Note: The file structures provided are intended as an aid for users. We cannot provide support in their application.

README File for File_Structure for PL Summary Files

The structure of the three files provided for each state Redistricting Summary File product is documented in the file, 0README_PL, found under each state directory and the FTP directory for the Redistricting Data.

Microsoft Access 2007 and Microsoft Access 2003 files contain import specifications describing the fixed-field format of the geographic header and assign names to each of the data elements included in the three Redistricting Data Summary Files. These datasets were created to support users of the 2010 Redistricting Data FTP files. For Windows users, these files can reduce the burden of preparing an environment in which to work with these summary data files.   These files are made available on an "as-is" basis.

SAS import programs have been created to support users of the 2010 Redistricting Data FTP files.

The **Access** databases contain the following tables:

- Header   (corresponds to HEADER.DBF)
- PL_Geo_Header   (corresponds to PL_GEOHD_2010.DBF)
- PL_Part1   (corresponds to PL_PART1_2010.DBF)
- PL_Part2   (corresponds to PL_PART2_2010.DBF)
- Tables   (corresponds to TABLES_2010.DBF)

The following **SAS** programs are provided:

- pl_geohd_2010.sas   (produces a GEO header dataset)
- pl_part1_2010.sas   (produces a table 1 and 2 dataset)
- pl_part2_2010.sas   (produces a table 3, 4, and 5 dataset)
- pl_all_3_2010.sas   (produces all 3 PL files together in 1 dataset)

Users of the SAS programs will have to modify the libname, data, and infile statements to conform to their environments. The pl_all_3_2010.sas program merges the three Redistricting Data files into one SAS dataset by LOGRECNO. Users should check their SAS log for inconsistencies. These programs have been tested using SAS version 9. SAS program users will have to unzip the files in a state subdirectory prior to working with them.

For Access Users

The following are suggestions for loading the Redistricting Data Summary Files into an Access Database:

Part 1

- Download the zip files from the FTP site.
- Download the PL2010_Access.accdb (Access2007) or PL2010_Access2003.mdb (Access2003) file from the FTP site.
- Unzip the PL files you wish to load into Access and rename the file extension to csv. For convenience, you may want to place these files in a clearly named subdirectory. (NOTE: The files downloaded from the FTP site were created in a LINUX environment. To work with these files in a Windows environment you must unzip the data sets using Unzip software that can convert the format of these files to a DOS/Windows compatible format. See the 0README_PL file accompanying the data sets.
- Make a copy of the downloaded .mdb file in the subdirectory where you want the new Access database to reside. Rename the copy (for example, MyPLData_2010.mdb).
- Open Access.
- Select and open the new database you created (for example, MyPLData_2010).

Part 2

- From the File menu, select Get External Data/Import.
- In the Import window, (a) select Text Files for Files of Type, (b) enter *.* for File name, (c) select the subdirectory where the unzipped files were placed to complete the "Look In" option, (d) select the file you want to import (for example, AKGEO2010.csv, and (e) press the Import button.
- In the Import Text Wizard window, click on the Advanced option. In the Import Specification window, click on Specs. Select the appropriate import specification. (There is an import specification for each of the three PL file types.) Click Open. Then click OK.
- In the Import Text Wizard window, click Next twice. Select In a New Table. Click Next a third and fourth time. Select Choose My Own Primary Key. Select LOGRECNO. Click Next. Change the name of the Access table if you wish. Click Finish.
- Repeat part 2 until all three files for a state have been added.

File Structure

The structure of the files is identical in each format. These three files provide file structure only. They contain no data. The structure of each is detailed below:
