

# Supplement to the American Housing Survey for the United States in 1989

Issued October 1992

## U.S. Department of Commerce

**Barbara Hackman Franklin,**  
Secretary

**Rockwell A. Schnabel,**  
Deputy Secretary

**Economics and  
Statistics Administration**

**J. Antonio Villamil,**  
Under Secretary  
for Economic Affairs

**BUREAU OF  
THE CENSUS**

**Barbara Everitt Bryant,**  
Director

## U.S. Department of Housing and Urban Development

**Jack Kemp,**  
Secretary

**OFFICE OF POLICY  
DEVELOPMENT AND  
RESEARCH**

**John C. Weicher,**  
Assistant Secretary

**Frederick J. Eggers,**  
Acting Deputy Assistant  
Secretary for  
Economic Affairs

**Economics and  
Statistics Administration**

**J. Antonio Villamil,**  
Under Secretary  
for Economic Affairs

**BUREAU OF THE CENSUS**

**Barbara Everitt Bryant,**  
Director

**Harry A. Scarr,**  
Acting Deputy Director

**William P. Butz,**  
Associate Director for  
Demographic Programs

**Daniel H. Weinberg,**  
Chief, Housing and Household  
Economic Statistics Division

**OFFICE OF POLICY  
DEVELOPMENT AND  
RESEARCH**

**John C. Weicher,**  
Assistant Secretary

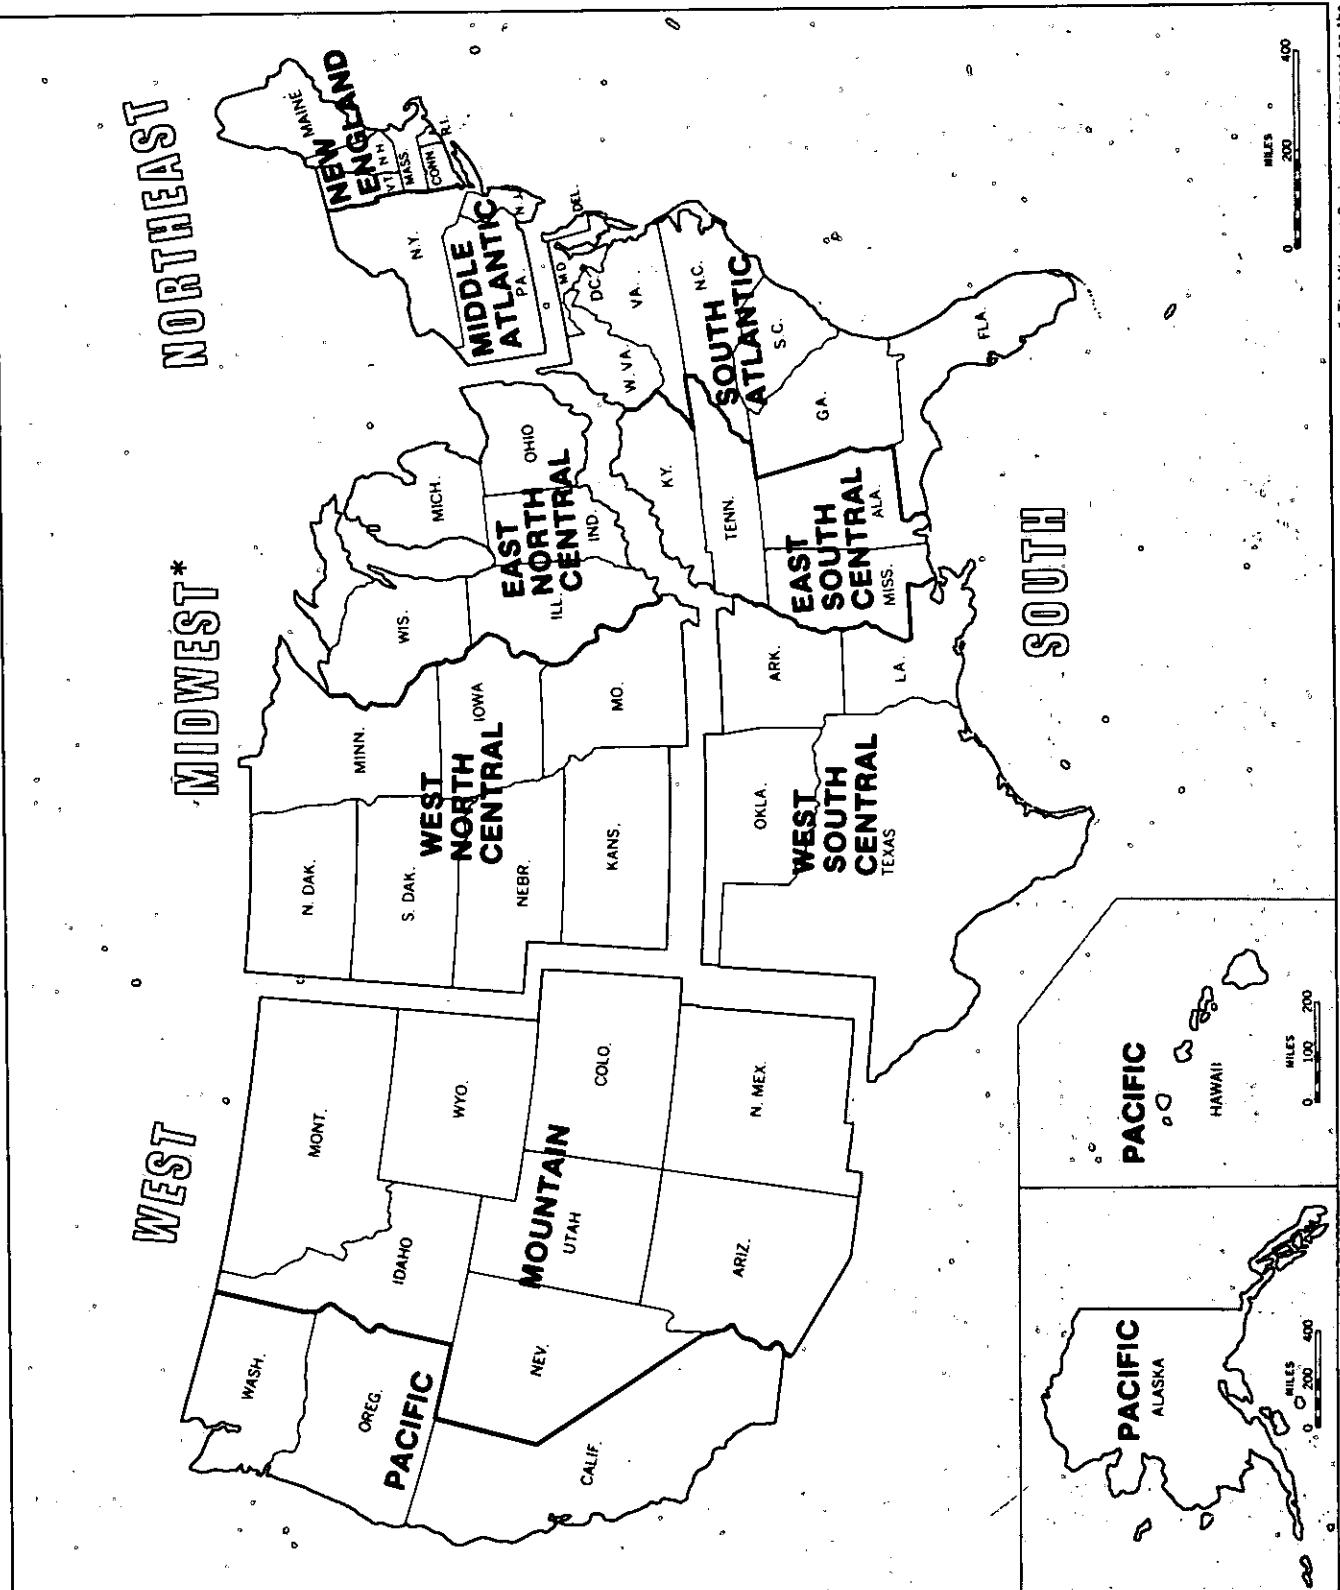

**Frederick J. Eggers,**  
Acting Deputy Assistant Secretary  
for Economic Affairs

**Duane T. McGough,**  
Director, Housing and  
Demographic Analysis Division

For sale by Data User Services Division, Customer Services (Publications),  
Bureau of the Census, Washington, DC 20233. Postage stamps not  
acceptable; currency submitted at sender's risk. Remittances from foreign  
countries must be by international money order or by a draft on a U.S. bank.

REGIONS AND CENSUS DIVISIONS OF THE UNITED STATES

\* The Midwest Region was designated as the  
North Central Region until June 1984.

## GENERAL

This report presents supplemental statistics for occupied housing units from the 1989 American Housing Survey National Sample (AHS-N) for the United States, inside and outside MSA's, urban and rural, and the four census regions. The supplemental statistics include housing and household characteristics by family type, housing quality by family type, neighborhood quality, journey to work, and additional residential units. Prior to 1984, the AHS was called the Annual Housing Survey. The name was changed to the American Housing Survey since the National sample (AHS-N) is no longer conducted annually but every other year in odd-numbered years. The last even-numbered year for the National sample was 1980. The AHS was designed to provide a current series of information on the size and composition of the housing inventory, the characteristics

of its occupants, changes in the inventory resulting from new construction, indicators of housing and neighborhood quality, and the characteristics of recent movers. The survey, conducted for the Department of Housing and Urban Development, is authorized under sections 501 and 502 (d), 502 (e), and 502 (f) of the Housing and Urban Development Act of 1970, Title 12, United States Code 1701z-1 and 1701z-2. The Bureau of the Census is authorized under Title 31, United States Code, section 686, to perform special work or services for Federal agencies.

The statistics presented in this report are based on information from a sample of housing units. The information for the 1989 AHS-National was collected by interviewers from July 1989 through December 1989. (See paragraph "Sample size.")

This report is issued jointly by the Department of Housing and Urban Development and the Bureau of the Census. The content and procedures of the American Housing Survey were determined after consultation with a variety of users of housing data and through field pretesting. The data for many of the subjects covered in this report are similar to those collected in the 1980 Census of Housing and the 1973 through 1983 Annual Housing Surveys. The data for a few items may not be comparable because of definitional changes in the American Housing Survey in 1984 and beyond (redesigned AHS). See the section titled "Qualifications of the data." A number of new items were introduced in the redesigned AHS-N and used for this supplement. These include units with severe or moderate problems and units with an elderly householder. For detailed definitions and qualifications of these and other items, see appendix A.

More detailed information on the technical and procedural matters covered in the text of the report can be obtained by writing to the Director, Bureau of the Census, Washington, DC 20233.

**Sample size.** The statistics presented in this report are based on a sample of housing units and are, therefore, subject to sampling variability. The designated sample consisted of approximately 49,400 housing units located throughout the United States. The sample was selected from units enumerated in the 1980 census and updated to include units constructed since 1980. Detailed information on the sample design, size of sample, estimation procedure, and sampling variability associated with these data is given in appendix B.

**Organization of the text.** The text consists of this introduction and appendixes A and B, which appear after the data tables. Appendix A describes the geographic area classifications, provides definitions and explanations of the subjects covered in this report, and contains a facsimile of the questionnaire and control card. Appendix B presents information on sample design, estimation, and accuracy of the data.

**Contents of the tables.** The tables in this report are organized into 11 chapters. Chapter 1 presents statistics on total occupied housing units; chapter 2, statistics on owner-occupied housing units; chapter 3, statistics on renter-occupied housing units; chapter 4, on occupied housing units with a Black householder; chapter 5, on occupied housing units with a householder of Hispanic origin; chapter 6, on occupied housing units with an elderly householder; chapter 7, on occupied housing units in central cities; chapter 8, on occupied housing units in the suburbs; chapter 9, on occupied housing units outside metropolitan areas; chapter 10, on occupied housing units in urban areas; and chapter 11, occupied housing units in rural areas.

Tables 1 through 5 are the same in all 11 chapters. Table 1 presents general characteristics by family type; table 2, financial characteristics by family type; table 3, housing quality by family type; table 4, neighborhood quality; and table 5, journey to work.

Table 6, appearing in chapters 1 and 2 only, presents data on additional residential units both recreational and investment properties.

All of the financial characteristics shown in this report are shown for all renters and/or all owners. Prior to 1984, the AHS reported characteristics such as value and monthly housing costs for specified owners and specified renters only. See the *American Housing Survey for the United States in 1989*, Series H150, for data on specified owners and renters.

**Derived figures (medians, rates, etc.)** Shown in this report are percents, medians, and ratios. The median, which is a type of average, is the middle value in a distribution; i.e., the median divides the distribution into two equal parts—one-half of the cases fall below the median and one-half of the cases exceed the median. Derived figures are not presented (but indicated by three dots(...)) if there are less than 25 sample cases in the distribution or the base.

The medians shown in this report are based on unrounded data and may differ from medians calculated from the published rounded data. All medians are rounded. The method of rounding depends on the characteristic being measured. For the method of rounding with each specific median, see the definitions in appendix A for the specific characteristic being measured.

Poverty level as used in the American Housing Survey is based on household income rather than the income of

families, unrelated subfamilies, and unrelated individuals separately as is the case in officially published poverty statistics. See the "Qualification of the data" section of this introduction.

Shown in chapters 1 through 11 are data for units with severe or moderate problems. Units with severe problems include those units with severe problems in one or more of the following: plumbing facilities, heating equipment, electricity, upkeep, and hallways. Units with moderate problems include those units with moderate problems in one or more of the following: plumbing facilities, heating equipment, upkeep, hallways, and kitchens. A unit with one or more severe problems is counted as such whether or not it has a moderate problem and is not counted with units having moderate problems even if one exists. For a detailed description of how moderate and severe problems are derived, see appendix A, page App-7.

The percentages shown in table 4 are based on unrounded data as a percent of the total occupied units. In some instances these percentages may not total to 100 percent because of rounding.

**Symbols.** A dash (-) signifies zero or a number that rounds to zero. Three dots (...) in a data column mean not applicable or that the base for a derived figure is too small for it to be shown. The symbol "NA" means not available.

**Boundaries.** The data shown in this report relate to the areas as defined for the 1980 census. See appendix A for a discussion of these areas.

**Reports from the American Housing Survey.** Reports from the AHS-National are published under series H150. Any supplemental national reports, such as this one, are published under series H151. Data for the national reports are collected every other year in odd-numbered years from a sample of housing units that is independent of the sample housing units used to produce metropolitan reports. AHS-N reports present data for the United States, inside and outside MSA's, urban and rural, and the four census regions. The first AHS national was conducted from August to December 1973.

The AHS-MS survey is conducted in 44 selected metropolitan areas divided into four groups of approximately 11 each with a group to be interviewed once every 4 years on a rotating basis. A listing of these areas by the year of their first interview can be found on page XII. Reports from the AHS-MS are published under Series H170. Any supplemental metropolitan reports are published under Series H171.

**SMSA reports from the Annual Housing Survey.** From 1974 through 1983, the AHS SMSA surveys were conducted in 60 selected SMSA's originally divided into groups of 20 each, with a group to be interviewed once every 3 years on a rotating basis. A listing of the SMSA's by the original three groups can be found on page XII. The years for which reports are available for individual SMSA's are provided on this listing.

## ADDITIONAL DATA

**Public-use microdata files.** For the data user whose needs are not met by the available tabulations, the Census Bureau also has made available computerized microdata (individual respondent records) from both the metropolitan and national samples. Except for names and addresses, the AHS microdata provide essentially all the information obtained from each household or vacant unit. The Census Bureau's confidentiality guidelines prescribe that individuals and specific addresses remain anonymous.

Confidentiality guidelines further prescribe that individual records cannot be associated with areas having fewer than 100,000 people based on 1980 census results. The redesigned AHS national file identifies the four census geographic regions, urban/rural residence, and metropolitan/nonmetropolitan residence as well as all central cities and urbanized areas in the sample that satisfy the 100,000 population confidentiality requirement. The redesigned AHS metropolitan file identifies all central cities, counties, and zones (selected groups of census tracts) that have a 1980 population of 100,000 or more persons. Before the redesigned AHS, public-use microdata files only identified geographic areas having a 1970 census population of 250,000 persons.

Microdata from the AHS are available on CD-ROM or computer tape on a cost-per-reel basis from Data User Services Division, Customer Services (Tapes), Bureau of the Census, Washington, DC 20233.

**Microfiche of published reports.** Microfiche copies for national and MSA published reports are available from Data User Services Division, Customer Services (Microfiche), Bureau of the Census, Washington, DC 20233.

## DATA COLLECTION PROCEDURES

The 1989 American Housing Survey was conducted by interviewers who obtained the information from the occupants or, if the unit was vacant, from informed persons such as landlords, rental agents, or knowledgeable neighbors. The information reported by the interviewer reflected the situation at the time of the survey, which began in July 1989 and continued through December 1989.

Data were collected for sample housing units located in the counties and independent cities that make up the 394 sample areas for the 1989 AHS. A sample of housing units was selected in these areas from the 1980 census and updated by a sample of addresses from building permits to include housing units added since 1980. Estimates of the counts and characteristics of the 1989 inventory were obtained for these sample units. A more detailed description of the survey design and sampling procedures can be found in appendix B.

## PROCESSING PROCEDURES

The questionnaire and control card used for the redesigned AHS were of the conventional type on which the

interviewer recorded the information by marking a pre-coded check box or by writing in the entries. Census clerks edited and coded the documents. The information was then data keyed directly to magnetic tape, which was processed on the Census Bureau's computer through a number of editing and tabulating steps. A facsimile of both the control card and the questionnaire appears at the end of appendix A.

## QUALIFICATIONS OF THE DATA

Since the estimates in this report are based on a sample, they may differ somewhat from a complete census using the same questionnaire, instructions, and interviewers. Particular care should be exercised, therefore, in the interpretation of figures based on relatively small numbers of cases as well as small differences between figures. As in any survey work, the results are subject to errors of response and nonreporting and to sampling variability. For a further discussion of the accuracy of the data, see appendix B.

**Comparison of the 1989 survey with the 1985 and 1987 American Housing Surveys.** The concepts, definitions, data collection, and processing procedures are essentially the same for the 1985 through 1989 American Housing Surveys National samples.

**Severe and moderate problems.** The data concerning units with severe and moderate problems in 1989 are not entirely comparable with similar data published in 1985 and 1987. Units lacking complete plumbing facilities are included in the count of units with severe physical problems. Data on plumbing facilities in 1985 and 1987 were deficient because of the design of the questionnaire. As a result, the number of units with severe problems was underestimated in 1985 and 1987, but the number of units with moderate problems was overestimated. These deficiencies were corrected in the 1989 questionnaire. For additional discussion, see the paragraphs on "Plumbing facilities" under the section "Comparison of the 1985 through 1989 American Housing Surveys with the 1973 through 1983 Annual Housing Surveys" in the introduction of the *American Housing Survey for the United States in 1989*, series H150/89.

**A change in an item relating to income.** A new item in 1989 has replaced a similar item that was published in 1985 and 1987. It is "Monthly housing costs as percent of current income." For income, this new item uses "Current income"; in 1985 and 1987, the item "Monthly housing costs as percent of income" used the "Income of families and primary individuals in the last 12 months." See appendix A for a complete definition of "Current income," and "Monthly housing costs as percent of current income." We recommend caution when comparing prior years' data with 1989

because of the differences in the definitions. See the introduction of the *American Housing Survey for the United States in 1989*, series H150/89 for comparative tables on monthly housing costs as a percent of income.

**Poverty.** The AHS poverty data is not comparable to official poverty data published from the Current Population Survey (CPS). According to AHS estimates, there were 13,266,000 households in poverty in 1985, 11,969,000 in 1987, and 12,403,000 in 1989. Poverty estimates from the CPS were 11,966,000 in 1985, 11,807,000 in 1987, and 11,369,000 in 1989. The CPS shows a 189,000 drop in the number of households in poverty between 1985 and 1987, and a 438,000 drop between 1987 and 1989. The AHS shows a drop of 1,297,000 between 1985 and 1987 and an increase of 434,000 between 1987 and 1989. Compared with CPS, the AHS drop in poverty between 1985 and 1987 seems far too large. The 1987 to 1989 AHS increase in poverty may be, in part, a compensation for the unrealistic 1985 to 1987 drop.

In general, AHS estimates of poverty are higher than the CPS estimates. Research indicates that the AHS slightly underreports income when compared with the CPS, thus overreporting poverty. Furthermore, the problem seems to be concentrated in elderly households. A detailed discussion of AHS poverty data is presented in the Census Bureau memorandum for the record, "AHS Poverty Data, 1985 to 1989." Copies of the memorandum can be obtained by writing to the Housing and Household Economic Statistics Division, Bureau of the Census, Washington, DC 20233.

