Geography and Environment

This section presents a variety of information on the physical environment of the United States, starting with basic area measurement data and ending with climatic data for selected weather stations around the country. The subjects covered between those points are mostly concerned with environmental trends but include related subjects such as land use, water consumption, air pollutant emissions, toxic releases, oil spills, hazardous waste sites, municipal waste and recycling, threatened and endangered wildlife, and the environmental industry.

The information in this section is selected from a wide range of federal agencies that compile the data for various administrative or regulatory purposes, such as the Environmental Protection Agency (EPA), U.S. Geological Survey (USGS), National Oceanic and Atmospheric Administration (NOAA), Natural Resources Conservation Service (NRCS), and General Services Administration (GSA). New information on hazardous waste generation and shipment by state and federal funding for several environmental programs may be found in Tables 370 and 371.

Area—For the 2000 census, area measurements were calculated by computer based on the information contained in a single, consistent geographic database, the Topologically Integrated Geographic Encoding & Referencing system (TIGER®) database, rather than relying on historical, local, and manually calculated information. Information from the 2000 census may be found in Table 346.

Geography—The USGS conducts investigations, surveys, and research in the fields of geography, geology, topography, geographic information systems, mineralogy, hydrology, and geothermal energy resources as well as natural hazards. The USGS provides United States cartographic

data through the Earth Sciences Information Center, water resources data through the National Water Data Exchange (NAWDEX), and a variety of research and Open-File reports which are announced monthly in *New Publications of the USGS*.

In a joint project with the U.S. Census Bureau, during the 1980s, the USGS provided the basic information on geographic features for input into a national geographic and cartographic database prepared by the Census Bureau, called TIGER® database. Since then, using a variety of sources, the Census Bureau has updated these features and their related attributes (names, descriptions, etc.) and inserted current information on the boundaries, names, and codes of legal and statistical geographic entities; very few of these updates added aerial water features. Maps prepared by the Census Bureau using the TIGER® database show the names and boundaries of entities and are available on a current basis.

The U.S. Census Bureau uses the Boundary and Annexation Survey to maintain a current inventory of government units and their legal boundaries. The information is available to the public online. There are also several series of maps for Census 2000: P.L. County Block Maps, Census Tract Outline Maps, and Voting District/State Legislative District Outline Maps. These maps can be obtained online via the American Fact-Finder®.

An inventory of the nation's land resources by type of use/cover was conducted by the National Resources Inventory Conservation Service every 5 years beginning in 1977. The most recent survey results, which were published in the 1997 National Resources Inventory, cover

all nonfederal land in Puerto Rico, the Virgin Islands, and the United States except Alaska. Tables 349 to 351 provide results from the survey. Beginning with the release of the 2001 estimates, this program will shift to become an annual release of land use data.

Environment—The principal federal agency responsible for pollution abatement and control activities is the Environmental Protection Agency (EPA). It is responsible for establishing and monitoring national air quality standards, water quality activities, solid and hazardous waste disposal, and control of toxic substances. Many of these series now appear in the Envirofacts portion of the EPA Web site at <<http://www.epa.gov/enviro/>>. In 2003, EPA released a major compilation of environmental indicators, entitled *Draft Report on the Environment: 2003*, found at <<http://www.epa.gov/indicators/roe/htm/roeTOC.htm>>. A new series of reports (technical, public, and electronic) are planned for 2006.

National Ambient Air Quality Standards (NAAQS) for suspended particulate matter, sulfur dioxide, photochemical oxidants, carbon monoxide, and nitrogen dioxide were originally set by the EPA in April 1971. Every 5 years, each of the NAAQS is reviewed and revised to include any additional or new health or welfare data. The standard for photochemical oxidants, now called ozone, was revised in February 1979. Also, a new NAAQS for confining lead was promulgated in October 1978 and for suspended particulate matter in 1987. Table 359 gives some of the health-related standards for the six air pollutants having NAAQS. Data gathered from state networks are periodically submitted to EPA's National Aerometric Information Retrieval System (AIRS) for summarization in annual reports on the nationwide status and trends in air quality. For details, see *National Air Quality and Emissions Trends Report*. More current information on emissions may be found on the EPA Web site at <<http://www.epa.gov/airtrends/>>.

