This report presents data from the Annual Housing Survey, which was sponsored by the U.S. Department of Housing and Urban Development and conducted by the U.S. Bureau of the Census. It was developed under the direction of Arnold H. Diamond, Assistant Counselor for Finance and Economics, Department of Housing and Urban Development; and Arthur F. Young, Chief, Housing Division, Bureau of the Census.

Arnold H. Diamond, Duane McGough, and David Yentis were responsible for overseeing the Annual Housing Survey and the resultant report on behalf of the Department of Housing and Urban Development.

Within the Bureau of the Census, this report was developed in the Housing Division. It was prepared under the supervision of Leonard J. Norry, Assistant Division Chief, by Elmo E. Beach, Chief, Current Surveys Branch, assisted by Aneda E. France, Edward D. Montfort, and George Spraggins. Specific activities related to data collection procedures, statistical presentation, organization of the report, and preparation of text materials were performed by Edward Cary Bean, Jr., Robert W. Bonnette, Mary C. Carroll, Margaret W. Harper, Paul P. Harple, Jr., Mary A. Knoll, Richard G. Kreinsen, Jane S. Maynard, Mary D. Stickell, and Jeanne M. Woodward.

The operational aspects of the Annual Housing Survey were coordinated by the Demographic Surveys Division under the direction of Earle J. Gerson, Chief, by Stanley Greene, Assistant Division Chief, and Edward F. Knowles, assisted by John C. Cannon and Leo Dougherty. Systems and processing procedures were performed under the direction of Barry M. Cohen, Assistant Division Chief. The computer programming and processing were performed under the supervision of D. Richard Bartlett, assisted by Merritt Woodard, Robert St. Laurent, Nathan Call, James Dallman, and Lee Rian. Leonard Goldberg, assisted by David B. Lipscomb, Mary L. Campbell, and Robert Smith, Jr., was responsible for the clerical and keying procedures.

The planning of sample design, weighting, and computation of sampling variances were developed in the Statistical Methods Division under the supervision of Morton Boisen, Charles Jones, and Gary Shapiro, by David Bateman, Dennis Schwanz and Joan Kahn. Implementation of the sample selection was performed under the supervision of David Diskin and Leonard Baer, by Jerome Roth and Patricia Clark (Data Preparation Division, Jeffersonville, Ind.). Implementation of field sample control and reinterview procedures was carried out under the supervision of Irene C. Montie, by Fay F. Nash and John J. Paletta. Reinterview design and analysis was conducted under the supervision of Irwin Schreiner.

Data collection activities were administered by the Field Division under the supervision of Richard C. Burt, Chief, by Stanley D. Matchett, Assistant Division Chief, D. Ross Forbes, and Larry T. Arnold, as well as Porter S. Rickley, Director of the Bureau's Philadelphia Regional Office.

Clerical processing of the questionnaires was performed in the Data Preparation Division under the direction of Don L. Adams, Chief, by Patricia Clark and Kurt Legait.

Within the Publications Services Division, many individuals made significant contributions in the areas of publication planning and design, editorial review, composition, and printing procurement.

For sale by Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402, or any U.S. Department of Commerce district office. Postage stamps not acceptable; currency submitted at sender's risk. Remittances from foreign countries must be by international money order or by draft on a U.S. bank.

## GENERAL

This report presents statistics on housing and household characteristics from the 1975-1976 Annual Housing Survey conducted in 21 selected standard metropolitan statistical areas (SMSA's). For a list of these SMSA's, see page XV. The Annual Housing Survey was designed to provide a current series of information on the size and composition of the housing inventory, the characteristics of its occupants, the changes in the inventory resulting from new construction and from losses, the indicators of housing and neighborhood quality, and the characteristics of recent movers. The survey, performed for the Department of Housing and Urban Development, is authorized under sections 501 and 502(d), 502(e), and 502(f) of the Housing and Urban Development Act of 1970, Title 12, United States Code 1701z-1 and 1701z-2. The Bureau of

the Census is authorized under Title 31, United States Code 686, to perform special work or services for Federal agencies.

The statistics presented in this report are based on information from a sample of housing units. The information for the survey was collected by personal interview from April 1975 through March 1976.

A separate report is issued jointly by the Department of Housing and Urban Development and the Bureau of the Census for each of the 21 SMSA's in the 1975-1976 survey. Each report consists of four parts. Part A presents statistics on general housing characteristics, part B on indicators of housing and neighborhood quality, part C on financial characteristics, and part D on recent mover households.

The content and procedures of the Annual Housing Survey were determined after consultation with a variety of users of housing data and through field pre-testing. The data for many of the subjects covered in this report are the same as those collected in the 1970 Census of Housing; in general, these data are comparable to those shown in the 1970 census reports. In addition, a number of new items were introduced in this survey on subjects such as breakdowns in equipment, the physical condition of the structure, neighborhood conditions and services, distance and travel time from home to work for the household head, storm windows and doors, and insulation.

More detailed information on the technical and procedural matters covered in the text of this report can be obtained by writing to the Director, Bureau of the Census, Washington, D.C. 20233.

**Sample size.**—The statistics presented in this report are based on a sample of housing units and are, therefore, subject to sampling variability. Two different sample sizes were employed in the 1975-1976 survey. The largest SMSA from each of the four geographic regions was represented by a sample of 15,000 designated housing units which was evenly divided between the central city or cities and the balance of the respective SMSA; i.e., the area not in central cities. These SMSA's were Atlanta, Ga., Chicago, Ill., Philadelphia, Pa.-N.J., and San Francisco-Oakland, Calif. All remaining SMSA's were each represented by a sample of 5,000 designated housing units.

The sample was selected from units enumerated in the 1970 census and updated to include units constructed since 1970. Detailed information on the sample design, size of sample, estimation procedure, and sampling variability associated with these data is given in appendix B.

**Organization of the text.**—The text consists of this introduction and appendixes A and B, which appear after the data tables. Appendix A describes the geographic area classifications and provides definitions and explanations of the subjects covered in this report. The subject location (part A, B, C, or D) precedes the subject definitions in appendix A. Definitions covering general subject areas, however, do not contain a part A, B, C, or D designation. Appendix B presents information on sample design, estimation, and accuracy of the data.

**Content of the tables.**—A series of standard tables presents data for housing units

## INTRODUCTION—Continued

for each area shown in the report. In the reports for the largest SMSA in each of the four geographic regions, separate data are shown for "in central cities" and "not in central cities," as well as for the SMSA as a whole. For the other SMSA's, data are shown only for the SMSA as a whole. In parts A, B, and C of the four largest SMSA's, the prefix letter "A" has been assigned to the tables for the SMSA as a whole, "B" to tables for "in central cities," and "C" to tables for "not in central cities." The numbers presented in the tables are published in whole numbers but rounded to the nearest hundred. Characteristics for some items may not add to the total due to rounding.

In part A on general housing characteristics, tables 1 and 2 present selected housing characteristics for 1975 and 1970; table 3, characteristics of new construction units, and table 4, 1970 characteristics of housing units removed from the housing inventory. The same general subject content presented in tables 1 and 2 is also presented for households with Black household head in tables 5 and 6 and for households with head of Spanish origin in tables 7 and 8.

In part B on indicators of housing and neighborhood quality, tables 1 to 4 present characteristics for owner- and renter-occupied housing units, tables 5 to 8 present characteristics for owner- and renter-occupied housing units with Black household head, tables 9 to 12 present characteristics for owner- and renter-occupied housing units with household head of Spanish origin, and table 13 presents characteristics for vacant year-round housing units.

In part C on financial characteristics, table 1 presents characteristics of owner- and renter-occupied housing units by income of the family or primary individual; table 2 presents characteristics for owner-occupied, one-family homes by value of property; and table 3 presents characteristics of renter-occupied housing units by gross rent. The same subject content as shown in tables 1 to 3 is presented for housing units with Black household head in tables 4 to 6 and for housing units with household head of Spanish origin in tables 7 to 9.

In part D on recent mover households, table 1 presents characteristics of all occupied housing units and units occupied by recent movers (households that moved into their units during the 12 months prior to enumeration). Tables 2 to 9 present characteristics of the present unit for recent mover households cross-classified by characteristics of the previous unit. The same subject content as shown in tables 1 to 9 is presented for housing units with Black household head in tables 10 to 18 and for housing units with household head of Spanish origin in tables 19 to 27.

**1970 data in this report.**—The source of the 1970 data shown in part A of this report is both published and unpublished tabulations from the 1970 Census of Population and Housing. For some items, 1970 data are not shown because they are not available. Data for 1970 for all housing units and for units with Black household head are from the 20-, 15-, and 5-percent samples. Data for housing units with household head of Spanish origin are limited to the 1970 census 5-percent sample. For the sample of units reported as lost from the housing inventory, the 1970 data were tabulated from the 100-percent 1970 census records. The totals for individual items in some tables may differ when the characteristics are derived from different samples. Information for the 1970 census was collected as of April 1, 1970.

**Derived figures (medians, etc.).**—Shown in this report are percents, means, medians, and ratios. The median, which is a type of average, is the middle value in a distribution; i.e., the median divides the distribution into two equal parts—one-half the cases fall below the median and one-half the cases exceed the median. Derived figures are not presented (but indicated by three dots "...") if there are less than 25 sample cases in the distribution or the base.

Medians for rooms, persons, and years of school completed by head are rounded to the nearest tenth; selected monthly housing costs as percentage of income to the nearest percent. Travel time is rounded

to the nearest minute and distance from home to work is rounded to the nearest tenth mile. Medians for value and income are rounded to the nearest hundred dollars; rent, real estate taxes last year, and selected monthly housing costs are rounded to the nearest dollar.

In computing medians for rooms and persons per housing unit, the whole number is used as the midpoint of the interval so that, for example, the category "4 rooms" is treated as an interval ranging from 3.5 up to 4.5 rooms. When computing medians for distance and travel time to work, household heads reporting "no fixed place of work" are excluded. Units reporting "no cash rent" are excluded from the computation of median rent; for selected monthly housing costs as percentage of income, units in the category "not computed" are excluded. "Not reported" categories are excluded from the computation of medians.

The median number of school years completed by the head of the household was computed after the statistics on years of school completed had been converted to a continuous series of numbers (e.g., completion of the first year of high school was treated as completion of the 9th year and completion of the first year of college as completion of the 13th year). Heads completing a given school year were assumed to be distributed evenly within the interval from 0.0 to 0.9 of the year. Because of the inexact assumption as to the distribution within an interval, the median school years completed is more appropriately used for comparing different groups and the same group at different dates than as an absolute measure of educational attainment.

The medians presented for 1975 are generally computed on the basis of the distributions as shown in this report. The medians presented for 1970 are computed on the basis of the distributions as tabulated in 1970, which are sometimes more detailed than the distributions shown in this report.

When the median falls in the lower terminal category of an open-ended distribution, the method of presentation is to show the initial value of the next category followed by a minus sign; thus,

## INTRODUCTION—Continued

for example, if the median falls in the category "Less than \$5,000," it is shown as "\$5,000—." When the median falls in the upper terminal category of an open-ended distribution, the method of presentation is to show the initial value of the terminal category followed by a plus sign; thus, for example, if the median falls in the category "\$60,000 or more," it is shown as "\$60,000+."

**Symbols.**—A dash "—" signifies zero or a number which rounds to zero. Three dots "... " in a data column mean not applicable or that the base for a derived figure is too small for it to be shown. The symbol "NA" means not available.

**Boundaries.**—The data shown in this report relate to the areas as defined for the 1970 census. See appendix A for a discussion of these areas. Additional information and definitions of the 1970 boundaries are given in the 1970 Population Census PC(1)-A reports.

**List of SMSA reports from the Annual Housing Survey.**—The SMSA surveys are conducted in 60 selected SMSA's divided into three groups of approximately 20 each, with one group interviewed every 3 years on a rotating basis. Enumeration for the first group began April 1974 and continued through March 1975; enumeration for the second group (which includes this SMSA) covered the period April 1975 through March 1976; and enumeration for the third group began in April 1976 and continued through March 1977. Publication plans for the third group call for a publication program similar to the first and second groups' reports. A list of the SMSA's in each group is included.

**Other reports from the Annual Housing Survey.**—Beginning with the Group II SMSA's, a report (part F) will be published containing data on financial characteristics cross-classified by indicators of housing and neighborhood quality. In addition to part F and the basic report containing parts A-D for each SMSA in Series H-170, one or more supplementary reports (Series H-171) may be published for the SMSA's.

A series of reports (H-150) similar to Series H-170 is being published for the United States. The data for the national reports are collected once a year from an independent sample of housing units. Statistics are shown for the United States by inside and outside SMSA's and for each of the four regions. The first national survey was conducted in August to December 1973. From the 1973 survey, four reports (parts A-D) and a supplementary report (Series H-151, No. 1) were published. The publication program for the 1974 and 1975 surveys included six final reports, parts A-F; each part is published as a separate report. Part E, published only for the national sample, presents housing characteristics of urban and rural units.

### DATA COLLECTION PROCEDURES

The 1975-76 Annual Housing Survey was conducted by enumerators who made personal visits to each sample unit and obtained the information from the occu-

pants or, if the unit was vacant, from informed persons (landlords, rental agents, or knowledgeable neighbors). The information reported by the enumerator reflected the situation at the time of enumeration, which began in April 1975 and extended through March 1976, with one-twelfth of the sample units being visited each month.

Data were collected for sample housing units located in the counties and independent cities comprising the 21 Group II SMSA's. A sample of housing units was selected in these areas from the 1970 census and updated by a sample of addresses from building permits to include housing units added since 1970. Estimates of the counts and characteristics of the 1975 inventory were obtained for these sample units.

For the estimates of losses from the 1970 housing inventory, the interviewer located the address of the 1970 sample unit. If the 1970 sample unit no longer existed or no longer was a separate

## INTRODUCTION—Continued

housing unit, the disposition of the unit was determined; i.e., lost through means such as demolition, disaster, merger, or conversion to nonresidential use. In non-permit-issuing areas only (mainly rural areas), a housing unit is counted as a loss when the *whole* structure in which it was located was lost from the inventory.

A more detailed description of the survey design and sampling procedures can be found in appendix B.

### PROCESSING PROCEDURES

The questionnaires used for the 1975 Annual Housing Survey were of the conventional type, on which the enumerator recorded the information by marking a precoded check box or by writing in the entries. Census clerks edited and coded the schedules. The information from the questionnaires was data keyed directly to magnetic tape which was processed on the Census Bureau's computers through a number of editing and tabulating steps. A facsimile of the questionnaire appears at the end of appendix A.

The 1970 characteristics of units lost from the housing inventory were obtained by matching those units to the 1970 census records. The 1970 data for the losses were then extracted from the 1970 census record tapes. Data on losses are shown in part A of this report.

### QUALIFICATIONS OF THE DATA

Since the estimates in this report are based on a sample, they may differ somewhat from the figures that would have been obtained from a complete census using the same schedules, instructions, and enumerators. Particular care should be exercised, therefore, in the interpretation of figures based on relatively small numbers of sample cases as well as small differences between figures. As in any survey work, the results are subject to errors of response and non-reporting and to sampling variability. For a further discussion of accuracy of the data, see appendix B.

The concepts and definitions are essentially the same for those items which appear both in this report and in the 1970 census reports. The SMSA boundaries are the same as those in the 1970 census. For historical comparisons and boundary changes, refer to the census reports of 1960 and earlier.

In making comparisons between the 1975 survey and 1970 Census of Housing results, differences in the data may reflect such factors as the use of direct interview for 1975 contrasted with the extensive use of self-enumeration in 1970, the sample design, the estimation procedure used, the sampling variability of the estimates, and the processing procedures. See the section on "Comparability with 1970 Census of Housing data" in appendix A for further discussion.

Statistics on income relate to the income of the family or primary individual. Therefore, no data are provided on household income; i.e., income of persons unrelated to the head of the household is excluded.

Statistics for some of the characteristics shown are based on restricted universes and, therefore, care should be exercised in relating the statistics for one characteristic to another. For example, value is restricted to owner-occupied, one-family homes on less than 10 acres and no business on property. Therefore, the totals for owner-occupied units in the "value" universe do not agree with the totals for owner-occupied units for some of the other universes such as "rooms" or "persons." In addition, data for some of the items are not comparable because of the different universes used. For example, the statistics on sewage disposal in parts B and C are limited to "units occupied 3 months or longer," whereas decennial census data and data in parts A and D on sewage disposal are shown for "all units," including units which were occupied less than 3 months.

The data in part B are intended to serve as broad "indicators" of housing quality and not as precise measurements.

A housing unit, for example, that is reported to have signs of a leaking roof or a breakdown or failure in plumbing facilities is not necessarily "inadequate" or "poor" housing. Conversely, a housing unit that is reported as not having such defects is not necessarily a house of "good quality." The data presented for items such as "neighborhood conditions" and "neighborhood services" are based on the individual respondent's opinion of conditions in his neighborhood. The respondent's opinion may or may not reflect the "actual" situation. Furthermore, two respondents in the same neighborhood may view the same condition differently; for example, one respondent may indicate that the streets need repair while the other does not.

See appendix A for a more detailed discussion of the definitions and qualifications of all items in this report.

### TABLES FOR MINORITY HOUSEHOLDS

All simple distribution tables for housing units with Black household head or Spanish-origin household head are shown except when that group consists of less than 25 sample cases. All cross-tabulations are shown except when the minority group consists of less than 75 sample cases.

For this SMSA, all tables for housing units with Black household head are shown. All tables for Spanish-origin households are shown except for the SMSA "total" in tables 21 to 27 of part D, for "in central city" in tables 21 to 27 of part D, and for "not in central city" in tables C-7 to C-9 of part C and tables 21 to 27 of part D. These tables are not shown because the Annual Housing Survey (AHS) estimate of Spanish-origin households "not in central city" is 10,100, constituting 74 sample cases. The AHS estimate of Spanish-origin recent mover households for the SMSA "total" is 7,200, for "in central city" is 3,400, and for "not in central city" is 3,800, constituting 60, 32, and 28 sample cases respectively.

