasi-longitudinal panel interviewed sample persons.*

The 2001 SPD quasi-longitudinal panel non-interview adjustment factors ( $F_{QLW01}$ ) were calculated.  $F_{QLW01}$  served as a means to appropriately transfer the weights from the 2001 SPD quasi-longitudinal panel non-interviewed persons to the 2001 SPD quasi-longitudinal panel interviewed persons with similar demographic and economic characteristics. Herein, the similarity in demographic and economic characteristics among the sample persons were classified based on the following variables: age, race, ethnicity, education, labor force status, employment status, income types, assets, and income level. Namely, the 2001 SPD quasi-longitudinal panel non-interview adjusted weights (NIAWQL01) were then adjusted in the following manner.

For each 2001 SPD quasi-longitudinal panel *interviewed* person (defined earlier in this step), his/her NIAWQL01 was assigned in terms of EIWQL01 (obtained in step 4) and  $F_{QLW01}$  as shown in the equation below.

$$NIAWQL01 = EIWQL01 \times F_{QLW01}$$

For each 2001 SPD quasi-longitudinal panel non-interviewed person (defined earlier), his/her quasi-longitudinal panel weight SPDQLW01 was assigned as zero ( $SPDQLW01 = 0$ ) and he/she was then excluded from further processing of the weighting calculation with respect to SPDQLW01.

**STEP 6** - The second stage ratio estimation was performed for computing the final weights (SPDQLW01) for the 2001 SPD quasi-longitudinal panel interviewed persons. The second stage ratio estimation principally involved raking to match a set of SPD population estimates with a corresponding set of controls from a representative control date. The controls are available for the classifications based on the following demographic variables: age, sex, race, ethnicity, householder living with or not living with relative, and non-householder related to or not related to householder. As described in step 1, the representative control date for the SPD panel universe is March 1993. The control population estimates are from the CPS population estimates produced for March 1993. The second stage ratio adjustment served as a means to improve the population coverage of the SPD sample. The classification of the sample persons into groups for the second stage ratio estimation also served as a post-sampling stratification. Therefore, as a by-product of the second stage ratio estimation, the variance estimates of the estimates based on the SPD sample are generally improved as well.

The positive weights obtained after the second stage adjustment are the final weights (SPDQLW01) for the 2001 SPD quasi-longitudinal panel interviewed persons.

**STEP 7** - As described earlier, the annual weight SPDQAW01 associated with the 2001 SPD quasi-longitudinal panel weight (SPDQLW01) was derived for making annual estimates of the characteristics of young children based on the data on the SPD third longitudinal file.

For all sample people except the non-original young sample children (person number > 200), their longitudinal annual weights SPDQAW01 were assigned equal to their 2001 quasi-longitudinal panel weights SPDQLW01 (i.e., assign SPDQAW01 = SPDQLW01).

For the non-original young sample children whose designated parents are non-original sample persons, their longitudinal annual weights were assigned as zero (i.e., SPDQAW01 = 0).

For each non-original young sample child whose designated parent is an original sample person, the following intermediate weight, SPDQXW01, was created by assigning it equal to his/her designated parent's weight, SPDQAW01. Namely, SPDQXW01 = SPDQAW01 of the child's designated parent. Hereinafter, the non-original young sample children whose designated parents are original sample people are referred to as *the weighted non-original young sample children associated with SPDQLW01*.

The intermediate weights SPDQXW01 of the weighted non-original young sample children associated with SPDQLW01 were then adjusted to match various controls in June 2001 for children aged nine and below. This adjustment yielded their final longitudinal annual weights SPDQAW01.

### **Procedure for Calculating the 2002 SPD Quasi-longitudinal Panel Weight SPDQLW02 and its Associated Annual Weight SPDQAW02**

The procedure used for calculating the 2002 SPD quasi-longitudinal panel weight SPDQLW02 and its associated longitudinal annual weight SPDQAW02 of the sample people on the SPD third longitudinal file is summarized in the seven steps provided below. (Note that the calculation procedure for SPDQAW02 is in step 7.)

**STEP 1** – Choose March 1993 as the reference point in time (control date) for the SPD panel universe used for measuring the effect of the welfare reform. Namely, the SPD panel universe consists of persons (including children) residing in the United States households and persons living in group quarters in March 1993. (Note that persons living in military barracks and institutions, such as prisons and nursing homes, are excluded.) The SPD panel universe is represented by combining the SIPP Panels 1992 and 1993 into one sample. The effect of the welfare reform can be assessed based on the various longitudinal (time dependent) characteristics of the people in the SPD panel universe.

**STEP 2** – An initial weight (IW) was assigned to each of the original sample persons (including children). An original sample person is a person who at the time of wave 1

interview resided in an interviewed sample household or group quarter. The inverse of this initial weight represents the probability of an original sample person residing in an interviewed Wave 1 sample household in either the SIPP Panel 1992 or 1993, depending on which SIPP panel he/she originally belonged. Thus, by definition, the initial weights were expressed as follows:

Each SIPP Panel 1992 original sample person received an initial weight of his/her SIPP Panel 1992 household base weight  $\times$  his/her SIPP Panel 1992 Wave 1 household non-interview adjustment factor.

Each SIPP Panel 1993 original sample persons received an initial weight of his/her SIPP Panel 1993 household base weight  $\times$  his/her SIPP Panel 1993 Wave 1 household non-interview adjustment factor.

For every sample person who is (a) not an original sample person (200+ level) or (b) an original sample person not belonging to one of sample components 1 through 5 (defined in section II) or (c) an original sample person belonging to sample components 1 through 3 but not surviving the SPD 2002 sample cut and not belonging to sample component 6, his/her 2002 quasi-longitudinal panel weight SPDQLW02 was assigned as zero (SPDQLW02 = 0) and he/she was then excluded from further processing in the weighting calculation with respect to SPDQLW02.

**STEP 3** – Since each of the SIPP Panels 1992 and 1993 (samples) is a nationally representative sample by itself, combining them into one sample reduces the weight of each panel sample person proportionately to their sample sizes. The two SIPP Panels 1992 and 1993 started in wave 1 and ended in their last wave with approximately the same sample sizes, and their wave-by-wave sample sizes (total eligible households), household response rates, and Type A and Type D non-response rates were approximately the same for both panels. Based on the sample selection procedure (described earlier), the SPD Bridge sample also consisted of approximately equal number of sample households from each of SIPP Panels 1992 and 1993. Likewise, the SIPP 1992/1993 non-interviewed sample component also consisted of approximately equal number of Type A and Type D non-interviewed sample households from each of SIPP Panels 1992 and 1993. Therefore, a combined panel factor (CPF) of 0.5 was assigned to each of the original sample persons who *either* is in sample components 1 through 3 and survived the SPD 2002 sample cut *or* is in sample components 4 through 6. (As pointed out earlier, by definition, sample component 6 is a subset of sample components 1 through 3.) Namely, the weight (CPAW) of each original sample person after accounting for the panel combining effect can be expressed in terms of IW and CPF as

$$\text{CPAW} = \text{IW} \times \text{CPF}.$$

**STEP 4** – The weight CPAW of each of the original sample persons in sample components 1 to 6 was adjusted to account for the sample cut or subsampling effect in the following manner. Let *EIWQL02* denote the weight to be obtained from this adjustment. By definition of *EIWQL02* specified below, *EIWQL02* represents the effective initial weight of each original sample person who *either* is in sample components 1 through 3 and survived the SPD 2002 sample cut *or* is in sample

components 4 through 6, prior to the non-interview weight adjustment in the 2002 SPD traditional longitudinal panel weighting process. Namely, EIWQL02 was defined as described below.

*For sample component 1 - the SPD core sample component (applied only to the original sample persons who survived the SPD 2002 sample cut),*

$$EIWQL02 = CPAW \times SCF98 \times SCF02 = IW \times CPF \times SCF98 \times SCF02,$$

where SCF98 and SCF02 represent the SPD 1998 and 2002 sample cut factors, respectively.

*For sample component 2 - the SPD Bridge non-interviewed sample component (applied only to the original sample persons who survived the SPD 2002 sample cut),*

$$EIWQL02 = CPAW \times SCFBNI \times SCF02 = IW \times CPF \times SCFBNI \times SCF02,$$

where SCFBNI represents the subsampling factor associated with the SPD Bridge sample component.

*For sample component 3 - the SIPP 1992/1993 non-interviewed sample component (applied only to the original sample persons who survived the SPD 2002 sample cut),*

$$EIWQL02 = CPAW \times SCFSNI \times SCF02 = IW \times CPF \times SCFSNI \times SCF02,$$

where SCFSNI represents the subsampling factor associated with the SIPP 1992/1993 non-interviewed sample component.

*For sample component 4 - the pre SPD panel universe leaver sample component,*

$$EIWQL02 = CPAW = IW \times CPF.$$

*For sample component 5 - the pre 1998 SPD panel universe leaver sample component,*

$$EIWQL02 = CPAW = IW \times CPF.$$

*For the part of sample component 6 (the pre 2002 SPD panel universe leaver sample component) belonging to sample component 1 (the SPD core sample component),*

$$EIWTL02 = CPAW \times SCF98 = IW \times CPF \times SCF98.$$

*For the part of sample component 6 (the pre 2002 SPD panel universe leaver sample component) belonging to sample component 2 (the SPD Bridge non-interviewed sample component),*

$$EIWTL02 = CPAW \times SCFBNI = IW \times CPF \times SCFBNI.$$

*For the part of sample component 6 (the pre 2002 SPD panel universe leaver sample component) belonging to sample component 3 (the SIPP 1992/1993 non-interviewed sample component),*

$$EIWTL02 = CPAW \times SCFSNI = IW \times CPF \times SCFSNI.$$

**STEP 5** - The original sample persons who either are in sample components 1 through 3 and survived the SPD 2002 sample cut or in sample components 4 through 6 were divided into two groups as follows: the first group consists of the original sample persons who were qualified as *the 2002 SPD quasi-longitudinal panel interviewed sample persons*. The second group consists of the original sample persons who were *not* qualified as the 2002 SPD quasi-longitudinal panel interviewed sample persons. Hereinafter, the second group is referred to as *the 2002 SPD quasi-longitudinal panel non-interviewed sample persons*.

*For sample component 1 - the SPD core sample component (applied only to the original sample persons who survived the SPD 2002 sample cut), (a) an original sample person belonging to cohorts QLW02A or QLW02B (defined earlier) is a 2002 SPD quasi-longitudinal panel interviewed sample person, and (b) an original sample person (who survived the SPD 2002 sample cut) not belonging to cohorts QLW02A or QLW02B is a 2002 SPD quasi-longitudinal panel non-interviewed sample person.*

*For sample component 2 - the SPD Bridge non-interviewed sample component (applied only to the original sample persons who survived the SPD 2002 sample cut), (a) an original sample person belonging to cohorts QLW02C or QLW02D (defined earlier) is a 2002 SPD quasi-longitudinal panel interviewed sample person, and (b) an original sample person (who survived the SPD 2002 sample cut) not belonging to cohorts QLW02C or QLW02D is a 2002 SPD quasi-longitudinal panel non-interviewed sample person.*

*For sample component 3 - the SIPP 1992/1993 non-interviewed sample component (apply only to the original sample persons who survived the SPD 2002 sample cut), (a) an original sample person belonging to cohorts QLW02E or QLW02F (defined earlier) is a 2002 SPD quasi-longitudinal panel interviewed sample person, and (b) an original sample person (who survived the SPD 2002 sample cut) not belonging to cohorts QLW02E or QLW02F is a 2002 SPD quasi-longitudinal panel non-interviewed sample person.*

*For sample component 4 - the pre SPD panel universe leaver sample component, an original sample person belonging to cohort QLW02G is a 2002 SPD quasi-longitudinal panel interviewed sample person. Note that, by definition of QLW02G, all original sample people belonging to sample component 4 are 2002 SPD quasi-longitudinal panel interviewed sample persons.*

*For sample component 5 - the pre 1998 SPD panel universe leaver sample component, an original sample person belonging to cohort QLW02H is a 2002 SPD quasi-longitudinal panel interviewed sample person. Note that, by definition of QLW02H, all original sample people belonging to sample component 5 are 2002 SPD quasi-longitudinal panel interviewed sample persons.*

For sample component 6 - the pre 2002 SPD panel universe leaver sample component, an original sample person *belonging to cohort* QLW02I is a 2002 SPD quasi-longitudinal panel *interviewed* sample person. Note that, by definition of QLW02I, all original sample people belonging to sample component 6 are 2002 SPD quasi-longitudinal panel *interviewed* sample persons.

The 2002 SPD quasi-longitudinal panel non-interview adjustment factors ( $F_{QLW02}$ ) were calculated.  $F_{QLW02}$  served as a means to appropriately transfer the weights from the 2002 SPD quasi-longitudinal panel non-interviewed persons to the 2002 SPD quasi-longitudinal panel interviewed persons with similar demographic and economic characteristics. Herein, the similarity in demographic and economic characteristics among the sample persons were classified based on the following variables: age, race, ethnicity, education, labor force status, employment status, income types, assets, and income level. Namely, the 2002 SPD quasi-longitudinal panel non-interview adjusted weights (NIAWQL02) were then assigned in the following manner.

For each 2002 SPD quasi-longitudinal panel *interviewed* person (defined earlier in this step), his/her NIAWQL02 was assigned in terms of EIWQL02 (obtained in step 4) and  $F_{QLW02}$  as shown in the equation below.

$$NIAWQL02 = EIWQL02 \times F_{QLW02}$$

For each 2002 SPD quasi-longitudinal panel non-interviewed person (defined earlier in this step), his/her quasi-longitudinal panel weight SPDQLW02 was assigned as zero ( $SPDQLW02 = 0$ ) and he/she was then excluded from further processing of the weighting calculation with respect to SPDQLW02.

**STEP 6** - The second stage ratio estimation was performed for computing the final weights (SPDQLW02) for the 2002 SPD quasi-longitudinal panel interviewed persons. The second stage ratio estimation principally involved raking to match a set of SPD population estimates with a corresponding set of controls from a representative control date. The controls are available for the classifications based on the following demographic variables: age, sex, race, ethnicity, householder living with or not living with relative, and non-householder related to or not related to householder. As described in step 1, the representative control date for the SPD panel universe is March 1993. The control population estimates are from the CPS population estimates produced for March 1993. The second stage ratio adjustment served as a means to improve the population coverage of the SPD sample. The classification of the sample persons into groups for the second stage ratio estimation also served as a post-sampling stratification. Therefore, as a by-product of the second stage ratio estimation, the variance estimates of the estimates based on the SPD sample are generally improved as well.

The positive weights obtained after the second stage adjustment are the final weights (SPDQLW02) for the 2002 SPD quasi-longitudinal panel interviewed persons.

**STEP 7** - As described earlier, the annual weight SPDQAW02 associated with the 2002 SPD quasi-longitudinal panel weight (SPDQLW02) was derived for making annual estimates of the characteristics of young children based on the data on the SPD third

longitudinal file.

For all sample people except the non-original young sample children (person number > 200), their longitudinal annual weights SPDQAW02 were assigned equal to their 2002 quasi-longitudinal panel weights SPDQLW02 (i.e., assign SPDQAW02 = SPDQLW02).

For the non-original young sample children whose designated parents are non-original sample persons, their longitudinal annual weights were assigned as zero (i.e., SPDQAW02 = 0).

For each non-original young sample child whose designated parent is an original sample person, the following intermediate weight, SPDQXW02, was created by assigning it equal to his/her designated parent's weight SPDQAW02. Namely, SPDQXW02 = SPDQAW02 of the child's designated parent. Hereinafter, the non-original young sample children whose designated parents are original sample people are referred to as *the weighted non-original young sample children associated with SPDQLW02*.

The intermediate weights SPDQXW02 of the weighted non-original young sample children associated with SPDQLW02 were then adjusted to match various controls in June 2002 for children aged ten and below. This adjustment yielded their final longitudinal annual weight (SPDQAW02).

### **Estimation of Person Characteristics**

Some basic types of longitudinal estimates that can be constructed using the longitudinal weight as described below in terms of estimated numbers. Of course, more complex estimates, such as percents, averages, and ratios can be constructed from the estimated numbers. The SPD longitudinal weights can be used to construct the following types of longitudinal estimates:

- (1) The number of people who have ever experienced a characteristic or situation during a given time period. (For example, the number of people who experienced unemployment during the low economy year of 2001). To construct such an estimate, sum the weights over all sample people who possessed the characteristic of interest at some point during the time period of interest.
- (2) The amount of a characteristic accumulated by people during a given time period. (For example, the amount of unemployment compensation received by unemployed people during the low economy year of 2001.) To construct such an estimate, compute the product of the weight times the amount of the characteristic and sum this product over all appropriate sample people.

### **Annual Weights Associated with Non-original Sample Children**

The annual weights SPDTAW01, SPDTAW02, SPDQAW00, SPDQAW01, and SPDQAW02 of the non-original sample children (associated with the 2001 SPD traditional longitudinal panel weight SPDTLW01, the 2002 SPD traditional longitudinal panel weight SPDTLW02, the 2000 SPD quasi-longitudinal panel weight SPDQLW00,

the 2001 SPD quasi-longitudinal panel weight SPDQLW01, and the 2002 SPD quasi-longitudinal panel weight SPDQLW02, respectively) are for making estimation of the annual (calendar year) characteristics of young children born after Wave 1 of the SIPP panel 1992 or the SIPP panel 1993. As described in the Weighting section, the annual weights of the original and non-original sample adults and the original sample children are the same as their corresponding longitudinal panel weights (namely, their annual weights  $SPDTAW01 = SPDTLW01$ ,  $SPDTAW02 = SPDTLW02$ ,  $SPDQAW00 = SPDQLW00$ ,  $SPDQAW01 = SPDQLW01$ , and  $SPDQAW02 = SPDTLW02$ ). For each non-original sample children, each of his/her annual weights  $SPDTAW01$ ,  $SPDTAW02$ ,  $SPDQAW00$ ,  $SPDQAW01$ , and  $SPDQAW02$  is positive if his/her designated parent's corresponding annual weight is positive; otherwise it is zero. For example, if a non-original child's designated parent has a positive annual weight  $SPDQAW01$  but has a zero annual weight  $SPDTAW01$ , then, like his/her designated parent, his/her annual weight  $SPDQAW01$  is positive but his/her annual weight  $SPDTAW01$  is zero.

In the estimation of an annual estimate of a characteristic of these young children using a annual weight (e.g.,  $SPDQAW00$ ), the portion of the estimate contributed by the non-original sample children must be calculated based only on the non-original sample children whose annual weights under consideration (e.g.,  $SPDQAW00$ ) are positive and were born in or prior to the calendar year under consideration. The non-original sample children weights, for those aged eight or less in 2000 (nine or less in 2001, ten or less in 2002), are intended only to approximate growth in the non-institutional civilian universe in the country up to 2000 (2001, 2002). Some caution should be given when interpreting results for the children aged eight or less in 2000 (nine or less in 2002, ten or less in 2002). The annual weights  $SPDQAW00$  (associated with the 2000 SPD quasi-longitudinal panel weight  $SPDQLW00$ ) are most likely to provide more accurate annual estimates of the characteristics of the young children in 2000 than the young children in other years. This is because the annual weights  $SPDQAW00$  were adjusted to improve the population coverage of these children with respect to June 2000. Similarly, (a) the annual weights  $SPDTAW01$  (associated with the 2001 SPD traditional longitudinal panel weight  $SPDTLW01$ ) are most likely to provide more accurate annual estimates of the characteristics of the young children in 2001 than the young children in other years, (b) the annual weights  $SPDQAW01$  (associated with the 2001 SPD quasi-longitudinal panel weight  $SPDQLW01$ ) are most likely to provide more accurate annual estimates of the characteristics of the young children in 2001 than the young children in other years, (c) the annual weights  $SPDTAW02$  (associated with the 2002 SPD traditional longitudinal panel weight  $SPDTLW02$ ) are most likely to provide more accurate annual estimates of the characteristics of the young children in 2002 than the young children in other years, and (d) the annual weights  $SPDQAW02$  (associated with the 2002 SPD quasi-longitudinal panel weight  $SPDQLW02$ ) are most likely to provide more accurate annual estimates of the characteristics of the young children in 2002 than the young children in other years. Between the annual weight  $SPDTAW01$  and the annual weight  $SPDQAW01$ , the annual weights  $SPDQAW01$  are more likely to provide more accurate annual estimates of the characteristics of the young children in 2001 than the annual weights  $SPDTAW01$  because the effective sample size associated with the annual weights  $SPDQAW01$  is larger than the effective sample size associated with the annual weights  $SPDTAW01$ . Similarly, between the annual weight  $SPDTAW02$  and the annual weight  $SPDQAW02$ , the annual weights  $SPDQAW02$  are more likely to provide more

accurate annual estimates of the characteristics of the young children in 2002 than the annual weights SPDTAW02. However, for annual estimates associated with calendar years other than 2001, the annual weights SPDTAW01 have an advantage over the annual weights SPDQAW01 because it is most likely that there are some missing data associated with some sample people with a positive annual weight SPDQAW01 for any data years other than the data year 2000, and these missing data need to be approximated or imputed by the users. Similarly, for annual estimates associated with calendar years other than 2002, the annual weights SPDTAW02 have an advantage over the annual weights SPDQAW02 because it is most likely that there are some missing data associated with some sample people with a positive annual weight SPDQAW02 for any data years other than the data year 2001, and these missing data need to be approximated or imputed by the users.