The Toxics Release Inventory (TRI), published by the EPA, is a valuable source of information on nearly 650 chemicals that are being used, manufactured, treated,

transported, or released into the environment. Sections 313 of the Emergency Planning and Community Right-To-Know Act (EPCRA) and 6607 of the Pollution Prevention Act (PPA), mandate that a publicly-accessible toxic chemical database be developed and maintained by EPA. This database, known as the TRI, contains information concerning waste management activities and the release of toxic chemicals by facilities that manufacture, process, or otherwise use said materials. Data on the release of these chemicals are collected from over 23,000 facilities and facilities added in 1998 that have the equivalent of 10 or more full-time employees and meet the established thresholds for manufacturing, processing, or "other use" of listed chemicals. Facilities must report their releases and other waste management quantities. Since 1994 federal facilities have been required to report their data regardless of industry classification. In May 1997, EPA added seven new industry sectors that reported to the TRI for the first time in July 1999 for the 1998 reporting year.

Climate—NOAA, through the National Weather Service and the National Environmental Satellite, Data, and Information Service, is responsible for climate data. NOAA maintains about 11,600 weather stations, of which over 3,000 produce autographic precipitation records, about 600 take hourly readings of a series of weather elements, and the remainder record data once a day. These data are reported monthly in the Climatological Data and Storm Data, published monthly and annually in the Local Climatological Data (published by location for major cities).

The normal climatological temperatures, precipitation, and degree days listed in this publication are derived for comparative purposes and are averages for the 30-year period, 1971–2000. For stations that did not have continuous records for the entire 30 years from the same instrument site, the normals have been adjusted to provide representative values for the current location. The information in all other tables is based on data from the beginning of the record at that location through 2003.

Table 347. Land and Water Area of States and Other Entities: 2000

[One square mile = 2.59 square kilometers. Area is calculated from the specific boundary recorded for each entity in the U.S. Census Bureau's geographic TIGER database]

State and other area	Total area		Land area		Water area					
	Sq. mi.	Sq. km.	Sq. mi.	Sq. km.	Total		Inland (sq. mi.)	Coastal (sq. mi.)	Great Lakes (sq. mi.)	Terri- torial (sq. mi.)
					Sq. mi.	Sq. km.

Table 353. U.S. Wetland Resources and Deepwater Habitats by Type: 1986 and 1997

[In thousands of acres (144,673.3 represents 144,677,300). Wetlands and deepwater habitats are defined separately because the term wetland does not include permanent water bodies. Deepwater habitats are permanently flooded land lying below the deepwater boundary of wetlands. Deepwater habitats include environments where surface water is permanent and often deep, so that water, rather than air, is the principal medium within which the dominant organisms live, whether or not they are attached to the substrate. As in wetlands, the dominant plants are hydrophytes; however, the substrates are considered nonsoil because the water is too deep to support emergent vegetation. In general terms, wetlands are lands where saturation with water is the dominant factor determining the nature of soil development and the types of plant and animal communities living in the soil and on its surface. The single feature that most wetlands share is soil or substrate that is at least periodically saturated with or covered by water. Wetlands are lands transitional between terrestrial and aquatic systems where the water table is usually at or near the surface or the land is covered by shallow water]

Wetland or deepwater category	1986	1997	Change, 1986 to 1997
All wetlands and deepwater habitats, total	144,673.3	144,136.8	-536.5
All deepwater habitats, total	38,537.6	38,645.1	107.5
Lacustrine ¹	14,608.9	14,725.3	116.4
Riverine ²	6,291.1	6,255.9	-35.2
Estuarine Subtidal ³	17,637.6	17,663.9	26.3
All wetlands, total	106,135.7	105,491.7	-644.0
Intertidal wetlands ⁴	5,336.6	5,326.2	-10.4
Marine intertidal	133.1	130.9	-2.2
Estuarine intertidal nonvegetated	580.4	580.1	-0.3
Estuarine intertidal vegetated	4,623.1	4,615.2	-7.9
Freshwater wetlands	100,799.1	100,165.5	-633.6
Freshwater nonvegetated	5,251.0	5,914.3	663.3
Freshwater vegetated	95,548.1	94,251.2	-1,296.9
Freshwater emergent ⁵	26,383.3	25,157.1	-1,226.2
Freshwater forested ⁶	51,929.6	50,728.5	-1,201.1
Freshwater shrub ⁷	17,235.2	18,365.6	1,130.4

