Foreword

With the publication of this Commentary, I am pleased to welcome the completion of a long task which is of particular importance to the ICRC. All those who made this achievement possible receive here the ICRC's sincere gratitude.

From its experience of the Commentary on the Geneva Conventions the ICRC was not unaware of the magnitude of the assignment facing the authors, but it did not hesitate to undertake it. It invited its Honorary Vice-President, Jean Pictet, to preside over the Reading Committee so that it could benefit from his wide experience, as well as ensure the smooth transition from the Commentary on the Conventions, and it asked several members of its staff to devote a great deal of time to this work.

However, the ICRC also allowed the authors their academic freedom, considering the Commentary above all as a scholarly work, and not as a work intended to disseminate the views of the ICRC.

The ICRC decided to support this undertaking and publish the Commentary because it is conscious of its role as a guardian of international humanitarian law and is convinced of the importance of this work for those entrusted with implementing the Protocols or ensuring that they are widely disseminated, particularly among government and academic circles, and in Red Cross and Red Crescent circles. The Commentary on the Geneva Conventions gave ample proof in this respect of the value of such a work.

It is well known that without this work of implementation and dissemination, humanitarian law would remain a dead letter and would not be able to achieve its essential objective: the protection of the victims of armed conflicts. In this sense the publication of this Commentary is essentially considered by the ICRC as an effort on behalf of such victims.

Alexandre Hay
President of the ICRC

Editors' note

The **English version** of the Commentary is taken from the French original published in 1986. The translation was undertaken by Martinus Nijhoff Publishers' team of translators: **Mr. Tony Langham** and **Ms. Plym Peters**, and **Mr. Paul Peters**. **Ms. Suzanne Rossington** translated Annex I to Protocol I. The important task of a thorough revision of the text as a whole was undertaken by **Ms. Louise Doswald-Beck**, presently member of the ICRC Legal Division.

The present Commentary is essentially concerned with explaining the provisions of the 1977 Protocols, primarily on the basis of the work of the Diplomatic Conference (CDDH) and other preparatory work. The authors were guided by existing international humanitarian law, general international law and legal literature.

If, nevertheless, the interpretation of the texts gives rise to some uncertainty, the opinions put forward are legal opinions, and not opinions of principle: it is not a question of saying what is just, but of stating the facts. Admittedly, more general considerations or points of principle have been put forward in some cases, but these have been presented as such and can clearly be identified. The responsibility for the text of this work essentially lies with its **authors**.

The **ICRC** contributed to this Commentary first of all by inviting Mr. Jean Pictet, its Honorary Vice-President, and several of its staff to devote a great deal of their time to it, and secondly, by the support of its Legal Commission, whose advice was sought on several points of law. However, strictly speaking, it is not a commentary of the ICRC.

These opening remarks would not be complete without a tribute to the memory of **Mr. Claude Pilloud**. Former Director at the ICRC, Mr. Claude Pilloud retired after serving the Institution for more than forty years. Nevertheless, he very generously agreed to participate in the drawing up of this work. The contribution of his experience and dynamic approach was of great value up to the time of his death in November 1984.

As a collective work the Commentary was prepared within a framework of structures and procedures approved by the ICRC on the proposal of persons entrusted with that mandate.

Most of the authors participated in the work of the Diplomatic Conference (CDDH) as members of the ICRC delegation.

The first version, drafted by each author, was discussed, article by article, in the **Reading Committee**. Taking into account the remarks made during the sessions of that Committee, each author submitted a second version of his text. This second version was then examined by those responsible for **editing** and also **coordination** of the whole, and was then discussed with the author so that the substance – and to some extent, the form – could be harmonized with the other texts so as to ensure the greatest possible uniformity of the work. This discussion allowed the author to draft a third version of the text, which is in principle that contained in the work. During the **revision of the English version** some modifications and corrections were introduced to the text.

The texts bear the **signature** of their authors. After the premature death of Mr. Claude Pilloud the texts were taken over by Mr. Jean Pictet, who submitted the second and third versions.

The **editorial layout** of the work allows some parts to be made into separate volumes without the necessity of resetting.

The **accompanying texts** are aimed at collecting together all the references given in the body of the Commentary and to provide additional information for the user. With a few exceptions these references go up to 31 December 1984.

In the context of the Commentary, **references to writings on international humanitarian law** were only made to elucidate the texts being commented upon without claiming to reflect in any complete way the whole of existing literature; similarly, the authors chose to include only the most essential writings on general international law.

Each text is preceded by a collection of **references to the preparatory work** of and to the CDDH, and to the most important documents for finding the origin of the texts which were finally adopted.

In the same vein, the **Index** common to the two Protocols allows in particular the identification of their common features, as well as the relationship which existed during the drafting of these instruments, especially during the CDDH.

The **continuous numbering** of paragraphs in the work permits easy reference to a particular passage without necessarily having to give other information.

It is our pleasant duty to **thank** all those who contributed to the publication of the Commentary.

Our thanks go in the first place to **Ms. Eliane Goy-Voyame**, whose dedicated participation in the work of producing and editing the texts made it possible to complete the work in time. For a period she was aptly seconded by **Ms. Mari-Carmen Jan Dechamps**.

Ms. Sylvie Valaizon, editorial assistant, made a substantial contribution to editing the work.

Finally, our thanks go to Martinus Nijhoff Publishers, and in particular to **Mr. Alan D. Stephens, Ms. Hannelore Brown-Knauff** and **Mr. Peter A. Schregardus** for their efficient involvement.

* * *

For the purposes of this Commentary it seems useful to recall and define some expressions generally used throughout the work.

Protocol I defines the expression **rules of international law applicable in armed conflict** as “the rules applicable in armed conflict set forth in international agreements to which the Parties to the conflict are Parties and the generally recognized principles and rules of international law which are applicable to armed conflict” (Article 2, sub-paragraph (b)).

This expression covers all rules specifically intended to apply during armed conflict. In this Commentary it is abbreviated in some cases to the expression **law of armed conflict**.

In the present Commentary the expression **international humanitarian law applicable in armed conflict** means international rules, established by treaties or custom, which are specifically intended to solve humanitarian problems directly arising from international or non-international armed conflicts and which, for humanitarian reasons, limit the right of Parties to a conflict to use the methods and means of warfare of their choice or protect persons and property that are, or may be, affected by conflict. The expression “international humanitarian law applicable in armed conflict” is often abbreviated to **international humanitarian law** or **humanitarian law**.

In the legal literature, the expression **Geneva law** is used fairly commonly to designate the rules of humanitarian law laying down the right of victims to protection, and the expression **Hague law** to designate the rules of humanitarian law governing the conduct of hostilities.

Nowadays this is a rather artificial distinction as the Protocols contain rules of both types. Nevertheless, these expressions are used several times in the Commentary in the sense defined here.

The Conventions and the Protocols mention the three **distinctive emblems** of red cross, red crescent and red lion and sun. The latter has only ever been used by Iran.

According to a notification by the Swiss Federal Council acting as depositary of these treaties, dated 20 October 1980, the Islamic Republic of Iran notified it of its adoption of the red crescent emblem.

Taking this decision into account, the present Commentary restricts itself in principle, depending on the context, to using the expressions “distinctive emblem”, “red cross” and “red crescent”, or a combination of the three.

In accordance with the above-mentioned decision of the Islamic Republic of Iran, the Iranian Red Lion and Sun Society changed its name to “Iranian Red Crescent”.

In principle the present Commentary will restrict itself, depending on the context, to the expressions **National Societies**, **National Red Cross Societies**, and **National Red Cross and Red Crescent Societies**.

On 12 October 1983 the League of Red Cross Societies changed its name to the **League of Red Cross and Red Crescent Societies**.

Thus in principle the present Commentary will use that name or simply the expression **League**.

Since 8 November 1986 the International Red Cross has the name of the **International Red Cross and Red Crescent Movement** (although it may continue to be named the International Red Cross). This is composed of the National Red Cross and Red Crescent Societies, the International Committee of the Red Cross and the League of Red Cross and Red Crescent Societies. At the same date, new Statutes of the Movement entered into force; this entailed some changes in the numbering of these Statutes' Articles. As the Commentary generally gives information valid up to December 1984, none of these changes is reflected in the text.

General introduction

The task of the development of humanitarian law

From its inception, the International Committee of the Red Cross (ICRC) has taken the initiative, which has by now become a long-standing practice, of working for the development of international humanitarian law, which regulates the conduct of hostilities in order to mitigate their severity. Thus it was responsible for initiating the process which led to the conclusion, and later the revision of the Geneva Conventions for the protection of the victims of war of 1864, 1906, 1929 and 1949, while the Government of Switzerland, the depositary State of these basic instruments, convened and organized diplomatic conferences which brought into being these Conventions.

The Geneva Conventions, which have saved innumerable lives, were considerably enlarged in 1949: the three Conventions existing prior to that date relative to wounded and sick soldiers, to the shipwrecked and to prisoners of war, were reviewed and improved, and the Fourth Convention, which was almost entirely new and related to civilians, bridged a gap which was keenly felt during the Second World War. Yet this last mentioned Convention only protects civilians against arbitrary enemy action, and not – except in the specific case of the wounded, hospitals and medical personnel and material – against the effects of hostilities.

However, although humanitarian law had been developed and adapted to the needs of the time in 1949, the Geneva Conventions did not cover all aspects of human suffering in armed conflict. Moreover, by the 1970's even these were already a quarter of a century old and on some points had exposed gaps and imperfections.

In addition, the law of The Hague, which is concerned with developing rules on hostilities and the use of weapons, had not undergone any significant revision since 1907. Consequently, in agreement with the Government of the Netherlands, two subjects arising from the Hague Regulations Respecting the Laws and Customs of War on Land were placed on the agenda for future development: the conduct of combatants and, even more important, the protection of the civilian population from the effects of hostilities.

On the latter point, which it considered essential, the ICRC had already presented Draft Rules to the XIXth International Conference of the Red Cross, which convened in New Delhi in 1957. Though these draft rules were approved in principle at the time, they did not achieve support from governments, mainly because they tackled directly the controversial question of nuclear weapons.

Subsequently the XXth International Conference of the Red Cross, which took

place in Vienna in 1965, laid down in its resolution XXVIII four principles relating to the protection of the civilian population against the dangers of indiscriminate warfare. In addition, it urged “the ICRC to pursue the development of International Humanitarian Law”.

Considering this to be an encouraging sign, the ICRC then decided to move a stage further in trying to develop humanitarian law. It did not allow itself to become discouraged by the enormity and the difficulty of this task. In fact, it soon became apparent that this task was much more arduous than in 1949, when a single session of the Diplomatic Conference had been sufficient. This time, four were needed. As we have seen, the matter was more problematic with regard to some aspects, such as the protection of the civilian population against the effects of hostilities, a matter which the ICRC had previously decided not to include.

Soon thereafter, following the wishes of that Conference, the ICRC addressed a memorandum dated 19 May 1967 to all States Parties to the Geneva Conventions, raising the question of further developing the law of armed conflicts and including a list it had drawn up of the written and customary rules which could be considered to still be in force.

In May 1968 the International Conference on Human Rights, held in Teheran on the initiative of the United Nations, revealed its interest in this question and invited the United Nations Secretary-General to establish contact with the ICRC with a view to cooperating in a joint study. Consultations took place on this matter, and since then the ICRC has maintained close links with the Organization. Thus representatives of the UN have participated in the two sessions of the Conference of Government Experts called by the ICRC. Similarly, delegates from the ICRC have closely followed the debates of the UN General Assembly, which, after taking cognisance of extensively documented reports of the Secretary-General, adopted at each session resolutions on “respect for human rights in armed conflict”, strongly encouraging the ICRC to continue in this task. In fact, it soon became apparent that by adopting the same method which so far had made the development of the Geneva Conventions possible i.e. resorting to the ICRC for the preparatory stage, then the Swiss government for convening the Conference – the best conditions for success would once more be created; by undertaking the task on neutral ground it was hoped to avoid, at least to some extent, that the discussions become politicized.

In September 1968 the ICRC put its plans to the National Societies of the Red Cross and the Red Crescent which were present at Geneva. There was no intention of trying to rewrite the Geneva Conventions, nor even of completely revising them, which would have entailed the risk of weakening them. When they are fully applied, these Conventions provide effective guarantees for the victims of conflicts. Thus it would be sufficient to extend them so as to cover certain supplementary matters and to clarify some important points. Consequently, since then, one has referred to “reaffirming and developing” humanitarian law. Similarly, the idea of adopting the form of protocols additional to the Geneva Conventions was soon conceived, and later approved by governments.

In September 1969 the XXIst International Conference of the Red Cross, held in Istanbul, was presented with an important report from the ICRC on this subject. It unanimously passed a Resolution of major importance, No. XIII, which gave the undertaking a decisive stimulus. In the terms of this resolution the

ICRC was urged to actively pursue its efforts with a view to “proposing, as soon as possible, concrete rules which would supplement the existing humanitarian law” and to invite experts for this purpose.

In order to carry out this task, the ICRC employed its usual method of collecting all the necessary documents, demonstrating on which points the law needed to be confirmed, supplemented or improved, and then drawing up draft treaties with the aid of government experts, National Societies and other humanitarian institutions.

Thus, with valuable cooperation from the Netherlands Red Cross, it convened experts from the National Societies in The Hague in March, 1971, and had the benefit of their views.

The ICRC next convened the *Conference of Government Experts on the Reaffirmation and Development of International Humanitarian Law Applicable in Armed Conflicts* from 24 May to 12 June 1971. About forty governments were invited to send participants to the Conference and these numbered almost 200. For this meeting the ICRC had drawn up documentation in eight volumes, numbering over 800 pages. As it was not able to cover the entire agenda, this meeting required a second session. This time it was open to all the States Parties to the Geneva Conventions.

In November 1971, the ICRC gathered the opinions of various non-governmental organizations. In March 1972, it once again consulted the National Societies, who had been cordially invited to convene in Vienna by the Austrian Red Cross, and submitted the first draft texts to them.

The second session of the Conference of Government Experts was held in Geneva from 3 May to 3 June 1972. It comprised over 400 experts sent by 77 governments. This extensive participation, the sustained work carried out in several committees, and the constructive atmosphere in which the discussions took place made it possible to achieve significant progress.

Following these sessions the ICRC drew up the complete text of two draft Protocols additional to the Geneva Conventions, one for cases of international armed conflict, the other for conflicts which were not of an international nature. These were to serve as a basis for discussion in the future Diplomatic Conference which the Swiss Government had decided to convene.

The drafts took into account most of the views given by those consulted, though they did not follow them entirely, as the ICRC could not agree with them on all points. In some cases proposals put forward were contradictory, and it was necessary to make a choice. In other cases, when the requirements of the Red Cross so dictated, the ICRC had to take the initiative itself and assume full responsibility. In elaborating the basic texts, the ICRC endeavoured to remain true to the spirit in which it had always sought guarantees for the benefit of victims of conflicts, ever since 1864, as required by humanitarian considerations, but also, in order to be realistic, taking into account military and political constraints.

The drafts were sent to all governments in June 1973, accompanied by a detailed commentary and a report of the Conference which contained, in particular, the various proposals put forward by government experts. These were again presented at the XXIInd International Conference of the Red Cross, which was held in Teheran in November of the same year. Resolution XIII of this

Conference welcomed the draft Protocols, wished the forthcoming Diplomatic Conference every success, and recommended that governments should do all they could for the texts to become applicable worldwide.

Thus the texts passed out of the hands of the Red Cross to enter a new phase in which States would have the power of decision. It is States which conclude international conventions and take on obligations thereunder.

In the introduction to the draft Protocols the ICRC had stated that: "Problems relating to atomic, bacteriological and chemical warfare are subjects of international agreements or negotiations by governments, and in submitting these draft Additional Protocols the ICRC does not intend to broach those problems."

As regards so-called "conventional" weapons which cause superfluous injury or unnecessary suffering or strike indiscriminately civilian population and combatants alike, the ICRC did not include in the drafts any prohibitions or specific limitations as this subject seemed to be such a delicate one. It limited itself to reiterating the fundamental principles of The Hague and St. Petersburg, which had in fact become customary law. However, on the initiative of the Swedish delegation, during the second session of the Conference of Government Experts, a group of experts requested that the question of conventional weapons should also be considered.

The ICRC carried out this request and convened two sessions of a Conference of Government Experts, in Lucerne in 1974, and in Lugano in 1976. However, the results achieved at that stage did not make it possible to draw up draft treaty provisions or even to arrive at agreement on the main points, so that this subject remained one step behind the Protocols. All the documentation gathered on this important question was presented to the Diplomatic Conference, which set up an *ad hoc* committee to examine it. This committee met at each session. It did not deal with the basic aspects of the problem in any detail, but the discussions resulted in a resolution of the Conference (No. 22), expressing the wish that the matter should be dealt with within the framework of the United Nations, and calling for a special diplomatic conference "with a view to reaching agreements on prohibitions or restrictions on the use of specific conventional weapons".

This procedure was successful, and it led, on 10 October 1980, under the auspices of the United Nations, to the adoption of the Convention on Prohibition or Restrictions on the Use of Certain Conventional Weapons which may be deemed to be Excessively Injurious or to have Indiscriminate Effects.

The Diplomatic Conference from 1974 to 1977

The *Diplomatic Conference on the Reaffirmation and Development of International Humanitarian Law Applicable in Armed Conflicts* was convened and organized by the Swiss Government in its capacity as the depositary of the Geneva Conventions and in accordance with a hundred year-old tradition. The Conference met in Geneva at the International Conference Centre in four sessions. The first session was held from 20 February to 29 March 1974, the second from 3 February to 18 April 1975, the third from 21 April to 11 June 1976 and the fourth from 17 March to 10 June 1977.

All States which were Parties to the Geneva Conventions or Members of the United Nations were invited to attend, in all numbering 155 nations. The number of those participating in the Conference varied from 107 to 124 in the various sessions. In addition, 11 national liberation movements and 51 intergovernmental or non-governmental organizations participated as observers, so that the total number of delegates fluctuated around 700.

Under the terms of the Rules of Procedure, the ICRC representatives were involved in the work of the Conference as experts and called upon to participate continuously, in particular to orally present the articles of the draft Protocols which the ICRC had drawn up, and which were used as a basis for discussion.

The presidency of the Diplomatic Conference was held by Pierre Graber, Federal Councillor, Head of the Federal Political Department, and in 1975 President of the Swiss Confederation. He presided over the plenary meetings of the Conference and the meetings of the bureau. Jean Humbert (Switzerland) held the office of Secretary-General. The Conference also appointed 19 vice-presidents.

The Conference was sub-divided into three main plenary committees, one *ad hoc* committee on "conventional weapons", also plenary, to which were added the Credentials Committee and the Drafting Committee, as well as numerous working groups. Each committee appointed its own chairman, viz., Edvard Hambro (Norway) and Einar-Frederik Ofstad (Norway) for Committee I; Tadeusz Mallik (Poland) and Stanislaw-Edward Nahlik (Poland) for Committee II; Hamed Sultan (Egypt) for Committee III; Diego Garcés (Colombia) and Héctor Charry Samper (Colombia) for the *Ad Hoc* Committee; Abu Sayed Chowdhury (Bangladesh) and Iqbal Abdul Quarim Al-Fallouji (Iraq) for the Drafting Committee. The Rapporteurs were: Miguel Marin Bosch (Mexico) and Antonio Eusebio de Icaza (Mexico) for Committee I; Djibrilla Maiga (Mali) and El Hussein El Hassan (Sudan) for Committee II; Richard Baxter (United States of America) and George H. Aldrich (United States of America) for Committee III; Frits Kalshoven (Netherlands), Robert J. Akkerman (Netherlands), John G. Taylor (United Kingdom of Great Britain and Northern Ireland) and Martin R. Eaton (United Kingdom of Great Britain and Northern Ireland) for the *Ad Hoc* Committee.

The Rules of Procedure reflect the rules of procedure generally accepted in codification conferences. All decisions on matters of substance taken by the plenary Assembly, and particularly the definitive adoption of articles, were subject to a two-thirds majority whenever there was no consensus. In the Committees only a simple majority was required.

The languages of the Conference were English, French, Russian, Spanish, as well as Arabic (from the third session) and Chinese (for the first session).

The Protocols were adopted on 8 June 1977, and the Diplomatic Conference ended two days later with the formal signature of the Final Act. Almost all delegations signed this. The Final Act contains in an Annex the text of the two Protocols Additional to the Geneva Conventions of 12 August 1949, representing the results of the Conference. Some resolutions were added.

Following the ratification deposited by Ghana, and the accession by Libya, these instruments, which are of such fundamental importance for humanity, entered into force on 7 December 1978.

The 1977 codification is surely an achievement comparable to the revisions achieved in 1949. Supplemented in this way, borrowing copiously from the Hague law – which itself had been in great need of updating since 1907 – the Geneva Conventions henceforth constitute an impressive monument of 600 articles of which almost 150 are new. This codification brings great hope to so many victims, as the Powers have agreed to reaffirm and develop their obligations arising from the conduct of hostilities. It will allow the national and the international Red Cross to save even more lives and to help those in distress who would otherwise have remained unassisted. Finally, throughout the world it will spread an ideal of mutual aid and cooperation, and in this way it will advance the cause of peace – the wish of all men of goodwill.

Although the aim was only described as “reaffirming and developing humanitarian law” in order to emphasize the “additional” and complementary character of the Protocols, there is no doubt that on certain points the 1977 instruments modify previous law and sometimes even introduce fairly bold innovations.

Despite all efforts, it was not possible to entirely avoid some politics being brought into the debates. This should not come as a great surprise, for, though treaties of this nature have humanitarian aims, their implementation raises political and military problems, to begin with, that of the survival of the State. Thus it was not possible to escape this tension between political and humanitarian requirements. Such tension is in the nature of the law of armed conflict, which is based, as we know, on compromise.

However, the legislative work is accomplished, and this represents an achievement of great significance. It is also remarkable that almost all the provisions were adopted by consensus. In fact, of the 150 articles on matters of substance contained in the two Protocols, only 14 required a formal vote, not counting of course those draft articles, proposals and amendments that were rejected after a vote.

It should be a matter of great satisfaction that for the first time, all the nations of the world participated in this codification. Thus it reflects a universal sentiment which is not merely a façade, but is very real and founded on a feeling of solidarity. This should encourage all States who have not yet done so to ratify the instruments produced by such representative sessions in the very near future, or to accede to them.

It is too early to assess the true value of these new instruments – a period of time will be necessary to do this. However, there is every reason to think that they will follow the course of the Geneva Conventions, that they will be worthy of this long tradition, and that they will allow safeguards for human beings to be improved, which is their *raison d'être*.

In the final analysis, Protocol I very largely meets the concerns and wishes of the Red Cross. Amongst the results achieved, we should like to mention first the protection of the civilian population against the dangers of hostilities. The reaffirmation and development of norms in this field, which had been neglected since 1907, was the primary reason for the Diplomatic Conference, and the Conference would have been considered a failure if the legislative work had not been successful on this point.

Civilian medical personnel and the personnel of civil defence services will in

future enjoy safeguards comparable to those which military medical personnel have enjoyed for a long time. The medical service has acquired a better status, and there is hope that immunity will be achieved for medical aviation, thanks to modern identification techniques.

A major area is constituted by the complex subject of wars of liberation and guerrilla fighters; this has raised difficult questions and has led to a number of controversies, but it is probably because of the solutions that were finally adopted, which pay great attention to humanitarian considerations, that many contemporary conflicts will be governed by law.

Another noteworthy chapter relates to the conduct of combatants, a subject which was dealt with in the Hague law. This field was in great need of updating, and most of the customary rules have now been codified. The provisions for the reinforcement of the supervision over the application of the Conventions are also significant. They include the development of sanctions and a stronger position of the Red Cross; it is not possible to mention all the provisions here.

As regards Protocol II, relating to non-international armed conflicts, this was adopted by consensus and represents considerable progress, despite its rather restricted field of application.

At the close of the Diplomatic Conference of 1974-1977, the ICRC made a point of once more expressing its profound gratitude to all those who, either in public or in private, had encouraged it in its determination, had given it their trust and had helped it to carry out a task which required many years of work.

It has been said that the texts drawn up in Geneva are often complex and difficult. Thus it is all the more necessary to explain them and ensure that they are understood at all levels, and most of all, by those who will be responsible for putting them into practice. It is to be hoped that the present Commentary, which is intended primarily as a working tool, may be a useful contribution to this task.

Commentary

General remarks

- 1 The title of a treaty does not have a substantial juridical function, but primarily a practical one. If it is properly worded, it will enable all those concerned, first of all to find a particular treaty easily and logically from the many existing treaties, and subsequently it will enable them to see at a glance whether it really is the treaty being sought. The title of the Protocol is worded in such a way as to satisfy these requirements, and for practical purposes a short title, but still an official title, is added in parentheses. This is common practice, particularly in national legislation.
- 2 With the exception of the addition of this short title, the wording adopted by the Conference is the same as that used in the draft.² No amendments were

¹ There is no commentary on the draft title.

² Except that the word "draft", which was the first word, was of course deleted. In English the date was worded according to normal modern usage, as in Articles 1, para. 3; 2, sub-para. (a); 53.

officially proposed and it was adopted by consensus, both in Committee I and in the plenary Conference.³

“Additional Protocol”

- 3 This Protocol is unquestionably a treaty, i.e., according to the Vienna Convention on the Law of Treaties of 23 May 1969, “an international agreement concluded between States in written form and governed by international law, [...] whatever its particular designation” (Article 2, paragraph 1(a)).⁴
- 4 The expressions “additional protocol” or “protocol” are widely used to refer to a treaty supplementing an already existing treaty, and it is in this sense that the word “additional” is used in the title here.⁵ Nevertheless, for the sake of completeness, it should be noted that there are supplementary treaties which are not termed “protocols”, as well as independent protocols.
- 5 The additional character of the Protocol means that it is not an independent instrument. Apart from what is said below about its relation to the 1949 Conventions, this is clearly demonstrated by the fact that it is impossible to become a Party to the Protocol without already being a Party to the Conventions – or without becoming a Party to the Conventions simultaneously.⁶

“to the Geneva Conventions of 12 August 1949”

- 6 The relationship with the Geneva Conventions is fundamental and is structural in nature. Essentially the Protocol supplements the four Geneva Conventions of 12 August 1949 for the protection of war victims.⁷ It supplements their substantive rules and their implementation mechanisms. In turn it is governed by those of their provisions which are relevant and which it has not amended, particularly the general and final provisions, as well as by their general principles.
- 7 Two points must be clarified: some of the provisions of the Protocol supplement all four Conventions, some supplement only one or some of them; the Protocol also reaffirms and develops other treaty norms, and it reaffirms and elucidates customary rules. Such questions will be dealt with in greater detail in the discussion of Article 1 (*General principles and scope of application*) and Article 96 (*Treaty relations upon entry into force of this Protocol*), and particularly with regard to other provisions concerned.

³ O.R. IX, p. 478, CDDH/I/SR.76, para. 35. O.R. VII, pp. 52-53, CDDH/SR.48, para. 11. After it had been adopted by the Committee, the Drafting Committee retained the present wording in all languages, although the English version had previously started with the words “*First Protocol Additional*”, and did not have a short title.

⁴ As P. Reuter remarks: It is well-known that there is no precise terminology to designate international treaties, and that terms such as: *treaty, convention, agreement, protocol* can be used interchangeably (*Introduction au droit des traités*, Paris, 1972, p. 69, para. 62).

⁵ Cf. General introduction, *supra*, on the reasons which led to a preference for the choice of protocols additional to the Conventions rather than a revision of the Conventions.

⁶ Cf. in particular, commentary Arts. 92, 94 and 96, para. 2, *infra*, pp. 1068-1069, 1076 and 1087, note 19, respectively.

⁷ “The Conventions”, according to the definition of Article 2, sub-para. (a).

“and relating to the Protection of Victims of International Armed Conflicts”

- 8 Each of the four Conventions for the protection of war victims has its own title.⁸ The wording used here qualifies the Protocol⁹ and shows that it supplements the whole of the four Conventions, while Protocol II supplements Article 3 common to the Conventions and relating to non-international armed conflicts.¹⁰
- 9 As regards the expression “armed conflicts”, this was preferred because of its more objective character to the term “war”, which is still used, for example, in the title of some of the Conventions and in Article 2, common to the Conventions.¹¹

B.Z.

⁸ Cf. Art 2, sub-para. (a).

⁹ To avoid any ambiguity in this respect the English version uses the conjunction “and”.

¹⁰ As explicitly stated in the Preamble, first paragraph, and in Art. 1, para. 1, of Protocol II.

¹¹ For the title of the Conventions, cf. *infra*, commentary Art. 2, sub-para. (a), p. 59. Para. 2 of Art. 2, common to the Conventions, provides that: “the present Convention shall apply to all cases of declared war or of any other armed conflict”. Cf. also *infra*, commentary Art. 1, para. 3, p. 39.

Protocol I

Preamble

The High Contracting Parties,

Proclaiming their earnest wish to see peace prevail among peoples,

Recalling that every State has the duty, in conformity with the Charter of the United Nations, to refrain in its international relations from the threat or use of force against the sovereignty, territorial integrity or political independence of any State, or in any other manner inconsistent with the purposes of the United Nations,

Believing it necessary nevertheless to reaffirm and develop the provisions protecting the victims of armed conflicts and to supplement measures intended to reinforce their application,

Expressing their conviction that nothing in this Protocol or in the Geneva Conventions of 12 August 1949 can be construed as legitimizing or authorizing any act of aggression or any other use of force inconsistent with the Charter of the United Nations,

Reaffirming further that the provisions of the Geneva Conventions of 12 August 1949 and of this Protocol must be fully applied in all circumstances to all persons who are protected by those instruments, without any adverse distinction based on the nature or origin of the armed conflict or on the causes espoused by or attributed to the Parties to the conflict,

Have agreed on the following:

Commentary**General remarks**

- 10 The Conventions do not have a preamble as such, but an introductory paragraph indicating for which particular task of revision or drafting the plenipotentiaries met. This was not due to any lack of ideas regarding what a preamble might have contained: in fact, it was the existence of contradictory proposals and the impossibility of reconciling them that led the Diplomatic Conference to abandon the idea of a real preamble in 1949.¹
- 11 Even though a preamble does not always contain rules that can be applied as such, it often constitutes an explanatory memorandum that can be used as guidance in the interpretation of the treaty and to cover any gaps.² These two objectives formed the basis of the draft preamble of the Protocol submitted to the Conference.
- 12 Presented with three amendments and with proposals formulated by the Working Group,³ the Conference retained therefrom what is now laid down in the second, fourth and fifth paragraphs, so that the Preamble is undoubtedly more substantial than the draft had been.
- 13 The Committee decided by consensus that the so-called “Martens clause”, which had meanwhile become paragraph 2 of Article 1 (*General principles and scope of application*), no longer needed to be contained in the Preamble, as it had been in the draft, and subsequently it adopted the Preamble by consensus.⁴ The plenary Conference adopted the same text by consensus after amendments to the second to fifth paragraphs had been rejected or withdrawn.⁵

“The High Contracting Parties”

- 14 The Conventions and the Protocol regularly use the expression “High Contracting Parties” to refer to the Parties to these treaties. This unquestionably refers to the States for which these treaties are in force in accordance with their relevant provisions, i.e., for the Protocol, Article 95 (*Entry into force*).
- 15 Thus this expression should not be given the meaning which the Vienna Convention on the Law of Treaties of 23 May 1969, for its own purposes, gives to a similar expression, “contracting State”, namely “a State which has consented to be bound by the treaty, whether or not the treaty has entered into force” (Article 2, Use of terms, paragraph 1(f)). On the contrary, “High Contracting Parties” must be understood in the Conventions and the Protocol in the sense given by the same Vienna Convention to the word “Party”, namely “a State which has consented to be bound by the treaty, and for which the treaty is in force”. (Article 2, paragraph 1(g)).
- 16 Finally the expression only directly covers the Parties in a strict sense, i.e., such Parties as have given their consent to be bound by those treaties through ratification, accession or notification of succession. Nevertheless, this rule also applies, like the Conventions and the Protocol, to a Party to a conflict which, without being bound by one of such methods, accepts and applies these treaties.⁶ The same applies, in relation to the conflict concerned, with regard to an authority representing a people engaged in a conflict of the type mentioned in paragraph 4 of Article 1 (*General principles and scope of application*) against a High Contracting Party, and which has made a declaration as laid down in Article 96 (*Treaty relations upon entry into force of this Protocol*), paragraph 3, in which subparagraph (b) does not leave any room for doubt in this respect. The same also applies, at least in a conflict to which a newly independent State is a Party, to that State if, instead of giving notification of succession, it has made a declaration on the provisional application of treaties covering humanitarian law, in the sense of the Vienna Convention on the Succession of States in respect of Treaties of 23 August 1978.⁷

First paragraph

- 17 This paragraph is inspired by the Preamble of the United Nations Charter, which starts with the words: “We the Peoples of the United Nations, determined to save succeeding generations from the scourge of war”. The Diplomatic Conference of 1949 had already expressed a similar aim in its Resolution 8 when it formulated “its earnest hope [...] that, in the future, Governments may never have to apply the Geneva Conventions” and that “peace shall reign on earth forever”.
- 18 This touches upon the central problem, which also underlies the following three paragraphs, regarding the justification and the aims of international humanitarian law. What is the purpose of having, and even developing the laws

⁶ Cf. Art. 2, para. 3, common to the Conventions, and Art. 96, para. 2, Protocol I, respectively.

⁷ On ratification, accession, succession and provisional application by a newly independent State, cf. commentary Arts. 93, *infra*, pp. 1071-1072; and 94, *infra*, p. 1077.

of armed conflict, and how should this be done when the threat or use of force has actually been prohibited in international relations by the Charter of the United Nations?⁸ For the sake of brevity, we refer hereafter only to the *use* of force, although the *threat* of such use is by no means irrelevant since this may involve the application of the Conventions and the Protocol depending on the security measures taken in conjunction with such a threat.

- 19 First, the United Nations itself may decide to use force, though this is only a marginal issue.⁹ Next, there is the inherent right of individual or collective self-defence when an armed attack occurs against a State – which presupposes that the prohibition has been violated.¹⁰ Finally, and above all, it cannot be denied that, despite the Charter, the phenomenon of international armed conflict has by no means disappeared.
- 20 In short, as the prohibition on the use of force is not absolute, and is not immune to violation, it is necessary and justified to develop a body of law to govern international armed conflicts: the violation of the law of peace, which includes certain exceptions (*jus ad bellum*) to the general prohibition of the use of force, neither prevents nor exempts any Party to a conflict from respecting the law applicable in such a situation (*jus in bello*).¹¹ A moral and humanitarian argument can be added to this legal aspect: just as the dissemination of humanitarian law contributes to the promotion of humanitarian ideals and of a spirit of peace among nations,¹² the faithful application of such law can contribute to reestablishing peace, by limiting the effects of hostilities.
- 21 Thus there is no contradiction between expressing a desire for peace on the one hand and developing a law of armed conflicts on the other, as both actions proceed from the same “faith in fundamental human rights, in the dignity and worth of the human person”.¹³ The second aim takes into account the realities of life, so that those situations where legal regulation is essential are not in a legal vacuum on the pretext that they arise from a violation of law; it results from the general wish of the contemporary international community that relations between States in their totality should be regulated by law.

⁸ Apart from the second and fourth paragraphs, the Charter of the United Nations is mentioned in Arts. 1, para. 4, 89, and 101, para. 1; the Organization is mentioned in Arts. 38, para. 2, 89, 101, paras. 1 and 2; the signs, emblems and uniforms of the Organization are mentioned in Arts. 37, para. 1 (d), and 38, para. 2.

⁹ Charter of the United Nations, Chapter VII (Action with respect to threats to the peace, breaches of the peace and acts of aggression), especially Art. 42; *cf.* also commentary Art. 89, *infra*, pp. 1034-1035.

¹⁰ Charter of the United Nations, Art. 51. For armed struggles against colonial domination and alien occupation and against racist régimes in the exercise of the right of peoples to self-determination, *cf. infra*, p. 43, *ad* Art. 1, para. 4.

¹¹ On the relationship between *jus ad bellum* and *jus in bello*, *cf. infra*, *ad* fourth and fifth paragraphs.

¹² O.R. I, Part I, p. 214, resolution 21, second preambular paragraph.

¹³ Charter of the United Nations, Preamble. The principles of humanity and respect for the human person are expressed with different wording particularly in the following articles of the Conventions and the Protocol: Conventions, Arts. 12/12/13, 14/16, 27; Protocol, Arts. 1 (para. 2), 10, 11, 75 (para. 1).

Second paragraph

- 22 This point was added by the Conference, establishing a logical connection between the preceding and the following paragraphs. In the words of one of the co-sponsors, it correctly underlined the point that in our time the maintenance of peace should not simply be the wish of the contracting Parties – it is actually a peremptory norm of international law (*jus cogens*).¹⁴
- 23 In this respect the question was raised whether the reference to the Charter of the United Nations was necessary and sufficient for the second and fourth paragraphs of the Preamble, as not all the nations of the world are Members of the United Nations.¹⁵ The opinion prevailed that this reference had the advantage of being specific, and that States not Members of the United Nations were subject to the same obligations under principles of international law which correspond to the provisions of the Charter of the United Nations.¹⁶
- 24 Thus, by referring to the Charter of the United Nations, the Conference adopted a text repeating almost word for word Article 2, paragraph 4, of the Charter, though adding the word “sovereignty”.¹⁷ Moreover, paragraph 6 of the same Article 2 lays down that the United Nations shall ensure that States which are not Members shall “act in accordance with these Principles so far as may be necessary for the maintenance of international peace and security”.

Third paragraph

- 25 This point was accepted by the Conference without any objections, once the new second paragraph had been introduced, expressing the context more logically. The Conference preferred to retain the reference made in the draft to “provisions protecting the victims of armed conflicts”, rather than referring only to the Geneva Conventions, as was proposed in an amendment.¹⁸ In fact, a formulation in general terms, which also covers, in particular, the Hague

¹⁴ O.R. III, p. 3, CDDH/I/337 and Add. 1. O.R. IX, p. 385, CDDH/I/SR.69, para. 25. The complete text of Art. 53 of the Vienna Convention on the Law of Treaties, in which the second sentence defines the expression *jus cogens*, is as follows:

“Art. 53 – *Treaties conflicting with a peremptory norm of general international law (jus cogens)*.

A treaty is void if, at the time of its conclusion, it conflicts with a peremptory norm of general international law. For the purposes of the present Convention, a peremptory norm of general international law is a norm accepted and recognized by the international community of States as a whole as a norm from which no derogation is permitted and which can be modified only by a subsequent norm of general international law having the same character.”

¹⁵ O.R. III, p. 4, CDDH/439. O.R. VII, p. 165, CDDH/SR.54, para. 3.

¹⁶ *Ibid*, pp. 166-170, paras. 7, 9, 14, 25, 28-29, 36 and 38.

¹⁷ This word was not included in the initial proposal and was added by the Working Group; neither the report of the latter, nor the discussions in the Committee and the plenary Conference explain it. The inclusion of this concept, which is in the Charter of the United Nations (e.g., Art. 2, para. 1), and in particular in the definition of aggression (Art. 1, *cf. infra*, ad fourth paragraph *in fine*) does not modify the scope of the present paragraph, which, after all, serves only as a reminder.

¹⁸ O.R. III, p. 4, CDDH/439.

Conventions of 1899 and 1907 respecting the Laws and Customs of War on Land, was more appropriate.¹⁹

- 26 It is actually this paragraph which provides the *raison d'être* of the two aspects of the entire undertaking to reaffirm and develop humanitarian law: to supplement the substantive rules, and to reinforce the measures ensuring their application.²⁰

Fourth paragraph

- 27 This point supplements the second paragraph and actually stems from the same proposal.²¹ Its aim is more specifically to prevent any interpretation of humanitarian law that could serve to legitimize any use of force inconsistent with the Charter of the United Nations: humanitarian law cannot set aside the rules of *jus ad bellum* which are in force. The same idea also appears in Articles 4 (*Legal status of the Parties to the conflict*) and 5 (*Appointment of Protecting Powers and of their substitute*), paragraph 5, of the Protocol.
- 28 Just as the second paragraph only serves as a reminder, the fourth paragraph results from a concern for prudence, and not from real necessity. Such an interpretation would in any case be incompatible with Article 103 of the Charter of the United Nations and – the prohibition on the use of force, as formulated in the Charter of the United Nations, being *jus cogens* – by Article 53 of the Vienna Convention on the Law of Treaties.²²
- 29 The Conference decided not to include a specific reference to the Definition of aggression adopted in 1974 by the United Nations General Assembly.²³

Fifth paragraph

- 30 The fourth paragraph states that *jus in bello* cannot affect *jus ad bellum*; this point confirms the reverse.
- 31 The Conventions and the Protocol contain numerous prohibitions on making any adverse distinction based on race, colour, sex, language, religion or belief, political or other opinion, national or social origin, wealth, birth or other status, or any other similar criteria.²⁴

¹⁹ O.R. VII, pp. 167-168, CDDH/SR.54, paras. 17-23.

²⁰ For a general review of the requirements and the results of these two points of view, *cf. supra*, General introduction.

²¹ *Cf.* references to *Official Records, supra*, note 14.

²² Vienna Convention: *cf. supra*, note 14. The text of Article 103 of the Charter of the United Nations reads as follows: "In the event of a conflict between the obligations of the Members of the United Nations under the present Charter and their obligations under any other international agreement, their obligations under the present Charter shall prevail."

²³ Resolution 3314 (XXIX), Annex.

²⁴ Enumeration of Art. 75, para. 1. *Cf.* also, for the Conventions, common Art. 3 (internal conflicts) and Art. 12, para. 2, First Convention; Art. 12, para. 2, Second Convention; Art. 16, Third Convention, and Arts. 13 and 27, para. 3, Fourth Convention. For the Protocol, Arts. 9, para. 1; 69, para. 1; 70, para. 1; 75, para. 1. The non-exhaustive list of prohibited criteria is not given in each case and varies in accordance with the requirements of the context.

32 This is a reaffirmation that humanitarian law should apply in all circumstances to all persons (and objects) protected by it, without taking into account the nature or origin of the conflict, or the causes actually espoused by or attributed to the Parties to the conflict. The fact of being the aggressor or the victim of aggression, of espousing a just or an unjust cause, does not absolve anyone from his obligations nor deprive anyone of the guarantees laid down by humanitarian law, even though it may be relevant and have an effect in other fields of international law.

B.Z.

Protocol I

Part I – General provisions

Introduction

- 33 The main aim of this Part is to define general principles and the temporal and material scope of application of the Protocol. These two aspects of the scope of application are not simply defined by reference to the Conventions – which could have been done, given the fact that the Protocol is an additional instrument;¹ the scope was made more specific and broader in comparison with that of the Conventions, and as far as the Contracting Parties² are concerned, this new definition applies for the Conventions as well as for the Protocol.
- 34 This Part is closely related to Part V (*Execution of the Conventions and of this Protocol*), particularly its Section I, which bears the same title; thus the present Part also contains provisions relating to the implementation of the Conventions and of the Protocol. These articles, relating to Protecting Powers, qualified persons and meetings of Contracting Parties, are preceded by an unequivocal confirmation that the application of the Conventions and the Protocol will not affect the legal status of the Parties to the conflict. Such a clause should prevent any reticence to fully apply the Protocol for fear of humanitarian law having untoward consequences beyond its own field.

B.Z.

¹ On this feature of the Protocol, *cf. supra*, commentary on the title of the Protocol (pp. 20-21) and *infra*, commentary Art. 1, para. 3 (p. 39) and Art. 96, para. 1, pp. 1085-1086.

² On the meaning of the expression “High Contracting Parties”, *cf. commentary Preamble, supra*, p. 25.

Protocol I

Article 1 – General principles and scope of application

1. The High Contracting Parties undertake to respect and to ensure respect for this Protocol in all circumstances.
2. In cases not covered by this Protocol or by other international agreements, civilians and combatants remain under the protection and authority of the principles of international law derived from established custom, from the principles of humanity and from the dictates of public conscience.
3. This Protocol, which supplements the Geneva Conventions of 12 August 1949 for the protection of war victims, shall apply in the situations referred to in Article 2 common to those Conventions.
4. The situations referred to in the preceding paragraph include armed conflicts in which peoples are fighting against colonial domination and alien occupation and against racist régimes in the exercise of their right of self-determination, as enshrined in the Charter of the United Nations and the Declaration on Principles of International Law concerning Friendly Relations and Co-operation among States in accordance with the Charter of the United Nations.

Commentary

General remarks

- 35 This article lays down two general principles (paragraphs 1 and 2) and defines the material scope of application of the Protocol (paragraphs 3 and 4). Because of the diversity of the nature and historical background of these four paragraphs it seems justified to discuss them for each one separately, rather than for all paragraphs together. The article was adopted by roll call, both in Committee I and in the plenary Conference.¹

Paragraph 1

- 36 This paragraph literally repeats Article 1 common to the Conventions, in which only the words “the present Convention” have been replaced by “this Protocol”. As the Protocol is subject to the general provisions and principles of the Conventions, by virtue of the fact that it is an instrument additional to the Conventions, this general principle would have applied for the Protocol even if it had not been stated in so many words; for this reason the draft Protocol did not repeat Article 1 of the Conventions, following the opinion of the majority of

¹ Vote in Committee: 70-21-13, *cf. O.R. VIII*, p. 102, CDDH/I/SR.13, para. 42; vote in plenary Conference, 87-1-11, *cf. O.R. VI*, pp. 40-41, CDDH/SR.36, para. 58.

experts.² Nevertheless, the sponsors of the relevant proposal,³ followed by the Conference, considered that it was appropriate to include a reminder of this principle.

- 37 The commentary on Article 1 of the Conventions⁴ continues to apply fully, and the reader is referred to it. We will merely reiterate the essential points below, adding a few new elements.

“The High Contracting Parties undertake to respect”

- 38 For the meaning of the expression “the High Contracting Parties”, which, in the present context, differs from the usual meaning, reference should be made to the commentary on this expression in the Preamble.⁵
- 39 The mere fact of becoming a Party to a treaty implies the obligation to apply it in good faith from the moment that it enters into force. This fundamental rule of international law originated in customary law, expressed in the maxim *pacta sunt servanda*, and is now set out in Article 26 of the Vienna Convention on the Law of Treaties of 23 May 1969 which uses this maxim by way of a title; it reads: “Every treaty in force is binding upon the parties to it and must be performed by them in good faith”.
- 40 Thus the import of this paragraph does not lie in the first part, but in the two elements which will be discussed below. As regards the word “undertake”, which appears only occasionally in the Protocol,⁶ this is a more solemn turn of phrase than the normal usage of “shall”.

“to ensure respect”

- 41 At first sight this might seem to be superfluous: the duty to respect implies that of ensuring respect by civilian and military authorities, the members of the armed forces, and in general, by the population as a whole. This means not only that preparatory measures must be taken to permit the implementation of the Protocol, but also that such implementation should be supervised. In this respect, the phrase “to ensure respect” essentially anticipates the measures for execution and supervision laid down in Article 80 (*Measures for execution*).
- 42 Though the preceding obligation is in fact already included in *pacta sunt servanda*, or the words “to respect”, the phrase “to ensure respect” should also be considered to reflect another aspect, which is described in the Commentary on the Conventions as follows:

² O.R. VIII, p. 48, CDDH/I/SR.6, para. 28. On the additional character and its consequences, cf. mainly *infra*, commentary para. 3 (p. 39) and Art. 96, para. 1 (pp. 1085-1086) and *supra*, commentary on the title (pp. 20-21) and the Preamble, third paragraph (p. 27).

³ O.R. III, p. 6, CDDH/I/12 and Corr.1 and Add.1.

⁴ The best researched study of Article 1 of the Conventions and of this paragraph is by L. Condorelli and L. Boisson de Chazournes, “Quelques remarques à propos de l’obligation de ‘respecter et faire respecter’ le droit international humanitaire ‘en toutes circonstances’”, in *Studies and Essays in Honour of Jean Pictet*, Geneva-The Hague, 1984, p. 18.

⁵ *Supra*, p. 25.

⁶ In addition to this article, cf. Arts. 83, para. 1; 89 and 96, para. 3.

“In the event of a Power failing to fulfil its obligations, each of the other Contracting Parties, (neutral, allied or enemy) should endeavour to bring it back to an attitude of respect for the Convention. The proper working of the system of protection provided by the Convention demands in fact that the States which are parties to it should not be content merely to apply its provisions themselves, but should do everything in their power to ensure that it is respected universally.”⁷

- 43 This interpretation was not contested⁸ and it is on this interpretation that the ICRC has taken a number of steps, confidentially or publicly, individually or generally, to encourage States, even those not Party to a conflict, to use their influence or offer their cooperation to ensure respect for humanitarian law.⁹ Leaving aside any bilateral or multilateral measures taken by States, which rarely become known, it should be pointed out that the organized international community has frequently and emphatically manifested its concern that humanitarian law should be respected.¹⁰
- 44 Finally, and most importantly, the Diplomatic Conference fully understood and wished to impose this duty on each Party to the Conventions, and therefore reaffirmed it in the Protocol as a general principle, adding in particular to the already existing implementation measures those of Articles 7 (*Meetings*) and 89 (*Co-operation*).
- 45 In this way the Conference clearly demonstrated that humanitarian law creates for each State obligations towards the international community as a whole (*erga omnes*); in view of the importance of the rights concerned, each State can be considered to have a legal interest in the protection of such rights.¹¹
- 46 Neither the Diplomatic Conferences which drafted the Conventions and the Protocol, nor these instruments, defined very closely the measures which the Parties to these treaties should take to execute the obligation to “ensure respect”

⁷ *Commentary III*, p. 18 (Art. 1).

⁸ The International Conference on Human Rights (Teheran, 1968) adopted it in Resolution XXIII. The Preamble of this resolution reminds States Parties to the Geneva Conventions of their responsibility “to take the necessary measures to ensure respect for such rules of humanitarian law by other States in all circumstances, even if they are not themselves directly involved in armed conflict”. The same applies to almost all governments which made a statement on this subject during the reaffirmation and development procedure; cf. *Government replies*, 2nd ed., pp. 19-33 (“Question 2”). For recent literature, cf. L. Condorelli and L. Boisson de Chazournes, *op. cit.*, pp. 26-32 and K. Obradović, “Que faire face aux violations du droit humanitaire? Quelques réflexions sur le rôle possible du CICR”, in *Studies and Essays in Honour of Jean Pictet*, *op. cit.*, p. 483, especially pp. 487-490.

⁹ For the policy of the ICRC on its action in the event of breaches of humanitarian law, see *IRRC*, March-April 1981, pp. 76-83. For a diplomatic appeal by the ICRC to all the Parties to the Conventions, cf. *ibid.*, July-August 1983, pp. 220-223. This same appeal is examined in the study of L. Condorelli and L. Boisson de Chazournes, *op. cit.*, p. 28, and K. Obradović, *op. cit.*, p. 493, and also by Y. Sandoz, “Appel du CICR dans le cadre du conflit entre l’Irak et l’Iran”, 29 *AFDI*, 1983, p. 161.

¹⁰ See also commentary Art. 89, *infra*, p. 1034.

¹¹ For a general description of these norms which formed the inspiration for this passage, cf. the judgment of the International Court of Justice in the *Barcelona Traction* case, second phase, *ICJ Reports*, 1970, p. 32; reference is made to this case in the studies by L. Condorelli and L. Boisson de Chazournes, *op. cit.*, p. 29, and K. Obradović, *op. cit.*, p. 489.

by the other Parties, other than by means of the examples quoted above of Articles 7 (*Meetings*) and 89 (*Co-operation*). The limitations to such actions are obviously those imposed by general international law, particularly the prohibition on the use of force.¹² Even if the United Nations were to take coercive measures involving the use of armed force¹³ in order to ensure respect for humanitarian law, the limitation would be that of the very respect due to this law in all circumstances. It suffices to say that whenever such measures are necessary, each Party to humanitarian law instruments should examine the wide range of diplomatic or legal measures which can be taken to ensure respect for that law.

“in all circumstances”

- 47 The expression “in all circumstances” does not mean that the Protocol as a whole applies at all times: for the distinction between provisions applicable at all times and those which become so only in the situations referred to in paragraphs 3 and 4 of this article, reference should be made to the commentary on Article 3 (*Beginning and end of application*).¹⁴
- 48 “In all circumstances” prohibits all Parties from invoking any reason not to respect the Protocol as a whole, whether the reason is of a legal or other nature. The question whether the war concerned is “just” or “unjust”, one of aggression or of self-defence, should not affect the application of the Protocol – this type of discrimination is explicitly prohibited by the fifth paragraph of the Preamble.¹⁵
- 49 Any idea of reciprocity should also be discarded, viz., a Party should be prevented from claiming to be exempt from the obligation to respect a particular provision, or the Protocol as a whole, because an adversary had not respected this provision or the Protocol as whole. As the Commentary to the Conventions states, treaties of humanitarian law do not constitute:
- “an engagement concluded on a basis of reciprocity, binding each party to the contract only in so far as the other party observes its obligations. It is rather a series of unilateral engagements solemnly contracted before the world as represented by the other Contracting Parties”.¹⁶
- 50 Thus reciprocity invoked as an argument not to fulfil the obligations of humanitarian law is prohibited, but this does not apply to the type of reciprocity which could be termed “positive”, by which the Parties mutually encourage each other to go beyond what is laid down by humanitarian law. Further, the concept of reciprocity on which the conclusion of any treaty is based also applies to the Conventions and the Protocol: they apply between the Parties which have

¹² Including “humanitarian intervention”, generally considered to be covered by this prohibition; on this subject, cf. U. Beyerlin, “Humanitarian Intervention”, in R. Bernhardt (ed.), *Encyclopedia of Public International Law*, Instalment 3, 1982, p. 211.

¹³ On this subject, cf. commentary Art. 89, *infra*, pp. 1034-1035.

¹⁴ *Infra*, pp. 66-67.

¹⁵ Cf. the commentary thereon, *supra*, pp. 28-29.

¹⁶ *Commentary I*, p. 25 (Art. 1).

consented to be bound by them¹⁷ – and only in exceptional cases to a Party’s own nationals, or to the nationals of a Party which is not bound.¹⁸

- 51 The prohibition against invoking reciprocity in order to shirk the obligations of humanitarian law is absolute. This applies irrespective of the violation allegedly committed by the adversary. It does not allow the suspension of the application of the law either in part or as a whole, even if this is aimed at obtaining reparations from the adversary or a return to a respect for the law from him.¹⁹ This was confirmed quite unambiguously in Article 60 of the Vienna Convention on the Law of Treaties, which lays down under what conditions a material breach of a treaty can permit its suspension or termination; that article specifically exempts treaties of a humanitarian character.²⁰

Paragraph 2

- 52 Except for a few details, this paragraph is taken from the famous clause, known as the “Martens clause”, after the Russian diplomat who had proposed it; it was included by unanimous decision in the Preamble of the Hague Conventions of 1899 and 1907 respecting the laws and customs of war on land.²¹
- 53 The 1949 Conventions did not contain a preamble,²² and it was therefore considered appropriate to include a similar clause in their article on denunciation, in order to underline in a succinct fashion that even denunciation could not result in a legal void.²³ The draft of the Protocol provided for a reaffirmation of this clause in the Preamble,²⁴ but the Conference supported a proposal to include it in Article 1.²⁵
- 54 In the initial context of 1899 and 1907, the Martens clause was obviously justified, as the Peace Conferences were aware that the Conventions that had been adopted had left a number of questions unanswered.²⁶ We referred above to the reason why it was taken up in the 1949 Conventions.
- 55 There were two reasons why it was considered useful to include this clause yet again in the Protocol. First, despite the considerable increase in the number of

¹⁷ For the meaning of the expression “the High Contracting Parties”, cf. commentary Preamble, *supra*, p. 25. Also see the study by J. de Preux, “The Geneva Conventions and Reciprocity”, *IRRC*, January-February 1985, p. 25, especially pp. 25-26.

¹⁸ Cf. in particular, Fourth Convention, Part II (Art. 13 in contrast with Art. 4), and Protocol I, Art. 75.

¹⁹ Cf. the passage relating to reprisals, introduction to Part V, Section II, *infra*, pp. 981-987.

²⁰ Cf. para. 5 and also para. 4, which has a more general scope, of this article, entitled “Termination or suspension of the operation of a treaty as a consequence of its breach”.

²¹ On the subject of this clause, cf. H. Strebél, “Martens’ clause”, in R. Bernhardt (ed.), *op. cit.*, Instalment 3, pp. 252-253 (and references cited); S. Miyazaki, “The Martens Clause and International Humanitarian Law”, in *Studies and Essays in Honour of Jean Pictet, op. cit.*, p. 433.

²² Cf. commentary Preamble, *supra*, p. 24.

²³ Cf. para. 4 of common Art. 63/62/142/158 and the commentary thereon, on pp. 413, 282, 648 and 625-626 respectively.

²⁴ *Commentary Drafts*, p. 5 (Preamble, third paragraph).

²⁵ Cf. *supra*, note 3. The 1980 Convention on conventional weapons also reaffirms this clause (Preamble, fifth paragraph).

²⁶ Cf. H. Strebél, *op. cit.*, p. 252, and F. Kalshoven, *Belligerent Reprisals*, Leyden, 1971, p. 58.

subjects covered by the law of armed conflicts, and despite the detail of its codification, it is not possible for any codification to be complete at any given moment; thus the Martens clause prevents the assumption that anything which is not explicitly prohibited by the relevant treaties is therefore permitted.²⁷ Secondly, it should be seen as a dynamic factor proclaiming the applicability of the principles mentioned regardless of subsequent developments of types of situation or technology.²⁸

- 56 In conclusion, the Martens clause, which itself applies independently of participation in the treaties containing it, states that the principles of international law²⁹ apply in all armed conflicts,³⁰ whether or not a particular case is provided for by treaty law, and whether or not the relevant treaty law binds as such the Parties to the conflict.

Paragraph 3

- 57 This paragraph corresponds to the draft of Article 1 of the ICRC: the “additional” character of the Protocol justifies the definition of its scope of application in terms referring back to Article 2, common to the Conventions. As regards the term “supplements”, this reveals that there is a relation, though also a limitation imposed upon the Diplomatic Conference which, by reason of its own title, had the task of reaffirming and developing the pre-existing law, and not of endangering it.³¹
- 58 The wording of this paragraph did not raise any difficulties in itself, but there was heated and lengthy debate regarding extending its scope to the conflicts referred to in paragraph 4. We will therefore deal separately with this aspect, including the question whether its inclusion represented a development or a codification of law (consequently whether or not such conflicts were already covered by Article 2, common to the Conventions, referred to by this paragraph). With this reservation we will base our arguments below essentially on the commentary on this common Article 2.³²
- 59 *Common Article 2, paragraph 1*, reads: “[...] the present Convention shall apply to all cases of declared war or of any other armed conflict which may arise between two or more of the High Contracting Parties, even if the state of war is not recognized by one of them.”
- 60 War which has been declared, or otherwise recognized as such, entails the application of humanitarian law; even in the absence of hostilities it can offer

²⁷ Cf. H. Strebel, *op. cit.*; also *O.R. VIII*, p. 18, CDDH/I/SR.3, para. 11.

²⁸ Cf. H. Strebel, *op. cit.*, p. 252, and S. Miyazaki, *op. cit.*, p. 441.

²⁹ Similar to the expression “general principles of law” used in Art. 38, para. 1(c) of the Statute of the International Court of Justice.

³⁰ It should be noted that Protocol II uses different wording (*cf.* its Preamble, fourth paragraph, and the commentary thereon, *infra*, p. 1341).

³¹ *Commentary Drafts*, p. 6 (Art. 1). On the general relationship between the Conventions and the Protocol, *cf.* commentary on the title and on the Preamble, third paragraph, *supra*, pp. 20-21 and 27, and in particular, commentary Art. 96, para. 1, *infra*, pp. 1085-1086.

³² Pp. 27-33, 26-29, 19-23, and 17-22 respectively (without para. 3, which corresponds to Art. 96, para. 2, of the Protocol).

valuable guarantees, in particular to enemy nationals in the territory of a State at war.

- 61 Nevertheless, despite their title (“for the protection of war victims”), the Conventions are not applicable only in cases of declared war: the institution of the declaration of war³³ has been disregarded too often to make the application of humanitarian law dependent on this act. It is not necessary either that the existence of war be legally proved, as this concept is too prone to discussion, and too many armed conflicts would therefore be at risk of eluding humanitarian law.³⁴
- 62 Thus, as will most often be the case in practice, humanitarian law also covers any dispute between two States involving the use of their armed forces. Neither the duration of the conflict, nor its intensity, play a role: the law must be applied to the fullest extent required by the situation of the persons and the objects protected by it.³⁵
- 63 The Conventions cover the case in which one of the Parties to an armed conflict contests the state of war. The object and purpose of humanitarian law mean that this rule must be given a wider scope: even if the two Parties – or all the Parties, if there are more than two – deny that there is a state of war, this cannot enable them to impede the application of the law. It is aimed, above all, at protecting individuals, and not at serving the interests of States.³⁶
- 64 *Common Article 2, paragraph 2*, reads: “The Convention shall also apply to all cases of partial or total occupation of the territory of a High Contracting Party, even if the said occupation meets with no armed resistance.”
- 65 In fact, cases of occupation occurring in a war that has been declared or in another armed conflict are already covered by paragraph 1, as the declaration of war or the commencement of hostilities has rendered the humanitarian law applicable. The inhabitants of occupied territory become protected persons as they fall into the power of the enemy. Despite its wording, paragraph 2 only addresses itself to cases of occupation without a declaration of war, and without hostilities.³⁷

³³ Required by the Hague Convention Relative to the Opening of Hostilities (Convention III of 1907).

³⁴ For definitions of “war” and “armed conflict”, *cf.* in particular D. Schindler, “The Different Types of Armed Conflicts According to the Geneva Conventions and Protocols”, 163 *Hague Recueil*, 1979/II, p. 128; K.J. Partsch, “Armed Conflict” in R. Bernhardt (ed.), *op. cit.*, Instalment 3, p. 25; K. Skubiszewski, “Peace and War”, *ibid.*, Instalment 4, p. 74; W. Meng, “War”, *ibid.*, p. 282; Ch. Rousseau, *Le droit des conflits armés*, Paris, 1983, pp. 2-16.

³⁵ *Cf. Commentaries I, II, III and IV*, pp. 34, 27-28, 22-23 and 21 respectively.

³⁶ *Cf. Commentaries III and IV*, pp. 22-23 and 21 respectively.

³⁷ *Cf. Commentary IV*, pp. 21-22. It should be noted that the definition of occupation given in Article 42 of the Hague Regulations of 1907 Concerning the Laws and Customs of War on Land reads:

“Territory is considered occupied when it is actually placed under the authority of the hostile army.

The occupation extends only to the territory where such authority has been established and can be exercised.”

Paragraph 4*Origins of this rule*

- 66** Because the Protocol is additional to the Conventions, it was logical, as we saw above with regard to paragraph 3, to define the scope of application of the Protocol by reference to Article 2, common to the Conventions. On the other hand, the explicit inclusion within this scope of application of what is commonly known as “wars of national liberation”, by means of the present paragraph 4 (*cf.* the word “included”), gave rise to heated controversy. A number of different aspects arose with regard to this question.
- 67** Would the Protocol cover only the treatment of persons engaged in such a conflict and captured by the adverse Party, or would it generally clarify the status of such conflicts and the status of persons participating in them? The fact that international humanitarian law provides rules in two separate parts, depending on whether it concerns a situation limited to the territory of a single State or, on the contrary, affecting two or more States, in itself already gives rise to problems of interpretation in quite a number of specific situations. What sort of problems would arise if this distinction, based on a more or less objective criterion – whether or not the conflict is between States – were suppressed, or if it were made dependent also on factors which were considered by some to be objective and by others to be subjective?
- 68** The 1949 Conference did not take up the idea of the ICRC which had been adopted by the XVIIth International Conference of the Red Cross (Stockholm, 1948) that the four Conventions as a whole should be declared applicable in all armed conflicts, whether internal or international.³⁸ For internal conflicts it retained only Article 3, common to the Conventions, which still created an unprecedented inroad into the exclusive competence of governments to deal with their internal affairs, in that they bound themselves in advance to comply with certain fundamental rules. Gradually, however, what had generally constituted a remarkable achievement at the time, turned out to be incomplete (which led to the efforts resulting in Protocol II), and above all, for political and legal reasons, unsuited to the type of conflict which has characterized recent decades, i.e., wars of national liberation.

*Right of self-determination**1. Before the Charter of the United Nations*

- 69** The concept of the right of self-determination of peoples only gradually emerged during the course of the nineteenth and twentieth centuries under a variety of names. Thus, at an early stage, what was known as the right of nationalities was created only for the benefit of peoples who described themselves

³⁸ *Cf. infra*, p. 46.

as “civilized”. Similarly it was considered that colonization and the domination exercised over entire continents should permit them to be brought within the orbit of “civilization”, though without disguising the economic or military interests at stake.

- 70 The principle, which was proclaimed by the French Revolution, and was subsequently often denied, has from the outset constantly come up against the legal order;³⁹ this did not prevent it from being applied with increasing frequency and from growing in strength. It acquired a universal importance during the course of the First World War and narrowly missed becoming incorporated in the Covenant of the League of Nations on the proposal of the President of the United States, Woodrow Wilson. Even without being explicitly mentioned in this Covenant, the principle acquired the twofold value of a guiding principle in politics and of a rule of exception in international law.⁴⁰

2. *The Charter of the United Nations*

- 71 After a preamble laying down in particular “the equal rights [...] of nations large and small”, the Charter defines the purposes of the United Nations in Article 1. The wording of paragraph 2 is as follows: “To develop friendly relations among nations based on respect for the principle of equal rights and self-determination of peoples, and to take other appropriate measures to strengthen universal peace”. The same principle is affirmed in Article 55 of the Charter.
- 72 The progress achieved by the Charter of the United Nations therefore consisted of turning this principle of self-determination of peoples into a right established in an instrument of universal application, in which almost all States participate today.
- 73 The right of self-determination has been evoked a great many times, in the United Nations General Assembly, in Human Rights Commission and in other bodies. We will restrict ourselves here to the most important stages.⁴¹

3. *The Declaration on the Granting of Independence*

- 74 A document which is considered as one of the most important is Resolution 1514 (XV) of 14 December 1960, entitled “Declaration on the Granting of Independence to Colonial Countries and Peoples”.

³⁹ S. Calogeropoulos-Stratis, *Le droit des peuples à disposer d'eux-mêmes*, Brussels, 1973, p. 11.

⁴⁰ *Ibid.*, p. 11; K.J. Partsch, “Fundamental Principles of Human Rights, Self-Determination, Equality and Non-Discrimination”, in *The International Dimensions of Human Rights*, Paris, 1982, pp. 63-64, gives some examples.

⁴¹ For a more detailed historical background, cf. i.a., A. Cristescu, *The Right to Self-Determination – Historical and Current Development on the Basis of United Nations Instruments*, United Nations publication, 1981, paras. 14-87.

- 75 Following Resolutions 545 (VI) and 637 (VII)⁴² in particular, this document reaffirms the right of all peoples and all nations to self-determination, including Non-Self-Governing and Trust Territories.⁴³

4. *The concept of the legitimate struggle*

- 76 With Resolution 2105 (XX) of 20 December 1965 the General Assembly recognized the legitimacy of the struggle of colonial peoples against colonial domination in the exercise of their right to self-determination and independence, and it invited all States to provide material and moral support to national liberation movements in colonial territories.
- 77 These views were to be reiterated, in particular in Resolution 2621 (XXV) of 12 October 1970, claiming prisoner-of-war treatment under the Third Convention for freedom fighters under detention.

5. *The Human Rights Covenants*

- 78 In a series of successive resolutions relating to the drafts of International Covenants on Human Rights, the General Assembly requested that an article should be included on the right of peoples to self-determination, which would also provide that all States should contribute to ensuring the exercise of this right: in fact, the right to self-determination is a precondition for the enjoyment of all fundamental human rights.⁴⁴
- 79 The International Covenants on Human Rights, viz., the International Covenant on Economic, Social and Cultural Rights, and the International Covenant on Civil and Political Rights complied with this request.⁴⁵

⁴² Cf. *infra*, point 5.

⁴³ The last preambular paragraph and operative paras. 1 and 4 of this resolution read as follows: “[...] all peoples have an inalienable right to complete freedom, the exercise of their sovereignty and the integrity of their national territory.”

“1. The subjection of peoples to alien subjugation, domination and exploitation constitutes a denial of fundamental human rights, is contrary to the Charter of the United Nations and is an impediment to the promotion of world peace and co-operation.”

“4. All armed action and repressive measures of all kinds directed against dependent peoples shall cease in order to enable them to exercise peacefully and freely their right to complete independence and the integrity of their national territory shall be respected.”

⁴⁴ Cf. in particular, Resolutions 545 (VI) and 637 (VII) mentioned above.

⁴⁵ Adopted by Resolution 2200 (XXI) of the General Assembly of 16 December 1966, the Covenants have been in force since 1976, binding 80 and 83 States respectively as of 31 December 1984. Their common Article 1 reads as follows:

“1. All peoples have the right of self-determination. By virtue of that right they freely determine their political status and freely pursue their economic, social and cultural development.

2. All peoples may, for their own ends, freely dispose of their natural wealth and resources without prejudice to any obligations arising out of international economic co-operation, based on the principle of mutual benefit, and international law. In no case may a people be deprived of its own means of subsistence.

3. The States Parties to the present Covenant, including those having responsibility for the administration of Non-Self-Governing and Trust Territories, shall promote the realization of the right of self-determination, and shall respect that right, in conformity with the provisions of the Charter of the United Nations.”

6. Human Rights Conference

- 80 The International Conference on Human Rights held in Teheran in 1968 under the auspices of the United Nations considered in its Resolution XXIII that persons fighting against minority racist régimes or colonial régimes should, if they were detained, be treated as prisoners of war or as political prisoners, in accordance with international law.⁴⁶

7. Friendly Relations Declaration⁴⁷

- 81 On 24 October 1970, on the occasion of the 25th anniversary of the United Nations, the General Assembly adopted by consensus the Declaration on Principles of International Law concerning Friendly Relations and Co-operation among States in accordance with the Charter of the United Nations.⁴⁸ The preparatory negotiations on this declaration had taken place in the General Assembly and a Special Committee,⁴⁹ and contained, in particular, the examination of the principle of equal rights and self-determination of peoples. From the beginning the General Assembly was concerned with tackling the progressive development and codification of principles already contained in the Charter in order to ensure that they would be applied more effectively.
- 82 In the eight paragraphs devoted to “the principle of equal rights and self-determination of peoples”, the Declaration states in particular that:
- a) all peoples have the right freely to determine their political status;
 - b) every State has the duty to respect this right and to promote its realization;
 - c) every State has the duty to refrain from any forcible action which deprives peoples of this right;
 - d) in their actions against, and resistance to, such forcible action, peoples are entitled to seek and receive support in accordance with the purposes and principles of the Charter;

⁴⁶ The same Conference had formerly adopted Resolution VIII in which, with particular reference to two specific cases, it claimed similarly that captured freedom fighters should be treated as prisoners of war in the sense of the Third Geneva Convention of 1949. The objectives of Resolution XXIII were reiterated in Resolution 2444 (XXIII) of the General Assembly, the first of a long series devoted to the “Respect for human rights in armed conflicts” (*cf. infra*, pp. 1573-1576).

⁴⁷ Resolution 2625 (XXV), Annex.

⁴⁸ For an account of the preparatory work of this Declaration and its evaluation, *cf.* in particular, M. Šahović, “Codification des principes du droit international des relations amicales et de la coopération entre les États”, 137 *Hague Recueil*, 1972/III, p. 243; G. Arangio-Ruiz, “Codification of the Principles of International Law on Friendly Relations and Co-operation Between States”, *ibid.*, p. 419.

⁴⁹ *Cf.* Resolution 1815 (XVII), based on Article 13 of the Charter. The Special Committee on the principles of international law on friendly relations and co-operation among States, created pursuant to Resolution 1966 (XVIII), and reconstituted pursuant to Resolution 2103A (XX), met for seven sessions. The idea of a declaration on this subject was suggested by the Second Conference of Heads of State or Government of Non-Aligned Countries, held in Cairo in 1964 (*cf.* the fifth preambular paragraph of Resolution 2103 A (XX)).

- e) under the Charter, the territory of a colony or other non-self-governing territory has a status separate and distinct from that of the State administering it.⁵⁰

8. *The basic principles*

- 83 The last resolution adopted by the United Nations General Assembly before the opening of the CDDH was Resolution 3103 (XXVIII) of 12 December 1973 entitled “Basic principles of the legal status of the combatants struggling against colonial and alien domination and racist régimes.”⁵¹
- 84 The preamble referred to a large number of previous statements on this issue⁵²; it states in particular that:
- combatants struggling for freedom and self-determination are entitled to the application of the provisions of the Third and Fourth Geneva Conventions of 1949 (the resolutions referred to were formulated in more precise terms, requiring, on the one hand, the application of the Third Convention to combatants, and on the other hand, compliance with the Fourth Convention relative to the protection of civilians);
 - it is necessary to draft “additional instruments and norms envisaging, *inter alia*, the increase of the protection of persons struggling for freedom against colonial and alien domination and racist régimes”.
- 85 The principles laid down in the operative paragraphs of the resolution, though this was to be “without prejudice to their elaboration in future within the framework of the development of international law applying to the the protection of human rights in armed conflicts”, may be summarized as follows:

⁵⁰ The 7th paragraph is quoted in full: “Nothing in the foregoing paragraphs shall be construed as authorizing or encouraging any action which would dismember or impair, totally or in part, the territorial integrity or political unity of sovereign and independent States conducting themselves in compliance with the principle of equal rights and self-determination of peoples as described above and thus possessed of a government representing the whole people belonging to the territory without distinction as to race, creed or colour.”

⁵¹ It was adopted with 83 votes for, 13 against and 19 abstentions.

⁵² The contents of the Resolutions mentioned are briefly outlined here: 2383 (XXIII): Third Convention, Southern Rhodesia; 2508 (XXIV): Third and Fourth Conventions, Southern Rhodesia; 2547 (XXIV): Third and Fourth Conventions, Southern Rhodesia, territories under Portuguese administration, Namibia; 2652 (XXV): Third and Fourth Conventions, Southern Rhodesia; 2678 (XXV): Third and Fourth Conventions, Namibia; 2707 (XXV): Third and Fourth Conventions, territories under Portuguese administration; 2795 (XXVI): Third and Fourth Conventions, territories under Portuguese administration; 2796 (XXVI): Third and Fourth Conventions, Southern Rhodesia; 2871 (XXVI): Third and Fourth Conventions, Namibia. Amongst other relevant resolutions not mentioned above, but alluded to by the words “*inter alia*”, we would recall, for example, Resolution 2396 (XXIII) which demands that the population of South Africa as a whole should be able to exercise its right of self-determination and that, as their struggle is legitimate, the freedom fighters there should be treated as prisoners of war under the terms of international law, particularly the Third Geneva Convention of 1949.

- the struggle of peoples under colonial and alien domination and racist régimes for the implementation of their right to self-determination is legitimate;⁵³
- any attempt to suppress such a struggle is incompatible with the Charter, the Friendly Relations Declaration, the Universal Declaration of Human Rights, and the Declaration on the Granting of Independence, and constitutes a threat to international peace and security;
- armed conflicts resulting from such a struggle are international armed conflicts in the sense of the Geneva Conventions;
- combatants engaged in such struggles should enjoy prisoner-of-war status in the sense of the Third Convention;
- violation of such status entails the full responsibility of those committing it.

Historical background of this paragraph

1. *The 1949 Conventions*

- 86 Article 2 of the draft Conventions, adopted by the XVIIth International Conference of the Red Cross (Stockholm, 1948), provided that the Conventions would apply in all cases of armed conflict which did not have an international character, and which arose in the territory of one or more of the High Contracting Parties. This was stated in the text of the draft submitted to the Conference by the ICRC, except that one phrase relating to “cases of civil war, colonial conflicts, or wars of religion” had been deleted; this enumeration was intended to be illustrative, not exhaustive.
- 87 After lengthy debates, the Diplomatic Conference adopted common Article 3 to deal with conflicts not of an international character. This article enumerates a restricted number of rules applicable in all conflicts of this kind. In accordance with the intention of its authors, common Article 3 would cover all armed conflicts not of an international (inter States) character, i.e., in accordance with the ideas prevailing at the time, particularly colonial wars. The main arguments advanced against the mandatory application of the Conventions as a whole to all conflicts were less concerned with the practical impossibility of such a task than with the risk, in conflicts not of an international character, of granting such rebels a degree of recognition *de facto*, or of undermining government action aimed at defending the existing structure of the State.⁵⁴

⁵³ On 14 December 1974, viz., after the adoption of Article 1 by the relevant Committee of the CDDH, the General Assembly once again confirmed its views with regard to the concept of aggression. Article 7 of the Definition of Aggression, adopted by consensus (Resolution 3314 (XXIX), Annex) reserves the right of peoples forcefully deprived of their right to self-determination to struggle to that end; the right to self-determination is also mentioned in the Preamble to this definition.

⁵⁴ For further information on the historical background to common Art. 3, and on its scope, see *Commentaries I, II, III and IV*.

2. *Evolution until 1969*

88 The progressive development of the concept of the right of self-determination and its various consequences took place essentially within the framework of the United Nations, given the responsibilities of this organization. For its part, the Red Cross movement evinced its concern for the fate of victims of armed struggles for self-determination. In this respect resolution XVIII of the XXIst International Conference of the Red Cross (Istanbul, 1969) should be noted. This gave priority to pragmatic measures but also expressed the need for a thorough legal examination of the question.

3. *Reaffirmation and development – preliminary discussions*

89 During the various meetings of experts devoted specifically to the reaffirmation and development of international humanitarian law applicable in armed conflicts, whether these were consultations in groups with restricted participation or the Conferences of Government Experts or Red Cross experts, the majority of experts considered that wars of national liberation were conflicts not of an international character. Indeed, although they all recognized the need for improving the protection provided by humanitarian law to victims of the armed conflicts for self-determination – and those of other conflicts qualified as not having an international character – only a minority advocated the extension of the mandatory legal application of the whole of the Conventions and of Protocol I to such conflicts.

90 The following trends can be discerned from the many different views:⁵⁵

- a) common Article 2 can, and should be interpreted as covering wars of liberation, since, although they do not take place between States, they are certainly of an international character, according to the United Nations; thus the term “Power” does not refer only to States, but also to non-State entities which enjoy the right to self-determination;⁵⁶
- b) the international character of wars of liberation should be proclaimed by the Preamble or by Article 1 of Protocol I;⁵⁷
- c) it is not possible to dismiss the fundamental distinction between international conflicts (in the sense of inter-State conflicts) and conflicts not of an international character, i.e., the sole distinction that rests on the basis of objective and legal criteria, in order to take into account the reasons underlying the armed conflict;⁵⁸

⁵⁵ The first two trends underlined the need for preventing the creation of two separate legal orders, United Nations law and humanitarian law, as there can only be one international law. With respect to the negotiations as a whole, this view was upheld particularly by the representative of the United Nations Secretary-General: *CE 1971, Report*, p. 119, para. 601.

⁵⁶ Cf. for example, *CE 1972, Report*, Vol. I, p. 175, para. 4.25.

⁵⁷ Cf. for example, *Preliminary Report on the Consultation of Experts concerning Non-International Conflicts and Guerilla Warfare*, Geneva, 1970, 1st part, pp. 19-20; *CE 1971, Report*, p. 35, para. 113; p. 36, para. 133, *CE 1972, Report*, Vol I, p. 175, para. 4.26; p. 200, para. 4.215; p. 205, para. 5.22.

⁵⁸ Cf. for example, *CE 1972, Report*, Vol. I, p. 64, para. 2.26; p. 66, para. 2.38.

- d) wars of national liberation are conflicts not of an international character, but some of these conflicts should involve the application of the law of armed conflicts as a whole because of their intensity or because of certain other characteristics.⁵⁹

91 The various successive proposals of the ICRC can be summarized as follows:

- a) In 1969 the ICRC reaffirmed, on the one hand, that when hostilities were such that they resembled a war, it has always attempted to obtain in actual practice treatment for captured combatants as similar as possible to that accorded prisoners of war under the Third Convention; on the other hand, it noted resolutions of the United Nations General Assembly proclaiming the right of “freedom fighters” to be treated as prisoners of war in case of capture, and the international character of their struggle. The ICRC suggested that an attempt should be made to obtain the treatment, but not the status of prisoner of war. This solution seemed to have the best chances of being accepted, as it operated on a strictly humanitarian basis, without political or legal repercussions.⁶⁰
- b) The ICRC was aware of the fact that, if the struggle for self-determination were to be declared international, the problem would still arise how to establish whether any particular conflict should be designated as such a struggle; the ICRC in 1971 therefore proposed developing rules of humanitarian law that would apply in situations where the law of armed conflicts as a whole would not automatically and incontrovertibly apply.⁶¹
- c) In 1972 the question of the struggle for self-determination was broached in two ways:
- Article 1 of the draft of Protocol I defined the scope of the Protocol by referring to Article 2 of the Conventions, but Article 38 laid down prisoner-of-war treatment for combatants of organized independence movements, provided in particular that they belonged to a Party to the conflict, even if this were a government or an authority not recognized by the Detaining Power;⁶²
 - a preliminary draft of a Declaration on the Application of International Humanitarian Law in Armed Struggles for Self-Determination proclaimed that international humanitarian law as a whole should apply to such struggles; failing which, the Parties involved in such struggles should at least

⁵⁹ Cf. for example, *CRCE 1971, Report*, p. 43 (para. 2); *CE 1971, Report*, pp. 48-50, paras. 282-289; *CE 1972, Report*, Vol. I, pp. 97-100, Chapter VIII.

⁶⁰ *Protection of Victims of Non-International Conflicts*, Report submitted at the XXIst International Conference of the Red Cross (Istanbul, 1969), ICRC, Geneva, pp. 7-8.

⁶¹ *CE/5b*, pp. 30-35 (Conclusions and proposals).

⁶² *CE 1972, Report*, Vol. II, p. 1 (Art. 1, para. 2) and p. 6 (Art. 38, para. 1) of the draft Protocol I of the ICRC. The French text reads “non reconnue”, using the feminine form of the adjective, which may seem to refer only to the authority; this seems to be an error; the report does not refer to any discussion on this point, but the 1973 draft uses the plural adjective “non reconnus” (Art. 42), as indeed does Art. 4 A(3) of the Third Convention.

apply by analogy Article 3, common to the Conventions, and Protocol II, or otherwise they should comply with a set of special rules which were to be annexed to the Declaration.⁶³

4. *The Diplomatic Conference*

- 92 The draft of Article 1 submitted by the ICRC to the CDDH, though worded differently, repeated the substance of the 1972 draft: the Protocol would apply in the situations referred to in Article 2 common to the Conventions. The commentary on this draft reveals that the majority of experts were opposed to the inclusion of a paragraph to the effect that the situations referred to in the said common Article 2 would include armed struggles by peoples for the exercise of their right to self-determination. The opposition was based on various different and contradictory reasons: a refusal to qualify specific conflicts; the desire to retain this type of conflict within the scope of application of common Article 3, and of the draft of Protocol II; a preference for other solutions, such as the proclamation of the international character of such conflicts in the Preamble, or by mentioning members of movements struggling for self-determination in draft Article 42 (New category of prisoners of war). One remark relating to this draft article, as well as the commentary thereon, suggested that if the CDDH wished to comply with the desire of numerous governments, it should add a third paragraph covering members of organized liberation movements; this was intended to grant them prisoner-of-war treatment, and not prisoner-of-war status, so as to avoid the problem of qualifying specific conflicts.
- 93 The problem of struggles for self-determination was raised mainly with respect to four questions:

- during the initial plenary meetings of the CDDH the question arose whether national liberation movements should be invited to participate in the Conference.⁶⁴ In its resolution 3 (I) the CDDH decided by consensus⁶⁵ “to

⁶³ For the text of this preliminary draft of the Declaration, *cf. CE 1972, Report*, Vol. II, p. 23. The great majority of experts were opposed to such a declaration for various contradictory reasons, some considering it to be insufficient, while others considered that the cases covered came under common Art. 3 and the draft of Protocol II; for the text of the preliminary draft and the report on the discussions, *cf. ibid.*, Vol. I, pp. 200-201, paras. 4.216-4.224.

⁶⁴ The wish to invite them had been expressed by the XXIInd International Conference of the Red Cross (Teheran, 1973) in its Resolution XIII, operative para. 3; similarly, the United Nations General Assembly in its Resolution 3102 (XXVIII), operative para. 2.

⁶⁵ *O.R. V*, p. 65, CDDH/SR.7, para. 4. The list of movements invited for this purpose can be found in *O.R. V*, p. 56, CDDH/SR.6, para. 11; the list of movements that participated can be found in *O.R. II*, pp. 351-358; the list of movements which signed the Final Act is in *O.R. VII*, p. 336, CDDH/SR.59, para. 5; the status of these movements in the Conference was governed by Chapter X of the Rules of Procedure: *cf. O.R. II*, p. 15, CDDH/2/Rev. 3, Art. 58.

invite the national liberation movements, which are recognized by the regional intergovernmental organizations concerned, to participate fully in the deliberations of the Conference and its Main Committees”;⁶⁶

- a close relationship linked the rules on such struggles to Part III of Protocol I;
- if liberation struggles were to fall under Protocol I, it would be appropriate to lay down how liberation movements could undertake to apply this Protocol and the Conventions; the solution adopted is Article 96 (*Treaty relations upon entry into force of this Protocol*), paragraph 3;⁶⁷
- finally, and this was a fundamental point, it had to be determined whether such struggles were international conflicts, and as such required the application of the Conventions and of Protocol I as a whole. This is the point with which we are concerned here.

94 After its introduction by the ICRC,⁶⁸ the draft of Article 1 formed the object of various proposals for amendments.⁶⁹ Most of these proposals were more or less directly linked to paragraph 4, and it was because of this paragraph that the article was adopted by a vote and not by consensus.⁷⁰

Analysis of paragraph 4

95 In describing the historical background of this paragraph it was not possible to give a detailed account of each of the arguments advanced for and against the wording that was finally adopted, or of each of the proposals submitted in the Conference: the sum total would have been out of proportion. The same applies with regard to the extent of information found in legal and other literature, either

⁶⁶ Para. 1, *cf. O.R. I*, Part II, p. 5, CDDH/55, Resolution 3 (I).

⁶⁷ Paragraph added to draft Art. 84.

⁶⁸ *O.R. VIII*, p. 7, CDDH/I/SR.2, paras. 2-6.

⁶⁹ *O.R. III*, pp. 5-9, CDDH/I/5, and Add.1-2 (withdrawn in favour of document CDDH/I/41), CDDH/I/11 and Add.1-3, CDDH/I/12 and Corr. 1 and Add.1, CDDH/I/13 (withdrawn in favour of document CDDH/I/41), CDDH/I/41 and Add.1-7, CDDH/I/42, CDDH/I/71. A draft resolution requesting that an interessional working group should be entrusted with examining the question was not passed (CDDH/I/78, not reproduced in the *Official Records*; introduction: *O.R. VIII*, pp. 97-98, CDDH/I/SR.13, paras. 1-5). The text finally adopted for paragraph 4 is that of paragraph 2 of CDDH/I/71, a revision of the corresponding paragraph of CDDH/I/41, which was itself a merger of CDDH/I/5 and 11. The order of paragraphs was modified by the Drafting Committee: paras. 1 and 2 became 3 and 4, and paras. 3 and 4 became 1 and 2. In the French text, “populations” was replaced by “peuples”, and “de leur droit à l’autodétermination” by “du droit des peuples à disposer d’eux-mêmes”: *cf. O.R. VIII*, p. 100, CDDH/I/SR.13, paras. 19-20. In all the versions “colonial and alien occupation” was replaced by “colonial domination and alien occupation”; *cf. ibid.*, paras. 18 and 20.

⁷⁰ *Cf. supra*, note 1.

in general on the right of peoples to self-determination, or on the struggles conducted in exercising this right.⁷¹

- 96 Despite the many instruments and texts available, it should be noted that some discrepancies remain, and that the general character of texts which were unanimously approved does not always lead to undisputed conclusions.

1. *International instruments invoked*

- 97 The majority of delegations emphasized the need for ensuring the unity of international law and refused to accept or to maintain a humanitarian law which did not take into account existing general international law. In this respect reference was made to the Charter of the United Nations, the International Covenants on Human Rights, and to resolutions of the United Nations General Assembly, especially to Nos. 1514 (XV), 2625 (XXV), and 3103 (XXVIII). Recommendations were made to adapt the law expressly, without prejudice to an interpretation of existing instruments in the light of the subsequent development of the law and the entire legal system in force at the time of interpretation, in accordance with the principles expressed by the International Court of Justice with regard to Namibia.⁷² For one delegation the adaptation of humanitarian law was essential: it could not remain an isolated branch of law, and had to conform to general international law, including *jus cogens*.⁷³

⁷¹ For further details, reference may be made in the first place to the bibliographies of S. Calogeropoulos-Stratis, *op. cit.*, and of H. Gros Espiell, *The Right to Self-Determination – Implementation of United Nations’ Resolutions*, United Nations publication, 1979. The numerous publications relating to paragraph 4 include: W.T. Mallison and S.V. Mallison, “The Juridical Status of Privileged Combatants under the Geneva Protocol of 1977 concerning International Conflicts”, 62 *Law and Contemporary Problems* 2, Duke University, 1978, p. 10; W.D. Verwey, “Decolonization and *Ius ad Bellum*: A Case Study on the Impact of the United Nations General Assembly on International Law”, in *Declarations of Principles – A Quest for Universal Peace*, Leyden, 1977, p. 121; J.J.A. Salmon, “Les guerres de libération nationale”, in A. Cassese (ed.), *The New Humanitarian Law of Armed Conflict*, Naples, 1979, p. 55; D. Schindler, “The Different Types of Armed Conflicts...”, *op. cit.*, pp. 118-119, 132-145, 152-157; G. Abi-Saab, “Wars of National Liberation in the Geneva Conventions and Protocols”, 165 *Hague Recueil*, 1979/IV, p. 357; E. Kussbach, “Die Rechtsstellung nationaler Befreiungsbewegungen im humanitären Völkerrecht”, in *Ius Humanitatis, Festschrift zum 90. Geburtstag von Alfred Verdross*, Berlin, 1980, p. 499; J.A. Barberis, “Nouvelles questions concernant la personnalité juridique internationale”, 179 *Hague Recueil*, 1983/I, p. 239; A. Cassese, “Wars of National Liberation and Humanitarian Law”, in *Studies and Essays in Honour of Jean Pictet, op. cit.*, p. 313.

⁷² Cf. “Legal Consequences for States of the Continued Presence of South Africa in Namibia (South West Africa), notwithstanding Security Council Resolution 276 (1970), Advisory Opinion”, *ICJ Reports*, 1971, p. 16 (particularly pp. 31-32, para. 53). Similarly the Vienna Convention on the Law of Treaties, Art. 31 (General rule of interpretation), para. 3, particularly sub-para. (c).

⁷³ *O.R. VIII*, p. 21, CDDH/1/SR.3, para. 30. For H. Gros Espiell, *op. cit.*, paras. 70-87, the right of peoples to self-determination is *jus cogens*, even though this view still meets with some opposition.

98 In contrast, some delegations intervened to claim that the right of peoples to self-determination was not a right but a principle;⁷⁴ some contested that one could properly refer to instruments which were not treaties, such as resolutions, even those which had been adopted unanimously.⁷⁵

2. *The meaning of the right of peoples to self-determination*

99 As shown above, this right is, according to the International Covenants on Human Rights, the right of all peoples to “freely determine their political status and freely pursue their economic, social and cultural development”.⁷⁶

100 The struggle of peoples against any forcible action aimed at depriving them of their right to self-determination is legitimate; in this case they are entitled to seek and receive support in accordance with the purposes and principles of the Charter of the United Nations.⁷⁷

101 Any non-self-governing territory possesses a status separate and distinct from that of the territory of the State administering it.⁷⁸

3. *Those entitled to the right of peoples to self-determination*

102 The only unanimously agreed certainty is that those who are entitled to this right are “all peoples”, but what is uncertain is the definition of the term “people”. For some, the term is defined in the Charter and the International Covenants on Human Rights;⁷⁹ for others it is an elastic concept, as various examples have shown.⁸⁰

103 In international law there is no definition of what constitutes a people; there are only instruments listing the rights it is recognized all peoples hold. Nor is there an objective or infallible criterion which makes it possible to recognize a group as a people: apart from a defined territory, other criteria could be taken into account such as that of a common language, common culture or ethnic ties. The territory may not be a single unit geographically or politically, and a people can comprise various linguistic, cultural or ethnic groups. The essential factor is a common sentiment of forming a people, and a political will to live together as such. Such a sentiment and will are the result of one or more of the criteria indicated, and are generally highlighted and reinforced by a common history. This means simultaneously that there is a bond between the persons belonging to this people and something that separates them from other peoples: there is a common element and a distinctive element.

⁷⁴ *O.R.* VIII, pp. 13-14, CDDH/I/SR.2, para. 46; pp. 28-29, CDDH/I/SR.4, para. 25.

⁷⁵ For example, *ibid.*, p. 26, CDDH/I/SR.4, para. 7; p. 28, para. 21; p. 39, CDDH/I/SR.5, para. 43.

⁷⁶ Art. I, para. 1; *cf. supra*, p. 43, point 5.

⁷⁷ Resolutions 2105 (XX), 2625 (XXV), and 3103 (XXVIII), *cf. supra*, pp. 43 and 44, points 4, 7 and 8.

⁷⁸ Resolution 2625 (XXVIII), *cf. supra*, p. 44, point 7.

⁷⁹ For example, *O.R.* VIII, p. 15, CDDH/I/SR.2, para. 53.

⁸⁰ For example, *ibid.*, pp. 13-14, para. 46.

- 104 The definition of a group as a people does not arise from a decision by a regional or worldwide intergovernmental organization: by their declarations such organizations can take note of and proclaim the existence of peoples, but they cannot create them. While a group of population declared to be a “people” by an intergovernmental organization may in fact be considered to be such, the contrary conclusion does not necessarily follow from the absence of such a declaration, as the reasons for the absence may vary.⁸¹
- 105 The idea that a national liberation movement must be recognized by the regional intergovernmental organization concerned⁸² for paragraph 4 to apply was advanced but was not adopted.⁸³
- 106 It should be noted that, under the Charter and the Covenants, only peoples have the right to self-determination as defined by these instruments. This is not the case for ethnic, religious or linguistic minorities which, for example, under the Covenant on Civil and Political Rights, are merely entitled to enjoy their own culture, to profess and practise their own religion, or to use their own language (Article 27). Thus it is clear that the difficulty in individual cases lies entirely in the qualification that is chosen: is the case in question one of a people, with a right to self-determination and all the attendant consequences, or is it a minority entitled to protection, but not to self-determination?

4. *The peoples covered by paragraph 4*

- 107 A twofold requirement results from the merging of the various amendments proposed, for the paragraph to apply:
- there must be an armed conflict in which a people is struggling against colonial domination, alien occupation or a racist régime;

⁸¹ Chapter III (paras. 251-261) in H. Gros Espiell, *op. cit.*, is entitled “Specific situations concerning the right of peoples under colonial and alien domination to self-determination which have been or are being dealt with the United Nations”. Here is the list of States and territories in alphabetical order: Algeria, American Samoa, Angola, Antigua, Bahamas, Barbados, Belize, Bermuda, Botswana, British Virgin Islands, Brunei, Burundi, Cambodia, Cameroon, Cape Verde, Cayman Islands, Central African Republic, Chad, Cocos (Keeling) Islands, Comoro Archipelago, Congo, Cook Islands, Cyprus, Dahomey, Djibouti, Dominica, Equatorial Guinea, Eritrea, Falkland Islands (Malvinas), Fiji, Gabon, Gambia, Ghana, Gibraltar, Gilbert and Ellis Islands, Grenada, Guam, Guinea, Guinea-Bissau, Guyana, Hungary, Ifni, Indonesia, Ivory Coast, Jamaica, Kenya, Laos, Lesotho, Libya, Madagascar, Malaysia, Malawi, Mali, Malta, Mariana Islands, Mauritania, Mauritius, Montserrat, Morocco, Mozambique, Namibia, Nauru, New Hebrides, Niger, Nigeria, Niue, Oman, Palestine, Papua New Guinea, Pitcairn, Puerto Rico, Rwanda, St. Kitts-Nevis-Anguilla, St. Helena, St. Lucia, St. Vincent, Sao Tome and Principe, Senegal, Seychelles, Sierra Leone, Singapore, Solomon Islands, Somalia, South Africa, Southern Rhodesia, Southern Yemen, Suriname, Swaziland, Tanzania, Tibet, Timor, Togo, Tokelau Islands, Trinidad and Tobago, Tunisia, Turks and Caicos Islands, Tuvalu, Uganda, United States Virgin Islands, Upper Volta, Western Sahara, Western Samoa, West New Guinea (West Irian), Zaire, Zambia.

⁸² Criterion used for inviting liberation movements to the CDDH, *cf. supra*, pp. 49-50, and note 66. *Cf.* also commentary Art. 96, *infra*, p. 1089 and note 29.

⁸³ *O.R.* III, p. 8, CDDH/I/42, quoted above. In favour of this proposal, in addition to its sponsor: *O.R.* VI, pp. 62-63, CDDH/SR.36, Annex (Indonesia); *O.R.* VII, p. 324, CDDH/SR.58, Annex (Mauritania) (after adoption in the Plenary Conference); against: *cf. O.R.* VIII, p. 105, CDDH/I/SR.14, para. 4 (after adoption by Committee I).

– the struggle of that people must be in order to exercise its right to self-determination.

- 108** However, one delegation considered that in interpreting the word “include” literally, the list following it is not exhaustive.⁸⁴ In contrast, another delegation expressed regret that the paragraph remained selective and does not cover all situations entering the concept of the right of peoples to self-determination.⁸⁵
- 109** As no delegation had specified what armed conflicts for self-determination would be implicitly included or excluded (depending on which of the two above-mentioned interpretations is chosen) by the formulation of the paragraph, it is necessary to study the paragraph and the texts on which it is based.
- 110** The Charter of the United Nations and the Friendly Relations Declaration, which were examined above, grant the right to self-determination to all peoples equally and in every respect.
- 111** As regards the wording of the paragraph, what meaning should be ascribed to the word “include”? We consider that it should be interpreted as introducing an exhaustive list of cases which are considered to form part of the situations covered by the preceding paragraph.
- 112** However, do the cases listed essentially cover all possible circumstances in which peoples are struggling for the exercise of their right to self-determination? The expression “colonial domination” certainly covers the most frequently occurring case in recent years, where a people has had to take up arms to free itself from the domination of another people; it is not necessary to explain this in greater detail here. The expression “alien occupation” in the sense of this paragraph – as distinct from belligerent occupation in the traditional sense of all or part of the territory of one State being occupied by another State⁸⁶ – covers cases of partial or total occupation of a territory which has not yet been fully formed as a State.⁸⁷ Finally, the expression “racist régimes” covers cases of régimes founded on racist criteria. The first two situations imply the existence of distinct peoples. The third implies, if not the existence of two completely distinct peoples, at least a rift within a people which ensures hegemony of one section in accordance with racist ideas. It should be added that a specific situation may correspond simultaneously with two of the situations listed, or even with all three.⁸⁸
- 113** In our opinion, it must be concluded that the list is exhaustive and complete: it certainly covers all cases in which a people, in order to exercise its right of self-determination, must resort to the use of armed force against the interference

⁸⁴ *O.R.* V, p. 228, CDDH/SR.22, para. 14.

⁸⁵ *O.R.* VII, p. 246, CDDH/SR.56, Annex (Syria). Other declarations can also be noted which are less conclusive with regard to the question whether the paragraph covers only one of the aspects of the right of peoples to self-determination: *O.R.* VIII, p. 11, CDDH/I/SR.2, para. 34; p. 20, CDDH/I/SR.3, para. 21; p. 106, CDDH/I/SR.14, para. 8.

⁸⁶ A situation already covered by the law of The Hague and Geneva; *cf.* commentary para. 3, *supra*, p. 40.

⁸⁷ *Cf.* for example, *O.R.* V, pp. 314-315, CDDH/SR.27, paras. 5 and 14, with regard to resolution 7 (II).

⁸⁸ In this sense, *cf.* *O.R.* VI, p. 53, CDDH/SR.36, para. 114.

of another people, or against a racist régime. On the other hand, it does not include cases in which, without one of these elements, a people takes up arms against authorities which it contests, as such a situation is not considered to be international.

5. *The application of humanitarian law*

- 114 At what moment does humanitarian law as a whole become applicable in pursuance of this paragraph? This is not stated here, but the preceding paragraph, which it supplements, refers to Article 2 common to the Conventions in this respect. The latter is as concise as it is clear: application is required in all cases of armed conflict which may arise between two or more High Contracting Parties, or in case of the total or partial occupation of the territory of a High Contracting Party – even if it meets with no armed resistance. The same rule applies here, in accordance with Article 96 (*Treaty relations upon entry into force of this Protocol*), paragraph 3, which provides for the way in which an authority representing a people engaged in a struggle may undertake to apply the Conventions and the Protocol and make them applicable to the conflict.
- 115 Although some considered that in the absence of a definition of the concept of armed conflict, reference should be made to Article 1 of Protocol II⁸⁹ (*Material field of application*), which could be applied by analogy, or a certain degree of intensity should be required,⁹⁰ this is not expressed in either paragraph 4 or the Conventions: according to the Conventions and the Protocol, the only real requirements for the correct application of the law when persons in such a conflict are protected persons within the meaning of these instruments are an authority representing the people engaged in the struggle and an organized structure of its armed forces, including a responsible command, in accordance with the requirements of Article 43 (*Armed forces*).⁹¹
- 116 The objection that only States would be capable of applying such heavy norms⁹² was not taken into account for the same reasons: apart from the innovations introduced in Part III, the only requirement considered truly necessary was the setting up in Article 96 (*Treaty relations upon entry into force of this Protocol*) of an *ad hoc* mechanism by which an authority representing a people engaged in a struggle may make an undertaking.⁹³

⁸⁹ *Ibid.*, p. 47, CDDH/SR.36, paras. 87-88; such a requirement was formulated in a declaration made by the United Kingdom upon signing the Protocol.

⁹⁰ *Cf.* O.R. VI, pp. 59-60, CDDH/SR.36, Annex (Australia).

⁹¹ *Cf.* the comparison with organized resistance movements in totally occupied countries: O.R. VIII, p. 34, CDDH/I/SR.5, para. 7; O.R. VI, p. 354, CDDH/SR.46, para. 77.

⁹² Amongst other statements, *cf.* O.R. VIII, p. 11, CDDH/I/SR.2, para. 32; pp. 28-29, CDDH/I/SR.4, para. 25; after the adoption of Art. 1 in plenary: O.R. VII, p. 217, CDDH/SR.56, para. 114.

⁹³ *Cf.* the indication that an unofficial working group in which all the regional groups were represented unanimously arrived at this conclusion during the second session, while studying the repercussions of Art. 1: O.R. VI, pp. 43-44, CDDH/SR.36, para. 69.

- 117 The actual adoption of this last provision, and of the paragraph under consideration here, suffices to entail the obligation in the situations referred to of interpreting certain criteria used in humanitarian law, such as that of nationality, in a new way. In fact, to insist on the “official” nationality would result in depriving these provisions of a large part of their purpose, and it is therefore necessary to resort to concepts such as “belonging” or “allegiance”.
- 118 One thing is certain: the characteristics of a conflict, especially its intensity or its length, may justify the application of the Conventions and of the Protocol as a whole, or a part of these instruments, but this is merely a question of common sense, which also applies to any conflict between States. It should also be emphasized that contrary to the fears expressed by certain delegations,⁹⁴ all the Parties to the conflict will have the same obligations and enjoy the same rights,⁹⁵ without any adverse distinction: neither the fifth paragraph of the Preamble nor paragraph 3 of Article 96 (*Treaty relations upon entry into force of this Protocol*) leaves any room for doubt on this point. As regards the crucial question of the inevitable disputes regarding the qualification of a specific conflict, one must assume that the Parties concerned will carry out their obligations in good faith, and count on the positive influence of all the High Contracting Parties.⁹⁶

B.Z.

⁹⁴ For example *O.R.* V, p. 101, CDDH/SR.11, para. 5; pp. 109-110, paras. 46-47.

⁹⁵ For example *O.R.* VIII, p. 32, CDDH/I/SR.4, para. 45; *O.R.* VI, p. 354, CDDH/SR.46, paras. 76-77.

⁹⁶ *Cf.* in particular Art. 1, common to the Conventions, para. 1 of this article, as well as Art. 89 of Protocol I.