PART

A

# General Housing Characteristics

# Annual Housing Survey

## Source of the 1975 Housing Inventory

Area and subject	Total	In central cities	Not in central cities
All housing units, October 1975. . . . .	1,621,300	651,800	969,500
All housing units, April 1970. . . . .	1,536,700	673,500	863,200
Change:			
Number . . . . .	84,600	-21,700	106,300
Percent. . . . .	5.5	-3.2	12.3
Units added by new construction . . . . .	154,700	19,500	135,200
Units lost through demolition or disaster or other means. . . . .	67,300	44,200	23,100
Unspecified units (net change) <sup>1</sup> . . . . .	-2,800	3,000	-5,800

<sup>1</sup>"Unspecified" units reflect omissions from the survey such as conversions, mergers, and additions other than new construction for the period 1970 to 1975 offset by certain losses; errors in the independent estimate of mobile homes, sampling and nonsampling errors due to the estimation of conventional new construction and losses; and differences in procedures between the census and current surveys. (See appendixes A and B.)

				<b>FACSIMILE OF THE ANNUAL HOUSING SURVEY QUESTIONNAIRE: 1975 . . . . .</b>	<b>App-19</b>
				<b>AREA CLASSIFICATIONS</b>	
				Counties	
				The primary divisions of most of the States are termed counties; in Louisiana the corresponding units are termed parishes. Alaska has no counties; in this	

State, areas designated census divisions have been defined for general statistical purposes by the State in cooperation with the Census Bureau and are treated as county equivalents. Four States (Maryland, Missouri, Nevada, and Virginia) contain one or more cities that are independent of any county; for statistical purposes these independent cities are treated as county equivalents.

#### Standard Metropolitan Statistical Areas

The definitions of standard metropolitan statistical areas used in the Annual Housing Survey correspond to the 243 SMSA's used in the 1970 census. These include the 228 SMSA's as defined and named in the Bureau of the Budget publication, **Standard Metropolitan Statistical Areas: 1967**, U.S. Government Printing Office, Washington, D.C. 20402. After 1967, 15 SMSA's were added, of which 2 were defined in January 1968 and an additional 13 were defined in February 1971 on the basis of the results of the 1970 census. Changes in SMSA definition criteria, boundaries, and titles made after February 1971 are not reflected in this series of reports. SMSA's are defined by the Office of Management and Budget (formerly Bureau of the Budget).

Except in the New England States, a standard metropolitan statistical area is a county or group of contiguous counties which contains at least one city of 50,000 inhabitants or more, or "twin cities" with a combined population of at least 50,000. In addition to the county or counties containing such a city or cities, contiguous counties are included in an SMSA if, according to certain criteria, they are socially and economically integrated with the central city. In the New England States, SMSA's consist of towns and cities instead of counties. Each SMSA must include at least one central city, and the complete title of an SMSA identifies the central city or cities. For a detailed description of the criteria used in defining SMSA's, see the Bureau of the Budget publication cited above.

In this report, figures for "in central cities" refer to all housing units within the legal city boundaries. For a few central cities, the figures include some hous-

ing units in parts of the city classified as rural in the 1970 census.

### DEFINITIONS AND EXPLANATIONS OF SUBJECT CHARACTERISTICS

#### General

As stated in the introductory text of this report, the 1975-1976 Annual Housing Survey was conducted by direct interview. The survey enumerators were instructed to read the questions directly from the questionnaire. The definitions and explanations given below for each subject are to a considerable extent drawn from various technical and procedural materials used in the collection of the data. This material helped the enumerative personnel to understand more fully the intent of each question and thus to resolve problem or unusual cases. Additional explanatory information has been added to this portion of the text to assist the user in the proper utilization of the statistics.

**Comparability with 1970 Census of Housing data.**—The concepts and definitions are essentially the same for items that appear in both the 1970 census and the 1975 survey. A major difference, however, is the time period classifying "recent movers." In the Annual Housing Survey, recent movers are households that moved into their unit during the 12 months prior to enumeration, a time period of 1 year or less. In the 1970 Census of Housing reports, different time periods were used. In Volume II, **Metropolitan Housing Characteristics**, the shortest time period for "year moved into unit," is "1969 to March 1970" (1½ years); in Volume IV, **Components of Inventory Change**, the period is 1969 to December 1970 (approximately 2 years); and in Volume VII, No. 5, **Mover Households**, the time period is April 1965 to March 1970 (approximately 5 years). Volume IV is the only 1970 census report which shows cross-tabulations of data on characteristics of present units by characteristics of previous units for recent movers. Other definitional differences, if any, are discussed under the particular subject. Additional differences between the 1975 Annual Housing

Survey data and the 1970 census data may be attributed to several factors. These include the extensive use of self-enumeration in the census in contrast to direct interview in the Annual Housing Survey; differences in processing procedures; the estimation procedures and sample designs; the sampling variability of the estimates from the Annual Housing Survey; to a smaller extent, the sampling variability associated with the sample data from the census; the non-sampling errors associated with the Annual Housing Survey estimates; and the nonsampling errors associated with the census estimates.

Statistics on counts and characteristics of changes in the housing inventory between the 1960 and 1970 censuses are given for the United States and for 15 selected SMSA's in the 1970 Census of Housing, Volume IV, **Components of Inventory Change**. In volume IV the data are based on information for a sample of housing units enumerated in late 1970 as part of the 1970 census. Data are provided for such components of change between 1960 and 1970 as new construction, conversions, other additions, demolitions, mergers, other losses, and housing units that were the same in 1960 and in 1970.

In part A of this report, data are shown only for new construction units and units removed from the inventory by demolition, disaster, or some other means. The 1975 data on new construction were obtained primarily by enumeration of a sample of units selected from building permits. The 1970 Components of Inventory Change data were obtained from the 1970 census tabulations of the "year structure built" item; i.e., housing units built in 1960 or later were classified as added by "new construction." Due to limitations in the 1975 survey procedures for obtaining data on losses in nonpermit-issuing areas only (mainly rural areas), a unit is classified as lost from the inventory in this report only when the entire structure in which the sample unit was located was lost. In contrast, the data on losses in volume IV refer to all housing unit losses, including losses of units in structures which still

## APPENDIX A—Continued

contained one or more housing units. For permit-issuing areas the data are comparable (see appendix B).

Data as of 1970 for "mortgage status," "mortgage insurance," "real estate taxes last year," "selected monthly housing costs," and "acquisition of property" are presented in the 1970 Census of Housing, Volume V, Residential Finance. In volume V, the data are based on information collected for a sample of housing units in the Residential Finance Survey which was conducted in 1971 as part of the 1970 census. The 1970 reports provided data on the financing of homeowner and rental properties, including characteristics of the mortgages, properties, and homeowners.

Differences in the concepts and definitions between the data in this report and volume V include the following. The basic unit of tabulation in this report is the housing unit; in volume V, it is the property. Data on mortgage status and mortgage insurance in this report are based on the occupant's answer; in volume V, mortgage status and mortgage insurance were verified by the lender. In this report, real estate taxes and selected monthly housing costs reflect the total amount of real estate taxes and housing costs, excluding special assessments. In volume V, real estate taxes and selected monthly housing costs *include* special assessments.

**Comparability with 1970 Census of Population data.**—In the 1970 census, data for years of school completed were based on responses to two questions—the highest grade or year of regular school each household member attended, and whether or not that grade or year was completed. In the 1975 Annual Housing Survey, data for years of school completed were based on responses to a single question—the highest grade or year of regular school completed by the head. Therefore, the 1975 Annual Housing Survey may overstate the education level of the head of the household; that is, respondents may have reported the grade or year the head was currently enrolled in or had last been enrolled in whether or not the grade or year was completed.

**Comparability with Current Construction Reports from the Surveys of Construction.**—The current construction statistics are collected primarily from the 14,000 permit-issuing places throughout the United States. The Census Bureau issues several publications under the general title, Current Construction Reports. These reports include current data on housing starts and completions; construction authorized by building permits; housing units authorized for demolition in permit-issuing places for selected areas; and new one-family homes sold and for sale.

Because of procedural differences mentioned below, care should be taken when comparing data from the Annual Housing Survey with data from the Current Construction Reports. The concepts and definitions used in this report differ from some of those used in the Current Construction Reports. The major difference is that the Current Construction Reports present counts and characteristics of housing units in various stages of construction through completion. The Annual Housing Survey shows counts and characteristics of the existing housing inventory. Additional differences between the 1975 Annual Housing Survey and the Current Construction Reports may be attributed to factors such as the sampling variability and nonsampling errors of the figures from the two surveys, survey procedures and techniques, and processing procedures.

### Living Quarters

Living quarters are classified as either housing units or group quarters. Usually, living quarters are in structures intended for residential use (e.g., a one-family home, apartment house, hotel or motel, boarding house, or mobile home or trailer). Living quarters may also be in structures intended for nonresidential use (e.g., the rooms in a warehouse where a watchman lives), as well as in places such as tents, caves, and old railroad cars.

**Housing units.**—A housing unit is a house, an apartment, a group of rooms, or a single room occupied or intended for occupancy as separate living quarters. Separate living quarters are those in

which the occupants do not live and eat with any other persons in the structure and which have either (1) direct access from the outside of the building or through a common hall which is used or intended to be used by the occupants of another unit or by the general public or (2) complete kitchen facilities for the exclusive use of the occupants. The occupants may be a single family, one person living alone, two or more families living together, or any other group of related or unrelated persons who share living arrangements (except as described in the section on group quarters). For vacant units the criteria of separateness, direct access, and complete kitchen facilities for exclusive use are applied to the intended occupants whenever possible. If the information cannot be obtained, the criteria are applied to the previous occupants. Both occupied and vacant housing units are included in the housing inventory, except that mobile homes, trailers, tents, caves, boats, railroad cars, and the like, are included only if they are occupied.

**Group quarters.**—Group quarters are living arrangements for institutional inmates or for other groups containing five or more persons not related to the person in charge. Group quarters are located most frequently in institutions, boarding houses, military barracks, college dormitories, fraternity and sorority houses, hospitals, monasteries, convents, and ships. A house or apartment is considered group quarters if it is shared by the person in charge and five or more persons unrelated to him, or if there is no person in charge, by six or more unrelated persons. Information on the housing characteristics of group quarters was not collected.

**Rules for mobile homes, hotels, rooming houses, etc.**—Mobile homes or trailers, tents, boats, or railroad cars are not considered housing units if vacant, used only for business, or used only for vacations.

Occupied rooms or suites of rooms in hotels, motels, and similar places are classified as housing units only when occupied by permanent residents; i.e.,

## APPENDIX A—Continued

persons who consider the hotel as their usual place of residence or have no usual place of residence elsewhere. Vacant rooms or suites of rooms are classified as housing units only in those hotels, motels, and similar places in which 75 percent or more of the accommodations are occupied by permanent residents.

If any of the occupants in a rooming or boarding house live and eat separately from everyone else in the building and have either direct access or complete kitchen facilities for exclusive use, their quarters are classified as separate housing units. The remaining quarters are combined. If the combined quarters contain four or fewer roomers unrelated to the head, they are classified as one housing unit; if the combined quarters contain five or more roomers unrelated to the head or person in charge, they are classified as group quarters. In a dormitory, residence hall, or similar place, living quarters of the supervisory staff and other employees are separate housing units if they satisfy the housing unit criteria; other living quarters are considered group quarters.

**Institutions.**—Living quarters of staff personnel are separate housing units if they satisfy the housing unit criteria. Other living quarters are considered group quarters.

**Year-round housing units.**—Data on housing characteristics are limited to year-round housing units; i.e., all occupied units plus vacant units which are intended for year-round use. Vacant units intended for seasonal occupancy and vacant units held for migratory labor are excluded because it is difficult to obtain reliable information for them. However, this report does present counts of the total housing inventory which includes all vacant housing units.

### Changes in the Housing Inventory

**Units added by new construction.**—A housing unit built in April 1970 or later is classified as a unit added by "new construction." Vacant units under construction at the time of enumeration were

enumerated only if construction had proceeded to a point that all exterior windows and doors were installed and final usable floors were in place. Housing units built during this period but removed from the housing inventory before enumeration are not reflected in the figures of this report. In the Annual Housing Survey, data on new construction were obtained primarily by the enumeration of a sample of units selected from building permits; in the 1970 Census of Housing, Volume IV, **Components of Inventory Change**, new construction data were obtained from tabulations of the 1970 census sample records of units built 1960 or later.

**Units lost from the inventory.**—In table 4 of part A of this report, characteristics are presented for all units removed from the inventory through demolition or disaster and through other means.

**Units lost through demolition or disaster.**—A housing unit which existed in April 1970 and was torn down on the initiative of a public agency or as a result of action on the part of the owner is classified as a unit lost through demolition. Housing units destroyed by fire, flood, or other causes are classified as units lost through disaster. In nonpermit-issuing areas only (mainly rural areas), a housing unit is counted as a demolition or disaster loss when the whole structure in which it was located was lost from the inventory. In the 1970 Census of Housing, Volume IV, **Components of Inventory Change**, the data on losses refer to all housing unit losses, including losses of units in structures which still contained one or more housing units. In addition, units lost through disaster were counted in 1970 as "units lost through other means."

**Units lost through other means.**—Any housing unit which existed in April 1970 is counted as lost through other means when it was lost to the housing inventory through means other than demolition or disaster. In nonpermit-issuing areas, the *whole* structure must be lost. This com-

ponent includes the following types of losses:

1. Units lost by change to group quarters; for example, a housing unit that was occupied by a family in 1970 and by a family and five lodgers at the time of enumeration.
2. Units lost from the inventory because they are vacant and unfit for human habitation. A unit is unfit for human habitation if the roof, walls, doors, and windows no longer protect the interior from the elements.
3. Vacant units lost from the inventory because there is positive evidence (sign, notice, mark on the house or block) that the units are scheduled for demolition or rehabilitation or that they are condemned for reasons of health or safety so that further occupancy is prohibited.
4. Units lost by change to nonresidential use.
5. Units moved from site since April 1970. Such moves in the same area do not necessarily result in a net loss from the total inventory since they presumably represent units added in the place to which they were moved.

In the 1970 Census of Housing, Volume IV, **Components of Inventory Change**, units lost through disaster (fire, flood, or other such causes) were counted in 1970 as "units lost through other means."

**Unspecified units.**—There are other components of change in the housing inventory for which the Annual Housing Survey provides no specific measures. The survey procedures do not include a measure of conversions and mergers and units added from other sources such as nonresidential structures. The net effect of these omissions on the change in the total housing inventory is not known.

**Units changed by conversion.**—Conversion refers to the creation of two or more housing units from fewer units through structural alteration or change in use. Structural alteration includes such changes as adding a room or installing partitions to form another housing unit. Change in use is a simple rearrangement in the use of

## APPENDIX A—Continued

space without structural alteration, such as locking a door which closes off one or more rooms to form a separate housing unit.

*Units changed by merger.*—A merger is the result of combining two or more housing units into fewer units through structural alteration or change in use. Structural alteration includes such changes as the removal of partitions or dismantling of kitchen facilities. Change in use may result from a simple rearrangement of space without structural alteration, such as unlocking a door which formerly separated two housing units. A change in use also occurs, for example, when a family occupied both floors of a house which formerly contained a separate housing unit on each floor.

*Units added through other sources.*—Any housing unit added to the inventory through sources other than new construction or conversion is classified as a unit added through other sources. This component includes units created from living quarters previously classified as group quarters and units created from nonresidential space such as a store, garage, or barn. Also included are units built at one site and moved to another site. Such units, if moved within the same area, do not necessarily result in a net addition to the total inventory since they presumably represent units lost in the place from which they were moved. A previously vacant mobile home or trailer, whether on a different site or the same site, is a net addition if currently occupied as a housing unit.

These unspecified units are *not* identified in the survey.

### Occupancy and Vacancy Characteristics

**Occupied housing units.**—A housing unit is classified as occupied if a person or group of persons is living in it at the time of enumeration, or if the occupants are only temporarily absent—for example, on vacation. However, if the unit was occupied entirely by persons with a usual place of residence elsewhere, the unit is

classified as vacant. By definition, the count of occupied housing units is the same as the count of households.

**Race.**—The classification by race shown here refers to the race of the head of the household occupying the housing unit. The concept of race as used by the Census Bureau does not denote clear-cut scientific definitions of biological stock. The enumerator was to report the race of the head of the household in three categories: White, Black (Negro), and other. The last category includes American Indian, Chinese, Eskimo, Japanese, Korean, and any other race except White and Black. Figures on tenure are given separately for White and Black household heads; units with household heads of other races are included in the total in table 1 of part A and may be derived by subtracting the sum of White and Black from the total. More detailed characteristics of units with Black household head are presented in separate tables. The classification of race in the Annual Housing Survey was made by the enumerator based on his own observation. In the 1970 census, race was essentially a self-classification by people according to the race with which they identified themselves.

**Spanish origin.**—The classification by Spanish origin here refers to the origin of the head of the household occupying the housing unit. Detailed characteristics of units with head of Spanish origin are presented in separate tables. Spanish origin was determined on the basis of a question that asked for self-identification of a person's origin or descent. Respondents were asked to select their origins from a "flash card." Persons of Spanish origin were those who indicated that their origin was either Mexican-American, Chicano, Mexican, Mexicano, Puerto Rican, Cuban, Central or South American, or other Spanish.

In the 1970 census and current surveys' reports, Spanish persons are identified according to various criteria: Birthplace, birthplace of parents, language, surname, and origin or descent. For this reason, care should be taken in making

comparisons of Spanish origin estimates from the Annual Housing Survey and other surveys.