¹ The lacustrine system includes deepwater habitats with all of the following characteristics: (1) situated in a topographic depression or a dammed river channel; (2) lacking trees, shrubs, persistent emergents, emergent mosses or lichens with greater than 30 percent coverage; (3) total area exceeds 20 acres. ² The riverine system includes deepwater habitats contained within a channel, with the exception of habitats with water containing ocean derived salts in excess of 0.5 parts per thousand. ³ The estuarine system consists of deepwater tidal habitats and adjacent tidal wetland that are usually semi-enclosed by land but have open, partly obstructed, or sporadic access to the open ocean, and in which ocean water is at least occasionally diluted by freshwater runoff from the land. Subtidal is where the substrate is continuously submerged by marine or estuarine waters. ⁴ Intertidal is where the substrate is exposed and flooded by tides. Intertidal includes the splash zone of coastal waters. ⁵ Emergent wetlands are characterized by erect, rooted, herbaceous hydrophytes, excluding mosses and lichens. This vegetation is present for most of the growing season in most years. These wetlands are usually dominated by perennial plants. ⁶ Forested wetlands are characterized by woody vegetation that is 20 feet tall or taller. ⁷ Shrub wetlands include areas dominated by woody vegetation less than 20 feet tall. The species include true shrubs, young trees, and trees or shrubs that are small or stunted because of environmental conditions.

- Represents zero. ¹ From source to mouth. ² Drainage area includes both the United States and Canada. ³ The length from the source of the Missouri River to the Mississippi River and thence to the Gulf of Mexico is about 3,710 miles. ⁴ Includes about 167,000 cubic ft. per second diverted from the Mississippi into the Atchafalaya River but excludes the flow of the Red River. ⁵ Excludes the drainage areas of the Red and Atchafalaya Rivers. ⁶ In east-central Louisiana, the Red River flows into the Atchafalaya River, a distributary of the Mississippi River. Data on average discharge, length, and drainage area include the Red River, but exclude all water diverted into the Atchafalaya from the Mississippi River.

Table 357. U.S. Water Quality Conditions by Type of Waterbody: 2000

[Section 305(b) of the Clean Water Act requires states and other jurisdictions to assess the health of their waters and the extent to which their waters support water quality standards. Section 305(b) requires that states submit reports describing water quality conditions to the Environmental Protection Agency every two years. Water quality standards have three elements (designated uses, criteria developed to protect each use, and an antidegradation policy). For information on survey methodology and assessment criteria, see report]

Item	Rivers and streams (miles)	Lakes, reservoirs, and ponds (acres)	Estuaries (sq. miles)	Great Lakes shoreline (miles)	Ocean shoreline (miles)

Urban runoff and storm sewers	34,871	13,699,327	5,045	152	241

- Represents zero. NA Not available. ¹ Includes waterbodies assessed as not attainable for one or more uses. Most states do not assess all their waterbodies during the 2-year reporting cycle, but use a "rotating basin approach" whereby all waters are monitored over a set period of time. ² Based on assessment of available data, water quality supports all designated uses. Water quality meets narrative and/or numeric criteria adopted to protect and support a designated use. ³ Although all assessed uses are currently met, data show a declining trend in water quality. Projections based on this trend indicate water quality will be impaired in the future, unless action is taken to prevent further degradation. ⁴ Impaired or not attainable. The reporting state or jurisdiction has performed a "use-attainability analysis" and demonstrated that support of one or more designated beneficial uses is not attainable due to specific biological, chemical, physical, or economic/social conditions. ⁵ Excludes unknown and natural sources.

¹ Refers to the primary National Ambient Air Quality Standard that protects the public health. ² Based on 8-hour standard of 9 ppm. ³ Based on 1-hour standard of .12 ppm. ⁴ Based on 8-hour standard of .08 ppm. ⁵ The particulates (PM-10) standard replaced the previous standard for total suspended particulates in 1987. ⁶ Based on 3-month standard of 1.5 $\mu\text{g}/\text{m}^3$.

Table 360. National Air Pollutant Emissions: 1970 to 2002

[In thousands of tons (13,042 represents 13,042,000), except as indicated. PM-10 = Particulate matter of less than ten microns; PM-2.5 = particulate matter of less than 2.5 microns effective diameter. Methodologies to estimate data for 1970 to 1980 period and 1985 to present emissions differ. Beginning with 1985, the methodology for more recent years is described in the document available at <<http://www.epa.gov/ttn/chieftrends/trends99/neiproc99.pdf>>.]

