SURVEY OF INCOME AND PROGRAM PARTICIPATION (SIPP)
2004 PANEL
WAVE 8 TOPICAL MODULE MICRODATA FILE

ABSTRACT

Survey of Income and Program Participation (SIPP) 2004 Panel Wave 8 Topical Module Microdata File, [machine-readable data file] / conducted by the U.S. Census Bureau. ‒ Washington: The Bureau [producer and distributor], 2009.

Type of File

Microdata; unit of observation is an individual.

Universe Description

The universe is the resident population of the United States, excluding persons living in institutions and military barracks.

Subject-Matter Description

The file contains data primarily from the topical module portion of the questionnaire. However, for purposes of matching persons to the core file, which was released separately, the beginning of the file contains identifying information as well as some basic demographics and social characteristics that are also contained in the core file. The identifying information includes sample unit, household address id, and entry address id. Demographic and social characteristics include age, sex, race (White alone; Black alone; Asian alone; Residual), ethnic origin, marital status, household relationship, and education. Data in this topical module file include child care, child well-being and welfare reform.

The sample in each wave consists of 4 rotation groups, each interviewed in a different month. For Wave 8, the interview months were from June 2006 to September 2006. For each group, the reference period for reporting labor force activity and income is the four calendar months preceding the interview month.

SIPP is a longitudinal survey where each sampled household and each descendent household is reinterviewed at 4-month intervals for each interview or "wave." This file contains the results of the eighth interview. Unique codes are included on each record to allow linking together the same persons from the preceding and subsequent waves.

Geographic Coverage

United States. No geography below the national level is shown on this file. State and metropolitan status are shown. Codes are included for 50 individual States and the District of Columbia, **although the sample was not designed to produce State estimates**.

Technical Description

File Structure: Rectangular. Each logical record for a sampled person includes information on the household and family of which the person was a part during each month of the reference period, as well as characteristics of the person. The unit observation is one record for each person in sample**.**

File Size: 91,630 logical records; 2,896 characters per record

File Sort Sequence of Sample Units: Sampling unit sequence number, by entry address ID, and by person number within sampling unit.

Reference Materials

Survey of Income and Program Participation (SIPP) 2004 Panel, Wave 8 Topical Module Microdata File Technical Documentation. The documentation includes this abstract, the data dictionary, an index to the data dictionary, questionnaire facsimiles, and general information on SIPP.

Survey of Income and Program Participation Users' Guide. The Users' Guide contains a general overview of the file as well as chapters on survey design and content, structure and use of cross-sectional files, linking waves and reliability of the data. It is available at http://www.sipp.census.gov/sipp/pubs.html

Related Reports Online and in Print

Related reports include working papers, compilations of papers presented at annual meetings of the American Statistical Association, articles appearing in the *Journal of Economic and Social Measurement*, and reports in the P-70 series of the Current Population Reports. These reports are available online in PDF in the Publications Library at http://www.census.gov/prod/www/titles.html and in some cases in printed form from the Customer Services Center. Forthcoming reports will be cited in the *Census Product Update*, an online newsletter issued every two weeks. To subscribe or to view past issues, go to http://www.census.gov/mp/www/cpu.html

Related Machine-Readable Data Files

SIPP files from all Waves of the 1984 through 1993 Panels, 1996 Panel, 2001 Panel, and 2004 Panel are available from the Customer Services Center. Files (1990 forward) may be downloaded from the SIPP FTP website at http://www.bls.census.gov/sipp_ftp.html#sipp

File Availability

You can order the file on disc from the Customer Services Center at (301) 763-INFO (4636) or through our online sales catalog (click "Catalog" on the Census Bureau's home page). This file also may be downloaded from the SIPP FTP website at http://www.bls.census.gov/sipp_ftp.html#sipp

FILE INFORMATION

Matching Topical Module File with Core File

Since the core and topical module data are released as separate files, it may be necessary to match the two files. The two files contain the following information for linking purposes.

SSUID	Sample unit identifier
SPANEL	Panel year
SWAVE	Wave of data collection
SROTATION	Rotation of data collection
TFIPSST	FIPS State Code
EOUTCOME	Interview status code for this household
SHHADID	Household address ID differentiates hhlds in sample unit
SINTHHID	Household address ID of person in interview month
RFID	Family ID number for this month
RFID2	Family ID excluding related subfamily members
EPPIDX	Person index
EENTAID	Address ID of household where person entered sample
EPPPNUM	Person number
EPOPSTAT	Population status based on age in fourth reference month
EPPINTVW	Person's interview status
EPPMIS4	Person's fourth month interview status
ESEX	Sex of this person
ERACE	Race of this person
EORIGIN	Spanish, Hispanic or Latino
WPFINWGT	Person weight
ERRP	Household relationship
EMS	Marital status
EPNMOM	Person number of mother
EPNDAD	Person number of father
EPNGUARD	Person number of guardian
EPNSPOUS	Person number of spouse
RDESGPNT	Designated parent or guardian flag
TAGE	Age as of last birthday
EEDUCATE	Highest degree received or grade completed

Geographic Coverage

United States. State and metropolitan status are shown. Codes are included for 50 individual States and the District of Columbia, **although the sample was not designed to produce State estimates**. The file identifies the metropolitan status code for each household.

Identification Number System

The SIPP identification scheme is designed to uniquely identify individuals in each wave, provide a means of linking the same individuals over time, and group individuals into households and families over time. The various components of the identification scheme are listed below:

SSUID   Sample Unit Identification Number
SINTHHID   Address ID
EENTAID   Entry Address ID
EPPPNUM   Person Number

The sample unit identification number was created by scrambling together the PSU, segment, and serial numbers used for Census Bureau administrative purposes. This identifier is constructed the same way on each wave regardless of moves, to enable matching from wave to wave.

The two-digit address ID code identifies each household associated with the same sample unit identification number. The first digit of the address ID code indicates the wave in which that address was first assigned for interview. The second digit sequentially numbers multiple households that have the same serial number. The address ID code is 11 for all sample addresses in Wave 1. As SIPP sample persons move to new addresses, new address ID codes are assigned. Any new address to which sample unit members moved during Wave 4 is numbered in the 40's.

The person ID is a five-digit number consisting of the two-digit entry address ID and a three-digit person number. Person numbers 101, 102, etc., are assigned in Wave 1; 201, 202, etc., are assigned to persons added to the roster in Wave 2, and so forth. This five-digit number is not changed or updated, regardless of moves.

The sampling unit serial number and address ID code uniquely identifies each household in any given wave. The sampling unit serial number can link all households in subsequent waves back to the original Wave 1 household.

Topcoding of Income Variables

To protect against the possibility that a user might recognize the identity of a SIPP respondent with very high income, income from every source is "topcoded" so that no individual income amounts above $150,000 are revealed. While the data dictionary indicates a topcode of 50,000 for monthly income, this topcode will rarely be used. In most cases the monthly income is shown as an individual dollar amount of $12,500, with $12,500 actually representing "$12,500 or more." (The $150,000 annual income topcode is $12,500 multiplied by 12 months). Individual monthly amounts above $12,500 may occasionally be shown if the respondent's income varied considerably from month to month, as long as the average does not exceed $12,500. For example, if a respondents' income from a single job were concentrated in only one of the four reference months, a figure as high as $50,000 could be shown. (Income from interest or property have lower topcodes).

Summary income figures on the person, family, and household records are simple sums of the components shown on the file after topcoding, and are not independently topcoded. Thus, a person with high income from several sources (jobs, businesses, property) could have aggregate monthly income well over the topcode for each source. Families and households with a number of high income members could theoretically have aggregate income shown well over $150,000, though well below the $1.5 million shown as the highest allowable value in the data dictionary.

The user is cautioned against trying to make much use of the occasional monthly figures above $12,500, except in calculating aggregates or observing patterns across the 4-month period for a single individual, family, or household. Those units with higher monthly amounts shown are a biased sample of high income units, more likely to include units with income from multiple sources than other units with equally high aggregate income which comes from a single source.