Protocol I

Article 2 – Definitions

For the purposes of this Protocol:

- (a) “First Convention”, “Second Convention”, “Third Convention” and “Fourth Convention” mean, respectively, the Geneva Convention for the Amelioration of the Condition of the Wounded and Sick in Armed Forces in the Field of 12 August 1949; the Geneva Convention for the Amelioration of the Condition of Wounded, Sick and Shipwrecked Members of Armed Forces at Sea of 12 August 1949; the Geneva Convention relative to the Treatment of Prisoners of War of 12 August 1949; the Geneva Convention relative to the Protection of Civilian Persons in Time of War of 12 August 1949; “the Conventions” means the four Geneva Conventions of 12 August 1949 for the protection of war victims;
- (b) “rules of international law applicable in armed conflict” means the rules applicable in armed conflict set forth in international agreements to which the Parties to the conflict are Parties and the generally recognized principles and rules of international law which are applicable to armed conflict;
- (c) “Protecting Power” means a neutral or other State not a Party to the conflict which has been designated by a Party to the conflict and accepted by the adverse Party and has agreed to carry out the functions assigned to a Protecting Power under the Conventions and this Protocol;
- (d) “substitute” means an organization acting in place of a Protecting Power in accordance with Article 5.

Commentary

General remarks

- 119 Article 31 (General rule of interpretation) of the Vienna Convention on the Law of Treaties of 23 May 1969 provides that: “A treaty shall be interpreted in good faith in accordance with the ordinary meaning to be given to the terms of the treaty in their context and in the light of its object and purpose” (paragraph 1); it adds that: “A special meaning shall be given to a term if it is established that the parties so intended” (paragraph 4).
- 120 Thus the object of definitions is essentially to help the interpretation in cases of possible doubt regarding the meaning of terms in a treaty; it may also simply be to prevent the use of lengthy formulations by replacing them with more concise expressions; finally, a definition can itself contain a substantive rule. Whatever the case, the definitions laid down in a treaty for the purposes of that treaty bind the Parties with regard to its interpretation.
- 121 During the Diplomatic Conference the question was raised whether all the definitions given in the Protocol should be grouped together in Article 2, or whether it should include only definitions of expressions used throughout the Protocol, as in the case of the draft. The latter solution was chosen, and other definitions were retained in parts, sections or chapters particularly concerned with them.¹

¹ Thus other definitions or similar provisions can be found in the following articles: 8; 26, para. 2; 37; 41, para. 2; 43; 46, paras. 2-3; 47, para. 2; 49, para. 1; 50; 51, paras. 4-5; 52; 56, para. 1; 59, paras. 2-3; 60, para. 3-4; 61; 85, para. 5; 90, para. 1.

- 122 Two major modifications were made to the draft. Sub-paragraph (b) was inserted in Article 2 although it had been developed and adopted by Committee III as an integral part of Article 43 (*Armed forces*). In addition, in view of the difficulty of establishing a general definition of such expressions as “protected persons” and “protected objects”, Committee I decided not to provide definitions of these expressions; in fact, as these two expressions were to be used only in Articles 11 (*Protection of persons*) and 85 (*Repression of breaches of this Protocol*), it seemed best to include the appropriate information in these provisions.
- 123 The article was adopted by consensus by the Committee² and in plenary.³

Opening sentence

- 124 The six words preceding the sub-paragraphs are the standard wording also found in Articles 8 (*Terminology*) and 61 (*Definitions and scope*). Even though this might be considered to be self-evident, it means that the definitions given do not in any way affect another meaning that the expressions defined could have, for example, in another treaty⁴ or in the domestic law of a State.
- 125 Nevertheless, with regard to sub-paragraph (c), it is clear that the definition given here applies not only to the Protocol but also to the Conventions.

Sub-paragraph (a)

- 126 The expressions “First Convention” etc. have become current usage for practical reasons, though up to now there has been no official recognition.⁵ The same considerations applied for adopting the terms “Protocol I” and “Protocol II”, this time as an official abbreviated title.
- 127 The expression “for the protection of war victims” had already been officially approved in the resolutions of the Diplomatic Conference of 1949; subsequently it was used particularly by their depositary and by the United Nations.⁶ Moreover, it is contained in Article 1 (*General principles and scope of application*), paragraph 3, of the Protocol.

² O.R. VIII, p. 53, CDDH/I/SR.7, paras. 18-23; pp. 247-248, CDDH/I/SR.26, para. 4; O.R. XV, p. 91, CDDH/III/SR.47, para. 35 (cf. also *ibid.*, p. 390, CDDH/236/Rev. 1, para. 43).

³ O.R. VI, p. 57, CDDH/SR.36, para. 129.

⁴ Along the same lines, cf. commentary Art. 35, para. 3, *infra*, pp. 415-420, for the different meanings of almost identical expressions in two treaties.

⁵ One or other of the expressions defined is used in the following arts. of the Protocol: 2-9, 12, 15, 16, 18, 21-23, 30, 33, 34, 38, 41, 43-46, 49, 50, 58-60, 68-70, 72, 75, 79-83, 85-100, 102, and Art. 1 of Annex I.

⁶ *United Nations Treaty Series*, 1950, Nos. 970-973.

Sub-paragraph (b)

- 128 The expression “rules of international law applicable in armed conflict” is used in a number of articles of the Protocol.⁷ Other references relating generally or specifically to international law,⁸ or to specific instruments,⁹ can also be found.
- 129 The object of Article 43 (*Armed forces*), for which this definition was drafted, was not so much to list all the rules but to extend the fundamental obligation laid down in Article 1 of the Hague Convention IV of 1907 to the Protocol¹⁰, and to all the armed forces. The commentary on the Draft specified that the expression related to customary law, as well as to treaty law, the latter comprising mainly the Hague Conventions of 1907, the Geneva Protocol of 1925, the Geneva Conventions of 1949, and the Hague Convention of 1954.¹¹ Since then, this Protocol and the Convention of 1980 on conventional weapons *inter alia* have been added to these.
- 130 As the Conference did not draw up a list of treaty rules or customary rules covered by this sub-paragraph either in Committee III or in plenary meetings, reference should be made to the various articles containing this formula to know to which rules each of them is referring.¹²
- 131 Essentially the treaty rules are contained in instruments especially intended to apply in armed conflicts, including the law of neutrality. The expression “applicable to armed conflict” used at the end of the sub-paragraph should not be interpreted to cover *jus ad bellum* as well, in the context of the Protocol.¹³ On the other hand, the definition does cover instruments of more general applicability that continue to apply wholly or partially in a situation of armed conflict.

⁷ Arts. 31, 37, 43, 44, 57, 59 and 60.

⁸ Art. 1, para. 2: “principles of international law”; Art. 5: “rules of international law relating to diplomatic relations”; Art. 36: “any other rule of international law applicable to the High Contracting Party”; Art. 39, para. 3: “existing generally recognized rules of international law applicable to espionage or to the use of flags in the conduct of armed conflict at sea”; Art. 49, para. 3: “rules of international law applicable in armed conflict at sea or in the air”; Art. 49, para. 4: “other international agreements binding upon the High Contracting Parties, as well as to other rules of international law relating to the protection of civilians and civilian objects on land, at sea or in the air against the effects of hostilities”; Art. 51, para. 1: “other applicable rules of international law”; Art. 56, para. 3: “international law”; Art. 72: “other applicable rules of international law relating to the protection of fundamental human rights during international armed conflict”; Art. 75, para. 7(a), and para. 8: “applicable rules of international law”.

⁹ Preamble, second and fourth paragraphs: “Charter of the United Nations”; Art. 89: *idem*; Art. 102: *idem*; Annex I, Art. 7, para. 3: “International Telecommunication Convention”; Art. 8, para. 1: “Chicago Convention on International Civil Aviation of 7 December 1944”; Art. 10: “standards [...] established by [the ITU, ICAO and IMCO]”; Art. 11: “International Code of Signals”, above-mentioned Chicago Convention; Art. 13: same Convention.

¹⁰ “The Contracting Powers shall issue instructions to their armed land forces which shall be in conformity with the Regulations Respecting the Laws and Customs of War on Land, annexed to the present Convention”. For this Protocol various provisions of Parts I and V have the same aim.

¹¹ *Commentary Drafts*, p. 47 (Art. 41).

¹² Also see *supra*, Editors’ Note (definitions).

¹³ In this respect, *cf.* commentary Preamble, first, fourth and fifth paras., *supra*, pp. 26 and 28.

132 Finally it should be noted that the limitation to “international agreements to which the Parties to the conflict are Parties” has no effect with regard to rules which have validity as customary law, whether or not they form part of a treaty.

Sub-paragraph (c)

- 133 The expression “Protecting Power”, used in the Geneva Conventions since 1929, can be found in sub-paragraph (d) of this article, as well as in various other articles of the Protocol.¹⁴
- 134 The main particulars given in the Protocol on the characteristics and activities of the Protecting Power are given in the other articles of the Protocol referred to above. However, this sub-paragraph does contain some elements.
- 135 First, the Protecting Power means “a neutral or other State not a Party to the conflict”. Only the term “neutral” is used by the Conventions in a number of their provisions. The draft Protocol used the wording “not engaged in the conflict” instead of the word “neutral”. In fact, other forms of non-participation in a conflict have been added to neutrality as defined by treaty¹⁵ and customary law. Undoubtedly it would have sufficed to use the expression “not engaged in the conflict” or “not Party to the conflict” for the purposes of this sub-paragraph and other articles of the Protocol containing the same wording.¹⁶
- 136 Nevertheless, while assigning them equal significance, the Conference considered it appropriate to make a separate mention of non-participation in the conflict in general, and of neutrality in the true sense of the word – whether this is neutrality in a particular conflict, or permanent neutrality. The fact that the Protocol thus gave a restrictive meaning to the term “neutral” by using this new wording, does not affect the meaning of the term in the Conventions, where it should be interpreted as covering non-participation in conflicts in general, as well as neutrality in the proper sense of the word.¹⁷
- 137 The rest of the sub-paragraph expressly formulates what the concept of a Protecting Power means: to appoint such a Power there must be agreement between the State approached to be the Protecting Power and each of the two Parties to the conflict concerned. Although the consent of the two first is mentioned in Article 5 (*Appointment of Protecting Powers and of their substitute*),

¹⁴ Arts. 5, 33, 45, 70, 78 and 84.

¹⁵ Essentially the Hague Conventions V and XIII of 1907.

¹⁶ Art. 9, para. 2(d); 19; 22, para. 2(a); 30, para. 3; 31; 37, para. 1(a); 39, para. 1; 64, paras. 2-3.

¹⁷ On the theme of the CDDH and neutrality, cf. in particular, E. Kussbach, “Protocol I and Neutral States”, *IRRC*, September-October 1980, p. 231; J. Monnier, “Développement du droit international humanitaire et droit de la neutralité”, a study presented at the Tenth Round Table of the International Institute of Humanitarian Law (San Remo, September, 1984) in *Quatre études du droit international humanitaire*, Geneva, 1985, p. 5. On neutrality in a more general sense, cf. D. Schindler, “Aspects contemporains de la neutralité”, 121 *Hague Recueil*, 1967/II, p. 221; Bernhardt (ed.), *op. cit.*, Instalment 4; R. Bindschedler, “Neutrality, Concept and General Rules” (p. 9); K.J. Madders, “Neutrality in Air Warfare” (p. 14); K. Zemanek, “Neutrality in Land Warfare” (p. 16); Y. Dinstein, “Neutrality in Sea Warfare” (p. 19); E. Kussbach, “Neutrality Laws” (p. 28); R. Bindschedler, “Permanent Neutrality of States” (p. 133).

the latter is not; although this does not matter, it would have been more logical if the third consent had also been mentioned.¹⁸

- 138 Finally, the mention of “functions assigned [...] under the Conventions and this Protocol” results from the distinction established in Article 5 (*Appointment of Protecting Powers and of their substitute*), paragraph 6, between the “Vienna mandate” and the “Geneva mandate” – as the same Protecting Power should not necessarily take upon itself both of these two mandates.¹⁹

Sub-paragraph (d)

- 139 The term “substitute” is used only in Article 5 (*Appointment of Protecting Powers and of their substitute*), paragraphs 4 and 7. Paragraph 7 specifically dispenses with the need to mention the substitute each time reference is made to Protecting Powers. Although the term did not appear in the text itself of the Conventions, it had been used in the marginal notes (which were not adopted by the Conference in 1949), and it was widely used in practice.
- 140 Nevertheless, we will see below with regard to the above-mentioned Article 5 (*Appointment of Protecting Powers and of their substitute*), paragraphs 4 and 7, that the relevant article of the Conventions provides for various possible types of substitute – a neutral State, an organization which offers every guarantee of impartiality and efficacy, a humanitarian organization such as the ICRC. As regards the Protocol, it refers only to the ICRC or any other organization which offers all guarantees of impartiality and efficacy.
- 141 The draft envisaged that a substitute might replace a Protecting Power “for the discharge of all or part of its functions”. The Working Group decided to delete this expression. According to the commentary of the draft Protocol the words “all or part” in the draft referred to two possible situations: that in which the Protecting Power and the substitute shared the tasks, in accordance with the wishes of the designated Protecting Power and with the agreement of the Parties to the conflict; and that in which the substitute was prepared to assume only part of such activities, in the absence of a Protecting Power and with the agreement of the Parties to the conflict. The possibility of having several different substitutes at the same time had already been envisaged by the Commentary to the Conventions.²⁰
- 142 Although the Conference did not retain the words “all or part” in this sub-paragraph – just as it did not adopt a proposal to use “substitutes” in the plural instead of “a substitute” in Article 5 (*Appointment of Protecting Powers and of their substitute*), paragraph 7 – neither the summary records nor the reports of the Committee reveal any strong opposition to the notion of a possible division of

¹⁸ In this sense, cf. *O.R.* VIII, p. 56, CDDH/I/SR.7, para. 45.

¹⁹ Cf. commentary Art. 5, para. 6, *infra*, pp. 87-88.

²⁰ E.g., *Commentary I*, pp. 134-135 (Art. 10, para. 3).

tasks.²¹ On the contrary, several speakers argued in its favour,²² and other proposed amendments did not affect the draft in this respect.

143 It must be concluded that the Conference did not wish to encourage the division of responsibilities between a Protecting Power and a substitute, or between a number of substitutes, by explicitly referring to such a possibility. However, neither did it wish to prohibit such a solution in exceptional cases where it was necessary for the sake of the victims, whose interests must prevail over practical considerations in favour of a unified approach.²³

B.Z.

²¹ Even in the introduction of the amendment proposing deleting the words “all or part”; *cf.* O.R. III, p. 11, CDDH/I/44, and Corr.1; O.R. VIII, p. 85, CDDH/I/SR.11, para. 49.

²² O.R. VIII, p. 84, CDDH/I/SR.11, paras. 41 and 46; p. 162, CDDH/I/SR.18, paras. 45 and 46 *in fine*.

²³ *Cf.* also *infra*, pp. 87-88, commentary Art. 5, para. 6, regarding the possibility of having one or two Protecting Powers for the “Vienna mandate” and the “Geneva mandate”.

Article 3 – Beginning and end of application

Without prejudice to the provisions which are applicable at all times:

- (a) the Conventions and this Protocol shall apply from the beginning of any situation referred to in Article 1 of this Protocol;
- (b) the application of the Conventions and of this Protocol shall cease, in the territory of Parties to the conflict, on the general close of military operations and, in the case of occupied territories, on the termination of the occupation, except, in either circumstance, for those persons whose final release, repatriation or re-establishment takes place thereafter. These persons shall continue to benefit from the relevant provisions of the Conventions and of this Protocol until their final release, repatriation or re-establishment.

Commentary

General remarks

- 144 The material scope of application of the Protocol is laid down in Article 1 (*General principles and scope of application*), and it may therefore seem self-evident at first sight that the application would extend from the beginning to the end of such situations as are referred to in that article.
- 145 The real situation is more complicated: some provisions apply at all times; various types of situation require separate rules; finally, some persons may find themselves in a different situation from the general situation.
- 146 The draft, which was extensively modified as regards its form, was also improved by the Conference with regard to its substance. First, as it also governs the Conventions and replaces their relevant provisions,¹ it avoids any discrepancy, simplifies the law and represents tangible progress with regard to occupied territories.
- 147 On the other hand, the Protocol includes a provision which was already contained in the Conventions in order to extend the benefits thereof to the new categories of persons whom it protects: all protected persons will continue to enjoy the relevant provisions of the Conventions and the Protocol until their final release, repatriation or re-establishment – that is to say, even after the general close of military operations or the termination of occupation. It should be noted that a similar clause is contained in paragraph 6 of Article 75 (*Fundamental guarantees*), which has a particular scope of application as regards the persons it covers.
- 148 The article was adopted by consensus in Committee I² and in the plenary Conference.³

Opening sentence

- 149 The provisions which apply at all times can actually be divided into various degrees or groups:
- a) the Final Provisions (and Article 90 – *International Fact-Finding Commission*), some of which necessarily apply even before the Protocol enters into force;
 - b) provisions which apply as soon as the Protocol enters into force, such as Articles 6 (*Qualified persons*), 36 (*New weapons*), 43 (*Armed forces*), 80 (*Measures for execution*), 81 (*Activities of the Red Cross and other*

¹ Article 2 common to the Conventions and Arts. 51-5/6. The absence of an article on when the Second Convention ceases to apply to persons remaining in the power of the enemy after the general close of military operations is justified, because such long-lasting detention would take place on land, which means that, depending on the situation, the First, Third or Fourth Conventions would apply (*cf. Commentary II*, p. 41).

² *O.R.* VIII, pp. 247-248, CDDH/I/SR.26, para. 4.

³ *O.R.* VI, p. 57, CDDH/SR.36, para. 129.

- humanitarian organizations*), 82 (*Legal advisers in armed forces*), 83 (*Dissemination*) and 84 (*Rules of application*);
- c) provisions which may apply from the entry into force of the Protocol, such as Article 7 (*Meetings*), and articles which give grounds for taking preparatory measures (for example, Articles 18 – *Identification*, 56 – *Protection of works and installations containing dangerous forces*, 58 – *Precautions against the effects of attacks*, 66 – *Identification*, 79 – *Measures of protection for journalists*, and Annexes I and II);
- d) articles whose application in relation to a conflict may continue beyond the termination of this conflict, such as Articles 33 (*Missing persons*), 34 (*Remains of deceased*), 74 (*Reunion of dispersed families*), 78 (*Evacuation of children*), 85 (*Repression of breaches of this Protocol*), 86 (*Failure to act*), 87 (*Duty of commanders*), 88 (*Mutual assistance in criminal matters*), 89 (*Co-operation*), 90 (*International Fact-Finding Commission*) and 91 (*Responsibility*), in addition to the case of persons with whom sub-paragraph (b) of Article 3 is especially concerned.

Sub-paragraph (a)

- 150 Reference should be made to the commentary on Article 1 (*General principles and scope of application*), paragraphs 3 and 4, for the description of situations covered by the said article, including the time at which the beginning of such situations may be considered to take place. It is self-evident that the occurrence of such situations makes the Conventions and the Protocol applicable only for Parties bound by these instruments.⁴

Sub-paragraph (b)

- 151 This sub-paragraph takes up its various aspects of the provisions relating to the end of the application of the First Convention (Article 5), Third Convention (Article 5) and Fourth Convention (Article 6). It replaces these provisions and its main effect is to extend the application in occupied territory beyond what is laid down in the Fourth Convention.

Territory of Parties to the conflict

- 152 “Military operations” means the movements, manoeuvres and actions of any sort, carried out by the armed forces with a view to combat. “The general close of military operations” is the same expression as that used in Article 6 of the Fourth Convention, which, according to the commentary thereon, may be deemed in principle to be at the time of a general armistice, capitulation or just when the occupation of the whole territory of a Party is completed, accompanied

⁴ Cf. remarks relating to the expression “High Contracting Parties”, commentary Preamble, *supra*, p. 25.

by the effective cessation of all hostilities, without the necessity of a legal instrument of any kind.⁵ When there are several States on one side or the other, the general close of military operations could mean the complete cessation of hostilities between all belligerents,⁶ at least in a particular theatre of war.

- 153 The general close of military operations may occur after the “cessation of active hostilities” referred to in Article 118 of the Third Convention: although a ceasefire, even a tacit ceasefire, may be sufficient for that Convention, military operations can often continue after such a ceasefire, even without confrontations. Whatever the moment of the general close of military operations, repercussions of the conflict may continue to affect some persons who will be dealt with below.

Occupied territories

- 154 Article 6 of the Fourth Convention provided that its application in occupied territory would cease one year after the general close of military operations, except for some articles to the extent that the Occupying Power continued to exercise the functions of government in such territory.
- 155 The extension of the application up to the termination of occupation, as laid down in this sub-paragraph (b), actually takes up again the draft which the Diplomatic Conference in 1949 rejected.⁷ However good the reasons advanced against this solution at that time may have been, despite the possible extension of the application for some articles as just mentioned, and despite the existence in Article 6 of the Fourth Convention of a clause corresponding to that to be studied below under the next heading, obvious progress has been made and any future controversy regarding the exact moment of the general close of military operations will be pointless.
- 156 The termination of occupation may occur a long time after the beginning of that occupation, and can come about in various ways, *de facto* or *de jure*, depending on whether it ends in the liberation of the territory or in its incorporation in one or more States in accordance with the right of the people or peoples of that territory to self-determination.⁸ The occupation as such does not affect the legal status of the occupied territory, as confirmed by Article 4 (*Legal status of the Parties to the conflict*).

Continued application to particular persons

- 157 Taking up a clause from the above-mentioned articles of the First, Third and Fourth Conventions for the purposes of the Protocol, the end of the first sentence and the second sentence fulfil a necessary function. In fact, no matter at what

⁵ Some of the literature refers to this situation as *debellatio*, but this is a narrower interpretation of the term than other publicists ascribe to it. On the concept of *debellatio* and the various definitions of this term, cf. K.U. Meyn, “*Debellatio*”, in R. Bernhardt (ed.), *op. cit.*, Instalment 3, p. 145.

⁶ *Commentary IV*, p. 62.

⁷ *Ibid.*, pp. 61-63.

⁸ Cf. commentary Art. 1, para. 4, *supra*, pp. 44 and 52, and Art. 4, *infra*, pp. 72-73.

time humanitarian law may cease to apply generally, the situation of a number of people requires that they should continue to benefit from such application beyond that time.

- 158** The expression “final release” means the end of captivity, detention or other measures restricting a person’s liberty as a result of armed conflict or occupation; “repatriation” refers to the return to the country of which a person is a national, or in some cases, to the country where he was normally resident; “re-establishment” means being established in another country, for whatever reason.⁹
- 159** The provision refers mainly to persons in a situation requiring continued protection after the Conventions and the Protocol have ceased to be applied generally. It also covers of course persons who do not get into a situation requiring protection until after the end of the period when humanitarian law applies generally.¹⁰
- 160** Finally, it should be noted again that Article 75 (*Fundamental guarantees*), paragraph 6, contains a provision similar to the present one, for the purposes of that article alone.¹¹

B.Z.

⁹ For these various situations, *cf.* mainly Art. 118, Third Convention and Arts. 133-135, Fourth Convention; for grave breaches relating to these situations, *cf.* Art. 147, Fourth Convention (“unlawful confinement”) and 85, para. 4(b), of this Protocol (a delay, which is unjustifiable, wilful and in violation of the law, in the repatriation of prisoners of war or civilians).

¹⁰ This question was raised in relation to Art. 41 (then 38 *bis*) by Committee III, which considered that such persons were effectively covered by the present wording; *cf.* O.R. XV, pp. 384-385, CDDH/236/Rev.1, para. 25, and commentary Art. 41, *infra*, p. 438.

¹¹ Some thought that Art. 75, para. 6 (Art. 65, para. 5, of the draft), could render the corresponding part of Art. 3, sub-para. (b), superfluous. This view was, justifiably, not maintained; *cf.* O.R. VIII, p. 60, CDDH/SR.8, para. 11; pp. 67-68, CDDH/I/SR.9, paras. 1 and 4; see also O.R. III, p. 17, CDDH/I/49, para. 2 and note.

Article 4 – Legal status of the Parties to the conflict

The application of the Conventions and of this Protocol, as well as the conclusion of the agreements provided for therein, shall not affect the legal status of the Parties to the conflict. Neither the occupation of a territory nor the application of the Conventions and this Protocol shall affect the legal status of the territory in question.

Commentary

General remarks

- 161 Article 4 is essentially the affirmation, for international armed conflict, of a rule which had only been explicitly formulated in the Conventions for armed conflict not of an international character.¹ Though this had seemed necessary in

¹ "The application of the preceding provisions shall not affect the legal status of the Parties to the conflict" (common Art. 3, para. 4).

1949 only with regard to the latter category of conflicts, experience has shown that Parties to an armed conflict of which the international character is disputed may fear – though this would be unjustified – that the application of the law of international armed conflict could have a detrimental effect on their legal status or that of another Party to the conflict. To prevent such fears from affecting the application of the Conventions and the Protocol it was therefore necessary to state unequivocally that their sole aim is a humanitarian one.

- 162 The Conference considered it appropriate to reaffirm in the same article the undisputed principle of international law that the occupation of a territory does not affect its status. With this exception the Conference retained the draft, though the form was changed to avoid any incorrect interpretation.
- 163 The draft and the proposed amendments² were examined by Committee I, and then by its Working Group A; the latter failed to come to a unanimous agreement, and in its report³ it put forward two possible texts. The Committee chose one of these by voting, and then adopted the article as a whole by consensus.⁴ The article was adopted by consensus in the plenary Conference.⁵

Text of the article

- 164 In fact, this article deals with two separate, though related, questions: on the one hand, with the application of humanitarian law in both sentences; on the other hand, with occupation, in the second sentence. Up to this time the first question had only been codified for conflicts not of an international character; the second had already been codified outside humanitarian law.

Application of humanitarian law

- 165 As stated in the Commentary to the Conventions,⁶ paragraph 4 of common Article 3 is essential; without it, neither Article 3 nor any other in its place would ever have been adopted, because it was necessary to indicate in the clearest possible way that the article is exclusively of a humanitarian nature, and cannot confer any special protection or immunity on a Party, or increase its authority or power in any way.⁷
- 166 A corresponding provision was not considered necessary in 1949 for international armed conflict, but from the time of the Conference of Government Experts, those concerned have revised their views. In fact, it is possible for a Party to contest the international character of a conflict, because it considers that the other Party to the conflict is neither a State, nor a people referred to in Article

² O.R. III, pp. 19-21.

³ O.R. X, pp. 67 and 69, CDDH/I/235/Rev.1 (Art. 4).

⁴ 46 votes in favour, 11 against and 14 abstentions; cf. O.R. VIII, pp. 248-250, CDDH/I/SR.26, paras. 5-21.

⁵ O.R. VI, p. 57, CDDH/SR.36, para. 129.

⁶ For example, *Commentary I*, pp. 60-61.

⁷ As regards Powers not taking part in the conflict, reference should also be made to Resolution 10 of 1949.

1 (*General principles and scope of application*), paragraph 4. It is also possible that, without contesting the fact that the conflict is of the type described in Article 1 (*General principles and scope of application*), paragraph 4, a Party to the conflict would contest the quality of an authority claiming to represent a people engaged in fighting in the sense of Article 96 (*Treaty relations upon entry into force of this Protocol*), paragraph 3.⁸

- 167 In such situations a Party to the conflict could fear that by applying humanitarian law – no matter how justified this might actually be – it could imply, or seem to imply recognition of the very quality it is contesting with regard to the adverse Party. Fears of this nature will in future be quite unfounded because of the explicit wording of this provision.
- 168 Thus, as humanitarian law has no effects beyond those it has itself prescribed on the legal status of Parties to the conflict, two situations may arise. In the first case, the application of humanitarian law does not change the legal status of the State, of a people fighting for self-determination, or of an authority representing such a people, this being the status which the contested Party effectively possessed; in the other case, it neither creates nor reinforces a quality which did not exist. Such a change does not result from the application of humanitarian law.
- 169 The validity of this rule was not doubted by anyone as far as the principle is concerned, but there were difficulties in its formulation. And this was not with regard to the Parties to the conflict themselves, but, according to the terms of the draft, regarding the “territories over which they exercise authority”.⁹ This will be dealt with in the following section.

Occupation of a territory

- 170 The experience of a number of specific situations had led the ICRC to formulate a draft according to which the principle of the absence of legal effect of the application of humanitarian law should not only apply for the Parties to the conflict, but also for the “territories over which they exercise authority”,¹⁰ in particular, occupied territories.
- 171 Though there was no opposition to this either, two remarks were made. On the one hand, according to some interpretations, this wording could lead to the idea that humanitarian law would sanction situations conflicting with international law;¹¹ on the other hand, the majority wished to reiterate the principle that occupation does not affect the legal status of occupied territory beyond what is laid down in the Hague Regulations, the Fourth Convention and the present Protocol for the duration of the occupation.
- 172 Everyone recognized this principle as an uncontested principle of international law which was, moreover, underlying both the Hague Regulations and the Fourth Convention. Nowadays it follows from the inadmissibility of the use of force, as laid down in the Charter of the United Nations, and elaborated in the Declaration

⁸ On the meaning of the expression “a government or an authority not recognized by an adverse Party”, contained in Article 43, para. 1, *cf.* the commentary thereon, *infra*, pp. 506-508.

⁹ *Cf.* in particular *O.R.* VIII, pp. 60-65, CDDH/1/SR.8, paras. 15-46.

¹⁰ *Ibid.*, p. 61, para. 19.

¹¹ *Cf.* in particular *ibid.*, p. 62, para. 25; pp. 199-200, CDDH/1/SR.21, paras. 55 and 61.

on Principles of International Law concerning Friendly Relations and Co-operation among States in accordance with the Charter of the United Nations (Resolution 2625 (XXV) of the United Nations General Assembly). The only question that was disputed by a minority was whether it was appropriate and necessary to repeat this principle in the present article.¹²

- 173** It should be recalled at this point that with regard to persons protected by it in occupied territory, Article 47 of the Fourth Convention prohibits any deprivation of protection which could be the consequence, in particular, of “any change introduced, as the result of the occupation of a territory, into the institutions or government of the said territory”, or from the annexation by the Occupying Power of the whole or part of the occupied territory.¹³

Conclusion of agreements

- 174** The Conventions and the Protocol provide that a certain number of questions should be resolved by agreements to be concluded between Parties to the conflict; some may also be concluded outside a conflict situation or, in relation to a conflict, may equally concern neutral States or other States not Party to the conflict.¹⁴
- 175** The statement that the conclusion of agreements provided for by the Conventions and the Protocol does not have any effect either on the legal status of those concerned, should be considered to be superfluous: the conclusion of such agreements actually represents no more than one aspect of the application of these instruments. This becomes all the more significant because while the Conference has elaborated the present text using two sentences instead of the one sentence contained in the draft, it did not explicitly refer to the conclusion of such agreements in the second sentence. That does not alter the fact that the rule as a whole applies to the two sentences of the article.
- 176** Common Article 6/6/6/7 of the Conventions states that, apart from the agreements expressly provided for, the Contracting Parties “may conclude other special agreements for all matters concerning which they may deem it suitable to make separate provision”. There is no doubt that this possibility also exists for matters more specifically governed by the Protocol, and that the same restriction applies: no special agreement can adversely affect the situation of protected persons as regulated by the Conventions and this Protocol.¹⁵

B.Z.

¹² *Ibid.*, p. 63, CDDH/I/SR.8, para. 34; pp. 166-167, CDDH/I/SR.18, para. 72; p. 199, CDDH/I/SR.21, para. 58; pp. 248-250, CDDH/I/SR.26, paras. 10-21.

¹³ The mention of such situations in Article 47 of the Fourth Convention has the aim of preventing them more effectively and in no way of legitimizing acts which are contrary to international law; *cf. Commentary IV*, pp. 272-276.

¹⁴ In the Protocol the following articles should be noted in this respect: 6, para. 4; 26, para. 1; 27, paras. 1-2; 28, para. 4; 29; 30, paras. 3 (c) and 4 (c); 31, paras. 1-4; 33, para. 4; 34, paras. 2-3; 56, para. 4; 59, paras. 5-7; 60, paras. 1-3 and 5-7; 66, para. 5; 90, paras. 2 (d) and 3 (a); Annex I, Arts. 6, para. 3; 7, para. 3; 8, paras. 1-2; 12.

¹⁵ The rule of this common article is repeated for occupied territories in the above-mentioned Article 47 of the Fourth Convention.

Protocol I

Article 5 – Appointment of Protecting Powers and of their substitutes

1. It is the duty of the Parties to a conflict from the beginning of that conflict to secure the supervision and implementation of the Conventions and of this Protocol by the application of the system of Protecting Powers, including *inter alia* the designation and acceptance of those Powers, in accordance with the following paragraphs. Protecting Powers shall have the duty of safeguarding the interests of the Parties to the conflict.
2. From the beginning of a situation referred to in Article 1, each Party to the conflict shall without delay designate a Protecting Power for the purpose of applying the Conventions and this Protocol and shall, likewise without delay and for the same purpose, permit the activities of a Protecting Power which has been accepted by it as such after designation by the adverse Party.
3. If a Protecting Power has not been designated or accepted from the beginning of a situation referred to in Article 1, the International Committee of the Red Cross, without prejudice to the right of any other impartial humanitarian organization to do likewise, shall offer its good offices to the Parties to the conflict with a view to the designation without delay of a Protecting Power to which the Parties to the conflict consent. For that purpose it may, *inter alia*, ask each Party to provide it with a list of at least five States which that Party considers acceptable to act as Protecting Power on its behalf in relation to an adverse Party, and ask each adverse Party to provide a list of at least five States which it would accept as the Protecting Power of the first Party; these lists shall be communicated to the Committee within two weeks after the receipt of the request; it shall compare them and seek the agreement of any proposed State named on both lists.
4. If, despite the foregoing, there is no Protecting Power, the Parties to the conflict shall accept without delay an offer which may be made by the International Committee of the Red Cross or by any other organization which offers all guarantees of impartiality and efficacy, after due consultations with the said Parties and taking into account the result of these consultations, to act as a substitute. The functioning of such a substitute is subject to the consent of the Parties to the conflict; every effort shall be made by the Parties to the conflict to facilitate the operations of the substitute in the performance of its tasks under the Conventions and this Protocol.
5. In accordance with Article 4, the designation and acceptance of Protecting Powers for the purpose of applying the Conventions and this Protocol shall not affect the legal status of the Parties to the conflict or of any territory, including occupied territory.
6. The maintenance of diplomatic relations between Parties to the conflict or

the entrusting of the protection of a Party's interests and those of its nationals to a third State in accordance with the rules of international law relating to diplomatic relations is no obstacle to the designation of Protecting Powers for the purpose of applying the Conventions and this Protocol.

7. Any subsequent mention in this Protocol of a Protecting Power includes also a substitute.

Commentary

General remarks

- 177 The question of supervising the application of the rules, together with the question of the scope of application, was the subject that gave rise to most discussion in Part I. At all stages of the procedure of reaffirmation and

development, the need not only for developing the rules of protection, but also for strengthening the already existing but under-used mechanisms for application and the supervision of application was recognized. The usefulness of Protecting Powers and their substitutes was not called into question.¹ Nevertheless, it was to be noted that, since the conclusion of the Conventions, there had only been Protecting Powers in three conflicts, and even then it was not for all the Parties concerned, nor to carry out all the tasks provided for in the Conventions.²

178 Various reasons had been advanced to explain the absence of Protecting Powers or of their substitutes in the majority of conflicts. Apart from the fact that many conflicts were not subjected to the system of Protecting Powers because their character was either exclusively or predominantly non-international, the following explanations are given amongst those which were put forward:³

- the Parties to the conflict in some cases abstained from appointing Protecting Powers because they had not broken off diplomatic relations;
- in some cases States did not designate a Protecting Power for fear that this might be interpreted as a recognition of the statehood of an adversary which they refused to recognize as a State;
- the prohibition of the use of force contained in Article 2, paragraph 4, of the Charter of the United Nations means that States only rarely recognize the existence of an armed conflict;
- the relatively limited number of States acceptable to both Parties to the conflict concerned in each set of bilateral relations; the problem of directing the belligerents' attention to designating and accepting Protecting Powers at a time when hostilities are raging; the burden imposed on States called upon to act as Protecting Powers in terms of material and human resources, as well as the risk of political difficulties vis-à-vis the Parties to the conflict concerned.

179 The present article has endeavoured to deal with such difficulties, by clarifying the compulsory character of the system of Protecting Powers (paragraphs 1 and 2), by proposing practical methods for their appointment (paragraph 3), dealing with the question of a substitute (paragraph 4), and finally by clarifying special aspects (paragraphs 5 and 6). All this relates solely to the appointment of Protecting Powers and of their substitute defined in Article 2 (*Definitions*), sub-

¹ The functions of the Protecting Powers are outlined below in the discussion of para. 1. In the preparatory work particular note should be made of the document *Government Replies*, 2nd ed., pp. 6-18, (question 1), pp. 34-130, (questions 3-13), and 01-010 (Annexes I and II).

² O.R. VIII, p. 165, CDDH/II/SR.18, para. 62. Cf. J. Pictet, *Humanitarian Law and the Protection of War Victims*, Geneva-Leyden, 1975, p. 66, which mentions the Suez conflict (1956), that in Goa (1961) and the conflict between India and Pakistan (1971-1972). A more recent case is that of the conflict between Argentina and the United Kingdom in 1982, in which two States exercised functions of an intermediary and communicated information as laid down by the Conventions (cf. S.-S. Junod, *Protection of the Victims of Armed Conflict Falkland-Malvinas Islands (1982)*. *International Humanitarian Law and Humanitarian Action*, Geneva, 1984, p. 20).

³ We repeat in simplified form the relevant passages of CE/2b, pp. 16-17, and Report A/7720 of the United Nations Secretary-General of 20 November 1969, para. 213, quoted *ibid.*, p. 24, note 62.

paragraphs (c) and (d), without changing the system of supervision established by the Conventions.⁴

- 180** Why did the Conventions not deal with the appointment of Protecting Powers? This is because customary law governed their appointment and their mandate in general, which is currently known as “the Vienna mandate”, as will be seen with regard to paragraph 6; hence the Conventions confined themselves to entrusting the supervision of their application under their common Article 8/8/8/9 to an already existing institution which, in view of the experience of the two World Wars, could be expected to be used and available in every situation of international armed conflict. As regards the substitutes of Protecting Powers, the concept was defined by the Conventions and their appointment was also governed by them in common Article 10/10/10/11.
- 181** Finally, a brief comment about the wording of the article: the title refers to “appointment”, while paragraphs 1, 2, 3, 5 and 6 use the word “designate”. The meaning of the latter word is not always exactly the same. In general, designation means the act by which a Party to the conflict chooses a neutral or other State not Party to the conflict⁵ to safeguard its interests vis-à-vis the adverse Party; this act on the part of the designator must be supplemented by the consent of the Power chosen as a Protecting Power, and by the acceptance of the adverse Party in question, if the institution is to function: the conclusion to this end, in accordance with Article 2 (*Definitions*), sub-paragraph (c), of two mutually corresponding bilateral agreements or of one tripartite agreement means that the Protecting Power is “appointed”. The use of the word “appointment” in the title of the article refers to this last stage.⁶
- 182** The present article, which was discussed together with Article 2 (*Definitions*), sub-paragraphs (c) and (d), was adopted in Committee I, first of all paragraph by paragraph, and subsequently as a whole, by consensus; it was then adopted by consensus in the plenary Conference.⁷

Paragraph 1

- 183** This paragraph contains valuable clarifications with regard to Article 8/8/8/9 common to the Conventions, which reads in part as follows: “The present Convention shall be applied with the co-operation and under the scrutiny of the

⁴ The Protecting Powers or their substitute are mentioned in the Protocol in Articles 2 (sub-paras. (c) and (d)), 6 (para. 1) 11 (para. 6), 33 (para. 3), 45 (paras. 1-2), 60 (para. 2), 70 (para. 3 (b)), 78 (para. 1), and 84. In addition, the Parties to the conflict may resort to Protecting Powers for notifications, agreements and communications of information, as laid down in Articles 12 (para. 3), 22 (para. 3), 23 (para. 4), 25, 26 (para. 1), 27 (para. 1), 28 (para. 4), 29 (paras. 1-4), 33 (paras. 1 and 4), 34 (paras. 2-3), 43 (para. 3), 56 (para. 6), 57 (para. 2(c)), 59 (paras. 2, 4-6), 60 (para. 5), 64 (paras. 1-2), 65 (para. 1), 66 (para. 5), 85 (para. 4(d)), 90 (paras. 2(d) and 3(a)), 96 (para. 2), Annex I, Arts. 1 (para. 2), 6 (para. 3), 7 (para. 3), 8, and 12.

⁵ On the meaning of this expression, *cf.* commentary Art. 2, sub-para. (c), *supra*, p. 61.

⁶ In fact, the same word “désignation” is used in the French version in the title and in the article itself.

⁷ *Cf.* O.R. VIII, p. 264, CDDH/1/SR.27, para. 70; pp. 266-267, paras. 87, 91; pp. 268-269, paras. 98 and 101-103; O.R. VI, p. 65, CDDH/SR.37, para. 1, respectively.

Protecting Powers whose duty it is to safeguard the interests of the Parties to the conflict” (paragraph 1, first sentence).

- 184** First, there remains no doubt at all that the Parties to the conflict should not only turn to the Protecting Powers if any exist, but also that they must appoint such Protecting Powers for the purposes defined by this paragraph. Secondly it is clear that this duty exists from the very moment that a situation referred to in Article 1 (*General principles and scope of application*) arises.⁸ This is emphasized by various expressions which subsequently stress the need to act urgently (“from the beginning of a situation referred to in Article 1”; “without delay”; “within two weeks”). The explicit mention in this paragraph of the designation and acceptance is in the same vein, and serves to underline the fact that it is not sufficient to facilitate the task of the Protecting Powers once they have been appointed: the same duty to be diligent already exists to provide each Party to the conflict with a Protecting Power vis-à-vis every adverse Party.
- 185** In the situation where there are not merely two but several Parties to a conflict, each should have a Protecting Power vis-à-vis each of its adverse Parties; depending on each individual case, this could be a single Protecting Power or several different ones. In the following we will limit ourselves to the case in which only two Parties confront each other.
- 186** The aim assigned to the system of Protecting Powers – to ensure the supervision and implementation of the Conventions and the Protocol – adds a new element to the terms of the above-mentioned paragraph 1 of Article 8/8/8/9 common to the Conventions. Thus, if Article 1 common to the Conventions, and Article 1 (*General principles and scope of application*), paragraph 1, of the Protocol are taken into account, the main responsibility of respecting the Conventions and the Protocol falls on each individual Contracting Party,⁹ in particular the Parties to the conflict; moreover, the duty of “ensuring respect” for these instruments, i.e., doing all in their power to prevent or put an end to failures of another Contracting Party, falls upon all Contracting Parties jointly.¹⁰ For their part, the Protecting Powers act simultaneously as messengers and guardians: they serve as an intermediary between the adverse Parties and supervise the application of the law.¹¹

⁸ The difference between the wording of this paragraph (“from the beginning of that conflict”) and paragraph 2 (“from the beginning of a situation referred to in Article 1”) is not the result of a difference of substance: the term “conflict”, as used particularly in the title of the Protocol itself, also covers all forms of occupation, including the case where it does not meet any armed resistance (cf. Art. 1, paras. 3 and 4, of the Protocol and Art. 2 common to the Conventions, paras. 1-2).

⁹ On the meaning of the expression “High Contracting Parties”, cf. commentary Preamble, *supra*, p. 25.

¹⁰ For further details, cf. commentary Art. 1, para. 1, *supra*, pp. 35-37.

¹¹ On Protecting Powers before 1949, cf. A. Janner, *La Puissance protectrice en droit international*, Basle, 1st ed., 1948, 2nd ed., 1972; W.M. Franklin, *Protection of Foreign Interests*, Washington, D.C., 1946.

On Protecting Powers and their substitutes in the Conventions, both for the historical background and for an analysis of their functions, cf. F. Siordet, *The Geneva Conventions of 1949. The Question of Scrutiny*, ICRC, 1953. *Commentaries I-IV ad Arts. 8/8/8/9 and 10/10/10/11*.

(continued on next page)

- 187 These two aspects of their function form the object of a number of special provisions of the Conventions and the Protocol,¹² but they are not limited to these provisions. The Diplomatic Conference of 1949 replaced the expression “their mission as defined in the present Convention” (draft) by the expression “their mission under the present Convention” in paragraph 3 of the above-mentioned common article precisely in order to show clearly that the function is not limited to those special provisions.¹³ The reference of Article 2 (*Definitions*), sub-paragraph (c), to “functions assigned [...] under the Conventions and this Protocol” is not exhaustive either, since it refers back to the general definition of the function of Protecting Powers given in Article 5, paragraph 1.
- 188 To supervise the application of the law undeniably entails the right to demand that violations shall cease and, if necessary, reparations are made. However, the Conference did not consider that the Protecting Power was an organ entrusted with investigating and reporting on violations, as this was dealt with by other organs and other provisions.¹⁴
- 189 The Conference did not determine or discuss in general what functions, if any, Protecting Powers might have to exercise in the combat zone, as supervision of the application of Part III, Section I (*Methods and means of warfare*), or of Part IV, Section I (*General protection against effects of hostilities*), might imply. According to the commentary to the draft¹⁵ on this, it may be said that the Conventions and the Protocol have not significantly altered the traditional functions of the Protecting Powers and have therefore not envisaged that such Powers should be present during the combat stage itself.
- 190 Finally, in referring to the interests of the Parties to the conflict, the second sentence of this paragraph is less concerned with the political interests of Parties than with the humanitarian interests of their nationals, having regard to the

Covering the Conventions and the Protocol, cf. M. Takemoto, “The Scrutiny System under International Humanitarian Law – An Analysis of Recent Attempts to Reinforce the Role of Protecting Powers in Armed Conflicts”, *Japanese Annual of International Law*, 1975, p. 1; D.P. Forsythe, “Who Guards the Guardians: Third Parties and the Law of Armed Conflict”, 70 *AJIL* 1, 1976, p. 41; F. ¹³ Cf. for example, *Commentary I*, pp. 96-98.

¹⁴ Cf. commentary Art. 90, particularly para. 2 (e), which mentions the relevant Article common to the Conventions. For the *travaux préparatoires*, cf. particularly *O.R. III*, p. 35, CDDH/1/83, para. 2; *O.R. X*, p. 69, CDDH/1/235/Rev.1 (para. 4 bis); *O.R. VIII*, p. 254, CDDH/1/SR.27, para. 8; pp. 261-262, paras. 54-55; *Commentary Drafts*, p. 9 (Art. 2, sub-para. (d), *in fine*).

¹⁵ *Commentary Drafts*, p. 9 (Art. 2, sub-para. (d), *in fine*).

humanitarian character of the Protocol.¹⁶ Safeguarding the interests of the State itself is covered by the rules of international law concerning diplomatic relations, which we shall consider below with respect to paragraph 6. It should be noted that the wording of that paragraph is more comprehensive, covering the interests of the Parties to the conflict as well as those of their nationals.

Paragraph 2

- 191 Paragraph 1 laid down the principles and paragraph 2 specifies the twofold obligation of each Party, emphasizing the urgency of carrying out this obligation.
- 192 For the passage “From the beginning of a situation referred to in Article 1”, reference should be made to the commentary on paragraphs 3 and 4 of Article 1 (*General principles and scope of application*) and on Article 3 (*Beginning and end of application*). It gives the necessary indications regarding the scope of application and its beginning.
- 193 The concept of fixing a period within which the obligations had to be fulfilled emerged several times, particularly in relation to the possibility that a substitute might appear on the scene in due course: thus periods of thirty or sixty days¹⁷ were proposed, after which the use of a substitute was to have become compulsory in the absence of a Protecting Power. The wish to impose a requirement as firm in principle as it was adaptable to various circumstances prevailed, and the Parties are summoned to do all they can in the circumstances, bearing in mind the interests of the victims to be protected. A fixed period of a certain number of days appears only in paragraph 3 *in fine*.
- 194 Regarding the method of appointing Protecting Powers, the paragraph repeats two of the three necessary steps listed in Article 2 (*Definitions*), sub-paragraph (c). In the first place, each of the Parties to the conflict must designate a neutral or other State not Party to the conflict as its Protecting Power vis-à-vis the adverse Party; as far as possible, it will endeavour to reconcile its own preferences with the likelihood of the adverse Party accepting its choice. In the second place, it must permit the activities of the Protecting Power of the adverse Party (the neutral or other State not Party to the conflict, designated as a Protecting Power by the adverse Party and accepted by it as such).
- 195 A given State may accept the role of Protecting Power with which a Party to the conflict wishes to entrust it, at various points during the procedure. However, it is desirable for the State in question to have accepted the role, or at least to have replied in principle in a positive fashion before its name is proposed to the adverse Party. In any event, the first function of a State proposed as a Protecting Power might well consist of communicating to each Party to the conflict the choice made by the other. In this respect it should be noted that two opposing Parties may choose one and the same State as the respective Protecting Power of each of them. This has occurred in many cases in a perfectly effective fashion.

¹⁶ O.R. VIII, p. 280, CDDH/I/SR.28, para. 50.

¹⁷ O.R. III, p. 28, CDDH/I/64; p. 34, CDDH/I/205 (*ad paras. 3 and 3 bis*). Cf. also *Commentary III*, p. 121, and *Commentary IV*, pp. 109-110.

196 The acceptance as a Protecting Power of a State designated by the adverse Party and prepared to assume such functions, implies that the accepting Party will permit its activities. In fact, by mentioning the acceptance and the permission to act separately, this paragraph does not intend to describe two separate operations; on the contrary, it stresses the fact that these two aspects of a single act are inseparable, with at most the reservation that certain practical questions must have been settled.

Paragraph 3

197 This deals with the case in which one or other of the Parties to the conflict, or both, do not have a Protecting Power from the beginning of a situation referred to in Article 1 (*General principles and scope of application*) for whatever reason this may be.

First sentence

198 Although the ICRC must intervene under the terms of this paragraph from the beginning of a situation referred to in Article 1 (*General principles and scope of application*), it will of course decide on the principle and the moment of its intervention in the light of several factors. In particular, it will take into account the chances of appointing the Protecting Power or Powers which are lacking without its acting as an intermediary, the time when the appointment is likely to occur, as well as the importance and urgency of the need for a Protecting Power. The ICRC will use its best judgment, without interfering when it gets positive information on the contacts undertaken, but also without any indecision if a failure or deadlock seems more probable.

199 What does the term “good offices” mean? This refers to the assistance which the ICRC would offer to the Parties to the conflict to find one or two Protecting Powers to which they would agree; the forms such assistance could take are not specified, with the exception of the example given in the second sentence. The good offices are limited to the role of intermediary, as in principle only a mediator can propose a solution. This rather theoretical distinction, judging from international practice and legal literature,¹⁸ should not unduly limit the possibilities open to impartial humanitarian organizations in the present context.

200 The paragraph does not only prescribe action by the ICRC, it grants it a degree of priority by mentioning it expressly and entrusting it with a mandate. However, it does not prohibit the right of any other impartial humanitarian organization to act in the same manner. In fact, this solution is not intended to encourage harmful

¹⁸ Cf. L. Oppenheim, *International Law: A Treatise*, vol. 2: Disputes, War and Neutrality, 7th ed., London, 1952, pp. 8-11 (§7-11); P. Reuter, *Droit international public*, 4th ed., Paris, 1973, pp. 326-327; Ch. Rousseau, *Droit international public*, vol. V, Paris, 1983, pp. 261-271 (paras. 253-264). The Hague Convention for the Pacific Settlement of International Disputes deals with the subject of good offices and mediation, though without defining the former or establishing a clear distinction between them (Convention I of 1899 and 1907, Arts. 2-8).

competition of parallel but contradictory action, but, if necessary, provides a possibility of resorting to a number of different channels to increase the chances of success.

- 201 Thus in certain circumstances there might be several organizations acting in parallel, and in the final analysis the assessment of their humanitarian merits and the degree of their impartiality falls upon the Parties concerned.¹⁹ The objective which prevails by far over questions of priority or monopoly is of course the appointment of the one or two Protecting Powers which are lacking, with the least possible delay.

Second sentence

- 202 As shown by the words “*inter alia*”, this is an example of the good offices which the ICRC or another impartial humanitarian organization might render.
- 203 Each Party to the conflict which has no Protecting Power is required to provide, within two weeks from the receipt of the request, a list of at least five States which that Party considers acceptable to act as a Protecting Power on its behalf in relation to an adverse Party. Similarly each Party for which the adverse Party did not have a Protecting Power would be required to provide a list of at least five States which would be acceptable to it as a Protecting Power. The ICRC or other organization making the request would compare for each of the Parties the two lists of States acceptable as a Protecting Power submitted respectively by the first-mentioned Party and by its adverse Party, and would seek the agreement of each State contained on the two lists.
- 204 If only one State appeared on both lists, its agreement would suffice for its appointment as a Protecting Power, given the fact that the two Parties concerned have already accepted. If several States appeared on both lists, a choice would have to be made after seeking their agreement. If no State appeared simultaneously on both lists, this would require either a continuation of the good offices or recourse to paragraph 4, depending on the circumstances.

Paragraph 4

The system of the Conventions

- 205 The question of substitutes of Protecting Powers is dealt with in Article 10/10/10/11 common to the Conventions.²⁰ The three possibilities contained in this article actually exceed the definition of the substitute given in Article 2 (*Definitions*), sub-paragraph (*d*), of the Protocol, and the provisions of this paragraph.

¹⁹ On the concepts of “humanitarian” and “impartial”, *cf.* for example *Commentary I*, pp. 109-110 (Art. 9).

²⁰ For more complete information on the origin and contents of this common article, *cf.* the commentary thereon or F. Siordet, *op. cit.*

- 206 According to *paragraph 1* of the common article: “The High Contracting Parties may at any time agree to entrust to an organization which offers all guarantees of impartiality and efficacy the duties incumbent on the Protecting Powers by virtue of the present Convention.”
- 207 This possibility, which is open to two, or any other number of Contracting Parties, has never been used. It was intended to allow for the designation of an existing organization or the creation of a new one.²¹
- 208 According to *paragraph 2* of the common article, when protected persons do not benefit from the activities of a Protecting Power or of an organization provided for in paragraph 1, the Detaining Power must request a neutral State²² or such an existing organization, to undertake the functions of a Protecting Power.
- 209 Though the functions are indeed the same as those of a Protecting Power – or of an organization in accordance with paragraph 1 – this substitute is appointed without the intervention of the Power of origin of the protected persons. Such a mechanism should only be used in exceptional cases, for example, where the Power of origin was not, or was no longer recognized by the adverse Party, or otherwise where it was impossible for whatever reason to appoint a Protecting Power or to replace a Protecting Power which is no longer able to act.²³
- 210 *Paragraph 3* of the common article offers the ultimate remedy in case none of the previous provisions has been applied: what has been called a quasi-substitute or a humanitarian substitute. In this eventuality the Detaining Power must request a humanitarian organization such as the ICRC to assume the humanitarian functions of a Protecting Power, or it must accept an offer of services by such an organization.
- 211 Here again, appointment can take place without the agreement of the Power of origin necessarily being required, as it is for Protecting Powers, or the organization referred to in paragraph 1. There is an additional difference in that the activities of the quasi-substitute are limited to the *humanitarian* functions that fall upon Protecting Powers. This means that the quasi-substitute must take upon himself at least and as a matter of priority such functions as bring directly and immediately to protected persons the care and relief which their condition demands.²⁴ Yet the ICRC has made it known that in its view all tasks that fall upon Protecting Powers under the Conventions are in fact humanitarian tasks.²⁵
- 212 *Paragraph 4* of the common article, which is directly linked with the preceding paragraph, requires that the organization concerned furnishes sufficient assurances that it is in a position to undertake its functions and to discharge them impartially.

²¹ The study of the possibility of a new body as recommended by resolution 2 in 1949 has not led to any result.

²² To be interpreted in the terminology of the Protocol as “a neutral or other State not Party to the conflict”; *cf.* commentary Art. 2, sub-para. (c), *supra*, p. 61.

²³ *Cf.* for example *Commentary I*, pp. 120-121. For an assessment of the reservations formulated by a number of States with regard to paras. 2 and 3, *cf.* C. Pilloud, “Reservations to the Geneva Conventions of 1949”, *IRRC*, March 1976, pp. 117-121 (pp. 13-16 of the offprint).

²⁴ *Cf.* for example, *Commentary I*, p. 122.

²⁵ *CE 1971, Report*, p. 109, paras. 552-553.

Purpose of paragraph 4 of Article 5

213 Two problems had been identified with regard to the substitutes provided for by the Conventions:

- paragraph 1 of the relevant common article had never resulted either in the designation of an existing organization or in the creation of a new body;
- paragraphs 2 and 3 had never been used either; the main drawback imputed to them, and which had actually led to reservations being made with regard to this article,²⁶ was concerned with the fact that the Power of origin was not consulted. For many the qualities and conduct required from such substitutes did not offer the same assurances for the Power of origin as the requirement of its consent. In contrast, a less strongly held view considered that it was desirable that in the absence of a Protecting Power the appointment of a substitute should take place almost or entirely automatically. The present text was the result of lengthy discussion and endeavoured to reconcile these two tendencies on this important point.

First sentence

214 The present paragraph is relevant only “if, despite the foregoing, there is no Protecting Power”. The normal procedure described above (paragraph 2) and the good offices (paragraph 3) have therefore failed. The recognized need for still ensuring the implementation of a system of supervision over the application justifies the right granted here to the ICRC or any other organization offering all guarantees of impartiality and efficacy to enter into consultation with the Parties to the conflict. The draft only mentioned the ICRC, but it was soon agreed that while only mentioning this organization explicitly, the same right should be granted to any other organization with the required characteristics; by way of example, the delegations named the United Nations – in particular, the High Commissioner for Refugees –, the Organization of African Unity, the Order of Malta.²⁷ As regards the ICRC, it should be emphasized that any functions that might be attributed to it pursuant to this paragraph do not affect the specific tasks with which it is entrusted by the Conventions and the Protocol, nor its right of initiative granted by Article 9/9/9/10 common to the Conventions, and Article 81 (*Activities of the Red Cross and other humanitarian organizations*), paragraph 1, of the Protocol.²⁸

215 The object of such consultations will be to determine how an organization of this type could assume the tasks which fall upon Protecting Powers. Depending on each individual case, it may be a question of making allowances for the fact

²⁶ Cf. *supra*, note 23, second sentence.

²⁷ The United Nations was mentioned several times in respect of this article, either as a designating authority for Protecting Powers or substitutes, or to play the role of substitute itself. The Order of Malta let it be known that it was prepared to assume a mandate as a substitute (cf. *O.R.* VII, p. 317, CDDH/SR.58, paras. 185-187, and notification by the depositary of 2 May 1980).

²⁸ The ICRC stated its views on the various aspects of this paragraph shortly before it was adopted by the competent Committee; cf. *O.R.* VIII, pp. 264-265, CDDH/I/SR.27, paras. 71-81.

that one or two Protecting Powers are missing between two Parties to the conflict. In some circumstances, the consultations could also take place between the Parties to the conflict and two or more organizations. For the appointment of a substitute, as for the good offices referred to in paragraph 3, there is nothing against the parallel examination of a number of candidates to increase the chances of a positive result. The important thing is to establish the qualities of impartiality and efficacy of the organizations willing to act with the least possible delay and the view of the Parties concerned is certainly decisive in this respect.

- 216 The organizations referred to should take into account the results of such negotiations, but does this mean they are bound by the results? Although the text does not necessarily state that this is the case, from the point of view of the efficacy of an organization, the chances of its success and its credibility are probably reduced if it does not enjoy the trust of the Power of origin, and these will be virtually nil if the trust of the other Party to the conflict is lacking. Bearing these considerations in mind, the ICRC declared that for its part it would only offer to act as a substitute if it had the consent of the Parties to the conflict – as it had already stated in connection with paragraph 3 of Article 10/10/10/11 common to the Conventions. It considers that it can only act with complete efficacy if this consent is forthcoming. In fact, such consent significantly affects the weight of its interventions and its acceptability in the eyes of protected persons. In addition, it should certainly not be forgotten that it also affects the possibility of finding the necessary resources both as regards personnel and financial means.
- 217 Thus an offer could be made despite a negative result of the negotiations, but its only effect would probably be to exacerbate or at least to block a situation which is already delicate. In our view, this is the only reason – and a sufficient one – for a clause which at first sight might seem to create a double hurdle given the requirement in the following sentence of the consent of the Parties to the conflict.
- 218 In the conduct of negotiations those concerned should make every effort to find and appoint a suitable substitute quickly. If the Parties to the conflict have clearly failed in this obligation, the ICRC would doubtless attempt to remind them of their obligations. Finally, although such consultations obviously have to be undertaken without publicity, when all was said and done, the ICRC should certainly state whether or not any offer it may have made to act as a substitute had been accepted.
- 219 We recall once again what was said with regard to Article 2 (*Definitions*), sub-paragraph (*d*); without explicitly providing for such action or encouraging it, the Protocol does not prohibit sharing out the tasks of the Protecting Power between a State and a substitute, or between two or more substitutes, if this seems appropriate in a particular case.

Second sentence

- 220 The exercise of its functions by a substitute is subject to the consent of the Parties to the conflict: this should be understood in relation to the preceding sentence. Once the Parties have accepted an offer, the specific practical details of the substitute's activities in the context of the Conventions and the Protocol

remain to be determined. This should certainly not mean that the acceptance may be called into question, or that it may be deprived of significance by not following it up.

- 221 Any hesitation in this respect is removed by the end of the second sentence, which states that: “every effort shall be made by the Parties to the conflict to facilitate the operations of the substitute in the performance of its tasks”.

Relationship with the Conventions

- 222 The examination undertaken of Article 10/10/10/11 common to the Conventions and of this paragraph 4 provides the key to their relationship.
- 223 Based as it is on the agreement of the two Parties to the conflict, which is desirable whenever possible, the present paragraph overrides paragraphs 2 and 3 of the article common to the Conventions. However, in the last resort, these paragraphs may still play a role, despite their imperfections.²⁹
- 224 As regards the possibility laid down in paragraph 1 of the same article, this remains open to the High Contracting Parties without being affected by the new provision.

Paragraph 5

- 225 Parties to a conflict have sometimes feared that recourse to the system of Protecting Powers might have an effect on the legal status of another Party to the conflict or of a particular territory. For this reason the Conference considered that it was appropriate to repeat here the general rule of Article 4 (*Legal status of the Parties to the conflict*).
- 226 The wording is more concise than that of Article 4 (*Legal status of the Parties to the conflict*) because it refers specifically to the general rule and because of the nature of the present provision, which merely serves as a reminder. Moreover the fact that this is a reminder has a particular importance as far as substitutes are concerned, as we will see with respect to paragraph 7.

Paragraph 6³⁰

Maintenance of diplomatic relations

- 227 This paragraph first affirms that the maintenance of diplomatic relations between the Parties to the conflict is no obstacle to the designation of Protecting Powers in the sense of the Conventions and the Protocol.

²⁹ Many explicit statements were made that the provisions of the Conventions relating to substitutes are not cancelled by the present paragraph, for example, *O.R.* VIII, p. 145, CDDH/1/SR.17, para. 24; pp. 271-272, CDDH/1/SR.28, paras. 3-6; p. 273, para. 11; p. 276, para. 21; p. 279, para. 43.

³⁰ Despite its wording, and as will be seen below in the commentary on paragraph 7, that paragraph also applies to paragraph 6.

- 228** In response to the wish of the majority of governments and experts who expressed their view on this matter, the rule requires that the circumstances of each particular case are assessed. For a long time there was a general feeling that the maintenance of diplomatic relations between Parties to the conflict prevented the latter from appointing Protecting Powers. However, this view of the matter could prove to be extremely harmful to the interests of protected persons if diplomatic relations were maintained without functioning normally.
- 229** On the other hand, the Diplomatic Conference did not follow the advocates of the opposite solution, which was to the effect that the appointment of Protecting Powers should be mandatory, even in cases where diplomatic relations were maintained.
- 230** Thus, in the light of the efficacy of existing diplomatic relations, and in particular their ability to ensure the necessary supervisory and liaison functions for the application of the Conventions and the Protocol, the Parties to the conflict may be exempted from appointing Protecting Powers.

“Geneva mandate” and “Vienna mandate”

- 231** After a brief discussion, the Conference allowed each Party to the conflict the possibility of having in certain cases two different Protecting Powers to safeguard its interests. One would be appointed in accordance with the rules of international law concerning diplomatic relations; this might be termed the “Vienna mandate”, after the Vienna Conventions on diplomatic and consular relations.³¹ The other would be appointed for the purposes of the Conventions and the Protocol, which explains the expression “Geneva mandate”.
- 232** The choice open to the Parties to the conflict should be aimed at the greatest possible efficacy. In principle it seems that the best solution remains that of a single Protecting Power, provided that the State which has already been entrusted with the “Vienna mandate” is prepared and capable of adding the “Geneva mandate”.
- 233** Whatever solution is chosen, the Parties to the conflict should specify their intentions and make them known as quickly as possible. In particular, to ensure that the system begins functioning as soon as possible, a Party to the conflict should only refuse for grave reasons the cumulation of both mandates where this is the wish of the adverse Party and has the agreement of the State already exercising for the latter Party the “Vienna mandate”.

³¹ Convention on Diplomatic Relations of 18 April 1961, Art. 45; Convention on Consular Relations of 24 April 1963, Art. 27. On 31 December 1984 these Conventions had 142 and 109 States Parties, respectively.

Paragraph 7

- 234 No commentary ought to be required for such a straightforward provision, which is aimed only at avoiding repetition in the text of the Protocol. Nevertheless, two comments should be made.
- 235 First, the word “subsequent”: it would perhaps have been surprising if the indication that every mention of the Protecting Power also includes the substitute applied to paragraphs 2 and 3 of this article. On the other hand, the word “subsequent” limits the application of the paragraph to subsequent articles, while it really also ought to apply to paragraphs 5, 6, and possibly 1 of Article 5.
- 236 This is only seemingly an omission: paragraph 5 in any case serves only as a reminder; paragraphs 1 and 6, for their part, refer to the Protecting Powers themselves because it is only in the case that they fail to be appointed that substitutes appear on the scene as a subsidiary form of the same system of supervision.
- 237 As regards the meaning of the word “substitute”, this can be found in Article 2 (*Definitions*), sub-paragraph (*d*): “an organization acting in place of a Protecting Power in accordance with Article 5”. This definition, which in any case turns out only to serve for the present paragraph, has one omission: it fails to cover substitutes in the sense of the Conventions, while paragraph 1 of the common Article 10/10/10/11 is not affected by the present article, and paragraphs 2 and 3 of the same common article remain as ultimate solutions. This should be seen as an error and it may be taken as granted that a substitute such as provided by these provisions of the common article could also invoke the provisions of the Protocol relating to Protecting Powers.

B. Z.

Protocol I

Article 6 – Qualified persons

1. The High Contracting Parties shall, also in peacetime, endeavour, with the assistance of the national Red Cross (Red Crescent, Red Lion and Sun) Societies, to train qualified personnel to facilitate the application of the Conventions and of this Protocol, and in particular the activities of the Protecting Powers.
2. The recruitment and training of such personnel are within domestic jurisdiction.
3. The International Committee of the Red Cross shall hold at the disposal of the High Contracting Parties the lists of persons so trained which the High Contracting Parties may have established and may have transmitted to it for that purpose.
4. The conditions governing the employment of such personnel outside the national territory shall, in each case, be the subject of special agreements between the Parties concerned.

Commentary

- 238 The XXth International Conference of the Red Cross (Vienna, 1965) adopted Resolution XXII, which stated that it was essential to make available – in the event of an armed conflict – to the Protecting Powers and their possible substitutes a sufficient number of persons capable of impartially carrying out the scrutiny of the application of the Conventions. It therefore invited States Parties to the Conventions to set up groups of competent persons to discharge these functions and expressed the wish that the International Committee of the Red Cross should contribute to the training of such persons.
- 239 This proposal had been put forward by the Principality of Monaco, on the basis of an initiative of the Commission médico-juridique de Monaco, taken up again by the International Committee for the Neutrality of Medicine, created in Paris in 1959, which gave its name to it.¹ The idea was taken up again in 1971 in various forms during the first session of the Conference of Government Experts.² On the basis of these preliminary discussions and the replies given on this point by governments to the “Questionnaire concerning measures intended to reinforce the implementation of the Geneva Conventions of August 12, 1949”, which the ICRC had addressed to them,³ a first proposal was presented at the second session of the Conference of Government Experts in 1972.⁴ In fact, the idea that States could train personnel with a view to facilitating the application of the Conventions and the future Protocol seemed to meet with more or less general approval. Several amendments to the ICRC proposal were suggested by the participants to the Conference,⁵ in the light of which the Drafting Committee drew up a text⁶ which, having gained a large measure of agreement, was finally incorporated as Article 6 in the draft submitted by the ICRC to the Diplomatic Conference.
- 240 In Committee I of the Conference, the fundamental principles which form the basis of this text were again unanimously agreed. However, several amendments provoked a discussion⁷ which resulted in some drafting changes, and the

¹ The resolution presented in this respect in 1964 at the Second International Conference on Medical Neutrality draws to the attention of States Parties to the Geneva Conventions that it is possible and timely to enter into negotiations on a model agreement. By such an agreement the said States would undertake to take the necessary measures to train, in their respective territories, *groups of persons* able to carry out the functions of implementation and supervision laid down in the four Conventions. These persons will be appointed by their respective governments on the recommendation of the most representative organizations concerned, taking into account their moral reputation and their ability to assist in enforcing the scrupulous compliance with the rules of the Conventions. Lists of persons established and kept up to date for this purpose will be the subject of periodic communications, particularly to the ICRC, which will be invited to contribute to their training. Exchanges between national groups will also be arranged for this purpose. See *Government replies*, Annex 2, p. 09.

incorporation in paragraph 1 of a clause concerning National Red Cross (and Red Crescent) Societies⁸ which was not contained in the original draft. The article was then adopted by consensus, both in the Committee⁹ and in the plenary meeting.¹⁰ It will also be noted that Resolution 21 entitled “Dissemination of knowledge of international humanitarian law applicable in armed conflicts”, annexed to the Protocol, also refers to this problem. In fact it invites the signatory States (and not only the Contracting Parties) to undertake the training of the personnel named in Article 6.¹¹

Paragraph 1 – Functions of qualified personnel

- 241 This paragraph relates to the training of personnel “to facilitate the application of the Conventions and of this Protocol”, and in particular the activities of the Protecting Powers. As stated above, the wording is identical to that which resulted from the second session of the Conference of Government Experts. At the Diplomatic Conference the participants had little to say on this part of the sentence. Yet thirty-two governments had expressed themselves at length on this point in their replies to the above-mentioned “Questionnaire” addressed to them by the ICRC, following a motion adopted by the first session of the Conference of Government Experts, and it is possible to draw a number of conclusions from these statements, which preceded the second session of the Conference of Government Experts.
- 242 It should be recalled, first of all, that in the mind of those who had taken the initiative, the members of the International Committee for the Neutrality of Medicine, it was a question of promoting

“the creation in each country of a corps of volunteers, doctors, lawyers, paramedical personnel who could be made available to belligerent countries, Protecting Powers, and the ICRC whenever necessary.”¹²

It was more particularly:

“to create in each country national committees bringing together persons who, by virtue of their professional and moral qualities could contribute to the dissemination and implementation of the Geneva Conventions and bring relief to the victims of conflicts [...]”¹³

⁸ Since July 1980 there has been no Society with the name “Red Lion and Sun”, nor any Party to the Conventions using this sign.

⁹ O.R. VIII, p. 252, CDDH/1/SR.26.

¹⁰ O.R. VI, p. 68, CDDH/SR.37.

¹¹ On this subject, see *infra*, para. 2, point 2, p. 99.

¹² Translated by the ICRC; original text: “la création, dans chaque pays, d’un corps de volontaires, de médecins, de juristes, d’auxiliaires médicaux qui pourraient être mis à la disposition des pays belligérants, des Puissances protectrices, du CICR, chaque fois que cela serait nécessaire”, Second International Congress on the Neutrality of Medicine, *Compte rendu analytique des débats*, Paris, Institut Pasteur, 12-14 November 1964, p. 40.

¹³ Translated by the ICRC; original text: “de créer dans chaque pays des “Comités nationaux” groupant des personnalités qui, en raison de leurs qualités professionnelles et morales, pourraient contribuer à la diffusion et à l’application des Conventions de Genève tout en portant secours aux victimes de conflits [...]” *Ibid.*

On the point of “national committees” the Diplomatic Conference took a position by the explicit mention of National Red Cross and Red Crescent Societies to which this paragraph refers. Moreover, this question is linked to that of the recruitment and training of the personnel concerned; this will be examined in the context of paragraph 2. As regards the function of this personnel, the above-mentioned initiative was concerned as much with the dissemination “at all times”¹⁴ of the Conventions, which means, already during peacetime and in national territory, as with supervising their implementation in time of conflict, as we have seen. Thus it is appropriate to try and ascertain if the wording of this paragraph can cover these two aspects of the matter, and to what extent.

1. *Activities of qualified personnel in peacetime*

243 The text of this paragraph does not state explicitly that the qualified personnel will carry out its activities even in peacetime, but that the Contracting Parties will endeavour to train them also in peacetime. On the other hand, Resolution 21 annexed to the Protocol is more explicit since it

“invites the signatory States to take all appropriate measures to ensure that knowledge of international humanitarian law applicable in armed conflicts [...] is effectively disseminated, particularly by [...] undertaking in peacetime the training of suitable persons to teach international humanitarian law [...] in accordance with Articles 6 and 82 of the Protocol [...]”

There is little doubt that Article 6, paragraph 1, applies equally to dissemination during peacetime. However, its scope can be interpreted in an even wider sense. The measures for the execution of obligations under the Conventions and the Protocol which must be taken without delay by the High Contracting Parties under the terms of Article 80 (*Measures for execution*) cannot be improvised. The implementation of the Conventions and the Protocol raises numerous questions which must be broached or resolved in peacetime in the military and technical fields (for example, on the question of weaponry), in the legal field, particularly in criminal law, in the health and medical fields, in administration, as well as in the organization of relief for victims, and the solution of these problems requires the participation of highly qualified personnel. No doubt these are tasks which are incumbent in the first place on the authorities, as one delegation pointed out,¹⁵ but it is quite conceivable that in order to carry out these tasks satisfactorily, they will rely on consultative groups, possibly even private groups consisting of qualified persons in the sense of Article 6. It is even possible that without such competent personnel within the government administration or outside it, the application of Article 80 of the Protocol (*Measures for execution*), which enjoins the High Contracting Parties to take all necessary measures for the execution of their obligations without delay, might be held up.

¹⁴ Resolution of the Second Congress mentioned above.

¹⁵ *O.R.* VIII, p. 180, CDDH/I/SR.19, para. 51.

2. *Activities of qualified personnel in time of armed conflict*

244 The activities of qualified personnel in time of armed conflict can be approached under the terms of this paragraph from two different points of view. If the State on which such qualified personnel depends is itself engaged in the conflict, the personnel can make a contribution to the implementation of the Conventions and the Protocol by the State in conflict. If the State is not engaged in conflict, it may be called upon to play the role of a Protecting Power or to make its qualified personnel available to a Protecting Power or its substitute.

a) *Contribution by qualified personnel to implementation of the Conventions and the Protocol by the State on which such personnel depends*

245 The Conventions and the Protocol apply in full from the beginning of an armed conflict, which means in particular that the hostilities must be conducted in accordance with all the rules contained therein from the very first shots that are fired, or from the moment that one Party penetrates the territory of the adversary. The principal measures laid down in the Protocol for guaranteeing compliance with the rules are the intense dissemination of the applicable rules at all levels of the army, the attachment of legal advisers to military commanders and the giving of appropriate orders and instructions; in addition, the observation of the rules must be supervised. In view of the countless problems of all kinds resulting from the commencement of a conflict, the many different constraints burdening the authorities and military commanders, and the concern for military necessity which is all too likely to outweigh humanitarian considerations, it is self-evident that the existence of qualified personnel exclusively devoted to the proper application of the Conventions and the Protocol can at such a time be absolutely invaluable to every High Contracting Party engaged in armed conflict. Such is the primary aim of this paragraph. It is true that the phrase which states “the High Contracting Parties shall, also in peacetime, endeavour, with the assistance of the national [...] Societies” to train such personnel, is an obligation as regards conduct, and not as regards results. It is an undertaking to do all that is possible to ensure that such personnel is available. However, while taking into account national particularities, it reveals the concern of the Conference that every Contracting Party should establish a system of self-control capable of guaranteeing respect for the obligations entered upon, under the best possible conditions.

b) *Contribution by qualified personnel to the activities of the Protecting Powers*

246 As we have seen, the proposal to train personnel so as to be qualified to assist the activities of the Protecting Powers was the main concern of Resolution XXII of the XXth International Conference of the Red Cross, which forms the basis of the article under consideration here. This idea is clearly reflected in the Protocol, even though it is only one of the options: the qualified personnel is called upon “to facilitate the application of the Conventions and of this Protocol, and in particular the activities of the Protecting Powers”.

247 One general remark contained in a government reply to the “Questionnaire” seems to correspond closely to a fairly commonly held opinion on this matter. This remark was to the effect that:

“Since the system of supervision laid down by the Geneva Conventions has not proved satisfactory in practice, it would be better to improve it, but in doing so it would be essential to maintain that which already exists. The innovations should essentially consist of creating supplementary supervision mechanisms in such a way as to offer the Parties to the conflict a greater choice.”¹⁶

248 One of the main reasons, though by no means the only one, for the fact that the choice is limited, is that most States do not have qualified personnel available to play the role of a Protecting Power, and would consequently not even be able to lend their services. This is a question which primarily applies to the training of diplomatic personnel and which is raised by paragraph 2. Whether or not it is in relation to this aspect of the problem, the original purpose, as revealed by the resolution of the International Conference of the Red Cross adopted in Vienna, was certainly “to make available – in the event of a conflict – to the Protecting Powers and their possible substitutes a sufficient number of persons capable of carrying out this scrutiny impartially”. The underlying idea is clearly present in the wording of this paragraph. However, the ambition of the second session of the Conference of Government Experts revealed even more specific objectives. Inspired particularly by the Regulations for the Execution of the Hague Convention for the Protection of Cultural Property in the Event of Armed Conflict, some delegations recommended the training of teams consisting of doctors and lawyers¹⁷ or even of officers, administrators, specialists in relief activities and other humanitarian activities.¹⁸ In the event of armed conflict these teams would be called upon, either in their own territory, or as nationals of neutral States, in the territory of belligerent States, to facilitate the work of the delegates of Protecting Powers or their substitutes.¹⁹ These specific points are not contained in the text of the Protocol, but there is nothing to stop the High Contracting Parties from interpreting the scope of the paragraph under consideration here in this sense.

249 As regards the functions with which such teams would be charged, these are not precisely defined either, as the phrase “to facilitate [...] the activities of the Protecting Powers” opens the door to a wide range of possibilities. These may be the tasks expressly assigned to the Protecting Powers or their substitutes, by the

¹⁶ Translated by the ICRC; original text: “Du moment que, dans la pratique, le système de contrôle prévu par les Conventions de Genève ne s’est pas avéré satisfaisant, il y aurait avantage à introduire certaines innovations, mais ce faisant, il faudrait à tout prix maintenir ce qui existe déjà. Les innovations devraient essentiellement consister à créer des possibilités de contrôle supplémentaire, de manière à offrir un plus grand choix aux Parties au conflit.” *Government replies*, p. 17.

¹⁷ *Ibid.*, p. 70.

¹⁸ *CE 1972, Report*, Vol. II, p. 101, *ad draft Art. 7*.

¹⁹ *Government replies*, p. 70.

Conventions²⁰ or by the Protocol,²¹ or resulting directly from these instruments,²² in which case the teams would probably be attached to the personnel belonging to the institutions concerned. They may be new tasks resulting from the Protocol which the Protecting Powers or their substitutes are reluctant, for one reason or another, to assume.

250 In this context it should be recalled that, at least in the eyes of the ICRC, the mandate of Protecting Powers regarding the application of the Conventions and of the Protocol should not be extended to include enquiries on violations of these instruments, of which the results would be made available in a public report, or would be brought to the attention of intergovernmental organizations. Moreover, the Conventions make it explicitly clear that the supervision to be exercised by Protecting Powers should not be confused with an enquiry into violations, as they have laid down a procedure for such an enquiry in a separate article (Article 52/53/132/149).²³ It is probably because it was aware of these limitations that the Government of Monaco had annexed draft regulations to its reply to the above-mentioned “Questionnaire” addressed to it by the ICRC. This draft had been elaborated by the Commission médico-juridique de Monaco, and was directly linked to the object of Article 6.²⁴ Article 7 of this draft included, amongst the tasks assigned to the qualified personnel, establishing any violations of international humanitarian law, making enquiries relating to such violations, and any necessary steps to stop them. There is nothing left of this draft in the Protocol, but nevertheless the Protocol does indeed extend the field of application of international humanitarian law to the conduct of hostilities in the true sense, and the question of problems of supervision which result or may result from this, remains open. Thus it is not possible to exclude *a priori* from the scope of application of Article 6, supervisory duties which, without falling under the competence of the Protecting Powers, could facilitate or even guarantee the activities of the latter. However, it is self-evident that such an extension of the mandate of qualified personnel referred to in this article is subject to the conclusion of special agreements in accordance with paragraph 4, if such personnel is to operate outside its own national territory.

²⁰ See *Commentary I*, Art. 8; *Commentary II*, Art. 8; *Commentary III*, Art. 8; *Commentary IV*, Art. 9. A complete list can also be found in F. Siordet, *op. cit.* See also *RICR*, March-April 1985, pp. 86-95.

²¹ See commentary Art. 5, *supra*, p. 75.

²² For example, confirming the civilian character of works or installations containing dangerous forces (Art. 56, para. 1) or confirming that a declared non-defended locality fulfils the conditions laid down (Art. 59). For other examples also see United Nations General Assembly, Report of the Secretary-General, A/8052, p. 78, para. 247.

²³ *Commentary Drafts*, p. 9. It should be noted that the two amendments to the draft Art. 79 *bis* (present Art. 90, “International Fact-Finding Commission”) explicitly laid down that the Commission could appoint qualified persons as mentioned in Art. 6 as experts assisting it (*O.R.* III, p. 339, CDDH/I/241, and Add. 1; p. 341, CDDH/I/267). However, these proposals found hardly any support and are therefore not contained in the final wording of Art. 90.

²⁴ *Government replies*, Annex 1, Draft regulation for the execution of the Geneva Conventions of 12 August 1949 for the protection of the victims of war, pp. 01-08.

Paragraph 2 – Recruitment and training

251 The problem of the recruitment and training of people so as to have qualified personnel is obviously closely linked to the functions the Contracting Parties envisage assigning such personnel – for the text of paragraph 1 is primarily addressed to such Parties. These various possibilities have already been analysed and it should be recalled that they may cover military, legal, medical, technical, administrative and relief matters etc. The provisions of the Conventions and of the Protocol, which require the participation of such personnel for their proper application, define the task to be carried out. Governments are responsible for ensuring this, at a national level, and National Red Cross and Red Crescent Societies are required to assist governments as appropriate.

1. Recruitment

252 In principle suitable personnel can be recruited from persons employed by the State or from the population in general. The degree to which various professions are controlled by the State in the country concerned plays an important role in this respect. If the exercise of the medical profession is restricted to State employees, it is self-evident that qualified medical personnel can be recruited only from such State employees. In fact, this will always be the case with regard to training magistrates, diplomatic personnel or military commanders, though not necessarily in recruiting military experts. It will be noted that under the terms of Article 8/8/8/9 of the Conventions, the Protecting Powers may appoint, apart from their diplomatic or consular staff, delegates from amongst their own nationals or the nationals of other neutral Powers (or from another State not Party to the conflict). Thus in this field too, the recruitment can take place from outside the public sector. In military matters it may be possible to recruit personnel from the ranks of officers, particularly from military colleges who are able, for example, to provide instruction on the methods and means of attack, as well as from personnel who do not belong to the military administration and who are specialized in legal, technical and scientific fields etc.

253 The aid of the National Red Cross and Red Crescent Societies is probably most useful for the recruitment of suitable personnel outside the public sector, although the text, taken literally, only mentions their assistance for the training of the personnel concerned. When the National Society's competence to assist in recruitment is accepted, it will provide lists of persons of a high moral quality and indisputable impartiality,²⁵ who are competent in the field in question, and are chosen either from its own members, or, though always at a national level, from

²⁵ *Ibid.*, p. 04, Art. 6.

the ranks or through the mediation of another appropriate institution.²⁶ For State employees, whether these be military personnel, diplomats, magistrates or other categories, the recruitment only seems to depend on the government itself.

2. Training

254 In the field of training, though the primary responsibility certainly lies with the High Contracting Parties, the assistance of the National Red Cross or Red Crescent Society is required without restriction, i.e., both for personnel belonging to the public sector and for personnel belonging to the private sector. However, as for recruitment, competence lies at a national level. It is complementary in the sense that it applies to persons who must already be extremely competent in their expert area, whether this is in the military, legal, medical, technical, administrative or any other field. It is not up to the Protocol to ensure instruction in the military tactics, law, medicine, the sciences or business management, but to see that these areas of expertise are available, even in peacetime, for the purpose of dissemination, implementation and enforcement, and once hostilities have broken out, for the purpose of applying the rules, so as to meet the requirements of international humanitarian law.

255 In this context the National Societies should, first of all, independently inculcate the “qualified personnel” with a knowledge of the fundamental principles of the Red Cross. “Technical” training should be geared to the Conventions and the Protocol, since it is a matter of facilitating the application of these instruments. Although competence is expressly centred at a national level, there is nothing to prevent national Societies, or even Contracting Parties, from resorting to the assistance of the International Committee of the Red Cross in this field. Resolution 21 annexed to the Protocol, entitled “Dissemination of knowledge of international humanitarian law applicable in armed conflicts”, in fact invites the authorities of the signatory States

“to plan and give effect, if necessary with the assistance and advice of the International Committee of the Red Cross, to arrangements to teach international humanitarian law, particularly to the armed forces and to appropriate administrative authorities in a manner suited to national circumstances”.

²⁶ A proposal presented at the first session of the Conference of Government Experts envisaged the establishment of teams consisting of one representative of the national Red Cross, one international lawyer, one representative from an international non-governmental organization, of high international standing, of which this proposal mentions, by way of example, Amnesty International, the International Association of Democratic Lawyers, Friends World Committee for Consultation (Quakers), the International Commission of Jurists and the World Veterans Federation (*CE 1971, Report*, pp. 115-116, CE/COM IV/4). In its report to the Second International Congress on the Neutrality of Medicine, the Commission médico-juridique de Monaco proposed in this respect to consult the World Medical Association, the national groups of the Institut de droit international and the International Law Association, as well as the national committees of the International Committee on the Neutrality of Medicine, *op. cit.*, p. 120.

It will be noted that the Resolution is addressed to the “signatory States”, while the text of the Protocol itself is always aimed at the Contracting Parties. This means that States which are called to become Contracting Parties are encouraged to implement this resolution, and consequently to apply this Article 6 without waiting for ratification. This objective is all the more understandable as it is clear that, as indicated above, it will actually facilitate the ratification process.

256 The National Red Cross and Red Crescent Societies are expressly invited by the above-mentioned resolution to offer their assistance to their respective governmental authorities with the aim of contributing in particular to the good understanding of international humanitarian law, which is obviously an essential prerequisite for the training of qualified personnel. From the ICRC, the resolution expects the publication of the necessary material for instruction, as well as organization or cooperation in establishing and running appropriate courses and seminars.

257 However, this task, which is expected of the ICRC, and which it carries out to the best of its ability,²⁷ is intended to support the activities of the High Contracting Parties and the signatory States, and not to take the place of such activities. It is to be hoped that National Societies will encourage setting up permanent inter-departmental committees in every country, as some of them have done already. These would be responsible in particular for organizing the training of the personnel covered by this article, with the cooperation of the National Societies.

Paragraph 3 – Transmission of lists

258 The transmission through the ICRC of lists of persons trained in accordance with Article 6 is basically intended to be of help in case of armed conflicts. This provision supplements that contained in paragraph 3 of Article 5 (*Appointment of Protecting Powers and of their substitute*). Under the terms of that provision, if a Protecting Power has not been designated or accepted, the ICRC may ask each Party to provide it with a list of at least five States which that Party considers acceptable to act on its behalf, and another list of at least five States which it would accept as the Protecting Power of the other Party. The ICRC will compare them and seek the agreement of any proposed State named on both lists.

259 If this procedure fails because there is no common ground between the proposals of the one side and the conditions imposed by the other, the ICRC may try another approach, either in conjunction with Article 6, or not. It may offer its own services in accordance with paragraph 4 of Article 5 (*Appointment of Protecting Powers and of their substitute*), or transmit any lists of qualified personnel which the Contracting Parties have communicated to it. Furthermore,

²⁷ In cooperation with the League of Red Cross and Red Crescent Societies, the ICRC encourages the instruction of international humanitarian law, particularly in faculties of law and political science, military academies, and faculties of medicine and social sciences. It carries out enquiries in universities on the current position of this instruction in conjunction with the National Societies of the countries concerned.

it is not impossible that a State which is a prospective Protecting Power or has already been accepted as such may wish to receive the same lists, for example in the case where it considered that it lacked qualified personnel. Admittedly the text confines itself to stating that the ICRC will keep the lists available for the Contracting Parties. However, since under the provisions of paragraph 4 of Article 5 (*Appointment of Protecting Powers and of their substitute*), the obligation to accept without delay an offer which may be made by the International Committee of the Red Cross or by any other organization which offers all guarantees of impartiality and efficacy, is subject to prior consultation and to the result of such consultations, the transmission to the Parties to the conflict or to other States which are prospective Protecting Powers of the above-mentioned lists, may in some cases fall under these consultations.

Paragraph 4 – Special agreements

- 260 This paragraph provides that the employment of the qualified personnel covered by this article outside national territory shall, in each case, be the subject of special agreements between the Parties concerned. A number of different cases can be envisaged.
- 261 Under the terms of Article 8/8/8/9 of the Conventions, Protecting Powers may appoint, apart from their diplomatic or consular staff, delegates from amongst their own nationals or the nationals of other neutral Powers. Such delegates may be chosen from amongst qualified personnel trained in accordance with the provisions of this article. However, as they have no diplomatic or consular status, they must receive an *ad hoc* approval which will grant them a status likely to correspond to that of the diplomatic and consular staff of the Protecting Power. Such a clause was implied in the Conventions. It is self-evident that in such a case the mandate of the qualified personnel cannot exceed that of the Protecting Power itself.
- 262 If such teams are called upon to exercise their activities under the authority of the ICRC, they must receive special approval, in the same way as the delegates of the ICRC itself. Their mandate will be defined either by the terms of the mission of the ICRC, as they result, in the case in question, from the Conventions and the Protocol, or through the consultations which the ICRC has carried out in accordance with the provisions of paragraph 4 of Article 5 (*Appointment of Protecting Powers and of their substitute*). Their status will probably be the same as that of ICRC delegates.
- 263 Finally, if qualified personnel covered by this article were to act independently of the Protecting Power or the ICRC, it would be all the more important to have a special agreement. This agreement would be concluded either between the country making qualified personnel available (or countries, if the teams are multinational) and the Parties to the conflict concerned, or between the organization representing them, on an *ad hoc* basis or otherwise, and the same Parties to the conflict. It should include in particular a list of the accredited delegates, define their functions, especially with regard to establishing whether violations have been committed and carrying out enquiries, if such is the wish of

the Contracting Parties. The agreement should, furthermore, determine their status and the allocation of expenses. The Parties concerned could be guided by the draft regulations established by the Commission médico-juridique de Monaco.²⁸

Protocol I

Article 7 – Meetings

The depositary of this Protocol shall convene a meeting of the High Contracting Parties, at the request of one or more of the said Parties and upon the approval of the majority of the said Parties, to consider general problems concerning the application of the Conventions and of the Protocol.

Commentary

General remarks

- 264 This article offers the community of States Parties to the Protocol a specific method of improving the application of this instrument. It is inspired by a comparable provision in the Hague Convention of 14 May 1954 for the Protection of Cultural Property in the Event of Armed Conflict.² This article lays down the possibility for Parties to the Protocol to meet in order “to consider general problems concerning the application of the Conventions and of the Protocol”. It is closely linked to Articles 1 (*General principles and scope of application*), paragraph 1, and 80 (*Measures for execution*), paragraph 1. It is also related to Article 11/11/11/12 common to the Conventions,³ Resolution 1 of 1949,⁴ and Article 97 (*Amendment*) of the Protocol.⁵
- 265 After voting on three particular points, the article was adopted in Committee I by consensus; it was also adopted by consensus in the plenary Conference.⁶

The right to request a meeting

- 266 The request of one Contracting Party is sufficient to start the procedure. A meeting may also take place in the event of requests from two or more Parties acting together or separately. The expression “High Contracting Parties” refers to Parties to the Protocol:⁷ only such Parties, and not Parties to the Conventions which are not Parties to the Protocol, have the right to request a meeting in accordance with this article, to be consulted about a request, and to participate in a meeting.
- 267 This does not prevent those which are only Parties to the Conventions from being informed regarding any action undertaken in accordance with this article, or at least the result of such action. Neither Article 7 nor Article 100

² Art. 27, which differs from the present article essentially with regard to the method of convening the meeting. On this subject, *cf.* S.E. Nahlik, “La protection internationale des biens culturels en cas de conflit armé”, 120 *Hague Recueil*, 1967/II, pp. 133, 142-143; J. Toman, “La protection des biens culturels dans les conflits armés internationaux: cadre juridique et institutionnel” in *Studies and Essays in Honour of Jean Pictet, op. cit.*, p. 579.

³ The good offices of Protecting Powers, particularly in the case of disagreement about application or interpretation.

⁴ This resolution recommends that any dispute relating to the interpretation or application of the Conventions which cannot be settled by other means should be submitted to the International Court of Justice.

⁵ Reference could also be made to Art. 98. With regard to its object and specific provisions, see commentary, *infra*, p. 1099.

⁶ *Cf.* O.R. VIII, pp. 283-284, CDDH/I/SR.28, paras. 64-73; and O.R. VI, p. 68, CDDH/SR.37, para. 20, respectively.

⁷ On this subject, *cf.* commentary Preamble, *supra*, p. 25. This article might be considered not to cover Parties to which the Protocol applies only in pursuance of Article 96, paras. 2 or 3, unless the general problem to be examined is linked to the conflict in which they are engaged.

(*Notifications*) requires the depositary to do this,⁸ but it might increase the interest of such States in the Protocol and extend participation in this instrument. In support of such views, it should be noted that a meeting may lead to an amendment procedure in the sense of Article 97 (*Amendment*). This provides that the Parties to the Conventions which are not Parties to the Protocol may participate in any conference called to examine a proposed amendment. The Conference made no rules on the question of information to be furnished to such States, nor did it raise any question about this or about whether such States might be invited as observers. It would seem that the depositary could submit proposals on such matters to the Contracting Parties in the context of the consultation which will be dealt with below.⁹

Consultation of Contracting Parties

- 268 Even though the text does not explicitly state this, it is in accordance with the functions of a depositary that such a consultation is carried out by it.¹⁰ Thus if one or several requests are submitted, the depositary will consult all the Contracting Parties on the subject of such requests.
- 269 When an appropriate period, determined by the depositary and advised to the Parties, has elapsed, the depositary will take note of the result of the consultation and notify it to all the High Contracting Parties. If the majority have stated that they are in favour of the meeting, notification of the result and notice of the meeting may be sent concurrently or successively.
- 270 The wording that was used refers to the majority of the Parties to the Protocol, and not only of those who expressed their views. This is meant to ensure that a meeting is held only with the requisite representation, and only if there is sufficient interest. Since there is no qualification, it is a simple majority.¹¹
- 271 Determining whether there is such a majority will be more difficult if there are two or more simultaneous requests for a meeting and these are not concerned with the same problem. Only if a majority decides that a problem should be

⁸ The depositary of the Protocol is the same as that of the Conventions, namely, the Swiss Federal Council; for the functions of the depositary as a whole, *cf.* commentary Art. 100, *infra*, p. 1114. The Swiss delegate said that his country was prepared to play the role with which it would be entrusted, if Article 7 were adopted (*O.R.* VIII, p. 188, CDDH/I/SR.20, para. 22).

⁹ The above-mentioned article of the Hague Convention (*supra*, note 2) also remains silent on these two questions. Nevertheless, States not Parties to the Convention were invited as observers to the only meeting held so far, under that article (*cf.* S.E. Nahlik, “La protection internationale des biens culturels...”, *op. cit.*, p. 142, and J. Toman, *op. cit.*, p. 579). In our opinion, this is even more justified for Parties to the Conventions not Parties to the Protocol, in the case of a meeting in the sense of this article, given the “additional” character of the Protocol.

¹⁰ In addition to the general statement quoted *supra*, note 8, the depositary subsequently confirmed that its obligations arising from this article involve the consultation of Parties and the sending of invitations; *cf.* *Message concernant les Protocoles additionnels aux Conventions de Genève* of 18 February 1981, addressed by the Swiss Federal Council to the Federal Parliament, Chap. 211.1 *in fine*.

¹¹ Committee I adopted this solution with a vote, in preference to a two-thirds majority of the Contracting Parties proposed in the draft; *cf.* *O.R.* VIII, p. 284, CDDH/I/SR.28, para. 71.

discussed, a meeting may be held with that problem on its agenda: the requirement of a majority applies for every single problem, even when a number of requests are submitted simultaneously. However, it is conceivable that some of the Parties consulted might consider that the discussion of a given problem does not by itself justify a meeting, though they might be prepared to discuss it if in the end a meeting were convened to deal with another problem; to remove any doubt on this point, their conditional approval should therefore be clearly indicated in their response.

- 272 The two points relating to the question of majority – that it should be a majority of all Parties and that it applies separately to each question proposed – should be reiterated by the depositary every time it consults the Parties, as should the possibility of conditional acceptance. Similarly, it should specify whether the approval must be explicitly given or whether there may be tacit approval in certain cases.

Object and purpose of the meeting

- 273 The agenda resulting from the consultation procedure described above will contain the discussion of one or more general problems relating to the application of the Conventions and the Protocol.
- 274 With the expression “general problems”, the Conference wished to exclude the discussion of specific situations, to which other provisions apply.¹² Despite the wording of the text, such general problems could equally relate to interpretation or preliminary measures for execution, as well as to the application as such. Similarly they could be submitted either in advance as a result of reflection, or in the light of experience.
- 275 The scope of the discussions covers the Conventions as well as the Protocol, this resulting from the “additional” character of the latter. A significant proportion, if not the majority of problems of application of the Protocol, will therefore also relate to the Conventions themselves, at least indirectly.¹³
- 276 The article does not indicate the nature of the conclusions to which a meeting can lead, nor the procedures to be applied. As the meeting must be limited to general problems, and as amendments are governed by Article 97 (*Amendment*), conclusions will have the character of recommendations. They will not have a compulsory character, but may contain a common interpretation of specific provisions, practical means of application or draft amendments.

B.Z.

¹² In addition to the articles quoted above at the beginning of the general remarks, this certainly refers to Part V, Section II. The insertion of the word “general” in the reference to problems was also decided by a vote in Committee I; *cf. O.R. VIII, p. 284, CDDH/1/SR.28, para. 70.*

¹³ However, the insertion of the words “of the Conventions and” was also voted on in Committee I; *cf. ibid., p. 284, para. 72.*

Introduction

277 The Fourth Convention contains only a few basic provisions on civilian medical personnel whose fate was therefore dealt with only in a very incomplete manner

by the 1949 Conference. Since then a number of humanitarian institutions have concerned themselves with this question, and a working group was set up¹ which has been engaged in numerous “Entretiens consacrés au droit international médical”.

- 278** The XXth International Conference of the Red Cross (Vienna, 1965) approved the basic elements of “Draft Rules for the Protection of Wounded and Sick and Civil Medical and Nursing Personnel in Time of Conflict”, which the ICRC had prepared on the basis of the “Entretiens...”, and requested that the whole question should be the object of a more thorough study, particularly with regard to the possibility of extending to civilian medical personnel the right to display the distinctive emblem for the purpose of protection.
- 279** The XXIst International Conference of the Red Cross (Istanbul, 1969) declared that it was in favour of an extension of the right to distinctive emblem on certain conditions, and requested “the ICRC to submit concrete proposals to Governments along these lines with a view to a rapid conclusion of an additional protocol to the First and Fourth Geneva Conventions” (Res. XVI).
- 280** In view of the increased importance attached to these matters, the ICRC considered it necessary to increase the number of institutions participating in the “Entretiens...”² Government enquiries were carried out and two draft Protocols were established, which took up to a large extent the contents of the Draft Rules submitted to the International Conferences of the Red Cross. They differed, however, materially on two points:
- 1) Whilst the Draft Rules were conceived to apply both to international conflicts and to non-international conflicts, the establishment of two draft Protocols permitted a distinction to be made between these two types of conflict, one Protocol (which at that time elaborated only the Fourth Convention) being applicable to the former, while the other, developing Article 3 common to the Conventions, applied to the latter.
 - 2) The Draft Rules still favoured the use of a different emblem for civilian medical personnel. In accordance with the above-mentioned resolution formulated in Istanbul, the draft Protocols suggested an extension of the right to emblem of the red cross (red crescent, red lion and sun), while maintaining the use of a different emblem – the red Staff of Aesculapius, on a white background – for medical personnel which does not form part of the medical service organized by the State.
- 281** The work of the first session of the Conference of Government Experts on the reaffirmation and development of international humanitarian law applicable in armed conflicts, held in Geneva from 24 May to 12 June 1971, permitted the

¹ In 1955 the International Committee of the Red Cross set up this working group with the two large international associations representing the medical profession, the World Medical Association, which had 700,000 members, and the International Committee of Military Medicine and Pharmacy, which included the health services of eighty-one countries, and with an observer representing the World Health Organization.

² The group was enlarged by taking in as observers experts from the League of Red Cross Societies, the International Law Association, the Commission médico-juridique de Monaco, and the International Committee for the Neutrality of Medicine.

ICRC to establish two new draft Protocols which retained the two above-mentioned new features.

- 282 When a second session of this Conference of Government Experts became necessary, it met again in Geneva from 3 May to 3 June 1972.³
- 283 The drafts of the ICRC served as a basis for the work of this second session. The experts introduced certain modifications and added a new chapter consisting of only one article entitled “National Red Cross organizations and other humanitarian organizations”. Apart from this, the only major change was in the chapter dealing with medical transportation. This was fundamentally amended, notably by the addition of three articles to the ICRC draft.⁴
- 284 The drafts used by the CDDH as a basis for its work follow very closely, with regard to the subject matter with which we are concerned here, the drafts presented at the 1972 session and the work of this session.
- 285 Part II (*Wounded, sick and shipwrecked*) is divided into two sections, one entitled “*General Protection*”, and the other, “*Medical transportation*”. The question of the “National Red Cross organizations and other humanitarian organizations” being once more withdrawn.
- 286 Only the second section is subdivided into two chapters, the first deals with “common provisions”, the second with “medical transportation by air”.
- 287 The essential element of the 1973 draft of this Part II can be found in the Protocol which was finally adopted. However, a few refinements and additions have been introduced, at first by Committee II of the CDDH, which was responsible for examining it, and later by the CDDH as a whole during the final plenary sessions.
- 288 In the commentary to each article we will see the various modifications to which they have been submitted. In the context of this introduction we will limit ourselves to a description of the structural modifications which the CDDH has introduced to Part II. There are three of these:

- 1) all the definitions concerning Part II have been listed in the first article of this Part (Article 8 – *Terminology*), while the definitions concerning medical transportation were to be found in the draft at the beginning of Section II, which deals with this subject matter;
- 2) the draft subdivided Section II (*Medical transportation*) into two chapters, one dealing with the common provisions (five articles), the other with medical transportation by air (seven articles). The problem of medical transportation by air still forms the larger part of Section II, but it now no longer has a chapter to itself, as Section II is no longer subdivided and deals successively with medical transportation on land (one article), by sea (two articles) and by air (eight articles);

³ On the basis of the work of the 1971 Conference, and after various subsequent consultations, the ICRC had already formulated the structure which was finally adopted, i.e., two Additional Protocols to the Geneva Conventions, one applicable to international conflicts (supplementing all four Conventions), the other to non-international conflicts (supplementing Article 3, common to the Conventions).

⁴ Moreover, it was during the course of this session that a Sub-Committee on the marking and identification of medical transports was set up. This Sub-Committee in particular drew up draft Annexes to Protocol I, which were later adopted (on this subject, *cf.* in particular, the commentary on Annex I to Protocol I, *infra*, p. 1137).

- 3) a new section, not included in the 1973 draft, was added at the end of Part II by the CDDH. This Section III deals with missing and dead persons and was first adopted by Committee II, and later at the plenary meetings of the CDDH. The Committee had discussed this subject on the basis of numerous amendments presented by various States at the first, second and third sessions. A number of these amendments recommended the adoption of a new article, while others were in favour of a new section. This last formula was finally adopted, the new Section (*Missing and dead persons*) containing three articles entitled respectively “*General principle*”, “*Missing persons*”, and “*Remains of deceased*”.
- 289** Finally, let us summarize the points which seem to reflect the essence of the contribution of Part II of Protocol I to the Geneva Conventions:
- 1) the wounded, sick and shipwrecked, whether civilian or military, are only considered as such during an initial period;
 - 2) recognized civilian medical personnel, as well as civilian medical units, will henceforth receive the same protection as that formerly reserved for military medical personnel and units;
 - 3) medical activities as such are better protected;
 - 4) the role of the civilian population and of relief societies is confirmed and extended;
 - 5) the protection of maritime medical transportation, and above all, of medical transportation by air, has been developed by extending the scope of the right to protection and by increasing the flexibility of the procedures required to invoke this right;
 - 6) the principle that families have the right to be informed of the fate of their relatives has been introduced, and the provisions concerning missing persons and the remains of the deceased have been developed.