Year	PM-10	PM-10, fugitive dust ¹	PM-2.5	Sulfur dioxide	Nitrogen dioxides	Volatile organic compounds	Carbon monoxide	Lead (tons) ²
1970	13,042	(NA)	(NA)	31,218	26,883	34,659	204,043	220,869
1975	7,671	(NA)	(NA)	28,043	26,337	30,765	188,398	159,659

Table 370. Federal Funding for the Superfund, Brownfields, and Related Programs: 1995 to 2005

[In millions of dollars (1,354 represents \$1,354,000,000). For fiscal years ending in year shown; see text, Section 8, State and Local Government Finances and Employment. Represents either outlays or obligations; see footnotes below for further explanation]

Program	1995	1996	1997	1998	1999	2000	2001	2002	2003	2004	2005
Current dollars											
Total	1,354	1,314	1,394	1,503	1,503	1,403	1,408	1,418	1,590	1,579	1,567
Superfund ¹	1,224	1,195	1,239	1,279	1,273	1,178	1,179	1,175	1,265	1,258	1,247
Brownfields ³	2	8	37	89	91	92	91	95	167	170	164
ATSDR ⁴	69	59	64	74	76	70	75	78	82	73	76
NIEHS ⁵	59	52	54	61	63	63	63	70	76	78	80
Constant (2004) dollars ⁶											
Total	1,589	1,514	1,578	1,682	1,660	1,519	1,489	1,473	1,622	1,579	1,537
Superfund ²	1,437	1,377	1,403	1,431	1,406	1,275	1,247	1,220	1,290	1,258	1,223
Brownfields ³	2	9	42	100	100	100	96	99	170	170	161
ATSDR ⁴	81	68	72	83	84	76	79	81	84	73	75
NIEHS ⁵	69	60	61	68	70	68	67	73	78	78	78

¹ For purposes of this analysis, excludes all emergency supplemental appropriations designated specifically for homeland security purposes. ² Superfund program funding is the enacted appropriations excluding amounts designated for the Brownfields, ATSDR, and NIEHS programs. ³ Brownfields funding includes amounts received through the Superfund appropriations for fiscal years 1995 through 2002 and direct appropriations for fiscal years 2003 through 2005. ⁴ Agency for Toxic Substances and Disease Registry (ATSDR) and National Institute for Environmental Health Sciences (NIEHS) funding includes amounts received through the Superfund appropriations for fiscal years 1995 through 2000 and direct appropriations for fiscal years 2001 through 2005. ⁵ The amount designated for the Brownfields program in fiscal year 1993 was 0.15 million in current year dollars and 0.18 in constant year 2004 dollars. ⁶ The current years dollars adjusted for inflation using the Gross Domestic Product (Chained) Price Index, with 2004 as the reference year.

- Represents zero. NA Not available. ¹ Source: U.S. National Weather Service, Internet site <<http://www.spc.noaa.gov/climo/torn/monthlytornstats.html>> (accessed 14 April 2004). A violent, rotating column of air descending from a cumulonimbus cloud in the form of a tubular- or funnel-shaped cloud, usually characterized by movements along a narrow path and wind speeds from 100 to over 300 miles per hour. Also known as a "twister" or "waterspout." ² Source: National Hurricane Center (NHC), Coral Gables, FL, unpublished data. For data on individual hurricanes, see the NHC Web site at <<http://www.nhc.noaa.gov/>>. Tropical storms have winds of 39 to 73 miles per hour; hurricanes have winds of 74 miles per hour or higher.

Table 375. Major U.S. Weather Disasters: 1995 to 2004

[6.5 represents \$6,500,000,000. Covers only weather related disasters costing \$1 billion or more]