INDEX TO 2004 WAVE 8 TOPICAL MODULE MICRODATA FILES

Key to Concept Labels

CC - Child Care Topical Module Variables
CW - Child Well-Being Topical Module Variables
ED - Education Variables
FA - Family Variables
HH - Household Variables

CC: Allocation flag for EKIDHR2G	AKIDHR2G	2775 - 2775

Description	Variable	Position
CC: Allocation flag for EKIDHR2H	AKIDHR2H	2778 - 2778
CC: Allocation flag for EKIDHR2I	AKIDHR2I	2781 - 2781
CC: Allocation flag for EKIDHR2J	AKIDHR2J	2784 - 2784
CC: Allocation flag for ELISTA	ALISTA	1640 - 1640
CC: Allocation flag for ELISTB	ALISTB	1643 - 1643
CC: Allocation flag for ELISTC	ALISTC	1646 - 1646
CC: Allocation flag for ELISTD	ALISTD	1649 - 1649
CC: Allocation flag for ELISTE	ALISTE	1652 - 1652
CC: Allocation flag for ELISTF	ALISTF	2873 - 2873
CC: Allocation flag for ELISTG	ALISTG	2876 - 2876
CC: Allocation flag for ELISTH	ALISTH	2879 - 2879
CC: Allocation flag for ELISTI	ALISTI	2882 - 2882
CC: Allocation flag for ELISTJ	ALISTJ	2885 - 2885
CC: Allocation flag for ENURHRSA	ANURHRSA	1259 - 1259
CC: Allocation flag for ENURHRSB	ANURHRSB	1262 - 1262
CC: Allocation flag for ENURHRSC	ANURHRSC	1265 - 1265
CC: Allocation flag for ENURHRSD	ANURHRSD	1268 - 1268
CC: Allocation flag for ENURHRSE	ANURHRSE	1271 - 1271
CC: Allocation flag for EOTHEHRA	AOTHEHRA	1399 - 1399
CC: Allocation flag for EOTHEHRB	AOTHEHRB	1402 - 1402
CC: Allocation flag for EOTHEHRC	AOTHEHRC	1405 - 1405
CC: Allocation flag for EOTHEHRD	AOTHEHRD	1408 - 1408
CC: Allocation flag for EOTHEHRE	AOTHEHRE	1411 - 1411
CC: Allocation flag for EOTHEHRF	AOTHEHRF	2632 - 2632
CC: Allocation flag for EOTHEHRG	AOTHEHRG	2635 - 2635
CC: Allocation flag for EOTHEHRH	AOTHEHRH	2638 - 2638
CC: Allocation flag for EOTHEHRI	AOTHEHRI	2641 - 2641
CC: Allocation flag for EOTHEHRJ	AOTHEHRJ	2644 - 2644
CC: Allocation flag for EPARHR1A	APARHR1A	778 - 778
CC: Allocation flag for EPARHR1B	APARHR1B	782 - 782
CC: Allocation flag for EPARHR1C	APARHR1C	786 - 786
CC: Allocation flag for EPARHR1D	APARHR1D	790 - 790
CC: Allocation flag for EPARHR1E	APARHR1E	794 - 794
CC: Allocation flag for EPARHR1F	APARHR1F	1838 - 1838
CC: Allocation flag for EPARHR1G	APARHR1G	1842 - 1842
CC: Allocation flag for EPARHR1H	APARHR1H	1846 - 1846
CC: Allocation flag for EPARHR1I	APARHR1I	1850 - 1850
CC: Allocation flag for EPARHR1J	APARHR1J	1854 - 1854
CC: Allocation flag for EPARHR2A	APARHR2A	798 - 798
CC: Allocation flag for EPARHR2B	APARHR2B	802 - 802
CC: Allocation flag for EPARHR2C	APARHR2C	806 - 806
CC: Allocation flag for EPARHR2D	APARHR2D	810 - 810
CC: Allocation flag for EPARHR2E	APARHR2E	814 - 814
CC: Allocation flag for EPARHR2F	APARHR2F	1858 - 1858
CC: Allocation flag for EPARHR2G	APARHR2G	1862 - 1862
CC: Allocation flag for EPARHR2H	APARHR2H	1866 - 1866
CC: Allocation flag for EPARHR2I	APARHR2I	1870 - 1870
CC: Allocation flag for EPARHR2J	APARHR2J	1874 - 1874
CC: Allocation flag for EPAYCLUF	APAYCLUF	2507 - 2507
CC: Allocation flag for EPAYCLUG	APAYCLUG	2510 - 2510
CC: Allocation flag for EPAYCLUH	APAYCLUH	2513 - 2513
CC: Allocation flag for EPAYCLUI	APAYCLUI	2516 - 2516
CC: Allocation flag for EPAYCLUJ	APAYCLUJ	2519 - 2519
CC: Allocation flag for EPAYDAYA	APAYDAYA	1209 - 1209
CC: Allocation flag for EPAYDAYB	APAYDAYB	1212 - 1212
CC: Allocation flag for EPAYDAYC	APAYDAYC	1215 - 1215

Description	Variable	Position
CC: Allocation flag for EPAYDAYD	APAYDAYD	1218 - 1218
CC: Allocation flag for EPAYDAYE	APAYDAYE	1221 - 1221
CC: Allocation flag for EPAYDAYF	APAYDAYF	2267 - 2267
CC: Allocation flag for EPAYDAYG	APAYDAYG	2270 - 2270
CC: Allocation flag for EPAYDAYH	APAYDAYH	2273 - 2273
CC: Allocation flag for EPAYDAYI	APAYDAYI	2276 - 2276
CC: Allocation flag for EPAYDAYJ	APAYDAYJ	2279 - 2279
CC: Allocation flag for EPAYFAMA	APAYFAMA	1128 - 1128
CC: Allocation flag for EPAYFAMB	APAYFAMB	1131 - 1131
CC: Allocation flag for EPAYFAMC	APAYFAMC	1134 - 1134
CC: Allocation flag for EPAYFAMD	APAYFAMD	1137 - 1137
CC: Allocation flag for EPAYFAME	APAYFAME	1140 - 1140
CC: Allocation flag for EPAYFAMF	APAYFAMF	2187 - 2187
CC: Allocation flag for EPAYFAMG	APAYFAMG	2190 - 2190
CC: Allocation flag for EPAYFAMH	APAYFAMH	2193 - 2193
CC: Allocation flag for EPAYFAMI	APAYFAMI	2196 - 2196
CC: Allocation flag for EPAYFAMJ	APAYFAMJ	2199 - 2199
CC: Allocation flag for EPAYGRAA	APAYGRAA	983 - 983
CC: Allocation flag for EPAYGRAB	APAYGRAB	986 - 986
CC: Allocation flag for EPAYGRAC	APAYGRAC	989 - 989
CC: Allocation flag for EPAYGRAD	APAYGRAD	992 - 992
CC: Allocation flag for EPAYGRAE	APAYGRAE	995 - 995
CC: Allocation flag for EPAYGRAF	APAYGRAF	2042 - 2042
CC: Allocation flag for EPAYGRAG	APAYGRAG	2045 - 2045
CC: Allocation flag for EPAYGRAH	APAYGRAH	2048 - 2048
CC: Allocation flag for EPAYGRAI	APAYGRAI	2051 - 2051
CC: Allocation flag for EPAYGRAJ	APAYGRAJ	2054 - 2054
CC: Allocation flag for EPAYHELA	APAYHELA	1569 - 1569
CC: Allocation flag for EPAYHELB	APAYHELB	1572 - 1572
CC: Allocation flag for EPAYHELC	APAYHELC	1575 - 1575
CC: Allocation flag for EPAYHELD	APAYHELD	1578 - 1578
CC: Allocation flag for EPAYHELE	APAYHELE	1581 - 1581
CC: Allocation flag for EPAYHELF	APAYHELF	2802 - 2802
CC: Allocation flag for EPAYHELG	APAYHELG	2805 - 2805
CC: Allocation flag for EPAYHELH	APAYHELH	2808 - 2808
CC: Allocation flag for EPAYHELI	APAYHELI	2811 - 2811
CC: Allocation flag for EPAYHELJ	APAYHELJ	2814 - 2814
CC: Allocation flag for EPAYLESF	APAYLESF	2427 - 2427
CC: Allocation flag for EPAYLESG	APAYLESG	2430 - 2430
CC: Allocation flag for EPAYLESH	APAYLESH	2433 - 2433
CC: Allocation flag for EPAYLESI	APAYLESI	2436 - 2436
CC: Allocation flag for EPAYLESJ	APAYLESJ	2439 - 2439
CC: Allocation flag for EPAYNURA	APAYNURA	1289 - 1289
CC: Allocation flag for EPAYNURB	APAYNURB	1292 - 1292
CC: Allocation flag for EPAYNURC	APAYNURC	1295 - 1295
CC: Allocation flag for EPAYNURD	APAYNURD	1298 - 1298
CC: Allocation flag for EPAYNURE	APAYNURE	1301 - 1301
CC: Allocation flag for EPAYOTHA	APAYOTHA	1429 - 1429
CC: Allocation flag for EPAYOTHB	APAYOTHB	1432 - 1432
CC: Allocation flag for EPAYOTHC	APAYOTHC	1435 - 1435
CC: Allocation flag for EPAYOTHD	APAYOTHD	1438 - 1438
CC: Allocation flag for EPAYOTHE	APAYOTHE	1441 - 1441
CC: Allocation flag for EPAYOTHF	APAYOTHF	2662 - 2662
CC: Allocation flag for EPAYOTHG	APAYOTHG	2665 - 2665
CC: Allocation flag for EPAYOTHH	APAYOTHH	2668 - 2668
CC: Allocation flag for EPAYOTHI	APAYOTHI	2671 - 2671

