# Agenda

NATIONAL CENTER FOR  
TELEHEALTH &  
TECHNOLOGY

a DCoE partner

- Importance of Suicide Surveillance in the Military
- Advances in Standardizing Suicide Surveillance in the DoD
- DoD Suicide Event Report (DoDSER)
  - Development
  - Content and Data Collection
- Future Developments

# Importance of Suicide Surveillance in the Military

Quality surveillance allows the DoD to:

- Describe the current status
- Track trends and identify patterns
  - Within suicides
  - Between those with suicide behaviors and the population
  - Between the military and civilian cases
- Examine risk factors unique to Warriors
- Identify possible solutions or interventions
- Evaluate the effectiveness of programs & policies
- Provide senior leaders quality data

# DoD Suicide Surveillance: Pursuing Standardization

Historically, U.S. Military Services have utilized separate surveillance systems to collect retrospective data about suicide cases:

- Air Force: Suicide Event Surveillance System (SESS)
- Army: Army Suicide Event Report (ASER)
- Navy/Marines: Department of the Navy Suicide Incident Report (DONSIR)

Problem: Combining data for DoD-level analysis was not possible

# Development of the DoD SER

- The Services' Suicide Prevention Program Managers meet monthly in the Suicide Prevention and Risk Reduction Committee (SPARRC)
- Successful standardization of suicide rates across Services
- Created interest in standardizing idiosyncratic Service-level surveillance systems
- T2 asked to take the lead in collaboration with the Services to develop the DoD SER

# Development of the DoD SER

- Detailed software requirements collaboratively developed with Suicide Prevention Program Managers of all Services (Army, Navy, Air Force and Marines)
- Initial data-collection only website developed and launched 1 January 2008
- Major software revision deployed August, 2009
  - Common Access Card (CAC) Log-In
  - Account Management Features

# DoD SER Item Content

- Objective & Subjective, detailed, standardized information:
  - Comprehensive event data (method, location, fatality)
  - Extensive risk factor data
    - dispositional or personal (e.g. demographics)
    - historical or developmental (e.g. military Hx)
    - contextual or situational (e.g. firearm in home)
    - clinical or symptom factors (e.g. diagnoses)

## Suicides

Review of medical and BH records  
Personnel and counseling records  
Investigative agency records (e.g. CID)

Records related to manner of death  
(casualty reports, toxicology, autopsy,  
suicide notes)

Interview of co-workers/supervisors,  
responsible investigative agency officer,  
other involved professionals, or family  
members when appropriate (some  
Services)

## Non-Fatal Suicide Behaviors (Some Services)

Interview of patient  
Review of medical and BH records  
Interview of co-workers and  
supervisors as needed

# The Current DoD Suicide Event Report

- Current DoD SER software includes secure (CAC) login website with:
  - Accounts that differ by role
  - Core set of DoD items and functionality for unique items by Services
  - Coding guidance
  - Item presentation logic, and form field validation
  - Save/Edit functionality
  - Retrieval of historical reports
  - Delete and restore DoD SERs

# Future Directions

- Refined DoD SER coding guidance/manual
- Online DoD SER training module
- Pilot project comparing DoD SER data to CDC's National Violent Death Reporting System (NVDRS)
- Project examining number of non-fatal DoD SER cases that end up in the VA system
- Pilot exploring a system to collect DoD SER control data
- Annual SPARRC Update of Item Content
- Program evaluation of software refinements