**Tenure.**—A housing unit is "owner occupied" if the owner or co-owner lives in the unit, even if it is mortgaged or not fully paid for. A cooperative or condominium unit is "owner occupied" only if the owner or co-owner lives in it. All other occupied units are classified as "renter occupied," including units rented for cash rent and those occupied without payment of cash rent.

**Duration of occupancy.** (Part B)—Data on duration of occupancy are based on information for the head of household; the data refer to the period when present occupancy began. Statistics are shown on whether the head lived in the unit "less than 3 months" or "3 months or longer." To qualify as having lived here "last winter," the household head must have moved into the unit prior to February 1975; however, if enumeration took place in February or March of 1976, the household head must have moved into the unit prior to February 1976.

**Year head moved into unit.** (Parts A, C, and D)—Data on year moved into unit are based on the information reported for the head of the household. The question refers to the year of latest move. Thus, if the head moved back into a unit he had previously occupied, the year of his latest move was to be reported; if he moved from one apartment to another in the same building, the year he moved into his present unit was to be reported. The intent is to establish the year the present occupancy by the head began. The year the head moves is not necessarily the same year other members of the household move, although in the great majority of cases the entire household moves at the same time.

**Owner or manager on property.** (Parts B and C)—These statistics are presented in terms of the number of housing units in structures of two or more units with the owner or the resident manager or superintendent living on the property. The

## APPENDIX A—Continued

category "with owner on property" refers to the owner and not his agent, resident manager, or superintendent. "With resident manager or superintendent on property" refers to a resident manager, superintendent, janitor, or other representative of the owner.

**Vacant housing units.** (Parts A and B)—A housing unit is vacant if no one is living in it at the time of enumeration, unless its occupants are only temporarily absent. In addition, a vacant unit may be one which is occupied entirely by persons who have a usual residence elsewhere.

New units not yet occupied are classified as vacant housing units if construction has reached a point where all exterior windows and doors are installed and final usable floors are in place. Vacant units are excluded if unfit for human habitation; that is, if the roof, walls, windows, or doors no longer protect the interior from the elements, or if there is positive evidence (such as a sign on the house or in the block) that the unit is to be demolished or is condemned. Also excluded are quarters being used entirely for nonresidential purposes, such as a store or an office, or quarters used for storing business supplies or inventory, machinery, or agricultural products.

The concepts and definitions of vacant housing units used in this report are the same as those used in the 1970 Census of Housing reports.

**Vacancy status.** (Parts A and B)—Vacant housing units are classified as either "seasonal and migratory" or "year-round." "Seasonal" units are intended for occupancy during only certain seasons of the year. Included are units intended for recreational use, such as beach cottages and hunting cabins, and vacant units held for herders and loggers. "Migratory" units are vacant units held for occupancy by migratory labor employed in farm work during the crop season. "Year-round" vacant housing units are available or intended for occupancy at any time of the year. A unit in a resort area which is usually occupied on a year-round basis is considered year-round. A unit used only occasionally throughout the year is also considered year-round.

"Year-round" vacant units are subdivided as follows:

*For sale only.*—Vacant year-round units "for sale only" also include vacant units in a cooperative or condominium building if the individual units are offered for sale only.

*For rent.*—Vacant year-round units "for rent" also include vacant units offered either for rent or for sale.

*Rented or sold, not occupied.*—If any money rent has been paid or agreed upon but the new renter has not moved in as of the date of enumeration, or if the unit has recently been sold but the new owner has not yet moved in, the year-round vacant unit is classified as "rented or sold, not occupied."

*Held for occasional use.*—This category consists of vacant year-round units which are held for weekend or other occasional use throughout the year. The intent of this question is to identify homes reserved by their owners as second homes. Because of the difficulty of distinguishing between this category and seasonal vacancies, it is possible that some "second homes" are classified as "seasonal" and vice versa. (See also discussion of "Owned second home" in section on "Equipment and Fuels.")

*Temporarily occupied by persons with usual residence elsewhere (URE).*—If all the persons in a housing unit usually live elsewhere, that unit is enumerated as vacant provided the usual place of residence is held for the household and is not offered for rent or for sale. For example, a beach cottage occupied at the time of enumeration by a family which has a usual place of residence in the city is included in the count of vacant units. If their house in the city was in the survey sample, the house would be reported "occupied" and would be included in the count of occupied units, since the occupants are only temporarily absent.

*Held for other reasons.*—If a vacant year-round unit does not fall into any of the classifications specified above, it

is classified as "held for other reasons." For example, this category includes units held for settlement of an estate, units held for occupancy by a caretaker or janitor, and units held for personal reasons of the owner.

In part A, "other vacant" refers to units in the last two categories above.

Characteristics of vacant housing are limited to year-round vacant units. Vacant units intended for seasonal occupancy and vacant units held for migratory labor are excluded because it is difficult to obtain reliable information for them. However, counts of seasonal units are given in part A.

**Duration of vacancy.** (Part B)—The statistics on duration of vacancy refer to the length of time (in months) from the date the last occupants moved from the unit to the date of enumeration. The data, therefore, do not provide a direct measure of the total length of time units remain vacant. For newly constructed units which have never been occupied, the duration of vacancy is counted from the date construction was completed. For recently converted or merged units, the time is reported from the date conversion or merger was completed. Units occupied entirely by persons with usual place of residence elsewhere are excluded from the data.

**Homeowner vacancy rate.** (Part A)—The 1975 homeowner vacancy rate is the number of year-round vacant units for sale as a percent of the total homeowner inventory; i.e., all owner-occupied units and year-round vacant units for sale or sold, not occupied. The homeowner vacancy rate for 1970 excludes vacant units sold but not occupied.

**Rental vacancy rate.** (Part A)—The 1975 rental vacancy rate is the number of year-round vacant units for rent as a percent of the total rental inventory; i.e., all renter-occupied units and all year-round vacant units for rent or rented, not occupied. The rental vacancy rate for 1970 excludes vacant units rented but not occupied.

**Units Occupied by Recent Movers**  
(Part D)

**Recent movers.**—Households that moved into their present units within 12 months prior to the date of enumeration are termed "recent movers." The household is classified by year moved into unit on the basis of information reported for the head of the household.

**Present and previous units of recent movers.**—The "present" unit is the unit occupied by the recent mover at the time of enumeration. The previous unit is the unit from which he moved. If the household moved more than once during the 12 months prior to the date of enumeration, the previous unit is the one from which the household last moved.

**Same or different head.**—Characteristics of the present and previous units occupied by recent movers are largely restricted to households that were essentially the same in the two units. The definitions of the characteristics for the previous unit are generally the same as those for the present unit.

A household for which the head in the present unit is the same person as the head in the previous unit (identified in the tables as "same head") is considered essentially the same even though there may have been some changes in the composition of the household. Conversely, a household in which there was no change except for a new household head was considered a household with "different head."

**Main reason for move into present unit.**—The statistics presented are restricted to units occupied by recent movers in which the present head of household was also the head at the previous unit he occupied. The classification categories refer to the principal reason the head of the household moved into his present unit. The category "job related reasons" refers to reasons such as job transfer, new job, retirement, and commuting reasons. The category "family status" refers to reasons such as newly married, family increased in size, and moved to be closer to relatives. The category "housing needs" re-

fers to reasons such as wanted to own his own residence, wanted a less expensive house, and didn't like his old neighborhood. The category "other reasons" includes reasons for moving which do not fall into any of the above classifications.

**Utilization Characteristics**

**Persons.** (Parts A, C, and D)—All persons occupying the housing unit are counted. These persons include not only occupants related to the head of the household but also any lodgers, roomers, boarders, partners, wards, foster children, and resident employees who share the living quarters of the household head. The data on "persons" show the number of housing units occupied by the specified number of persons.

A person is enumerated at his usual place of residence. This refers to the place where the person lives and sleeps most of the time. This place is not necessarily the same as his legal residence, voting residence, or domicile.

**Rooms.** (Parts A, B, C, and D)—The statistics on "rooms" refer to the number of housing units with specified number of rooms. Rooms counted include whole rooms used for living purposes, such as living rooms, dining rooms, kitchens, finished attic or basement rooms, recreation rooms, permanently enclosed porches that are suitable for year-round use, and lodger's rooms. Also included are rooms used for offices by a person living in the unit.

A partially divided room, such as a dinette next to a kitchen or living room, is a separate room only if there is a partition from floor to ceiling, but not if the partition consists only of shelves or cabinets.

Not included in the count of rooms are bathrooms, halls, foyers or vestibules, balconies, closets, alcoves, pantries, strip or pullman kitchens, laundry or furnace rooms, unfinished attics or basements, other unfinished space used for storage, open porches, trailers used only as bedrooms, and offices used only by persons not living in the unit.

If a room is used by occupants of more than one unit, the room is included

with the unit from which it is most easily reached.

**Persons per room.** (Parts A, C, and D)—"Persons per room" is computed for each occupied unit by dividing the number of persons in the unit by the number of rooms in the unit. The figures shown refer, therefore, to the number of housing units having the specified ratio of persons per room.

**Bedrooms.** (Parts A, B, C, and D)—The number of bedrooms in the unit is the count of rooms used mainly for sleeping, even if also used for other purposes. Rooms reserved for sleeping such as guest rooms, even though used infrequently, are counted as bedrooms. On the other hand, rooms used mainly for other purposes, even though used also for sleeping, such as a living room with a hideaway bed, are not considered bedrooms. A housing unit consisting of only one room, such as a one-room efficiency apartment, is classified, by definition, as having no bedroom.

Data on bedrooms lacking privacy are shown for housing units with two or more bedrooms. Units have bedrooms lacking privacy when it is necessary to pass through a bedroom to get to another room, such as a den, and/or to get to the bathroom. The bathroom access criterion is applied only to units with one complete bathroom or one bathroom plus half bath in which the half bath lacks a flush toilet.

In addition, statistics are shown for households with bedrooms used by three or more persons of all ages, and separately for such households when one or more of these persons is 13 years of age or older. Not included are bedrooms used for sleeping by three or more persons only on an occasional basis such as by visitors.

**Structural Characteristics**

**Complete kitchen facilities.** (Parts A, B, and C)—A unit has complete kitchen facilities when it has all three of the following for the exclusive use of the occupants of the unit: (1) An installed sink with piped water, (2) a range or

## APPENDIX A—Continued

cookstove, and (3) a mechanical refrigerator. All kitchen facilities must be located in the structure. They need not be in the same room. Quarters with only portable cooking equipment are not considered as having a range or cookstove. An icebox is not included as a mechanical refrigerator.

The kitchen facilities are for the exclusive use of the occupants when they are used only by the occupants of one housing unit, including lodgers or other unrelated persons living in the unit. When a structure consists of only one housing unit, all equipment located inside the structure is classified, by definition, for exclusive use.

For vacant units from which one or all of the kitchen facilities had been removed, the kitchen facilities used by the last occupant were to be reported.

**Condition of kitchen facilities.** (Part B)—Units with complete kitchen facilities were classified as to whether all the kitchen facilities were in usable condition. If one or more of the kitchen facilities (sink, range or cookstove, and refrigerator) could not be used for its intended purpose, the unit was classified as having "1 or more not in usable condition." Kitchen facilities that normally function properly, but which were temporarily out of use (two weeks or less) because of a breakdown, were classified as usable.

**Basement.** (Parts A, B, C, and D)—Statistics on basements are presented in terms of the number of housing units located in structures built with a basement. A structure has a basement if there is enclosed space in which persons can walk upright under all or part of the building.

In part B, basements in structures with occupied units are further classified by signs of water leakage. The category "with water leakage" consists of units in which the basement shows signs of water having leaked in from the outside, even if the signs only appear when it rains or during other similar situations. "No water leakage" means that the basement shows no signs of water leakage, or that the signs of water leakage are caused by a

problem inside the structure such as faulty plumbing. If the basement shows signs of water having leaked in from the outside but the problem causing the leakage has been corrected, the unit was classified as having no water leakage.

**Year structure built.** (Parts A, B, C, and D)—Year structure built refers to when the building was first constructed, not when it was remodeled, added to, or converted. The figures relate to the number of units in structures built during the specified periods and in existence at the time of enumeration. For mobile homes and trailers, the model year was assumed to be the year built.

**Units in structure.** (Parts A, B, C, and D)—All housing units, both occupied and vacant, were counted to determine the number of units in a structure. The statistics are presented for the number of housing units in structures of specified type and size, not for the number of residential structures.

A structure is a separate building that either has open space on all sides or is separated from other structures by dividing walls that extend from ground to roof. In part A, structures containing only one housing unit are further classified as detached or attached. A one-family house is detached if it has open space on all four sides even though it has an adjoining shed or garage. A one-family house is attached if it has one or more walls extending from ground to roof which divide it from other adjoining structures, such as in row houses, townhouses, etc.

Mobile homes and trailers are not shown as a separate category in this report but are included in the total counts of units. Any counts of mobile homes and trailers which are derived by subtraction should be used with extreme care. In part D, mobile homes and trailers are included in the "1 unit" category. When one or more rooms have been added to a mobile home or trailer, it is classified as a one-family house. If, however, only a porch or shed has been added, it is still counted as a mobile home or trailer.

**Elevator in structure.** (Parts A, B, and C)—Statistics on elevator in structure refer to the number of housing units in structures with four floors or more which have a passenger elevator. Units are in a "walkup" structure of four floors or more if the structure has no passenger elevator or if the only elevator service is for freight.

**Storm windows, storm doors, and attic or roof insulation.** (Part A)—The purpose of these three items is to determine if a housing unit has some form of insulation which helps to reduce heat loss during the winter and heat gain during the summer. The statistics are shown only for occupied one-family homes and mobile homes and trailers.

*Storm windows or other protective window covering.*—This category refers to protective window covering, such as storm windows, double-glazed glass, closeable shutters, or plastic. Housing units with "Some windows covered" have protective coverings over some, but not all windows.

*Storm doors.*—This category refers to additional doors hung in exterior doorways. Doors on attached garages are not included. Housing units with "Some doors covered" have storm doors on some, but not all, exterior door openings.

*Attic or roof insulation.*—This category includes roll or blanket insulation encased in a paper covering, fiberglass batting, and loose insulation which is poured or blown between the attic floor joists.

**Roof.** (Part B)—Units "with water leakage" are those in which the roof shows signs of water having leaked in from the outside or where the roof leaks when it rains. "No water leakage" means that the roof shows no signs of water having leaked in from the outside, or that the roof shows signs of water leakage but the problem causing the leakage has been corrected. If the signs of water leakage are caused by a problem inside the structure such as faulty plumbing, the unit was classified as having no water leakage.

**Interior ceilings and walls.** (Part B)—Statistics are presented on whether or not there are open cracks or holes and broken plaster or peeling paint on the interior ceilings or walls of a housing unit. Included are cracks or holes that do not go all the way through to the next room or to the outdoors. "Hairline cracks" or cracks that appear in the walls or ceilings but are not large enough for a fingernail file to be inserted in, and very small holes caused by nails or other similar objects are not considered to be open cracks or holes.

Broken plaster or peeling paint must be on the inside walls or ceilings, and at least one area of the broken plaster or peeling paint must be approximately one square foot or larger.

**Interior floors.** (Part B)—Data are shown on whether there are holes in the interior floors of a housing unit. The holes do not have to go through the floor. Excluded are very small holes caused by nails or other similar objects.

**Selected structural deficiencies and wish to move.** (Part B)—The category "household would like to move" consists of housing units in which the respondent considers one or more of the following structural deficiencies so objectionable that he would like to move from his unit: (1) Water leakage in basement, (2) water leakage from roof, (3) open cracks or holes in the interior walls or ceiling, (4) holes in the floor, and (5) broken plaster or peeling paint on the ceiling or inside walls.

**Overall opinion of structure.** (Part B)—The data presented are based on the respondent's overall opinion of his house or building as a place to live. The respondent was asked to rate the structure as excellent, good, fair, or poor.

**Common stairways.** (Part B)—The statistics on common stairways are presented for housing units in structures of two or more units with common stairways. The figures reflect the physical condition of the stairway; i.e., whether there are loose, broken, or missing steps or stair railings. Common stairways are stairways which

are usually used by the occupants of more than one unit or by the general public. They may be either inside the structure or attached to the outside of the building.

**Light fixtures in public halls.** (Part B)—The statistics on light fixtures in public halls refer to the number of housing units in structures of two or more units with public halls which have light fixtures and whether the light fixtures are in working order. Light fixtures include wall lights, ceiling lights, or table lamps in the public halls of the building. Public halls are used by the occupants of more than one unit or by the general public.

**Electric wiring.** (Part B)—A housing unit is classified as having exposed electric wiring if the unit has any wiring that is not enclosed, either in the walls or in metal coverings, or if the wiring is outside the walls but enclosed in some material other than metal. Extension cords and other types of wiring that extend from a wall outlet to an appliance or lamp are not considered as exposed wiring.

**Electric wall outlets.** (Part B)—A housing unit is classified as having electric wall outlets in each room if there is at least one working electric wall outlet or wall plug in each room of the unit. A working electric wall outlet or wall plug is one that is in operating condition; i.e., can be used when needed. If a room does not have an electric wall outlet, an extension cord used in place of a wall outlet is not considered to be an electric wall outlet.

**Electric fuse blowouts.** (Part B)—These statistics are presented for occupied housing units which had had an electrical circuit fuse blown or breaker switch tripped during the three months prior to enumeration. The data are restricted to households that had been at their present address for at least three months prior to the date of enumeration. A blown fuse or tripped breaker switch results in the temporary loss of electricity until the fuse is replaced or the breaker switch reset. Blown fuses inside certain appliances or equipment (such as some large

air conditioners) are counted as "fuse or switch blowouts."

**Parking facilities.** (Part D)—The statistics on parking facilities presented in this report are restricted to renter-occupied units for which cash rent is paid and exclude one-family homes on 10 acres or more. The data refer to off-street parking facilities which are available in connection with the building. The facilities are provided by the landlord or management and must be available without an additional cost to the renter. The parking facility may be a garage, carport, driveway, or open lot where the occupant may park his car off the street.