Description	Variable	Position
CC: Allocation flag for EPAYOTHJ	APAYOTHJ	2674 - 2674
CC: Allocation flag for EPAYRELA	APAYRELA	1063 - 1063
CC: Allocation flag for EPAYRELB	APAYRELB	1066 - 1066
CC: Allocation flag for EPAYRELC	APAYRELC	1069 - 1069
CC: Allocation flag for EPAYRELD	APAYRELD	1072 - 1072
CC: Allocation flag for EPAYRELE	APAYRELE	1075 - 1075
CC: Allocation flag for EPAYRELF	APAYRELF	2122 - 2122
CC: Allocation flag for EPAYRELG	APAYRELG	2125 - 2125
CC: Allocation flag for EPAYRELH	APAYRELH	2128 - 2128
CC: Allocation flag for EPAYRELI	APAYRELI	2131 - 2131
CC: Allocation flag for EPAYRELJ	APAYRELJ	2134 - 2134
CC: Allocation flag for EPAYSCHF	APAYSCHF	2582 - 2582
CC: Allocation flag for EPAYSCHG	APAYSCHG	2585 - 2585
CC: Allocation flag for EPAYSCHH	APAYSCHH	2588 - 2588
CC: Allocation flag for EPAYSCHI	APAYSCHI	2591 - 2591
CC: Allocation flag for EPAYSCHJ	APAYSCHJ	2594 - 2594
CC: Allocation flag for EPAYSPOF	APAYSPOF	2347 - 2347
CC: Allocation flag for EPAYSPOG	APAYSPOG	2350 - 2350
CC: Allocation flag for EPAYSPOH	APAYSPOH	2353 - 2353
CC: Allocation flag for EPAYSPOI	APAYSPOI	2356 - 2356
CC: Allocation flag for EPAYSPOJ	APAYSPOJ	2359 - 2359
CC: Allocation flag for EPAYSTAA	APAYSTAA	1354 - 1354
CC: Allocation flag for EPAYSTAB	APAYSTAB	1357 - 1357
CC: Allocation flag for EPAYSTAC	APAYSTAC	1360 - 1360
CC: Allocation flag for EPAYSTAD	APAYSTAD	1363 - 1363
CC: Allocation flag for EPAYSTAE	APAYSTAE	1366 - 1366
CC: Allocation flag for ERELHR1A	ARELHR1A	1033 - 1033
CC: Allocation flag for ERELHR1B	ARELHR1B	1036 - 1036
CC: Allocation flag for ERELHR1C	ARELHR1C	1039 - 1039
CC: Allocation flag for ERELHR1D	ARELHR1D	1042 - 1042
CC: Allocation flag for ERELHR1E	ARELHR1E	1045 - 1045
CC: Allocation flag for ERELHR1F	ARELHR1F	2092 - 2092
CC: Allocation flag for ERELHR1G	ARELHR1G	2095 - 2095
CC: Allocation flag for ERELHR1H	ARELHR1H	2098 - 2098
CC: Allocation flag for ERELHR1I	ARELHR1I	2101 - 2101
CC: Allocation flag for ERELHR1J	ARELHR1J	2104 - 2104
CC: Allocation flag for ERELHR2A	ARELHR2A	1048 - 1048
CC: Allocation flag for ERELHR2B	ARELHR2B	1051 - 1051
CC: Allocation flag for ERELHR2C	ARELHR2C	1054 - 1054
CC: Allocation flag for ERELHR2D	ARELHR2D	1057 - 1057
CC: Allocation flag for ERELHR2E	ARELHR2E	1060 - 1060
CC: Allocation flag for ERELHR2F	ARELHR2F	2107 - 2107
CC: Allocation flag for ERELHR2G	ARELHR2G	2110 - 2110
CC: Allocation flag for ERELHR2H	ARELHR2H	2113 - 2113
CC: Allocation flag for ERELHR2I	ARELHR2I	2116 - 2116
CC: Allocation flag for ERELHR2J	ARELHR2J	2119 - 2119
CC: Allocation flag for ESB14HRA	ASB14HRA	908 - 908
CC: Allocation flag for ESB14HRB	ASB14HRB	911 - 911
CC: Allocation flag for ESB14HRC	ASB14HRC	914 - 914
CC: Allocation flag for ESB14HRD	ASB14HRD	917 - 917
CC: Allocation flag for ESB14HRE	ASB14HRE	920 - 920
CC: Allocation flag for ESB14HRF	ASB14HRF	1967 - 1967
CC: Allocation flag for ESB14HRG	ASB14HRG	1970 - 1970
CC: Allocation flag for ESB14HRH	ASB14HRH	1973 - 1973
CC: Allocation flag for ESB14HRI	ASB14HRI	1976 - 1976
CC: Allocation flag for ESB14HRJ	ASB14HRJ	1979 - 1979

Description	Variable	Position
CC: Allocation flag for ESCHOOWA	ASCHOOWA	1464 - 1464
CC: Allocation flag for ESCHOOWB	ASCHOOWB	1467 - 1467
CC: Allocation flag for ESCHOOWC	ASCHOOWC	1470 - 1470
CC: Allocation flag for ESCHOOWD	ASCHOOWD	1473 - 1473
CC: Allocation flag for ESCHOOWE	ASCHOOWE	1476 - 1476
CC: Allocation flag for ESCHOOWF	ASCHOOWF	2697 - 2697
CC: Allocation flag for ESCHOOWG	ASCHOOWG	2700 - 2700
CC: Allocation flag for ESCHOOWH	ASCHOOWH	2703 - 2703
CC: Allocation flag for ESCHOOWI	ASCHOOWI	2706 - 2706
CC: Allocation flag for ESCHOOWJ	ASCHOOWJ	2709 - 2709
CC: Allocation flag for ESELFCAA	ASELFCAA	1509 - 1509
CC: Allocation flag for ESELFCAB	ASELFCAB	1512 - 1512
CC: Allocation flag for ESELFCAC	ASELFCAC	1515 - 1515
CC: Allocation flag for ESELFCAD	ASELFCAD	1518 - 1518
CC: Allocation flag for ESELFCAE	ASELFCAE	1521 - 1521
CC: Allocation flag for ESELFCAF	ASELFCAF	2742 - 2742
CC: Allocation flag for ESELFCAG	ASELFCAG	2745 - 2745
CC: Allocation flag for ESELFCAH	ASELFCAH	2748 - 2748
CC: Allocation flag for ESELFCAI	ASELFCAI	2751 - 2751
CC: Allocation flag for ESELFCAJ	ASELFCAJ	2754 - 2754
CC: Allocation flag for ESELFHRA	ASELFHRA	832 - 832
CC: Allocation flag for ESELFHRB	ASELFHRB	835 - 835
CC: Allocation flag for ESELFHRC	ASELFHRC	838 - 838
CC: Allocation flag for ESELFHRD	ASELFHRD	841 - 841
CC: Allocation flag for ESELFHRE	ASELFHRE	844 - 844
CC: Allocation flag for ESELFHRF	ASELFHRF	1892 - 1892
CC: Allocation flag for ESELFHRG	ASELFHRG	1895 - 1895
CC: Allocation flag for ESELFHRH	ASELFHRH	1898 - 1898
CC: Allocation flag for ESELFHRI	ASELFHRI	1901 - 1901
CC: Allocation flag for ESELFHRJ	ASELFHRJ	1904 - 1904
CC: Allocation flag for ETIAMT01	ATIAMT01	2891 - 2891
CC: Allocation flag for ETIAMT02	ATIAMT02	2894 - 2894
CC: Allocation flag for EWHCLUBF	AWHCLUBF	2462 - 2462
CC: Allocation flag for EWHCLUBG	AWHCLUBG	2465 - 2465
CC: Allocation flag for EWHCLUBH	AWHCLUBH	2468 - 2468
CC: Allocation flag for EWHCLUBI	AWHCLUBI	2471 - 2471
CC: Allocation flag for EWHCLUBJ	AWHCLUBJ	2474 - 2474
CC: Allocation flag for EWHDAYCA	AWHDAYCA	1163 - 1163
CC: Allocation flag for EWHDAYCB	AWHDAYCB	1166 - 1166
CC: Allocation flag for EWHDAYCC	AWHDAYCC	1169 - 1169
CC: Allocation flag for EWHDAYCD	AWHDAYCD	1172 - 1172
CC: Allocation flag for EWHDAYCE	AWHDAYCE	1175 - 1175
CC: Allocation flag for EWHDAYCF	AWHDAYCF	2222 - 2222
CC: Allocation flag for EWHDAYCG	AWHDAYCG	2225 - 2225
CC: Allocation flag for EWHDAYCH	AWHDAYCH	2228 - 2228
CC: Allocation flag for EWHDAYCI	AWHDAYCI	2231 - 2231
CC: Allocation flag for EWHDAYCJ	AWHDAYCJ	2234 - 2234
CC: Allocation flag for EWHEPARA	AWHEPARA	762 - 762
CC: Allocation flag for EWHEPARB	AWHEPARB	765 - 765
CC: Allocation flag for EWHEPARC	AWHEPARC	768 - 768
CC: Allocation flag for EWHEPARD	AWHEPARD	771 - 771
CC: Allocation flag for EWHEPARE	AWHEPARE	774 - 774
CC: Allocation flag for EWHEPARF	AWHEPARF	1822 - 1822
CC: Allocation flag for EWHEPARG	AWHEPARG	1825 - 1825
CC: Allocation flag for EWHEPARH	AWHEPARH	1828 - 1828
CC: Allocation flag for EWHEPARI	AWHEPARI	1831 - 1831