## Longitudinal Research Using This File

The SPD is designed exclusively to support longitudinal analysis of the impact of welfare reform. The Third Longitudinal SPD data can be linked to the 1992 and 1993 SIPP Cross-sectional and longitudinal files, the 1997 SPD Bridge, the 1998, 1999, 2000, 2001 and 2002 SPD Cross-sectional files, and the First and Second Longitudinal SPD files using the following variables:

SIPP Panel Number	SIPP_PNL
Sample Unit Identification Number	PP_ID
Entry ID	PP_ENTRY
Person Number	PP_PNUM
Address ID	ADDIDE(2,3,4,7,8,9,0,1,X)

A Longitudinal weight is assigned to 100-level persons with full panel weights in the 1992/1993 SIPP file who were successfully interviewed in 2000. Note the full panel weights on the SIPP files were assigned to 100-level people who were interviewed for the entire time they remained in the SIPP universe or who had at most 1 missing interview bounded by successful interviews.

The SPD data represent the behavior and characteristics of people in two fixed cohorts. One cohort represents the population as it existed in March 1992 from the 1992 panel of the SIPP and the other population as of March 1993 from the 1993 panel. This is not a traditional longitudinal survey in that it does not repeat the same measure throughout the period. Each round of the SPD interviewing, beginning with the Bridge in 1997, does not represent cross-sectional snapshots of the U.S. population. It does offer insight into what the current condition is of the people in the U. S. population in the early 1990s just prior to welfare reform.

The core information common throughout the data collection (although reference periods and question phrasing vary) consists of basic demographics, labor force activity, income, and program participation. The longitudinal file consists of data collected using three different instruments, each with variations in wording and context.

## **Obtaining Access to Self-Administered Questionnaire Data**

The marital relationship and conflict, depression scale, and SAQ (Adult and Adolescent) data will only be available through the Census Bureau's Research Data Centers. Contact the Research Data Center staff for the requirements for reviewing this data.

# GLOSSARY

This glossary includes definitions of terms that apply to the Survey of Program Dynamics (SPD).

[Note that, for a technical term (except for the technical term 401K Plan) led by numbers, it is placed in this glossary in an order based on the alphabetical expression that follows the leading numbers.]

- 401K Plan*** A 401K plan is a retirement qualified profit sharing or stock bonus plan that contains a cash-or-deferred arrangement. Elective contributions are excluded from the employee's gross income for the year in which they are made and are not subject to taxation until distributed. Retirement payments from 401K's should be considered as "regular retirement income".
- Additional People*** People who join original sample households, as well as anyone else who lives with them in that or any future household. An additional person remains in the survey until he or she no longer shares a household with the original sample person.
- Address ID*** The three-digit address ID code identifies each household associated with the same sample unit identification number. The first two digits of the address ID code indicate the wave or year in which that address was first assigned for interview. The third digit sequentially numbers multiple households that have the same serial number. The address ID code is 011 for all sample addresses that are the same as in Wave 1 of the 1992 and the 1993 SIPP panels. As the SIPP sample people move to new addresses, new address ID codes are assigned. For example, any new address to which sample unit members moved during the 2002 SPD is numbered from 161 to 169.
- Address Unit*** Often referred to as "household", this collection unit is a person or group of persons living at the same address at the time of an interview. The address unit may consist of one person living alone, a group of unrelated individuals, or one or more families.
- Adult*** Household members 15 years old or older. Information is collected for each adult.

***AFDC or ADC***

The Aid to Families with Dependent Children (AFDC) or Aid for Dependent Children (ADC) program has been abolished as a result of the 1996 Welfare Reform Act. Each state now has its own welfare program. Some states use the generic name, Temporary Assistance to Needy Families (TANF). Most states have a unique name. All references to AFDC/ADC in the instrument have been changed to "public assistance". *See public assistance for more information.*

***Age***

Date of birth is recorded to compute the age for subsequent interviews or reference months.

The public use microdata files include year of birth. For the SIPP 1992 panel, year of birth is bottom coded at 1910 to maintain confidentiality. For the SIPP 1993 panel, year of birth is bottom coded at 1911 to maintain confidentiality. Similarly, the top code for age is 92.

***Aid to Families With Dependent Children***

See AFDC

***Alimony Payments***

Support payments received from a former spouse. These payments may be received directly from the former spouse or through the courts.

***Annuity***

Annuities are purchased by people at retirement or during the person's working years to guarantee a regular income after retirement. Include all such annuities purchased by the person, except any already reported as part of the person's employee pension.

***Armed Forces***

People in the Armed Forces include any members of the United States:

- Army, Navy, Air Force, Marines
- Coast Guard
- Reserve component of any of the above organizations on active duty status for several months. This includes the 4-6 month period served in connection with the provisions of the Reserve Forces Act of 1955.
- Commissioned officers of U. S. Public Health Service who are attached to any branch of the Armed Forces (Army, Navy, Air Force).

- National Guard in Federal Service (when all or part of their service was during a period when their unit was blanketed into the regular forces by Presidential Order). This includes the 6 month active duty served by National Guardsmen.
- Cadets in the United States military academies (West Point, Naval Academy, Air Force Academy, and the Coast Guard Academy).

Exclusions:

- People who have served in the Armed Forces of foreign countries.
- People whose only service was in the Coast Guard Temporary Reserve.
- Employees of the Merchant Marines, Maritime Commission, American Field Service, and civilian employees of the Department of Defense.
- People whose only service was in a National Guard unit blanketed into the regular forces by Presidential Order and who did not serve the 4-6 months of active duty in connection with the provisions of the Reserve Forces Act of 1955.
- People in short periods of active reserve training or who attended weekly reserve meetings.
- Reserve Officer's Training Corps (R. O. T. C).
- VISTA or Peace Corps

***Armed Forces  
Vocational  
Rehabilitation  
Program***

This program provides for veterans who are in need of vocational rehabilitation to overcome a handicap resulting from a service-connected disability. Veterans may receive up to 48 months of education or training to restore their employability "unless a longer period is prescribed by a VA Administrator."

The full cost of their training is paid by the Department of Veterans Affairs (VA). In addition, they receive a subsistence allowance while in training and for 2 months after rehabilitation. These disabled veterans are provided counseling assistance in selecting a suitable objective and planning a program of rehabilitative training. While in training they are provided continuing help by vocational rehabilitation specialists. Necessary employment assistance is provided following completion of training.

***Asset Income***

Asset income for the SPD is collected on an annual basis. The focus is on income earned from each asset during the reference period, not on the value of the asset.

***Asset and Asset Ownership***

The SPD collects ownership information for a variety of asset types. These include savings and interest-earning checking accounts, certificates of deposit (CD), money market and mutual funds, stocks, rental property, and other such assets. The value of home and information about automobile ownership is also collected.

If assets are owned jointly by two household members (for example, a husband and wife), the SPD collects this information from one spouse. This prevents double-counting of joint assets. Respondents report income from assets on an annual basis, or select from a range that represents the amount of interest earned.

***Assets and Liabilities***

Assets and Liabilities are included to broaden our understanding of resources available to households and individuals. These data allow an examination of economic well-being beyond that which can be observed through the study of current income. Participation in many federal programs is contingent upon not just the basic income level, but upon the assets and liabilities of the individual or household as well.

Some information on assets and liabilities is gathered in the "Amounts" sections. The questions ask for the value of certain assets such as the balance in checking accounts, ownership of and value of stocks and bonds, receipt of interest dividends and royalties and rental income. Respondents are also asked about outstanding debts and obligations, such as unpaid bank loans or credit card bills.

***Below Market Interest Rate***

Under the Federal Housing Authority's "below market-interest rate" programs, the amount of interest paid on the mortgage by the project owner is reduced so that the owner can charge rents that can be afforded by families and individuals of low and moderate income. The FHA pays the mortgage lender the difference between the interest payment required at the market rate and the lower interest payment made by the owner.

***Bonuses, non-military***

Payments made by employers to employees as supplements to wages and salaries; for example, bonuses based on a percentage of the profits and cash from employers to employees.

***Business***

A business exists when one of the following conditions is met:

- the person has invested substantial capital in machinery or equipment used by him/her in conducting the business
- an office, store, or other place of business is maintained, or
- some public advertising of the business or profession exists

***Computer Assisted Interviewing (CAI)***

A collection of methods for using computers to assist with data collection.

***Certificates of Deposit or Other Savings Certificates***

A certificate of deposit or other savings certificate is an investment in which people invest money for a fixed period of time usually at a fixed interest rate. These accounts are available at banks, savings and loans, and credit unions.

***Child Care or Day Care Center***

A child care center provides adult supervision and care for children under the age of 14.

***CHAMPUS/Tricare***

"CHAMPUS" (Civilian Health and Medical Program of the Uniformed Services) has been replaced by Tricare. It is a health benefit program for all seven uniformed services. The following is a list of people covered by TRICARE:

- Active duty service members
- Spouses and unmarried children of active duty service members
- Uniformed service retirees, their spouses, and unmarried children
- Not remarried former spouse and unmarried children of active duty or retired service members who have died
- Spouses and unmarried children of reservists and National Guard who are ordered to active duty for more than 30 consecutive days (they are covered only during the reservist's active duty tour) or of reservists and National Guard who die on active duty.
- Spouses and unmarried children of reservists and National Guard who die as a result of a line of duty condition may be eligible for health care.
- Persons who have received the Congressional Medal of Honor, and their family members, who are not otherwise TRICARE eligible. These persons will be able to obtain health care benefits under TRICARE in the same manner as if they were entitled to retired pay.

- Unmarried children up to age 21 (including stepchildren *who are adopted by the sponsor*) are still covered by TRICARE even if the spouse gets divorced or remarried. But in the case of a stepchild who was not adopted by the sponsor and the marriage ends in divorce, the stepchild loses eligibility on the date the divorce decree is final
- A child aged 21 or over may be covered if he or she is severely disabled and the condition existed prior to the child's 21st birthday—*or*, if the condition occurred between the ages of 21 and 23 while the child was enrolled in school full-time and is, or was at the time of the sponsor's death, dependent on the sponsor for more than one-half of his or her support. A child may also be covered up to age 23 if he or she is in school full-time.
- Children placed in the custody of a service member or former member, by a court of law; or by a recognized adoption agency in anticipation of legal adoption by the member.
- Children of current or former service members or their spouses born out of wedlock may be eligible for TRICARE benefits under certain conditions.
- Certain family members of active duty service members who were court-martialed and separated for spouse or child abuse. The victims of the abuse within the family are eligible for health benefits for the period that the abused family member is receiving "transitional compensation" under Section 1059 of Title 10, U.S. Code. Cost sharing will be the same as for other active duty families.
- Certain abused spouses, former spouses, and dependent children of service members who were eligible for retirement, but had that eligibility taken away as a result of abuse of the spouse or child. This benefit is effective for medically necessary services and supplies provided under TRICARE Standard (CHAMPUS) on or after October 23, 1992.
- Spouses and children of North Atlantic Treaty Organization (NATO) and "Partners for Peace" (PFP) nation representatives who are officially accompanying the NATO or PFP nation representatives while stationed in, or passing through, the United States on official business. These family members are eligible for outpatient benefits only (including ambulatory surgery). (NATO and PFP family members cannot enroll in TRICARE Prime.)

- Former spouses of active or retired military who were married to a service member or former member who had performed at least 20 years of creditable service for retirement purposes at the time the divorce or annulment occurred. The former spouse must also meet the following requirements:
  1. Must not have remarried.
  2. Must not be covered by an employer-sponsored health plan.
  3. Must not be the former spouse of a NATO (or “Partners for Peace” nation) member. And—
  4. Must meet the requirements of one (not all) of three situations provided by TRICARE
- Military, retired members and their families who are 65 years old and over, eligible for Medicare Part A and maintain Medicare Part B (enacted October 2001)

**CHAMPVA**

CHAMPVA (Civilian Health and Medical Program of the Department of Veterans Affairs) is a medical program through which the VA helps pay for medical services obtained from civilian sources by eligible dependents and survivors of veterans. To be eligible for CHAMPVA you cannot be eligible for Tricare/CHAMPUS. The following is a list of people covered by CHAMPVA:

- The spouse or child of a veteran who has a permanent, total disability, resulting from a service-connected disability
- The surviving spouse or child of a veteran who died as the result of a service-connected disability, or who at the time of death had a total disability, permanent in nature, resulting from a service-connected disability
- The surviving spouse or child of a military member who died in the line of duty, not due to misconduct.
- 

The term "child" refers to an unmarried child who is:

- A legitimate child, a legally adopted child, a stepchild who is a member of the veteran's household or who was a household member at the time of the veteran's death, or an illegitimate child
- A child who is 18 years of age or older, but incapable of self-support because of a mental or physical incapacity that

- existed before the age of 18, or
- A child who is under the age of 23 and is in school

***Child Support Payments***

Child support is money paid to the custodial parent (that is, for example, the respondent) by the non-custodial parent for the support of their child(ren). The payment may be made directly to the respondent or indirectly through the court system or other public agency, sometimes called "pass-through payments."

When a public agency is involved with child support collection, it is particularly important that it not be confused with any government-administered programs such as other public assistance (formerly known as AFDC), food stamps, general assistance, WIC, school lunches, or breakfasts.

***Children's Health Insurance Program (CHIP)***

See State Children's Health Insurance Program (SCHIP)

***Chronic Condition***

A condition marked by long duration of frequent occurrence. One that is always present or constantly vexing, weakening, or troubling.

***Citizens of Foreign Countries Temporarily in the United States***

Citizens of foreign countries staying at the sample unit are interviewed if:

- They are not living on the premises of an embassy, ministry, legation, chancellery, or consulate or
- They are not merely visiting or traveling in the United States

***COBRA***

COBRA makes it possible for certain workers and their families to retain for either 18, 29 or 36 months the health insurance benefits they had when they were covered under an employer's group health insurance plan. Named for the Consolidated Omnibus Budget Reconciliation Act, which contains the key provisions, COBRA provides for continuation of health insurance benefits available to the employee or conversion to an individual or individual family health insurance policy. After reaching a certain age, a dependent can be covered for a period of up to 36 months. A worker terminated from employment can be covered for up to 18 months.

<b><i>Cohort QLW00A (associated with weighting)</i></b>	The original sample people who belonged to sample component 1 (the SPD core sample component), were <i>not</i> a 2000 SPD panel universe leaver, and were interviewed (self or proxy or imputed) in the SPD 2000.
<b><i>Cohort QLW00B (associated with weighting)</i></b>	The original sample people who belonged to sample component 1 (the SPD core sample component) and <i>were</i> a 2000 SPD panel universe leaver.
<b><i>Cohort QLW00C (associated with weighting)</i></b>	The original sample people who belonged to sample component 2 (the SPD Bridge non-interviewed sample component), were <i>not</i> a 2000 SPD panel universe leaver, and were interviewed (self or proxy or imputed) in the SPD 2000.
<b><i>Cohort QLW00D (associated with weighting)</i></b>	The original sample people who belonged to sample component 2 (the SPD Bridge non-interviewed sample component) and <i>were</i> a 2000 SPD panel universe leaver.
<b><i>Cohort QLW00E (associated with weighting)</i></b>	All of the original sample people who belonged to sample component 4 (the pre SPD panel universe leaver sample component).
<b><i>Cohort QLW00F (associated with weighting)</i></b>	All of the original sample people who belonged to sample component 5 (the pre 1998 SPD panel universe leaver sample component).
<b><i>Cohort QLW01A (associated with weighting)</i></b>	The original sample people who belonged to sample component 1 (the SPD core sample component), were <i>not</i> a 2001 SPD panel universe leaver, and were interviewed (self or proxy or imputed) in the SPD 2001.
<b><i>Cohort QLW01B (associated with weighting)</i></b>	The original sample people who belonged to sample component 1 (the SPD core sample component) and <i>were</i> a 2001 SPD panel universe leaver.
<b><i>Cohort QLW01C (associated with weighting)</i></b>	The original sample people who belonged to sample component 2 (the SPD Bridge non-interviewed sample component), were <i>not</i> a 2001 SPD panel universe leaver, and were interviewed (self or proxy or imputed) in the SPD 2001.
<b><i>Cohort QLW01D (associated with weighting)</i></b>	The original sample people who belonged to sample component 2 (the SPD Bridge non-interviewed sample component) and <i>were</i> a 2001 SPD panel universe leaver.

<b><i>Cohort QLW01E (associated with weighting)</i></b>	The original sample people who belonged to sample component 3 (the SIPP 1992/1993 non-interviewed sample component), were <i>not</i> a 2001 SPD panel universe leaver, and were interviewed (self or proxy or imputed) in the SPD 2001.
<b><i>Cohort QLW01F (associated with weighting)</i></b>	The original sample people who belonged to sample component 3 (the SIPP 1992/1993 non-interviewed sample component) and <i>were</i> a 2001 SPD panel universe leaver.
<b><i>Cohort QLW01G (associated with weighting)</i></b>	All of the original sample people who belonged to sample component 4 (the pre SPD panel universe leaver sample component).
<b><i>Cohort QLW01H (associated with weighting)</i></b>	All of the original sample people who belonged to sample component 5 (the pre 1998 SPD panel universe leaver sample component).
<b><i>Cohort QLW02A (associated with weighting)</i></b>	The original sample people who belonged to sample component 1 (the SPD core sample component), survived the SPD 2002 sample cut, were <i>not</i> a 2002 SPD panel universe leaver, and were interviewed (self or proxy or imputed) in the SPD 2002.
<b><i>Cohort QLW02B (associated with weighting)</i></b>	The original sample people who belonged to sample component 1 (the SPD core sample component), survived the SPD 2002 sample cut, <i>were</i> a 2002 SPD panel universe leaver.
<b><i>Cohort QLW02C (associated with weighting)</i></b>	The original sample people who belonged to sample component 2 (the SPD Bridge non-interviewed sample component), survived the SPD 2002 sample cut, were <i>not</i> a 2002 SPD panel universe leaver, and were interviewed (self or proxy or imputed) in the SPD 2002.
<b><i>Cohort QLW02D (associated with weighting)</i></b>	The original sample people who belonged to sample component 2 (the SPD Bridge non-interviewed sample component), survived the SPD 2002 sample cut, and <i>were</i> a 2002 SPD panel universe leaver.
<b><i>Cohort QLW02E (associated with weighting)</i></b>	The original sample people who belonged to sample component 3 (the SIPP 1992/1993 non-interviewed sample component), survived the SPD 2002 sample cut, were <i>not</i> a 2002 SPD panel universe leaver, and were interviewed (self or proxy or imputed) in the SPD 2002.
<b><i>Cohort QLW02F (associated with weighting)</i></b>	The original sample people who belonged to sample component 3 (the SIPP 1992/1993 non-interviewed sample component), survived the SPD 2002 sample cut, and <i>were</i> a 2002 SPD panel

universe leaver.

***Cohort QLW02G  
(associated with  
weighting)***

All of the original sample people who belonged to sample component 4 (the pre SPD panel universe leaver sample component).

***Cohort QLW02H  
(associated with  
weighting)***

All of the original sample people who belonged to sample component 5 (the pre 1998 SPD panel universe leaver sample component).

***Cohort QLW02I  
(associated with  
weighting)***

All of the original sample people who belonged to (a) sample component 1 (the SPD core sample component) and sample component 6 (the pre 2002 SPD panel universe leaver sample component) or (b) sample component 2 (the SPD Bridge non-interviewed sample component) and sample component 6 or (d) sample component 3 (the SIPP 1992/1993 non-interviewed sample component) and sample component 6. Note that, by definition, all of the original sample people belonging to sample component 6 are 2002 SPD quasi-longitudinal panel universe leavers.

***Cohort TLW01A  
(associated with  
weighting)***

The original sample people who belonged to sample component 1 (the SPD core sample component), and had *positive* SIPP 1992/1993 longitudinal panel weights (which implies he/she was classified as a SIPP 1992/1993 longitudinal panel interviewed sample person), and were interviewed (self or proxy or imputed) in the SPD Bridge (1997) and the SPD 1998 through the SPD 2001. (Note that, on each of the SIPP 1992 and 1993 longitudinal files, the SIPP 1992/1993 longitudinal panel weight was represented by the variable PNLWGT.)