Y.S.

Part II, Section I – General Protection

Introduction

- 290 This Section gives general information regarding the protection of the wounded, sick and shipwrecked, particularly by defining the terms – which was not done in the First Convention – and by indicating the scope of application of Part II.
- 291 It is important in that it develops the protection of *civilian* medical personnel and units by the distinctive emblem, in this way enabling all those capable of caring for the wounded and sick in time of armed conflict to be mobilized more efficiently. This development can only be welcomed: the wounded and sick have all too often suffered from deficient medical services, inadequately equipped as regards personnel and materials (*matériel*).¹
- 292 Protection of *medical duties*, of aid societies and of the civilian population collecting the wounded or coming to their aid has the same purpose.
- 293 The improvement in identification and the introduction of technical means of identification are an essential complement to this development, for it is all too true that protection granted medical personnel and medical objects is pointless if such personnel and objects are not identified in time.
- 294 Finally, it should be noted that emphasis is put on the protection of persons in the power of the enemy or detained for reasons related to the armed conflict. As they are often ill-treated or even affected in their physical or mental well-being, such people are in particular need of protection: the text is unambiguous in specifying the principles to be observed with respect to them, as well as on practices which are to be forbidden. This is a welcome step forward, though it should not be forgotten that a tremendous effort must still be made to ensure strict application of these rules.

Y.S.

¹ The corresponding word in the Protocol and also used in the commentary by the author is *matériel*.

Article 8 – Terminology

For the purposes of this Protocol:

- (a) “wounded” and “sick” means persons, whether military or civilian, who, because of trauma, disease or other physical or mental disorder or disability, are in need of medical assistance or care and who refrain from any act of hostility. These terms also cover maternity cases, new-born babies and other persons who may be in need of immediate medical assistance or care, such as the infirm or expectant mothers, and who refrain from any act of hostility;
- (b) “shipwrecked” means persons, whether military or civilian, who are in peril at sea or in other waters as a result of misfortune affecting them or the vessel or aircraft carrying them and who refrain from any act of hostility. These persons, provided that they continue to refrain from any act of hostility, shall continue to be considered shipwrecked during their rescue until they acquire another status under the Conventions or this Protocol;
- (c) “medical personnel” means those persons assigned, by a Party to the conflict, exclusively to the medical purposes enumerated under sub-paragraph (e) or to the administration of medical units or to the operation or administration of medical transports. Such assignments may be either permanent or temporary. The term includes:
 - (i) medical personnel of a Party to the conflict, whether military or civilian, including those described in the First and Second Conventions, and those assigned to civil defence organizations;
 - (ii) medical personnel of national Red Cross (Red Crescent, Red Lion and Sun) Societies and other national voluntary aid societies duly recognized and authorized by a Party to the conflict;
 - (iii) medical personnel of medical units or medical transports described in Article 9, paragraph 2;
- (d) “religious personnel” means military or civilian persons, such as chaplains, who are exclusively engaged in the work of their ministry and attached:
 - (i) to the armed forces of a Party to the conflict;
 - (ii) to medical units or medical transports of a Party to the conflict;
 - (iii) to medical units or medical transports described in Article 9, paragraph 2; or
 - (iv) to civil defence organizations of a Party to the conflict.The attachment of religious personnel may be either permanent or temporary, and the relevant provisions mentioned under sub-paragraph (k) apply to them;

- (e) “medical units” means establishments and other units, whether military or civilian, organized for medical purposes, namely the search for, collection, transportation, diagnosis or treatment – including first-aid treatment – of the wounded, sick and shipwrecked, or for the prevention of disease. The term includes, for example, hospitals and other similar units, blood transfusion centres, preventive medicine centres and institutes, medical depots and the medical and pharmaceutical stores of such units. Medical units may be fixed or mobile, permanent or temporary;
- (f) “medical transportation” means the conveyance by land, water or air of the wounded, sick, shipwrecked, medical personnel, religious personnel, medical equipment or medical supplies protected by the Conventions and by this Protocol;
- (g) “medical transports” means any means of transportation, whether military or civilian, permanent or temporary, assigned exclusively to medical transportation and under the control of a competent authority of a Party to the conflict;
- (h) “medical vehicles” means any medical transports by land;
- (i) “medical ships and craft” means any medical transports by water;
- (j) “medical aircraft” means any medical transports by air;
- (k) “permanent medical personnel”, “permanent medical units” and “permanent medical transports” mean those assigned exclusively to medical purposes for an indeterminate period. “Temporary medical personnel”, “temporary medical units” and “temporary medical transports” mean those devoted exclusively to medical purposes for limited periods during the whole of such periods. Unless otherwise specified, the terms “medical personnel”, “medical units” and “medical transports” cover both permanent and temporary categories;
- (l) “distinctive emblem” means the distinctive emblem of the red cross, red crescent or red lion and sun on a white ground when used for the protection of medical units and transports, or medical and religious personnel, equipment or supplies;
- (m) “distinctive signal” means any signal or message specified for the identification exclusively of medical units or transports in Chapter III of Annex I to this Protocol.

Commentary

General remarks

295 The idea of defining the most widely used terms of this Part arose during the second session of the Conference of Government Experts in 1971.¹ Following numerous discussions regarding the terms to be defined, and with regard to where these definitions should come in the Protocol,² the ICRC introduced an article of definitions at the beginning of Part II, and another at the beginning of the second Section of Part II devoted to medical transportation.

296 These definitions were examined by Committee II of the CDDH, which introduced some modifications and, in particular, decided to add two:

- 1) On the initiative of the Holy See, which presented an amendment,³ remarking that “religious personnel and medical personnel were mentioned together in a number of articles in the Geneva Conventions of 1949” and that “it was desirable that the former should be defined in order to avoid any misunderstanding”,⁴ the definition of the expression “religious personnel”

¹ Cf. in particular *CE 1971, Report*, p. 24, para. 46.

² Cf. in particular *ibid.*, p. 24, para. 46; p. 32, para. 90; *CE 1972, Report*, Vol. I, p. 33, para. 1.11; p. 209, para. 5.48.

³ *O.R. III*, p. 51, CDDH/II/58.

⁴ *O.R. XI*, p. 50, CDDH/II/SR.7, para. 6.

was inserted in Article 8. This initiative was supported by a number of other delegations which presented a new amendment together with the Holy See.⁵

- 2) The Drafting Committee of Committee II had noted that the notion “permanent” or “temporary” was applicable in a number of the expressions defined, and on the basis of a draft amendment,⁶ it proposed the insertion in Article 8 of a definition of these terms⁷ to avoid repetitions. This proposal was accepted.

- 297 Moreover, the Drafting Committee of the CDDH decided to group together all the definitions of Part II in Article 8, and therefore to transfer to this article the definitions of terms used in Section II devoted to medical transportation, which had formerly been placed at the beginning of this Section.⁸

Opening sentence

- 298 The definitions were given “for the purposes of the present Part” in the draft presented to the CDDH.

- 299 At the first session an amendment was presented with a view to substituting the words “the terms used in the present Part have the following meaning” for “for the purposes of the present Part”.⁹ The purpose of this amendment was to prevent

“an unduly restrictive interpretation being placed on the provisions of draft Protocol I, which did not exist as an independent instrument, but merely represented a supplement to the Geneva Conventions of 1949 and to international law on armed conflicts as a whole”.¹⁰

Some doubts were expressed regarding the competence of the Conference to modify the Geneva Conventions, and this amendment was referred to the Drafting Committee of Committee II, which provisionally accepted the expression “for the purposes of the present Protocol”. This choice was confirmed by the Drafting Committee of the CDDH, which, although it decided to keep the definitions in different places in the Protocol, and to group the definitions relating in particular to Part II, at the beginning of Part II, did not wish to restrict their scope to this Part, particularly because some of the terms defined are also found outside Part II.

Sub-paragraph (a)

- 300 The 1973 draft had defined the expression “the wounded and sick”, bringing together in a single category persons entitled to strictly identical protection. The

⁵ *O.R.* III, p. 53, CDDH/II/374.

⁶ *Ibid.*, p. 52, CDDH/II/239.

⁷ *Cf.* CDDH/II/240/Add. 1, p. 1.

⁸ *Cf.* CDDH/CR/RD/13/Rev.i, p. i, note i.

⁹ *O.R.* III, p. 46, CDDH/II/17.

¹⁰ *O.R.* XI, p. 21, CDDH/II/SR.3.

existence of a single category of persons is not put into question now. The reason it was decided to separate the terms was to enable them to be used more flexibly with various conjunctions (such as, for example, “to the wounded and to the sick”). The fact that persons who are neither wounded nor sick are included in this category shows that there is indeed only a single category: for example, new-born babies are included in the category “wounded” and “sick”, even when they are neither wounded nor sick.

301 Thus, when the Protocol mentions the wounded and sick, it is not concerned with the wounded and sick according to the ordinary meaning of these words, but with the persons defined here. The definition of the “wounded” and the “sick” is at the same time wider and narrower than the more common definition of these terms. It is wider in that it encompasses, as we have pointed out, persons who are not wounded or sick in the usual sense of these words, but narrower in that it does not protect such persons as a whole (i.e., also the wounded and sick according to the usual meaning) unless they abstain from all hostile acts.

302 These two elements are examined below.

1. *Persons benefitting from protection*

a) *The wounded in the usual sense of the word*

b) *The sick in the usual sense of the word, whether the sickness is physical or psychological*

303 The criterion for such persons is that they *are in need of medical care*. However, this first element is very difficult to assess in the heat of action, and it is above all with regard to the requirement made of such persons that they refrain from any act of hostility that a combatant must determine his attitude, if he is faced with a person who does not seem to have any obvious characteristics of injury or sickness. At this stage it is not significant for the combatant whether the person concerned falls under the category of the “wounded” and “sick”, or whether he is a soldier who “clearly expresses an intention to surrender” (Article 41 – *Safeguard of an enemy hors de combat*): he must respect both because they are *hors de combat*. It is after the event, if such persons are captured, that a decision is made as to whether or not they are in need of medical care, and thus whether or not they fall under the category of the “wounded” and “sick”.

304 Moreover, it should be noted that this criterion – being in need of medical care – is the only valid one for determining whether a person is “wounded” or “sick” in the sense of the Protocol (insofar as the second condition – *infra*, 2 – is fulfilled). The persons concerned may be either civilians or soldiers and the Protocol does not retain the distinction made between these two categories by the Conventions as regards the wounded and sick. On this basis a wounded soldier and a wounded civilian are entitled to identical protection, even though, at the same time, there would be a significant difference in the status which applies to the one and the other if they fell into enemy hands (particularly that of prisoner of war for a combatant).

c) *Persons who, although neither wounded nor sick in the usual sense of these words, may be in need of immediate medical care*

305 These are persons who are not necessarily in urgent need of medical care at the time, as the persons described above in a) and b) are, but whose condition may at any moment necessitate immediate medical care. A list of such persons is given, though only by way of example. It includes:

- maternity cases;
- new-born babies;
- invalids;¹¹
- expectant mothers.

2. *The necessity of refraining from any act of hostility*

306 Although the status of “wounded” and “sick” can therefore be given to persons who are not wounded or sick in the usual sense of these words, it may on the other hand be refused to those who are: to benefit from this status it is necessary *to refrain from any act of hostility*. A person who has broken his leg is not wounded in the sense of the Protocol if he continues to shoot. This is a logical conclusion: it would be unreasonable to ask a soldier to spare someone who is threatening him, or, otherwise, who is attempting to escape.¹²

307 If they wish to benefit from the status of “wounded” and “sick”, those entitled to this status must therefore meet this requirement, though obviously only to the extent that it applies to them (naturally this problem does not arise for an unconscious wounded person or a new-born baby).

Sub-paragraph (b)

308 Two essential elements mentioned with regard to the definition of the “wounded” and “sick” are repeated with regard to the definition of the “shipwrecked”: those who are not shipwrecked in the strict sense of the word may be covered by the definition, but anyone shipwrecked, even if he is shipwrecked in the usual sense of the word, is only considered as such if he refrains from any act of hostility.

¹¹ This obviously refers to infirmity of some seriousness, which has in principle justified exemption from military service. However, the fact of knowing exactly how serious the infirmity covered here is, is not very important. If his infirmity was not considered sufficient and the invalid was enlisted as a combatant, he has in any case no right to any special treatment as long as he engages in combat. On the other hand, if his condition obviously prevents him from continuing to engage in combat, or if he wishes to surrender and clearly shows his intention of refraining from hostile acts, he must be spared by the combatant who has him in his power, either in accordance with Article 10 or in accordance with Article 41. Only when he is captured should it be determined whether his infirmity is considered sufficiently serious – i.e., may require immediate medical care to warrant classifying him in the category of the “wounded” and “sick”.

¹² For further details on the concept of an “act of hostility”, cf. commentary Art. 41, *infra*, pp. 488-489.

309 A particularly difficult question with regard to the protection given shipwrecked persons is also dealt with, namely, the duration of the “shipwrecked” status. We will consider these three elements in succession, devoting most attention to the third.

1. *Persons benefitting from protection*

310 The condition laid down here is that the person concerned is in peril “at sea or in other waters”. The Second Convention only mentions those shipwrecked “at sea”. The 1973 draft also followed this restricted definition. One delegation regretted that persons in peril in inland waters (lakes, rivers etc.) seemed to be excluded and Committee II finally decided to broaden the definition by using the expression “at sea or in other waters”. On the other hand, it did not adopt a proposal made by the ICRC, and taken up by several delegations at the beginning of the CDDH, to put those in peril *on land* (for example, in the desert) on a par with the shipwrecked.

311 The definition was also widened in comparison with the original draft, in that it is not concerned only with the shipwrecked in a strict sense, i.e., those in distress as a result of a shipwreck or damage to a vessel, but with any person in peril, including in particular persons who have fallen into the sea, even when the vessel transporting them has not been damaged. Moreover, those who have fallen into the sea from or with an aircraft are also explicitly included.

312 As in the case of the “wounded” and “sick”, no distinction is made between civilians and soldiers as long as they are considered to be shipwrecked. This constitutes an important innovation in relation to the Conventions.

313 The fact that the “shipwrecked” covered here must be in peril *as a result of misfortune* does not mean that the field of those concerned should be excessively restrained. Persons who are in distress as a result of their inexperience or their recklessness, are also protected. The aim was to exclude those who voluntarily put themselves in peril in order to accomplish a mission, such as military commandos or individual frogmen of the military commandos.

314 However, it should be noted that if such men are in difficulties or in distress, and they give up their mission and all other acts of hostility, they will also enjoy the status of the “shipwrecked”.

2. *The necessity of refraining from any act of hostility*

315 In the exceptional case where someone who would normally be entitled to the protection given to the “shipwrecked” by the Protocol continues to fight, and in particular to fire shots, he would obviously lose his right to protection and would not even be defined as “shipwrecked”, in the sense of the Protocol. The observations made in this respect with regard to the “wounded” and “sick” also apply here.¹³

¹³ Cf. *supra*, p. 118.

3. *Duration of the status of “shipwrecked”*

- 316** First, it should be clarified that the status of “shipwrecked”, which is only given, as we saw above, to persons who refrain from any act of hostility, is automatically lost by those who, having enjoyed such status, commit an act of hostility: committing such an act of hostility is incompatible with the “shipwrecked” status throughout its duration.
- 317** It remains to be determined how long persons who are entitled to “shipwrecked” status and who continue to refrain from any act of hostility can enjoy such status. Without specifying this period exactly, the Second Convention implies that a shipwrecked person continues to be considered as such throughout the rescue operation, i.e., until he has been safely returned to land. This is shown, for example, in Article 14 of the Convention, which refers to the “shipwrecked on board military hospital ships”.
- 318** The Protocol specifies that the shipwrecked “shall be considered shipwrecked during their rescue”, which means that they retain their status until they are returned to land. However, they can lose this status earlier if they acquire another status under the Conventions or the Protocol.
- 319** For the sake of clarity, it is necessary to list the possibilities which may arise. A distinction is made between the case in which the shipwrecked person is a soldier and the case in which he is a civilian.

3.1. *The shipwrecked person is a soldier*

a) *He is rescued by his own armed forces*

- 320** In this case there are two possibilities:
- He was not wounded or traumatized by his experience (which, it must be noted, is exceptional), and can quickly assume an active role again. From this moment he again becomes a combatant and loses his “shipwrecked” status.
 - He is wounded or traumatized. As a result he acquires the status of “wounded” or “sick”, which gives him the same rights as the “shipwrecked” status. This means that if the vessel is attacked, he will be spared as far as possible (i.e., in practical terms, that he will be spared in the event – though admittedly exceptional these days – that the vessel is boarded and taken by force).¹⁴ He will enjoy the status of “wounded” and “sick” if the vessel which has rescued him is seized (and he becomes, moreover, a prisoner of war).

b) *He is rescued by enemy armed forces*

- 321** Such a shipwrecked person becomes a prisoner of war. He loses his “shipwrecked” status as soon as he is on board, but in addition to his prisoner of war status, becomes “wounded” or “sick” in the case that his condition means that he falls in this category and he remains so as long as his condition justifies this.
- 322** Anyone shipwrecked who has participated in hostilities, but is not entitled to prisoner-of-war status,¹⁵ will be considered shipwrecked throughout the duration

¹⁴ However, see also Art. 28, Second Convention.

¹⁵ Cf. in particular Art. 45, para. 3, and Art. 47, para. 1.

of the rescue operation, i.e., in principle until he is taken back to land, unless his condition means he falls under the category of the wounded and sick (which actually assures him identical protection). This also applies to persons whose status has not been clearly determined.¹⁶

c) *He is rescued by a neutral warship*¹⁷

323 In this case he will be considered throughout the rescue operation to be either wounded or sick if his condition warrants this, or shipwrecked, if not.¹⁸

d) *He is rescued by a hospital ship, a coastal rescue craft or other medical ship or craft belonging to his own Party to the conflict*

324 He will be considered as either wounded or sick, or as shipwrecked, depending on his condition, until he lands. This does not give him any rights while he is on the vessel which rescued him,¹⁹ but it is important for him and for the vessel if the latter is boarded and searched: if his transfer to an enemy warship is ordered, he is to be treated as though he had been directly picked up by such a vessel (*cf. supra*, b)). Moreover, the vessel transporting him shall not be accused of transporting a combatant.

325 In the case that a wounded, sick or shipwrecked person is not transferred to another vessel, the vessel which rescued him will most likely take him to his own Party to the conflict, unless it has to land him in a neutral port. In this case he will retain the status of “wounded” and “sick”, if his condition warrants this,²⁰ and in any case, Article 17 of the Second Convention will apply to him.

e) *He is rescued by a hospital ship, coastal rescue craft or other medical vessel or craft belonging to the adverse Party*

326 He will enjoy either the status of “wounded” and “sick”, if his condition justifies this, or “shipwrecked” status, until he has landed. If he is transferred onto a warship of his own Party to the conflict, after it has boarded and searched the vessel which rescued him, he will be considered to have been rescued directly by the former (*cf. supra*, a)). If he remains on the first vessel until he lands, he will be treated as a prisoner of war (and will, moreover, continue to enjoy the status of “wounded” and “sick”, if his condition justifies this), in case he lands in a port of the adverse Party; if he lands in a neutral port, Article 17 of the Second Convention will apply to him, and the status of “wounded” and “sick” will still be granted him, provided that his condition justifies this, in accordance with Article 19 of the Protocol (*Neutral and other States not Parties to the conflict*).

¹⁶ *Cf.* in particular Art. 45, paras. 2 and 3.

¹⁷ I.e., from a State which is not a Party to the conflict; on this subject, *cf.* commentary Art. 2, sub-para. (c), *supra*, p. 61.

¹⁸ *Cf.* also Protocol I, Art. 19, and Second Convention, Art. 15.

¹⁹ *Cf.*, however, commentary Art. 11, *infra*, pp. 152-154.

²⁰ *Cf.* Protocol I, Art. 19.

f) *He is rescued by a non-medical civilian vessel*

327 The comments under letters d) and e) apply to a shipwrecked person rescued respectively by a civilian vessel belonging to his own Party, or to the adverse Party, even though, in this case, the vessel itself can also be seized.

328 If it is a civilian vessel belonging to a State which is not a Party to the conflict, the solution mentioned under letter c) applies to him, but the vessel may be boarded and searched and in this case, either the solution mentioned under letter a) (if the searching vessel belongs to the shipwrecked person's Party to the conflict), or the solution mentioned under letter b) (if it belongs to the adverse Party), will apply.

3.2. *The shipwrecked person is a civilian*

a) *He is rescued by a military vessel belonging to his own Party to the conflict*

329 He enjoys the status of "wounded" and "sick", or "shipwrecked", depending on his condition, until he lands. Such status does not give him any rights in relation to his own Party to the conflict.²¹ On the other hand, it is important if the vessel is seized: a person not wearing uniform on a warship could be suspected of espionage. In the case of such a seizure, solution b) described below applies.

b) *He is rescued by a military vessel belonging to the adverse Party*

330 He enjoys the status of "wounded" and "sick" or "shipwrecked", depending on his condition, until he has landed in a neutral port. In any case he will then no longer be considered to be shipwrecked, as the rescue operation has been completed, but will still be covered by Article 19 of the Protocol (*Neutral and other States not Parties to the conflict*) if he still falls under the category "wounded" and "sick".

331 If he is taken to the territory of the adverse Party, which is probably usually the case, he will lose his "shipwrecked" status as soon as he lands, as the rescue operation has been completed by that time, but will enjoy the status of "protected person" in the sense of Article 4 of the Fourth Convention. This will apply to him, particularly Section II (Aliens within the territory of a Party to the conflict) of Part III. In addition, he will enjoy the status of "wounded" and "sick", if his condition justifies this.

c) *He is rescued by a neutral warship*

332 He will enjoy the status of "wounded" and "sick", or "shipwrecked", depending on his condition, until he has landed. After he has landed in the neutral country, he will continue to enjoy the status of "wounded" and "sick", if he meets the necessary conditions.²² If not, he will lose his "shipwrecked" status and no longer fall under the scope of application of the Conventions and the Protocol.

²¹ Cf., however, commentary Art. 11, *infra*, pp. 152-154.

²² Cf. Protocol I, Art. 19.

d) *He is rescued by a hospital ship, coastal rescue craft or other medical craft or vessel belonging to his own Party to the conflict*

333 He will have the status of “wounded” and “sick” or “shipwrecked”, depending on his condition, until he has landed. This does not give him any specific rights, as he is in the hands of personnel of his own Party to the conflict,²³ but it is important to justify his presence in case the vessel is submitted to an inspection. In principle he should not be transferred to a vessel belonging to the adverse Party.²⁴

e) *He is rescued by a hospital ship, coastal rescue craft or other medical craft or vessel belonging to the adverse Party*

334 He has the status of “wounded” and “sick” or “shipwrecked”, depending on his condition, until he has landed.

335 If he lands in a port of the adverse Party, he becomes a protected person in the sense of Article 4 of the Fourth Convention, and this Convention then applies to him. In addition, he retains the status of “wounded” and “sick”, if his condition justifies this.

336 If he lands in a neutral port, the Conventions and the Protocol no longer apply to him, unless his condition justifies the status of “wounded” and “sick”, which should be respected by the State where he has landed, in accordance with Article 19 of the Protocol (*Neutral and other States not Parties to the conflict*).

337 If the vessel is boarded and searched by a military vessel of his own Party to the conflict, and he is transferred onto the latter, the solution mentioned under letter a) applies.

f) *He is rescued by a non-medical civilian vessel belonging to a neutral State*

338 The solution mentioned under letter c) applies.

339 Even if a military vessel were to board and search the neutral civilian vessel, it should not require the transfer of the shipwrecked person.

g) *He is rescued by a civilian vessel belonging to his own Party*

340 In principle there is no problem if he arrives safe and sound. However, if his own Party has to retain him for reasons related to the armed conflict (treason, desertion etc.), he should at least be granted the benefits of Article 75 (*Fundamental guarantees*)²⁵, as well as the status of “wounded” or “sick”, if his condition justifies this.

341 In the case that the vessel is seized by a military vessel of the adverse Party, the solution mentioned under letter b) applies.

²³ Cf., however, commentary Art. 11, *infra*, pp. 152-154.

²⁴ Cf. Protocol I, Art. 22, para. 1, *in fine* and Art. 23, para. 6. On this subject, cf. also *infra*, commentary Arts. 22 and 23, p. 253.

²⁵ Cf. commentary Art. 75, *infra*, p. 866.

h) *He is rescued by a civilian vessel belonging to the adverse Party*

- 342 He will have the status of “wounded” and “sick” or “shipwrecked”, depending on his condition, until he has landed.
- 343 If he lands in a port of the adverse Party, he will have the status of “protected person” in the sense of Article 4 of the Fourth Convention. This Convention will apply to him, particularly Section II (Aliens within the territory of a Party to the conflict) of Part III. In addition, he will enjoy the status of “wounded” and “sick”, if his condition justifies this.
- 344 If he lands in a neutral port, he will continue to enjoy the status of “wounded” and “sick”, if his condition justifies this, in accordance with Article 19 of the Protocol (*Neutral and other States not Parties to the conflict*). If not, he will no longer be within the scope of the Conventions and the Protocol.
- 345 If the vessel is seized by a military vessel of the Party to the conflict to which he belongs, the solution mentioned under letter a) applies.

Sub-paragraph (c)

- 346 The ICRC draft mentioned the categories of persons covered by the expression “medical personnel”, without first defining the expression. On the basis of an amendment presented by seven countries,²⁶ Committee II decided to define the expression before listing the categories of persons that it covers.

1. *Definition of medical personnel*

- 347 Medical personnel covers such persons as are assigned to particular tasks necessary for the well-being of the wounded and sick. In fact the protection of medical personnel is a subsidiary protection granted to ensure the protection of the persons primarily concerned, namely, the wounded and sick.
- 348 A number of modifications of greater or lesser importance were made to the protection of medical personnel as laid down in the Conventions.
- 349 First of all, civilian medical personnel are also covered, provided that they are assigned to medical tasks by a Party to the conflict, in order to ensure in a better way the protection of all the wounded and sick, whether civilian or military.
- 350 Furthermore, it is specified that only such persons as are *exclusively* assigned to medical tasks are covered, which is the case in the Conventions only for the permanent personnel, even if it is implied for the temporary personnel. The *duration* of such an exclusive assignment is a vexed question. We shall discuss it with respect to sub-paragraph (k), where the concept of permanent and temporary medical personnel was also modified.²⁷
- 351 Finally, the distinction which was made in the Conventions between the identification of different categories of medical personnel has disappeared. All medical personnel of any sort must be identifiable as easily as possible.²⁸

²⁶ *O.R.* III, pp. 46-47, CDDH/II/19 and Corr.1.

²⁷ *Cf. infra*, pp. 132-133.

²⁸ *Cf. commentary Art. 18, infra*, p. 221.

352 A number of points which require elucidation are dealt with below.

1.1. *Medical personnel must be assigned to one of the following tasks:*

- a) The medical purposes enumerated in sub-paragraph (e). On this subject *cf. infra*, sub-paragraph (e).
- b) The administration of medical units. On the meaning of the expression “medical units”, *cf. infra*, sub-paragraph (e). Administration must be considered here in a wide sense. It includes all persons who ensure the functioning of the units without directly caring for the wounded and sick: thus they include the administrators as such, as well as many other persons, such as, for example, hospital cooks and cleaners.²⁹
- c) The operation or administration of medical transports. On the meaning of the expression “medical transports”, *cf. infra*, sub-paragraph (g). Here again we are concerned with persons who, without caring directly for the wounded and sick, are nevertheless essential components in the system of protection. They include, in particular, persons who drive or pilot medical transports, as well as persons assisting in this task (co-pilot or navigator in medical aircraft, crew of a medical ship, etc.), persons who are responsible for the maintenance of medical transports (mechanics, personnel required for the maintenance of medical ships etc.), or finally, persons who plan the employment of medical transports. All such persons are essential for the proper functioning of the system.

1.2. *Medical personnel must be assigned exclusively to these tasks*

353 This means that protected medical personnel cannot spend any time on different activities as long as they are assigned to medical tasks. This is a necessary precaution to prevent abuses of the emblem for commercial purposes, for example, or above all for military purposes.

1.3. *They must be assigned to such tasks by a Party to the conflict*

354 The problem does not arise with military medical personnel, as military personnel are assigned *ex officio* by the competent authority. On the other hand, this clause is important for civilian medical personnel. Not every civilian doctor is protected by the Conventions. Indeed, there is no *a priori* reason why a plastic surgeon, for example, should be protected. On the other hand, if the Party to the conflict in the territory in which he works assigns him to tasks mentioned above, i.e., if he becomes useful for the protection of the wounded and sick, he deserves to be protected. This is an example of the derivative character of the protection of medical personnel, which is relevant only when such personnel is engaged in

²⁹ It should be noted that Committee II included in its report at the end of the 3rd session of the CDDH an explanation – in line with what was said above – of the phrase commented upon here (*cf. O.R. XIII*, pp. 253-254, CDDH/235/Rev.1, para. 20).

the protection of the wounded and sick. Moreover, it is essential that the Party to the conflict, which is responsible for preventing the misuse of the protective emblem, retains the power to decide who is entitled to the protection reserved for medical personnel.

1.4. *The assignment may be either permanent or temporary*

355 For the meaning of these terms, *cf. infra*, sub-paragraph (k).

2. *Categories covered by the expression “medical personnel” (sub-paragraphs (c) (i), (ii), (iii))*

356 Three categories are mentioned by the Protocol.

2.1. *Sub-paragraph (c)(i)*

357 The first category comprises the medical personnel of a Party to the conflict, *viz.:*

- military medical personnel already protected by the First and Second Conventions (although the States Parties to the Protocol should review the organization of their medical service, and in particular, the problem of temporary medical personnel, in relation to the Protocol);
- civilian medical personnel, *viz.* civilian personnel exclusively assigned by a Party to the conflict to one of the tasks listed above;
- medical personnel assigned to civil defence organizations. In principle this is civilian personnel, although it could include military personnel.³⁰ For such personnel the status of medical personnel continues, despite their assignment to civil defence organizations. This is clearly shown by the fact that they must continue to be identifiable by means of the distinctive emblem of the red cross or the red crescent.³¹

2.2. *Sub-paragraph (c)(ii)*

358 This is personnel already covered by Article 26 of the First Convention. The societies concerned must fulfil three conditions:

- they must be *national* societies, *i.e.*, societies established in the territory of the Party to the conflict concerned;
- these societies must be *recognized* by the Party to the conflict concerned, which, in the most usual case where this Party is a State, means that the society must at least have been regularly constituted in accordance with national legislation. Therefore this excludes clandestine societies;

³⁰ *Cf.* commentary Art. 67, *infra*, p. 791.

³¹ *Cf.* also commentary Art. 66, para. 9, *infra*, pp. 788-789.

- these societies must be *authorized* by the Party to the conflict concerned, i.e., the latter must agree that personnel of these societies are employed as medical personnel.

2.3. *Sub-paragraph (c)(iii)*

359 This third category covers medical personnel who have been made available to a Party to the conflict without belonging to this Party, together with permanent medical units and medical transports (with the exception of hospital ships which are subject to a separate régime, regulated by Article 24 of the Second Convention). It should be noted that only certain States, societies or organizations may make such personnel available, and then only under certain conditions.³²

Sub-paragraph (d)

360 The original draft of the Protocol did not contain a definition of religious personnel, but it is appropriate to recall that chaplains attached to armed forces were covered by the proposed definition of medical personnel. This actually comprised military medical personnel as defined in the First and Second Conventions, and these chaplains fall under the definition of such personnel.

361 However, this seemed inadequate to some delegations. Largely as a result of two amendments, the present paragraph was added to define religious personnel explicitly (*cf. supra*, p. 115).

362 The persons concerned here must fulfil two conditions:

- They are exclusively devoted to their ministry. Thus they could not fulfil functions other than their religious functions, though carrying out medical tasks could obviously not be considered an infringement of this rule. On the other hand, the religion to which they belong is immaterial. Thus it has been said that the term “chaplain”, which is actually used only by way of example, does not refer exclusively to Christian religious personnel.³³ They do not have to be themselves incorporated into the army: it does not matter whether they are military or civilian.
- They have a specific attachment which presumes the agreement of the Party to the conflict concerned, to one of the four categories listed.

Sub-paragraph (d)(i)

363 This is the personnel covered by Article 24 of the First Convention.

³² On this subject, *cf.* commentary Art. 9, para. 2, *infra*, pp. 140-143.

³³ *Cf. O.R. XII*, p. 220, CDDH/II/SR.75, para. 20.

Sub-paragraph (d)(ii)

- 364 On the meaning of the expressions “medical units” and “medical transports”, *cf. infra*, sub-paragraphs (e) and (g) respectively.

Sub-paragraph (d)(iii)

- 365 On this subject, *cf. infra*, commentary on Article 9, paragraph 2, pp. 140-143.

Sub-paragraph (d)(iv)

- 366 On this subject, *cf. infra*, commentary on Article 61, sub-paragraph (b), pp. 732-735.

- 367 Like medical personnel, religious personnel may be assigned either permanently or temporarily. One delegate expressed the opinion that the temporary assignment of religious personnel has no effect on the type of status of religious personnel which, by its very nature, is permanent.³⁴ However, the Protocol does not prohibit the temporary assignment of laymen for religious purposes, and the possibility that they may be protected as religious personnel during the fulfilment of these tasks remains open. On the meaning of the terms “permanent” and “temporary”, *cf.*, apart from this, *infra*, sub-paragraph (k).

Sub-paragraph (e)

- 368 In order to simplify and clarify matters, a single expression was chosen to cover the entire range of medical establishments and other medical units.
- 369 As in the case of medical personnel, medical units may be either military or civilian and when the expression is used without the qualifying adjective “military” or “civilian”, it covers both categories.
- 370 Medical units are protected whether they are fixed or mobile, i.e., whether they consist of buildings built to remain where they are, or whether they are structures or establishments which can be moved according to needs. Moreover, they can be permanent or temporary (on the subject of these expressions, *cf. infra*, sub-paragraph (k)).
- 371 The only decisive condition which is imposed upon these establishments or other units to qualify as medical units is this: they must be “organized for medical purposes” and exclusively assigned to these purposes.
- 372 Irrespective of the reason for which the unit was established, it is the use at the relevant moment which counts. A hospital which is used as a barracks is not a medical unit, while a barracks equipped as a makeshift hospital becomes one.

³⁴ O.R. XII, p. 217, CDDH/II/SR.75, para. 3.

- 373** The medical purposes envisaged here are broad. The search for, evacuation and transportation of the wounded, sick and shipwrecked, particularly concern mobile units. Some confusion may arise between these units and medical transports (the transport element in principle prevails in the latter, the possibility of administering care in the former). In any case such confusion is not particularly important, as medical transports are entitled to a similar protection to that accorded mobile medical units. Moreover, the protection of medical transports also implies that of fixed units such as the garages where these vehicles are parked, and the workshops where they are repaired.
- 374** The diagnosis and treatment of injuries and sickness are usually carried out in fixed establishments, but may also be done in mobile establishments such as field hospitals.
- 375** The degree of care to be given is not a determining element: a simple first-aid post improvised near the battlefield is considered to be a medical unit.
- 376** Similarly establishments which do not directly care for victims, namely, the wounded, sick and shipwrecked, but attempt to reduce the number of these by preventing diseases, are also considered to be medical units. This applies in particular to vaccination centres or other preventive medicine centres and institutes, and blood transfusion centres.
- 377** In addition it is clear that a surgeon without instruments and medicine cannot do a great deal: for this reason, places where medicines, surgical instruments and in general any medical supplies are stored also qualify as medical units, whether these are simple depots attached to a hospital, for example, or centres where these can obtain supplies.
- 378** Finally, it should be noted that Committee II of the CDDH, which dealt with this article, wished to mention in its report drawn up at the end of the third session, that dental treatment is included in the medical purposes mentioned here.³⁵ Thus establishments where dental care is administered have also to be considered as medical units. It also mentioned that hospitals and other medical units include “rehabilitation centres providing medical treatment”.³⁶
- 379** Thus it is clear that the assignment for medical purposes must be interpreted very flexibly. However, as mentioned above, such assignment has to be made to the exclusion of any other for a unit to qualify as a medical unit. This does not follow from the paragraph under consideration here, but from the definition given below of the terms “permanent” and “temporary”.³⁷ As for medical personnel, this condition is perfectly logical for obvious reasons: it would not be possible to ask a Party to the conflict to spare a hospital, even if it contains a large number of wounded, if it is also sheltering an arsenal in the cellar or an army headquarters in one of the wings.
- 380** The list of establishments covered by the expression “medical units” mentioned in this paragraph, is by way of example. It does not require any further commentary.

³⁵ Cf. *O.R.* XII, p. 238, CDDH/II/SR.77, para. 8 and *O.R.* XIII, pp. 253-254, CDDH/235/Rev.1, para. 20.

³⁶ *O.R.* XIII, *ibid.*

³⁷ Cf. commentary sub-para. (k), *infra*, pp. 132-133.

Sub-paragraph (f)

- 381** This is a definition of medical transportation as such, independently of the means used. All movement is intended to be covered, which explains the specific mention of transportation by land, water or air. The expression “by water” was preferred to the expression “by sea” used in the initial draft, to emphasize that it concerned not only transportation across the seas or oceans, but also transportation across inland waters, such as rivers and lakes.
- 382** Thus the concept of transportation aims to cover the whole range of transportation: any form of transportation may be medical. However, to qualify as *medical* transportation, it obviously has to fulfil another condition, that of being linked directly or indirectly to the wounded, sick and shipwrecked protected by the Conventions and the Protocol. There is a direct link when the persons being transported are the wounded, sick or shipwrecked themselves, an indirect link when these are medical or religious personnel, or medical equipment and supplies. The terms or expressions “wounded”, “sick” or “shipwrecked”, “medical personnel” and “religious personnel” are defined elsewhere and we will not reconsider this question here. As regards the expression “medical equipment or medical supplies”, this should be interpreted broadly. It includes any equipment and supplies necessary for medical care – particularly surgical equipment – but also heavier equipment (for example, the equipment for an operating theatre or even an entire field hospital), or even, quite simply, medicines themselves.
- 383** It is indeed sufficient that one of these categories of persons, equipment or supplies are transported for it to qualify as medical transportation. On the other hand, it is quite clear that no category of persons, equipment or supplies other than these should be included in the transportation, if it is to retain its status of medical transportation. The transportation of wounded with able-bodied soldiers or the transportation of medical equipment and armaments is not medical transportation in the sense of the Protocol.

Sub-paragraph (g)

- 384** The transportation of specific persons, equipment or supplies, irrespective of the means used, was defined in sub-paragraph (f); the means themselves are defined here. They are defined in a very broad sense. Whether they are designated for civilian or military use is of no importance: like the wounded, sick and shipwrecked, medical transports are considered as such, irrespective of such designation. Moreover, they may be permanent or temporary.³⁸ Finally, this provision covers *any* means of transportation: none is excluded, from the ox-drawn cart to the supersonic jet, or any future means of transportation; the absence of an exhaustive list leaves the field open for the latter.

³⁸ On the exact meaning to be given to these terms, *cf.* commentary sub-para. (k), *infra*, pp. 132-133.

385 However, two conditions have been laid down for any means of transportation to qualify as *medical* transports:

- 1) It must be assigned *exclusively* to medical transportation. In practical terms, this means first of all that the means of transportation must only contain such categories of persons, equipment and supplies as fall under the definition of medical transportation.³⁹ As we saw above, without such a restriction there would not be any medical transportation. However, exclusive assignment also means that a means of transportation may not be used for purposes other than medical transportation, as long as it is assigned to this. Let us examine the example of a medical convoy consisting of trucks ordered to transport the wounded a considerable distance from the front. The trip takes a week and the lodging of the wounded is organized every evening. The trucks could not be said to be assigned exclusively to medical transportation if, during the night, they were used to transport weapons or for other military purposes. However, this is a knotty problem centred on the definition of *temporary* assignment. It will be further considered below with the definition of the terms “permanent” and “temporary”.⁴⁰
- 2) It has to be placed under the control of a competent authority of a Party to the conflict. As the Party to the conflict is responsible for any abuse which could be committed, it is natural, as in the case of medical personnel, that it exercises control over the persons, equipment or supplies which are entitled to bear the protective sign, which is the case for medical transports. For such transports, there is, moreover, a more direct control than for personnel. The Party to the conflict exercises its control not only when it makes the assignment, but it does so constantly. In fact, such transports should be used under the control of a competent authority of the Party to the conflict, i.e., an authority dependent, ultimately, on the highest authority of that country.

Sub-paragraphs (h), (i) and (j)

386 As the transports have been defined, the particular names of these means of transportation by land, by water and by air, i.e., medical vehicles, medical ships and craft and medical aircraft, require very little further commentary.

387 It suffices to note that the expression “medical vehicle” is used here in a wide sense, as it covers all means of transportation by land. For example, railway vehicles may count as medical vehicles, just as motor cars do.

388 Moreover, it should be noted that the expression “medical ships and craft” covers all means of medical transportation by water, and that any means of transportation by water may become a medical transport. This was not the case in the Second Convention, which only protected hospital ships and coastal rescue craft. In the context of the Protocol, merchant ships, for example, assigned for a particular period to medical transportation may enjoy protection, as may barges

³⁹ Cf. commentary sub-para. (f), *supra*, p. 130.

⁴⁰ Cf. commentary sub-para. (k), *infra*, pp. 132-133.

used to transport the wounded on navigable canals outside the context of war at sea.

- 389** Finally, it is appropriate to mention, for the three categories of medical transports, that the fact that a means of transportation comes within the definition of a “medical vehicle”, “medical ships and craft” or “medical aircraft”, does not automatically imply protection. To enjoy protection, such transports must be used in accordance with certain well-established rules (*cf.* Articles 21-31).

Sub-paragraph (k)

- 390** In the Protocol a development can be discerned, when compared with the Conventions, with regard to the protection of permanent and temporary medical personnel and equipment or supplies (in the general sense of anything that is not personnel). As regards medical personnel, there is a tendency to reduce the difference between the protection granted permanent personnel and that granted temporary personnel, and to increase the possibility for all medical personnel to be employed on a temporary basis, while on the other hand, strictly insisting on the obligation of temporary personnel to be exclusively assigned to medical tasks during their assignment. For equipment and supplies the tendency is to be more flexible with regard to accepting their temporary use for medical purposes.

- 391** To be considered permanent, medical personnel, medical units and medical transports must be “assigned exclusively to medical purposes for an indeterminate period”.

- 392** We saw above what was meant by exclusive assignment.⁴¹ However, it is appropriate to note the explanation given by the Drafting Committee of Committee II for using the word “assign”, when the personnel, units and medical transports are permanent and the word “devote” when they are temporary:

“These different words have been chosen in order to make it clear, that the protection of permanent units or personnel starts at the time of the order, assignment or similar act creating the unit or giving a medical task to the personnel. The protection of temporary units or personnel, however, commences only when they have in fact ceased to do other than medical work”.⁴²

- 393** We will not reconsider the expression “medical purposes”, which has already been analysed.⁴³

- 394** On the other hand, it is appropriate to ascertain what is meant by the expression “for an indeterminate period”. This expression was also used in the original ICRC draft. The exact meaning to be given to this expression was not discussed in depth, but it is actually quite clear. It covers persons or objects which can be expected to be assigned definitively to medical purposes. Thus, if a hospital is

⁴¹ *Cf.* commentary sub-para. (c), *supra*, p. 125 and sub-para. (g), *supra*, p. 131.

⁴² *O.R.* XIII, p. 338, CDDH/II/379.

⁴³ *Cf.* commentary sub-para. (e), *supra*, pp. 128-129.

built with operating theatres and all the necessary equipment, this is certainly with a view to using it solely and definitively as a hospital. Similarly, if a soldier is assigned to the medical troops, it is to function in a medical capacity whenever he is called up. Obviously it may happen that a new hospital is built and the old one is converted into a school, or even into an arsenal or a barracks. It is also possible that as a result of a lack of combatants, the army is obliged to change the assignment of medical soldiers and to transfer them to active combat duty. However, this is dependent on unforeseeable elements. If at the outset the idea is to make the assignment of personnel, units or transports to medical purposes definitive (i.e., without imposing any time limit), they are permanent.

- 395 The qualification of the word “temporary” is more delicate. As the Drafting Committee of Committee II explained, as shown above, the protection of temporary personnel begins only when these units have in fact ceased to perform other tasks than medical work. Does this mean that protection ceases the moment they are no longer carrying out a medical task? This would render the protection too uncertain. The criterion to adopt is rather that of the new assignment or use. From the moment that medical personnel or medical objects concerned are devoted or assigned to other purposes, they lose their right to protection. However, the real question to be resolved is that of the minimum time that must be observed for the assignment or use to be termed “exclusive”. There is no doubt that by putting the emphasis on the exclusive character of use, a choice has been made in the Protocol for a certain guarantee. No time limit was fixed, but common sense dictates that to the greatest possible extent, there should be no change in the assignment of medical personnel or medical objects during an operation, as we tried to show above with the example of the medical convoy.⁴⁴ If the medical assignment is too short and changes too often, this could only serve to introduce a generally harmful mistrust regarding the protection of medical personnel and medical objects, particularly as the identification of such personnel and objects will in future be the same as that for permanent medical personnel and objects.
- 396 Nevertheless, it is important not to be dogmatic in this field as the contributory role of temporary medical personnel, sometimes for a very short period of time, may constitute a considerable source of aid. Sometimes it has even happened that soldiers who do not belong to the medical personnel have spontaneously acted as stretcher bearers and were respected while they were carrying out this task. It is therefore essential to find *in practice* an equilibrium between the flexibility necessary to ensure the greatest possible aid for the wounded, and strict rules regarding the exclusive character of medical assignment which is indispensable to the survival of this system of protection, based as it is, on trust.
- 397 The last sentence of the paragraph does not require a great deal of commentary. It explains that the rules of the Protocol relate to medical personnel, medical units and medical transports, irrespective of their permanent or temporary character, unless it is explicitly specified in the rule that only one of these categories is intended.

⁴⁴ Cf. commentary sub-para. (g), *supra*, pp. 130-131.

Sub-paragraph (I)

- 398 There is no real definition of the distinctive emblem in the Conventions. On the other hand, a description is given of “the emblem and distinctive sign of the Medical Service of armed forces” in Article 38 of the First Convention, which is then referred to as “the emblem”, “the distinctive emblem”, “the distinctive emblem of the Convention”, or even “the distinctive emblem conferring the protection of the Convention”. Mention is also made of “the distinctive flag of the Convention” or “the flag of the Convention”.
- 399 In passing, it should be noted that the expression “distinctive sign” is sometimes used to designate a sign which is not that of the red cross, as evidenced by the reference to a “fixed distinctive sign recognizable at a distance”, which should be displayed by members of the militia who do not form part of the armed forces of a Party to the conflict, and other volunteer corps, in order that their wounded and sick members may be covered by the First Convention.⁴⁵
- 400 The advantage of having a simple, clearly defined expression which is thereafter used throughout the Protocol, was soon admitted during the discussions for the formulation of the Protocols.⁴⁶
- 401 Committee II of the CDDH did not waste time on this problem, and with a slight modification of form, it retained the definition proposed in the 1973 draft. The three signs currently recognized in the Conventions and the Protocols, i.e., the red cross, the red crescent and the red lion and sun⁴⁷, displayed on a white ground, are thus covered by the expression “distinctive emblem” as used in the Protocol. Article 18 of the Protocol (*Identification*) also deals with the use of this emblem, while Annex I to the Protocol broaches the technical problems of identification.⁴⁸
- 402 At the Drafting Committee’s suggestion, the Committee nevertheless added a phrase to the definition of the original draft specifying that each of the emblems described is only covered by the expression “distinctive emblem” when “used for the protection of medical units and transports or medical and religious personnel, equipment or supplies”. This addition is justified by the fact that the use of the emblem of the red cross, the red crescent or the red lion and sun is only laid down in the Protocol for the purposes of protection.⁴⁹ The question of the use of the emblem purely as an “indicatory” sign, to indicate that a person or object is linked

⁴⁵ Cf. Art 13, para. 2, of the First Convention.

⁴⁶ The Committee given the task of examining a draft Protocol on the protection of the wounded and sick in international armed conflicts during the Conference of Government Experts in 1971 had already included the “distinctive emblem” among the definitions which it proposed introducing at the beginning of the Protocol.

⁴⁷ On the subject of the emblem of the red lion and sun, cf. moreover *supra*, Editors’ note.

⁴⁸ On this subject, cf. commentary Art. 18, *infra*, p. 221, and commentary Annex I, *infra*, p. 1137.

⁴⁹ However, on this subject, cf. Art. 18, para. 7, *infra*, pp. 233-234.

with the Red Cross institution, without either being able or intending to place it under treaty protection, is not actually broached in the Protocol.⁵⁰

403 In short, when reference is made in the Protocol to the distinctive emblem, this always refers to the use of the emblem for the purposes of protection: the addition made to the definition by Committee II of the CDDH removes any ambiguity in this respect.

Sub-paragraph (m)

404 It had already become clear, even during the first session of the Conference of Government Experts in 1971, that the problem of the security of medical transports could only be resolved by finding solutions adapted to “modern means of marking, pinpointing and identification”.⁵¹ In fact it is no longer possible today to base effective protection solely on a visual distinctive emblem. This inevitable development has led to the adoption of an Annex to the Protocol which introduces light signals which are visible over longer distances than emblems painted in red, and above all, signals which are not solely visual (radio signals, electronic means of identification etc.).

405 It would have been very complicated to have provided precise technical descriptions of the distinctive signals every time they are mentioned in the Protocol. It was therefore considered useful to adopt a definition of the “distinctive signal” which is given in Chapter III of Annex I to the Protocol, which contains these technical descriptions.⁵²

406 Moreover, the definition of the distinctive signal mentions the object of such signals: i.e., of permitting the identification of medical units and transports. In addition, it is specified that such use must be exclusive. This point is essential: the use of signals laid down in Chapter III of Annex I for other purposes would very probably lead to a great mistrust with respect to these signals and this would entail the risk of seriously weakening the system of protection provided for in the Protocol.

Y.S.

⁵⁰ On the subject of the distinction to be made between the emblem used for the purposes of protection and the emblem used as an indicative sign, *cf. Commentary I*, pp. 323 ff. See also the Regulations on the Use of the Emblem of the Red Cross (Red Crescent and Red Lion and Sun) by National Societies, adopted by Resolution XXXII of the XXth International Conference of the Red Cross (Vienna, 1965).

⁵² On this subject, *cf. commentary Annex I, infra*, pp. 1185-1255.

Protocol I

Article 9 – Field of application

1. This Part, the provisions of which are intended to ameliorate the condition of the wounded, sick and shipwrecked, shall apply to all those affected by a situation referred to in Article 1, without any adverse distinction founded on race, colour, sex, language, religion or belief, political or other opinion, national or social origin, wealth, birth or other status, or on any other similar criteria.
2. The relevant provisions of Articles 27 and 32 of the First Convention shall apply to permanent medical units and transports (other than hospital ships, to which Article 25 of the Second Convention applies) and their personnel made available to a Party to the conflict for humanitarian purposes:
 - (a) by a neutral or other State which is not a Party to that conflict;
 - (b) by a recognized and authorized aid society of such a State;
 - (c) by an impartial international humanitarian organization.

Commentary

General remarks

- 407 In 1972, during the debates of the second session of the Conference of Government Experts, Committee I of this Conference, which was dealing with Part II, decided to add an article to the ICRC draft which extended the scope of Article 27 of the First Convention to medical aircraft.
- 408 As this extension concerned only Part II of the draft, the ICRC considered that it was necessary to insert an article concerning the scope of this Part only, right at the beginning (the specific scope of Part IV also in fact being defined at the beginning of that Part). This article, entitled “Field of application”, follows immediately upon the article devoted to the definitions at the beginning of Part II of the draft presented to the CDDH, where it becomes Article 9.
- 409 It was again debated at length by Committee II during the CDDH. The result of these debates included in particular the extension of the field of application mentioned in paragraph 1, which was considered to be too restrictive in the draft, and the amalgamation of paragraphs 2 and 3 of the draft into a single paragraph.

Paragraph 1

- 410 Although the article is simply entitled “Field of application”, the purpose is also mentioned in passing.
- 411 Thus there is no doubt that the essential objective of the whole Part is certainly the protection of the wounded, sick and shipwrecked. This is stated unequivocally at the beginning of paragraph 1.
- 412 On the other hand, it seemed too restrictive to limit the application of this Part to the wounded, sick and shipwrecked, and to medical personnel, units and transports. Even if this is not the principal objective, Part II does actually concern persons who are not included in these categories. Article 11 (*Protection of persons*) in particular, as noted at the time when Article 9 was presented, also deals with “persons in good health, prisoners of war and civilians”.¹
- 413 Then, *ratione loci*, it was noted during the CDDH discussions that it was too restrictive to limit the field of application of Part II only to the territory of the Parties to the conflict (the Protocol also being applicable on the high seas, in particular, and in disputed territory). It was therefore decided to delete any reference to application *ratione loci*, because it was considered that the application *ratione personae* in itself determined the field of application of the Protocol in a sufficiently clear manner. For reasons given in the preceding paragraph it was clearly not possible to exclude from this field of application any of the persons covered by the Protocol as a whole. As a result the field of application of Part II could be determined simply by referring to Article 1 of the

¹ O.R. XI, p. 55, CDDH/II/SR.7, para. 42.

Protocol (*General principles and scope of application*), and this solution was finally adopted. Some wondered whether it was necessary to retain this paragraph, which, they considered, did not provide any additional clarity. The precise definition of the field of application *ratione personae* (which is not given in Article 1 – *General principles and scope of application*), the reference to the purpose of Part II and the general balance of the article, from which paragraph 2 could not be omitted, justified the fact that it was retained.

414 According to Article 9, paragraph 1, Part II therefore applies “to all those affected by a situation referred to in Article 1”.²

415 The expression “all those who are affected by a situation referred to in Article 1” is, however, insufficiently precise to determine exactly the field of application *ratione personae* of Part II. Only an examination, article by article, of the whole of this Part, makes it possible to provide a more precise list of the persons to whom it applies in various circumstances. We will not attempt to draw up this list here, as it is of virtually no interest in that the scope of the provisions varies considerably, depending on the categories of persons concerned. Thus it is with regard to each one of these provisions that we will examine, whenever necessary, which categories of persons are covered.

416 Furthermore, it is significant that paragraph 1 does not mention the application of Part II to material elements such as medical units or transports. We will also examine these various material elements in the context of the provisions which directly concern them.

417 Finally, paragraph 1 of Article 9 refers to a fundamental principle of application which applies not only to Part II, but to all the Conventions and Protocols, namely, the fact that this Part applies to persons concerned *without any adverse distinction*. This principle was already formulated in each of the four Conventions,³ and it is also referred to in the fifth paragraph of the Preamble of the Protocol. It means that not all distinctions are prohibited, but only those designed to prejudice certain persons or categories of persons. Thus it is not contrary to the principle to give more care to seriously wounded persons, special food to persons whose state of health requires this, or an extra blanket to persons staying in particularly cold premises, or even to persons who are less able to tolerate the cold than others, for example, as a consequence of their place of origin. On the other hand, it is obviously incompatible with this principle to refuse a blanket, to reduce food rations, or to disadvantage any persons or categories of persons in any way solely because they belong to a particular race or practise a particular religion. In fact, a list is provided of the criteria on which no adverse distinction should be based. However, the list is not exhaustive, as it concludes: “or on any other similar criteria”. The criteria mentioned in this list include those which were mentioned in the Conventions,⁴ and a few others are added. As the debate on this list took place at the time of the discussion of the

² With regard to what exactly constitutes “a situation referred to in Article 1”, *cf.* commentary Art. 1, paras. 3 and 4, *supra*, pp. 39-56, and with regard to the persons “affected” by such a situation, *cf.* commentary Art. 75, para. 1, *infra*, p. 866.

³ *Cf.* in particular on this subject *Commentary I*, pp. 137 ff.

⁴ *Cf.* Art. 12, First and Second Conventions; Art. 16, Third Convention and Art. 13, Fourth Convention.

present Article 75 (*Fundamental guarantees*) by Committee III, this question is further dealt with in the commentary on Article 75.⁵

- 418 Furthermore, it is appropriate to underline the fact that on the basis of these criteria, it is only adverse distinctions that are prohibited and that accordingly certain fundamental distinctions may not be incompatible with the principle, such as, for example, the distribution of Korans to Muslims or Bibles to Christians. However, there is a need for considerable caution. Any distinction should always have a humanitarian and rational cause.

Paragraph 2

- 419 According to the First Convention, recognized organizations of neutral countries can make their medical personnel and units available to the Parties to the conflict in accordance with the procedure and rules laid down in Article 27 of this Convention. The aim of paragraph 2 is to extend this possibility to two other categories.
- 420 Reference was simply made in the draft to the “provisions of Article 27”, but in Article 9, paragraph 2, there is a mention of the *relevant* provisions. This amendment can be justified for a number of reasons.
- 421 The first relate to terminology. The terms “medical establishment and medical unit” have been replaced in the Protocols by the expression “medical unit”,⁶ while the expression “neutral State” has been replaced by the expression “neutral or other State not a Party to the conflict”.⁷
- 422 Finally, in the French original text, the expression “adverse Party” is used with a lower case letter in the Conventions but with an upper case letter in the Protocol.
- 423 However, there is also a substantive reason. In the Conventions there is a mention of “the State” which accepts the assistance of the aid society while the Protocol also considers entities which are not States as being possible Parties to the conflict.⁸ The reference to the *relevant* provisions of Articles 27 and 32 of the First Convention makes it possible to overcome this difference and to read the articles of the Conventions to which reference is made, within the meaning of the Protocol. Furthermore it is clear that, at any rate for the States which are Parties to the Protocol, Article 27 of the First Convention will itself apply to the Parties to the conflict within the meaning of the Protocol, and not only to States, even if the text of the Protocol may seem to indicate the contrary. Even though the Conventions have not been formally revised, the Protocol has modified the whole system on certain points.
- 424 On the other hand, it should be noted that the draft referred only to Article 27 of the First Convention, but Committee II of the CDDH quite logically decided to add a reference to Article 32 of this Convention, which deals with the fate of persons covered by Article 27 if they fall into the hands of an adverse Party.

⁵ Cf. *infra*, p. 870. See also commentary Art. 2 of Protocol II, *infra*, p. 1358.

⁶ In this respect, cf. commentary Art. 8, sub-para. (e), *supra*, pp. 128-129.

⁷ In this respect, cf. commentary Art. 2, sub-para. (c), *supra*, p. 61.

⁸ In this respect, cf. commentary Art. 1, para. 4, *supra*, pp. 41-56.

- 425 Now let us read Article 9, paragraph 2, of the Protocol, in conjunction with Articles 27 and 32 of the First Convention in order to understand exactly what the Protocol adds here.
- 426 According to the First Convention, “medical personnel and units”, and according to the Protocol, “permanent medical units and transports [...] and their personnel”, can be made available to the Parties to the conflict.
- 427 The medical units mentioned in the Conventions now apply to both mobile medical units and to the means of transport referred to in the Protocols: thus it is quite clear, on the one hand, that only *mobile* medical units can be made available because it is essential that they can be transported, while on the other hand, the expression “medical units” in the Conventions covers the means of medical transport, these transports being by definition, mobile medical services.⁹ The insertion of the term “permanent” in the Protocol does not, moreover, constitute a restriction compared with the Conventions. The latter only use the concepts “permanent” and “temporary” with regard to medical personnel, but not with regard to equipment. However, it is clear that it would be contrary to the Conventions to use the medical units lent by a national aid society for purposes other than medical purposes. Thus units which are exclusively destined for medical purposes during the entire period of their use in the conflict meet the qualification “permanent” as understood in the Protocol.¹⁰ Finally, the question of hospital ships used by societies or private persons of neutral or other States not Parties to the conflict is dealt with elsewhere in the Conventions,¹¹ and has not been included in the Protocol as is expressly mentioned in the brackets in this paragraph.
- 428 On the other hand, the text of the Protocol is slightly more restrictive than that of the First Convention with regard to the personnel that may be made available. In fact the Convention permits the authorized society to give the assistance of its personnel independently from that of its medical units, while the Protocol only envisages making available the personnel attached to medical units and transports which have themselves been put at the disposal of one of the Parties to the conflict. However, this restriction will obviously not apply to the societies authorized by Article 27 of the First Convention, which retain the possibility of sending medical personnel independently of sending medical units or transports; this follows from this article and the conditions which it lays down. Moreover, the commentary to the initial draft of this article,¹² which has not been changed on this point, indicates that there was no intention of being more restrictive than the Conventions were, and one can hope that as a result some flexibility will be retained in practice.
- 429 However, as has been shown, the purpose of paragraph 2 is to extend to other categories than the recognized societies of neutral or other States not Parties to the conflict the possibility of making available to the Parties to the conflict medical personnel, units and transports. According to the Protocol, the following categories may be so authorized:

⁹ *Commentary I*, p. 280.

¹⁰ With regard to this definition, cf. commentary Art. 8, sub-para. (k), *supra*, pp. 132-133.

¹¹ In Art. 25 of the Second Convention.

¹² Cf. commentary Art. 9, paras. 2 and 3, of the Draft, *Commentary Drafts*, p. 20.

1. *Neutral and other States not Parties to the conflict*

430 This permits the States themselves to take the initiative with regard to making available the personnel and equipment in question, obviously to the extent that they are not Parties to the conflict.

431 The following conditions are imposed on this:

- a) authorization by the Party to the conflict concerned (Article 27, First Convention);
- b) notification of this consent to the adverse Party of the Party mentioned under a);
- c) supplying the medical personnel with identification, as laid down in Article 40 of the First Convention, as supplemented by Articles 1 and 2 of Annex I to the Protocol;
- d) control of the Party to the conflict concerned over the personnel and equipment put at its disposal;
- e) notification by the Party to the conflict concerned to the adverse Party, of any use made of this personnel and equipment, prior to their use.

432 The condition laid down in Article 27 regarding the consent of the government of the State on which the aid society depends is obviously irrelevant as the present initiative is taken by the State itself.

2. *The recognized and authorized aid societies of the States mentioned under point 1*

433 This concerns the category already covered by Article 27 of the First Convention. Admittedly this article did not mention *aid* societies, but as the commentary on Article 27 reveals, the societies referred to are the same as those mentioned in Article 26, namely, the National Red Cross, Red Crescent and Red Lion and Sun Societies, as well as the other voluntary aid societies.¹³ In practice, this “will always, or nearly always, be a society which has already been authorized to assist the Medical Service of its own armed forces”.¹⁴

434 Conditions a) to e) enumerated above under point 1 have also to be fulfilled by the societies concerned, with the additional condition of having the consent of their own government as mentioned explicitly in Article 27 of the First Convention, and repeated in Article 9, paragraph 2, of the Protocol, to ensure that the societies are “authorized”.

¹³ Cf. *Commentary I*, p. 230 and p. 232, para. 3.

¹⁴ *Ibid.*, p. 230.

3. *The impartial international humanitarian organizations*

- 435 The 1973 draft referred to organizations with an international character in a broader sense. It adopted a suggestion made during the Conference of Government Experts which, in accordance with the author's intention, was to have permitted international airlines in particular to make aircraft available for the purposes of medical transportation.¹⁵
- 436 Following a proposal of its Drafting Committee, Committee II added two supplementary characteristics required of the organizations concerned, viz., their impartiality and their humanitarian character.
- 437 This reference to impartial international humanitarian organizations, which can be either governmental or non-governmental organizations, amounts to an open invitation, though it is not currently possible to designate the organizations which comply with the required criteria and are ready to make medical personnel, units and transport available.
- 438 The conditions required of the international organization are the conditions listed under a) to e) above, with regard to point 1. The consent of the government of the country where the organization is established is irrelevant here as it is an international organization. On the other hand, it must comply with the two characteristics mentioned in the Protocol: i.e., it must be impartial and have a humanitarian character.
- 439 An organization can be described as being "impartial" when it "fulfils the qualifications of being genuinely impartial".¹⁶ This implies that it observes the principle of non-discrimination in its activities and, when providing medical aid as laid down in Article 9, does not make

"any adverse distinction founded on race, colour, sex, language, religion or belief, political or other opinion, national or social origin, wealth, birth or other status, or any other similar criteria".

In other words, the organization must respect the principle of impartiality, which is one of the fundamental principles of the Red Cross.

- 440 With regard to the organization's "humanitarian character", it is necessary first of all that its activities in the context of the armed conflict retain a purely humanitarian character. However, it is equally essential that the organization *itself* has a humanitarian character, and as such, follows only humanitarian aims. This restriction excludes organizations with a political or commercial character. Nevertheless, it is not possible to designate precisely all the organizations covered by the definition,¹⁷ and it will be necessary to examine every case independently.

Y.S.

¹⁵ Cf. O.R. XII, p. 224, CDD/II/SR.75, para. 42.

¹⁶ In this respect, see O.R. VI, p. 68, CDDH/II/SR.37, para. 22.

¹⁷ Cf. Art. 10/10/10/11 common to the four Conventions. Besides, on the meaning of this expression, cf. *Commentary I*, pp. 118 and 109-110.

Article 10 – Protection and care

1. All the wounded, sick and shipwrecked, to whichever Party they belong, shall be respected and protected.
2. In all circumstances they shall be treated humanely and shall receive, to the fullest extent practicable and with the least possible delay, the medical care and attention required by their condition. There shall be no distinction among them founded on any grounds other than medical ones.

Commentary

General remarks

- 441 The final version of the text of Article 10 that was adopted is close to the first draft.
- 442 The proposal to add shipwrecked persons to those persons already covered by the article was adopted. On the other hand, the proposal discussed above with

regard to Article 8 (*Terminology*)¹ to treat persons who are in a dangerous situation on land, in a hostile environment, particularly the jungle or the desert, in the same way as the shipwrecked, was not finally adopted. Similarly, the proposal to add two paragraphs relating to the search, accommodation and exchange of the wounded, sick, shipwrecked and dead, was rejected, as many delegates considered that these matters were sufficiently provided for in the Conventions. However, it is worthy of note that they were included in Articles 32-34, though only to a very limited extent.

443 The question of the consent required from the patient to any surgical intervention was the subject of an amendment which was discussed, though it was finally dealt with under Article 11 (*Protection of persons*), paragraph 5.

Paragraph 1

444 This paragraph repeats one of the fundamental principles of international humanitarian law applicable in cases of armed conflict. It was not absolutely necessary to mention this in the context of the Protocol as, clearly, it is already prominently stated in the Conventions.² The reason for nonetheless repeating the principle was to clearly emphasize its importance, for almost all the obligations arising from Part II follow from it and the protection granted to medical personnel is justified only by reference to this principle. Thus the repetition of this principle at the beginning of this Part was indispensable for its harmonious structure, particularly as the Protocol covers all wounded, sick and shipwrecked persons, with no distinction between military and civilian persons.

445 In the context of an international armed conflict this paragraph concerns all the wounded, sick and shipwrecked in the sense given to these terms in the Protocol.³ Committee II considered that it was appropriate to add the expression “to whichever Party they belong” to the text of the 1973 draft in order to emphasize this point. In this way it is clearly stated that every Party to the conflict must respect and protect its own wounded, sick and shipwrecked – which may seem self-evident, though it is perhaps a useful reminder – and above all, that the wounded, sick and shipwrecked of the adverse Party are entitled to the same treatment. As we well know, this element of respect and protection of persons in the power of the enemy is certainly one of the essential characteristics of international humanitarian law.

446 The concepts of “respect” and “protection” are taken from the Conventions. The first concept was introduced as far back as the 1906 revision, the second at the time of the 1929 revision. *Respect* means “to spare, not to attack”, while *protect* means “to come to someone’s defence, to lend help and support”. Thus it is prohibited to attack the wounded, sick or shipwrecked, to kill them, maltreat them or injure them in any way, and there is also an obligation to come to their rescue.⁴

¹ Cf. commentary Art. 8, sub-para. (b), *supra*, p. 118.

² Art. 12, First and Second Conventions; Art. 16, para. 1, Fourth Convention.

³ On this subject, cf. commentary Art. 8, sub-paras. (a) and (b), *supra*, pp. 116-124.

⁴ On the subject of these ideas, see also *Commentary I*, pp. 134-135.

Paragraph 2

447 The principle introduced in the first sentence of this paragraph regarding the humane treatment of the wounded, sick and shipwrecked, is also taken from the Conventions.⁵

448 As stated in the Commentary to the First Convention:

“It is not sufficient to respect the wounded. They require *care*. If a soldier who is *hors de combat* is respected and protected against injury of any kind, but is at the same time left to struggle alone against the effects of his wound or his sickness, he runs a great risk of succumbing. There is therefore a positive, as well as a negative, obligation: the wounded and sick must be given such care as their condition requires. This fundamental principle has remained unchanged since 1864.”⁶

449 Moreover, humane treatment does not refer only to medical treatment, but applies “to all aspects of a man’s existence”.⁷ It is required under *all circumstances* from the moment that one comes across a wounded, sick or shipwrecked person.

450 In practice, this requirement of humane treatment will generally be observed after the requirement for respect and protection. The latter requirement should already be taken into account during the battle, but only afterwards when it is possible to come and take care of the wounded, can they be treated humanely and cared for.

451 The second stipulation was added by Committee II from a concern for the reality of the situation. The care required by the condition of the wounded, sick and shipwrecked shall be given them *to the fullest extent practicable*. This is again an expression of the maxim “no one is expected to do the impossible”, and one might say that this addition to the text of the first draft was already implicit in it. It is obvious that some wounded or sick persons could be saved, or at any rate be better cared for, in the clinics of wealthy countries which have the most advanced resources at their disposal. However, the requirement imposed here relates to the material possibilities existing in the place and at the time that the wounded person is cared for. What is required is that everyone does his utmost. If, because there is no doctor, an orderly is left to care for the wounded on his own, he must do so to the best of his ability. If there is no well-equipped clinic and the wounded must be cared for in an antiquated hospital, an attempt should nevertheless be made to use it to the maximum of its capacity.

452 An additional requirement is imposed with regard to the performance of these duties vis-à-vis the wounded, sick and shipwrecked in the second sentence of paragraph 2: *There shall be no distinction among them founded on any grounds other than medical ones*.

⁵ Cf. Art 12, para. 2, First and Second Conventions.

⁶ *Commentary I*, pp. 136-137.

⁷ *Ibid.*, p. 137.

- 453** Article 12 of the First and Second Conventions contains a non-exhaustive list of the discriminatory criteria which cannot be applied with regard to the victims. As we have seen, this list was adopted and developed in Article 9 (*Field of application*), paragraph 1, which determines the field of application *ratione personae* of Part II. The principle laid down there applies to the Part as a whole and there was no need to repeat it in Article 10. Thus the sentence which was finally included was not indispensable. Nevertheless it is useful, as it emphasizes a particular application of the principle which was stated in different words in Article 12, paragraph 3, of the First and Second Conventions: “Only urgent medical reasons will authorize priority in the order of treatment to be administered”. This is a reminder to the personnel taking care of the wounded that they shall ignore the nationality or uniform of the person they are taking care of. The only reason for treating one patient before another shall be because his wounds require more urgent care, independently of any non-medical considerations.
- 454** On the other hand, neither the Conventions nor the Protocols specify which medical criteria should be observed. For example, should an overburdened doctor launch into a long and hazardous operation on an extremely seriously wounded patient, or should he “sacrifice” this patient for the benefit of other patients whose chances of survival are better? It is above all medical ethics and the doctor’s own conscience which must provide the answer to such a question.⁸

Y.S.

⁸ On the subject of medical ethics, *cf.* commentary Art. 16, para. 1, *infra*, pp. 200-202.

Protocol I

Article 11 – Protection of persons

1. The physical or mental health and integrity of persons who are in the power of the adverse Party or who are interned, detained or otherwise deprived of liberty as a result of a situation referred to in Article 1 shall not be endangered by any unjustified act or omission. Accordingly, it is prohibited to subject the persons described in this Article to any medical procedure which is not indicated by the state of health of the person concerned and which is not consistent with generally accepted medical standards which would be applied under similar medical circumstances to persons who are nationals of the Party conducting the procedure and who are in no way deprived of liberty.
2. It is, in particular, prohibited to carry out on such persons, even with their consent:
 - (a) physical mutilations;
 - (b) medical or scientific experiments;
 - (c) removal of tissue or organs for transplantation,except where these acts are justified in conformity with the conditions provided for in paragraph 1.
3. Exceptions to the prohibition in paragraph 2 (c) may be made only in the case of donations of blood for transfusion or of skin for grafting, provided that they are given voluntarily and without any coercion or inducement, and then only for therapeutic purposes, under conditions consistent with generally accepted medical standards and controls designed for the benefit of both the donor and the recipient.
4. Any wilful act or omission which seriously endangers the physical or mental health or integrity of any person who is in the power of a Party other than the one on which he depends and which either violates any of the prohibitions in paragraphs 1 and 2 or fails to comply with the requirements of paragraph 3 shall be a grave breach of this Protocol.
5. The persons described in paragraph 1 have the right to refuse any surgical operation. In case of refusal, medical personnel shall endeavour to obtain a written statement to that effect, signed or acknowledged by the patient.
6. Each Party to the conflict shall keep a medical record for every donation of blood for transfusion or skin for grafting by persons referred to in paragraph 1, if that donation is made under the responsibility of that Party. In addition, each Party to the conflict shall endeavour to keep a record of all medical procedures undertaken with respect to any person who is interned, detained or otherwise deprived of liberty as a result of a situation referred to in Article 1. These records shall be available at all times for inspection by the Protecting Power.

Commentary

General remarks

- 455 The foremost aim of draft Article 11 was to clarify and develop the protection of persons protected by the Conventions and the Protocol against medical procedures not indicated by their state of health, and particularly against unlawful medical experiments.¹
- 456 This aim is certainly achieved by the article as it was finally adopted. However, numerous modifications or nuances were incorporated in the original draft and various elements were added. The most important modification concerns the categories of persons covered by the article. As regards the additions, these are mainly concerned with the possible derogations from explicit prohibitions on

¹ *Cf.* Art. 12, para. 2, First and Second Conventions; Art. 13, para. 1, Third Convention; Art. 32, Fourth Convention.

particular acts, the breaches of the rules formulated at the beginning of the article, the possibility of refusing surgical operations and the keeping of medical records. We will examine these rules in greater detail in the analysis of each paragraph.

- 457 Nevertheless, it is appropriate to point out a more general question which was raised in Committee II, i.e., the place of this article. Some considered that it would be more logical to place it in Section III of Part IV of the Protocol, entitled “Treatment of persons in the power of a Party to the conflict”. In fact, the similarity between Article 11 and Article 75 (*Fundamental guarantees*), which is in Part IV, Section III, cannot be denied. Article 75 (*Fundamental guarantees*) covers “persons who are in the power of a Party to the conflict and who do not benefit from more favourable treatment under the Conventions or under this Protocol”, and “in so far as they are affected by a situation referred to in Article 1 of this Protocol”.
- 458 The connection with a situation referred to in Article 1 of the Protocol (*General principles and scope of application*)² exists for both articles.
- 459 Furthermore, certain persons covered by Article 11 are also covered by Article 75 (*Fundamental guarantees*), and although the latter endeavours to cover fundamental guarantees as a whole, and not merely guarantees relating to medical abuses, these are included. To some extent the field of application *ratione personae* of the two articles thus overlap, and the field of application *ratione materiae* also seems to do so. Thus, for example, the question of mutilation, which a Party to the conflict is prohibited from committing, even on its own nationals who are detained for a reason related to the conflict, seems to fall under Article 11, as well as Article 75 (*Fundamental guarantees*). However, we have deliberately used the word “seems”, as there is a difficulty here which did not go unnoticed by the authors of the Protocol. Paragraph 1 of Article 75 (*Fundamental guarantees*) indicates that the provisions of this article apply only to persons covered by it to the extent that they “do not benefit from more favourable treatment under the Conventions or under this Protocol”. With regard to the persons covered by the two articles, it is therefore the provisions of Article 11 which apply to the matters dealt with by that article, while the provisions of Article 75 (*Fundamental guarantees*) relating to other matters also apply to them.³
- 460 However, there are basically two reasons why Article 11 was finally retained in Part II, viz.:
- a) this article concerns, above all, as regards the rights which it grants, the wounded, sick and shipwrecked, both civilian and military, who are protected by Part II as a whole;
 - b) the obligations which it lays down are primarily addressed to medical personnel whose rights and duties are also essentially defined in Part II.

² With regard to this expression, *cf. infra.*, pp. 153-154.

³ On this subject, *cf. also* commentary Art. 75, para. 1, *infra*, pp. 866-869.

Paragraph 1*First sentence*

- 461 This sentence expresses the principle of the article and determines the persons to whom this principle applies in the context of the Protocol.
- 462 First of all, health and integrity must not be endangered. Physical health is endangered, for example, if a wound is allowed to become infected through lack of hygiene or care, or because there is no medication, whether this is because of a harmful intention or gross negligence in the light of the local conditions and circumstances. Endangering physical integrity could be, for example, the amputation of an arm for no reason, or allowing a wound to become infected to the point where amputation becomes necessary. Thus these two elements – health and integrity – are often related, though this is not necessarily always the case. Matters affecting health may not be dangerous to a person's integrity, and experimental surgical operations can be performed with all possible precautions to ensure that the health of the patient undergoing the operation is not affected. This is why it is important to prohibit endangering both of these elements.
- 463 In addition, it is also prohibited to endanger mental health and integrity. This refers to medical experiments which affect the mental equilibrium of persons subjected to them, as well as, for example, the practice of leaving a person in complete isolation for a very long period of time. In addition, mental health and integrity can be particularly endangered by the practice known as "brainwashing", i.e., the massive injection of propaganda by more or less scientific means. Here too, mental health and mental integrity generally go together, although this is not always the case, and the prohibition on endangering both makes any loopholes impossible.
- 464 The original draft referred to acts and omissions "harmful to the health or to the physical or mental well-being". The article, as it is now, goes further when it states that health and integrity *shall not be endangered*. Indeed, it is possible to endanger health, for example, by leaving a contagious patient together with another detainee, without this necessarily having any effect.⁴
- 465 Moreover, the text refers to acts or omissions. The traditional term used in continental criminal law is "acts of commission or omission".
- 466 In fact, it is just as possible to endanger a person's health or integrity, for example, by removing an organ unnecessarily, as by depriving him of food or drink, or leaving unattended a wound which is becoming infected. Moreover, an omission may be voluntary (intent to harm his health), or be the result of gross negligence (failure to take care of persons for whom one is responsible).
- 467 These acts or omissions which endanger health or integrity must be *unjustified*. This term was discussed in Committee II, and some delegations requested that it be deleted. The reason that it was finally retained was that some justified acts or omissions can in fact endanger health. This is the case in particular when a doctor decides to operate in an almost hopeless case. This operation may result in the patient dying even sooner, but it may also save his life. It is impossible to exclude

⁴ On this subject, *cf.* also *infra*, p. 159 and note 16.

such a risk in all cases, and it did not seem wise to paralyse doctors' actions by an excessively strict provision on this point. Moreover, it should be noted that the act or omission must obviously be "justified" on medical and ethical grounds, with two exceptions: this article is not intended to prevent the execution of persons who have been lawfully condemned to death, and the omission of a surgical operation which is justified by the refusal of the person who has to undergo this operation.⁵

468 Secondly, this first sentence defines the persons covered by the application of the principle in the context of the Protocol. These are primarily all persons in the power of the adverse Party, i.e., prisoners of war, civilian internees, persons who have been refused authorization to leave the territory of this adverse Party, and even all persons belonging to a Party to the conflict who simply find themselves in the territory of the adverse Party. The term "territory of the adverse Party" is used here to mean the territory in which this Party exercises public authority *de facto*. However, enemy aliens need not necessarily have anything to do directly with the authorities: the simple fact of being in the territory of the adverse Party, as defined above, implies that one is "in the power" of the latter. In other words, as specified in the commentary on the Fourth Convention, the expression "in the power" should not necessarily be taken in the literal sense; it simply signifies that the person is in the territory under control of the Power in question.⁶ Finally, the inhabitants of territory occupied by the adverse Party are also in the power of this adverse Party.

469 Moreover, other persons are also covered by the article: persons "interned, detained or otherwise deprived of liberty as a result of a situation referred to in Article 1". Thus these are persons who do not come under the authority of the adverse Party. In fact, as we have just seen, the latter (i.e., those who are subject to the authority of the adverse Party) benefit from a very wide protection because of the broad concept covered by the expression "in the power". Obviously such a wide protection was not justified for others: for example, there is no reason to protect *a priori* a national of a State not Party to the conflict⁷ who is in the territory of a Party to the conflict. On the other hand, it seemed appropriate to protect any person from the moment his freedom of movement is denied because of hostilities or, more specifically, because of a situation referred to in Article 1 of the Protocol (*General principles and scope of application*).

470 Apart from the nationals of the adverse Party, all persons in territory controlled by a Party to the conflict may therefore be covered. Obviously the article is primarily concerned with persons protected *stricto sensu* by the Conventions and the Protocol, but it is also concerned with persons who are not, viz.:

- nationals of neutral States or other States not Parties to the conflict which have normal diplomatic relations with this Party to the conflict, who are in the territory of the latter (in occupied territory they are protected persons in the sense of the Fourth Convention);

⁵ On this subject, *cf.* commentary para. 5, *infra.*, pp. 160-161.

⁶ *Commentary IV*, p. 47; *cf.* also commentary Art. 75, para. 1, *infra*, p. 866.

⁷ On the exact meaning of the expression "neutral or other States not Parties to the conflict", *cf.* commentary Art. 2, sub-para. (c), *supra*, p. 61. For the purpose of simplification, we refer here to "States not Parties to the conflict".

- nationals of a co-belligerent State;
- persons who have become refugees after the outbreak of hostilities;⁸
- nationals of States not Parties to the Protocol (whether or not these States are engaged in the conflict);
- the nationals of the Party to the conflict.

However, all these persons are covered only if two conditions are met:

- a) they have been deprived of liberty in one way or another, whether they are detained in prison, hospital or any other place, interned in a camp or even simply confined to a designated residence;
- b) they are deprived of liberty as a result of a situation described in Article 1. The draft stated more simply: “as a result of hostilities”. However, it was justifiably noted that the Conventions and the Protocol also apply in cases of occupation where there is no military resistance (*cf.* Article 2, paragraph 2, common to the four Conventions). The formula which was finally adopted removes any ambiguity by referring to Article 1 (*General principles and scope of application*), which defines the situations in which the Protocol applies, and which in turn refers to Article 2 of the Conventions.⁹

471 However, it is also necessary to define the relationship which must exist between the persons concerned and such a situation, since these persons must be deprived of liberty *as a result* of such a situation.¹⁰

472 Finally, it should be noted that the principle laid down in Article 11 is quite generally accepted, even outside armed conflict, in the context of human rights. However, it is not immaterial whether or not a person is covered by the Protocol, as the system of supervision and of sanctions is more strict than with regard to the rules for the protection of human rights.

Second sentence

473 As mentioned above, Article 11 is basically aimed at preventing medical procedures not indicated by the state of health of the persons concerned. The principle laid down in the first sentence goes beyond the context of medical procedures. For example, the fact that a prison warden deprives detainees of food cannot be considered to be a medical procedure; though the principle covers such acts or omissions. However, in the second sentence of paragraph 1 the concern which is at the root of the article is revealed again, and as a result of the general principle contained in the first sentence, is applied to medical procedures.

474 A medical procedure must be understood to mean any procedure which has the purpose of influencing the state of health of the person undergoing it. Obviously this refers to any surgical operation, but it also covers medication or even diets or courses of treatment prescribed for medical reasons. If a negligent warden fails

⁸ On this subject, *cf.* Art. 73. It is to be noted in this respect that stateless persons, even if they were not considered as such until after the commencement of hostilities, are protected by Article 4, para. 1, of the Fourth Convention. *Cf.* commentary Art. 73, *infra*, p. 845.

⁹ *Cf.* commentary Art. 1, paras. 3 and 4, *supra*, pp. 39-56.

¹⁰ On this subject, *cf.* commentary Art. 75, para. 1, *infra*, pp. 866-867.

to provide adequate food for the detainees for whom he is responsible, this could not be considered as a medical procedure. On the other hand, a doctor who prescribes a diet is certainly performing a medical procedure. The French text uses the word “acte”, which, however, must not be given a more restricted meaning than the broader term “procedure” used in the English text.

475 In order to be authorized, a medical procedure must fulfil two (cumulative) conditions:

- a) It must be indicated by the state of health of the person concerned. If this condition had been laid down outside the context of the article, and in particular without being accompanied by a second condition, it would have been inadequate and could even have justified the worst forms of abuse: it is conceivable that a tyrannical régime would seek to justify the physical elimination of the chronically sick or mentally retarded with arguments relating to the state of health of the persons concerned. However, there is no room for doubt here. The reason for a medical procedure must be the improvement of the state of health of the person concerned: this is obviously a humanitarian perspective. Thus this reason may be either to improve the health of the person to whom the procedure is applied, or to relieve his suffering. As health also covers physical well-being, it can be argued that the relief of suffering amounts to a short-term improvement in health. Obviously a knotty problem would arise if this short-term improvement is at the expense of the patient’s health in the long term. This problem becomes even more acute in cases of active or passive euthanasia aimed at terminating the intolerable suffering of persons whose death is inevitable. The condition laid down here is certainly not aimed at answering this type of problem which belongs to medical ethics. It is limited to prohibiting medical procedures which are not performed for the benefit of the person concerned. The medical norms mentioned under the second condition must provide the answers to such questions.
- b) Secondly, the medical procedure must be consistent with generally accepted medical standards which the Party responsible for the procedure would apply under similar medical circumstances to its own nationals who are at liberty. This second condition contains a universal element – generally recognized medical standards – tempered by an element related to local medical conditions.

476 Unfortunately “generally accepted medical standards” have not been assembled in a universally adopted international instrument, and it is certainly beyond the scope of this commentary to attempt to list these standards. At most it is possible to mention certain instruments which give some indications of this matter.¹¹ However, it is clear that some standards are undeniable, such as that

¹¹ In this respect we refer in particular to the *Declaration of Geneva* (modern version of the Hippocratic Oath) (1948), the *International code of medical ethics* (1949), the *Rules of medical ethics in time of war* (1962) and the *Rules to ensure aid and care for the wounded and sick, particularly in time of armed conflict* (1962). All these instruments were adopted by the World Medical Association, the latter two jointly with the International Committee of Military Medicine and Pharmacy and the ICRC. For a thorough study of this question and accompanying bibliography, cf. in particular, M. Torrelli, *Le Médecin et les droits de l’homme*, Paris, 1983.

expressed above, which requires that medical procedures are performed in the interests of the patient. Thus, although the reference to generally accepted medical standards is insufficient to precisely define the field which it covers, it does allow for certain lines to be drawn. There is no doubt that there are “minimum standards”, though it is certainly necessary to define these better. The humanitarian perspective from which we must consider the state of health of a person on whom a medical procedure is performed, as in the case quoted above, is a good example.

477 However, there are also norms which, even though they are generally accepted, cannot be universally applied, because of insufficient means. This applies, for example, to the norms concerning the minimum medical environment for a given population, or the training of medical personnel. It would be pointless to ignore reality and require the strict application of standards by impecunious States which cannot observe such standards in peacetime with regard to their own population. Thus the criterion which has been used is the following: the medical personnel of a Party to the conflict must treat the persons referred to in this article in accordance with the criteria that it would apply in similar medical circumstances – i.e., having regard to the severity of the case concerned and the availability of medical personnel and means – to the nationals of the Party to the conflict itself who are *in no way deprived of liberty*. This last condition is appropriate to the extent that, as we saw above, the persons who are nationals of the Party to the conflict and are deprived of liberty by that Party, can be amongst the persons covered by the article. Thus reference is not made here to such persons or to any other detainees, but to the population as a whole. In other words, the Parties to the conflict are required not to make any discrimination in the application of medical standards between the persons covered by the present article and their own population as a whole.

Paragraph 2

478 This paragraph supplements the preceding paragraph. Without purporting to enumerate the procedures prohibited by paragraph 1 – the text states: “it is, in particular, prohibited” – it highlights a certain number of medical procedures which can easily give rise to abuse and which are in principle prohibited. These are:

- a) physical mutilations, i.e., particularly amputations and injury to limbs;
- b) medical or scientific experiments. Indeed, the persons concerned here are especially vulnerable in this field. Thus it was important to specify the prohibition against using them as guinea-pigs;
- c) removal of tissue or organs for transplantation. The possibility of transplanting organs for therapeutic purposes is relatively new, but it is obviously essential to observe very strict ethical rules with regard to the donor. The risk of abuse with regard to the persons concerned here is clear, and this explains the specific mention of operations such as the removal of tissue, especially skin, and of blood – which are prohibited for the same reasons.

479 However, there are some logical exceptions if the procedures are “justified in conformity with the conditions provided for in paragraph 1”, i.e., essentially, as

we have seen, if they are conducive to improving the state of health of the person concerned.

480 In this sense it is clear that some mutilations may be indispensable, such as the amputation of a gangrenous limb.

481 On the other hand, it is far less common for medical or scientific experiments to conform with the criteria of paragraph 1. Experiments carried out purely for scientific purposes are in any case categorically excluded. The only case in which such an experiment might be allowed if it could be considered as a medical experiment might be if a doctor tried out a new cure on a person who definitely could not be cured through the known methods. However, this is a marginal case which once again raises questions of medical ethics more than anything else.

482 With regard to the removal of organs for transplantation, this is prohibited in any case because this cannot be justified by referring to the state of health of the person donating the organ. Such practices are not completely out of the question in time of peace (as in the case of a father donating a kidney to his son), but it was essential to prohibit them totally with regard to the persons concerned here, as the danger of abuse would have been too great. However, this obviously does not prevent removals carried out for therapeutic purposes, as in the case of appendicitis or cancerous organs.

483 The removal of diseased tissue is also permitted for therapeutic purposes. The transplantation of healthy tissue is not excluded either if this is carried out on one and the same person (for example, the removal of skin to repair a badly burned face). As regards the removal of tissue for transplantation on other persons, this is prohibited in principle by paragraph 1, as it is not carried out for the benefit of the person whose tissue is removed. However, we will see below that a derogation has been made to this rule.¹²

484 If they are not justified by paragraph 1, and apart from the minor derogation permitted in paragraph 3 with regard to the removal of tissue, the acts mentioned in paragraph 2 are absolutely prohibited. In this sense it is explicitly stated that such acts could not be justified even with the consent of the person concerned. This rule applies in any case to all medical acts which are not performed in the interests of the person undergoing the treatment. This unequivocal statement is intended to prevent any possibility of justification on such grounds, and to prevent pressure being improperly exerted on the persons concerned here to obtain their consent.

Paragraph 3

485 This paragraph permits a slight exception to the strict prohibition, contained in paragraphs 1 and 2, to subject the persons concerned here to medical procedures which are not solely undertaken for their own benefit. It only concerns the withdrawal of blood for transfusion and the removal of skin for grafting. In both cases such removal may be invaluable from the medical point of view, and of considerable practical importance. Large numbers of the wounded may die for

¹² Cf. commentary para. 3, *infra*.

lack of blood for transfusions and skin grafts can also save lives, especially in cases of severe burns. Thus it seemed to be going too far to totally prohibit donations of blood and skin from persons covered by Article 11, particularly as the risk of abuse in such cases is not as great. Besides, the article itself imposes very rigorous rules on such removals.

- 486 First, the removals must be *donations*. It is therefore strictly prohibited to *impose* the taking of blood or skin. To prevent any ambiguity it is stipulated that such donations must be voluntary, which may seem tautologous, but clearly indicates that the donor must be capable of expressing his will (in this way taking blood or skin from unconscious persons or those incapable to make a decision is prevented). Moreover, it is specified that the will must be expressed voluntarily and any coercive measures (threats, discriminatory measures, punishments etc.) and even inducements (promises of important advantages, pressure on those who hold out etc.) were explicitly prohibited.
- 487 Secondly, there can only be two sorts of donations: donations of blood and donations of skin, which each have a specific purpose, i.e., blood transfusions and grafts respectively. Moreover, such transfusions or grafts must obviously be intended to improve the state of health of the recipient. Simple experiments are strictly prohibited, as is clearly specified: the donations must be “for therapeutic purposes”.
- 488 In addition, they must be carried out “under conditions consistent with generally accepted medical standards”. This refers in particular to conditions of hygiene and safety needed to provide guarantees for the donor’s health.¹³
- 489 Finally, taking blood for transfusion or skin for grafts must be done with adequate controls prior to and during the operation, “designed for the benefit of both the donor and the recipient”. This means, in particular, that it should be clearly established that taking the blood or skin does not present any special danger to the donor’s health, and that the transfusions or grafts are necessary for the improvement of the health of the recipient. These controls should also be exercised during and after the operation.
- 490 In short, the exception allowed in paragraph 3 is justified in that it makes it possible to help many wounded and sick, and because all the guarantees are given in its application to prevent abuse.

Paragraph 4

- 491 The problem broached in this paragraph is that of establishing the degree of gravity of any breaches of the provisions of the preceding paragraphs, with a view to sanctions. The repression of breaches of the Conventions and the Protocol is dealt with in Section II of Part V of this Protocol.¹⁴ However, to understand the paragraph under examination here, it is important to recall the main distinction made in the Conventions and the Protocol between *breaches* and *grave breaches* of these instruments. Although the Parties to the conflict are under the obligation

¹³ *cf.* moreover, *supra*, pp. 154-156.

¹⁴ For an analysis of the problems raised in this Section, refer to the commentary thereon, *infra*, p. 973.

to take measures necessary for the suppression of all acts contrary to the provisions of the Conventions and Protocol I, they are only bound to bring to court persons having committed grave breaches of these treaties, which are in any case considered to be war crimes.

492 Paragraph 4 qualifies as “grave breaches” some of the breaches which may be committed with respect to paragraphs 1, 2 and 3, with all the attendant consequences.

493 For a breach of these paragraphs to be considered grave breach, it must fulfil the following conditions cumulatively:

- a) it must be a *wilful* act or omission. Thus it is not possible to commit a grave breach through negligence, even though this may constitute a breach of paragraphs 1, 2 and 3, as we have seen. Moreover, the adjective “wilful” also excludes persons with an immature or greatly impaired intellectual capacity (children, mentally retarded persons etc.) or persons acting without knowing what they are doing (e.g., under the influence of drugs or medication). On the other hand, the concept of recklessness that may come into play – the person in question accepts the risk in full knowledge of what he is doing – must also be taken to be part and parcel of the concept of *wilfulness*.¹⁵
- b) The act or omission must “seriously endanger the physical or mental health or integrity” of the persons concerned. This does not go as far as the principle contained in paragraph 1 which prohibits acts or omissions which “endanger health”.¹⁶ The scope of the acts or omissions covered by paragraph 4 is therefore more restricted. However, the health does not necessarily have to be affected by the act or omission, but it must be clearly and significantly endangered. It is difficult to be more specific on this point. To know whether a person’s health has or has not been seriously endangered is a matter of judgment and a tribunal should settle this on the basis not only of the act or omission concerned, but also on the foreseeable consequences having regard to the state of health of the person subjected to them.
- c) Moreover, the act or omission must *violate any of the prohibitions in paragraphs 1 and 2 or fail to comply with the requirements of paragraph 3*. The very broad principle expressed in the first sentence of paragraph 1 certainly covers all acts and omissions complying with the above condition (*cf.* letter b)). Thus this is not really an additional condition, but merely a reminder that the transgression of any of the prohibitions and conditions mentioned in the preceding paragraphs may constitute a grave breach of the Protocol, given that they only constitute a grave breach if the other conditions (letters a), b) and d)) are also fulfilled.

¹⁵ In the French text of this commentary and of Art. 85 the term “intentionnel” is used. This is the legal term generally used, particularly in the context of penal law. The French text of Art. 11, para. 4, however, uses the term “volontaire”, which is another translation of “wilful”. As the latter term being used in the English text both in Art. 11, para. 4, and in Art. 85, paras. 3 and 4, it is clear that there is no difference of meaning.

As to recklessness, the concept used in Civil Law systems “dol éventuel” can also be translated in English as “malice prepense”.

¹⁶ The French text uses the expressions “compromettre” and “mettre en danger” where the English text uses the single verb “endanger”, revealing that the two French terms have the same meaning. On the other hand, the addition of the adverb “seriously”, both in the English and French texts, is significant.

- d) Finally, the act or omission concerned must be committed against a “person who is in the power of a Party other than the one on which he depends”. Thus acts or omissions committed in connection with deprivation of liberty imposed by a Party to the conflict on its own nationals are not considered as grave breaches, even if they are wilful and seriously endanger their physical or mental health or integrity, and even if they are deprived of liberty “as a result of a situation referred to in Article 1”.¹⁷ At first sight this restriction hardly seems logical. The same acts prohibited by the Protocol with regard to different categories of persons which it defines are not considered as grave breaches if they are committed against one of these categories. This does not seem fair, but it is not the purpose of this provision to arbitrarily exempt some persons from a just punishment.¹⁸

Paragraph 5

- 494 This paragraph lays down a principle and determines the way in which this principle is to be applied.

First sentence

- 495 The principle is that of the right of persons concerned to refuse any surgical operation. We have seen that acts or omissions endangering the physical health or integrity of the persons concerned are prohibited, unless they are justified, and that the justification must generally be of a medical and ethical nature. This paragraph is therefore an exception, as the rule laid down is unrestricted: the person concerned may refuse an operation, even if the surgeon considers it to be essential for his survival and therefore perfectly justified at a medical level. This question actually raises a problem of medical ethics for which we have not yet come up with a clear and universal solution in time of peace. However, the principle contained here in the context of the Protocol is unequivocal. Nevertheless, it is admitted that the surgeon is only bound by such a refusal if the person expressing it has reached a high enough age to be capable of judgement and his intellectual capacities are unimpaired.
- 496 One question remains open: if a patient who has refused a surgical operation falls into a coma, should the surgeon consider this to be a new situation and operate anyway, or should he consider himself bound by the patient’s refusal. Again this raises a delicate problem of medical ethics which the doctor will have

¹⁷ It could be noted that the word “Party”, used here on its own, actually means “Party to the conflict”; there can be no doubt on this point.

¹⁸ In fact, this restrictive clause was introduced as a result of an amendment during the last session of the CDDH because of a concern to preserve the sovereignty of States. According to the authors of the amendment, only the State is responsible in all circumstances for the repression of breaches, no matter how grave, committed by one of its nationals upon another. It was also stated that these might be crimes against humanity, but that it was important to distinguish them from war crimes. Cf. O.R. III, p. 62, CDDH/II/438; O.R. XII, pp. 463-464, CDDH/II/SR.98, para. 58, and p. 465, CDDH/II/SR.99, paras. 3 and 4.

to deal with to the best of his conscience and without incurring the risk of being accused of committing a breach of the Protocol, whatever solution he has chosen. However, in one case it is clear that the surgeon must act: *viz.*, when the operation required by the comatose condition is unrelated to the operation the patient had previously refused.

Second sentence

- 497 As mentioned above, the second sentence determines the way in which the principle is to be applied. In case of refusal, medical personnel¹⁹ should endeavour to obtain a written statement. Every effort should be made to obtain such a statement, but if the person refusing the operation also refuses to make a statement, medical personnel cannot be expected to waste a lot of time in trying to persuade him, especially when they are overworked, which is often the case in time of war.
- 498 The word “endeavour” also clearly indicates the secondary importance of the statement in relation to the refusal: the fact that a person refuses to make the statement does not mean that his refusal of the surgical operation can be ignored.
- 499 However, this statement may also be important to the medical personnel, who, without such a statement, might be afraid of being accused of having endangered the patient’s health by omitting to carry out the necessary medical treatment. Thus in the case of a double refusal – refusing a necessary surgical operation and refusing to acknowledge this first refusal in a statement (actually a very rare occurrence) – it is in the interests of the medical personnel concerned to compile a case history containing, if at all possible, evidence from third parties of the patient’s double refusal.
- 500 Finally, paragraph 5 stipulates a technical point with regard to the declaration to be made by the patient: it should be “signed or acknowledged” by him. The patient may be prevented from signing the declaration for two reasons: either because he does not know how to write, or because he is physically prevented from signing. If he does not know how to write, he can be asked to add an identification mark such as his thumbprint, to the statement, after the text has been read to him. If he is physically disabled, as in the case of a completely paralysed person, the best solution would be to read the statement to him in front of witnesses who could then sign it, certifying that the statement is in accordance with the patient’s wishes.

Paragraph 6

- 501 This paragraph deals with the problem of supervision. If proper supervision regarding the application of the Protocol by the Protecting Powers or their substitute is to be guaranteed, in accordance with the system established by the

¹⁹ As defined in Art. 8, sub-para. (c), *cf. supra*, pp. 124-127.

Conventions and the Protocol,²⁰ it is essential, or at any rate very useful to keep medical records with a view to the supervision of acts covered by this article.

- 502 The wording of the paragraph was proposed by the Drafting Committee of Committee II, before being approved by the latter, on the basis of oral proposals presented during the Conference. It makes a distinction between two cases: one in which keeping records is compulsory; the other in which it is not necessarily so. Finally, it explains the reason for keeping records: they must be available for inspection by the Protecting Power.

First sentence

- 503 There is an absolute obligation to keep records concerning donations of blood for transfusion or skin for grafting, i.e., for the operations carried out in accordance with paragraph 3. This strict obligation is justified by the fact that it covers the only operations that can be lawfully carried out on a person covered by this article, without it being in his own interest. The compulsory keeping of records constitutes an additional means of preventing abuses. The record will contain not only the details of the procedure (place, date, nature, etc.), but also the agreement of the patient, signed or acknowledged by him.
- 504 Moreover, it is specified that this obligation on the Party to the conflict exists only if the donation “is made under the responsibility of that Party”. This clarification was added in order to absolve an Occupying Power from this obligation for acts accomplished in hospitals (or other places) in occupied territory where it does not exercise control, particularly when it leaves the management of a hospital to the staff established there before the occupation. On the other hand, it will be bound by the obligation if, for example, it collects blood itself in the occupied territory.

Second sentence

- 505 The scope of this sentence is much broader, since it is concerned with keeping records of “all medical procedures undertaken with respect to any person who is interned, detained or otherwise deprived of liberty as a result of a situation referred to in Article 1”. This does not include procedures undertaken with respect to all persons in the power of an adverse Party covered by the rest of the article. In fact, it would have been going too far to request keeping medical records for all persons in the power of an adverse Party and particularly for all the inhabitants of an occupied territory. In general, an Occupying Power will allow the medical services in place to continue functioning to take care of the health of the inhabitants of occupied territory. To ask them to keep medical records for the procedures undertaken with respect to such inhabitants would lead to the establishment of an extremely cumbersome administrative system, which would not be justified.

²⁰ On this subject, *cf.* in particular commentary Art. 5, *supra*, p. 75.

- 506 Obviously the case of persons deprived of liberty as a result of a situation referred to in Article 1 (*General principles and scope of application*)²¹ is different, as they are more vulnerable, being much more dependent on the Party to the conflict. Thus we are concerned here with medical procedures undertaken on them.
- 507 Bearing in mind the practical impossibilities some Parties to the conflict may encounter, the obligation to keep such records was not made in an unrestricted fashion. Each Party to the conflict *shall endeavour* to keep such records. Thus there is no absolute obligation, but nor is it simply a matter of choice left up to the Parties to the conflict. They must keep such records if they have the means to do so, and if not, they must be able to justify the fact that they genuinely could not keep them.
- 508 Finally, the records concerned are for all *medical procedures* undertaken with respect to the persons concerned. Thus they are not kept only for surgical operations, but also for various types of treatment (cures, radiation, medication taken, etc.) or care which has been given. On the other hand, the simple administration of a light sedative or sleeping pill by non-medical staff could not be described as a *medical procedure*.

Third sentence

- 509 Such records are certainly useful in themselves, particularly at a medical level. It is important for a doctor to be aware of wounds and illnesses suffered by a patient, and the treatment that has been given.
- 510 However, the obligation to keep records in the context of the Protocol is intended rather to prevent abuse and to detect breaches committed with regard to the provisions of this article. It is true that the records do not constitute a foolproof means of supervision. In particular, they do not allow for any control on omissions endangering the health of persons concerned. Nevertheless, they form a by no means negligible means of supervision if they can be consulted without warning, which allows the inspector to supervise the way in which they are kept and the truthfulness of the entries.
- 511 Paragraph 6 certainly provides that the records shall be available at all times for inspection, and the role of inspector is played by the representative of the Protecting Power or its substitute.²² The latter can compare the contents of the records with the statements of the protected persons whom he is able to visit, and should therefore be able to form a fairly clear picture of the situation.

Y.S.

²¹ Enumerated in the commentary on para. 1, *supra*, pp. 153-154.

²² On the subject of the role of the Protecting Power or its substitute, *cf.* also commentary Art. 5, *supra*, p. 75.

