

Effective August 2011, an additional unit of quantity of “kilograms cows’ milk solids content” will be required for several Harmonized Tariff Schedule (HTS) codes used to classify dairy products. This new unit of measure is part of an import assessment program and does not affect exporters except for those who elect to use these HTS numbers to classify their commodities in the Automated Export System (AES).

Abbreviated “kg cmsc” in the *Harmonized Tariff Schedule of the United States Annotated for Statistical Reporting Purposes*, kilograms cows’ milk solids content includes all cows’ milk components other than water. In the AES, this new HTS unit of measure will be abbreviated “CKG” for content kilograms. Exporters using these particular HTS codes are required to report both quantity one and quantity two. Where applicable, zero (0) will be accepted as a second quantity in the AES.

The *Schedule B Statistical Classification of Domestic and Foreign Commodities Exported From the United States* or Schedule B is the recommended classification system for export reporting purposes. The following list shows the affected HTS codes for dairy products, their two units of measure, and the corresponding Schedule B codes, which require only one quantity.

Further information about the final rule concerning the dairy import assessment and the U.S. Department of Agriculture’s National Dairy Promotion Research Program is in the *Federal Register*, Volume 76, No. 53, published Friday, March 18, 2011.

If you have questions about filing these codes in the AES, call the Foreign Trade Division, Automated Export System Branch: 1-800-549-0595, Option 1 or email: [askaes@census.gov](mailto:askaes@census.gov).

Dairy HTS Numbers Reported in the AES and  
Their Corresponding Schedule B Codes