***Cohort TLW01B  
(associated with  
weighting)***

The original sample people who belonged to sample component 1 (the SPD core sample component), had *positive* SIPP 1992/1993 longitudinal panel weights (which implies he/she was classified as a SIPP 1992/1993 longitudinal panel interviewed sample person), and were interviewed (self or proxy or imputed) or were institutionalized or moved to live in armed forces barracks or moved out of the country in each SPD cycle (the SPD Bridge, the SPD 1998, ...) *until* they became a 2001 SPD panel universe leaver.

***Cohort TLW01C  
(associated with  
weighting)***

The original sample people who belonged to sample component 4 (the pre SPD panel universe leaver component), and had *positive* SIPP 1992/1993 longitudinal panel weights (which implies he/she was classified as a SIPP 1992/1993 longitudinal panel interviewed

sample person).

***Cohort TLW01D***  
***(associated with***  
***weighting)***

The original sample people who belonged to sample component 5 (the pre 1998 SPD panel universe leaver sample component), had *positive* SIPP 1992/1993 longitudinal panel weights (which implies he/she was classified as a SIPP 1992/1993 longitudinal panel interviewed sample person).

***Cohort TLW02A***  
***(associated with***  
***weighting)***

The original sample people who belonged to the SPD core sample component (sample component 1), survived the SPD 2002 sample cut, and were interviewed (self or proxy or imputed) in every wave of the SIPP panel 1992 or 1993 (which implies he/she was classified as a SIPP 1992/1993 longitudinal panel interviewed sample person), the SPD Bridge (1997), and the SPD 1998 through SPD 2002.

***Cohort TLW02B***  
***(associated with***  
***weighting)***

The original sample people who belonged to the SPD core sample component (sample component 1), survived the SPD 2002 sample cut, and had *positive* SIPP 1992/1993 longitudinal panel weights (which implies he/she was classified as a SIPP 1992/1993 longitudinal panel interviewed sample person), and were interviewed (self or proxy or imputed) or were institutionalized or moved to live in armed forces barracks or moved out of the country in each SPD cycle (the SPD Bridge, the SPD 1998, ...) until they became a 2002 SPD panel universe leaver.

***Cohort TLW02C***  
***(associated with***  
***weighting)***

The original sample people who belonged to the pre SPD panel universe leaver component (sample component 4), and had *positive* SIPP 1992/1993 longitudinal panel weights (which implies he/she was classified as a SIPP 1992/1993 longitudinal panel interviewed sample person).

***Cohort TLW02D***  
***(associated with***  
***weighting)***

The original sample people who belonged to the pre 1998 SPD panel universe leaver sample component (sample component 5), and had *positive* SIPP 1992/1993 longitudinal panel weights (which implies he/she was classified as a SIPP 1992/1993 longitudinal panel interviewed sample person).

***Cohort TLW02E***  
***(associated with***  
***weighting)***

The original sample people who belonged to both the SPD core sample component (sample component 1) and the *pre* 2002 SPD panel universe leaver sample component (sample component 6), and had *positive* SIPP 1992/1993 longitudinal panel weights (which implies he/she was classified as a SIPP 1992/1993 longitudinal panel interviewed sample person), and were

interviewed (self or proxy or imputed) or were deceased or were institutionalized or moved to lived in armed forces barracks or moved out of the country in each of the SPD Bridge and the SPD1998 through the SPD 2000. [Note that the SPD 2001 interview outcomes were not used in defining cohort TLW02E because, by definition, a pre 2002 SPD panel universe leaver had to remain to be or just became an SPD panel universe leaver in the SPD 2001 sample.]

***College/School  
Educational  
Assistance***

Colleges offer many types of aid to students, and also act as "pass through" agents for public and private aid.

**College Work-Study** - This program provides financial assistance to students by placing them in on-campus jobs that pay at least the minimum wage. Part of the wage is often paid by the employer, which may be the college or another organization. The rest of the wage is subsidized through funding provided by the federal government and administered by the college or university financial aid office.

**Tuition Remission** - Many private schools offer lowered tuition to students from families with income and assets below a certain threshold. Some students pay less than the "full" tuition.

**Teaching or Research Assistantship** - Teaching or research assistantship are usually offered to graduate students or, sometimes, advanced undergraduates as a form of support. Paid work in laboratories or teaching by students pursuing a degree fall under this category.

***Combined Panel  
Factor***

The combined panel factor is a factor accounting for the difference in the effective sample sizes (the number of interviewed sample households) of the SIPP panels 1992 and 1993 when they were combined to create the SPD samples (SPD Bridge through SPD 2002). Since the effective sample sizes of the SIPP panels 1992 and 1993 are essentially the same in every wave, the combined panel factor of 0.5 is used. Thus, the Wave 1 non-interview adjusted weights of the sample households in the SIPP panels 1992 and 1993 were adjusted by multiplying them with a combined panel factor of 0.5 when they were combined as an SPD sample (SPD Bridge through SPD 2002).

<b><i>Commissions</i></b>	Money received by a person for transacting business for another person or corporation. In some occupations, such as sales clerks, truck drivers, and launderers, commissions may constitute a large portion of wages or salary.
<b><i>Condominium and Association Fees</i></b>	Payments made by the residents of most condominium buildings and some residential communities for property management. The fees are sometimes included in the rent or mortgage payment.
<b><i>Confidentiality</i></b>	<p>The SPD is authorized and protected by Title 13, Section 182, of the U.S. Code. This means that the Census Bureau is responsible for protecting the confidentiality of all individual information collected. The term confidentiality refers to the guarantee that is made to individuals who provide survey information regarding disclosure of that information to others, as well as the uses of that information. No other government agencies such as the FBI, IRS, and CIA have access to identifiable information collected by the Census Bureau.</p> <p>Information is made available to the public and other data users only in the form of statistical summaries, tables, and microdata files, with no individuals identified. The Census Bureau does not publish data if the number of contributors is small enough to identify individuals from the data. Unauthorized disclosure of individual information by a sworn Census Bureau employee is punishable by a fine of up to \$5,000 or imprisonment of up to 5 years, or both. A notice of confidentiality is contained on the Advance Letter to respondents.</p>
<b><i>Coverage Unit</i></b>	See Housing Unit.
<b><i>Cross-sectional Survey</i></b>	Data collected for a single time period from a single sample.
<b><i>Cross-sectional Weighting</i></b>	See Weighting
<b><i>Data Suppression</i></b>	Data are suppressed to protect the confidentiality of survey respondents and to ensure that respondents cannot be identified. Confidentiality is accomplished by blanking, imputing, recoding, top coding and swapping data items.
<b><i>Day Care or Child Care Center</i></b>	A child care center is a center providing adult supervision and care for a number of children under the age of 14.

***Dependents' and  
Survivors  
Educational  
Assistance Program***

See Veterans' Educational Assistance.

***Designated Parent***

In married couple families, the mother is the designated parent and normally responds for all children related questions. If the mother is not available for interview, a proxy response from the father is acceptable. In single parent families, the resident parent is the designated parent. If neither parent is resident in the household, the guardian is the respondent. If the designated parent is unavailable, a callback is scheduled.

***Direct Access***

A living quarters has direct access when the occupant can either enter his/her living quarters directly from the outside of the structure, or enter his/her living quarters from a common hall or lobby that is used by occupants of more than one unit. The hall or lobby must not be part of any unit and must be clearly separate from all units in the structure. If the only entrance to a living quarters is through a room or a hall of another living quarters, then the living quarters does not have direct access.

***Disability***

For a person 15 years or older a disability is a physical or mental impairment that substantially limits one or more of life's major activities. In this survey we assess a person's functional limitations in a series of questions concerning the following:

- functional activities such as seeing, hearing and walking
- activities of daily living such as getting in and out of bed and bathing, and
- instrumental activities of daily living such as going outside the home

The SPD also identifies people with a work disability. A work disability is a physical, mental or other health condition which limits the kind or amount of work a person can perform. A work limitation may affect only the kind or amount of work the respondent can do, or it may prevent him/her from working altogether. Short-term illnesses or conditions are not work limiting. For example, a broken bone may keep a person from working for several weeks, but this would not constitute a work limitation. Pregnancy is not considered a work-limiting condition.

For children under 15 years old, the SPD assesses functional limitation in activities such as seeing, hearing, and walking as well as the following:

- presence of a developmental or learning disability.
- ability to perform age appropriate tasks (children under 6), and
- presence of behavioral or emotional problems (children 6-14).

***Disability Income***

Income that a household member received due to a health condition or other disability during the reference period (other than Social Security, SSI, or Veteran's compensation).

***Domestic Workers***

Workers in occupations concerned with tasks in and around a private household. They perform duties such as cleaning, washing, and ironing clothes, making beds, caring for children, planning meals, going to the market, and cooking.

***Educational Assistance***

Many students in 2-and 4-year colleges, universities, and various types of vocational and training institutions receive financial assistance in paying both tuition and living expenses. Assistance may be in the form of scholarships, grants, loans, college work-study, employer assistance (for example, employer-paid tuition payments), veterans' benefits, and other forms of aid from sources other than from students or their families to help students finance post-secondary education.

(For more information about specific programs, see entries under (1) College/School Educational Assistance, (2) Federal Educational Assistance, (3) Other Educational Assistance, and (4) Veterans' Educational Assistance.)

The following are specific examples of educational assistance:

- GI Bill
- Other Veterans Administration Educational Assistance Programs
- Survivors' and Dependents' Educational Assistance Program
- Armed Forces Vocational Rehabilitation Program
- Post-Vietnam Vocational Educational Assistance Program
- College Work-Study
- Pell Grant

- Supplementary Educational Opportunity Grants
- National Direct Student Loan
- Guaranteed Student Loan
- Job Training Partnership Act Training
- Employer Assistance
- Fellowship/Scholarship
- Other Financial Aid

***Educational  
Attainment***

Educational attainment codes are entered for each household member 15 years of age or older. They are as follows:

- (31) Less than 1st grade
- (32) 1st, 2nd, 3rd or 4th grade
- (33) 5th or 6th grade
- (34) 7th or 8th grade
- (35) 9th grade
- (36) 10th grade
- (37) 11th grade
- (38) 12th grade, no diploma
- (39) HIGH SCHOOL GRADUATE - high school DIPLOMA or equivalent (for example, GED)
- (40) Some college, but no degree
- (41) Diploma or certificate from a vocational, technical, trade or business school beyond the high school level
- (42) Associate degree in college Occupational/vocational program
- (43) Associate degree in college - Academic program
- (44) Bachelor's degree (For example, BA, AB, BS)
- (45) Master's degree (For example, MA, MS, MEng, MEd, MSW, MBA)
- (46) Professional School Degree (For example, MD, DDS, DVM, LLB, JD)
- (47) Doctorate degree (For example, PhD, EdD)

The following special situations also apply:

**Junior high** - If the person's highest grade was in "junior high," a determination of the equivalent in elementary grades (1-8) or high school grades (9-12) is made by the field representative (FR).

**"Post-graduate" high school** - For people who have attended "post-graduate" high school courses after completing high school, but have not attended college, a code of "39" is entered.

**Equivalency tests** - For people who pass a high school equivalency test (GED) or finished high school while in the Armed Forces, but did not attend college, a code of "39" is entered.

**Miscellaneous school system** - The entry represents the equivalent grade in the regular school system for a person who obtained a formal education through any of the following methods:

- Foreign schools
- Ungraded schools
- Home schools (children who are taught at home by their parents or by a paid tutor)
- Night schools or instruction by tutors (if such instruction was counted toward promotion in the regular school system).

**People still in school** - For people still attending school, educational attainment is the highest grade or level the individual completed (usually the grade attended the previous year), or the highest degree attained.

**Summer status** - For people who are on summer vacation or in school, the entry represents the grade or year they were enrolled in the previous school year, provided they completed that grade (not the grade or year they will attend in the fall or an uncompleted year).

**The following situations are excluded:**

**Vocational or other trade schools** - Education obtained at vocational schools, business schools or colleges, and other trade and specialized schools are not included unless a certificate has been awarded. The training must also take place after high school is completed, or at a level beyond high school.

**Correspondence schools** - Training received by mail from "correspondence" schools is not included unless the correspondence course counted toward promotion in a regular school.

**"On-the-Job" training** - Training received as "on-the-job" training is not included.

**Adult Education Classes** - Adult education classes are not included unless such schooling is being counted for credit in a regular school system. If a person is taking adult education classes but not for credit, he/she is not regarded as enrolled in a "regular" school. Which category the person fits into depends on whether or not the schooling can advance a person toward an elementary school certificate, a high school diploma, or college degree.

**Training** under the Manpower and Training Act of 1962, Comprehensive Employment and Training Act (CETA), Job Training Partnership Act of 1983, or the Poverty Program - Most of the training under these acts consisted of courses at private vocational or trade schools or on-the-job training and was not in regular schools. However, if the training gave credit toward regular school, it is included. See further definition under "regular school."

### ***Employer***

**Wage and salary workers:** The employer is the person, company, corporation, or agency, who paid them. A change of occupation under the same payroll is not considered a different employer.

**Self-employed workers:** People who were self-employed the whole year, even though they may have changed their type of business, had one employer. If a person was self-employed, but closed his/her business and took a job with someone else, or if a wage and salary worker became self-employed, this person is recorded as having two employers.

**Domestic workers:** Individuals who work in and take care of people's homes.

- a person who was employed exclusively as a domestic worker or was an odd-job worker, such as gardeners, babysitters, and housekeeper is considered having one employer regardless of the number of different households the person worked (see below).
- a domestic or odd-job worker who moved between this type of job and something entirely different had two or three employers depending on the number of jobs employed at during the year.

**Number of employers:** People employed as domestics or odd-job workers, such as gardeners, babysitters, and housekeepers may regularly work for a number of people throughout the year. For these people, consider their type of work as their employer.

- one employer for a person who did housework for five different families all in 1996, even if each of the five families paid him/her for doing different tasks.
- two employers for a person who switched from doing housework the first part of the year to painting houses the second part of the year.
- only one employer in the following type of case: a field representative who, during 1996, did CPS interviewing for 3 months, did not work at all for 6 months, and then did CPS interviewing again for another 3 months (example of only one job).

***Employer or Union  
Temporary Sickness  
Program***

This privately run program (usually established by an employer or union) pays benefits to people with temporary sickness or disability. This program is not connected with any government program.

***Enrollment***

See School Enrollment

***Entry ID***

The entry ID represents the address of the person at the time he/she was first interviewed and does not change even if the person moves. It is used in conjunction with the person number to uniquely identify people within the sample unit. This variable is the number 011 for all original sample people. For additional sample people, this variable can be 011 or greater than 011 depending on the current address ID of the unit which the new sample person joined. For example, a person who moves into a household with an ADDIDEX of 011 will receive an PP\_ENTRY of 011. Whereas, a person who enters a household spawned in 2002 (ADDIDEX=161) will have a PP\_ENTRY of 161.

***Estates and Trusts***

Money received from the property or possessions of a deceased person. This money can be received on a regular basis (monthly, yearly) or may be received all at one time; for example, upon reaching a specific age. If the money is received all at once, it should be considered as a "lump sum payment."

***Ethnic Origin***

See Origin.

***Family***

The family is defined by the Census Bureau as two or more people living together who are related by blood, marriage, or adoption. On this longitudinal file, economic and demographic data are summarized for each primary and unrelated sub-family unit and each unrelated individual. A primary family is the family

containing the household reference person. An unrelated subfamily is a family that does not contain the reference person or anyone related to the reference person.

***Family Business (or Farm)***

A business (or farm) run by a member of the household who is related to the respondent by marriage, blood, or adoption.

***Family Day Care Home***

A family day care home is an arrangement in which a provider takes care of two or more children *of different parents* in the *provider's home*. This does *not* include day care centers. It also excludes arrangements in which a sitter or nanny only takes care of one or more of this parent's children.

***Family With Two or More Homes***

Some families have two or more homes and may spend part of the time in each. For such cases, the "usual residence" is the place in which the person spends the largest part of the calendar year. Only one unit can be the "usual residence."

***Farmers' Home Administration Rental Program***

In rural areas and towns with a population under 20,000 outside metropolitan areas, or 10,000 inside metropolitan areas, the Department of Agriculture program offers rental assistance to tenants of rental units built under this direct loan program. The tenants pay 30 percent of their income and the FHA pays the remainder of the rent (up to a flexible ceiling determined by the difference between operating cost of the project and the cost of repaying the loan on the project).

***Federal Civil Service or Other Federal Civilian Employee Pension***

Federal employee retirement pensions are payments by the federal government to its retired and/or disabled civilian employees and their survivors. Civilian federal government employees usually worked in the U.S. Civil Service, but may also have been postal workers or former employees of other civilian branches of the federal government, such as the Federal Reserve Bank System, Foreign Service, Tennessee Valley Authority, and the Public Health Service.

Payments are made by U.S. Treasury checks or direct deposit to the person's bank account. Currently, most payments are made by check. Payments are monthly and usually arrive in the first few days of the month. Military retirement pensions are not included.

***Federal Educational Assistance***

The federal government is a major provider of financial aid to college and university students. There are two major categories of aid — grants and loans.

## **1. Federal Grant Programs:**

**College Work-Study** - This program provides financial assistance to students by placing them in on-campus jobs which pay at least the minimum wage. Part of the wage is often paid by the employer, which may be the college or may be another organization. The rest of the wage is subsidized through funding provided by the federal government and administered by the college or university financial aid office.

**Pell Grant** - Pell Grants, formerly known as Basic Educational Opportunity Grants (BEOG), are available to undergraduates enrolled in college at least half time. A student applies when entering college and the federal government notifies the student and the educational institution if awarded.

**Supplemental Educational Opportunity Grants (SEOG's)** - The Supplemental Educational Opportunity Grants (SEOGs) are awarded to students on the basis of exceptional financial need. Like the Pell Grants, SEOGs are entirely federally funded, but they are awarded through the financial aid offices of approved educational institutions. The criteria for awarding them are, therefore, not nationally standardized. Students who receive SEOGs may receive Pell Grants as well.

**National Science Foundation (NSF) Grants** - These are competitively-awarded grants for advanced undergraduate and graduate study.

## **2. Federal Loan Programs:**

**Perkins National Direct Students Loans (NDSL)** - The National Direct Student Loan Program (NDSL), now called the Perkins NDSL, differs from the Guaranteed Student Loan program in that funds are allocated to post-secondary institutions for the purpose of making long-term, low-interest loans to students with financial need. They are fully underwritten by the federal government. Repayment begins nine months after leaving school.

**Parent Loan for Undergraduate Students (PLUS) and Supplemental Loan for Students (SLS)** - The Parent Loan for Undergraduate Students (PLUS) and the Supplemental Loan for Students (SLS) programs provide educational loans either to

parents for payment of their children's educational expenses, or directly to the student for his/her school expenses. The entire cost of the loan is underwritten by banking institutions. The main difference between PLUS/SLS loans and Stafford and Perkins Loans is that PLUS/SLS loan recipients must begin the repayment of their loan 60 days after final disbursement. Stafford loans are partially underwritten by the government.

**Stafford Loan or Guaranteed Student Loan (GSL)** - The Guaranteed Student Loan Program (GSL) provides low-interest loans to students attending institutions of higher learning and certain vocational, technical, business and trade schools. The principal of the loan is provided by participating lending institutions such as, banks and savings and loans; repayment of the loan currently begins 6 months after leaving school (although in the past this has been different), and is guaranteed by a state or private non-profit agency or it is insured directly by the U.S. Department of Education.

***Federal  
Supplemental  
Security Income  
(SSI)***

See Supplemental Security Income.

***FHA Rent  
Supplement Program***

Under this program the Federal Housing Authority (FHA) pays part of the rent for low-income families and individuals occupying certain types of HUD-assisted rental housing projects. To be eligible for assistance under the program, the family or individual must have an income below a certain maximum set for the area.

The family or individual is required to spend at least 25 percent of their income for rent. The difference between this amount and the rent charged for the unit occupied by the family or individual, is paid by the FHA to the project owner. This FHA payment is known as the rent supplement payment.

***Food Stamps***

The food stamp program provides coupons or ATM cards for low-income households to purchase food. The food stamp program is a federal program, which is administered by state and local governments.

***Foster Child Care  
Payments***

Money paid by a state or local welfare office to a person in return for his/her providing care to children placed in his/her home by the local welfare department. Expenses incurred by the person caring

for the children are included.

***Full-time (school)***

School enrollment is considered full-time when the course load meets a school's definition of "full-time" or when the course load is the same as that of a student who pursues his or her studies as his or her only activity. If all students in a school combine studies with other activities generally recognized standards from other schools were used to make a decision as to what constitutes "full-time."

***Full-time (work)***

A position is considered full-time when the person works 35 hours or more per week at that position. A person who is regularly scheduled for under 35 hours may be considered full-time in certain cases (for example, airline pilots and certain unionized jobs).