Protocol I

Article 12 – Protection of medical units

1. Medical units shall be respected and protected at all times and shall not be the object of attack.
2. Paragraph 1 shall apply to civilian medical units, provided that they:
 - (a) belong to one of the Parties to the conflict;
 - (b) are recognized and authorized by the competent authority of one of the Parties to the conflict; or
 - (c) are authorized in conformity with Article 9, paragraph 2, of this Protocol or Article 27 of the First Convention.
3. The Parties to the conflict are invited to notify each other of the location of their fixed medical units. The absence of such notification shall not exempt any of the Parties from the obligation to comply with the provisions of paragraph 1.
4. Under no circumstances shall medical units be used in an attempt to shield military objectives from attack. Whenever possible, the Parties to the conflict shall ensure that medical units are so sited that attacks against military objectives do not imperil their safety.

Commentary**General remarks**

- 512 The principal aim of this article is to extend to all civilian medical units the protection which hitherto applied to all military medical units on the one hand (*cf.* Article 19, First Convention), but only to civilian hospitals on the other (*cf.* Article 18, Fourth Convention).
- 513 Thus, paragraphs 1, 3 and 4 concern all medical units, whether military or civilian. As certain rules have been introduced which have no equivalent in the Conventions (even with regard to military units) with the object of increasing the protection of these units, it was obviously important that all units were covered, not just the civilian units.
- 514 Paragraph 2 lays down three conditions, and all civilian medical units must comply at least with one of them to benefit from the right to respect and protection. Each of these conditions implies a certain degree of control by the authorities over these units, which is essential for the prevention of any form of abuse.

Paragraph 1

- 515 This paragraph lays down the three principles for all medical units which were already imposed in the Conventions for military medical units (or, according to the terminology of the Conventions, fixed establishments and mobile medical units). These units:
- shall be protected;
 - shall be respected;
 - shall not be the object of attack.
- 516 These principles are taken from the Conventions. We have examined the general definition of the terms “to respect” and “to protect” above.¹
- 517 In the present context the term “to respect” the units means, first of all, that it is prohibited to attack or harm them in any way. This also means that there should be no interference with their work (for example, by preventing supplies from getting through) or preventing the possibility of continuing to give treatment to the wounded and sick who are in their care, as long as this is necessary.
- 518 To protect these units is “to ensure that they are respected, that is to say to oblige third parties to respect them. It also means coming to their help in case of need”.² It is no longer only a matter of not preventing supplies from reaching these units, to take the example given above, but, if necessary, to help to ensure the delivery of these supplies (for example, by providing a vehicle) or even to make sure that they are not jeopardized by third parties (looting etc.).

¹ *Cf.* commentary Art. 10, para. 1, *supra*, p. 146.

² *Commentary I*, p. 196.

- 519 Finally, medical units should not be the object of attack.³ The usefulness of this third point is not obvious, as the *respect* of the medical units implies the obligation not to attack them. However, this provision was explicitly formulated even in the Conventions in view of “the increasing scale of aerial bombardment”.⁴ The inclusion of this provision also means that an attack on a medical unit which is undertaken by commandos in enemy territory is unambiguously forbidden, even if the purpose of the attack is not to hinder the proper functioning of the unit, but, for example, to exert pressure or gain an advantage at a military level. Finally, it should be noted that even though an attack cannot be lawfully directed against medical units as such, it is not totally out of the question for them to be damaged during attacks on military objectives, even though various precautions must be taken during these attacks.⁵ The rules laid down in paragraphs 3 and 4 of this article are aimed at preventing as far as possible the risks incurred by medical units during such attacks.
- 520 These three principles should be observed *at all times*, i.e., even when the units have not yet received any wounded and sick, or when no more wounded and sick are with them at the time.⁶ Obviously this only applies while the units continue to be *assigned exclusively to medical purposes*. However, it was not necessary to make this specific point in Article 12, as the definition of medical units itself, whether permanent or temporary, requires that they are used exclusively for medical purposes.⁷ If they are used for other purposes, they are no longer considered to be medical units within the meaning of the Protocol, and thus they lose their right to the use of the emblem, as well as the right to respect and protection if they are used in such a way that they could be categorized as military objectives.⁸
- 521 The fact that a unit is assigned exclusively to medical purposes does not mean that it should be used at all times to care for the wounded and sick. For example, a first aid post, even if it is temporary, does not lose its rights merely because there are no wounded or sick patients there. It is sufficient that the post is intended to care for the wounded and sick and that it is not assigned for any other purpose, particularly a military purpose, for it to remain covered by the three above-mentioned principles.

Paragraph 2

- 522 As shown above, this paragraph lays down three conditions, with one of which civilian medical units must comply to be covered by the principles described in paragraph 1. These conditions all imply a certain degree of control by the Party to the conflict over the units, to ensure that they are strictly and exclusively used

³ The expression “attacks” is defined in Art. 49, para. 1. On this subject, see *infra*, pp. 602-603.

⁴ *Commentary I*, p. 196.

⁵ On this subject, *cf.*, in particular, commentary Art. 57, *infra*, pp. 680-687.

⁶ The expression “at all times” was introduced in 1906, but was not included in the Convention of 1864. On this subject, *cf. Commentary I*, p. 196.

⁷ *Cf.* commentary Art. 8, sub-para. (e), *supra*, pp. 128-129.

⁸ On this subject, *cf.* commentary Art. 52, *infra*, pp. 635-637; *cf.* also commentary Art. 13, *infra*, p. 173.

for the intended purposes. This control is of paramount importance, for if a Party to the conflict discovers that the adverse Party has seriously and repeatedly been guilty of abuse, this could lead to a loss of confidence and cast doubt on the entire system of protection aimed at by the Conventions and the Protocols, which is based precisely on confidence.

523 On the other hand, there was no need to impose similar conditions for military medical units as these, being part of the army, are subject to military hierarchy and discipline. The conditions are as follows:

a) *To belong to one of the Parties to the conflict*

524 This concerns particularly hospitals or ambulance services of the State. The Party to the conflict is itself responsible for the administration of these units and therefore control is easy. The persons in charge of these units are appointed directly by the competent authority of the Party to the conflict, who can also remove them from this position.

b) *To be recognized and authorized by the competent authority of one of the Parties to the conflict*

525 In the first place, this concerns medical units of the National Red Cross Society or a Society of a State not Party to the conflict.⁹ It may also concern private medical units, such as private clinics or ambulance services. In addition, this category can also include units belonging to public bodies at a level below that of the State, and which have a certain degree of independence vis-à-vis the central government. For example, these could include, in particular, units belonging to the different States constituting a federal State.

526 It is up to the competent authority of the Party to the conflict (i.e., in the case of a federal State, the central government) to recognize and authorize these units. Thus there are two elements: the *recognition* implies that the competent authority agrees that this unit is a medical unit within the meaning of the Protocol; the *authorization* is the right conferred upon this unit by the Party to the conflict to exercise the prerogatives granted to civilian medical units by the Protocol. In exceptional circumstances it may happen that a Party to the conflict recognizes a medical unit without granting this authorization (which the Protocol leaves to the Party's discretion). However, the authorization implies preliminary recognition of the unit.

527 The control in this case is less direct than in the case of units belonging to one of the Parties to the conflict. For example, the latter cannot replace the director of a private medical unit who has been guilty of abuses, as it can in the case of units that belong to it. It can threaten to withdraw its authorization if this replacement is not carried out, and as a last resort can actually withdraw its authorization.

⁹ Cf. Art. 27, First Convention.

c) *To be authorized in conformity with Article 9, paragraph 2, of this Protocol or Article 27 of the First Convention*

528 This refers to the civilian medical units placed at the disposal of a Party to the conflict for humanitarian purposes by a neutral State or another State not Party to the conflict, by an aid society recognized and authorized by a neutral State or another State not Party to the conflict, or by an impartial international humanitarian organization.¹⁰

Paragraph 3

First sentence

529 This concerns a simple recommendation to the Parties to the conflict, aimed at reinforcing the security of medical units. The Conventions do not contain an equivalent provision. However, it should be noted that the notification of hospital zones is prescribed in the Draft Agreement annexed to the First Convention.¹¹

530 For obvious practical reasons the medical units concerned here are only fixed medical units. There is clearly no question of keeping the adverse Party constantly informed about all the movements of mobile units (although there is nothing to prevent a Party to the conflict from informing the adverse Party about an important movement of these units).

531 Some delegations would have preferred to restrict this recommendation to *civilian* medical units, but the opinion which finally prevailed was that there was no reason why the location of military medical units should not also be communicated with a view to reinforcing the protection of these units.

532 On the other hand, it was widely agreed that this provision should not have a mandatory character, but should retain the form of a recommendation to the Parties to the conflict, as it was in the draft.¹²

Second sentence

533 This sentence was not contained in the draft and is the result of an amendment submitted in Committee II. In fact, it is not really a modification of the draft, but a clarification. It was not considered to be indispensable by the authors of the draft, but it clearly expresses their intention.

534 As notification is only recommended, it is clear that the right to protection does not depend on it and exists independently of it. Failure to notify increases the risk of the units being damaged incidentally during an attack on military objectives,

¹⁰ For further details on this subject, *cf.* commentary Art. 9, para. 2, *supra*, pp. 140-142.

¹¹ *Cf.* Draft Agreement relating to hospital zones and localities, Art. 7.

¹² All those who spoke on this subject in Committee II agreed that this was a matter to be decided in the last resort by the authorities of the Parties to the conflict. *Cf.* O.R. XI, pp. 115-118, CDDH/II/SR.13, paras. 19-43.

but it in no way impairs the obligation to respect, protect and refrain from attacking the units, nor that of taking the necessary precautions to prevent, as far as possible, inflicting any damage on them during an attack on military objectives.

- 535 The clarification given in the second sentence of paragraph 3 removes any ambiguity which might have existed on this point.

Paragraph 4

- 536 This paragraph is in a way the corollary to the principles described in paragraph 1. The right to protection also implies certain obligations on the part of the Parties to the conflict with regard to their own units – or the units which have fallen into their hands – which benefit from it. Certainly the most important obligation is to refrain from making improper use of the signs and signals of protection described in the Conventions and the Protocol, as laid down in Article 38 of the Protocol (*Recognized emblems*). This is complemented by the two rules contained in paragraph 4, one of which contains an unequivocal prohibition, while the other contains a more flexible provision: to comply with “whenever possible”. The aim of these rules is, on the one hand, to make it possible for an adverse Party to carry out its duty to respect medical units, and on the other hand, and above all, to increase the security of medical units and their occupants, which should never become the object of any form of moral blackmail.

First sentence

- 537 The aim of this first sentence is precisely to prohibit what we have qualified as blackmail.
- 538 It may happen that medical units are sited on the periphery of military objectives,¹³ and it is probably impossible to avoid this in all cases, as will be seen with regard to the rule laid down in the second sentence of this paragraph. However, it is not admissible that a Party to the conflict should intentionally place medical units on the periphery of military objectives in the hope that the adverse Party would hesitate to attack these objectives for humanitarian reasons. This would completely distort the spirit of humanitarian law and devalue both the victims being cared for in these units and the medical personnel who would be knowingly exposed to very grave danger. Thus this type of action constitutes a breach of the Protocol and can be justified “under no circumstances”.
- 539 One may certainly wonder whether such an action could release the adverse Party from its obligation to respect the medical units sited in this way. With regard to this question, see Article 51 of the Protocol (*Protection of the civilian population*). The second sentence of its paragraph 7 contains a similar rule to that given here for medical units, relating to the movement of the civilian population or civilian persons. Paragraph 8 of the same article explains that a violation of

¹³ On the meaning of the expression “military objective”, cf. commentary Art. 52, para. 2, *infra*, pp. 635-637.

this prohibition (as of any other prohibitions laid down in the article) does not release the Parties to the conflict from taking the precautionary measures provided for in Article 57 (*Precautions in attack*).¹⁴

- 540 Although not explicitly mentioned, these precautions should also be taken with regard to the wounded and sick, and consequently the medical units where they are being cared for. The victims should not have to pay for trickery for which they are not responsible, particularly as the *intention* of siting the medical units in the vicinity of military objectives in an attempt to shield the latter from attacks is rarely easy to establish with any certainty. However, it is clear that if one of the Parties to the conflict is unmistakably continuing to use this unlawful method for endeavouring to shield military objectives from attack, the delicate balance established in the Conventions and the Protocols between military necessity and humanitarian needs would be in great danger of being jeopardized and consequently so would the protection of the units concerned.

Second sentence

- 541 This sentence repeats a rule introduced in 1949 in Article 19, paragraph 2, of the First Convention, though the formulation is slightly different. It extends the scope of application to all the medical units covered by the Protocol, and not only to military units.
- 542 We are not concerned here, as in the rule contained in the first sentence, with prohibiting the wrongful use of medical units, but with including an additional precaution for safeguarding their function. The provision requires that care should be taken to ensure that medical units are so sited that attacks against military objectives do not imperil their safety, in other words that they are sufficiently removed from these objectives not to be affected by damage in the surrounding area which is very likely to occur during an attack. As stated in the Commentary on the First Convention, this precaution is obviously taken above all against aerial bombardment.¹⁵
- 543 Moreover, it should be noted that this provision requires the Parties to the conflict to take precautions which are essentially for the benefit of persons belonging to their own side. This led to objections when a similar provision was adopted in 1949, and still remains an exception, albeit an important one, in the Protocols.
- 544 In practical terms this provision should already have been taken into consideration by the contracting Parties in time of peace, for example by avoiding the construction of a hospital next to a barracks, or vice versa.
- 545 The obligation should be observed “whenever possible”. It is quite clear that the Parties to the conflict should always do so to the best of their capability. However, this expression was inserted because it was generally agreed that it was not always possible to shield medical units from the danger one wishes to avoid.

¹⁴ On the subject of these, cf. commentary Art. 57, *infra*, pp. 680-687. Cf. also commentary Art. 51, *infra*, pp. 627-628.

¹⁵ Cf. *Commentary I*, p. 198.

When it was proposed to remove this expression in Committee II, it was not considered possible to prohibit mobile medical units from moving into the vicinity of combat in order to retrieve and care for the wounded as quickly as possible, despite the risks that this would incur.¹⁶ Thus there are two interests to weigh up, and the obligation to favour one of the two should not be too rigid.

Y.S.

¹⁶ Cf. particularly *O.R.* XI, pp. 117-118, CDDH/II/SR.13, para. 41.

Article 13 – Discontinuance of protection of civilian medical units

1. The protection to which civilian medical units are entitled shall not cease unless they are used to commit, outside their humanitarian function, acts harmful to the enemy. Protection may, however, cease only after a warning has been given setting, whenever appropriate, a reasonable time-limit, and after such a warning has remained unheeded.
2. The following shall not be considered as acts harmful to the enemy:
 - (a) that the personnel of the unit are equipped with light individual weapons for their own defence or for that of the wounded and sick in their charge;
 - (b) that the unit is guarded by a picket or by sentries or by an escort;
 - (c) that small arms and ammunition taken from the wounded and sick, and not yet handed to the proper service, are found in the units;
 - (d) that members of the armed forces or other combatants are in the unit for medical reasons.

Commentary

General remarks

- 546 The first paragraph of this article is based on Article 21 and the second on Article 22 of the First Convention. It lays down rules for all civilian medical units similar to those laid down in these articles for military medical units. With regard to civilian medical units, there is also a similar article in the Fourth Convention (Article 19), but its scope is restricted to civilian *hospitals*.
- 547 The aim of this article is to determine exactly which acts result in losing the right to protection, above all to prevent false pretexts from being resorted to.
- 548 Paragraph 1 lays down the rule in the first sentence and in the second sentence goes on to introduce some flexibility for the benefit of the victims. Paragraph 2 describes four acts which shall not be considered harmful to the enemy (even though they might appear to be harmful) so that consequently the perpetration of these acts does not cancel the right of a medical unit to protection.

Paragraph 1

First sentence

- 549 This sentence clearly states that the protection to which civilian medical units are entitled shall not cease except in the case where the units are used to commit acts harmful to the enemy. No other reason can give rise to the termination of their right to protection. This formulation is derived from Article 21 of the First Convention. The 1949 Diplomatic Conference insisted that “protection could only cease in the one case mentioned above, whereas in 1929 it had merely been stated that protection would cease if such acts were committed”.¹ However, if the medical unit were systematically used for purposes other than medical purposes, even if no acts harmful to the enemy were committed, it would lose its status as a medical unit within the meaning of the Protocol which *defines* these units as being *exclusively* dedicated to medical purposes.² As we are concerned here with medical units in the sense of the Protocol, it is clear that they are deemed to be dedicated exclusively to medical purposes and that, if acts which are harmful to the enemy are ascribed to them, these acts are accidental or sporadic and are not the result of any intention to use these units for military purposes.
- 550 The next question is to know what would constitute *acts which are harmful to the enemy* and which are prohibited. The 1949 Diplomatic Conference, like the 1929 Diplomatic Conference, did not consider that there was a need for defining these because in their opinion this expression was self-explanatory and should remain very general.³ The Diplomatic Conference of 1974-1977 followed

¹ *Commentary I*, p. 200.

² *Cf. commentary Art. 8, sub-para. (k), supra*, pp. 132-133.

³ *Cf. Commentary I*, p. 200.

suit. However, the ICRC had come up with a more explicit formulation in 1949 in the event that the Diplomatic Conference should have felt the need for a more precise definition. This was worded as follows: “Acts the purpose or effect of which is to harm the adverse Party, by facilitating or impeding military operations”.

551 Moreover, some examples of harmful acts are given in the commentary on Article 21 of the First Convention. These examples also elucidate the interpretation to be given to the expression: “the use of a hospital as a shelter for able-bodied combatants or fugitives, as an arms or ammunition dump, or as a military observation post; another instance would be the deliberate siting of a medical unit in a position where it would impede an enemy attack”⁴ (this last act is in fact specifically prohibited by Article 12 (*Protection of medical units*), paragraph 4, first sentence, of the Protocol, examined above). Thus the definition of *harmful* is very broad. It refers not only to direct harm inflicted on the enemy, for example, by firing at him, but also to any attempts at deliberately hindering his military operations in any way whatsoever.

552 In any event, in order to be classified as being prohibited, these acts which are harmful to the enemy must be committed *outside the humanitarian function* of the medical units, which implies that certain acts that are harmful to the enemy may be compatible with this humanitarian function, and as such may be lawfully committed. This clarification also appears in Article 21 of the First Convention, although it is formulated in a slightly different way (in this case the phrase is “outside their humanitarian duties”). It is justified because it may actually happen, though only in exceptional cases, that an act committed in accordance with the humanitarian function of the medical units is such as to be harmful to the enemy, or can incorrectly be interpreted in this sense. One might think, for example, of the case where a mobile medical unit accidentally breaks down while it is being moved in accordance with its humanitarian function, and thereby obstructs a crossroads of military importance. The 1949 Conference mentioned the example of the radiation emitted by X-ray apparatus which could interfere with the transmission or reception of wireless messages at a military location, or with the working of a radar unit.⁵

553 As already stated, such acts are obviously exceptional and remedies should be found as soon as their harmful character to the enemy is realized. However, it was important to include this clarification to make a distinction between those acts that are committed without the intention of being harmful, but which could accidentally have an unfavourable effect on the enemy, and those acts which are deliberately committed in order to harm the enemy.

Second sentence

554 The second sentence applies in the case where there is a valid reason, in the sense of the first sentence examined above, for discontinuing the protection to

⁴ *Ibid.*, pp. 200-201.

⁵ *Cf. ibid.*, p. 201.

which a civilian medical unit is entitled. This sentence, too, has been taken from Article 21 of the First Convention, with some slight modifications.

555 The principle laid down here is intended to temper the effect of the strict interpretation of the preceding sentence, above all with the aim of preventing the wounded and sick who are hospitalized in the unit from becoming the innocent victims of acts for which they are not responsible. If the medical unit is used to commit acts which are harmful to the enemy, it actually becomes a military objective which can legitimately be attacked, and even destroyed. Before resorting to this extreme action it is of paramount importance that the fate of the legitimate occupants of the medical unit is guaranteed. This is the aim of the warning referred to in the principle laid down here. Moreover, the warning may take various forms. In most cases it would simply consist of an order to cease the harmful act within a specified period. In the most serious cases there may be a time-limit for evacuating the unit which will be attacked after this time-limit.

556 The period of respite must be *reasonable*, but it has not been specified. It will vary according to the particular case. As stated in the commentary on Article 21 of the First Convention, “one thing is certain, however. It must be long enough either to allow the unlawful acts to be stopped, or for the wounded and sick who are present with the unit to be removed to a place of safety”.⁶ This time-limit should also allow those in charge of the unit enough time to reply to the accusations that have been made, and if they can, to justify themselves. However, it is also specified that a time-limit will only be set “whenever appropriate”. This stipulation, which has also been taken from Article 21 of the First Convention, is obviously not included to allow the possibility of evading the duty to set a time-limit. However, it takes into account the cases where it is not practicable to set a time-limit: an example might be a body of troops approaching a hospital being met by heavy fire. However, even in this case humanitarian considerations should not be forgotten. A hospital with eight hundred beds should not be destroyed by mortar-fire because one soldier has taken cover in one of the rooms. Here too, the principle of proportionality between military necessity and humanitarian exigencies⁷ shall be taken into consideration.

Paragraph 2

557 This paragraph enumerates four acts which could give rise to misunderstanding and for which the perpetrators could be accused of committing acts which are harmful to the enemy, but which it has nevertheless been considered necessary to permit. It was essential therefore to stipulate that these acts shall not be considered as being harmful to the enemy, and thus shall not deprive the medical unit concerned of the protection to which it is entitled.

558 This paragraph is based on both Article 22 of the First Convention, with the modifications necessitated by the fact that the units concerned here are *civilian*

⁶ *Ibid.*, p. 202.

⁷ On this subject see commentary Art. 12, par. 4, first sentence, *supra*, pp. 170-171.

medical units, and on Article 19, paragraph 2, of the Fourth Convention, which it completes with two acts which are not included in this article. Thus the four acts included here which are not to be considered to be harmful to the enemy are the following:

Sub-paragraph (a) – “that the personnel of the unit are equipped with light individual weapons for their own defence or for that of the wounded and sick in their charge”

- 559 Even though the right for medical personnel to bear arms is laid down in the Conventions since 1906, this point, which was not included in the first draft, was certainly responsible for the most heated discussions of Committee II during the CDDH. Two questions actually arose in succession with regard to this matter. The first of these is the actual principle of arming personnel of civilian medical units. Once this is accepted, the second question which was discussed was that of the type of arms with which this personnel may be equipped.
- 560 In 1949 it was confirmed that military medical personnel have the right to bear arms, though there were objections to this. It is certainly possible to argue that the most certain guarantee of protection is to be absolutely defenceless, thus forming the least possible risk for the enemy. In fact, if the principle that medical personnel have the right to bear arms was finally accepted, it was obviously not for the reason that this personnel should use force to oppose the capture of the unit: in this case it would lose its status and the right to protection derived from this status. However, it is possible that the unit is attacked by uncontrolled elements or looters. It may also happen that considerable problems present themselves with regard to maintaining order amongst the convalescent wounded or sick. These sound reasons finally prevailed and therefore in 1949 the use of arms by military medical personnel was accepted. However, the CDDH was concerned with taking this matter one step further, as this time the medical personnel being given the use of arms was a civilian personnel, although throughout the CDDH the emphasis had been laid on the importance of maintaining a clear distinction between civilian and military personnel. Moreover, giving this right to bear arms was not in accordance with the protection given civilian hospitals in Article 19 of the Fourth Convention. Nevertheless, the principle that civilian personnel of medical units could bear arms was finally adopted because it was admitted that civilian medical personnel were exposed to the same dangers and had to deal with the same situations as military medical personnel, as a result of the increased scope of its role in the Protocol. Therefore they should have the same means at their disposal for their own defence.
- 561 However, it is appropriate to stress once again that as medical personnel and as civilians the personnel have a strict obligation to refrain from using arms except for their own defence or for that of the wounded and sick in their charge. In other words, to prevent themselves or the wounded and sick in their charge from becoming the victims of violence. The term “defence” should in fact be interpreted in the restricted sense of defence against violence, and medical personnel cannot use force to try and prevent combatants from the adverse Party from capturing the medical unit, without losing their right to protection.

- 562 It is clear that when medical personnel were granted the right to bear arms in 1949, the views regarding the lawful use that this personnel could make of these arms implied that they must be light weapons. However, it was not considered necessary to specify this in Article 22 of the First Convention.
- 563 Nevertheless, the question resurfaced to be discussed by Committee II during the CDDH, and the decision was finally taken to specify that the weapons that could lawfully be used by the civilian personnel of a medical unit were limited to “light individual weapons”. This expression was not defined, but it appears from the discussions in Committee II regarding this article and, regarding the cessation of protection to which civilian civil defence organizations are entitled,⁸ that it refers to weapons which are generally carried and used by a single individual. Thus not only hand weapons such as pistols are permitted, but also rifles or even sub-machine guns. On the other hand, machine guns and any other heavy arms which cannot easily be transported by an individual and which have to be operated by a number of people are prohibited. Thus it is evident that the level of acceptance is quite high. However, this is the case above all to prevent the unit’s right to protection from being suppressed too easily. Independently of the weapons with which the personnel are equipped, they may use them, as we have seen, only for very specific purposes, and it is above all with regard to this that no abuses should be committed. Pistols should certainly be sufficient to carry out the tasks specified, but it makes little difference in the end if the personnel prefer rifles, provided that they stay strictly within their competence.
- 564 Finally, it should be noted that Article 22 of the First Convention does not specify what type of arms the personnel of military medical units can carry. But as the tasks to be carried out are the same as in this article, any weapons that are heavier than those stipulated here could not be allocated to the military personnel without the risk of incurring serious suspicion, and therefore without endangering the protection of the medical unit.

Sub-paragraph (b) – “that the unit is guarded by a picket or by sentries or by an escort”

- 565 This act is also mentioned in Article 22 of the First Convention, though it is only provided for there “in the absence of armed orderlies”. However, the commentary on this provision shows that there was no intention on the part of the drafters to exclude the simultaneous presence of armed orderlies and a military guard and that what was intended was that the guard of a medical unit would, as a rule, be provided by its own personnel.⁹ However, as this point may give rise to misunderstanding, it was not included in the Protocol.
- 566 Whether the guard consists of a picket, sentries or an escort, it is generally made up of soldiers, as the medical service is part of the army and is normally protected by a military authority. However, in the exceptional case where the

⁸ Cf. commentary Art. 65, par. 3, *infra*, pp. 774-778.

⁹ Cf. *Commentary I*, p. 203.

guard duties were to be entrusted to a civilian uniformed police force, this would not entail an infringement of the Protocol. Like medical personnel, the police are generally only equipped with light weapons. They should not exceed their functions.

567 The use of weapons by the members of this guard detailed to a medical unit is subject to the same conditions as the use of arms by medical personnel. The guards are there to prevent looting and violence, but they should not attempt to oppose the capture or control of the medical unit by the adverse Party.

568 With regard to the status of military guards, a passage from the Commentary on the First Convention is reproduced below, which clearly explains what this status was and what it is now (being understood that the members of the military guard of a medical unit have the same status whether the unit is a civilian or a military unit).

“The 1906 Convention (Article 9, paragraph 2) placed them on exactly the same footing as medical personnel, on condition that they were provided with regular instructions (Article 8, sub-paragraph (2)). They were entitled to the same protection as medical personnel and were not to be treated as prisoners of war.

The 1929 Conference firmly rejected the above arrangement, regarding it as impracticable. It had not been respected during the First World War and had given rise to abuses. The provision of regular instructions appeared to be impossible in practice.

Their status will therefore be that of ordinary members of the armed forces, although the mere fact of their presence with a medical unit will shelter them from attack. This practical immunity is, after all, only reasonable, since they have no offensive role to play and are there only to protect the wounded and sick. But in case of capture they will be prisoners of war.”¹⁰

Sub-paragraph (c) – “that small arms and ammunition taken from the wounded and sick, and not yet handed to the proper service, are found in the units”

569 This provision is taken from Article 22 of the First Convention. The arms and ammunition will be taken from the wounded and handed to the proper service. However, this may take some time, and it is important to clarify that, if the arms are kept in the medical unit for a while, the unit will not lose its right to protection as a result.

570 The arms concerned are small arms, in other words, arms which can be carried by men. On the other hand, there is no indication that they must be individual arms. Thus some weapons which are slightly heavier than those which are authorized for medical personnel could be involved, such as, for example, small machine guns, provided that they are portable (even if this should require two or

¹⁰ *Ibid.*, p. 204.

three soldiers). However, the extremely deadly character of some of these portable arms should be emphasized, this being a result of technological progress.

Sub-paragraph (d) – “that members of the armed forces or other combatants are in the unit for medical reasons”

- 571** In view of the conditions of modern warfare, military and civilian wounded and sick are often found in the same place, and consequently they may be collected by the same medical units. Thus it is not possible to complain about the presence of wounded and sick civilians in a military unit, or that of military wounded and sick in a civilian unit, as a reason to terminate the protection to which these units are entitled. The provision quoted above removes any ambiguity on this point, as do the equivalent provisions of Article 22 of the First Convention with regard to military medical units, and of Article 19 of the Fourth Convention for civilian hospitals.
- 572** The expression “or other combatants” was added to the expression “members of the armed forces” to ensure that all combatants within the meaning of Article 43 of the Protocol (*Armed forces*) are included. This addition, which was made during the CDDH, was retained in the end, even though it had become superfluous in view of the final wording of Article 43 (*Armed forces*). As armed forces are defined in a very broad sense in paragraph 1 of that article, there are no combatants who are not members of the armed forces of a Party to the conflict within the meaning of the Protocol.
- 573** The expression “for medical reasons” was preferred to the expression “for medical treatment”, which appeared in the draft. It may happen that members of the armed forces are in a medical unit for medical reasons when they are not receiving medical *treatment* as such. For example, this could be the case with medical examinations or vaccinations. The formulation which was finally adopted is more flexible and should make it possible to avoid unjustified accusations that a medical unit is being used to commit acts which are harmful to the enemy.
- 574** Finally, it should be noted that the soldiers being treated in a civilian medical unit can be soldiers belonging to the Party to which the unit belongs, but they may also, in urgent cases, be combatants of the adverse Party who must be treated in accordance with the principle of non-discrimination among the wounded and sick.¹¹ As they are prisoners of war these wounded will nevertheless be transferred to a military medical unit as soon as their condition and situation permit, as a civilian medical unit does not in principle have to guard prisoners of war.

Y.S.

¹¹ Cf. commentary Art. 10, par. 2, second sentence, *supra*, pp. 147-148.

Protocol I

Article 14 – Limitations on requisition of civilian medical units

1. The Occupying Power has the duty to ensure that the medical needs of the civilian population in occupied territory continue to be satisfied.
2. The Occupying Power shall not, therefore, requisition civilian medical units, their equipment, their *matériel* or the services of their personnel, so long as these resources are necessary for the provision of adequate medical services for the civilian population and for the continuing medical care of any wounded and sick already under treatment.
3. Provided that the general rule in paragraph 2 continues to be observed, the Occupying Power may requisition the said resources, subject to the following particular conditions:
 - (a) that the resources are necessary for the adequate and immediate medical treatment of the wounded and sick members of the armed forces of the Occupying Power or of prisoners of war;
 - (b) that the requisition continues only while such necessity exists; and
 - (c) that immediate arrangements are made to ensure that the medical needs of the civilian population, as well as those of any wounded and sick under treatment who are affected by the requisition, continue to be satisfied.

Commentary**General remarks**

- 575 The purpose of this article is to regulate the problem of requisition of civilian medical units in occupied territory with a view to completing the provisions of Article 57 of the Fourth Convention which are concerned only with requisitioning civilian hospitals.
- 576 Before dealing with the problem of requisition itself, Committee II of the CDDH considered that it should be viewed in the light of the Occupying Power's duty to see that the medical needs of the civilian population of the occupied territory are attended to, as stipulated in paragraph 1. The principle laid down here is based on the more detailed provisions contained in Article 55, paragraph 1, and Article 56, paragraph 1, of the Fourth Convention.
- 577 The wide obligation referred to in paragraph 1 has the general consequence of imposing a strict limitation on the requisition of civilian medical units, which is in fact prohibited as long as these units are necessary for the health of the civilian population and for the wounded and sick receiving treatment. This is the content of the provision contained in paragraph 2.
- 578 Thus requisitions are only allowed if they are carried out in accordance with the strict rule laid down in paragraph 2, and even then the three conditions mentioned in paragraph 3 must be complied with.
- 579 Finally it is worthy of note that this article is concerned only with the requisition of civilian medical units, while the fate of military medical units which have fallen into enemy hands is regulated by Article 33 of the First Convention.

Paragraph 1

- 580 The principle laid down here is restricted to the duties of the Occupying Power with regard to medical matters, for the problem of the requisition of civilian medical units is closely related to these duties. It should be read in connection with the following principles laid down in Article 55, paragraph 1, and Article 56, paragraph 1, of the Fourth Convention, which complement it:

“To the fullest extent of the means available to it, the Occupying Power has the duty of ensuring the food and medical supplies of the population; [...]”

“To the fullest extent of the means available to it, the Occupying Power has the duty of ensuring and maintaining, with the co-operation of national and local authorities, the medical and hospital establishments and services, public health and hygiene in the occupied territory, [...]”

- 581 There are two differences between the wording of these principles and the wording given in paragraph 1 of the article under consideration. The latter does not state that the duty imposed on the Occupying Power is “to the fullest extent of the means available to it”. On the other hand, it does not state that the Occupying Power has the duty to ensure that the medical needs of the civilian

population *are* satisfied but that they *continue* to be satisfied. These differences in formulation are directly linked.

- 582 The above-mentioned provisions of the Fourth Convention are concerned with ensuring public health in the occupied territory, regardless of the public health situation previously. It may happen that health conditions existing in a territory before it is occupied are deplorable. In this case the Occupying Power will probably be unable to rectify this situation very quickly, particularly if the infrastructure itself is inadequate. This is why it was necessary to qualify the duty of the Occupying Power with the expression “to the fullest extent of the means available to it”.
- 583 On the other hand, the principle laid down in paragraph 1 of the article under consideration does not require a particular endeavour from the Occupying Power. It is merely required to ensure that the medical system which already exists in the occupied territory continues to function properly. There was no reason therefore not to impose this requirement in absolute terms.
- 584 The problem of the requisition of civilian medical units directly affects the duty of ensuring the continuation of the existing medical system, rather than that of ensuring public health regardless of its former standard, as such requisition for the benefit of the Occupying Power may well have a harmful effect on the medical system already established in the occupied territory.

Paragraph 2

- 585 The provision contained in this paragraph is the consequence of the principle contained in paragraph 1 with regard to the Occupying Power’s possibility of requisitioning civilian medical units.
- 586 If the condition specified in this paragraph is met, the prohibition on requisitioning the personnel and the resources listed herein is absolute. Let us examine what is prohibited from being requisitioned, and in what circumstances.
- 587 It is prohibited to requisition civilian medical units, their equipment, their *matériel* and the services of their personnel. Medical units, whether civilian or military, are defined earlier in this commentary.¹ The equipment of these units, whether this includes medical equipment, such as operating tables, or functional equipment, such as the heating system or the kitchen (much of which, it could even be argued, forms an integral part of the unit), as well as the *matériel* (surgical instruments, medication, but equally linen, and food services) cannot be requisitioned either, as they are actually indispensable to the proper functioning of the unit, and it would be pointless to prohibit the requisition of the unit if its functioning were allowed to be hampered. The same applies to the personnel of the unit, whether this concerns the personnel taking care of the patients, or other personnel essential to the proper functioning of the unit (administrators, cooks,

¹ Cf. commentary Art. 8, sub-para. (e), *supra*, pp. 128-129.

laundry staff etc.). It is worth noting that this type of personnel is also covered by the next article of the Protocol, Article 15 (*Protection of civilian medical and religious personnel*), which is concerned with all civilian medical and religious personnel.

- 588 The condition attached to this absolute prohibition on requisition is that “these resources are necessary for the provision of adequate medical services for the civilian population and for the continuing medical care of any wounded and sick already under treatment”.
- 589 The prohibition is absolute “so long as” these resources are necessary, in other words, the absolute prohibition applies only to the resources necessary for the purposes mentioned, and ceases as soon as they are no longer necessary.
- 590 The term *resources* refers to all the objects and services mentioned above, including the medical personnel, who are considered here only in the light of their role (while Article 15 – *Protection of civilian medical and religious personnel*, deals with their protection).
- 591 Obviously the word “necessary” is not very clear. It can be interpreted in a wide range of meanings from “useful” to “indispensable”. Any requisition which manifestly jeopardizes, in a medical context, any of the purposes for which the resources are intended, is prohibited. For example, it would not be permissible to requisition the only surgeon of a hospital containing a large number of wounded. On the other hand, a certain degree of flexibility is possible, depending on the circumstances, with regard to resources which are useful without being indispensable (for example, it might be possible to make a slight reduction in the number of orderlies if the hospital had a very large staff).
- 592 These resources must be necessary for either of the following two purposes:

a) *The provision of adequate medical services for the civilian population*

- 593 Again the provision leaves a great deal of leeway for interpretation. The ratio of doctors per head of population varies enormously from one area of the world to another, more for economic reasons than in relation to the medical needs of the population. Bearing this in mind, how can one assess the medical needs of the civilian population? Obviously it is not within the scope of the Protocol to lay down social policies or to determine a general criterion defining the needs of a civilian population, wherever it may be. The context in which this question must be dealt with here is with regard to the *continuation* of the medical system existing before the occupation. Thus, in order to assess the medical needs in the sense intended here, it is a matter above all of taking into account the customary medical practices of the local population. For example, the services of a gynaecologist are considered essential in some areas for childbirth, while it is considered a superfluous luxury in other areas. The concept of medical needs for that matter, must be interpreted in a wide sense. Customary prophylactic measures (hygiene, vaccination, check-ups) should also be taken into consideration.

b) *Ensuring the continuing medical care of any wounded or sick already under treatment*

- 594 This is a short-term necessity which it was important to emphasize. Even if certain forms of treatment (such as cosmetic surgery) do not fall under the category of medical *needs* of the civilian population, it is important that any treatment being undertaken is completed (or perhaps in certain cases, interrupted) without endangering the life or the health of the patient because of insufficient or inadequate care.
- 595 Moreover, it should be noted that the principle laid down in this paragraph might seem to contradict the principle of non-discrimination in the treatment of the wounded and sick, founded on any grounds other than medical ones.² How should an Occupying Power act if large numbers of its armed forces are wounded and without care, if the conditions for requisition are not met? In the long term it is clear that its responsibility as an Occupying Power means that it must find a solution which is not prejudicial to the civilian population of the occupied territory in any way. However, in the short term, although the Occupying Power certainly does not have the right to *requisition* the medical “resources” mentioned here, which is contrary to the principle expressed in this paragraph, it can nevertheless provisionally transfer the wounded into the civilian medical units of the occupied territory. In fact the principle of non-discrimination with regard to treatment means that those in charge of these units cannot refuse to accept the wounded and means that they must be treated in the same way as the civilian wounded in the unit. They should be concerned only with the medical condition of the patients under their care. Even if the medical orderlies are overburdened and the hospital corridors are crowded with the wounded, which is obviously not without some inconvenience for the civilian wounded being treated in this hospital, it would be intolerable to have wounded dying outside the doors of the hospital without being treated. However, it must be emphasized once again that this can only be a provisional solution and that the responsibility of an Occupying Power is such that it implies the duty to deal with this sort of situation.

Paragraph 3

- 596 Thus the requisition of civilian medical units, of their equipment, their *matériel*, or the services of their personnel, can only be considered if these “resources” are not necessary for the purposes examined above in the preceding paragraph. However, even if they are not necessary for these purposes, these “resources” cannot be lawfully requisitioned by the Occupying Power unless the additional following three conditions contained in the paragraph under consideration are all fulfilled.

² Cf. commentary Art. 10, para. 2, *supra*, pp. 147-148.

Sub-paragraph (a) – The resources are necessary for the adequate and immediate medical treatment of the wounded and sick members of the armed forces of the Occupying Power or of prisoners of war

597 Thus these resources should retain their medical purpose. For example, it is out of the question to requisition a medical unit for use as a munitions depot.

598 Moreover, they must be necessary for the *adequate* and *immediate* medical treatment. The term *immediate* means that they must be used without delay for providing care for the wounded and sick needing care. They cannot be requisitioned for future needs, even if these are genuinely predictable. The term *adequate* means that the resources that have been requisitioned should correspond to the treatment to be given and the possibility of giving it. It is not permitted to requisition equipment which is not needed, or if there is no personnel available who know how to operate it. Finally, the wounded and sick for whom these resources may be requisitioned are those belonging to the armed forces of the Occupying Power or the prisoners of war who have fallen into their hands. Thus these are the wounded and sick of the occupying forces and the captured enemy combatants (i.e., in particular, native soldiers of the occupied territory who were defending their country). Consequently it is unlawful to requisition the “resources” referred to here to use them in the Occupying Power’s own territory.

Sub-paragraph (b) – The requisition continues only while such necessity exists

599 This second condition follows from the first. It is also intended to prevent abuse. The medical necessity for the requisitioned “resources” should not exist only at the moment of requisition, but throughout the period of requisition. As soon as there is no longer any necessity for the resources, their requisition should cease and they should be restored to their former use, or be returned to the service of the civilian population of the occupied territory.

Sub-paragraph (c) – Immediate arrangements are made to ensure that the medical needs of the civilian population, as well as those of any wounded and sick under treatment who are affected by the requisition, continue to be satisfied

600 At first sight this third condition seems superfluous, as paragraph 2 prohibits any requisition of “resources” necessary for these needs. However, it is not superfluous. It could be the case that certain “resources” can be requisitioned without prejudicing in any way the wounded and sick under treatment or the civilian population, but only provided that adequate arrangements are made. Thus, for example, this could be the case if two hospitals were identically equipped and certain pieces of equipment were used to only half their capacity. In this case certain resources could be requisitioned provided that certain measures were taken (specialization of the hospitals, transfer of particular

patients etc.). Thus it was important to state that requisition is prohibited not only if those resources are necessary for the overall medical needs of the civilian population, but also in the case where they may not be necessary in an absolute sense, if practical arrangements are not taken to remove the harmful effects which the requisition might have for the civilian population of the occupied territory.

Y.S.

Article 15 – Protection of civilian medical and religious personnel

1. Civilian medical personnel shall be respected and protected.
2. If needed, all available help shall be afforded to civilian medical personnel in an area where civilian medical services are disrupted by reason of combat activity.
3. The Occupying Power shall afford civilian medical personnel in occupied territories every assistance to enable them to perform, to the best of their ability, their humanitarian functions. The Occupying Power may not require that, in the performance of those functions, such personnel shall give priority to the treatment of any person except on medical grounds. They shall not be compelled to carry out tasks which are not compatible with their humanitarian mission.
4. Civilian medical personnel shall have access to any place where their services are essential, subject to such supervisory and safety measures as the relevant Party to the conflict may deem necessary.
5. Civilian religious personnel shall be respected and protected. The provisions of the Conventions and of this Protocol concerning the protection and identification of medical personnel shall apply equally to such persons.

Commentary**General remarks**

- 601 The object of this article is to allow civilian medical personnel, as well as civilian religious personnel, to fulfil their task, not only by ensuring that they will be respected and protected, but also by affording them help in areas and circumstances where this is required.
- 602 Thus respect and protection are extended to all civilian medical personnel (paragraph 1) and civilian religious personnel (paragraph 5), as they are defined in Article 8 (*Terminology*), sub-paragraphs (c) and (d) respectively, while such respect and protection are provided in the Conventions only for military medical and religious personnel, and for the medical personnel of civilian hospitals.¹
- 603 Such an extension of protection is amply justified by the fact that a large number of States nowadays envisage the amalgamation, or at least coordination, between the military and civilian medical services in case of armed conflict.
- 604 A distinction is then made in the help to be given civilian medical personnel, depending on whether it is afforded in one of two areas: an area where medical services are disrupted by reason of combat activity (paragraph 2), and in occupied territories (paragraph 3). In fact only such areas deserve special attention. Apart from these two cases, civilian medical personnel will operate as normal in the context of a medical service which has not been disrupted by combat activity in the territory of the Party to the conflict on which it depends. There is no reason to provide special measures in these circumstances.
- 605 The problem of access of medical personnel to places where their services are indispensable – a matter of great importance for the wounded – is at last dealt with in this article (paragraph 4).
- 606 Moreover, it should be noted that the question of the identification of civilian medical personnel is dealt with later in Article 18 (*Identification*).
- 607 On the other hand, there is no special provision for the case where members of the civilian medical personnel fall into the hands of the adverse Party (except

¹ Cf. First Convention, Arts. 24-26; Fourth Convention, Art. 20.

in the case of occupied territory). In principle such personnel should not be captured, but be left free to carry out its activities. However, if they are seized in a combat zone for reasons of security, or if they inadvertently find themselves in territory controlled by the adverse Party, they will be treated by the latter as protected persons in the sense of the Fourth Convention and Part III, Section II, of that Convention will apply to them in particular. In addition, the rule that such personnel must not be compelled to carry out tasks incompatible with their humanitarian function, must also be observed in this case.²

Paragraph 1

- 608 The fundamental principle of respect and protection for medical personnel is simply mentioned without any addition or restriction.³
- 609 The draft specified that temporary civilian medical personnel are protected only “for the duration of their medical mission”. This specification has become meaningless because of the adoption of a definition of the term “temporary”, which states that temporary medical personnel is only considered to be medical personnel during such time as it is exclusively assigned to medical tasks.⁴ The problem of their protection as civilian medical personnel therefore does not arise outside these periods when they are then considered to be on an equal footing with all other civilians.
- 610 Finally, it should be remembered that not all civilian medical and nursing personnel is covered here, but only those who have been assigned to medical tasks by the Party to the conflict on which they depend.⁵

Paragraph 2

- 611 The areas referred to here are those where the civilian medical services have been disrupted by reason of combat activity. The draft simply referred to combat zones. The present text is an improvement as it emphasizes the disruption of medical services. In fact, it may be that medical services remain properly organized in a combat zone, even though they are usually overburdened, and then it may also be that medical services are disrupted by combat activity, even though they are not situated in the combat zone. The example of bombing behind the lines springs to mind, or the problems of ensuring adequate supplies which may be caused by combat a long way away.
- 612 The help must be given “if needed”. As a matter of fact, it may happen that the civilian medical personnel themselves are in a position to deal immediately with events immediately in case of the disruption of the civilian medical service (e.g., hospitals damaged by bombing). In such a case there is no need to insist on

² Cf. commentary para. 3, *in fine, infra*, pp. 193-194.

³ On the concepts of “respect” and “protection”, cf. commentary Art. 10, para. 1, *supra*, p. 146.

⁴ Cf. commentary Art. 8, sub-para. (c), *supra*, pp. 124-127.

⁵ *Ibid.*

helping those responsible for civilian medical services, if they do not want help, as this could lead to more problems than it would solve.

- 613 It is the *available* help which must be given and not the *necessary* help. It is not possible to ignore military necessity, particularly in combat zones. Thus it is a matter of affording help, as far as this is possible, without weakening one's own military position. This help may have a passive character (such as permitting the transit of medical supplies) or an active character (such as providing places to shelter the wounded and sick or providing a vehicle to transport them).
- 614 Finally, it is not specified who must provide this help; in fact, it is up to the Party to the conflict capable of providing such help. Obviously this is primarily the Party to the conflict on which the civilian personnel depend, but it can also be the adverse Party in some cases, particularly when a temporary advance places it in the presence of civilian medical units and personnel or when medical transports have to cross its lines.

Paragraph 3

- 615 This paragraph imposes three obligations upon the Occupying Power with respect to civilian medical personnel in occupied territories.
- 616 First, the Occupying Power must afford every assistance to such personnel to enable them to perform their humanitarian functions to the best of their ability.
- 617 This does not only refer to "possible" assistance. The Occupying Power has a responsibility to maintain public health and hygiene,⁶ and its duty to assist in territories which are no longer combat zones, but are considered to have regained a measure of stability, is clearly expressed. Humanitarian considerations carry great weight here yet again. Thus the Occupying Power should provide the *necessary* assistance for the civilian medical personnel to perform their humanitarian functions.⁷
- 618 Moreover, this requirement complements the principles laid down in Article 14 (*Limitations on requisition of civilian medical units*), paragraphs 1 and 2.
- 619 Such assistance must be afforded civilian medical personnel "to enable them to perform, to the best of their ability, their humanitarian functions". This is a reminder that the ultimate aim of such assistance, like that of the protection accorded medical personnel, is the help and care given to the wounded and sick. Such assistance can take a concrete form, such as medical supplies or vehicles, but it can also consist of removing hindrances which could be put in the way of the work of medical personnel, particularly by facilitating access to places where the presence of such personnel is required.
- 620 The second obligation imposed on the Occupying Power is to refrain from requiring that the civilian medical personnel should give priority to any person in the performance of their functions, except on medical grounds.
- 621 In fact, this obligation follows from the general principle also contained in Article 10 (*Protection and care*), paragraph 2, second sentence, of the Protocol,

⁶ Cf. in particular Fourth Convention, Art. 56.

⁷ On the interpretation of the term "necessary", cf. commentary Art. 14, para. 2, *supra*, p. 184.

which provides that no distinction shall be made between the wounded, sick and shipwrecked, founded on any grounds other than medical ones.⁸

- 622** Obviously this principle should be observed primarily by medical personnel, but it should also be observed by any person in contact with the wounded, sick or shipwrecked. Above all, it imposes upon the Parties to the conflict an obligation not to do anything to prevent compliance with it. Thus, in a strict sense, the repetition of this principle in Article 15 was not indispensable. However, it was considered to be useful because it is precisely in situations of occupation that abuse is most to be feared. It can be very tempting for the Occupying Power to order the civilian medical personnel to give priority to the care of its own wounded and sick to the detriment of the civilian wounded and sick of the occupied territory. It was therefore important to stress that such behaviour would be unlawful. But, conversely, it should also be recalled that on the basis of the same principle civilian medical personnel cannot leave without care the wounded and sick of the Occupying Power taken to them in emergencies.⁹
- 623** In all cases the priorities regarding the care to be given should solely be based on criteria derived from medical ethics.
- 624** Finally, the third obligation imposed on the Occupying Power is to refrain from compelling civilian medical personnel from carrying out tasks which are not compatible with their humanitarian mission.
- 625** The text of the draft went further in prohibiting such personnel from being compelled to carry out tasks “unrelated to their mission”. A careful examination by Committee II of Article 15 of draft Protocol II, which was also devoted to medical and religious personnel, resulted in the setting up of a Working Group which considered that the text of the draft was “unnecessarily restrictive on this point, and that it should be sufficient to provide that medical personnel shall not be employed on tasks which are not compatible with their humanitarian role”.¹⁰ Following an amendment, Committee II then accepted the reopening of the discussion on the corresponding article of Protocol I, with which we are concerned here, and the insertion of the present wording in preference to the wording of the draft.¹¹
- 626** The present text, as shown by the above-mentioned Working Group, is less restrictive than the text of the draft as regards the prohibition of tasks which medical personnel may be compelled to perform. While of course all tasks incompatible with the mission of medical personnel are extraneous, i.e., unrelated to that mission, there are tasks unrelated to that mission which are not incompatible with it. For example, to make nursing personnel take part in the construction of medical buildings is certainly unrelated to their mission, but not incompatible with it.
- 627** Certain acts are incompatible as such with the humanitarian mission of medical personnel, particularly such acts as could lead to a loss of trust in such personnel by the wounded and sick whom they are detailed to look after. However, some acts which are not in themselves incompatible may become so if carrying out such

⁸ On this subject, *cf.* commentary Art. 10, para. 2, second sentence, *supra*, pp. 147-148.

⁹ On this subject, *cf.* commentary Art. 14, para. 2, *in fine, supra*, p. 185.

¹⁰ *O.R. XIII*, p. 218, CDDH/II/269, question 5.

¹¹ *O.R. XII*, p. 281, CDDH/II/SR.81, paras. 1-2.

acts overburdens the work of the medical personnel to the point where they are prevented from properly carrying out the tasks necessary for their humanitarian mission.

- 628 Moreover, this provision should be read in conjunction with Article 14 (*Limitation on requisition of civilian medical units*), which imposes strict limitations on the requisition of civilian medical “resources” – including personnel – and in particular imposes the condition that such “resources” should be necessary on medical grounds. It should also be read in conjunction with Article 16 (*General protection of medical duties*), which specifically prohibits any persons engaged in medical activities from being compelled to perform acts contrary to the rules of medical ethics.
- 629 Finally, nothing is mentioned concerning the arming of civilian medical personnel in occupied territories, but it seems to be well within the competence of the Occupying Power to disarm this personnel if it deems the measure necessary for security reasons.¹²

Paragraph 4

- 630 The provision laid down in this paragraph is essential to ensure that the extension introduced in the Protocol of the protection granted military medical personnel to civilian medical personnel is effective. Indeed, for civilian medical personnel to be able to provide the services which justify their protection, it is necessary that they are mobile, and it is especially while they are moving around that the protection afforded them is of paramount importance.
- 631 The principle of free movement for medical personnel is thus laid down, though with two reservations.
- 632 The first is that the movement is related to the medical function. In principle, medical personnel can only move to places “where their services are essential”. However, the word “essential” should not be interpreted in an excessively restrictive sense. It is not only in emergencies – e.g., large numbers of wounded after combat or bombing – that medical personnel must be able to move around, but whenever there is medical justification for such movement: a surgeon who has to perform an operation must have access to the hospital without prolonged discussions regarding the essential nature or not of the operation he wishes to perform.
- 633 On the other hand, apart from movements justified by their function, civilian medical personnel are, if necessary, subject to the same restrictions on movements as the rest of the civilian population.
- 634 The second reservation imposed on such freedom of movement is left to the discretion of the Party to the conflict concerned, i.e., the Party which controls the territory where freedom of movement is required, whether this is its own territory or occupied territory. In these circumstances there are certain security requirements which cannot be ignored. Thus all movement is subject to “such

¹² It is to be noted that this competence is explicitly provided regarding civil defence personnel: cf. Art. 63, para. 3.

supervisory and safety measures as the relevant Party to the conflict may deem necessary”. In extreme cases movement may even therefore be prohibited, though the Party concerned must also take into account its responsibility towards public health in the territory which it controls, and must avoid imposing such categorical restrictions as far as possible. On the other hand, it is quite legitimate for the Party concerned to carry out checks, particularly identity checks, and to take various measures to ensure its own security, especially if it fears espionage or sabotage, or the safety of the medical personnel for whom it could, for example, provide an escort on dangerous journeys.

Paragraph 5

- 635** This paragraph lays down the principle of respect and protection¹³ for civilian religious personnel which is additional to that enjoyed by all civilians.
- 636** Up to now protection has only been accorded to chaplains attached to armed forces,¹⁴ religious personnel of hospital ships,¹⁵ and religious personnel assigned to the spiritual care of the wounded, sick and shipwrecked covered by the Second Convention.¹⁶ To enjoy such protection, such personnel had to be attached to the armed forces, i.e., there had to be “an official relationship” established by “the competent military authorities”.¹⁷
- 637** Article 15, paragraph 5, extends the protection to all civilian religious personnel. However, it is appropriate to be aware of the fact that this covers only the personnel defined in Article 8 (*Terminology*), sub-paragraph (*d*). Only religious personnel attached either to the armed forces of the Parties to the conflict, to medical units or transports, or to civil defence organizations are considered to be religious personnel.¹⁸ As in the case of civilian medical personnel, the competent authorities of the Parties to the conflict therefore retain responsibility for designating, or at least accepting, religious personnel who will enjoy protection. It should be remembered that this restriction is justified by the fact that the authorities of the Parties to the conflict are responsible for the application of the Protocol, and in particular for ensuring that no abuses will be committed by protected persons. To automatically and generally attribute the right to protection to all medical or religious personnel would make such a task extremely difficult, if not impossible.
- 638** The majority of civilian religious personnel in the usual meaning of the term, i.e., those carrying out their function amongst the civilian population, are therefore not covered by this provision. However, special protection cannot be justified for such personnel, who, it should be remembered, remain covered by the general protection accorded the population and all civilian persons.

¹³ On the concept of “respect” and “protection”, *cf.* commentary Art. 10, para. 1, *supra*, p. 146.

¹⁴ *Cf.* Art. 24, First Convention.

¹⁵ *Cf.* Art. 36, Second Convention.

¹⁶ *Cf.* Art. 37, Second Convention.

¹⁷ *Cf. Commentary I*, p. 220.

¹⁸ For further details, *cf.* commentary Art. 8. sub-para. (*d*), *supra*, pp. 127-128.

639 As the second sentence of paragraph 5 makes clear, the right of religious personnel to protection and the measures of identification taken in their regard are the same as those for medical personnel. Thus paragraph 5 simply operates by reference. We will do the same, recalling that this is essentially covered by the provisions of Chapter IV and Article 40 of the First Convention, Chapter IV and Article 42 of the Second Convention, and Articles 15 and 18 (*Identification*) of this Protocol.

Y.S.

Protocol I

Article 16 – General protection of medical duties

1. Under no circumstances shall any person be punished for carrying out medical activities compatible with medical ethics, regardless of the person benefiting therefrom.
2. Persons engaged in medical activities shall not be compelled to perform acts or to carry out work contrary to the rules of medical ethics or to other medical rules designed for the benefit of the wounded and sick or to the provisions of the Conventions or of this Protocol, or to refrain from performing acts or from carrying out work required by those rules and provisions.
3. No person engaged in medical activities shall be compelled to give to anyone belonging either to an adverse Party, or to his own Party except as required by the law of the latter Party, any information concerning the wounded and sick who are, or who would have been, under his care, if such information would, in his opinion, prove harmful to the patients concerned or to their families. Regulations for the compulsory notification of communicable diseases shall, however, be respected.

Commentary

General remarks

- 640 The principle that the wounded, sick and shipwrecked (hereafter referred to as “the wounded”), must be treated and cared for humanely, in addition to the respect and protection to which they are entitled, is one of the pillars of the Geneva Conventions. The first corollary of this principle is that medical personnel must be respected and protected. This is essential for them to be able to act for the benefit of the wounded. A second corollary is laid down in Article 16: any person able to perform medical activities for the benefit of the wounded should be able to do so without fear or any form of coercion.
- 641 Article 16 supplements the principle contained in Article 18, paragraph 3, of the First Convention for the whole population, which states: “no one may ever be molested or convicted for having nursed the wounded or sick”, though it does so only with respect to personnel engaged in medical activities.
- 642 It is no longer only the fact of providing care which is covered here, but any form of medical activities, always provided that they are compatible with medical ethics. As shown in the documentation presented to the Conference of Government Experts in 1971, a doctor is not limited to giving treatment: “He may be called upon also to diagnose (which may reveal that nothing is wrong), report as an expert consultant, give proof of death, or merely advice, and so forth”.¹ This is why it is important to cover all medical activities.
- 643 Moreover, while it is important that medical activities undertaken for the benefit of the wounded cannot be punished, it is even more so to prevent any behaviour conflicting with their interests. Article 11 (*Protection of persons*) deals with persons receiving treatment, and prohibits subjecting them to any medical procedure which is not indicated by their state of health.² Article 16, paragraph 2, supplements this prohibition by protecting the potential perpetrator against any compulsion to perform acts – or refrain from performing acts – contrary to the patient’s interests.
- 644 Finally, still with the intention of benefitting medical activities for the well-being of the wounded, Article 16, paragraph 3, is concerned with preventing the use of the privileged relationship which often exists between medical personnel and the wounded to compel such personnel to extract information from the wounded. This restriction is necessary to establish an atmosphere of trust between those providing care and their patients, which is nowadays even considered to form part of the healing process.

¹ CE/7b, p. 21.

² For further details on this subject, cf. commentary Art. 11, *supra*, p. 154.

645 As to the historical background, it should be noted that the principles on which this article is based were already raised in the context of the “Entretiens consacrés au droit international médical” and were included in the “Draft Rules for the Protection of Wounded, Sick and Civil Medical and Nursing Personnel in Time of Conflict” which resulted from these discussions and were presented by the ICRC at the XXth International Conference of the Red Cross (Vienna, 1965).³ It is clear therefore that the essence of Article 16 reflects a preoccupation which was already an issue right at the beginning of the work that led to the Protocols.

Paragraph 1

646 The object of this provision is obviously to remove all fear of punishment from persons who may get involved in caring for the wounded who are the true beneficiaries of this provisions. As a matter of fact, the threat of punishment hanging over the head of persons able to help them means that they would be in danger of being left without care.

647 Thus, though the ultimate aim of Article 16 is to improve the treatment of the wounded, this paragraph is directly concerned with persons who have provided care and therefore implicitly those who could get involved in such activities.

648 It may seem that this category of persons could be extremely broad or even include the whole population, since anyone may find himself in the presence of a wounded person who is losing blood and may perform a medical act such as applying a tourniquet in such circumstances.

649 Although the spirit of international humanitarian law is of course opposed to any condemnation of such acts, the present provision is nevertheless more particularly concerned with those performing medical activities or activities directly related thereto, whether or not they are considered to be medical personnel in the sense of the Protocol. On the other hand, Article 17 (*Role of the civilian population and of aid societies*) covers the whole population.

650 What meaning can be ascribed to the term *punishing*? Article 18, paragraph 3, of the First Convention uses the terms *molest* and *convict*, and Article 17 (*Role of the civilian population and of aid societies*), paragraph 1, of the Protocol adds the term *prosecute*. The draft presented at the Conference of Government Experts in 1971 stated that the exercise of medical activities should not be “considered an offence”.⁴ The verb *convict*, used in the First Convention, and the term *offence*, used in the 1971 draft, show that these are concerned only with the criminal law aspects. However, the term *molest*, used in the Convention, goes much further. This should prevent any criminal proceedings or even administrative proceedings being brought solely on the basis of such grounds, as is even more clearly prohibited by the term *prosecute*, used in Article 17 (*Role of the civilian population and of aid societies*) of the Protocol. *A fortiori*, it should also prevent any administrative measure (particularly a disciplinary measure)

³ On the subject of these discussions and these “Draft rules...” and their historical background, cf. introduction to Part II, *supra*, pp. 108-110.

⁴ CE/7b, p. 21.

from being taken, or even any form of annoyance, threat or harassment. By using the term *punishing* the prohibition is here restricted to sanctions. However, the verb *punishing* is less restrictive than *convicting*; it refers not only to penal sanctions, but also to any other sanctions or harassment.

- 651 The obligation to refrain from punishing is addressed to all authorities in a position to administer punishment, from the immediate superior in the hierarchy of the person concerned who is entitled to do so, to the supreme court of a State. It applies not only to the enemy authorities, but also to the authorities of the State of which the person concerned is a national. This is important, because there could be a great temptation for a State to punish its own nationals who have administered care to the enemy wounded.
- 652 The expression “medical activities” is very broad, and its precise limitations are difficult to define. Ultimately the determining element is that the activities are aimed at improving the health or alleviating the suffering of the wounded. In this way activities which should obviously be excluded, are in fact excluded: activities unrelated to the wounded person’s state of health, such as messages which could be transmitted to help him.
- 653 Medical activities must be “compatible with medical ethics”. This point first of all acts as a reminder that the provision under consideration here is aimed at medical personnel. However, it raises two questions. What exactly are medical ethics? To what extent can one require that persons who are not professionally bound by ethical rules, observe and therefore are familiar with such rules?
- 654 It is possible to define this concept fairly closely. Ethics are defined as “the science of morals [...] the science of human duty”.⁵ They are not only concerned with the medical profession, though modern usage of the term usually refers to *medical* ethics, viz., the science of the professional duties of medical practitioners.⁶ These are certainly the ethics with which we are concerned here: there is no doubt about that.⁷
- 655 Thus the phrase refers to the moral duties incumbent upon the medical profession. Such duties are generally decreed by the medical corps of each State in the form of professional duties. However, this should not be confused with the rules of the internal organization of medicine which obviously are not part of medical ethics.
- 656 At the international level, the World Medical Association⁸ adopted an “International Code of Medical Ethics” (1949)⁹; a modern version of the Hippocratic Oath, the “Declaration of Geneva” (1948)¹⁰; the “Regulations in

⁵ Shorter Oxford English Dictionary, 1973 Edition, p. 685.

⁶ The French equivalent “déontologie” in particular refers to “déontologie médicale”, cf. Paul Robert, Dictionnaire alphabétique et analogique de la langue française, Paris, 1971, Vol. II, p. 120.

⁷ A proposal was made to use the expression “déontologie médicale” in the French text, “medical ethics” in the English text (cf. O.R. III, p. 78, CDDH/II/53).

⁸ This Association was set up in 1947. It is constituted of one medical association in each country and has about 700,000 members. On this subject, cf., in particular, M. Torrelli, *op. cit.*

⁹ *Ibid.*, pp. 384 ff., which contains the text of this Code in an Annex.

¹⁰ *Ibid.*, pp. 385 ff.

time of armed conflict”¹¹ and the “Rules governing the care of sick and wounded, particularly in time of conflict”.¹² These rules have not been adopted by States and have no binding force in international law. Nevertheless, they constitute a valuable instrument of reference and no one contests the principles on which they are laid down. There is no doubt that these are the rules of medical ethics referred to in the context of the provision under consideration here.¹³

657 As these rules were adopted for the medical profession, strictly speaking they bind only the members of this profession. However, an examination of these rules reveals that the underlying principles are simply common sense and that no person administering care could transgress them without being aware of being in the wrong. In fact the more delicate ethical problems, such as those raised by abortion or euthanasia, do not play a part in this context.

658 What is the essential maxim of these principles? It is never to act in conflict with the wounded person’s interests, to help him to the fullest extent of the

¹¹ These rules, as amended by the 35th World Medical Assembly in 1983, are as follows:

“1. Medical Ethics in time of armed conflict is identical to medical ethics in time of peace, as established in the International Code of Medical Ethics of the World Medical Association. The primary obligation of the physician is his professional duty; in performing his professional duty, the physician’s supreme guide is his conscience.

2. The primary task of the medical profession is to preserve health and save life. Hence it is deemed unethical for physicians to:

A. Give advice or perform prophylactic, diagnostic or therapeutic procedures that are not justifiable in the patient’s interest.

B. Weaken the physical or mental strength of a human being without therapeutic justification.

C. Employ scientific knowledge to imperil health or destroy life.

3. Human experimentation in time of armed conflict is governed by the same code as in time of peace; it is strictly forbidden on all persons deprived of their liberty, especially civilian and military prisoners and the population of occupied countries.

4. In emergencies, the physician must always give the required care impartially and without consideration of sex, race, nationality, religion, political affiliation or any other similar criterion. Such medical assistance must be continued for as long as necessary and practicable.

5. Medical confidentiality must be preserved by the physician in the practice of his profession.

6. Privileges and facilities afforded the physician must never be used for other than professional purposes.”

¹² These rules, as amended in 1983, are as follows:

“A.1. Under all circumstances, every person, military or civilian must receive promptly the care he needs without consideration of sex, race, nationality, religion, political affiliation or any other similar criterion.

2. Any procedure detrimental to the health, physical or mental integrity of a human being is forbidden unless therapeutically justifiable.

B. 1. In emergencies, physicians and associated medical personnel are required to render immediate service to the best of their ability. No distinction shall be made between patients except those justified by medical urgency.

2. The members of medical and auxiliary professions must be granted the protection needed to carry out their professional activities freely. The assistance necessary should be given to them in fulfilling their responsibilities. Free passage should be granted whenever their assistance is required. They should be afforded complete professional independence.

3. The fulfillment of medical duties and responsibilities shall in no circumstance be considered an offence. The physician must never be prosecuted for observing professional confidentiality.

4. In fulfilling their professional duties, the medical and auxiliary professions will be identified by the distinctive emblem of a red serpent and staff on a white field. The use of this emblem is governed by special regulation.”

¹³ For further details in this field, *cf.* in particular M. Torrelli, *op. cit.*

means available, whoever he is (principle of non-discrimination), to be discreet regarding his condition and never to abuse his sense of dependence on the person administering care, particularly not with a view to gaining an advantage from him.

659 Thus the meaning of paragraph 1 is clear: it encourages concern for the wounded, provided that this concern remains pure and impartial.¹⁴

660 The second part of the sentence, “regardless of the person benefitting therefrom” (medical activities), was not indispensable. It simply reveals the absolute character of the principle, to which no exception can be made. There is a right, and even a duty (in any case for medical personnel) to administer care to the worst enemy of one’s own Party to the conflict, if he is wounded, even in the middle of the most cruel battle.

661 However, one tricky problem remains: if a national of a State is in service of the enemy, this act may be punished by that State. Should Article 16 be considered as an obligation for a State Party to the conflict not to punish its own nationals serving in the enemy medical service? Without being able to answer this in the affirmative, it is to be earnestly wished. In any case, the act of serving in the *medical service* of the enemy should at least be considered an important mitigating circumstance in a case of *being in the enemy service*.

662 It should also be stated that on the basis of this provision, it is not possible to rule out the prosecution of those who have not answered a call to mobilisation. However, this is another problem which does not belong to international humanitarian law.¹⁵

Paragraph 2

663 This paragraph is concerned with another aspect of the protection of medical duties. This time it is not a case of preventing medical activities from being paralyzed by the fear of possible punishment, but of preventing compulsion from being exercised on medical personnel to make them behave contrary to medical ethics.

664 Those on whom such compulsion must not be exercised are “persons engaged in medical activities”. This refers, first of all, to all personnel caring for the wounded, whether these are doctors, nurses or medical aides. However, it also includes technical personnel whose activities, such as X-ray examinations and the preparation of medicine, has a direct influence on the wounded. It should be noted that this concept only partially covers that of medical personnel. Indeed, on the one hand, it covers members of medical personnel who do not qualify as such in the sense of the Protocol because they are carrying out medical activities without being “assigned, by a Party to the conflict, exclusively” to such medical purposes (*cf.* Article 8 – *Terminology*, sub-paragraph (c)); on the other hand, some persons considered as medical personnel by the Protocol do not carry out

¹⁴ *Cf.* also Art. 11, para. 1, and its commentary, *supra*, pp. 152-156.

¹⁵ On this subject, see also J. Pictet, *Humanitarian Law and the Protection of War Victims*, *op.cit.*, pp. 78-80.

medical activities (such as, for example, the personnel assigned to the administration of medical units). Nevertheless, the latter are covered by the general principle of Article 17 (*Role of the civilian population and of aid societies*), paragraph 1, third sentence.¹⁶

- 665 Such persons cannot be *compelled* to perform acts or to carry out work, or refrain from so doing. “To compel” means “to urge irresistibly, to constrain, oblige, force”¹⁷ someone to act against his will. People may be compelled directly (by threats of death, of maltreatment, of harassment, of imprisonment) or indirectly (e.g., by threats relating to members of their family). For military medical personnel a simple military order may even constitute a form of compulsion, as refusing to carry out an order is severely punished. However, there should be more than mere pressure, such as that of withdrawing or failing to grant certain material advantages. Moreover, it should be noted that anyone who compelled a person engaged in medical activities to perform acts contrary to medical ethics would not only be violating Article 16, paragraph 2, but also Article 10 (*Protection and care*), and probably Article 11 (*Protection of persons*). As regards the person who had been compelled to commit such an act, he would not be automatically absolved from blame. The compulsion would be considered as a mitigating circumstance of the violation of Article 10 (*Protection and care*), and probably of Article 11 (*Protection of persons*), and depending on the circumstances, might even result in the acquittal of the accused.¹⁸
- 666 The persons concerned cannot be compelled “to perform acts or to carry out work contrary to the rules of medical ethics” (or other rules: see below). Thus this does not refer only to medical procedures (such as performing an operation, giving an injection, administering medicine etc.), but also to work that is essential for medical treatment (preparation of medicines, analyses etc.)
- 667 For that matter, it is clearly stated that such compulsion may take either a positive or a negative form. To prevent the performance of an essential operation, administering medicines or disinfecting a wound, clearly constitutes a compulsion which is just as reprehensible as a compulsion to perform certain acts. For example, it is quite clear that preventing an orderly from carrying out an analysis which is essential for medical treatment is also contrary to the provisions of paragraph 2.
- 668 The acts or the work referred to in this paragraph are those which are “contrary to the rules of medical ethics or to other medical rules designed for the benefit of the wounded and sick, or to the provisions of the Conventions or of this Protocol”. These are alternative conditions, and it is sufficient for such acts or works to be contrary to one of these three types of rules.
- 669 It should be noted that in the documentation presented at the first session of the Conference of Government Experts in 1971 reference was made to conduct “contrary to his vocation and professional conscience”. The experts attempted to draw up a list of acts which should be prohibited, but in view of the difficulties of such a task, they gave up. Finally, they adopted the solution of including a

¹⁶ Cf. commentary Art. 17. *infra*, pp. 216-217.

¹⁷ Shorter Oxford English Dictionary, 1973 Edition, p. 382.

¹⁸ On this subject, *cf.* also commentary Arts. 85-87, *infra*, p. 989.

paragraph specifically prohibiting medical personnel from being compelled to violate the provisions of the Conventions or the Protocol, and another paragraph prohibiting them from being compelled to perform acts or carry out work contrary to *professional rules*. The concept of *professional conscience* was considered to be too subjective and was abandoned. In the draft presented to the CDDH this part of the article was simplified. The two paragraphs were combined into a single one, referring only to *medical ethics*, on the basis that this covered all the provisions considered previously. However, various amendments requested the reintroduction of more complete and explicit references.¹⁹ As stated during the CDDH,

“the relevant norms were to be found, first in the Geneva Conventions and the Protocols themselves; secondly, in the rules of medical ethics designed for the benefit of the wounded and sick, as opposed to those rules concerned only with the interests of the profession; thirdly, in other rules designed for the same purpose and applicable in a specific case”.²⁰

However, it should be remarked that no attempt was made to list these various rules. The main point in understanding the scope of this paragraph is to be sensitive to its spirit. It is concerned with removing a compulsion which might be exerted on medical personnel to conduct themselves in a way that is contrary to their patients’ interests. This is at the heart of the problem, and the seriousness of a breach of this provision should be considered in the light of the harm it could do to such patients’ interests and the awareness of harm being done.

Paragraph 3

- 670 This paragraph is an attempt to resolve an awkward problem which had already been raised during the drafting of the Conventions, and which had been thoroughly discussed in medical circles. It is not the problem of “medical confidentiality”, as it has sometimes improperly been described,²¹ but the principle that the wounded and sick should not be denounced and that they should not be informed on.
- 671 This problem arose mainly because of experiences during the Second World War when the occupying forces ordered inhabitants, including doctors, to denounce the presence of any presumed enemy, under threat of grave punishment.
- 672 During the discussions which resulted in 1949 in the adoption of the Conventions, some delegations would have liked to specify that medical personnel and the civilian population should not be permitted to conceal the wounded whom they had given shelter or care from the control of the authorities.

¹⁹ Cf. *O.R.* III, pp. 77-81, particularly CDDH/II/36, CDDH/II/53, CDDH/II/209, CDDH/II/212.

²⁰ *O.R.* XI, p. 183, CDDH/II/SR.19, para. 59.

²¹ As a general rule, medical confidentiality refers to the discretion that a doctor must observe with respect to third parties regarding the state of health of his patients and the treatment he has administered or prescribed for them. Cf. also *CE/7b*, p. 22.

They considered that otherwise such personnel and population would be infringing their neutral status.²²

- 673 Others were opposed to this point of view, fearing that such a provision would confer legitimacy on measures taken by occupying authorities to compel doctors to denounce wounded members of the enemy forces or of resistance movements. Taking this argument to its logical conclusion, some wished to include non-denunciation as a principle.²³
- 674 Finally, because of the lack of agreement, this was not mentioned at all in the First Convention.
- 675 However, the problem was subsequently taken up by the International Law Association,²⁴ as well as by the IIIrd International Congress on the Neutrality of Medicine,²⁵ which both recommended that the principle of non-denunciation should be categorically recognized, emphasizing that otherwise the wounded would not take the risk of seeking medical attention.
- 676 The text proposed by the ICRC during the first session of the Conference of Government Experts does not put the principle of non-denunciation categorically, but leaves the responsibility whether or not to denounce a patient up to the doctor: the doctor cannot be compelled to denounce (but he is under no obligation to refrain from denunciation).²⁶ In this way the possibility of imposing denunciation has been taken away from the authorities, but a doctor retains the freedom to denounce a patient on the basis that he may legitimately wish to prevent the patient pursuing activities which he considers to be dangerous for other human beings, just as, in peacetime, he may wish to prevent a criminal from continuing his criminal activities. This principle was retained throughout all the stages of the Protocol's drafting and is contained in the final text.
- 677 However, the experts increased its scope by making it applicable to all persons carrying out medical activities.
- 678 Furthermore, it should be pointed out that the principle is concerned primarily with occupied territory, and that at first it had been provided that it applied only in such territory. As a controversy had arisen during the second session of the Conference of Government Experts regarding its application to the occupying authority's own medical personnel, the expression "occupying authorities" was replaced by "adverse Party". For that matter, it seemed to be clearly established that nothing in this provision could prevent the occupying authorities from imposing a duty to denounce on its own personnel. However, subsequently some confusion arose whether it was the adverse Party of that of the medical personnel, or of that of the wounded, that was referred to. In the Commentary on the draft Additional Protocols presented to the CDDH, the ICRC opted for the second

²² On this subject, cf. CE/7b, p. 22.

²³ *Ibid.*

²⁴ Cf. *Report of the 53rd Conference, Buenos Aires, 1968*, The International Law Association, London, 1969.

²⁵ A summary of the reports, debates and resolutions of this congress, which took place in Rome from 16-20 April 1968, can be found in the *Annales de Droit international médical*, Commission médico-juridique, Palais de Monaco, No. 18, December 1968, pp. 72-76.

²⁶ Cf. CE/7b, p. 23.

explanation, though this was contested.²⁷ Replacing the expression “occupying authorities” by the expression “adverse Party”, moreover, also resulted in the application of the rule no longer being restricted to occupied territory.

- 679 Finally, it should be noted that the Government Experts Conference made a reservation to the principle with regard to the notification of communicable diseases and the personnel caring for the wounded may therefore be compelled to make such notification. This reservation was retained and is included in the present text of Article 16, paragraph 3.
- 680 Let us now turn to the text to be reviewed.
- 681 Paragraph 3 applies to any person “engaged in medical activities”, i.e., the same wording as in paragraph 2. The French text uses slightly different expressions in paragraphs 2 and 3, referring to “activité de caractère médical” and “activité médicale”, respectively. However, this is merely a question of translation. The English text, which is identical in both paragraphs, shows that paragraph 3 is not addressed to a different group of persons from paragraph 2. As regards the meaning of the words quoted, reference should therefore be made to the commentary on paragraph 2. The same applies to the meaning of the verb *compel*.
- 682 Such a person cannot be compelled to give “information concerning the wounded and sick who are, or who have been, under his care”. This refers not so much to information relating to the health or physical condition of the wounded and sick. In fact, discretion in this respect is required by medical ethics and is therefore imposed by paragraph 2. The information concerned is rather information about the activities, connections, position or simply the existence of the wounded. The provision does not cover only the wounded who are still under the care of the person engaged in medical activities, but also those who have been cared for previously. Thus the protection is not of a temporary nature, but long term, based on the general idea that it is not right to use information obtained in the context of the relationship between the wounded and persons caring for them. This relationship must be free of any suspicion if it is to be truly effective.
- 683 Nevertheless, this obligation to refrain from compelling a person engaged in medical activities to give information thereon is subject to the condition that “such information, would, in his opinion, prove harmful to the patients concerned or to their families”. In other words, the personnel caring for the wounded could not lawfully use this provision as an excuse to refuse to give information for other reasons. However, it is clear that the discretion of the person engaged in medical activities is still very broad, all the more so as it is very difficult, if not impossible in practice, to examine the validity of such reasons.
- 684 Moreover, as we saw above, there is no obligation upon those exercising medical activities to remain silent. They may denounce the presence of the wounded to the authorities even when they know that this will be prejudicial to the wounded person or his family, if such denunciation is in their view necessary for saving lives. The prohibition is aimed at those who could compel such denunciations.

²⁷ Cf. *Commentary Drafts*, p. 25, and *O.R.* XI, p. 150, CDDH/II/SR.16, para. 52.

- 685** The information must not be demanded under compulsion by “anyone” belonging to the Parties to the conflict, with one reservation which will be examined below. The draft presented to the CDDH referred to the “authorities”. Even though only authorities in the wide sense can lawfully be in a position to exercise compulsion, there is no need to regret the wider formulation adopted in the final text, as this avoids any ambiguity.
- 686** Although compulsion exercised by personnel of the adverse Party is absolutely prohibited, such compulsion exercised on a person by his own authorities is only forbidden insofar as the national law of such a person does not allow exceptions (“except as required by the law of the latter Party”). Without reiterating the historical background of this clause outlined above, it is worth recalling that the draft presented to the CDDH simply imposes a prohibition on the authorities of the adverse Party. During the CDDH the text first adopted by Committee II also referred only to the adverse Party. However, this text presented the Drafting Committee with some difficult problems, and it decided to refer it back to a Working Group. It was this latter which adopted the present wording, maintaining that it was not altering the essential meaning of the preceding text. The Rapporteur of the Committee’s Drafting Committee considered that the idea “that no person engaged in medical activities should be compelled to give, even to his own Party, the information in question except if so required by national legislation” had “always been implicit in the former wording”.²⁸
- 687** However, this modification was not unimportant as regards the principle involved, as it clearly presumes that in the relationship between the authorities of a Party to the conflict and its own personnel engaged in medical activities, compulsion to denounce is prohibited in principle. Only an explicit provision of national legislation can remove this presumption. It is by no means negligible as the problem of the relationship between the doctor dependent on the authorities of his own Party, and the wounded of the adverse Party (care of persons in occupied territory, prisoners of war etc.) is not a mere academic point. At a purely humanitarian level it is regrettable that the wording did not go even further by adopting the provision without restriction, even with respect to the Party to the conflict of the personnel engaged in medical activities and leaving the sole responsibility whether or not to denounce to such personnel. However, the view prevailed that there could be no question “of interfering with the application of national legislation”²⁹ once it was decided that the scope of the provision should not be confined to occupied territories, but should be extended to national territories.
- 688** Finally, it should be mentioned that the solution which was ultimately adopted is not very satisfactory from the purely legal point of view, insofar as it results in an international legal norm varying according to different national legislations. One delegation at the CDDH even stated that “such a provision was contrary to

²⁸ *O.R.* XII, p. 282, CDDH/II/SR.81, para. 3.

²⁹ *O.R.* XI, p. 153, CDDH/II/SR.16, para. 68.

the very essence of international law”.³⁰ It remains to be hoped that the national legislation on which the application of the rule depends on this point will exercise as little compulsion as possible with regard to persons engaged in medical activities. In any case they may not impose an obligation to violate the minimum standards imposed by the general rules of medical ethics mentioned above.³¹

689 The final sentence of the paragraph concerns the relationship of the personnel caring for the wounded both with the adverse Party and with its own Party. In fact, in the case of communicable diseases, general interest takes precedence over special interests. Thus it is logical to impose on persons engaged in medical activities an obligation in all circumstances to notify cases of communicable diseases which they can trace. The Protocol itself does not impose this obligation, but refers to domestic regulations, removing any ambiguity with regard to the conformity of these regulations and the present article.

Y.S.

³⁰ *O.R.* XI, p. 513, CDDH/II/SR.46, para. 2. This remark referred to a similar provision in Protocol II, but it was repeated with regard to the present provision: *O.R.* XII, p. 282, CDDH/II/SR.81, para. 5.

³¹ *Cf. supra*, pp. 200-201, and notes 11-12.

Protocol I

Article 17 – Role of the civilian population and of aid societies

1. The civilian population shall respect the wounded, sick and shipwrecked, even if they belong to the adverse Party, and shall commit no act of violence against them. The civilian population and aid societies, such as national Red Cross (Red Crescent, Red Lion and Sun) Societies, shall be permitted, even on their own initiative, to collect and care for the wounded, sick and shipwrecked, even in invaded or occupied areas. No one shall be harmed, prosecuted, convicted or punished for such humanitarian acts.
2. The Parties to the conflict may appeal to the civilian population and the aid societies referred to in paragraph 1 to collect and care for the wounded, sick and shipwrecked, and to search for the dead and report their location; they shall grant both protection and the necessary facilities to those who respond to this appeal. If the adverse Party gains or regains control of the area, that Party also shall afford the same protection and facilities for so long as they are needed.

Commentary

General remarks

- 690 The foremost reason for this provision is once again to protect the interests of the wounded, sick and shipwrecked, and its immediate aim is to permit the civilian population and aid societies to assist such victims, either on their own initiative or at the request of the authorities.
- 691 The draft Protocol additional to the Fourth Convention, presented by the ICRC at the first session of the Conference of Government Experts in 1971, contained an article entitled “Role of the civilian population”, which more or less covered the scope of the present Article 17, paragraph 1.
- 692 This provision was inspired by Article 18, paragraphs 2, 3 and 4, of the First Convention – the principle of which came from the original Convention of 22 August 1864 (Article 5) – and it was aimed at extending the scope of Article 18 to the civilian wounded and sick. In fact, Article 18 applies only to the military wounded and sick, as defined in Article 13 of the First Convention.
- 693 A first addition was made to this text in the draft presented by the ICRC at the second session of the Conference of Government Experts in 1972: the ICRC included the shipwrecked, in addition to the wounded and sick. In doing so, it extended the scope of the provisions of Article 21 of the Second Convention, which permits an “appeal to the charity of commanders of neutral merchant vessels, yachts or other craft”, and guarantees special protection for vessels responding to this appeal, or for those “having of their own accord collected wounded, sick or shipwrecked persons”. The Committee which dealt with this question during the second session of the Conference of Government Experts in 1972 considered that it was appropriate to introduce in the draft a paragraph corresponding more closely to Article 21 of the Second Convention, but covering all victims protected in the draft, including in particular shipwrecked civilians who are not covered by the Second Convention.
- 694 In the 1973 draft a new addition was made with the introduction of a paragraph inspired by Article 18, paragraph 1, of the First Convention. This provides for the possibility of military authorities appealing to the charity of the civilian population to collect the wounded and sick. The new paragraph extended its scope in two respects: first, like the whole of the new article, it also covered the civilian wounded and sick; secondly, it allowed for the possibility of appealing to the civilian population, as does Article 18 of the First Convention, and also to aid societies.¹

¹ However, it should be noted that in this second case there is not really a substantial change. According to *Commentary I*, it is clear that relief societies are covered by the generic term “inhabitants”. Cf. p. 189 of that *Commentary*.

- 695 As regards the structure of the article, the 1973 draft adopted a division into five paragraphs, of which the first four formed a corollary to part of Article 18 of the First Convention, while the fifth supplemented Article 21 of the Second Convention.
- 696 Though the substance of this draft article was retained during the CDDH with one exception, its structure was again modified. The first three paragraphs were combined to form a single paragraph, the fourth therefore remained as a separate paragraph (which became the second paragraph of the present article), and the fifth was deleted.
- 697 The main modification of the substance of the draft during the CDDH consisted of the deletion of the fifth paragraph, although it was ultimately of less importance than it had first seemed. In fact, the deletion of this paragraph² should be considered in conjunction with the reintroduction of the term “shipwrecked” in the first and second paragraphs, which thus became complementary to Article 21 of the Second Convention.
- 698 Thus the main reason for the deletion of this paragraph was that it no longer seemed to have much purpose.³ Moreover, this argument is strengthened by the new regulations adopted for medical ships and craft.⁴ However, it is appropriate to point out that perhaps an attempt to increase the scope of this paragraph was not unrelated either to the decision finally taken to delete it. In presenting the article, the ICRC representative had actually already mentioned that the lack of any mention of aircraft⁵ in paragraph 5 of the draft meant that there was something missing, and an amendment was put forward to include aircraft and vehicles in this paragraph.⁶ This amendment was hotly disputed, particularly because such a vague provision relating to aircraft entailed the risk of reintroducing the fear that medical aircraft might abuse their privileges while detailed regulations had just been established for medical aircraft.⁷ It was after this debate that the decision to delete the paragraph was taken by Committee II.⁸

Paragraph 1

First sentence

- 699 This paragraph confirms a traditional rule which the civilian population should observe. It is the only place in the Protocol where the rule is explicitly addressed to the civilian population. Nevertheless, as with any rule in the Protocol, it is appropriate to recall that it is up to the High Contracting Parties to respect and

⁵ *Cf.* O.R. XI, p. 157, CDDH/II/SR.17, para. 18.

⁶ *Cf.* O.R. III, pp. 85-86, CDDH/II/203.

⁷ *Cf.* O.R. XII, pp. 48-50, CDDH/II/SR.59, paras. 67, 72 and 74. As regards medical aircraft, *cf.* Arts. 24-31, with the commentary thereon, *infra*, p. 279.

⁸ *Cf.* O.R. XII, p. 50, CDDH/II/SR.59, para. 78.

to ensure respect for it in all circumstances,⁹ and therefore to instruct the civilian population accordingly.

700 The civilian population is defined in Article 50 of the Protocol (*Definition of civilians and civilian population*).¹⁰

701 The duty imposed here upon the civilian population is only to *respect* the wounded, sick and shipwrecked, and not to *protect* them.¹¹ Thus it is above all an obligation to refrain from action, i.e., to commit no act of violence against the wounded or take advantage of their condition. There is no positive obligation to assist a wounded person, though obviously the possibility of imposing such an obligation remains open for national legislation, and in several countries the law has indeed provided for the obligation to assist persons who are in danger, on pain of penal sanctions.

702 The obligation is imposed with respect to the *wounded, sick and shipwrecked* as they are defined in Article 8 (*Terminology*).¹² Such an obligation had already been laid down with respect to the wounded and sick covered by the First Convention, but not with respect to the shipwrecked covered by the Second Convention. A proposal had been made to add to this list “combatants *hors de combat*”,¹³ but the point of view which finally prevailed was that the problem of combatants *hors de combat* without also being wounded, sick or shipwrecked, should not be dealt with in Part II, which is devoted to the wounded, sick and shipwrecked.¹⁴ At a later stage Committee II even rejected the suggestion of Committee III that Article 17 should refer to the protection of persons *hors de combat*.¹⁵

703 The obligation is unconditional, and it was considered proper to recall that it exists even if the victims *belong to the adverse Party*. This stipulation was not indispensable and a proposal was made to delete it:¹⁶ clearly, it is the members of the adverse Party with which this provision is primarily concerned, as violence committed against victims of one’s own Party, or against neutral victims, is undoubtedly already prohibited by national legislation. However, despite this, it was retained to make sure that there could be no ambiguity.

704 The clause “and shall commit no act of violence against them” at first sight also seems superfluous. Would it actually be possible to respect a wounded person and at the same time commit an act of violence against him? This wording was already contained in the draft presented to the CDDH by the ICRC, and it is in fact an approximate transcription of Article 18, paragraph 2, second sentence, of the

⁹ Cf. Art. 1, para. 1.

¹⁰ Cf. commentary Art. 50, *infra*, p. 609.

¹¹ On the meaning of these two terms, cf. commentary Art. 10, *supra*, p. 145.

¹² Cf. commentary Art. 8, sub-paras. (a) and (b), *supra*, pp. 116-124.

¹³ Cf. O.R. III, p. 83, CDDH/II/14.

¹⁴ Cf. O.R. XI, pp. 158-161, CDDH/II/SR.17, paras. 34-56.

¹⁵ Cf. O.R. XIII, p. 66, CDDH/236/Rev. 1, para. 25. According to the Rapporteur of Committee III, speaking on persons *hors de combat*, it seemed undeniable that such persons should be respected by the civilian population. However, Committee III considered that a provision on this point would be more appropriate in Art. 17, which is why it was referred to Committee II, which refused to take up the question for the reason mentioned above. For further details on this matter, cf. commentary Art. 41 and Art. 42, *infra*, p. 479.

¹⁶ Cf. O.R. III, p. 85, CDDH/II/203.

First Convention.¹⁷ Thus the act of violence must be considered as an aspect of disrespect which deserves to be emphasized. This is certainly the way in which this clause of paragraph 1 should be understood. In this respect it should also be noted that the violence which is prohibited is not necessarily physical violence. For example, threatening or harassing a wounded person would certainly constitute reprehensible moral violence against him, and in any case this would be in violation of the duty imposed by this provision to *respect* him.

Second sentence

- 705** The first sentence was concerned with instilling in the civilian population an attitude at least of neutrality with regard to any victim. The second sentence is aimed at permitting civilians, including aid societies, to adopt a positive attitude towards such victims, if they desire to do so. In other words, the civilian population *must respect* and *may protect*.
- 706** This sentence is concerned, in addition to the civilian population, with *aid societies*, which are also mentioned in Article 18 of the First Convention.
- 707** The mention of such societies had formed the subject of discussion during the second session of the Conference of Government Experts in 1972. The opinion had been voiced that such societies did not need to be mentioned specifically, as they form part of the civilian population, but the opposite view prevailed. It was admitted that as the population often organizes aid societies of different kinds, it was opportune to mention such societies.¹⁸
- 708** The draft did not contain any example of such societies, though various amendments were put forward, proposing that the National Red Cross (Red Crescent, Red Lion and Sun) Societies should be mentioned by way of example, in view of their prominent role in this type of activity.¹⁹ The principle of such a mention was adopted by Committee II.²⁰ However, as stated above, such a mention is given only by way of example, and when it was adopted by consensus at a plenary meeting of the Conference, one delegation considered that it was appropriate to recall that the mention of such societies “does not imply any limitation on the initiative and the action of other aid societies”.²¹ However, *aid societies* should be understood to mean “voluntary aid societies duly recognized and authorized by their governments”, i.e., the societies covered by Article 26 of the First Convention. This was the intention of the authors of the draft,²² and it was not contested by anyone during the CDDH. A profit-making society or a society established without complying with the rules imposed by national legislation, could therefore not fall under this provision.

¹⁷ This sentence is worded as follows: “The civilian population shall respect these wounded and sick, and in particular abstain from offering them violence”.

¹⁸ *CE 1972, Report*, vol. I, p. 40, para. 1.58.

¹⁹ *Cf. O.R. III*, p. 82-84, CDDH/II/1, 11, 16, 19.

²⁰ By 45 votes to none against and seven abstentions: *cf. O.R. XI*, p. 162, CDDH/II/SR.17, paras. 62 and 63.

²¹ *O.R. VI*, p. 78, CDDH/SR.37, Annex (Holy See).

²² *Cf. Commentary Drafts*, p. 26 (Art. 17, para. 2).

709 The civilian population and aid societies “shall be permitted, even on their own initiative” to undertake the described activities (see below). This wording might lead one to suppose that authorization should be requested (which, in principle, should be granted). Yet this is not the case. In the absence of any provision to the contrary, there is a presumption that the activities described are permitted. In fact, this wording is taken from the First Convention where the commentary is very clear on this subject: assistance to the wounded is a duty and

“it is impossible *a fortiori* to deny those who wish to come to the help of the wounded their right to do so. That right is the natural appanage of all persons; and no one can prevent the civilian population from carrying out, in all circumstances, their humanitarian duty towards the wounded [...]”²³

At most, the authorities could prevent the civilian population from reaching the victims by prohibiting certain movements, provided that there are valid reasons for such action, in particular, reasons of security. However, it is up to them to justify such a prohibition. In fact, this interpretation is reinforced by the expression “even on their own initiative”. There can actually be no question of requesting authorization when people act on their own initiative. Otherwise, they would no longer really be acting on their own initiative. Thus the authorization referred to here applies generally and is given once and for all. It is the expression of a right.²⁴

710 However, it should also be noted that the expression *even on their own initiative* was only finally adopted after lengthy discussions. Article 18 of the First Convention, like the 1973 draft, used the term *spontaneously*. This expression was considered inadequate, as on the one hand, it seemed to exclude organized aid, and on the other hand, did not apply very accurately to the societies whose activities do, after all, necessarily require some degree of concerted cooperation.²⁵ The expression which was finally chosen is appropriate, since the word *even* does not exclude organized activities, and the expression *on their own initiative* does not necessarily imply improvised action. It means that the aid societies can take their decision in accordance with their respective decision making processes, without external consultations.

711 Permission is given to *collect and care for the wounded, sick and shipwrecked*. The original 1864 Convention had already stated that “the presence of any wounded combatant receiving shelter and care in a house shall ensure its protection”. The principle went very far and it was subsequently slightly diluted,²⁶ but the concepts expressed by the terms “collect” and “care” were retained, for, as the Commentary to the First Convention states, “to ‘collect’ a wounded man is to receive him into one’s house. But it may also mean to bring him in from where he is lying wounded”.²⁷ Apart from the reference to “collect”, the 1973 draft refers to “care or assistance”. However, this proposal led to heated

²³ *Commentary I*, p. 189.

²⁴ On this subject, cf. also *O.R.* XI, p. 243, CDDH/II/SR.24, para. 59.

²⁵ Cf. in particular *O.R.* XI, pp. 238-243, CDDH/II/SR.24, paras. 21-66.

²⁶ On this subject, cf. *Commentary I*, pp. 184 ff.

²⁷ *Ibid.*, p. 187.

discussion in Committee II and several proposals were made to amend it.²⁸ Some were afraid that the term “assistance” entailed a “possibility of conflict with domestic legislation concerning treason or other crimes or unlawful acts”.²⁹ Others thought that the term “care”, as well as the expressions “medical assistance” or “medical care”, to the exclusion of a more general term, “would restrict the scope of the article in a way that was incompatible with its humanitarian aim”.³⁰ In their opinion, “warm clothing or a packet of biscuits could be just as useful as medical care”.³¹ The solution which was finally adopted – to “care” (French: “prodiguer des soins”) – is at the same time a general and a restrictive term. It is general in that there was no attempt to restrict aid solely to medical care, but the intention was to include any act contributing to the victim’s relief; it is restrictive to the extent that it excluded assistance not directly intended to relieve the victim, in order to avoid any confusion with acts of treason or other punishable acts. Thus the criterion is undeniably the purely humanitarian character of the acts, as confirmed in the last sentence of the paragraph, which qualifies them as “humanitarian acts”.

712 There remains the thorny problem of supervision and the possible obligation for the civilian population or aid societies to report the wounded they have collected or cared for to the authorities. On this point the article is silent, as is Article 18 of the First Convention. In this respect it is appropriate to refer to the commentary on this article, which also applies to Article 17, paragraph 1, of the Protocol:

“But the Diplomatic Conference refused to make the permission granted to the inhabitants to give spontaneous help dependent on the acceptance of military supervision, or on any kind of compulsory statement, which would be tantamount to informing against those cared for. They pointed out that the absence from the Convention of any allusion to control did not necessarily mean that control was prohibited, and that in actual fact the military authorities could undoubtedly issue regulations of this kind where such a course was indicated by circumstances.”³²

713 Finally, the authorization applies “even in invaded or occupied areas”. In fact, the right of the civilian population and aid societies to collect and care for the wounded, sick and shipwrecked is an absolute right and this clarification was by no means necessary. It was already present in Article 18 of the First Convention, and was retained during the Conference of Government Experts and the CDDH. It is actually in invaded or occupied areas that the respect for this right of the civilian population is most at risk, since it applies to the relationship between the authorities of one Party to the conflict and the civilian population of the adverse Party. Hence, this point was made explicitly to avoid any ambiguity. However, it should be noted that during the Conference of Government Experts in 1972, one delegation proposed deleting this phrase, given that in practical terms such areas

²⁸ Cf. *O.R.* III, pp. 83 and 85, CDDH/II/12, 54 and 203.

²⁹ *O.R.* XI, p. 158, CDDH/II/SR.17, para. 32.

³⁰ *Ibid.*, p. 159, para. 35.

³¹ *Ibid.*, para. 43.

³² *Commentary I*, pp. 190-191.

are the only ones where the rule can be effectively applied.³³ This is not strictly correct. The rule also applies to the authorities of a Party to the conflict with respect to its own population, even though, in such cases, there should be fewer problems regarding its implementation. During the CDDH it was also proposed to make a distinction between the situation “in invaded areas, which would probably be immediately behind the battlefield, and occupied areas”.³⁴ However, this proposal was not adopted. Finally, it should be noted that no definition was given of “invaded or occupied areas”. In fact, it is a question of degree. An area will be considered to be invaded, but not occupied, when combatants have entered without yet having set up the administrative machinery of occupation. Thus it is a transitional period, and at the end the invader will either withdraw or establish a proper form of occupation with all the juridical consequences implicit in this, particularly the integral application of the Fourth Convention.³⁵

Third sentence

- 714** The last sentence of paragraph 1 is a corollary of the previous sentence. The civilian population enjoys a right, and it follows logically that it cannot be punished for the sole reason of having exercised this right.
- 715** The term “no one” is used deliberately, and it extends the scope of the sentence. Not only civilians, but anyone, whether civilian or military, the nationals of any Party, is covered by this sentence if he has performed the acts referred to.
- 716** For such acts it is prohibited to *harm, prosecute, convict or punish* the persons concerned. Article 18 of the First Convention used only the words *molested or convicted*; the word “prosecuted” was added in the 1973 draft and Committee II of the CDDH decided to introduce a second addition, i.e., the verb “punish”. These terms were added for the sake of being complete. The aim of the provision is to prevent any repression, whether or not this is judicial (*prosecute* refers in particular to the examining magistrate and the public prosecutor, who should not bring such a case before the court, *convict* refers to the court which must acquit anyone who is nonetheless brought before it on such a charge; *harm* may refer to the investigation stage, which should not be embarked upon only for such a reason). There may actually also be an extra-judiciary form of repression. It is possible to harm someone with threats, whether these are open or anonymous. As regards the meaning of *punish*, this is very broad and has already been discussed.³⁶
- 717** By referring to “such humanitarian acts”, this obviously indicates the acts enumerated in the preceding sentence, i.e., collecting and caring for the wounded, sick and shipwrecked. In this way, as shown above, it is also confirmed that the permitted acts must have humanitarian motives: to collect a wounded

³³ CE 1972, Report, vol. II, p. 27 (Art. 20).

³⁴ O.R. XI, p. 238, CDDH/II/SR.24, para. 24.

³⁵ Cf. in addition commentary Art. 44, *infra*, pp. 532-533 and note 53.

³⁶ Cf. commentary Art. 16, para. 1, *supra*, p. 199. On the subject of this sentence, cf. also *Commentary I*, pp. 192-193 (Art. 18, para. 3).

person in the hope of financial reward is no longer a humanitarian act. For the rest, the rule cannot be invoked to shirk an obligation to report the wounded that have been collected in the event that such an obligation had been imposed by the authorities. On this point there is certainly a difference to be made as compared with medical personnel.³⁷

Paragraph 2

- 718 Since it is important that the civilian population can act on its own initiative for the benefit of the wounded, sick and shipwrecked, without fear of being punished, it is no less important that it can carry out such tasks at the request of the Parties to the conflict, especially when the medical services of the latter are overworked. This second aspect of the participation of civilians in activities for the benefit of victims is absolutely fundamental. It was such an appeal that Dunant made to the local population in Solferino, based at that time only upon his moral authority, long before the founding of the Red Cross and the adoption of the Geneva Convention of 22 August 1864.
- 719 Such a provision was contained in all the versions of the Geneva Convention, and it was included in 1949 in Article 18, paragraph 1, of the First Convention and Article 21 of the Second Convention. The reason that it is repeated in the Protocol is that the victims – with regard to whom the civilian population may be called upon to help – are no longer only the military wounded and sick (as defined in Article 13 of the First Convention), but military *and civilian* wounded, sick *and shipwrecked*.
- 720 It is the *Parties to the conflict* which may make such an appeal, whereas the First Convention stipulated that this should be the *military authorities*. The solution given in the Protocol is very suitable, leaving the competence to the highest authorities of the Parties to the conflict, whether civilian or military – i.e., for States, to the government – while giving the latter the possibility of delegating this competence to subordinate bodies.
- 721 The 1973 draft referred to the possibility of appealing to the *charity* of the civilian population, the word used in the First Convention. During the CDDH the proposal to delete this word, which was considered “out of date”³⁸ was adopted. Various replacements for this term – “goodwill”, “humanitarian feelings”, “generous feelings” – were also rejected³⁹ and Committee II finally adopted a proposal “that all reference to ‘feelings’ should be deleted” from paragraph 2 of Article 17.⁴⁰ In fact, this reference to the feelings of the population hardly seems to be necessary, though with one reservation. Two representatives expressed the fear that the absence of such a reference would permit the provisions of paragraph 2 to be interpreted as being mandatory for the civilian

³⁷ On this subject, *cf.* commentary Art. 16, para. 3, *supra*, pp. 204-208.

³⁸ *Cf.* in particular *O.R.* XI, p. 241, CDDH/II/SR.24, para. 49.

³⁹ *Cf.* in particular *ibid.*, pp. 237-244, paras. 17, 30, 40-42, 46, 49-51, 55, 57, 60, 67-70.

⁴⁰ *Ibid.*, p. 244, CDDH/II/SR.24, para. 70. This proposal was approved by 27 votes for, 8 against and 14 abstentions.

population.⁴¹ The present text is actually ambiguous on this point and it is appropriate to stress in this commentary that the drafters' intention was to retain an optional character for this provision, both with regard to the Parties to the conflict (who may make an appeal or refrain from so doing) and with regard to the civilian population and aid societies (who remain free to respond as they wish). This provision should not be seen as a sort of "right to mobilize" civilians for humanitarian purposes.

