

5. Finding SIPP Information

SIPP data and supporting documentation are available in various forms. They include published estimates based on those data, microdata in several formats, documentation for each of the microdata files, and more general documentation about methodological issues in SIPP. In addition more information about SIPP can be found in the SIPP Quality Profile, working papers distributed by the Census Bureau, articles published in academic journals, and conference proceedings. This chapter discusses SIPP published estimates, briefly describes the data files and supporting documentation, and provides information on how to obtain them.

Published Estimates from SIPP

Published estimates from SIPP data are useful to data analysts in a number of ways. First, Census Bureau publications may already contain the estimates needed for the research project at hand, thus saving users the having to create those estimates themselves. Second, published estimates can often provide a useful cross-check for closely related estimates prepared by analysts.

Published estimates are based on the Census Bureau's *internal* data files. The internal files are not top-coded, however the public use files have been top-coded and some data suppressed to protect respondent confidentiality. It is expected, therefore, that outside analysts will often not be able to replicate published estimates exactly.

The Census Bureau's P-70 series of publications is a primary source for published estimates from SIPP. Table 5-1 displays the titles and publication numbers of reports in the series that are currently available from the Census Bureau. Copies of those reports can be obtained from the U.S. Government Printing Office, Washington, DC 20402. To order online, visit the U.S. Government Online Bookstore at <http://bookstore.gpo.gov>. To order by phone, call toll-free 866.512.1800 or, in the Washington, D.C. metro area, call 202-512-1800 from 7:00 a.m.- 9:00 p.m. EST. To order by fax, dial 202-512-2104. A continuously updated list of P-70 series reports can be obtained from the SIPP Web site (<http://www.bls.census.gov/sipp/>); each of the reports contains a phone number the reader can call for further information or clarification. Users can call the Demographics Call Center 866-758-1060 for general information.

Following data collection as described in Chapter 2 and post collection data processing as described in Chapter 4, the Census Bureau prepares data files in formats compatible with the most common methods of analysis. Those microdata are available in several file formats and can be obtained on a variety of media. The following sections describe the file formats currently in use, each of which is used for somewhat different SIPP data. Information is also provided about how to obtain those data and supporting documentation.

Formats and Contents of SIPP Microdata Files

SIPP public use microdata are available in four types of files: core wave files, topical module files, and full and partial longitudinal panel files. The files vary in content and structure. Analysts should be aware that their need for files depends on their particular application.

Data files are available through the Customer Services Section of the Publication Services Branch, Administrative and Customer Services Division, at (301) 763-4403. Users can also extract data files by using on-line data access tools, as described later in this chapter in Sources for Obtaining SIPP Microdata.

Core Wave Files

Core wave files contain the core labor force, income, household and family composition, and program participation data from one wave of interviews. The core wave files are currently available in person-month format, containing, for every person who was a member of a SIPP household for at least 1 month during the 4-month reference period for that wave, one record for each month that person was in-sample.¹ In other words, a person who was in-sample for all 4 reference months has four records one for each reference month. A person who was in-sample for only 1 month would have just one record. The core wave files are designed for cross-sectional analyses. Analysts who do not wish to wait for the release of certain files can link one or more core wave files to make their own longitudinal files. Chapter 13 discusses linking files. Table 5-2 illustrates the structure of the person-month format for core wave files.

The core wave files are the only source of monthly cross-sectional weights. When using data drawn from the full panel files, available for 1984-1993 Panels, for cross-sectional analyses, users must merge weights from the core wave files. Chapter 8 explains how to select and merge weights.

Topical Module Files

Each topical module file contains selected core information along with the data from the topical module administered in a given wave. As described in Chapter 2, different topical modules are administered in each wave of a SIPP panel. Table 5-3 shows which topical modules were administered for each wave of each SIPP panel. Table 5-4 lists topical areas along with the panels and waves in which they were administered. Topical module files are issued in person-record format; there is one record for each person who was a member of a SIPP household as of the 15th of the interview month. Table 5-5 illustrates the structure of a topical module file. Chapter 2 describes how the interviews are conducted and how topical module information is collected; Chapter 4 explains how missing data are handled in the files. In the 1996+ Panels, the month that determined the universe for the topical module files changed to month 4 of the reference period.

¹ Prior to the 1990 Panel, the Census Bureau issued core wave files in a format with a single record for each person. Those files are described in earlier editions of the SIPP Users' Guide

^a The number preceding the hyphen indicates the year of the panel, and the number following the hyphen indicates the wave number. Thus, 84-8 denotes that the information was collected in the 1984 Panel, during Wave 8.

Full and Partial Panel Files

For the pre-1996 Panels, at the conclusion of each panel, the Census Bureau created a single full panel file containing selected data from the core wave files for every person who was a member of the SIPP sample at any time during the life of that panel. The full panel files were issued in a format that contained one record for each person. That record contained either data or missing value codes for selected core questionnaire items for every month of the panel.² Chapter 3 discusses survey content, including information about the content of the core questionnaire. For the 1996 and the 2001 Panels, no full Panel-files were created, however demographics in each cross-sectional file were longitudinally edited based on the wave 4 values. Beginning with the 2004 Panel, this edit was discontinued.

² In the case of items that are asked only once per interview rather than for each month of the 4-month reference period, there is a field for each interview rather than for each month.