***General Assistance  
or General Relief***

State and local programs provide cash assistance to people not eligible for cash assistance, (formerly AFDC/ADC) or Supplemental Security Income (SSI), and to people awaiting enrollment in SSI. These programs are also available to people out of work who cannot qualify for unemployment insurance or whose benefits under that program are inadequate or have been exhausted. General assistance or general relief programs are often called by other names. Check with state or local welfare offices to be sure of the correct title of the program in your locality.

***General Income***

General income information is collected for all people 15 years old and over and for children under 15 years of age if the income is received by an adult on their behalf. It includes any type of income except earnings and assets income. Examples include food stamps, all types of public assistance, pension and retirement income, social security, and gifts from friends.

***G.I. Bill/VEAP  
Education Benefits***

See Veterans' Educational Assistance.

***Group Quarters***

Group quarters are non-institutional housing units occupied by nine or more persons unrelated to the head and having shared kitchen facilities or common entrance. By definition, group quarters generally include rooming and boarding houses, college dormitories, convents, monasteries, and dwellings and family-type housing (excluding barracks) on military bases.

<b><i>Gross Pay</i></b>	Total earnings before deductions such as, income tax and health insurance.
<b><i>Head Start</i></b>	Head Start is a federally-funded preschool program organized to provide educational experiences for preschool children. The child care center receives Federal Head Start funding to pay for the cost of the child care; parents of the children do not pay anything.
<b><i>Health Insurance</i></b>	A respondent is covered by health insurance if the person has a health insurance policy or is covered by a policy in his/her spouse's or parent's name. A private health insurance plan is obtained through the place of employment (an employer, union, or former employer) or from a private health insurance provider or company. This does not include plans that provide only dental care. The respondent can be covered by a government health insurance program, such as Medicare, Medicaid, or CHAMPUS/Tricare.
<b><i>Hispanic Persons</i></b>	A Hispanic (Spanish) person is a person who has one of the following ethnicities: Mexican American, Chicano, Mexican (Mexicano), Puerto Rican, Cuban, Central or South American, and other Spanish.  Note that, in accordance with the weighting specifications, Spanish population estimates do not include the Spanish sample persons in the military not living in barracks. Instead, they are treated as if they were non-spanish.
<b><i>Household Final Cross-sectional Weight</i></b>	A household final cross-sectional weight is the person final cross-sectional weight of the reference person of a SPD 2002 sample household. The household final cross-sectional weight can be for the household-level estimates of characteristics of the SPD 2002 cross-sectional universe.
<b><i>Household Initial Weight</i></b>	The initial weight of a SPD 2002 sample household is the weight resulted from adjusting its Wave 1 SIPP 1992/1993 non-interview adjusted weight to account for the combined panel effect and the sample cut (sub-sampling) effect on the SPD 2002 sample.
<b><i>Household Mover's Weight</i></b>	The household initial weight of a SPD 2002 sample household is the weight resulted from adjusting its household change between the SIPP 1992/1993 Wave 1 and the SPD 2002 due to sample persons moved into the household after Wave 1. By definition, if a sample household consists only of original sample person then the household mover's weight is the same as the household initial

weight.

### ***Hot Deck***

A hot deck is a tool used to impute missing data (see Imputation). The hot deck is usually a multi-dimensional array of values used in imputation. For example, if we want to create a hot deck to impute marital status we might define an array "MS" on three dimensions, where those dimensions are defined by the variables sex, age, and race.

Each person on the data set who has an unreported marital status is assigned a marital status from the array.

MS (missing)=MS (Sex, Age, Race)

Each person on the data set who has a reported marital status is used to update or refresh the hot deck, that is, the reported value replaces the value stored in the hot deck.

MS (Sex, Age, Race)=MS (reported)

This keeps the values in the hot deck current and relevant to the data set. This means that people receiving an imputed value for a data item, in this case marital status, will be assigned the same value as someone else with some similar characteristics, in this case someone of the same sex, age group, and race.

### ***Householder***

Householder is also known as the "reference person." The reference person is the person in whose name the home is owned or rented. If the house is owned jointly by a married couple, either the husband or the wife may be listed as the "reference person."

### ***Household Members***

Individuals whose usual place of residence at the time of interview, is the sample unit and those people staying in the sample unit who have no usual place of residence elsewhere (URE).

### ***Households***

Households, defined each interview period based on people sharing an address, are synonymous with address units. However, household composition is not explicitly collected. Instead, it is inferred from the interviews conducted at each address, based on information obtained regarding people entering and leaving the address.

### ***Housing for Elderly - - Direct Loan***

Under this program (also known as the "Section 202" program), HUD makes 100 percent loans for a maximum term of 50 years to

***Program***

nonprofit organizations. This housing is for older people with incomes too high for public housing, but too low to pay rent in the private housing market.

The low-interest payments permit nonprofit organizations to charge lower rents. Churches, labor unions, fraternal organizations, and civic clubs are generally the owners of these projects.

***Housing Unit***

A group of rooms or a single room occupied as separate living quarters or intended for occupancy as separate living quarters. A housing unit may be occupied by a family or one person. A housing unit may also be occupied by two or more unrelated people who share the living quarters.

***Housing Unit  
Classification Items***

The following items are used to determine housing unit classification.

- What is your exact address?
- Is this also the mailing address?
- What is the housing unit's geographic location (movers only)?
- Classification of living quarters.
- How many housing units, both occupied and vacant, are there in the structure?
- Tenure of the unit.
- Characteristics of the unit (in subsidized housing).

***Housing Units Not  
Within Structures***

Possible housing units not located within structures include trailers, tents, boats, cars, buses and caves. Before a unit is listed, it must meet the housing unit definition. If a trailer or tent, houseboat or yacht, converted car, bus, or railroad boxcar is either occupied or intended for occupancy as a separate living quarters on a site, it is a housing unit. Houseboats and yachts used only for vacations or overflow sleeping quarters are not housing units.

***Housing Units  
Within Structures***

Double or duplex houses, row houses, townhouses, multi-unit structures, and housing units that occupy the top portion of nonresidential structures.

***Imputation***

The process of determining a missing characteristic based on an individual's social, economic, and demographic characteristics. In general, an imputation procedure enhances the usefulness of the data. It simplifies processing for the microdata user by eliminating

“not reported” categories. It gives a user the ability to work with a more complete data set. Statistically, there are advantages and disadvantages to the use of imputed data.

***Incidental or Casual Earnings***

Earnings not received on a regular basis, for example, mowing a person's yard or babysitting weekly. These earnings are usually unplanned and sporadic.

***Income Assistance From a Charitable Group***

Includes cash assistance given by a church, synagogue, social welfare group, or some other charitable non-profit organization. Excluded are items such as meals, clothing, or a place to sleep, which are "in-kind" types of charity.

***Income From Roomers or Boarders***

Includes all money received from any roomers or boarders. Expenses incurred by the respondent (landlord) are not deducted.

***Incorporated business***

A business that has undergone the legal process of incorporating, according to the laws of the state in which the incorporation took place. Such businesses have the abbreviation “Inc.” or “Ltd.” after the company name.

***Indian Assistance Program***

There are a number of income-assistance programs for Native American Indians, which are administered by the Bureau of Indian Affairs. To be eligible for these programs a person must be a registered member of a tribe and live on or near an Indian reservation, and be ineligible for both state cash assistance (formerly AFDC/ADC) and SSI. There are some minor exceptions to this rule in Oklahoma and Alaska. A program thru which the Department of Health and Human Services provides medical assistance to eligible American Indians at IHS facilities.

***Indian Health Services (IHS)***

A health care program through which the Department of Health and Human Services provides medical assistance to eligible American Indians at IHS facilities. In addition, the IHS helps pay the cost of selected health care services provided at non-IHS facilities.

***Inmates of Specified Institutions***

Inmates of certain types of institutions at the time of interview are not household members of the sample unit. Usually, these are places that offer full custodial care and the people are expected to remain there for periods exceeding 6 months, for example, prisons or state mental health facilities. They are considered usual residents at the institution.

## *Instrument Design*

The SPD is an automated instrument using CAI.

### 1) Household Roster and Demographics Section

Household relationships help determine eligibility for many assistance and transfer programs. In order to assure that the SPD data can be used for projecting the effects of changes to such programs, as well as other family-based analyses, relationships of all household members to the householder, or reference person, are collected and edited in the instrument. Information on parental and sub-family relationships within the household are also collected.

Age checks are incorporated into a number of questions, such as the Armed Forces questions, to prevent inconsistent responses (that is, 18-year-olds who served in World War II). Information on age, sex, marital status, parental relationships, Armed Forces status (for people 18 and older), educational attainment, race, origin, and Social Security number for all people in the household are collected. Information collected in the first interview is provided in subsequent interviews, and specific items such as marital status, education level and armed forces status are verified in each succeeding interview.

Finally, the instrument uses the age, sex, and other demographic information collected to determine which questions are asked of each individual in the household during the balance of the interview.

### 2) Employment and Earnings

Employment and earnings information is collected for up to four jobs and/or businesses by SPD for all people 15 years or older living in the household. Individuals are asked only questions that pertain to their situation. The instrument collects precise information about work experience for the reference period, such as weeks worked, looking for work or on layoff, average hours employed per week, and other job-specific characteristics. Respondents not employed during the reference period are asked to furnish data on weeks looking for work or on layoff. The survey also collects detailed information on gross wages earned and fringe benefits from those jobs and/or businesses during the interview. Questions are asked also of respondents about their current employment status.

### 3) General Income and Amounts Sections

General income information is collected for all people 15 years old and over and for children under 15 years old if income was received by an adult on their behalf. Data on reciprocity and amount are collected for income sources received during the reference period (the prior year).

Reciprocity alone is collected for sources received during the reference period as a way of partially correcting for seam bias. Maximum parameters are used in real time edits to help validate amounts being recorded. Demographic characteristics of each household member are used to target questions within the instrument. Also, questions are asked about joint income receipt among household members to prevent double-counting income in the instrument. Reciprocity questions for government programs are augmented with questions to establish why reciprocity was begun or terminated as well as who in the household the program covered. In subsequent interviews, previous data are used to establish the flow of questions in the interview.

### 4) Eligibility and Assets Section

The SPD survey collects data on assets and liabilities necessary for measuring program eligibility. Assets include the primary residence, ownership of other property, and vehicles owned by household members. Data is also collected for expenditures critical to eligibility determination, including mortgage and rent, utilities, medical expenses, and child or other support payments. The survey asks about other financial obligations, such as those related to property tax or homeowner insurance and individual debts outstanding. In general, asset ownership and expenditure payments are collected for each household member in the survey.

### 5) Health Insurance Section

The SPD collects information on several different types of health insurance coverage, such as medicaid, medicare, and private health insurance. The questions determine whether the person was covered on his/her own policy, or on someone else's policy.

Additionally, the SPD asks

- how the person obtained the private health insurance,
- which months in the preceding year the person was covered by private health insurance,
- whether a person's employer or union is paying all, part or none of the person's insurance premium,
- for people not covered by insurance, why they are not covered.
- how much the person is paying for private health insurance, if applicable.

The instrument uses demographic information and data reported by other household members, which determines the questions to be asked for specific household members.

#### 6) Program Questions

The SPD collects information on specific government programs, such as subsidized housing or rent, energy assistance (including federal, state and local energy assistance), and the Federal School Lunch and School Breakfast programs. The instrument controls the conditions under which these questions are asked, for example, if there are no school-age children in the household, the questions for school lunches and breakfasts are not asked. If there are school-aged children in the household, the questions display the names of the eligible children.

#### 7) Other Adult Questions

The adult questions on educational enrollment track the progress of adults toward receiving high school or high school equivalency degrees as well as college and graduate degrees. The work training questions focus on whether adults received any work training designed to help them look for a job or to train them for a new job. Participation in these activities is tied to eligibility for receiving welfare benefits in some states. Questions on disability, health care utilization and health insurance are condensed versions of similar series included as topical modules in the SIPP. The food security series is a shortened version of the United States Department of Agriculture-sponsored food security supplement to the CPS and is intended to measure the subjective experience of hunger. The questions are used as a scale to measure the severity of

hunger in a household.

Direct changes in the food stamp program account for nearly half the total federal cost savings under the legislation. Additionally, the food stamp benefits of legal immigrants and able-bodied people ages 18-50 years old without dependents are affected almost immediately by changes in the legislation.

#### 8) Child-related questions

School enrollment and enrichment activities questions track a child's progress through and out of school over time. As household and family conditions change, student progress may be impeded or facilitated. Questions on extracurricular enrichment activities add to the overall portrait of the child's development. The extent to which parents have the financial resources or the time to devote to such activities may be strongly influenced by their program participation and employment in the labor market. Disability and health care utilization questions are similar to those asked about adults.

In the area of child care, a key objective of welfare reform is to encourage single mothers to enter or re-enter the labor force. If the demand of child care outstrips the supply, or if child care is too costly, there is the possibility that greater numbers of children will be left to care for themselves. Analysts want to match child care arrangements to the employment data for the previous calendar year. We will know the type of arrangement used as well as the months it was used.

Questions about child support and contact with an absent parent allow researchers to examine the nature of the awards and whether the awards are being followed or enforced. Child support payments are also a factor in determining the economic status of children living in single-parent families. Contact with absent parents measure the amount of time absent parents spend with their children.

#### 9) Marital Relationships, Conflict and Depression

Marital and family stability questions provide indicators of marital happiness and of overall stress that can contribute to marital and family harmony or instability. These questions are asked of the respondent only.

## 10) Adolescent Self-Administered Questionnaire (SAQ)

The SAQ contains questions about housework and chores, family routines, parent-child relationships, participation in the labor force, parental monitoring, dating, and contact with absent parents. These contact with absent parent questions are similar to the series administered to the mother or designated parent. The SAQ also includes questions on substance abuse, early sexual initiation, contraception, and childbearing. The behavior of adolescents is of particular interest because adolescents can engage in behavior that is intrinsically problematic and because adolescence is a time when children develop the skills and characteristics that increase or reduce the risk of intergenerational dependency. The adolescents either listened to the questions through headphones and marked their responses on an answer sheet in order to prevent others from hearing the questions and answers; or completed the SAQ by answering questions via telephone.

### ***Interest-Earning Checking Account***

Primary checking accounts that pay interest on monthly deposits. Some other names used for interest-earning checking accounts are: money market checking, investor checking, high-interest checking or NOW II. These accounts should not be confused with money market deposit accounts, which typically pay a higher rate of interest and limit the number of free checks that can be written.

### ***IRA***

A personal retirement plan, which allows employees, self-employed individuals, and certain other individuals, to set aside an amount of money each year for retirement in a tax-deferred account. Earnings on all amounts contributed to any IRA accumulate on a tax-deferred basis. The two kinds of IRAs are the traditional IRA and the Roth IRA.

### ***Job***

A definite arrangement for regular (full or part time) work every week or month for pay. Also, definite arrangement to work a specified amount of time, but on an irregular schedule during the week or month is also considered a job.

### ***Job Training***

Job training has one of two objectives:

- (1) to teach the trainee how to look for a job, or
- (2) to teach specific skills needed for a job or career.

A person can participate in some kinds of job training at home (for

example, by taking a correspondence course), while other sorts of job training require the trainee to attend classes at a training center.

***Joint Custody***

This may be joint physical or joint legal custody.

Joint Physical Custody : Gives each parent the right to have the child/children live with each parent part of the time.

Joint Legal Custody: Gives both parents the right to help make decisions about the child/children.

***Keogh Plan***

A qualified retirement plan maintained by a self-employed individual, either a sole proprietor or a partner. The self-employed individual may take a tax deduction for annual contributions to the plan made on behalf of the individual and on behalf of any eligible employees.

***Labor Force***

Employment status (with or without a job, on layoff, looking for work) and weeks with a job and/or without pay are indicated for each week of the reference period as are average hours of work, including part-time status (less than 35 hours per week). Adult respondents who work less than 52 weeks or without a job are asked their main reason for not working during those weeks and whether they looked for a job.

***Layoff***

People are on layoff if they are waiting to be recalled to a job from which they were temporarily separated for business-related reasons, such as temporary drops in demand, business downturns, plant remodeling, material shortages, or taking inventory. Any person forced to leave a job due to slack work conditions, shortages, or other economic conditions of the business (rather than personal misconduct) is considered "on layoff."

***Legal Custody***

Legal custody is a child custody arrangement that gives parents the right to make decisions about the child.

***Line Number of Parent***

Parents must be a household member to have a parent's line number. Parents include and exclude the following:

Include:

- Natural parents.
- Adopted parents, and
- Step-parents.

Exclude:

- Foster parents.
- In-laws, and
- Grandparents.

### ***Living Quarters Classification***

The following three concepts are used to classify living quarters.

- 1) **Direct Access:** Living quarters that have direct access, that is, an occupant can either enter his/her living quarters directly from the outside of the structure or enter his/her living quarters from a common hall or lobby that is used by occupants of more than one unit. The hall or lobby must not be part of any other unit and must be clearly separate from all units in the structure.
- 2) **Housing Unit (HU):**
  - a) House, apartment, flat - This category is for a sample unit that is a house or apartment. It includes such housing units as an apartment over a garage, in an office building, and housing units in such places as converted barns or sheds.
  - b) HU in nontransient hotel, motel - This category is for separate living quarters such as in a hotel, motel or motor court that reserves 75 percent or more of its rooms for people who stay a month or longer. By definition, all separate living quarters in a nontransient hotel, motel or motor court are housing units.
  - c) HU, permanent in transient hotel or motel - This category is for separate living quarters, occupied or intended for occupancy by permanent guests or resident employees, in a hotel, motel or motor court which has more than 25 percent of the rooms designated for people who stay less than a month.
  - d) HU in rooming house - This category is for sample units that meet the housing unit definition in rooming houses or combination rooming and boarding houses.
  - e) Mobile home or trailer with *no* permanent room added - This category is for a mobile home or trailer (even if it is on a permanent foundation). If a permanent room (or rooms) has been added, classify it as "Mobile home or trailer with one or more permanent rooms added." Open or unheated porches or sheds built onto trailers are not considered rooms.
  - f) Mobile home or trailer with one or more permanent rooms added - This category is for a mobile home or trailer to

which a permanent room (or rooms) has been added. Sheds and open or unheated porches built onto trailers are not considered rooms.

- g) HU not specified above - Included in this category are living quarters, which meet the housing unit definition, but cannot be described by the specific categories listed above. Tents, houseboats and railroad cars are included here if they meet the housing unit definition. If this category is marked, the instrument notes space contains a description of the unit.

### 3) Group Quarters Units

Group quarters units are *not* housing units. They are located in certain special places such as institutions, dormitories, and boarding houses where the residents have their own rooms, groups of rooms or beds, and also have some common facilities such as a dining hall, lobby or living rooms, or recreational areas.

- a) Group quarters, not HU in rooming or boarding house - If a unit is located in a boarding house, or is occupied by a boarder in a combination rooming and boarding house, or otherwise does not meet the housing unit definition in a rooming house or combination rooming and boarding house.
- b) Unit not permanent (for example, in transient hotel or motel) - If a unit is located in a transient hotel, motel, or motor court and is occupied or intended for occupancy by transient guests or does not meet the housing unit definition.
- c) Unoccupied tent site in a carnival or campground - If the group quarters unit is an unoccupied site for a tent.
- d) Group quarters unit not specified above - This category is for a group quarters unit not described above. Examples include rooms in student dormitories, quarters for nurses and quarters in bunkhouses. The notes space of the instrument contains a description of this type of group quarters unit.

***Local Government  
Retirement Pension***

Paid to retired people who were former employees of city, county or other local government agencies, such as police and fire departments, libraries, public schools, and hospitals, and to employees who retired early because of disability.

People with a sufficient number of years of service may retire with a pension before reaching age 65. Individuals employed in hazardous occupations, such as law enforcement, may be eligible to retire with a pension as early as age 40, if they have completed 20 or more years of service.

Most payments are made monthly by check through the mail. It is possible, however, that payments are made by direct deposit to the person's bank account. Since there are more than 2,000 state and local government pension plans, the source and appearance of the payments made by check are varied.

Some of the state retirement systems have provisions for cost-of-living increases.

***Longitudinal survey***

A longitudinal survey captures changes in household and family composition over an extended period. The SPD provides data for the following types of analysis:

- What factors affect change in household and family structure and living arrangements?
- What are the interactions between changes in the structure of households and families and the distribution of income?
- What effects do changes in household composition have on economic status and program eligibility?
- What are the primary determinants of turnover in programs such as food stamps and public assistance?

***Looking For Work***

The person must have been conducting an active search for a job to be considered “looking for work”. An active search may include registering at employment offices, meeting prospective employers, placing or answering advertisements, and/or writing letters of application.