We wish to remind analysts that poverty data are published in the AHS not as an official count of households in poverty, but to show the housing characteristics of low-income households.

**CATI.** As a result of the use of both decentralized telephone interviewing and Computer Assisted Telephone Interviewing (CATI) in the 1987 and 1989 AHS-N, data for several observation items are not comparable to that reported in the 1985 AHS-N. Data for the observation items for the units assigned to telephone interviewing were collected only if the sample unit was located in a multiunit structure.

Large-scale CATI experiments were conducted as part of both the 1987 and 1989 AHS-N. Preliminary analysis of the CATI experiment indicated that CATI had a significant effect on both the 1987 and 1989 data. Both the 1987 and 1989 experiments revealed that characteristics' data for owner housing, urban housing, and housing with moderate physical problems exhibited high numbers of significant differences between CATI and non-CATI estimates. The moderate physical problems subgroup had the highest incidence of significant differences. The 1989 analysis also showed significant differences for total occupied, suburban housing units, and moved in the past year.

Little is known at this time about whether CATI or non-CATI produces better data. It is currently felt that CATI may produce better income estimates but worse estimates for other characteristics. It is thought, however, that estimates of change in AHS-N data between 1985 and 1987 and between 1985 and 1989 will be biased for many characteristics as a result of the introduction of CATI. Estimates of change between 1987 and 1989 may also be biased, but to a lesser degree, as CATI was used in both years. For more detailed discussions of CATI, see the "Telephone interviewing experiment" and "Possible effects of computer assisted telephone interviewing (CATI) on the data" sections in appendix B.

**Comparison of the 1985 through 1989 American Housing Surveys with the 1973 through 1983 Annual Housing Surveys.** Most of the subjects in the 1985 through 1989 American Housing Survey National samples (AHS-N) are the same as those published in 1973 through 1983 Annual Housing Survey National samples. In 1985, however, the AHS-N was completely redesigned. A new sample was chosen, a new questionnaire designed, and new weighting procedures developed. Most of the changes made in the redesigned AHS-N were made to improve the quality of the data.

As a result of these changes, however, several items in the redesigned AHS-N are not comparable to similar data in 1973 through 1983. All comparisons between the redesigned AHS and 1973 through 1983 should be made with caution. Listed below are major differences noted as a result of the redesign. The differences were analyzed through a comparison of 1985 data to 1983. These differences, however, affect all comparisons of 1985 and later data with 1973 through 1983 data. The list may not be all inclusive. Differences noted include the following:

**1983 to 1985 household increase.** The total number of households increased from 84,638,000 in 1983 to 88,425,000 in 1985, a total of 3,787,000. A small proportion of this apparent growth is because of changes in the redesigned AHS-N. In 1985 the 1980 census count of occupied units was adjusted for undercount and projected to 1987 using the 1980 to 1985 Current Population Survey's (CPS) rate of change. The redesigned AHS-N was then ratio-estimated into this number. In the 1983 AHS, occupied units were ratio-estimated directly into CPS estimates. The 1985 occupied ratio-estimation procedure resulted in 200,000 additional occupied units that would not have been estimated if the 1983 procedures had been employed in 1985. For a complete description of the redesigned weighting procedures, see appendix B of this report. For a complete description of the 1983 weighting procedures, see appendix B of the 1983 Annual Housing Survey reports, Series H150/83.

When considering growth between the 1983 AHS-N and 1985 AHS-N, a more appropriate level of 1983 to 1985 household growth would be 3,587,000 households (3,787,000 - 200,000).

**Units in structure.** Households living in single-family detached units grew from 53,544,000 in 1983 to 55,076,000 in 1985, a 1,532,000 increase. For single-family attached, the number of units decreased from 4,109,000 in 1983 to 4,102,000 in 1985 or minus 7,000. Units in multiunit structures (2-or-more units in structure) grew from 22,985,000 in 1983 to 24,492,000, an increase of 1,507,000. In 1983, data on units in structure were based on the respondents answer to one question, "How many living quarters, both occupied and vacant, are there in this house (building)"? In 1985, data on units in structure were based on the respondents answer to a series of questions (see item 20 through 23 on page 3 of the questionnaire in appendix A). The method of collecting units-in-structure data in 1985 was revised as previous AHS experience has shown the concept to be difficult for respondents. Respondents particularly had difficulty distinguishing between single-family attached and units in multiunit structures. It is estimated that the 1983 AHS overestimated single-family detached by 118,000 units and single-family attached by 641,000 units. The 1983 AHS underestimated units in multiunit structures by approximately 788,000. More reasonable levels of 1983 to 1985 growth are 1,650,000 units for single-family detached ( $1,532,000 + 118,000$ ), 634,000 for single-family attached ( $-7,000 + 641,000$ ), and 719,000 for units in multiunit structures ( $1,507,000 - 788,000$ ).

**Mobile homes.** Occupied mobile homes grew from 3,999,000 in 1983 to 4,754,000 in 1985, an increase of 755,000. This level of growth seems excessive as data from the Survey of Mobile Home Placements shows approximately 570,000 new mobile homes placed for residential use during the same time period. In the 1985 redesigned AHS-N, estimates of mobile homes with a model year of 1980 or later were ratio-estimated into independent counts of mobile placements from the Survey of Mobile Home Placements. No such adjustment was done in 1983. The 1983 count of occupied mobile homes may be deficient leading to an unrealistic estimate of 1983 to 1985 changes.

**Rooms in unit.** The number of households living in units with one or two rooms dropped from 3,215,000 in 1983 to 1,937,000 in 1985. As a result, the median number of rooms per unit increased from 5.2 to 5.3. This does not necessarily indicate an increase in the average size of housing units. In the 1983 AHS, respondents answered a single question asking for a total count of rooms in the unit. The potential to miss specific rooms is high in a question of this type. In the 1985 AHS, respondents were asked for a count of each specific type of room. The answers to these questions are then added together in the tabulations to provide a total count of rooms. Far fewer rooms are missed in this series of questions, which has apparently resulted in lower counts of one- and two-room units.

There are changes to the housing unit definition that may affect the count of households. One minor difference in the definition is the 1973 through 1983 AHS requirement

that a housing unit must have either direct access from the outside or through a common hallway, or complete kitchen facilities for the exclusive use of the occupants. In the redesigned American Housing Survey, the complete kitchen facilities alternative was dropped, with direct access required of all units. A second minor difference is in the definition of group quarters. In the 1973 through 1983 Annual Housing Survey, a household containing five or more persons unrelated to the householder was considered to be group quarters. In the redesigned AHS-N, the cutoff was changed to nine or more persons unrelated to the householder.

There are also some minor differences in the definition or presentation of several subjects. The 1973 through 1983 AHS reports presented data on gross rent for renter-occupied units, contract rent for vacant for-rent units, and selected monthly housing costs for owner-occupied housing units. The same basic data are presented for all three groups in the redesign except that the subject is titled "monthly housing costs" for all three universes on all tables to ease presentation of the data on tables where more than one of the universes occur. For a detailed definition of "monthly housing costs" see appendix A.

The characteristics of new-construction units are based on units constructed during the last 4 years in the redesigned AHS-N. Before the redesigned AHS-N, characteristics of new construction were based on units built since the last survey year, which was a 1-year period except for the 1983 survey that was a 2-year period.

A number of new items were introduced in the redesigned AHS-N including units with severe or moderate problems, elderly householder, etc. For detailed definitions and qualifications of these and other items, please see appendix A.

**Comparisons with the 1980 Census of Housing.** Care should be exercised in making comparisons between the redesigned AHS-N reports and the 1980 Census of Housing results. Differences in the data may reflect such factors as the use of direct interview in the AHS contrasted with extensive use of self-enumeration in the census, the time periods during which the data were collected (possible seasonal effects), sample designs, estimation procedures, and the processing procedures.

See the section on "Comparability with the 1980 Census of Housing Data" in appendix A for further discussion.

More detailed information on the technical and procedural matters covered in the text of this report can be obtained by writing to the Director of the Bureau of the Census, Washington, DC 20233.

## DATA FOR MINORITY HOUSEHOLDS

In the 1989 AHS National supplemental report, separate chapters are shown for housing units with a Black householder and housing units with a Hispanic householder (chapters 4 and 5, respectively).

|  |       |                                       |       | <b>CARD: 1989 .....</b>             | App-41 |                                    |       |                                     |        |                                 |       |                                       |       |                                     |       |                                    |       |                                     |        |                                 |        |                                       |       |                                     |       |                                    |       |                                     |        |                                 |        |                                       |       |                                     |       |                                    |       |                                     |        |                                 |        |                                       |       |                                     |       |                                    |       |                                     |        |                                 |        |                                      |       |                                     |       |                                    |       |                                     |        |                                 |        |                                      |       |                                     |       |                                    |       |                                     |        |                                 |        |                                      |       |                                     |       |                                    |       |                                     |        |                                 |        |                                      |       |                                     |       |                                  |       |                                     |        |                                 |        |                                     |       |                                     |       |                                  |       |                                     |        |                                 |        |                                     |       |                                   |       |                                  |       |                                     |        |                                 |        |                                     |       |                       |       |                                  |       |                                     |        |                                 |        |                                     |       |                       |  |                                  |  |                                     |        |                                 |        |                               |  |                       |  |                                  |  |                                     |        |                                 |        |                               |  |                       |  |                                  |  |                                     |        |                                 |        |                               |  |                       |  |                                  |  |                                     |        |                                 |        |                               |  |                       |  |                                  |  |                                     |        |                                 |        |                               |  |                       |  |                                  |  |                                     |        |                                 |        |                               |  |                       |  |                                  |  |                                     |        |                                 |        |                               |  |                       |  |                                  |  |                                     |        |                                 |        |                               |  |                       |  |                                  |  |                                  |        |                                 |        |                               |  |                       |  |                                  |  |                         |        |                                 |        |                               |  |  |  |                                  |  |                         |        |  |  |                               |  |  |  |  |  |                         |        |

### AREA CLASSIFICATIONS

**Regions.** Regions are large groups of States that form the firstorder subdivisions of the United States for census purposes. The four regions are the Northeast, Midwest, South, and West. Data for the regions are shown in chapters 1 through 11, tables 4 and 5.

**Places.** Two types of places are recognized by the Census Bureau, incorporated places and census designated places as defined below.

*Incorporated places.* Incorporated places are those that are incorporated under the laws of their respective States as cities, boroughs, towns, and villages.

*Census designated places (CDP's).* The Census Bureau has delineated boundaries for closely settled population

centers without corporate limits. To be recognized for the census, CDP's must have a minimum population. If located in urbanized areas that have one or more cities of 50,000 or more population, CDP's must have a minimum population of 5,000. All other areas except for areas in Alaska and Hawaii require a minimum population of 1,000. The requirements are a population of 25 in Alaska and 300 in Hawaii.

**Urban and rural residence.** As defined for the 1980 census, urban housing comprises all housing units in urbanized areas and in places of 2,500 or more inhabitants outside urbanized areas. More specifically, urban housing consists of all housing units in (a) places of 2,500 or more inhabitants incorporated as cities, villages, boroughs (except in Alaska and New York), and towns (except in the New England States, New York, and Wisconsin), but excluding

those housing units in the rural portions of extended cities; (b) census designated places of 2,500 or more inhabitants; and (c) other territory, incorporated or unincorporated, included in urbanized areas. Housing units not classified as urban constitutes rural housing. Information on the historical development of the urban-rural residence definition appears in the 1980 Census of Population Report, Characteristics of the Population, *Number of Inhabitants*, PC80-1-A.

**Urbanized areas.** The major objective of the Census Bureau in delineating urbanized areas is to provide a better separation of urban and rural housing in the vicinity of large cities. In the 1980 census, an urbanized area comprised an incorporated place and adjacent, densely settled surrounding area that together have a minimum population of 50,000. For more information on urbanized areas, refer to the 1980 Population Census PC(1)-A reports.

**Farm-nonfarm residence.** In rural areas, occupied housing units are subdivided into rural-farm housing (which comprises all rural units on farms) and rural-nonfarm housing (which comprises the remaining rural units). Occupied housing units are classified as farm units if the sales of agricultural products amounted to at least \$1,000 during the 12-month period prior to the interview. Occupied units in rural territory that do not meet the definition for farm housing are classified as nonfarm.

**Metropolitan statistical areas.** Metropolitan statistical areas (MSA's) shown in the American Housing Survey are defined by the Office of Management and Budget. By current standards, as published in the Federal Register on January 3, 1980, an area qualifies for recognition as an MSA in one of two ways: if there is a city of at least 50,000 population, or a Census Bureau-defined urbanized area of at least 50,000 with a total metropolitan population of at least 100,000 (75,000 in New England). Except in the New England States, an MSA is defined in terms of entire counties. In New England, MSA's are composed of cities and towns. In addition to the county containing the main city, additional counties are included in an MSA if they are socially and economically integrated with the central county. An MSA may contain more than one city of 50,000 population and may cross State lines.

**Primary metropolitan statistical areas.** Within the metropolitan statistical areas classified as Level A (population size of 1,000,000 or more), some areas may qualify for separate recognition as primary metropolitan statistical areas (PMSA's). PMSA is a large urbanized county, or cluster of counties, that demonstrates very strong internal economic and social links in addition to close ties to the other portions of the Level A metropolitan statistical area.

**Consolidated metropolitan statistical areas.** Consolidated metropolitan statistical areas (CMSA's) are Level A metropolitan statistical areas when at least two primary metropolitan statistical areas are defined.

**Central cities.** Every metropolitan statistical area has at least one central city, which is usually its largest city. Smaller cities are also identified as central cities if they have at least 25,000 population and meet the following two commuting requirements. First, the city must have at least 75 jobs for each 100 residents who are employed. Second, no more than 60 percent of the city's resident workers may commute to jobs outside the city limits. In addition, any city with at least 250,000 population or at least 100,000 persons working within its corporate limits qualifies as a central city even if it fails to meet the above two commuting requirements. Finally, in certain smaller metropolitan statistical areas, there are places with between 15,000 and 25,000 population that also qualify as central cities, because, they are at least one-third the size of the metropolitan statistical area's largest city and meet the two commuting requirements.

**Standard metropolitan statistical areas.** The definitions of standard metropolitan statistical areas (SMSA's) used in the Annual Housing Survey before 1984 corresponded to the 243 SMSA's used in the 1970 census. Except in the New England States, an SMSA is a county or group of contiguous counties that contains at least one city of 50,000 inhabitants or more, or "twin cities" with a combined population of at least 50,000. In addition to the county or counties containing such a city or cities, contiguous counties are included in an SMSA if, according to certain criteria, they are socially and economically integrated with the central city. In the New England States, SMSA's consist of towns and cities instead of counties. Each SMSA must include at least one central city, and the complete title of an SMSA identifies the central city or cities.

## DEFINITIONS AND EXPLANATIONS OF SUBJECT CHARACTERISTICS

### General

As stated in the introduction, the 1989 American Housing Survey was conducted by personal interview. The survey interviewers were instructed to read the questions directly from the questionnaire. The definitions and explanations given for each subject are, to a considerable extent, drawn from various technical and procedural materials used in the collection of the data. These materials helped the field interviewers to understand more fully the intent of each question and thus to resolve problems or unusual cases. Additional explanatory information has been added to this portion of the text to assist the user in understanding the statistics.

**Comparability with the 1973 through 1983 Annual Housing Survey data.** Most of the concepts and definitions used in the 1973 through 1983 Annual Housing Survey are essentially the same for items that also appear in the American Housing Survey in 1984 and beyond (redesigned AHS).

## APPENDIX A

There are one major and two minor differences in the housing unit definition. The major difference is that the redesigned American Housing Surveys include vacant mobile homes as housing units. The 1973 through 1983 Annual Housing Surveys excluded these units. A minor difference in the definition is the 1973 through 1983 requirement that a housing unit must have either direct access from the outside or through a common hallway, or complete kitchen facilities for the exclusive use of the occupants. In the redesigned American Housing Survey, the complete kitchen facilities alternative was dropped with direct access required of all units. A second minor difference is in the definition of group quarters. In the 1973 through 1983 Annual Housing Surveys, a household containing five or more persons unrelated to the householder was considered to be group quarters. In the redesigned American Housing Survey, the cutoff was changed to nine or more persons unrelated to the householder. Differences that relate to specific subject areas are discussed under the subjects in this appendix.

Some differences in the data may exist for subjects covered in both the 1973 through 1983 AHS and the redesigned AHS as a result of the redesign of the questionnaires used. For a detailed discussion of those characteristics that show significant differences between 1973 through 1983 AHS and the redesigned AHS, see the "Qualifications of the data" section in the introduction.

**Comparability with 1980 Census of Housing data.** The concepts and definitions are essentially the same for items that appear in both the 1980 census and the redesigned AHS survey.

There is a major difference, however, in the time period of the recent mover classification. In the redesigned American Housing Survey, recent movers are households that moved into their unit during the 12 months prior to interview, a period of 1 year or less. In the 1980 Census of Housing, Volume III, Mover Households reports, the time period was from January 1, 1979, through March 31, 1980, a period of 15 months or less.

A variety of data on mortgages and homeowner properties are presented in the 1980 Census of Housing, Volume V, *Residential Finance* report. Differences in the concepts and definitions in the redesigned American Housing Survey and Volume V include the following: The basic unit of tabulation in AHS is the housing unit; in Volume V, it is the property. All the data in AHS are provided by the occupant; in Volume V, mortgage is reconciled with responses from the lender.

In the redesigned American Housing Survey, units are classified as new construction if constructed 4 years or less from the date of interview. In the 1980 Census of Housing, Volume VI, *Components of Inventory Change* report, units are classified as new construction if constructed in 1974 through October of 1980.

Data on poverty level in the 1980 Census of Housing do not contain the income of household members unrelated

to the householder. In the redesigned American Housing Survey, data on poverty level include the income of all household members whether or not they are related to the householder.

Differences between the redesigned American Housing Survey data and the 1980 census may also be attributed to several other factors. These include the extensive use of self-enumeration in the census in contrast to personal interview in the survey; differences in processing procedures and sample designs; the sampling variability associated with the sample data from the redesigned AHS; the nonsampling errors associated with the survey estimates; and the nonsampling errors associated with census data.

**Comparability with Current Construction Reports from the Surveys of Construction.** The Census Bureau issues several publications under the general titles, "Current Construction Reports." The data for these reports are primarily from the Surveys of Construction.

The Surveys of Construction consists of approximately 8,300 permit-issuing places throughout the United States. The reports from the survey contain current data on housing starts and completions, construction authorized by building permits, new one-unit structures sold and for sale, characteristics of new housing, and value of new construction put in place. The concepts and definitions used in this report differ from some of those used in the Surveys of Construction. The major difference is that the Surveys of Construction shows counts and characteristics of housing units in various stages of construction through completion. The redesigned American Housing Survey shows counts and characteristics of the existing housing inventory. Additional differences between the redesigned American Housing Survey and the Surveys of Construction may be attributed to factors such as the sampling variability and nonsampling errors of the data from the two surveys, survey procedures and techniques, and processing procedures.

**Comparability with other Bureau of the Census data.** Statistics in this report refer, for the most part, to the housing unit, household, or householder. Data on the individual household members may differ from other similar data compiled by the Bureau of the Census. For these types of data, write to Chief, Population Division, Bureau of the Census, Washington, DC 20233.

## Living Quarters

Living quarters are classified as either housing units or group quarters. Usually, living quarters are in structures intended for residential use (e.g., a one-unit structure, apartment house, hotel or motel, boarding house, or mobile home or trailer). Living quarters may also be in structures intended for nonresidential use (e.g., the rooms in a warehouse where a watchman lives), as well as in places such as tents, caves, and old railroad cars.

**Housing units.** A housing unit is a house, an apartment, a group of rooms, or a single room occupied or intended for occupancy as separate living quarters. Separate living quarters are those in which the occupants do not live and eat with any other persons in the structure and that have direct access from the outside of the building or through a common hall that is used or intended for use by the occupants of another unit or by the general public. The occupants may be a single family, one person living alone, two or more families living together, or any other group of related or unrelated persons who share living arrangements (except as described in the section on group quarters).

For a detailed discussion of changes to the housing unit definition, see the "Comparability with the 1973 through 1983 Annual Housing Survey Data" section in this appendix.

**Group quarters.** Group quarters are living arrangements for institutional inmates or for other groups containing nine or more persons not related to the person in charge. Group quarters are located most frequently in institutions, boarding houses, military barracks, college dormitories, fraternity and sorority houses, hospitals, monasteries, convents, and ships. A house or apartment is considered group quarters if it is shared by the person in charge and nine or more persons not related to the person in charge or, if there is no person in charge, by 10 or more unrelated persons. Information on the housing characteristics of group quarters was not collected.