#### Plumbing Characteristics

**Plumbing facilities.** (Parts A, B, C, and D)—The category "with all plumbing facilities" consists of units which have hot and cold piped water inside the structure as well as a flush toilet and a bathtub or shower inside the structure for the exclusive use of the occupants of the unit. All plumbing facilities must be located in the structure but they need not be in the same room. "Lacking some or all plumbing facilities" means that the unit does not have all three specified plumbing facilities (hot and cold piped water, as well as flush toilet and bathtub or shower inside the structure), or that the toilet or bathing facilities are also for the use of the occupants of other housing units.

**Complete bathrooms.** (Parts A, B, C, and D)—A housing unit is classified as having a complete bathroom if it has a room with a flush toilet and bathtub or shower and a wash basin, as well as piped hot water in the structure for the exclusive use of the occupants of the unit. A half bathroom has either a flush toilet or a bathtub or shower for exclusive use, but does not have all the facilities for a complete bathroom.

"Also used by another household" refers to units with bathroom facilities which are also for the use of the occupants of other housing units. "None" refers to units with no bathroom facili-

## APPENDIX A—Continued

ties, units with only a half bathroom, and units with all bathroom facilities but not in one room.

**Source of water or water supply.** (Parts A, B, and C)—“A public system or private company” refers to a common source supplying running water to six or more housing units. The water may be supplied by a city, county, water district, or private water company, or it may be obtained from a well which supplies six or more housing units. If a well provides water for five or fewer housing units, it is classified as an “individual well.” Individual wells are further classified as to whether they were originally “drilled” or “dug”. Drilled wells are machine dug. Water sources such as springs, creeks, rivers, cisterns, ponds, or lakes are included in the “other” category.

Data on breakdowns or failures of water supply are shown if the housing unit was occupied by the head of the household at least 3 months prior to enumeration and if the breakdown or failure lasted 6 consecutive hours or longer during the 3 months prior to enumeration. Breakdowns or failures in the water supply were asked when the unit had piped water inside the structure. The water may be available from sources such as a sink, wash basin, bathtub, or shower. In the 1974 Annual Housing Survey (SMSA sample) statistics on breakdowns or failures in water supply were presented for units when the source of water was from a public system, private company or individual well.

A unit is classified as having no piped water inside structure if the unit has no piped water or if the only piped water available is outside the structure; for example, on an open porch or in another building. A breakdown or failure in the water supply means that the unit was completely without running water from its regular source. A unit was considered to be completely without running water if (1) the water system servicing the unit supplied no water at all, or (2) no water was available in the unit due to a breakdown or failure in the water supply inside the structure, or (3) the equipment and facilities (i.e., faucets in the kitchen and

the bathroom sinks, faucet and shower in the bathtub, flush toilet, etc.) were all inoperable. If the faucet in the kitchen sink was broken but the one in the bathtub was working, the unit was not classified as being completely without water.

Units with a breakdown or failure in the water supply are classified according to the number of breakdowns or failures and to the most common source of the problem. “Problems inside the building” refer to such problems as broken pipes in the unit (or building) or turning the water off in the unit (or building) for maintenance and repairs. “Problems outside the building” refer to such problems as power failures, breaks in the main water line, or shutdown by the water company for maintenance and repairs.

**Sewage disposal.** (Parts A, B, C, and D)—A “public sewer” is connected to a city, county, sanitary district, neighborhood, or subdivision sewer system. It may be operated by a governmental body or private organization. A “septic tank or cesspool” is an underground tank or pit used for disposal of sewage. Small sewage treatment plants which in some localities are called neighborhood septic tanks are classified as public sewers. A chemical toilet uses chemicals to breakdown or dissolve garbage, a privy refers to an “outhouse” or other small shelter outside the unit which contains a toilet. Units for which sewage is disposed of in some other way are included in the “other” category.

The data on breakdowns or failures in the means of sewage disposal are limited to units in which the means of sewage disposal was a public sewer, septic tank, or cesspool. The breakdown or failure may have been the result of an overloaded sewage disposal system, lack of running water, a broken or cracked tank, etc. Data on breakdowns are shown if the housing unit was occupied by the head of the household at least 3 months prior to enumeration and if the breakdown or failure lasted 6 consecutive hours or longer during the 3 months prior to enumeration.

**Flush toilet.** (Parts B and C)—The statistics on breakdowns or failures of flush toilet are limited to units that had all

plumbing facilities with only one flush toilet, that is, one complete bathroom or one complete bathroom plus a half bath without flush toilet. The flush toilet may be completely unusable because of broken pipes, stopped up soil pipe, lack of water supplied to the flush toilet, or some other reason.

Units with breakdown or failure in flush toilet are classified according to the number of breakdowns or failures and to the most common source of the problem. “Problems inside the building” refer to such breakdowns or failures as broken pipes in the unit (or building), a cracked or broken bowl, or faulty flushing mechanism. “Problems outside the building” refer to such breakdowns or failures as breaks in the main water or sewer line or shutdowns by the water company for maintenance or repairs.

Data on breakdowns or failures of flush toilet are shown if the housing unit was occupied by the head of household at least 3 months prior to enumeration, and if the breakdown or failure lasted 6 consecutive hours or more during the 3 months prior to enumeration.

### Equipment and Fuels

**Telephone available.** (Part A)—A unit is classified as having a telephone if there is a telephone available for receiving calls to the occupants of the unit. The telephone may be located outside or inside the housing unit, and one telephone may serve the occupants of several units. The number of housing units with a telephone available, therefore, does not indicate the number of telephones installed in homes.

**Heating equipment.** (Parts A, B, and C)—“Warm-air furnace” refers to a central system which provides warm air through ducts leading to various rooms; central heat pumps are included in this category. “Steam or hot water” refers to a central heating system in which heat from steam or hot water is delivered through radiators or other outlets. “Built-in electric units” are permanently installed in floors, walls, ceilings, or baseboards. A “floor, wall, or pipeless furnace” delivers warm air to the room right above the furnace or to the

## APPENDIX A--Continued

room(s) on one or both sides of the wall in which the furnace is installed. "Room heaters with flue" include circulating heaters, convectors, radiant gas heaters, and other nonportable heaters that burn gas, oil, kerosene, or other liquid fuels, and which are connected to a flue, vent, or chimney to remove smoke and fumes. "Room heaters without flue" include any room heater (not portable) that burns gas, oil, or kerosene which is not connected to a flue, vent, or chimney. "Fireplaces, stoves, or portable heaters" also include room heaters that burn coal or wood.

For vacant units from which the heating equipment had been removed, the equipment used by the last occupants was to be reported.

For breakdowns or failures of heating equipment, data are shown for units occupied by the household head during the winter prior to enumeration if the equipment was unusable for 6 consecutive hours or longer during that time. To qualify as having lived here "last winter," the household head must have moved into the unit prior to February 1975; however, if enumeration took place in February or March of 1976, the household head must have moved into the unit prior to February 1976.

Heating equipment is considered unusable if it cannot be used for the purposes intended; the breakdown or failure may be caused by broken pipes, electrical or gas parts out of order, or downed power lines.

**Insufficient heat.** (Part B)—The statistics presented refer to housing units in which the household head occupied the unit during the winter prior to the date of enumeration. To qualify as having lived here "last winter," the household head must have moved into the unit prior to February 1975; however, if enumeration took place in February or March of 1976, the household head must have moved into the unit prior to February 1976.

Separate data are shown for units with additional heat source, rooms which lacked specified heat source, and units with closed rooms. The term "specified heating equipment" includes warm-air

furnace; steam or hot water system; built-in electric units; floor, wall, or pipeless furnace; and room heaters with flue. Excluded are room heaters without flue or vent, fireplaces, stoves, and portable heaters.

The data on additional heat source refer to units with "specified heating equipment" which had to use additional sources of heat to supplement the regular heating system because the regular system did not provide enough heat. Additional sources of heat such as kitchen stoves, fireplaces, or portable heaters, may have been used only in the mornings or on very cold evenings. Electric blankets, heating pads, or hot water bottles are not considered additional sources of heat.

"Rooms lacking specified heat source" include rooms lacking hot air ducts, registers, radiators, and room heaters. The intent of this item was to identify rooms in units with "specified heating equipment" which did not contain the means of conveying the heat to the room. The kitchen was not considered to be a room for this item.

Separate data are also shown for rooms which were closed because they could not be kept warm. The rooms must have been closed for seven consecutive days or longer during the previous winter, and the unit must have "specified heating equipment." For this item, also, the kitchen was not considered a room.

**Air conditioning.** (Parts A, B, C, and D)—Air conditioning is defined as the cooling of air by a refrigeration unit; excluded are evaporative coolers, fans, or blowers which are not connected to a refrigeration unit. A room unit is an individual air conditioner which is installed in a window or an outside wall and is generally intended to cool one room, although it may sometimes be used to cool more than one room. A central system is a central installation which air conditions the entire housing unit. In an apartment building, a central system may cool all apartments in the building, each apartment may have its own central system, or there may be several systems, each providing central air conditioning for a group of apartments. A central

installation with individual room controls is a central air-conditioning system.

**Automobiles and trucks available.** (Parts A, C, and D)—Statistics on automobiles available represent the number of passenger automobiles, including station wagons, which are owned or regularly used by any member of the household and which are ordinarily kept at home. The figures include leased automobiles, taxicabs and company-owned automobiles kept at home. Police cars, pickups, or larger trucks were not to be counted. In the 1974 Annual Housing Survey (SMSA sample), taxicabs kept at home were not included in the count of "automobiles available."

The data on trucks available represent the number of pickups and small panel trucks of one-ton capacity or less which are owned or regularly used by any member of the household and which are ordinarily kept at home. Trucks used for business purposes were included only if also used for personal activities of household members.

The statistics do not reflect the number of privately owned automobiles or trucks or the number of households owning such vehicles.

**Fuels used for house heating and cooking.** (Parts A and C)—"Utility gas" is gas that is piped through underground pipes from a central system and serves the neighborhood. "Bottled, tank, or LP gas" is stored in tanks which are refilled or exchanged when empty. "Fuel oil, kerosene, etc." includes fuel oil, kerosene, gasoline, alcohol, and other combustible liquids. "Other fuel" includes any other fuel such as briquettes made of pitch and sawdust, coal dust, corncobs, or purchased steam.

**Owned second home.** (Parts A and C)—A second home may be a single-family house, vacation cottage, hunting cabin, ski lodge, etc., which is owned and held for use sometime during the year by the owner or members of his household. Second homes may also be owned in partnership with members of a different household. The figures include second

## APPENDIX A—Continued

homes which are sometimes rented or leased on a short-term basis to other persons but are principally held for the owner's occasional use during the year.

The statistics refer to the number of households that own (one or more) second homes. The data, therefore, do not reflect the number of owned second homes. (See also discussion of vacant units "Held for occasional use" in the section on "Occupancy and Vacancy Characteristics.")

### Services and Neighborhood Conditions

**Garbage collection service.** (Parts B and D)—A housing unit is classified as having garbage collection service if either a private or public company collects the trash or garbage on a regular basis and carries it to public disposal areas. In some areas where the garbage (food waste) is collected by one company and the trash (paper, cans, etc.) by another, data are obtained only for the garbage collection service.

If the household does not have garbage collection service, the means of garbage disposal is classified as follows:

**Incinerator, trash chute, or compactor.**—An incinerator is a large unit on the property designed to burn all trash and garbage. Trash chutes and compactors were marked as the means of garbage disposal when the final means of disposal was not known; i.e., if the respondent knew only that he put his garbage down a trash chute or that his garbage goes into a compactor. A compactor is a unit which packs trash and garbage into smaller units for disposal.

**Garbage disposal unit.**—A garbage disposal unit is connected to the kitchen sink and grinds up the garbage which is disposed of through the sewage system.

**Other means.**—If the method of disposal does not fall into any of the classifications specified above, it is classified as "other means."

The statistics on garbage and trash collection service presented in part D are restricted to renter-occupied units for which cash rent is paid and exclude one-

family homes on 10 acres or more. The data refer to whether or not the cost of garbage and trash collection service is paid by the renter.

**Exterminator service.** (Part B)—The statistics on exterminator service refer to households that have been at their present address for at least 3 months prior to the date of enumeration and who reported that they had seen mice or rats or signs or traces of their presence *inside* the house or building during the last 3 months. Signs of mice and rats or traces of their presence include droppings, holes in the wall, or ripped or torn food containers. "Regular extermination service" refers to periodic visits by a licensed company or individual who uses chemicals and sprays to control or kill pests and rodents. The regular service interval may be once a month, four times a year, or any other such interval. "Irregular extermination service" includes visits by an exterminator who is called only when needed by the household or building manager, or where it is known that a building is serviced but it is not known whether the service is regular or irregular. "No extermination service" includes units in a house or building that has not been serviced during the 12 months prior to enumeration and where it is not known if there is any exterminator service.

**Neighborhood conditions and services.** (Part B)—The statistics presented are based on the respondent's assessment of the neighborhood in which he lives. Thus, the respondent's answer may or may not reflect the "actual" description of the neighborhood. Furthermore, the respondent may not have the same assessment as his neighbor about the neighborhood conditions and/or services; for example, the respondent may feel that the street lighting or neighborhood shopping facilities are inadequate while his neighbor may not.

**Neighborhood conditions.**—The respondent was asked whether or not certain conditions were present in his neighborhood. The following is the list of conditions:

1. Airplane noise—This category refers to the respondent's opinion concerning noise made by airplanes in landing or taking off or sonic booms from nearby airports or military bases.

2. Street noise—Street noise refers to noise made by children playing outdoors, noise from a factory or business, or any other sound that the respondent considers street noise.

3. Heavy traffic—This category refers to the presence of cars and/or trucks which the respondent classifies as heavy traffic.

4. Odors.—This category refers to fumes, smoke, or gas coming from cars, trucks, nearby industries, factories, businesses, etc., which the respondent considers objectionable.

5. Litter.—Included are all types of trash, debris, or junk such as paper, cans, or abandoned cars in the street, on empty lots, or on properties on the street which the respondent considers litter.

6. Abandoned buildings.—Abandoned buildings refer to both single and multiunit buildings which the respondent reported to be abandoned or boarded up. Included in this category are remains of previous buildings.

7. Deteriorating housing.—Deteriorating housing refers to occupied housing units which in the respondent's opinion are in rundown condition.

8. Commercial or industrial.—This category refers to commercial, industrial, or other activities, including both large and small industries as well as businesses and stores, that the respondent considers to be nonresidential.

9. Streets need repair.—The data are based on the respondent's opinion that the streets, either paved or unpaved, are continually in need of repair or are bordered by open ditches used for water or sewage drainage.

10. Roads impassable.—This category refers to roads that the respondent reported to be neglected by State, county, or city crews during snow storms, heavy rain storms, or other such conditions that make a road impassable.

11. Poor street lighting.—Poor street lighting includes areas which, in the opinion of the respondent, have no street lighting, insufficient street lighting, and street lighting that does not work adequately.

12. Crime.—This category refers to all forms of neighborhood crime such as petty theft, assaults against the person, burglary, etc., or any related activities that the respondent judges to be a crime.

*Neighborhood conditions and wish to move.*—The category "would like to move" consists of housing units in which the respondent considers one or more neighborhood conditions (such as street noise) disturbing, harmful, or dangerous and so objectionable that he would like to move from the neighborhood.

*Neighborhood services.*—The data shown are based on the respondent's opinion of the adequacy of the following neighborhood services:

1. Public transportation.—The data are based on the respondent's opinion of the availability of public transportation such as bus, subway, or taxicab service.

2. Schools.—The statistics are based on the respondent's opinion about the schools in his neighborhood, such as the proximity of the school, population of the student body, etc.

3. Neighborhood shopping.—This category refers to the respondent's opinion regarding stores such as grocery or drug stores and their merchandise, prices, or services in his vicinity.

4. Police protection.—This category refers to the presence, quality, quantity, and response time of services that, in the respondent's

opinion, should be provided by the police.

5. Fire protection.—The data are based on the respondent's opinion regarding the presence and response time of the local fire protection services.

6. Hospitals and health clinics.—This category refers to the quality and proximity of health facilities, etc., serving the local community in the opinion of the respondent.

*Neighborhood services and wish to move.*—The category "household would like to move" consists of housing units in which the respondent considers one or more of the specified neighborhood services (such as public transportation) so inadequate or unsatisfactory that he would like to move from the neighborhood.

*Overall opinion of neighborhood.*—The data presented are based on the respondent's overall opinion of the neighborhood according to the neighborhood conditions and services available (described in preceding paragraphs). The respondent was asked to rate the neighborhood as excellent, good, fair, or poor. Data are also shown for wish to move because of undesirable neighborhood conditions cross-classified by the respondent's overall opinion of his neighborhood.

#### Financial Characteristics

*Value.* (Parts A, C, and D)—Value is the respondent's estimate of how much the property (house and lot) would sell for if it were for sale. The statistics on value are shown only for one-family homes on less than 10 acres without a commercial establishment or medical or dental office on the property. Owner-occupied cooperatives, condominiums, mobile homes, and trailers are excluded from the value tabulations.

*Value-income ratio.* (Parts A and C)—The value-income ratio is computed by dividing the value of the housing unit by the total money income of the family or primary individual. The ratio is presented for the same owner-occupied units for

which value was tabulated; thus, the statistics on value-income ratio reflect the exclusion of certain owner-occupied units. The ratio was computed separately for each unit and was rounded to the nearest tenth. In reporting value, respondents were asked to select an appropriate class interval. The midpoints of the value intervals were used in the computation of the value-income ratio, except that a mean of \$2,000 was assigned for values less than \$2,500 and a mean of \$70,000 was assigned for values of \$60,000 or more. For income, the dollar amounts were used. Units occupied by families or primary individuals who reported no income or a net loss comprise the category "not computed."