***Low Income Home  
Energy Assistance  
Program (LIHEAP)***

The Low-Income Home Energy Assistance Program (LIHEAP) provides financial assistance to eligible households to help them pay their home energy costs. Each state has great flexibility in deciding how to distribute the money to poor households. The federal government provides the funds for this program to the

states and have made over \$1 billion available for the last several winters. In addition to federal funds, some states provided their own money for energy assistance.

### ***Lump Sum Payments***

Lump sum payments include lottery/bingo winnings, cash awards, bonuses and inheritances. Lump sum payments received from an estate or trust should be listed as a lump sum payment, not under "estates and trusts." Lump sums can also be received from a retirement plan and be invested in other assets.

### ***Marital Status***

This question is asked for people 15 years of age or older. The question includes the following codes/categories:

- 1) Married spouse present: both spouses live in the sample unit; includes people who state they have a common-law marriage; excludes "separated" people as defined below.
- 2) Married spouse absent: only one spouse currently resides in the sample unit; includes people who state they have a common-law marriage, but where one spouse is currently living elsewhere; excludes "separated" people as defined below. In this category spouse is not listed in the household membership.
- 3) Widowed: a person who has lost their spouse by death and has not remarried.
- 4) Divorced: a person whose marriage is legally terminated.
- 5) Separated: includes married people who have a legal separation or who have parted because of marital discord, but have not yet obtained a divorce. Those who have parted temporarily for other reasons (such as employment or Armed Forces) are classified as married-spouse absent).
- 6) Never married: includes people whose only marriage has been annulled or people living together who make no mention of a common-law marriage.

### ***Medicaid***

Medicaid is a jointly funded federal and state health insurance program for needy or low-income individuals and families. It also includes coverage for the aged, blind, and permanently or totally disabled individuals whose incomes and resources are insufficient to cover the cost of needed medical services. This program is administered at the state level and may be known by different

names in different states.

***Medicare***

Medicare is the federal program that helps pay health care costs for people 65 and older and for people under 65 with certain types of long-term disability and people with End-Stage Renal Disease. Most social security recipients are covered by medicare. Medicare consists of two parts:

**Part A** is called the Hospital Insurance Program. It helps pay for inpatient hospital care and is available to anyone age 65 and older, for people under 65 with certain types of long-term disability or with End-Stage Renal Disease. People who are eligible for either social security or railroad retirement benefits are not required to pay a monthly premium. However, anyone who is age 65 or older and does not qualify for social security or railroad retirement benefits may pay premiums directly to social security to obtain coverage for Part A.

**Part B** is called the Supplementary Medical Insurance Program. It is a voluntary plan, which builds upon the hospital insurance protection provided by the basic plan. It provides insurance protection covering physicians and surgeons services and a variety of medical and other health services received either in hospitals or on an ambulatory basis. It is financed through monthly premium payments by those enrolled and subsidized by federal general revenue funds.

***Members of the Armed Forces***

Members of the Armed Forces (either men or women) are considered as household members if they are stationed in the locality and usually sleep in the sample unit.

***Merger***

A merger is when a sample household containing original sample persons combines with another household containing original sample persons.

***Military Disability Retirement Pay***

Military disability retirement pay is received by former members of the U.S. Armed Forces, including active duty, national guard, or reserve forces, for service related disabilities. While there are no length of service or age requirements, servicemen must have a U.S. Department of Defense (DOD) disability rating of 30 percent or greater at the time of retirement to be eligible. (This rating may differ from the VA disability rating.) Payments are based on active duty basic pay and the DOD disability rating. Former servicemen are also eligible to receive VA disability pensions

***Military Households***

A military household is a household in which all adults are in the military or armed forces. Like SIPP, the military households are excluded from the SPD Third longitudinal weighting process, namely, assign their longitudinal panel final weights of zero.

Note that a military household was determined in Wave 1 of the SIPP Panels 1992 and 1993 and was not updated in later waves. Thus, if a sample person belonged to a military household in Wave 1 of the SIPP Panels 1992 and 1993, he/she is assumed to remain in the military household throughout the SIPP Panels 1992 and 1993 and SPD surveys in the weighting process.

***Mobile Homes***

A mobile home is a type of living quarters, originally constructed to be towed on its own chassis. It may also have permanent rooms or other structural modifications.

***Mobile Home Parks***

A mobile home park can consist of five or more mobile home sites under a single ownership or management; or a group of mobile homes parked on a common property that is operated under a single management or a homeowners' association.

A group of mobile homes or sites, regardless of the number, is not a mobile home park if the group does not have a single management or association, and the group does not have common properties or facilities.

***Mobile Homes for Migratory Workers***

A group of mobile homes with living quarters for five or more migratory workers is considered a migratory workers' camp.

***Money Market Deposit Accounts***

Money market deposit accounts pay a higher rate of interest than regular or passbook savings accounts. These accounts are only available at banks, savings and loans, and credit unions. The actual rate of interest is variable and is determined by the bank, savings and loans, or credit union. There is no fixed term of investment; money can be withdrawn at any time without penalty. The accounts are federally insured.

***Money Market Funds***

Money market funds are organized to invest in various types of short-term securities. There is no fixed rate of interest and money can be invested or withdrawn at any time. These funds are not the same as money market deposit accounts at a bank, savings and loan, or credit union.

Major money market funds are listed periodically in the financial section of major newspapers. Some of these funds are sponsored by brokerage or investment firms. The interest paid on these accounts may sometimes be called "dividends"; this should be considered as interest income.

***Money Received  
From Relatives or  
Friends***

Cash assistance given by relatives (by blood or marriage) or by personal acquaintances. These people do not live in the same household as the respondent. This does not include money received as a gift, such as for birthdays or weddings.

***Mortgage***

A mortgage is any type of loan secured by real estate. Trust deeds, mortgages, mortgage bonds, and vendors' liens are terms used in some parts of the country for type of debts that are considered mortgages or deeds of trust. There may be a security agreement or installment loan in which the lender, usually a bank, holds the title to the unit until the loan is paid. A purchaser who is buying a property with a contract to purchase may not consider himself/herself the owner, because the seller has title to the property; however, for the purpose of this survey, he/she is considered the owner.

If the house has been paid for and then used as security for a new loan, the new loan is considered a mortgage. Home equity loans are considered mortgages if the property was used as security for the loan.

***Mover***

All original sample people who move during the life of the panel. The SPD follows all original sample people if they move from the original housing unit (with certain exceptions). The SPD also collects data on all other people, including children under 15, who live with or move into households with any of the original sample people. These individuals, however, are not followed when they no longer live with an original sample person.

***Municipal or  
Corporate Bonds***

This includes marketable securities other than stocks, such as bills, certificates, notes, bonds, or debentures, issued by state or local governments or domestic corporations.

***Mutual Fund Shares***

A mutual fund is a company that pools the money of many investors (its shareholders) to invest in a variety of asset types, including stocks, bonds, real estate, and gold. Such assets are professionally managed on behalf of the shareholders, and each investor holds a pro rata share of the overall fund portfolio,

entitling them to any profits obtained from assets sales, but also subjecting them to any losses in value.

***National Guard or Reserve Forces Retirement Pay***

National Guard or Reserve Forces retirement pay is received by former members of these military organizations. In general, 20 years of qualifying service is required to be eligible, although pensions may be received by a former employee who retired early because of disability. Payments are not made until the former members reach 60 years of age. This does not include payments from other U.S. military retirement pensions or payments from the U.S. Department of Veterans Affairs.

***National Guard or Reserve Pay***

Any pay received while on active or temporary duty as a member of the National Guard or the Guard Reserve of any branch of the Armed Forces.

***National School Lunch or Breakfast Program***

The National School Lunch Program is sponsored by the U.S. Department of Agriculture and Food and Consumer Service, which subsidizes the cost of all school lunches in the country. In addition to these standard subsidies, students whose household income falls below a certain level are eligible to receive their lunches free or at a reduced price. In order to qualify, the household must apply to the local school district. The district determines who qualifies for this additional aid.

***Noninterview Household or Person***

A sample household for which information is not obtained because:

- a sample household is located, but an interview was not obtained - Type A;
- a sample household moves and is not located - Type D;
- a sample household in which all original sample persons are institutionalized - Type B; or
- a sample household in which all household members are deceased, moved out of the country, armed forces members or occupied by people not eligible for interview - Type C.

***No Usual Place of Residence Elsewhere***

People with no usual place of residence elsewhere are considered as sample household members. They include recent migrants, people trying to find permanent living quarters, and people staying temporarily in the unit who have no other home of their own. Entire households with no usual place of residence elsewhere include people who have rented or lent their usual living quarters to others and are traveling or are temporarily staying in another

unit. Often such people offer their usual living quarters for rent or sale, sometimes as furnished units, during their absence.

***Origin, Ethnicity, or Descent,***

National or cultural group from which a person is descended. It is determined by the nationality or lineage of a person's ancestors. There is no set rule as to how many generations are to be taken into account in determining origin. A respondent may report origin based on the origin of a parent, grandparent, or some ancient ancestor. Ethnic origin or descent is not necessarily related to race. That is, origin or descent and race may be considered as two independent characteristics of a person. Respondents are asked to report their origin based on the following listing:

<b><u>European Origin</u></b>	<b><u>Hispanic Origin</u></b>
Canadian	Mexican
Dutch	Mexican-American
English	Chicano
French	Puerto Rican
French-Canadian	Cuban
German	Central American
Hungarian	South American
Irish	Dominican Republic
Italian	Other Hispanic
Polish	
Russian	<b><u>Other Origins</u></b>
Scandinavian	African-American
Scotch/Irish	or Afro-American
Scottish	American Indian,
Slovak	Eskimo or Aleut
Welsh	Arab
Other European	Asian
	Pacific Islander
	West Indian
	Another group not listed

If they cannot select from the list, the field representative (FR) uses the following guidelines to determine and record origin and descent.

- 1) The response is not listed, the FR assigns the code for "Another group not listed", unless the response can be considered as one

of Spanish origin.

Examples of responses classified as "Other Spanish" are listed below:

Balearic Islands	Iberian
Basque	Majorcan
California	Spanish
Canary Islands	Spaniard
Catalonian	Spanish-American
Hispanic	Spanish-speaking

Central or South American Spanish countries are as follows:

Argentina	Guatemala
Bolivia	Nicaragua
Chile	Panama
Honduras	Paraguay
Columbia	Peru
Costa Rica	Uruguay
Ecuador	Venezuela
El Salvador	

A response such as "LaRaza" is classified as "Mexican" and "Boricura" is classified as "Puerto Rican."

- 2) If the respondent reports more than one origin and no parts are Spanish, the code for "Another group not listed" is assigned. We do not consider responses such as German-American or Italian-American as multiple origins. For cases such as these, their origin is considered as German or Italian.
- 3) If the respondent reports more than one origin and the respondent cannot give a single origin, the field representative asks for the origin of their mother and proceeds as follows:
  - If the person's mother is Spanish, the appropriate Spanish code is entered as the origin of that person.
  - If the origin of the person's mother is not Spanish, the mother's origin is entered as the origin of that person.
- 4) If the respondent is unable to report a single origin for the mother or the origin of the mother is unknown, the first origin originally mentioned for the person is entered.

- 5) Some respondents may not identify with the foreign birthplace of their ancestors or with their nationality group and may report the category "American." Those individuals are categorized as "Another group not listed."
- 6) A code D, "Don't Know" is used only if the respondent absolutely does not know his/her own or another person's origin or cannot understand the concept of origin or ancestry.
- 7) A code R, " Refusal" is used if the respondent refuses to answer the origin question.

***Original Sample  
(100 Level) Persons***

The original sample persons of the combined SIPP Panels 1992 and 1993 or the SPD Bridge (1997) panel or the SPD 1998 panel comprise the sample persons (including children) of those that belong to the SPD longitudinal sample. Namely, an original sample person was a resident of an interviewed sample household or group quarter at the time of the Wave 1 interview of the SIPP Panel 1992 or 1993. The person number of an original sample person is in the range of 100-199. Therefore, an original sample person will be occasionally referred to as “a 100 level person.”

***Other/Miscellaneous  
Cash Income Not  
Included Elsewhere***

This includes any cash income that does not fall into any specific category. This income type is intended only as a catch-all for any income that does not qualify for any other income types.

***Other Educational  
Assistance***

Includes any educational benefits that do not fit into one of the following categories.

**Federal PELL Grant** (see Federal Education Assistance)  
**Department of Veterans Affairs (VA) assistance** (see Veterans' Educational Assistance)

**College (or Federal) Work Study** (see College/School Educational Assistance)

**Other Federal grant** (see Federal Education Assistance)

**State Grants and Scholarships** – Many state governments operate grant and scholarship programs. These vary in nature by state. Many are concentrated on state-run colleges and universities; others may allow attendance at private universities at rates comparable to public university tuition. Examples include Douglas Scholarships and State Student Incentive Grant Program

(SSIGP). Loan programs should be counted as loans, not scholarships. NOTE: The SSIGP is now called the Leveraging Educational Assistance Program (LEAP).

**Grant, scholarship, or tuition remission** – includes any educational benefits (fellowships, grants, subsidies, scholarships, or stipends) provided to an individual by the school, the state, or a private organization for which no service or work was required (also see College/School Educational Assistance).

**Teaching or research assistantship from the school attended** (see College/School Educational Assistance)

**Employer assistance** – When a person holds a job during the school year (excluding work-study jobs) or prior to attending school, and the employer is paying any of the person’s educational expenses.

**Loan that has to be repaid** (see Federal Educational Assistance)

**Assistance from a welfare or social service office**

Other educational assistance does NOT include help from any family members, including trusts and estates.

***Other Financial Investments***

Other financial investments include investments in a non-corporate business venture managed by others, investments in a corporation, and other investments not reported elsewhere (for example, part-ownership of a race horse).

***Other Interest-Earning Assets***

This includes all other investments from which the person receives interest income.

***Other Payments for Retirement, Disability or Survivor***

This category is used if the person received a retirement pension of a type other than those described in the instrument. Also included in this category is any other income received because of a disability and not marked elsewhere in the instrument.

***Other Unemployment Compensation***

This category includes:

- Trade Adjustment Act allowance programs, which provide financial assistance to people who lost jobs because of importation of competitive durable goods.

- Federally financed programs (administered by the states) for certain groups of people, including federal employees, former Armed Forces members, and people who lost jobs due to natural disaster.

***Other Welfare***

Cash public assistance that cannot be included under one of the other answer categories listed. This category excludes food, food stamps, clothing, or other nonmonetary receipts.

Note: Since welfare programs such as AFDC and ADC no longer exist each state has its own welfare program. Some states use the generic name, Temporary Assistance to Needy Families (TANF). However, most states have a unique name.

***Panel***

A panel is a full sample of households that are brought online in the same year. The SPD is a longitudinal survey of adults from two different SIPP panels: 1992 and 1993.

***Parent Loan for Undergraduate Students (PLUS) and Supplemental Loan for Students (SLS)***

See Federal Educational Assistance.

***Pass-Through Child Support Payment***

Pass-through or bonus child-support payments are made to the respondent through a public assistance (formerly AFDC/ADC) agency. These types of payments are independent concepts and are not considered to be child support payments in this context.

***Payments From a Sickness, Accidents or Disability Policy***

An individual who is sick or disabled may receive income from private disability insurance, which they purchased. These policies may cover cases where either a short-term or long-term illness has forced an individual to stop working.

***Pell Grant***

See Federal Educational Assistance.

***Pension From Company or Union***

Included here are retirement pensions from a private company, local union, or from a profit-sharing plan received by people who become disabled.

A private retirement pension is received by a retired or disabled person from a former employer or labor union, either directly or through an insurance company. The respondent may identify the pension as an annuity.

Payments are likely to be made monthly by check through the mail. However, there are so many different private pension plans that it is impossible to provide details such as the method of payment or appearance of the checks. Some private pensions have cost-of-living clauses.

***Perkins National  
Direct Students  
Loans (NDSL)***

See Federal Educational Assistance.

***People in Vacation  
Homes, Tourist  
Cabins, and Trailers***

People living in vacation homes, or tourist cabins and trailers are interviewed if they have no usual residence anywhere else.

***Person Number***

The person number represents the wave the person entered the sample. Person numbers such as 0101 and 0102 are assigned in Wave 1 of the SIPP. Person numbers such as 0201 and 0202 are assigned to people added to the roster in Wave 2 of the SIPP. People added to the roster in the 2002 SPD have person numbers beginning with 1601 and 1602 and following sequentially as needed. People added to the roster in the 2001 SPD have person numbers beginning with 1501 and 1502 and following sequentially as needed. People added to the roster in the 2000 SPD have person numbers beginning with 1401 and 1402 and following sequentially as needed. People added to the roster in the 1999 SPD have person numbers beginning with 1301 and 1302 and following sequentially as needed. People added to the roster in the 1998 SPD have person numbers beginning with 1201 and 1202 and following sequentially as needed. People added to the roster in the 1997 SPD Bridge have person numbers beginning with 1101 and 1102 and following sequentially as needed.

***Person With Two  
Concurrent  
Residences***

When a person has two concurrent residences, the residence in which he/she has spent the greater number of nights during the period is considered the person's usual place of residence.

For children under a shared custody arrangement, spending equal amounts of time with each parent:

- The child is listed as a household member only if living at the unit at the time of the first interview. In later interviews the child is not considered a mover while living at the other parent's address, unless the move is permanent.

- If the child is NOT living at the sample unit at the time of the first visit, they are not included as a household member. In later interview periods, if the child is living at the sample unit, they are not included as a household member, unless the child has moved in permanently.

***Preschool***

Preschool is defined as a center providing a *structured program of educational or school-readiness* activities for a number of children under the age of 6. It is organized to provide educational experiences for children during the years preceding kindergarten. These programs are called various things in addition to “preschool,” such as pre-kindergarten, nursery school, or Head Start. Day care is a child care arrangement with the purpose of providing adult supervision and custodial care for children. Many day care programs include school readiness activities such as learning the letters of the alphabet, numbers and colors. If a day care arrangement includes a significant educational component, it is considered to be a preschool.

***Primary Family***

A primary family is the family containing the household reference person and those related to them. An unrelated subfamily is a family that does not contain the reference person nor anyone related to the reference person.

***Primary Sampling Unit (PSU)***

Divisions of the country, usually along county boundaries (along Minor Civil Divisions in New England). Primary Sampling Units are assigned a 5-digit code.

***Principal***

Principal is the amount of the mortgage(s) or home equity that is still owed, excluding any interest owed.

***Private School***

A private school is controlled or supported *primarily* by a church or religious organization or by private people or organizations.

***Program Participation***

The SPD provides information on how people participate in government programs designed to transfer portions of the national product to individuals needing assistance. These programs include Social Security, unemployment insurance, and public assistance (formerly AFDC/ADC).

Another set of programs aims mostly at eliminating poverty and its surrounding conditions. These originated during the 1960s and 1970s and included the expansion of public assistance, food stamps, subsidized school lunches, medicaid, medicare, and

housing subsidies.

Private transfer programs also have a long history. Aside from company pension plans, families share resources to help support elderly and child members as well as others who are unable to work. Private charities also provide cash and noncash assistance, though on a much smaller scale than the federal government.

***Pre SPD Panel  
Universe Leavers***

An original (100-level) sample person (adult or child) who (a) permanently (continuously) became a non-interviewed sample person *starting at any point after* Wave 1 in the SIPP panel 1992 or 1993 for one or more of the following reasons: through death, moving out of the country, being institutionalized, and living in armed forces barracks and (b) did not return later to the SPD core sample component (sample component 1) or the SPD Bridge non-interviewed sample component (sample component 2) or the SIPP 1992/1993 non-interviewed sample component (sample component 3), is classified as a pre SPD panel universe leaver.

***Pre 1998 SPD Panel  
Universe Leavers***

An original sample person (adult or child) who (a) belonged to the SPD Bridge and (b) belonged to a non-interviewed sample household in the SPD Bridge because of the entire household being deceased or moving out of the country or moving to live in armed forces barracks and (c) did not return later to the SPD core sample component (sample component 1) or the SPD Bridge non-interviewed sample component (sample component 2) or the SIPP 1992/1993 non-interviewed sample component (sample component 3), is classified as a pre 1998 SPD panel universe leaver.