Description	Variable	Position
CC: Allocation flag for EWHEPARJ	AWHEPARJ	1834 - 1834
CC: Allocation flag for EWHGRANA	AWHGRANA	938 - 938
CC: Allocation flag for EWHGRANB	AWHGRANB	941 - 941
CC: Allocation flag for EWHGRANC	AWHGRANC	944 - 944
CC: Allocation flag for EWHGRAND	AWHGRAND	947 - 947
CC: Allocation flag for EWHGRANE	AWHGRANE	950 - 950
CC: Allocation flag for EWHGRANE	AWHGRANJ	2009 - 2009
CC: Allocation flag for EWHGRANF	AWHGRANF	1997 - 1997
CC: Allocation flag for EWHGRANG	AWHGRANG	2000 - 2000
CC: Allocation flag for EWHGRANH	AWHGRANH	2003 - 2003
CC: Allocation flag for EWHGRANI	AWHGRANI	2006 - 2006
CC: Allocation flag for EWHLESSF	AWHLESSF	2382 - 2382
CC: Allocation flag for EWHLESSG	AWHLESSG	2385 - 2385
CC: Allocation flag for EWHLESSH	AWHLESSH	2388 - 2388
CC: Allocation flag for EWHLESSI	AWHLESSI	2391 - 2391
CC: Allocation flag for EWHLESSJ	AWHLESSJ	2394 - 2394
CC: Allocation flag for EWHNURSA	AWHNURSA	1244 - 1244
CC: Allocation flag for EWHNURSB	AWHNURSB	1247 - 1247
CC: Allocation flag for EWHNURSC	AWHNURSC	1250 - 1250
CC: Allocation flag for EWHNURSD	AWHNURSD	1253 - 1253
CC: Allocation flag for EWHNURSE	AWHNURSE	1256 - 1256
CC: Allocation flag for EWHOPA1A-EWHOPA4A	AWHOPAA	1591 - 1591
CC: Allocation flag for EWHOPA1B-EWHOPA4B	AWHOPAB	1600 - 1600

HOW TO USE THE DATA DICTIONARY

The Data Dictionary describes the file contents and provides locations for each variable (record layout of the public-use computer tape file.) The first line ("D" Line) of each data item description gives the variable name, size of the data field, and the begin position of that field. The components include a short mnemonic or field name for use with software packages; field size; starting position; and a description of field contents with possible values.

The next few lines contain descriptive text and any applicable notes. Categorical value codes and labels are given where needed. Comment notes marked by an (*) are provided throughout for the rest of the dictionary components. Comments should be removed from the machine-readable version of the data dictionary before using it to help access the data file.

