

Letterkenny becomes a staple depot in supporting the warfighter with new mission's such as customizing HMMWV's for all the Armed Services and Special Forces Operations to handle the requirements of the new breed of vehicles used in the War in Iraq

Cranes and generators began worked on in 2005 as LEAD reinforces itself as a DoD top maintenance depot

Force protection became top priority after the attacks of September 11, 2001. This leads to construction of new security buildings at depot entrances

# 2000's

Letterkenny began the 21st century in a new headquarters in Building 10. With little time to settle in, the country faced the unknowns presented by the extraordinary events of September 11, 2001. Letterkenny employees were able to react in ways that differed from ordinary citizens because they were able to contribute significantly to the warfighter.

"Something" meant an increasing variety of work to respond to the Global War on Terror. Whether retrofitting Ground Mobility Vehicles, resetting Avengers and HMMWV's, or Patriot Missile recapitalization, employees felt themselves on the cutting edge of the fight and met each challenge, often ahead of schedule.

Lean Manufacturing techniques were implemented to achieve success in meeting new workload challenges in an era of Chemical and Biological threats. The depot entered partnerships and worked on Biological Integrated Detection Systems, Dry Filter Units and Portal Shields and hundreds of generators..

Soldiers lived in Force Provider's (tent cities) overhauled on the depot and unknown numbers of lives were saved through various Armor protection projects produced at record-breaking schedules to enhance Soldier safety.

(GMV) General Mobility Systems line up as Lettekenny has this new mission

Biodection systems (BIDS) were worked on to support the global war on terrorism

Letterkenny workers work around the clock getting Avengers for the Avenger recap program and other vehicles delivered on time in support of the war effort

Patriot radar systems need refurbished from head-to-toe giving the depot what was known as the Patriot Recap mission