***Pre 2002 SPD Panel  
Universe Leavers***

The original sample people (adults or children) who belonged to one of the following two cohorts (labeled as cohort type C\* and cohort type O\*) are classified as the pre 2002 SPD panel universe leavers. Cohort type C\* consists of the original sample people who (a) belonged to the SPD core sample component (sample component 1) or the SPD Bridge non-interviewed sample component (sample component 2) or the SIPP 1992/1993 non-interviewed sample component (sample component 3); and (b) belonged to a type C\* non-interviewed sample household in the SPD 1998 sample and did not return to any later SPD samples (the SPD 1999 to 2002 samples), *or* belonged to a type C\* non-interviewed sample household in the SPD 1999 sample and did not return to any later SPD samples (the SPD 2000 to 2002 samples), *or* belonged to a type C\* non-interviewed sample household in the SPD 2000 sample and did not return to any later SPD samples (the

SPD 2001 and 2002 samples), or belonged to a type C\* non-interviewed sample household in the SPD 2001 sample and did not return later to the SPD 2002 sample. Cohort type O\* consists of the original sample people who (a) belonged to the SPD core sample component (sample component 1) or the SPD Bridge non-interviewed sample component (sample component 2) or the SIPP 1992/1993 non-interviewed sample component (sample component 3), and (b) belonged to a type O\* non-interviewed sample household in the SPD sample 2001, and (c) died or were permanently institutionalized or permanently moved to live in armed forced barracks or permanently moved out of the country in the period between the fielding of the SPD 1998 sample and the fielding of the SPD 2001 sample, and (d) did not return later to the SPD 2002 sample. [Notes: A type C\* non-interviewed sample household in an SPD sample is a sample household that was not interviewed because of the entire household being deceased or moving out of the country or moving to live in armed forced barracks. A type O\* non-interviewed sample household in an SPD sample is a sample household that was not interviewed for any reasons other than being a type C\*, type A (direct/indirect refusal for interview), type B (entire household being institutionalized), and type D (moved to an unknown address) non-interviewed sample household. ]

***Property***

Property includes the following: the entire structure (or other type of living quarters) such as a mobile home or trailer, which contains the sample unit, the land on which it stands, and any additional structures (or other types of living quarters) on the same plot of land owned by the person who owns the structure containing the sample unit.

For cooperative and condominium units, property includes only the structure (or other type of living quarters) in which the sample unit is located and the ground on which it stands.

***Public Assistance or Welfare***

Since passage of the 1996 Personal Responsibility and Work Opportunity Reconciliation Act, programs such as AFDC and ADC no longer exist. Each state has its own welfare program. Some states use the generic name for the new type of aid -- Temporary Assistance to Needy Families (TANF). Most states have a unique name for the program, which makes it difficult to identify in a national survey. In some states, public assistance is provided at the county level and each county may have their own name for the program.

Many of these programs are variations of the old AFDC/ADC program. AFDC/ADC was a means-tested program that was state or locally administered. Eligibility for AFDC (or ADC) was based upon:

- (1) income
- (2) the incapacity or death of a parent
- (3) a parent's continued absence from the home; or
- (4) the unemployment of a parent

NOTE: Reciprocity questions for bonus or pass-through child support payments are asked only if respondents receive AFDC payments.

People applying for Public Assistance (AFDC) are required to cooperate with the public agency in securing the child support award and its collection. The agency became the collector and disbursing agent of the child support which, when received through the agency, was called a *pass-through or bonus payment*. The first designated dollar amount (the amount differs by state) per month of child support collected from the non-custodial parent is "passed through" to the AFDC recipient; the balance is retained by the agency. Information on the amounts of AFDC, pass-through payments and child support collected by the agency are obtained individually in the CAI instrument.

Because of different state accounting practices, the amount of pass-through payments reported in a given month may exceed \$50.

The amount collected by the agency should never be less than the amount received by the respondent.

***Public Housing***

Public housing implies public ownership and means that the owner is a local or state government agency. A public housing project may also be known as a housing and redevelopment authority or a housing development agency. These organizations may receive subsidies from the federal or state government, but the local agency owns the property.

***Public School***

A public school is controlled or supported *primarily* by a local, state, or federal government agency.

***Race***

The concept of race as used by the Census Bureau does not reflect clear-cut definitions of biological stock or conform to any

scientific definition. Rather, it reflects self-identification by respondents. Therefore, individuals are asked to report the race with which they most closely identify.

Race is provided for four major race groups: 1) White, 2) Black, 3) American Indian, Eskimo, and Aleut, and 4) Asian and Pacific Islander.

If the respondent replies with a response such as Japanese, Chinese, Filipino, Korean, Asian Indian, Vietnamese, Hawaiian, Guamanian, Samoan, or other Asian, the field representative enters code 4 for the appropriate person. The respondent may give two or more races, such as White and American Indian, White and Black, Chinese and Hawaiian, and so forth. In instances such as these, the field representative asks the respondent to select the one single race

category that they most closely identify with; if the respondent cannot do this, they use the race of the person's mother.

### ***Railroad Retirement Benefits***

Railroad retirement benefits are based on a person's long-term employment (10 years or more) in the railroad industry. They do not include payment from pensions established by railroad companies or unions to supplement Federal Railroad Retirements. Railroad Retirement checks are U.S. Treasury checks and may bear the letters "RR" in combination with other letters beneath the payment amount.

Railroad Retirement disability payments are received by severely disabled workers who worked long enough in "covered employment" before their disability to be entitled to payments. The worker's disability must have lasted for at least 6 months and be expected to last for at least an additional year for him/her to qualify for benefits. In addition, the worker's physical or mental condition must prevent him/her from earning substantial income from working. Payments are drawn from the U.S. Treasury.

### ***Recoding of Variables***

The following information is recoded (categories collapsed) to protect against the possibility that a user might recognize the identity of a respondent on the public use microdata files:

1. Employment:
  - number of employees at all locations.
  - self-employment industry code, and
  - occupational categories.

2. Geography:
  - states with small population are collapsed together.
3. Age:
  - age is topcoded at 92
4. Family Income
5. Household Income

***Reference Period  
for the Interview***

At each interview, respondents are asked to provide information covering different reference periods. For the SPD, the reference period is last calendar year, unless otherwise noted.

***Regular or Passbook  
Savings Account in a  
Bank, Savings and  
Loan or Credit Union***

This category includes "passbook" or "statement" savings accounts, which pay interest at market value subject to a ceiling. Checks cannot be written against the savings account. Money can usually be drawn at anytime without penalty. These accounts are only available at banks, savings and loans, and credit unions. At credit unions, interest paid on balances may sometimes be called "dividends." These earnings are treated as interest income in the Amounts sections of the instrument.

***Regular School***

Regular schools are part of a recognized regular school system--whether public or private (including parochial). They include kindergarten, elementary school, junior or senior high school, colleges, universities, or professional school (for example, medical, law, dentistry, veterinary). Regular school advances a person toward an elementary school certificate, high school diploma, or a college, university, or professional school degree. Schools for the mentally retarded or physically disabled are regular school if they meet the above criteria. A school does not have to have class levels or be graded to be a regular school. Attendance may be day or night, full-time or part-time.

Training can be differentiated from regular school by the nature of the credential awarded. Any award or certificate for completion of a training program is purely incidental to the purpose of training for employment. Only in rare instances would training count towards a broadly-recognized degree. If a training program does count for credit in regular school, few of those taking the program would be expected to use it in pursuit of a regular school degree.

***Related Subfamily***

A married couple and dependents related to the reference person, but not including him/her, such as the householder's daughter and son-in-law, or a single parent-child group where the child is under 18 and the group is related to the householder.

***Rental Property***

Income from residential, commercial, industrial and/or land rental property as well as equipment that is rented out, such as tractors, computers. There are three types of rental properties:

- 1) Residential property: Houses, apartments, or condominiums other than the person's own house, owned individually or jointly with someone else
- 2) Commercial/industrial property: A store, factory or warehouse other than the person's own business is owned individually or jointly with someone else, and
- 3) Land rental property: Land that is rented out to others for the farming or ranching

***Retainer Pay***

A military pension in which the recipient is subject to active duty recall under the Uniform Code of Military Justice. Payments begin upon the receipt of orders transferring the military member of retired/retainer status and continue until his/her death. If the recipient is recalled to active duty, the retainer pay is terminated and he/she instead receives the appropriate active duty pay.

***Retirement Income***

Includes U.S. government railroad retirement, pension from company or union, Federal Civil Service or other federal civilian employee pension, U.S. military retirement pay, retainer pay, National Guard or Reserve Forces retirement, state government pension, local government pension, and other types of pension other than Social Security.

***Royalties***

Include income from oil, gas and other mineral rights, income from patents, copyrights on literary works, trademarks and formulas. Royalties can be earned primarily from a person's major occupational activity. For example, a professional self-employed writer may receive royalties as his/her primary income. In these cases, royalties are considered as self-employment income and reported in the Earnings and Employment section of the instrument.

<b><i>Sample</i></b>	The housing units selected for interviewing. The SPD sample respondents were originally selected from 2 retired SIPP panels (1992 and 1993).
<b><i>Sample Component 1 - SPD Basic (Core) Sample Component</i></b>	The SPD basic (core) sample component consists of the SPD Bridge interviewed households and the SPD type B non-interviewed households (entirely institutionalized households) that were selected as the 1998 SPD sample (survived the SPD sample cut) and their spawned households starting from the SPD 1998 data collection and later data collections.
<b><i>Sample Component 2 - SPD Bridge Non- interviewed Sample Component</i></b>	The SPD Bridge non-interviewed sample component consists of some of the SPD Bridge type A (direct and indirect refusal) and Type D (unlocated movers) non-interviewed households that were brought back to add to the SPD 2000 sample and their spawned households after the SPD Bridge data collection and later SPD data collections.
<b><i>Sample Component 3 - SIPP 1992/1993 Non-interviewed Sample Component</i></b>	The SIPP 1992/1993 non-interviewed sample component consists of some of the SIPP panels 1992 and 1993 type A (direct and indirect refusal) and type D (unlocated movers) non-interviewed households in Wave 2 and beyond that were brought back to add to the SPD 2001 and their spawned households from the time of their attrition from the SIPP panel 1992 or 1993 and thereafter (up to the SPD 2001 and 2002 data collections).
<b><i>Sample Component 4 - Pre SPD Panel Universe Leaver Sample Component</i></b>	The pre SPD panel universe leaver sample component consists of all of the original sample people who are a pre SPD panel universe leaver (defined in other part of the glossary).
<b><i>Sample Component 5 - Pre 1998 SPD Panel Universe Leaver Sample Component</i></b>	The pre 1998 SPD panel universe leaver sample component consists of all of the original sample people who are a pre 1998 SPD panel universe leaver (defined in other part of this glossary).
<b><i>Sample Component 6 - Pre 2002 SPD Panel Universe Leaver Sample Component</i></b>	The pre 2002 SPD panel universe leaver sample component consists of all of the original sample people who are a pre 2002 SPD panel universe leaver (defined in other part of this glossary). Note that, by definition, the pre 2002 SPD panel universe leaver sample component is part (subset) of the SPD core, SPD Bridge non-interviewed, and SIPP 1992/1993 non-interviewed sample components (sample components 1 through 3), prior to the SPD

2002 sample cut.

***Sample Cut Factor***

A sample cut factor is the sub-sampling rate for a cohort or group of households in a SPD sample associated with a sample cut or a partial bringing back of the SIPP 1992/1993 or SPD Bridge (1997) non-interviewed household into a SPD sample due to budget constraint or limitation. In the entire SPD, there are the SPD 1998 sample cut, the SPD 2000 partial bringing back of the SPD Bridge non-interviewed households, the SPD 2001 partial bringing back of the SIPP 1992/1993 non-interviewed households, and the SPD 2002 sample cut.

***Sample Unit***

A sample unit is the ADDRESS selected into the sample.

***Sample Unit Identification Number***

Was created by scrambling together the PSU, segment, and serial numbers used for Census Bureau administrative purposes. These identifiers are constructed in the same manner as the 1992 and 1993 SIPP panel files, to enable matching to these files. The sample unit identification number and address ID code uniquely identifies each household in any given wave. The sample unit identification number can link all households in subsequent waves back to the original Wave 1 household.

***Scholarships***

See Other Educational Assistance.

***School Enrollment Level***

The school enrollment codes for adults in the SPD are based on a three part question to people who say they were enrolled in school during the reference period. The codes do not match those asked of children, nor do they match the questions in the SIPP.

The question sequence is as follows:

- Was it a high school, college, vocational school or something else?
- [If in high school] In what grade are you enrolled?
- [If in vocational, technical, business school or college] At what level were you enrolled?

The answer codes start with (1) for each question.

There is a single school enrollment question for children 17 and under in the SPD:

- In what grade was ... enrolled?

Answers are (K) for kindergarten, (1) - (12) for first grade through 12th grade, and (P) for postsecondary enrollment.

College enrollment level is determined by completion of course work that counts toward the current degree goal. If the school has a set number of credits for counting a person such as a freshman or sophomore that classification scheme should be used. Otherwise, if a person has completed the course work a full-time student would typically complete in one year, he or she should be counted as a sophomore, and so on for further years. If a person has completed courses at another institution, then only those that count at the current institution should be included. For instance, a person who transferred to a four-year college from a community college after attending for two years might still be considered a sophomore if some of the credits earned at the community college did not transfer.

***Seamen***

Crew members of a vessel. They are considered to be household members at their homes rather than on the vessel, regardless of the length of their trips and regardless of whether they are at home or on the vessel at the time of the interview (assuming they have a usual place of residence).

***Section 8 Rental Assistance Program***

Rental assistance payments are made to the private owners of newly constructed or existing housing units on behalf of low-income tenants who applied to the local housing authority. The local government program for assistance to tenants pays 30 percent of household income for rent, with the federal assistance payment making up the difference between the tenant's payment and a fair market rental, based on the rents for equivalent units in the area.

***Section 236 Housing***

The Federal Housing Administration (FHA) finances the construction or rehabilitation of rental or cooperative detached, semi-detached, row, walkup, or elevator type structures primarily for lower-income families or individuals 62 years or older or handicapped, with priority in occupancy going to those displaced by urban renewal or other governmental actions; up to 10 percent of the units may be occupied by lower-income individuals under age 62 who are not handicapped.

Assistance for mortgages insured under Section 236 is provided in the form of periodic interest-reduction payments to the mortgagee on behalf of the mortgagor, which serve to reduce interest costs on a market-rate project mortgage.

These payments enable rentals to be reduced to a basic rental charge, determined for each unit on the basis of operating the project with such payments. A tenant or cooperative member pays either the basic charge or a greater amount, which represents 35 percent of his/her income, but does not exceed the fair market rental charge. This is determined on the basis of operating the project without any interest-reduction payments.

***Segment Number***

All surveys use a four-digit segment number. Each segment number is unique within the survey and field PSU.

***Self-Employed***

Someone working for profit at his/her OWN business, shop, office, or farm. The business may be incorporated or unincorporated.

***Separate Living Quarters***

A separate living quarters is one in which the quarter's occupants:

- Live and eat separately from all other people on the property
- Have direct access to their living quarters from the outside or through a common hall or lobby (for example, apartment buildings)

***Serial Number***

The first time an address is in a current sample a two-digit serial number is assigned on the first cluster of lines designated for that sample. After the address has been listed, a serial number is assigned to units in the current sample only which have a unit that has been listed. Serial numbers are assigned consecutively within segment, within sample.

***Sex***

The appropriate responses are "male" or "female" for each person in the household. The answer to the question is usually determined from the name and relationship questions. However, if there is any doubt, then the question is asked as worded.

***SIPP Panel Number***

The SIPP panel number identifies the panel in which the respondent participated. The sample person should either have an entry of 1992 or 1993 for their panel number.

***Social Security Benefits***

Social security payments are received by people who have worked long enough in "covered" employment (that is, employment in which Social security deductions were made from a person's salary). Social security payments may also be made to the spouse or dependent children of covered workers.

The Social Security Administration also pays benefits to student dependents (under age 19) of eligible Social Security annuitants who are disabled or deceased. Benefits are paid by the federal government directly to the student.

Social Security checks are U.S. Treasury checks, which bear the letters "SOC SEC" beneath the payment amount.

***Social Security  
Number and  
Railroad Retirement  
Number***

Social security or Federal Railroad Retirement number is asked the first time an individual is interviewed. It is also collected on sequential interviews if it is not obtained during a previous interview.

***Spawning***

The process of creating a new household on the laptop computer, because an original sample person moved is called "spawning". Spawning allows additional cases for the newly formed mover household to be created.

***SPD Longitudinal  
Panel Sample***

The SPD longitudinal panel cohort only consists of the sample persons (including children) who, at the time of Wave 1 interview of the SIPP Panel 1992 or 1993, resided in an interviewed sample household or group quarter. Note that other sample persons that lived with those belonging to the SPD longitudinal panel cohort were included on the SPD longitudinal panel file as well.

***SPD Panel Universe***

The SPD panel universe consists of persons (including children) resident in the United States civilian and military households and persons living in group quarters in March 1993. (Note that persons living in military barracks and institutions, such as prisons and nursing homes, are excluded.) Namely, the effect of the Welfare Reform will be assessed based on this group of persons, and March 1993 will be referred to as the control date (reference point in time) of the SPD panel universe.

***2000 SPD Panel  
Universe Leaver in  
the SPD Core Sample  
Component (Sample  
Component 1)***

An original sample person belonging to the SPD core sample component (sample component 1) is classified as a 2000 SPD panel universe leaver (in the SPD core sample component) if he/she permanently (continuously) became a non-interviewed sample person *starting at any point between* the SPD 1998 and the SPD 2000 for one or more of the following reasons: through death, moving out of the country, being institutionalized, and living in armed forces barracks.

***2001 SPD Panel  
Universe Leaver in  
the SPD Core Sample  
Component (Sample  
Component 1)***

An original sample person belonging to the SPD core sample component (sample component 1) is classified as a 2001 SPD panel universe leaver (in the SPD core sample component) if he/she permanently (continuously) became a non-interviewed sample person *starting at any point between* the SPD 1998 and the SPD 2001 for one or more of the following reasons: through death, moving out of the country, being institutionalized, and living in armed forces barracks.

***2002 SPD Panel  
Universe Leaver in  
the SPD Core Sample  
Component (Sample  
Component 1)***

An original sample person belonging to the SPD core sample component (sample component 1) and *surviving* the SPD 2002 sample cut is classified as a 2002 SPD panel universe leaver (in the SPD core sample component) if he/she permanently (continuously) became a non-interviewed sample person *starting at any point between* the SPD 1998 and the SPD 2002 for one or more of the following reasons: through death, moving out of the country, being institutionalized, and living in armed forces barracks.

***2000 SPD Panel  
Universe Leaver in  
the SPD Bridge Non-  
interviewed Sample  
Component (Sample  
Component 2)***

An original sample person belonging to the SPD Bridge non-interviewed sample component (sample component 2) is classified as a 2000 SPD panel universe leaver (in the SPD Bridge non-interviewed sample component) if he/she became a non-interviewed sample person *in* the SPD 2000 for one of the following reasons: through death, moving out of the country, being institutionalized, and living in armed forces barracks.

***2001 SPD Panel  
Universe Leaver in  
the SPD Bridge Non-  
interviewed Sample  
Component (Sample  
Component 2)***

An original sample person belonging to the SPD Bridge non-interviewed sample component (sample component 2) is classified as a 2001 SPD panel universe leaver (in the SPD Bridge non-interviewed sample component) if he/she permanently (continuously) became a non-interviewed sample person *starting at any point between* the SPD 2000 and the SPD 2001 for one or more of the following reasons: through death, moving out of the country, being institutionalized, and living in armed forces barracks.

***2002 SPD Panel  
Universe Leaver in  
the SPD Bridge Non-  
interviewed Sample  
Component (Sample  
Component 2)***

An original sample person belonging to the SPD Bridge non-interviewed sample component (sample component 2) and *surviving* the SPD 2002 sample cut is classified as a 2002 SPD panel universe leaver (in the SPD Bridge non-interviewed sample component) if he/she permanently (continuously) became a non-interviewed sample person *starting at any point between* the SPD 2000 and the SPD 2002 for one or more of the following reasons: through death, moving out of the country, being institutionalized,

and living in armed forces barracks.

***2001 SPD Panel  
Universe Leaver in  
the SIPP 1992/1993  
Non-interviewed  
Sample Component  
(Sample Component  
3)***

An original sample person belonging to the SIPP 1992/1993 non-interviewed sample component (sample component 3) is classified as a 2001 SPD panel universe leaver (in the SIPP 1992/1993 non-interviewed sample component) if he/she became a non-interviewed sample person *in* the SPD 2001 for one of the following reasons: through death, moving out of the country, being institutionalized, and living in armed forces barracks. *Note that there are no 2000 SPD panel universe leavers in the SIPP 1992/1993 non-interviewed sample component because this sample component was fielded for the first time in 2001 (as part of the SPD 2001 sample).*

***2002 SPD Panel  
Universe Leaver in  
the SIPP 1992/1993  
Non-interviewed  
Sample Component  
(Sample Component  
3)***

An original sample person belonging to the SIPP 1992/1993 non-interviewed sample component (sample component 3) and *surviving* the SPD 2002 sample cut is classified as a 2002 SPD panel universe leaver (in the SIPP 1992/1993 non-interviewed sample component) if he/she permanently (continuously) became a non-interviewed sample person *starting at any point between* the SPD 2001 and the SPD 2002 for one or more of the following reasons: through death, moving out of the country, being institutionalized, and living in armed forces barracks.