The first line of each data item description begins with the character "D" (left-justified, two characters). The "D" flag indicates lines in the data dictionary containing the name, size and begin position of each data item. The second line of each data item description begins with the character "T" (left-justified, two characters). The "T" flag indicates lines in the data dictionary containing the category code and short description of the variable. The line beginning with the character "U" describes the universe for that item. Lines containing categorical value codes and labels follow next and begin with the character "V". The special character (.) denotes the start of the value labels. Two examples of data item descriptions follow:

```
D IJHJOBYN    2    168
T WR: Did training/assistance lead to job?
      WR24 Did any of that training or
      assistance actually lead to a job?
U (EAGE ge 17, else ESEX=2 and pointed to as
  LNMOM,  else ESEX=1 and pointed to as LNDAD
  by child without an LNMOM)
V         2 .No
V         1 .Yes
V         0 .Not answered
V        -1 .Don't know
V        -2 .Refused

SOURCE AND ACCURACY STATEMENT
FOR THE SURVEY OF INCOME AND PROGRAM PARTICIPATION (SIPP) 2004,
WAVE 1 - WAVE 12 PUBLIC USE (CORE) FILES[1]

SOURCE OF DATA

The data were collected in the 2004 Panel of the Survey of Income and Program Participation (SIPP). The population represented in the 2004 SIPP (the population universe) is the civilian noninstitutionalized population living in the United States. The institutionalized population, which is excluded from the population universe, is composed primarily of the population in correctional institutions and nursing homes (91 percent of the 4.1 million institutionalized people in Census 2000).

The 2004 Panel of the SIPP sample is located in 351 Primary Sampling Units (PSUs), each consisting of a county or a group of contiguous counties. Of these 351 PSUs, 123 are self-representing (SR) and 228 are non-self-representing (NSR). SR PSUs have a probability of selection of one. NSR PSUs have a probability of selection of less than one. Within PSUs, housing units (HUs) were systematically selected from the master address file (MAF) used for the 2000 decennial census. To account for HUs built within each of the sample areas after the 2000 census, a sample containing clusters of four HUs was drawn from permits issued for construction of residential HUs up until shortly before the beginning of the panel. In jurisdictions that don't issue building permits or have incomplete addresses, we systematically sampled expected clusters of four HUs which were then listed by field personnel.

Sample households within a given panel are divided into four random subsamples of nearly equal size. These subsamples are called rotation groups and one rotation group is interviewed each month. Each household in the sample was scheduled to be interviewed at four-month intervals over a period of roughly four years beginning in February 2004. The reference period for the questions is the four-month period preceding the interview month. The most recent month is designated reference month 4, the earliest month is reference month 1. In general, one cycle of four interview months covering the entire sample, using the same questionnaire, is called a wave. For example, Wave 1 rotation group 1 of the 2004 Panel was interviewed in February 2004 and data for the reference months October 2003 through January 2004 were collected.

In Wave 1, the 2004 SIPP began with a sample of about 62,700 HUs. About 11,300 of these HUs were found to be vacant, demolished, converted to nonresidential use, or otherwise ineligible for the survey. Field Representatives (FRs) were able to obtain interviews for about 43,700 of the eligible HUs. FRs were unable to interview approximately 7,700 eligible HUs in the panel because the occupants: (1) refused to be interviewed; (2) could not be found at home; (3) were temporarily absent; or (4) were otherwise unavailable. Thus, occupants of about 85 percent of all eligible HUs participated in the first interview of the panel.

---

[1]For questions or further assistance with the information provided in this document contact: Tracy Mattingly of the Demographic Statistical Methods Division on 301/763-6445 or via the email at Tracy.L.Mattingly@census.gov.

For subsequent interviews, only original sample people (those in Wave 1 sample households and interviewed in Wave 1) and people living with them are eligible to be interviewed. The SIPP sample includes original sample people if they move to a new address, unless the new address was more than 100 miles from a SIPP sample area. In this case, FRs attempt telephone interviews. Based on these follow-up criteria, FRs were able to interview about 40,600 HUs of the approximately 44,200 eligible HUs for Wave 2, about 39,100 HUs of the approximately 44,600 eligible HUs for Wave 3, about 38,300 HUs of the approximately 44,900 eligible HUs for Wave 4, about 37,400 HUs of the approximately 45,400 eligible HUs for Wave 5, about 36,900 HUs of the approximately 45,600 eligible HUs for Wave 6, about 36,300 HUs of the approximately 45,700 eligible HUs for Wave 7, and about 36,000 HUs of the approximately 45,700 eligible HUs for Wave 8. In each of these waves, FRs were unable to interview some of the eligible housing units because the occupants either directly or indirectly refused to be interviewed in the same manner described for Wave 1 or moved to an unknown address. The rates of non-interviewed housing units due to direct or indirect refusal (Type A rate) were 6.6% for Wave 2, 9.9% for Wave 3, 11.6% for Wave 4, 13.7% for Wave 5, 15.0% for Wave 6, 16.1% for Wave 7, and 16.1% for Wave 8. The rates of non-interviewed HUs due to moving to an unknown address (Type D rate) were 1.4% for Wave 2, 2.5% for Wave 3, 3.1% for Wave 4, 3.7% for Wave 5, 4.1% for Wave 6, 4.5% for Wave 7, and 5.2% for Wave 8.

Because of budget constraints, a 53% sample cut occurred at Wave 9. Essentially, 76 NSR PSUs were dropped from the sample, as well as 33% of the sample in SR PSUs. This resulted in approximately 21,300 eligible HUs for Wave 9. Out of these 21,300 HUs, FRs were able to interview about 16,600 HUs for Wave 9, about 16,200 HUs for Wave 10, about 15,900 for Wave 11, and about 16,000 HUs for Wave 12. After the sample cut, the rates of non-interviewed housing units due to direct or indirect refusal (Type A rate) were 16.9% for Wave 9, 18.5% for Wave 10, 19.7% for Wave 11, and 18.9% for Wave 12. The rates of non-interviewed HUs due to moving to an unknown address (Type D rate) after the sample cut were 5.2% for Wave 9, 5.3% for Wave 10, 5.7% for Wave 11, and 6.4% for Wave 12.

Since SIPP follows all original sample members, those members that form new households are also included in the SIPP sample. This expansion of original households can be estimated within the interviewed sample, but is impossible to determine within the non-interviewed sample. Therefore, a growth factor based on the growth in the known sample is used to estimate the unknown expansion of the non-interviewed households.

Growth factors account for the additional nonresponse stemming from the expansion of non-interviewed households. They are used to get a more accurate estimate of the number of non-interviewed HUs at each wave, called sample loss. To calculate sample loss we use Formula (1):

$$\text{Sample Loss} = \frac{(A_1 \times GF) + A_C + D_C}{I_C + (A_1 \times GF) + A_C + D_C} \tag{1}$$

where A_1 is the number of Type A non-interviewed households in Wave 1, A_C is the number of Type A non-interviewed households in the Current Wave, D_C is the number of Type D non-interviewed households in the current wave, I_C is the number of interviewed households in the current wave, and GF is the growth factor associated with the current wave.

Wave	Eligible HUs	Interviewed HUs	Type As		Type Ds		Growth Factor	Sample Loss
			Total	Rate	Total	Rate		
1	51363	43711	7652	14.9%				14.9%

12	21332	15952	4024	18.9%	1356	6.4%	1.0668	36.6%

Table A. Sample Loss for SIPP 2004

Note that the Wave 1 sample loss rate is the same as the Type A rate since growth factors and Type D (movers) are not applicable until Wave 2.

The public use files include core and supplemental (topical module) data. Core questions are repeated at each interview over the life of the panel. Topical modules include questions which are asked only in certain waves. The 2004 panel topical modules are given in Table 1.

Table 2 indicates the reference months and interview months for the collection of data from each rotation group for the 2004 panel. For example, Wave 1 rotation group 1 of the 2004 panel was interviewed in February 2004 and data for the reference months October 2003 through January 2004 were collected.

Estimation. The SIPP estimation procedure involves several stages of weight adjustments to derive the cross-sectional person level weights. First, each person is given a base weight (BW) equal to the inverse of the probability of selection of a person's household. Then a noninterview adjustment factor is applied to account for households which were eligible for the sample but which FRs could not interview in Wave 1 (F_{N1}). Next, a Duplication Control Factor (DCF) is used to adjust for subsampling done in the field when the number of sample units is much larger than expected. A Mover's Weight (MW) is applied to adjust for persons in the SIPP universe who move into sample households after Wave 1. The last adjustment is the Second Stage Adjustment Factor (F_{2S}). This adjusts estimates to population controls and equalizes husbands' and wives' weights. The 2004 Panel adjusts weights to both national and state level controls.

The final cross-sectional weight is $FW_c = BW * DCF * F_{N1} * F_{2S}$ for Wave 1 and is $FW_c = IW * F_{N2} * F_{2S}$ for Waves 2+, where IW is either $BW * DCF * F_{N1}$ or MW. Additional details of the weighting process are in *SIPP 2004+: Cross-Sectional Weighting Specifications for Wave 1 and Wave 2+*.

Population Controls. The 2004 SIPP estimation procedure adjusts weighted sample results to agree with independently derived population estimates of the civilian noninstitutional population. National family type controls are obtained by taking the Current Population Survey (CPS) weights and doing a "March type" family equalization. That is, wives' weights are assigned to husbands and then proportionally adjusted to the weights of persons by month, rotation group, race, sex, age, and by the marital and family status of householders. This attempts to correct for undercoverage and thereby reduces the mean square error of the estimates. The national and state level population controls are obtained directly from the Population Division and are prepared each month to agree with the most current set of population estimates released by the Census Bureau's population estimates and projections program.

The national level controls are distributed by demographic characteristics as follows:

- Age, Sex, and Race (White Alone, Black Alone, and all other groups combined)
- Age, Sex, and Hispanic Origin

The state level controls are distributed by demographic characteristics as follows:

- State by Age and Sex
- State by Hispanic origin
- State by Race (Black Alone, all other groups combined)

The estimates begin with the latest decennial census as the base and incorporate the latest available information on births and deaths along with the latest estimates of net international migration.

The net international migration component in the population estimates include a combination of:

- Legal migration to the U.S.,
- Emigration of foreign born and native people from the U.S.,
- Net movement between the U.S. and Puerto Rico,
- Estimates of temporary migration, and
- Estimates of net residual foreign-born population, which include unauthorized migration.

Because the latest available information on these components lags the survey date, to develop the estimate for the survey date, it is necessary to make short-term projections of these components.

Use of Weights. There are three primary weights for the analysis of SIPP data. The person month weight (one for each reference month) is for analyzing data at the person level. Everyone in the sample in a given reference month has a person month weight. The person month weight of the household reference person is used to analyze data at the household level (a household may consist of related and unrelated persons). The person month weight of the family reference person is the family weight. Use this weight to analyze family level questions. Weights are also available in the public use files for related subfamilies. Chapter 8 of the SIPP Users' Guide provides additional information on how to use these weights.