722 The appeal is made to the civilian population and the aid societies referred to in paragraph 1.⁴²

723 The appeal can be made only for specific tasks. The first two of these, "to collect and [to] care for the wounded, sick and shipwrecked", are identical to those described in paragraph 1.⁴³

724 However, the civilian population and aid societies may also be called upon for a third task, and it is appropriate to consider this here. The task referred to is "to search for the dead and report their location". This task is not contained in Article 18 of the First Convention⁴⁴ and had not been introduced in the 1973 draft. Curiously, it was introduced by the Drafting Committee of Committee II, who were concerned to make this paragraph accord with paragraph 5 of the 1973 draft, which related to the appeal to commanders of civilian ships and craft, and which contained a similar provision. Yet, as mentioned above, this paragraph 5 was deleted,⁴⁵ though the addition made to paragraph 2 was retained, admittedly in a modified form. The Drafting Committee of Committee II had actually proposed the expression "to collect the dead", but one delegation remarked that "it was not right that civilian populations and relief societies should be expected to collect the dead, with the possible exception of those at sea".⁴⁶ The present text was then proposed in an amendment which was adopted by consensus at the 44th meeting of Committee II.⁴⁷ The possibility of asking the civilian population and aid societies to deal with the dead is not mentioned. This omission seems justified, particularly for reasons of hygiene. On the other hand, it is certainly possible to appeal to them to search for the dead, and if they should find them, to report their location to the authorities.

725 Next it is specified that the Parties to the conflict which have made such an appeal to the civilian population or aid societies should grant "protection and the necessary facilities to those who respond to this appeal". This is a logical and indispensable requirement. It would not be possible to appeal to the civilian population and to aid societies without granting them sufficient protection and assistance. Such a provision is also contained in similar terms in Article 18, paragraph 1, of the First Convention.⁴⁸

⁴¹ Cf. *ibid.*, p. 242, CDDH/II/SR.24, paras. 55 and 57.

⁴² On this subject, cf. commentary para. 1, *supra*, pp. 211-216.

⁴³ On this subject, cf. *ibid.*

⁴⁴ However, the Parties to the conflict could also rely on Art. 15, para. 1, of the First Convention to approach the civilian population for these purposes.

⁴⁵ On this subject, cf. *supra*, p. 211.

⁴⁶ O.R. XI, p. 486, CDDH/II/SR.44, para. 8.

⁴⁷ Cf. O.R. III, p. 86, CDDH/II/256, and O.R. XIII, p. 94, CDDH/221/Rev. 1, para. 87.

⁴⁸ On this subject, reference could be made to *Commentary I*, pp. 186 ff. The following remarks are largely inspired by this.

- 726 What constitutes such protection and *necessary* facilities? This refers to such protection and facilities without which the task of the population or the aid societies would be too difficult or dangerous. The assessment of such necessity is left in the first instance to the competent authorities of the Party to the conflict which made the appeal, but this Party must take into account, as far as possible, the wishes and views of the societies or persons prepared to respond to the appeal. Such protection and facilities will essentially depend on the circumstances and can therefore not be listed exhaustively.
- 727 However, it should be noted that the protection which can be granted in this context does not automatically include the right to use the red cross emblem, as the use of this emblem must be reserved to situations explicitly provided for by the Conventions and the Protocol. This restriction is justified because the risk of abuse is so great. However, there is nothing to prevent the Parties to the conflict from increasing the strength of their temporary medical personnel or the number of their temporary medical units. The Protocol is very flexible in this respect. However, such measures imply strict supervision and do not fall under the scope of this article.
- 728 Finally, Article 17 imposes an obligation on the adverse Party to afford the same protection and facilities for as long as they are needed, if it gains or regains control of the area. The logic of this obligation is not the same as that for the previous obligation, as in this case a Party to the conflict is required to afford protection and facilities to persons or societies to which it has not made an appeal itself. However, it is in the interests of the wounded and sick that the population or the societies to which an appeal had been made for help by the often overloaded authorities, can continue their humanitarian task, even under the authorities of the adverse Party. A similar provision had been introduced in Article 18 of the First Convention in 1949 to fill the gap which was felt to exist in the 1929 Convention.⁴⁹
- 729 It should be noted that this phrase refers to a Party which *gains or regains* control of the area. The determining factor is the need, and not the fact that one Party or the other controls the area. In this respect it is of little or no importance whether the area is occupied or not. The facilities must be afforded if they are needed, and must continue to be afforded by the adversary if the need continues.
- 730 However, the maintenance of such protection and such facilities remains obligatory only for “so long as they are needed”. This specific stipulation was made neither in Article 18 of the First Convention, nor in the 1973 draft. It was added during the CDDH on the basis of an amendment.⁵⁰ Nevertheless, it is justified. A change in the control of territory can totally change the parameters of a problem. Some measures of protection or assistance may no longer be necessary. It may no longer be useful to resort to the civilian population or to aid societies, particularly if the medical services of the Party gaining or regaining control of the area can easily cope with their task. As regards an assessment of what is *necessary*, what was said above also applies here.⁵¹

⁴⁹ Cf. *Commentary I*, p. 188.

⁵⁰ Cf. *O.R.* III, p. 85, CDDH/II/54; *O.R.* XIII, pp. 91 and 93, CDDH/221/Rev. 1, para. 83.

⁵¹ Cf. *supra*.

731 Moreover, it should be recalled that the civilian population and aid societies obviously retain the right to collect and care for the wounded, sick and shipwrecked on their own initiative in accordance with paragraph 1, independently of any protection and facilities which the Parties to the conflict might grant them or withhold from them.

Y.S.

Protocol I

Article 18 – Identification

1. Each Party to the conflict shall endeavour to ensure that medical and religious personnel and medical units and transports are identifiable.
2. Each Party to the conflict shall also endeavour to adopt and to implement methods and procedures which will make it possible to recognize medical units and transports which use the distinctive emblem and distinctive signals.
3. In occupied territory and in areas where fighting is taking place or is likely to take place, civilian medical personnel and civilian religious personnel should be recognizable by the distinctive emblem and an identity card certifying their status.
4. With the consent of the competent authority, medical units and transports shall be marked by the distinctive emblem. The ships and craft referred to in Article 22 of this Protocol shall be marked in accordance with the provisions of the Second Convention.
5. In addition to the distinctive emblem, a Party to the conflict may, as provided in Chapter III of Annex I to this Protocol, authorize the use of distinctive signals to identify medical units and transports. Exceptionally, in the special cases covered in that Chapter, medical transports may use distinctive signals without displaying the distinctive emblem.
6. The application of the provisions of paragraphs 1 to 5 of this Article is governed by Chapters I to III of Annex I to this Protocol. Signals designated in Chapter III of the Annex for the exclusive use of medical units and transports shall not, except as provided therein, be used for any purpose other than to identify the medical units and transports specified in that Chapter.
7. This Article does not authorize any wider use of the distinctive emblem in peacetime than is prescribed in Article 44 of the First Convention.
8. The provisions of the Conventions and of this Protocol relating to supervision of the use of the distinctive emblem and to the prevention and repression of any misuse thereof shall be applicable to distinctive signals.

Commentary

General remarks

- 732** The possibility, in areas where hostilities take place, of identifying persons and objects entitled to respect and protection is an essential corollary to this right.
- 733** The principal persons protected by the Conventions and the Protocols, i.e., the wounded, sick and shipwrecked, can be identified by means of their condition, even though an additional means of identification in the form of the distinctive emblem is desirable whenever possible. A wounded soldier will be bedridden and unable to continue taking part in combat; the situation of a shipwrecked person who has the good fortune to be retrieved does not give rise to much confusion.
- 734** The same does not apply to the personnel and objects protected in their functional capacity (i.e., so that they are able to ensure the protection of persons principally protected). A soldier with medical duties is actually an able-bodied person who might well engage in combat; a medical vehicle could be used to transport ammunition rather than the wounded or medical supplies. Thus it is essential for medical personnel, units, materials and transports to be identified in order to ensure the protection to which they are entitled, which is identical to that accorded the wounded, sick and shipwrecked.
- 735** The need for this is clear, and did not escape the attention of the authors of the very first Geneva Convention of 22 August 1864. Article 7 of this Convention already provided for the use of flags and armlets bearing the red cross on a white ground. In the 1949 Conventions this problem was treated in greater detail.¹

¹ Cf. Chapter VII of the First Convention, containing seven articles, entitled: "The distinctive emblem"; Chapter VI of the Second Convention, with the same title, and containing five articles; Articles 18 (paras. 3 and 4), 20 (para. 2), 21 and 22 (para. 2) of the Fourth Convention.

- 736 Moreover, as the entire system of protection established in the Conventions is based on the trust which can be placed in the proper use of the distinctive emblem, the control of such use and the repression of abuse are of paramount importance.²
- 737 As regards identification, the Protocol had to comply with two requirements: to determine how civilian personnel and objects entitled to respect and protection could be identified, and to adapt the means of identification to modern techniques.
- 738 The first requirement was discussed from the beginning of the preliminary negotiations of the Protocol. The most delicate question was that of the emblem to be chosen to identify civilian medical persons and objects entitled to protection. Should the use of the red cross, red crescent or red lion and sun emblem simply be extended, or was it better to introduce a new emblem for such persons and objects? At first, the latter solution was chosen, and this is contained in the “Draft Rules for the Protection of Wounded and Sick and Civil Medical and Nursing Personnel in Time of Conflict”, presented at the XXth International Conference of the Red Cross.³ An emblem was even proposed, that of the Aesculapian symbol, on a white ground. However, the XXth International Conference of the Red Cross declared that it was in favour of extending the red cross, red crescent or red lion and sun emblem.
- 739 In the draft Protocol Additional to the Fourth Convention, presented to the Conference of Government Experts in 1971, the ICRC accepted this extension, though still without completely abandoning the Aesculapian symbol. In fact, this draft made a distinction between civilian medical personnel “organized and duly authorized by the State”,⁴ which should be entitled to use the emblem of the red cross (red crescent, red lion and sun), and “doctors and nurses who are not members of the State medical service”, who may “with the consent of the relevant authorities, display the red Staff of Aesculapius on a white background as a means of identification”.⁵ Nevertheless, both at the Conference of Red Cross Experts in 1971, and at the Conference of Government Experts in the same year, the great majority of experts considered that it would be best to discard this new emblem.
- 740 The following passage, taken from the ICRC contribution to the third round of the “Entretiens consacrés au droit international médical”⁶ takes up the arguments which could be put forward in favour of a new emblem:

“Extending the use of the emblem to all doctors without distinction [...] would hardly be possible nor would it be desirable. In fact, if the value of this emblem is to be retained, it is important to limit its use to those who are entitled to use it under the Conventions; moreover, its widespread use would make any control impossible. On the other hand [...] the creation of a clear, easily recognisable, “meaningful” emblem, which is neither the red cross nor

² On this subject, *cf.* commentary para. 8, *infra*, pp. 234-235.

³ *Cf.* introduction to Part II, *supra*, p. 107.

⁴ Art. 7 of the Draft, *cf.* CE/7b, p. 6.

⁵ *Cf.* Art. 11 of the Draft, CE/7b, p. 8.

⁶ On this subject, *cf.* introduction to Part II, *supra*, p. 107.

an imitation of it, and which would be adopted by the medical profession throughout the world and be recognized at a national level by each State [...] would undoubtedly soon become the symbol of devoted and innocent medical assistance, alongside the Red Cross.”⁷

Obviously these arguments lost their relevance to some extent once it was decided that the medical personnel who were also to be protected henceforth, were only personnel *duly recognized and authorized* by the Parties to the conflict concerned. As regards retaining the use of a different emblem for all civilian medical personnel not authorized to use the red cross, red crescent or red lion and sun, the opinion expressed by the Conference of Government Experts in 1971 finally prevailed:

“The Commission felt, however, as did also the Conference of Red Cross Experts in The Hague in March 1971, that this new emblem conferred no special protection, that it concerned a relatively limited number of persons, and that confusion might arise by the indication of two emblems in the same Protocol. It was decided therefore not to include in this Protocol any mention of the Staff of Aesculapius.”⁸

- 741 Thus it was finally decided to opt for an extension of the use of the emblem of the red cross, red crescent or red lion and sun in the Protocol, because this avoided any possibility of confusion and consequently offered a better guarantee.
- 742 The second requirement with which the provisions of the Protocol devoted to identification had to comply – adapting identification to modern combat techniques – was also of paramount importance, particularly for medical aircraft. In fact, the use of such aircraft was extremely limited in 1949 for technical reasons.⁹ Merely to have the emblem of the red cross, red crescent or red lion and sun painted on an aircraft seemed insufficient to ensure effective protection, having regard to modern means of warfare.
- 743 Thus to deal with this virtual impasse with regard to medical aircraft, it was necessary to solve such technical problems and it was not long before an appeal was made to technical experts rather than to legal experts.¹⁰
- 744 Finally, these questions were grouped together in Annex I to the Protocol, which supplements Article 18.

⁷ Translated by the ICRC. The original French is as follows: “Une extension de l’usage de l’emblème à tous les médecins sans distinction [...] ne serait guère possible ni souhaitable. Il importe en effet, si l’on veut conserver à cet emblème toute sa valeur, d’en limiter l’emploi aux seuls bénéficiaires prévus par les Conventions; de plus, sa multiplication rendrait tout contrôle impossible. En revanche [...] la création d’un emblème clair, bien reconnaissable, “parlant”, qui ne serait ni la croix rouge ni une imitation de celle-ci et serait adopté par l’ensemble du corps médical dans le monde et reconnu sur le plan national, par chaque Etat [...] deviendrait rapidement sans doute, à côté de la Croix-Rouge, le symbole de l’assistance médicale, dévouée et innocente.” Contribution of the ICRC to the “Entretiens consacrés au droit international médical” (Liège, April 1956), Document ICRC, D.430, pp. 6-7.

⁸ *CE 1971, Report*, p. 26, para. 66.

⁹ On this subject, *cf.* in particular Art. 36 of the First Convention, and *Commentary I*, pp. 284-293.

¹⁰ On this subject, and in particular for the historical background to these negotiations, *cf.* commentary Annex I, *infra*, p. 1137.

745 It should also be noted that the problem of identification had been dealt with in various articles in the first drafts of the Protocol, particularly in the draft presented at the second session of the Conference of Government Experts in 1972. Finally, as stated in the Commentary on the draft presented to the CDDH:

“To avoid repetition, it seemed advisable to concentrate all provisions relating to the marking and identification of medical units, means of medical transport and medical personnel in a single article, which incidentally would connect this Part and the Annex.”¹¹

Paragraph 1

746 The basic principle is stated in this first paragraph. The right to respect and protection of medical personnel and medical objects would be meaningless if they could not be clearly recognized. The Parties to the conflict therefore have a great interest in seeing that such personnel and objects can be identified by the enemy. Thus the rule laid down here is in the interests of those who are responsible for observing it. In fact, it would be the medical personnel and medical objects of the Party concerned which would suffer from poor means of identification and which could become the target of an enemy that had not identified them. Yet it must be emphasized that the means of identification do not *constitute* the right to protection, and from the moment that medical personnel or medical objects have been identified, shortcomings in the means of identification cannot be used as a pretext for failing to respect them.

747 The Parties to the conflict must *endeavour* to ensure that the personnel and objects concerned are identifiable. As this is an obligation to achieve a result which not only depends on the Party under obligation, it cannot be imposed in an absolute fashion: despite all the efforts one might make, it is not out of the question that at some point, persons or objects, even if they are correctly marked, are not identified by the enemy in time. However, the reason that the obligation is not absolute is also because some means of identification are very expensive or highly technical, and it is not possible to impose these on Parties to the conflict which do not have the financial or technical means to employ them. The Parties to the conflict must do *all they can*, which in any case is in their own interest, as we have seen above.

748 It is not specified *who* must be able to identify. However, it is clear that this refers first of all (though not exclusively) to those who could harm the persons and objects to be identified, i.e., mainly members of the armed forces of the adverse Party. However, no emphasis is placed on this aspect of the problem at this stage deliberately, as it occurs again in paragraph 2. What is required here is a clear identification comprehensible by everyone, as provided in the Protocol and its Annex I.

749 Finally, the personnel and objects to be identified (medical personnel, religious personnel, medical units and transports) are defined in Article 8 of the Protocol (*Terminology*).¹²

¹¹ *Commentary Drafts*, p. 27.

¹² *Cf.* commentary Art. 8, sub-paras. (c), (d), (e) and (g), *supra*, pp. 124-131.

Paragraph 2

- 750 Paragraph 2 is the corollary of paragraph 1. If it is necessary to make one's own medical personnel and medical objects identifiable, it is also necessary to make an effort to recognize those of others. It is only on this condition that the duty to respect and protect them can be fulfilled.
- 751 In the draft no distinction had been made between these two aspects of the problem, and the scope of the rule laid down in paragraph 1 of the draft was not clearly defined. This became apparent in Committee II of the CDDH,¹³ and a perfectly justifiable decision was taken to have two separate paragraphs.
- 752 There is of course not always a need for such a provision. Formerly, identification was purely visual and there were no special measures to take: a good eye-sight was all that was needed to identify the persons and objects regarding which there was a duty to respect and protect. However, as mentioned above, methods of warfare have developed, and long range combat has rendered purely visual means of identification inadequate. Moreover, to a great extent the technical means of long range identification are effective only if the adverse Party is equipped to perceive them. This applies particularly to electronic means of signalling and identification.
- 753 In this paragraph there is again no *obligation* for the Parties to the conflict to adopt adequate methods and procedures. The reason is that it did not seem desirable to impose an absolute obligation which would involve excessively onerous financial or technical burdens for certain States or other Parties to the conflict. Thus States are merely urged to *endeavour*, i.e., to do all they can, to fulfil the obligation laid down here.
- 754 Obviously this is not possible without raising a practical problem. If a Party to the conflict has means of signalling at its disposal the reception of which requires a certain technology, it would be acting rashly if it used them without the assurance that the adversary has access to such technology and is ready to use it for these purposes. Thus prior agreement between the Parties to the conflict seems almost indispensable.
- 755 This paragraph requires the Parties to the conflict to endeavour "to adopt and to implement methods and procedures". Thus the obligation has two aspects. First, regarding the choice of a method (i.e., the technology and equipment that are needed) and a procedure (i.e., the way in which such technology can be used effectively), and secondly, as regards its implementation, which may necessitate an extensive training and instruction programme – it is not sufficient to possess the equipment; it must also be used correctly.
- 756 Finally, it should be noted that reference is made here to the identification of medical units and transports, but not to that of medical personnel. This is because, although the use of signals is not excluded, such personnel are generally identified by means of visual emblems which do not require special methods or procedures of identification.
- 757 As regards the distinctive emblem and signals, these have been defined above.¹⁴

¹³ Cf. O.R. XI, p. 166, CDDH/II/SR.18, para. 7.

¹⁴ Cf. commentary Art. 8, sub-paras. (l) and (m), *supra*, pp. 134-135.

Paragraph 3

- 758 This paragraph is concerned with the means of identification which must be used by civilian medical and religious personnel. It is not concerned with the medical and religious personnel covered by the Conventions, as the question of their identification is regulated there.¹⁵
- 759 However, it should be noted in passing that Annex I emphasizes the effectiveness of the means of identification, and consequently the importance of their visibility. This means that the indications of the Conventions regarding restrictive use of the emblem (armlets) and particularly those imposing on temporary personnel the obligation to wear an emblem smaller in size, must be considered to be obsolete.¹⁶ The real question is whether a person is or is not entitled to use the distinctive emblem. Once his right to such use has been established, it would be illogical to impose measures which would diminish the visibility of the emblem, and in this way render effective protection uncertain.
- 760 Though the preceding remark applies to all persons entitled to the use of the distinctive emblem, it should be remembered that paragraph 3 applies only to *civilian* medical and religious personnel. For such personnel the rule regarding identification is imposed only “in occupied territory and in areas where fighting is taking place or is likely to take place”. We will not reconsider here the concept of occupied territory.¹⁷ The expression “areas where fighting is taking place or is likely to take place” is a result of the work of the mixed Working Group of Committee II and Committee III of the CDDH, which recommended:

“a) terms that should be used to cover the various military situations that are envisaged in some of the articles contained in the Draft Additional Protocols I and II to the Geneva Conventions of 12 August 1949; and b) definitions of the terms recommended”.¹⁸

As regards the present article, this Working Group defined the expression *combat area* as follows: “In an armed conflict, that area where the armed forces of the adverse Parties actually engaged in combat, and those directly supporting them, are located.”¹⁹

- 761 In the case under consideration here, the areas concerned are not only such areas, but also “areas where fighting [...] is likely to take place”, i.e., areas which may be presumed to become combat areas as defined above. Obviously the expression “is likely to take place” allows for a degree of judgment. However, there is no reason for the authorities concerned to be too restrictive. As soon as contact with the enemy becomes a possible or probable event, such authorities have every interest in providing civilian medical and religious personnel with the distinctive emblem and the identity card prescribed: it is a matter of their protection.

¹⁵ Cf. First Convention, Arts. 40-41; Second Convention, Art. 42.

¹⁶ On this subject, cf. also commentary Annex I, Arts. 3 and 4, *infra*, p. 1173.

¹⁷ On this subject, cf. in particular *Commentary IV*, pp. 2 ff. and 59 ff.

¹⁸ Report of the mixed Working Group, March 1975, *O.R. XIII*, p. 199, CDDH/II/266-CDDH/III/255.

¹⁹ Annex A of the above-mentioned report, *ibid.*, p. 203.

762 However, it should be noted that the expression “should be recognizable” (in the French text “se feront en règle générale reconnaître”) to some extent reduces the strictness of the obligation. In fact, the choice of this expression is the result of lengthy discussions. Some would have preferred that the entire system – particularly the issuing of the identity cards referred to here – should be set in motion already in peacetime.²⁰ Others were opposed to this point of view and even wished the system to remain optional in time of conflict. One solution envisaged by the Drafting Committee of Committee II was to make the identity card compulsory for permanent personnel and optional for temporary personnel.²¹ One of the main arguments for this solution was that: “in extraordinary combat conditions it might not be possible to provide temporary civilian medical personnel with identity cards”.²² However, a distinction of this sort was rejected, particularly because “the carrying of an identity card proved the qualifications of the holder, whether permanent or temporary. It was therefore in everyone’s interest that such cards should be carried”.²³ Such a distinction regarding identification was abandoned in Article 18, but the possibility of a simplified card for temporary personnel was introduced in Annex I of the Protocol.²⁴ Moreover, several delegates raised the practical problems facing certain countries.²⁵

763 Finally, therefore, the introduction of the expression “should be recognizable” (in French “se feront en règle générale reconnaître”) is the result of compromise. This means that personnel should be provided with such emblems and cards, but that it is not made a condition *sine qua non* of protection. Neither the identity card nor the distinctive emblem create a right of protection as such, as one delegate clearly pointed out: “protection was provided to medical personnel because of their function; the distinctive emblem was merely evidence of protection”.²⁶ The fact remains that the absence of such evidence – particularly the emblem – would make the safety of such personnel very uncertain, and it is therefore desirable that this rule is in practice generally observed. Moreover, it should be noted that though the expression “should” (in French “en règle générale”) allows civilian medical and religious personnel to operate in exceptional cases without the prescribed means for certifying their status, it cannot be interpreted as permitting the use of another distinctive sign, even in exceptional cases. One delegate correctly remarked in this respect that “there was no obligation to carry a distinctive emblem, but if one was carried it must be the distinctive emblem of the Red Cross (Red Crescent, Red Lion and Sun)”.²⁷

764 The details relating to the identity card and the distinctive emblem can be found in Articles 1-4 of Annex I to the Protocol.²⁸

Paragraph 4

- 765 This paragraph lays down the principle of the marking of medical units and transports. One may wonder why, as in the case of personnel, it is not solely concerned with *civilian* medical units and transports. The reason is that the concepts *medical units* and *medical transports* are not exactly equivalent in the Protocol to the concepts used in the Conventions. Thus it was necessary to repeat the rule for all units and transports.
- 766 Whether the units and transports are civilian or military, their use is subject to control by the Party to which they belong. Thus the distinctive emblem should not be affixed without the consent of the competent authority of this Party (which may also be an adverse Party for that matter, particularly in the case of occupied territory). Apparently this authority has but one choice: either it allows a unit or transport the character of a *medical* unit or transport in the sense of the Protocol, in which case it permits and even requires marking it by means of the distinctive emblem, or it does not recognize this character and does not allow the use of the emblem.
- 767 However, in reality the situation is more varied: certainly, the authority could not permit a unit or transport which is not recognized as a medical unit or transport within the meaning of the Protocol to be marked in this way. On the other hand, it is not out of the question that it desists from marking a medical unit or transport recognized as such, even if, in the great majority of cases, this would be against its own interest. Indeed, it may happen in some exceptional cases that a distinctive emblem is too striking, and this could be detrimental to military exigencies.²⁹
- 768 The way in which medical units and transports are to be marked is specified in Annex I to the Protocol, which emphasizes the visibility of the emblem.³⁰
- 769 However, it was necessary to take into account in the Protocol the special solutions adopted in the Second Convention for marking hospital ships and coastal rescue craft. In this respect no decision could be taken before the discussion on the articles of the Protocol relating to medical ships and craft.³¹ Article 22 of the Protocol (*Hospital ships and coastal rescue craft*)³² extends the possibility of using the ships and craft described in Articles 22, 24, 25 and 27 of the Second Convention and introduces some flexibility. Thus the solution which was finally adopted was to retain the system laid down in the Second Convention for the marking of such ships and craft. This concerns most of all Article 43 of the Second Convention, to which we now refer. It should be noted that this article already emphasizes the visibility of the distinctive emblem. Moreover, it lays down the rules to be adopted with regard to national flags, which must be hoisted or hauled down, depending on the circumstances. Finally, the last paragraph of this Article 43 is of special interest here, as it urges Parties to the conflict to endeavour at all times “to conclude mutual agreements, in order to use the most

²⁹ In this respect, *cf.* also in particular Art. 42, para. 3, of the First Convention. *Cf.* also commentary para. 5, second sentence, *infra*, pp. 231-232.

³⁰ On this subject, *cf.* Annex I, Arts. 3 and 4 and the commentary thereon, *infra*, p. 1173.

³¹ *Cf. O.R. XI*, p. 560, CDDH/II/SR.49, paras. 66-67.

³² On this subject, *cf. infra*, p. 253.

modern methods available to facilitate the identification of hospital ships”. On the basis of this paragraph, and to supplement the measures which it requires, even States not Parties to the Protocol will be encouraged to apply the appropriate provisions of Annex I to the Protocol.³³

770 In addition, it should be noted that in Article 23 (*Other medical ships and craft*) the Protocol introduces the possibility of using medical ships and craft not covered by the Second Convention. The marking of such ships and craft is laid down in Article 23 (*Other medical ships and craft*), paragraph 1. This article requires that such ships and craft are marked with the distinctive emblem and comply as far as possible with Article 43, paragraph 2, of the Second Convention (which provides for the question of the flags to be flown at the mainmast of hospital ships). Moreover, the provisions of the Protocol and its Annex I relating to medical units and transports are also applicable to such ships and craft.

Paragraph 5

771 We saw above³⁴ that one of the requirements with which the Protocol had to comply with regard to the question of the means of identification was to adapt these to modern techniques. The use of distinctive signals, in addition to the distinctive emblem, meets this requirement.

First sentence

772 The first sentence of paragraph 5 grants to Parties to the conflict the competence to authorize the use of distinctive signals, though they remain free not to exercise this competence. However, it imposes some limitations on this competence as regards the purpose for which and the way in which it must be used. In fact, such signals may not be used for other purposes than “to identify medical units and transports”, i.e., to allow in the first place the enemy to realise that he is dealing with such units or transports soon enough to spare them. The way in which this competence is to be exercised, is laid down in Annex I to the Protocol. Thus the distinctive signals will be used in accordance with this Annex.

773 Moreover, it should be noted that, with the exception laid down in the second sentence of the paragraph, such signals should be used only to supplement the distinctive emblem, which remains the basic element. Apart from the exception mentioned, it would be unlawful to use distinctive signals to permit the identification of a medical unit or transport which was not marked with the distinctive emblem.

³³ Cf. in particular Arts. 3-5 and 7-11, as well as the commentary thereon, *infra*, p. 65 and p. 103.

³⁴ Cf. *supra*, p. 224.

Second sentence

- 774 As mentioned above, there is one exception to the rule that distinctive signals can only be used for units and transports marked with the distinctive emblem. This exception led to some controversy in Committee II of the CDDH. It is contained in Article 5 (*Optional use*), paragraph 2, of Annex I to the Protocol, and relates to “temporary medical aircraft which cannot, either for lack of time or because of their characteristics, be marked with the distinctive emblem”. The draft contained this exception “in case of an emergency” for all temporary means of medical transport.
- 775 As one delegate stated, there were three different currents of opinion with regard to this question. The first was that the distinctive signals could be used instead of the distinctive emblem in case of emergency. The second was that under no circumstances should the distinctive signals be used unless the unit or the transport concerned was also marked with the distinctive emblem. Finally, the third current of opinion was that the distinctive signals should normally be used only when a distinctive emblem was also displayed, but that in extreme emergencies it should be possible to use any available means to identify transports in temporary use for medical purposes.³⁵ One delegate justifiably remarked that there were also a number of intermediate possibilities, particularly that of restricting the exception solely to aircraft.³⁶ Finally, it was the compromise provided by this last solution which the Committee adopted on the basis of a report of a Working Group to which it had submitted the whole problem.³⁷
- 776 The principal arguments in favour of the use of the distinctive signal only in combination with the emblem were, on the one hand, that the use of distinctive signals without displaying the distinctive emblem would entail the risk that the latter would lose its character of being the main means of identification,³⁸ and on the other hand, that it was dangerous to permit an aircraft not marked with the distinctive emblem to transmit distinctive signals because of the increased risk of abuse, as military aircraft “would have no difficulty in transmitting on a given frequency or emitting a blue light”.³⁹
- 777 The main argument in favour of the use of distinctive signals by units or transports not displaying the distinctive emblem was that:

“the number of small aircraft or helicopters required for use solely in transporting the wounded would be very much beyond the capacity of most countries and they would frequently use aircraft which had been engaged in military combat at one time of the day for humanitarian activities at another”.⁴⁰

³⁵ Cf. O.R. XI, p. 170, CDDH/II/SR.18, para. 32.

³⁶ *Ibid.*, para. 37.

³⁷ *Ibid.*, pp. 214-217, CDDH/II/SR. 22, paras. 6-30.

³⁸ *Ibid.*, p. 166, CDDH/II/SR.18, para. 9.

³⁹ *Ibid.*, p. 168, para. 18.

⁴⁰ *Ibid.*, para. 19. Cf. also in particular para. 33.

For this reason it would be necessary that such aircraft, which cannot be marked with the distinctive emblem, can use distinctive signals when engaged in humanitarian missions.

- 778 The solution which was finally adopted retains the fundamental character of the distinctive emblem which has been in force since the adoption of the original Convention of 22 August 1864. The use of distinctive signals by temporary medical aircraft – and exclusively by such aircraft – which are not marked with the distinctive emblem therefore remains an exception, but it is a welcome exception from the humanitarian point of view, for in case of emergency it is important that any medical aircraft available to bring relief to the wounded can be used.
- 779 In order to interpret the second sentence of paragraph 5 correctly it should therefore be understood that “the special cases covered in that Chapter” (i.e., Chapter III of Annex I to the Protocol) are cases in which temporary medical aircraft “cannot, whether for lack of time or because of their characteristics, be marked with the distinctive emblem” (Article 5 – *Optional use*, paragraph 2, first sentence, of Annex I) and that the only medical transports referred to here are these same temporary medical aircraft.⁴¹
- 780 Finally, it should be noted that, although the use of flashing blue light is reserved in the air to medical transports, it is not so on land and on water, unless a special agreement has been reached. However, this is a different problem, for in this case a flashing blue light is obviously no longer considered to be a distinctive signal in the sense of the Protocol.⁴²

Paragraph 6

First sentence

- 781 Paragraphs 1-5 laid down principles which may be quite difficult to implement, especially in view of the new technical means employed. This is the reason why an Annex is needed to provide all the requisite technical specifications and to relieve the Protocol of provisions which would have made it extremely unwieldy. The first sentence of paragraph 6 simply describes the relation between Article 18 and Annex I. It clearly shows – and this is its true *raison d'être* – that the High Contracting Parties or the Parties to the conflict have an obligation to carry out the provisions of Article 18, paragraphs 1-5, in accordance with Chapters I-III of Annex I (entitled respectively: *Identity cards*; *The distinctive emblem*; *Distinctive signals*). The fact that some of the provisions in the Annex are not absolutely mandatory, or are even optional, does not alter this obligation in any way. Some provisions are not mandatory because the Annex says so, and not because compliance with the Annex for carrying out the provisions of Article 18, paragraphs 1-5, is optional.

⁴¹ Cf. in addition commentary on Annex I, Art. 5, para. 2, *infra*, pp. 1202-1204.

⁴² On this subject, cf. also commentary on Annex I, Art. 6, *infra*, pp. 1210-1211.

Second sentence

- 782** The principle contained in this sentence is repeated in Article 5 (*Optional use*), paragraph 1, first sentence, of Annex I, which explains why one delegate doubted its usefulness.⁴³ Indeed, as Article 18, paragraph 6, first sentence, of the Protocol requires absolute compliance with this Annex for the execution of the provisions laid down in Article 18, paragraphs 1-5, as we saw above, it was not necessary to include this principle in two places. However, the reason that it was finally retained in Article 18 was probably because it does concern a principle and it was therefore considered logical to include it in the Protocol itself, and not only in the Annex.
- 783** The rule concerned here is of paramount importance. The effectiveness of protection actually depends on the trust that can be placed in the signalling. If a Party to the conflict has the slightest doubt regarding the nature of an aircraft transmitting agreed signals, it will probably be inclined not to grant this aircraft the protection to which it is entitled. It is certainly possible to conceive of the use of the same distinctive signals for other peaceful purposes, but the exclusive use for the purpose of the identification of medical units and transports is the only way of removing all ambiguity and of allaying all doubt. In such cases doubt is too dangerous to be permitted. Admittedly an aircraft on a military mission could use such signals, but this would be a flagrant violation of the Protocol with all the attendant consequences. The exclusive character of the rule does not allow for any half measures: either it is respected, or it is consciously violated.
- 784** Only distinctive signals are covered here because the same principle has already been laid down with regard to the distinctive emblem in Article 44, paragraph 1, of the First Convention. In that case it obviously does not concern only medical units and transports, but also medical personnel and material.
- 785** Article 18, paragraph 6, second sentence, refers to the exception laid down in Chapter III of Annex I. These exceptions, which are also referred to at the beginning of Article 5 (*Optional use*), paragraph 1, of the Annex, is mentioned in Article 6 (*Light signal*), paragraph 3. They concern only the use of the flashing blue light which is considered as a distinctive signal for the use of medical aircraft, though not – unless there is a special agreement between the Parties to the conflict – for vehicles or ships. Thus the exceptions apply to all the categories of medical vehicles and medical ships and craft. However, it does not permit the use of the signal on a transport in some cases for the purpose of identifying it as a medical transport, and sometimes for other purposes. Thus the exceptions do not allow for any ambiguity and the principle retains all its force and indispensable clarity.⁴⁴

⁴³ Cf. *O.R.* XI, pp. 215-216, CDDH/II/SR.22, paras. 13 and 22.

⁴⁴ Cf. also commentary Annex I, Art. 6, para. 3, *infra*, pp. 1210-1211.

Paragraph 7

- 786** The distinctive emblem of the red cross or the red crescent is of course intended first of all to permit the identification of persons and objects which should be protected in time of armed conflict, for the purpose of their protection. However, it is important that already in time of peace, the image of the emblem acquires or retains dignity for everyone. For example, the widespread use of the red cross emblem for commercial purposes would certainly damage its image, and in time of armed conflict might have unfortunate repercussions on the application of the rules demanding the respect and protection of persons and objects which it is used to identify.
- 787** The drafters of the Geneva Conventions were aware of this danger, and strict rules were laid down regarding the use of the emblem of the red cross, red crescent or red lion and sun in peacetime. It was in 1949 that a clear difference was made, in Article 44 of the First Convention, between the use of the distinctive emblem in time of war and in time of peace. In the first case, it is a protective emblem, while in the second, it is only an indicative sign. However, for the reasons mentioned above, the fact that it is of lesser importance then does not mean that the emblem, if it is not to lose credibility, may be used by anyone for any purpose in time of peace. For this reason, Article 44 of the First Convention imposes strict limitations on its use. Subsequently, to supplement the provisions of this article, the XXth International Conference of the Red Cross in 1965 adopted the “Regulations on the Use of the Emblem of the Red Cross, of the Red Crescent, and of the Red Lion and Sun by National Societies”.⁴⁵
- 788** In this commentary it is not possible to describe the rules relating to the use of the distinctive emblem in time of peace. On this matter we refer to Article 44 of the First Convention, the commentary thereon⁴⁶ and the above-mentioned Regulations.
- 789** The object of paragraph 7 of Article 18 is to prevent the increased use of the distinctive emblem in time of armed conflict, particularly to civilian medical personnel and units, from serving as a pretext for using this emblem for indicative purposes in time of peace more extensively than allowed by Article 44 of the First Convention. Such an extension would therefore be unlawful: this paragraph removes any doubt that might remain on this subject.
- 790** The introduction of this paragraph, which was not included in the 1973 draft, was proposed by the Working Group set up by Committee II to study the article. Committee II, in plenary, adopted this new paragraph as well as the substance of the Working Group’s report.⁴⁷ It might be thought that this paragraph was not essential and merely confirmed an established fact. However, as in other cases, the CDDH showed its concern not to leave any gaps in the system it was supplementing.

⁴⁵ These regulations, presently being revised, can be found, i.a., in the *International Red Cross Handbook*, 12th edition, Geneva, 1983, pp. 514 ff.

⁴⁶ *Commentary I*, pp. 323-339.

⁴⁷ Cf. *O.R.* XI, p. 217, CDDH/II/SR.22, para. 30.

Paragraph 8

- 791 To a great extent the system of the Conventions is based on the trust which can be placed in the distinctive emblem. The supervision of its use and the repression of abuses are therefore indispensable elements in the system.
- 792 As pointed out above,⁴⁸ modern techniques of warfare require new means of signalling and identification, and to this end the Protocol has introduced different distinctive signals. It is clear that the reasons which led to the supervision of the use of the distinctive emblem and the repression of abuse also apply with regard to such signals. Thus, it was easiest simply to refer to the rules of the Conventions and the Protocol dealing with such subjects. These rules therefore become applicable to distinctive signals, as well as to the distinctive emblem, for the Parties to the Protocol.
- 793 The provisions concerned are in particular those contained in Chapter VII and in Articles 53 and 54 of the First Convention, in Chapter VI of the Second Convention, in Articles 18 and 20 of the Fourth Convention, in the article under consideration here, and in Article 85 (*Repression of breaches of this Protocol*) of the Protocol. It is not possible to discuss these provisions in detail here, and we refer to the commentaries thereon.
- 794 However, the obligation upon the Contracting Parties (or, in the case of the Protocol, upon any other Parties to the conflict bound by it), to supervise the use of the distinctive emblem and signals by persons and on objects belonging to them, also arises in a more general way from their undertaking to respect and to ensure respect for the Conventions and the Protocol in all circumstances.⁴⁹

Y.S.

⁴⁸ Cf. *supra*, p. 224.

⁴⁹ Cf. Art. 1 common to the Conventions, and Art. 1, para. 1, of the Protocol.

Protocol I

Article 19 – Neutral and other States not Parties to the conflict

Neutral and other States not Parties to the conflict shall apply the relevant provisions of this Protocol to persons protected by this Part who may be received or interned within their territory, and to any dead of the Parties to that conflict whom they may find.

Commentary

General remarks

795 This article concerns the obligations of States which are not Parties to the conflict with respect to persons protected by Part II of the Protocol, and with respect to the dead of the Parties to the conflict. It supplements Article 4 of the First Convention, Article 5 of the Second Convention, and Article 4 B (2) of the Third Convention, which deal with the same problem and it lays down the same rules as those laid down in the 1949 Conventions.

796 The question may arise whether this article might not have been better placed among the general provisions of the Protocol. However, as one delegate stated,

it is essentially the obligations contained in the provisions of Part II which are placed on States not Parties to the conflict:

“Part I laid down the basic obligations imposed on all High Contracting Parties, and Parts III and IV were concerned with the situation on the battlefield and with the relations between the belligerent Power, especially as an Occupying Power, and the population. None of the provisions of those three Parts was applicable to a third State, with the exception of Articles 60 to 62, which were concerned with relief; in those articles, however, the obligations of the third State were explicitly regulated. Finally, Part V imposed obligations on all High Contracting Parties, whether Parties to the conflict or not, and accordingly did not come within the scope of Article 19.”¹

In addition, it should be noted that Article 9 (*Field of application*), paragraph 2 (a), and Article 31 (*Neutral or other States not Parties to the conflict*) of the Protocol, which both also fall under Part II, are also directly concerned with the States mentioned in Article 19.²

Text of the article

797 The States which are bound by obligations in pursuance of this article are “neutral and other States not Parties to the conflict”.³

798 This article does not cover liberation movements to which the Protocol may apply.⁴ However, it would be desirable that if a conflict in which they are not engaged takes place on the borders of territory under their control, they should at least endeavour to act in the spirit of the provisions which could relate to them.

799 The States concerned here are required to apply the “relevant provisions of this Protocol”. Mentioning only the provisions of the Protocol, without referring to those of the Conventions, shows that the category of States covered by the provisions of this Protocol is the same as that covered by the corresponding articles of the Conventions. On the other hand, there was a preference for requiring the application of the relevant provisions of the present Protocol, rather than the application “by analogy [...] [of] the provisions of the present Protocol”, as provided in the draft, which in turn was inspired by the Conventions. As one delegate stated, this expression:

“did not accurately reflect the true position of States not Parties to the conflict. Those words might seem to imply that such States were being asked to apply the provisions relating to the wounded, sick and shipwrecked as if they were Parties to the conflict”.⁵

¹ O.R. XI, p. 259, CDDH/II/SR.26, para. 11. The articles relating to relief actions have become Articles 68-71 in the final version of the Protocol.

² For further details on this subject, cf. commentary Art. 9, para. 2, point 1, *supra*, p. 142, and Art. 31, *infra*, p. 325.

³ On the meaning of this expression, cf. commentary Art. 2, sub-para. (c), *supra*, p. 61.

⁴ Cf. Art. 1, para. 4, and its commentary, *supra*, pp. 41-56.

⁵ O.R. XI, pp. 258-259, CDDH/II/SR.26, para. 9.

It is clear that many provisions of the Protocol cannot impose obligations on the States concerned here, even if they relate to persons who are to be protected.⁶ However, it is only a question of wording, for basically it is quite clear that the situation under the Conventions was precisely the same, as shown indeed in the commentary on Article 4 of the First Convention: “The Convention, having been drawn up with a view to determining the treatment of enemies, contains a number of provisions which could only apply to belligerents”.⁷

800 In the Protocol, as in Articles 4 of the First Convention and 5 of the Second Convention, though unlike Article 4 B (2) of the Third Convention, there is no list of the articles which must be applied – or those which need not be applied – by the States concerned in Article 19. The reason, which also applies for Article 19 of the Protocol, was clearly explained in the Commentary on the First Convention:

“An enumeration is justified in the Third Convention, whose object is to lay down regulations for the treatment of men who are interned; in the First Convention it would necessarily have been somewhat rigid and arbitrary, some of the articles being partially applicable. The application of the Convention by neutral Powers is primarily a question of common sense, guided by a humane spirit. The interests of the wounded themselves will provide a touchstone in cases of doubt.”⁸

801 It should also be noted that there was even a proposal in one amendment to mention only “the provisions of this Part”.⁹ The reason was that essentially only the provisions of this Part have to be applied by the States covered here. We noted this above, to explain the fact that Article 19 is included in Part II, and the reasons we gave were also put forward by the sponsors of this proposal. As the amendment was proposed rather late, and was considered by a number of delegates as a matter of substance,¹⁰ it was withdrawn without any real discussion taking place.¹¹ In any case the question is not of great importance. The States concerned are required mainly to observe the general principles of respect and protection for the wounded, sick and shipwrecked, as well as for medical personnel. These principles are actually stated in Part II.¹² However, these States could also seek inspiration in rules contained elsewhere. An example that springs to mind is Article 76 (*Protection of women*), paragraph 2, in Part IV, relating to pregnant women, who are also covered by Part II as “wounded” or “sick” in the sense of the Protocol.¹³

802 The persons covered by Article 19 are “persons protected by this Part”. This concise formulation was ultimately preferred to an enumeration of protected persons,¹⁴ as contained in the 1973 draft and the report of the Drafting Committee

⁶ Cf., for example, Art. 15, paras. 2-4.

⁷ *Commentary I*, p. 63.

⁸ *Ibid.*

⁹ Cf. *O.R.* III, p. 95, CDDH/II/242.

¹⁰ Cf. *O.R.* XI, p. 260, CDDH/II/SR. 26, paras. 18, 20-21.

¹¹ *Ibid.*, p. 260, para. 22.

¹² Cf., in particular, Arts. 10 and 15.

¹³ Cf. Art. 8, sub-para. (a).

¹⁴ Cf. *O.R.* XI, p. 262, CDDH/II/SR.26, para. 35.

of Committee II.¹⁵ The persons covered here are the wounded, sick and shipwrecked, civilian medical personnel and civilian religious personnel, in the sense of the Protocol.¹⁶ Medical and religious personnel not protected by Part II, and consequently not covered by this article, are protected by the Conventions and are therefore covered by the analagous articles in the Conventions mentioned above. These several instruments together cover all such personnel, leaving no gaps.

803 It should be noted that some provisions apply partially to persons whose protection is explicitly provided, and partially to other persons. This applies in particular to Article 16 (*General protection of medical duties*). Ordinary common sense should dictate to neutral or other States not Parties to the conflict that they should generally apply these articles, or at least, the principles on which they are based.

804 However, persons protected by this Part are only covered by Article 19 if they are “received or interned” within the territory of a neutral or other State not Party to the conflict. Indeed, their relationship to such a State becomes important only in this case. The text refers to persons who “may” be received or interned. This should be understood to mean “any persons who are actually received or interned when the occasion arises”. The article does not impose obligations on the States concerned with regard to persons they would be able to (but do not in fact) receive or intern. As regards the expression “received or interned”, it is taken from similar articles in the Conventions. These terms were deliberately selected in 1949 “in order to cover all cases which might arise through the application of the Fifth Hague Convention of 1907”.¹⁷ Reference should be made to this Convention, as well as to Articles 4 and 37, paragraph 3, of the First Convention and to the relevant Commentaries to ascertain in detail what persons must be interned. With regard to persons protected by this Part, it can simply be stated that in any case no obligation is imposed by international law on neutral or other States not Parties to the conflict to intern or detain civilians.¹⁸

805 Finally, neutral States and other States not Parties to the conflict must also apply the relevant provisions of the Protocol “to any dead of the Parties to that conflict whom they may find”. Basically this concerns the provisions of Article 34 (*Remains of deceased*), which in turn refers to some provisions of the Conventions.¹⁹ However, the States concerned could also refer to Article 17 (*Role of the civilian population and of aid societies*), paragraph 2, in cases where large numbers of dead are found in their territory.

Y.S.

¹⁵ Cf. CDDH/II/240 of 21 February 1975 (not published in the *Official Records*.)

¹⁶ Cf. Art. 8, sub-paras. (a), (b), (c) and (d).

¹⁷ *Commentary I*, p. 62. This refers to the Convention respecting the Rights and Duties of Neutral Powers and Persons in Case of War on Land.

¹⁸ However, there are a few exceptions, as in the case when such a person has committed an offence covered by an extradition treaty or a grave breach of the Conventions or the Protocol.

¹⁹ For further details on this subject, cf. commentary Art. 34, *infra*, p. 365.

Article 20 – Prohibition of reprisals

Reprisals against the persons and objects protected by this Part are prohibited.

Commentary

806 Article 46 of the First Convention prohibits reprisals “against the wounded, sick, personnel, buildings or equipment protected by the Convention”, and Article 47 of the Second Convention prohibits them “against the wounded, sick and shipwrecked persons, the personnel, the vessels or the equipment protected by the Convention”.

807 In 1929 the prohibition of reprisals against prisoners of war was introduced.

“The fact that this prohibition was not also inserted in 1929 in the Convention dealing with the wounded and sick – not explicitly, that is to say, for it follows

by implication from the principle of the respect to which they are entitled – can only have been due to an oversight.”¹

This oversight was corrected in 1949 when “the International Committee’s proposal that the prohibition should be inserted in all four Conventions was approved unanimously without opposition of any sort”.²

808 The mention of the principle in Part II of the Protocol supplements the rule mentioned above, which is contained in each of the Conventions, for persons and objects protected by this Part, which were not yet covered by the First and Second Conventions.

809 The Conventions include a list of the persons and objects covered. The Protocol has a more concise formulation. Protected persons include the wounded, sick and shipwrecked as well as medical personnel; as regards “objects”, these cover medical units and *matériel*, as well as medical transports.

810 The prohibition of reprisals is mentioned in Part II, because the negotiations which took place at the CDDH with regard to creating a single article dealing with this problem in the Protocol, were not successful.³

811 Nevertheless, two further elements on this brief article are discussed below.

812 The prohibition contained in this article is expressed very briefly and clearly and is absolute. Even unlawful acts committed by a Party to the conflict against protected persons or objects cannot justify similar acts by the adverse Party by way of reprisal. Nothing can ever justify reprisals against the persons and objects covered here.

813 A proposal was made to replace the term “reprisals” by the expression “measures in the nature of reprisals”⁴ with the view of encompassing in this way “all acts which might be called by any name but reprisals against the persons or objects protected by Part II”.⁵ However, an objection was made to this proposal stating that it was in danger of giving rise to confusion and that it would be better “to use the wording of the Geneva Conventions, which constituted a traditional and accepted concept”.⁶

814 In fact, Article 20 removes the only doubt that might remain with regard to the absolute character of the obligations imposed on Parties to the conflict with respect to persons and objects protected by Part II. Only reprisals indeed permit acts being committed which are “not normally legal”, in that they are “regarded as being legal in the particular circumstances which exist at the time”.⁷ By prohibiting reprisals, the only justification a Party to the conflict might have used from a legal point of view for violating its obligations with respect to persons and objects protected here, is denied.

⁷ *Commentary I*, p. 342.

- 815** The question of retaliation is a different matter. This allows acts to be carried out which are unfavourable to the persons and objects protected, as a reaction to acts committed by the adverse Party. However retaliation does not allow any violation of the law, even in exceptional cases. Thus this is only possible for a Party to the conflict which has accorded greater privileges than are required under the Protocol. Such a Party could indeed withdraw such privileges by way of retaliation. But it may never fall short of the obligations laid down by the Protocol. To prohibit retaliation would therefore be tantamount to laying down an unfounded rule in a field not covered by the Protocol. Certainly it might be desirable for the Parties to the conflict not to resort to retaliation, just as one might wish that they would agree to grant the persons and objects protected more favourable treatment than the minimum required by the Protocol. However, it cannot be denied that a prohibition of retaliation in the Protocol would have been rather inequitable, since it would tend to penalize in some way the most generous Parties to the conflict, the only ones in a position to practise retaliation.
- 816** As concluded in the commentary on Article 46 of the First Convention, which had also raised this problem, “what matters most, however, is that there should be no infringement of the rules of the Convention, that is to say, no interference with the rights of the persons protected, considered as a minimum”.⁸ In this respect, Article 20 does not allow for any uncertainty either.

Part II, Section II – Medical transportation

Introduction

- 817 The title of the Section has a rather hybrid character in the light of the way that medical transportation and medical transports have been defined.¹ In fact, the Section is essentially concerned with the protection of medical transports.
- 818 As was remarked in the introduction to this Part, the structure of the second Section of this Part was completely modified during the CDDH. Without examining this question at length, it seems useful to detail these structural modifications, and to analyse their substantive consequences on the protection of medical transportation.
- 819 The draft divided the section into two chapters: one devoted to the common provisions, i.e., the provisions relating to all types of medical transports, the other devoted more specifically to medical aircraft. This distinction was abandoned by the CDDH. In the Protocol there are no longer any common provisions, but one article devoted to medical vehicles, two articles to medical ships and craft, and eight articles to medical aircraft. The latter therefore remains the core of the Section.
- 820 Which were the common provisions of the draft, and why did they disappear ?
- 821 The first, Article 21, contained definitions relating more specifically to Section II. These definitions have been retained with some modifications,² but Committee II decided that it was better to group all the definitions relating to Part II at the beginning of this Part, and therefore they have been included in Article 8 (*Terminology*) in the final text.
- 822 The second, Article 22 of the 1973 draft, laid down the possibility of using medical transports to search for and evacuate the wounded, sick and shipwrecked. The Working Group considered that it was not desirable to mention search and evacuation:

“This function is fully covered in the First, Second and Fourth Conventions, and in Article 17 of the Protocol. To refer to the matter again would be to cast doubt on the meaning of the Conventions, and if search and evacuation were mentioned, the other functions of medical transport when carrying medical personnel should also be included, and those are already fully covered under the definition of medical personnel.”³

¹ Cf. Art. 8, sub-paras. (f) and (g).

² Cf. *supra*, commentary Art. 8, sub-paras. (f)-(j), pp. 130-132.

³ O.R. XIII, p. 231, CDDH/II/296, para. 3.

This point of view was approved by Committee II and then by the Conference in plenary meeting. Thus the removal of this article does not mean that transports may not be used for such essential tasks as the search for and evacuation of the wounded, sick and shipwrecked (though subject to an explicit restriction with regard to the use of medical aircraft⁴).

823 The third common provision of the draft contained in Article 23 was entitled *Application*, and sought to determine precisely which provisions of the Conventions and the Protocols would apply to medical ships and craft, as well as to amphibious medical transports covered by the Conventions and the Protocol, and in which circumstances they would apply. However, with the exception of amphibious medical transports, this article was concerned only with medical ships and craft, and the problems with which it dealt were included and elaborated in the articles specifically devoted to these medical transports, i.e., Articles 22 (*Hospital ships and coastal rescue craft*) and Article 23 (*Other medical ships and craft*). As regards amphibious medical transports, the Committee decided not to mention these. In this it followed the conclusion of the Working Group which considered that such means were covered by the relevant provisions relating to medical vehicles when they are on land, and by the relevant provisions relating to medical ships and craft when they are on water.⁵

824 The fourth of the common provisions of the draft, Article 24, entitled *Protection*, laid down the principle of respect and protection of medical transports, and made Article 12 of the Protocol (*Protection of medical units*) and Article 13 (*Discontinuance of protection of civilian medical units*) applicable to medical transports by analogy. Finally, it added another two activities characteristic of medical transportation which should not be considered as being harmful to the enemy.

825 The Working Group considered that it was preferable to include the provisions relating to protection in the articles concerning each type of medical transports. Consequently it also recommended the deletion of the general provisions contained in Article 24 of the draft.⁶

826 However, it should be noted that the two activities of medical transports, which the draft had added and which should not be considered as being harmful to the enemy, were only finally included, subject to some slight changes, with regard to medical aircraft.⁷

827 These related to:

- “(a) the carrying on board military or civilian means of medical transport of equipment to be used solely for such transmissions as may be necessary to movement or navigation;
- (b) the carrying on board military means of medical transport of armed military medical personnel who use such arms for their own protection and for that of the wounded and the sick being conveyed.”⁸

⁴ Cf. Art. 28, para. 4, and its commentary, *infra*, pp. 305-306.

⁵ Cf. O.R. XIII, p. 232, CDDH/II/296, para. 8.

⁶ Cf. *ibid.*, p. 231, para. 2.

⁷ Cf. commentary Art. 28, para. 2, *infra*, pp. 302-304.

⁸ Draft Art. 24, para. 3.

- 828 It is clear that the first of these activities cannot be considered as being harmful to the enemy, even if it is not specifically mentioned. However, to avoid all ambiguity, it is also necessary that medical transports only contain equipment indispensable for the purposes mentioned here. Nevertheless, when such a case arises, it is only by having full knowledge of the content of a communication – rather than from the presence of instruments which often have many uses – that it is really possible to discover whether abuse has taken place.
- 829 The second condition has become superfluous because civilian medical personnel were henceforth also permitted to carry light arms. It is explicitly mentioned in Article 13 of the Protocol (*Discontinuance of protection of civilian medical units*)(which was not the case in the draft) that the fact “that the personnel of the unit are equipped with light individual weapons for their own defence or for that of the wounded and sick in their charge” should not be considered as an act harmful to the enemy.⁹ Thus this rule applies to the same extent to personnel of medical transports.
- 830 Finally, the fifth and last article of the draft devoted to general provisions dealt with notification, and the Working Group “concluded that there was no requirement for a separate article on Notification”.¹⁰
- 831 The notification of medical aircraft in any case raises a very specific problem, and even in the draft this was dealt with separately. As the Working Group had expressed the opinion that “notification would be of no practical value in the case of medical vehicles”,¹¹ a general provision lost its *raison d’être* and the provisions relating to notification of medical ships and craft were logically included in the articles relating to these types of medical transports.
- 832 Nevertheless, the question arises whether the remark of the Working Group relating to the notification of medical vehicles is still altogether appropriate.
- 833 Indeed, it should not be forgotten that trains also count as medical vehicles within the meaning of the Protocol:¹² notification of medical convoys travelling by rail, or those consisting of a number of trucks or ambulances, would certainly be useful.
- 834 However, this omission is not of great importance. In general, the draft article itself provided only for the possibility, and not the obligation, to notify the characteristics useful for identifying medical transports. This possibility remains regardless of any official rule providing for it. There is nothing in the Protocol to prevent the notification of an important medical convoy – in fact, this can only be recommended.
- 835 Thus such considerations on the part of the Working Group led Committee II, and later the Conference as a whole, to abandon the division of Section II into chapters. Even so, Article 21 (*Medical vehicles*), Articles 22 and 23 relating to medical ships and craft, and finally Articles 24-31 relating to medical aircraft, form three separate groups. The articles on medical aircraft in particular form a whole and should be interpreted as such.

Y.S.

⁹ On the meaning of such weapons and the limitations imposed on their use, *cf.* however, *supra*, commentary Art. 13, para. 2(a), p. 177.

¹⁰ *Cf. O.R. XIII*, p. 231, CDDH/II/296, para. 2.

¹¹ *Ibid.*

¹² *Cf. supra*, commentary Art. 8, sub-para. (h), pp. 131-132.

Article 21 – Medical vehicles

Medical vehicles shall be respected and protected in the same way as mobile medical units under the Conventions and this Protocol.

Commentary

General remarks

- 836 The Conventions protect two types of medical transportation on land: first, the transportation of military wounded and sick undertaken in vehicles of the military medical services;¹ secondly, the transportation of civilian wounded and sick, the

¹ Cf. Art. 35, First Convention.

infirm and maternity cases, though only if they are undertaken by convoys of vehicles or by hospital trains.²

837 The aim of the Protocol in this field is to ensure the optimum protection of all wounded and sick persons. Whether they are civilian or military, the wounded and sick, medical personnel, medical units and *matériel*, will henceforth enjoy the same right to protection. It was logical also to grant exactly the same protection to all medical transportation, as far as this is possible.

838 The improvement created by the Protocol at the humanitarian level concerns civilian medical vehicles proceeding alone. Such single vehicles were not covered by the Conventions.³ In addition, civilian medical vehicles, like any other form of medical transports, are also permitted to transport medical or religious personnel or medical materials, while Article 21 of the Fourth Convention only permitted the transportation of “wounded and sick civilians, the infirm and maternity cases”.⁴

Text of the article

839 The meaning of the expression *medical vehicle* was examined above.⁵ In addition, it should be noted that amphibious medical transports should be considered as medical vehicles when they are used on land.⁶

840 The concepts of *respect* and *protection* were also defined above.⁷

841 Medical vehicles must be respected and protected “in the same way as mobile medical units under the Conventions and this Protocol”. It should be noted in passing that the First Convention also provides that medical transportation must be protected “in the same way as mobile medical units”.⁸

842 To be quite precise, the expression “and under the same conditions” should have been added in the Protocol to the words “in the same way”. Indeed, the Conventions and the Protocol not only lay down the way in which medical units must be protected, but also the conditions under which such protection is granted.

843 As regards the way in which they are protected, the Conventions, like the Protocol, provide that medical units must be respected and protected *at all times*, and that they *shall not be the object of attack*. The reason for these phrases and their meaning were analysed above.⁹ Clearly they also apply for medical vehicles.

844 Two conditions are imposed for medical units – and therefore medical vehicles – to enjoy the right to respect and protection. One concerns only civilian medical units (and vehicles), the other all medical units (and vehicles). The following comments are again based on references to the relevant provisions.

² Cf. Art. 21, Fourth Convention.

³ Cf. *Commentary IV*, p. 170.

⁴ It will be recalled that the infirm and maternity cases are included in the definition of the “wounded” and “sick” given in the Protocol: cf. *supra*, commentary Art. 8, sub-para. (a), pp. 116-118.

⁵ Cf. *supra*, commentary Art. 8, sub-para. (h), pp. 131-132.

⁶ Cf. *supra*, p. 246.

⁷ Cf. *supra*, commentary Art. 10, p. 146.

⁸ Cf. Art. 35, also Arts. 19, 21, 22, First Convention.

⁹ Cf. *supra*, commentary Art. 12, para. 1, pp. 166-167; and *Commentary I*, p. 196.

- 845** To be entitled to respect and protection civilian medical vehicles must fulfil one of the following conditions:
- a) they must belong to one of the Parties to the conflict;
 - b) they must be recognized and authorized by the competent authority of one of the Parties to the conflict; or
 - c) they must be authorized in accordance with Article 9 (*Field of application*), paragraph 2, of this Protocol, or Article 27 of the First Convention.
- 846** These conditions are listed in Article 12 (*Protection of medical units*), paragraph 2, of the Protocol, and explained in the commentary on that paragraph.¹⁰
- 847** As regards the condition imposed for all medical vehicles, this is that, outside their humanitarian mission, they shall not be used to commit any acts harmful to the enemy.¹¹

Y.S.

¹⁰ Cf. commentary Art. 12, para. 2, *supra*, pp. 167-169.

¹¹ On this subject, see commentary Art. 13, paragraph 2 of which also lists certain acts which should not be considered as being harmful to the enemy, even though they might be rather equivocal; *supra*, pp. 176-180.

Article 22 – Hospital ships and coastal rescue craft

1. The provisions of the Conventions relating to:
 - (a) vessels described in Articles 22, 24, 25 and 27 of the Second Convention,
 - (b) their lifeboats and small craft,
 - (c) their personnel and crews, and
 - (d) the wounded, sick and shipwrecked on board,shall also apply where these vessels carry civilian wounded, sick and shipwrecked who do not belong to any of the categories mentioned in Article 13 of the Second Convention. Such civilians shall not, however, be subject to surrender to any Party which is not their own, or to capture at sea. If they find themselves in the power of a Party to the conflict other than their own they shall be covered by the Fourth Convention and by this Protocol.
2. The protection provided by the Conventions to vessels described in Article 25 of the Second Convention shall extend to hospital ships made available for humanitarian purposes to a Party to the conflict:
 - (a) by a neutral or other State which is not a Party to that conflict; or
 - (b) by an impartial international humanitarian organization,provided that, in either case, the requirements set out in that Article are complied with.
3. Small craft described in Article 27 of the Second Convention shall be protected even if the notification envisaged by that Article has not been made. The Parties to the conflict are, nevertheless, invited to inform each other of any details of such craft which will facilitate their identification and recognition.

Commentary

General remarks

- 848 The 1973 draft divided the Section devoted to medical transportation into two chapters: “common provisions” and “Medical aircraft”. At first sight it apparently did not contain any article solely devoted to medical ships and craft. However, a close examination reveals that apart from paragraph 3, which deals with amphibious medical transports, Article 23 of the draft actually deals exclusively with medical ships and craft.
- 849 The first paragraph of the draft sought to bring civilian medical ships and craft, as defined by the Protocol, under the terms of the Second Convention. Up to that time they had not been covered by that Convention.
- 850 The second paragraph was concerned with clarifying the provisions applicable to medical ships and craft on inland waterways, i.e., *not at sea*. As a matter of fact, the Second Convention only covers protection *at sea*, and some doubt remained regarding the legal régime which applies to medical ships and craft navigating on waters other than the sea.
- 851 The third paragraph dealt with amphibious medical transports, specifying that they were subject to “the provisions relating to their use at a given time”. Thus the Second Convention would be applicable to them at sea, and the First (or perhaps even the Fourth Convention) would apply on land.
- 852 Finally, the fourth paragraph specified that though medical ships and craft, as defined by the Protocol – i.e., also *civilian* medical ships and craft – were covered by the Second Convention as a whole, the articles devoted to hospital ships were applicable only to such ships. The need to clarify this point seemed to be indispensable due to the fact that the function of hospital ships justifies more extensive privileges, while at the same time also requiring a stricter notification procedure.
- 853 As we saw above,¹ the structure of the ICRC draft of the Section devoted to medical transportation was completely modified during the Diplomatic

¹ *Supra*, pp. 245-247.

Conference. On this occasion the problem of medical ships and craft was seriously taken up by a Working Group of Committee II on the basis of numerous amendments,² and finally, two long articles exclusively devoted to this question were included in the Protocol.

- 854** These articles basically offer a solution to the two following subjects of concern:
- to permit ships and craft already covered by the Second Convention to also be available for all *civilian* wounded, sick and shipwrecked persons;
 - to provide protection for medical ships and craft which had not been covered by the Second Convention.
- 855** These two concerns are reflected in two separate articles, the first of which deals with the new privileges granted ships and craft already covered by the Second Convention, while at the same time slightly extending the category of hospital ships;³ and the second of which deals with the protection of medical ships and craft not covered by the Second Convention, which will benefit from privileges slightly less extensive than the former, though in accordance with a more flexible procedure.
- 856** The articles which were adopted go further and are much more detailed than Article 23 of the 1973 draft while resolving the questions raised in the draft. Moreover, although this question was not mentioned in Article 22 as finally adopted, it was clearly stated during the discussions in Committee II that, unlike what was indicated in Article 23, paragraph 2, of the draft: “a hospital ship enjoyed its privileged status wherever it might be, and no distinction was drawn whether it happened to be on the high seas or elsewhere”.⁴ This point of view prevailed, and it must be concluded that hospital ships fall under the scope of the Second Convention wherever they happen to be.

Paragraph 1

- 857** In the Second Convention, the ships described in Articles 22, 24 and 25 are those which are “built or equipped by the Powers specially and solely with a view to assisting the wounded, sick and shipwrecked, to treating them and to transporting them”.⁵ The wounded, sick and shipwrecked referred to are essentially members of the armed forces.⁶
- 858** As one of the main aims of Part II of the Protocol is to grant the same protection to any wounded, sick or shipwrecked person, whether civilian or military, it was deemed necessary to specify that such ships, as well as their lifeboats and small craft, and coastal rescue craft,⁷ can lawfully be used for civilian wounded, sick

² Cf. particularly *O.R.* III, pp. 116-117, CDDH/II/249 and Add.2 and 3; CDDH/II/258 and Add.1.

³ Cf. Art. 22, para. 2.

⁴ *O.R.* XI, p. 409, CDDH/II/SR.38, para. 12.

⁵ Cf. Art. 22, Second Convention.

⁶ Cf. Art. 13, Second Convention.

⁷ Cf. Art. 27, Second Convention.

and shipwrecked persons, and that in doing so they retain the rights granted them under the Second Convention, as do their personnel and crew.

- 859 Nevertheless, it should be noted that even under the régime of the Second Convention, the ships and craft that are covered were already under an obligation to offer assistance to any shipwrecked person they came across, in accordance with the general law of the sea. However, a specific task of taking care of civilian wounded, sick and shipwrecked persons could not be said to rest upon them, nor, in particular, that of transporting such wounded and sick civilians.

Sub-paragraph (a)

- 860 To be absolutely precise, this should have referred to “ships and craft”, since Article 27 of the Second Convention deals with *coastal rescue craft*. As such ships and craft are described in the articles of the Second Convention that are mentioned, reference can be made to them. However, the provisions relating to such ships and craft are not only those where they are described, but also Article 26, which recommends a minimum tonnage of 2,000 tons gross for hospital ships transporting wounded, sick and shipwrecked over long distances; Article 29, which permits hospital ships to leave ports falling into the hands of the enemy; Article 30, concerning the use of hospital ships and small craft; Article 31, granting the right of Parties to the conflict to control, search, and, where justified even to detain such ships and craft for a period not exceeding seven days; Article 32, which deals with their stay in a neutral port; Article 33, which imposes on merchant vessels which have been converted into hospital ships the obligation to remain dedicated to such use throughout the duration of hostilities; and Articles 34 and 35, which cover the cessation of protection.

Sub-paragraph (b)

- 861 The protection granted hospital ships is explicitly extended to their lifeboats – which is obviously necessary – by the Second Convention.⁸ On the other hand, the latter does not refer to the *small craft* of such ships. Yet there is no doubt that these were also covered. To mention them separately has the advantage of removing any ambiguity about the fact that auxiliary craft belonging to a hospital ship for the purpose of helping it to carry out its tasks is also protected.

Sub-paragraph (c)

- 862 This refers to the rules of Article 36 of the Second Convention relating to the medical personnel⁹ of hospital ships, and those of Article 37 for any religious or medical personnel who might be on board coastal rescue craft.

⁸ Cf. Art. 26, Second Convention.

⁹ In this respect, it should be recalled that the crew is also considered as personnel in the sense of the Protocol, cf. Art. 8, sub-para. (c) and (d).

Sub-paragraph (d)

- 863** The provisions of the Second Convention relating to such wounded, sick and shipwrecked persons are those of Article 12, which describes the protection and treatment to which they are entitled; Article 14, which lays down the conditions under which a belligerent may require the surrender of such persons; Article 15, which deals with cases in which they are taken on board a neutral warship or neutral military aircraft; Article 16, which provides for the fate of those who have fallen into enemy hands; and finally, Article 17, which deals with such persons who are landed in a neutral port.
- 864** As regards civilian wounded, sick and shipwrecked persons covered by the Protocol but not by the Second Convention, we will see below that only Article 12 of the latter remains applicable. However, it was necessary to point out that the fate of the wounded, sick and shipwrecked covered by the Second Convention is not affected by the presence on board ship of wounded, sick and shipwrecked persons not covered by that Convention.
- 865** Therefore, what new category of wounded, sick and shipwrecked persons can henceforth be taken on board, treated and transported without restriction? This covers all civilian wounded, sick and shipwrecked persons who are not already covered by Article 13 of the Second Convention.
- 866** The Protocol describes in detail which persons are included in the categories of wounded, sick and shipwrecked.¹⁰
- 867** As regards Article 13 of the Second Convention, this basically covers military wounded, sick and shipwrecked, though it also covers some well-defined categories of civilians.¹¹ Nevertheless, the great majority of civilians are not covered by this article, and in this respect the present article represents a step forward.
- 868** Although on the main points the rules applicable to such civilians are the same – i.e., the right to protection and care¹² – they are not identical with regard to other points, as was mentioned above:

- 1) *Such civilians (viz., those not covered by Article 13 of the Second Convention) may not be surrendered to any Party which is not their own*

- 869** Article 14 of the Second Convention permits warships of belligerent Parties to require that the wounded, sick or shipwrecked on board hospital ships or other craft shall be surrendered to them, provided that the condition of the persons to

¹⁰ Cf. *supra*, commentary Art. 8, sub-paras. (a) and (b), pp. 116-124.

¹¹ Persons following the armed forces without forming part of them and who have received authorization to do so, members of the crew of the merchant navy and civil aviation of the Parties to the conflict, if they do not enjoy more favourable treatment under the provisions of international law, and the civilian population taking up arms spontaneously, provided they carry them openly and respect the laws and customs of war; cf. Art 13, paras. 4-6, Second Convention.

¹² Cf. Art. 12, Second Convention.

be transferred permits this, and that the warship can provide adequate facilities for necessary medical treatment. Though this rule continues to apply to the wounded, sick and shipwrecked covered by Article 13 of the Second Convention, regardless of their nationality, it does not apply to all *civilian* wounded, sick and shipwrecked persons. Only the surrender to those who are nationals of the State whose flag the warship is flying can be lawfully required by this ship. As regards shipwrecked persons who have not yet been taken on board, a rather subtle distinction has to be made between the act of taking them on board and capturing them. When not engaged in combat, a warship has the duty to *take on board* shipwrecked persons, and in by far the majority of cases this could not be termed “capture”. Such action could be termed “capture” only in the possibly rather academic case that shipwrecked persons are manifestly on the point of reaching dry land safe and sound, or of being taken on board by another craft. In this respect the determining factor is the intention of the captain of the warship.

870 The hospital ships covered by Articles 22, 24 and 25 of the Second Convention all depend on a Party to the conflict, either belonging to it, or officially commissioned by it or otherwise placed under its command. Thus, in principle they will not enter the territorial waters or approach the territory of an adverse Party to that on which they depend. Nevertheless, they may be compelled to do so by adverse circumstances (storms, damage etc.), and again in such a case the surrender of the civilian wounded, sick and shipwrecked who are not covered by Article 13 of the Second Convention, or are not nationals of the adverse Party, cannot be required by the latter either. However, hospital ships will entrust such persons to this Party if their condition requires care which they are unable to provide. In this the victim’s interests are predominant – a matter of common sense. Moreover, as they do not enjoy extraterritorial rights, hospital ships have no power to oppose the wishes of those in their care who ask the adverse Party to land in the latter’s territory.

871 Finally, it should be noted that no reservation has been made for civilian wounded, sick and shipwrecked who do not wish to return to their own territory, even though they are nationals of a Party to the conflict (refugees, political dissidents etc.) The Protocol does not prevent a Party to the conflict – particularly one of its warships – from requiring the surrender of such persons. Nevertheless, the latter should still enjoy at least the guarantees provided by Article 75 (*Fundamental guarantees*).¹³

872 The question of the fate of those on board a hospital ship or medical craft which has landed in a neutral port is examined below.¹⁴

¹³ On this subject, *cf.* commentary Art. 75, *infra*, p. 861, and Art. 73, *infra*, p. 845.

¹⁴ *Cf.* commentary Art. 23, para. 6, *infra*, pp. 273-278.

2) *Nevertheless, such civilians may find themselves in the power of a Party to the conflict other than their own, and in this case they will be covered by the Fourth Convention and this Protocol*

- 873 The Protocol provides that civilians not covered by Article 13 of the Second Convention may not be surrendered to a Party to the conflict of which they are not nationals. However, it is conceivable that such civilians could fall into the hands of such a Party, particularly if they are taken on board a ship belonging to the latter. In such cases they should obviously not be treated as civilians covered by Article 13 of the Second Convention, who become prisoners of war, but as aliens within the territory of a Party to the conflict.
- 874 If they are nationals of an adverse Party, the Fourth Convention applies to them, particularly Section II (Aliens within the territory of a Party to the conflict) of Part III, and in the case that they are interned, Section IV (Regulations for the treatment of internees). As regards the Protocol, one or more provisions of Section III (Treatment of persons in the power of a Party to the conflict) of Part IV may also be applicable to them, depending on the circumstances.
- 875 If they are nationals of a neutral or other State not Party to the conflict, the above-mentioned provisions of the Fourth Convention and the Protocol apply to them only if the State of which they are nationals has no “normal diplomatic representation in the State in whose hands they are”.¹⁵ The general question of the status of shipwrecked persons, and the rights and obligations arising therefrom, was examined above.¹⁶

Paragraph 2

- 876 Article 25 of the Second Convention provides for the possibility that hospital ships are used by National Red Cross Societies, or other officially recognized relief societies, or even private persons of *neutral countries* – according to the terminology of Protocol I, of a “neutral or other State not Party to the conflict”¹⁷ – under the control of a Party to the conflict. The present paragraph deals with the possibility, not provided for in Article 25 of the Second Convention, that a hospital ship is made available directly to a Party to the conflict by a neutral or other State not Party to the conflict, or by an impartial international humanitarian organization.
- 877 Such a hospital ship must be made available “for humanitarian purposes”.
- 878 This last point was hardly necessary considering it is a requirement for all hospital ships. However, it was stressed in this context to remove any possible doubt regarding the character of the donor’s intention.
- 879 Article 25 of the Second Convention specifies that the hospital ship is “utilized” by the society or the private person making it available, which implies that the latter provides the necessary crew and medical personnel. As the present

¹⁵ Cf. Article 4, Fourth Convention.

¹⁶ Cf. commentary Art. 8, sub-para. (b), pp. 118-124.

¹⁷ Cf. commentary Art. 2, sub-para. (c), pp. 61-62.

paragraph does not specify whether the hospital ship is made available with or without an adequate crew and medical personnel, it must be recognized that both possibilities exist.

880 In any case, protection is granted such a hospital ship only if the conditions listed under Article 25 of the Second Convention are fulfilled, viz.:

- the hospital ship is placed under the control – and under the responsibility – of the Party to the conflict to which it has been made available;
- it has been made available with the consent not only of the Party receiving it, but also with that of the government of those providing it. This last condition is obviously superfluous when the neutral State itself provides the hospital ship. Its meaning is more difficult to determine when it is provided by an impartial international humanitarian organization,¹⁸ but it would seem that in most cases the agreement of a government other than that of the beneficiary State is not required. Nevertheless, a more precise answer could be given only after an analysis of the various organizations concerned;
- the provisions of Article 22 of the Second Convention concerning notification must be observed: the names and characteristics of hospital ships made available in this way must be notified to the Parties to the conflict ten days before those ships are used. Moreover, it is specified that “the characteristics which must appear in the notification shall include registered gross tonnage, the length from stem to stern, and the number of masts and funnels”.¹⁹

Paragraph 3

881 This paragraph makes a more flexible provision for one of the conditions to which the protection of coastal rescue craft is subject. In fact, it seemed excessively formal to make the notification of such craft a condition of their protection, as is the case in Article 27 of the Second Convention. Thus the Protocol recommends such notification, which provides an additional guarantee for such craft to be respected, but it does not make it a *condition* of protection. Thus, this should prevent such craft from being immobilized at a time when their services could be of enormous value from a humanitarian point of view.

Y.S.

¹⁸ On the meaning of this expression, *cf.* commentary Art. 9, para. 2, *supra*, p. 143.

¹⁹ Art. 22, para. 2, Second Convention.

Protocol I

Article 23 – Other medical ships and craft

1. Medical ships and craft other than those referred to in Article 22 of this Protocol and Article 38 of the Second Convention shall, whether at sea or in other waters, be respected and protected in the same way as mobile medical units under the Conventions and this Protocol. Since this protection can only be effective if they can be identified and recognized as medical ships or craft, such vessels should be marked with the distinctive emblem and as far as possible comply with the second paragraph of Article 43 of the Second Convention.
2. The ships and craft referred to in paragraph 1 shall remain subject to the laws of war. Any warship on the surface able immediately to enforce its command may order them to stop, order them off, or make them take a certain course, and they shall obey every such command. Such ships and craft may not in any other way be diverted from their medical mission so long as they are needed for the wounded, sick and shipwrecked on board.
3. The protection provided in paragraph 1 shall cease only under the conditions set out in Articles 34 and 35 of the Second Convention. A clear refusal to obey a command given in accordance with paragraph 2 shall be an act harmful to the enemy under Article 34 of the Second Convention.
4. A Party to the conflict may notify any adverse Party as far in advance of sailing as possible of the name, description, expected time of sailing, course and estimated speed of the medical ship or craft, particularly in the case of ships of over 2,000 gross tons, and may provide any other information which would facilitate identification and recognition. The adverse Party shall acknowledge receipt of such information.
5. The provisions of Article 37 of the Second Convention shall apply to medical and religious personnel in such ships and craft.
6. The provisions of the Second Convention shall apply to the wounded, sick and shipwrecked belonging to the categories referred to in Article 13 of the Second Convention and in Article 44 of this Protocol who may be on board such medical ships and craft. Wounded, sick and shipwrecked civilians who do not belong to any of the categories mentioned in Article 13 of the Second Convention shall not be subject, at sea, either to surrender to any Party which is not their own, or to removal from such ships or craft; if they find themselves in the power of a Party to the conflict other than their own, they shall be covered by the Fourth Convention and by this Protocol.

Commentary

General remarks

- 882** Article 23 covers medical ships and craft as defined in Article 8 (*Terminology*), and not covered by Article 22 (*Hospital ships and coastal rescue craft*) of the Protocol or by Article 38 of the Second Convention. Article 22 (*Hospital ships and coastal rescue craft*) extended the protection of ships and craft covered by Articles 22, 24, 25 and 27 of the Second Convention, and therefore all ships and craft covered by that Convention are excluded from the scope of Article 23.
- 883** In the system of the Conventions only the transportation of civilian wounded and sick,¹ of the infirm and maternity cases, which is undertaken by ships assigned to such transportation, falls under the scope of this article with any certainty.² Although this question is not mentioned in the First Convention, it is also clear that in the case of armed conflict taking place on land, the transportation of the wounded and sick, or of medical equipment, covered by Article 35 of the First

¹ In the usual sense of the expression and not as defined by the Protocol in Art. 8, sub-para. (a).

² Cf. Art. 21 of the Fourth Convention.

Convention, also come into this category when it is carried out by water (for example, on canals or across lakes).

884 Protocol I extends the concept of “medical ships and craft”. It covers “any medical transports by water”,³ medical transports⁴ and medical transportation⁵ having been previously defined.

885 Thus any means of transportation by water fulfilling the following conditions may be considered to be “medical ships and craft”:

- they must be *exclusively* assigned, for the duration of their assignment (which may be short) to medical transportation as defined above;
- they must be placed under the control of a Party to the conflict.

886 For example, a simple fishing boat requisitioned exclusively for the transportation of medicines to a hospital situated on an island falls under the category of medical ships and craft as long as the transportation lasts. For this reason several delegates during the CDDH considered that it was necessary to make a distinction and single out ships and craft whose protection is subject to stricter requirements, and to provide two articles. Indeed, as one of the delegates stated, the majority considered that it was not possible to grant the “wider protection of the Second Geneva Convention of 1949 to ships and craft which did not meet the difficult requirements which that Convention set as a condition of such protection”.⁶

887 The basic difference between the two types of medical ships and craft lies in the fact that the former are “permanent and could not change their status during the conflict”: for this reason it is accepted that they may not be seized by the enemy, while the latter, whose status could change during the conflict so that they could subsequently contribute to the enemy war effort “enjoyed less protection and could be seized if they fell into enemy hands”.⁷

888 Thus Article 23 is devoted to this second category of medical ships and craft.

Paragraph 1

First sentence

889 The hospital ships and craft concerned here are all “medical ships and craft” as described above, with the exception of those covered by Article 22 of the Protocol (*Hospital ships and coastal rescue craft*), viz.:

- military hospital ships,
- hospital ships used by relief societies or private individuals,
- hospital ships used by relief societies or private individuals of neutral countries,

³ Art. 8, sub-para. (i).

⁴ Art. 8, sub-para. (g).

⁵ Art. 8, sub-para. (f).

⁶ O.R. XI, p. 412, CDDH/II/SR.38, para. 28.

⁷ *Ibid.*, p. 559, CDDH/II/SR.49, para. 58.

- hospital ships made available to a Party to the conflict by a State not Party to that conflict, or by an impartial international humanitarian organization,
- coastal rescue craft,⁸

and with the exception of those covered by Article 38 of the Second Convention, i.e., ships chartered by a Party to the conflict to transport medical equipment intended for the treatment of the wounded covered by Article 13 of the same Convention.

- 890** The conditions for according protection to ships and craft not covered by Article 23 are stricter, and, accordingly, the rules according protection are more extensive. However, there is an exception with regard to the use of the distinctive emblem, which is laid down for all medical ships and craft, but not for the ships covered by Article 38 of the Second Convention. Article 43 of the Second Convention, which lays down the rules regarding the marking of hospital ships and other craft, does not provide for the use of the distinctive emblem for ships covered by Article 38 of that Convention. Such ships, which must meet more stringent conditions for protection than those required for all the ships and craft covered by Article 23 of the Protocol – the particulars regarding their voyage must be “notified to the adverse Party and approved by the latter” – would not be entitled to use the emblem, unlike all other medical ships and craft. This is illogical, and common sense requires that this discrepancy should be eliminated. It does not seem that anyone could be opposed to such ships using the distinctive emblem in future, particularly as they fall under the definition of medical ships and craft given in the Protocol.⁹
- 891** The ships and craft covered by Article 23 must be “respected and protected¹⁰ in the same way as mobile medical units under the Conventions and this Protocol”.
- 892** Article 19 of the First Convention provides that mobile medical units, as indeed fixed establishments, “may in no circumstances be attacked, but shall at all times be respected and protected by the Parties to the conflict”.
- 893** It adds that “should they fall into the hands of the adverse Party, their personnel shall be free to pursue their duties, as long as the capturing Power has not itself ensured the necessary care of the wounded and sick”.
- 894** It follows from this that the medical ships and craft covered by Article 23 are not exempt from being seized, unlike those covered by Article 22 (*Hospital ships and coastal rescue craft*), but that as everywhere else in the Conventions, the interests of the wounded and sick remain the prime consideration. In no case may the care administered to the wounded on board ship be interrupted.
- 895** The question of ships and craft only transporting medical personnel or even medical equipment is not actually clearly resolved by reference to the Conventions. However, an examination of paragraph 2 of Article 23 inevitably

⁸ Cf. in the order Art. 22, Art. 24, Art. 25, Second Convention; Art. 22, para. 2, Protocol I; Art. 27, Second Convention.

⁹ Cf. commentary Art. 8, sub-para. (i), *supra*, pp. 131-132.

¹⁰ On these concepts, cf. commentary Art. 10, para. 1, *supra*, p. 146.

leads to the conclusion that the medical duties of such ships or craft were not considered sufficiently important to prohibit them from being seized, as long as such duties had not been accomplished. On this point the ships covered by Article 38 of the Second Convention enjoy a significant additional guarantee, since they do enjoy exemption from being seized.

896 Article 19 of the First Convention also provides that the responsible authorities must ensure that medical units are, as far as possible, positioned in such a manner that attacks against military objectives cannot imperil their safety. A warship which sought to benefit from the protection granted the ships and craft covered by Article 23 by sailing close to such ships would be violating this provision. By doing so, it would endanger the safety of the ships and craft covered by Article 23, as the possibility of damage caused by the enemy to such ships and craft could not then be excluded.¹¹

897 The first sentence of paragraph 1 of Article 23 also refers to the protection granted medical units under this Protocol. The reference is in particular to Article 12 of the Protocol (*Protection of medical units*). That article principally attempts to define the conditions under which civilian medical units enjoy identical protection to that accorded military medical units.¹²

898 Finally, the first sentence of paragraph 1 specifies that the respect and protection of the ships and craft covered by Article 23 is an obligation applicable whether they are “at sea or in other waters”. It was stated above that hospital ships are protected everywhere.¹³ With regard to the ships and craft covered by Article 23 which are not exempt from being seized, it was important to specify clearly that protection extends to all waters. In particular there are some very large lakes on which such ships and craft must be able to accomplish their medical duties. The same applies, for example, if they have to carry the wounded or medicines to an inland hospital along canals.

Second sentence

899 This sentence begins with a statement: unless they are clearly marked, medical ships and craft cannot be recognized as such, and therefore run the risk of not being respected, particularly in a combat area. Consequently it is desirable that such ships and craft can be identified, i.e., that it is possible to identify them as *medical* ships and craft, on the one hand, and to recognize on which Party to the conflict they depend, on the other. The inclusion of the words “and recognized” means exactly this. Reference is made to the second paragraph of Article 43 of the Second Convention, which requires that the national flag is hoisted, and that a white flag with a red cross is flown “at the mainmast as high as possible”.

¹¹ In this respect, *cf.* by analogy Arts. 57 and 58 of Protocol I, as well as the commentary thereon.

¹² On this subject, *cf.* commentary Art. 12, and in particular, commentary para. 2, *supra*, pp. 167-169.

¹³ *Cf. supra.*

- 900 In addition, the second sentence of paragraph 1 of Article 23 indicates that such ships and craft should be “marked with the distinctive emblem”, without giving any further particulars. In this respect, reference may be made to Article 18 (*Identification*). Paragraph 1 of this article requires that each Party to the conflict shall endeavour to ensure that medical units, in particular, are identifiable, while paragraph 6 refers to Annex I to the Protocol for the application of this provision. The Annex lays down the basic rule that the distinctive emblem should be “as large as appropriate under the circumstances”.¹⁴ Thus there is no restriction regarding the way in which ships and craft, covered by Article 23, should be marked with the distinctive emblem.¹⁵
- 901 These provisions on marking are laid down only in the form of recommendations. The absence of formal rules is justified by the large measure of flexibility which the Parties to the conflict must enjoy in order to assign ships and craft to medical tasks without delay in case of emergency. It means that marking is not a constitutive element of the protection, as is, for example, the notification of names and characteristics of hospital ships to Parties to the conflict ten days before they are used. Thus ships and craft covered by Article 23 are protected even when they are not marked, though in this case they obviously run the risk of sustaining damage due to mistaken identity. This is why compliance is recommended as far as possible with the proposals contained in the second sentence of paragraph 1.

Paragraph 2

First sentence

- 902 “The ships and craft referred to in paragraph 1 shall remain subject to the laws of war”. This is the rule laid down in the first sentence, while exceptions to this rule are contained in the second and third sentences.
- 903 References to “the laws of war” (in French “le droit de la guerre” or “les lois de la guerre”) were already made in the First Convention, particularly in Articles 33 and 35, with regard to the buildings and materials of fixed medical establishments and medical transports.¹⁶ In this respect the Commentary on the First Convention remarks that the rules of the laws of war are “often summary and not very precise, and have not always been accepted unanimously by legal authorities”.¹⁷ Besides, this remark applies particularly to the treaty provisions enumerated below, and for the whole of the laws of war at sea.

¹⁴ Art. 3, para. 1.

¹⁵ For further details, *cf.* also Annex I, Arts. 3 and 4, and their commentary, *infra*, p. 1173.

¹⁶ *Cf.* respectively Arts. 33 and 35, Second Convention.

¹⁷ *Commentary I*, p. 274.

- 904 Various Conventions adopted in The Hague in 1899 and 1907 relate to the laws of war at sea.¹⁸
- 905 However, none of these Conventions applies to the ships and craft covered by Article 23, as their existence had simply not been anticipated as legally relevant, before the Protocol was adopted.
- 906 On the other hand, as regards legal literature, the Manual adopted by the Institute of International Law in 1913 in Oxford, on the laws of war at sea governing the relations between belligerents,¹⁹ gives some indications, particularly in Articles 32-40, relating to publicly and privately owned vessels other than those of the navy, and other than hospital ships.
- 907 It follows fairly clearly that the ships and craft covered by Article 23 are subject to capture, except for the reservations made in the next two sentences of paragraph 2, and that goods on board are liable to seizure. Moreover, it is specified that such capture and seizure are permitted “even when the vessels or the goods have fallen into the power of the belligerent because of *force majeure*, through shipwreck or by being compelled to put into port”.²⁰
- 908 Some grounds for extenuation of the principle of capture, which are also laid down in the Oxford Manual, especially for ships in an enemy port at the outbreak of hostilities, or ships which had left their last port of departure before the commencement of the war,²¹ could also be taken into account.
- 909 However, it seems obvious that only if States are prepared to re-examine naval war overall would it become possible to precisely define the present state of the laws of war at sea.

Second and third sentences

- 910 The second and third sentences of paragraph 2 contain detailed rules limiting the application of the general laws of war, i.e., essentially limiting the right of a warship to seize ships and craft belonging to the adverse Party, which are covered by Article 23.

¹⁸ Apart from the Hague Convention for the Adaptation to Maritime Warfare of the Principles of the 1864 Geneva Convention, which forms the basis of the Second Convention of 1949, the following conventions of 1907 deserve a mention:

- 1) Convention Relative to the Status of Enemy Merchant-Ships at the Outbreak of Hostilities;
- 2) Convention Relative to the Conversion of Merchant Ships into Warships;
- 3) Convention Relative to the Laying of Automatic Submarine Contact Mines;
- 4) Convention Respecting Bombardment by Naval Forces in Time of War;
- 5) Convention relative to Certain Restrictions to the Exercise of the Right of Capture in Naval War;
- 6) Convention Relative to the Establishment of an International Prize Court;
- 7) Convention Concerning the Rights and Duties of Neutral Powers in Naval War.

¹⁹ The content of this manual can be found in particular in M. Deltenre, *op. cit.*, pp. 666-715. As regards recent literature, *cf.* in particular, the bibliography produced by Y. Dinstein, “Sea Warfare”, in Bernhardt (ed.), *op. cit.*, Instalment 4, 1982, pp. 211 ff.

²⁰ *Cf.* the above-mentioned Oxford Manual of 1913, Arts. 33-34.

²¹ *Ibid.*, Arts. 36-40.

- 911 A distinction is made between two situations, i.e., that in which such ships and craft are “needed for the wounded, sick and shipwrecked on board”, and that in which they are not. Similar rules, protecting the interests of the wounded and sick, can be found in several places in the Conventions. In the first situation, such ships and craft are the only ones able to provide adequate care for the wounded, sick and shipwrecked they shelter.²² It should be noted that this refers only to the wounded *on board*. For example, a ship transporting medical personnel or equipment needed by the wounded in a hospital situated on an island would therefore not be covered. However, it is to be hoped that in such cases belligerents would act in a humanitarian spirit and permit such a ship to accomplish its task.
- 912 The second situation means that the wounded, sick and shipwrecked can be cared for in another way – for example, by being transferred onto a hospital ship or taken onto land²³ – or that such ships and craft are not transporting wounded or sick persons, but only medical personnel or equipment.²⁴

1. *Ships and craft are needed for the wounded, sick and shipwrecked on board*

- 913 In principle, only specific types of ships may give orders to the ships and craft in question, and such orders themselves are subject to restrictions.

1.1. *Ships allowed to give orders*

- 914 Paragraph 2 refers to “any warship on the surface able immediately to enforce its command”.
- 915 The expression *warship* in the Protocol is not defined here, though it was defined in the Convention on the High Seas of 29 April 1958.²⁵ It is clear that medical ships and craft, even if they are attached to the naval forces of a State, cannot be considered as warships. In this respect the definition could lead to some ambiguity, though international humanitarian law does not leave any room for doubt. Warships, being by their very nature military objectives, are ships whose purpose or use “make an effective contribution to military action”.²⁶ By contrast,

²² In the same sense, *cf. Commentary I*, p. 274 (Art. 33, para. 2).

²³ *Cf. however, infra*, commentary para. 6, regarding persons who cannot be obliged to leave ship.

²⁴ With regard to this situation, *cf. supra*, pp. 264-265.

²⁵ This Convention was adopted by the United Nations Conference on the Law of the Sea and entered into force on 30 September 1962. It had 57 States Parties as of 31 December 1984, including notably the United States, the United Kingdom and the USSR. Article 8, paragraph 2, reads as follows:

“For the purposes of these Articles, the term “warship” means a ship belonging to the naval forces of a State and bearing the external marks distinguishing warships of its nationality, under the command of an officer duly commissioned by the government and whose name appears in the Navy List, and manned by a crew who are under regular naval discipline.”

A similar definition was introduced in Article 29 of the Convention of the United Nations on the Law of the Sea of 10 December 1982, though this has not yet entered into force.

²⁶ *Cf. Art. 52, para. 2*, which defines a military objective.

medical ships and craft, which cannot display the distinctive emblems of warships and which do not make such a contribution, enjoy privileged protection.²⁷

916 In addition, such a warship must sail *on the surface*. In this respect, Committee II clearly specified that naval submarines which have surfaced are included in this definition.²⁸

917 Finally, such a warship must be *able immediately to enforce its command*. Thus the warship must have the military capacity to impose its will on the ship or craft to which the order has been given. Moreover, it is clear that it must be on the spot: the obligation to obey “existed only while the ship was present and able to enforce its command”.²⁹ Thus it should be recognized that the warship must have the other ship or craft in sight.

918 Some ships are equipped with weapons which can hit a long-range target with precision, and by imposing this specific requirement, it was hoped to avoid such ships abusing their power on the navigation of the ships and craft covered by Article 23 in a very wide area.

1.2. *Orders which may be given*

919 The above-mentioned warships may order the ships and craft covered by Article 23 “to stop, order them off, or make them take a certain course”. A similar provision is laid down in Article 31 of the Second Convention, while this article also mentions the possibility of controlling “the use of their wireless and other means of communication, and even detain them for a period not exceeding seven days from the time of interception, if the gravity of the circumstances so requires”. These two last possibilities have not been mentioned in paragraph 2 under discussion here. Yet, the abuse of means of communication constitutes an act harmful to the enemy which can lead to the loss of protection of the ship or craft concerned.³⁰ As regards the possibility of detaining the ship or craft for a period up to seven days, this was not included for the ships and craft covered by Article 23, because, unlike the ships and craft covered by Article 31 of the Second Convention, they may be seized as long as the wounded and sick on board are cared for. Moreover, it should be noted that a warship retains the possibility of escorting a ship containing wounded in need of care to its own territory, as long as the voyage is not too long, and could for that reason have an unfavourable effect on the condition of the wounded.

920 There is nothing to indicate that the orders given, which all relate to navigation, must comply with a special motive. However, they may not be purely arbitrary.

²⁷ In favour of the opposite point of view, arguments could certainly be drawn from Article 14 of the Hague Convention of 18 October 1907 concerning the Rights and Duties of Neutral Powers in Naval War, since Article 14 of this Convention refers to: “warships devoted exclusively to religious, scientific or philanthropic purposes”. However, international humanitarian law prefers a clear distinction. *Commentary II*, p. 113, states unambiguously: “A hospital ship may belong to the naval forces, but it is not a warship in the proper sense of the term”.

²⁸ Cf. *O.R.* XII, pp. 42-43, CDDH/II/SR.59, para. 28; also *cf.* para. 30.

²⁹ *Ibid.*, p. 43.

³⁰ Cf. *commentary* para. 3, *infra*, pp. 270-271.

The commentary on Article 31 of the Second Convention³¹ indicates that such orders must be given “for reasons of military security”.³² This interpretation seems to apply equally in the context of Article 23 under consideration here.

- 921 Paragraph 2 also mentions the obligation for the ship or craft covered by Article 23 to obey such commands. The consequences of disobeying are implied in paragraph 3 and reference should be made to the commentary thereon.³³

2. *Ships and craft which are not needed for the wounded and sick on board*

- 922 Ships and craft covered by Article 23, which are in this situation,³⁴ may be diverted from their medical duties in other ways. In this case the general laws of war³⁵ apply to such ships and craft. In this respect it should be recalled primarily that they may be *seized* and assigned to other purposes.

Paragraph 3

- 923 This paragraph deals with the termination of protection accorded ships and craft covered by this article.
- 924 The term *protection* is a form of shorthand which is frequently used. As indicated in paragraph 1, it is used here to mean the respect and protection as provided for mobile medical units by the Conventions and Protocol.³⁶
- 925 As regards Articles 34 and 35 of the Second Convention, which are referred to here, the former relates to the termination of protection, while the latter describes conditions not depriving hospital ships of protection. The rules laid down in this respect for medical units and establishments (or medical units as this term used in the Protocol covers both expressions) in Articles 21 and 22 of the First Convention are adapted here for ships. The principle is that such protection can only cease if the ships are used to commit acts harmful to the enemy, such as, for example, firing at a warship, transporting able-bodied soldiers or weaponry, or transmitting military information.
- 926 Such harmful acts to the enemy are not mentioned specifically, with the exception of one, namely, the possession or use of a secret code for communication.³⁷ On the other hand, five situations are listed which at first glance could be considered as equivalent to acts harmful to the enemy, but precisely must not be considered as such.

³¹ Commentary based on the Rules for the Control of Radio in Time of War and Rules for Air Warfare, prepared by the Commission of Jurists responsible for investigating and reporting on the revision of the laws of war, which met in The Hague on 11 December 1922. Cf. M. Deltenre, *op. cit.*, pp. 819-849.

³² *Commentary II*, p. 182.

³³ Cf. *infra*.

³⁴ In this respect, cf. *supra*, pp. 264-265.

³⁵ On this subject, cf. *supra*, pp. 266-268.

³⁶ On this subject, cf. *supra*, pp. 263-266.

³⁷ Cf. Art. 34, para. 2, Second Convention.

- 927 The first of these situations is the personnel of such ships and craft being armed – which is therefore implicitly tolerated. However, it should be remembered that such (light) arms can only be used for the purpose of keeping order on board ship, or for dealing with acts of piracy. Their use against a warship attempting to stop and search a medical ship or craft would undoubtedly constitute an “act harmful to the enemy”.
- 928 The second situation is the presence on board of apparatus exclusively intended to facilitate navigation or communication. This is related to the explicitly mentioned prohibition of using secret codes.³⁸ Moreover, it should be noted that the question of signalling and identification of medical ships and craft is currently being developed.³⁹
- 929 The third situation is the presence on board of portable arms and ammunition taken from the wounded, sick or shipwrecked, when it has not yet been possible to hand it over to the proper service.
- 930 Finally, the fourth and fifth situations do not really need to be mentioned with regard to the ships and craft covered by Article 23. They relate to the fact that such ships and craft also transport *civilian* wounded, sick or shipwrecked, and the fact that such ships transport equipment and personnel “exclusively for medical duties, over and above the normal requirements”. These two situations were actually exceptions allowed by the Second Convention, which intended that hospital ships should solely be devoted to providing relief, treating and transporting wounded, sick and shipwrecked soldiers and equivalent categories, but they also take part, in the same way as the others, in tasks assigned to “medical ships and craft” as defined in the Protocol.⁴⁰
- 931 In addition to the rules of Articles 34 and 35 of the Second Convention, paragraph 3 adds another act specifically defined as constituting an act harmful to the enemy, namely, a clear refusal to obey a command given in accordance with paragraph 2 (that paragraph, in any case, imposes the obligation on ships and craft covered by Article 23 to obey such an order). The word *clear* shows the intention to avoid a situation where a misunderstanding may lead to a disaster. It must be plain that a medical ship or craft has *refused* to obey, and has not simply misunderstood the command, for a warship to consider that it is the victim of a harmful act and take measures accordingly.
- 932 Finally, it should be noted that Article 34 of the Second Convention in all appropriate cases imposes the obligation to give due warning, naming a time-limit, before attacking a medical ship or craft which has committed a harmful act.⁴¹

³⁸ *Ibid.*

³⁹ On this subject, *cf.* particularly Ph. Eberlin, “Identification of Hospital Ships and Ships Protected by the Geneva Convention of 12 August 1949”, *IRRC*, Nov.-Dec. 1982, pp. 315 ff. *Cf.* in addition, commentary Annex I, Chapter III, *infra*, p. 1185.

⁴⁰ *Cf.* Art. 8, sub-paras. (f), (g) and (i).

⁴¹ For further details on Articles 34 and 35, *cf.* *Commentary II*, pp. 189-198. With regard to the warning, *cf.* also commentary Art. 13, para. 1, second sentence, *supra*, pp. 175-176.

Paragraph 4

- 933 The first sentence of this paragraph consists of a recommendation, the second of an obligation which arises when effect is given to this recommendation.

First sentence

- 934 The notification provided for here is a recommendation and not an obligation. Thus protection is not dependent on the notification. However, it provides an additional guarantee for the ships and craft concerned by making the authorities of the adverse Party “responsible” and enabling them to notify their warships of the presence of medical ships and craft. Moreover, the sooner such authorities receive such notification, the better they can transmit it, and this is the reason why the notification is asked to be made “as far in advance of sailing as possible”.
- 935 Without constituting an obligation, the recommendation is made in more pressing terms for larger ships, and the figure of 2,000 gross tons mentioned here is taken from Article 26 of the Second Convention.⁴²
- 936 The content of the notification requires little comment, particularly as the details mentioned in paragraph 4 – name, description, estimated speed – are given only by way of example. It is apparent from the end of the sentence that the notification may include any appropriate information which would facilitate identification and recognition of the medical ship or craft.
- 937 It should be recalled with regard to the characteristics which appear in the notification, that Article 22, paragraph 2, of the Second Convention requires that in all cases “the registered gross tonnage, the length from stem to stern and the number of masts and funnels” must be included.

Second sentence

- 938 Though the Parties to the conflict remain free to notify the adverse Party or not, any Party receiving such notification is obliged to acknowledge receipt as soon as it has received it. It is even specified that such a Party must acknowledge receipt “of such information”, which indicates that the acknowledgement of receipt should be fairly detailed in order to avoid any confusion.
- 939 In addition, it should be noted that if the notification or the acknowledgement of receipt cannot be made directly between the Parties to the conflict because of a lack of communication, the Protecting Powers, their substitute or the ICRC could take care of the transmission.

⁴² Which indicates this as the minimum recommended limit for hospital ships called upon to transport the wounded, sick and shipwrecked over long distances on the high seas.

Paragraph 5

- 940 This paragraph relates to medical and religious personnel of ships and craft covered by Article 23 when they have fallen into the hands of an enemy. Article 37 of the Second Convention basically provides that such personnel shall be respected and protected; that they may continue to carry out their duties as long as this is necessary for the care of the wounded and sick on board ship; that they shall afterwards be repatriated to the extent that this is possible; and finally, that they will be subject to the provisions of the First Convention if they are landed in the territory of the adverse Party.⁴³
- 941 Moreover, it should be noted that the crew of such ships and craft are considered as medical personnel in the sense of the Protocol,⁴⁴ and that they are therefore also covered by Article 37 of the Second Convention.⁴⁵

Paragraph 6

- 942 This paragraph regulates the fate of the wounded, sick and shipwrecked on board ships and craft covered by Article 23 in the event that such ships and craft are boarded and searched or captured by the adverse Party. The basic rule which should be kept in mind is that nothing which could jeopardize the care due to the wounded and sick is permitted. Apart from this, a distinction is made between military wounded, sick and shipwrecked and those with equivalent status, on the one hand, and civilian wounded, sick and shipwrecked, on the other.