***2000 SPD Quasi-  
longitudinal Panel  
Interviewed Sample  
Persons***

*For sample component 1 - the SPD core sample component*, an original sample person *belonging to* cohorts QLW00A or QLW00B (defined in other part of this glossary) is a 2000 SPD quasi-longitudinal panel *interviewed* sample person.

*For sample component 2 - the SPD Bridge non-interviewed sample component*, an original sample person *belonging to* cohorts QLW00C or QLW00D (defined in other part of this glossary) is a 2000 SPD quasi-longitudinal panel *interviewed* sample person.

*For sample component 4 - the pre SPD panel universe leaver sample component*, an original sample person *belonging to* cohort QLW00E (defined in other part of this glossary) is a 2000 SPD quasi-longitudinal panel *interviewed* sample person. Note that, by definition of QLW00F, all original sample people belonging to sample component 4 are 2000 quasi-longitudinal panel interviewed sample persons.

*For sample component 5- the pre 1998 SPD panel universe leaver sample component*, an original sample person *belonging to* cohort

QLW00F (defined in other part of this glossary) is a 2000 SPD quasi-longitudinal panel *interviewed* sample person. Note that, by definition of QLW00G, all original sample people belonging to sample component 5 are 2000 quasi-longitudinal panel interviewed sample persons.

***2000 SPD Quasi-longitudinal Panel Non-interviewed Sample Persons***

*For sample component 1 - the SPD core sample component, an original sample person not belonging to cohorts QLW00A or QLW00B (defined in other part of this glossary) is a 2000 SPD quasi-longitudinal panel non-interviewed sample person.*

*For sample component 2 - the SPD Bridge non-interviewed sample component, an original sample person not belonging to cohorts QLW00C or QLW00D (defined in other part of this glossary) is a 2000 SPD quasi-longitudinal panel non-interviewed sample person.*

*For sample component 3 - the SIPP 1992/1993 non-interviewed sample component, all original sample persons belonging to sample component 3 are 2000 SPD quasi-longitudinal panel non-interviewed sample persons.*

***2000 SPD Quasi-longitudinal Panel Excluded Sample Persons***

A sample person (adult or child) who is *either* a non-original sample person (200+ level) *or* an original sample person but does not belong to one of sample components 1 through 5 (defined in other part of this glossary) is a 2000 SPD quasi-longitudinal panel *excluded* sample person in the process of deriving the 2000 SPD quasi-longitudinal panel weight SPDQLW00 per se. Namely, he/she is excluded from the 2000 SPD quasi-longitudinal panel weighting process and his/her 2000 SPD quasi-longitudinal panel weight is assigned as zero (SPDQLW00 = 0).

*Note that, in the process of deriving the longitudinal annual weight SPDQAW00 associated with the 2000 SPD quasi-longitudinal panel weight SPDTAW00, the non-original sample children born after Wave 1 of the SIPP Panels 1992 and 1993 are included in the process. Namely, a non-original sample child will have a positive SPDQAW00 if his/her designated parent has a positive SPDQLW00, otherwise, he/she will have a zero SPDQAW00.*

***2001 SPD Quasi-longitudinal Panel Interviewed Sample Persons***

*For sample component 1 - the SPD core sample component, an original sample person belonging to cohorts QLW01A or QLW01B (defined in other part of this glossary) is a 2001 SPD quasi-longitudinal panel interviewed sample person.*

*For sample component 2 - the SPD Bridge non-interviewed sample component, an original sample person belonging to cohorts QLW01C or QLW01D (defined in other part of this glossary) is a 2001 SPD quasi-longitudinal panel interviewed sample person.*

*For sample component 3 - the SIPP 1992/1993 non-interviewed sample component, an original sample person belonging to cohorts QLW01E or QLW01F (defined in other part of this glossary) is a 2001 SPD quasi-longitudinal panel interviewed sample person.*

*For sample component 4 - the pre SPD panel universe leaver sample component, an original sample person belonging to cohort QLW01G is a 2001 SPD quasi-longitudinal panel interviewed sample person. Note that, by definition of QLW01G, all original sample people belonging to sample component 4 are 2001 quasi-longitudinal panel interviewed sample persons.*

*For sample component 5- the pre 1998 SPD panel universe leaver sample component, an original sample person belonging to cohort QLW01H is a 2001 SPD quasi-longitudinal panel interviewed sample person. Note that, by definition of QLW01H, all original sample people belonging to sample component 5 are 2001 quasi-longitudinal panel interviewed sample persons.*

***2001 SPD Quasi-longitudinal Panel Non-interviewed Sample Persons***

*For sample component 1 - the SPD core sample component, an original sample person not belonging to cohorts QLW01A or QLW01B (defined in other part of this glossary) is a 2001 SPD quasi-longitudinal panel non-interviewed sample person.*

*For sample component 2 - the SPD Bridge non-interviewed sample component, an original sample person not belonging to cohorts QLW01C or QLW01D (defined in other part of this glossary) is a 2001 SPD quasi-longitudinal panel non-interviewed sample person.*

*For sample component 3 - the SIPP 1992/1993 non-interviewed sample component, an original sample person not belonging to cohorts QLW01E or QLW01F (defined in other part of this glossary) is a 2001 SPD quasi-longitudinal panel non-interviewed sample person.*

***2001 SPD Quasi-longitudinal Panel Excluded Sample***

A sample person (adult or child) who is *either* a non-original sample person (200+ level) *or* an original sample person but does not belong to one of sample components 1 through 5 (defined in

**Persons**

other part of this glossary) is a 2001 SPD quasi-longitudinal panel *excluded* sample person in the process of deriving the 2001 SPD quasi-longitudinal panel weight SPDQLW01 per se. Namely, he/she is excluded from the 2001 SPD quasi-longitudinal panel weighting process and his/her 2001 SPD quasi-longitudinal panel weight is assigned as zero (SPDQLW01 = 0).

*Note that, in the process of deriving the longitudinal annual weight SPDQAW01 associated with the 2001 SPD quasi-longitudinal panel weight SPDTAW01, the non-original sample children born after Wave 1 of the SIPP Panels 1992 and 1993 are included in the process. Namely, a non-original sample child will have a positive SPDQAW01 if his/her designated parent has a positive SPDQLW01, otherwise, he/she will have a zero SPDQAW01.*

**2002 SPD Quasi-longitudinal Panel Interviewed Sample Persons**

*For sample component 1 - the SPD core sample component (apply only to the original sample persons surviving the SPD 2002 sample cut), an original sample person belonging to cohorts QLW02A or QLW02B (defined in other part of this glossary) is a 2002 SPD quasi-longitudinal panel interviewed sample person.*

*For sample component 2 - the SPD Bridge non-interviewed sample component (apply only to the original sample persons surviving the SPD 2002 sample cut), an original sample person belonging to cohorts QLW02C or QLW02D (defined in other part of this glossary) is a 2002 SPD quasi-longitudinal panel interviewed sample person.*

*For sample component 3 - the SIPP 1992/1993 non-interviewed sample component (apply only to the original sample persons surviving the SPD 2002 sample cut), an original sample person belonging to cohorts QLW02E or QLW02F (defined in other part of this glossary) is a 2002 SPD quasi-longitudinal panel interviewed sample person.*

*For sample component 4 - the pre SPD panel universe leaver sample component, an original sample person belonging to cohort QLW02G (defined in other part of this glossary) is a 2002 SPD quasi-longitudinal panel interviewed sample person. Note that, by definition of QLW02G, all original sample people belonging to sample component 4 are 2002 SPD quasi-longitudinal panel interviewed sample persons.*

*For sample component 5 - the pre 1998 SPD panel universe leaver*

*sample component*, an original sample person *belonging to* cohort QLW02H (defined in other part of this glossary) is a 2002 SPD quasi-longitudinal panel *interviewed* sample person. Note that, by definition of QLW02H, all original sample people belonging to sample component 5 are 2002 SPD quasi-longitudinal panel *interviewed* sample persons.

*For sample component 6 - the pre 2002 SPD panel universe leaver sample component*, an original sample person *belonging to* cohort QLW02I (defined in other part of this glossary) is a 2002 SPD quasi-longitudinal panel *interviewed* sample person. Note that, by definition of QLW02I, all original sample people belonging to sample component 6 are 2002 SPD quasi-longitudinal panel *interviewed* sample persons.

**2002 SPD Quasi-longitudinal Panel Non-interviewed Sample Persons**

*For sample component 1 - the SPD core sample component (apply only to the original sample persons surviving the SPD 2002 sample cut)*, an original sample person (who survived the SPD 2002 sample cut) *not belonging to* cohorts QLW02A or QLW02B (defined in other part of this glossary) is a 2002 SPD quasi-longitudinal panel *non-interviewed* sample person.

*For sample component 2 - the SPD Bridge non-interviewed sample component (apply only to the original sample persons surviving the SPD 2002 sample cut)*, an original sample person (who survived the SPD 2002 sample cut) *not belonging to* cohorts QLW02C or QLW02D (defined by in other part of this glossary) is a 2002 SPD quasi-longitudinal panel *non-interviewed* sample person.

*For sample component 3 - the SIPP 1992/1993 non-interviewed sample component (apply only to the original sample persons surviving the SPD 2002 sample cut)*, an original sample person (who survived the SPD 2002 sample cut) *not belonging to* cohorts QLW02E or QLW02F (defined in other part of this glossary) is a 2002 SPD quasi-longitudinal panel *non-interviewed* sample person.

**2002 SPD Quasi-longitudinal Panel Excluded Sample Persons**

A sample person (adult or child) who *is* (a) a non-original sample person (200+ level) *or* (b) an original sample person but does not belong to one of sample components 1 through 5 (defined respectively by definitions G1 through G5) *or* (c) an original sample person belonging to sample components 1 through 3 but not belonging to sample component 6 (defined in other part of this

glossary) and not surviving the SPD 2002 sample cut, is a 2002 SPD quasi-longitudinal panel *excluded* sample person in the process of deriving the 2002 SPD quasi-longitudinal panel weight SPDQLW02 per se. Namely, he/she is excluded from the 2002 SPD quasi-longitudinal panel weighting process and his/her 2002 SPD quasi-longitudinal panel weight is assigned as zero (SPDQLW02 = 0).

*Note that, in the process of deriving the longitudinal annual weight SPDQAW02 associated with the 2002 SPD quasi-longitudinal panel weight SPDTAW02, the non-original sample children born after Wave 1 of the SIPP Panels 1992 and 1993 are included in the process. Namely, a non-original sample child will have a positive SPDQAW02 if his/her designated parent has a positive SPDQLW02, otherwise, he/she will have a zero SPDQAW02.*

**2001 SPD  
Traditional  
Longitudinal Panel  
Interviewed Sample  
Persons**

*For sample component 1 - the SPD core sample component, an original sample person belonging to cohorts TLW01A or TLW01B (defined in other part of this glossary) is a 2001 SPD traditional longitudinal panel interviewed sample person.*

*For sample component 4 - The pre SPD panel universe leaver sample component, an original sample person belonging to cohort TLW01C (defined in other part of this glossary) is a 2001 SPD traditional longitudinal panel interviewed sample person.*

*For sample component 5 - The pre 1998 SPD panel universe leaver sample component, an original sample person belonging to cohort TLW01D (defined in other part of this glossary) is a 2001 SPD traditional longitudinal panel interviewed sample person.*

**2001 SPD  
Traditional  
Longitudinal Panel  
Non-interviewed  
Sample Persons**

*For sample component 1 - the SPD core sample component, an original sample person not belonging to cohorts TLW01A or TLW01B (defined in other part of this glossary) is a 2001 SPD traditional longitudinal panel non-interviewed sample person.*

*For sample component 2 - the SPD Bridge non-interviewed sample component, each of these original sample persons is a 2001 SPD traditional longitudinal panel non-interviewed sample person (because all of the original sample persons in the SPD Bridge non-interviewed sample component belonged to a type A or type D non-interviewed sample household in the SPD Bridge and their missing data were not imputed for the SPD Bridge, the SPD 1998, and the SPD 1999).*

*For sample component 3 - the SIPP 1992/1993 non-interviewed sample component, each of these original sample persons is a 2001 SPD traditional longitudinal panel non-interviewed sample person (because all of the original sample persons in the SIPP 1992/1993 non-interviewed sample component belonged to a type A or type D non-interviewed sample households in the SIPP panel 1992 or 1993 and their missing data were not imputed for the SIPP panel 1992/1993, the SPD Bridge, and the SPD 1998 through the SPD 2000).*

*For sample component 4 - The pre SPD panel universe leaver sample component, an original sample person not belonging to cohort TLW01C (defined in other part of this glossary) is a 2001 SPD traditional longitudinal panel non-interviewed sample person.*

*For sample component 5 - The pre 1998 SPD panel universe leaver sample component, an original sample person not belonging to cohort TLW01D (defined in other part of this glossary) is a 2001 SPD traditional longitudinal panel non-interviewed sample person.*

**2001 SPD  
Traditional  
Longitudinal Panel  
Excluded Sample  
Persons**

A sample person (adult or child) who is *either* a non-original sample person (200+ level) *or* an original sample person but does not belong to one of sample components 1 through 5 (defined in other part of this glossary) is a 2001 SPD traditional longitudinal panel *excluded* sample person in the process of deriving the 2001 SPD traditional longitudinal panel weight SPDTLW01 per se. Namely, he/she is excluded from the 2001 SPD traditional longitudinal panel weighting process and his/her 2001 SPD traditional longitudinal panel weight is assigned as zero (SPDTLW01 = 0).

*Note that, in the process of deriving the longitudinal annual weight SPDTAW01 associated with the 2001 SPD traditional longitudinal panel weight SPDTAW01, the non-original sample children born after Wave 1 of the SIPP Panels 1992 and 1993 are included in the process. Namely, a non-original sample child will have a positive SPDTAW01 if his/her designated parent has a positive SPDTLW01, otherwise, he/she will have a zero SPDTAW01.*

**2002 SPD  
Traditional  
Longitudinal Panel  
Interviewed Sample**

*For sample component 1 - the SPD core sample component (apply only to the original sample persons who survived the SPD 2002 sample cut), an original sample person belonging to cohorts TLW02A or TLW02B (defined in other part of this glossary) is a*

***Persons***

2002 SPD traditional longitudinal panel *interviewed* sample person.

*For sample component 4 - The pre SPD panel universe leaver sample component*, an original sample person *belonging to* cohort TLW02C (defined in other part of this glossary) is a 2002 SPD traditional longitudinal panel *interviewed* sample person.

*For sample component 5 - The pre 1998 SPD panel universe leaver sample component*, an original sample person *belonging to* cohort TLW02D (defined in other part of this glossary) is a 2002 SPD traditional longitudinal panel *interviewed* sample person.

*For sample component 6 - The pre 2002 SPD panel universe leaver sample component*, an original sample person *belonging to* sample component 1 and cohort TLW02E (defined in other part of this glossary) is a 2002 SPD traditional longitudinal panel *interviewed* sample person.

***2002 SPD  
Traditional  
Longitudinal Panel  
Non-interviewed  
Sample Persons***

*For sample component 1 - the SPD core sample component (apply only to the original sample persons surviving the SPD 2002 sample cut)*, an original sample person (who survived the SPD 2002 sample cut) not belonging to cohorts TLW02A or TLW02B (defined in other part of this glossary) is a 2002 SPD traditional longitudinal panel *non-interviewed* sample person.

*For sample component 2 - the SPD Bridge non-interviewed sample component (apply only to the original sample persons surviving the SPD 2002 sample cut)*, each of these original sample persons is a 2002 SPD traditional longitudinal panel non-interviewed sample person (because all of the original sample persons in the SPD Bridge non-interviewed sample component belonged to a type A or type D non-interviewed sample households in the SPD Bridge and their missing data were not imputed for the SPD Bridge, the SPD 1998, and the SPD 1999).

*For sample component 3 - the SIPP 1992/1993 non-interviewed sample component (apply only to the original sample persons surviving the SPD 2002 sample cut)*, each of these original sample persons is a 2002 SPD traditional longitudinal panel non-interviewed sample person (because all of the original sample persons in the SIPP 1992/1993 non-interviewed sample component belonged to a type A or type D non-interviewed sample household in the SIPP panel 1992 or 1993 and their missing data were not

imputed for the SIPP panel 1992/1993, the SPD Bridge, and the SPD 1998 through the SPD 2000).

*For sample component 4 - The pre SPD panel universe leaver sample component, an original sample person not belonging to cohort TLW02C (defined in other part of this glossary) is a 2002 SPD traditional longitudinal panel non-interviewed sample person.*

*For sample component 5 - The pre 1998 SPD panel universe leaver sample component, an original sample person not belonging to cohort TLW02D (defined in other part of this glossary) is a 2002 SPD traditional longitudinal panel non-interviewed sample person.*

*For sample component 6 - The pre 2002 SPD panel universe leaver sample component, (a) an original sample person belonging to sample component 1 (the SPD core sample component) but not belonging to cohort TLW02E (defined in other part of this glossary) is a 2002 SPD traditional longitudinal panel non-interviewed sample person, (b) an original sample person belonging to sample component 2 (the SPD Bridge non-interviewed sample component) is a 2002 SPD traditional longitudinal panel non-interviewed sample person, and (c) an original sample person belonging to sample component 3 (the SIPP 1992/1993 non-interviewed sample component) is a 2002 SPD traditional longitudinal panel non-interviewed sample person.*

**2002 SPD  
Traditional  
Longitudinal Panel  
Excluded Sample  
Persons**

A sample person (adult or child) who is (a) a non-original sample person (200+ level) *or* (b) an original sample person but does not belong to one of sample components 1 through 5 (defined in other part of this glossary) *or* (c) an original sample person belonging to sample components 1 through 3 but not belonging to sample component 6 (defined in other part of this glossary) and not surviving the SPD 2002 sample cut, is a 2002 SPD traditional longitudinal panel *excluded* sample person in the process of deriving the 2002 SPD traditional longitudinal panel weight SPDTLW02 per se. Namely, he/she is excluded from the 2002 SPD traditional longitudinal panel weighting process and his/her 2002 SPD traditional longitudinal panel weight is assigned as zero (SPDTLW02 = 0).

*Note that, in the process of deriving the longitudinal annual weight SPDTAW02 associated with the 2002 SPD traditional longitudinal panel weight SPDTAW02, the non-original sample children born*

*after Wave 1 of the SIPP Panels 1992 and 1993 are included in the process. Namely, a non-original sample child will have a positive SPDTAW02 if his/her designated parent has a positive SPDTLW02, otherwise, he/she will have a zero SPDTAW02.*

***Stafford Loan or  
Guaranteed Student  
Loan (GSL)***

See Federal Educational Assistance.

***State Children's  
Health Insurance  
Program (SCHIP)  
Address Unit***

Program administered at the state-level to provide health-care coverage to low-income children (18 and under) whose parents do not qualify for medicaid. SCHIP may be known by different names in different states.

***State Government  
Retirement Pension***

State government retirement pensions include payments by state government agencies, such as colleges, universities or state hospitals, to their retired former employees, including employees who retired early because of disability.

***State Supplemental  
Security Income  
(State Administered  
SSI Only)***

The SSI program is administered by the Social Security Administration. Each state may add to the federal payment from its own funds. This additional money may be included in the federal payment or it may be received as a separate check. If it is combined with the federal payment, the words "STATE PAYMENT INCLUDED" will appear on the federal check. Some states make SSI payments to individuals who do not receive a federal payment.

Respondents may have difficulty distinguishing between federal and state or local SSI payments. If the check is a U.S. Treasury check, one may assume it is a federal check. The phrase "Supplemental Security Income Payment" is printed on the federal check. Checks received directly from the state or local welfare office will vary in color and wording from state to state, or even county to county.

***State Temporary  
Sickness or Disability  
Benefits***

This is available in several states, and it provides benefits to people with nonwork-connected temporary sickness or disability.

***State Unemployment  
Compensation***

Money received from state government unemployment insurance funds to help replace wages lost during times of layoff or unemployment.

***Stocks***

This includes both common and preferred stock in private corporations, generally purchased through a broker. Shares of stock in any "closely-held" corporations are not included.

***Structure***

A structure is a separate building that either:

- Has open space on all sides (no other building attached to it), or
- Is separated from other structures by dividing walls that extend from ground to roof

Residential buildings are considered to be separate structures if the common wall between them goes from ground to roof; for example, double houses, duplex houses, row houses, and houses attached to nonresidential structures.

Note: Sheds and private garages attached to houses are not considered separate structures because they are not intended for occupancy as separate living quarters.

***Students (Not Student Nurses)***

Unmarried students living away from home while attending school, college, trade or commercial school in another locality, are members of the household back at their home and should not be interviewed in the locality where they are attending school. Conversely, if the student reports having left home permanently, consider the student to be a household member at the school address. A married student who is living with a spouse and family is interviewed in the locality where he/she is attending school. Such people do not consider their parent's home their usual place of residence after they are married.

