

APPENDIX D: DEFENSE DISTRIBUTION DEPOTS

Supply Methodology

In accordance with S&S JCSG definition of the Supply, Defense Distribution Depots (DDD) do not perform this function.

Storage Methodology

Storage capacity utilizes 85% of reported available storage space. This is a common industry standard to account for unusable space supporting materiel handling equipment, allocated for fire lanes, etc. This figure is considered the current capacity. Actual storage space utilized (for each type of storage) is subtracted from current capacity (and minus surge) to arrive at excess capacity. These amounts are rolled up in cubic feet by Covered Storage (General Purpose, Shed and Transitory); in cubic feet for Special Covered Storage (Controlled Humidity, Refrigerated, Flammable, Magazine and Secure); in square feet for Open Storage (Open Improved, Open Unimproved) and in gallons for POL Storage (Dry Tank, POL).

Surge Methodology

Surge is an additional demand on an activity’s current resources. For storage, usage rates are computed in the same manner as under normal circumstances and then increased 10% and 20%. Excess capacity is then reduced based on this increase. Tables D.3 and D.4 display Defense Distribution Depot Tobyhanna storage calculations at 10% and 20% surge.

Methodology Demonstration using Defense Distribution Depot Tobyhanna, PA

Distribution

Distribution Excess Capacity is measured as discussed in Appendix A for each activity. Surge is computed by increasing the capacity utilized by 10% and 20%. For Defense Distribution Depot Tobyhanna capacity available is:

	Number of Loading Bays
Current Capacity	22
Usage	7
Excess Capacity	15

For Defense Distribution Depot Tobyhanna capacity utilized at 10% surge:

	Number of Loading Bays
Current Capacity	22
Usage +10%	8
Excess Capacity	14

For Defense Distribution Depot Tobyhanna capacity utilized at 20% surge:

	Number of Loading Bays
Current Capacity	22
Usage	8
Excess Capacity	14