**Hotels, motels, rooming houses, etc.** Occupied rooms or suites of rooms in hotels, motels, and similar places are classified as housing units only when occupied by permanent residents; i.e., persons who consider the hotel as their usual place of residence or have no usual place of residence elsewhere. Vacant rooms or suites of rooms are classified as housing units only in those hotels, motels, and similar places in which 75 percent or more of the accommodations are occupied by permanent residents.

If any of the occupants in a rooming or boarding house live and eat separately from everyone else in the building and have direct access, their quarters are classified as separate housing units. The remaining quarters are combined. If the combined quarters contain eight or fewer roomers unrelated to the householder, or person in charge, they are classified as group quarters. In a dormitory, residence hall, or similar place, living quarters of the supervisory staff and other employees are separate housing units if they satisfy the housing unit criteria; other living quarters are considered group quarters.

**Occupied housing units.** A housing unit is classified as occupied if a person or group of persons is living in it at the time of the interview or if the occupants are only temporarily absent, for example, on vacation. However, if the unit

is occupied entirely by persons with a usual place of residence elsewhere, the unit is classified as vacant. By definition, the count of occupied housing units is the same as the count of households.

**Race.** The classification of "race" refers to the race of the householder occupying the housing unit. The concept of race as used by the Census Bureau does not denote a clear-cut scientific definition of biological stock. Race was determined on the basis of a question that asked for self-identification of a person's race. Figures on tenure are given separately for White and Black householders in table 1. Detailed characteristics of units with Black householders are presented in chapter 4.

**Hispanic.** The classification "Hispanic" refers to the origin of the householder occupying the housing unit. Detailed characteristics of housing units with Hispanic householders are presented in chapter 5. Hispanic origin was determined on the basis of a question that asked for self-identification of persons living in the unit who were Hispanic or Spanish American. Hispanic persons may be of any race.

In the 1980 census and the 1973 through 1983 Annual Housing Survey, the concept Spanish origin was used. Spanish origin is basically the same as Hispanic according to Census Bureau definitions. Both the census and the 1973 through 1983 AHS asked respondents to choose from a list or flashcard containing a variety of Spanish origin categories. For this reason, care should be taken in making comparisons of Spanish-origin estimates from the 1973 through 1983 Annual Housing Survey, the 1980 census, and the 1989 American Housing Survey.

**Tenure.** A housing unit is owner occupied if the owner or co-owner lives in the unit, even if it is mortgaged or not fully paid for. Also, a cooperative or condominium unit is owner occupied only if the owner or co-owner lives in it. All other occupied housing units are classified as renter occupied, including housing units rented for cash rent and those occupied without payment of cash rent.

**Suitability for year-round use.** A housing unit is suitable for year-round use if it is built as a permanent structure, properly equipped and insulated for heating as necessitated by the climate, and if it has a heating system that would be adequate during extended cold periods.

**Recent movers.** In this report, data for recent movers are shown for units where the householder/respondent moved into the present unit during the 12 months prior to the interview.

## Utilization Characteristics

**Persons.** All persons occupying the housing unit are counted. These persons include not only occupants related

to the householder but also any lodgers, roomers, boarders, partners, wards, foster children, and resident employees who share the living quarters of the householder. The median for persons is rounded to the nearest tenth.

A person is counted at the usual place of residence for that person. This refers to the place where the person lives and sleeps most of the time. This place is not necessarily the same as a legal residence, voting residence, or domicile.

**Rooms.** The statistics on rooms are for the number of housing units with a specified number of rooms. Rooms counted include whole rooms used for living purposes, such as bedrooms, living rooms, dining rooms, kitchens, recreation rooms, permanently enclosed porches that are suitable for year-round use, lodgers' rooms and other finished and unfinished rooms. Also included are rooms used for offices by a person living in the unit. The median for rooms is rounded to the nearest tenth.

A dining room, to be counted, must be a separate room. It must be separated from adjoining rooms by built-in floor-to-ceiling walls extending at least a few inches from the intersecting walls. Movable or collapsible partitions or partitions consisting solely of shelves or cabinets are not considered built-in-walls. Bathrooms are not counted as rooms.

Data on the number of rooms are not completely comparable with data on the number of rooms collected before the redesigned AHS. For a detailed discussion, see the "Qualifications of the data" section in the introduction.

**Persons per room.** Persons per room is computed for each occupied housing unit by dividing the number of persons in the unit by the number of rooms in the unit. The figures shown refer, therefore, to the number of housing units having the specified ratio of persons per room.

## Structural Characteristics

**New construction.** Housing units built in the 4 years prior to the date of the interview are classified as new construction.

**Year structure built.** Year structure built refers to when the building was first constructed, not when it was remodeled, added to, or converted. The figures refer to the number of housing units in structures built during the specified periods and in existence at the time of the interview. For mobile homes and trailers, the manufacturer's model year was assumed to be the year built. Median year built is rounded to the nearest year.

**Units in structure.** In determining the number of housing units in a structure, all units, both occupied and vacant, were counted. The statistics are presented for the number of housing units in structures of specified type and size, not for the number of residential structures.

A structure is a separate building if it has either open space on all sides or is separated from other structures by dividing walls that extend from ground to roof. Structures containing only one housing unit are further classified as detached or attached.

A one-unit structure is detached if it has open space on all four sides even though it has an adjoining shed or garage. A one-unit structure is attached if it has one or more walls extending from ground to roof that divide it from other adjoining structures and does not share a furnace or boiler with adjoining structures such as in rowhouses, townhouses, etc.

Mobile homes and trailers are shown as a separate category. When one or more rooms have been added to a mobile home or trailer, it is classified as a mobile home. In previous AHS reports, these units were classified as a house, apartment, or flat.

Data on units in structure including mobile homes are not completely comparable with data on units in structure collected before the redesigned AHS. For a detailed discussion, see the "Qualifications of the data" section in the introduction.

## Plumbing Characteristics

**Water supply stoppage.** Water supply stoppage means that the housing unit was completely without running water from its regular source. Completely without running water means that the water system servicing the unit supplied no water at all; that is, no equipment or facility using running water (in kitchen and bathroom sinks, shower, in bathtub, flush toilet, dishwasher, and other similar items) had water supplied to it or all were inoperable. The reason could vary from a stoppage because of a flood or storm, to a broken pipe, to a shutdown of the water system, to a failure to pay the bill, or other reasons.

Data on water supply stoppage are shown if the stoppage occurred in the 3 months prior to the interview, or while the household was living in the unit if less than 3 months, and if the breakdown or failure lasted 6 consecutive hours or more. Housing units with water supply stoppage are also classified according to the number of times the stoppages occurred.

**Sewage disposal and sewage disposal breakdowns.** A public sewer is connected to a city, county, sanitary district, neighborhood, or subdivision sewer system. Included are only systems operated by a government body or private organization with a system serving six or more units. Small sewage treatment plants, which in some localities are called neighborhood septic tanks, are classified as public sewers. A septic tank or cesspool is an underground tank or pit used for disposal of sewage (serving five or fewer units). A chemical toilet, which may be inside or outside the unit, uses chemicals to break down or dissolve sewage. Housing units for which sewage is disposed of in some other way are included in the "other" category.

The data on breakdowns in the means of sewage disposal are limited to housing units in which the means of sewage disposal was a public sewer, septic tank, or cesspool. Breakdowns refer to situations in which the system was completely unusable. Examples include septic tank being pumped because it no longer perked, tank collapsed, tank exploded, sewer main broken, sewer treatment plant not operating because of electric failure, or water service interruption, etc.

Data on breakdowns are shown if they occurred in the 3 months prior to the interview, or while the household was living in the unit if less than 3 months, and if the breakdown lasted 6 consecutive hours or more. Housing units with a breakdown in sewage disposal are also classified according to the number of breakdowns.

**Flush toilet and flush toilet breakdowns.** A privy or chemical toilet is not considered a flush toilet. Flush toilets outside the unit were not counted. The statistics on breakdowns of flush toilet are shown for housing units with at least one flush toilet for the household's use only. The flush toilet may be completely unusable because of a faulty flushing mechanism, broken pipes, stopped-up soil pipe, lack of water supplied to the flush toilet, or some other reason.

Data on breakdowns are classified by whether any of the flush toilets were working in the 3 months prior to the interview, or while the household was living in the unit if less than 3 months, and the number of times the breakdown lasted 6 hours or more.

## Equipment

**Heating equipment and heating equipment breakdowns.** Data are shown for the main heating equipment and other heating equipment used in addition to the main heating equipment. More than one category of "other heating equipment" could be reported for the same household.

Only one type of equipment was reported as the "main heating equipment." Warm-air furnace refers to a central system that provides warm air through ducts leading to various rooms. Steam or hot water system refers to a central heating system in which heat from steam or hot water is delivered through radiators or other outlets. It also includes solar heated hot water that is circulated throughout the home. An electric heat pump refers to a heating-cooling system that utilized indoor and outdoor coils, a compressor, and a refrigerant to pump in heat during the winter and pump out heat during the summer. Only heat pumps that are centrally installed with ducts to the rooms are included in this category. Built-in electric units are permanently installed in floors, walls, ceilings, or baseboards. A floor, wall, or other built-in hot-air unit without ducts delivers warm air to the room right above the furnace or to the room(s) on one or both sides of the wall in which the furnace is installed. Room heaters with flue include

nonportable room heaters in the wall or free standing heaters that burn liquid fuel, and that are connected to a flue, vent, or chimney to remove smoke and fumes. Room heaters without flue include any room heater that burns gas, oil, or kerosene that does not connect to a flue, vent, or chimney. Portable electric heaters include heaters that receive current from an electrical wall outlet. Stoves refer to ranges, stoves, or Franklin stoves that burn wood, coal, or other solid fuel. Fireplaces with inserts have a fan-forced air circulation system to force the heat into the room. A fireplace without inserts or with only glass door fire screens or firebacks inserted in the back of the fireplace to passively reflect heat is included in the category "fireplace without inserts."

For breakdowns of heating equipment, statistics are shown for housing units occupied by the householder during the winter prior to the interview. The data are classified by whether the housing unit was uncomfortably cold for 24 hours or more, the number of times equipment breakdowns occurred lasting 6 hours or more, and causes for the breakdowns.

The heating equipment is broken down if it is not providing heat at its normal heating capacity through some fault in the equipment. Utility interruptions occur when there is a cut off in the gas, electricity, or other fuel supplying the heat. Inadequate heating capacity refers to heating equipment that is providing heat at its normal capacity but the housing unit is still too cold for the occupants. Inadequate insulation refers to air drafts through window frames, electrical outlets, or walls that are cold.

## Housing and Neighborhood Quality

### Selected amenities:

*Porch, deck, balcony, or patio.* The porch, deck, balcony, or patio must be attached to the sample unit, not just to the building or free standing. Porches may be enclosed or open.

*Telephone available.* A housing unit is classified as having a telephone if there is a telephone for receiving calls available to the occupants of the unit. The telephone may be located outside or inside the housing unit, and one telephone may serve the occupants of several units. The number of housing units with a telephone available, therefore, does not indicate the number of telephones installed in homes.

*Usable fireplace.* Excludes the following: fireplaces that have been blocked off or whose chimney or flue have been filled, decorative or artificial fireplaces, and Franklin stoves. Free-standing fireplaces are included in this item.

*Separate dining room.* A separate dining room is an area separated from adjoining rooms by a built-in floor-to-ceiling wall extending at least a few inches from its intersecting wall. Built-in walls do not include movable or collapsible partitions or partitions consisting solely of shelves and cabinets.

*Living rooms, recreation rooms, etc.* Includes family rooms, dens, recreation rooms and/or libraries.

*Garage or carport.* The garage or carport must be on the same property but does not have to be attached to the house. Off-street parking is considered driveway or parking lot privileges that is paid for as part of the rent.

#### Selected deficiencies:

*Signs of rats.* The statistics on signs of rats refer to respondents who reported seeing rats or signs of rats inside the house or building during the last 3 months or while the household was living in the unit if less than 3 months. Signs of rats include droppings, holes in the wall, or ripped or torn food containers.

*Holes in floors.* Data are shown on whether there are holes in the interior floors of a housing unit. The holes do not have to go all the way through to a lower floor or to the exterior of the unit. The holes must be large enough to cause someone to trip.

*Open cracks or holes (interior).* Statistics are presented on whether or not there are open cracks or holes in the interior walls or ceilings of the housing unit. Included are cracks or holes that do not go all the way through to the next room or to the exterior of the housing unit. Hairline cracks or cracks that appear in the walls or ceilings but are not large enough to insert the edge of a dime and very small holes caused by nails or other similar objects are not considered to be open cracks or holes.

*Broken plaster or peeling paint (interior).* The area of peeling paint or broken plaster must be on the inside walls or ceilings, and at least one area of broken plaster or peeling paint must be larger than 8 inches by 11 inches.

*Electric wiring.* A housing unit is classified as having exposed electric wiring if the unit has any wiring that is not enclosed either in the walls or in metal coverings, or if the unit has any wiring outside the walls enclosed in some material other than metal. Excluded from the tabulation are appliance cords, extension cords, chandelier cords, and telephone or antenna wires.

*Electric wall outlets.* A housing unit is classified as having rooms without electric wall outlets if there is not at least one working electric wall outlet in each room of the unit. A working electric wall outlet is one that is in operating condition; i.e., can be used when needed. If a room does not have an electric wall outlet, an extension cord used in place of a wall outlet is not considered to be an electric wall outlet.

**Severe physical problems.** A unit has severe physical problems if it has any of the following five problems:

*Plumbing.* Lacking hot or cold piped water or a flush toilet, or lacking both bathtub and shower, all inside the structure for the exclusive use of the unit.

*Heating.* Having been uncomfortably cold last winter for 24 hours or more because the heating equipment broke down, and it broke down at least three times last winter for at least 6 hours each time.

*Electric.* Having no electricity or all of the following three electric problems: exposed wiring, a room with no working wall outlet, and three blown fuses or tripped circuit breakers in the last 90 days.

*Upkeep.* Having any five of the following six maintenance problems: water leaks from the outside, such as from the roof, basement, or around windows and doors; leaks from inside structure such as pipes or plumbing fixtures; holes in the floors; holes or open cracks in the walls or ceilings; more than 8 inches by 11 inches of peeling paint or broken plaster; or signs of rats or mice in the last 90 days.

*Hallways.* Having all of the following four problems in public areas: no working light fixtures, loose or missing steps, loose or missing railings, and no elevator.

**Moderate physical problems.** A unit has moderate physical problems if it has any of the following five problems but none of the severe problems.

*Plumbing.* On at least three occasions during the last 3 months or while the household was living in the unit if less than 3 months, all the flush toilets were broken down at the same time for 6 hours or more.

*Heating.* Having unvented gas, oil, or kerosene heaters as the primary heating equipment.

*Upkeep.* Having any three of the overall list of six upkeep problems mentioned above under severe physical problems.

*Hallways.* Having any three of the four hallway problems mentioned above under severe physical problems.

*Kitchen.* Lacking a sink, refrigerator, or either burners or oven all inside the structure for the exclusive use of the unit.

**Overall opinion of structure.** The data presented are based on the respondent's overall opinion of the house or apartment as a place to live. The respondent was asked to rate the structure based on a scale from 1 to 10, where 10 is the best and 1 is the worst.

**Overall opinion of neighborhood.** The data presented are based on the respondent's overall opinion of the neighborhood. The respondent defines neighborhood. The respondent was asked to rate the neighborhood based on a scale from 1 to 10, where 10 is the best and 1 is the worst.

**Neighborhood conditions.** The statistics presented in table 3 are based on the respondent's opinion and attitude toward the neighborhood. The respondent defines neighborhood. The respondent was asked a two-part question: (1) If anything about the neighborhood bothered the respondent and (2) if so, what? The interviewer coded the responses into the following categories: crime; noise; traffic; litter or housing deterioration; poor city/county services; undesirable commercial, institutional, or industrial property; people; and other. Multiple responses were allowed. The respondent may not have the same opinion as a neighbor about neighborhood conditions. The respondent's opinion may or may not reflect the actual neighborhood situation.

**Neighborhood conditions and neighborhood services.** The statistics presented in table 4, as a percent of the total occupied units, are based on the respondent's opinion and attitude toward the neighborhood in which he/she lives. Thus, the respondent's answer may or may not reflect the actual description of the neighborhood. Furthermore, the respondent may not have the same opinion as a neighbor about the neighborhood services; for example, the respondent may feel that the street lighting or neighborhood shopping facilities are inadequate but a neighbor may not.

**Neighborhood conditions and wish to move.** Data on neighborhood conditions and wish to move in table 4 are based on the respondent's answers to a three-part question concerning specific neighborhood conditions. The respondent was asked (1) if the condition was present, (2) if the condition was bothersome, and (3) if the condition was so objectionable that the respondent would like to move from the neighborhood.

- Street noise or heavy street traffic—Street noise refers to noise made by children playing outdoors, noise from a factory or business, or any other sounds that the respondent considers street noise. Traffic refers to the amount of vehicular traffic that the respondent considers "heavy."
- Neighborhood crime—This category refers to all forms of street and neighborhood crime such as petty theft, assaults against the person, burglary, etc., or any related activities that the respondent judges to be a crime.

**Neighborhood services.** Data on neighborhood services are based on the respondent's answer to a series of questions concerning neighborhood services.

The respondent was asked a three-part question on public transportation: (1) if service is available, (2) if service is satisfactory, and (3) if any member of the household used the service at least once a week.

Data were also collected on satisfaction with neighborhood shopping such as grocery stores and drug stores, and whether or not these stores are located within 1 mile of the neighborhood.

Respondents were asked a three-part question on public elementary schools: (1) if children within the household attended public elementary school or private elementary school, (2) if the public elementary school is satisfactory, and (3) if the public elementary school is within 1 mile of the neighborhood.

## Journey to Work

**Workers.** Includes all persons aged 14 years and over who held a job any time the previous week of this survey within the United States.

**Principal means of transportation last week.** Means of transportation refers to the principal mode of travel used to get from home to work. Householders who used different means of transportation on different days of the week were asked to specify the one used most often. Householders who used more than one means of transportation to get to work each day were asked to specify the one used for the longest distance during the work trip. Mass transportation refers to bus or streetcar and subway or elevated railroad.

**Travel time from home to work.** The total elapsed time in minutes that the person reported it usually took to get from home to work during the week prior to interview was counted as the travel time to work. The elapsed time included time spent waiting for public transportation and picking up members of carpools. Respondents were instructed to report travel time to the nearest minute.

**No fixed place of work.** Workers with no fixed place of work were those who did not usually work at the same location each day and did not usually report in to a central location to begin work each day.

**Distance from home to work.** The one-way, "door-to-door" distance in miles that the person reported usually traveling from home to work during the week prior to interview was counted as the travel distance to work. Respondents were instructed to report travel rounded to the nearest mile.

**Departure time to work.** Refers to the time (hour and minutes) the respondent left for work. The categories begin with 12:00 a.m. and progress to 11:59 p.m.

## FINANCIAL CHARACTERISTICS

All of the financial characteristics shown in this report are shown for all renters and/or all owners. In 1983 and earlier, the Annual Housing Survey reported characteristics such as value and rent for specified owners and specified renters only. Specified owners are single-family, owner-occupied units on less than 10 acres with no business or medical office. Specified renters exclude single-family units on 10 acres or more. This report does not present financial characteristics for specified owners and specified renters. See *The American Housing Survey for the United States in 1989*, series H150, for data on specified owners and renters.

**Value.** Value is the respondent's estimate of how much the property (house and lot) would sell for if it were for sale. Any nonresidential portions of the property are excluded from the cost. Medians for value are rounded to the nearest dollar.

**Income.** The statistics on income in the American Housing Survey are based on the respondent's reply to questions on income for the 12 months prior to the interview and are the sum of the amounts reported for wage and salary income, self-employment income, interest or dividends, Social Security or railroad retirement income, public assistance or welfare payments, alimony or child support, and all other money income. The figure represents the amount of income received before deductions for personal income taxes, Social Security, union dues, bond purchases, health insurance premiums, Medicare deductions, etc. Medians for income are rounded to the nearest hundred dollars.

In this report, the statistics are shown for the money income of the household (the sum of the income of the householder and all other household members 14 years old and over). Household income is shown separately for family households and nonfamily households.

Receipts from the following sources were not included as income: value of income "in kind," such as free living quarters, housing subsidies, food stamps, or food produced and consumed in the home; money received from the sale of property (unless the recipient was engaged in the business of selling such property); money borrowed; tax refund; withdrawal of bank deposits; accrued interest on uncashed savings bonds; exchange of money between relatives living in the same household; gifts of money; and lump-sum payments from inheritances, insurance policies, estates, trusts, gifts, etc.