The 1975 income statistics are for the 12 months prior to the date of enumeration (April 1975 through March 1976). For 1970, the income statistics cover the calendar year 1969.

*Mortgage status.* (Part C)—The data are limited to owner-occupied, one-family homes on less than 10 acres without a commercial establishment or medical or dental office on the property. A mortgage or similar debt refers to all forms of debt where the property is pledged as security for repayment of the debt. It includes such debt instruments as deeds of trust, trust deeds, mortgage bonds, and vendor liens. In such arrangements, the borrower generally has the title to the property. Also included as a mortgage or similar debt are arrangements such as contracts to purchase and land contracts where the title to the property remains with the lender.

Units with no mortgage or similar debt comprise the category "owned free and clear." Also included in this category are housing units in which the owner has no mortgage but pays a "ground rent," that is, the owner owns the unit but leases, rents, or pays a fee for the use of the land.

*Mortgage insurance.* (Parts A, C, and D)—The data are restricted to owner-occupied units with a mortgage or similar debt. In addition, the units must be one-family homes on less than 10 acres without a

## APPENDIX A—Continued

commercial establishment or medical or dental office on the property.

A mortgage or similar debt is considered insured if it is currently insured by the Federal Housing Administration (FHA), the Veterans' Administration (VA), the Farmers Home Administration, or by private mortgage insurance companies. Mortgages or similar debts insured or guaranteed by State or local government agencies are not included.

The Federal Housing Administration insures loans on homes. The Veterans' Administration guarantees or insures loans under the Serviceman's Readjustment Act (G.I. Bill). The Farmers Home Administration provides much the same service as the Federal Housing Administration, but confines its assistance to rural areas. Private mortgage insurance companies insure loans that are not insured or guaranteed by an agency of the Federal government. It should be noted that many conventional loans are not insured or guaranteed at all.

**Real estate taxes last year.** (Parts A and C)—The data are restricted to owner-occupied, one-family homes on less than 10 acres without a commercial establishment or medical or dental office on the property. "Real estate taxes last year" refers to the total amount of all real estate taxes payable on the entire property during the last billing period. It includes State and local real estate taxes. Not included are payments on delinquent taxes due from prior years or payments for special assessments, facilities, or services. When the real estate taxes are included with the mortgage, a separate amount for the taxes is obtained. In part C, the mean real estate taxes for last year per \$1,000 value of the property (house and lot) are presented. Housing units for which no taxes are paid are excluded from the computation of the mean.

**Property insurance.** (Parts A and C)—In this report, property insurance is included only as a component of "Selected monthly housing costs" and "Selected monthly housing costs as percentage of income." The data are presented for

owner-occupied, one-family homes on less than 10 acres without a commercial establishment or medical or dental office on the property.

Property insurance refers to fire and hazard insurance; that is, policies which protect the unit and its contents against loss due to damage by fire, lightning, wind, hail, explosion, etc. Homeowner's policies are also included since this type of insurance has fire and hazard insurance together with other types of homeowner protection such as liability. If the cost of the insurance was included as part of the mortgage payments, a separate amount for the insurance was obtained. The amount of the insurance premium reported was the amount paid for an entire 12-month period even if made in two or more installments.

**Selected monthly housing costs.** (Parts A and C)—The data are presented for owner-occupied, one-family homes on less than 10 acres without a commercial establishment or medical or dental office on the property. Separate distributions are shown for units with a mortgage and for units owned free and clear. Selected monthly housing costs is the sum of payments for mortgage, real estate taxes, property insurance, utilities (electricity, gas, water, and sewage disposal), fuel (oil, coal, kerosene, wood, etc.), and garbage and trash collection.

Households that did not report the amount of mortgage and/or real estate taxes were included in the "not reported" category.

**Selected monthly housing costs as percentage of income.** (Parts A and C)—The yearly housing costs (selected monthly housing costs multiplied by 12) are expressed as a percentage of the total income of the family or primary individual. This percentage is presented for the same owner-occupied units for which "selected monthly housing costs" were tabulated; thus, the statistics on selected monthly housing costs as percentage of income reflect the exclusion of certain owner-occupied units. The percentage was computed separately for each unit and was rounded to the nearest tenth. For income

and "selected monthly housing costs" the dollar amounts were used. Units occupied by families or primary individuals who reported no income or a net loss comprise the category "not computed."

Units that did not report the amount of mortgage and/or real estate taxes were included in the "not reported" category.

**Acquisition of property.** (Parts A and C)—This item indicates how the current owner acquired the property; i.e., whether by purchase or by means other than purchase. Data are presented for one-family homes on less than 10 acres without a commercial establishment or medical or dental office on the property.

*Placed or assumed a mortgage.*—This includes units where the present owner had to place one or more new mortgages in order to obtain the property or assume an existing mortgage on the property. The intent was to determine whether the property was ever mortgaged by the present occupants even though there was no mortgage at the time of enumeration.

*Acquired through inheritance or gift.*—This includes property acquired as a beneficiary of an estate and property acquired through a gift.

*Paid all cash.*—In these cases, the owner paid cash for the total cost of the property and no mortgage or other similar debt was involved.

*Acquired in other manner.*—Includes acquisitions of properties through foreclosure, delinquent tax sale, corporate reorganization, or trade for another property. Also included are those cases in which the owner acquired the property with borrowed funds (for all or part of the purchase price or cost of construction) and this loan was not secured by a mortgage, deed of trust, land contract, etc.

**Alterations and repairs during the last 12 months.** (Parts A and C)—The statistics refer to the 12 months prior to enumeration and are restricted to owner-occupied, one-family homes on less than 10 acres without a commercial establishment or medical or dental office on the property.

The data are presented according to whether the alterations and repairs cost less than \$100 or \$100 or more. The total cost of the labor and materials was to be reported. However, if the labor was performed by the occupants or provided without charge, only the cost of the materials was obtained. The cost pertains to a single job; for example, if several jobs were done, each costing less than \$100 but the sum total was over \$100, it was reported as costing less than \$100 since none of the jobs by themselves cost \$100 or more.

**Additions.**—Additions refer to floor space built onto, above, or below an existing unit in order to increase the enclosed space within the house, such as a bedroom or basement added onto a house. It may also be construction of other buildings on the property; for example, a garage.

**Alterations.**—These are permanent changes made either to the inside or outside of a structure including the surrounding grounds. Alterations inside the structure include any type of remodeling resulting in permanent modification of space; for example, construction of a breakfast nook in a kitchen. It may involve completely remodeling a room, such as a kitchen or bathroom, or a structural change such as separation of living and dining areas by a permanent room divider. It may also include attached equipment installed in the house for the first time; i.e., built-in dishwasher. Alterations outside the structure consist of installing walks, driveways, fences, storm windows or doors, planting trees or shrubbery, or swimming pools built into the ground.

**Replacements.**—This refers to the complete substitution of a new piece of fixed equipment, surfacing, or fixed appliances for an old item that was previously there; for example, a new gas furnace or central air-conditioning system for one that no longer functioned properly. Excluded are appliances such as clothes washers, refrigerators, or window air-conditioners.

**Repairs.**—This refers to jobs necessary

for maintenance and preventive care of the structure, property, and fixed equipment; for example, painting, papering, floor sanding, mending water pipes, and replacing parts of large equipment such as a furnace valve.

**Plans for improvements during the next 12 months.** (Parts A and C)—This item is restricted to owner-occupied, one-family homes on less than 10 acres without a commercial establishment or medical or dental office on the property. This item refers to the respondent's plans, if any, to make improvements on his property (additions, alterations, replacements, or repairs) during the 12-month period following enumeration and whether the labor and/or materials cost more or less than \$100.

**Sales price asked.** (Part B)—For vacant units, the sales price is the amount asked for the property at the time of enumeration and may differ from the price at which the property is sold. The statistics on sales price asked are shown only for vacant for sale one-family homes on less than 10 acres without a commercial establishment or medical or dental office on the property.

**Garage or carport on property.** (Parts B, C, and D)—Data on units with a garage or carport on the property are shown only for one-family homes on less than 10 acres without a commercial establishment or medical or dental office on the property. The garage or carport must be currently available for use by the occupants of the unit; i.e., the members of the household can use it for parking even if it is currently used as a storage area for items such as lawn equipment or furniture. It may be attached to the house or it may be completely unattached, but it must be on the property. Excluded are garages or carports that have been converted to other uses such as living quarters, an extra room for business purposes, rented to someone else, or for some reason cannot be used for parking.

**Contract rent.** (Part A)—Contract rent is the monthly rent agreed to, or contracted

for, even if the furnishings, utilities, or services are included. The statistics on rent exclude one-family homes on 10 acres or more. Renter units occupied without payment of cash rent are shown separately as "no cash rent" in the rent tabulations.

**Gross rent.** (Parts A, C, and D)—The computed rent termed "gross rent" is the contract rent plus the estimated average monthly cost of utilities (electricity, gas, water) and fuels (oil, coal, kerosene, wood, etc.), if these items are paid for by the renter (or paid for him by someone else, such as a relative, welfare agency, or friend) in addition to rent. Contract rent is the monthly rent agreed to, or contracted for, regardless of any furnishings, utilities, or services that may be included. Thus, gross rent is intended to eliminate differentials which result from varying practices with respect to the inclusion of utilities and fuel as part of the rental payment. The estimated costs of water and fuels are reported on a yearly basis but they are converted to monthly figures in the computation process.

The statistics on rent exclude one-family houses on 10 acres or more. Renter units occupied without payment of cash rent are shown separately as "no cash rent" in the rent tabulations.

**Gross rent in nonsubsidized housing.** (Part A)—The gross rent for nonsubsidized housing units excludes units reported in public housing projects, units with Federal, State, or local government rent subsidies, as well as one-family homes on 10 acres or more. Data on nonsubsidized units in this report are not based on government or local records; the figures are, therefore, subject to the ability of a respondent to properly classify his unit as subsidized or nonsubsidized housing.

**Gross rent as percentage of income.** (Parts A and C)—The yearly gross rent (monthly gross rent multiplied by 12) is expressed as a percentage of the total income of the family or primary individual. The percentage is presented for the same renter-occupied units for which gross rent was

tabulated; thus, the statistics on gross rent as percentage of income reflect the exclusion of certain renter-occupied units. The percentage was computed separately for each unit and was rounded to the nearest whole number. For gross rent and income, the dollar amounts were used in the computation. Units for which no cash rent is paid and units occupied by families or primary individuals who reported no income or a net loss comprise the category "not computed."

The 1975 income statistics are for the 12 months prior to the date of enumeration (April 1975 through March 1976). For 1970, the income statistics cover the calendar year 1969.

**Gross rent in nonsubsidized housing as percentage of income.** (Part A)—This item was computed in the same manner as gross rent as percentage of income except that rents and incomes for public and subsidized housing units were excluded. Data on nonsubsidized units in this report are not based on government or local records; they are, therefore, subject to the ability of a respondent to properly classify his unit as subsidized or nonsubsidized housing.

**Inclusion in rent (parking facilities, garbage collection, and furniture).** (Part C)—Counts are shown separately for units in which parking facilities, garbage and trash collection, and furniture are included in the rent. The data exclude one-family homes on 10 acres or more.

**Parking facilities.**—The statistics refer to off-street parking facilities which are available in connection with the building. The facilities are provided by the landlord or management and must be available without additional cost to the renter. The parking facility may be a garage, carport, driveway, or open lot where the occupant may park his car off the street.

**Garbage and trash collection.**—Included are units which have garbage and trash collection service available in connection with the building. The service may be public or private and must be available without additional cost to

the renter. If the garbage (food waste) is collected by one company and the trash (paper, cans, etc.) by another, the data refer to the garbage collection service. In tables 3, 6, and 9 of part C, separate counts are also shown for renter-occupied units reporting additional amounts paid for garbage and trash collection service.

**Furniture.**—The statistics refer to furnished apartments or houses in which the management supplied major pieces of furniture such as a bed, sofa, chest of drawers, and table and chairs for the use of the occupant. Refrigerator, cooking range or stove, lamps, and rugs are not considered furniture. Units in which the occupants rent furniture from some source other than the management are not classified as furnished units.

**Rent asked.** (Part B)—For vacant units, rent is the amount asked for the unit at the time of enumeration and may differ from the rent contracted for when the unit is occupied. The data are for vacant year-round units for rent, excluding one-family homes on 10 acres or more. The median rent asked is shown separately for units in which the rent includes payment for all utilities (electricity, gas, and water) and fuels (oil, coal, kerosene, wood, etc.). Median rent asked is also shown for units in which the rent includes utilities, fuels, and payment for garbage and trash collection service.

**Public, private, or subsidized housing.** (Parts B, C and D)—A housing unit is classified as being in a "public housing project" if the structure in which the unit is located is owned by a local housing authority or other public agency; e.g., a housing and redevelopment authority or a housing development agency, and operated as public housing. These organizations may receive subsidies from the Federal or State government but the local agency owns the property. All other housing units are classified as "private housing."

Private housing units are further classified by whether the unit is subsidized; that is, the respondent pays a lower rent

because a Federal, State, or local government program pays part of the cost of construction, building mortgage, or operating expenses. These programs include (1) the interest subsidy programs of the Department of Housing and Urban Development (HUD) for rental and cooperative housing for moderate-income families, (2) the rent supplement program where part of the rent for low-income families occupying certain types of rental housing projects is paid by HUD, and (3) the direct loan program of HUD for housing the elderly.

The statistics on public or subsidized housing exclude one-family homes on 10 acres or more and renter units occupied without payment of cash rent. In addition, the data are not based on government or local records; the figures are, therefore, subject to the ability of a respondent to properly classify his unit as public or private and, if private, as subsidized or nonsubsidized housing.

#### Household Characteristics

**Household.** (Parts A, B, C, and D)—A household consists of all the persons who occupy a housing unit. By definition, the count of households is the same as the count of occupied housing units.

**Head of household.** (Parts A, B, C, and D)—One person in each household is designated as the "head," that is, the person who is regarded as the head by the members of the household. However, if a married woman living with her husband is reported as the head, her husband was considered the head for the purpose of simplifying the tabulations.

**Household composition.** (Parts A, C, and D)—Statistics by age of head are presented separately for two-or-more-person households and for one-person households. Households having two or more persons are further subdivided as follows:

**Male head, wife present, no nonrelatives.**—Each household in this group consists of the head and his wife, and other persons, if any, all of whom are related to him.

**Other male head.**—This category in-

cludes households with male head, wife present, with nonrelatives living with them; male heads who are married, but with wife absent because of separation or other reason where husband and wife maintain separate residences; and male heads who are widowed, divorced, or single.

**Female head.**—This group comprises households with female heads regardless of their marital status. Included are female heads with no spouse and female heads whose husbands are living away from their families, as for example, husbands in the Armed Forces living on military installations.

Households consisting of only one person are shown separately as "one-person households" and are not included in the subcategories "other male head" and "female head."

**Family or primary individual.** (Parts A, C, and D)—Housing units are occupied by either "families" or "primary individuals." The term "family" refers to the head of a household and all (one or more) other persons living in the same household who are related to the head by blood, marriage, or adoption. If the head lives alone or with nonrelatives only, then the head is considered a "primary individual."

Married couples related to the head of a family are included in the family and are not considered as separate families. A lodger, servant, or other person unrelated to the head is considered a member of the household but not of the family.

In the statistics on household composition, families are always included in one of the three major groups of two-or-more-person households. Primary individuals with nonrelatives living with them are tabulated as "other male head" or "female head." Primary individuals living alone are always tabulated as "one-person households."

**Subfamily.** (Parts A and C)—A subfamily is a married couple with or without children, or one parent with one or more own single (never married) children under 18 years old, living in a household and related to, but not including the head of

the household or his wife. The most common example of a subfamily is a young married couple sharing the home of the husband's or wife's parents.

**Age of head.** (Parts A, C, and D)—The age classification refers to the age reported for the head of the household as of his last birthday.

**Persons 65 years old and over.** (Parts A and D)—All persons, including the head, who are members of the household and are 65 years and over are included in the count of person 65 years old and over.

**Own children.** (Parts A, C, and D)—Statistics on presence of "own" children of household heads are shown in this report. A child under 18 years old is defined as an "own" child if he or she is a single (never married) son, daughter, stepchild, or adopted child of a household head. Own children of subfamilies are excluded from the total count of own children.

**Other relative of head.** (Part A)—This category includes all persons related to the head by blood, marriage, or adoption except wife or child of head and members of subfamilies.

**Nonrelative.** (Parts A and C)—A nonrelative of the head is any person in the household who is not related to the head by blood, marriage, or adoption. Roomers, boarders, lodgers, partners, resident employees, wards, and foster children are included in this category.

**Years of school completed by head.** (Parts A and C)—The statistics refer to the highest grade of regular school completed and not to the highest grade attended. For persons still attending school, the highest grade completed is one less than the one in which they are currently enrolled. "Regular" school refers to formal education obtained in graded public, private, or parochial schools, colleges, universities, or professional schools, whether day or night school, and whether attendance was full or part time. That is, "regular schooling" is formal education which may ad-

vance a person toward an elementary or high school diploma, or college, university, or professional school degree. Schooling or tutoring in other than regular schools is counted only if the credits obtained are regarded as transferable to a school in the regular school system. Household heads whose highest grade completed was in a foreign school system or in an ungraded school were instructed to report the approximate equivalent grade (or years) in the regular United States school system. A head was not reported as having completed a given grade if he dropped out or failed to pass the last grade attended. Education received in the following types of schools is not counted as "regular schooling": Vocational schools, trade schools, business schools, and non-credit adult education classes.

**Means of transportation and distance and travel time to work.** (Part A)—The statistics are restricted to household heads who had a job the week prior to enumeration. A job is defined as a definite arrangement for regular part-time or full-time work for pay every week or every month. Heads who do not report to the same place of work every day comprise the "No fixed place of work" category.

