COLLABORA
TION FORUM

Building Interoperability through Architecture

- Mr. Giovanni Demonte, Architecture Branch Chief
- Synopsis:

This session will look to establish a definition of interoperability for the biometrics community. The session will also discuss roles, responsibilities, and the process for assessing compliance for interoperability. Similarly discussion will cover the responsibilities, criteria and resulting reports for testing interoperability. Lastly, the session will discuss key challenges related to interoperability including cross domain solutions and interactions with external (non-DoD) entities.

Session Objectives

Challenges:

- Improving data sharing
- Coexistence of classified and unclassified data.

Desired Output:

- Agreed upon definition for interoperability.
- A strawman process for assessing compliance for interoperability.
- Identification of the testing responsibilities, criteria and resulting reports.
- Development of a clear problem statement for cross domain solution and potential courses of action.

Findings and Insights

- Summarize key discussion points from the session.

Next Steps and Timeline

- Highlight any progress (or breakthroughs) made during session.
- Outline the “way ahead” with a timeline for completion.