The income statistics and the characteristics of the household refer to different periods in time. For 1989, the income data refer to the 12 months prior to the interview, but the household characteristics refer to the date of interview. Thus, family or household income does not include amounts received by persons who were members of the family during all or part of the income period if these

persons no longer resided with the family at the time of the interview. On the other hand, family or household income includes income reported by persons who did not reside with the household during the income period but who were members at the time of the interview. For most households, however, the income reported was received by persons who were members of the household throughout the income period.

There may be significant differences in the income data between the American Housing Survey and other Census Bureau surveys and censuses. For example, the time period for the income data in the American Housing Survey refers to the 12 months prior to the interview, but other income data generally refer to the calendar year prior to the date of the interview. Additional differences in the income data may be attributed to factors such as the various ways income questions are asked, the sampling variability and nonsampling errors between the American Housing Survey and other Census Bureau surveys and censuses, survey procedures and techniques, and processing procedures.

**Current income.** Two new questions were added to the American Housing Survey in 1989. Upon completion of the detailed income questions, respondents were asked, "Is your total family income THIS MONTH about the same as it was a year ago?" "About the same" was defined within 10 percent or just cost of living adjustments. If the respondent answered "no," a second question was asked, "What do you expect your total family income to be in the NEXT 12 MONTHS?" Current income for households whose most recent month's income was NOT about the same as a year ago is the "total expected family income in the NEXT 12 MONTHS." Current income for households whose most recent month's income WAS about the same as a year ago is "family and primary individual income." For the majority of households, current income equals income of families and primary individuals. Data on current income is not published separately. It is used in the calculation of "Monthly housing costs as percent of current income." It is felt that respondents who have only recently entered the job market and those who changed jobs during the past year often report a previous year's income, which is too low to accurately reflect their current financial situation as it relates to the value of their home and their housing costs.

**Poverty status.** The poverty data in this report differs from official poverty estimates in two important respects. The first important difference is the use of a poverty definition that is based on household income in place of the official method that is based on the income of the family or the unrelated individual. Under the official approach, the poverty status of two unrelated individuals living together would be determined by comparing the income of each individual to the poverty threshold for an unrelated individual. The result might be that both were in poverty, both were out of poverty, or one was in poverty and one was

not. Under the approach used in this report, the two unrelated individuals were treated as members of a two-person family, and their poverty status was determined by comparing their combined income to the poverty threshold for a two-person family. The effect of using a poverty concept that is based on household income is to undercount the number of persons in poverty relative to the official estimate.

A study based on the March 1975 Current Population Survey found that poverty estimates based on a household income concept were about 6 percent lower than official estimates. For more information, see Technical Paper X, *Effect of Using a Poverty Definition Based on Household Income*, U.S. Department of Health, Education, and Welfare, 1976. A second important difference between the poverty estimates in this report and the official poverty estimates has to do with the method used to measure income.

The official annual poverty estimates are based on data collected in the March supplement to the Current Population Survey. The income questions asked in that survey are very detailed and measure the amount of income received during the previous calendar year. The income questions asked in the AHS are much less detailed and measure the amount received during the previous 12 months. Because interviews were conducted during the period August through December, the income measures do not pertain to a fixed period. Many of the income questions in the AHS were asked on a household rather than an individual income basis. The lack of data for individuals made it necessary to adopt a poverty definition based on household income.

Officially, families and unrelated individuals are classified as being above or below poverty level using the poverty index originated at the Social Security Administration in 1964 and revised by the Federal Interagency Committees in 1969 and 1980. The poverty index is based solely on money income and does not reflect the fact that many low-income persons receive noncash benefits such as food stamps, Medicaid, and public housing. The index is based on the Department of Agriculture's 1961 Economy Food Plan and reflects the different consumption requirements of families based on their size and composition. The poverty thresholds are updated every year to reflect changes in the Consumer Price Index (CPI). For further details, see Current Population Reports, Series P-60, No. 171, *Poverty in the United States: 1988 and 1989*.

**Mortgage status on property.** The owner or the owner's spouse was asked the status of mortgages or similar loans currently in effect on second homes or investment properties. Units were reported as with mortgage or as being owned free and clear. A mortgage or similar debt refers to all forms of debt where the property is pledged as security for payment of the debt. It includes such debt instruments as deeds of trust, trust deeds, mortgage bonds, and vendors' liens. In the first three arrangements, usually a third party, known as the trustee, holds the title to the

property until the debt is paid. In the vendor lien arrangement, the title is kept by the buyer, but the seller (vendor) reserves, in the deed to the buyer, a lien on the property to secure payment of the balance of the purchase price. Also included as a mortgage or similar debt are contracts to purchase; land contracts, and lease-purchase agreements where the title to the property remains with the seller until the agreed upon payments have been made by the buyer.

**Monthly housing costs.** The data are presented for owner- and renter-occupied housing units. Monthly housing cost for owner-occupied units is the sum of monthly payments for the mortgage or installment loan or contract; real estate taxes (including taxes on mobile homes or trailer sites if the site is owned); property insurance; homeowner's association fee, cooperative or condominium fee; mobile home park fee; land rent; utilities (electricity, gas, water, and sewage disposal); fuels (oil, coal, kerosene, wood, etc.); and garbage and trash collection. Monthly housing costs are not computed for households with a mortgage or similar debt that failed to report the amount of their loan or contract payment.

For renter-occupied housing units, monthly housing costs include the contract rent plus estimated average monthly cost of utilities (electricity, gas, water, and sewage disposal); fuels (oil, coal, kerosene, wood, etc.); property insurance; mobile home land rent; and garbage and trash collection if these items are paid for by the renter (or paid for by someone else, such as a relative, welfare agency, or friend) in addition to rent. Renter housing units occupied without payment of cash rent are shown separately as no cash rent.

Monthly housing costs are shown for all renters and all owners. In 1983 and earlier, the Annual Housing Survey published selected monthly housing costs and gross rent for specified owners and specified renters only. This report does not present data for specified owners or renters. Medians for monthly housing costs are rounded to the nearest dollar.

**Monthly housing costs as percent of current income.** The yearly housing costs (monthly costs multiplied by 12) are expressed as a percentage of the total current income (see definition of current income). This percentage is calculated for the same owner- and renter-occupied housing units for which "Monthly housing costs" were computed (for exclusion, see "Monthly housing costs"). The percentage was computed separately for each unit and rounded to the nearest percent. The measure was not computed for units where occupants reported no income or a net loss.

Before 1989, the item "Monthly housing costs as percent of income," was computed by using the income of family and primary individuals only. It was felt that respondents who only recently entered the job market or who changed jobs during the past year often reported a previous year's income, which was too low to accurately reflect

their current situation. As a result of this change, data for "Monthly housing costs as a percent of current income" published as of 1989 are not comparable to "Monthly housing costs as a percent of income" published in previous surveys.

## Household Characteristics

**Household.** A household consists of all the persons who occupy a housing unit. By definition, the count of households is the same as the count of occupied housing units.

**Householder.** The householder is the first household member who is 18 years old and over and is the owner or renter of the sample unit. If no household member occupying the sample unit owns or rents the unit, the householder is the first household member listed who is 18 years old or older. In cases where no household member listed owns or rents the unit or is 18 years or older, the first household member listed is the householder. Before 1980, the concept "head of household" was used. One person in each household was designated as the head, that is, the person who was regarded as the head by the respondent. However, if a married woman living with her husband was reported as the head, her husband was considered the head for the purpose of simplifying the tabulations.

## Family Type

**Family.** Family refers to the householder and all (one or more) other persons living in the same household who may be related to the householder by blood, marriage, or adoption. Married couples related to the householder of a family are included in the family and are not considered as separate families unless they reside in separate living quarters.

**Married couple.** Each household in this group consists of the householder and spouse and one or more other persons, if any.

**Male householder, no wife present.** This category includes families with male householders who are married, but with wife absent because of separation or other reason where husband and wife maintain separate residences; and male householders who are widowed, divorced, or single.

**Female householder, no husband present.** This category includes families with female householders who are married, but with husband absent because of separation or other reason where husband and wife maintain separate residences; and female householders who are widowed, divorced, or single.

**Nonfamily households.** Housing units where the householder lives alone or with nonrelatives only. A lodger, servant, or other person unrelated to the householder is considered a member of the household but not of the family.

**Own children under 18 years old.** Statistics on presence of own children of households are shown in this report. A child under 18 years old is defined as an own child if he or she is a single (never married) son, daughter, stepchild, or adopted child of a householder. Own children of subfamilies are excluded from the total count of own children.

**Age of householder.** The age classification refers to the age reported for the householder as of that person's last birthday.

**Elderly.** Data for elderly include all households with a householder of 65 years of age and over.

## Additional Residential Properties

**Ownership.** This refers to households owning additional residential property in addition to their usual residence. The property may be owned for vacation or investment purposes as well as other reasons.

**Reasons for ownership.** Respondents indicated the reason for owning additional residential property. The categories include previous usual residence, used for recreational purposes, investment purposes, unable to sell property, inherited property, and other reasons.

**Vacation units.** Vacation homes or recreational homes characteristics are only shown for the first vacation home listed. Vacation homes exclude multiunit buildings and units with ownership shared with nonhousehold member. Units reported as both vacation and investment properties are classified as vacation units.

**Investment properties.** Investment properties characteristics are shown for up to six additional properties. Investment properties include units or multiunit buildings but exclude those properties used also for recreational purposes. Units reported as both vacation and investment properties are classified as vacation units.

**Shared ownership.** This item is restricted to owner-occupied housing units. Shared ownership includes properties where the ownership of the investment property is shared with one or more nonhousehold members.

**Type of housing unit.** This item refers to the type of housing unit used for vacation or recreational purposes. The types include single-family home, unit in multiunit building, mobile home, or other type.

**Type of property.** This item refers to the type of residential property used for investment purposes. Those units used for both recreational and investment purposes are

excluded from this category. The types include single-family homes, multiunit buildings, unit in a multiunit buildings, mobile homes, or other type.

**Value of property.** Refers to the amount that the property (vacation or investment) is perceived to sell for on today's market. The value of shared ownership property is limited to respondent's share only.

**Location of property.** Refers to the distance from current residence to the vacation or investment property.

Statistics are shown for within 150 miles or 150 miles and greater from current residence.

**Nights spent at vacation unit.** Refers to the number of nights spent at the unit during the past year. Data are shown for 3 nights or less, 4 to 7 nights, 8 to 28 nights, and 29 nights or more. The median number of nights is rounded to the nearest whole number.

### REGULAR OCCUPIED - Continued

|   |  |   |                  |
|---|--|---|------------------|
| <b>47a.</b> Last winter was there any time when the house/apartment was so cold for 24 hours or more that it caused anyone in your household discomfort?                          |  | <input type="checkbox"/> Yes<br>1<br>2 <input type="checkbox"/> No<br>3 <input type="checkbox"/> Did not live here last winter  | Skip to item 48a |
| <b>b. Was that because the heating equipment broke down?</b>  |  | <input type="checkbox"/> Yes<br>1<br>2 <input type="checkbox"/> No, didn't break down – Skip to item 47e  |                  |
| <b>c. How many times did it (they all) break down for 6 hours or more?</b>  |  | <input type="checkbox"/> Number of breakdowns lasting 6 hours or more<br>1<br>2 <input type="checkbox"/> Never broken for 6 hours   |                  |
| <b>d. Was it cold for any other reason?</b>   |  | <input type="checkbox"/> Yes<br>1<br>2 <input type="checkbox"/> No – Skip to item 48a   |                  |
| <b>e. What was the reason?</b>  |  | <input type="checkbox"/> Utility interruption<br>1<br>2 <input type="checkbox"/> Inadequate heating capacity<br>3 <input type="checkbox"/> Inadequate insulation<br>7 <input type="checkbox"/> Other – Specify _____  |                  |
| <b>f. Does the (house/apartment) have a porch, deck, balcony, or patio? (Measuring at least four feet by four feet) (Exclude if already counted as a room.)</b>                   |  | <input type="checkbox"/> Yes<br>1<br>2 <input type="checkbox"/> No  |                  |
| <b>g. Does the (house/apartment) have open cracks or holes in the inside walls or ceilings? (Cracks thicker than a dime)</b>  |  | <input type="checkbox"/> Yes<br>1<br>2 <input type="checkbox"/> No  |                  |
| <b>C. Does the (house/apartment) have holes in the floors?</b>  |  | <input type="checkbox"/> Yes<br>1<br>2 <input type="checkbox"/> No  |                  |
| <b>d. Does the (house/apartment) have any areas of peeling paint or broken planter bigger than 8 inches by 11 inches? (The size of a weekly news magazine or standard letter)</b> |  | <input type="checkbox"/> Yes<br>1<br>2 <input type="checkbox"/> No  |                  |
| <b>e. In the last 3 months have you seen any rats or signs of rats in the building?</b>   |  | <input type="checkbox"/> Yes<br>1<br>2 <input type="checkbox"/> No  |                  |
| <b>48a. Does the (house/apartment) have holes in the floor?</b>   |  | <input type="checkbox"/> Yes<br>1<br>2 <input type="checkbox"/> No  |                  |
| <b>b. Does the (house/apartment) have open cracks or holes in the inside walls or ceilings? (Cracks thicker than a dime)</b>  |  | <input type="checkbox"/> Yes<br>1<br>2 <input type="checkbox"/> No  |                  |
| <b>C. Does the (house/apartment) have holes in the floors?</b>  |  | <input type="checkbox"/> Yes<br>1<br>2 <input type="checkbox"/> No  |                  |
| <b>d. Does the (house/apartment) have any areas of peeling paint or broken planter bigger than 8 inches by 11 inches? (The size of a weekly news magazine or standard letter)</b> |  | <input type="checkbox"/> Yes<br>1<br>2 <input type="checkbox"/> No  |                  |
| <b>e. In the last 3 months have you seen any rats or signs of rats in the building?</b>   |  | <input type="checkbox"/> Yes<br>1<br>2 <input type="checkbox"/> No  |                  |
| <b>49. On a scale of 1 to 10, how would you rate the (house/apartment) as a place to live? 10 is best, 1 is worst.</b>  |  | <input type="checkbox"/> Yes<br>1<br>2 <input type="checkbox"/> No – Skip to item 51a, page 10  |                  |
| <b>50a. How would you rate the neighborhood on a scale of 1 to 10? 10 is best, 1 is worst. (Mark 'No neighborhood,' if respondent volunteers this answer.)</b>                    |  | <input type="checkbox"/> Yes<br>1<br>2 <input type="checkbox"/> No – Skip to item 51a, page 10  |                  |
| <b>b. Is there anything about the neighborhood that bothers you?</b>  |  | <input type="checkbox"/> Yes<br>1<br>2 <input type="checkbox"/> No – Skip to item 51a, page 10  |                  |
| <b>c. What? (Write exact words and mark all that apply.)</b>  |  | <input type="checkbox"/> No problem<br>1<br>2 <input type="checkbox"/> Crime<br>3 <input type="checkbox"/> Noise<br>4 <input type="checkbox"/> Traffic<br>5 <input type="checkbox"/> Litter or housing deterioration<br>6 <input type="checkbox"/> Poor city/county services<br>7 <input type="checkbox"/> Undesirable commercial, institutional, or industrial property<br>8 <input type="checkbox"/> People<br>9 <input type="checkbox"/> Other |                  |

51a. Check item (See Control Card item 25.) (Mark first box that applies.)

- Respondent moved here after (last enumeration/January 1, 1988) – Ask item 52a
- Other(s) but not respondent moved here after (last enumeration/January 1, 1988) – Skip to item 55a, page 11
- All moved in before last enumeration/January 1, 1988 – Go to item 51b

b. Check item (See Control Card item 5b.)

- Owned – Skip to item 73a, page 16
- Rented – Skip to item 64a, page 14
- No cash rent – Skip to item 64c, page 14

52a. What are the reasons you moved from your last residence? (Mark all that apply.)

- To establish own household
- To be closer to work/school/other
- Other, financial/employment related
- Moved, widowed, divorced, or separated
- Wanted better quality house (apartment)
- Change from owner to renter OR renter to owner
- Wanted lower rent or less expensive house
- To maintain
- Other housing related reasons
- Other – Specify \_\_\_\_\_

52b. What are the reasons you moved from your last residence? (Mark all that apply.)

- For some purpose
- Forced to leave by the government
- Disaster loss (fire, flood, etc.)
- New job or job transfer
- Other, family/personal related
- Wanted better quality house (apartment)
- Change from owner to renter OR renter to owner
- Wanted lower rent or less expensive house
- To maintain
- Other housing related reasons
- Other – Specify \_\_\_\_\_

53. Check item (Mark first box that applies.)

b. MARK if only one box checked in item 52a OR ASK if two or more boxes checked –

What is the MAIN reason you moved?

- Box 1 marked in item 52a – Ask item 54a
- Box 2 marked in item 52a – Skip to item 54b
- Boxes 1 and 2 both in item 52a – Skip to item 54c

54a. Did you have –

- Because the owner, or members of the owner's family were going to move into that residence?
- Because that unit was going to become a condominium or cooperative?

b. In addition to the reasons given, did you leave –

- Because a private company or person wanted to use the land or building for some other purpose?
- Because the government wanted to use the land or building for some other purpose?
- Because that residence was condemned by the government as unfit for occupancy?

c. (4) Because it was going to be a condominium or cooperative?

- Yes – Ask (2)
- No – Skip to item 55a, page 11

(5) Because the government forced you to leave?

- Yes – Ask (6)
- No – Ask (3)

(6) Was that because the government wanted to use the land or building for some other purpose?

- Yes – Skip to item 55a, page 11
- No – Ask (7)

(7) Because it was condemned by the government as unfit for occupancy?

- Yes – Skip to item 55a, page 11
- No – Ask (4)

54b. Did you leave –

- Yes – Skip to item 55a, page 11
- No – Ask (5)

55a. Was that because the owner or members of the owner's family were going to move into that residence?

- Yes – Skip to item 55a, page 11
- No – Ask (6)

55b. Was that because the government forced you to leave?

- Yes – Ask (7)
- No – Ask (8)

55c. Was that because the government wanted to use the land or building for some other purpose?

- Yes – Skip to item 55a, page 11
- No – Ask (9)

55d. Was that because the government wanted to use the land or building for some other purpose?

- Yes – Ask (10)
- No – Ask (11)

55e. Was that because the government wanted to use the land or building for some other purpose?

- Yes – Skip to item 55a, page 11
- No – Ask (12)

55f. Was that because the government wanted to use the land or building for some other purpose?

- Yes – Ask (13)
- No – Ask (14)

55g. Was that because the government wanted to use the land or building for some other purpose?

- Yes – Ask (15)
- No – Ask (16)

55h. Was that because the government wanted to use the land or building for some other purpose?

- Yes – Ask (17)
- No – Ask (18)

55i. Was that because the government wanted to use the land or building for some other purpose?