**Head's principal means of transportation to work.**—If different means of transportation are used on different days, the means used most often is recorded. If more than one means of transportation is used each day, the means covering the greatest distance is recorded. A "carpool" is where one or more persons regularly ride in the car with the head; the head may share driving, drive others, or ride with someone else. The category "mass transportation" includes railroad, subway, elevated transportation system, bus, and streetcar.

**Distance from home to work.**—The statistics refer to the one-way distance the head of household travels from home to work.

**Travel time from home to work.**—The data refer to the average time it takes the household head to travel one-way from home to work.

## APPENDIX A—Continued

**Income (Parts A, C, and D)**—The statistics on income in the Annual Housing Survey are based on the respondent's reply to questions on income for the 12 months prior to enumeration and is the sum of the amounts reported for wage and salary income, net self-employment income, Social Security or railroad retirement income, public assistance or welfare payments, and all other money income. The figures represent the amount of income received before deductions for personal income taxes, Social Security, union dues, bond purchases, health insurance premiums, Medicare deductions etc.

In this report, the statistics relate to the money income of the family or primary individual occupying the housing unit, that is, the sum of the income of the head of the family and all other members of the family 14 years old and over or the income of the primary individual. Incomes of persons living in the unit but not related to the head of the household are not included in this sum.

Wage or salary income is defined as the total money earnings received for work performed as an employee at any time during the 12-month period prior to enumeration. It includes wages, salary, piece rate payments, commissions, tips, cash bonuses, and Armed Forces pay. Net self-employment income is defined as net money income (gross receipts minus operating expenses) received from a business, professional practice, partnership, or farm in which the person was engaged on his own account.

Social Security or railroad retirement income includes cash receipts of Social

Security pensions; survivors' benefits, disability insurance programs for retired persons, dependents of deceased insured workers, or disabled workers; and deductions for Medicare and health insurance premiums. Cash receipt of retirement, disability, and survivors' benefit payments made by the U.S. Government under the Railroad Retirement Act are also included. Separate payments received for hospital or other medical care are not included.

Income from all other sources includes money income received from sources such as periodic payments from estates and trust funds; dividends; interest; net rental income (or loss) from property rentals; net receipts from roomers or boarders; net royalties; public assistance or welfare payments which include cash receipts received from public assistance programs such as old age assistance, aid to families with dependent children, and aid to the blind or totally disabled; unemployment insurance benefits; money received for transportation and/or subsistence by persons participating in special governmental training programs such as the Area Redevelopment Act and the Manpower Development and Training Act; workmen's compensation cash benefits; periodic payments by the Veterans Administration to disabled members of the Armed Forces or to survivors of deceased veterans; public or private pensions; periodic receipts from insurance policies or annuities; alimony or child support from persons who are not members of the household; net gambling gains; and nonservice scholarships and fellowships.

Receipts from the following sources were not included as income: Value of income "in kind" such as free living quarters, housing subsidies, food stamps, or food produced and consumed in the home; money received from the sale of property (unless the recipient was engaged in the business of selling such property); money borrowed; tax refund; withdrawal of bank deposits; accrued interest on "uncashed" savings bonds; exchange of money between relatives living in the same household; and gifts and lump-sum insurance payments, inheritances, and other types of lump-sum receipts.

The income statistics and the characteristics of the household refer to different periods in time. For 1975, the income data refer to the 12 months prior to enumeration (April 1975 through March 1976), whereas the household characteristics refer to the date of enumeration. For 1970, income data refer to the calendar year 1969, whereas the household characteristics refer to April 1, 1970. Thus, the income of the family does not include amounts received by persons who were members of the family during all or part of the income period if these persons no longer resided with the family at the time of enumeration. On the other hand, family income includes amounts reported by related persons who did not reside with the family during the income period but who were members of the family at the time of enumeration. For most families, however, the income reported was received by persons who were members of the family throughout the income period.

NOTES	

Section II - OCCUPIED UNITS (include URE's)	
CHECK ITEM A	Mark all 3 parts (See cc 21) (1) Household head lived here last 90 days ..... 015 1 <input type="checkbox"/> Yes 2 <input type="checkbox"/> No (2) Household head lived here last winter ..... 016 1 <input type="checkbox"/> Yes 2 <input type="checkbox"/> No (3) Household head moved here during the last 12 months ..... 017 1 <input type="checkbox"/> Yes 2 <input type="checkbox"/> No
35. How many bedrooms do you have in your house (apartment)? Count rooms used mainly for sleeping even if used for other purposes.	018 _____ Bedrooms OR 0 <input type="checkbox"/> None - Skip to 38
36a. Is it necessary to pass through anyone's bedroom to get from one room to another - excluding bathrooms?	019 1 <input type="checkbox"/> Yes - Skip to Check Item B 2 <input type="checkbox"/> No
b. Is it necessary to pass through anyone's bedroom to get to the bathroom?	020 1 <input type="checkbox"/> Yes 2 <input type="checkbox"/> No
CHECK ITEM B	(See cc 11c) Do not count persons with usual residence elsewhere unless entire household is URE. <input type="checkbox"/> Household has 1 or 2 persons - Skip to 38 <input type="checkbox"/> Household has 3 or more persons - Ask 37a
37a. Are any bedrooms used for sleeping by 3 or more persons?	<input type="checkbox"/> Yes - How many bedrooms are used for sleeping by 3 or more persons? 021 1 <input type="checkbox"/> 1 bedroom 2 <input type="checkbox"/> 2 or more bedrooms 3 <input type="checkbox"/> No - Skip to 38
b. Are any of the persons who use this bedroom (these bedrooms) 13 years of age or older?	022 1 <input type="checkbox"/> Yes 2 <input type="checkbox"/> No
38. Do you have complete kitchen facilities in this house (building); that is, a kitchen sink with piped water, a refrigerator and a range or a cookstove?	023 1 <input type="checkbox"/> Yes - Used for this household only 2 <input type="checkbox"/> Yes - Also used by another household 3 <input type="checkbox"/> No - Skip to 40
39a. Are the kitchen sink, refrigerator, and range or cookstove all in usable condition?	024 1 <input type="checkbox"/> Yes - Skip to 41 2 <input type="checkbox"/> No
b. Which of the items are not in usable condition? (Mark all that apply)	025 1 <input type="checkbox"/> Kitchen sink } Skip to 41 2 <input type="checkbox"/> Refrigerator } 3 <input type="checkbox"/> Range or cookstove }
40a. Do you have piped water -	026 1 <input type="checkbox"/> Yes - Skip to 41 2 <input type="checkbox"/> No
b. Available within 1/4 mile?	027 1 <input type="checkbox"/> Yes } Skip to 45b 2 <input type="checkbox"/> No }

Facsimile of the Annual Housing Survey Questionnaire: 1975 - Continued

Section II - OCCUPIED UNITS (Include URE's) - Continued

Household head lived here last 90 days (See Check Item A (1), page 8)

41. INTERVIEWER (Mark one) Household head lived here last 90 days (See Check Item A (1), page 8)  
 Yes  No - Skip to 42

a. At any time in the last 90 days were you COMPLETELY without running water?  
 (058) 1  Yes  
 2  No - Skip to 42

b. Were you completely without running water for 6 consecutive hours or more?  
 (059) 1  Yes  
 2  No - Skip to 42  
 3  Don't know

c. How many times?  
 (060) 1  1  
 2  2  
 3  3 or more

d. What was the (most common) reason you were completely without water for 6 consecutive hours or more - was it because of problems inside the building or problems outside the building?  
 (061) 1  Inside - Specify problem  $\nearrow$   
 2  Outside - Specify problem  $\nearrow$

42. Do you have complete plumbing facilities in this house (building); that is, hot and cold piped water, a flush toilet and a bathtub or shower?  
 (062) 1  Yes - For this household only  
 2  Yes - Also used by another household } Skip to 45a  
 3  No

43. How many bathrooms do you have?  
 (Mark only one box)  
 (063) 1  Complete plumbing facilities but not in one room  
 2  Complete bathroom  
 One complete bathroom plus half bath(s)  
 3  Half bath does NOT have flush toilet  
 4  Half bath has flush toilet } Skip to 45a  
 5  2 complete bathrooms  
 6  More than 2 complete bathrooms

44. INTERVIEWER (Mark one) Household head lived here last 90 days (See Check Item A(1), page 8)  
 Yes  No - Skip to 45a

a. At any time in the last 90 days was there a breakdown in your flush toilet; that is, was it completely unusable?  
 (064) 1  Yes  
 2  No - Skip to 45a

b. Did any of these breakdowns last 6 consecutive hours or more?  
 (065) 1  Yes  
 2  No - Skip to 45a

c. How many of these breakdowns were there?  
 (066) 1  1  
 2  2  
 3  3  
 4  4 or more

d. What was the (most common) reason you were completely without the use of your flush toilet for 6 consecutive hours or more - was it because of problems inside the building or problems outside the building?  
 (067) 1  Inside - Specify problem  $\nearrow$   
 2  Outside - Specify problem  $\nearrow$

Section II - OCCUPIED UNITS (Include URE's) - Continued

45a. Is this house (building) connected to a public sewer?  
 (068) 1  Yes - Skip to 46  
 2  No

b. What means of sewage disposal do you use?  
 (069) 1  Septic tank or cesspool  
 2  Chemical toilet  
 3  Privy  
 4  Use facilities in another structure  
 5  Other - Describe  $\nearrow$  } Skip to 47

46. INTERVIEWER (Mark one) Household head lived here last 90 days (See Check Item A(1), page 8)  
 Yes  No - Skip to 47

a. At any time in the last 90 days was there a breakdown in your public sewer (septic tank or cesspool); that is, was it completely unusable?  
 (070) 1  Yes  
 2  No - Skip to 47

b. Did any of these breakdowns last 6 consecutive hours or more?  
 (071) 1  Yes  
 2  No  
 3  Don't know } Skip to 47

c. How many of these breakdowns were there?  
 (072) 1  1  
 2  2  
 3  3 or more

47. How is your house (apartment) heated - by gas, oil, electricity, or with some other fuel?  
 (073) Gas  $\nearrow$  1  From underground pipes serving the neighborhood  
 2  Botted, tank, or L.P.  
 3  Fuel oil, kerosene, etc.  
 4  Electricity  
 5  Coal or coke  
 6  Wood  
 7  Other fuel  
 8  No fuel used

48. What type of heating equipment does your house (apartment) have? (Record answer categories) (Mark heating equipment used most)  
 (074) 1  A central warm-air furnace with ducts in individual rooms, or a heat pump  
 2  Steam or hot water system  
 3  Built-in electric units (permanently installed in wall, ceiling, or baseboard)  
 4  Floor, wall, or pipeless furnace  
 5  Room heaters with flue or vent burning gas, oil, or kerosene  
 6  Room heaters without flue or vent burning gas, oil, or kerosene } Skip to 51  
 7  Fireplaces, stoves, or portable room heaters  
 8  Unit has no heating equipment - Skip to 53a

Facsimile of the Annual Housing Survey Questionnaire: 1975—Continued

Section II - OCCUPIED UNITS (Include URE's) - Continued	
INTERVIEWER (Mark one)	Household head lived here LAST WINTER (See Check Item A(2), page 8)
49. INTERVIEWER (Mark one)	Household head lived here LAST WINTER (See Check Item A(2), page 8)
During the past winter, when your regular heating system was working, did you, at any time, have to use additional sources of heat because your regular system did not provide enough heat? Do not include additional sources of heat used solely because of the current energy shortage. (Additional sources of heat may be the kitchen stove, a fireplace, or a portable heater.)	<input type="checkbox"/> Yes <input type="checkbox"/> No - Skip to 50 (075) 1 <input type="checkbox"/> Yes 2 <input type="checkbox"/> No
50. How many rooms do you have without hot air ducts or registers, radiators, or room heaters? (Exclude kitchen and bathrooms)	<input type="checkbox"/> None <input type="checkbox"/> 1 room <input type="checkbox"/> 2 rooms <input type="checkbox"/> 3 or more rooms (076) 1 <input type="checkbox"/> None 2 <input type="checkbox"/> 1 room 3 <input type="checkbox"/> 2 rooms 4 <input type="checkbox"/> 3 or more rooms
51. INTERVIEWER (Mark one)	Household head lived here LAST WINTER (See Check Item A(2), page 8)
a. At any time during the past winter, was there a breakdown in your heating equipment; that is, was it completely unusable for 6 consecutive hours or more?	<input type="checkbox"/> Yes <input type="checkbox"/> No - Skip to 53a (077) 1 <input type="checkbox"/> Yes 2 <input type="checkbox"/> No - Skip to 53a
b. How many times did that happen?	<input type="checkbox"/> 1 <input type="checkbox"/> 2 <input type="checkbox"/> 3 <input type="checkbox"/> 4 or more (078) 1 <input type="checkbox"/> 1 2 <input type="checkbox"/> 2 3 <input type="checkbox"/> 3 4 <input type="checkbox"/> 4 or more
52a. During the past winter did you completely close certain rooms for a week or longer because you couldn't get them warm? Do not include the living room, kitchen, or bedrooms. (Include kitchens and bedrooms)	<input type="checkbox"/> Yes <input type="checkbox"/> No - Skip to 53a (079) 1 <input type="checkbox"/> Yes 2 <input type="checkbox"/> No - Skip to 53a
b. Which rooms? (Mark all that apply)	<input type="checkbox"/> Living room <input type="checkbox"/> Dining room <input type="checkbox"/> One or more bedrooms <input type="checkbox"/> Other - Specify $\gamma$ (080) 1 <input type="checkbox"/> Living room 2 <input type="checkbox"/> Dining room 3 <input type="checkbox"/> One or more bedrooms 4 <input type="checkbox"/> Other - Specify $\gamma$
53a. Do you have air conditioning?	<input type="checkbox"/> Yes <input type="checkbox"/> No - Skip to 54 (081) 1 <input type="checkbox"/> Yes 2 <input type="checkbox"/> No - Skip to 54
b. Do you have a central air-conditioning system or individual room units?	<input type="checkbox"/> Central - Skip to 54 <input type="checkbox"/> Room units (082) 1 <input type="checkbox"/> Central - Skip to 54 2 <input type="checkbox"/> Room units
c. How many room units do you have?	<input type="checkbox"/> 1 <input type="checkbox"/> 2 or more (083) 1 <input type="checkbox"/> 1 2 <input type="checkbox"/> 2 or more

(12) Regular contributions from persons not living in this household?	301	1 <input type="checkbox"/> Yes	2 <input type="checkbox"/> No	
(13) Anything else?	302	1 <input type="checkbox"/> Yes	2 <input type="checkbox"/> No	
	303			

**NOTES**

**Section III-C OCCUPIED UNITS - Continued**

**NOTE - Ask 111a for all categories before asking 111b.**

(Obtain family income for head and all persons 14+ in household related to head by blood, marriage, or adoption.)

111a. In the past 12 months, did any member of this family receive any money from -

(1) Social Security or Railroad Retirement payments?	262	1 <input type="checkbox"/> Yes	2 <input type="checkbox"/> No	111b. How much was received from (source of income)?
(2) Estates, trusts or dividends?	264	1 <input type="checkbox"/> Yes	2 <input type="checkbox"/> No	263 \$
(3) Interest on savings accounts or bonds?	266	1 <input type="checkbox"/> Yes	2 <input type="checkbox"/> No	265 \$
(4) Net rental income?	268	1 <input type="checkbox"/> Yes	2 <input type="checkbox"/> No	267 \$
(5) Welfare payments or other public assistance?	270	1 <input type="checkbox"/> Yes	2 <input type="checkbox"/> No	271 \$
(6) Unemployment compensation?	272	1 <input type="checkbox"/> Yes	2 <input type="checkbox"/> No	273 \$
(7) Workmen's compensation?	274	1 <input type="checkbox"/> Yes	2 <input type="checkbox"/> No	275 \$
(8) Government employee pensions?	276	1 <input type="checkbox"/> Yes	2 <input type="checkbox"/> No	277 \$
(9) Veterans payments?	278	1 <input type="checkbox"/> Yes	2 <input type="checkbox"/> No	279 \$
(10) Private pensions or annuities?	280	1 <input type="checkbox"/> Yes	2 <input type="checkbox"/> No	281 \$
(11) Alimony or child support?	282	1 <input type="checkbox"/> Yes	2 <input type="checkbox"/> No	283 \$
(12) Regular contributions from persons not living in this household?	284	1 <input type="checkbox"/> Yes	2 <input type="checkbox"/> No	285 \$
(13) Anything else?	286	1 <input type="checkbox"/> Yes	2 <input type="checkbox"/> No	287 \$

**NOTE - If "Yes" was answered for one or more of the categories in 111a, ask 111b.**

OBSERVATION - Fill for mobile home in group of 288 1  6-99  
 2  100 or more

112. How many mobile homes are in this group?

OBSERVATION - Fill for 2 or more unit structures  
 289 1  None, on same floor  
 2  One (up or down)  
 3  Two or more (up or down)

113. How many stories (floors) are there from the main entrance of the building to the main entrance of the apartment?  
 (See Central Card item 11b)

**CHECK ITEM Y**

Household contains only family members - Skip to Check item W, page 35  
 Household contains persons 14+ NOT RELATED TO THE HEAD by blood, marriage or adoption - Ask 114

### SAMPLE DESIGN

**Annual Housing Survey.**—The estimates for each of the 21 SMSA's are based on data collected from the 1975 Annual Housing Survey (AHS) which was conducted by the Bureau of the Census acting as collection agent for the Department of Housing and Urban Development. In each of the 21 SMSA's, the data were collected for the 12-month period from April 1975 through March 1976, with one-twelfth of the sample units being visited each month.

Data for the first group of 19 SMSA's were collected for the AHS from April 1974 through March 1975, and a third group of 20 SMSA's were collected from April 1976 through March 1977. The sample housing units for each group of SMSA's will be enumerated for the AHS every three years on a rotating basis.