Sources for Obtaining SIPP Microdata

SIPP microdata files can be obtained from several sources. All public use microdata files can be obtained on magnetic media or CD-ROM directly from the Census Bureau. When microdata files are obtained directly from the Census Bureau, users are provided with a full set of documentation for those files, including all currently available applicable User Notes (discussed later in this chapter). Users can also be placed on a distribution list to receive information from the Census Bureau regarding any errors found in, or revisions made to, those files, by contacting the Customer Services Branch, Administrative and Customer Services Division, at (301) 457-4100. In addition, analysts affiliated with institutions that are members of the Inter-university Consortium for Political and Social Research (ICPSR) can obtain all SIPP microdata from that source. Users should contact the ICPSR representative at their institutions for more information. Finally, SIPP data and documentation, as released by the Census Bureau, are not copyrighted. The data files and supporting documentation can therefore be freely copied and distributed to other users.³

³ This provision pertains only to materials authored and distributed by the Census Bureau or other federal agencies. It does not imply any rights to copy and distribute material published by any other party.

For data from the 1996+ Panels and for the 1992 and 1993 longitudinal files, users can access the data through the Federated Electronic Research Review Extraction and Tabulation Tool also known as DataFerret. FERRET is the product of a joint project of the U.S. Census Bureau and the Bureau of Labor Statistics. It is a system enabling users to access and manipulate large demographic and economic data sets on-line. This data tool allows analysts to handle core data as well as topical module data without a lot of pre-coding. The user selects a data basket of variables and then recodes them as needed. Once the variables have been recoded, (if needed) tables and charts can be easily created or you can download your data.

FERRET is designed to aid sophisticated researchers, reporters, students, government policy makers, and amateur statisticians. SIPP is one of several surveys available through FERRET.⁴

DataFerret allows:

- Data to be downloaded in several different formats, (ASCII, SAS, SPSS, or Excel/Access file)
- Users move seamlessly between query, analysis, and visualization of data in one package
- Users share data and manage their own online data

You can download DataFerret and FTP data files at the SIPP Web site (<http://www.sipp.census.gov/sipp/>). The tutorial provides examples on how to use and move around DataFerret.

Other Sources of Information About SIPP

Other sources of information about SIPP include the SIPP Quality Profile, User Notes, and SIPP working papers. The SIPP Web site includes an extensive bibliography that provides references to SIPP-related research and documentation, data dictionaries, variable metadata documenting all information relevant to variables that appear on the public use microdata files, and a computer-based tutorial that introduces users to methods and concepts needed to use SIPP data.

⁴ Among the current and future topics accessible through FERRET are employment, health care, education, race and ethnicity, health insurance, housing, income and poverty, aging, marriage, and the family. FERRET allows users to quickly locate current and historical information from survey sources, get tabulations for specific information they need, make comparisons between different data sets, create simple tables, and download large amounts of data to desktop and larger computers for custom reports.

SIPP Quality Profile

The SIPP Quality Profile documents data quality issues related to SIPP. It summarizes what is known about the sources and magnitude of errors in estimates based on SIPP. The SIPP Quality Profile covers both sampling and nonsampling error, with an emphasis on nonsampling error. There have been three editions of the SIPP Quality Profile. The third edition, by Kalton, Winglee, & Jabine (U.S. Census Bureau, 1998a), updates the two previous editions, by King, Petroni, & Singh (U.S. Census Bureau, 1987) and Jabine, King, & Petroni (U.S. Census Bureau, 1990). The third edition of the SIPP Quality Profile is available on-line at the SIPP Web site.

SIPP User Notes

The SIPP User Notes, issued periodically by the Census Bureau, contain updated information for specific microdata files. The User Notes include corrections to the data dictionaries, announcements of errors found in the public use data files after their release, and recommended corrections for those data errors. Analysts obtaining SIPP microdata files directly from the Census Bureau will receive all User Notes that have been issued for those files at the time of purchase. Users who obtained files from other sources should contact the Publication Customer Services Branch, Administrative and Customer Services Division, at (301) 763-4400, to request the User Notes that have been issued for the data they plan to use. User Notes are also available at the SIPP Web site (<http://www.sipp.census.gov/sipp/>).

Microdata Technical Documentation

Users purchasing SIPP microdata files directly from the Census Bureau receive, along with the data files, a package of technical documentation. The technical documentation includes:

- A data dictionary, containing information about the file structure and the names, locations and contents of all variables. The printed version of the data dictionary also includes information about the structure of the machine-readable data dictionary supplied with each file.
- A source and accuracy statement, containing detailed information about sample weights and computation of standard errors using Census Bureau generalized variance procedures. This information is specific to the panel, wave, and content of the data file. For example, the topical module file and the core wave file for Wave 7 of the 1990 Panel have different source and accuracy statements.
- A copy of the questionnaire screens used to collect the information contained in the microdata file for the computer-assisted interviews for the 1996+ Panels are available from the SIPP Web site (Chapter 2).

SIPP Working Papers

The Census Bureau publishes a series of SIPP working papers. Those papers are written by authors inside the Census Bureau and by outside analysts. The series includes research papers based on SIPP data or related to the SIPP program. SIPP working papers can be obtained from the SIPP Web site (<http://www.sipp.census.gov/sipp/>) or ordered from the Publication Services Branch, Administrative and Customer Services Division, at (301) 763-4400.

Bibliography

A bibliography of works related to SIPP is available on-line from the SIPP Web site, <http://www.census.gov/sipp/aboutbib.html>. This relatively comprehensive bibliography contains references for journal articles, research papers, and working papers that use SIPP data or that discuss the SIPP survey.