- Yes – Ask (19)
- No – Ask (20)

## Facsimile of the American Housing Survey Questionnaire: 1989—Continued

| REGULAR OCCUPIED — Continued   |   |
|--|---|
| 65a. Is the building owned by a public housing authority?  | <p>2840 1 <input type="checkbox"/> Yes — Skip to item 65g<br/>2 <input type="checkbox"/> No</p>   |
| b. Does the Federal Government pay some of the cost of the unit?   | <p>2850 1 <input type="checkbox"/> Yes — Skip to item 65g<br/>2 <input type="checkbox"/> No</p>   |
| c. Does the State or local government pay some of the cost of the unit?  | <p>2860 1 <input type="checkbox"/> Yes — Skip to item 65g<br/>2 <input type="checkbox"/> No</p>   |
| d. Do (young people living here) have to report the household's income to someone every year so they can set the rent?                   | <p>2870 1 <input type="checkbox"/> Yes — Skip to item 66<br/>2 <input type="checkbox"/> No</p>  |
| e. Does the local government limit the rent on the unit through rent control or rent stabilization?                                      | <p>2880 1 <input type="checkbox"/> Yes — Skip to item 66<br/>2 <input type="checkbox"/> No</p>  |
| f. Is the rent adjusted because someone in the household works for or is related to the owner?   | <p>2890 1 <input type="checkbox"/> Yes } Skip to item 66<br/>2 <input type="checkbox"/> No }</p>  |
| g. Of the ... (amount from 6-6b) you reported, how much is this household required to pay?   | 60  |
| 66. Check Item 23, page 3.)<br>□ Mobile home either one-unit or two-or-more units — Skip to item 68<br>□ Not a mobile home — Ask item 67 |   |
| 67. About when was the building originally built?  | <p>2910 1 <input type="checkbox"/> 1980 or later <input type="checkbox"/> Year<br/>           2 <input type="checkbox"/> 1979      } Skip to item 70</p> <p>3 <input type="checkbox"/> 75-78<br/>           4 <input type="checkbox"/> 60-69<br/>           5 <input type="checkbox"/> 50-59      } Skip to item 71,<br/>           6 <input type="checkbox"/> 40-49      page 16<br/>           7 <input type="checkbox"/> 30-39<br/>           8 <input type="checkbox"/> 20-29<br/>           9 <input type="checkbox"/> 1919 or earlier</p> |
| 68. Excluding the dealer's lot, is this the first site on which this mobile home was placed?   | <p>2900 1 <input type="checkbox"/> Yes, first site<br/>           2 <input type="checkbox"/> No, moved from another site<br/>           3 <input type="checkbox"/> Don't know</p>   |
| 69. When is the model year of the mobile home?   | <p>2910 1 <input type="checkbox"/> 1980 or later <input type="checkbox"/> Year<br/>           2 <input type="checkbox"/> 1979      } Ask item 70</p> <p>3 <input type="checkbox"/> 75-78<br/>           4 <input type="checkbox"/> 70-74<br/>           5 <input type="checkbox"/> 60-69      } Skip to item 71,<br/>           6 <input type="checkbox"/> 50-59      page 16<br/>           7 <input type="checkbox"/> 40-49<br/>           8 <input type="checkbox"/> 1939 or earlier</p>   |
| 70. Were the first (person/people) to occupy this home or did someone else live here before you?   | <p>2920 1 <input type="checkbox"/> First occupants<br/>           2 <input type="checkbox"/> Previously occupied</p>  |
| Notes  |   |

| REGULAR OCCUPIED — Continued  |  |
|---|--|
| 71. Check Item 23, page 3.)<br>□ Two-or-more-unit building or two-or-more-unit mobile home — Skip to item 10a, page 24<br>□ All others — Ask item 72a   |  |
| 72a. How large is the lot(s)/site? (Include all connecting land that is owned or that is rented with the home.) If under one acre, convert to approximate square feet by one-eighth acre = 5500 sq. ft., one-quarter acre = 11000 sq. ft., one-third acre = 14000 sq. ft., half acre = 22000 sq. ft., three-quarters acre = 33000 sq. ft., one acre = 40000 sq. ft. | <p>2880 _____ Square feet<br/>           OR<br/>           2890 _____ Feet by<br/>           2900 _____ feet<br/>           OR<br/>           3010 Whole acres<br/>           0 <input type="checkbox"/> Don't know — Ask item 72b</p> |
| b. Is it more than 10 acres?  | <p>3020 1 <input type="checkbox"/> Yes } Skip to item 109a, page 24<br/>           2 <input type="checkbox"/> No }</p>   |
| NOTE — Ask item 69 only for those categories in item 73a which were answered "Yes".   |  |
| 73a. These questions are about major repairs, improvements or alterations made to the house/apartment in the last 2 years. (Count work only once, include work in progress.) (While living here if less than 2 years)   |  |
| (1) Was all or part of the roof replaced in the last 2 years?   | <p>2850 1 <input type="checkbox"/> Yes } Ask c —<br/>           2 <input type="checkbox"/> No }</p>  |
| (2) Were any additions built?   | <p>2870 1 <input type="checkbox"/> Yes<br/>           * 2 <input type="checkbox"/> No } Ask c —<br/>           0 <input type="checkbox"/> No cost</p>  |
| (3) Was the kitchen remodeled or a kitchen added?   | <p>2890 1 <input type="checkbox"/> Yes } Ask c —<br/>           * 2 <input type="checkbox"/> No }</p>  |
| (4) Were any bathrooms remodeled or added?  | <p>2710 1 <input type="checkbox"/> Yes } Ask c —<br/>           * 2 <input type="checkbox"/> No }</p>  |
| (5) Was any siding replaced or added in the last 2 years?   | <p>2730 1 <input type="checkbox"/> Yes } Ask c —<br/>           * 2 <input type="checkbox"/> No }</p>  |
| (6) Were any new storm doors or storm windows bought and installed?   | <p>2750 1 <input type="checkbox"/> Yes } Ask c —<br/>           * 2 <input type="checkbox"/> No }</p>  |
| (7) Was any major equipment, such as a furnace or central air conditioning, replaced or added?  | <p>2770 1 <input type="checkbox"/> Yes } Ask c —<br/>           * 2 <input type="checkbox"/> No }</p>  |
| (8) Was insulation added?   | <p>2790 1 <input type="checkbox"/> Yes } Ask c —<br/>           * 2 <input type="checkbox"/> No }</p>  |
| NOTE — If "Yes" was answered for one or more categories in item 73a, ask item 73b.  |  |
| 74. Check Item 23, page 3.)<br>□ At least one "Yes" marked in item 73a — Skip to item 76, page 17<br>□ All "No" in item 73a — Ask item 75   |  |
| 75. Did the household get a low interest loan or grant from a government program to help pay for making any of these repairs or alterations to your home?   | <p>2830 1 <input type="checkbox"/> Yes<br/>           2 <input type="checkbox"/> No</p>  |

## Facsimile of the American Housing Survey Questionnaire: 1989—Continued

**REGULAR OCCUPIED — Continued**

76. In just the last YEAR, how much was spent on routine maintenance such as painting, repairs, etc.? (i.e., exclude anything already mentioned.)  
 \$ 240       [00]       Nothing  
 (Exclude housecleaning.)

77. Check item (See item 23, page 3.)  
 Mobile home either one-unit or two-or-more units — Skip to item 78  
 Not a mobile home — Add item 78

78. About when was the building originally built?  
 2810       1980 or later       7  
 Month      Year       } Skip to item 81

|      |   |   |      |   |
|------|---|---|------|---|
| 2810 | 1 | □ | 1979 | {<br>2      □ 75-78<br>3      □ 79-84<br>4      □ 60-69<br>5      □ 50-59<br>6      □ 40-49<br>7      □ 30-39<br>8      □ 20-29<br>9      □ 19-18<br>or earlier |
|------|---|---|------|---|

2810       1 Yes, first site  
 2 No, moved from another site  
 3 Don't know

80. What is the model year of the mobile home?  
 2810       1980 or later       7  
 Year       } Ask item 81

|      |   |   |      |  |
|------|---|---|------|--|

|------|---|---|------|--|

2810       1 First occupants  
 2 Previously occupied

81. Were you the first (person/people) to occupy this home or did someone else live here before you?  
 (House/apartment?)  
 (If land and building bought at different times, building only)

82a. When did this household buy the  
 (House/apartment)?  
 (If land and building bought at different times,  
 building only)  
 2830       1       9       Year — Skip to item 82c  
 2      Received as inheritance or gift

82b. In what year did this household (inherit/receive) the home?  
 2840       1       9       Year — Skip to item 82a  
 2      \_\_\_\_\_

c. What was the price?  
 (Exclude closing costs.)  
 (For mobile homes, exclude value of the land.)

d. Was the main source of the down payment the  
 sale of a previous home, savings, or  
 something else?  
 (If bought outright, enter main source of full  
 payment.)

e. Have any of the owners now living here before?  
 (Exclude you) ever owned a home before?

83a. Check item (See item 28a, page 3.)  
 Condominium or cooperative — Skip to item 87a  
 Not a condominium or cooperative — Go to item 83b

b. Check from (See item 23, page 3.)  
 One-unit building — Ask item 84a  
 One-unit mobile home — Skip to item 83a, page 19  
 Two-or-more-unit building or two-or-more-unit mobile home — Skip to item 83a

84a. How large is the lot?  
 (Include all connecting land that is owned or that is rented with the home.)

(If over 1 acre, drop any fractions, don't round up.  
 If under one acre, convert to approximate square feet.)

|                     |   |                |                             |
|---------------------|---|----------------|-----------------------------|
| One-eighth acre     | = | 5500 sq. ft.   | OR                          |
| Quarter acre        | = | 11,000 sq. ft. | Feet by                     |
| One-third acre      | = | 14,000 sq. ft. | feet                        |
| Half acre           | = | 22,000 sq. ft. | OR                          |
| Three-quarters acre | = | 33,000 sq. ft. | Whole acres                 |
| One acre            | = | 44,000 sq. ft. | □ Don't know — Ask item 84b |

b. MARK OR ASK —

Is it more than 10 acres?

c. Is there a commercial establishment on the property?

d. Is there a medical or dental office on the property?

e. How much do you think the house and lot would sell for on today's market?

f. Is there a medical or dental office on the property?

g. Is there a commercial establishment on the property?

h. How much do you think the house and its (lot/yard) would sell for on today's market?

i. How much do you think the house and its (lot/yard) would sell for on today's market?

j. How much do you think the entire building and property would sell for on today's market?

k. How much of that would apply to the apartment only?

l. Is there a commercial establishment on the property?

m. Is there a medical or dental office on the property?

n. How much do you think the house and its (lot/yard) would sell for on today's market?

o. How much do you think the apartment would sell for on today's market?

p. Is there a medical or dental office on the property?

q. Is there a commercial establishment on the property?

r. Is there a medical or dental office on the property?

s. How much do you think the house and its (lot/yard) would sell for on today's market?

## Facsimile of the American Housing Survey Questionnaire, 1989—Continued

**URE INTERVIEWS — Continued**

**149a. Does the (house/apartment) have a porch, deck, balcony, or patio?** (Measuring at least four feet by four feet)  
(Excludes if already counted as a room.)

b. Does the (house/apartment) have open cracks or holes in the inside walls or ceilings? (Cracks thicker than a dime)

c. Does the (house/apartment) have holes in the floors? (Big enough for someone to trip in)

d. Does the (house/apartment) have any area of peeling paint and/or plaster bigger than 8 inches by 11 inches? (The size of a weekly news magazine or standard letter)

**150a. Is the (house/apartment) INTENDED for year round use, for occupancy only on a seasonal basis, or for use by migrant workers?**

b. Does the construction and heating of the (house/apartment) make it suitable for year-round use?

c. How many months has it been since the (house/apartment) was occupied as a permanent home?

d. Is the ownership of the (house/apartment) time-shared?

Notes

**URE INTERVIEWS — Continued**

**151. Check item (See Control Card Item 8a.)**

Owned — Skip to Item 154  
 Rented — Ask item 152a  
 No cash rent — Skip to Item 152c(1)

**152a. How often is the rent on the (house/apartment) due?**

    - 8 61 +  
    2500 \_\_\_\_\_ Times per year  
    12  Monthly

b. How much is the rent?  
 If parking billed separately, exclude it here and mark NO (Items 153a and 153b without asking.)

    2510 \$ \_\_\_\_\_ 00

c. (1) Is this (house/apartment) for vacation or other short-term use?

    - 8 61 +  
    2485 1  Yes  
 2  No

(2) Check item (See Item 127, page 34.)

Mobile home either one-unit or two-or-more-units — Ask item 152d  
 Not a mobile home — Skip to Item 153a

d. Do you pay separate rent for the land?

    2511 1  Yes  
 2  No — Skip to item 152g

e. How many times a year is the (land/site) rent due?

    2512 12  Monthly \_\_\_\_\_ Times per year

f. What is the cost each... (Billing period)?

    2513 \$ \_\_\_\_\_ 00

    0  No cash rent  
 0  Included in mobile home park fee or association fee

g. (----/In addition to the rent) do you pay any (----/additional) mobile home park fee?

    2514 1  Yes  
 2  No — Skip to item 152f

h. How many times a year is the fee due?

    2515 12  Monthly \_\_\_\_\_ Times per year

i. What is the cost each... (Billing period)?

    2516 \$ \_\_\_\_\_ 00

    0  Included in mobile home rent

j. Are there any (----/other) required fees for utility hookups, mobile home association fees, and so forth?

    - 8 61 +  
 2517 1  Yes  
 2  No — Skip to item 153e

k. How many times a year are the fees due?

    2518 12  Monthly \_\_\_\_\_ Times per year

l. What is the average cost each... (Billing period) for those fees?

    2519 \$ \_\_\_\_\_ 00

    0  Included in mobile home rent

153a. Is a garage or carport included (in the rent with the home)?

    2520 1  Yes — Skip to Item 154  
 2  No

b. Is an offstreet parking space included?

    2530 1  Yes  
 2  No

154. Check item (See item 127, page 34.)

Not a mobile home — Ask from 155  
 Mobile home either one-unit or two-or-more units — Skip to Item 156, page 41.

155. About when was the building originally built?

    2540 .  1980 or later  
 Month \_\_\_\_\_ Year \_\_\_\_\_

    1  1979  
 2  76-78  
 3  70-74

### SAMPLE DESIGN

The 1989 estimates contained in this report are based on data collected from July 1989 through December 1989 for the American Housing Survey (AHS), which was conducted by the Bureau of the Census, acting as collection agent for the Department of Housing and Urban Development. The sample for this survey was spread over 394 sample areas (called primary sampling units) comprising 878 counties and independent cities with coverage in each of the 50 States and the District of Columbia.

Approximately 49,400 sample housing units were selected for interview for the 1989 AHS. Of this number, about 2,700 were found to be ineligible because they no longer existed or information relevant to the 1989 housing inventory could not be obtained for the unit. Of the approximately 46,700 units (both occupied and vacant) that were

eligible for interview, about 1,900 were classified as "non-interviews" because either no one was home after repeated visits, the respondent refused to be interviewed, or the interviewer was unable to locate the unit.

**Selection of sample areas.** The United States was divided into areas made up of counties and independent cities referred to as primary sampling units (PSU's). Of these PSU's, 170 were known as self-representing since the sample from the PSU represented only that PSU. These 170 PSU's were in sample with certainty. The remaining PSU's were grouped into strata and were referred to as nonself-representing since the sample of housing units from the sample PSU represented all PSU's, both sample and nonsample, in the stratum. These nonself-representing sample PSU's were selected in two steps.

First, the Current Population Survey (CPS) formed groups consisting of one or more PSU's. In groups consisting of more than one PSU, one PSU was selected to represent all PSU's in a CPS stratum. The second step involved selecting a subset of PSU's selected by the CPS. The PSU's selected for the CPS sample (some of which were self-representing for CPS and some of which were nonself-representing for CPS) were grouped again for the AHS. For groups consisting of only one PSU selected for the CPS, that PSU was also selected for the AHS. For groups consisting of more than one PSU selected for the CPS, one PSU was selected for the AHS.

**Selection of the sample housing units from the 1980 census.** The overall sampling rate used to select the sample of housing units from the 1980 census for the 1989 AHS was about 1 in 2,148. The within-PSU sampling rate was determined so that the overall probability of selection for each sample housing unit was the same (e.g., if the probability of selecting a nonself-representing PSU was 1 in 10, then the within-PSU sampling rate would be 1 in 214.8).

In areas where addresses were, for the most part, completed and where new construction is monitored by permits (these areas will be referred to as address enumeration districts (ED's)), a sample of housing units that received long-form questionnaires in the 1980 census was selected directly from a list of all such housing units based on certain housing and geographic information of the housing unit. A sample of living quarters that did not meet the definition of a housing unit (e.g., military barracks, college dorm) was selected independently from housing

units in address ED's. This sample of living quarters that were not housing units was used to identify units that were converted to housing units since the census.

In areas where at least 4 percent of the addresses were incomplete or inadequate, or where new construction was not monitored by building permits (most rural areas), a sample of 1980 census units that received long-form questionnaires was selected in several steps (these areas will be referred to as ED's). First, the areas were grouped and a sample of areas was chosen. Next, an area of land, known as a segment, was chosen within each sample area. Finally, a sample of housing units that received 1980 census long forms was selected within the segment.

**Selection of new construction housing units in permit-issuing areas.** The sample of permit new construction was selected from building permits issued such that the units are expected to be completed after April 1, 1980. For certain areas and structure sizes, this included permits issued as early as March 1979 but, for the most part, includes permits issued since July 1979. Only nonmobile home new construction is covered by the building permit frame. Within each PSU, building permits were selected so that the sample would be representative in terms of geography and month of issue for permits. Clusters of approximately four housing units were created. Housing units in these clusters were subsampled at the rate of 1 in 4, yielding clusters of size 1.

**Housing Unit Coverage Study sample.** Housing units at addresses missed in the 1980 census or units that were at inadequately described addresses in the census address registers did not have a chance of being selected for the AHS sample. A special study, done as part of the 1980 census, called the Housing Unit Coverage Study, identified such units. A sample of the units in the Housing Unit Coverage Study sample was included in the AHS sample.

**Housing units added since the 1980 census.** Housing units added to the inventory since the 1980 census were represented using two methods. One method identified within-structure additions. These are units in structures that had a chance of being in sample because they contained at least one unit enumerated in the 1980 census. This method was used for the Housing Unit Coverage Study sample as well. The other method identified whole-structure additions. These are units in structures for which none of the units in the structure were enumerated in the 1980 census.

In area ED's, all within-structure additions in structures containing at least one sample unit were interviewed for the AHS.

In address ED's, all within-structure additions in 1- to 15-unit structures containing at least one sample unit were interviewed for AHS. In 16-or-more-unit structures in address ED's, only units falling on AHS sample lines were interviewed for AHS.

In address ED's, whole-structure additions were identified using area sampling methods. Under area sampling, all housing units within a land area are first listed, and then a systematic sample is selected using a start-with and take every so that a desired sample size is achieved based on the expected number of units within the segment. Land areas in sample for the Health Interview Survey in 1985 were used. Only Health Interview Survey areas that were in AHS PSU's or in Health Interview Survey PSU's adjacent to AHS PSU's were used. Also, only units that were not already assigned to the Health Interview Survey were eligible. These units were then matched to the 1980 census address registers. If the address matched to the census, the unit was ineligible. (Only the basic address, i.e., 801 Main Street, had to match. Apartment number, mobile home site number, etc., did not have to match.) At the time of listing, eligible units were then screened further so that only units with no previous chance of coming into sample were picked up. (The screening eliminated units such as nonmobile home new construction, which is covered by building permits, and census misses.) This address ED coverage improvement operation was not updated in 1989. For the area ED coverage improvement, only certain panels were updated to pick up whole-structure additions since the 1987 enumeration.

In area ED's where new construction is not monitored by building permits, all land areas chosen for the sample in area ED's were used. An expected four units were chosen using area sampling methods within these land areas to identify whole-structure additions. This sample was screened at the time of listing using the same criteria as for address ED's. However, this sample was not matched to the census. One important difference to note is that new construction was not eliminated during the screening process.

In area ED's where new construction is monitored by building permits, only one-third of the land areas chosen for the sample in area ED's was used. An expected eight units were chosen using area sampling methods within these segments to identify whole-structure additions. This sample was screened at the time of listing using the same criteria as for address ED's. Again, this sample was not matched to the census. Nonmobile home new construction was eliminated by the screening process since it is covered by the building permit frame.

**Telephone interviewing experiment.** A large-scale Computer Assisted Telephone Interviewing (CATI) experiment was conducted as part of the 1987 enumeration of the AHS-National to investigate the effects of CATI interviewing on AHS-National (AHS-N) data. The 1987 sample was divided into six panels. Two of the six panels (panels 5 and 6) were randomly assigned to a maximum CATI treatment (about 16,000 cases). The other four panels (about 32,000 units) were assigned to a maximum decentralized (local) telephone interviewing treatment (i.e., the non-CATI treatment).

Units in the CATI treatment sample that were not eligible to be interviewed by CATI were screened out and sent to the field for a personal visit interview. These screened units included new construction added since 1985, the supplemental rural sample added in 1987, 1985 noninterviews, 1985 vacant units, 1985 units temporarily occupied by persons with usual residence elsewhere (URE's), households with eight or more members, multiunit mobile homes, special places, unit address/structure type inconsistencies, and units interviewed in 1985 indicating that they didn't have a telephone number at which they could be contacted. The remaining 10,400 units, which were units interviewed in 1985 and for which a telephone number was provided, were assigned to the Hagerstown Telephone Center (HTC) to attempt CATI. Actually interviewed by CATI were 6,400 units, which is 61 percent of eligible cases and 40 percent of the CATI treatment sample. The eligible units not interviewed by CATI were recycled to the field for a personal visit or decentralized telephone interview.

Within the non-CATI treatment, about 40 percent of the units were actually interviewed by telephone. Those units not eligible for interview by telephone, as well as the eligible units that couldn't actually be interviewed by telephone, were assigned for personal visit interviews.

Preliminary analysis of the 1987 AHS-National CATI experiment indicated that, for at least some characteristics, CATI had a substantial effect on the data. Another CATI experiment was conducted in 1989 to further study the effect of CATI on AHS data. This time panels 1 and 5 were assigned for maximum CATI and panels 4 and 6 for maximum decentralized telephone interviewing. In addition, about 4,000 cases were assigned for maximum CATI in 71 PSU's in panels 2 and 3. The intent was to target these CATI cases to PSU's having problems recruiting and maintaining interviewers. From a list prioritized by regional offices, specific PSU's were selected and designated for CATI. For the 1989 experiment, about 47 percent of the total AHS-N sample was initially designated for CATI. About 63 percent of these cases (about 14,500 cases) were actually eligible for CATI.