Unmarried students who are working away from their parent's home during summer school vacation are considered as household members of the sample unit if the living quarters are being held in the sample unit for them.

Students who attend school outside of the United States at the time of interview are not considered household members. However, if the student is in the household at the time of interview (for example, home on summer vacation) and has no other place of residence in the United States, they are counted as a household member.

***Student Nurses***

Student nurses are not students in the usual sense because they generally live year round at their place of training and the rules applicable to other students do not apply. Student nurses are considered residents of the hospital, nurse's home, or other place in which they live while receiving training, even though they may have a home elsewhere and visit it occasionally. Similarly, if the student nurse is living in a nurse's home, he/she would be interviewed as a resident there. If the student nurse is living at home while in training he/she is interviewed at home.

***Supplemental Educational Opportunity Grants (SEOG's)***

See Federal Educational Assistance.

***Supplemental Security Income (SSI)***

A federally administered program that pays monthly benefits to aged, disabled, and blind people who have limited income and assets. SSI payments can also be paid to disabled and/or blind people regardless of age. Further, a person may be eligible for SSI payments even if they have never worked.

Even though the Social Security Administration administers the basic SSI program, income from SSI is NOT the same as Social Security. The money for these programs comes from two distinct sources, and if eligible, people can get SSI in addition to Social Security. People in this program will receive a U.S. Treasury Check, or direct deposit.

***Supplemental Unemployment Benefits (SUB)***

Money received from a fund set up by private employers and negotiated by labor unions (mainly auto and steel worker unions). These benefits are paid in addition to state unemployment. SUB's are taxable, and people receiving them will receive a separate W-2 form showing the amount of SUB's paid to them.

***Survey Purpose***

The purposes of the survey:

- Assess the effects of welfare reform on the well being of individuals, families, and their children.
- Measure changes in program eligibility and participation, employment, income, in-kind benefits, services received from programs, and the impact of welfare reform on families and children, and
- Contribute to the development of measures of the economic and social well-being of the nation.

***Survivor Benefits***

These include any pensions or annuities that the respondent received as a widow(er) other than Social Security, IRAs, and Keogh accounts during the reference period.

***Tips***

Payments received, as supplements to wages, for services rendered to the customer. For some occupations such as waiters and waitresses, bellhops, barbers and taxicab drivers tips may constitute a large part of the person's income.

***Topcoding of Variables***

To protect against the possibility that a user might recognize the identity of an SPD respondent on the public use microdata files with very high income, income from every source is topcoded so that no individual income amounts above \$100,000 are revealed. This top-code amount is consistent with the topcoding for the 1992 and 1993 SIPP panels. Other economic variables are topcoded at the 97 percentile level. All variables that are topcoded have a "T" designation in the character which is the second from the right of the variable name.

***Topical Module***

Some topics are not asked every year for the SPD. The listing below shows when the topical modules are included in the instrument:

- 1998-Adolescent SAQ
- 1999-Extended Child Well-Being
- 2000-Children's Residential History
- 2001-Adolescent SAQ
- 2002-Extended Child Well-Being

***Tricare***

A health care program for members of the uniformed services and their families, and survivors and retired members and their families. It offers three choices to eligible beneficiaries:

- **Tricare Standard** - a fee-for-service option that is also known as CHAMPUS.
- **Tricare Extra** - similar to Tricare Standard, but offers discounts to patients when they use Tricare network providers (in other words, a PPO provider.)
- **Tricare Prime** - the primary health care option offered by military hospitals and clinics, supported by contracted civilian health care companies (Generally civilian HMOs). For this option, an enrollment process is necessary. Enrollees choose a primary care manager (PCM) to provide or arrange for their health care needs. Prime offers

wellness and preventive care services, but enrollees must get their care through Prime only. Active duty members are automatically enrolled in Prime. Beneficiaries choose to enroll in Prime.

<b><i>Type A Noninterview</i></b>	Households occupied by people eligible for interview, but an interview is not obtained.
<b><i>Type B Noninterview</i></b>	Type B noninterviews for the SPD are households or people who are temporarily ineligible for interview (for example, institutionalized people). We continue to follow up on Type B noninterviews.
<b><i>Type C Noninterview</i></b>	Units or people that are permanently ineligible for interview. These are households or people who can no longer participate in sample because they are deceased, moved out of the country or the entire household is in the military or the household dropped because of sample adjustments.
<b><i>Type D Noninterview</i></b>	Households or people who have moved to an unknown address or who have moved more than 100 miles from the nearest SPD PSU and a telephone interview could not be conducted.
<b><i>Type Z Noninterview</i></b>	An eligible person in an interviewed household who the field representative could not interview or for whom the field representative could not conduct a proxy interview.
<b><i>Unemployment Compensation</i></b>	Money received from state government unemployment insurance funds to help replace wages lost during times of layoff or unemployment.
<b><i>Unrelated Subfamily</i></b>	An unrelated subfamily is a family that does not contain the reference person or anyone related to the reference person.
<b><i>U.S. Government Railroad Retirement Benefits/Pensions</i></b>	Federal Railroad Retirement Benefits are based on a person's long-term employment (10 years or more) in the railroad industry. Payment from pensions established by railroad companies or unions to supplement Federal Railroad Retirement are not included as railroad retirement.
<b><i>U.S. Government Securities</i></b>	Includes U.S. Treasury bills, Treasury notes and Treasury bonds. It also includes Series H and HH U.S. Savings Bonds, which are bought at full value and interest payments are received semi-annually. Further, it includes credit instruments of agencies

such as the Federal National Mortgage Association (Fannie Mae).

***U. S. Military  
Retirement Disability***

Received by previous members of the Armed Forces who have a disability of at least 30 percent (under a standard schedule of rating disability by the VA) and either:

- the member has 8 years of service
- the disability results from active duty, or
- the disability occurred in the line of duty during a time of war or national emergency or certain other time periods

***U.S. Military  
Retirement Pay***

Military retirement pay is received by people as former career members of the U.S. Armed Forces. Payments are based on a percentage of the active duty basic pay, which is adjusted by semiannual cost of living changes. Payments from the U.S. Department of Veterans Affairs for disabled or aged veterans are not included. The key to avoiding this mistake is knowing that 20 years of service are generally required to receive retirement pay. Draftees and other former members of the Armed Forces with relatively short periods of service are not eligible for military retirement pay.

Since career military people are eligible for retirement pay after only 20 years of service, it is not uncommon for people receiving military retirement pay to be in their forties and fifties. Furthermore, they may be reemployed full-time as civilian employees of the federal, state or local governments, or in the private sector.

***U.S. Savings Bonds  
(E, EE)***

Series E and EE U.S. Savings Bonds are purchased at 50 to 75 percent of the bond's face value, and can be cashed in from 6 months after purchase until the bond's maturity. When the holder cashes in the bond, he/she will receive the amount paid for the bond, plus the interest calculated for the time the bond was held.

***Uses of the SPD Data***

The SPD core data can be used to create statistics to evaluate the survey, profile the participants in various government programs, examine the characteristics of the low income population, and examine how the economy is changing.

These statistics would include average monthly estimates of:

- Median household income.
- Number of workers and their median earnings.

- People with labor force activities.
- People who spent time looking for work or on layoff.
- Participants in government programs, such as:
  - 1) Public assistance payments (formerly known as AFDC).
  - 2) Social Security and SSI.
  - 3) Food stamps.
  - 4) Medicare and medicaid.
  - 5) Public or subsidized housing.
  - 6) Unemployment and workers' compensation.

These statistics (crossed by race, age, and other characteristics) are the basis for reports (or fact sheets) on the economic situation of Americans and their families.

***Usual Place of Residence***

The place where a person usually lives and sleeps. A usual place of residence must be specific living quarters held by the person to which he/she is free to return at any time. Living quarters that a person rents or lends to someone else cannot be considered her/his usual place of residence during the time these quarters are occupied by someone else. Likewise, vacant living quarters that a person offers for rent or sale during his/her absence should not be considered her/his usual place of residence while he/she is away.

A mailing address does not constitute a usual place of residence. Usual residents not only include members of the family, but may also include lodgers, servants, farm hands, and other employees who live in the unit and consider it their usual place of residence. In addition, a usual resident includes a person who lives in the sample unit but is temporarily absent, such as an unmarried child away at school (provided he/she has not left home permanently), a person traveling on business, a railroad worker, bus driver, and someone away visiting, on vacation, or temporarily in general hospitals (non-institutional).

***Veterans Compensation/Pension***

There are two types of veterans disability pensions:

- 1) Compensation payments for service-connected disability: These payments are made to veterans with a disability that was caused or aggravated by military service. Payment amounts are related to the extent of the disability, which may range from 0 to 100 percent. Veterans with ratings of 50 percent or more may receive additional compensation for dependent wives,

children under age 18, or under 22 if attending school full-time, and dependent parents; and

- 2) Nonservice-connected disability pensions: The second type are VA pensions made to veterans whose disability is not service-connected, but who served on active duty in wartime and are in financial need. Veterans who are under age 65 must be permanently and totally disabled. Veterans who are 65 and over and not working are also eligible for VA pensions.

Payments vary depending on such factors as income, number of dependents, and need for regular aid and attendance of another person, whether the veteran is permanently housebound, and whether or not time is spent in a VA medical facility. When the pension is originally awarded, and in January during each year that the pension is received, the veteran receives a letter from the U.S. Department of Veterans Affairs indicating the amount of the monthly payment and which people in his immediate family besides himself are covered. In certain instances, the dollar amount for each person is also indicated in the letter.

In either case, payments are made monthly from the U.S. Treasury. Recipients may have their payment deposited directly in their own bank account.

***Veterans'  
Educational  
Assistance***

Veterans' educational assistance includes the following programs:

**Dependents' and Survivors Educational Assistance Program -**

This program serves dependents and survivors of veterans who died from service-connected causes, or whose service-connected disability is rated permanent and total, or who died while a disability so evaluated was in existence. Spouses and children of service personnel who are missing in action or interned by a hostile foreign government for more than 90 days are also eligible under this program. Up to 45 months of full-time training is provided in approved schools and on-the-job training programs.

**G.I. Bill/VEAP Education Benefits -** Also known as the Veterans Educational Assistance Program (VEAP), provides educational or vocational opportunities to veterans whose education may have been impeded by service in the Armed Forces since January 31, 1955. An honorable-discharge veteran with at least 180 days of active service is eligible for up to 45 months of full-time schooling, on-the-job training toward obtaining a regular

undergraduate degree or any post-secondary education. These benefit payments are made directly to the veteran for any post secondary educational, vocational, or professional objective.

**Post-Vietnam Era Veterans Educational Assistance Program -**

Provides educational assistance to those people who entered the U.S. Armed Forces after December 31, 1976. Its goal is to assist young men and women in obtaining an education they might not otherwise be able to afford, and to promote and assist the all-volunteer military program of the United States by attracting qualified people to serve in the Armed Forces. To be eligible for training under this program, the person must:

- have served more than 180 days.
- have been released under conditions other than dishonorable, and
- have participated in a payroll deduction plan whereby the participant sets aside from \$25 to \$100 a month to a maximum of \$2,700, which the government will match on a 2 for 1 basis when the person elects to enter training. Individuals may make a lump sum contribution if they wish.

***Veterans' Financial Aid Programs***

Provides aid to veterans, the dependents and survivors of deceased or disabled military personnel, or military personnel participating in an educational assistance plan sponsored by the federal government. These programs include:

- GI Bill, Montgomery Bill.
- Post-Vietnam Vocational Educational Assistance (or Veterans' Educational Assistance Programs).
- Survivors' and Dependents' Educational Assistance, and
- the Armed Forces Vocational Rehabilitation Program.

***Weighting***

A calculation procedure designed to minimize the biases resulting from differences between the sample units (households and persons) that do respond and those that do not respond. As a result of the weighting, a set of final weights is produced for use in computing estimates of the characteristics of the survey universe (the universe of the population that the survey sample represents). For a panel survey such as SPD, two types of weighting are generally produced, namely, cross-sectional weighting and longitudinal weighting which are defined below.

- **Cross-sectional weighting** - A calculation procedure designed to minimize the biases resulting from differences between the respondent and nonrespondent sample units (households and persons) at a point in time, for example, Year 2001 etc. By definition, a cross-sectional weighting procedure produces a set of final weights for using in computing estimates of characteristics of the survey universe at a given point in time; for example, using the SPD 2001 data, an estimate of the total number of families in 2001 that had low income in 2000.
- **Longitudinal weighting** - A calculation procedure designed to minimize the biases resulting from differences between the respondent and nonrespondent sample units (persons) at a period spanning between two points in time, for example, a period between 1994 and 2001. By definition, a longitudinal-sectional weighting procedure produces a set of final weights for using in computing estimates of characteristics of the survey universe at a period between two points in time. For example, an estimate of the total number of adults who continuously received any kinds of welfare assistance between 1993 and 2001.

A description of the longitudinal weighting procedure for the calculation of the longitudinal weights for use in computing estimates of characteristics at any time periods within 1992 and 2001 of the SPD survey universe represented by the original (one hundred level) sample persons is included in the File Information (see pages 3-3 through 3-48).

***Weighted Non-original Young Sample Children Associated with the 2000 Quasi-longitudinal Panel Weight***

The weighted non-original young sample children associated with the 2000 quasi-longitudinal panel weight consist of the non-original sample children (200+ level) aged eight or lower in 2000 if originated from the SIPP panel 1992 and aged seven or lower in 2000 if originated from the SIPP panel 1993. Their designated parents must be original sample people who are also 2000 quasi-longitudinal panel interviewed persons (i.e., have a positive 2000 quasi-longitudinal panel weight). Each of these weighted non-original young sample children will have a positive quasi-longitudinal annual weight associated with the 2000 quasi-longitudinal panel weight.

***Weighted Non-original Young Sample Children Associated with the 2001 Quasi-longitudinal Panel Weight***

The weighted non-original young sample children associated with the 2001 quasi-longitudinal panel weight consist of the non-original sample children (200+ level) aged nine or lower in 2001 if originated from the SIPP panel 1992 and aged eight or lower in 2001 if originated from the SIPP panel 1993. Their designated parents must be original sample people who are also 2001 quasi-longitudinal panel interviewed persons (i.e., have a positive 2001 quasi-longitudinal panel weight). Each of these weighted non-original young sample children will have a positive quasi-longitudinal annual weight associated with the 2001 quasi-longitudinal panel weight.

***Weighted Non-original Young Sample Children Associated with the 2002 Quasi-longitudinal Panel Weight***

The weighted non-original young sample children associated with the 2002 quasi-longitudinal panel weight consist of the non-original sample children (200+ level) aged ten or lower in 2002 if originated from the SIPP panel 1992 and aged nine or lower in 2002 if originated from the SIPP panel 1993. Their designated parents must be original sample people who are also 2002 quasi-longitudinal panel interviewed persons (i.e., have a positive 2002 quasi-longitudinal panel weight). Each of these weighted non-original young sample children will have a positive quasi-longitudinal annual weight associated with the 2002 quasi-longitudinal panel weight.

***Weighted Non-original Young Sample Children Associated with the 2001 Traditional Longitudinal Panel Weight***

The weighted non-original young sample children associated with the 2001 traditional longitudinal panel weight consist of the non-original sample children (200+ level) aged nine or lower in 2001 if originated from the SIPP panel 1992 and aged eight or lower in 2001 if originated from the SIPP panel 1993. Their designated parents must be original sample people who are also 2001 traditional longitudinal panel interviewed persons (i.e., have a positive 2001 traditional longitudinal panel weight). Each of these weighted non-original young sample children will have a positive longitudinal annual weight associated with the 2001 traditional longitudinal panel weight.

***Weighted Non-original Young Sample Children Associated with the 2002 Traditional Longitudinal Panel Weight***

The weighted non-original young sample children associated with the 2002 traditional longitudinal panel weight consist of the non-original sample children (200+ level) aged ten or lower in 2002 if originated from the SIPP panel 1992 and aged nine or lower in 2002 if originated from the SIPP panel 1993. Their designated parents must be original sample people who are also 2002 traditional longitudinal panel interviewed persons (i.e., have a positive 2002 traditional longitudinal panel weight). Each of these

weighted non-original young sample children will have a positive longitudinal annual weight associated with the 2002 traditional longitudinal panel weight.

***WIC***

The Special Supplemental Nutrition Program for Women, Infants and Children (WIC) provides supplemental food either in the form of food or, more commonly, as vouchers valid for specific prescribed food items in stores. These supplemental foods include milk, cheese, eggs, instant formula, cereals, fruit and vegetable juices. Lower-income mothers, infants, and children judged to be at "nutritional risk" are eligible for WIC benefits. These include infants up to age one, children up to five years old, pregnant women, non-nursing mothers up to six months after childbirth, and nursing mothers up to one year after childbirth.

In addition to meeting the nutritional risk criterion, WIC enrollees must have annual family income below state-established limits, and public assistance recipients may be judged to be automatically eligible because of income.

***Work***

Work includes any activity for wages or salaries, for profit or fees, or for payment in-kind. One hour or more of such activity constitutes work. Work also includes unpaid activity of at least 15 hours a week on a family farm or business.

***Workers'  
Compensation***

Workers' Compensation payments are generally made under state laws set up to compensate workers for loss of pay because of accidents or illnesses caused by or happening on the job. Employees of the federal government, longshoremen, and harbor workers are also covered under special federal programs. Payments may be one-time compensation awards or may be made for longer periods for long-term disability. In cases of permanent and total disability, about three out of four states make payments for life. The great majority of cases involve cash payments in situations where a worker is unable to work for a temporary period after which the employee will be able to return to work. Payment amounts are calculated as a fraction of the workers' usual wage – most commonly about two-thirds. One-third of the states provide additional benefits for dependents.

Administration of workers' compensation payments is not uniform across states or even within each state. Payments may come directly from the employer, from an insurance company retained by the employer or from a state workers' compensation fund.

# HOW TO USE THE DATA DICTIONARY

The Data Dictionary describes the file contents and record layout of the public-use computer tape (or compact disc-readable) file.

The first line of each data item description gives the name of the variable (also referred to as data item, item name, or data field name). The variable name will be no longer than 8 characters. The first 6 characters provide a descriptive name, character 7 (or 2nd from right if the variable name is less than 8 characters) is the variable type code [unedited (U), edited (E), recoded (R), weights (W), imputation flag (I), or topcoded (T)]; and character 8 (or the last character if the variable name is less than 8 characters) will reflect the year in which the question was asked (for example, 2001 = 1).

The variable name uses alphabetic characters, numeric characters, and the special character (\_). No other special characters are used. It may be a mnemonic such as "SAMPLE98" or "PP\_ID", or a sequential identifier such as "VETTY1E1" or "SURSC2E1". Variable names are unique throughout the entire file. Following the variable name on the first line is information on the size of the data field, and the begin position of the field. This information can be used with software packages in order to read data values.

Below is an example of a variable in the 3<sup>rd</sup> Longitudinal file, and a description of the information that follows the variable name.

```
D WCYNEX      1 13128
T IS: Workers' compens payment rec'd 01
    During 2001 did (you) receive any
    workers' compensation payments or other
    payments as a result of a job related
    injury or illness?
U All people age 15+ reported receiving workers
  compensation income. (HINCWCEX = 1 and AGETX
  = 15+)
V      0 . Not in Universe
V      1 . Yes
V      2 . No
```

D The first line contains the variable name (WCYNEX), the variable length (1), and its position on the file (13128).

T The second line of each data item description begins with the character "T". The "T" flag indicates lines in the data dictionary containing the category code and a short description of the variable.

The next lines contain the long description and where possible, the screen variable name. Usually the long description directly quotes the question from the instrument. For recoded variables a fuller description of the variables is given in this location since there is no question in the instrument.

U The line beginning with the character "U" describes the universe for that item (for example, the conditions under which a question should have been asked).

V Line(s) containing categorical value codes and labels.

# DATA DICTIONARY

## ALPHABETICAL VARIABLE LISTING

Survey of Program Dynamics  
Third Longitudinal File

### Key to Concept Labels

DE	-	Demographic Variables
ED	-	Education Variables
EE	-	Employment and Earnings Variables
FDE	-	Family Demographic Variables
FEE	-	Family Employment and Earnings Variables
FIA	-	Family Income Amount Variables
FIS	-	Family Income Source Variables
FPV	-	Family Poverty Variables
HCV	-	Household Coverage Variables
HDE	-	Household Demographic Variables
HEE	-	Household Employment and Earnings Variables
HEL	-	Eligibility and Asset Variables
HHI	-	Household Health Insurance Variables
HI	-	Health Insurance Variables
HIA	-	Household Income Amount Variables
HIS	-	Household Income Source Variables
HSC	-	Household Sample Control Variables
IA	-	Income Amount Variables
IS	-	Income Source Variables
SC	-	Sample Control Variables

NOTE: All variables which begin with an "H" refer to a household level variable.