By selecting the appropriate reference month weight an analyst can obtain the average of an item such as income across several calendar months.

Example. Using the proper weights, one can estimate the monthly average number of households in a specified income range over December 2003 to January 2004. To estimate monthly averages of a given measure, e.g., total, mean, over a number of consecutive months, sum the monthly estimates and divide by the number of months. To form an estimate for a particular month, use the <u>reference month</u> weight for the month of interest, summing over all persons or households with the characteristic of interest whose reference period includes the month of interest.

The core wave file does not contain weights for characteristics that involve a person's or household's status over two or more months (such as, number of households with a 50 percent increase in income between December 2003 and January 2004).

Adjusting Estimates Which Use Less than the Full Sample. When estimates for months with less than four rotations worth of data are constructed from a wave file, factors greater than 1 must be applied. Multiply the sum by a factor to account for the number of rotations contributing data for the month. This factor equals 4 divided by the number of rotations contributing data for the month. For example, December 2003 data are only available from rotations 1-3 for Wave 1 of the 2004 Panel, so a factor of $4/3 \approx 1.3333$ must be applied. A list of appropriate factors is in Table 3.

ACCURACY OF ESTIMATES

SIPP estimates are based on a sample; they may differ somewhat from the figures that would have been obtained if a complete census had been taken using the same questionnaire, instructions, and enumerators. There are two types of errors possible in an estimate based on a sample survey: sampling and nonsampling. For a given estimator, the difference between an estimate based on a sample and the estimate that would result if the sample were to include the entire population is known as sampling error. For a given estimator, the difference between the estimate that would result if the sample were to include the entire population and the true population value being estimated is known as nonsampling error. We are able to provide estimates of the magnitude of SIPP sampling error, but this is not true of nonsampling error.

Nonsampling Error. Nonsampling errors can be attributed to many sources:

- Inability to obtain information about all cases in the sample
- Definitional difficulties
- Differences in the interpretation of questions
- Inability or unwillingness on the part of the respondents to provide correct information
- Errors made in the following: collection such as in recording or coding the data, processing the data, estimating values for missing data
- Biases resulting from the differing recall periods caused by the interviewing pattern used and undercoverage.

Quality control and edit procedures were used to reduce errors made by respondents, coders and interviewers. More detailed discussions of the existence and control of nonsampling errors in the SIPP can be found in the *SIPP Quality Profile, 1998 SIPP Working Paper Number 230*, issued May 1999.

Undercoverage in SIPP results from missed HUs and missed persons within sample HUs. It is known that undercoverage varies with age, race, and sex. Generally, undercoverage is larger for males than for females and larger for Blacks than for non-Blacks. Ratio estimation to independent age-race-sex population controls partially corrects for the bias due to survey undercoverage. However, biases exist in the estimates to the extent that persons in missed households or missed persons in interviewed households have characteristics different from those of interviewed persons in the same age-race-sex group.

A common measure of survey coverage is the coverage ratio, the estimated population before ratio adjustment divided by the independent population control. Table B below shows SIPP coverage ratios for age-sex-race groups for one month, January 2004, prior to the ratio adjustment. The SIPP coverage ratios exhibit some variability from month to month, but these are a typical set of coverage ratios. Other Census Bureau household surveys [like the CPS] experience similar coverage.

Comparability with Other Estimates. Caution should be exercised when comparing this data with data from other SIPP products or with data from other surveys. The comparability problems are caused by such sources as the seasonal patterns for many characteristics, different nonsampling errors, and different concepts and procedures. Refer to the *SIPP Quality Profile* for known differences with data from other sources and further discussions.

Sampling Variability. Standard errors indicate the magnitude of the sampling error. They also partially measure the effect of some nonsampling errors in response and enumeration, but do not measure any systematic biases in the data. The standard errors for the most part measure the variations that occurred by chance because a sample rather than the entire population was surveyed.

Table B. SIPP Average Coverage Ratios for January 2004 for Age by Race and Sex						
Age	White Only		Black Only		Residual	
	Male	Female	Male	Female	Male	Female
<15	0.89	0.90	0.85	0.82	1.16	1.07
15	0.89	0.90	0.88	0.83	0.96	0.95
16-17	0.90	0.88	0.75	0.84	0.93	0.89
18-19	0.83	0.81	0.79	0.80	0.96	0.89
20-21	0.75	0.74	0.70	0.77	0.96	1.03
22-24	0.75	0.77	0.75	0.73	0.95	1.06
25-29	0.80	0.89	0.70	0.77	0.90	0.95
30-34	0.84	0.88	0.80	0.84	0.94	0.99
35-39	0.89	0.92	0.80	0.83	1.00	1.06
40-44	0.89	0.88	0.84	0.88	1.03	0.99
45-49	0.85	0.91	0.79	0.94	1.02	1.04
50-54	0.92	0.91	0.80	0.89	1.04	1.09
55-59	0.88	0.91	0.91	0.94	0.97	1.19
60-61	0.89	1.01	0.92	0.82	1.04	1.14
62-64	0.92	0.97	0.76	0.97	1.15	1.07
65-69	0.94	0.93	0.99	1.03	1.07	1.01
70-74	0.94	0.96	0.99	1.04	1.08	0.94
75-79	1.04	0.98	0.93	1.08	0.84	0.95
80-84	0.98	0.92	0.79	0.97	0.84	0.97
85+	0.94	0.85	0.74	1.00	0.79	1.03

USES AND COMPUTATION OF STANDARD ERRORS

Confidence Intervals. The sample estimate and its standard error enable one to construct a confidence interval. A confidence interval is a range about a given estimate that has a known probability of including the result of a complete enumeration. For example, if all possible samples were selected, each of these being surveyed under essentially the same conditions and using the same sample design, and if an estimate and its standard error were calculated from each sample, then:

1. Approximately 68 percent of the intervals from one standard error below the estimate to one standard error above the estimate would include the average result of all possible samples.

2. Approximately 90 percent of the intervals from 1.645 standard errors below the estimate to 1.645 standard errors above the estimate would include the average result of all possible samples.

3. Approximately 95 percent of the intervals from two standard errors below the estimate to two standard errors above the estimate would include the average result of all possible samples.

The average estimate derived from all possible samples is or is not contained in any particular computed interval. However, for a particular sample, one can say with a specified confidence that the average estimate derived from all possible samples is included in the confidence interval.

Hypothesis Testing. Standard errors may also be used for hypothesis testing, a procedure for distinguishing between population characteristics using sample estimates. The most common types of hypotheses tested are 1) the population characteristics are identical versus 2) they are different. Tests may be performed at various levels of significance, where a level of significance is the probability of concluding that the characteristics are different when, in fact, they are identical.

To perform the most common test, compute the difference $X_A - X_B$, where X_A and X_B are sample estimates of the characteristics of interest. A later section explains how to derive an estimate of the standard error of the difference $X_A - X_B$. Let that standard error be S_{DIFF}. If $X_A - X_B$ is between $(-1.645 \times S_{DIFF})$ and $(+1.645 \times S_{DIFF})$, no conclusion about the characteristics is justified at the 10 percent significance level. If, on the other hand $X_A - X_B$, is smaller than $(-1.645 \times S_{DIFF})$ or larger than $(+1.645 \times S_{DIFF})$, the observed difference is significant at the 10 percent level. In this event, it is commonly accepted practice to say that the characteristics are different. We recommend that users report only those differences that are significant at the 10 percent level or better. Of course, sometimes this conclusion will be wrong. When the characteristics are the same, there is a 10 percent chance of concluding that they are different.

Note that as more tests are performed, more erroneous significant differences will occur. For example, at the 10 percent significance level, if 100 independent hypothesis tests are performed in which there are no real differences, it is likely that about 10 erroneous differences will occur. Therefore, the significance of any single test should be interpreted cautiously. A Bonferroni correction can be done to account for this potential problem that consists of dividing your stated level of significance by the number of tests you are performing. This correction results in a conservative test of significance.

Note Concerning Small Estimates and Small Differences. Because of the large standard errors involved, there is little chance that estimates will reveal useful information when computed on a base smaller than 75,000. For SIPP estimates calculated from Waves 9+, bases smaller than 250,000 will likely yield little useful information. Also, nonsampling error in one or more of the small number of cases providing the estimation can cause large relative error in that particular estimate. Care must be taken in the interpretation of small differences since even a small amount of nonsampling error can cause a borderline difference to appear significant or not, thus distorting a seemingly valid hypothesis test.

Calculating Standard Errors for SIPP Estimates. There are three main ways we calculate the Standard Errors (SEs) for SIPP Estimates. They are as follows:

- Direct estimates using replicate weighting methods;
- Generalized variance function parameters (denoted as *a* and *b*); and
- Simplified tables of SEs based on the *a* and *b* parameters.

While the replicate weight methods provide the most accurate variance estimates, this approach requires more computing resources and more expertise on the part of the user. The Generalized Variance Function (GVF) parameters provide a method of balancing accuracy with resource usage as well as smoothing effect on SE estimates across time. SIPP uses the Replicate Weighting Method to produce GVF parameters (see K. Wolter, *Introduction to Variance Estimation*, Chapter 5 for more information). The GVF parameters are used to create the simplified tables of SEs.

Standard Error Parameters and Tables and Their Use. Most SIPP estimates have greater standard errors than those obtained through a simple random sample because of its two-stage cluster sample design. To derive standard errors that would be applicable to a wide variety of estimates and could be prepared at a moderate cost, a number of approximations were required.

Estimates with similar standard error behavior were grouped together and two parameters (denoted *a* and *b*) were developed to approximate the standard error behavior of each group of estimates. Because the actual standard error behavior was not identical for all estimates within a group, the standard errors computed from these parameters provide an indication of the order of magnitude of the standard error for any specific estimate. These *a* and *b* parameters vary by characteristic and by demographic subgroup to which the estimate applies. Table 4 provides base *a* and *b* parameters for the core domains to be used for the 2004 Panel Wave 1 to Wave 12 estimates. The base *a* and *b* parameters for the topical modules for Wave 1 to Wave 8 are found in Table 5.