Eligibility criteria analogous to those used for the 1987 experiment were used in 1989. About 60 percent of the eligible cases were completed by CATI. The remaining cases were recycled to the field for decentralized telephone or personal visit interviews.

## ESTIMATION

After assigning each unit a weight that reflected the correct probability of selection for the unit, the AHS weighting procedure consisted of two phases. In the first phase, a series of adjustments were made to account for

units that could not be interviewed for a number of reasons. For each of these adjustments, a factor was computed and applied to the appropriate units. The factors were equal to the following ratio:

$$\frac{\text{Housing units to be kept after factor applied}}{\text{Housing units to be dropped after factor applied}} + \frac{\text{Housing units to be dropped after factor applied}}{\text{Housing units to be kept after factor applied}}$$

The housing units that are to be kept after a factor is applied will have that factor applied to them. The first of these adjustments was done in permit segments only to account for permits that could not be sampled and units that could not be located. These were represented by all other units in permit segments including both interviews and noninterviews (excluding unable-to-locate units).

The second of the adjustments was done for units in structures built before April 1, 1980. It was done to account for units that could not be located. The unlocatable units were represented by both interviews and noninterviews (excluding unable-to-locate units).

The last of these adjustments was done to account for units that could not be interviewed because either no one was home after repeated visits or the respondent refused to be interviewed. When 1985 or 1987 AHS or 1980 census data was available, this information was used to determine the noninterview adjustment cell. The cells included characteristics such as tenure, geography, units in structure, and number of rooms. When previous data were not available, adjustment factors were computed separately using more general characteristics such as type of area and type of housing unit (i.e., mobile home, nonmobile home).

The second phase involved a three-stage ratio estimation procedure to adjust for the sampling of nonself-representing PSU's, to account for known sampling deficiencies in new construction, and to bring the sample estimate of housing units into close agreement with estimates derived from independent sources for several key characteristics.

The first stage of this procedure was employed to reduce the contribution to the variance caused by the sampling of nonself-representing PSU's. The procedure takes into account the differences that existed at the time of the 1980 census between the housing units estimated from the nonself-representing sample PSU's and the actual 1980 census count of housing units from all nonself-representing strata. Factors accounting for these differences were computed separately for 15 place-of-residence/tenure cells for the Northeast and Midwest regions; 35 place-of-residence/ethnicity-race/tenure cells for the South region; and 25 place-of-residence/ethnicity/tenure cells for the West region. The first-stage ratio estimation factor was equal to the following ratio:

**Actual 1980 census housing units for all nonself-representing strata in a cell**

Number of 1980 housing units in the same cell estimated from the sample nonself-representing PSU's

The numerators of the ratios were calculated by summing the 1980 census housing unit counts for each cell across all nonself-representing strata. For each cell, the denominators were calculated by weighting the 1980 census housing unit counts from each nonself-representing sample PSU by the inverse of the probability of selection for that PSU and summing the weighted counts across all nonself-representing sample PSU's.

The second stage of the ratio estimation procedure was employed to adjust the AHS sample estimate of new construction (i.e., units built since the 1980 census) to account for known deficiencies in the AHS sample (see the section on nonsampling error). For nonmobile homes, the sample estimates were controlled to independently derived estimates from the Survey of Construction (SOC). For mobile homes, the sample estimates are controlled to independently derived estimates from the Survey of Mobile Home Placement (SMHP). These estimates were considered to be the best estimates available for these types of units. Factors were computed separately for each region. The second-stage factor was equal to the following ratio:

**Independently derived estimate for a cell**

**AHS sample estimate in that cell**

The denominators of the above ratio were obtained by summing the existing weight on each record after the first stage of ratio estimation over all records for each cell in each region.

The third stage of the ratio estimation procedure was employed to adjust the AHS sample estimate of housing units to independently derived current estimates for certain key characteristics. It is believed that these characteristics are highly correlated with other characteristics of interest for the AHS. This stage of the procedure was actually done in two steps for occupied units. During the first step, the sample estimate of occupied housing units was controlled to an independently derived estimate for tenure/ethnicity (i.e., Hispanic head of household-non-Hispanic head of household)/household-status cells for each region. After applying the factor computed in this step to the interviewed occupied units, the new sample estimate of occupied housing units was controlled to an independently derived estimate for 12 tenure/race (i.e., Black head of household-non-Black head of household)/household-status cells for each region. The sample estimate of vacant housing units was controlled to an independently derived estimate for four type-of-vacant cells for each region. All third-stage factors were calculated in a similar manner using the following ratio:

**Independently derived estimate of housing units in a cell**

**AHS sample estimate of housing units in that cell**

For occupied units, the numerators of the factors were derived from data based on the CPS and the 1980 census. The 1980 census count of housing units was adjusted for net undercoverage and overcoverage. The CPS was used to measure changes since the census and to derive the distribution for the third-stage occupied cells.

For vacant units, the numerators of the factors were derived based on the distribution of vacant units from the Housing Vacancy Survey (HVS), a quarterly vacancy survey conducted by the Bureau of the Census.

The denominators of the factors were obtained by summing the weights, with all previous factors applied, on all records in a cell. For the Hispanic/non-Hispanic and vacant cells, this was the weight after the second stage of the ratio estimation procedure. For the Black/non-Black cells, this was the weight after the Hispanic/non-Hispanic portion of the third stage of the ratio estimation procedure.

The second stage and third stage of the ratio estimation procedure were iterated to bring the AHS sample estimates into closer agreement with all independent estimates used. The numerators of the factors were the same ones used previously. The denominators of the factors in this iterative process were obtained by summing the existing weights on all records in a cell. For example, for the second stage of the ratio estimation procedure, the existing weight after the third stage of the ratio estimation procedure from the previous iteration was used. The final weight that resulted from all iterations was used to produce the tabulations in this report.

The overall estimation procedure reduced the sampling error substantially for most statistics below what would have been obtained by simply weighting the sample by the inverse of the probability of selection.

## ACCURACY OF THE ESTIMATES

There are two types of possible errors associated with estimates based on data from sample surveys—sampling and nonsampling errors. A description of the sampling and nonsampling errors associated with the AHS-National sample is given below.

**Sampling errors.** These errors result from the fact that the particular sample used for this survey is only one of a large number of possible samples that could have been selected using the same sample design. Even if all interviewing conditions were the same, estimates from each of the samples would differ from each other. The amount by which the estimates from all possible samples differ from one another is known as the sampling error. The standard error is commonly used to measure sampling error. It indicates how precisely an estimate from a particular sample measures the average result from all possible samples. In addition, the standard error also partially reflects the variation in the estimates caused by some

nonsampling errors, but it does not measure any systematic biases in the data. The accuracy of the estimates contained in this report depends on the sampling and nonsampling errors, as measured by the estimated standard error, and biases and other nonsampling errors not measured by the standard error.

The sample estimate and the estimated standard error permit the construction of intervals such that the average result from all possible samples lies within the interval with a known level of confidence. For example, if all possible samples were selected and surveyed under the same general conditions and the estimate and estimated standard error were computed for all the samples, then approximately 90 percent of the intervals from 1.6 standard errors below the estimate to 1.6 standard errors above the estimate would include the average result from all possible samples.

For intervals computed using estimates and estimated standard errors from this report, the average result from all possible samples either is or is not contained within the interval. However, it can be said that there is only a 1 in 10 chance that the sample selected will yield a 90-percent confidence interval that does not contain the average result from all possible samples.

The figures presented in the standard error tables are approximations to the standard errors for the estimates in this report. These approximations were necessary in order to produce standard errors applicable to a wide range of characteristics at a reasonable cost. The standard error tables provide an indication of the order of magnitude of the standard errors rather than the actual standard errors for any specific characteristic.

There are various types of estimates that can be made using the data in this report. For example, one can make an estimate of the total number of housing units having a specific characteristic (known as an estimate of a level), a percentage of housing units having a specific characteristic, a ratio of two different characteristics, the difference between two estimates, or medians. Other types of estimates can be made but these are the most commonly used. Procedures for computing estimated standard errors for these types of estimates are given below.

**Standard error table locator.** To help identify which standard error table to use for a specific type of estimate from this report, a Standard Error Table Locator is provided. The rows of this table identify the population groups on the boxhead of the tables in this report, and the columns indicate the types of housing characteristics. For example, for general characteristics of the national housing inventory, table 1a should be used for estimating standard errors of estimates of levels; table 1b should be used for estimating standard errors of estimated percentages of these housing units; for fuels and type of heating and cooling equipment in rural areas, table 6a should be used for estimating standard errors of estimates of levels

and table 6b should be used for estimating standard errors of estimated percentages of these housing units.

**Standard errors of estimates of levels.** Tables 1a through 7a present estimated standard errors for estimates of national and regional housing characteristics for 1989. Linear interpolation should be used to determine estimated standard errors for estimates not specifically shown in tables 1a through 7a. The following is an illustration of the use of table 1a.

Table 1-1 of this report shows that in the United States there were 4,234,000 owner-occupied housing units with householders under 25 years of age in 1989. The Standard Error Table Locator shows that table 1a should be used for this type of characteristic. Interpolation in standard error table 1a shows that the estimated standard error of an estimate of this size is 101,000. The following procedure was used in interpolating.

The information in the table below was taken from standard error table 1a. The entry for x is the standard error sought.

| Size of estimate (thousands) | Standard error (thousands) |
|------------------------------|----------------------------|
| 2,500.....                   | 79                         |
| 4,234.....                   | x                          |
| 5,000.....                   | 110                        |

By vertically interpolating between 79,000 and 110,000, "x" is determined to be 101,000.

$$79,000 + \frac{4,234,000 - 2,500,000}{5,000,000 - 2,500,000} (110,000 - 79,000) = 101,000$$

The 90-percent confidence interval for the estimated number of occupied housing units with householders under the age of 25 is from 4,073,000 to 4,395,000. Thus, the average estimate from all possible samples of these types of housing units will lie within an interval computed in this way for approximately 90 percent of all possible samples.

To obtain standard errors for estimates of levels pertaining to "Journey to work" characteristics, use this formula:

$$s = \sqrt{bx}$$

where s = standard error of the estimate

b = b-parameter from standard error locator table of the ratio

x = the estimate.

**Example.** Table 1-5 shows that in 1989 there were 4,272,000 workers in owner-occupied housing units working less than 1 mile from their home. According to the Standard Error

Table Locator,  $b = 2,939$  should be used with the formula  $s = \sqrt{bx}$  to obtain the standard error.

$$112,000 = \sqrt{2,939 (4,272,000)}$$

Thus, the 90-percent confidence interval for the estimated number of workers in owner-occupied housing units working less than 1 mile from their home is from 4,093,000 to 4,451,000.

**Standard errors of estimates of percentages.** Estimated percentages from this report are computed using sample data for both the numerator and the denominator. The numerator is a subclass of the denominator. The reliability of an estimated percentage depends upon both the size of the percentage and the total upon which the percentage is based (i.e., the denominator).

Estimated percentages are more reliable than the corresponding estimates of the numerators of the percentages, particularly if the estimated percentages are 50 percent or more. Tables 1b through 7b present estimated standard errors of national and regional estimated percentages of housing units for 1989. Two-way interpolation should be used for standard errors of estimated percentages not specifically shown in tables 1b through 7b.

Included in tables 1b through 7b are estimated standard errors for estimates of zero percent. These are considered to be overestimates of the true standard error and should be used primarily for the construction of confidence intervals for characteristics when an estimate of zero is obtained. The following is an illustration of the use of table 1b.

Table 1-1 shows that of the 11,723,000 family units with female householders, no husband present, in the United States in 1989, 783,000 or 6.7 percent were of Hispanic origin with own children under the age of 18. The Standard Error Table Locator shows that table 2b should be used. Interpolation in standard error table 2b (i.e., interpolation on both the denominator and the percent) shows that the standard error on the above percent is 0.4. The following procedure was used in interpolating.

The information in the table below was taken from standard error table 2b multiplied by a factor of 0.92 according to the footnote from table 2b. The entry for p is the standard error sought.

| Denominator of percent (thousands) | Estimated percent |     |     |
|------------------------------------|-------------------|-----|-----|
|                                    | 5                 | 6.7 | 10  |
| 10,000 . . . . .                   | 0.3               | a   | 0.5 |
| 11,723 . . . . .                   |                   | p   |     |
| 15,000 . . . . .                   | 0.3               | b   | 0.4 |

- First, interpolate horizontally between 0.3 and 0.5 to get entry for cell "a." The entry for cell "a" is 0.4.

$$0.3 + \frac{6.7 - 5}{10 - 5} (0.5 - 0.3) = 0.4$$

- Next, interpolate horizontally between 0.4 and 0.3 to get the entry for cell "b." The entry for cell "b" is 0.3.

$$0.3 + \frac{6.7 - 5}{10 - 5} (0.4 - 0.3) = 0.3$$

- Finally, interpolate vertically between 0.4 and 0.3 to get the entry for cell "p." The entry for cell "p" is 0.4.

$$0.4 + \frac{11,723,000 - 10,000,000}{15,000,000 - 10,000,000} (0.3 - 0.4) = 0.4$$

Thus, the estimated standard error of this estimated percentage multiplied by a factor of 1.6 is 0.6. The 90-percent confidence interval for this estimated percentage is between 6.1 and 7.3 percent.

To obtain standard errors for estimated percentages pertaining to "Journey to work" characteristics, use the formula:

$$s = \sqrt{\frac{b(p)(100-p)}{y}}$$

where  $s$  = standard error of the percent  
 $b$  = b-parameter from the standard error locator table  
 $p$  = percent  
 $y$  = base of the percentage.

*Example.* Table 1-5 also shows that of the 106,630,000 workers in the United States in 1989, 12,621,000 or 12 percent started for work within the 30-minute time span of 7:30 through 8:00 a.m.

According to the standard error table locator,  $b = 2,939$  should be used with the formula shown above to obtain the standard error.

$$0.2 = \sqrt{\frac{2,939 (12) (88)}{106,630,000}}$$

which rounds to 0.

**Standard errors of ratios.** For ratios of the form  $(100/x)/y$ , where  $x$  is not a subclass of  $y$ , the standard error tables for estimated percentages underestimate the standard error of the ratio when there is little or no correlation between  $x$  and  $y$ . For this type of ratio, a better approximation of the standard error may be obtained by letting the standard error of the ratio be approximately equal to the following:

$$(100) \frac{x}{y} \sqrt{\left(\frac{S_x}{x}\right)^2 + \left(\frac{S_y}{y}\right)^2}$$

where  $x$  = numerator of the ratio  
 $y$  = denominator of the ratio  
 $S_x$  = estimated standard error of the numerator  
 $S_y$  = estimated standard error of the denominator

$s_x$  and  $s_y$  are computed according to the method used for estimated standard errors of levels. The following is an illustration on how to compute the estimated standard error of a ratio.

Table 2-1 of this report shows that there were 48,080,000 owner-occupied housing units with family households in the United States in 1989. The estimated standard error of this estimate is determined to be 243,000 using linear interpolation in standard error table 1a. The ratio of owner-occupied family households to nonfamily households is 406. The estimated standard error of this ratio is 5.9 and is calculated as follows:

$$100 \left( \frac{48,080,000}{11,836,000} \right) \sqrt{\left( \frac{243,000}{48,080,000} \right)^2 + \left( \frac{162,000}{11,836,000} \right)^2} = 5.9$$

**Standard errors of differences.** The estimated standard errors shown in tables 1a through 7a are not directly applicable to the difference between two estimates. The estimated standard error of a difference can be computed by the following:

$$S_{x-y} = \sqrt{s_x^2 + s_y^2}$$

where  $s_x$  and  $s_y$  are the estimated standard errors for the two estimates  $x$  and  $y$ , respectively. They can be computed in the same manner as for estimated standard errors of levels. This formula is quite accurate for the difference between estimates of the same characteristics in two different areas or the difference between separate and uncorrelated characteristics in the same area. If a high positive correlation exists between the two characteristics, the formula will overestimate the true error. If there is a high negative correlation, the formula will underestimate the true standard error. The following illustration shows how to compute the estimated standard error of a difference.

Table 2-1 shows that in the United States there were 49,583,000 owner-occupied one-unit detached housing units in 1989. The estimated standard error on this estimate is 244,000. There were 2,527,000 owner-occupied one-unit attached housing units in the United States in 1989 with an estimated standard error of 79,000 housing units. The estimated difference between owner-occupied housing units with one-unit detached and with one-unit attached is 47,056,000, and the estimated standard error is 256,000 as computed by the following:

$$256,000 = \sqrt{(244,000)^2 + (79,000)^2}$$

The 90-percent confidence interval for the difference of 47,056,000 is from 46,646,000 to 47,466,000 and it can be concluded that the average estimate of this difference, derived from all possible samples, lies within an interval computed in this way for approximately 90 percent of all possible samples.

**Standard errors of medians.** For medians presented in certain tables in this report, the estimated standard error depends on the distribution of the characteristic and the total number of housing units that comprise the distribution. A common method for approximating the reliability of the estimated median is to construct an interval about the estimated median such that the average median from all possible samples lies within the interval with a known level of confidence. The following procedure should be used to estimate the upper and lower limits of a 90 percent confidence interval of a median.

1. From the appropriate standard error table for estimated percentages, determine the estimated standard error of a 50 percent characteristic based on the total number of housing units from the distribution.
2. Add to and subtract from 50 percent 1.6 times the estimated standard error determined in step 1 to obtain the upper and lower percentage limits from which the confidence interval will be determined.
3. Determine the lower endpoint of the confidence interval by linearly interpolating within the category of the distribution that contains the lower percentage limit. The upper endpoint of the confidence interval is determined in the same manner using the upper percentage limit.

For about 90 out of 100 possible samples the average median from all possible samples will lie within this 90-percent confidence interval. The following example illustrates how to compute a 90-percent confidence interval for a median.

Table 1-1 of this report shows the median number of persons in occupied married-couple households with Black householders with own children under the age of 18 was 4.1 in 1989. The total number of housing units upon which the distribution is based is 1,834,000 housing units.

1. From table 1b the standard error of a 50-percent characteristic based on 1,834,000 housing units is 2.0 percentage points.
2. To obtain a 90-percent confidence interval, add to and subtract from 50 percent 1.6 times the estimated standard error from step 1 giving upper and lower percentage limits of 46.8 and 53.2.
3. From table 1-1, the interval for occupied married-couple households with Black householders with own children under the age of 18 with four persons (for the purpose of calculating the median, the category of four persons is considered to be from 3.5 to 4.5 persons) contains the 46.8 percent derived in step 2. About 484,000 housing units or 26.4 percent fall below this interval, and 668,000 housing units or 36.4 percent fall within this interval.

By linear interpolation, the lower limit of the 90-percent confidence interval is found to be about 4.1.

$$3.5 + (4.5 - 3.5) \frac{(46.8 - 26.4)}{(36.4)} = 4.1$$

Similarly, the interval for owner-occupied married-couple households with Black householders with four persons contains the 53.2 percent derived in step 2. About 484,000 housing units or 26.4 percent fall below this interval, and 668,000 housing units or 36.4 percent fall within this interval.

The upper limit of the 90-percent confidence interval is found to be about 4.2.

$$3.5 + (4.5 - 3.5) \frac{(53.2 - 26.4)}{(36.4)} = 4.2$$

**Nonsampling errors.** Nonsampling errors can be attributed to many sources. The respondent may be unable or unwilling to provide the correct response. The interviewers may be unable to find the unit or they may be unable to obtain information about all the cases. They may record the data incorrectly. Either the respondent or the interviewer may interpret the questions differently than they were intended. The collected data may be keyed incorrectly. The sample frames may be incomplete, introducing some coverage error. Processing of the data introduces errors caused by rounding or adjusting for missing values. In addition to these errors, there are other errors of collection, response, processing, coverage, and estimation of missing data. Not all of these errors are unique to sample surveys since they can, and do, occur in complete censuses as well.

**Possible effects of decentralized telephone interviewing on the data.** The 1989 AHS-National interviews were conducted by decentralized telephone as much as possible, with the exception of cases assigned to the Computer Assisted Telephone Interviewing (CATI) facility. A large-scale decentralized telephone interviewing experiment was conducted in conjunction with the 1983 AHS-National sample in order to provide more definitive information about possible effects of decentralized telephone interviewing on AHS data. It was concluded that telephone interviewing has some effects on the data. The experimental data indicate that compared with personal visit interviewing, telephone interviewing had the effect of increasing item nonresponse rates for income items, although this effect does not appear to be causing any changes in the published estimates. There was some tendency to under-report problems with neighborhood quality as well, although this tendency was generally rather slight.

**Possible effects of computer assisted telephone interviewing (CATI) on the data.** (Note: The design of the CATI experiments is included in the sample design section of this appendix.)