For each group of SMSA's, the largest SMSA from each of the four geographic regions is represented by a sample of about 15,000 designated housing units evenly divided between the central city and the balance of the respective SMSA. All remaining SMSA's are each represented by a sample of about 5,000 designated housing units distributed proportionately between the central city and the balance of the respective SMSA based on the distribution of total housing units in each sector.

The largest SMSA's in the second group (Year II SMSA's) are: Atlanta, Ga., Chicago, Ill., Philadelphia, Pa.-N.J., and San Francisco-Oakland, Calif.

The remaining SMSA's in the second group are: Cincinnati, Ohio-Ky.-Ind., Colorado Springs, Colo., Columbus, Ohio, Hartford, Conn., Kansas City, Mo.-Kans., Miami, Fla., Milwaukee, Wis., New Orleans, La., Newport News-Hampton, Va., Paterson-Clifton-Passaic, N.J., Portland, Ore.-Wash., Rochester, N.Y., San Antonio, Tex., San Bernardino-Riverside-Ontario, Calif., San Diego, Calif., Springfield-Chicopee-Holyoke, Mass.-Conn., and Madison, Wis.

In this SMSA, 14,447 units were eligible for interview. Of these sample units, 863 interviews were not obtained because, for occupied sample units, the occupants were not at home after repeated visits or were unavailable for some other reason; or, for vacant units, no informed respondent could be found after repeated visits. In addition to units eligible for interview, 1,203 units were visited but found not to be eligible for interview, because these units were found to be condemned, unfit, demolished, converted to group quarters use, etc.

**Selection of the sample.**—The sample for the SMSA's which are 100-percent permit issuing was selected from two sample frames—units enumerated in the 1970 Census of Housing and Population in areas under the jurisdiction of permit-issuing offices (the permit-issuing uni-

verse) and units constructed in permit-issuing areas since the 1970 census (the new construction universe). In addition, the sample for those SMSA's which are *not* 100-percent permit issuing included a sample selected from a third frame—those units located in areas not under the jurisdiction of permit-issuing offices (the nonpermit universe). The following table indicates which SMSA's are 100-percent permit issuing and which contain a sample from the nonpermit universe.

100 Percent permit-issuing SMSA's	SMSA's with a sample from the nonpermit universe
Hartford, Conn.	Atlanta, Ga.
Miami, Fla.	Chicago, Ill.
Newport News-Hampton, Va.	Cincinnati, Ohio-Ky.-Ind.
Paterson-Clifton-Passaic, N.J.	Colorado Springs, Colo.
San Bernardino-Riverside-Ontario, Calif.	Columbus, Ohio
San Diego, Calif.	Kansas City, Mo.-Kans.
San Francisco-Oakland, Calif.	Madison, Wis.
	Milwaukee, Wis.
	New Orleans, La.
	Philadelphia, Pa.-N.J.
	Portland, Ore.-Wash.
	Rochester, N.Y.
	San Antonio, Tex.
	Springfield-Chicopee-Holyoke, Mass.-Conn.

Sampling operations, described in the following paragraphs, were performed separately within the central city and the balance of the SMSA for each of these sample frames. The overall sampling rate used to select the sample for each SMSA was determined by the size of the sample. Thus, for the four largest SMSA's, the overall sampling rate differed by central city and balance of the SMSA since the sample was divided equally between the central city and the balance of the SMSA. The remaining SMSA's had an overall sampling rate about the same for the sample selected from both the central city and the balance of the SMSA, since the

APPENDIX B—Continued

sample was distributed proportionately between the central city and the balance of the SMSA according to the distribution of total units in each sector.

The major portion of the sample was selected from a file which represented the 20-percent sample of units enumerated in permit-issuing areas of the SMSA during the 1970 Census of Housing and Population. This file contained records for occupied housing units, vacant housing units, and units in certain special places or group quarters. Sampling operations were done separately for the special place and group quarters records and for the occupied and vacant housing unit records. Before the sample was selected from the occupied and vacant unit records, the occupied housing unit records were stratified by race of head (non-Black/Black) and the vacant housing unit records were stratified into four categories pertaining to the value or rent associated with the vacant housing units. The occupied housing unit records were further stratified so that each unit was assigned to one of 50 strata according to its tenure, family size, and household income category as illustrated by the following table:

Household income	Tenure									
	Owner—family size					Renter—family size				
	1	2	3	4	5+	1	2	3	4	5+
Under \$3,000 . . .										
\$3,000—\$5,999 . .										
\$6,000—\$9,999 . .										
\$10,000—\$14,999										
\$15,000 and over .										

Thus, for this SMSA, the occupied housing unit records from this universe were assigned to one of 100 strata for either the central city or for the balance, and the vacant housing unit records were assigned to one of the four vacant strata for either the central city or for the balance of the SMSA. A sample of housing unit records was then selected to produce one-half of the desired sample size. The housing unit record adjacent to each of the above sample housing unit records was also selected to be in sample, thereby

insuring the necessary designated sample size.

Before the sample was selected from the group quarters and special place records, the records were stratified by census tract and census enumeration district (ED) within the central city and within the balance of the SMSA. A sample of special place records was then selected to produce one-quarter of the desired sample size. However, at the time of enumeration the units at each of the sample special places were listed and subsampled at a rate that would produce an expected four sample units, thereby insuring the necessary designated sample size.

The second frame from which this SMSA sample was selected was a list of new construction building permits issued since 1970 (i.e., the new construction universe). The sample selection from the list of new construction building permits was an independent operation within this SMSA. Prior to sample selection, the list of permits was chronologically stratified by the date the permits were issued, and clusters of an expected four (usually adjacent) housing units were formed. These clusters were then sampled for inclusion at the overall sampling rate.

For those SMSA's which are not 100-percent permit issuing, the remainder of the AHS sample was selected from a frame consisting of areas not under the jurisdiction of permit-issuing offices (i.e., the nonpermit universe). The first step in the sampling operation for the universe was the selection, using the overall sampling rate, of a sample of census enumeration districts within these areas. Prior to this sample selection, the ED's were stratified by census tract within the central city and within the balance of the SMSA. The probability of selection of an ED was proportionate to the following measure of size:

$$\frac{\text{Number of housing units in 1970 census ED} + \text{Group quarters population in 1970 census ED}}{4} \quad \frac{3}{3}$$

The sample ED's were then divided into segments; i.e., small land areas with well-defined boundaries having an expected size of four, or a multiple of four housing units. Those segments, with an

expected size which was a multiple of four, were further subdivided at the time of enumeration to produce an expected four sample housing units.

The next step was the selection of one of these segments within each sample ED. In the sample segments, all units in existence at the time of interview are in sample. Thus, units enumerated in the 1970 census as well as units built since the 1970 census are included.

**Building loss sample selection.**—Some tables in this report provide estimates of characteristics of housing units removed from the housing inventory since 1970 (i.e., units enumerated in the 1970 census that no longer existed as part of the housing inventory at the time of the AHS enumeration). For the permit-issuing universe, the sample upon which these estimates were based was the regular AHS sample described above. Since the addresses of these sample units were known to exist in 1970, the AHS interviewers could determine which of the sample units were no longer considered to be part of the housing inventory. From these units, estimates were obtained for both whole structure losses (i.e., lost units in structures in which all housing units were removed from the inventory) and part structure losses (i.e., lost units in structures in which some, but not all, of the units were removed from the inventory).

For each of the SMSA's with a non-permit universe, it was necessary to select an independent sample with which to measure lost units because of the area sample technique employed for the regular AHS sample. For this independent sample, a cluster of four (usually adjacent) housing unit addresses was selected from the 1970 census listing of addresses for each sample ED. Since these addresses were known to exist in 1970, the AHS interviewer determined those sample units that were no longer considered part of the housing inventory. From these units, only estimates of whole structure losses were obtained (i.e., lost units in structures in which all housing units were removed from the inventory).

**1970 Census of Population and Housing.**—The estimates pertaining to the 1970 housing inventory (i.e., the housing inventory that existed at the time of the 1970 census) are based on either 20-, 15-, or 5-percent sample data collected in April 1970 for the Decennial Census of Population and Housing. A detailed description of the sample design employed for the 1970 census can be obtained in the 1970 Census of Housing report, Volume I, *Housing Characteristics for States, Cities, and Counties*, Part 1.

**ESTIMATION**

The AHS sample produced two types of estimates for each SMSA: Estimates pertaining to characteristics of the housing inventory at enumeration time (i.e., the 1975 housing inventory), and estimates pertaining to characteristics of units removed from the housing inventory since 1970 (i.e., 1970-1975 lost units). Each type of estimate employed separate, although similar, estimation procedures.

**1975 housing inventory.**—The AHS estimates of characteristics of the 1975 housing inventory employed a three-stage ratio estimation procedure. However, the third-stage ratio estimation procedure was employed in only three SMSA's. Prior to the implementation of the ratio estimation procedure, the basic weight (i.e., the inverse of the probability of selection) for each interviewed sample housing unit was adjusted to account for the 863 noninterviews previously mentioned. The noninterview adjustment factor was equal to the following ratio:

$$\frac{\text{Weighted count of interviewed housing units} + \text{Weighted count of noninterviewed housing units}}{\text{Weighted count of interviewed housing units}}$$

Within each sector of each SMSA, a noninterview factor was computed separately for 54 noninterview cells for sample housing units from the permit-issuing universe (where the cells consisted of one or more of the different strata used in the stratification of the universe as previously illustrated), one noninter-

view cell for new construction, sample housing units and one noninterview cell for the nonpermit universe (if applicable). Sample housing units from the nonpermit universe identified as being built April 1, 1970, or later, were considered as new construction units for the purpose of the noninterview adjustment.

The first-stage ratio estimation procedure was employed for all sample housing units from the permit-issuing universe. This factor was computed separately for all sample housing units within each permit-issuing universe noninterview cell mentioned above. The ratio estimation factor for each cell was equal to the following:

$$\frac{\text{1970 census count of housing units from permit-issuing universe in a cell}}{\text{AHS sample estimate of 1970 housing units from the cell}}$$

For each SMSA, the numerators of the ratios were obtained from the 1970 Census of Population and Housing 20-percent file of units enumerated in areas under the jurisdiction of permit-issuing offices. The denominators of the ratios were obtained from weighted estimates of all the AHS sample units within the corresponding ratio estimation categories using the existing weight (i.e., the basic weight times the noninterview factor). The computed first-stage ratio estimation factor was then applied to the existing weight for each sample unit within the corresponding first-stage ratio estimation category.

The effect of this ratio estimation procedure was to reduce the variation in sample size for strata used in the sample selection of the permit-issuing universe. Ordinarily, this would have been controlled by sampling within the strata during the sample selection process. However, prior to the AHS sample selection within each SMSA, units already selected for other Census Bureau surveys were deleted from the permit-issuing universe. Thus, some variation in sample size was introduced during the AHS sample selection process.

The second-stage ratio estimation procedure was employed for all sample units that were conventional new con-

struction units (i.e., conventional units built after April 1970), new mobile homes (i.e., mobile homes built after April 1970), or "other addition" units (i.e., units added by conversion of 1970 units or by other sources). This procedure was designed to adjust the AHS sample estimates of these types of units to independently derived current estimates. These independent estimates were considered to be the best estimates available. The adjustment was necessary to correct known deficiencies in the AHS sample in the representation of these units (see section on nonsampling error). The second-stage ratio estimation factors were computed separately for each of the cells in the table below using the following formula:

$$\frac{\text{October 1975 independent estimate of housing units in that cell for the SMSA}}{\text{AHS sample estimates of housing units in that cell for the SMSA}}$$

**Second-Stage Ratio Estimation Cells**

Conventional new construction units . . . . .	
New mobile homes . . . . .	
"Other additions" . . . . .	

The numerators of the ratios were derived by applying the following factors:

1. For the "conventional new construction units" cell, either a national trend for missed conventional new construction was applied to the 1968 and 1969 building permits issued in the SMSA, or the missed conventional new construction was estimated from the Survey of Construction (SOC). (The table that follows indicates the procedure used to estimate the missing conventional new construction for each SMSA.)
2. For the "new mobile homes" cell, a 1970 census relationship between total new construction and new mobile homes that existed in this SMSA for the 1965-1970 period was applied.
3. For the "other additions" cell, the "other additions" rate from SCARF<sup>1</sup> was applied.

<sup>1</sup> SCARF denotes the Survey of Components of Change and Residential Finance, a survey conducted in 1957-1959 by the Census Bureau.

APPENDIX B—Continued

SMSA's employing the SOC estimate of missed conventional new construction	SMSA's employing the national trend for missed conventional new construction
Atlanta, Ga. Chicago, Ill. Cincinnati, Ohio-Ky.-Ind. Columbus, Ohio Kansas City, Mo.-Kans. Miami, Fla. Milwaukee, Wis. Philadelphia, Pa.-N.J. Portland, Oreg.-Wash. San Diego, Calif. San Francisco-Oakland, Calif.	Colorado Springs, Colo. Hartford, Conn. Madison, Wis. New Orleans, La. Newport News-Hampton, Va. Paterson-Clifton-Passaic, N.J. Rochester, N.Y. San Antonio, Tex. San Bernardino-Riverside-Ontario, Calif. Springfield-Chicopee-Holyoke, Mass.-Conn.

The denominators of the ratios were obtained from the weighted estimates for the AHS sample units within each cell using the existing weight after the first-stage ratio estimation procedure. The computed second-stage ratio estimation factor was then applied to the existing weight for each sample unit in the corresponding second-stage ratio estimation category.

For some Year II SMSA's (i.e., Colorado Springs, Colo., Miami, Fla., and San Diego, Calif.) a third-stage ratio estimation procedure was also employed. This procedure involved the ratio estimation of the AHS weighted sample estimate of the October 1975 housing inventory to an independent estimate of the SMSA's October 1975 housing inventory. This ratio estimate factor equaled the following:

$$\frac{\text{Independent estimate of the October 1975 housing inventory for the SMSA}}{\text{AHS sample estimate of the housing inventory}}$$

The numerator of the ratio was derived by using the 1970 census estimate of total housing units for the SMSA in conjunction with the estimate of the change in the housing inventory since the census.

The estimate of change was based on either administrative records from utility companies, or, when utility data were not available, on estimates of new construction permits and post-census demolition data. The denominator of that ratio was obtained from the weighted estimate of AHS sample units, using the existing weight after the second-stage ratio estimation procedure. The computed third-stage ratio estimation factor was then applied to the existing weight for each sample unit and the resulting product was used as the final weight for tabulation purposes.

The effect of the third-stage ratio estimation procedure, as well as the overall estimation procedure, was to reduce the sampling error for most statistics below what would have been obtained by simply weighting the results of the sample by the inverse of the probability of selection. Since the housing population of the sample differed somewhat by chance from the SMSA as a whole, it can be expected that the sample estimates will be improved when the sample housing population, or different portions of it, are brought into agreement with known estimates of the SMSA housing population.

The third-stage ratio estimation procedure was not employed in all Year II SMSA's since the reliability of the independent estimate varied by SMSA, depending on the completeness of the utility data or the permit-demolition data. The independent estimates were only employed in SMSA's where the estimated relative bias was thought to be low enough (i.e., 3 percent or less over a 10-year period) to preclude the possibility of doing more harm than good to the survey results. A measure of the relative bias of the independent estimate was available based on a comparison between the 1970 census estimate of the April 1970 housing inventory and the April 1970 independent estimate of the housing inventory generated from the procedure used to produce the October 1975 independent estimates. In some SMSA's, the measure of the relative bias of the independent estimate was less than 3 percent but the inde-

pendent estimate was still not employed, since there was evidence that suggested that the procedure for generating the independent estimates was producing substantial overestimates for these SMSA's.

**1970-1975 lost units.**—The AHS estimate of characteristics of the 1970-1975 lost units employed a one-stage ratio estimation procedure which is similar to the first-stage ratio estimation procedure mentioned above. The 1970-1975 lost units file was matched to the 1970 census file to obtain the 1970 characteristics of the lost units. Some lost units did not match. Thus, following the implementation of the ratio estimation procedure, the weight for each matched lost unit was adjusted to account for the nonmatched lost units. The nonmatch adjustment factor was equal to the following ratio:

$$\frac{\text{Weighted count of matched lost units} + \text{Weighted count of nonmatched lost units}}{\text{Weighted count of matched lost units}}$$

Within each sector of the SMSA, this factor was computed separately for whole structure losses and part structure losses. The effect of this estimation procedure was to reduce the sampling error below what would have been obtained by simply weighting the results of the sample by the inverse of the probability of selection.

**Ratio estimation procedure of the 1970 Census of Population and Housing.**—This report presents data on the housing characteristics of the 1970 housing inventory from the 1970 Census of Population and Housing. The statistics based on 1970 census sample data employed a ratio estimation procedure which was applied separately for each of the three census samples. A detailed description of this ratio estimation procedure can be found in the 1970 Census of Housing report, Volume I, *Housing Characteristics for State, Cities, and Counties, Part 1.*

**RELIABILITY OF THE ESTIMATES**

There are two types of possible errors associated with estimates based on data from sample surveys—sampling and non-

sampling errors. The "accuracy" of a survey estimate is determined by the joint effects of the sampling and nonsampling errors. The following is a description of the sampling and nonsampling errors associated with the AHS-SMSA sample and of the nonsampling errors associated with the 1970 census estimates. A description of the sampling errors associated with the sample estimates from the 1970 census is in the 1970 Census of Housing report, Volume I, *Housing Characteristics for States, Cities, and Counties, Part 1*.

**Nonsampling errors.**—Nonsampling errors can be attributed to many sources: Inability to obtain information about all cases, definitional difficulties, differences in the interpretation of questions, inability or unwillingness to provide correct information on the part of respondents, mistakes in recording or coding the data, and other errors of collection, response, processing, coverage, and estimation for missing data. As can be seen from the above list, nonsampling errors are not unique to sample surveys since they can, and do, occur in complete censuses as well.