First sentence – Military wounded, sick and shipwrecked persons and those with equivalent status

- 943 The persons referred to here are first of all those covered by Article 13 of the Second Convention, i.e., basically the wounded, sick and shipwrecked who are members of the armed forces of a Party to the conflict.⁴⁶ However, it should be stressed that Article 13, sub-paragraph (5), of the Convention, which relates in particular to members of crews of the merchant marine, cannot apply by analogy to members of crews of ships and craft covered by Article 23 of the Protocol, since the latter are considered as medical personnel, as mentioned in the previous paragraph, and therefore enjoy a more favourable status.
- 944 Combatants who, pursuant to Article 44 (*Combatants and prisoners of war*) of the Protocol, are entitled to prisoner-of-war status if they fall into the hands of the adverse Party, have the same status as persons covered by Article 13 of the

⁴³ On this subject, *cf.* in particular, Arts. 28 (Retained medical personnel and chaplains), 30 (Return of medical and religious personnel), and 31 (Selection of personnel for return).

⁴⁴ *Cf.* commentary Art. 8, sub-para. (c), *supra*, pp. 124-127.

⁴⁵ For further details, *cf.* also *Commentary II*, pp. 207-211.

⁴⁶ Apart from this, *cf.* Article 13 of the Second Convention, as well as *Commentary II*, pp. 93-104.

Second Convention. Under the provisions of the Conventions, they were not yet considered as combatants, and, in case of capture, as prisoners of war.⁴⁷

945 The “provisions of the Second Convention” to which reference is made, and which are applicable to such persons, are basically:

- Article 12, which provides that they must be respected and protected in all circumstances, and be treated and cared for humanely;
- Article 14, which provides that warships have the right to require the surrender of such persons, provided that they can provide adequate facilities for necessary medical treatment;
- Article 15, which deals with wounded, sick and shipwrecked persons taken on board a neutral warship and requires that the State to which such a warship belongs ensure that such persons can take no further part in hostilities;
- Article 16, which deals with the fate of wounded, sick and shipwrecked persons who have fallen into enemy hands, and provides that the enemy may decide, according to circumstances, “whether it is expedient to hold them, or to convey them to a port in the captor’s own country, to a neutral port, or even to a port in enemy territory”, provided the treatment required by their condition is ensured.

In the last case, “prisoners of war thus returned to their home country may not serve for the duration of the war”. In the event that they are landed in a neutral port, Article 17 of the Second Convention applies. Basically this provides that in general the wounded, sick and shipwrecked must be guarded by the neutral Power so that “the said persons cannot again take part in operations of war”. Finally, in the case that they are kept in custody, or sent to a port of the Party to which the ship that captured them belongs, they become prisoners of war. The Third Convention applies to them in addition to the Second Convention, as long as they are at sea, or if they are wounded or sick, both the First and Third Conventions apply from the moment they land.⁴⁸

First part of the second sentence – Wounded, sick and shipwrecked civilians

946 Apart from civilians covered by Article 13 of the Second Convention, this provision covers all civilian wounded, sick and shipwrecked on board the ships and craft covered by Article 23.

947 When such persons are at sea, they may not be surrendered “to any Party which is not their own”, nor may they be removed from such ships or craft. Each of these provisions requires comment.

948 In the first place, the rule only applies to ships and craft *at sea*. In fact, this ought to read *on the high seas*, to be quite accurate, as the intent is that they do not find themselves within the jurisdiction of any State. Nevertheless, this lack of

⁴⁷ On this subject, *cf.* commentary Art. 44, *infra*, p. 519.

⁴⁸ On this subject, *cf.* in addition, *Commentary II*, Art. 12, pp. 84-92; Art. 14, pp. 104-107; Art. 15, pp. 107-112; Art. 16, pp. 112-116, Art. 17, pp. 116-129, Art. 19, pp. 136-146; Art. 20, pp. 146-150.

accuracy may have an advantage, as it is often difficult to establish whether a ship is in fact situated on the high seas or whether it is within the territorial sea of a State.⁴⁹ In case of doubt, it should therefore be assumed that it is “on the high seas”. In any case there can be no doubt that the rule does not apply to a ship or craft sailing within the territorial waters of a State, whether they are sea, lake, river, canal or anything else.

- 949 “At sea”, therefore, such persons are not subject to “surrender to any Party which is not their own”. This means that if the ship or craft covered by Article 23 holds wounded, sick or shipwrecked persons (whether they have military or equivalent status or are civilians) belonging to the adverse Party, such persons may be claimed by a warship of the latter. Though such a warship can also require the surrender of *military* wounded, sick or shipwrecked persons (or those of *equivalent status*) of the adverse Party, i.e., belonging to the Party to which the medical ship or craft belongs, it cannot do so in the case of *civilians*. Indeed, this is perfectly logical: civilians are obviously not military objectives and although certain rules have been provided for the event that they happen to be in territory controlled by the enemy, they cannot be captured outside such territory.
- 950 In addition, such civilian wounded, sick and shipwrecked may not be subjected to *removal from such ships or craft*. This means that if persons belonging to a State Party to the conflict refuse to be transferred to a ship of that State – particularly if they have deliberately left that State to seek refuge elsewhere – such a transfer cannot be *imposed* upon them.⁵⁰
- 951 However, as we saw above, a certain course may be imposed on a medical ship or craft, and it may be escorted by a warship of the adverse Party to territory controlled by the latter, as long as this is not harmful to the wounded and sick on board.
- 952 In this case, as in any case when a medical ship or craft is within the territorial limits of a State, the question deserves to be re-examined in its entirety.
- 953 If the medical ship or craft is within the territorial limits of the State to which it belongs, the answers given for the high seas remain applicable. The warship of the adverse Party stopping and boarding it is obviously taking a greater risk since it is venturing into enemy territory, but this is purely a question of fact. Obviously, from a legal point of view, the possibility cannot be excluded that in the context of armed conflict, such a warship could enter enemy territory.
- 954 If, in exceptional circumstances, the medical ship or craft is within the territorial limits of the adverse Party, the solution still remains the same, with one exception:

⁴⁹ In legal terms, the concept of territorial sea and that of the contiguous zone (where the coastal State is also granted certain prerogatives) are defined in the Convention on the Territorial Sea and the Contiguous Zone, adopted on 29 April 1958 by the United Nations Conference on the Law of the Sea. This Convention entered into force on 10 September 1964 and had 46 States Parties as of 31 December 1984, including notably the United States, the United Kingdom and the USSR. The United Nations Convention on the Law of the Sea, referred to in note 25 *supra*, deals with this question in its Part II, Arts. 2-31.

⁵⁰ Nevertheless, see Arts. 22-23 of the Convention on the High Seas of 29 April 1958, referred to in note 25, *supra*. These articles deal with the right of visit and the right of hot pursuit, respectively. On that Convention, *cf.* note 25, *supra*. These articles were included, with some changes, in the Convention on the Law of the Sea (also referred to in note 25, *supra*) as Arts. 110 and 111.

such a Party cannot be prevented from exercising jurisdiction over its own civilian nationals, even if they are sick or wounded, if any are present on the medical ship or craft. Apart from this, it is obvious that in such a case the outcome will probably be the capture of the medical ship or craft, but this again is purely a question of fact, subject to the rules laid down in Article 23.

- 955 Finally, what happens if a medical ship or craft is within the territorial limits of a neutral or other State not Party to the conflict?⁵¹ There is no real problem if it is only passing through such territorial waters, as, like any other ship, it enjoys the right of “innocent passage”.⁵² On the other hand, various problems arise if it docks in a port of the neutral State.
- 956 Article 17 of the Second Convention deals with the problem of wounded, sick and shipwrecked persons with military or equivalent status who are landed by a hospital ship in a neutral port. The commentary on this article underlines the fact that the text does not specify the duty of neutral States in the case where the hospital ship wishes to land wounded, sick or shipwrecked persons. The author of the commentary proposes his own solution, and suggests that the wounded, sick and shipwrecked members of the armed forces (or persons with equivalent status) of the Party to which the hospital ship belongs, should remain interned until hostilities have ceased, and that those belonging to the adverse Party should be left free.⁵³ This solution was proposed because in both cases it avoids a situation in which it might be in the interests of a hospital ship to get rid of the wounded, sick and shipwrecked it has on board, in a neutral port. In any case, it seems clear that there was no question that the neutral State should, or could, *impose* the landing of wounded, sick and shipwrecked persons belonging to the adverse Party of the State to which the hospital ship belonged.
- 957 However, this question should be raised. Neither hospital ships nor *a fortiori* ships and craft covered by Article 23, enjoy *extraterritorial status*, unlike warships.⁵⁴ Furthermore, medical ships and craft cannot *capture* wounded, sick or shipwrecked members of the enemy armed forces.⁵⁵ These only really become prisoners of war when they are transferred onto a warship or taken to enemy territory. Thus what right could medical ships and craft have to keep on board such persons against their will, when they are within the territorial limits of a neutral State?
- 958 The solution which seems to be most logical is to permit the neutral State to accept such persons if *they* express a wish for this, and not at the request of the medical ship or craft.

⁵¹ On the meaning of this expression, *cf.* commentary Art. 2, sub-para. (c), *supra*, pp. 61-62. In the commentary on this paragraph we use the term “neutral State” for the sake of simplicity to designate any State covered by this expression.

⁵² *Cf.* on this subject, the Convention of 29 April 1958 on the Territorial Sea and the Contiguous Zone, quoted *supra*, note 49, Arts. 14-23, and the Convention of the United Nations on the Law of the Sea, cited *supra*, note 25, Arts. 17-32.

⁵³ *Cf. Commentary II*, pp. 125-129. On this subject, *cf.* in addition, K. Özerden, *Le sort des militaires belligérants, victimes de la guerre, débarqués dans un port neutre, d’après la Convention de Genève*, Paris, 1971.

⁵⁴ On this subject, *cf. ibid.*, p. 190, note 1.

⁵⁵ *Cf. ibid.*, p. 114.

- 959 The question remains whether or not they should be interned. Reference to the corresponding provisions of the Hague Convention of 18 October 1907 Respecting the Rights and Duties of Neutral Powers and Persons in War on Land suggests a choice between two possible solutions. Belligerent troops seeking refuge in neutral territory must be prevented from taking part in hostilities again. The same applies to wounded soldiers who reach neutral territory in a convoy of their enemy.⁵⁶ On the other hand, escaped prisoners of war who are admitted by a neutral Power will remain free.⁵⁷ As we recommend that the choice with regard to this decision should be left to the persons concerned, precisely because they cannot be considered as prisoners of the medical ship or craft, we believe that such persons should be treated as belligerents reaching neutral territory, and should therefore be interned.⁵⁸
- 960 As regards wounded, sick or shipwrecked members of the armed forces of the Party to which the medical ship or craft belongs, the solution proposed by the author of the commentary on the Second Convention seems indisputable: the decision to hand over those whose medical condition in their judgment requires this, must be taken by the medical ship or craft in the knowledge that the neutral State will be responsible for preventing them from taking part again in hostilities (i.e., in general, for interning them).
- 961 In addition, Article 23 of the Protocol means that the problem of civilian wounded, sick and shipwrecked must be considered. For those who do not belong to the Party to which the medical ship or craft belongs, there is little doubt as to the solution to be adopted: they must be considered to be perfectly free in deciding whether to remain on the ship or craft, or to disembark. As for the neutral State, it is obliged to take care of any wounded and sick entrusting themselves to it, but is not obliged to intern them. As soon as their state of health permits, such civilians are free to return to their State of origin, or to any other State of their choice, even to remain in the neutral State on a long-term basis, if the latter is willing to accept them. There is only one restriction on the freedom of choice of such civilian wounded, sick or shipwrecked: while they are in the territory of the neutral State, and subject to its jurisdiction, they can be disembarked against their will if the jurisdiction of the neutral State so requires, particularly if the persons concerned are wanted by this State for a crime or for an investigation.
- 962 However, the most delicate problem is that of civilians belonging to the Party to the conflict to which the medical ship or craft belongs. It would seem that if such civilians are in neutral territory (for it must be remembered that medical ships and craft do not enjoy extraterritorial status), those in charge of the medical ship or craft – however much authority they might have in their own territory in civil matters – could not oblige them to remain on the ship or craft. Thus such civilians should enjoy the same prerogatives as civilians who do not belong to the

⁵⁶ *cf.* Arts. 11 and 14 of that Convention.

⁵⁷ Art. 13, first sentence of that Convention.

⁵⁸ However, it should be recalled that Article 11 of the Hague Convention mentioned here allows a neutral State the possibility of deciding “whether officers can be left at liberty on giving their parole not to leave the neutral territory without permission”.

Party to the conflict to which the ship or craft belongs. As regards criminals or anyone accused of a crime, it would seem that the neutral State should intern them and then decide on the basis of its own legislation and its international obligations whether to extradite them, prosecute them itself, execute a penalty or an additional penalty or allow them to go free. With regard to this, it is important to emphasize that though international humanitarian law imposes an obligation on the neutral State to treat wounded, sick and shipwrecked persons humanely,⁵⁹ the fate of such civilians in other respects does not fall under this body of law. This is a matter in particular of human rights law, as well as the national legislation and the international obligations of the neutral State.

963 Finally, for the sake of completeness, it should be noted that a belligerent warship does not have the right to capture or even to stop and board a medical ship or craft in the territorial waters of a neutral State.⁶⁰ Thus the question of persons whose transfer could be required in these conditions does not arise.

Second part of the second sentence – Civilian wounded, sick and shipwrecked in the power of a Party other than their own

964 The word “néanmoins” (nevertheless) is used in the French text because the sentence in which it is used refers to circumstances which can only occur within the constraints of the preceding part of the sentence. However, the English text has correctly refrained from using this term, as it might give the incorrect impression that the situation referred to is an exception. In fact, this is not the case. A medical ship or craft may dock in an enemy port, either because of natural circumstances (e.g., storms, damage etc.), or because it is forced to do so by a warship. Moreover, a medical ship or craft may rescue shipwrecked persons of the adverse Party and take them to the territory of its own State. In all such cases there is no doubt that the civilian wounded, sick and shipwrecked of the adverse Party to that in whose territory they are disembarked, are in the power of the latter and are therefore protected by various provisions of international humanitarian law. The same applies to nationals of a neutral State, if this State does not have “normal diplomatic representation”.⁶¹

Y.S.

⁵⁹ On this subject, cf. commentary Art. 19, *supra*, p. 237.

⁶⁰ In this respect, Article 2 of the Hague Convention of 18 October 1907 concerning the Rights and Duties of Neutral Powers in Naval War is perfectly clear: “Any act of hostility, including capture and the exercise of the right of search, committed by belligerent war-ships in the territorial waters of a neutral Power, constitutes a violation of neutrality and is strictly forbidden.”

⁶¹ Cf. Art. 4, para. 2, Fourth Convention and *Commentary IV*, pp. 57-58. The Fourth Convention applies to such persons, particularly Section II (Aliens within the territory of a Party to the conflict) and, if applicable, Section IV (Regulations for the treatment of internees), Part III; Protocol I is also applicable, particularly Section III (Treatment of persons in the power of a Party to the conflict) of Part IV. In the context of the commentary on this article we cannot summarize these numerous provisions. Thus we refer the interested reader to these provisions and the commentary thereon.

Article 24 – Protection of medical aircraft

Medical aircraft shall be respected and protected, subject to the provisions of this Part.

Commentary

General remarks (relating to Articles 24-31)

965 The articles on medical aircraft belong together and should have formed a separate chapter, as in the draft, but it was finally decided not to divide Section

II of Part II into chapters.¹ It therefore seems appropriate at this point to make a few comments on Articles 24-31 as a whole.²

- 966** Medical aircraft were first mentioned in international humanitarian law in 1929. On the basis of experience during the First World War, the Diplomatic Conference introduced a provision concerning medical aircraft into Article 18 of the Convention for the Amelioration of the Condition of the Wounded and Sick in Armies in the Field of 27 July 1929. Such aircraft had to be painted white and had to bear the distinctive emblem of the red cross or red crescent. They were permitted to fly up to the zone situated in front of clearing or dressing stations. A special and express agreement was needed for permission to fly over this zone, or over any territory under the control of the adverse Party.
- 967** Far from developing these rather embryonic provisions of the 1929 Convention, the Diplomatic Conference of 1949 virtually paralyzed medical aviation when it subordinated all activity of medical aircraft of a Party to the conflict to a prior agreement with the adverse Party (*cf.* Article 36, First Convention; Article 39, Second Convention; Article 22, Fourth Convention).
- 968** The main reason that government delegates adopted such a strict view was the impossible situation that arose with regard to marking medical aircraft adequately in the face of modern means of anti-aircraft defence which made it possible to fire at aircraft before they were visible. Admittedly another reason given, as a delegate at the CDDH remarked, was that “Parties had sought to use the aircraft for logistic purposes when they were not employed on medical evacuation”.³
- 969** As significant technical progress was made in due course in the field of signalling, the ICRC started to hope that the rules governing the use of medical aircraft could once again be made more flexible and permit the development of this essential means of modern medical transportation.
- 970** The ICRC invited the Commission médico-juridique de Monaco to endeavour to develop this field. In 1965 the latter drafted technical specifications relating to additional means of identification of aircraft engaged on medical activities, as well as draft rules relating to medical transportation by air in time of armed conflict. The ICRC put these texts before the XXIst International Conference of the Red Cross (Istanbul, 1969), and then submitted them to a meeting of technical experts, which took place at the headquarters of the ICRC on 28 and 29 October 1970.⁴
- 971** The question of medical aviation was subsequently put to the first session of the Conference of Government Experts on the Reaffirmation and Development of International Humanitarian Law Applicable in Armed Conflicts, which was held in Geneva from 24 May to 12 June 1971, and has since then followed the path which led to the drafts submitted to the CDDH.⁵

² On this subject, see particularly *CE/7b*, pp. 39-40; *Commentary Drafts*, pp. 34-35; *O.R. XI* pp. 502-504, *CDDH/II/SR.45*, paras. 6-15.

³ *O.R. XI*, p. 503, *CDDH/II/SR.45*, para. 12.

⁴ *Cf.* Document D.1169, ICRC, Geneva.

⁵ On this subject, *cf. supra*, p. 107.

- 972 In the draft, medical transportation by air was the object of a chapter of seven articles. As was stated on the occasion of the presentation of these articles, they could be divided into three parts. The first three articles distinguish three zones, and lay down general rules for each of these. The following three articles contain provisions on application. Finally, the last article deals with the problem of medical aircraft flying over territory of States not Parties to the conflict, or landing there.
- 973 The common provisions of the draft concerning medical transportation⁶ were deleted by Committee II of the CDDH, justifying the inclusion of a general article at the beginning of the articles devoted to medical transportation by air. Apart from this, Committee II retained the structure adopted in the draft, even though some fairly important modifications as to substance and form were introduced in the articles, particularly in accordance with various amendments and the extensive work of the various Working Groups and the Drafting Committee of Committee II.
- 974 Articles 24-31 form a balanced unit in the way they are presented, and while they take full account of safety requirements, which are particularly strict in the field of aviation, they should make it possible to give new life to medical aviation. In addition, it is clear that the technical provisions contained in the Regulations concerning identification (Annex I to Protocol I) constitute an essential complement to these articles.⁷
- 975 Finally, it is necessary to ask how these articles can be harmonized with the provisions of the Conventions concerning medical aircraft.⁸ In principle, as we have said before, the Protocol is additional to the Conventions.⁹ However, in this particular case it is clear that there has been more than a simple development, as the provisions of the Protocol form a whole and some of them are even in conflict with the above-mentioned articles of the Conventions. Thus, as one delegate stated explicitly during the CDDH, it cannot be denied that the articles of the Protocol relating to medical aircraft must be considered, in the relations between Parties to the Protocol, to replace the above-mentioned articles of the Conventions.¹⁰

Text of Article 24

- 976 As mentioned above, this general article, which was not contained in the draft, was added by Committee II because of its decision to delete the common provisions of the draft, and particularly Article 24, which laid down the principle of respect and protection for medical transports.
- 977 The expression *medical aircraft* is defined in Article 8 (*Terminology*), subparagraph (j).¹¹

⁶ On this subject, *cf. supra*, p. 245.

⁷ On this subject, *cf. commentary Annex I, infra*, p. 1137.

⁸ *Viz.* Articles 36, First Convention; 39, Second Convention and 22, Fourth Convention.

⁹ On this subject, *cf. supra*, pp. 20-21.

¹⁰ *Cf. O.R. XI*, p. 529, CDDH/II/SR.47, para. 25.

¹¹ *Cf. commentary Art. 8, sub-para. (j), supra*, pp. 131-132.

- 978 The concepts of respect and protection were mentioned above.¹²
- 979 Medical aircraft must be “respected and protected, subject to the provisions of this Part”.
- 980 The amendment which gave rise to this article¹³ stated “subject to” these provisions, and “in accordance with” these provisions, because the authors “desired to make it completely clear that while indicating the situations in which there was loss of protection, Chapter II did provide for such protection”.¹⁴ However, the final wording used in the article is perfectly clear: it clearly shows that this Part determines the *extent and the limits* of protection.
- 981 The reference to the Part as a whole, and not merely to Articles 24-31, is justified. As shown above, medical aircraft are defined in Article 8 (*Terminology*), and it is particularly important to remember that a medical aircraft, in order to be considered as such, must be “under the control of a competent authority of a Party to the conflict” (Article 8 – *Terminology*, subparagraph (g)). Article 9 (*Field of application*), paragraph 2, which raises the possibility of making permanent medical units and transports available to a Party to the conflict is also very important for medical aircraft. Indeed, according to one delegate at the CDDH, it is “a key point in the text prepared by the Conference of Government Experts with a view to providing less-developed countries with medical aircraft facilities”.¹⁵

Protocol I

Article 25 – Medical aircraft in areas not controlled by an adverse Party

In and over land areas physically controlled by friendly forces, or in and over sea areas not physically controlled by an adverse Party, the respect and protection of medical aircraft of a Party to the conflict is not dependent on any agreement with an adverse Party. For greater safety, however, a Party to the conflict operating its medical aircraft in these areas may notify the adverse Party, as provided in Article 29, in particular when such aircraft are making flights bringing them within range of surface-to-air weapon systems of the adverse Party.

Commentary

982 Article 25 is the first of three articles which lay down general rules on the use of medical aircraft according to the area or zone where they are used.

First sentence

- 983 The expression *physically controlled* was finally preferred to the word *controlled* on its own, used in the text of the draft¹ and in the main amendment to this.² *Physically* clearly indicates, as the authors of the above-mentioned amendment had also intended, that it was considered desirable to avoid “the use of terms having legal connotations”.³ Thus this does not refer to the sovereignty of a Party over such territory, but to its actual domination (the presence of its armed forces) which alone makes it possible to ensure the safety of medical aircraft. Obviously this element of safety is the determining factor in this context.
- 984 The expression *by friendly forces* was preferred to the expression *by itself or by its allies*, used in the draft. As a matter of fact, the latter did not cover the armed forces of a liberation movement engaged in an armed conflict in accordance with Article 1 (*General principles and scope of application*), paragraph 4, of the Protocol.⁴ It is clear that “friendly forces” covers both the armed forces of a Party to the conflict and allied forces.⁵
- 985 The draft laid down the same requirement with regard to land areas and sea areas. Both should be “controlled”. During the discussions in the Committee, the sponsors of the above-mentioned amendment emphasized the fact that though land areas – obviously including inland waters (lakes, rivers, etc.) – were, as a rule, under the actual domination of a Party to the conflict, such domination was exceptional for sea areas. In general, the Parties limit the exercise of their domination to certain zones, “such as the sea around island bases, or waters adjacent to defended areas of the territorial sea, or areas along some straits”.⁶ Outside such zones, medical aircraft, and for that matter, neutral aircraft, should be able to fly over areas without being subject to prior conditions.
- 986 Article 25 uses the term *in and over* land areas and *in and over* sea areas, thus clearly showing that the obligation to respect and protect medical aircraft exists both when they are in flight and when they are grounded.
- 987 In such areas respect and protection “is not dependent on any agreement with an adverse Party”. Thus such an agreement is not required, as is the case in the context of Article 27 (*Medical aircraft in areas controlled by an adverse Party*), or considered virtually indispensable, as in the context of Article 26 (*Medical aircraft in contact or similar zones*). Thus the Party to the conflict which controls the medical aircraft is solely responsible for their use in such areas, even though certain precautions are recommended in the second sentence.

¹ 1973 Draft, Art. 26. On the other hand, this expression was retained in Arts. 54, para. 5, and 70, para. 1.

² *O.R.* III, p. 130, CDDH/II/82/Rev.1, Art. 26.

³ *O.R.* XI, p. 504, CDDH/II/SR.45, para. 16; *cf.* also *ibid.*, p. 517, CDDH/II/SR.46, para. 17.

⁴ On this subject, *cf. ibid.*, p. 515, CDDH/II/SR.46, para. 11.

⁵ On this subject, *cf. ibid.*, pp. 515-516, paras. 12 and 16.

⁶ *Ibid.*, p. 504, CDDH/II/SR.45, para. 16.

Second sentence

- 988** The freedom of medical aircraft to fly in the areas defined above is not put into question by the second sentence. The use of the word “ainsi” (in this manner) in the French text is not very suitable, since the first sentence does not define the way in which such aircraft should be used. Moreover, no such word is used in the English text, and it should not be considered as any form of restriction on the use of medical aircraft in the areas mentioned, as the conditions of use are determined by Article 28 (*Restrictions on operations of medical aircraft*).
- 989** Obviously notification provides an additional element of safety. It is rightly more forcefully recommended for medical aircraft making flying within range of surface-to-air weapons systems of the adverse Party. This point is emphasized to indicate the importance of precautions to be taken for the protection of medical transportation.
- 990** Finally, though the *decision* to notify is left to the discretion of the Party concerned, the *contents* of such notification are laid down mandatorily. This is perfectly logical: as soon as a Party decides to notify the adverse Party, it should do so unambiguously to prevent any subsequent controversy.⁷

Y.S.

⁷ In addition, cf. commentary Art. 29, *infra*, p. 307.

Protocol I

Article 26 – Medical aircraft in contact or similar zones

1. In and over those parts of the contact zone which are physically controlled by friendly forces and in and over those areas the physical control of which is not clearly established, protection for medical aircraft can be fully effective only by prior agreement between the competent military authorities of the Parties to the conflict, as provided for in Article 29. Although, in the absence of such an agreement, medical aircraft operate at their own risk, they shall nevertheless be respected after they have been recognized as such.
2. “Contact zone” means any area on land where the forward elements of opposing forces are in contact with each other, especially where they are exposed to direct fire from the ground.

Commentary

- 991 Article 26 is the second of three articles laying down the general rules for the use of medical aircraft, depending on the area (zone) where they are.
- 992 It will be noted that this article actually imposes only one obligation on the Parties to the conflict, namely, that they must respect medical aircraft as soon as they have been recognized as such in the areas defined in the article. In addition, the great risk taken by medical aircraft operating in such areas without prior agreement with the adverse Party is pointed out, though such action is not prohibited.
- 993 The second paragraph of the article defines the expression *contact zone*, which is used in the first paragraph. As it is virtually impossible to interpret the first paragraph without understanding this definition, we will begin by examining the second paragraph.

Paragraph 2

- 994 This paragraph defines the expression *contact zone*.
- 995 The draft adopted by the Conference of Government Experts in 1972 referred to the forward part of the battle area,¹ as opposed to the *rear part*, and these concepts were described in the following terms:
- “in the forward part are to be found units in direct contact with the enemy. Freedom of movement is limited; the forces are exposed to direct enemy vision and hence to direct firing. In the ‘rear part’ of the battle area are the units belonging to the second echelon and the reserve units of the troops in hostile contact. They are less exposed to enemy vision and firing, and there is, therefore, greater freedom of movement.”²
- 996 During the Diplomatic Conference a mixed Working Group from Committees II and III met with a view to recommend the “terms that should be used to cover the various military situations that are envisaged in some of the articles contained in the Draft Additional Protocols” and the “definitions of the terms recommended”.³
- 997 The expression “contact area” was defined by the Working Group as follows: “In an armed conflict, that area where the most forward elements of the armed forces of the adverse Parties are in contact with each other”.⁴

¹ *CE 1972, Report*, Vol. I, p. 46, para. 1.83 and draft Article 25, para. 1, of the Committee.

³ *O.R. XIII*, p. 199, CDDH/II/266-CDDH/III/255, para. 1; *cf.* also F. de Mulinen, “A propos de la Conférence de Lucerne et Lugano sur l’emploi de certaines armes conventionnelles”. 9 *Annales d’Etudes internationales*, Geneva, 1977, pp. 123-125.

⁴ On this subject, *cf.* *O.R. XIII*, p. 203, CDDH/II/266-CDDH/III/255, Annex 1.

- 998 As the Rapporteur of the Drafting Committee of Committee II stated, this Committee considered that “the expression contact zone corresponded *grosso modo* to the definition proposed by the Joint Working Group”.⁵
- 999 The fact that it was limited to areas *on land* was in order to “exclude naval engagements where there was, strictly speaking, no ‘contact zone’”.⁶ It should be added that, in any event, such engagements would be governed by the laws of war at sea, which were not dealt with by the CDDH, and that the very concept of a contact zone basically, if not exclusively, belongs to the field of war on land.
- 1000 On the other hand, as the Rapporteur stated unequivocally, land areas also include “rivers, shallow waters and beaches where fighting could take place in the same way as anywhere on other land areas”.⁷
- 1001 Though the phrase “especially where they are exposed to direct fire from the ground” was added, this was as a “reference to a military scenario” by way of a clarifying example.⁸ In this respect the Rapporteur indicated that *direct fire* should be understood as “any shooting where the person shooting had his target in sight, as distinguished from indirect fire, where the gunner did not see the target but directed the shooting on the basis of data other than his own vision”.⁹ Moreover, it should be stressed that the direct fire referred to here is *from the ground*, i.e., it does not include direct fire that might come from aircraft. Thus the extent of the contact zone can vary considerably, depending on the range of the weapons used and the configuration of the ground.
- 1002 The term *forward elements* should not be interpreted merely as a small number of scouts, but as all troops in contact with the enemy. In short, the contact zone is simply the “forward part” of the field of battle.
- 1003 Finally, as the Rapporteur of the Drafting Committee stated, it should be noted that this definition does not claim to be applicable in other contexts and was established only for the specific needs of Article 26.¹⁰ However, the possibility cannot be excluded that it might be used for reference in the future.

Paragraph 1

First sentence

- 1004 This paragraph first sets out to define the areas where the article will apply.
- 1005 First it refers to “parts of the contact zone which are physically controlled by friendly forces”. Even this forward part of the battle-area constituting the contact zone can be sub-divided into zones controlled by each of the Parties to the conflict.¹¹

⁵ O.R. XI, p. 591, CDDH/II/SR.52, para. 12.

⁶ *Ibid.*

⁷ *Ibid.*

⁸ *Ibid.*

⁹ *Ibid.*

¹⁰ Cf. *ibid.*, para. 15.

¹¹ On the meaning of the expressions “physically controlled” and “friendly forces”, cf. commentary Art. 25, *supra*, p. 284.

- 1006 Secondly it refers to “areas the physical control of which is not clearly established”. Although there are zones in the “forward part” of the battle-area, where one or other of the Parties has clearly established control, there are others where physical control by one or other of the Parties is not clearly established. Furthermore, the latter zones may be predominant in view of the nature of modern conflicts. These are areas where, as the Conference of Government Experts expressed it in 1972, the military situation is “not clear”,¹² where the opposing forces may be entangled as a result of a series of assaults and repulses.
- 1007 Thus these are the two types of areas covered by Article 26, excluding the part of the contact zone dominated by enemy forces. That part of the contact zone is subject to the same rules as any area under the control of the adverse Party.¹³
- 1008 In addition, it is stated that Article 26 applies not only *in* the areas defined above, but also *over* those areas, i.e., in the air space situated above such areas. In fact, the article applies *primarily* to the air space, since it deals with aircraft. However, by making this distinction it is clearly shown that the protection of medical aircraft does not apply only when they are flying over such areas, but also when they are on the ground.
- 1009 The rest of the first sentence is a straightforward remark, implying a recommendation. Reference is made to the risk run by medical aircraft used in such areas without prior agreement. Thus an implicit recommendation is made to conclude such agreements between the “competent military authorities of the Parties to the conflict”. The draft referred to “local military authorities”. Even though such agreements are generally concluded at that level, Committee II considered that a specific mention of local authorities was unduly restrictive. As one delegate pointed out, it is important to avoid
- “a situation in which protection for medical aircraft was not fully effective merely because it had been impossible to reach prior agreement between the local military authorities, whereas there might have been means of communication and agreement between the Parties at a higher level”.¹⁴
- 1010 There is nothing in the article to indicate that there is any form of *obligation* for the Parties to the conflict to conclude such agreements. However, given that medical aircraft can play a role of paramount importance in rescuing the wounded, and that the risk they would run by operating without an agreement would be considerable, it seems clear that the spirit of the text means that Parties to the conflict should not refuse to conclude such agreements without a valid reason. Moreover, the draft presented to the Conference of Government Experts in 1972 stated that the Parties to the conflict shall permit, and an exception was only made in case of imperative military necessity.
- 1011 The procedure and the content of the agreement are specified in Article 29 (*Notifications and agreements concerning medical aircraft*).¹⁵

¹² CE 1972, Report, Vol. I, p. 46, para. 1.82.

¹³ On this subject, cf. commentary Art. 27, *infra*, p. 293.

¹⁴ O.R. XI, pp. 521-522, CDDH/II/SR.46, para. 43.

¹⁵ Cf. commentary Art. 29, *infra*, p. 307.

Second sentence, first part

- 1012** As is made clear in the second part of the sentence, this first part should not be interpreted as a sort of “free for all”. The drafters of the Protocol merely refused to allow States engaged in armed conflict to be made responsible for medical aircraft flying without prior agreement in the area defined above. Thus the authorities of such States cannot be held responsible when a medical aircraft flying in such circumstances, and not yet identified, is shot down by mistake.

Second sentence, second part

- 1013** Basically this second part of the sentence repeats the second paragraph of the draft. Some delegates wished to delete it in order to impose a total ban on medical aircraft flying in such areas without prior agreement.¹⁶ With some justification they relied for this view on the Conventions, particularly Article 36 of the First Convention, which makes agreement a condition *sine qua non* of the use of medical aircraft.
- 1014** The fact that the second part of the sentence was retained means that medical aircraft flying in such areas without prior agreement, though taking considerable risks, as stressed in the article, nevertheless do not lose their right to protection. Obviously there is a risk that members of the armed forces of the adverse Party might fire before recognizing that the aircraft are *medical* aircraft, but as soon as they have recognized them as such, they are under a strict obligation to respect the aircraft, i.e., not to take aim at them, and by violating this obligation, they would commit a grave breach (even though in such cases it would obviously be very difficult to establish fault).
- 1015** The connection between this article and Article 30 (*Landing and inspection of medical aircraft*), paragraph 1, needs to be pointed out. This provides that over “areas the physical control of which is not clearly established”, but only over such areas, medical aircraft may be ordered to land and must obey any such order. If aircraft flying over such areas are unequivocally ordered to land and clearly refuse to comply, they lose the right to respect which is laid down in the second part of the second sentence. It was rightly pointed out in Committee II that it might be difficult to order a landing and make an inspection of aircraft in such areas.¹⁷ In this respect it is clearly impossible to require a medical aircraft to land somewhere where it is not possible to land or, in some situations, to alight on water satisfactorily. However, even if there is a possibility, it was pointed out that it might happen that a medical aircraft decided not to obey the order¹⁸ and attempted to return to the rear. Nevertheless, it will be recalled that a pilot taking such a decision would be in contravention of the provision laid down in Article

¹⁶ Cf. particularly *O.R.* XI, p. 520, CDDH/II/SR.46, para. 38. On the relationship between the articles of the Conventions and those of the Protocol relating to medical aircraft, cf. in addition, *supra*, commentary Art. 24, p. 279.

¹⁷ *O.R.* XI, p. 541, CDDH/II/SR.48, para. 17.

¹⁸ *Ibid.*, p. 542, para. 23.

30 (*Landing and inspection of medical aircraft*), paragraph 1, second sentence, and that he would run the risk of his aircraft being shot down.

1016 A summary of the situation may be stated as follows: in the part of the contact zone physically controlled by friendly forces, medical aircraft operate at their own risk, if there is no agreement, but they should be respected by the adverse Party as soon as the latter has realized that it is a medical aircraft.

1017 The situation is the same in areas the physical control of which is not clearly established, though the adverse Party has the additional option of ordering the aircraft to land or, in some cases, to alight on water – provided that it is actually possible to carry out such an order. If the aircraft clearly refuses to comply with this order, it loses its right to be respected.

Y.S.

Protocol I

Article 27 – Medical aircraft in areas controlled by an adverse Party

1. The medical aircraft of a Party to the conflict shall continue to be protected while flying over land or sea areas physically controlled by an adverse Party, provided that prior agreement to such flights has been obtained from the competent authority of that adverse Party.
2. A medical aircraft which flies over an area physically controlled by an adverse Party without, or in deviation from the terms of, an agreement provided for in paragraph 1, either through navigational error or because of an emergency affecting the safety of the flight, shall make every effort to identify itself and to inform the adverse Party of the circumstances. As soon as such medical aircraft has been recognized by the adverse Party, that Party shall make all reasonable efforts to give the order to land or to alight on water, referred to in Article 30, paragraph 1, or to take other measures to safeguard its own interests, and, in either case, to allow the aircraft time for compliance, before resorting to an attack against the aircraft.

Commentary

- 1018** Article 27 is the last of three articles which lay down general rules for the use of medical aircraft, depending on the area (zone) where they are used.
- 1019** The reason why Article 26 (*Medical aircraft in contact or similar zones*) closed the door halfway to the use of medical aircraft without prior agreement in “contact or similar zones” is primarily to ensure the safety of such aircraft. The fact that now the door is even more firmly closed to flight without prior agreement over areas “physically controlled by an adverse Party”, is basically because the safety of that Party could also be seriously jeopardized by such overflight.

Paragraph 1

- 1020** The rule laid down in this paragraph takes up, though in a more positive vein, the provision of Article 36, paragraph 3, of the First Convention, which reads as follows: “Unless agreed otherwise, flights over enemy or enemy-occupied territory are prohibited”. This should be interpreted as reflecting a different attitude with regard to such flights. Some had even wished to allow overflight without agreement, merely subject to notification.¹ It is true that the obligation to obtain the agreement of the adverse Party has been retained, but the positive formulation of the sentence indicates that that Party should in principle give its agreement and may refuse to do so only for imperative reasons, particularly security reasons.
- 1021** Medical aircraft will only fly through the air space of the adverse Party and will not land on its territory, except in the case of technical difficulties, or if they are ordered to do so. Thus paragraph 1 concerns only overflight and an agreement relates only to this.
- 1022** The concept of “land or sea areas physically controlled by an adverse Party” was examined above.²
- 1023** Agreement should be given by the “competent authority of the adverse Party”. This wording was deliberately left vague. As one delegate remarked, it is possible
“that flight over enemy territory would be over broader areas than were represented by the contact zone, and in the enemy’s rear. As a general rule, however, overflight of enemy territory was more likely to take place over combat areas and that was therefore when it was necessary to reach an agreement with the adverse Party. There must, for instance, be provision for the case of an air head or a besieged area from which the wounded had to be evacuated by air over relatively short distances, strictly within the area controlled by the combat commander; in that case it was clearly not the national or political authority which would have to give clearance, but the military commander.”

¹ Cf. *CE 1972, Report*, Vol. I, p. 47.

² Cf. commentary Art. 25, *supra*, p. 284.

That delegate therefore considered, as did the Committee as a whole, that it was better not to identify the authority which had to agree: “that was for each State to determine”.³

- 1024 The request for an agreement and the response to such a request may be made by any means of communication. The help of Protecting Powers, their substitute or the ICRC may be requested, if this should be necessary. The contents of the request for an agreement, and the obligations of the Party receiving such a request, are laid down in Article 29 (*Notifications and agreements concerning medical aircraft*).⁴

Paragraph 2

- 1025 The purpose of this paragraph is to prevent a tragic accident i.e., the shooting down of a medical aircraft, while taking into account the legitimate fears of the Parties to the conflict with regard to their security. If a Party to the conflict happened to shoot down a medical aircraft, this would certainly not be intentional in the majority of cases, but because it had been led to believe that the characteristics of the aircraft were deceptive, and that it was actually an aircraft on an espionage mission or even an aircraft carrying bombs.

First sentence

- 1026 The first sentence indicates the problem and outlines the obligations incumbent upon medical aircraft.
- 1027 As shown above, medical aircraft may not fly over “areas physically controlled by the adverse Party”⁵ unless they have the agreement of that Party. This paragraph provides for the case where medical aircraft fly over such areas “without, or in deviation from the terms of, an agreement provided for in paragraph 1”. In fact, the agreement must contain in particular a flight plan,⁶ and a medical aircraft which did not comply with this would not be flying without an agreement, but in deviation of the terms of an agreement.
- 1028 However, this paragraph does not provide for the case of a *deliberately* planned overflight without, or in deviation from the terms of, an agreement. There must be a navigational error or an emergency affecting the safety of the flight. As one delegate stated:

“An aircraft was at the mercy of the law of gravity. If something went wrong, the pilot could not stop; he had to go on, possibly in a direction which he had not intended. There was also the phenomenon of the jet-stream over oceans, which could force a pilot to fly at a speed lower by 200 miles an hour than he had expected, with the resultant effect on fuel consumption and the pilot’s

³ *O.R.* XI, p. 528, CDDH/II/SR.47, para. 20.

⁴ *Cf.* commentary Art. 29, *infra*, p. 307.

⁵ A concept which was discussed above, *cf.* commentary Art. 25, *supra*, p. 284.

⁶ *Cf.* Art. 29, para. 1.

ability to reach his planned destination. Sometimes also a pilot was forced to make extensive detours in order to allow for unexpected weather.”⁷

Finally, the instruments may be faulty and the pilot may lose his way. In all these cases the medical aircraft may find itself in the air space of a Party to the conflict without any agreement giving it the right to be there, or if there is an agreement, at another time or place than arranged.

1029 One delegate stated that such situations were not provided for by the Geneva Conventions and that such cases were therefore in violation of the Conventions, regardless of their cause. Consequently he considered that the article of the Protocol modified the Conventions, and that it was necessary to say so.⁸ We have already expressed our own view that the articles on medical aircraft do indeed modify the régime of the Conventions.⁹ However, in this particular case it certainly seems that the recognized legal concepts of *necessity* (in the case of an intentional overflight justified by technical reasons), *error* (in the case of non-intentional overflight), or more generally, *force majeure* preventing compliance with an obligation, can be invoked even under the régime of the Conventions.

1030 As regards the Protocol, this provides that in such cases the aircraft must “make every effort to identify itself and to inform the adverse Party of the circumstances”. As soon as they realize they are flying over territory of the adverse Party without the right to do so (which is not always the case), the crew must do all they can, as soon as possible, to ensure that the medical aircraft be identified and recognized as such by the adverse Party. This is perfectly logical, as the aircraft is in the gravest danger at this point: in the context of armed conflict a Party to the conflict could certainly not remain passive for very long in the face of the risk to its security presented by an unidentified aircraft flying over its territory. Thus the crew of the aircraft must use every means at their disposal to communicate with the adverse Party so that they can be identified.¹⁰

1031 Although not explicitly stated in the text, it is clear that, to the extent that there is an error which can be corrected, the aircraft will endeavour to leave the air space of the adverse Party, whilst at the same time making every effort to be identified. However, it will do so obviously only as long as it has not received any order to the contrary from the adverse Party.¹¹

Second sentence

1032 This sentence deals with the obligations incumbent in such a situation on the Party to the conflict over whose territory the aircraft is flying.

1033 It is admitted that as a final solution, that Party can resort to *an attack against the aircraft*. This is a perfect example of what international humanitarian law

⁷ *O.R.* XI, pp. 527-528, CDDH/II/SR.47, para. 16.

⁸ *Cf. ibid.*, p. 559, para. 36.

⁹ *Cf. commentary Art. 24, supra*, pp. 280-281.

¹⁰ On this subject, *cf. Annex I* (particularly Arts. 5-13) and the commentary thereon, *infra*, p. 1137.

¹¹ *Cf. the commentary on the second sentence, infra.*

often comes down to: a balance between diverging interests, even though this seems shocking at first. Everything that is possible must be done to prevent an attack on a medical aircraft, but as a last resort, such an act cannot be prohibited, for, as one delegate stressed, “the fact that a single aircraft could wipe out an entire city”, cannot be ignored.¹² Moreover, as another delegate stated, “the word ‘attack’ did not mean ‘to shoot down’”,¹³ even though the possibility that such an aircraft might be shot down remains if all other methods – particularly warning shots – have been ineffective. This cannot be denied, for the reasons given above.

1034 However, the second sentence of the paragraph is aimed at preventing this final solution. Before resorting to an attack, the adverse Party:

“shall make all reasonable efforts to give the order to land or to alight on water, referred to in Article 30, paragraph 1, or to take other measures to safeguard its own interests, and, in either case, to allow the aircraft time for compliance”.

The significance of this admittedly rather ponderous wording is studied in detail below.

1035 The expression “make all reasonable efforts” resulted in controversy right up to the final plenary meetings. For example, it was claimed that “the adjective ‘reasonable’ was borrowed from the Anglo-Saxon system” and that the expression was “not very clear”.¹⁴ Even though the expression does not have a very precise legal meaning in this context, at any rate not in French, there is little doubt concerning the intent behind the words: the efforts required are those dictated by common sense. No one is obliged to do the impossible, and a Party to the conflict cannot be required to take suicidal risks. Thus it is asked to do all it can to avoid attacking the aircraft, taking into account its security requirements. This is above all a matter of common sense.

1036 Such efforts may first be concerned with ordering the aircraft to land, or if it is a hydroplane, to alight on water. This situation and its consequences are dealt with in detail in Article 30 (*Landing and inspection of medical aircraft*).¹⁵

1037 Such efforts may also involve taking “other measures”. In fact, there are several possible alternative measures that could be employed, such as obliging the aircraft to take another route and “sending another aircraft to order the medical aircraft to follow it”.¹⁶ There was no reason to give a limitative enumeration in this respect, and Parties to the conflict are free to adopt such measures as they consider to be adequate.

1038 The object of such measures is specified. It is to *safeguard the interests* of the Party taking them. Thus they should not be measures of intimidation or of mere harassment, unrelated to the interests of that Party, which in this context are basically, if not exclusively concerned with its security.

¹² O.R. XII, p. 33, CDDH/II/SR.58, para. 19.

¹³ *Ibid.*, p. 35, para. 34.

¹⁴ O.R. VI, p. 95, CDDH/SR.39, paras. 12 and 15.

¹⁵ On the subject of which, *cf. infra*, p. 315.

¹⁶ O.R. XI, p. 592, CDDH/II/SR.52, para. 24.

- 1039** Whether that Party to the conflict orders the aircraft to land or to alight on water, it must also “make all reasonable efforts [...] to allow the aircraft time for compliance”. This is more or less self-evident. It is obvious that nothing is gained by ordering a medical aircraft to land, if it is then shot down before it has the time to carry out this order.
- 1040** In fact, the intention is that the medical aircraft must be given every possible opportunity to show its good will. If a medical aircraft in a situation as described in this paragraph manifestly does not comply with the order, although it has understood it, the Party to the conflict in whose air space it is flying has good reason to think *that it is not actually a medical aircraft*, i.e., an aircraft exclusively assigned to medical transportation, and it will take the action required for the preservation of its own security.
- 1041** The problem remains of *medical aircraft deliberately entering the air space of an adverse Party*. It could happen that the crew of a medical aircraft deliberately choose to enter prohibited air space and this choice is not caused by technical or weather conditions but, for example, because this course would shorten the duration of transporting the wounded in urgent need of care. For reasons of security, the CDDH did not tolerate such overflight, which would therefore constitute a breach of the Protocol.
- 1042** However, in the first instance, the reaction of a Party to the conflict over whose territory an aircraft is flying for such a reason should be the same as the reaction that it should have with regard to a medical aircraft which had entered its air space by mistake, or for technical difficulties, for the simple reason that it cannot distinguish one from the other.
- 1043** Thus, in the event, the Party to the conflict concerned will apply the second sentence of paragraph 2 with respect to such aircraft.
- 1044** It would be later, when the aircraft had been brought down to land, and its crew had therefore fallen into the hands of that Party, that the situation of the crew would be different.
- 1045** If they have committed a breach of the Protocol, they could be punished in accordance with the gravity of the breach. However, it should be noted that this could vary considerably: the case in which a pilot errs in taking the risk of entering prohibited air space for purely humanitarian reasons, such as that mentioned above, of shortening the journey of seriously wounded persons, has nothing in common with the case of a pilot who has misused the red cross or red crescent emblem for the purpose of committing a hostile act.

Y.S.

Protocol I

Article 28 – Restrictions on operations of medical aircraft

1. The Parties to the conflict are prohibited from using their medical aircraft to attempt to acquire any military advantage over an adverse Party. The presence of medical aircraft shall not be used in an attempt to render military objectives immune from attack.
2. Medical aircraft shall not be used to collect or transmit intelligence data and shall not carry any equipment intended for such purposes. They are prohibited from carrying any persons or cargo not included within the definition in Article 8, sub-paragraph (f). The carrying on board of the personal effects of the occupants or of equipment intended solely to facilitate navigation, communication or identification shall not be considered as prohibited.
3. Medical aircraft shall not carry any armament except small arms and ammunition taken from the wounded, sick and shipwrecked on board and not yet handed to the proper service, and such light individual weapons as may be necessary to enable the medical personnel on board to defend themselves and the wounded, sick and shipwrecked in their charge.
4. While carrying out the flights referred to in Articles 26 and 27, medical aircraft shall not, except by prior agreement with the adverse Party, be used to search for the wounded, sick and shipwrecked.

Commentary**General remarks**

1046 As one delegate remarked at the CDDH:

“Apart from the fear that the safety of medical aircraft could not be assured against attack from distances which exceeded the range of recognition of the distinctive emblem, an important factor in limitations on the protection of medical aircraft under present law was the concern felt over the security threat posed by possible abuses of protected status.”¹

1047 Article 28 is an attempt to deal with this last concern, and lists the various restrictions imposed on the use of medical aircraft. The restrictions mentioned in paragraphs 1-3 have a general scope of application and apply to all uses of medical aircraft; the restriction imposed by paragraph 4 applies for flights carried out in the air space corresponding to the zones and areas covered by Article 26 (*Medical aircraft in contact or similar zones*) and Article 27 (*Medical aircraft in areas controlled by an adverse Party*), but does not apply to flights carried out over the areas covered by Article 25 (*Medical aircraft in areas not controlled by an adverse Party*).

1048 The restrictions imposed in paragraphs 1-3 have a general character and therefore apply to aircraft:

“even when flying over their own territory. It had been brought out in the discussion [...] that a Party might be intending to fly over its own territory, but might accidentally fly over enemy territory, through inadvertence or stress of weather”.²

1049 Article 29 of the 1973 draft, which corresponds to the present Article 28, consisted of only one paragraph. It contained only the restriction included in paragraph 4, and a shorter version of that contained in the first sentence of paragraph 2 of the article.

1050 However, this should not lead one to conclude that there was no intention to impose the other restrictions now contained in Article 28. The construction of the entire part of the draft concerning the protection of medical transports was different,³ and these restrictions were simply mentioned somewhere else. Article 24 of the draft, entitled *Protection*, applied to all medical transportation by air. Paragraph 3(a) dealt with part of the question now governed by paragraph 2 of Article 28, and paragraph 3(b) is similar to the present paragraph 3 of Article 28. Other provisions were contained in Articles 12 and 13 concerning medical units and the cessation of protection of medical units, respectively. The contents of paragraph 4 of Article 12 in particular were included in the present paragraph 1

¹ *O.R.* XI, p. 506, CDDH/II/SR.45, para. 22.

² *Ibid.*, p. 532, CDDH/II/SR.47, para. 42.

³ On this subject, *cf.* introduction to Section II of Part II, *supra*, p. 245.

of Article 28, while those of paragraph 2(b) of Article 13 were included at the beginning of the present paragraph 3 of Article 28.

- 1051 Therefore Committee II – which, incidentally, followed to a large extent the conclusions of the Conference of Government Experts in 1972⁴ – did not really modify the restrictions imposed on medical aircraft in the draft, but improved the Protocol by making it more comprehensible in this respect. Article 24, paragraph 2, of the draft, which referred back to Articles 12 and 13, subject, in the case of medical aircraft, to Articles 27, 28, 29 and 32, is a striking example of a provision that was far too difficult to understand. As one delegate stressed, as these provisions “must be observed and enforced by non-lawyers under the stress of combat, the demands of clarity suggested that they be collected in one place of the Protocol”.⁵

Paragraph 1

First sentence

- 1052 The prohibition mentioned here is fundamental, and applies not only to medical aircraft, but for any person and any objects enjoying special protection. Such a rule is actually one of the pillars on which international humanitarian law is founded, and one might ask whether it is necessary to repeat it here. It flows from the definition of medical aircraft which, like all other medical transports, is only considered as such if it is “assigned exclusively to medical transportation”. Thus the use of an aircraft that is supposedly a medical aircraft *to attempt to acquire any military advantage* would mean that the aircraft loses its status of medical aircraft, and therefore its right to protection.
- 1053 The fact that this principle is nevertheless still mentioned in Article 28 is because all the other provisions of the article are concerned with its implementation.⁶
- 1054 As regards the meaning of the sentence, it should be noted that there must be *intent* to acquire a military advantage. It is possible to conceive – though such a situation is unlikely to occur in reality – that an aircraft could impede military action without any deliberate intention of so doing. In such a case the aircraft would not lose its right to protection. As regards the military advantage, this may take different forms. Apart from using weapons against the adverse Party, we mention the possibility of collecting information of military importance, or that of deceiving the enemy.

⁴ Cf. CE 1972, Report, Vol. I, p. 45, paras. 1.77-1.79, and draft Article 24 of the Committee.

⁵ Cf. O.R. XI, p. 507, CDDH/II/SR.45, para. 25.

⁶ In this sense, cf. O.R. XI, p. 532, CDDH/II/SR.47, para. 42.

Second sentence

- 1055** This sentence is an application of the principle contained in the first sentence. It is inspired by rules given in the Conventions prohibiting, in particular, the use of prisoners of war or persons protected by the Fourth Convention “to render certain points or areas immune from military operations”.⁷
- 1056** It is also similar to Article 51 (*Protection of the civilian population*), paragraph 7, of the Protocol.⁸
- 1057** For example, medical aircraft used as cover to protect non-medical military aircraft from being fired at from the ground, or deliberately placed at an airport in between such military aircraft, can no longer lay a claim to being spared; the object of this sentence is to demonstrate this point clearly.

Paragraph 2*First sentence*

- 1058** This sentence mentions a form of abuse which is especially to be feared with regard to the use of medical aircraft. It is clear that any aircraft forms a particularly favourable observation post, and this is one of the reasons why medical aircraft are not allowed to fly over the territory of the adverse Party without specific permission from the latter.⁹
- 1059** This sentence contains three prohibitions which should be distinguished:
- 1060** *First*, medical aircraft must not be used to “collect [...] intelligence data”. Broadly speaking, intelligence data means any information which could have an effect on the conduct of military operations: for example, signaling the presence of military positions in a particular sector is clearly intelligence data, but so is signaling the absence of such positions. *To collect* means that there is intent to acquire such data. Thus what is prohibited here is not the discovery of intelligence data as such, but setting out to do so.
- 1061** *Secondly*, medical aircraft may not be used to “transmit” such data. Even if there is no intent to collect intelligence data, it may happen that a medical aircraft comes across such information by chance. In this case there could be a great temptation to transmit it. However, in doing so the aircraft would be betraying its function. It was important to clearly stress this point.
- 1062** *Thirdly*, medical aircraft must not *carry* any equipment intended for collecting or transmitting intelligence data. This provision is not limited to “photographic equipment”, as was the 1973 draft, because, as one delegate pointed out, there are today “many kinds”¹⁰ of detection devices and it was appropriate to adopt a general wording encompassing all such equipment.

⁷ Cf. Art. 23, para. 1, Third Convention; Art. 28, Fourth Convention.

⁸ On this subject, cf. commentary Art. 51, para. 7, *infra*, p. 627; cf. also Art. 58.

⁹ Cf. commentary Art. 27, *supra*, pp. 294-295.

¹⁰ Cf. O.R. XI, p. 532, CDDH/II/SR.47, para. 42.

- 1063** Whether or not it has collected or transmitted such data, an aircraft carrying equipment intended for such purposes is committing a breach. Thus such carrying is a breach in itself, and not merely indicative of a breach. Such a strict rule is logical. It may be very difficult to prove that an aircraft has actually collected or transmitted information, and if in time of armed conflict it is carrying equipment apparently intended for this purpose, it is not entitled to have the benefit of the doubt. However, the third sentence of the paragraph is meant to prevent the presence of just any equipment of suspicious appearance from being considered to be a breach of this provision.¹¹

Second sentence

- 1064** It could be maintained that this sentence serves no purpose, and one delegate proposed that it be deleted.¹² In fact the very definition of medical transportation which is referred to in this sentence, implies that it concerns the conveyance of “the wounded, sick, shipwrecked, medical personnel, religious personnel, medical equipment or medical supplies protected by the Conventions and by this Protocol”, and “medical transports” means any means of transportation assigned *exclusively* to medical transportation. Once again, however, common sense prevailed over purely legal arguments,

“since Protocol I would not be interpreted by lawyers or airmen or by lawyers in Air Ministeries, the sponsors had thought it useful to include the second and third sentences of paragraph 2. They might be the very points that would be checked in aircraft landing on foreign territory”.¹³

Furthermore, one delegate considered that this mention revealed more clearly that the transportation of persons or of a cargo that was not permitted constituted a breach of the Protocol.¹⁴

- 1065** It should be recalled that persons who may be transported are, on the one hand, the wounded, sick and shipwrecked (it has been shown that under some conditions aircraft may be used for rescue operations at sea); on the other hand, medical and religious personnel: i.e., personnel accompanying the wounded, sick and shipwrecked, and the crew of the aircraft, as well as medical or religious personnel who are travelling on the medical aircraft.
- 1066** As regards the cargo, apart from the effects and equipment described in the following sentence, this may consist only of medical equipment and *matériel*, whether needed for the wounded and sick being transported, or whether they are being sent from one place to another.
- 1067** A controversy arose with regard to transporting the dead, and the Rapporteur of the Drafting Committee of Committee II explained that this was not permitted. Nevertheless, he added that it was understood “that the protection of medical

¹¹ Cf. *infra*, p. 304.

¹² O.R. XI, p. 532, CDDH/II/SR.47, para. 43.

¹³ *Ibid.*, p. 533, para. 47.

¹⁴ *Ibid.*

aircraft did not cease if they were carrying the bodies of persons who had died during the flight”.¹⁵

Third sentence

1068 What is said in this provision is self-evident, and it was considered pointless by some to state it. However, as with the preceding sentence, it was wisely considered that one can never be too careful, particularly when the provisions concerned may have to be applied by people with little ability to grasp the legal subtleties involved. The mention of “equipment intended solely to facilitate navigation, communication or identification” seemed especially important “since for a soldier on the ground or for a layman it was not always obvious that such apparatus formed part of the essential equipment of an aircraft”,¹⁶ and because it could easily be confused with the equipment mentioned in the first sentence of the paragraph. It should be recognized for that matter that authorized effects and equipment could in certain cases be used for prohibited purposes. This is why it is important, in the first sentence, to distinguish prohibited acts from the equipment medical aircraft are forbidden to carry.

Paragraph 3

1069 The provisions laid down in this paragraph are similar to those which apply generally to medical units and transports. They correspond to Article 13 (*Discontinuance of protection of civilian medical units*), paragraph 2(a) and (c), which implicitly permits the two acts mentioned here, since it states that they may not be “considered as acts harmful to the enemy”. Moreover, they can also be found mentioned as such in Article 22 of the First Convention, which specifies that they must not be “considered as depriving a medical unit or establishment of the protection guaranteed”. As shown above, the 1973 draft also referred back, with regard to protection, to the articles concerning medical units. However, as other elements of these articles could not apply to medical aircraft, the system became too complicated. On the specific points mentioned in paragraph 3, the rules adopted for medical aircraft are the same as those governing medical units as a whole. Thus for the meaning of these provisions, we refer to the commentary on Article 13 (*Discontinuance of protection of civilian medical units*), paragraph 2(a) and (c).¹⁷

1070 Perhaps it should merely be added that in the case of medical aircraft the use of defensive weapons – with all the restrictions mentioned in this respect¹⁸ – is conceivable only on the ground, particularly when an aircraft is forced to land or alight on water. Of course there is no question here either of forcibly opposing

¹⁵ *Ibid.*, p. 594, CDDH/II/SR.52, para. 34.

¹⁶ *Ibid.*, p. 533, CDDH/II/SR.47, para. 44.

¹⁷ *Supra*, pp. 177-180.

¹⁸ *Cf. supra*, pp. 177-178.

the aircraft from being seized by armed forces, but of defence against possible acts of banditry or vandalism.

Paragraph 4

- 1071 In the 1973 draft, Article 22 provided the general rule that medical transport may be used to search for and evacuate the wounded, the sick and the shipwrecked. This article was considered unnecessary by Committee II, which, as one delegate stated in particular, considered that “search for the wounded was a normal medical function”, and that if it were decided to mention it here, “all the other things permitted to medical personnel would have to be included” as well.¹⁹
- 1072 Thus no one doubts that searching for the wounded is a normal medical function. Consequently, if a medical transport is to be prohibited from carrying out such a task, this should be explicitly stated. In fact, this had already been done in the above-mentioned Article 22 of the 1973 draft, which contained the general rule “subject to Article 29”, the latter imposing such exceptions. The exception imposed by the present paragraph 4 therefore continues to be necessary even without the explicit mention of the rule.
- 1073 Let us now examine the effect of the restriction mentioned in paragraph 4 on the use of medical aircraft.
- 1074 First, the expression *to search for the wounded* clearly refers in this context to flights over an area with the aim of finding the wounded.
- 1075 In the context of Article 25 (*Medical aircraft in areas not controlled by an adverse Party*) the search is freely permitted, as it is not subject to the restriction of this paragraph, and it is therefore left to the sole initiative of the Party to which the medical aircrafts belong.
- 1076 In the context of Article 26 (*Medical aircraft in contact or similar zones*) a prior agreement with the military authorities of the adverse Party is strongly recommended before flights over contact or similar zones. In the absence of a specific mention in the agreement, search is not included: it is therefore prohibited.
- 1077 However, Article 26 (*Medical aircraft in contact or similar zones*) does not prohibit medical aircraft from operating in such zones without an agreement, though it states that in this case they do so at their own risk. Paragraph 4 under consideration here prohibits such flights for search purposes. This is important. An aircraft which enters a zone such as defined in Article 26 (*Medical aircraft in contact or similar zones*) without a prior agreement, with the aim of bringing relief to the wounded previously found there, certainly takes great risks, but it does not commit a breach of the Protocol. On the other hand, anyone operating in such a zone with the aim of searching for the wounded is committing a breach. More seriously, the rule of Article 26 (*Medical aircraft in contact or similar zones*), which provides that medical aircraft flying in such a zone must be respected as

¹⁹ O.R. XI, p. 401, CDDH/II/SR.37, para. 40.

soon as they are recognized, no longer applies to aircraft which are visibly engaged in a search mission. In practice it is of course advisable to spare such medical aircraft as far as possible, particularly as it is often not very easy to determine whether an aircraft is actually engaged in a search mission. However, the rule is strictly laid down for reasons of security, for there is a danger that such a search mission could be abused as a pretext for spying on enemy positions.

- 1078** Finally, in the context of Article 27 (*Medical aircraft in areas controlled by an adverse Party*), any flight over areas physically controlled by the adverse Party can only be lawfully carried out with the agreement of the latter. If such an agreement does not specify that a search mission may be carried out during a permitted flight, such a mission is prohibited.
- 1079** If a medical aircraft carrying out a search mission in areas defined by Article 25 (*Medical aircraft in areas not controlled by an adverse Party*) enters an area under the control of the adverse Party as the result of a navigational error, it should obviously stop searching immediately upon realizing its mistake, make an attempt to get itself identified by the adverse Party, and act in accordance with any instructions that might be given by the latter.
- 1080** Thus, for obvious reasons of security the Protocol is rather strict as regards the missions which might be undertaken by medical aircraft to search for the wounded in areas outside those under the control of the Party to which the aircraft belongs. In fact, this problem arises mainly in contact or similar zones, as wounded persons requiring relief are most numerous there, and no search mission by aircraft is permitted without the agreement of the two Parties to the conflict. This is why in this case it is proper to insist on the obligation of the Parties to do all they can to reach such agreements. In this respect it is appropriate to recall in particular Article 15, paragraph 2, of the First Convention, which does not allow for any doubt in this respect:

“Whenever circumstances permit, an armistice or a suspension of fire shall be arranged, or local arrangements made, to permit the removal, exchange and transport of the wounded left on the battlefield.”

Y.S.

Protocol I

Article 29 – Notifications and agreements concerning medical aircraft

1. Notifications under Article 25, or requests for prior agreement under Articles 26, 27, 28 (paragraph 4), or 31 shall state the proposed number of medical aircraft, their flight plans and means of identification, and shall be understood to mean that every flight will be carried out in compliance with Article 28.
2. A Party which receives a notification given under Article 25 shall at once acknowledge receipt of such notification.
3. A Party which receives a request for prior agreement under Articles 26, 27 28 (paragraph 4), or 31 shall, as rapidly as possible, notify the requesting Party:
 - (a) that the request is agreed to;
 - (b) that the request is denied; or
 - (c) of reasonable alternative proposals to the request. It may also propose a prohibition or restriction of other flights in the area during the time involved. If the Party which submitted the request accepts the alternative proposals, it shall notify the other Party of such acceptance.
4. The Parties shall take the necessary measures to ensure that notifications and agreements can be made rapidly.
5. The Parties shall also take the necessary measures to disseminate rapidly the substance of any such notifications and agreements to the military units concerned and shall instruct those units regarding the means of identification that will be used by the medical aircraft in question.

Commentary**General remarks**

- 1081** This article lays down the way in which notifications and agreements concerning medical aircraft should be made. The 1973 draft was very brief, and Committee II developed it considerably. For the sake of the safety of aircraft operating in accordance with such notifications and agreements, it was essential that such matters were made perfectly clear.

Paragraph 1

- 1082** Notifications under Article 25 (*Medical aircraft in areas not controlled by an adverse Party*) are optional and are especially recommended in certain cases. Requests for prior agreements are very strongly recommended for flights referred to in Article 26 (*Medical aircraft in contact or similar zones*); they are required for flights referred to in Article 27 (*Medical aircraft in areas controlled by an adverse Party*); and also required for flights undertaken to search for the wounded,¹ whether they are covered by Article 26 (*Medical aircraft in contact or similar zones*) or by Article 27 (*Medical aircraft in areas controlled by an adverse Party*). Finally they are also required for flights over the territory of a State not Party to the conflict, and for landing or alighting on water in such territory.²
- 1083** However, whether they be optional, recommended in various degrees or obligatory, such notifications or requests for agreement *must*, once they are made, contain a number of elements which are listed in paragraph 1. Such an *obligation regarding the content* of a notification or a request for agreement is logical. Whenever a notification – even if this is of an optional character – is made to the adverse Party, the latter incurs a greater responsibility in case of blunders, since it had been warned. However, it would be wrong and could result in dangerously worsening relations to make accusations based on notifications that had not been sufficiently precise. This is why there is an *obligation* to include the elements that are listed *even for optional notifications*.

¹ Cf. Art. 28, para. 4.

² Cf. Art. 31, para. 1.

- 1084 There are three such elements. The information that must be given is: the “proposed number of medical aircraft”, their “flight plans” (i.e., as precisely as possible their departure and arrival times, their flight path and altitude) which should be as far as possible formulated in accordance with the procedures laid down by the International Civil Aviation Organization³ and their “means of identification” (i.e., the distinctive emblem and signals with which they are equipped).⁴
- 1085 These three points *must* be included in all notifications or requests for agreement although, as indicated in the commentary on Article 30 of the draft, this list is not exhaustive; the Parties sending the notification or the request for agreement may add other elements.
- 1086 In addition, according to the second part of paragraph 1, such notifications or requests for agreement “shall be understood to mean that every flight will be carried out in compliance with Article 28”.
- 1087 In fact, any use of medical aircraft must be in accordance with the provisions of Article 28 (*Restrictions on operations of medical aircraft*). However, as information is communicated in the cases covered by Article 29, it seemed better to Committee II to clearly state that Article 28 (*Restrictions on operations of medical aircraft*) would apply regardless of whether those provisions were mentioned explicitly in the notification or the request for agreement. For example, if there is no mention in a notification or a request for agreement on transport of weapons, that does not mean that one is allowed to act contrary to Article 28 (*Restrictions on the operations of medical aircraft*), paragraph 3. This is self-evident, but the Committee nevertheless considered that it would be useful to emphasize the point. It could even be considered that this provision goes somewhat further: in making a notification or a request for an agreement, a Party to the conflict implicitly indicates that it is perfectly aware of the restrictions laid down in Article 28 (*Restrictions on operations of medical aircraft*), and that it will comply with them.

Paragraph 2

- 1088 As we have seen, the notification made pursuant to Article 25 (*Medical aircraft in areas not controlled by an adverse Party*) is optional. On the other hand, the acknowledgement of receipt of such notification is justifiably compulsory. Indeed, a notification made in accordance with this article does not entail any additional obligation for the Party receiving it – thus it cannot refuse it – but helps it to observe the obligation to respect medical aircraft used outside areas under its physical control, an obligation which falls upon it anyway, independently of any notification. Furthermore, the notification is an additional guarantee for the Party making it that its medical aircraft will not be hit by the adverse Party by mistake. However, in order that such aircraft can really fly with an enhanced

³ Cf. commentary Annex I, Art. 12, *infra*, p. 1273.

⁴ Cf. commentary Art. 18, *supra*, p. 221, and commentary Annex I, Chapters I-III, *infra*, p. 1151.

sense of security, the pilots must know that the notification has been properly received. Thus there is a good reason for the Party receiving the notification to acknowledge receipt and no valid reason for refusing. This is why there is an *obligation*. Moreover, the acknowledgement of receipt should take place “at once”, i.e., as soon as that Party has become aware of the notification. The channels used for such acknowledgement, as for the notification itself, can be either direct, if such direct channels exist, or indirect, if there are none. In this case the Protecting Powers, their substitute or the ICRC could notably serve as a channel of communication.

Paragraph 3

- 1089** In the situations covered here there is a request for agreement which, if accepted by the adverse Party, would modify the obligations of the latter. Thus it is logical that the procedure is more complicated. In the case of Articles 26 (*Medical aircraft in contact or similar zones*), 27 (*Medical aircraft in areas controlled by an adverse Party*) or 31 (*Neutral or other States not Parties to the conflict*), the adverse Party is requested (Articles 26 – *Medical aircraft in contact or similar zones*, and 27 – *Medical aircraft in areas controlled by an adverse Party*), or a State not Party to the conflict is requested (Article 31 – *Neutral or other States not Parties to the conflict*) to agree to the use, by the Party making the request, of a determined number of medical aircraft equipped with clearly defined means of identification and flying in accordance with an indicated flight plan over areas where such aircraft without an agreement either cannot be used, except at their own risk (Article 26 – *Medical aircraft in contact or similar zones*) or do not have any right to be used (Articles 27 – *Medical aircraft in areas controlled by an adverse Party* and 31 – *Neutral or other States not Parties to the conflict*). In both cases, if the adverse Party or the State not Party to the conflict agrees to the request, it thereby accepts the responsibility for ensuring that its own forces will not endanger aircraft flying in accordance with the agreement.
- 1090** The reply of the Party receiving the request must be sent “as rapidly as possible”, and no longer “at once”. In fact, although paragraph 2 is simply concerned with acknowledging receipt of information received, the reply to be sent under paragraph 3 may require consultations, and therefore involve a short delay.
- 1091** Four types of reply are possible:
- Unconditional acceptance of the request, permitting the entry into force of the agreement as soon as the requesting Party receives the acceptance (the latter could still acknowledge receipt of such a positive response for the sake of security).
 - Denial of the request, which should in principle be explained, at any rate when coming from the adverse Party. In fact, it should not be forgotten that Article 15 of the First Convention in particular requests Parties to the conflict at all times to “without delay, take all possible measures to search for and collect the wounded and sick, to protect them against pillage and ill-treatment, to ensure their adequate care”. A denial of the request, even if it does not contain alternative proposals, should explain the reasons for denial to the requesting

Party, and as far as possible, include indications to help such a Party formulate a request which has a chance of being accepted.

- “Reasonable alternative proposals to the request”.⁵ For example, this could refer to a change in flight plan, or in the number of aircraft permitted to carry out the tasks or any other proposal which makes good sense. An alternative proposal should be made in a positive spirit with the real intention of coming to an agreement. It must not be a delaying tactic or a suggestion which is obviously not going to have any chance of being accepted.
- Finally, an additional condition may be proposed either on its own or together with a proposal for an alternative agreement, viz., a “prohibition or restriction of other flights in the area during the time involved”. One delegate expressed his doubts about this possibility, which “could make those flights conditional upon the prohibition or restriction of all non-medical flights of the adverse Party in the area concerned”. He feared that such a condition might be “drawn up in such a way that the humanitarian aim of the medical flight might be endangered”.⁶ However, this point of view did not prevail. As one delegate stated, the Committee considered that, to prevent any form of abuse in this respect, it was reasonable that the Party to whom the request is addressed, should require the requesting Party to stop all non-medical operational flights “while its own automatic defence equipment was switched off to permit the medical flight”.⁷

1092 If the Party which has submitted the request accepts the alternative proposals – i.e., to modify the agreement, restrict or prohibit other flights during the time concerned, or a combination of these two possibilities – “it shall notify the other Party of such acceptance”. Indeed such notification is essential, since there are new proposals. For the sake of greater security the Party which has received the notification should acknowledge receipt before the agreement is put into operation, even though this is not laid down in Article 29 and is therefore not essential.

1093 No provision has been made in the case that the alternative proposals are not acceptable to the Party which made the first request. In principle, such “toing and froing” between the Parties to the conflict should not be too drawn out. However, there is nothing to prevent this Party from addressing a new request, in which case the procedure laid down in paragraph 3 applies again *ab initio*.

Paragraph 4

1094 The wounded cannot be kept waiting for relief. It is therefore essential that agreements which may be concluded to this end should be made rapidly, as otherwise they generally lose a great deal of their purpose. This is the reason for paragraph 4, which imposes upon the Parties (i.e., the Parties to the conflict, but

⁵ On the meaning of the word “reasonable” as used in this context, cf. commentary Art. 27, para. 2, *supra*, pp. 297-298.

⁶ *O.R.* XI, p. 535, CDDH/II/SR.47, para. 55.

⁷ *Ibid.*, para. 57.

also States not Parties within the meaning of Article 31 – *Neutral or other States not Parties to the conflict*) the obligation to take the “necessary measures” to ensure that such notifications can be made and agreements can be “rapidly” concluded. The first step is to ensure that a rapid communication channel is permanently open between the Parties to the conflict, whether it is direct or indirect.⁸ However, the Parties must also ensure that requests for agreement are examined without delay by the competent authorities so that a reply and, if necessary alternative proposals, can be rapidly communicated. In this context the word “rapidly” cannot be given a *precise* definition. The speed which can be expected from a Party depends on the circumstances and the technical means available to it. However, as a general rule, this space of time should be only a matter of hours.

1095 As regards acknowledgement of the receipt of a notification, this should be sent “at once”, as mentioned above.

Paragraph 5

1096 The fact that medical aircraft should not be shot down is part of the instruction that should be acquired in the context of a general and long-term dissemination programme;⁹ the obligation to refrain from firing at any unidentified aircraft flying over one’s own territory, in a combat zone or over enemy territory but within range of one’s own surface-to-air weapons systems, is not a general obligation of international humanitarian law. Such an obligation can only be based on specific agreements which should give rise to precise instructions related to the cases in point. This is why it is particularly important to inform *all those who could, through ignorance, act contrary to the notifications and agreements* concerned here. The expression “the military units concerned” should be interpreted in this sense being understood that it is the responsibility of the Parties to ensure that the information is passed by unit commanders to all persons – airmen, artillery gunners or others – who are in a position to put aircraft flying in accordance with the notifications or agreements in jeopardy.

1097 Moreover, it is specified that such units must be instructed “regarding the means of identification that will be used by the medical aircraft in question”. The French text further specifies that they must be so instructed “rapidly” (*rapidement*). This point might seem superfluous at first sight, since the notifications and agreements concerned *must* include the means of identification.¹⁰ Nevertheless, it is not merely a matter of communicating the means of identification to the military units concerned, but of *instructing* them, i.e., clearly explaining how such aircraft can be identified (by distinctive emblem and signals).¹¹

1098 It is clear that such dissemination has a *particularly urgent* character. At any rate the word “rapidly” used in the French version of paragraph 5 is not

⁸ On this subject, *cf.* commentary para. 2, *supra*, p. 310.

⁹ *Cf.* Art. 83 and its commentary, *infra*, p. 959.

¹⁰ *Cf.* commentary para. 1, *supra*, pp. 308-309.

¹¹ *Cf.* commentary Annex I, Chapters II-III, *infra*, p. 1167.

sufficiently precise in this context. For it to be meaningful, the *dissemination* prescribed in paragraph 5 must take place before the start of flights carried out in accordance with the notification or agreement in question. Thus the speed required here depends on the times at which such flights are scheduled.

1099 As regards the timing of such information, the Parties are requested to inform persons who are in a position to put the aircraft concerned in jeopardy, before they have to take any decision relating to them.

Y.S.

Article 30 – Landing and inspection of medical aircraft

1. Medical aircraft flying over areas which are physically controlled by an adverse Party, or over areas the physical control of which is not clearly established, may be ordered to land or to alight on water, as appropriate, to permit inspection in accordance with the following paragraphs. Medical aircraft shall obey any such order.
2. If such an aircraft lands or alights on water, whether ordered to do so or for other reasons, it may be subjected to inspection solely to determine the matters referred to in paragraphs 3 and 4. Any such inspection shall be commenced without delay and shall be conducted expeditiously. The inspecting Party shall not require the wounded and sick to be removed from the aircraft unless their removal is essential for the inspection. That Party shall in any event ensure that the condition of the wounded and sick is not adversely affected by the inspection or by the removal.
3. If the inspection discloses that the aircraft:
 - (a) is a medical aircraft within the meaning of Article 8, sub-paragraph (j),
 - (b) is not in violation of the conditions prescribed in Article 28, and
 - (c) has not flown without or in breach of a prior agreement where such agreement is required,the aircraft and those of its occupants who belong to the adverse Party or to a neutral or other State not a Party to the conflict shall be authorized to continue the flight without delay.
4. If the inspection discloses that the aircraft:
 - (a) is not a medical aircraft within the meaning of Article 8, sub-paragraph (j),
 - (b) is in violation of the conditions prescribed in Article 28, or
 - (c) has flown without or in breach of a prior agreement where such agreement is required,the aircraft may be seized. Its occupants shall be treated in conformity with the relevant provisions of the Conventions and of this Protocol. Any aircraft seized which had been assigned as a permanent medical aircraft may be used thereafter only as a medical aircraft.

Commentary

General remarks

- 1100** In an armed conflict any aircraft of a Party to the conflict flying over an area under the control of the adverse Party – or where elements of the latter’s armed forces are located – constitutes a threat to that Party. The agreements and notifications required for such overflight were examined above (Article 29 – *Notifications and agreements concerning medical aircraft*). The adverse Party may require aircraft to land or alight on water in areas under its control during such overflight, even if there is an agreement. Obviously such aircraft will be required to do so almost automatically in case of flights carried out without, or in contravention of, the terms of an agreement. Finally, a medical aircraft may have to land or alight on water on its own initiative on territory under the control of the adverse Party because of damage, technical difficulties or adverse weather conditions.
- 1101** This article deals with this question as a whole, i.e. with the order which may be given to land or alight on water, with inspection on the ground and with the fate of the aircraft and the treatment of its occupants.

Paragraph 1

- 1102** Aircraft covered in this paragraph are “medical aircraft flying over areas which are physically controlled by an adverse Party, or over areas the physical control of which is not clearly established”, i.e., aircraft in situations provided for in

Articles 27 (*Medical aircraft in areas controlled by an adverse Party*) and 26 (*Medical aircraft in contact or similar zones*), respectively.¹

- 1103 However, it should be noted that, in addition to “areas the physical control of which is not clearly established”, Article 26 (*Medical aircraft in contact or similar zones*) also covers the “parts of the contact zone which are physically controlled by friendly forces” and that aircraft flying over such parts do not come within the scope of Article 30.
- 1104 *All medical aircraft flying over the areas mentioned above* may be ordered to land or to alight on water, regardless of whether the flight has been made in accordance with an agreement, in violation of an agreement, or without an agreement. It is therefore important to emphasize the fact that even a medical aircraft flying in accordance with the terms of an agreement may be ordered to land or to alight on water. This is a provision in the interest of the security of the Parties to the conflict; an agreement guaranteeing that a medical aircraft could not be ordered to land for inspection was considered to entail too great a risk that the benefitting Party might abuse such a guarantee to its own advantage, by using the aircraft for other purposes than the purely medical purposes to which it should be exclusively assigned.
- 1105 The aircraft may be ordered “to land or to alight on water, as appropriate”. Alighting on water clearly refers only to hydroplanes or to amphibious aircraft. Without exception all steps should be taken to ensure that the aircraft can land under adequate safety conditions.
- 1106 If a medical aircraft is ordered to land, this can only be for the clearly specified reason of *permitting inspection*, in accordance with the provisions of the following paragraphs.
- 1107 Finally, there is an *obligation* for medical aircraft flying over the areas mentioned in this paragraph to obey the order to land or to alight on water. An aircraft refusing to comply with such an order may be forced to land, or even as a last resort, be shot down.² It is therefore of paramount importance that the captain of an aircraft receiving such an order to land should heed the *obligation* to comply with it. The lives of his passengers are at stake.³

Paragraph 2

- 1108 Like paragraphs 3 and 4, this paragraph concerns medical aircraft on the ground, in the power of the adverse Party. They may have been “ordered” to land or alight in situations described in paragraph 1, but they may also have landed or alighted *on their own initiative*, because of damage, technical difficulties or adverse weather conditions, or even simply by mistake.

¹ For details on these areas and zones, *cf.* commentary Art. 26, *supra*, p. 287, and Art. 27, *supra*, p. 293.

² On this subject, *cf.* commentary Art. 26, para. 1, *supra*, pp. 291-292, and Art. 27, para. 2, *supra*, pp. 295-297.

³ *Cf.*, however, commentary Art. 26, para. 1, second sentence, second part, *supra*, pp. 291-292.

- 1109 As mentioned above in paragraph 1, an aircraft may be ordered to land (or alight) so as to permit inspection. This paragraph specifies that the inspection must be limited to verify particular points described below.
- 1110 An inspection relating to other points, such as the technical characteristics of the aircraft, would therefore be abusive.
- 1111 Moreover, three rules are given, aimed at ensuring the best possible treatment for the wounded and sick in such circumstances, which could be particularly gruelling for them.
- 1112 First, such inspection “shall be commenced without delay” and “shall be conducted expeditiously”. These two factors are both aimed at reducing as far as possible the time that the wounded, sick or shipwrecked in the aircraft have to wait. The first condition is generally addressed to the authorities of the Party undertaking the inspection. They must do all they can to ensure that personnel authorized to carry out the inspection are available at very short notice. This applies in particular, if they wish to investigate this, to personnel with the technical competence to distinguish equipment “intended solely to facilitate navigation, communication or identification” from that intended “to collect or transmit intelligence data”.⁴ The second part of the rule is more particularly addressed to the personnel charged with the inspection; they should carry out their task as rapidly as possible.
- 1113 The second rule is that the wounded and sick may not be required to be removed “unless their removal is essential for the inspection”. The purpose of this rule is also obviously to protect the interests of the wounded and sick. The rule applies neither to the crew nor to shipwrecked persons who may have been taken on board the aircraft and are not wounded or sick. The term “essential” means that the removal is necessary to achieve the purposes for which the inspection may be carried out; for example, in Committee II reference was made to the case that there was suspicion that equipment intended for transmitting information was concealed in the aircraft, and where the wounded and sick might have been used to conceal such equipment.⁵
- 1114 Finally, the third rule should be considered as a general rule of which the first two are only particular applications. The requirement that the inspection should be carried out rapidly, and the wounded and sick should be removed only if their removal is essential, certainly has the aim of ensuring that “the condition of the wounded and sick is not adversely affected by the inspection or by the removal”. The overriding importance of the last rule compared with the two others is clearly revealed by the beginning of the sentence, which requires the Party concerned to “in any event ensure” that such an adverse effect does not occur, i.e., whether the wounded are removed or whether they stay on board. In more general terms, it could even be said that these three rules merely specify for this particular situation the general obligation given in Article 10 (*Protection and care*) to respect and protect the wounded, sick and shipwrecked and treat them humanely.

⁴ Cf. commentary Art. 28, paras. 1 and 2. *supra*, pp. 301-303.

⁵ Cf. O.R. XI, p. 542, CDDH/II/SR.48, para. 22. Cf. also commentary Art. 31, para. 3, *infra*, pp. 331-332.

- 1115 In fact it is clear that, in general, removal is harmful (which is the reason for the second rule quoted above) particularly if the inspection as required is conducted expeditiously. However, the possibility that it might be *in the interests of the wounded and sick* to get them off the aircraft cannot be excluded. As stated in Committee II, there are cases when leaving the wounded and sick on board could be even more harmful to their state of health than their removal would be.⁶ The example given was of an aircraft landing in a country with a tropical climate.
- 1116 As regards responsibility for the *removal*, this obviously does not end with merely transporting the wounded and sick from the aircraft, but also concerns finding them provisional accommodation in a place where they can be given adequate care.

Paragraph 3

- 1117 This paragraph lists the three elements which are to be investigated during the inspection and are determining factors in deciding the fate of the aircraft and the treatment of its occupants.
- 1118 The first element is the question whether the aircraft really is a medical aircraft as defined in Article 8 (*Terminology*), sub-paragraph (j). Thus it must be a medical transport by air which is “under the control of a competent authority of a Party to the conflict” and “assigned exclusively to medical transportation”, i.e., the transportation of the “wounded, sick, shipwrecked, medical personnel, religious personnel, medical equipment or medical supplies protected by the Conventions and by this Protocol”.⁷
- 1119 The second element to be ascertained during the inspection is that the aircraft is not in violation of the conditions prescribed in Article 28 (*Restrictions on operations of medical aircraft*). In this respect, as mentioned above, it might be argued that the restrictions imposed by the first three paragraphs of Article 28 (*Restrictions on operations of medical aircraft*) are already covered by the actual definition of medical aircraft, as this must be assigned *exclusively* to medical purposes.⁸ Apart from this, reference should be made to the whole of the commentary on Article 28 (*Restrictions on operations of medical aircraft*).⁹
- 1120 Finally, the third element is the question whether the aircraft has “flown without or in breach of a prior agreement where such agreement is required”. Thus this refers only to cases where agreement is *required*, viz.:
- *first*, flights over contact or similar zones for the purpose of searching for the wounded, sick or shipwrecked¹⁰ (an agreement for flights over such zones for other medical purposes being strongly recommended but *not required*);

⁷ Cf. Art. 8, sub-paras. (f), (g), and (j), and, for further details, the commentary thereon, *supra*, pp. 130-132.

⁸ Cf. commentary Art. 8, sub-paras. (g) and (j), *supra*, pp. 130-132.

⁹ *Supra*, p. 299.

¹⁰ Cf. Art. 26 and Art. 28, para. 4.

- *secondly*, flights over areas under the control of the adverse Party;¹¹
- *thirdly*, flights over areas under the control of the adverse Party for the purpose of searching for the wounded, sick and shipwrecked, in which case the agreement must specify permission to carry out such search in such areas.¹²

1121 The flight may have been made “without” or “in breach of” a prior agreement. Only the latter case could be problematic in so far as there may have been a lack of specification as to the limits beyond which the agreement could be considered as violated. In principle the agreement itself should be sufficiently flexible, particularly as regards the flight duration, to take into account the unknown factors involved in aerial navigation. At any rate the principle of good faith should be applied to determine whether there has been any real violation of the agreement.

1122 Finally, the most difficult point of the paragraph concerns the term “has flown”. The French text uses the term “entrepris”, which could indicate that an aircraft which had made a flight without or in breach of the terms of a required agreement, doing so because of damage, technical difficulties or weather conditions but *without the intention of committing a violation*, would not be in conflict with the condition prescribed in paragraph 3 (c). However, the amendment which was the inspiration for the article as finally adopted was in English, and the English text, by using the term “has flown”, removes any doubt that might exist in this respect¹³. Thus it is clearly the objective fact that a flight has been carried out without or in breach of the terms of an agreement that is the determining factor here, *irrespective of the will* to fly without an agreement or in conflict with such an agreement.

1123 In fact, this conclusion is in line with the First Convention of which the final paragraph of Article 36 states that:

“In the event of an involuntary landing in enemy or enemy-occupied territory, the wounded and sick, as well as the crew of the aircraft shall be prisoners of war. The medical personnel shall be treated according to Article 24 and the Articles following.” [All persons mentioned in this paragraph are, of course, members of the armed forces under the régime of the Conventions (Y.S.).]

1124 When all three elements mentioned above apply, the medical aircraft “shall be authorized to continue the flight without delay”. The continuation of the flight will thereupon be subject only to the usual technical requirements prescribed also for civilian flights. It will be up to the captain to ascertain that his aircraft is able to continue the flight and that the necessary facilities are made available by the local authorities for the flight to continue in normal conditions; there is an

¹¹ Cf. Art 27.

¹² Cf. Art. 28, para. 4.

¹³ Cf. O.R. III, p. 150 (French version) and p. 146 (English version), CDDH/II/82/Rev.1, draft Article 31. Paragraphs 3, 4 and 5 of Article 31 (present Art. 30) proposed in this amendment, reveal that the original English expression “has flown”, had already been translated by “a entrepris son vol”. Thus this is undoubtedly a matter of imprecise translation and not a question of hesitation in Committee II on a point of substance.

obligation to allow the aircraft to leave and no obstacles may be placed in the way of such departure.

- 1125 As regards the occupants of the aircraft, in principle they must also be authorized to continue their flight. This rule was laid down in the 1973 draft without any restrictions. Its scope was later limited to those occupants (whether they are wounded, sick or shipwrecked, or medical or religious personnel) belonging either to the adverse Party to that which carried out the inspection, or to a State not involved in the conflict.¹⁴ On the other hand, the Rapporteur of the Drafting Committee of Committee II stated that it “would have been unreasonable and had clearly not been intended by the original drafters” to prohibit a Party to the conflict from taking “persons belonging to its own side from an aircraft landing on its territory or on territory controlled by it”.¹⁵ In this respect it should be noted that a Party cannot be prevented from keeping its own nationals, even against their wishes, as the latter cannot seek political asylum in the aircraft, which does not enjoy extraterritorial rights. For the same reason, the other occupants of the aircraft have the *right* to continue their flight, but they are not under an *obligation* to do so. As a matter of fact, it is quite clear that the captain of the aircraft authorized to continue his flight cannot *oblige* the other occupants to remain in the aircraft. There is nothing to prevent nationals of a State not involved in the conflict to request admission into the territory of the Party which carried out the inspection, nor could even nationals of the adverse Party – that to which the aircraft belongs – be prevented from seeking political asylum. Finally, the article does not mention the case of seriously wounded persons whose condition is such that they cannot continue to travel. Insofar as such a wounded person is no longer able to express himself, the decision will be up to the captain of the aircraft. The wounded person left behind in this way, provided that he is not a national of a co-belligerent State or a State which is not involved in the conflict and which has normal diplomatic representation with the Party to which he is entrusted, will then be covered by the Conventions (First and Third, if he is a member of the armed forces or has equivalent status; Fourth, if he is a civilian) and by Protocol I.

Paragraph 4

- 1126 This paragraph deals with the case in which inspection discloses that at least *one* of the three conditions which should be verified is not fulfilled. As paragraph 3 was concerned with the situation in which each of the three conditions is fulfilled, paragraph 4 already applies in fact if only one of them is not fulfilled.¹⁶
- 1127 When one of these conditions is not fulfilled, paragraph 4 indicates what *may* happen to the aircraft and what *must* happen to its occupants.
- 1128 “The aircraft may be seized”. This is therefore an option for the Party into whose hands the medical aircraft or alleged medical aircraft of the adverse Party

¹⁴ On the exact meaning of the expression “a neutral or other State not Party to the conflict”, cf. commentary Art. 2, sub-para. (c), *supra*, pp. 61-62.

¹⁵ O.R. XII, p. 21, CDDH/II/SR.57, para. 7.

¹⁶ On these three conditions, cf. *supra*, pp. 319-320.

(if the inspection discloses that it is not, in fact, such an aircraft) has fallen. It is to be hoped that this option will rarely be used. Though it is easy to understand that this right will be used unhesitatingly in cases where the aircraft has deliberately flown in violation of the provisions of the Protocol or of a prior agreement, it seems that such a Party should carefully consider the possibility of authorizing aircrafts to continue their flight if they have not wilfully committed a breach but were the victims of damage, technical problems or adverse weather conditions. In the event that the aircraft is authorized to leave, the fate of its occupants will be established in accordance with our comments on paragraph 3.¹⁷

1129 In the case that the seized aircraft had been assigned as a permanent medical aircraft, i.e., that it was *assigned exclusively to medical purposes for an indeterminate period*,¹⁸ it may only be used thereafter as a medical aircraft by the Party which has seized it. There is no limitation on this obligation, and it therefore lasts until the end of the conflict concerned.

1130 No mention is made regarding the use to be made of an aircraft when the inspection has disclosed that it is not a medical aircraft, nor is it mentioned what is to be done with a *temporary* medical aircraft, i.e., one “devoted exclusively to medical purposes for limited periods”.¹⁹ In both cases the aircraft may be assigned to purposes other than medical purposes. Obviously the distinctive emblem must be carefully removed in this case and the means of identification laid down in the Protocol for medical aircraft may no longer be used.

1131 As regards the occupants of a seized aircraft, they must be treated “in conformity with the relevant provisions of the Conventions and of this Protocol”. This very general provision requires an explanation. We will attempt to summarize possible categories of occupants with the provisions of the Conventions and the Protocol applicable to each of them.²⁰

- a) Nationals of a co-belligerent State or of a State which is not involved in the conflict and which has normal diplomatic relations with the State in whose power they are, no longer enjoy the protection of the Conventions and of the Protocol, apart from Article 75 (*Fundamental guarantees*) of the latter.²¹ Their fate must be settled between the States concerned. Apart from this, the provisions of human rights law obviously continue to apply.
- b) Nationals of the Party seizing the aircraft, if they are wounded or sick, must be treated humanely and receive the care to which this category is entitled.²² If they are imprisoned or prosecuted for a reason related to the conflict – particularly if they are considered to be traitors – Articles 11 (*Protection of*

¹⁷ Cf. *supra*, pp. 320-321.

¹⁸ Cf. Art. 8, sub-para. (k).

¹⁹ *Ibid.*

²⁰ For the sake of simplification, we will not deal with the situation, which is exceptional nowadays, where some of the occupants are nationals of a State which is not a Party to the Conventions. However, in this respect it should be noted that the fundamental rules of the Conventions are presently recognized as customary law. Thus they would apply even to this category of occupants.

²¹ Cf. commentary Art. 75, para. 1, *infra*, pp. 866-871.

²² Cf. especially Art. 10 of the Protocol.

persons) and 75 (*Fundamental guarantees*) of the Protocol will also apply to them.²³ If they are neither wounded nor sick and are not imprisoned nor committed to trial, they will no longer benefit from the protection of the Conventions in their relations with their own Party. As stated in subparagraph (a), the protection afforded by human rights law obviously continues to apply.

- c) The civilian wounded, sick and shipwrecked belonging to the adverse Party, or to a co-belligerent State or a State not involved in the conflict, but not having normal diplomatic relations with the Power into whose hands they have fallen, will come within the scope of the Fourth Convention – particularly Section II of Part III and if they are interned, of Section IV – and of the Protocol (particularly Section III of Part IV). Moreover, if they are at the same time wounded or sick, they must also be treated in accordance with those provisions of the Conventions and the Protocol which protect this category of victims.
- d) The military wounded, sick and shipwrecked belonging to the adverse Party will be prisoners of war and be covered by the Third Convention. If they are at the same time wounded or sick they must also be treated in accordance with the provisions of the Conventions and the Protocol protecting such victims.
- e) The wounded, sick and shipwrecked who do not fall in one of the categories mentioned above – such as mercenaries – will at least enjoy the fundamental guarantees laid down in Article 75 (*Fundamental guarantees*), apart their protection as sick, wounded or shipwrecked.
- f) The crew of the medical aircraft, whether this is the personnel required for the functioning of the aircraft, or the personnel charged with caring for the wounded and sick, are considered as medical personnel in the sense of the Protocol.²⁴ Medical personnel who, though not employed to take care of the wounded and sick on board the aircraft, are transported by the latter, fall in the same category. The rules of the Conventions and the Protocol concerning medical personnel apply to all such persons (particularly Chapter IV of the First Convention and Article 15 of the Protocol – *Protection of civilian medical and religious personnel*).
- g) If the inspection discloses that the aircraft is not actually a medical aircraft, every member or alleged member of the medical personnel responsible for such abuse will lose his status of medical personnel and, depending on his situation, will be considered as a prisoner of war or simply as a civilian, protected by the Fourth Convention or not, depending on his nationality.²⁵ He is further covered by Article 75 of Protocol I (*Fundamental guarantees*) particularly if he is committed to trial and does not enjoy any better protection. In either case he may be tried and convicted for such a breach of international humanitarian law which, depending on the circumstances, may even be considered as a grave breach.²⁶

²³ On this subject, cf. commentary Art. 11, para. 1, *supra*, p. 152, and Art. 75, para. 1, *infra*, pp. 866-871.

²⁴ Cf. Art. 8, sub-para. (e).

²⁵ Cf. Art. 4, Fourth Convention.

²⁶ Cf. commentary Art. 85, para. 3 (f), *infra*, pp. 998-999.

1132 Finally, it should be noted that a debate took place in Committee II regarding the treatment to be given the wounded and sick. The main amendment to Article 31²⁷ (the present Article 29 – *Notifications and agreements concerning medical aircraft*) distinguished between the case that inspection revealed that the aircraft was not a medical aircraft or was in violation of the provisions of the present Article 28 (*Restrictions on operations of medical aircraft*) and the case that the aircraft had flown without or in breach of an agreement. In the last case it was provided that the aircraft could be seized only “if the seizing Party was in a position to provide adequate medical facilities for the wounded and sick aboard”. However, this requirement seemed unacceptable to some delegates, who considered that this discriminated against countries which do not possess “the level of technical development required to satisfy the conditions of the proposed text”.²⁸ This was countered with a claim that the expression “adequate facilities for the necessary medical treatment” should be understood to mean “the level of facilities accorded by a given country to its own citizens”.²⁹ This restriction has admittedly disappeared from the text finally adopted, but the general obligation remains to treat all occupants, i.e., also the wounded and sick, “in conformity with the relevant provisions of the Conventions and of this Protocol”. When this article was adopted in Committee, one delegate emphasized the fact that the general obligation of Article 10 (*Protection and care*), according to which the wounded and sick should “be treated humanely and in all circumstances, and that they should receive to the fullest extent practicable and with the least possible delay, the medical care required by their condition”, obviously also applied in the context of this paragraph.³⁰ However, it should be noted that there is no need to fear discrimination against countries that are technically underdeveloped, because the requirement is that such States act *to the best of their ability*.³¹

1133 It remains to be said that a Party to the conflict truly unable to ensure the treatment required by the condition of the wounded and sick – for example, because personnel or hospital facilities are overburdened – should allow a medical aircraft to continue on its way, or find another way of transferring such wounded and sick rapidly, without endangering their health, to a place where adequate medical care can be administered.

³⁰ Cf. *ibid.*, p. 40, CDDH/II/SR.59, para. 11.

³¹ On this subject, cf. commentary Art. 10, para. 2, *supra*, pp. 147-148, and Art. 11, para. 1, *supra*, pp. 154-156.

Protocol I

Article 31 – Neutral or other States not Parties to the conflict

1. Except by prior agreement, medical aircraft shall not fly over or land in the territory of a neutral or other State not a Party to the conflict. However, with such an agreement, they shall be respected throughout their flight and also for the duration of any calls in the territory. Nevertheless they shall obey any summons to land or to alight on water, as appropriate.
2. Should a medical aircraft, in the absence of an agreement or in deviation from the terms of an agreement, fly over the territory of a neutral or other State not a Party to the conflict, either through navigational error or because of an emergency affecting the safety of the flight, it shall make every effort to give notice of the flight and to identify itself. As soon as such medical aircraft is recognized, that State shall make reasonable efforts to give the order to land or to alight on water referred to in Article 30, paragraph 1, or to take other measures to safeguard its own interests, and, in either case, to allow the aircraft time for compliance, before resorting to an attack against the aircraft.
3. If a medical aircraft, either by agreement or in the circumstances mentioned in paragraph 2, lands or alights on water in the territory of a neutral or other State not Party to the conflict, whether ordered to do so or for other reasons, the aircraft shall be subject to inspection for the purposes of determining whether it is in fact a medical aircraft. The inspection shall be commenced without delay and shall be conducted expeditiously. The inspecting Party shall not require the wounded and sick of the Party operating the aircraft to be removed from it unless their removal is essential for the inspection. The inspecting Party shall in any event ensure that the condition of the wounded and sick is not adversely affected by the inspection or the removal. If the inspection discloses that the aircraft is in fact a medical aircraft, the aircraft with its occupants, other than those who must be detained in accordance with the rules of international law applicable in armed conflict, shall be allowed to resume its flight, and reasonable facilities shall be given for the continuation of the flight. If the inspection discloses that the aircraft is not a medical aircraft, it shall be seized and the occupants treated in accordance with paragraph 4.
4. The wounded, sick and shipwrecked disembarked, otherwise than temporarily, from a medical aircraft with the consent of the local authorities in the territory of a neutral or other State not a Party to the conflict shall, unless agreed otherwise between that State and the Parties to the conflict, be detained by that State where so required by the rules of international law applicable in armed conflict, in such a manner that they cannot again take

part in the hostilities. The cost of hospital treatment and internment shall be borne by the State to which those persons belong.

5. Neutral or other States not Parties to the conflict shall apply any conditions and restrictions on the passage of medical aircraft over, or on the landing of medical aircraft in, their territory equally to all Parties to the conflict.

Commentary

General remarks

- 1134 The First Convention (Article 37) and the Second Convention (Article 40) contain a similar article about flights over neutral countries¹ by medical aircraft, landing in such countries and the consequences. On the other hand, the question of overflight and landing by *civilian* aircraft is not broached in the Conventions.
- 1135 Article 31 is aimed at extending the benefits of the Conventions to *civilian* medical aircraft which, under the régime of the Protocols, are subject to the same

¹ For the exact meaning of the expression “neutral and other States not Parties to the conflict”, cf. commentary Art. 2, sub-para. (c), *supra*, p. 61. For the sake of simplicity, the term “States not Parties to the conflict” is used below to cover the whole expression.

rules as military medical aircraft. Moreover, it provides certain details which were not contained in the Conventions, particularly with regard to landing.

Paragraph 1

- 1136** This paragraph lays down the general rules for flights over the territory or calls in the territory of a State not a Party to the conflict. These rules are similar to those laid down for medical aircraft flying over an area under the physical control of the adverse Party,² except that a voluntary call made under an agreement is not even considered in the territory of the latter, while it has been provided for in the context of this article. However, whether they merely want to fly over the State not a Party to the conflict or whether they wish to land or alight on water in its territory, medical aircraft can lawfully do so only if there is a prior agreement, as in the case of flights over areas under the control of the adverse Party.
- 1137** As the requirement of an agreement provided for in Articles 26 (*Medical aircraft in contact or similar zones*), 27 (*Medical aircraft in areas controlled by an adverse Party*), 28 (*Restrictions on operations of medical aircraft*), paragraph 4, the request for an agreement mentioned in this Article 31 is subject to the restrictions provided for in Article 28 (*Restrictions on operations of medical aircraft*), paragraphs 1-3. On the other hand, it is not subject to those provided for by Article 28 (*Restrictions on operations of medical aircraft*), paragraph 4, whereas prohibited search for the wounded, sick and shipwrecked being not envisageable over the territory of a State not Party to the conflict. Logically speaking, the points indicated in Article 29 (*Notifications and agreements concerning medical aircraft*), paragraph 1, have also to be mentioned. The rules of procedure also contained in Article 29 (*Notifications and agreements concerning medical aircraft*) apply either to a Party to the conflict or to a State not a Party to the conflict, when they wish to conclude an agreement, in spite of the fact that the dialogue between such States or Parties (particularly through the normal diplomatic channels) should not in principle pose any special problems.
- 1138** When there is an agreement about overflight or calls, medical aircraft acting in accordance with the agreement must be respected. This is self-evident, as it is the very aim of the agreement, but it obviously implies, as specifically presented in Article 29 (*Notifications and agreements concerning medical aircraft*), paragraph 5, that the authorities concerned must inform all the services concerned and indicate to them the means of identifying the aircraft which they are bound to *respect*, specifying the flights and any landing or alighting on water which they must allow without offering any obstacles.
- 1139** It should be noted in passing that the word “however” at the beginning of the second sentence is not very appropriate. In fact, the second sentence does not constitute an exception to the first sentence as a whole, but supplements it by being more specific. Thus the text is to be read as though this word is not there,

² On this, *cf.* commentary Art. 27, *supra*, p. 293.

as the Conference did not have any intention of affecting the substance of the matter. It was merely an inaccurate use of language which was left to stand. At most it can be seen as an intention to emphasize the fact that there is no *obligation* to respect aircraft flying, landing or alighting on water without or in deviation from the terms of an agreement, as confirmed in the rest of the article.