For those users who wish further simplification, we have also provided base standard errors for estimates of totals and percentages in Tables 6 through 9. Note that these base standard errors only apply when data from all four rotations are used and must be adjusted by an *f* factor provided in Table 4. The standard errors resulting from this simplified approach are less accurate. Methods for using these parameters and tables for computation of standard errors are given in the following sections.

Adjusting Standard Error Parameters for Estimates Which Use Less Than the Full Sample. If some rotation groups are unavailable to contribute data to a given estimate, then the estimate and its standard error need to be adjusted. The adjustment of the estimate is described in the previous section. The standard error is adjusted by multiplying the appropriate *a* and *b* parameters by a factor equal to 4 divided by the number of rotation groups contributing data to the estimate or it can be taken from Table 3 where the factor is given for each single reference month, October 2003 to March 2007.

Use Table 3 to select the adjustment factor appropriate to the wave. Multiply this factor by the *a* and *b* base parameters of Table 4 to produce *a* and *b* parameters for the variance estimate for a specific subgroup and reference period.

Illustration 1.

Using Table 4 for Wave 1 of the 2004 panel, the base *a* and *b* parameters for total number of households are -0.00002809 and 3,153, respectively. Using Table 3 for Wave 1, the factor for November 2003 is 2 *since only two rotation months of data are available*. So the *a* and *b* parameters for the variance estimate of a white household characteristic in November 2003 based on Wave 1 are:

$$-0.00002809 \times 2 = -0.00005618 \text{ and } 3{,}153 \times 2 = 6{,}306, \text{ respectively.}$$

Similarly, the factor from Table 3 for the last quarter of 2003 is 1.8519, since the only data available are the six rotation months from Wave 1. (Rotation 1 provides three rotation months, rotation 2 provides two rotation months, and rotation 3 provides one rotation month of data.) Thus, the *a* and *b* parameters for the variance estimate of a white household characteristic in the last quarter of 2003 are:

$$-0.00002809 \times 1.8519 = -0.00005202 \text{ and } 3{,}153 \times 1.8519 = 5{,}839, \text{ respectively.}$$

Standard Errors of Estimated Numbers. The approximate standard error, s_x, of an estimated number of persons, households, families, unrelated individuals and so forth, can be obtained in two ways. Both apply when data from all four rotations are used to make the estimate. However, only Formula (2) should be used when less than four rotations of data are available for the estimate. Note that neither method should be applied to dollar values.

The standard error may be obtained by the use of Formula (2):

$$s_x = f \times s,$$ (2)

where f is the appropriate f factor from Table 4, and s is the base standard error on the estimate obtained by interpolation from Tables 6 or 7. Alternatively, s_x may be approximated by Formula (3):

$$s_x = \sqrt{ax^2 + bx}.$$ (3)

This formula was used to calculate the base standard errors in Tables 8 and 9. Here x is the size of the estimate and a and b are the parameters from Table 4 which are associated with the characteristic being estimated (and the wave which applies). Use of Formula (3) will generally provide more accurate results than the use of Formula (2).

Illustration 2.

Suppose SIPP estimates based on Wave 1 of the 2004 panel show that there were 2,000,000 females aged 25 to 44 with a monthly income of greater than $6,000 in January 2004. The appropriate parameters and factor from Table 4 and the appropriate general standard error from Table 6 are:

$$a = -0.00003059 \quad b = 3{,}582 \quad f = 1.007 \quad s = 83{,}766$$

Using Formula (2), the approximate standard error is:

$$s_x = 1.007 \times 83{,}766 = 84{,}352.$$

Using Formula (3), the approximate standard error is:

$$s_x = \sqrt{(-0.00003059 \times 2{,}000{,}000^2) + (3{,}582 \times 2{,}000{,}000)} = 83{,}914 \ \textit{females}.$$

Using the standard error based on Formula (3), the approximate 90-percent confidence interval as shown by the data is from 1,861,961 to 2,138,039 females (i.e., $2{,}000{,}000 \pm 1.645 \times 83{,}914$). Therefore, a conclusion that the average estimate derived from all possible samples lies within a range computed in this way would be correct for roughly 90% of all samples.

Standard Error of a Mean. A mean is defined here to be the average quantity of some item (other than persons, families, or households) per person, family or household. For example, it could be the average

monthly household income of females age 25 to 34. The standard error of a mean can be approximated by Formula (4) below. Because of the approximations used in developing Formula (4), an estimate of the standard error of the mean obtained from this formula will generally underestimate the true standard error. The formula used to estimate the standard error of a mean $\bar{x}$ is:

$$s_{\bar{x}} = \sqrt{\left(\frac{b}{y}\right)s^2},$$ (4)

where y is the size of the base, s^2 is the estimated population variance of the item and b is the parameter associated with the particular type of item.

The population variance s^2 may be estimated by one of two methods. In both methods, we assume x_i is the value of the item for i^{th} unit. (A unit may be person, family, or household). To use the first method, the range of values for the item is divided into c intervals. The lower and upper boundaries of interval j are z_{j-1} and Z_j, respectively. Each unit, x_i, is placed into one of c intervals such that $Z_{j-1} < x_i \le Z_j$.

The estimated population mean, $\bar{x}$, and variance, s^2, are given by the formulas:

$$\bar{x} = \sum_{j=1}^{c} p_j m_j$$

$$s^2 = \sum_{j=1}^{c} p_j m_j^2 - \bar{x}^2,$$ (5)

where $m_j = (Z_{j-1} + Z_j) / 2$, and p_j is the estimated proportion of units in the interval j. The most representative value of the item in the interval j is assumed to be m_j. If the interval c is open-ended, or no upper interval boundary exists, then an approximate value for m_c is

$$m_c = \frac{3}{2} Z_{c-1}.$$

In the second method, the estimated population mean, $\bar{x}$, and variance, s^2 are given by:

$$\bar{x} = \frac{\sum\limits_{i=1}^{n} w_i x_i}{\sum\limits_{i=1}^{n} w_i}$$

$$s^2 = \frac{\sum\limits_{i=1}^{n} w_i x_i^2}{\sum\limits_{i=1}^{n} w_i} - \bar{x}^2,$$ (6)

where there are n units with the item of interest and w_i is the final weight for i^{th} unit. (Note that $\sum w_i = y$.)

<u>Illustration 3.</u>

Suppose that based on Wave 1 data, the distribution of monthly cash income for persons age 25 to 34 during the month of January 2004 is given in Table 10. Using these data, the mean monthly cash income for persons aged 25 to 34 is $2, 530. Applying Formula (5), the approximate population variance, s^2, is:

$$s^2 = \left(\frac{1,371}{39,851}\right)(150)^2 + \left(\frac{1,651}{39,851}\right)(450)^2 + ... + \left(\frac{1,493}{39,851}\right)(9,000)^2 - (2,530)^2 = 3,159,887.$$

Using Formula (4) and a base b parameter of 3,582, the estimated standard error of a mean $\bar{x}$ is:

$$s_{\bar{x}} = \sqrt{\frac{3,582}{39,851,000} \times 3,159,887} = \$16.85.$$

Thus, the approximate 90-percent confidence interval as shown by the data ranges from \$2,502.28 to \$2,557.72.

Standard Error of an Aggregate. An aggregate is defined to be the total quantity of an item summed over all the units in a group. The standard error of an aggregate can be approximated using Formula (7).

As with the estimate of the standard error of a mean, the estimate of the standard error of an aggregate will generally underestimate the true standard error. Let y be the size of the base, s^2 be the estimated population variance of the item obtained using Formula (5) or Formula (6) and b be the parameter associated with the particular type of item. The standard error of an aggregate
is:

$$s_x = \sqrt{b \times y \times s^2}. \tag{7}$$

Standard Errors of Estimated Percentages. The reliability of an estimated percentage, computed using sample data for both numerator and denominator, depends upon both the size of the percentage and the size of the total upon which the percentage is based. Estimated percentages are relatively more reliable than the corresponding estimates of the numerators of the percentages, particularly if the percentages are 50 percent or more, e.g., the percent of people employed is more reliable than the estimated number of people employed. When the numerator and denominator of the percentage have different parameters, use the parameter (and appropriate factor) of the numerator. If proportions are presented instead of percentages, note that the standard error of a proportion is equal to the standard error of the corresponding percentage divided by 100.

There are two types of percentages commonly estimated. The first is the percentage of people sharing a particular characteristic such as the percent of people owning their own home. The second type is the percentage of money or some similar concept held by a particular group of people or held in a particular form. Examples are the percent of total wealth held by people with high income and the percent of total income received by people on welfare.

For the percentage of people, the approximate standard error, $s_{(x,p)}$, of the estimated percentage p can be obtained by the formula:

$$s_{(x,p)} = f \times s,$$

<div align="right">(8)</div>

when data from all four rotations are used to estimate p. In this formula, f is the appropriate f factor from Table 4 (for the appropriate wave) and s is the base standard error of the estimate from Tables 8 or 9.

Alternatively, it may be approximated by the formula:

$$s_{(x,p)} = \sqrt{\frac{b}{x} (p) (100-p)},$$

<div align="right">(9)</div>

from which the standard errors in Tables 8 and 9 were calculated. Here x is the size of the subclass of social units which is the base of the percentage, p is the percentage ($0 < p < 100$), and b is the parameter associated with the characteristic in the numerator. Use of Formula (9) will give more accurate results than use of Formula (8) above and should be used when data from less than four rotations are used to estimate p.

Illustration 4.

Suppose that in January 2004, 6.7 percent of the 16,812,000 persons in nonfarm households with a mean monthly household cash income of $4,000 to $4,999, were black. Using Formula (9), a b parameter of 3,253, and a factor of 1 from Table 3 since all four rotations are used, the approximate standard error is:

$$s_{(x,p)} = \sqrt{\frac{3,253}{16,812,000} \times 6.7 \times (100-6.7)} = 0.35 \; percent.$$

Consequently, the 90 percent confidence interval as shown by these data is from 6.12 to 7.28 percent.

For percentages of money, a more complicated formula is required. A percentage of money will usually be estimated in one of two ways. It may be the ratio of two aggregates:

$$p_I = 100 \left(\frac{x_A}{x_N} \right),$$

or it may be the ratio of two means with an adjustment for different bases:

$$p_I = 100 \left(\hat{p}_A \frac{\overline{x}_A}{\overline{x}_N} \right),$$

where x_A and x_N are aggregate money figures, $\bar{x}_A$ and $\bar{x}_N$ are mean money figures, and $\hat{p}_A$ is the estimated number in group A divided by the estimated number in group N. In either case, we estimate the standard error as

$$s_I = \sqrt{\left(\frac{\hat{p}_A \bar{x}_A}{\bar{x}_N}\right)^2 \left[\left(\frac{s_p}{\hat{p}_A}\right)^2 + \left(\frac{s_A}{\bar{x}_A}\right)^2 + \left(\frac{s_B}{\bar{x}_N}\right)^2\right]}, \tag{10}$$

where s_p is the standard error of $\hat{p}_A$, s_A is the standard error of $\bar{x}_A$ and s_B is the standard error of $\bar{x}_N$. To calculate s_p, use Formula (9). The standard errors of $\bar{x}_N$ and $\bar{x}_A$ may be calculated using Formula (4).

It should be noted that there is frequently some correlation between $\hat{p}_A$, $\bar{x}_N$, and $\bar{x}_A$. Depending on the magnitude and sign of the correlations, the standard error will be over or underestimated.

Illustration 5.

Suppose that in January 2004, 9.8% of the households own rental property, the mean value of rental property is $72,121, the mean value of assets is $78,734, and the corresponding standard errors are 0.18%, $5,468, and $2,703, respectively. In total there are 86,790,000 households. Then, the percent of all household assets held in rental property is:

$$100 \left(0.098 \times \frac{72{,}121}{78{,}734}\right) = 9.0\%.$$

Using Formula (10), the appropriate standard error is:

$$s_I = \sqrt{\left(\frac{0.098 \times 72{,}121}{78{,}734}\right)^2 \left[\left(\frac{0.0018}{0.098}\right)^2 + \left(\frac{5{,}468}{72{,}121}\right)^2 + \left(\frac{2{,}703}{78{,}734}\right)^2\right]} = 0.7\%.$$

Standard Error of a Difference. The standard error of a difference between two sample estimates is approximately equal to

$$s_{(x-y)} = \sqrt{s_x^2 + s_y^2}, \tag{11}$$

where s_x and s_y are the standard errors of the estimates x and y. The estimates can be numbers, percents, ratios, etc. The above formula assumes that the correlation coefficient between the characteristics estimated by x and y is zero. If the correlation is really positive (negative), then this assumption will tend to cause overestimates (underestimates) of the true standard error.

<u>Illustration 6.</u>

Suppose that for January 2004 SIPP estimates show the number of persons age 35-44 years with monthly cash income of $4,000 to $4,999 was 4,880,200 and the number of persons age 25-34 years with monthly cash income of $4,000 to $4,999 in the same time period was 4,810,800. Then, using the parameters $a =$ -0.00001583 and $b =$ 3,582 from Table 4 and Formula (3), the standard errors of these numbers are approximately 130,782 and 129,869, respectively. The difference in sample estimates is 69,400 and using Formula (11), the approximate standard error of the difference is:

$$\sqrt{130,782^2 + 129,869^2} = 184,309.$$

Suppose that it is desired to test at the 10 percent significance level whether the number of persons with monthly cash income of $4,000 to $4,999 was different for people age 35-44 years than for people age 25-34 years. To perform the test, compare the difference of 69,400 to the product $1.645 \times 184,309 =$ 303,188. Since the difference is not greater than 1.645 times the standard error of the difference, the data show that the two age groups are not significantly different at the 10 percent significance level.

Standard Error of a Median. The median quantity of some item such as income for a given group of people is that quantity such that at least half the group have as much or more and at least half the group have as much or less. The sampling variability of an estimated median depends upon the form of the distribution of the item as well as the size of the group. To calculate standard errors on medians, the procedure described below may be used.

The median, like the mean, can be estimated using either data which have been grouped into intervals or ungrouped data. If grouped data are used, the median is estimated using Formulas (12) or (13) with $p =$ 0.5. If ungrouped data are used, the data records are ordered based on the value of the characteristic, then the estimated median is the value of the characteristic such that the weighted estimate of 50 percent of the subpopulation falls at or below that value and 50 percent is at or above that value. Note that the method of standard error computation which is presented here requires the use of grouped data. Therefore, it should be easier to compute the median by grouping the data and using Formulas (12) or (13).

An approximate method for measuring the reliability of an estimated median is to determine a confidence interval about it. (See the section on sampling variability for a general discussion of confidence intervals.) The following procedure may be used to estimate the 68-percent confidence limits and hence the standard error of a median based on sample data.

1.   Determine, using either Formula (8) or Formula (9), the standard error of an estimate of 50 percent of the group.

2.   Add to and subtract from 50 percent the standard error determined in step 1.

3.   Using the distribution of the item within the group, calculate the quantity of the item such that the percent of the group with more of the item is equal to the smaller percentage found in step 2. This quantity will be the upper limit for the 68-percent confidence interval. In a similar fashion, calculate the quantity of the item such that the percent of the group with more of the item is equal to the larger percentage found in step 2. This quantity will be the lower limit for the 68-percent confidence interval.

4.   Divide the difference between the two quantities determined in step 3 by two to obtain the standard error of the median.

To perform step 3, it will be necessary to interpolate. Different methods of interpolation may be used. The most common are simple linear interpolation and Pareto interpolation. The appropriateness of the method depends on the form of the distribution around the median. If density is declining in the area, then we recommend Pareto interpolation. If density is fairly constant in the area, then we recommend linear interpolation. Note, however, that Pareto interpolation can never be used if the interval contains zero or negative measures of the item of interest. Interpolation is used as follows. The quantity of the item such that p percent have more of the item is:

$$X_{pN} = A_1 \times \exp\left[\left(\frac{\ln(pN \,/\, N_1)}{\ln(N_2 \,/\, N_1)}\right) \ln\left(\frac{A_2}{A_1}\right)\right], \tag{12}$$

if Pareto Interpolation is indicated and:

$$X_{pN} = \left[A_1 + \left(\frac{PN - N_1}{N_2 - N_1}\right)(A_2 - A_1)\right], \tag{13}$$

if linear interpolation is indicated, where:

N	is the size of the group,
A_1 and A_2	are the lower and upper bounds, respectively, of the interval in which X_{pN} falls
N_1 and N_2	are the estimated number of group members owning more than A_1 and A_2, respectively
exp	refers to the exponential function and
ln	refers to the natural logarithm function

<u>Illustration 7.</u>

To illustrate the calculations for the sampling error on a median, we return to Table 10. The median monthly income for this group is $2,158. The size of the group is 39,851,000.

1. Using Formula (9), the standard error of 50 percent on a base of 39,851,000 is about 0.5 percentage points.

2. Following step 2, the two percentages of interest are 49.5 and 50.5.

3. By examining Table 10, we see that the percentage 49.5 falls in the income interval from $2,000 to $2,499. (Since 55.5% receive more than $2,000 per month, the dollar value corresponding to 49.5 must be between $2,000 and $2,500.) Thus, A_1 = **$2,000,** A_2 = **$2,500,** N_1 = **22,106,000,** and N_2 = **16,307,000**.

In this case, we decided to use Pareto interpolation. Therefore, using Formula (12), the upper bound of a 68% confidence interval for the median is

$$\$2{,}000 \times \exp\left[\frac{\ln\left((0.495 \times 39{,}851{,}000)\ /\ 22{,}106{,}000\right)}{\ln(16{,}307{,}000/22{,}106{,}000)} \times \ln\left(\frac{2{,}500}{2{,}000}\right)\right] = \$2{,}174.$$

Also by examining Table 10, we see that 50.5 falls in the same income interval. Thus, A_1, A_2, N and N are the same. We also use Pareto interpolation for this case. So the lower bound of a 68% confidence interval for the median is

$$\$2{,}000 \times \exp\left[\frac{\ln\left((0.505 \times 39{,}851{,}000)\ /\ 22{,}106{,}000\right)}{\ln(16{,}307{,}000/22{,}106{,}000)} \times \ln\left(\frac{2{,}500}{2{,}000}\right)\right] = \$2{,}142.$$

Thus, the 68-percent confidence interval on the estimated median is from $2,142 to $2,174.

4. Then the approximate standard error of the median is
$$\frac{\$2{,}174 - \$2{,}142}{2} = \$16.$$

Standard Errors of Ratios of Means and Medians. The standard error for a ratio of means or medians is approximated by:

$$s_{\frac{x}{y}} = \sqrt{\left(\frac{x}{y}\right)^2 \left[\left(\frac{s_y}{y}\right)^2 + \left(\frac{s_x}{x}\right)^2\right]}, \tag{13}$$

where x and y are the means or medians, and s_x and s_y are their associated standard errors.

Formula (14) assumes that the means are not correlated. If the correlation between the population means estimated by x and y are actually positive (negative), then this procedure will tend to produce overestimates (underestimates) of the true standard error for the ratio of means.

Standard Errors Using SAS or SPSS. Standard errors and their associated variance, calculated by SAS or SPSS statistical software package, do not accurately reflect the SIPP's complex sample design. Erroneous conclusions will result if these standard errors are used directly. We provide adjustment factors by characteristics that should be used to correctly compensate for likely under-estimates. The factors called DEFF available in Table 4, must be applied to SAS or SPSS generated variances. The square root of DEFF can be directly applied to similarly generated standard errors. These factors approximate design effects which adjust statistical measures for sample designs more complex than simple random sample.

Table 1. 2004 Panel Topical Modules

W1	• Recipiency History • Employment History	W5	• Adult Well-Being • Child Support Agreements • Functional Limitations/Disabilities-Adult • Functional Limitations/Disabilities-Child • Support for Non-household members • School Enrollment & Financing • Employer-Provided Health Benefits
W2	• Work Disability • Marital History • Fertility History • Household Relationships • Education & Training History • Migration History	W6	• Assets and Liabilities • Real Estate, Dependent Care, and Vehicles • Mortgage, Stocks, Int Acct, Rental, Val Bus, Other • Medical Expenses/Utilization of Health Care Services • Work-related Expenses • Child Support Paid
W3	• Child Well-Being • Work-related Expenses • Child Support Paid • Medical Expenses/Utilization of Health Care Services • Assets and Liabilities • Real Estate, Dependent Care, and Vehicles • Mortgage, Stocks, Int Acct, Rental, Val Bus, Other	W7	• Annual Income & Retirement Accounts • Taxes • Informal Care Giving • Retirement & Pension Plan Coverage
W4	• Annual Income & Retirement Accounts • Taxes • Child Care • Work Schedule	W8	• Welfare Reform • Child Care • Child Well-Being

Notes on Domain Usage for Table 4:

Poverty and Program Participation — Use these parameters for estimates concerning poverty rates, welfare program participation (e.g., foodstamp, SSI, TANF), and other programs for adults with low incomes.

Income and Labor Force — These parameters are for estimates concerning income, sources of income, labor force participation, economic well being other than poverty, employment related estimates (e.g., occupation, hours worked a week), and other income, job, or employment related estimates.

Other Persons — Use the "Other Persons" parameters for estimates of total (or white) persons aged 0+ in the labor force, and all other characteristics not specified in this table, for the total or white population.

Black/Hispanic Persons — Use these parameters for estimates of Black and Hispanic persons 0+.

Households — Use these parameters for all household level estimates.

Our next questions are about various types of assistance for persons
in need.

Between [fill MONTH1] 1st and today, other than the benefits you
already told me about, did [fill TEMPNAME] receive any type of
assistance because [fill HESHE] had income that was too low to meet
[fill HISHER] needs?

QUESTION CW19 ASKS THE RESPONDENT TO REPORT
HER/HIS OWN PERSPECTIVE.
THESE QUESTIONS ARE ASKED OF THE DESIGNATED
PARENT/GUARDIAN, OR THE SPOUSE.

Now I'm going to read you some statements. Please tell me
if you think each statement is not true, sometimes true or
often true.

In general, [fill CDNAME] likes to go to school.
Would you say this statement is not true, sometimes true,
or often true?

```
(1)  Not true
(2)  Sometimes true
(3)  Often true

    @
```

Mark One Only   **CW19b**

```
[fill CDNAME] is interested in school work.
Would you say this statement is not true, sometimes true,
or often true?

    (1)  Not true
    (2)  Sometimes true
    (3)  Often true

      @
```

Mark One Only   **CW19c**

```
[fill CDNAME] works hard at school.
Would you say this statement is not true, sometimes true,
or often true?

    (1)  Not true
    (2)  Sometimes true
    (3)  Often true

      @
```

Mark One Only   **CW20a**

```
Other than graduating from one school to another,
has [fill CDNAME] [bold]EVER[n] changed schools since
entering the first grade?

    (1)  Yes
    (2)  No

      @
```

Enter Number   **CW20b**

```
How many times did [fill CDNAME] change schools
for reasons other than graduation?

    Number of times:@
```

Mark One Only   **CW21a**

```
Has [fill CDNAME] repeated any grades,
or been held back for any reason?

    (1)  Yes