Obtaining a measurement of the total nonsampling error associated with the estimates from a survey is very difficult, considering the number of possible sources of error. However, an attempt was made to measure some of the nonsampling errors associated with the estimates for both the 1970 Census of Population and Housing and the 1975 AHS-SMSA sample.

**1970 census.**—Several studies were conducted to measure two types of general errors associated with 1970 census estimates—"coverage" and "content" errors. The "coverage" errors determined how completely housing units were counted in the census and included space errors, definitional errors, and occupancy errors. The "content" errors measured the accuracy of the data collected for enumerated housing units. These errors were measured by reinterviews, record checks, and other surveys.

The detailed results of these studies, as well as the methodology employed,

are presented in the 1970 Census of Population and Housing Evaluation and Research Program Reports, Series PHC(E)-5, *The Coverage of Housing in the 1970 Census*, and Series PHC(E)-10, *Accuracy of Data for Selected Housing Characteristics as Measured by Reinterviews*.

**AHS-SMSA.**—For the 1975 AHS-SMSA sample, a study was conducted to obtain a measurement of some of the components of the nonsampling error associated with the AHS estimates. A reinterview program was conducted for a sample of the AHS households. These households were revisited and answers to some of the questions on the AHS questionnaire were obtained again. The original interview and the reinterview were assumed to be two independent readings and, thus, were the basis for the measurement of the accuracy of the AHS data collected from enumerated households.

As part of the reinterview, a check was made at each of these households to determine if the following was done during the original interview:

1. The correct unit was visited.
2. The correct number of housing units were interviewed at that address.
3. The correct information on "Year Built" was obtained.
4. The correct information on "Tenure" was obtained.
5. The correct information on "Household Composition" was obtained.
6. The correct information on "Type of Housing Unit" was obtained.
7. The correct information on "Occupancy Status" was obtained.

This check was made for interviewer evaluation and control. That is, tolerance limits were derived to determine which interviewers passed or failed this reinterview with regard to the above items. The results of this study are not yet available, however, it is believed that they will be similar to the results of the Year I AHS-SMSA reinterview study which were presented in the following Census Bureau memorandum, "Reinterview Results for Annual Housing Survey-SMSA Sample: 1974."

Some of the results of this study are presented below (note that these results

are based on the reinterviews across all Year I SMSA's and not for any specific SMSA):

1. "The results indicate that the interviewers are doing a good job. From a total of 230 interviewers checked, 9 failed in coverage reinterview, 2 in household composition, and 6 in content reinterview."
2. The estimated indexes of inconsistency for most of the reinterview items were in the 20 to 50 range. The 20-50 interval is considered moderate indicating that there is some problem with inconsistent reporting on a range of 0-100, with a high index associated with a high level of response variability. The items with the higher levels of inconsistency tended to be the attitude and opinion items which were expected to have relatively high inconsistency levels and were included in the AHS reinterview program because they had not been previously tested.
3. "Our bias indicator, the net difference rate, shows no signs of serious bias. For only one characteristic was there as much as a 2½ percent probability that the net difference rate is greater than 10 percent."

The results of this study were based on sample data so there is sampling error associated with these estimates of nonsampling error. Therefore, the possibility of such errors should be taken into account when considering the results of this study.

**Coverage errors.**—With errors of coverage and estimation for missing data, it is believed that the AHS new construction sample had deficiencies in the representation of both conventional new construction and new mobile homes (and trailers) in permit-issuing areas. During the sampling of building permits, only those issued January 1, 1970, or later, were eligible to be sampled to represent conventional new construction in permit-issuing areas for this SMSA. It had been assumed that units with permits issued prior to 1970 would have been completed by the time of the 1970 census (i.e., April 1970), and

therefore, would have been represented in the sample selected from 1970 census units. However, it has been estimated that, nationally, there were about 600,000 conventional new construction units built after April 1970 whose permits were issued prior to January 1970 (most of which were issued in 1968 and 1969). Although it is not known exactly, an estimated 18,800 conventional new construction units in this SMSA had permits issued prior to January 1970, and therefore, were missed by the 1975 AHS-SMSA survey.

In addition, unlike the procedure for conventional new construction, there is no sampling procedure specifically for new mobile homes (and trailers) in permit-issuing areas. However, new mobile homes in permit-issuing areas do come into sample if the mobile homes are located in mobile home parks, identified as such in the 1970 census. Nonetheless, new mobile homes in permit-issuing areas that are located in mobile home parks not in existence at the time of the 1970 census or not identified as such in the 1970 census have no chance of coming into the AHS sample. Although it is not known exactly, an estimated 2,200 new mobile homes in permit-issuing areas were missed by the 1975 AHS-SMSA survey in this SMSA. The second-stage ratio estimation procedure was employed to reduce the effect of both these deficiencies, although some bias in the AHS data still exists.

**Rounding errors.**—The rounding of estimates introduces another source of error in the data, the severity of which depends on the statistic being measured. The effect of rounding is significant relative to the sampling error only for small percentages, median number of persons, and median number of rooms when these figures are derived from relatively large bases. This means that confidence intervals formed from the standard errors given may be distorted, and this should be taken into account when considering the results of the survey.

**Sampling errors for the AHS-SMSA sample.**—The particular sample used for this survey is one of a large number of

possible samples of the same size that could have been selected using the same sample design. Even if the same schedules, instructions, and enumerators were used, estimates from each of the different samples would differ from each other. The deviation of a sample estimate from the average of all possible samples is defined as the sampling error. The standard error of a survey estimate attempts to provide a measure of this variation among the estimates from the possible samples and, thus, is a measure of the precision with which an estimate from a sample approximates the average result of all possible samples.

As calculated for this report, the standard error also partially measures the variation in the estimates due to response and enumerator errors (non-sampling errors), but it does not measure, as such, any systematic biases in the data. Therefore, the accuracy of the estimates depends on both the sampling and non-sampling error, measured by the standard error, biases, and some additional non-sampling errors not measured by the standard error.

The sample estimate and its estimated standard error enable one to construct interval estimates in which the interval includes the average result of all possible samples with a known probability. For example, if all possible samples were selected, each of these surveyed under essentially the same general conditions, and an estimate and its estimated standard error were calculated from each sample, then:

1. Approximately 68 percent of the intervals from one standard error below the estimate to one standard error above the estimate would include the average result of all possible samples.
2. Approximately 90 percent of the intervals from 1.6 standard errors below the estimate to 1.6 standard errors above the estimate would include the average result of all possible samples.
3. Approximately 95 percent of the intervals from two standard errors below the estimate to two standard

errors above the estimate would include the average result of all possible samples.

The average result of all possible samples may or may not be contained in any particular computed interval. For a particular sample, however, one can say with specified confidence that the average result of all possible samples is included in the constructed interval.

The figures presented in tables I and II are approximations to the standard errors of various estimates shown in this SMSA report. In order to derive standard errors that would be applicable to a wide variety of items and also could be prepared at a moderate cost, a number of approximations were required. As a result, the tables of standard errors provide an indication of the order of magnitude of the standard errors rather than precise standard errors for any specific item.

**TABLE I. Standard Errors for Estimated Number of Housing Units in the 1975 Housing Inventory and for Estimated Number of 1970-1975 Lost Units for the Philadelphia, Pa.-N.J., SMSA, for the Central City and for the Balance of the SMSA**

(68 chances out of 100)

Size of estimate	Standard error		
	SMSA	In central city	Not in central city
200 .....	170	150	180
500 .....	270	240	280

500,000 .....	7,850	4,660	7,810
1,000,000 .....	10,200	—	9,060
1,500,000 .....	11,300	—	—

Tables I through IV present the standard errors applicable to estimates of

APPENDIX B—Continued

characteristics of the 1975 housing inventory as well as estimates of characteristics of the 1970-1975 lost units. Linear interpolation should be used to determine the standard errors for estimates not specifically shown in these tables.

For ratios,  $(100) (x/y)$ , where  $x$  is not a subclass of  $y$ , tables II through IV underestimate the standard error of the ratio when there is little or no correlation between  $x$  and  $y$ . For this type of ratio, a better approximation of the standard error may be obtained by letting the standard error of the ratio be approximately equal to:

$$(100) (x/y) \sqrt{\left(\frac{\sigma_x}{x}\right)^2 + \left(\frac{\sigma_y}{y}\right)^2}$$

- Let:  $x$  = the numerator of the ratio
- $y$  = the denominator of the ratio
- $\sigma_x$  = the standard error of the numerator
- $\sigma_y$  = the standard error of the denominator

*Illustration of the use of the standard error tables.*—Table A-1 of part A of this report shows that in 1975 there were 1,030,300 owner-occupied housing units in this SMSA. Interpolation in table I of this appendix shows that the standard error of an estimate of this size is approximately 10,270. Consequently, the 68-percent confidence interval, as shown by these data, is from 1,020,030 to 1,040,570 housing units. Therefore, a conclusion that the average estimate, derived from all possible samples, of 1975 owner-occupied housing units lying within a range computed in this way would be correct for roughly 68 percent of all possible samples. Similarly, we could conclude that the average estimate derived from all possible samples, lies within the interval from 1,013,870 to 1,046,730 housing units with 90 percent confidence; and that the average estimate lies within the interval from 1,009,760 to 1,050,840 housing units with 95 percent confidence.

Table A-1 of part A also shows that of the 1,030,300 owner-occupied housing units 149,800, or 14.5 percent, had two bedrooms. Interpolation in table II of this appendix shows that the standard error of

TABLE II. Standard Errors for Estimated Percentages of Housing Units in the 1975 Housing Inventory and for Estimated Percentages of 1970-1975 Lost Units for the Philadelphia, Pa.-N.J., SMSA

Base of percentage	Estimated percentage				
	1 or 99	5 or 95	10 or 90	25 or 75	50
200 .....	8.4	18.4	25.3	36.5	42.2
500 .....	5.3	11.6	16.0	23.1	26.7
700 .....	4.5	9.8	13.5	19.5	22.5
1,000 .....	3.8	8.2	11.3	16.3	18.9
2,500 .....	2.4	5.2	7.2	10.3	11.9
5,000 .....	1.7	3.7	5.1	7.3	8.4
10,000 .....	1.2	2.6	3.6	5.2	6.0
25,000 .....	.8	1.6	2.3	3.3	3.8
50,000 .....	.5	1.2	1.6	2.3	2.7
100,000 .....	.4	.8	1.1	1.6	1.9
250,000 .....	.2	.5	.7	1.0	1.2
400,000 .....	.2	.4	.6	.8	.9
500,000 .....	.2	.4	.5	.7	.8
1,000,000 .....	.12	.3	.4	.5	.6
1,500,000 .....	.10	.2	.3	.4	.5

the percent is approximately .4 percentage points. Consequently, the 68-percent confidence interval, as shown by these data, is from 14.1 to 14.9 percent; the 90-percent confidence interval is from 13.9 to 15.1 percent; and the 95-percent confidence interval is from 13.7 to 15.3 percent.

*Differences.*—The standard errors shown are not directly applicable to differences between two sample estimates. The standard error of a difference between estimates is approximately equal to the square root of the sum of the squares of the standard error of each estimate considered separately. This formula is quite accurate for the difference between estimates of the same characteristic in two different SMSA's or the difference between separate and uncorrelated characteristics in the same SMSA. However, if there is a high positive correlation between the two characteristics, the formula will overestimate the true standard error; while, if there is a high negative correlation, the formula will underestimate the true standard error.

*Illustration of the computation of the standard error of a difference.*—Table A-1

of part A of this report shows that in 1975 there were 599,200 owner-occupied units with three bedrooms in this SMSA. Thus, the apparent difference, as shown by these data, between owner-occupied units with two bedrooms and owner-occupied units with three bedrooms is 449,400. Table I shows the standard error of 149,800 is approximately 4,400 and the standard error of 599,200 is approximately 8,320. Therefore, the standard error of the estimated difference of 449,400 is about

$$9,410 = \sqrt{(4,400)^2 + (8,320)^2}$$

Consequently, the 68-percent confidence interval for the 449,400 difference is from 439,990 to 458,810 housing units. Therefore, a conclusion that the average estimate, derived from all possible samples, of this difference lying within a range computed in this way would be correct for roughly 68 percent of all possible samples. Similarly, the 90-percent confidence interval is from 434,340 to 464,460 housing units, and the 95-percent confidence interval is from 430,580 to 468,220. Thus, we can conclude with 95 percent confidence that the number of 1975 owner-occupied units

APPENDIX B—Continued

**TABLE III. Standard Errors for Estimated Percentages of Housing Units in the 1975 Housing Inventory and for Estimated Percentages of 1970-1975 Lost Units for the Central City**

Base of percentage	Estimated percentage				
	1 or 99	5 or 95	10 or 90	25 or 75	50
200 .....	7.6	16.7	23.0	33.1	38.3

1,000 .....	3.4	7.5	10.3	14.8	17.1
2,500 .....	2.2	4.7	6.5	9.4	10.8
5,000 .....	1.5	3.3	4.6	6.6	7.7
10,000 .....	1.1	2.4	3.2	4.7	5.4
25,000 .....	.7	1.5	2.1	3.0	3.4
50,000 .....	.5	1.1	1.5	2.1	2.4
100,000 .....	.3	.7	1.0	1.5	1.7
250,000 .....	.2	.5	.6	.9	1.1
400,000 .....	.2	.4	.5	.7	.9
500,000 .....	.2	.3	.5	.7	.8

with three bedrooms is greater than the number of owner-occupied units with two bedrooms since the 95-percent confidence interval does not include zero or negative values.

*Medians.*—For medians presented in certain tables, the sampling error depends on the size of the base and on the distribution upon which the median is based. An approximate method for measuring the reliability of the estimated median is to determine an interval about the estimated median so that there is a stated degree of confidence that the average median from all possible samples lies within the interval. The following procedure may be used to estimate confidence limits of a median based on sample data:

1. From table II determine the standard error of a 50-percent characteristic on the base of the median;
2. add to and subtract from 50 percent, the standard error determined in step 1; and
3. using the distribution of the characteristic, read off the confidence interval corresponding to the two points established in step 2.

For about 68 out of 100 possible samples, the average median from all possible samples would lie between these two values.

A two-standard-error confidence interval may be determined by finding the values corresponding to 50 percent plus and minus twice the standard error determined in step 1. For about 95 out of 100 possible samples, the average median from all possible samples would lie between these two values.

*Illustration of the computation of the 95-percent confidence interval for a*

**TABLE IV. Standard Errors for Estimated Percentages of Housing Units in the 1975 Housing Inventory and for Estimated Percentages of 1970-1975 Lost Units for the Balance of the SMSA**

Base of percentage	Estimated percentage				
	1 or 99	5 or 95	10 or 90	25 or 75	50
100 .....	12.7	27.7	38.2	55.1	63.6
200 .....	9.0	19.6	27.0	39.0	45.0
500 .....	5.7	12.4	17.1	24.7	28.5
700 .....	4.8	10.5	14.4	20.8	24.1
1,000 .....	4.0	8.8	12.1	17.4	20.1
2,500 .....	2.5	5.5	7.6	11.0	12.7
5,000 .....	1.8	3.9	5.4	7.8	9.0
10,000 .....	1.3	2.8	3.8	5.5	6.4
25,000 .....	.8	1.8	2.4	3.5	4.0
50,000 .....	.6	1.2	1.7	2.5	2.8
100,000 .....	.4	.9	1.2	1.7	2.0
250,000 .....	.3	.6	.8	1.1	1.3
500,000 .....	.2	.4	.5	.8	.9
1,000,000 .....	.13	.3	.4	.6	.6

*median.*—Table A-1 of part A of this report shows the median number of persons for owner-occupied housing units is 3.1. The base of the distribution from which this median was determined is 1,030,300 housing units.

1. Interpolation in table II shows that the standard error of 50 percent on a base of 1,030,300 is approximately .6 percentage points.

2. To obtain a 95-percent confidence interval on the estimated median, initially add to and subtract from 50 percent twice the standard error determined in step 1. This yields percentage limits of 48.8 and 51.2.

3. From table A-1 of part A, it can be seen by cumulating the frequencies for the first two categories that 406,700 owner-occupied housing units, or 39.5 percent, had one or two persons (for purposes of calculating the median, the category of two persons is considered to be from 1.5 to 2.5 persons) and that an additional 193,200 owner-occupied housing units, or 18.8 percent, had three persons (i.e., 2.5 to 3.5 persons).

By linear interpolation, the lower limit of the 95-percent confidence interval is found to be about:

---

APPENDIX B—Continued

$$2.5 + (3.5 - 2.5) \left( \frac{48.8 - 39.5}{18.8} \right) = 3.0$$

Similarly, the upper limit of the 95-percent confidence interval is found to be about:

$$2.5 + (3.5 - 2.5) \left( \frac{51.2 - 39.5}{18.8} \right) = 3.1$$

Thus, the 95-percent confidence interval ranges from 3.0 to 3.1 persons. Although it appears that this confidence interval

has the sample estimate as the upper limit, it actually is a reflection of the rounding error associated with the median (see the paragraph on rounding errors in the nonsampling errors section).

# Table Finding Guide, Part A

## Subjects by Type of Area and Table Number

This guide lists all subjects covered in this part but does not indicate all cross-classifications, for example, by tenure.

In the tables for the four large SMSA's, the prefix letter "A" indicates data for the total SMSA, prefix letter "B" indicates data for inside central cities, and prefix letter "C" indicates data for not inside central cities. Tables with no prefix letter show data for the total SMSA.

# Table Finding Guide, Part B

## Subjects by Type of Area and Table Number

This guide lists all subjects covered in this part but does not indicate all cross-classifications, for example, by tenure.

In the tables for the four large SMSA's, the prefix letter "A" indicates data for the total SMSA, prefix letter "B" indicates data for inside central cities, and prefix letter "C" indicates data for not inside central cities. Tables with no prefix letter show data for the total SMSA.

Subject	All housing units	Units occupied by households with—	
		Black household head	Spanish-origin head