- 1140 As in the case when they fly over “areas physically controlled by an adverse Party” or “areas the physical control of which is not clearly established”, medical aircraft may be ordered to land or if need be, to alight on water, even when they are flying over the territory of a State not a Party to the conflict in accordance with a prior agreement.³
- 1141 In this situation, the responsibility for taking all measures required to guarantee a safe landing or alighting on water, which is incumbent upon a State giving the order in any case, is all the greater.

Paragraph 2

- 1142 The first sentence is similar to the first sentence of Article 27 (*Medical aircraft in areas controlled by an adverse Party*), paragraph 2.
- 1143 However, there are a few slight differences in the wording. We shall note in particular that no reference is made regarding the agreement without which or in breach of which the flight is carried out. But this is without substantial consequences, as this agreement, like the one mentioned in Article 27 (*Medical aircraft in areas controlled by an adverse Party*) is subject to the rules laid down in Article 29 (*Notifications and agreements concerning medical aircraft*).
- 1144 The obligation upon the aircraft in the situation referred to in Article 27 (*Medical aircraft in areas controlled by an adverse Party*) is to “make every effort to identify itself and to inform the adverse Party of the circumstances”. The corresponding obligation in Article 31 is to “make every effort to give notice of the flight and to identify itself”. It was proposed in Committee II to replace the term *to give notice* in Article 31, as some did not consider it to be very clear in this context, and no objection was raised against this proposal.⁴
- 1145 The fact that this term was finally retained seems to have been unintentional and not an attempt to distinguish the obligation as formulated here from that of Article 27 (*Medical aircraft in areas controlled by an adverse Party*), paragraph 2. In any case, there is no practical difference for the aircraft. If it gets involved in an illegal flight despite itself and is therefore in danger of being shot down, it should do all it can to inform the State or the Party over whose territory it is flying, of the circumstances.
- 1146 Thus there is no substantive difference between the first sentence of paragraph 2 of Article 27 (*Medical aircraft in areas controlled by an adverse Party*) and the corresponding provision in Article 31.⁵

³ For the reason for this provision. *cf.* commentary Art. 30, para. 1, *supra*, p. 316.

⁴ *Cf.* O.R. XI, pp. 545-546, CDDH/II/SR.48, paras. 39-41 and 43.

⁵ On this subject, *cf.* commentary Art. 27, *supra*, pp. 295-296, which *mutatis mutandis* also applies here.

- 1147 The second sentence of paragraph 2 is virtually identical to the second sentence of paragraph 2 of Article 27 (*Medical aircraft in areas controlled by an adverse Party*).⁶ However, it should be mentioned that in relation to Article 31, the possibility that a State not a Party to the conflict might resort to an attack, mentioned here specifically as it is in Article 27 (*Medical aircraft in areas controlled by an adverse Party*) gave rise to a debate of some significance. For this reason the paragraph was actually not adopted by consensus in Committee II, but by vote.⁷
- 1148 It will be noted that according to both Article 37 of the First Convention and Article 40 of the Second Convention, medical aircraft flying over the territory of a State not a Party to the conflict “will be immune from attack” only during flights that are in accordance with a prior agreement. However, the commentary on the draft presented at the Conference of Government Experts in 1972 considered the sentence containing these terms to be shocking for its brutality, and did not consider that it had a place in a humanitarian convention.⁸
- 1149 From the discussions in Committee II we first quote that “the word ‘attack’ does not mean to shoot down”,⁹ that “an order to attack implied many things other than shooting down”,¹⁰ and that “an attack was only the last step in a series of measures”.¹¹ However, it cannot be denied that the possibility of shooting down the aircraft was left open as a last resort. The fact that nowadays “a single aircraft could wipe out an entire city should be the first point to consider”, according to one delegate,¹² was probably a determining factor in this respect.

Paragraph 3

- 1150 The first sentence indicates that in *all cases* where a medical aircraft of a Party to the conflict lands in the territory of a State not a Party to the conflict, the latter can subject the aircraft to inspection. Thus this applies when the aircraft lands without a prior agreement; or when it lands after an order to do so, following a flight carried out without or in deviation from the terms of an agreement. It also applies for those cases in which landing or alighting on water is provided for in the agreement, and those where the State not Party to the conflict exercises its right to order the medical aircraft to land or to alight on water, even if it was flying in accordance with an agreement.¹³ Thus a medical aircraft of a Party to the conflict flying over the territory of a State not Party to the conflict should know that it may at any time be subject to inspection and this possibility should be one more important deterrent discouraging the wrongful use of such aircraft. When

⁶ Again, cf. commentary Art. 27, *supra*, pp. 296-298.

⁷ Cf. O.R. XII, p. 259, CDDH/235/Rev.1, para. 37.

⁸ CE 1972, *Commentary*, Part I, p. 58 (Art. 29, paras. 1-3).

⁹ O.R. XII, p. 35, CDDH/II/SR.58, para. 34.

¹⁰ *Ibid.*, para. 36.

¹¹ *Ibid.*, p. 36, para. 44.

¹² *Ibid.*, p. 33, para. 19.

¹³ Cf. para. 1, last sentence, and the commentary thereon, *supra*, p. 328.

a medical aircraft landing on the territory of a State not a Party to the conflict has not done anything wrong, it is quite clear, as the text shows, that such a State has the *option* to carry out an inspection, but is not obliged to do so.

- 1151 On the other hand, it might seem that the law of neutrality could impose some *obligation* to carry out an inspection when the aircraft which has landed, has done so either on its own initiative without a prior agreement, or had been ordered to do so following a flight made without or in deviation from the terms of an agreement. In fact, in such cases the risk that the aircraft has abused the distinctive emblem for military purposes is greater. It will be found that the Hague Convention Respecting the Rights and Duties of Neutral Powers and Persons in Case of War on Land of 18 October 1907 particularly prescribes for neutral Powers (which should be understood to mean all “neutral and other State not Party to the conflict” in the sense of the Protocol) that they should not tolerate in their territory movements of foreign troops or convoys of ammunition or supplies, or even the erection of “a wireless telegraphy station or other apparatus for the purpose of communicating with belligerent forces on land or sea” (*cf.* Articles 2, 3 and 5 of that Convention).¹⁴ Thus to carry out an inspection in such cases seems to be an elementary precaution for a State not Party to the conflict, as the only means that can ensure that it is fulfilling its obligations under the law of neutrality. Moreover, in this respect reference can be made to Article 14 of the above-mentioned Hague Convention, which permits a neutral Power to authorize the passage over its territory of convoys of the sick and wounded on condition that they include “neither personnel [*i.e.*, able-bodied personnel] nor war material” and that “whatever measures of safety and control are necessary for the purpose” are taken.
- 1152 As regards the inspection, this should have a very specific aim, namely, *to determine whether it is in fact a medical aircraft*. It must be limited to this purpose and investigations made for other purposes, such as, for instance, commercial ones, would be wrong.
- 1153 As regards the question of determining whether the aircraft is in fact a medical aircraft, this was examined above.¹⁵
- 1154 As compared with inspections under Article 30 (*Landing and inspection of medical aircraft*), paragraphs 3 and 4, two of the three points listed are left out. There is no requirement to ascertain, firstly, whether the aircraft is in violation of the conditions prescribed in Article 28 (*Restrictions on operations of medical aircraft*); and secondly, whether it has flown without or in breach of a prior agreement.
- 1155 The fact that Article 28 (*Restrictions on operations of medical aircraft*) is not mentioned is without important consequences. Paragraph 1 and to some extent paragraph 2 apply principally to the relations between a medical aircraft belonging to a Party to the conflict and the adverse Party. As regards paragraph 4, the text itself indicates that it refers only to flights in contact or similar zones

¹⁴ It is generally agreed that a large part of this convention now constitutes customary international law.

¹⁵ *Cf.* commentary Art. 30, para. 3, *supra*, p. 319.

or in areas physically controlled by the adverse Party. However, aircraft flying over neutral territory as a convenient way of reaching enemy territory in order to collect or transmit intelligence data, is not only prohibited by Article 28 (*Restrictions on operations of medical aircraft*), paragraphs 1 and 2, but is also a breach of the law of neutrality. Further, aircraft carrying equipment intended for collecting or transmitting intelligence data, as prohibited by Article 28 (*Restrictions on operations of medical aircraft*), paragraph 2, and carrying other armaments than those listed in Article 28 (*Restrictions on operations of medical aircraft*), paragraph 3, would no longer even be covered by the definition of medical aircraft¹⁶ as set out in Article 8 (*Terminology*), sub-paragraphs (f), (g) and (j). Thus the conclusion of the inspection would be that the aircraft is not a medical aircraft, with all the attendant consequences.

1156 On the other hand, the fact that there is no requirement that one of the aims of the inspection should be to verify whether the aircraft has made the flight without or in violation of the terms of the agreement constitutes a significant difference as compared with the inspection provided for in Article 30 (*Landing and inspection of medical aircraft*). As the final sentences of this paragraph confirm, it shows that unlike a Party to the conflict which has in its power a medical aircraft belonging to the adverse Party, a State not Party to the conflict does not have the right to seize a medical aircraft for the sole reason that it has flown over its territory or has landed there without or in violation of the terms of an agreement. The obviously very different relations between a Party to the conflict and the adverse Party, compared with those between a Party to the conflict and a State not Party to the conflict, justify this relaxation of the rule.

1157 *The second, third and fourth sentences* of the paragraph, which determine the manner in which the inspection should be carried out in order to safeguard the condition of the wounded and sick as far as possible, are similar to the second, third and fourth sentences of Article 30 (*Landing and inspection of medical aircraft*), paragraph 2.¹⁷ The only difference between these two articles on this subject lies in the reference in Article 31 to the “Party operating the aircraft”, whose wounded and sick shall not be removed from it unless their removal is essential for the inspection. In fact, these three rules of procedure have the sole aim, as we have already recalled several times, of safeguarding the condition of the wounded and sick. This is included in Article 31 taking into account the fact that, as a general rule, the other wounded and sick have to be removed from the aircraft in any case, and that it is therefore preferable to take them immediately to somewhere adequately equipped for their care. The reason for this provision is to avoid as far as possible any pointless transportation of the wounded and sick. Thus, under Article 31 every effort should be made to avoid removing the wounded and sick from the aircraft unless such removal is justified by the inspection or by their condition. This applies just as much to Article 30 (*Landing and inspection of medical aircraft*), as it applies to Article 31. The wounded and sick should, therefore, depending on each individual case, stay on board or should

¹⁶ Cf. commentary Art. 28, *supra*, p. 299.

¹⁷ On this subject, cf. commentary Art. 30, *supra*, pp. 317-319.

have the choice to remain in the aircraft if it is allowed to continue the flight at the end of the inspection.

1158 *The fifth and sixth sentences determine the fate of the aircraft and that of its occupants.*

1159 We will first examine the case of the aircraft. “If the inspection discloses that the aircraft is in fact a medical aircraft” in the sense of the Protocol, it must in any case be allowed to continue the flight. As mentioned above, the fact that it has flown over the territory of a State not Party to the conflict, or landed on such territory, without permission or in violation of an agreement, is not a sufficient reason to detain it. On the other hand, there is nothing to prevent the State not a Party to the conflict from making a protest to the Party to which the aircraft belongs, and to take all possible steps to prevent such an incident occurring again, particularly if the flight over its territory was not justified by *force majeure*, but resulted from a decision taken deliberately. An aircraft permitted to leave will be given “reasonable facilities” for the continuation of the flight, i.e., as far as possible, it will be given all the technical help needed for the safety of the flight. Although not explicitly stated, a State allowing an aircraft to leave must also give the appropriate medical assistance to ensure the adequate treatment of the wounded and sick during the flight as far as it is able to do so. This obligation follows, in particular, from Article 19 (*Neutral and other States not Parties to the conflict*).¹⁸

1160 If the inspection discloses that the aircraft “is not a medical aircraft” in the sense of the Protocol, it *must* be seized. Thus this provision is stricter than that laid down in Article 30 (*Landing and inspection of medical aircraft*) which, in a similar situation, leaves the adverse Party to that to which the medical aircraft belongs, the *choice* whether or not to seize the aircraft. The reason for this difference is perfectly logical. In the case where the adverse Party detains the aircraft there is only a bilateral relationship. There is nothing in humanitarian law that aims to prevent a Party to the conflict from being more generous vis-à-vis the adverse Party than the law prescribes. On the other hand, when the aircraft is in the hands of a State not Party to the conflict, there is a trilateral relationship. By acting too liberally vis-à-vis one Party to the conflict, the State not Party to the conflict would put the other Party at a disadvantage. Moreover, the possibility of choosing could place such a Party in an embarrassing situation vis-à-vis one or other of the Parties to the conflict. For this reason there is an obligation to seize the aircraft in the situation envisaged here. It will be shown, for that matter, that paragraph 5 of this article is concerned with the same problem.¹⁹ Moreover, it is worth noting that this rule also flows from Article 5 of the 1907 Hague Convention V, on neutrality.

1161 We will now deal with the delicate problem of the fate of the passengers.

1162 If the aircraft is permitted to continue its flight it may do so “with its occupants, other than those who must be detained in accordance with the rules of international law applicable in armed conflict”. Thus it is the duty of States not

¹⁸ On this subject, *cf.* commentary Art. 19, *supra*, p. 237.

¹⁹ *Cf. infra*, p. 337.

Parties to the conflict to detain certain occupants. However, the question could also be asked whether the other occupants should be *obliged* to continue the flight.

- 1163** The “rules of international law applicable in armed conflict” referred to here are the relevant provisions of the above-mentioned Hague Convention²⁰ Respecting the Rights and Duties of Neutral Powers and Persons in Case of War on Land. Reference is also made indirectly to it in Articles 37 of the First Convention and 40 of the Second Convention.²¹
- 1164** Article 14 of this Hague Convention deals with the passage over neutral territory of “the sick and wounded belonging to the belligerent armies”. The provisions of that article should apply here by analogy. Nevertheless, one might wonder whether a distinction should not be made between aircraft which have landed without an agreement or because they have been ordered to do so, following a flight carried out without or in violation of the terms of an agreement, and aircraft which have been ordered to land for verification purposes, even though they were flying in accordance with an agreement. In fact, in the latter case, the decision whether or not to order the aircraft to land is left to the discretion of the State not Party to the conflict, and at first sight it might seem inequitable that the fate of some of its occupants should depend on such discretionary power. However, the deliberations in Committee II did not show any intention of making such a distinction. Moreover, Parties to a conflict which conclude an agreement for overflight of territory of a State not Party to the conflict by a medical aircraft know that such aircraft may be ordered to land.²² Finally, a State not Party to the conflict should act in the same way vis-à-vis all the belligerents.²³ For all these reasons it must be admitted that Article 14 applies by analogy in all cases where a medical aircraft belonging to a Party to the conflict lands in the territory of a neutral State.
- 1165** Article 14, which deals only with the military wounded and sick, makes two requirements of a State not Party to the conflict. First, to guard the wounded and sick of the adverse Party to that to which the aircraft belongs. Thus it must guard such wounded, sick and shipwrecked persons who would otherwise become prisoners of war. Secondly, it must guard the wounded and sick of the Party to which the aircraft belongs, if these *are committed to its care*, i.e., in practical terms, those whom the captain of the aircraft, after consulting medical personnel, considers are unable to endure the continuation of the flight. In the first case it therefore depends on a control to be carried out by the State not Party to the conflict whether they stay behind. In the second case it depends on the decision of the captain of the aircraft. All wounded, sick and shipwrecked persons who remain behind must be guarded by the State not Party to the conflict “so as to ensure their not taking part again in the military operations”.²⁴ Insofar as the

²⁰ Cf. *supra*, p. 330.

²¹ Cf. *Commentary I*, p. 296.

²² Cf. *supra*, p. 328.

²³ Cf. *commentary para. 5, infra*, p. 337.

²⁴ In some cases they may be repatriated before hostilities have ceased. On this subject, cf. Third Convention, Part IV, Section I, in particular Art. 110.

State not Party to the conflict is a Party to the First Convention and to Protocol I, the relevant provisions of these instruments will be applied to them by analogy.²⁵

- 1166** Except for one specific category which is discussed below, other occupants of the aircraft are not comparable to the persons referred to in the Hague Convention, and it would be abusive to apply this Convention by analogy. With regard to such persons, it suffices to say that they are not covered by the law of neutrality but by the rules of human rights law and by the national legislation of the State where the persons concerned are situated. Thus the determining factor should be the free will of the persons involved. The medical aircraft does not enjoy extraterritorial rights and the crew have no right to detain the occupants against their will.
- 1167** With regard to civilian wounded or sick who are unable to express their will, but whose condition does not require them to be removed from the aircraft, a logical approach should be adopted. If their nationality is that of the Party to which the aircraft belongs, they should continue the flight. If their nationality is that of the adverse Party, they should be removed from the aircraft. If they are nationals of the State not Party to the conflict on the territory of which the aircraft has landed, they will obviously be removed from the aircraft, but, if they are nationals of another State not Party to the conflict, their fate should be determined in agreement between the captain of the aircraft and the authorities of the State on the territory of which the aircraft has landed.
- 1168** A State not Party to the conflict is under an obligation to care for the civilian wounded and sick removed from the aircraft and to treat them humanely, but unlike the provisions laid down with regard to the military wounded and sick, there is no obligation to keep them until hostilities have ended. The civilian wounded and sick may request repatriation, particularly through the diplomatic representation of their country. They may also seek asylum in the State in whose territory they have landed, or in another State.
- 1169** For the sake of completeness, one special case should be mentioned, namely, members of the crew seeking asylum in a State not Party to the conflict. It was shown above that all members of the crew are considered to be medical personnel in the sense of the Protocol. However, in this case it is necessary to make a distinction between military medical personnel and civilian medical personnel.²⁶ Those belonging to the first category – who would therefore be deserting – should be treated as members of the armed forces seeking refuge in the territory of a State not Party to the conflict,²⁷ and be interned until hostilities have ended. In fact, it would appear incompatible with the law of neutrality to allow them to reach the adverse Party. When hostilities have ceased, they will remain free to seek asylum wherever they wish, unless they are suspected of any war crimes.

²⁵ Cf. Art. 4, First Convention and Art. 19, Protocol I.

²⁶ On this subject, also cf. commentary Art. 15, *supra*, p. 189.

²⁷ Cf. Art. 11 of the above-mentioned Hague Convention.

- 1170 On the other hand, someone who is a member of the civilian medical personnel should be treated like any other civilian. In any case, the law of neutrality does not impose any obligation on a State not Party to the conflict to hold him until hostilities have ceased.
- 1171 When the inspection discloses that the aircraft is not in fact a medical aircraft in the sense of the Protocol, it must be seized as mentioned above. All the occupants will therefore be disembarked in the territory of the State not Party to the conflict and their fate is determined by paragraph 4 of this article.

Paragraph 4

- 1172 This paragraph deals with the fate of the wounded, sick and shipwrecked disembarked in the territory of a State not Party to the conflict with the exception of those who are disembarked temporarily (i.e., the wounded and sick who are disembarked while they are waiting for the aircraft to continue its flight because of their condition and local circumstances).
- 1173 The various categories of persons who may be disembarked in the event that the aircraft is permitted to continue its flight were outlined above. If the aircraft is seized, what was said with respect to paragraph 3 continues to apply for those concerned. A few additional remarks should be made regarding the fate of other occupants.
- 1174 All the military wounded, sick and shipwrecked of the Party to which the aircraft belongs are in the same situation as those entrusted to the State not Party to the conflict when the aircraft is permitted to continue its flight, a situation which was examined above. Thus they must be held “in such a manner that they cannot again take part in the hostilities”. As regards other military wounded, sick and shipwrecked, it was shown above that they must in any case be held in this way.
- 1175 As was also mentioned above, the law of neutrality does not impose an obligation to hold the civilian wounded, sick and shipwrecked. These will be repatriated or sent to the State of their choice (if this State will accept them) provided that their condition allows it.
- 1176 As regards the crew, the special case in which crew members refused to continue the flight, even though the aircraft had permission to do so, was discussed above. In the event that the aircraft is seized, the whole crew falls into the hands of the State not Party to the conflict. In this respect there is an omission in Article 31, as it does not deal with this problem. It should therefore be dealt with on the basis of the principles of international humanitarian law and the law of neutrality, and by applying the existing rules by analogy.
- 1177 In the situation discussed here, the aircraft *is not* really a medical aircraft in the sense of the Protocol, since this is the only reason for which it can (and must) be seized by the State not Party to the conflict. Members of the crew who consciously participated in what constitutes an abuse of the emblem no longer enjoy the status of medical personnel. With regard to civilians, this also constitutes a punishable breach for them. By analogy, Article 11 of the above-mentioned Hague Convention should be applied to these persons. Thus they should be interned

until hostilities have ceased, without prejudice to their being put on trial, which is compulsory if they are found to have committed a grave breach of the Conventions or of the Protocol.²⁸

1178 In our opinion, the fate of those members of the medical personnel who can clearly be shown not to have been involved in abuse of the distinctive emblem should be as follows: civilian medical personnel will be repatriated like any other civilians in this situation, if they express the wish to be repatriated. Members of permanent military medical personnel will also be repatriated if they wish, in the way that such personnel must be repatriated when they fall into enemy hands.²⁹ The possibility given in Article 28 of the First Convention for a Party to the conflict to compel such personnel to remain behind insofar as they are needed to care for the wounded and sick of the Party to the conflict to which they belong, should not be applied by analogy to a State not Party to the conflict. Finally, temporary military medical personnel have to be treated as members of the armed forces of a Party to the conflict entering neutral territory³⁰ and must be interned until hostilities have ceased.

1179 Paragraph 4 adds two elements which are worthy of note. The obligation imposed upon a State not Party to the conflict to detain some categories of persons may be lifted or modified if so agreed between *that State and the Parties to the conflict*. This clearly means that each time there must be agreement between all three Parties (State not Party to the conflict and the two belligerent Parties). Thus, for example, if a State not Party to the conflict wishes to set free nationals of a Party to the conflict, whom it is supposed to detain until hostilities have ceased, before such time, it must not only have the agreement of the Party to which such persons belong (which will presumably grant permission very easily), but also that of the adverse Party. Such agreements can be envisaged particularly on the basis of reciprocity when nationals of both sides are interned in a State not Party to the conflict.

1180 The second new element mentioned in paragraph 4 concerns the “cost of hospital treatment and internment”, which “shall be borne by the State to which those persons belong”. This is in accordance with the above-mentioned Hague Convention of which Article 12, paragraph 2, provides that: “At the conclusion of peace the expenses caused by the internment shall be made good”. Nevertheless, there is nothing to indicate here that the debt need not be settled until there is peace, and in general the Parties to which the interned persons belong³¹ should cover the expenses caused by such persons regularly, in such manner as may be agreed upon with the State not Party to the conflict. Finally it is clear that this obligation is related only to persons who *must be interned* by the State not Party to the conflict and not such persons as it may have granted temporary or permanent asylum.

²⁸ On this subject, *cf.*, in particular, Arts. 49-50 of the First Convention, and *Commentary I*, pp. 350-372, as well as Art. 85 of the Protocol and the commentary thereon, *infra*, p. 989.

²⁹ *Cf.* Art. 28 of the First Convention.

³⁰ *Cf.* Art. 11 of the above-mentioned Hague Convention.

³¹ Although it is not mentioned in the text, this need not necessarily be a State in the context of Protocol I: *cf.*, in this respect, Art. 1, para. 4.

Paragraph 5

- 1181** This paragraph is important for States not Parties to the conflict. In the tense international situation which exists when an international armed conflict takes place on the borders of such a State, it is essential that it should not be open to the accusation of favouring one belligerent to the disadvantage of the other. The danger of such accusations and the possibility that they might have dramatic consequences should encourage the State not Party to the conflict to do all it can to avoid an ambiguous attitude.
- 1182** The case under consideration here concerns the facilities accorded for passage of medical aircraft of the Parties to the conflict over its territory, or for the landing or alighting on water of such aircraft. Paragraph 5 lays down an *obligation* to apply “equally to all Parties to the conflict” any conditions and restrictions in force in this respect.³² Of course, this does not mean that a State not Party to the conflict is obliged to allow exactly the same number of medical aircraft of each of the Parties to fly over its territory. However, it should consider all requests for agreements, from whatever Party they come, in the same way. The procedures it demands in such agreements, the degree of verification that it imposes on such flights, should also be the same for each of the Parties to the conflict. As regards inspection on the ground, the fate of the aircraft and that of its occupants, it has already been shown that the same rules apply to aircraft of each of the Parties.

Y.S.

³² This is merely a reflection, for that matter, of a general obligation arising from the law of neutrality.

Introduction

- 1183** The draft did not contain provisions on missing and dead persons – even though this is a question that had been dealt with by international humanitarian law at an early stage¹ – for this area is covered at some length in the Geneva Conventions.
- 1184** Nevertheless, on 6 November 1974, the United Nations General Assembly discussed the problems dealt with in the present Section, and adopted Resolution

* Remark: By way of exception, the references are given here for the whole Section as it was treated as a single article during much of the CDDH.

¹ Cf. in particular the Hague Regulations Respecting the Laws and Customs of War on Land annexed to the Hague Convention II of 29 July 1899 and the Hague Convention IV of 18 October 1907, Arts. 14 and 19, and the Geneva Convention of 6 July 1906, Arts. 3 and 4. Also see the Manual published by the Institute of International Law on the laws of war on land, following its session in Oxford in 1880, Art. 20.

3320 (XXIX) thereon, entitled “Assistance and co-operation in accounting for persons who are missing or dead in armed conflicts”, asking the United Nations Secretary-General to bring this resolution to the attention of the second session of the CDDH.

- 1185** That resolution follows up Resolution V of the XXIInd International Conference of the Red Cross (Teheran, 1973) and calls on Parties to armed conflicts to

“take such action as may be within their power to help to locate and mark the graves of the dead, to facilitate the disinterment and the return of remains, if requested by their families, and to provide information about those who are missing in action”.

- 1186** Some States then prepared a draft text and submitted a proposal to the second session of the CDDH,² while another delegation also presented a draft on the subject. Moreover, in accordance with the mandate given him, the Secretary-General presented Resolution 3220 (XXIX) to the Conference through the intermediary of the Director of the United Nations Human Rights Division.³

- 1187** The sponsors of the proposals drew attention to the positive effects of the existing provisions, but also pointed out that they “left a number of gaps”.⁴ To remedy this they proposed improvements on five main issues:

“First, the existing provisions did not cover all categories of missing and dead persons, in particular those civilians who were not internees protected by the Fourth Geneva Convention of 1949. Second, the provisions with regard to the maintenance of graves and the keeping of records thereof needed elucidation. Thirdly, the access to graves was not expressly granted in the provisions; fourthly, the duty to allow exhumation and return of the remains needed to be made clearer; fifthly, the duty to secure and exchange information on the missing and dead needed to be strengthened.”⁵

- 1188** The ICRC representative emphasized that:

“The Conventions were silent on one important matter: they did not oblige the Parties to a conflict to search at all times for soldiers of the opposing side whose names did not appear on the lists of captured or deceased persons. Nor were they obliged to carry out such searches in the case of civilians.”⁶

² Cf. *O.R.* XIII, pp. 102-103, CDDH/221/Rev.1, paras. 113-115; *O.R.* III, pp. 48-100, CDDH/II/56, and *O.R.* IV, pp. 166-167, CDDH/II/90.

³ Cf. *O.R.* XI, pp. 184-185, CDDH/II/19, paras. 67-69.

⁴ *Ibid.*, p. 185, para. 72.

⁵ *Ibid.*

⁶ *Ibid.*, p. 187, para. 86.

- 1189 Despite the fact that there were no provisions in the draft, the ICRC approved the idea that a new provision should be introduced into the Protocol, particularly as this would comply with the request put forward during the XXIInd International Conference of the Red Cross (Teheran, 1973 (Resolution V)), as well as Resolution 3320 (XXIX) of the United Nations General Assembly as mentioned above.⁷
- 1190 The Committee adopted this point of view, but considering the numerous problems raised by these proposals, referred examination of the question to a Working Group. The latter proposed introducing three articles in a new section of Part II of the Protocol, and this proposal was adopted by Committee II.
- 1191 This third Section of Part II first lays down the general principle on which the Section is based (Article 32 – *General principle*), then makes a distinction between the problem of missing persons (Article 33 – *Missing persons*) and that of the remains of the deceased (Article 34 – *Remains of deceased*). Each one of these questions is dealt with in a lengthy article. In the commentary on these articles, we will examine the new features which they add to the provisions of the Conventions on this subject.
- 1192 Three further elements which concern the Section as a whole deserve to be mentioned:
- 1193 – In principle the Parties to the Protocol are only required to apply it *inter se* in order to resolve problems relating to the consequences of conflicts breaking out between them or relating to the aftermath of such conflicts. Obviously we would not wish to defend the idea of retroactive application of the Protocol, but even so it is to be hoped that Parties bound by it will refer to it to resolve problems still unresolved at the end of a conflict which had ended before they had become bound by the Protocol. Questions relating to missing persons, and to an even greater extent, those concerning the remains of the deceased, actually pose problems well after the end of an armed conflict.
- 1194 – As explicitly mentioned in Article 33 (*Missing persons*), paragraph 2, and Article 34 (*Remains of deceased*), paragraph 1, the provisions of this Section are only intended to fill a gap and should in no case be substituted for a more favourable régime which the persons concerned may enjoy under the Geneva Conventions.

In order not to weaken the existing provisions and to leave them intact,⁸ the “additional” character of the new provisions was explicitly mentioned in the report of the Working Group presented during the 34th meeting of the Committee.⁹ This qualification was subsequently deleted as it was considered superfluous having regard to the general provision of Article 1 (*General principles and scope of application*), paragraph 3.¹⁰ However, in the context of this Section it is important to bear this in mind, for it is very relevant, as we will see in the analysis of certain provisions.

⁷ *Ibid.*

⁸ *Ibid.*, p. 186, para. 82.

⁹ CDDH/II/244/Rev.1, Chapter III, para. 11, 2nd sentence. *Cf. O.R. XIII*, pp. 107-110, CDDH/221/Rev.1, para. 120.

¹⁰ In this connection, *cf. in particular O.R. XI*, p. 358, CDDH/II/SR.34, para. 54. *Cf. also Article 96*, para. 1.

1195 – The question whether some provisions of this Section should impose obligations on a Party to the conflict vis-à-vis its own nationals was discussed repeatedly in Committee II.¹¹ The Committee’s intentions, as clearly expressed, were ultimately not to impose any such obligations: in fact, the report of the Working Group on this Section adopted by Committee II contained a paragraph in square brackets (Article 20 *quater*, paragraph 5), which provided that: “this Section does not impose on any High Contracting Party or Party to a conflict obligations with regards to its own nationals”.¹² Although this paragraph was later deleted by consensus, this was, according to the report by Committee II, “because it was self-evident that the article did not apply to a Party’s own nationals”.¹³

Y.S.

¹¹ Cf. in particular *O.R.* XI, p. 352, CDDH/II/SR.34, para. 18; p. 354, para. 30; pp. 358-359, para. 55; p. 370, CDDH/II/SR.35, para. 45; p. 372, para. 58; p. 374, para. 68. *O.R.* XII, p. 468, CDDH/II/SR.99, paras. 17-18; p. 476, CDDH/II/SR.100; para. 33.

¹² Cf. *O.R.* XIII, p. 285, CDDH/235/Rev.1, Annex I (Article 20 *quater*, paragraph 5).

¹³ *Ibid.* p. 361, CDDH/II/406/Rev.1, para. 32. However, in this connection, see commentary Art. 32, *infra*, p. 346 and note 19.

Article 32 – General principle

In the implementation of this Section, the activities of the High Contracting Parties, of the Parties to the conflict and of the international humanitarian organizations mentioned in the Conventions and in this Protocol shall be prompted mainly by the right of families to know the fate of their relatives.

Documentary references

By way of exception, the references to the Official Records of the CDDH are cited at the beginning of the Section as Articles 32-34 were treated as one article during much of the CDDH.

Commentary

General remarks

1196 The sponsors of the proposal, introduced as an amendment,¹ and which led to this Section, did not give expression to the general principle on which it was based. They were, however, aware of its importance, as shown in the following statement explaining the need for the amendment:

“To mitigate the suffering of the families of those who disappeared in war by removing the uncertainty about their fate and to give them an opportunity to remember their dead in the place where their remains lay was a fundamental humanitarian principle.”²

1197 However, an explicit statement of this principle was later included in a new amendment.³ The aim of the amendment was clearly explained by those who presented it. They were concerned with drawing attention to the suffering inflicted on families by armed conflict, and in particular the anxiety resulting from the absence of information. For this reason, families should be accorded a

³ *O.R.* III, p. 102, CDDH/II/259.

fundamental right which had never been recognized up to that time, namely, the right to know the fate of their relatives.⁴

- 1198 Nevertheless, the introduction of this principle met with some objections. Some delegates, while recognizing that there was a “basic need” for families to know the fate of their relatives, did not consider that it was truly a “fundamental right”.⁵
- 1199 Others considered that there was no need for this statement since “it merely stated the motive behind the article, which could surely be taken for granted”.⁶
- 1200 The Rapporteur of the Working Group, replying to this objection, recognized that “it was unusual to state the premises on which an article was based”, but emphasized the fact that the general principle had been incorporated “in response to a strong feeling of many delegations and institutions that it was important to express in the Protocol the idea that families had a right to know what had happened to their relatives”.⁷
- 1201 In this way he also answered the first objection by confirming the existence of a right,⁸ and his point of view finally prevailed both in Committee II and in the plenary Conference.
- 1202 The decision to state this general principle in a separate article was left to the Drafting Committee of Committee II, which opted for the solution given here.⁹ First, it was thought to include it as the first paragraph of Article 20 *bis* (the present Article 33 – *Missing persons*) and it must be admitted that the present wording of the principle relates essentially to that article.
- 1203 However, it should be stated that no one contested the statement made at the time of the presentation of the initial proposal that “the right of access to graves [...] was an obvious and fundamental humanitarian need”.¹⁰

Text of the article

- 1204 The principle is mentioned as the main motive for “activities” of the Parties to the conflict. It was therefore necessary to specify that it applies *only in the context of this Section*.
- 1205 Those undertaking the activities referred to are said to be the “High Contracting Parties”, the “Parties to the conflict” and the “international humanitarian organizations mentioned in the Conventions and in this Protocol”.
- 1206 The *Parties to the conflict* and the *High Contracting Parties* are mentioned separately because some Parties to the conflict may not be Contracting Parties and yet be bound by the Protocol.¹¹
- 1207 It is clear that apart from the Contracting Parties and Parties to the conflict, some organizations are brought in to play a role in the areas covered by this

⁴ Cf. O.R. XI, p. 363, CDDH/II/SR.35, para. 2.

⁵ *Ibid.*, p. 371, para. 49.

⁷ *Ibid.*, p. 232, para. 29.

⁸ On this subject, cf. also *infra*, p. 346.

⁹ Cf. O.R. XII, p. 253, CDDH/II/SR.78, para. 34.

¹⁰ O.R. XI, p. 186, CDDH/II/SR.19, para. 76.

¹¹ On this subject, cf. commentary Art. 96, paras. 2 and 3, *infra*, pp. 1086-1092.

Section. As a matter of fact, the Central Tracing Agency of the International Committee of the Red Cross is explicitly mentioned in Article 33 (*Missing persons*), paragraph 3.¹²

- 1208 The sponsors of the amendment, requesting that the principle mentioned in Article 32 should be given expression, referred only to “international organizations”. The present wording, proposed by another delegate,¹³ was preferred to this rather vague expression and was adopted without giving rise to any discussion. Yet the expression that was finally used is not very precise either. The organizations mentioned in the Conventions and the Protocol are referred to in many different ways, and in most cases such references are open-ended, so that it is impossible to draw up a comprehensive list of such organizations.¹⁴
- 1209 It should therefore be noted that the expression should be understood in a broad sense. The words “international humanitarian organizations”, in particular, might lead to the idea that there was an intention to limit them to inter-governmental humanitarian organizations, which is evidently not the case. The ICRC and its Central Tracing Agency are the first to be mentioned, and they would not fall under such a restrictive definition of international organizations. These therefore cover also non-governmental organizations.
- 1210 This broad interpretation is all the more important as it is not a matter of conferring powers, but of reminding those working in this area of a line of conduct which, it is hoped, will always be respected.
- 1211 The reference to the *right* of families to know the fate of their relatives gave rise to considerable discussion.¹⁵ It should be stressed once again that the use of this term was adopted after careful reflection, and made in full consciousness. The Rapporteur of the Working Group in particular drew attention to the fact that:

“United Nations General Assembly resolution 3220 (XXIX), which the Working Group had studied when drawing up the present text, stated in the last preambular paragraph that ‘the desire to know [...] is a basic human need’, but the text under consideration went even further by referring to the ‘right’.”¹⁶

He also justified calling it a right by stating that “if the right of families was not specifically mentioned, the Section might be interpreted as referring to the right of governments, for instance, to know what had happened to certain missing persons”.¹⁷ Finally, in the speech he made after the Section was adopted by consensus in Committee II, the Director of the United Nations Human Rights Division made the following statement:

¹² On this subject, *cf. infra*, p. 360.

¹³ *Cf. O.R. XI*, p. 365, CDDH/II/SR.35, para. 13.

¹⁴ However, on this subject, *cf. Commentary III*, pp. 594-596 (Art. 125) and commentary Art. 9, para. 2, *supra*, p. 143.

¹⁵ *Cf. supra*, p. 344.

¹⁶ *O.R. XII*, p. 232, CDDH/II/SR.76, para. 29.

¹⁷ *Ibid.*, para. 28.

“The text which had just been adopted by consensus was an important step forward in the field of international efforts to protect human rights. The Conference would emphasize the ‘right’ of families to be informed of the fate of their next-of-kin involved in armed conflicts [...]”¹⁸

- 1212** Thus, although there may be a right,¹⁹ the content of the obligation imposed on States, on other Parties to the conflict, and on the organizations concerned, is not easy to determine. In fact, it cannot be denied that there is no individual legal right for a representative of a family to insist that a government or other organization concerned undertake any particular action. This applies all the more because, as seen above, Committee II clearly confirmed that this Section did not impose obligations on a State with respect to its own nationals.²⁰
- 1213** However, it does grant the right (and imposes the duty) on those who are entrusted with ensuring the application of international humanitarian law – first, the Parties concerned, secondly the Protecting Powers and their substitutes, but also all the States Parties to the Protocol in pursuance of Article 1 (*General principles and scope of application*), paragraph 1 – to take care that activities undertaken in the light of this Section are basically motivated by this legal provision and keep clear of political or other motivations foreign to the nature of international humanitarian law.
- 1214** The right is that of a *family* with regard to its *relatives*. This right should obviously be exercised by one or more of the members of the family. The actual relationship required is deliberately not specified in greater detail. The sponsors of the amendment introducing the general principle had used the word “proches” (the original text was in French) and subsequently “parents”.²¹ The English translation in both cases referred to “relatives”. It was later pointed out that “there were varying definitions of ‘family’ and ‘relatives’ throughout the world”,²² and that in certain countries there was “the extended family”.²³
- 1215** In the end the Committee decided not to define the meaning of family and family members, leaving this, and the latitude with which the expression should be understood, to the Contracting Parties in accordance with their social and cultural environment. From the humanitarian point of view it is important to adopt an approach which, at a practical level, takes into account, as far as possible, not only blood relations and legal ties, but also personal and emotional ties. Article 74 (*Reunion of dispersed families*) confirms in any case that there is such a duty on the part of Contracting Parties and Parties to the conflict.
- 1216** The right of families mentioned here consists of knowing “the fate of their relatives”, i.e., all possible steps should be taken to inform them of such a fate,

¹⁸ *Ibid.*, p. 255, CDDH/II/SR.78, para. 46.

¹⁹ The recognition of such a right in international armed conflicts should have further repercussions, particularly with regard to the families of missing persons in non-international armed conflicts and in the framework of human rights, even during internal disturbances or tensions.

²⁰ Cf. introduction to the present Section, *supra*, p. 342.

²¹ O.R. III, p. 102, CDDH/II/259 and p. 105, CDDH/II/354.

²² O.R. XI, p. 365, CDDH/II/SR.35, para. 11.

²³ Cf. *ibid.*, p. 372, para. 58.

(but no one can be held to do the impossible). Thus it basically relates to Article 33 (*Missing persons*), which is concerned with the search for missing persons. Nevertheless, some obligations related to Article 34 (*Remains of deceased*), concerning the remains of the deceased, are also affected by this right, particularly the obligation to mark gravesites. Moreover, although this point is not explicitly mentioned, it should not be forgotten in commenting on this provision, that the right of access to gravesites was also mentioned during the Conference,²⁴ and no objections on points of principle were made. In the speech mentioned above,²⁵ the Director of the United Nations Human Rights Division mentioned the will of the Conference to underline “the right of families” also “to have some assurance that the remains of those who died would be treated in accordance with national ethical values and age-old traditional standards”.²⁶

1217 In short, it certainly seems that the Conference wished to see that all the activities undertaken in the context of this Section would be basically founded on a concern for the interests of families and to spare them emotional suffering as far as possible.

1218 However, the right of families should not be more than the “primary” motivation for the activities concerned and thus these activities are founded basically, but not solely, on this right.²⁷ A Party to the conflict also has the right to know the fate of its soldiers, and it may happen, though only in exceptional cases, that a prisoner does not wish to communicate with his family.

1219 Indeed this right is shared, and although priority should be given to the family, the two interests involved do not clash. In the situation where the prisoner does not wish to communicate with his family, however, the two interests, i.e. that of the individual and that of his family, contradict each other. In this situation, although one can try to make the unwilling person understand his family’s suffering, one cannot impose on him a course of action by virtue of the general principle.

Article 33 – Missing persons

1. As soon as circumstances permit, and at the latest from the end of active hostilities, each Party to the conflict shall search for the persons who have been reported missing by an adverse Party. Such adverse Party shall transmit all relevant information concerning such persons in order to facilitate such searches.
2. In order to facilitate the gathering of information pursuant to the preceding paragraph, each Party to the conflict shall, with respect to persons who would not receive more favourable consideration under the Conventions and this Protocol:
 - (a) record the information specified in Article 138 of the Fourth Convention in respect of such persons who have been detained, imprisoned or otherwise held in captivity for more than two weeks as a result of hostilities or occupation, or who have died during any period of detention;
 - (b) to the fullest extent possible, facilitate and, if need be, carry out the search for and the recording of information concerning such persons if they have died in other circumstances as a result of hostilities or occupation.
3. Information concerning persons reported missing pursuant to paragraph 1 and requests for such information shall be transmitted either directly or through the Protecting Power or the Central Tracing Agency of the International Committee of the Red Cross or national Red Cross (Red Crescent, Red Lion and Sun) Societies. Where the information is not transmitted through the International Committee of the Red Cross and its Central Tracing Agency, each Party to the conflict shall ensure that such information is also supplied to the Central Tracing Agency.
4. The Parties to the conflict shall endeavour to agree on arrangements for teams to search for, identify and recover the dead from battlefield areas, including arrangements, if appropriate, for such teams to be accompanied by personnel of the adverse Party while carrying out these missions in areas controlled by the adverse Party. Personnel of such teams shall be respected and protected while exclusively carrying out these duties.

Documentary references

By way of exception the references to the Official Records of the CDDH are cited at the beginning of the Section as Articles 32-34 were treated as one article during much of the CDDH.

Commentary

General remarks

- 1220 The substance of this article was contained in paragraphs 2, 7, 8 and 9 of the initial draft which led to this Section and which consisted of only one article.¹
- 1221 In its first report the Working Group charged with examining this subject had already proposed dividing the article into two main parts, one devoted to “information on the missing and dead”, and the other to “graves”.² Although the titles were changed later, this distinction was retained.
- 1222 The main aims of the article are, on the one hand, to extend the obligation to search for missing persons to embrace also persons not covered by the Conventions, and on the other hand, to reinforce the duty to furnish and exchange information on the missing and the dead in order to facilitate the search for them.³

Paragraph 1 – Search

- 1223 This paragraph introduces the obligation to search for persons who have been reported missing, an obligation which, as the delegate presenting the initial proposal stated, “met a fundamental humanitarian need, which was not yet fully and explicitly covered by existing treaty obligations”.⁴

First sentence – Obligations of the Party receiving the request

- 1224 Obviously this type of search is distinct from that carried out on the battlefield after a clash, which is covered by Article 15 of the First Convention and paragraph 4 of this article. With regard to paragraph 1 under consideration here, it is not so much a question of combing a well-defined area, but of carrying out a real investigation.
- 1225 The persons covered by this paragraph are not listed. Apparently the only restriction imposed is that the request should come from the adverse Party. Does this mean that the latter may request information about anyone? It certainly does not. The request must relate to persons who are either nationals of that Party, or in some other way are linked to it – such as, in particular, persons who had been admitted to its territory as refugees or persons who had enlisted in its armed forces – or generally persons in whom it has a genuine interest based on the general principle of Article 32 (*General principle*), such as members of the family of a person belonging to the two former categories.

¹ Cf. *O.R.* III, pp. 98-100, CDDH/II/56.

² Cf. *O.R.* XIII, pp. 107-110, CDDH/221/Rev., para. 120.

³ On this subject, cf. particularly *O.R.* XI, p. 185, CDDH/II/SR. 19, para. 72.

⁴ *Ibid.*, p. 186, para. 79. Cf. also *ibid.*, p. 187, para. 86.

- 1226 Although this restriction is not explicitly made in Article 33, it is nevertheless quite clear that it follows from the general principle of Article 32 (*General principle*) – the object of the request must be humanitarian – and from the jurisdiction *ratione personae* of States as defined by general international law.⁵
- 1227 Nevertheless, when there is any controversy regarding the legitimacy of the request, particularly if it relates to persons from territory the status of which is contested, so that consequently their nationality is also contested,⁶ the interests of families and the humanitarian character of the problem should prevail in accordance with the principle set out in Article 32 (*General principle*).
- 1228 Moreover, a Party reporting missing persons will use its authority mainly to deal with requests submitted to it by the families of missing persons. A systematic refusal to transmit such requests would be contrary to the principle of Article 32 (*General principle*).
- 1229 Persons to be searched for, according to a request, should basically be combatants from whom there has been no news, or civilians in occupied territory or enemy territory. The idea of including “a definition of ‘missing’, to indicate that a missing person, whether military or civilian, was one who had not returned to his unit after a military operation or mission, or who had not returned to his home because of circumstances associated with the hostilities”⁷ was rejected, and the Working Group on this matter adopted the following working definition: “the missing were those reported by another party as missing”.⁸ It follows that a request cannot be refused for the sole reason that the person to be searched for is not “missing” in the strict sense of the word.
- 1230 In theory searches should not be related to prisoners of war or civilian internees, since, on the one hand, information about persons in these categories should be transmitted to the Powers concerned by the national Information Bureaux which must be established by Detaining Powers in pursuance of Articles 119 and 122 of the Third Convention, as well as Article 137 of the Fourth Convention, while on the other hand, any search should be undertaken on the basis of Article 119 of the Third Convention and Article 133 of the Fourth Convention.
- 1231 Requests from allied States or States not Parties to the conflict are not taken into consideration in this context as they are supposed to be made through normal diplomatic channels and are not subject to international humanitarian law. However, logically, requests from States not Parties to the conflict, but without diplomatic relations with the Party to whom the request for the search is directed, should also be admitted, since nationals of such States are considered as protected persons under the Fourth Convention while they are in the territory of that Party.⁹ Thus there is a gap here, probably unintentional, as the record of the

⁵ On this subject, *cf.* particularly A.N. Makarov, “Règles générales du Droit de la nationalité”, 74 *Hague Recueil*, 1949/I, p. 269.

⁶ In this respect it should be noted that Committee II clearly indicated that the Section did not lay down any obligation for a Party to the conflict with respect to its nationals. *Cf.* the introduction to this Section, *supra*, p. 342.

⁷ *O.R.* XI, p. 191, CDDH/II/SR. 20, para. 13.

⁸ *Ibid.*, p. 353, CDDH/II/SR.34, para. 20.

⁹ *Cf.* Art. 4 of that Convention.

negotiations shows that the problem has not been raised.¹⁰ Whatever the facts of the matter, this omission could also be remedied by an initiative taken by an organization such as the ICRC, which could transmit requests relating to such cases.

- 1232** The obligation is imposed only on Parties to the conflict, which is logical in the context of international humanitarian law. It is expressed in a very general manner: those persons who have been reported missing shall be “searched for”. The first step in such a search, which suffices in some cases, may be relatively simple: the last known place of residence of the person concerned is checked or the registers of detention centres are inspected (however, the second task may be more complicated than it seems if there is no central register or if the registers are badly kept or non-existent).
- 1233** If the first step is not successful, the search of course becomes more difficult and may require considerable effort. For example, it may be necessary to search for members of the family who could give information, to question neighbours and colleagues, in short, to carry out a true investigation. It is quite clear that the possibility of conducting such investigations will vary considerably, depending on the situation and also on the infrastructure and the geography of the country and on the willingness of its leaders and the manpower available. In this respect it should be mentioned that the National Red Cross or Red Crescent Societies should be able to make a considerable contribution to this task. They can draw on the experience of the Central Tracing Agency of the ICRC, which also plays a coordinating role.
- 1234** The Conference did not specify how far the *obligation* extends. Certainly it would not be met if the first step mentioned above, which must be considered as a minimum requirement, were not undertaken. As regards the second step, there were delegates who stated that “too heavy a burden should not be imposed on the Parties” and that “account must be taken of the fact that the conditions of the search might be difficult and the costs high”.¹¹ Furthermore, though a proposal to mitigate the obligation by adding the words “as far as practicable” was finally withdrawn, this was only after the intervention of the Rapporteur of the Working Group, who stressed that “such a provision was implicit in the entire Section”.¹²
- 1235** The obligation exists “as soon as circumstances permit, and at the latest from the end of active hostilities”. This wording tends to set a time-limit which allows great latitude of judgment to the Parties to the conflict obliged to carry out the search (they themselves must determine whether circumstances will permit the search to be carried out), but it also lays down an absolute limit: the end of active hostilities.
- 1236** Various opinions, which do not all accord, were expressed with regard to this wording,¹³ but during one of the last discussions relating more specifically to the

¹⁰ The obligation to record information about nationals of such States – on this subject, *cf. infra*, pp. 357-358 – is another important indication with regard to the intention that para. 1 should cover such States.

¹¹ *O.R.* XII, p. 231, CDDH/II/SR.76, para. 22.

¹² *Ibid.*, para. 27. *Cf.* also pp. 252-253, CDDH/II/SR.78, paras. 25-32.

¹³ *Cf.* particularly, *O.R.* XI, p. 365, CDDH/II/SR.35, para. 13; *O.R.* XII, p. 231, CDDH/II/SR.76, para. 25; p. 234, CDDH/II/SR.76, para. 38.

term “active hostilities” the Rapporteur of the Drafting Committee recalled that as these words were used in the Geneva Conventions, the Working Group considered that they should be retained.¹⁴ This point of view finally prevailed.

1237 The expression “as soon as circumstances permit” requires that the Parties which have to undertake the search examine the possibility of doing so before the end of active hostilities. There is therefore a clear directive that consideration of the request should not simply be delayed to the second time-limit; the situation should be assessed immediately, and then at regular intervals, to determine whether circumstances permit the requested search to be carried out. For example, there are no major *a priori* reasons preventing registers from being checked. On the other hand, if a more thorough investigation turned out to be necessary, the possibilities of gaining access to certain places or communicating with them may be reduced as a result of hostilities, and may justify delaying the investigation. However, the Parties concerned must constantly bear in mind the interests of families and be aware of the terrible moral suffering inflicted on them by any delay in the transmission of information about their relatives.

1238 As regards the absolute limit of the “end of active hostilities”, virtually the same expression can be found in the Geneva Conventions, though only in one place.¹⁵ The Commentary in French on the Third Convention equates the end of active hostilities with a cease-fire¹⁶ (though this term is not mentioned in the English text), underlining the fact that hostilities “could cease without any peace treaty, or even armistice”.¹⁷ In fact, the meaning of the expression “active hostilities” is no different in this context from that of the expression “hostilities”. In both cases it refers to armed hostilities.

1239 Finally it should be noted that no time-limit is laid down with regard to how long such activities should be pursued. As the Rapporteur of the Working Group remarked:

“The representative of the Central Tracing Agency of the ICRC had in fact suggested adding a provision to the effect that the search should continue without any limit of duration, but the members of the Working Group had considered that such a provision was implicit in the paragraph.”¹⁸

This statement was not contested.

¹⁴ *O.R. XII*, p. 250-253, CDDH/II/SR.78, paras. 12, 20, 33-34.

¹⁵ Article 118, para. 1, Third Convention. The French text is identical (*la fin des hostilités actives*); in the English version there is a slight difference: “the cessation of active hostilities” instead of “the end of active hostilities”. On the other hand, Article 17, para. 4, of the First Convention and Article 130, para. 3, of the Fourth Convention use the same expression in French: “dès que les circonstances le permettront et au plus tard à la fin des hostilités”. In the English text they are different in wording: First Convention: “As soon as circumstances permit, and at the latest at the end of hostilities; Fourth Convention: “as soon as circumstances permit, and not later than the close of hostilities”.

¹⁶ *Cf. Commentary III*, p. 550 (English text) and p. 579 (French text).

¹⁷ *Commentary III*, p. 541.

¹⁸ *O.R. XII*, p. 232, CDDH/II/SR.76, para. 28.

Second sentence – Obligation of the Party making the request

- 1240** The second sentence of paragraph 1 seems self-evident. If a Party requests a search, it is in its own interests to transmit all relevant information to facilitate the investigation.
- 1241** Nevertheless, the sentence has a purpose. Transmitting requests for searches received from families should not become a routine matter, and it is therefore proper that from the outset this should be done in a serious and thorough manner. For this purpose the officials or other persons responsible for preparing the request to be transmitted should consistently stipulate that requesting families give all the information that might facilitate the investigation.
- 1242** The expression “all relevant information” is of course not very precise. The report of the Working Group presented during the third session of the CDDH indicated: “the name, special characteristics and other information on such persons”.¹⁹
- 1243** At the presentation of the report of the Working Group at the preceding session, the Rapporteur of this group had mentioned “names and other relevant information (such as the date and place of loss)”.²⁰
- 1244** The general expression that was finally adopted is justified by the fact that the information concerned may vary considerably in each individual case (date of last letter and place where it was despatched, testimony of witnesses, addresses of friends etc.). It is important simply that the person making the request does so intelligently and conscientiously in order to “facilitate search” to be undertaken by the adverse Party, as the text states explicitly.
- 1245** Where necessary, the Central Tracing Agency of the ICRC will make its experience available to persons charged with gathering and transmitting information about cases of missing persons.²¹

Paragraph 2 – Measures to facilitate the search*Opening sentence*

- 1246** Paragraph 2 is addressed to the Parties to the conflict only, and imposes two obligations on them mentioned in sub-paragraphs (a) and (b). In addition to the

¹⁹ O.R. XIII, p. 331, CDDH/II/376 (Art. 20 bis, para. 2).

²⁰ O.R. XI, p. 353, CDDH/II/SR.34, para. 20.

²¹ The wording of requests for a search by the CTA contains the following points: full name of the person being searched for (as used locally); father’s full name; mother’s full name; date of birth; sex; place of birth; nationality; country of origin; occupation; marital status; rank/unit/service number (if applicable); date and kind of last news; last known address; circumstances leading to loss of contact; full name of family members accompanying the person to be traced; date of birth; sex; relationship; additional information (request to supply all information that may assist investigation, such as: duration and address of former residences, precisions regarding business address or that of present employer, religion etc.); name and address of persons able to supply information; full name of the enquirer (as used locally); father’s full name; mother’s full name; date of birth; sex; place of birth; full present address; relationship to the person to be traced; signature of the enquirer; date and place of request.

general objective of the Section as a whole, described in Article 32 (*General principle*), these obligations have a direct purpose mentioned in the opening sentence: “to facilitate the gathering of information pursuant to the preceding paragraph”. This wording is actually not very clear at first reading, in that it could lead one to think that it refers to the information described in the second sentence of paragraph 1 which must be communicated by the requesting Party to facilitate the investigation by the Party undertaking the search. However, the measures laid down in sub-paragraphs (a) and (b) only concern the Party holding missing persons, i.e., the Party to which requests may in due course be addressed. Thus paragraph 2 refers to the first sentence of paragraph 1, and not to the second sentence.

1247 Finally, the introductory sentence is a reminder that the obligations laid down here establish new duties, for the benefit of persons who were previously inadequately covered or not covered at all, but do not in any way restrict the more extensive rights to which some categories of persons are entitled under the rules of the Conventions, or by virtue of other provisions of Protocol I. We will examine below which persons are covered by each of these obligations, and which are not because they are entitled to better protection under other provisions of the Conventions or Protocol I.

Sub-paragraph (a) – Keeping records

1248 This provision deals separately with the obligation to record information about persons who have been detained, on the one hand, and those who have died during a period of detention, on the other.

1. The obligation to record information in respect of persons who have been detained

1249 The content of the first part of the obligation is relatively simple: it consists of recording the information laid down in Article 138 of the Fourth Convention, viz.:

- surname;
- first names;
- place and date of birth;
- nationality;
- last residence;
- distinguishing characteristics;
- the first name of the father and the maiden name of the mother;
- the date, place and nature of the action taken with regard to the individual;
- the address at which correspondence to him may be sent;
- the name and address of the person to be informed.

1250 It should be recalled that this list is preceded by the qualification “at least”, and that other useful information may be added, particularly when some of the information mentioned above cannot be obtained.

- 1251** Finally, as Article 138 also provides for the regular transmission of information regarding the state of health of internees who are seriously ill or seriously wounded, every file should contain, where applicable, information about the medical procedures which have been carried out on the persons concerned, as is in fact explicitly provided in Article 11 (*Protection of persons*), paragraph 6, of the Protocol, which also covers such persons.²²
- 1252** Next, it is necessary to determine exactly to which persons the first part of the obligation applies.
- 1253** First we shall examine who are “protected persons” under the Fourth Convention, i.e., as regards the relations between two Parties to the Conventions:
- nationals of one Party who are in the power of the adverse Party;
 - nationals of a Party not involved in the conflict (a neutral State according to the terminology of the Conventions)²³ in occupied territory;
 - nationals of a Party not involved in the conflict who are in the territory of a Party to the conflict where their State does not have “normal diplomatic representation”;²⁴
 - nationals of a Party engaged in the conflict who are in the power of a co-belligerent (allied) Party in which their State has no “normal diplomatic representation” (which should be very exceptional).
- 1254** The obligation to record the information listed in Article 138 of the Fourth Convention covers those protected persons who are “kept in custody for more than two weeks, who are subjected to assigned residence or who are interned” (Article 136, Fourth Convention). The wording used in the Protocol – “detained, imprisoned or otherwise held in captivity for more than two weeks” – attempts to avoid any loopholes: it refers to any person who is forcefully detained by the Party concerned for a period longer than two weeks. This period has been retained, as it corresponds to the time which may be necessary for a preliminary judicial investigation. In fact, although the expression “interned”, which is used in Article 136 of the Fourth Convention, may leave some room for doubt whether it was meant to cover all forms of detention, this was certainly the intention of the Conference in 1949, as confirmed in the commentary on this provision. The Diplomatic Conference of 1949 “considered that the national Information Bureaux, in order to keep constant track of each person, should record every sort of detention”.²⁵ Thus, the first part of the obligation laid down in paragraph 2, sub-paragraph (a), clarifies, but does not in any way change, the obligation to record information laid down in Article 138 with regard to persons protected by the Fourth Convention. In addition, it should be recalled that the obligation of the Fourth Convention applies to all protected persons detained for more than

²² Cf. commentary Art. 11, para. 6, *supra*, pp. 161-163. For more details on Article 138 of the Fourth Convention, cf. also *Commentary IV*, pp. 534-537.

²³ On this subject, cf. commentary Art. 2, sub-para. (c), *supra*, pp. 61-62.

²⁴ On the meaning of the expression “normal diplomatic representation”, cf. *Commentary IV*, pp. 48-49.

²⁵ *Commentary IV*, p. 526.

two weeks “whether for political reasons or for offences against ordinary law”,²⁶ while the Protocol is limited to detention “as a result of hostilities or occupation”.

1255 We shall now consider the position of civilians in the territory of a Party to the conflict or in occupied territory who are not specifically protected by the Fourth Convention, viz.:

- a) nationals of a State not Party to the Fourth Convention;
- b) nationals, other than those in occupied territory, of a State not Party to the conflict which has “normal diplomatic representation” in the detaining State;
- c) nationals of a co-belligerent State which has “normal diplomatic representation” in the detaining State;
- d) the Party to the conflict’s own nationals.

a) *Nationals of States not Parties to the Fourth Convention*

1256 In principle the Protocol only applies between Contracting Parties or between a Contracting Party and a Party to the conflict which, though not a Contracting Party, is bound pursuant to Article 96 (*Treaty relations upon entry into force of this Protocol*), paragraphs 2 and 3.²⁷ Nevertheless, the Conference’s intention in Article 33 seems to have been to cover *all* persons, except nationals, who are missing in the territory of a Party to the conflict in time of armed conflict and who do not already enjoy protection under another treaty.²⁸ In fact, keeping such records is in the interests of families and therefore accords with the spirit of Article 32 (*General principle*).

b) *Nationals of States not Parties to the conflict*

1257 Nationals of States not Parties to the conflict were expressly mentioned by the acting Rapporteur of the Working Group of Committee II charged with examining this Section, as being covered by Article 33.²⁹ This view did not raise any objections, and must be considered to have been generally accepted. It may be viewed as the counterpart to the obligation which rests upon States not Parties to the conflict to apply “the relevant provisions of this Protocol to persons protected by this Part who may be received or interned within their territory, and to any dead of the Parties to that conflict whom they may find” (Article 19 – *Neutral and other States not Parties to the conflict*).³⁰

c) *Nationals of co-belligerent States*

1258 The above-mentioned statement by the acting Rapporteur of the Working Group also related to nationals of co-belligerent States.³¹ The logic of this is not

²⁶ *Ibid.*

²⁷ On this subject, *cf.* commentary Art. 96, *infra*, pp. 1086-1092.

²⁸ In this sense, *cf.* O.R. XII, p. 228, CDDH/II/SR.76, para. 8, and M. Bothe, K.J. Partsch, W. Solf, *op. cit.*, p. 173.

²⁹ *Cf.* O.R. XII, p. 228, CDDH/II/SR.76, para. 8.

³⁰ On this subject, *cf.* commentary Art. 19, *supra*, p. 237.

³¹ *Cf.* O.R. XII, p. 228, CDDH/II/SR.76, para. 8.

so clear for this category of persons, as their situation is not governed by the Conventions and the Protocol, except where there are no diplomatic relations. It is, in fact, a very useful exception; there are cases where a government engages the State which it represents in a conflict on the side of another State, against the wishes of the majority of its own population, of which some members may leave the country or go underground. In such cases the humanitarian importance of prescribing compulsory records for nationals of the co-belligerent State who have been detained is apparent. However, the obligation to keep records only relates to nationals of a Party which is also bound by the Protocol, and only if such persons are held in captivity “as a result of hostilities or occupation”.³² Thus this does not include someone imprisoned under ordinary rules of criminal law, though of course this should not be used as a pretext to wrongfully exclude persons who have committed acts for reasons related to the conflict. In this case again legal niceties should not be the dominant factor, but a respect for the interests of families.

d) *A Party to the conflict's own nationals*

- 1259** As regards the nationals of a Party to the conflict itself, the clear statements made in Committee II about excluding them from the scope of this Section were mentioned above.³³ Thus the Protocol does not impose an obligation on a State to keep records of its own nationals who are held in captivity, even when this is for reasons related to the hostilities. However, it cannot be denied that it would be desirable to keep such records in accordance with the general principle of Article 32 (*General principle*), particularly when a State is divided politically, or even physically split in two. In addition, it is absolutely essential that records of persons whose nationality is contested are kept, *a fortiori* when the question of nationality is the crux of the conflict.
- 1260** The obligation to record prisoners of war (Article 4A, Third Convention) and persons entitled to prisoner-of-war treatment (Article 4B, Third Convention) is laid down in Article 122 of the Third Convention, and these categories are therefore not covered by Article 33, paragraph 2, sub-paragraph (a), under consideration here.
- 1261** Persons enjoying the status of combatant and, where applicable, prisoner-of-war status in accordance with Articles 43 (*Armed forces*), 44 (*Combatants and prisoners of war*) and 45 (*Protection of persons who have taken part in hostilities*) of the Protocol, and who are not covered by Article 4 of the Third Convention, are also protected, in the case of Parties to the Protocol, by Article 122 of the Third Convention, and therefore do not fall under Article 33 of the Protocol with which we are concerned here.
- 1262** Apart from this, spies,³⁴ mercenaries³⁵ and all those denied prisoner-of-war status are normally covered by the Fourth Convention, and if not, by this Article.

³² Cf. *supra*, p. 357.

³³ Cf. introduction to this Section, *supra*, p. 339.

³⁴ Cf. Art. 46, Protocol I.

³⁵ Cf. Art. 47, Protocol I.

Thus records must be kept on them in accordance with the requirements examined above.

2. *The obligation to record information in respect of persons who died during detention*

- 1263** Information as set out in Article 138 of the Fourth Convention and in this paragraph must also be recorded if those concerned have died in detention.³⁶
- 1264** This applies to all persons defined above. In case of death, however, the obligation even applies during the first two weeks of detention.
- 1265** It is logical that the obligation has been so strengthened in case of death in detention, and it fits into the system of the present Section III. For it may be recalled that one of the purposes of this Section was to strengthen “the duty to secure and exchange information on the missing and dead”.³⁷

Sub-paragraph (b) – Keeping records in case of death otherwise than in detention

- 1266** Sub-paragraph (a) is concerned with an obligation to keep records which presupposes instructions at an administrative level, but does not involve great expense; it is no great thing to ask a State to keep a record of persons it holds in detention.
- 1267** Although the purpose of sub-paragraph (b) is the same, i.e., to inform families, it implies the setting into motion of specific measures which may be costly. This is why the expression “to the fullest extent possible” was introduced at the explicit request of several delegates who had stressed the limited means available to some States.³⁸
- 1268** The persons concerned are still the same, i.e., those who do not enjoy more favourable treatment under the Conventions and this Protocol.³⁹ The search and recording of information are in this case concerned with persons who have died, on the one hand, “as a result of hostilities or occupation”,⁴⁰ and on the other hand not in a place of detention under the control of the Party to the conflict. The expression “in other circumstances” actually refers to the words “during any period of detention” used in sub-paragraph (a), so as to exclude detention. The latter of course covers only detention imposed by the Party concerned, and not that resulting from banditry (kidnapping, taking hostages etc.).
- 1269** It should be remembered that sub-paragraph (b) only seeks to make the obligation laid down in paragraph 1, i.e., to search for persons who have been reported missing by an adverse Party, more specific. The scope of this obligation here, in the context of sub-paragraph (b), only extends to the search for *deceased*

³⁶ On the meaning of the word “detention”, cf. *supra*, p. 356.

³⁷ O.R. XI, p. 185, CDDH/II/SR.19, para. 72.

³⁸ Cf. particularly *ibid.*, pp. 368-369, CDDH/II/SR.35, paras. 33 and 41.

³⁹ Cf. *supra*, pp. 341 and 354-355.

⁴⁰ On this subject, cf. *supra*, p. 357.

persons, and keeping records of them. Nevertheless, as regards the search, this concerns persons who are presumed dead. This applies in particular to the registration of the missing and the dead after bombardments.

- 1270 The obligation imposed on the Parties to the conflict is to “facilitate and, if need be, carry out” the search for and the recording of information concerned. As one delegate stated, this wording is justified as “in occupied territory the search for and recording of information concerning the persons referred to [...] would normally be left to the local municipal authorities”.⁴¹

Paragraph 3 – Transmission of information

- 1271 First, this paragraph determines the appropriate channel for transmitting requests and the information mentioned in paragraphs 1 and 2. Secondly, it provides for the central safekeeping of such information in view of the humanitarian importance it has sometimes for a very long time.
- 1272 The information concerned is that gathered in accordance with paragraphs 1 and 2. As regards the “requests for such information”, this refers, as clearly shown in the English text, to the requests made by a Party to the conflict to an adverse Party, in accordance with paragraph 1, to search for a missing person. In short, all these activities presuppose a contact between the Parties to the conflict and a way must be found to establish this.
- 1273 The first possibility to be mentioned is through direct contact, which is logical wherever possible. If not, an intermediary should be found. As a first resort, the Protecting Power is mentioned, which is designated by a Party to the conflict to safeguard its humanitarian interests vis-à-vis the adverse Party, and can easily play this role.
- 1274 However, for this to happen, the system of Protecting Powers, or at least of their substitutes, must be functioning properly. Yet though it is to be hoped that it will gain strength by virtue of the fact that it is reinforced in the Protocol,⁴² it cannot be denied that it has seldom been applied since the Conventions were adopted.
- 1275 Other possibilities were therefore provided for. The first is to employ the channel of the Central Tracing Agency (CTA) of the ICRC. In particular, this has the right to visit prisoners of war and civilian internees, and generally sends a delegation to each of the Parties to the conflict in the case of an international armed conflict. Representatives of the CTA are included in these delegations and thus they can easily play an intermediary role as the information and the requests are generally transmitted through the headquarters of the organization in Geneva. It should be noted that the explicit mention of the CTA of the ICRC also constitutes *a posteriori* recognition of the fact that in practice the CTA plays the role of the central information agencies which, according to the Conventions, should be created in neutral countries in the case of international

⁴¹ O.R. XI, p. 370, CDDH/II/SR.35, para. 46.

⁴² On this subject, cf. commentary Art. 5, *supra*, p. 75.

armed conflict, both for prisoners of war and for persons protected by the Fourth Convention.⁴³

- 1276 Finally, the possibility is laid down of using the national Red Cross and Red Crescent Societies. In fact, it may happen that contact is established between two National Societies of countries engaged in conflict, and that as a result, they play a humanitarian role. Resolution XXI of the XXIst International Conference of the Red Cross (Istanbul, 1969) indeed recommends such contacts.
- 1277 On the other hand, the reference to other impartial humanitarian organizations, initially included in the report of the Working Group, was deleted, since, according to one delegate, “division of effort means loss of efficiency”.⁴⁴
- 1278 The second sentence of the paragraph “underlined the role of the Central Tracing Agency”,⁴⁵ as stated by the acting Rapporteur of the Working Group, by requesting that information which had not passed through this Agency should be transmitted to it. The Parties to the conflict are responsible for “ensuring” that such information is transmitted, either by directly communicating such information as is available to them, or by ensuring that the intermediary acting as liaison with the adverse Party also informs the CTA.
- 1279 In this way, the importance of making sure that the information is centralized in one place and safely stored on a long-term basis is recognized. National frontiers may be changed, populations dispersed and files destroyed, but the central storage of information has enabled families to be reunited or to regain contact, sometimes even long after the end of the armed conflict, as well as making possible many other humanitarian acts.⁴⁶

Paragraph 4 – Searching for the dead in battlefield areas

- 1280 This paragraph supplements Article 15 of the First Convention, which provides in particular that the Parties to the conflict:

⁴³ Cf. Art. 123, Third Convention, and Art. 140, Fourth Convention. Cf. also *O.R.* XI, p. 191, CDDH/II/SR.20, para. 10.

⁴⁴ *O.R.* XI, p. 355, CDDH/II/SR.34, para. 37. Cf. also pp. 363-364, CDDH/II/SR.35, para. 3.

⁴⁵ *O.R.* XII, p. 228, CDDH/II/SR.76, para. 9.

⁴⁶ In this respect it should be noted that information received “over and above” that which the Parties to the conflict are obliged to furnish under treaty obligations has enabled the solution of many humanitarian problems. By way of example the following could be mentioned:

- lists of former prisoners of war and internees in German hands, drawn up by the allied forces when they liberated them;
- lists of civilian internees repatriated from Ethiopia (occupied by the United Kingdom) to Italy during the conflict;
- lists of the Italian Red Cross and other Italian organizations of Italian civilians and former prisoners of war, repatriated after the end of hostilities;
- information received from the Italians, after the war, on Italian soldiers killed during hostilities;
- replies to questionnaires on civilian internees in the United Kingdom and in the Commonwealth.

In addition it should be noted that information from neutral countries may be very useful, such as, for example, the lists of persons who passed through Switzerland in the process of repatriation.

“shall, without delay, take all possible measures to search for and collect the wounded and sick, to protect them against pillage and ill-treatment, to ensure their adequate care, and to search for the dead and prevent their being despoiled”.⁴⁷

- 1281** Paragraph 4 of Article 33 provides “to search for, identify and recover the dead”, in order to fulfil two humanitarian objectives: that of informing the family of the deceased, if he has been identified, and that of ensuring a decent burial after having been removed to behind the lines, if that is possible, or on the spot if it is not.
- 1282** Logically the function of searching for the dead, as provided for in this article, should be coordinated with the function, laid down in Article 15 of the First Convention, of searching for the wounded.
- 1283** As far as possible this will be the case. However, it should be noted that although Article 15 provides that “whenever circumstances permit, an armistice or a suspension of fire shall be arranged, or local arrangements made”, this is only in order to permit “the removal, exchange and transport of the wounded left on the battlefield”, and not to recover the dead. Now the provision of Article 33 under consideration here also lays down the possibility of making arrangements with regard to recovering the dead, though in a less imperative manner: “The Parties to the conflict shall endeavour to agree on arrangements”. Admittedly the difference in meaning is minimal,⁴⁸ but it is clear that the obligation laid down is not absolute.⁴⁹ For that matter, it often happens that these activities are carried out in two stages: the first, devoted to the wounded for whom every minute counts; the second, devoted to the dead.
- 1284** Though Article 15 of the First Convention does not explicitly mention joint teams, i.e., teams of one Party to the conflict accompanied by personnel of the adverse Party, as does the provision under consideration here, such a possibility is not excluded in that article and it therefore also exists with regard to the search for the wounded.
- 1285** The possibility of a team being accompanied by personnel of the adverse Party is provided when such teams are “carrying out these missions in areas controlled by the adverse Party”.
- 1286** In this respect it was clearly stated that activities of a team in territory controlled by the adverse Party could not be carried out without the agreement of the latter.⁵⁰
- 1287** In fact, in referring to battlefield areas, we are dealing with “areas the physical control of which is not clearly established”,⁵¹ as described in Article 26 (*Medical aircraft in contact or similar zones*), unless hostilities have ceased. Moreover, there will probably be dead or even wounded of each of the Parties. The arrangement should therefore, as far as possible, allow for activities by joint teams to search for the dead and wounded of *both* Parties.

⁴⁷ Cf. also *O.R.* XI, p. 192, CDDH/II/SR.20, para. 20.

⁴⁸ On this subject, cf. also *O.R.* XII, p. 230, CDDH/II/SR.76, paras. 18-19; p. 233, paras. 31-32.

⁴⁹ In this respect, cf. *O.R.* XI, p. 360, CDDH/II/SR.34, para. 62.

⁵⁰ Cf. particularly *ibid.*, p. 365, CDDH/II/SR.35, para. 14.

⁵¹ Cf. commentary Art. 26, *supra*, p. 290.

- 1288 The expression “battlefield areas”, taken from Article 15 of the First Convention, was finally preferred to “combat zones”, which had been suggested.⁵² However, there is no reason to insist on a more precise definition of this expression with regard to this provision, since the Parties to the conflict have the authority to enter into such agreements and can conclude them whenever they are deemed useful.
- 1289 It should be noted that in its first report the Working Group of Committee II had provided that such teams could be assisted by “personnel of international humanitarian organizations”,⁵³ though this idea was later abandoned. However, the fact that it was deleted does not express an intention to exclude the personnel of such organizations from such tasks. As one delegate, who proposed deleting the phrase, stated: “the Parties could by mutual agreement decide that personnel of international humanitarian organizations might participate in the activities referred to”.⁵⁴
- 1290 In practice the ICRC has often played an important role in concluding such agreements and has actively participated in their implementation.
- 1291 Finally, the last sentence recalls the obvious obligation to respect and protect the personnel of such teams.⁵⁵
- 1292 However, this obligation was qualified in that it is only imposed while such personnel are “exclusively carrying out these duties”. In this way the obligation of the personnel of such teams to devote themselves *exclusively*⁵⁶ to their task throughout such missions is emphasized, as in the case of temporary medical personnel. The trust which allows such activities would be seriously betrayed if the personnel were entrusted with other tasks, particularly that of military intelligence.
- 1293 Apart from this, it is clearly indicated that for such missions, personnel may be employed who are not normally protected, and that the immunity granted such personnel applies only for the duration of the mission.
- 1294 Finally, this sentence indirectly recalls the delicate nature of such agreements and the importance of their being perfectly clear and precise.

⁵² Cf. particularly *O.R.* XI, p. 353, CDDH/II/SR.34, para. 22.

⁵³ Cf. *O.R.* XIII, p. 108, CDDH/221/Rev.1, para. 120 (para. 4, sub-para. (b), of the new proposed Section).

⁵⁴ *O.R.* XI, p. 367, CDDH/II/SR.35, para. 22.

⁵⁵ On the concepts of respect and protection, cf. commentary Art. 10, *supra*, p. 146.

⁵⁶ On this concept, cf. commentary Art. 8, sub-para. (k), *supra*, pp. 132-135.

Article 34 – Remains of deceased

1. The remains of persons who have died for reasons related to occupation or in detention resulting from occupation or hostilities and those of persons not nationals of the country in which they have died as a result of hostilities shall be respected, and the gravesites of all such persons shall be respected, maintained and marked as provided for in Article 130 of the Fourth Convention, where their remains or gravesites would not receive more favourable consideration under the Conventions and this Protocol.
2. As soon as circumstances and the relations between the adverse Parties permit, the High Contracting Parties in whose territories graves and, as the case may be, other locations of the remains of persons who have died as a result of hostilities or during occupation or in detention are situated, shall conclude agreements in order:
 - (a) to facilitate access to the gravesites by relatives of the deceased and by representatives of official graves registration services and to regulate the practical arrangements for such access;
 - (b) to protect and maintain such gravesites permanently;
 - (c) to facilitate the return of the remains of the deceased and of personal effects to the home country upon its request or, unless that country objects, upon the request of the next of kin.
3. In the absence of the agreements provided for in paragraph 2(b) or (c) and if the home country of such deceased is not willing to arrange at its expense for the maintenance of such gravesites, the High Contracting Party in whose territory the gravesites are situated may offer to facilitate the return of the remains of the deceased to the home country. Where such an offer has not been accepted the High Contracting Party may, after the expiry of five years from the date of the offer and upon due notice to the home country, adopt the arrangements laid down in its own laws relating to cemeteries and graves.
4. A High Contracting Party in whose territory the gravesites referred to in this Article are situated shall be permitted to exhume the remains only:
 - (a) in accordance with paragraphs 2(c) and 3, or
 - (b) where exhumation is a matter of overriding public necessity, including cases of medical and investigative necessity, in which case the High Contracting Party shall at all times respect the remains, and shall give notice to the home country of its intention to exhume the remains together with details of the intended place of reinterment.

Documentary references

By way of exception, the references to the Official Records of the CDDH are cited at the beginning of the Section as Articles 32-34 were treated as one article during much of the CDDH.

Commentary

1295 Article 34 is concerned with the remains of persons who have died, as shown in the title, and with various problems linked to the burial of such persons. It develops the Conventions by introducing new provisions and moreover, by extending the personal field of application of existing provisions.

Paragraph 1 – Respect for remains and gravesites

1296 This paragraph is concerned with the respect due to the remains and gravesites of persons insofar as these are not covered by other provisions of the Conventions or Protocol I.

1297 Thus it concerns only remains and gravesites that “would not receive more favourable consideration under the Conventions and this Protocol”. It therefore excludes:

- combatants who have died in battle and who are covered by Articles 15-17 of the First Convention, and by Articles 18-20 of the Second Convention;
- prisoners of war who have died during a period of detention and who are covered by Articles 120 and 121 of the Third Convention;
- protected civilians who have died during internment and who are covered by Articles 129-131 of the Fourth Convention.

1298 It therefore covers the following categories:

a) *Persons who have died for reasons related to occupation*

1299 The whole population of occupied territories seems to be covered by this provision. Nevertheless, the following are excluded:

- civilian internees, as these enjoy greater protection under the Conventions (see above);
- the nationals of the Occupying Power.¹ However, under Article 75 (*Fundamental guarantees*) the latter are entitled to humanitarian treatment if they are detained for reasons related to the conflict,² and it is clear that such

¹ On this subject, *cf.* introduction to this Section, *supra*, p. 342.

² *Cf.* commentary Art. 75, para. 1, *infra*, pp. 866-871.

humanitarian treatment implies a respect for their remains and a decent gravesite;

- persons who have died for reasons not related to the occupation. However, with the exception of nationals of States not Parties to the Conventions, such persons are covered by Article 27 of the Fourth Convention, which provides in particular that they are entitled in all circumstances “to respect for their persons, their honour, their family rights, their religious convictions and practices, and their manners and customs”, and that “they shall at all times be humanely treated”. It is clear here, too, that such a provision implies, at the very least, a respect for the remains of the dead and a decent burial in accordance with their religious practices.

1300 As regards Article 34, paragraph 1, this is concerned more specifically, as shown above, with persons who have died “for reasons related to occupation”. The connection between the occupation and the death is not defined more precisely. It basically relates to persons who are victims of armed conflicts, particularly of bombardments, and to persons killed by the armed forces of the Occupying Power for failing to comply with security regulations related to the occupation, such as curfews. It is probably advisable to limit this category to clear-cut cases such as these, and to exclude cases which are less clear, such as death which is to some extent hastened by a lack of medication or by the grief resulting from separation (it may be recalled that respect for the remains and gravesites of persons who have died for such reasons is, in any case, implicitly imposed by Article 27 of the Fourth Convention).³

1301 Finally, nationals of States not Parties to the Conventions should also be considered to be covered by this provision,⁴ if they have died for reasons related to the occupation.

b) *Persons who have died in detention resulting from occupation or hostilities*

1302 With the exception of civilian internees and the nationals of the Party concerned, this category concerns:

- persons whose detention results from occupation. There is no difference intended between detention “resulting from occupation” and the phrase “during occupation”, used in paragraph 2 of Article 33 (*Missing persons*).⁵ This remark is important also in relation to the category mentioned above under a), because of the fact that persons detained for reasons of occupation can obviously die for reasons that are not related to occupation;
- persons “in detention resulting from hostilities”. It would have been more precise to refer here to “the hostilities” as we are concerned with the same armed conflict which gave rise to the application of the Protocol in the first place (apart from the above-mentioned occupation problem). The French text is not more precise here, as it also omits the definite article (“d’hostilités”),

³ National legislation, particularly social legislation, may also give indications in this respect.

⁴ On this subject, *cf.*, by analogy, commentary Art. 33, *supra*, p. 357.

⁵ *Cf.* also commentary Art. 33, para. 2, *supra*, p. 357.

although in Article 33 (*Missing persons*), paragraph 2(a), it did use, in a similar context, the definite article (“des hostilités”). However, the English text in Article 33 (*Missing persons*) is as imprecise as it is in Article 34. Yet, the reference to “detention resulting from hostilities” should be understood in the same way as the corresponding one in Article 33 (*Missing persons*).⁶

c) *Persons not nationals of the country in which they have died as the result of hostilities*

1303 These are persons who are in the territory of a Party to the conflict and who are:

- neither nationals of that Party to the conflict;
- nor persons who fall under a more favourable régime under the Conventions and Protocol I.⁷

1304 They therefore comprise:

- nationals of States not Parties to the conflict or co-belligerent States who are in the territory of a Party to the conflict where the State of which they are nationals has a “normal diplomatic representation”,⁸ and who are therefore excluded from the protection of Part III of the Fourth Convention. In the event of their death, such persons are therefore covered by this provision, even if the problem should in principle be solved without recourse to international humanitarian law;
- nationals of the adverse Party (other than prisoners of war and civilian internees), nationals of States not Parties to the conflict and nationals of co-belligerent States who are in the territory of a Party to the conflict where the State of which they are nationals does not have a “normal diplomatic representation”. In fact, such persons are covered by Part III of the Fourth Convention, but apart from the general provisions of Article 27,⁹ Part III does not contain any provisions concerning the remains and gravesites of the dead;
- nationals of States not Parties to the Fourth Convention, who are therefore not Parties to the Protocol either.

1305 All such persons are covered by this provision of Article 34, if they have died as a result of hostilities. Death may be due in particular to bombardment or other attacks, possibly aimed directly at such persons in violation of international humanitarian law, or they may be victims of incidental damage resulting from attacks on military objectives.¹⁰ Their death may be immediate or not. For example, if a man spends a year in hospital because of injuries caused by bombardment, and dies after this period from his injuries, he is of course covered.

⁶ *Ibid.*

⁷ On this subject, *cf. supra*, pp. 354-356.

⁸ *Cf.* Fourth Convention, Art. 4, para. 2.

⁹ On these provisions, *cf. supra*, p. 367.

¹⁰ On this subject, *cf.* particularly Art. 57, sub-para. 2(a)(ii), and the commentary thereon, *infra*, pp. 682-683.

But here, too, there may be borderline cases where the causal link between death and hostilities is not clear. However, there must undoubtedly be a direct causal link.¹¹

1306 There are two requirements vis-à-vis the persons listed above: respect for their remains, and respect for and maintenance and marking of the gravesites.

a) *Respect for remains*

1307 Article 34, paragraph 1, is very brief in this respect, simply stating that the remains of certain persons “shall be respected”, without any further clarification. Reference should be made to the provisions of the Conventions,¹² to determine the contents of this obligation. Basically this consists of preventing the remains from being despoiled and from being exposed to public curiosity, by placing them in an appropriate place before burial or cremation. This also, for that matter, constitutes a measure of essential public hygiene. Respect for the remains also implies that they are disposed of as far as possible in accordance with the wishes or the religious beliefs of the deceased, insofar as these are known.

b) *Gravesites*

1308 Gravesites must be “respected, maintained and marked as provided for in Article 130 of the Fourth Convention”. That article deals with the burial or cremation of civilian internees and the relevant provisions of that article therefore apply to the gravesites of the persons covered by this paragraph.

1309 As regards respect, Article 130 mentions respect for graves without any further explanation. It shows how much this is considered self-evident.

1310 However, the same article also lays down a principle of individual graves, and only permits cremation in exceptional circumstances “for imperative reasons of hygiene, on account of the religion of the deceased, or in accordance with his expressed wish to this effect”. The duty to retain the ashes and transfer them to the next of kin is also mentioned. These provisions arise from a respect for both the remains and for the gravesites, and this should be duly taken into account.

1311 Moreover, Article 130 states that graves should be “properly maintained”, and above all, that they must be “marked in such a way that they can always be recognized”. This is certainly the essential element, and even the main object, not only of marking the grave, but also of maintaining it properly.¹³

¹¹ Cf. also *supra*, pp. 367-368.

¹² Cf. particularly Arts. 15-17, First Convention; 18-20, Second Convention; 120, Third Convention; and 119-120, Fourth Convention.

¹³ For more details on this subject, cf. *Commentary IV*, pp. 506-507.

Paragraph 2 – Access to and maintenance of gravesites; return of the remains*Opening sentence*

- 1312** This sentence imposes the obligation to conclude agreements of which the subject matter is specified in sub-paragraphs (a), (b) and (c). This obligation rests on the “High Contracting Parties in whose territories graves and, as the case may be, other locations of the remains of persons who have died as a result of hostilities or during occupation or in detention are situated”.
- 1313** The persons whose graves or remains are situated in the territory of the Contracting Party are those covered by paragraph 1, even though the wording of paragraph 2 seems to have a broader scope. However, the development of the situation should be taken into account. Thus, for example, a Contracting Party occupying the territory of the adverse Party would be affected by these provisions if the said adverse Party had buried in such territory some of its own nationals who had died as a result of hostilities.
- 1314** The fact that “other locations of the remains” of such persons are mentioned in addition to graves is in order to take into account all eventualities, lawful or unlawful, such as, in particular, cremation, collective graves, and even mass graves consequent upon atrocities committed during hostilities.¹⁴
- 1315** The obligation concerns the “High Contracting Parties”. The Parties engaged in a conflict such as that provided in Article 1 (*General principles and scope of application*), paragraph 4, which have made the declaration provided for in Article 96 (*Treaty relations upon entry into force of this Protocol*), paragraph 3, are not mentioned. However, this omission has no legal consequences as Article 96 (*Treaty relations upon entry into force of this Protocol*), paragraph 3(b), provides that the authority representing such a Party “assumes the same rights and obligations as those which have been assumed by a High Contracting Party to the Conventions and this Protocol”.¹⁵
- 1316** However, in practice the agreements concerned presuppose lasting control of the territory which such a Party rarely has in fact. Thus they should act in accordance with the spirit of these provisions to the extent that they are able to do so. Depending on the circumstances, some *ad hoc* procedures could be envisaged, particularly through the good offices of the Protecting Powers or the ICRC.
- 1317** Finally, the obligation to conclude agreements only enters into force “as soon as circumstances and the relations between the adverse Parties permit”. This phrase was discussed at length in Committee II.¹⁶ At first the Working Group of Committee II preferred the solution of using the same expression that was used in Article 33 (*Missing persons*), paragraph 1, namely, “as soon as circumstances permit, and at the latest from the end of active hostilities”.¹⁷

¹⁴ Cf. also *O.R.* XI, p. 354, CDDH/II/SR.34, para. 28.

¹⁵ On this subject, cf. also commentary Art. 96, *infra*, pp. 1088-1092.

¹⁶ Cf. particularly *O.R.* XI, p. 367, CDDH/II/SR.35, para. 25, and *O.R.* XII, p. 250, CDDH/II/SR.78, para. 10; pp. 254-255, paras. 39-43.

¹⁷ Cf. *O.R.* XIII, p. 109, CDDH/221/Rev.1, para. 120 (Art. 18 *bis*, para. 7).

- 1318 The Committee then opted for the expression “as soon as circumstances permit”,¹⁸ but in the end it agreed on the formulation that was finally adopted, and which did not give rise to any comments¹⁹ after a statement emphasizing the difficulty of carrying out agreements permitting access of families to gravesites whilst hostilities were continuing.²⁰
- 1319 It could be claimed that the relations between the Parties constitute part of the “circumstances” which make it possible to conclude such agreements or not. However, the more specific wording has the advantage of emphasizing the importance of such relations, which obviously form the key to the problem. The very flexible wording which was finally adopted should make it possible to deal with important humanitarian problems raised by this paragraph without seeing any political motivation behind this. It is clear that it is up to the Parties concerned to determine whether their relations permit the conclusion of such agreements, but in the event there is nothing to prevent Protecting Powers or the ICRC from suggesting them.
- 1320 Finally, it should be noted that the Parties to the agreement are not identified, but it is clear that these will be States with a legitimate interest in the remains situated in the territory of the Contracting Party concerned, an interest based on the fact that the remains are those of their nationals or of others for whom they are responsible, insofar as they meet the criteria set out above.²¹

Sub-paragraph (a) – Access to gravesites

- 1321 The first of the agreements which the Contracting Parties must conclude within the restraints described above concerns access to gravesites, which was presented on behalf of the co-authors of the initial proposal as an “obvious and fundamental humanitarian need”.²²
- 1322 Those benefitting from the agreement are first of all the “relatives” of the persons who have died and who meet the criteria listed above.²³ The concept of “relatives” has been examined above.²⁴
- 1323 Another category of beneficiaries is also mentioned, namely, representatives of official graves registration services. In fact it is important that a census of the dead and an accurate report on the location of gravesites should be carefully drawn up by the services of every State concerned, particularly in order to facilitate the informing of families and for the solution of various problems, whether legal or otherwise. However, it is not impossible that a Contracting Party may consider that the situation only permits access for families or, conversely, for the graves registration services. In such cases agreements are made in two stages.

¹⁸ Cf. *ibid.*, p. 332, CDDH/II/376 (Art. 20 *ter*, para. 2).

¹⁹ O.R. XII, pp. 254-255, CDDH/II/SR.78, paras. 38-44.

²⁰ Cf. *ibid.*, p. 251, para. 16.

²¹ Cf. *supra*, pp. 366-369.

²² O.R. XI, p. 186, CDDH/II/SR.19, para. 76.

²³ Cf. *supra*, pp. 366-369.

²⁴ Cf. commentary Art. 32, *supra*, pp. 346-347.

1324 The agreements should “facilitate access to the gravesites”, which is not a very precise wording. Obviously this primarily means that the persons concerned should be able to enter the territory and, if necessary, be granted a visa. Then they should be informed exactly where the graves are located. However, in practice many problems may arise concerning in particular the transport of persons, or the exact location of a grave at the indicated site, and this applies all the more if the armed hostilities have not yet terminated. This did not escape the notice of the drafters of the Protocol. This instrument therefore requires, in addition to agreements facilitating access to the gravesites, that the Contracting Parties concerned “regulate the practical arrangements for such access”. Thus, if necessary, special transport should be made available, and specific dates fixed for the persons concerned to avoid possible congestion. Officials able to locate the graves should be made available at the site and, in short, all that is necessary for the agreement to be put into operation in the best conditions.

Sub-paragraph (b) – Protection and maintenance of gravesites

1325 Paragraph 1 lays down obligations relating to the establishment, marking and maintenance of gravesites, as mentioned in this paragraph. The problem posed by this sub-paragraph concerns the duration of such obligations. The maintenance of gravesites after all involves financial expenditure which cannot be laid *ad infinitum* to the charge of countries where gravesites of other countries’ nationals are located.²⁵

1326 As the sponsors of the initial proposal stated, the fact that the State of origin of the dead must bear the cost of maintenance of gravesites in the territory of another State is “a necessary corollary to the duty of maintaining such graves. Otherwise, the State responsible for the maintenance of the graves might rightly feel itself overburdened”.²⁶

1327 Thus bilateral agreements must be concluded to solve this problem, as the sub-paragraph under consideration here requires, and a procedure should be laid down in case agreements cannot be concluded. This is done in paragraph 3.²⁷

1328 Moreover, in this respect it should be noted that the Conventions do not deal with this problem and do not specify a time-limit on the obligation to maintain gravesites.²⁸ Even though the system now laid down only officially applies to the gravesites concerned here, which are not those covered by the Conventions, it must be admitted that in future it will also be applied to the latter, in this way filling an obvious gap in the Conventions.

²⁵ On this subject, *cf.* also commentary para. 3, *infra*, pp. 376-377.

²⁶ *O.R.* XI, p. 186, CDDH/II/SR.19, para. 78.

²⁷ *Cf. infra*, pp. 376-377.

²⁸ *Cf.* Art. 17, para. 3, First Convention; Art. 120, para. 4, Third Convention; Art. 130, para. 1, Fourth Convention.

Sub-paragraph (c) – Return of the remains

- 1329** The second field in which the Contracting Parties referred to in this paragraph are obliged to conclude agreements is that of repatriating the remains of the dead covered by this sub-paragraph.
- 1330** It should be noted that the Conventions do not provide for the repatriation of the remains of deceased persons which are dealt with by specific provisions.²⁹ They do not, of course, exclude this, but they do not contain any procedure to be followed. Thus this provision can again serve as an example, not only for the dead explicitly covered, but also for those covered by the Conventions. When they presented the initial proposal, the co-sponsors clearly indicated that although they intended to extend the procedure to cases which had not been previously covered, their aim was still “a clarification of the procedure and time with respect to the duty to allow the exhumation and return of the remains of a deceased person”.³⁰
- 1331** The return of the remains of the deceased provided for here should form the object of an agreement as should that of their “personal effects”. In this respect it should be noted that the First and Second Conventions provide for the automatic forwarding of the personal effects of deceased combatants to the Power on which they depend, by the Information Bureau referred to in Article 122 of the Third Convention.³¹ The Third Convention lays down the same procedure for articles left by prisoners of war “who have been repatriated or released, or who have escaped or died”.³² Similarly, the forwarding of personal valuables of persons protected by the Fourth Convention, “in particular those who have been repatriated or released, or who have escaped or died”, is laid down in that Convention.³³ In this respect it is clear that the provision under consideration here cannot in any way diminish the obligations arising from those articles.³⁴
- 1332** For the meaning of the expression “personal effects”, reference should be made to the Conventions: Article 16 of the First Convention mentions “last wills or other documents of importance to the next of kin, money, and in general all articles of an intrinsic or sentimental value”. Article 122, paragraph 9, of the Third Convention refers to “all personal valuables, including sums in currencies other than that of the Detaining Power and documents of importance to the next of kin”.
- 1333** As regards Article 139 of the Fourth Convention, this refers only to “personal valuables”. In this respect the commentary on that Convention specifies that these are “all the articles which belonged to the person” concerned, and which “are of any commercial worth or sentimental value”. Finally, it adds: “In practice,

²⁹ Cf. Art. 17, First Convention; Art. 20, Second Convention; Art. 120, Third Convention; Art. 130, Fourth Convention.

³⁰ *O.R.* XI, p. 186, CDDH/II/SR.19, para. 75.

³¹ Cf. Art. 16, para. 3, First Convention and Art. 19, para. 3, Second Convention.

³² Cf. Art. 122, para. 9, Third Convention.

³³ Cf. Art. 139, Fourth Convention.

³⁴ On this subject, cf. particularly *O.R.* XI, p. 190, CDDH/II/SR.20, para. 6.

therefore, almost all the articles found on the spot will be collected and forwarded.”³⁵

1334 The agreements must “facilitate” the return of the remains and the personal effects. Basically this implies the exhumation of the remains when they have been buried, and the forwarding of such remains and of personal effects. These tasks can only be carried out by the competent authorities of the Contracting Parties concerned. However, the agreements can lay down rules for sharing the costs.

1335 As in the case of sub-paragraph (b) examined above, paragraph 3 provides for a procedure when there is no agreement regarding repatriation of remains.³⁶

1336 The agreements should provide for the repatriation of the remains and of personal effects:

- on the one hand, upon the request of the home country;
- on the other hand, upon the request of the next of kin, with a right of veto of the home country.

1337 Committee II discussed the question of the “home country” at length. One amendment proposed including a definition of the State of origin.³⁷ This amendment was subsequently withdrawn in favour of the proposal made by the Working Group.³⁸

1338 The idea that the home country should be permitted to *object* to the repatriation of remains, even though an express agreement is not required, was also introduced by an amendment,³⁹ with the aim of permitting repatriation

“even if there was no home State, and consequently no one was allowed to object. That might be the case, for example, if a defeated State broke up into two or more separate States, neither of which was interested in some or all of the dead, although their families might still wish to have the remains repatriated”.⁴⁰

1339 A definition close to that proposed in the above-mentioned amendment was then introduced into the report of the Working Group presented at the fifty-second session of Committee II, but it was in square brackets, indicating that the desirability of such a definition was in dispute. It gives a good indication of how this expression should be interpreted:

“‘home country’ means the State on which a person depended on the date he died or was reported missing, or, in the event of a succession of States taking place in relation to that country, the State on which such person would have depended had he not died or been reported missing”.⁴¹

³⁵ Cf. *Commentary IV*, p. 538.

³⁶ Cf. *infra*, pp. 376-377.

³⁷ *O.R.* III, p. 101, CDDH/II/220.

³⁸ Cf. *O.R.* XI, p. 357, CDDH/II/SR.34, para. 49.

³⁹ Cf. *O.R.* III, p. 100, CDDH/II/56/Rev.1.

⁴⁰ *O.R.* XI, p. 190, CDDH/II/SR.20, para. 7.

⁴¹ *O.R.* XIII, p. 117, CDDH/221/Rev.1, para. 124 (para. 11 of the new Section I *bis*).

- 1340 In the end, as the Rapporteur of the Working Group stated,
- “the Working Group as a whole had considered that the question of definition was so complex that it would be better not to attempt a definition which might lead to difficulties in reaching a decision on the responsibility for missing or dead persons”.⁴²
- However, commenting on this definition and stressing that it was not “intended to be exclusive”,⁴³ he indicated that “for a soldier or combatant, that definition would normally mean a country in whose forces he was serving, and for a civilian, the country of citizenship or residence”.⁴⁴
- 1341 Finally, one delegate emphasized the importance of two factors: “that of dependency on a State”,⁴⁵ for which the above-mentioned commentary of the Rapporteur gave a valuable pointer, and the “reference to succession of States”⁴⁶ made in the draft definition.
- 1342 These factors will solve the problem in the great majority of cases. A solution taking into account the interests of families should be found in other cases.
- 1343 Thus the request may be made by the home country, but it may also come directly from the family.⁴⁷
- 1344 The question of precisely which relatives were entitled to request repatriation of remains led to some discussion in Committee II. One delegate stated that, according to his delegation, such relatives could only be “close personal relatives”,⁴⁸ and an amendment was even proposed on these lines.⁴⁹ However, another delegate emphasized the fact that the expression “close personal relatives” would not be applicable in his country, “because of the existence there of the extended family”.⁵⁰ This point of view finally prevailed and it is up to each country individually to find a solution on the basis of its laws and customs. However, it should be noted that the English text uses the expression “next of kin”, which only designates the closest living relative, and is therefore more restrictive than the term “relatives” used in Article 32 (*General principle*) and in Article 34, paragraph 2(a). In view of the above-mentioned discussions, the French term “famille” therefore seems more appropriate.
- 1345 Nevertheless, in this case the home country has a right of veto. As one delegate explained, it was not desirable that the exhumation and transfer of remains from well-established gravesites such as those dating back to the First World War, should be carried out without the agreement of the home country.⁵¹

⁴⁸ *Cf.* O.R. XI, p. 357, CDDH/II/SR.34, para. 45.

⁴⁹ *Cf.* O.R. III, p. 103, CDDH/II/260; *cf.* also O.R. XI, p. 374, CDDH/II/SR.35, para. 67.

⁵⁰ O.R. XI, p. 372, CDDH/II/SR.35, para. 58.

⁵¹ *Cf. ibid.*, p. 189, CDDH/II/SR.20, para. 4; *cf.* also p. 353, CDDH/II/SR.34, para. 25.

1346 Moreover, he also stressed the importance of laying down rules for the question of repatriation in an orderly manner, which explains the importance of the right of veto of the home State, which itself takes over the problem in its entirety.⁵²

Paragraph 3 – Treatment of gravesites in the absence of agreements

1347 Article 34 does not ignore the fact that the agreements described in paragraph 2(b) and (c) might not be concluded, particularly for financial reasons.

1348 In this case the Contracting Party may legitimately wish to stop meeting the expenses incurred by the maintenance of the gravesites concerned. Nevertheless, respect for the remains and the interests of families should still be maintained. For this reason paragraph 3 wisely makes the decision the responsibility of the home country or even of the family in case that country is not prepared to meet the expenses. Although it is not spelled out in so many words, it is quite clear that the offer is directed to the home country, but if needed, this may be transferred to the family or the family may be invited to participate in the expenses.

1349 Logically the offer is made only if the agreements regarding permanent maintenance of gravesites or repatriation of the remains, as laid down in paragraph 2(b) and (c), have not been concluded. Further, even if such agreements have not been concluded, the Contracting Party in whose territory the gravesites are situated is obliged to ensure permanent maintenance if the home country of the deceased is prepared to meet the costs.

1350 However, an agreement on this subject concluded as soon as possible seems clearly preferable as a long-term solution.

1351 In the following situation – i.e., no agreement with the home country and no declaration of intent on the part of the latter to meet the costs of maintaining the gravesites – the Contracting Party concerned “may offer to facilitate the return of the remains of the deceased to the home country”. In practice this means that, at the request of the home country, it is prepared, on the one hand, to exhume the remains, and on the other hand, to ensure that they are transported to a place to be agreed upon (whether this is the border or any other place) where the home country takes charge of them. The technical details and the costs incurred by the operation should clearly be arranged between the Contracting Party and the home country concerned.

1352 If the offer to facilitate the return of the remains of the deceased is refused, the Contracting Party may “adopt the arrangements laid down in its own laws related to cemeteries and graves”. Of course, such national legislation is extremely diverse, but this may entail the closure and disappearance of gravesites, particularly if no financial contribution is made for their maintenance.