Event	Description	Estimated cost		
		Time period	(bil.dol.)	Deaths
Hurricane Jeanne	Category 3 hurricane makes landfall in east-central Florida, causing considerable damage in Florida and some flood damage in GA, SC, NC, VA, MD, DE, NJ, PA, and NY.	September 2004	over 6.5	28
Hurricane Ivan	Category 3 hurricane makes landfall on Gulf coast of Alabama causing significant damage in AL and FL and wind/flood damage in GA, SC, NC, LA, MS, WV, MD, TN, KY, OH, DE, NJ, PA, and NY.	September 2004	over 12	52
Hurricane Jeanne	Category 2 hurricane makes landfall in east-central Florida causing significant damage in FL and considerable flood damage in GA, SC, NC, and NY.	September 2004	over 9	38
Hurricane Charly	Category 4 hurricane makes landfall in southwest FL resulting in major damage in FL and some damage in SC and NC.	September 2004	over 14	34
Southern California wildfires	Dry weather, high winds, and resulting wildfires in southern CA burned 743,000 acres and destroyed 3700 homes.	Oct.–early Nov. 2003	2.5	22
Hurricane Isabel	Category 2 hurricane makes landfall in eastern NC, causing damage along coasts of NC, VA, and MD with wind damage and flooding in NC, VA, MD, DE, WV, NJ, NY and PA.	September 2003	over 4	47
Midwest severe storms and tornadoes	Numerous tornadoes over the midwest, MS River valley, and OH/TN River valleys with record 400 tornadoes in one week.	Early May 2003	over 3.1	41
Storms and hail	Severe storms and large hail over southern plains, lower MS River valley, and TX.	Early April 2003	over 1.6	21
Widespread drought	Moderate to extreme drought over large portions of 30 states.	Spring to fall 2002	over 10	43
Western fire season	Major fires over 11 western states from Rockies to west coast.	Spring to fall 2002	over 2	3
Tropical Storm Allison	Tropical storm produced rainfall and severe flooding in coastal portions of TX and LA and damage in MS, FL, VA, and PA.	June 2001	5.0	140
Midwest and Ohio Valley hail and tornadoes	Storms, tornadoes, and hail in TX, OK, KS, NE, IA, MO, IL, IN, WI, MI, OH, KY, and PA.	April 2001	1.7	75
Southern drought/heat wave	Severe drought and heat over south-central and southeastern states cause significant losses in agriculture and related industries.	Spring–summer 2000	over 4.0	256
Western fire season	Severe fire season in western states.	Spring–summer 2000	over 2.0	55
Hurricane Floyd	Category 2 hurricane in NC, causing severe flooding in NC and some flooding in SC, VA, MD, PA, NY, NJ, DE, RI, CT, MA, and VT.	September 1999	6.0	31
Drought/heat wave	Drought/heatwave over eastern U.S.	Summer 1999	1.0	40
Oklahoma-Kansas tornadoes	Category F4-F5 tornadoes hit OK, KS, TX, and TN.	May 1999	1.0	75
Arkansas-Tennessee tornadoes	Two outbreaks of tornadoes in 6-day period.	January 1999	1.3	256
Texas flooding	Severe flooding in southeast Texas from 2 heavy rain events with 10–20 in. totals.	Oct.–Nov. 1998	1.0	55
Hurricane Georges	Category 2 hurricane in Puerto Rico, Florida Keys, and Gulf coasts of LA, MS, AL, and FL.	September 1998	3–4	31
Hurricane Bonnie	Category 3 hurricane in eastern NC and VA.	August 1998	1.0	31
Southern drought/heat wave	Severe drought and heat wave from TX/OK to the Carolinas.	Summer 1998	6.0	16
Minnesota severe storms/hail	Very damaging severe thunderstorms with large hail over wide areas of Minnesota.	May 1998	1.5	2
Southeast severe weather	Tornadoes and flooding related to strong El Nino in the southeast.	Winter/Spring 1998	1.0	200
Northeast ice storm	Intense ice storm hits ME, NH, VT, and NY.	January 1998	1.4	16
Northern plains flooding	Severe flooding in Dakotas and Minnesota due to heavy spring snowmelt.	April–May 1997	2.0	11
MS and OH valleys flooding	Tornadoes and severe flooding hit the states of AR, MO, MS, TN, IL, IN, KY, OH, and WV.	March 1997	1.0	67
West Coast flooding	Flooding from rains and snowmelt in CA, WA, OR, ID, NV, and MT.	Dec. 1996–Jan. 1999	2–3	36
Hurricane Fran	Category 3 hurricane in NC and VA.	Sept. 1996	5.0	(NA)
Southern Plains severe drought	Drought in agricultural areas of TX and OK.	Fall 1995–summer 1996	Over 4	9
Pacific Northwest severe flooding	Flooding from heavy rain and snowmelt in OR, WA, ID, and MT.	Feb. 1996	1.0	187
Blizzard of '96 followed by flooding	Heavy snowstorm followed by severe flooding in Appalachians, Mid-Atlantic, and Northeast.	Jan. 1996	3.0	27

- Represents zero. NA Not available or not reported.