**Summary.** There is strong evidence that there are differences in data collected by CATI and non-CATI treatments. It is not known for sure, however, which method produces better data. Preliminary analysis of a CATI experiment

conducted in 1987 indicated that CATI had a substantial effect on some characteristics of AHS-N data. Another experiment conducted in 1989 confirmed the results of the 1987 experiment. These findings affect all types of estimates and comparisons. In particular, change estimates across 1985, 1987, and 1989 are biased and longitudinal analysis is quite adversely affected. Further investigation is planned for 1991, but detailed plans have not been determined.

**Analysis of results.** The same method of analysis was used for both the 1987 and 1989 experiments. Data from the CATI and non-CATI treatment panels were weighted separately using the AHS-N estimation procedure described previously. Then estimates from the two treatments were produced in data tables for characteristics provided in chapter 2 of the AHS-National publication. Differences between estimates from the CATI and non-CATI treatments were tested using t-statistics.

The 1987 and 1989 analyses of the t-tests yielded similar results. The percents of significant differences observed at the 10-percent, 5-percent, and 1-percent significance levels were higher than what would be expected by chance (e.g. we expected that 10 percent of the tests would yield significant results by chance when tested at the  $s = .10$  significance level).

| Year       | Proportion of significant tests |           |           |
|------------|---------------------------------|-----------|-----------|
|            | $s = .10$                       | $s = .05$ | $s = .01$ |
| 1987 ..... | 11.1%                           | 6.2%      | 1.9%      |
| 1989 ..... | 11.7%                           | 6.8%      | 2.3%      |

Both the 1987 and 1989 experiments revealed that the owner, urban, and moderate physical problems subgroups exhibited high numbers of significant differences between CATI and non-CATI estimates, with the moderate physical problems subgroup displaying the highest incidence of significant differences. The 1989 analysis showed significant differences in the total occupied, suburbs (in MSA's), and moved in past year subgroups as well.

The analyses also indicated that CATI had an effect on certain characteristics of the subgroups. These items include lot size, water leakage, income, monthly housing costs as percent of income, housing ownership shared by person not living here, utilities paid separately, owners with a mortgage, and routine maintenance costs. The 1989 analysis indicated differences in heating equipment and other (additional) heating fuels also. CATI estimates tended to be lower than those for non-CATI for four items: water leakage, monthly housing costs as percent of income, other heating fuel, and owners with a mortgage. However, utilities paid separately, income, and housing ownership shared by "person not living here" estimates were generally higher for CATI than those for non-CATI. The percent differences between estimates for the panels assigned to

the CATI treatment and for the panels assigned to the non-CATI treatment for items in the total occupied subgroup ranged from about 6 percent to about 40 percent. More detailed information on which specific characteristics are affected or the extent of the effect can be obtained by writing to the Demographic Statistical Methods Division, Bureau of the Census, Washington, DC 20233.

If indeed CATI itself is the source of these differences, the magnitude of its effect is underestimated by our procedures, as not all cases assigned to CATI were actually interviewed using that methodology. We plan further investigation of the CATI methodology during the 1991 AHS-National interviewing. The nature of that investigation is not yet determined.

Results of a reinterview study conducted in 1989 on 17 items (mainly mortgage and water leakage items) found some weak evidence that CATI may produce more errors than non-CATI. CATI had a higher gross difference rate for 3 of the 17 items, tested at the 10 percent significance level. Significant differences between CATI and non-CATI estimates for two of the three items (water leakage and presence of a mortgage) have been cited previously.

**Conclusions.** The 1989 CATI experiment was designed and implemented to determine whether the results from the 1987 experiment, which showed that CATI had a substantial effect on some characteristics of AHS-N data, were valid or the result of random variation. Since the 1989 results confirmed the findings from the 1987 study, there is strong evidence that there are differences in data collected in the two treatments. Although very little is known about which treatment provides better data, we speculate that CATI income estimates are probably better than non-CATI, but that most other estimates are probably worse. We base our speculation about income on our assumption that with the computer's assistance, CATI tends to ensure that all questions are asked. We believe that non-CATI estimates for several items are more accurate than CATI estimates because it seems unlikely that people would overreport things like water leaks.

Estimates from both CATI and non-CATI treatments were used to produce the data presented in the 1987 and 1989 publications. As a result, this will have the following impact on these data:

- a. The 1987 and 1989 published estimates for the subgroups and items mentioned previously are different than what they would have been if a maximum decentralized telephone interviewing mode had been used for all six panels.
- b. There are probably other subgroups and items that were similarly affected but were not detected or included in this preliminary analysis.
- c. Cross-sectional comparisons for 1987 and 1989 that involve these items will probably also be affected.
- d. Estimates of 1985 to 1987 and 1985 to 1989 change for these items will be biased.

- e. The effect on estimates of 1987 to 1989 change for these items should be less since CATI was used in both years.

We encourage you to consider the effects mentioned previously when analyzing the 1987 and 1989 estimates and these change estimates.

**Reinterview program.** The 1989 AHS-N reinterview served as a check for interviewer evaluation and quality control. This check was made at a subsample of the original households to determine if the following was done during the original interview:

- a. The correct unit was visited.
- b. The correct information on "Tenure" was obtained..
- c. The correct information on "Occupancy status" was obtained.

The 1989 reinterview program also served as the means to measure response variance for mortgage items. The results of this analysis were not available at the time of publication. In 1985, a reinterview program was conducted in an attempt to measure some of the nonsampling errors associated with the AHS estimates in addition to serving as an interviewer evaluation and quality control check. This study was conducted using a subsample of the original AHS households. These households were revisited, and responses to select questions from the original questionnaire were obtained again. The original interview and the reinterview were assumed to be two independent readings and, thus, were the basis for the measurement of the response error associated with the AHS estimates. The 1985 AHS-N reinterview study was done for three groups of items. They are units in structure and description of structure, number and type of rooms, and appliances, including the age and fuel of the appliances. All items measured showed low levels of inconsistency except those listed in the table below. Included in the table are the levels of inconsistency.

| Item                                  | Level of inconsistency for occupied units |
|---------------------------------------|---|
| Number of living rooms .....          | Moderate                                  |
| Number of dining rooms .....          | Moderate                                  |
| Number of family rooms.....           | Moderate                                  |
| Number of "Other" types of rooms..... | Moderate                                  |
| Age of refrigerator.....              | --  |
| Age of garbage disposal .....         | --  |
| Age of oven/cooking burner.....       | --  |
| Age of dishwasher .....               | --  |
| Age of clotheswasher.....             | Moderate                                  |
| Central air conditioning fuel.....    | High                                      |
| Cookstove or range with oven .....    | Moderate to High                          |

Dashes in the table represent items for which there were not enough observations to compute reliable estimates or items that had low levels of inconsistency. Low

levels of inconsistency indicate that the response error is insignificant relative to the standard error in this report. Moderate levels of inconsistency indicate the response error is not insignificant compared to the standard error in this report. High levels of inconsistency indicate that the response error is very significant compared to the standard error in this report, and caution should be used when examining estimates of these characteristics.

Cross-tabulations involving those items that are subject to high levels of inconsistency may also be subject to a large distortion as a consequence and, thus, are considered to be less reliable than comparable cross-tabulations that do not involve these data. Since the reinterview programs only measured inconsistencies for a sample of the items on the AHS questionnaire, there may be other items with high levels of inconsistency.

Reinterview studies were also conducted in conjunction with AHS enumerations before 1985. These studies included items dealing with poor housing quality, attitudes about the neighborhood, certain housing costs, journey to work, and mobility data. The following table shows the items that had moderate or high levels of inconsistency. Although these questions were not included in either the 1985, 1987, or 1989 reinterview studies, questions from previous enumerations were not altered enough to lead one to believe that the level of inconsistent responses would change.

| Item  | Level of inconsistency |
|---|------------------------|
| Open cracks or holes on inside of building .....  | Moderate to High       |
| Holes in floors .....   | Moderate to High       |
| Broken plaster of peeling paint on ceilings and walls.....  | High                   |
| Mice or rats .....  | Moderate               |
| Working electric outlet in all rooms .....  | High                   |
| Concealed wiring.....   | High                   |
| Blown fuses/tripped circuit breakers.....   | Moderate to High       |
| Neighborhood conditions: street noise; roads in need of repair; crime; trash, litter, junk in streets or on properties; boarded-up/abandoned structures; nonresidential activities; odors, smoke, gas ..... | Moderate to High       |
| Satisfactory neighborhood services: police protection; hospitals/healthclinics; public transportation; shopping; elementary schools .....   | Moderate to High       |
| Electricity cost .....  | Moderate to High       |
| Gas cost .....  | High                   |
| Oil, coal, kerosene, wood, or other fuel cost.....  | High                   |
| Fire/hazard insurance .....   | Moderate to High       |
| Real estate taxes .....   | Moderate to High       |
| Cost of real estate taxes .....   | Moderate to High       |
| Cost of water supply and sewage disposal .....  | High                   |
| Cost of garbage collection.....   | Moderate to High       |
| Gross income .....  | High                   |
| Type of vacant.....   | Moderate to High       |
| Prefer to live in same area or somewhere else .....   | Moderate               |

A possible explanation for the results of the reinterview studies, as well as the surveys themselves, is that respondents may lack precise information. Also, since the results of the reinterview studies are derived from sample surveys,

there is sampling error associated with these estimates of nonsampling errors. The possibility of such errors should be taken into account when considering the results of the studies.

**Reconciliation experiment.** As part of the 1987 CATI experiment, a reconciliation study was conducted when the responses provided during the CATI interviews for any of the nine selected questions were different from the respective 1985 responses and beyond reasonable tolerance ranges.

Reconciliation questions were then asked immediately following the regular interview to determine whether there had been an actual change since 1985 or whether the 1985 or 1987 responses were wrong.

This reconciliation study indicated that respondents have reporting difficulties with items such as presence of basement, heating equipment, and heating fuel, based on the inconsistent responses provided between 1985 and 1987. These reporting difficulties are not necessarily a result of the CATI mode of interviewing, but they may reflect general reporting difficulties with select items. This is indicated by the fact that approximately an equal number of respondents stated that their 1985 responses were wrong, when all interviewing was conducted by personal visit, as did the number of respondents who stated that their 1987 responses were wrong. Caution should be taken when carrying out analyses using these data.

A reconciliation study was conducted again in 1989 with six of the nine questions from the 1987 study. The results were similar to those of the 1987 study. Results indicate reporting problems with the presence of a basement and type of heating equipment items. However, more than half of the respondents indicated that the 1987 response rather than the 1989 response was wrong.

**Coverage errors.** AHS misses approximately 25 percent of the new mobile homes (i.e., those built after January 1, 1980). It is believed that most of the difference is caused by poor coverage of new mobile home parks in address ED's.

The coverage of old construction housing units is only as good as the coverage of the 1980 census. The third stage of the ratio estimation procedure attempted to correct for these deficiencies.

Another area of the AHS sample where coverage deficiencies exist is the sampling of building permits to represent conventional (i.e., nonmobile home) new construction. Because of time constraints, only permits issued more than 6 months before interviewing began were eligible to be selected to represent conventional new construction. This is more of a problem for single-unit rather than multiunit structures. In fact, the time lag between issuance of a permit and completion of construction for multiunit structures is generally more than 6 months depending on the size of the structure. Also, new construction in

special places such as colleges or military bases is not covered. This is a deficiency in both permit and nonpermit areas.

In identifying whole-structure additions in address and area ED's, units that were in sample were screened to see if they were eligible for interview. The screening operation involved asking a series of questions. Therefore, the quality of coverage in these areas is only as good as the quality of the responses to these questions. It is conceivable that eligible units were omitted and ineligible units were included because the respondents' answers to the screening questions were incorrect. In addition, the quality of the listing of addresses will also affect the coverage of whole-structure additions.

It is also believed that a coverage deficiency exists for units that were nonresidential at the time of the 1980 census, but that have since been converted to residential units. The magnitude of this deficiency is not known.

The second and third stages of ratio estimation correct these deficiencies for the total number of housing units only. Biases of subtotals will still exist.

**Processing errors.** Several types of errors are associated with the processing of the data. The first type of processing error that may be introduced is keying error. A quality assurance operation conducted in conjunction with the keying of the data helps to insure that less than 0.4 percent of the data fields keyed from the questionnaire will be in error.

Another type of processing error is imputation error. If certain fields on a questionnaire are blank, values are assigned by the computer. These are generally items for which 1980 census data is available, as well as items that had an item nonresponse rate of 1.0 percent or less in 1983. It is not known how close these imputed values are to the actual values.

A problem may also exist for items for which there are no imputations for item nonresponse. Totals for these items and any subcategories of these items may be underestimated. Percent distributions may also be distorted.

Nonsampling error also occurs because of noninterview. The noninterview adjustments assume that interviewed units of similar size and geographic location (i.e., (P)MSA status, urban/rural status) can adequately represent noninterviews. The extent to which this assumption does not hold true will determine the magnitude of the nonsampling error from these units.

Finally, another type of processing error is rounding error. The data are processed using double precision to minimize the effect of the rounding errors. However, the error may still be significant for small percentages and small medians when these figures are derived from relatively large bases. Thus, confidence intervals formed from the standard errors may be distorted. This should be taken into consideration when analyzing the results of this survey.

**Standard Error Table Locator: Population Group by Type of Characteristic**

(Use "a" tables for estimates; use "b" tables for percentages)

| Population group <sup>1</sup>        | Table number, by characteristic group |   |                           |                      |  |
|--------------------------------------|---------------------------------------|---|---------------------------|----------------------|--|
|                                      | General <sup>2</sup>                  | Fuels and type of heating/cooling equipment | Neighborhood <sup>3</sup> | Special <sup>4</sup> | Journey to work "b" parameter <sup>5</sup> |

| Northeast . . . . .                  | 2a, 2b                                | 5a, 5b                                      | 5a, 5b                    | 6a, 6b               | 2,621                                      |
| Midwest . . . . .                    | 1a, 1b                                | 5a, 5b                                      | 5a, 5b                    | 6a, 6b               | 2,939                                      |
| South . . . . .                      | 3a, 3b                                | 6a, 6b                                      | 5a, 5b                    | 6a, 6b               | 3,127                                      |
| West . . . . .                       | 1a, 1b                                | 5a, 5b                                      | 5a, 5b                    | 6a, 6b               | 2,939                                      |

<sup>1</sup>For multiple population groups (for example, Blacks in the Northeast or new construction in central cities ) use the standard error table with the highest standard error for a given estimate.

<sup>2</sup>General includes all characteristics except fuels and heating/cooling equipment, neighborhood items, and special items.

<sup>3</sup>Neighborhood items include all characteristics in "neighborhood" tables except "mobile home in group."

<sup>4</sup>Special items include all characteristics pertaining to cooperatives or condominiums; no complete bathroom; less than 1,500 square feet of detached or mobile homes; well serving one to five units; mobile homes in a group of seven or more; area within 300 feet includes open space, park, farm, or ranch; and major street repairs needed.

<sup>5</sup>To obtain standard errors for estimates pertaining to "Journey to work" characteristics, use the "b-parameter" indicated and the formulas presented in the examples.

<sup>6</sup>Total includes total occupied housing units, owner, renter, physical problems, moved in past year, below poverty level.

<sup>1</sup>Use standard errors as displayed in the table for estimates pertaining to the following Hispanic deficiency items: sagging roof; missing bricks, siding, and other outside material; broken windows; fuel other than electricity, gas, or oil; bars on windows of buildings within 300 feet; 1.51 or more persons per room; 400 to 699 square feet per person; water supply stoppage in last 3 months; no toilet working for at least 6 hours in last 3 months; sewage disposal—public sewer with breakdown lasting 6 hours or more in last 3 months; uncomfortably cold for 24 or more hours last winter; signs of rats in last 3 months; and broken plaster or peeling paint in interior.

Multiply standard errors by a factor of 0.92 for estimates pertaining to Hispanic general items.

**Additional residential properties:** comparisons 1-6, owners 2-6, definition App-11

**Age of householder:** comparisons 1-1, owners 2-1, renters 3-1, Blacks 4-1, Hispanics 5-1, elderly 6-1, central cities 7-1, suburbs 8-1, nonmetro 9-1, urban 10-1, rural 11-1, definition App-11

**Balcony:** comparisons 1-3, owners 2-3, renters 3-3, Blacks 4-3, Hispanics 5-3, elderly 6-3, central cities 7-3, suburbs 8-3, nonmetro 9-3, urban 10-3, rural 11-3, definition App-6

**Bicycle:** comparisons 1-5, owners 2-5, renters 3-5, Blacks 4-5, Hispanics 5-5, elderly 6-5, central cities 7-5, suburbs 8-5, nonmetro 9-5, urban 10-5, rural 11-5, definition App-8

**Black:** definition App-4, column heading in most tables

**Breakdown, heating or toilet:** comparisons 1-3, owners 2-3, renters 3-3, Blacks 4-3, Hispanics 5-3, elderly 6-3, central cities 7-3, suburbs 8-3, nonmetro 9-3, urban 10-3, rural 11-3, definition App-6

**Breakdown, water supply or sewage system:** comparisons 1-3, owners 2-3, renters 3-3, Blacks 4-3, Hispanics 5-3, elderly 6-3, central cities 7-3, suburbs 8-3, nonmetro 9-3, urban 10-3, rural 11-3, definition App-5

**Carpool:** comparisons 1-5, owners 2-5, renters 3-5, Blacks 4-5, Hispanics 5-5, elderly 6-5, central cities 7-5, suburbs 8-5, nonmetro 9-5, urban 10-5, rural 11-5, definition App-8

**Carport:** comparisons 1-3, owners 2-3, renters 3-3, Blacks 4-3, Hispanics 5-3, elderly 6-3, central cities 7-3, suburbs 8-3, nonmetro 9-3, urban 10-3, rural 11-3, definition App-7

**Central cities:** definition App-2, column heading in most tables

**Cesspool:** comparisons 1-3, owners 2-3, renters 3-3, Blacks 4-3, Hispanics 5-3, elderly 6-3, central cities 7-3, suburbs 8-3, nonmetro 9-3, urban 10-3, rural 11-3, definition App-5

**Cesspool stoppage:** comparisons 1-3, owners 2-3, renters 3-3, Blacks 4-3, Hispanics 5-3, elderly 6-3, central cities 7-3, suburbs 8-3, nonmetro 9-3, urban 10-3, rural 11-3, definition App-5

**Children, own under 18:** comparisons 1-4, owners 2-4, renters 3-4, Blacks 4-4, Hispanics 5-4, elderly 6-4, central cities 7-4, suburbs 8-4, nonmetro 9-4, urban 10-4, rural 11-4, definition App-11, column heading in most tables

**City services:** comparisons 1-3, owners 2-3, renters 3-3, Blacks 4-3, Hispanics 5-3, elderly 6-3, central cities 7-3, suburbs 8-3, nonmetro 9-3, urban 10-3, rural 11-3, definition App-8

**Cold home:** comparisons 1-3, owners 2-3, renters 3-3, Blacks 4-3, Hispanics 5-3, elderly 6-3, central cities 7-3, suburbs 8-3, nonmetro 9-3, urban 10-3, rural 11-3, definition App-6

**Commercial neighbors:** comparisons 1-3, owners 2-3, renters 3-3, Blacks 4-3, Hispanics 5-3, elderly 6-3, central cities 7-3, suburbs 8-3, nonmetro 9-3, urban 10-3, rural 11-3, definition App-8

**County services:** comparisons 1-3, owners 2-3, renters 3-3, Blacks 4-3, Hispanics 5-3, elderly 6-3, central cities 7-3, suburbs 8-3, nonmetro 9-3, urban 10-3, rural 11-3, definition App-8

**Crack in inside wall:** comparisons 1-3, owners 2-3, renters 3-3, Blacks 4-3, Hispanics 5-3, elderly 6-3, central cities 7-3, suburbs 8-3, nonmetro 9-3, urban 10-3, rural 11-3, definition App-7

**Crime:** comparisons 1-3, owners 2-3, renters 3-3, Blacks 4-3, Hispanics 5-3, elderly 6-3, central cities 7-3, suburbs 8-3, nonmetro 9-3, urban 10-3, rural 11-3, definition App-8

**Crime, nearby:** comparisons 1-3, owners 2-3, renters 3-3, Blacks 4-3, Hispanics 5-3, elderly 6-3, central cities 7-3, suburbs 8-3, nonmetro 9-3, urban 10-3, rural 11-3, definition App-8

**Crime, neighborhood:** comparisons 1-4, owners 2-4, renters 3-4, Blacks 4-4, Hispanics 5-4, elderly 6-4, central cities 7-4, suburbs 8-4, nonmetro 9-4, urban 10-4, rural 11-4, definition App-8

**Deck:** comparisons 1-3, owners 2-3, renters 3-3, Blacks 4-3, Hispanics 5-3, elderly 6-3, central cities 7-3, suburbs 8-3, nonmetro 9-3, urban 10-3, rural 11-3, definition App-6

**Departure time to work:** comparisons 1-5, owners 2-5, renters 3-5, Blacks 4-5, Hispanics 5-5, elderly 6-5, central cities 7-5, suburbs 8-5, nonmetro 9-5, urban 10-5, rural 11-5, definition App-8

**Dining rooms:** comparisons 1-3, owners 2-3, renters 3-3, Blacks 4-3, Hispanics 5-3, elderly 6-3, central cities 7-3, suburbs 8-3, nonmetro 9-3, urban 10-3, rural 11-3, definition App-6

**Discomfort from cold:** comparisons 1-3, owners 2-3, renters 3-3, Blacks 4-3, Hispanics 5-3, elderly 6-3, central cities 7-3, suburbs 8-3, nonmetro 9-3, urban 10-3, rural 11-3, definition App-6

**Distance from home to work:** comparisons 1-5, owners 2-5, renters 3-5, Blacks 4-5, Hispanics 5-5, elderly 6-5, central cities 7-5, suburbs 8-5, nonmetro 9-5, urban 10-5, rural 11-5, definition App-8

**Drives self (to work):** comparisons 1-5, owners 2-5, renters 3-5, Blacks 4-5, Hispanics 5-5, elderly 6-5, central cities 7-5, suburbs 8-5, nonmetro 9-5, urban 10-5, rural 11-5, definition App-8

**Elderly:** definition App-11, column heading in most tables

**Electric outlets, rooms without:** comparisons 1-3, owners 2-3, renters 3-3, Blacks 4-3, Hispanics 5-3, elderly 6-3, central cities 7-3, suburbs 8-3, nonmetro 9-3, urban 10-3, rural 11-3, definition App-7

**Electric wiring adequacy:** comparisons 1-3, owners 2-3, renters 3-3, Blacks 4-3, Hispanics 5-3, elderly 6-3, central cities 7-3, suburbs 8-3, nonmetro 9-3, urban 10-3, rural 11-3, definition App-7

**Exposed wiring:** comparisons 1-3, owners 2-3, renters 3-3, Blacks 4-3, Hispanics 5-3, elderly 6-3, central cities 7-3, suburbs 8-3, nonmetro 9-3, urban 10-3, rural 11-3, definition App-7

**Family households:** definition App-11, column heading in most tables

**Female householder, no husband present:** definition App-11, column heading in most tables

**Fireplace usable:** comparisons 1-3, owners 2-3, renters 3-3, Blacks 4-3, Hispanics 5-3, elderly 6-3, central cities 7-3, suburbs 8-3, nonmetro 9-3, urban 10-3, rural 11-3, definition App-6

**Floors, hole:** comparisons 1-3, owners 2-3, renters 3-3, Blacks 4-3, Hispanics 5-3, elderly 6-3, central cities 7-3, suburbs 8-3, nonmetro 9-3, urban 10-3, rural 11-3, definition App-7

**Garage:** comparisons 1-3, owners 2-3, renters 3-3, Blacks 4-3, Hispanics 5-3, elderly 6-3, central cities 7-3, suburbs 8-3, nonmetro 9-3, urban 10-3, rural 11-3, definition App-7

**Heating capacity, inadequate:** comparisons 1-3, owners 2-3, renters 3-3, Blacks 4-3, Hispanics 5-3, elderly 6-3, central cities 7-3, suburbs 8-3, nonmetro 9-3, urban 10-3, rural 11-3, definition App-6

**Heating problems:** comparisons 1-3, owners 2-3, renters 3-3, Blacks 4-3, Hispanics 5-3, elderly 6-3, central cities 7-3, suburbs 8-3, nonmetro 9-3, urban 10-3, rural 11-3, definition App-6

**Heating stoppage:** comparisons 1-3, owners 2-3, renters 3-3, Blacks 4-3, Hispanics 5-3, elderly 6-3, central cities 7-3, suburbs 8-3, nonmetro 9-3, urban 10-3, rural 11-3, definition App-6

**Hispanic:** definition App-4, column heading in most tables

**Hole in floors:** comparisons 1-3, owners 2-3, renters 3-3, Blacks 4-3, Hispanics 5-3, elderly 6-3, central cities 7-3, suburbs 8-3, nonmetro 9-3, urban 10-3, rural 11-3, definition App-7

**Hole in inside wall:** comparisons 1-3, owners 2-3, renters 3-3, Blacks 4-3, Hispanics 5-3, elderly 6-3, central cities 7-3, suburbs 8-3, nonmetro 9-3, urban 10-3, rural 11-3, definition App-7

**Households:** definition App-11, column heading in most tables

**Housing unit, type:** comparisons 1-6, owners 2-6, definition App-4

**Inadequate heating capacity:** comparisons 1-3, owners 2-3, renters 3-3, Blacks 4-3, Hispanics 5-3, elderly 6-3, central cities 7-3, suburbs 8-3, nonmetro 9-3, urban 10-3, rural 11-3, definition App-6

**Inadequate insulation:** comparisons 1-3, owners 2-3, renters 3-3, Blacks 4-3, Hispanics 5-3, elderly 6-3, central cities 7-3, suburbs 8-3, nonmetro 9-3, urban 10-3, rural 11-3, definition App-7

**Income (household):** comparisons 1-2, owners 2-2, renters 3-2, Blacks 4-2, Hispanics 5-2, elderly 6-2, central cities 7-2, suburbs 8-2, nonmetro 9-2, urban 10-2, rural 11-2, definition App-9

**Income (household) as percent of poverty level:** comparisons 1-2, owners 2-2, renters 3-2, Blacks 4-2, Hispanics 5-2, elderly 6-2, central cities 7-2, suburbs 8-2, nonmetro 9-2, urban 10-2, rural 11-2, definition App-9

**Industrial neighbors:** comparisons 1-3, owners 2-3, renters 3-3, Blacks 4-3, Hispanics 5-3, elderly 6-3, central cities 7-3, suburbs 8-3, nonmetro 9-3, urban 10-3, rural 11-3, definition App-8

**Insulation, inadequate:** comparisons 1-3, owners 2-3, renters 3-3, Blacks 4-3, Hispanics 5-3, elderly 6-3, central cities 7-3, suburbs 8-3, nonmetro 9-3, urban 10-3, rural 11-3, definition App-7

**Investment units:** comparisons 1-6, owners 2-6, definition App-11

**Journey to work:** comparisons 1-5, owners 2-5, renters 3-5, Blacks 4-5, Hispanics 5-5, elderly 6-5, central cities 7-5, suburbs 8-5, nonmetro 9-5, urban 10-5, rural 11-5, definition App-8

**Litter nearby:** comparisons 1-3, owners 2-3, renters 3-3, Blacks 4-3, Hispanics 5-3, elderly 6-3, central cities 7-3, suburbs 8-3, nonmetro 9-3, urban 10-3, rural 11-3, definition App-8

**Living rooms:** comparisons 1-3, owners 2-3, renters 3-3, Blacks 4-3, Hispanics 5-3, elderly 6-3, central cities 7-3, suburbs 8-3, nonmetro 9-3, urban 10-3, rural 11-3, definition App-7

**Location of property (vacant and investment units):** comparisons 1-6, owners 2-6, definition App-12

**Male householder, no wife present:** definition App-11, column heading in most tables

**Married couple:** definition App-11, column heading in most tables

**Mass transportation:** comparisons 1-5, owners 2-5, renters 3-5, Blacks 4-5, Hispanics 5-5, elderly 6-5, central cities 7-5, suburbs 8-5, nonmetro 9-5, urban 10-5, rural 11-5, definition App-8

**Means of transportation to go to work:** comparisons 1-5, owners 2-5, renters 3-5, Blacks 4-5, Hispanics 5-5, elderly 6-5, central cities 7-5, suburbs 8-5, nonmetro 9-5, urban 10-5, rural 11-5, definition App-8

**Metro. area:** definition App-2, column heading in most tables

**Midwest:** definition App-1, column heading in most tables

**Mobile home:** definition App-3, column heading in most tables

**Monthly housing costs:** comparisons 1-2, owners 2-2, renters 3-2, Blacks 4-2, Hispanics 5-2, elderly 6-2, central cities 7-2, suburbs 8-2, nonmetro 9-2, urban 10-2, rural 11-2, definition App-10

**Monthly housing costs as percent of current income:** comparisons 1-2, owners 2-2, renters 3-2, Blacks 4-2, Hispanics 5-2, elderly 6-2, central cities 7-2, suburbs 8-2, nonmetro 9-2, urban 10-2, rural 11-2, definition App-10

**Mortgage status (vacant and investment units):** comparisons 1-6, owners 2-6, definition App-10

**Motorcycle:** comparisons 1-5, owners 2-5, renters 3-5, Blacks 4-5, Hispanics 5-5, elderly 6-5, central cities 7-5, suburbs 8-5, nonmetro 9-5, urban 10-5, rural 11-5, definition App-8

**Moved in past year:** definition App-4, column heading in most tables

**Neighborhood conditions:** comparisons 1-3, owners 2-3, renters 3-3, Blacks 4-3, Hispanics 5-3, elderly 6-3, central cities 7-3, suburbs 8-3, nonmetro 9-3, urban 10-3, rural 11-3, definition App-8

**Neighborhood crime:** comparisons 1-4, owners 2-4, renters 3-4, Blacks 4-4, Hispanics 5-4, elderly 6-4, central cities 7-4, suburbs 8-4, nonmetro 9-4, urban 10-4, rural 11-4, definition App-8

**Neighborhood shopping:** comparisons 1-4, owners 2-4, renters 3-4, Blacks 4-4, Hispanics 5-4, elderly 6-4, central cities 7-4, suburbs 8-4, nonmetro 9-4, urban 10-4, rural 11-4, definition App-8

**New construction:** definition App-5, column heading in most tables

**Nights spent at unit:** comparisons 1-6, owners 2-6, definition App-12

**Noise nearby:** comparisons 1-3, owners 2-3, renters 3-3, Blacks 4-3, Hispanics 5-3, elderly 6-3, central cities 7-3, suburbs 8-3, nonmetro 9-3, urban 10-3, rural 11-3, definition App-8

**Nonfamily households:** definition App-11, column heading in most tables

**Nonfamily living alone, female householder:** definition App-11, column heading in most tables

**Nonfamily living alone, female householder (65 and over):** definition App-11, column heading in most tables

**Nonfamily living alone, male householder:** definition App-11, column heading in most tables

**Nonfamily living alone, male householder (65 and over):** definition App-11, column heading in most tables

**Nonfamily, other female householder:** definition App-11, column heading in most tables

**Nonfamily, other male householder:** definition App-11, column heading in most tables

**Nonmetro. area:** definition App-2, column heading in most tables

**Northeast:** definition App-1, column heading in most tables

**Offstreet parking:** comparisons 1-3, owners 2-3, renters 3-3, Blacks 4-3, Hispanics 5-3, elderly 6-3, central cities 7-3, suburbs 8-3, nonmetro 9-3, urban 10-3, rural 11-3, definition App-7

**Opinion of home:** comparisons 1-3, owners 2-3, renters 3-3, Blacks 4-3, Hispanics 5-3, elderly 6-3, central cities 7-3, suburbs 8-3, nonmetro 9-3, urban 10-3, rural 11-3, definition App-7

**Opinion of neighborhood:** comparisons 1-3, owners 2-3, renters 3-3, Blacks 4-3, Hispanics 5-3, elderly 6-3, central cities 7-3, suburbs 8-3, nonmetro 9-3, urban 10-3, rural 11-3, definition App-8

**Origin:** definition App-4, column heading in most tables

**Owner occupant:** comparisons 1-1, 1-2, 1-3, owners 2-1, 2-2, 2-3, renters 3-1, 3-2, 3-3, Blacks 4-1, 4-2, 4-3, Hispanics 5-1, 5-2, 5-3, elderly 6-1, 6-2, 6-3, central cities 7-1, 7-2, 7-3, suburbs 8-1, 8-2, 8-3, nonmetro 9-1, 9-2, 9-3, urban 10-1, 10-2, 10-3, rural 11-1, 11-2, 11-3, definition App-4, column heading in most tables

**Ownership (additional units):** comparisons 1-6, owners 2-6, definition App-11

**Ownership, reasons:** comparisons 1-6, owners 2-6, definition App-11

**Ownership sharing:** comparisons 1-6, owners 2-6, definition App-11

**Paint, peeling:** comparisons 1-3, owners 2-3, renters 3-3, Blacks 4-3, Hispanics 5-3, elderly 6-3, central cities 7-3, suburbs 8-3, nonmetro 9-3, urban 10-3, rural 11-3, definition App-7

**Parking for this home:** comparisons 1-3, owners 2-3, renters 3-3, Blacks 4-3, Hispanics 5-3, elderly 6-3, central cities 7-3, suburbs 8-3, nonmetro 9-3, urban 10-3, rural 11-3, definition App-7

**Patio:** comparisons 1-3, owners 2-3, renters 3-3, Blacks 4-3, Hispanics 5-3, elderly 6-3, central cities 7-3, suburbs 8-3, nonmetro 9-3, urban 10-3, rural 11-3, definition App-6

**Peeling paint:** comparisons 1-3, owners 2-3, renters 3-3, Blacks 4-3, Hispanics 5-3, elderly 6-3, central cities 7-3, suburbs 8-3, nonmetro 9-3, urban 10-3, rural 11-3, definition App-7

**People (65 years and older):** comparisons 1-1, owners 2-1, renters 3-1, Blacks 4-1, Hispanics 5-1, elderly 6-1, central cities 7-1, suburbs 8-1, nonmetro 9-1, urban 10-1, rural 11-1, definition App-11

**People as neighborhood problem:** comparisons 1-3, owners 2-3, renters 3-3, Blacks 4-3, Hispanics 5-3, elderly 6-3, central cities 7-3, suburbs 8-3, nonmetro 9-3, urban 10-3, rural 11-3, definition App-8

**People in home:** comparisons 1-1, owners 2-1, renters 3-1, Blacks 4-1, Hispanics 5-1, elderly 6-1, central cities 7-1, suburbs 8-1, nonmetro 9-1, urban 10-1, rural 11-1, definition App-4

**People per room:** comparisons 1-1, owners 2-1, renters 3-1, Blacks 4-1, Hispanics 5-1, elderly 6-1, central cities 7-1, suburbs 8-1, nonmetro 9-1, urban 10-1, rural 11-1, definition App-5

**Physical problems:** definition App-7, column heading in most tables

**Plaster, broken:** comparisons 1-3, owners 2-3, renters 3-3, Blacks 4-3, Hispanics 5-3, elderly 6-3, central cities 7-3, suburbs 8-3, nonmetro 9-3, urban 10-3, rural 11-3, definition App-7

**Poor home, rating of:** comparisons 1-3, owners 2-3, renters 3-3, Blacks 4-3, Hispanics 5-3, elderly 6-3, central cities 7-3, suburbs 8-3, nonmetro 9-3, urban 10-3, rural 11-3, definition App-7

**Poor neighborhood, rating of:** comparisons 1-3, owners 2-3, renters 3-3, Blacks 4-3, Hispanics 5-3, elderly 6-3, central cities 7-3, suburbs 8-3, nonmetro 9-3, urban 10-3, rural 11-3, definition App-8

**Poor people:** definition App-9, column heading in most tables

**Porch:** comparisons 1-3, owners 2-3, renters 3-3, Blacks 4-3, Hispanics 5-3, elderly 6-3, central cities 7-3, suburbs 8-3, nonmetro 9-3, urban 10-3, rural 11-3, definition App-6

**Poverty:** definition App-9, column heading in most tables

**Property, type:** comparisons 1-6, owners 2-6, definition App-11

**Public elementary school:** comparisons 1-4, owners 2-4, renters 3-4, Blacks 4-4, Hispanics 5-4, elderly 6-4, central cities 7-4, suburbs 8-4, nonmetro 9-4, urban 10-4, rural 11-4, definition App-8

**Public transportation:** comparisons 1-4, owners 2-4, renters 3-4, Blacks 4-4, Hispanics 5-4, elderly 6-4, central cities 7-4, suburbs 8-4, nonmetro 9-4, urban 10-4, rural 11-4, definition App-8

**Race:** definition App-4, column heading in most tables

**Rating of home:** comparisons 1-3, owners 2-3, renters 3-3, Blacks 4-3, Hispanics 5-3, elderly 6-3, central cities 7-3, suburbs 8-3, nonmetro 9-3, urban 10-3, rural 11-3, definition App-7

**Rating of neighborhood:** comparisons 1-3, owners 2-3, renters 3-3, Blacks 4-3, Hispanics 5-3, elderly 6-3, central cities 7-3, suburbs 8-3, nonmetro 9-3, urban 10-3, rural 11-3, definition App-8

**Rats:** comparisons 1-3, owners 2-3, renters 3-3, Blacks 4-3, Hispanics 5-3, elderly 6-3, central cities 7-3, suburbs 8-3, nonmetro 9-3, urban 10-3, rural 11-3, definition App-7

**Water supply stoppage:** comparisons 1-3, owners 2-3, renters 3-3, Blacks 4-3, Hispanics 5-3, elderly 6-3, central cities 7-3, suburbs 8-3, nonmetro 9-3, urban 10-3, rural 11-3, definition App-5

**West:** definition App-1, column heading in most tables

**White:** definition App-4, column heading in most tables

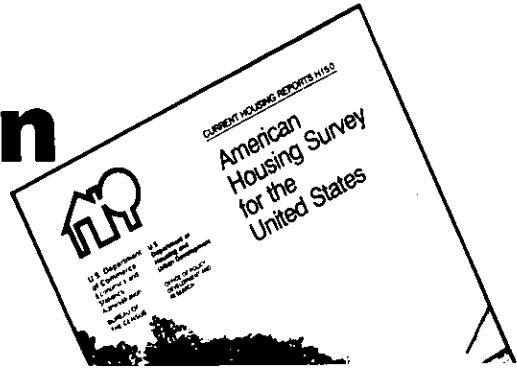

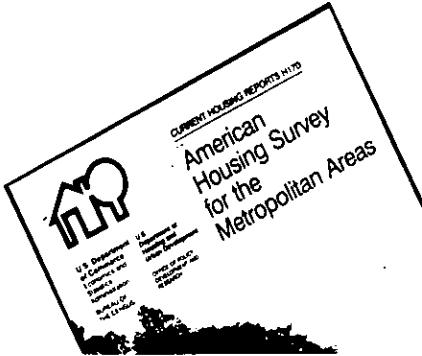

**Work (at home):** comparisons 1-5, owners 2-5, renters 3-5, Blacks 4-5, Hispanics 5-5, elderly 6-5, central cities 7-5, suburbs 8-5, nonmetro 9-5, urban 10-5, rural 11-5, definition App-8

**Work (last week):** comparisons 1-5, owners 2-5, renters 3-5, Blacks 4-5, Hispanics 5-5, elderly 6-5, central cities 7-5, suburbs 8-5, nonmetro 9-5, urban 10-5, rural 11-5, definition App-8

**Year built:** comparisons 1-1, owners 2-1, renters 3-1, Blacks 4-1, Hispanics 5-1, elderly 6-1, central cities 7-1, suburbs 8-1, nonmetro 9-1, urban 10-1, rural 11-1, definition App-5

**Year round use:** comparisons 1-6, owners 2-6, definition App-4

# The American Housing Survey

The American Housing Survey (AHS) is sponsored by the Department of Housing and Urban Development (HUD) and conducted by the Bureau of the Census. The AHS includes two independent data collection efforts in which generally the same questions are asked. One is a national sample (AHS-N), the other is a metropolitan sample (AHS-MS).

Data for the national reports are collected every other year in odd-numbered years.

AHS-N reports present data for the United States, inside and outside MSA's, urban and rural, and the four regions.

The AHS-MS is conducted in 44 selected metropolitan areas divided into 4 groups of 11 each with a group to be interviewed once every 4 years on a rotating basis.

**The AHS is designed to provide a current series of information on the following:**

*Size and composition of the housing inventory.*

*Household characteristics.*

*Indicators of housing and neighborhood quality.*

*Characteristics of recent movers.*

**AHS reports include information covering various areas:**

*General housing characteristics.*

*Size of unit and lot, including square footage.*

*Condition and quality of the unit and the neighborhood.*

*Equipment and fuels.*

*Financial characteristics, including mortgage.*

*Recent movers.*

Reports from the AHS-National are published under series H150. Any supplemental national reports are published under series H151. Reports are for sale by Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402-9327.  
**To order, call 202-783-3238.**

The metropolitan reports are published under series H170. One report is published for each metropolitan area. Any supplemental reports are published under series H171. Reports are for sale by Data User Services Division, Customer Services (Publications), Bureau of the Census, Washington, DC 20233-5300.  
**To order, call 301-763-4100.**