1353 However, two conditions are laid down before such measures may be resorted to:

- A period of five years must have elapsed since the offer was made. There is therefore in any case an obligation to maintain gravesites for five years after

⁵² Cf. *ibid.*, p. 190, CDDH/II/SR.20, para. 5.

the proposal is made to repatriate the remains. This period was contested in Committee II, as one delegate considered in particular that “the Party to the conflict in whose territory such graves were situated should have the right to act in accordance with its domestic legislation without being bound to wait for any given period”.⁵³ However, the period was retained and represents a useful guarantee for families.

- The Contracting Party must give “due notice to the home country” before applying the provisions laid down in its own laws. Thus there is a sort of *ultimatum* which is addressed to the home country, and this is also a positive element, particularly if the national legislation permits the destruction of gravesites. Thus the home country is clearly faced with its responsibilities once again in case the initial offer made five years previously had been forgotten.

Paragraph 4 – Exhumation of remains

1354 Article 34 also includes exhumation, particularly in dealing with the repatriation of the remains of the deceased, and paragraph 4 specifies exact rules which should be observed in this field.

1355 As one of the co-sponsors of the amendment⁵⁴ which gave rise to paragraph 4 stated: respect for graves had been proclaimed as a general principle, and similarly the duty to exhume in certain circumstances, but “exhumation should be the subject of closer control”.⁵⁵ This is why a proposal was made to permit it only in the situations listed. “They had sought to strike a balance between the general principle of respect for graves and the need to exhume”.⁵⁶

1356 This paragraph is addressed to the Contracting Parties in whose territory the gravesites covered by this article⁵⁷ are situated, and it provides that exhumations are strictly prohibited outside the situations described.

1357 These situations are the following:

- exhumation in accordance with the agreements laid down in paragraph 2 (c);⁵⁸
- exhumation in accordance with paragraph 3,⁵⁹ in the absence of such agreements;
- exhumation required in cases of “overriding public necessity, including cases of medical and investigative necessity”. In the last case exhumation is based on a unilateral decision of the Party in whose territory the gravesite is situated.

1358 At first the Working Group considered that the Protocol should not restrict such exhumations, on the one hand, because the principle of respect for the remains of the deceased and for gravesites laid down earlier provided sufficient general limitations, and on the other hand, because the exhumation might be

⁵³ *Ibid.*, p. 367, CDDH/II/SR.35, para. 26.

⁵⁴ *O.R.* III, p. 101, CDDH/II/204.

⁵⁵ *O.R.* XI, p. 190, CDDH/II/SR.20, para. 9.

⁵⁶ *Ibid.*

⁵⁷ On this subject, *cf. supra*, pp. 366-369.

⁵⁸ *Cf. supra*, pp. 373-376.

⁵⁹ *Cf. supra*, pp. 376-377.

“undertaken for many reasons, such as the grouping of remains by nationality, relocation of cemeteries, threats of flood or rising water, reasons of health and sanitation, identification of the deceased or enquiries on war crimes or mutilations”.⁶⁰

However, several delegates advocated retaining rules “covering situations where the host State required exhumations for its own purposes”.⁶¹

1359 The exhumation should be *necessary* in the public interest. There must be compelling reasons, and as the acting Rapporteur of the Working Group stated, this wording stresses “the need to protect graves”.⁶² He continued by stating that:

“Where adequate protection and maintenance was not otherwise possible – for instance, in the case of scattered and temporary graves made during a battle – exhumation for the purpose of regrouping graves in one location would be a matter of public necessity. There was, however, no clause on general re-grouping of graves, since that might result in the arbitrary or capricious removal of graves.”⁶³

1360 The expression “including cases of medical and investigative necessity” was added, following the comment of a delegate who considered that, in addition to cases of overriding public necessity there might be “a matter of military and medical necessity, for example, when it was necessary to determine the cause of death”.⁶⁴ According to another delegate, “public necessity must, by its nature, include both those concepts”.⁶⁵ Although the latter view prevailed, the discussed concepts were included to avoid any misunderstanding.

1361 Although the term “overriding public necessity” is therefore fairly clearly defined, it should nevertheless be noted, as the Rapporteur of the Working Group stated, that “it would of course be for the country in whose territory the graves were situated to decide whether or not exhumation was a matter of overriding public necessity”.⁶⁶ In this respect the interpretative declaration by one delegation should be noted:

“Paragraph 4 of the article in no way prevents the exhumation of the remains in temporary graves at the end of an armed conflict by or on behalf of a Graves Registration Service for the purpose of providing permanent gravesites, as was done after the last two European conflicts.”⁶⁷

1362 In the cases examined above where exhumation is carried out for reasons relevant to the State in whose territory the graves are situated, three additional obligations are specified with which it must comply:

⁶⁰ *O.R.* XI, pp. 353-354, CDDH/II/SR.34, para. 27.

⁶¹ *Ibid.*, p. 356, para. 43; also *cf.* paras. 44-46.

⁶² *O.R.* XII, p. 229, CDDH/II/SR.76, para. 13.

⁶³ *Ibid.*

⁶⁴ *O.R.* XI, p. 365, CDDH/II/SR.35, para. 15.

⁶⁵ *Ibid.*, p. 373, para. 61.

⁶⁶ *Ibid.*, p. 360, CDDH/II/SR.34, para. 62.

⁶⁷ *O.R.* VI, p. 81, CDDH/SR.37, Annex (United Kingdom).

-
- to treat the remains of the deceased with respect at all times. This reminder was not essential inasmuch as this obligation already follows from paragraph 1. Nevertheless, it is appropriate to emphasize that even reasons of overriding public necessity cannot in any case justify a lack of respect for the remains of the deceased;⁶⁸
 - to give notice to the home country of the intention to exhume. This country may then make comments although it cannot object to the exhumation. On the other hand, on this occasion it could still propose the repatriation of the remains in accordance with a procedure to be determined;
 - to give the home country details of the intended place of reburial. The right of families to access to the graves of their relatives clearly requires the transmission of such information and the home country is responsible for transmitting it to the families concerned.

Y.S.

⁶⁸ On the concept of respect, *cf.* also *supra*, p. 369.

Part III – Methods and means of warfare - Combatant and prisoner-of-war status

Introduction

- 1363** The law of war, and particularly that part of the law of war which relates to methods and means of warfare, more than ever before deserve our special attention.
- 1364** Despite numerous violations and despite the horrors related to the appearance of new means of destruction, the Hague Regulations Respecting the Laws and Customs of War on Land were still more or less respected by the belligerents during the First World War. The situation worsened during the Second World War, particularly in the field of air and naval warfare, to the point where the question might well be asked whether any rules still existed. However, with regard to the matters more particularly covered by the Hague Regulations, the Military Tribunal of Nuremberg declared on 1 October 1946, addressing both signatories and non-signatories, that the provisions of the Regulations were recognized, at least at the start of the Second World War, by all civilized nations and that they were considered as being declaratory of the laws and customs of war. Furthermore, throughout the conflict no belligerent dared to claim that it was not bound by these rules. The mere fact of invoking the need to take reprisals for any particular operation necessarily implied the existence and recognition of a rule which would have prohibited the operations in other circumstances. In fact the most serious breaches of the Hague Regulations were particularly committed with regard to prisoners of war not covered by the Geneva Convention of 1929, and with regard to the inhabitants of occupied territories.
- 1365** In the resolutions adopted on respect for human rights in time of armed conflict, the United Nations General Assembly called upon all Parties to such conflicts to recognize and carry out the obligations incumbent upon them under the applicable humanitarian instruments, in particular the Hague Conventions of 1899 and 1907. In 1965 the XXth International Conference of the Red Cross confirmed the fundamental principle underlying the Hague Regulations, in Resolution XXVIII, namely that the right of Parties engaged in an armed conflict to adopt means of injuring the enemy is not unlimited (Article 22). On 19 December 1968 the United Nations General Assembly affirmed the resolution of the International Conference of the Red Cross and confirmed the above-mentioned fundamental principle of the law of The Hague (Resolution 2444 (XXIII)).
- 1366** These rules of warfare, or of conduct between combatants as they are sometimes called, are basically those contained in Articles 22 and 23, paragraph 1(b), (c), (d), (e) and (f) of the Hague Regulations. In addition to the general

principle by which the right of belligerents to adopt means of injuring the enemy is not unlimited, they contain two types of fundamental rules: on the one hand, humanitarian rules, and on the other hand, rules on good faith. The humanitarian rules prohibit killing or wounding an enemy who has laid down his arms or no longer has the means to defend himself and has therefore surrendered unconditionally; they also prohibit refusing to give quarter and causing superfluous injury or unnecessary suffering. The rules on good faith prohibit killing or wounding the enemy treacherously, as well as deceiving him by the improper use of the flag of truce, of national emblems or of enemy uniforms, and also by the improper use of the red cross emblem. Every military Power, without exception, must include these fundamental principles in the instructions it issues to its troops.

- 1367** Thus the first Section of Part III (*Methods and means of warfare*) is concerned with the reaffirmation of these principles. This implies accepting the principle of limited warfare, as opposed to total warfare which discards all rules. It has a key function in relation to the other provisions of the Protocol, since non-respect for the rules of combat entails non-respect for all other rules. It should be considered as a constructive reaffirmation of the law of The Hague.
- 1368** One of the first objectives was to restore the fundamental rules amongst those who had brushed them aside, i.e., the participants in the two World Wars. There was another objective.

“It is a fact that between the end of the Second World War and the 1960s the community of States underwent a transformation without historical precedent in its extent and the speed with which it took place. The members of the *universitas civitatum* more than doubled in number in less than two decades. The vast areas occupied by dependent territories which still existed in 1945, mainly in two large continents, gradually and almost totally disappeared during this short period. Their populations, which had formerly been considered as objects of international relations and not as subjects enjoying, in the very first place, the right to self-determination, gave rise to numerous independent political entities, to States which have become full members of the international community.”¹

- 1369** These States, which had recently appeared on the international scene, were to be associated, formally and freely, with the promulgation of the fundamental principles. This was all the more appropriate because since 1945 it was the

¹ Translated by the ICRC. Original French: “Il est un fait qu’entre la fin du deuxième conflit mondial et les années soixante, la société des Etats a été le théâtre d’une transformation dont l’étendue et la vitesse n’ont pas de précédents dans son histoire. Le nombre des membres de l’*universitas civitatum* a plus que doublé en moins de deux décennies. Les vastes étendues de territoires dépendants qui subsistaient encore, vers 1945, dans deux grands continents surtout, ont progressivement et presque totalement disparu au cours de cette courte période. Leurs populations, considérées auparavant comme objet de relations internationales, et non comme sujets dotés avant toute chose du droit de décider d’eux-mêmes, ont donné naissance à de nombreuses entités politiques indépendantes, à des Etats devenus membres à part entière de la communauté internationale.” R. Ago, “Droit des traités à la lumière de la Convention de Vienne, Introduction”, 134 *Hague Recueil*, 1971/III, pp. 306-307.

territories of these new States that had been unceasingly afflicted by the ravages of war. They did not reveal any opposition in this respect and gave their support to the law of The Hague without difficulty.

1370 Problems only started to arise with regard to the second question, namely, combatant and prisoner-of-war status in guerrilla warfare, which is the subject matter of Section II of the present Part (*Combatants and prisoner-of-war status*). It is actually rather strange to note that on this point – one might almost say, on this point alone – the law of The Hague coped rather well during 1939-1945, so as to survive virtually intact, even at the end of the Diplomatic Conference of 1949. Hundreds of thousands, if not millions of resistance fighters opposed the occupying armies in Europe and elsewhere, often with nothing more than makeshift equipment at their disposal, but the Hague Regulations were not, on the whole, seriously shaken thereby. Belgians, Dutchmen, Frenchmen, Greeks, Italians, Norwegians, Poles, Russians and Yugoslavs, to mention only the peoples of the main occupied countries in Europe, as well as many others throughout the world, entered the fight bearing to a greater or lesser extent signs or uniforms to distinguish themselves from civilians (and sometimes bearing none at all), showing more or less respect for their prisoners (and sometimes not respecting them at all), often carrying their arms openly, though not always. Their combatant status was accepted or rejected, depending on whether one considered the territory in which they were fighting as invaded or occupied. It was not in fact unusual that in this struggle, where the rules of the law of The Hague barely survived, the conditions imposed by those rules for recognition of combatant status – conditions which resistance fighters were unable to satisfy or to satisfy fully – were upheld with full force. Both during the conflict however, and thereafter, the law as laid down in The Hague prevailed. During the conflict resistance fighters were often executed summarily, i.e., without formalities. After the conflict such summary executions were only disclaimed in exceptional cases, and when they were, it was at the price of arguing the illegality of the invasion or occupation. Thus there was no one who maintained that the Hague Regulations of 1907 had lapsed on this point. In this way the four conditions of 1907 were eventually reaffirmed in 1949 in Article 4 of the Third Convention: a responsible commander, a fixed distinctive sign, carrying arms openly, observing the laws and customs of war. The only concession consisted of recognizing the right to continue fighting when under occupation, provided that such guerrilla fighters belonged to a Party to the conflict.

1371 Thus in the 1949 Diplomatic Conference there was no intention to contest the reality of the phenomenon which had spread throughout the occupied countries, particularly in Europe, but rather to reaffirm the 1907 rules in order to avoid developments which were considered to be full of risks. This amounted to denying an inevitable evolution linked to the wish of territories to achieve independence. The situation was thus clearly paradoxical.

1372 There was one view in the past that no distinction was needed between combatants and non-combatants as military operations must have the aim of destroying the adversary's will to resist, wherever there is resistance, and thus indiscriminate bombing would be justifiable. On the other hand, with respect to guerrilla fighters, the legal view on that distinction remained as strict as before, and therefore qualified anyone who violated the four conditions of 1907 as a

non-privileged combatant, i.e., as a civilian with no right to carry arms. In view of such developments and contradictions, it was inevitable that subsequent to 1949 the design would sooner or later be returned to the drawing board, without prejudice however to the subject matter already covered by the 1949 Conventions. Yet there has never been any question of blaming those who in 1949, with the best intentions, upheld the draconian conditions with regard to guerrillas, in the belief that this phenomenon, which had been provoked during the Second World War by the occupation, mainly in Europe, could and should be limited in future, precisely because it had been connected with the occupation. What the drafters in 1949 could not have foreseen, was the truly enormous tidal wave of guerrilla activity which in the thirty years following 1945 affected countries which had not yet achieved independence. It was not clear at that time that ultimately guerrilla warfare would be the method of warfare *par excellence* for liberation movements and that the tide of self-determination would propel these movements forward, without giving thought to the conditions agreed upon in The Hague in another time and for other circumstances. The combination of, on the one hand, highly sophisticated means of warfare, products of technological development which make it possible to hit the enemy everywhere and anywhere, with weak legal regulations and, on the other hand, guerrilla activities whose methods are contested to the point where they have no real chance of confronting the adversary, can only lead to an escalation of brutality. Of course, this is not the aim of the law of war. Law is made for life, and not life for law. Is this not clear when man, at the price of so many lives and so much sacrifice, has striven to show the need for new behaviour. Law must not be dominated by sophisticated technical developments as a matter of course.

- 1373 This awareness of a growing rift between the law and reality, on the one hand, and between the available technical means and acceptance of rules governing their use, on the other hand, led the International Red Cross to proclaim certain fundamental principles in Vienna in 1965 and to start the process which was to conclude with the Diplomatic Conference and with the Additional Protocols. In fact, the prevailing view in Vienna in 1965 was basically a concern for the protection of civilian populations against the dangers of indiscriminate warfare. It was the Human Rights Conference in Teheran in 1968 which emphasized respect for human rights in armed conflicts, and which took up the cause of some categories of guerrilla fighters, relying on the principles of the United Nations. Subsequent resolutions of the United Nations General Assembly insisted on the need for developing rules governing the status, protection and humane treatment of combatants (Resolution 2852 (XXVI), 1971) and on the absolute necessity to make significant further progress, particularly in the field of guerrilla warfare (Resolution 3032 (XXVII), 1972). Moreover, it would be wrong to think that the majority view which had emerged during the Diplomatic Conference of 1949 was unalterable. Even in 1951 Professor Baxter had predicted that “it is possible to envisage a day when the law will be so retailored as to place all belligerents, however garbed, in a protected status”.² Before the start of the Diplomatic

² R.R. Baxter, “So-called ‘Unprivileged Belligerency’: Spies, Guerillas and Saboteurs”, 28 *BYIL*, 1951, p. 323, in particular p. 343.

Conference, in 1974, proposals were made suggesting that the open carrying of arms during military operations would be sufficient to distinguish guerrilla fighters from members of the civilian population. Such suggestions did not come only from countries striving for independence, or those supporting them.³ As far as Draft Additional Protocol was concerned, which the ICRC had prepared to serve as a basis of discussion at the Diplomatic Conference, this only provided in Article 42 for an obligation “that [members of organized resistance movements] distinguish themselves from the civilian population” without any further clarification.

- 1374 Thus the matter seemed to have a promising start. However, when it was linked to a proposal presented at the first session of the Diplomatic Conference in 1974, to consider wars of national liberation engaged upon invoking the principles of the United Nations Charter as international conflicts, the entire issue became doubtful. By sheer hard work, the will to find a solution, concern to avoid breaking up the Conference and a sense of the magnitude and indivisibility of the problems, success was finally achieved by means of a formulation which admittedly is not always very clear. But if there is one area where it may be said that while criticism is easy positive action is not, this must be it.
- 1375 Some claimed that this concession amounted to abolishing the requirement that the law of armed conflict be respected in military operations conducted by members of guerrilla movements, while still granting the latter the status of legitimate combatants and of prisoner of war in case of capture. Such allegations are not well-founded, but this introduction is not the right place to discuss that. A status does not entail exemption from penal prosecution if a crime is committed, but offers international procedural guarantees. The achievement is no less great for all that. It led to an international definition of legitimate combatants in an international armed conflict which applies whether combatants are those of a State or not.
- 1376 Of course, an international conference always takes place at a given time in history with its underlying or open disagreements and its current concerns which influence those looking for solutions and the solutions found, which are therefore to some extent pragmatic. There is no greater possibility of permanent rules than there is of permanent circumstances. Some will always argue that the steps taken are unduly cautious, while others will say they are too bold, but the main point is that they are taken in the right direction.
- 1377 The first part of the heading of Part III, like the heading of Section I, which is identical, uses words taken directly from the text of Article 35 (*Basic rules*). Although they use different terminology from that used in the Hague Regulations for the same subject, they are not fundamentally different. The expression “means of injuring the enemy” was also taken from the fundamental article according to which belligerents do not have an unlimited right in this respect (Hague Regulations, Section II, Hostilities, Chapter I, Means of injuring the enemy, sieges, and bombardments).

³ See, for example, *The Department of State Bulletin*, No. 1773, 18 June 1973, p. 880.

- 1378** As regards the term “combatant and prisoner-of-war status”, used as the heading of Section II, one may recall the headings found in Section I of the Hague Regulations, viz., “On belligerents” or even more specifically “The qualifications of belligerents”, and “Prisoners of war”. Apart from the fact that the order of the sections is reversed, the structure used in the Protocol for these subjects is therefore the same as that of the Hague Regulations.
- 1379** However, such similarities have only gradually become apparent. As the ICRC had no intention of saying anything about the possibility of amending the Hague Regulations, but was originally concerned only with the conduct of combatants with a view to limiting unnecessary suffering, Part III was simply entitled “Combatants” in the draft presented in 1972 to the second session of the Conference of Government Experts. This subject was not subdivided, although one article (38) was devoted to guerrilla fighters. The fundamental character of the rules of the present Article 35 (*Basic rules*) as well as the importance to be accorded to combatants status in guerrilla warfare, at least when they are captured, finally prevailed, however. In 1973 the draft presented by the ICRC had a basically similar structure to the present one. However, during the Conference itself Section II was considerably developed.

J. de P.

Part III, Section I – Methods and means of warfare

Introduction

1380 This Section is aimed primarily at reaffirming and developing Articles 22, 23 (b), (c), (d), (e) (f), and 24 of the Hague Regulations of 1907. Article 23(a), which deals with the prohibition of poison, was not included, as particular individual weapons were the subject of separate studies. In fact, this omission has no effect on the prohibition which remains fully in force. Similarly, the rules relating to the treatment of enemy property (Article 23(g) and (h)) were not included here as this problem seemed to be less urgent. On the other hand, three absolutely new provisions, which have no equivalent in the above-mentioned articles of the Regulations, have been introduced. These are concerned with the protection of the environment (Article 35 – *Basic rules*, paragraph 3), with the responsibilities at the national level relating to the introduction of new weapons (Article 36 – *New weapons*), and with the protection of airmen in distress (Article 42 – *Occupants of aircraft*).

1381 Finally, with regard to subjects which are common to the Section concerned here and the Hague Regulations, it may be noted that the Hague Conference had urged that until regulations for the law of naval warfare were drawn up, Powers should apply as far as possible to war at sea the principles of the Convention Relative to the Laws and Customs of War on Land.¹

Protocol I

Article 35 – Basic rules

1. In any armed conflict, the right of the Parties to the conflict to choose methods or means of warfare is not unlimited.
2. It is prohibited to employ weapons, projectiles and material and methods of warfare of a nature to cause superfluous injury or unnecessary suffering.
3. It is prohibited to employ methods or means of warfare which are intended, or may be expected, to cause widespread, long-term and severe damage to the natural environment.

Commentary

Paragraph 1 – Methods or means of warfare: no unlimited right

Introduction

- 1382** The principle contained in this paragraph reaffirms the law in force. Whether the armed conflict concerned is considered by the protagonists to be lawful or unlawful, general or local, a war of liberation or a war of conquest, a war of aggression or of self-defence, limited or “total” war, using conventional weapons or not, the Parties to the conflict are not free to use any methods or any means of warfare whatsoever.
- 1383** With reference to its basis in international law, it was Grotius in his work *De iure belli ac pacis*, published in 1625, who demonstrated the necessity of *temperamenta belli*, of imposing limitations on the destructive power of weapons to be used (at that time Europe was plunged in the horrors of the Thirty Years’ War, which had all too often been waged as a “total war”). This principle undoubtedly had its opponents between 1625 and 1907, but it was never actually contested. The Hague Regulations of 1907 repeat this principle in Article 22 in the following form: “The right of belligerents to adopt means of injuring the enemy is not unlimited”. The necessity of reaching complete agreement on this essential basic principle before any attempt could be made at formulating specific regulations was obvious to the members of the Conference of 1907.
- 1384** In 1965 the XXth International Conference of the Red Cross considered it necessary to reaffirm this principle (“the right of the parties to a conflict to adopt means of injuring the enemy is not unlimited”, Resolution XXVIII). This proposition was taken up again by the United Nations General Assembly on 13 January 1969 in a slightly different form (Resolution 2444 (XXIII)),¹ which was actually closer to the text finally adopted by the Diplomatic Conference. The latter did not contest the proposition submitted on this point by the ICRC,² but it slightly modified the wording of it after a number of proposals and amendments were made,³ finally returning to the “English version”. These modifications did not change the basic intent.⁴ The proposal of making this paragraph into a separate article reveals the importance that was attached to it. The title, “Basic rules”, was introduced by the Conference.⁵

¹ In fact, this was taken from the English version of the 1907 text, except that the expression “belligerents” was replaced by “Parties to an armed conflict”. However, one should remember that the authentic text of the Hague Regulations was in French.

² The ICRC text was as follows: “The right of Parties to the conflict and of members of their armed forces to adopt methods and means of combat is not unlimited”. (Draft Protocol I, Art. 33, para. 1).

³ *O.R.* III, pp. 155, 157, CDDH/III/91, 108, 237.

⁴ A possibly more substantial modification was proposed in an amendment stating that “the choice” (and not the right) of the methods and means of combat was not unlimited (*ibid.*, p. 156, CDDH/III/225); cf. *CE 1972, Report*, Vol. II, p. 56, CE/COM III/C 27.

⁵ *O.R.* XIV, p. 234, CDDH/III/SR. 26, para. 5.

1385 Contrary to what some might think or wish, in law there are no exceptions to this fundamental rule. If one were to renounce the rule, by which Parties to the conflict do not have an unlimited right, one would enter the realm of arbitrary behaviour, i.e., an area where law does not exist, whether this was intended or not. It is quite another matter to determine the actual scope of the principle, and the specific rules and practices implied by it, which may differ with the times, depending on the prevalent customs and treaties. These variations do not affect the principle itself but its application.

The pretext of the so-called “Kriegsraison”

1386 A number of different theories, of which some are still in existence, seek to contest the validity of the rule as such, i.e., the rule contained in the paragraph under consideration. The best known of these, though it is now out of date, was expressed by the maxim “Kriegsraison geht vor Kriegsmanier” (“the necessities of war take precedence over the rules of war”), or “Not kennt kein Gebot” (“necessity knows no law”). These maxims imply that the commander on the battlefield can decide in every case whether the rules will be respected or ignored, depending on the demands of the military situation at the time. It is quite obvious that if combatants were to have the authority to violate the laws of armed conflict every time they consider this violation to be necessary for the success of an operation, the law would cease to exist.⁶ Law is a restraint which cannot be confused with more usages to be applied when convenient. The doctrine of “Kriegsraison” was still applied during the Second World War.⁷ It is possibly the uncertainty as to the applicability of the Hague law in conditions which had changed considerably since 1907 that contributed to this to some extent. However, it is probable that the resort to this doctrine was above all based on contempt for the law, the weakening of which is may be characteristic and a danger of our age.⁸ “Kriegsraison” was condemned at Nuremberg,⁹ and this condemnation has been confirmed by legal writings. One can and should consider this theory discredited. It is totally incompatible with the wording of Article 35, paragraph 1, and with the very existence of the Protocol.

A state of necessity

1387 The second obstacle placed in the path of this provision is more serious. It is related to the state of necessity, which is different from the valid doctrine of military necessity which will be examined below. The argument runs like this: the laws of war no longer apply in the case of a state of emergency affecting the very

⁹ For a well-known case, see 42 *AJIL*, 1948, pp. 301-304.

existence of the nation (“Staatsnotstand”), i.e., there is a genuine right to ensure the preservation of the State, which may be exercised when conditions are such that no remedy is available, except by the violation of the laws of war, and to be decided, not by military commanders, but by the highest government authorities.¹⁰ In its work on State responsibility and the state of necessity, a report of the International Law Commission comes to the conclusion that there are no situations which have the effect

“of precluding the wrongfulness of State conduct not in conformity with one of the rules of the law of war which impose limitations on the belligerents regarding the means and methods of conducting hostilities between them, the general purpose being to attenuate the rigours of war” (para. 28).

The International Law Commission considers that a state of necessity cannot be invoked as a reason for eliminating the unlawful nature of conduct against “obligations arising out of peremptory norm of international law, i.e., norm from which no derogation is permitted and which can be modified only by subsequent norms of general international law having the same character” (para. 37).¹¹

1388 It is quite probable that there has been a tendency for war to be conducted, at least to some extent, in conflict with these principles. The *tabula rasa* doctrine, which was put forward by those who considered that the Second World War had left neither rules nor principles behind it, cannot be explained in any other way.¹² This obstacle should be taken seriously, but we are not concerned here with pursuing the examination of this problem any further. However, it does not seem that this doctrine went so far as to repudiate either the Geneva Conventions themselves or the Martens clause.¹³ It is precisely because this sort of situation threatens everything, including the interests protected by the Geneva Conventions, that an effort was made in the Protocol to reaffirm and develop the law applicable to armed conflict. In other words, the principle which states that the Parties to the conflict do not have an unlimited right was contested in the name of total war. The Protocol answered by declaring that the negation of this principle is incompatible with the preservation of civilisation and humanity, and this is in fact the real issue.

Military necessity

1389 Though the principle is clear, the concepts which result from it require some explanation. The law of armed conflict is a compromise based on a balance between military necessity, on the one hand, and the requirements of humanity,

¹⁰ F. Berber, *op. cit.*, p. 78.

¹¹ *Yearbook of the International Law Commission*, 1980, Vol. II, part two, pp. 34, 46-47 and 50; there are also numerous bibliographical references, particularly on pp. 46-47. See also the Vienna Convention on the Law of Treaties, Art. 53.

¹² J.L. Kunz, “The Laws of War”, 50 *AJIL*, 1956, p. 328.

¹³ On this subject, see H. Lauterpacht, “The Problem of the Revision of the Law of War”, 29 *BYIL*, 1952, p. 360.

on the other. It is customarily expressed in the form of prohibitions which take military necessity into account. Military necessity means the necessity for measures which are essential to attain the goals of war, and which are lawful in accordance with the laws and customs of war.¹⁴ Consequently a rule of the law of armed conflict cannot be derogated from by invoking military necessity unless this possibility is explicitly provided for by the rule in question. Conversely, when the law of armed conflict does not provide for any prohibition, the Parties to the conflict are in principle free within the constraints of customary law and general principles. This is specified in Article 1 (*General principles and scope of application*), paragraph 2, of the Protocol, when it states that:

“In cases not covered by this Protocol or by other international agreements, civilians and combatants remain under the protection and authority of the principles of international law derived from established custom, from the principles of humanity and from the dictates of public conscience.”

This is the Martens clause, which was already contained in essentially the same form in the Preamble of Hague Convention IV of 1907. In other words, when the Parties to the conflict do not clash with a formal prohibition of law of armed conflict, they can act freely within the bounds of the principles of international law, i.e., they have the benefit of a freedom which is not arbitrary but within the framework of law. When they come up against a formal prohibition, they cannot invoke military necessity to derogate from it. When this possibility is explicitly provided for, the Parties to the conflict can only invoke it to the extent that it is provided for.

1390 This principle and these concepts are meant to be applied in practice. This is almost always where the difficulties begin. It has been argued that the principle is clear but the concepts are vague.¹⁵ As to these concepts, an effort was made to clarify them in the preceding lines. Others have said that the principle is basic, but it needs to be elaborated; methods and means which strike indiscriminately must be further circumscribed, and this also applies to weapons, environmental factors and terrorism.¹⁶ It is quite clear that these clarifications have above all been given by the rules of the Protocol itself, beginning with the two other paragraphs of Article 35 examined here, which are aimed at the prohibition of superfluous injury or unnecessary suffering and severe damage to the natural environment; these will be examined below. However, it is appropriate to begin by remarking that the text does not contain a prohibition on specific weapons. This might seem unusual at a time when all questions, whatever their nature, end by posing a technical problem. It is not surprising, therefore, that the subject was debated for a long time, from the time of the preliminary draft and throughout

¹⁴ F. Lieber, *Instructions for the Government of Armies of the United States in the Field* (known as the Lieber Code), 1863, Art. 14; this formula is still applicable. In this sense, see W. Downey, *op. cit.*, p. 252.

¹⁵ O.R. XIV, pp. 233-249, CDDH/III/SR.26 and 27.

¹⁶ *Ibid.*

the Conference itself,¹⁷ but it is a fact that the Protocol does not contain a single formal prohibition concerning a specific weapon. This means that even more importance must be attached to the general principles, particularly to the rule of paragraph 2 of the article concerned here, which prohibits superfluous injury and unnecessary suffering. The same applies, of course, to a proper understanding of “military necessity” when the Protocol alludes to it. In fact, this was a criticism which had already been made of the 1949 Geneva Conventions. By repeatedly allowing expressions such as “if possible”, “as far as possible” and exceptions based on military considerations, whether they are considered to be “urgent”, “absolute” or simply “necessary”, one introduces an element of uncertainty and risks arbitrary behaviour. In this respect the 1949 drafters replied that without these concessions, which take reality into account, it would never have been possible to arrive at such detailed texts and at provisions which were so favourable to the victims of war. According to Max Huber, the objection has sometimes been raised:

“that provisions which take reality into account are at risk of becoming a source of reciprocal accusation for the belligerents or a pretext for questioning all laws of war; but this will not be the case if the Conventions combine a high moral tone with a sense of reality”.¹⁸

On the other hand, he admits that:

“there is no branch of law in which complete clarity is more essential than in that of the laws of war, for in this field allegations of violations of the law are particularly difficult to settle by means of juridical and peaceful procedures. This is because practical and psychological conditions in wartime are opposed to an impartial and swift appraisal of the facts”.¹⁹

1391 Yet “the consensus procedure, which is in itself useful, always has certain limitations. The agreement of the Parties is often only reached at the cost of the clarity and precision of the text”.²⁰

1392 The lack of clarity frequently conceals more or less unadmitted “military necessities”. However, if the rule of Article 35, which is discussed here, is not to become a dead letter, it is necessary to determine its scope. In other provisions, the rule may be perfectly clear, but containing a safety clause, depriving it

²⁰ Translated by the ICRC; original text: “la procédure en soi utile du consensus connaît toutefois des limites. L'accord des Parties n'est souvent acquis qu'au détriment de la clarté et de la précision des textes”. Report of 29 July 1976 on relations between Switzerland and the United Nations and its specialized agencies from 1972-1976, submitted by the Federal Council to the Federal Parliament, p. 21, footnote.

precision.²¹ “Have confidence in the wisdom of the generals”²² was the only solution to limit the injury and suffering of war entertained by a number of authors following the Second World War.²³ But it is not the solution which was chosen by the international community, as evidenced by the existence of the Protocol, and there is absolutely no reason to go back on this choice.

1393 Having said this, it is important that generals and all combatants who have to interpret matters left to their discretion as a result of recourse to military necessity, do so wisely. Good faith is not a virtue which is the exclusive attribute of the interpreters of the law, but is also imposed on those who enjoy a certain degree of freedom of action in the field, even though the heat of battle does not favour an objective view of things. This is also the place to recall that the Martens clause, which is included in Article 1 (*General principles and scope of application*), paragraph 2, of the Protocol, automatically applies from the moment that a specific rule is questioned as a result of a discretionary clause. Even though the Parties to the conflict may only be bound within the limits of “what is practicable” in a particular case, they will never be exempted from fundamental humanitarian requirements.

1394 Moreover, in certain countries the very concept of military necessity has assumed a relatively well-defined form, not only on the basis of legal theory, but also on the basis of case-law. Born of necessity, often by improvisation, the laws of war derive their permanent source from these constraints (“temperamenta”). Those matters which were left to discretionary clauses based on military necessity were those which could not be regulated; and matters which are not regulated provide a field for the law to develop. This is stated explicitly in Article 45 of the First Convention of 1949, which lays down that unforeseen cases are to be provided for by the Commanders-in-Chief in conformity with the general principles of the Convention.²⁴ Undoubtedly the well-known statement by Lauterpacht could also apply to these unforeseen cases. He stated that “the law on these subjects must be shaped – so far as it can be shaped at all – by reference not to existing law but to more compelling considerations of humanity, of the survival of civilisation, and of the sanctity of the individual human being”,²⁵ though writing this, he was thinking in broader terms and was referring to the conduct of hostilities in general.

²¹ For example, this led to a number of experts at the second session of the Conference of Government Experts expressing their fear of passing the responsibility of deciding what is a lawful objective and what is not to the military commander at any level. They firmly opposed the proposal that a military commander could draw up his own criteria and consequently they requested that objective criteria should be laid down in the Protocol, to which the military must refer in practice (*CE 1972, Report*, Vol. I, p. 147, para. 3.141). See also E. David, *La protection des populations civiles pendant les conflits armés*, International Institute for Human Rights, VIIIth Teaching Session, July 1977, p. 32.

²² *Ibid*, p. 52.

²³ F. Berber, *op. cit.*, p. 60, quoting Fenwick.

²⁴ See *Commentary I*, pp. 340-341.

²⁵ H. Lauterpacht, *op. cit.*, p. 379.

- 1395 However, apart from these basic considerations, it is possible to detect elements which define the concept of military necessity even more clearly. This concept can, in exceptional cases, and only in those where it has been explicitly provided for, justify a certain degree of freedom of judgment, though it can never justify a degree of violence which exceeds the level which is strictly necessary to ensure the success of a particular operation in a particular case.²⁶ This rule is sometimes expressed by the maxim which states that necessity is the limit of legality. Any violence which exceeds the minimum that is necessary is unlawful and it is on this principle that all law relating to the conduct of hostilities is ultimately founded. This principle is expressed in specific rules in the Protocol, but it does not govern only these specific rules. Its scope also extends to situations which are not covered by these rules. This is a direct consequence of the principle which states that the Parties to the conflict do not have an unlimited right.
- 1396 An American writer has attempted a more precise definition with particular reference to the case law:

“Military necessity is an urgent need, admitting of no delay, for the taking by a commander, of measures which are indispensable for forcing as quickly as possible the complete surrender of the enemy by means of regulated violence, and which are not forbidden by the laws and customs of war.”²⁷

Thus this definition is based on four foundations: urgency, measures which are limited to the indispensable, the control (in space and time) of the force used, and the means which should not infringe an unconditional prohibition.

- 1397 Another definition in very general terms is given as follows: military necessity constitutes “the right to apply that amount and kind of force which is necessary to compel the submission of the enemy with the least possible expenditure of time, life and money”.²⁸ However, this description has the disadvantage that it does not in fact take into account the paragraph of Article 35 with which we are concerned, and therefore it cannot stand on its own. Moreover, it should be quite clear that the requirement as to minimum loss of life and objects which is included in this definition refers not only to the assailant, but also to the party attacked. If this were not the case, the description would be completely inadequate. Finally, it is important to realize that this formula is normally applied purely and simply as a result of respect for the rules of the Protocol, since these rules encompass all considerations of military necessity.²⁹

²⁶ N.C.H. Dunbar, “Military necessity in War Crimes Trials: Notes”, 29 *BYIL*, 1952, p. 442, at p. 444, in a quotation attributed to Phillipson.

²⁷ W. Downey, *op. cit.*, p. 254. In “The Hostages Trial” (Trial of Wilhelm List and Others), the American military tribunal declared that: “Military necessity or expediency do not justify a violation of positive rules [...] The rules of international law must be followed even if it results in the loss of a battle or even a war.” The tribunal added that the prohibitions contained in the Hague Regulations “are superior to military necessities of the most urgent nature except where the Regulations themselves specifically provide the contrary” (15 *Law Reports*, p. 175, and 8 *Law Reports*, pp. 66-69).

²⁸ M. Greenspan, *op. cit.*, pp. 313-314.

²⁹ See, in addition, M. Greenspan, *op. cit.*, pp. 314-316; for a more detailed discussion of this subject, *cf.* N.C.H. Dunbar, *op. cit.*

Limits on the exception of reprisals

1398 Obviously these principles and the rule contained in Article 35, paragraph 1, cannot be nullified by reprisals. This above all because reprisals are prohibited in the majority of cases. The Geneva Conventions prohibit them purely and simply against persons protected by these Conventions.³⁰ The Protocol prohibits them in Articles 51-56, against civilians, civilian objects, cultural objects and places of worship, objects indispensable to the survival of the civilian population, the environment and the works and installations containing dangerous forces, as well as all those persons and all the objects which are protected in Part II (the wounded, sick and shipwrecked, medical and religious personnel, medical units and transports, Article 20 – *Prohibition of reprisals*). Thus, according to the Protocol, reprisals are no longer authorized, except in the conduct of hostilities, and even then they cannot be carried out arbitrarily. The following are principles of customary law that apply to the execution of reprisals: the evident failure or manifest impracticability of any other solution, prior and express warning that reprisals will be carried out if the violation does not cease, the decision to be taken at the highest governmental level, the means to be proportional to the offence in question, and immediate interruption when the offence has stopped.³¹ These conditions only serve to confirm the validity and the intangible character of the principle contained in Article 35.

Questions of terminology

- 1399** With regard to the terms used, there are no particular difficulties. In the first place it should be noted that the rule is formulated, as is often the case in Part III, in the present tense, without further explanation or specific prohibitions. This means that the text merely lays down the rule, independently of the conditions of application.³²
- 1400** The expression “Parties to the conflict” replaced the term “belligerents” used in the Hague Regulations, but the term is commonly used in the Geneva Conventions. Moreover, the term “belligerents” dates back to a time when war was still considered as a recognized method of resolving differences which arose between nations. This is no longer the case today, even though all too often the international community is unable to prevent it.

³⁰ First Convention, Art. 46; Second Convention, Art. 47; Third Convention, Art. 13; Fourth Convention, Art. 33.

³¹ See in particular, *Reaffirmation*, Report of the ICRC at the XXth International Conference of the Red Cross, Geneva, 1969, pp. 96-100. For the discussion of the problem at the Diplomatic Conference, see S.E. Nahlik, “Belligerent Reprisals as Seen in the Light of the diplomatic Conference on Humanitarian Law, Geneva, 1974-1977”, 42 *Law and Contemporary Problems* 2, 1978, p. 36.

³² By way of comparison, see Art. 15: “Civilian medical personnel shall be respected and protected”, or Art. 42: “No person parachuting from an aircraft in distress shall be made the object of attack during his descent”; the conditions under which the obligation is to be carried out are explicit in the second example, and those on the exercise of the right are implied in the first case.

- 1401** The Conference preferred the term “methods and means of warfare” to the term “methods and means of combat”, which was used in the ICRC draft,³³ “for the reason that ‘combat’ might be construed more narrowly than ‘warfare’.”³⁴ It is clear that the term “warfare” encompasses “combat”, a term that is used occasionally in the Protocol.³⁵
- 1402** The words “methods and means” include weapons in the widest sense, as well as the way in which they are used. The use that is made of a weapon can be unlawful in itself, or it can be unlawful only under certain conditions. For example, poison is unlawful in itself, as would be any weapon which would, by its very nature, be so imprecise that it would inevitably cause indiscriminate damage. It would automatically fall under the prohibition of Article 57 (*Precautions in attack*), paragraph 2(a)(ii). However, a weapon that can be used with precision can also be abusively used against the civilian population. In this case, it is not the weapon which is prohibited, but the method or the way in which it is used.³⁶

Statements

- 1403** The Conference adopted Article 35 by consensus. However, at the time that it was adopted certain countries expressed an opinion either to say that paragraphs 1 and 2 constitute a reaffirmation of customary law,³⁷ as codified in The Hague, or to indicate that they would have abstained if it had been put to a vote.³⁸ One country joined the consensus on the understanding that: “the basic rules contained in this article will apply to all categories of weapons, namely nuclear weapons, bacteriological, chemical or conventional weapons, or any other category of weapons”.³⁹

³³ See *supra*, note 2.

³⁴ Report of the Rapporteur, *O.R.* XV, p. 267, CDDH/215/Rev.1, para. 20.

³⁵ See Art. 18, para. 3; Art. 41, paras. 1, 2 and 3; Art. 51, para. 4(b) and (c); Art. 65, para. 3; Art. 85, para. 3(e).

³⁶ The ICRC Draft contained yet another explicit reference to the members of the armed forces (see *supra*, note 2), which was finally rejected by the Conference. Perhaps it is because of the extent of the “grey areas” where the prescribed conduct is even more difficult to determine for an ordinary soldier or his superior officer than for the legal experts that this reference was rejected. Nevertheless, it was in accordance with a number of military manuals (see, for example, *US Army Field Manual 27-10*, para. 3(b): “the law of war is binding not only upon States as such but also upon individuals and, in particular, the members of their armed forces”) and with the Geneva Conventions of 1949. These clarifications were added after the “Hostages Trial” at Nuremberg.

³⁷ *O.R.* VI, p. 115, CDDH/SR.39, Annex.

³⁸ Based on the fact that this article, as well as others in this Part, have “direct implications for the defence and security of States” (*O.R.* VI, p. 101, CDDH/SR.39, para. 55), or for motives relating to para. 3 (*ibid.*, p. 113, Annex).

³⁹ *Ibid.*, p. 115, Annex; the United States has made a declaration contrary to this statement with regard to nuclear arms at the time of signature on 12 December 1977; the United Kingdom also did so to some extent. See commentary Art. 51, *infra*, p. 613.

Conclusion

- 1404 – The principle which states that the right of the Parties to the conflict to choose the methods and means of warfare is not unlimited implies principally the obligation to respect the rules of international law applicable in case of armed conflict.
- 1405 – Military necessity cannot justify any derogation from rules which are drafted in a peremptory manner. On the other hand, military necessity does give military commanders some freedom of judgment if, and only if, this is explicitly provided for in the Protocol, as well as in unforeseen cases or when the applicable rules are very unclear.
- 1406 – Military necessity is limited to measures which are essential to ensure the success of an operation that is planned, and are lawful according to the other rules of the Protocol, or of international law applicable in the particular case. It is always subject to the Martens clause (Article 1 – *General principles and scope of application*, paragraph 2).
- 1407 – To the extent that they are not prohibited by the Protocol, reprisals are governed by customary law and therefore do not confer an unlimited right.
- 1408 – The Protocol does not impose a specific prohibition on any specific weapon. The prohibitions are those of customary law, or are contained in other international agreements.
- 1409 – The rules of the Protocol must be interpreted in good faith at every level.

Paragraph 2 – Prohibition of superfluous injury or unnecessary suffering*Preliminary remarks*

- 1410 Warfare entails a complete upheaval of values.⁴⁰ In war, law, the governing element in social order, is replaced by force. In the majority of cases it turns men who are destined to live normally and achieve, into wounded soldiers, prisoners, oppressed persons or even corpses. In fact, this was the reason for the founding of the Red Cross. It is the Red Cross which takes up the challenge of these outrages perpetrated by men against their fellow men. It is the Red Cross whose prime concern is man's suffering at the very moment that men are desperately engaged in their task of destruction. However, the development of the techniques of war has caused the Red Cross to wonder if it will be able to concern itself much longer with effects to the exclusion of causes. At the start of the Conference a delegate remarked that "what was more important than seeking to improve the condition of the wounded was to restrict the use of weapons which caused unnecessary suffering or had indiscriminate effects".⁴¹ The ICRC was perfectly aware of this. The expression, "the reaffirmation and development of international humanitarian law applicable in armed conflicts" corresponded to the new situation, and indicated that in future the development of humanitarian

⁴⁰ M. Huber, *La pensée et l'action de la Croix-Rouge*, op. cit., p. 33.

⁴¹ O.R. V, p. 129, CDDH/SR.13, para. 15

law should be conceived and undertaken on a wider scale,⁴² although this does not mean that all the necessary attention should not be paid to the Geneva Conventions. The Draft Rules for the Limitation of the Dangers incurred by the Civilian Population in Time of War, submitted to all governments by the ICRC in 1957, had the sole aim of reducing the suffering of the civilian population. This is now the basic aim of the Protocol itself. However, the memorandum sent to all governments by the ICRC, on 25 May 1967, on the protection of the civilian population against the dangers of indiscriminate warfare, emphasized another matter – that of the combatants. It was not only concerned with saving those who did not participate in the hostilities, but also with avoiding any injury or suffering of the combatants in excess of that necessary to put the enemy *hors de combat*. The ICRC quoted a clause from the Preamble of the St. Petersburg Declaration of 1868, whilst expressing its regret that this was virtually ignored. This clause, which is still applicable, envisages that governments will in due course seek an understanding:

“whenever a precise proposition shall be drawn up in view of future improvements which science may effect in the armament of troops, in order to maintain the principles which they have established, and to conciliate the necessities of war with the laws of humanity”.

Finally, in the preliminary papers for the Conference, the ICRC referred to the principles which in its view impose the obligation on the belligerents to abstain from the use of arms:

- of a nature to cause superfluous injury or unnecessary suffering;
- which, because of the imprecision or their effects, will indiscriminately affect the civilian population as well as the combatants;
- of which the harmful effects will escape the control, in space or in time, of those using them.⁴³

1411 At the beginning of the first session of the Conference of Government Experts in 1971, the ICRC was already quite convinced that, from the point of view of humanitarian law, it would be difficult today to make provisions only with regard to the care to be given to the wounded and the sick, or even only to formulate rules of protection. It has become necessary to deal with the means which are available to the combatants. Article 35, paragraph 2, has this sole aim, although it merely announces the principle without detailing any specific points. The object of combat is to disarm the enemy. Therefore it is prohibited to use any means or methods which exceed what is necessary for rendering the enemy *hors de combat*. This rule is the corollary to paragraph 1, which denies an unlimited right to choose the means to harm the enemy. Neither the combatants nor the Parties to the conflict are free to inflict unnecessary damage or injury, or to use violence in an irrational way. All in all, this is the position adopted by the ICRC.

⁴² *Reaffirmation*, p. 2. As Max Huber has remarked, the words “Red Cross” also signify “the indefatigable struggle against all the causes of suffering which can be overcome” (translated by the ICRC) (M. Huber, *La pensée et l’action de la Croix-Rouge*, *op. cit.*, p. 50).

⁴³ *Reaffirmation*, pp. 74-75.

- 1412 However, the history of weapons is above all dominated by the contest between projectile and armour, between mortar fire and fortification. The discovery of a new means of attack leads to the introduction of a new means of defence, which in turn provokes the introduction of an even more powerful projectile. This course of events has been taking place since time immemorial. The battlefield of armaments is now littered with weapons that have disappeared because they are either obsolete or they have been improved upon. In our time this evolution of the means used in attack and defence has developed with a dizzying speed, and to guard against this, “deterrence” is resorted to, which is significant. Historically, when particular weapons disappeared, this was because they were replaced by others. There are very few exceptions to this rule, though certain weapons were rejected because they had a double-edged effect of endangering those who were using them, as well as those against whom they were used. Bacteriological weapons are an example of this.
- 1413 However, it is equally true that there have been a number of attempts in the past aimed at prohibiting certain weapons for disinterested humanitarian motives or, at least, for motives alleged to be such. These attempts did not have the desired effect, possibly because this would have consolidated definitively the superiority of certain categories of individuals over others. Means as simple as the bow and arrow or the crossbow, or as sophisticated for the time of the European Middle Ages as gunpowder, became temporarily subject to prohibitions. Nevertheless, they were used and have contributed to the disintegration of an outdated social order. This makes it difficult to pass judgment. There are the weapons of the poor and the weapons of the rich, the weapons of the attackers and those of the defenders; the problem is indeed complex.

The Declarations of St. Petersburg and The Hague

- 1414 However, a glimmer of light eventually appeared in the murky process of the development of weapons. This came in the form of the St. Petersburg Declaration of 1868, which introduced a prohibition on the use, in time of war, of explosive or inflammable projectiles with a weight of less than 400 grammes. The significance of this Declaration does not primarily lie in the prohibition itself, as the problems arising today are on a different scale from those described. It lies in its Preamble. The salient feature of the St. Petersburg Declaration is the relatively clear idea of the purpose of military operations, i.e., to weaken the military forces of the enemy. With this concept as a starting point, the Declaration continues by stating a principle and concludes with a specific prohibition. The principle is that of the prohibition of weapons which would unnecessarily increase the suffering of men rendered *hors de combat*, or which would inevitably lead to their death. It is sufficient to render enemy combatants *hors de combat*. The actual prohibition is restricted to any projectile of less than 400 grammes which “is either explosive or charged with fulminating or inflammable substances”, but it allows for the possibility of future prohibitions.
- 1415 This was undeniably a milestone, for even in 1863, Lieber had stated in his Instructions – which codified the law existing at the time he was writing – that

since wars had developed into large scale national wars, there were no longer any treaty restrictions of the modes adopted to injure the enemy, but that the law of war imposes many limitations and restrictions based on principles of justice, faith and honour.⁴⁴ The St. Petersburg Declaration was followed in 1899 by three other Declarations at The Hague, including one concerned with the use of bullets which expand or flatten easily in the human body (dum-dum bullets).⁴⁵ There was apparently a general respect for this last prohibition by belligerent Parties, even though modern weapons could give rise to new problems in this respect. With regard to the prohibition of 1868, practice is less clear and the question is controversial.⁴⁶ However, the principal point which was raised by some of the experts who concerned themselves with this matter was a different issue. The St. Petersburg Declaration of 1868 and the Hague Declarations of 1899 explicitly prohibit particular weapons on the basis of a certain concept of military operations which renders these weapons unnecessary. The Hague Regulations of 1907 which in Article 23, paragraph 1(e), states that it is prohibited “to employ arms, projectiles, or material calculated to cause unnecessary suffering” turns this basis into the rule itself, but as a result it becomes so vague and generalized that in the view of the experts it lacks any practical value.⁴⁷ The principle in the Preamble of the Declaration was thus turned into the rule in The Hague in 1907, whereas its true role is, and only can be, a source of inspiration for establishing the rules.⁴⁸

The work of the United Nations

- 1416 The fact remains that the text of Article 23, paragraph 1(e), of the Hague Regulations had to be included in the Protocol with some modifications in the wording. It can be found in Article 35, paragraph 2, under the title “Basic rules”. However, the problem was not resolved and this is why the participants in the Conference endeavoured to find a solution since the start of the *travaux préparatoires* in 1971.⁴⁹ This was the start of a debate which went on during the two sessions of the Conference of Government Experts, three meetings of experts,⁵⁰ the four sessions of the Diplomatic Conference in an *Ad Hoc* Committee. Resolution 22, entitled “Follow-up regarding Prohibitions or Restriction of Use of Certain Conventional Weapons”, crowned all these efforts.

⁴⁴ F. Lieber, *op. cit.*, Art. 30.

⁴⁵ The two others are entitled “Declaration Prohibiting the Discharge of Projectiles and Explosives from Balloons” and “Declaration Concerning the Prohibition of Using Projectiles the Sole Object of which is the Diffusion of Asphyxiating or Deleterious Gases”, which has now been replaced by the 1925 Geneva Protocol.

⁴⁶ On this point, see, Y. Sandoz, *Des armes interdites en droit de la guerre*, Geneva, 1975, pp. 16-20.

⁴⁷ A. Cassese, “Weapons Causing Unnecessary Suffering: Are They Prohibited?”, 58 *Rivista di diritto internazionale*, No. 1, 1975, particularly pp. 16-20.

⁴⁸ *Ibid.*, pp. 37-42.

⁴⁹ *CE 1971, Report*, p. 99, CE/COM III/44, chap. VII.

⁵⁰ The first took place in 1973; see ICRC, *Weapons that may Cause Unnecessary Suffering or have Indiscriminate Effects*, Geneva, 1973, 72 p.; see also *supra*, note 17, and P.A. Robblee Jr., “The Legitimacy of Modern Conventional Weaponry”, *RDPMDG XVI-4*, 1977, p. 401.

Throughout the course of these debates the principle of the prohibition on superfluous damage and injury was examined, analysed, thoroughly studied and questioned, both in the light of past experience and from the point of view of modern military necessity. The principle was never contested, but neither did it form the subject of a wide-ranging agreement on its significance and its scope as far as actual means used in combat are concerned. The first fruits of these efforts were gathered by the “United Nations Conference on Prohibitions or Restrictions on the Use of Certain Conventional Weapons which may be deemed to be Excessively Injurious or to have Indiscriminate Effects”, which was held in Geneva from 10 to 28 September 1979, and from 15 September to 10 October 1980. This Conference was called on the basis of a recommendation formulated in Resolution 22 mentioned above, which gained the full support of the United Nations General Assembly. It concluded by adopting the following instruments by consensus:

- Convention on Prohibitions or Restrictions on the Use of Certain Conventional Weapons which may be deemed to be Excessively Injurious or to have Indiscriminate Effects;
- Protocol I on Non-Detectable Fragments;
- Protocol II on Prohibitions or Restrictions on the Use of Mines, Booby-Traps and Other Devices;
- Protocol III on Prohibitions or Restrictions on the Use of Incendiary Weapons.⁵¹

The scope of the prohibition

a) *General*

1417 The report of the Rapporteur indicates that:

“several representatives wished to have it recorded that they understood the injuries covered by that phrase to be limited to those which were more severe than would be necessary to render an adversary *hors de combat*”.⁵²

As we have seen above, this corresponds to the position of the ICRC⁵³ and to the intent of the original rule.

1418 However, before examining particular aspects, it is appropriate now first to examine the undisputed importance and value of the paragraph under consideration here, in relation to all the Geneva Conventions and to the Protocol

⁵¹ See Y. Sandoz, “A New Step Forward in International Law – Prohibitions or Restrictions on the Use of Certain Conventional Weapons”, *IRRC*, January-February 1981, p. 3, and for the Final Act of the Conference, *ibid.*, p. 41.

⁵² *O.R.* XV, p. 267, CDDH/215/Rev. 1, para. 21.

⁵³ The ICRC draft was as follows: “It is forbidden to employ weapons, projectiles, substances, methods and means which uselessly aggravate the sufferings of disabled adversaries or render their death inevitable in all circumstances”. This text is even closer to the St. Petersburg Declaration of 1868. The article is entitled: “Prohibition of unnecessary injury”.

itself. It is precisely because mistreating someone who is *hors de combat*, whether he is wounded, sick, or shipwrecked, a prisoner or a harmless civilian, is considered as being completely unnecessary from the point of view of military necessity, that the Geneva Conventions since 1864, and now the Protocol, have been adopted. It is precisely in order to prevent unnecessary suffering that Article 51 of the Protocol (*Protection of the civilian population*), paragraph 4, prohibits indiscriminate attacks. Similarly, Article 48 (*Basic rule*) imposes the obligation at all times “to distinguish between the civilian population and combatants”, Article 52 (*General protection of civilian objects*) distinguishes military objectives and civilian objects, and Article 57 (*Precautions in attack*) imposes the obligation on those who plan and decide upon an attack to identify the objective before proceeding with the attack. These are just a few examples. The same principle forms the basis for Article 35, paragraph 3, which prohibits widespread, long-term and severe damage to the natural environment. Similarly, Article 36 (*New weapons*) places the High Contracting Parties under an obligation to take care when developing or adopting a new weapon. In all these fields the principle of the prohibition of causing unnecessary suffering is not only undisputed but is applied in the form of concrete rules, including those which are specifically concerned with the civilian population.

b) *Specifics*

1419 The problem of the weapons remains. This is the most difficult, and possibly also the most important issue:

“[...] if there is continued exploitation of technological developments for military purposes, as has unfortunately been the case since 1907, the existence and the value of what still remains of the laws of war and even of the law of nations in general, will become problematical”.⁵⁴

The specific applications of the prohibition formulated in Article 23, paragraph 1(e), of the Hague Regulations, or resulting from the Declarations of St. Petersburg and The Hague, are not very numerous. They include:

1. explosive bullets and projectiles filled with glass, but not explosives contained in artillery missiles, mines, rockets and hand grenades;⁵⁵
2. “dum-dum” bullets, i.e., bullets which easily expand or flatten in the human body, such as bullets with a hard envelope which does not entirely cover the core or is pierced with incisions⁵⁶ or bullets of irregular shape or with a hollowed out nose;⁵⁷

⁵⁴ Translated by the ICRC; original text: “[...] si l’on continue à exploiter à des fins guerrières les possibilités techniques qui s’ouvrent comme ce fut malheureusement le cas depuis 1907, l’existence et la valeur de tout ce qui reste du droit de la guerre et même du droit des gens en général deviendra problématique”. M. Huber, “Quelques considérations...”, *op. cit.*, p. 432.

⁵⁵ Declaration of St. Petersburg of 1868; see also *The Law of Land Warfare*, p. 18, para. 34, in *US Field Manual 27-10*, 1956.

⁵⁶ Hague Declaration III of 1899.

⁵⁷ *US Field Manual 27-10*, p. 18, para. 34; *Zusammenstellung der für die Bundeswehr wichtigen kriegsvölkerrechtlichen Abkommen* (ZD 15/10), para. 75.

3. poison and poisoned weapons,⁵⁸ as well as any substance intended to aggravate a wound;⁵⁹
4. asphyxiating or deleterious gases;⁶⁰
5. bayonets with a serrated edge,⁶¹ and lances with barbed heads;⁶²
6. hunting shotguns are the object of some controversy, depending on the nature of the ammunition and its effect on a soft target.⁶³

1420 The weapons which are prohibited under the provisions of the Hague Law are, *a fortiori*, prohibited under the paragraph of Article 35 with which we are concerned here.

1421 The above-mentioned Convention on Prohibitions or Restrictions on the Use of Certain Conventional Weapons, and the Protocols annexed to it, formulate rules prohibiting or restricting the use of certain weapons with particular reference in the Preamble to the text of this paragraph of Article 35, as well as to paragraphs 1 and 3 of this article.

a) The following are prohibited:

- the use of any weapon the primary effect of which is to injure by fragments which in the human body escape detection by X-rays (Protocol I);⁶⁴
- the use of booby-traps intended to cause superfluous injury or unnecessary suffering, as well as any booby-traps that are placed perfidiously (Protocol II).⁶⁵

b) The following have a restricted or limited use:

- mines, booby-traps (those which are not prohibited in the sense described above), and other delayed-action devices (Protocol II);
- incendiary weapons (Protocol III).

1422 With regard to the first category, apart from the restrictions which are already imposed by the rules of Protocol I Additional to the Conventions (restriction of attacks to military objectives, prohibition on indiscriminate attacks etc.), the restrictions concern populated areas and remotely delivered mines (Articles 4 and 5). In principle, mines should not be used in populated areas. Exceptions are provided for in combat, or if adequate control measures are taken. Regarding the use of remotely-delivered mines, this is subject either to a precise recording of the mined area, or to the condition that the mines deployed are fitted with a self-activating or remotely-controlled mechanism capable of neutralizing them as soon as the military situation allows it. Special provisions (Articles 7–9) provide for the publication of the location of the minefields as soon as active hostilities cease, and for special security measures for the protection of United Nations

⁵⁸ Hague Regulations of 1907, Art. 23(a).

⁵⁹ *US Field Manual 27-10*, paras. 34 and 37.

⁶⁰ Hague Declaration II of 1899; this point is now covered in the Geneva Protocol of 1925.

⁶¹ See A. Cassese, “Weapons causing ...”, *op. cit.*, p. 23.

⁶² *US Field Manual 27-10*, para. 34.

⁶³ *ICRC, Weapons that may cause...*, *op. cit.*, p. 16.

⁶⁴ These are weapons manufactured entirely or principally with substances such as wood, glass, or plastic, composed of light atoms which are virtually indistinguishable from the atoms of the human body with regard to the absorption of X-rays.

⁶⁵ For details, see *infra*, p. 442.

forces and for international cooperation regarding the removal of minefields, mines and booby-traps.

- 1423** Incendiary weapons are also subject to restrictions on their use on the basis of Protocol I Additional to the Conventions (prohibition of attacks against the civilian population and civilian objects). But in addition, a military objective situated inside a concentration of civilians should never be the object of attack by incendiary weapons delivered by aircraft (Article 2, paragraph 2). Other incendiary weapons can only be used in such a situation if the military objective is clearly separated from the concentration of civilians, and if all precautions have been taken to prevent or minimize civilian losses and injury (Article 2, paragraph 3). Finally, the use of incendiary weapons is prohibited in forests and other types of vegetation, unless these constitute military objectives or conceal military objectives (Article 2, paragraph 4).
- 1424** It is worth noting that none of the rules explicitly protects combatants from incendiary weapons such as flame-throwers or napalm. However, it is generally admitted that these weapons should not be used in such a way that they will cause unnecessary suffering,⁶⁶ which means that in particular they should not be used against individuals without cover. Certain other weapons that may have an indiscriminate effect continue to be the object of controversy (although the Additional Protocol imposes mandatory rules in this respect in Article 51 – *Protection of the civilian population*, paragraph 4 which admittedly refers to “attacks” and not to weapons). These include, for example, certain blast and fragmentation weapons, as well as small-calibre projectiles. A start has been made on examining the possibility of prohibiting or restricting their use.⁶⁷
- 1425** In this field, which concerns the security of States, more than in any other, any extension of the scope of Article 35, paragraph 2, relating to weapons⁶⁸ depends either on the practice of States or on their express agreement to prohibitions or restrictions on the use of the weapons referred to above.

Questions of terminology

- 1426** Regarding the wording of the paragraph under consideration, this only differs slightly in the French version from the Hague text,⁶⁹ and only the word “méthodes” has been added. On the other hand, the difference is greater in the English text from two points of view. The Conference certainly considered that the expression “calculated to cause”, which was used in English as an equivalent of the French expression “propre à”, and which can be found in the 1907 version

⁶⁶ *US Field Manual 27-10*, para. 36.

⁶⁷ Resolution 22, cited above, p. 402; see also *O.R.* XVI, pp. 602-622, CDDH/IV/226. Unconventional weapons are left out of consideration here as their prohibition was negotiated outside the CDDH, for example, by the Convention on the Prohibition of the Development, Production and Stockpiling of Bacteriological (Biological) Weapons and Toxin Weapons, and on their Destruction, which entered into force in 1975.

⁶⁸ For an outline of this question, see Y. Sandoz, *Des armes interdites...*, *op cit.*, pp. 16-35.

⁶⁹ See *supra*, p. 401.

of the Hague Regulations was not appropriate,⁷⁰ and consequently the text was amended to “of a nature to”. Moreover, the French expression “maux superflus” was translated in English no longer only by the words “unnecessary suffering”, as it had been formerly, but by the expression “superfluous injury or unnecessary suffering”, as the French expression covers “simultaneously the sense of moral and physical suffering”.⁷¹

Problems arising within the Ad Hoc Committee

1427 Thus the principle which forms the object of the paragraph of Article 35 with which we are concerned here, was accepted without any difficulty by Committee III of the Conference. Not surprisingly, there were a number of proposals aimed at rendering it more complete and precise. In this respect one could refer to the proposed amendments designed to prohibit methods and means of mass extermination,⁷² or weapons which have indiscriminate effects,⁷³ or even means of combat resorted to in the context of the conflicts covered by Article 1 (*General principles and scope of application*), paragraph 4,⁷⁴ but these proposals did not, in the end, give rise to any real discussion at this stage. Only the problem of damage to the natural environment, which is covered by paragraph 3 examined below, was dealt with. Obviously the scope of Article 36 (*New weapons*) is left for consideration later. It was in the *Ad Hoc* Committee and in the meetings of experts mentioned above that detailed debates took place on the questions raised by the rule under consideration here. The most that can be said with regard to Committee III is that certain delegations insisted from the very beginning of the discussion of Article 35, paragraph 2, that the problems raised by this provision fall exclusively within the competence of States.⁷⁵

1428 Thus the *Ad Hoc* Committee was faced with an arduous task.⁷⁶ It is clear that in the eyes of the victim all suffering is superfluous and any injury is unnecessary.

⁷⁰ *O.R.* XV, p. 267, CDDH/215/ Rev.1, para. 19.

⁷¹ *Ibid.*, para. 21; the English text was further corrected as compared with the previous translation of the Hague Regulations in that the expression “to choose” was substituted for the expression “to adopt” (*O.R.* XIV, pp. 234 and 241, CDDH/III/SR.26, paras. 5 and 28).

⁷² *O.R.* III, p. 157, CDDH/III/238.

⁷³ *Ibid.*, p. 154, CDDH/III/11.

⁷⁴ *Ibid.*, p. 157, CDDH/III/238, and *O.R.* XIV, pp. 236-238, CDDH/III/SR.26, paras. 12 and 15.

⁷⁵ *O.R.* XIV, p. 246, CDDH/III/SR.27, para. 8.

⁷⁶ The *Ad Hoc* Committee did not restrict itself to examining those weapons that are of a nature to cause superfluous injury and unnecessary suffering in a strict sense, but also considered other criteria such as non-discrimination, perfidy, the dictates of public conscience (*O.R.* XVI, p. 470, CDDH/220/Rev.1, Report of the 2nd session, para. 5). Its programme included: a) incendiary weapons; b) small calibre projectiles; c) blast and fragmentation weapons; d) delayed action and perfidious weapons; e) potential weapons development (*ibid.*, p. 453, CDDH/47/Rev.1, para. 2). From the beginning arms which are dealt with in another forum were excluded, particularly those on the agenda of the Conference of the Committee on Disarmament (CCD) (*CE 1971, Report, CE/COM III/44*, ch. VII, “Prohibited methods and means of warfare” “Note”, p. 99, and *CE 1972, Report, Vol. I*, para. 3.14, pp. 127-128, and paras. 3.15-3.23, pp. 128-130).

Thus in principle it is necessary to weigh up the nature of the injury or the intensity of suffering on the one hand, against the “military necessity”, on the other hand, before deciding whether there is a case of superfluous injury or unnecessary suffering as this term is understood in war. The debates on this point have too often given way to discussions which could almost be described as Byzantine with regard to the examination of each individual weapon. This occurred to such an extent that “most experts had [...] agreed that it would be easier to ensure that a weapon was banned if the treaty did not spell out the underlying motives”.⁷⁷ This reveals to what extent the matter has remained a question of controversy.⁷⁸ This is the case even if the question is considered from the purely medical point of view, as appeared in the “Statement concerning unnecessary suffering presented by the informal working group of medical experts” at the second session of the Conference of Government Experts on the Use of Certain Conventional Weapons.

1429 This Statement is as follows:

“‘Unnecessary suffering’ is a term implying numerous medical parameters. From a strictly medical standpoint it seems impossible at the present stage of medical knowledge to objectively define suffering or to give absolute values permitting comparisons between human individuals. Pain, for instance, which is but one of many components of suffering, is subject to enormous individual variations. Not only does the pain threshold vary between human beings: at different times it varies in the same person, depending upon circumstances.

It was the opinion of all medical experts that instead of ‘suffering’, *the wound or injury* caused by a weapon offered a better but still very complex way of defining the effect of that particular weapon. It is still very difficult to compare an injury in one part of the human body with one in a different location. Likewise, general effects caused by a local injury are subject to many variables and make comparison between different individuals difficult. However, if such parameters are taken into consideration, it seemed to the medical experts preferable to use *injury instead of suffering*.”⁷⁹

It is quite clear that the French expression “maux superflus” implies the concept of injury as well as that of suffering.⁸⁰

⁷⁷ O.R. XVI, p. 392, CDDH/IV/SR.38, para. 9.

⁷⁸ For the question as a whole, see in particular: ICRC, *Weapons that may cause...*, *op. cit.*, pp. 11-19, paras. 18-39, and pp. 25-29, paras. 59-76; *Lucerne Report*, pp. 7-14, paras. 16-42; *Lugano Report*, pp. 5-9, paras. 1-15 and pp. 24 ff.; as well as the reports of the *Ad Hoc* Committee on conventional weapons, already cited *supra*, note 76; see also the Report of the United Nations Secretary-General, “Napalm and other incendiary weapons and all aspects of their possible use” (following resolution 2852 (XXVI) of the United Nations General Assembly, New York, 1973, A/8803/Rev.1).

⁷⁹ *Lugano Report*, p. 140.

⁸⁰ O.R. VI, p. 99, CDDH/SR.39, para. 47.

Conclusion

- 1430** Article 35, paragraph 2, was finally adopted by consensus.⁸¹ It lays down a prohibition relating to the results produced, though not directly a prohibition on the means. However, this does not mean that such prohibitions are necessarily absent in the Protocol, as is clear from other provisions (for example, the prohibition on the use of perfidy, on methods and means of combat with indiscriminate effects, on starvation etc.).
- 1431** Despite the difficulties encountered by the *Ad Hoc* Committee in its task, the reaffirmation of the prohibition on unnecessary suffering and superfluous injury corresponds to the ICRC's own proposals. To cast any doubt on the prohibition of superfluous injury or unnecessary suffering, or, even worse, to renounce it, would have resulted sooner or later in the acceptance of torture. Admittedly, obstacles will be met in applying this principle to specific weapons, but the main thing is that the principle has been upheld as a permanent signpost indicating the ultimate objective. We conclude with the following summary:
- 1432** – The principle of the Hague Regulations, Article 23(e) is reaffirmed.
- 1433** – All methods of war conflicting with the rules of the Protocol and the Geneva Conventions are of a nature to cause superfluous injury or unnecessary suffering.
- 1434** – The prohibitions on inflicting superfluous injury or unnecessary suffering on combatants and civilians, resulting from preceding rules, are confirmed (see in particular, *supra*, pp. 404-405).
- 1435** – Fragmentation projectiles of which the fragments cannot be traced by X-rays are prohibited as they are of a nature to cause superfluous injury or unnecessary suffering (see *supra*, p. 405).
- 1436** – In inhabited areas, landmines⁸² are subject to restrictions on their use, with the intention of avoiding superfluous injury or unnecessary suffering. The same applies to booby-traps and other delayed-action devices, which should never be deployed perfidiously. The use of remotely delivered mines is subject in all circumstances to the condition that the mined area be recorded or neutralized as soon as the military situation allows (see *supra*, pp. 405-406).
- 1437** – Incendiary weapons are subject to restrictions on their use when the military objective is situated in an inhabited area. In particular, they should never be delivered by aircraft in these circumstances (see *supra*, p. 406).
- 1438** – Napalm, small-calibre projectiles, and certain blast and fragmentation weapons can also result in superfluous injury or unnecessary suffering, in the sense of the provision contained in this article, even though up to now no regulations have been adopted on this subject.
- 1439** – The concept of superfluous injury or unnecessary suffering, its objective effect on the victim (severity of the injury, intensity of suffering), and its relation to military necessity (rendering the enemy *hors de combat*) are not interpreted in

⁸¹ *Ibid.*, p. 101.

⁸² In war at sea, the use of mines is regulated by the Hague Convention of 1907 Relative to the Laying of Automatic Submarine Contact Mines.

a consistent and generally accepted manner. This concept continues to be the basis on which judgment is formed, but debates have shown its relative and imprecise character.

Paragraph 3 – Protection of the natural environment

Introduction

- 1440** Any method or means of warfare which are planned to cause, or may be expected (albeit without the intention) to cause serious damage to the natural environment, even if this effect is incidental, are prohibited.
- 1441** Thus this is a matter not only of protecting the natural environment against the use of weapons or techniques deliberately directed against it, nor merely of protecting the population and the combatants of the countries at war against any of these effects, but also one of protecting the natural environment itself, taking into account the inevitable overflow effect inherent in these incidents and the resulting “transnational” aspect of this problem.
- 1442** These days, the environment is all too often adversely affected, which is the subject of much criticism, and which has principally affected industrialized countries. Pollution, ugliness, soot, noise and the psycho-physiological conditions resulting for mankind, all contribute to create a degraded environment in which mankind is forced to live. Thus preventative or corrective measures have to be taken to prevent this environment from having a harmful effect on the physical or mental health of the people. This struggle has already begun, both at the national level and at the international level. At the national level this action is led by public authorities, and in some cases a Cabinet Member is even appointed with responsibility for the quality of life. At the international level, the United Nations Conference on the Environment, held in Stockholm in 1972, formed the starting point for the United Nations Environment Programme, as well as a declaration known as the Stockholm Declaration. The Red Cross is involved to a significant extent in this peacetime effort, whether it takes place at a national level, through the National Red Cross or Red Crescent Societies, or at the international level, through the intervention of their federation, the League of the Red Cross and Red Crescent Societies.⁸³
- 1443** The threat of peacetime activities to man’s environment is a relatively new problem.⁸⁴ Until quite recently this was the unhappy prerogative, above all, of war. War is still a threat, but it no longer has a monopoly. In fact it is a threat to such an extent, in view of the devastating character of modern weapons, that

⁸³ XXIIInd and XXIIIrd International Conferences of the Red Cross, Teheran, 1973, and Bucharest, 1977, Resolutions XVIII and XXI; *IRRC*, August 1972, p. 468, and “The Red Cross and the Human Environment”, *IRRC*, June 1976, p. 295.

⁸⁴ See also UN, 9 *Monthly Chronicle*, No. 7, July 1972, pp. 89-94; “International Environment, Protection, Policy, Legal and Trade Aspects” in *American Society of International Law, Proceedings*, 1977, p. 48; M. Bothe, “War and Environment”, in Bernhardt (ed.), *op. cit.*, Instalment 4, 1982, p. 290.

Article 54 of the Protocol (*Protection of objects indispensable to the survival of the civilian population*) contains a special provision to this effect. In fact, the threat is not limited to the period of hostilities. It extends far beyond this period, as shown by the studies carried out under the aegis of the United Nations Environment Programme.⁸⁵ Landmines and booby-traps have in some cases been scattered in astronomical quantities in certain theatres of war. Once the war is over, these devices can only be eliminated with considerable risk by patient efforts which must continue for many years. Meanwhile, they form a serious and constant threat to the population. This is just one example, but in reality all delayed-action devices or those which have not exploded, for whatever reason, have a similar effect on the environment, with ominous consequences. In addition, chemical components of certain material war remnants can have permanent harmful effects on humans, animals, vegetation, water, land and the ecosystem as a whole.⁸⁶

Travaux préparatoires

1444 The concept of the ecosystem brings us to the essence of Article 35, paragraph 3 (identical on this point to that of Article 55 – *Protection of the natural environment*), as opposed to the concept of the human environment which forms the subject matter previously considered. In fact this distinction has only gradually emerged in the text. The first proposals submitted in 1972 referred to “means and methods which destroy the natural human environmental conditions”,⁸⁷ or the “methods and means which destroy natural human environment”.⁸⁸ These formulations are understandable when one remembers that they express a concern for the protection of the natural environment, for example, the climate, from effects which could in the long run be harmful to the environment necessary for man’s existence.⁸⁹ Man could and should modify his environment by cooperating with nature, not by attacking it in an ill-considered way. However, as war is a destructive activity which is directed against men, i.e. combatants, as much as against the environment surrounding them, these proposals undoubtedly seemed to be lacking in clarity or ambiguous. However,

⁸⁵ United Nations Environment Programme, Administrative Council, 5th session, Nairobi, 9-25 May 1977, item 14 on the provisional agenda “Application of resolution 3435 (XXX) of the General Assembly: The study of the material remnants of war, particularly mines, and their effect on the environment” (UNEP/GC/103/19, April 1977; *O.R.* IV, pp. 282-289, CDDH/IV/inf.241, and *ibid.*, pp. 236-238, CDDH/IV/inf. 222). See also: UNITAR and the Libyan Institute of international relations, *The material remnants of war*, UNITAR/CR/26, 1983; Resolution 3435(XXX) of 9 December 1982 of the United Nations General Assembly.

⁸⁷ *CE 1972, Report*, Vol. II, p. 63, CE/COM III/C 68-69; see also *ibid.*, Vol. I, pp. 28-29, para. 0.30.

⁸⁸ *Ibid.*, Vol. II, p. 51, CE/COM III/C 2. For the discussion, see *ibid.*, Vol. I, pp. 30 (par. 0.30), 129 (paras. 3.17 and 3.19), 149 (para. 3.156) and 208 (para. 5.33).

⁸⁹ In this respect, see the amendment CDDH/III/222, *infra*, note 94.

they retain their usefulness in revealing the concern of the original proponents of the final provision with which we are concerned here. This also applies to another proposition concerned with the “means and methods which upset the balance of the natural living and environmental conditions”,⁹⁰ which is linked to the above-mentioned concept of the ecosystem.

1445 These fears are by no means imaginary.

1446 As shown in the *Final Report: An Agenda for the Red Cross*, by D. Tansley, published in 1975:

“Another possibility for the future concerns new kinds of disasters which may emerge from the growing impact of technology upon the environment. Deterioration of the environment through various human activities can be expected to have an important effect on human populations, particularly in large urban agglomerations and densely populated areas. Pollution of the air and of the water cycle raises the possibility of increased ‘technological disasters’ in the future. Many of these can be expected to be local in impact, confined to a single city, region or country. But concern is also growing over the extent to which human activities might also touch the ‘outer limits’ of the ecological systems of the earth. Prediction in such a difficult area is hazardous. It is perhaps enough to note the concern expressed by the Club of Rome [...]”⁹¹

If peacetime activities can unleash such “technological disasters”, we should fear them all the more during wartime.⁹²

The work of the Diplomatic Conference

1447 The problem was brought up by a number of delegations⁹³ from the very beginning of the Conference in 1974, and various proposals were again submitted.⁹⁴ Finally, Committee III set up an informal working group, called the Group “Biotope”, which proposed adding a supplementary paragraph to Article

⁹⁰ *CE 1972, Report*, Vol. II, p. 52, CE/COM III/C6.

⁹¹ D.D. Tansley, *Final Report: An Agenda for the Red Cross. Re-appraisal of the Role of the Red Cross*, Geneva, July 1975, p. 57.

⁹² For example, see the Report of the United Nations Secretary-General on napalm (*op. cit.*), pp. 31-32, paras. 98-102; pp. 51-52, paras. 160-162; pp. 57-58, paras. 181; p. 60, paras. 160-162. See also “Stockholm International Peace Research Institute”, *SIPRI Yearbook*, 1977, pp. 79-94, and the statement by Mr. Tolba, Executive Director of the United Nations Environment Programme (UNEP), drawn up for the World Day for the Environment, which states that there is “a constant deterioration of the situation in the biological and ecological fields”, in *Weekly Summary of United Nations’ Activities*, SI/22/82, 7 June 1982.

⁹³ See *O.R.* V, p. 105: CDDH/SR.11, para. 22; p. 139, CDDH/SR.13, para. 61, and p. 141, CDDH/SR.14, para. 3.

⁹⁴ “It is forbidden to employ methods and means of combat which disrupt or destroy the natural conditions of the human environment” (*O.R.* III, p. 157, CDDH/III/238 and Add.1). “It is forbidden to use means and methods which destroy natural human environmental conditions” (*ibid.*, p. 155, CDDH/III/108, para. 4). “It is forbidden to use methods and means which disturb or alter the ecological balance of the human environment” (*ibid.*, p. 156, CDDH/III/222). See also CDDH/III/60, *ad* new Article 49 *bis* of the ICRC draft, *O.R.* III, p. 220.

35, with the following wording: “It is forbidden to employ methods and means of warfare which damage the environment in such a way that the stability of the ecosystem is disturbed”.⁹⁵ However, Committee III did not follow the proposal of its working group entirely, and finally eliminated all references to the “ecosystem”.⁹⁶ However, it is clear that there is a discrepancy between the proposals submitted, on the one hand, by a number of different countries (CDDH/III/222, see *supra*, note 94), and on the other, by the Group “Biotope”. Some refer to the ecological balance of the human environment, others to the stability of the ecosystem, and the text which was finally adopted simply refers to “widespread, long-term and severe damage to the natural environment”. The opinions expressed on this point by the United States and the Soviet Union are not unrelated to this result.

1448 A concern for coordination can in fact explain this. At the time that the problem was being debated in the Diplomatic Conference, i.e., in the spring of 1975, the Conference of the Committee on Disarmament (CCD), which was also meeting in Geneva at that time, had on its agenda Resolution 3264 (XXIX) of the United Nations General Assembly. This resolution was concerned precisely with the prohibition of actions to influence the environment and climate for military and other purposes incompatible with the maintenance of international security, human well-being and health. In the annex it included a draft Convention. Article 1⁹⁷ of the Convention, which reflected the deliberations of the CCD,⁹⁸ finally incorporated the prohibition “of environmental modification techniques having widespread, long-term or severe effects”.⁹⁹

⁹⁵ CDDH/III/GT/35; this proposal was made independently of two others of the same nature aimed at the insertion in Part IV of a supplementary article relating to the “protection of the natural environment” (present Article 55) and another article relating to the “protection of natural reserves” (*ibid.*).

⁹⁶ On its part, the ICRC had considered that the concept of the environment was extremely vague, and in the absence of a satisfactory definition, had deemed it best to avoid introducing it in the draft.

⁹⁷ This Article 1 had the following wording in the first Soviet draft: “Each of the Parties to this Convention undertake not to develop meteorological, geophysical or any other scientific or technological means of influencing the environment, including the weather and the climate, for military and other purposes incompatible with the maintenance of international security, human well-being and health and furthermore never under any circumstances to resort to such means of influencing the environment and climate nor to carry out preparations for their use.” (General Assembly, Resolution 3264 (XXIX), Annex.

⁹⁸ “Convention on the Prohibition of Military or any other Hostile Use of Environmental Modification Techniques” (47 States Parties at 31 December 1984). See in particular, J. Goldblat, “The ENMOD Convention Review Conference”, in *Disarmament, A Periodic Review by the United Nations*, New York, Vol. III, No. 2, Summer 1984, p. 93.

⁹⁹ The record of the CCD debates leaves little doubt that this wording is the result of an agreement between the major powers. Within the working group of Committee III of the Diplomatic Conference, the United States and the Soviet Union put forward similar views (large scale, prolonged, severe) during the discussion of a proposal by the Rapporteur. Whether it occurred within the CCD or within the Diplomatic Conference, the agreement was reached and led to the withdrawal of the proposals which had been submitted previously. In particular, see Report of the Conference of the Committee on Disarmament, Vol. I, United Nations General Assembly, 31st session, supplement No. 27 (A/31/27), p. 61, para. 273; p. 66, para. 299 and p. 93, para. 7.

1449 A number of questions arise. Could one maintain that these two texts which seem to be identical, or at least extremely similar on essential points, actually duplicate each other? Within the Diplomatic Conference, this point was examined primarily with regard to the apparent duplication resulting from the paragraph of Article 35 under consideration, and Article 55 (*Protection of the natural environment*). The Group “Biotope”¹⁰⁰ gave the following answer to this question in its report:

“An effort was made to incorporate Article 33 [now Article 35] within Article 48*bis* [now Article 55]. The Group reached the conclusion, however, that the two Articles should remain separate for the reason that whereas Article 48*bis* [55] relates to the protection of the civilian population, Article 33 [35] relates to the prohibition of unnecessary injury.”¹⁰¹

A number of delegations expressed a similar point of view during the discussion of Article 48*bis* [55] within the Working Group.¹⁰² The present paragraph 3 of Article 35 was included in the context of methods of warfare, while Article 55 (*Protection of the natural environment*) is aimed at ensuring the survival or the health of the civilian population living in a particular wartime environment. For this reason it was not considered that these two provisions duplicated each other, as Article 35, paragraph 3, has a much wider scope, taking into account the inevitable “overflow effect”, i.e., the “transnational” aspect of the problem. However, the question was debated above all in relation to the United Nations Convention.

Relation to the United Nations Convention on the Prohibition of Military or any Other Hostile Use of Environmental Modification Techniques

1450 This question of possible duplication was raised in particular with regard to the two separate instruments: on the one hand, the Additional Protocol to the Geneva Conventions, and on the other hand, the Convention on the Prohibition of Military or Any Other Hostile Use of Environmental Modification Techniques. The problem was discussed within the CCD and the representative of the United States clearly responded to this in the negative. He stated that the Protocol is aimed at protecting the natural environment against damage which could be inflicted on it by any weapon, whereas the goal of the Convention is to prevent the

¹⁰⁰ See *supra*, p. 412.

¹⁰¹ CDDH/III/GT/35, p. 3, para. 11. The countries which participated in the Group were: Australia, Czechoslovakia, Finland, German Democratic Republic, Hungary, Ireland, the Netherlands, Spain, Sweden, Yugoslavia.

¹⁰² For example: Switzerland, Democratic Republic of Vietnam, Mongolia, Cyprus. Canada expressed the same opinion but “without throwing out the baby with the bathwater”. Sweden pointed out that the problem had a transnational character.

use of environmental modification techniques¹⁰³ as a weapon.¹⁰⁴ He added that the Protocol only applied to armed conflict, while the prohibition contained in the Convention applies to the use of these techniques for hostile purposes, even in a case where there had been no declaration of war whatsoever, and where no other weapons were used.¹⁰⁵ These views do not seem to have been contested,¹⁰⁶ though some representatives regretted that the identical or virtually identical wording on this essential point (“widespread, long-lasting or severe” in the Convention and “widespread, long-term and severe” in the Protocol) does not make it easy to make a distinction between the two.¹⁰⁷ However, it is generally accepted that the United Nations Convention has a wider application than the Protocol in this respect.

1451 In more concrete terms, one could add that the Convention prohibits the deliberate manipulation of natural processes in order to change “the dynamics, composition or structure of the Earth, including its biota, lithosphere, hydrosphere and atmosphere, or of outer space”,¹⁰⁸ with the intention of damaging the armed forces of another State Party to the Convention, its civilian population, towns, industries, agriculture, transportation and communication networks, or its natural resources and wealth.¹⁰⁹ In contrast the Protocol prohibits damaging the natural environment by any means whatsoever, whether direct or indirect, as opposed to effects on the human environment, i.e. “to external conditions and influences which affect the life, development and the survival of the civilian population and living organisms”.¹¹⁰ Even though the formula referring to perturbations of the stability of the ecosystem was rejected, “as an operative part of the standard”,¹¹¹ the term “natural environment” in the Protocol does refer to this system of inextricable interrelations between living organisms and their inanimate environment.¹¹² This is a kind of permanent or transient equilibrium depending on the situation, though always relatively fragile, of forces which keep each other in balance and condition the life of biological groups.

1452 Thus these texts do not duplicate each other. Nor do they seem to contradict each other, as was once feared. This fear was based on the fact that the United

¹⁰³ Cf. Article 1: “Each State Party to this Convention undertakes not to engage in military or any other hostile use of environmental modification techniques having widespread, long-lasting or severe effects as the means of destruction, damage or injury to any other State Party.”

¹⁰⁴ By way of example the understanding annexed to the Convention mentions: earthquakes; tsunamis; an upset in the ecological balance of a region; changes in weather patterns (clouds, precipitation, cyclones of various types, and tornadic storms); changes in climate patterns; changes in ocean currents; changes in the state of the ozone layer; and changes in the state of the ionosphere”. (Report cited, A/31/27, p. 92).

¹⁰⁵ *Ibid.*, p. 72, para. 327.

¹⁰⁶ *Ibid.*, paras. 328-330.

¹⁰⁷ *Ibid.*, para. 330; these terms do not actually have the same meaning in the two instruments, as we will see.

¹⁰⁸ Art. 2; for some specific examples, see *supra*, note 104.

¹⁰⁹ Report cited A/31/27, p. 73, para. 332.

¹¹⁰ Report of the Group “Biotopie”, CDDH/III/GT/35, p. 2, para. 5.

¹¹¹ Report of the Rapporteur, O.R. XV, p. 268, CDDH/215/Rev.1, para. 26.

¹¹² Report of the Group “Biotopie”, p. 2, par. 7.

Nations Convention does not prohibit environmental modifications which cause widespread, long-lasting or severe damage as such, but only to the extent that they are used to cause damage to another State, while the Protocol prohibits any means of a nature to cause widespread, long-term and severe damage to the natural environment. As we have seen above, these similar, though not identical terms reveal different realities and different goals. On the other hand, there is no doubt that the two texts are complementary in time of war, i.e., that the Protocol supplements the United Nations Convention. It is probably for this reason that an effort was made to employ a uniform terminology as far as possible.¹¹³ However, an additional difficulty arises from the fact that the United Nations Convention, on the one hand, and the Protocol, on the other hand, do not give the same meaning to the same terms. For example, for the United Nations Convention, the term “long-lasting” was defined as lasting for a period of months or approximately a season,¹¹⁴ while for the Protocol “long-term” was interpreted as a matter of decades.¹¹⁵ Taking this into consideration, the United Nations Convention prohibits both in times of war and peace any actions which could be expected to cause, for example, a “long-lasting” (several months) modification of the climate, which could harm another State Party to the Convention. In the case of armed conflict the Protocol prohibits any “long-term” (a period of decades) modification of the climate, whether this is instigated directly or indirectly.

1453 In times of armed conflict, which is only what concerns us here, the Protocol and the Convention, taken together, prohibit:

- a) any direct action on natural phenomena of which the effects would last more than three months or a season for one or other of the Parties to the Convention, even if this Party is not a Party to the conflict;
- b) any direct action on natural phenomena of which the effects would be widespread or severe (for the interpretation of these terms, see *infra*, note 117), regardless of the duration, affecting one or other of the Parties to the Convention, even if it is not a Party to the conflict;
- c) any method of conventional or unconventional warfare which, by collateral effects, would cause widespread and severe damage to the natural environment as such, whenever this may occur over a period of decades.¹¹⁶

1454 Undoubtedly there was concern for coordination and even unification of the terminology used, but there is also some danger of confusion as the same words are not used with the same meaning. The drafters of the United Nations

¹¹³ CCD/480, 20 February 1976, reproducing the text of a statement made by the representative of Australia on 24 November 1975 at the First Committee of the United Nations General Assembly.

¹¹⁴ Report cited, A/31/27, p. 91, understanding on interpretation, letter b).

¹¹⁵ O.R. XV, p. 268, CDDH/215/Rev.1, para. 27.

¹¹⁶ Like the oceans, the natural environment, taken in an ecological sense, “res communis”, taken in an ecological sense. It cannot be appropriated but is for the use of everyone, without exclusive jurisdiction or sovereign rights. The most recent writers have advanced the concept of the “common heritage of mankind” (see A.C. Kiss, in 175 *Hague Recueil*, 1982/II, p. 103, particularly pp. 116 and 174).

Convention are thinking of hurricanes, tidal waves and earthquakes as well as rain and snow, and they reason in terms of months and seasons.¹¹⁷ The authors of the Protocol think in terms of “ecology”, and the time scales are not at all the same. This is what the Rapporteur stated in his report:

“The three elements of the adopted formula of time or duration of the damage, scope or area affected, and the severity or prejudicial effect of the damage to the civilian population was extensively discussed. The time or duration required (i.e., long-term) was considered by some to be measured in decades. References to twenty or thirty years were made by some representatives as being a minimum. Others referred to battlefield destruction in France in the First World War as being outside the scope of the prohibition. The Biotope report states that ‘Acts of warfare which cause short-term damage to the natural environment, such as artillery bombardment, are not intended to be prohibited by the article’, and continues by stating that the period might be perhaps for ten years or more. However, it is impossible to say with certainty what period of time might be involved. It appeared to be a widely shared assumption that battlefield damage incidental to conventional warfare would not normally be proscribed by this provision. What the article is primarily directed to is thus such damage as would be likely to prejudice, over a long term, the continued survival of the civilian population or would risk causing it major health problems.”¹¹⁸

1455 This last remark seems to refer to Article 55 (*Protection of the natural environment*) of the Protocol rather than to Article 35, with which we are concerned here.¹¹⁹ However, the report clearly indicates that the period should be measured in decades and not in months, which underlines the ecological aspect of the problem, even though the term “ecosystem” is not used in the text.¹²⁰ Similarly, it eliminates certain effects which can extend over decades, while they are not of a nature to affect the ecosystem as such. Also, the problems arising from the material remnants of war, which were referred to above,¹²¹ seem to be covered not only by the provisions of Article 35, but also by Article 55 (*Protection of the natural environment*). The drafters of the United Nations Convention took

¹¹⁷ It is the understanding of “the Committee that, for the purposes of this Convention, the terms ‘widespread’, ‘long-lasting’ and ‘severe’ shall be interpreted as follows:

a) ‘widespread’: encompassing an area on the scale of several hundred square kilometers;
 b) ‘long-lasting’: lasting for a period of months, or approximately a season;
 c) ‘severe’: involving serious or significant disruption or harm to human life, natural economic resources or other assets.”

Understanding on interpretation relating to Article 1, report cited, A/31/27, p. 91.

¹¹⁸ O.R. XV, p. 268, CDDH/215/Rev.1, para. 27.

¹¹⁹ See *supra*, p. 414.

¹²⁰ See *supra*, pp. 412-413; it is actually in these terms that ecological catastrophes are measured. At the time of the Amoco Cadiz disaster – a tanker which lost 220,000 tons of oil off the coast of Brittany in the spring of 1978 – it was estimated that it would take five to ten years for the equilibrium of the ecological system on the shore to recover, i.e., for the flora and fauna to return to their former level of existence (see 85 *RGDIP*, 1981/4, p. 892).

¹²¹ See *supra*, pp. 410-411.

every precaution to ensure that the interpretation of the terms “widespread, long-lasting or severe” used in the Convention would not be automatically applied to the Protocol.¹²²

- 1456 These apparently contradictory demands are not irreconcilable at the level of interpretation. The ordinary meaning to be given to the terms of a treaty in their context should be established in the light of the object and purpose of the treaty,¹²³ or those of the provision under consideration. These different rules relating to the protection of the environment manifestly reflect a concern about the harmonization of the terminology used. However, each one of these articles should still be understood and interpreted in the light of its own character, its context, object and purpose. These concepts are not interchangeable, nor are the conclusions which are based on them.

Questions of terminology

- 1457 We repeat that the formula used in the United Nations Convention (“widespread, long-lasting or severe”) implies that it is sufficient for one or other of these conditions to be fulfilled, for the situation to fall under the prohibition. On the other hand, a method or a means of war does not become unlawful under Article 35 of the Protocol unless it cumulatively fulfils all three conditions included in the provision, i.e., unless it causes damage which is simultaneously widespread, long-lasting and severe.
- 1458 Further, as a matter of drafting, Article 35, paragraph 3, contains the phrase “intended, or may be expected, to cause”, though there is no equivalent phrase in paragraph 2. The analysis of the latter provision has shown that the English formula (“calculated to cause”), was corrected to conform with the French text (“de nature à”).¹²⁴ In fact, the experts had recognized that the English turn of phrase contained the notion of intention or of deliberate design, which seemed to be missing in the French expression and that it could be interpreted in a more restrictive sense.¹²⁵ It was even contended that the English expression was aimed in particular at the manufacturers of arms and meant to force them to abstain from developing arms of a nature to cause unnecessary suffering.¹²⁶ Whatever the case may be, the drafting of the paragraph under consideration here deliberately differs in this respect from the preceding paragraph and refers both to geophysical weapons, exclusively intended to affect for example the climate,

¹²² “It is further understood that the interpretation set forth above [see *supra*, note 117] is intended exclusively for this Convention and is not intended to prejudice the interpretation of the same or similar terms if used in connexion with any other international agreement”. Report cited, A/31/27, interpretative understandings, p. 91.

¹²³ Vienna Convention on the Law of Treaties, Art. 31, para. 1.

¹²⁶ *Ibid.*

and “non-intentional ecological war” in which the consequences for the natural environment simply result from the large scale use of conventional weapons.¹²⁷

Declarations

1459 Article 35, paragraph 3, was adopted by consensus at a plenary meeting. However, a number of delegations decided to make statements,¹²⁸ particularly those who did not approve of the wording of Article 1 of the United Nations Convention and the inclusion of the words “widespread, long-lasting or severe” in this provision, a wording which was considered by its supporters to help “friction on insignificant questions”.¹²⁹ One delegate stated that in his opinion:

“the interpretation of the terms ‘widespread’, ‘long-term’ and ‘severe’ has to be consistent with the general line of thought as it emerged from the deliberations on this article in Committee III, as reflected in its report (CDDH/215/Rev.1). In no case should it be interpreted in the light of the terminology of other instruments of environmental protection that have a different scope of application altogether”.¹³⁰

¹²⁷ *Lucerne Report*, p. 76, para. 273. The Report of the Rapporteur indicates that these two expressions “may be expected” and “are intended” were included for reasons of extreme caution. The latter alludes to deliberate harm directed against the natural environment, as a method or means of warfare, such as the destruction of natural resources. The former implies an objective norm concerning that which a State or an individual considers, or should consider, to cause the effects described (*O.R.* XV, p. 360, CDDH/III/275).

¹²⁸ *Venezuela*: “[...] on the understanding that this approval is without prejudice to Venezuela’s position on the Convention on the prohibition of military or any other hostile use of environmental modification techniques” (*O.R.* VI, p. 118, CDDH/SR.39, Annex).

Mexico: “His delegation’s support for paragraph 3 of Article 33 [35] could in no way be construed as a change in its Government’s attitude to the Convention entitled “Convention on the prohibition of military or any other hostile use of environmental modification techniques” in which the words “widespread, long-lasting or severe effects” appeared. Those words had not the same scope as they had in the context of the Protocol” (*ibid.*, p. 100, CDDH/SR.39, para. 49).

Argentina: “The Argentine delegation interprets the provision which has now been approved as in no way connected with the work of the Conference of the Committee on Disarmament, which culminated in the Convention on the prohibition of military or any other hostile use of environmental modification techniques in respect of which the Argentine government has made its position clear at the appropriate time” (*ibid.*, p. 113, CDDH/SR.39, Annex).

Egypt: “The Egyptian delegation emphasizes the fact that its acceptance of Article 33, paragraph 3, in no way prejudices its country’s position on the Convention on the prohibition of military or any other hostile use of environmental modification techniques” (*ibid.*, p. 114, CDDH/SR.39, Annex).

¹²⁹ Report cited, A/31/27, p. 66, para. 298.

¹³⁰ Federal Republic of Germany; see *O.R.* VI, p. 115, CDDH/SR.39, Annex.

Another delegation did not approve of the inclusion of the clause relating to the environment in Article 35.¹³¹

Conclusion

- 1460** Geophysical war and ecological war are two aspects of the same subject. They are dealt with in two separate juridical instruments and form the object of provisions which are sometimes couched in similar terms, underlining their kinship, though this should not lead to confusion.
- 1461** For example, geophysical war might be aimed at changing the weather or the climate, or triggering off earthquakes. It is prohibited by the United Nations Convention on the Prohibition of Military or Any Other Hostile Use of Environmental Modification Techniques, vis-à-vis any State Party to the Convention. This concerns a measure of arm control which applies in time of peace, as in time of war. The threshold of applicability of this prohibition is determined with reference to the extent of the damage, to the period during which the damage is caused, or to its severity. The order of magnitude is in terms of some hundreds of square kilometers with regard to the extent, several months or one season with regard to the duration, and the serious disruption of human life and natural or other resources with regard to the severity.
- 1462** Ecological warfare refers to the serious disruption of the natural equilibrium permitting life and the development of man and all living organisms, a disruption of which the effects may be felt for one or more decades. The paragraph under consideration here prohibits this, whether it is committed intentionally or not, for example, by the deliberate use of the tools of chemical warfare, or whether it is simply the result of the use of weapons which inevitably have the same effect on vast stretches of land, whether these are populated or not. Because of the transnational aspect of this problem in particular, the prohibition is absolute; it even continues to apply in the absence of any direct threat to the population or to the flora and fauna of the enemy State. It is the natural environment itself that is protected. It is common property, and should be retained for everyone's use and be preserved.

J. de P.

¹³¹ United Kingdom: "We regard this paragraph as otiose repetition of Article 48 *bis* and would have preferred that paragraph 3 not be included in this Article. We consider that it is basically in order to protect the civilians living in the environment that the environment itself is to be protected against attack. Hence the provision on protection of the environment is in our view rightly placed in the section on protection of civilians. Now that Article 33 has been adopted with paragraph 3, we shall interpret that paragraph in the same way as Article 48 *bis*, which in our view is a fuller and more satisfactory formulation" (*ibid.*, p. 118, CDDH/SR.39, Annex).

Article 36 – New weapons

In the study, development, acquisition or adoption of a new weapon, means or method of warfare, a High Contracting Party is under an obligation to determine whether its employment would, in some or all circumstances, be prohibited by this Protocol or by any other rule of international law applicable to the High Contracting Party.

Commentary

General remarks

- 1463 There was a need for a link between the principles laid down in Article 35 (*Basic rules*) and the concrete prohibitions or the effective restrictions on arms

which cause superfluous injury or unnecessary suffering, or have indiscriminate effects. Some delegates saw the need for a specific legal connexion involving the creation of a special body, a committee responsible for drawing up a list of weapons or methods of use which would fall under the prohibition. This committee would be established by the Protocol itself. It also implied the setting up of a mechanism designed to ensure that, in due course, special conferences would be convened with responsibility for concluding suitable agreements on the basis of humanitarian law. The advocates of this solution were concerned with elaborating Article 35 (*Basic rules*) in a specific and substantive way, and to establish “controls inspired by humanitarian considerations to limit superfluous injury or unnecessary suffering”. For small countries this was a fundamental point, essential for their security. Some even seemed to be inclined to make it a condition of accepting the Protocol in its entirety.¹

- 1464** In the view of opposing delegations, however, this proposal seemed to imply disarmament, a subject which was outside the scope of the Diplomatic Conference. It would lead to a proliferation of international bodies which would only complicate the search for a solution. It had one major drawback in that some of the factors, which are obviously of importance, such as military or political considerations, necessarily elude a humanitarian forum. Moreover, the link established with Article 35 (*Basic rules*) would ultimately establish the unlawful character of certain weapons, even if they had been used prior to the conclusion of the agreements envisaged, which would be unacceptable. Furthermore, they stated that without any consensus the proposal of the small countries was doomed to failure in the face of realities, and, as a practical matter, it would only be possible to establish a mechanism of control and review outside the Protocol.²
- 1465** This exchange of views ended in a rejection in plenary meeting of draft Article 86 *bis* submitted by Committee I,³ for the majority in favour fell short of

¹ O.R. VII, p. 30, CDDH/SR.47, para. 76; for the discussion of the Conference in plenary meeting, *ibid.*, pp. 16-50.

³ This draft article read as follows:

“1. A Committee of States Parties to the Conventions or this Protocol shall be established to consider and adopt recommendations regarding any proposal that one or more States Parties and the Committee itself may submit on the basis of Article 35 of this Protocol for the prohibition or restriction, for humanitarian reasons, of the use of certain conventional weapons that may cause superfluous injuries or have indiscriminate effects.

2. The Committee shall consist of representatives of thirty-one States Parties elected for three years on the basis of equitable geographical distribution by the States Parties to the Conventions or this Protocol, by means of notifications addressed to the depositary Government. The depositary Government, if it should consider it necessary, may convene a meeting of the States Parties to elect the members of the Committee. The Committee shall meet whenever one third of its members so requests; it shall adopt its recommendations by majority and shall elect its chairman.

3. The International Committee of the Red Cross shall participate in the work of the Committee referred to in this article, and shall provide the necessary secretarial facilities.

4. On the basis of the Committee’s recommendations the depositary Government may convene a special Conference, in consultation with any State Party or Parties that may wish to invite such

(continued on next page)

the necessary two-thirds. Finally, by way of compromise, the Conference adopted by consensus Resolution 22 entitled “Follow-up regarding prohibition or restriction of use of certain conventional weapons”, which was mentioned above.⁴

Nature of the obligation

- 1466 Thus it is only in Article 36 that the Protocol establishes a link between its provisions, including those laid down in Article 35 (*Basic rules*) and the introduction of a new weapon by States. The principle is as follows: on the basis of this article the High Contracting Parties undertake to determine the possibly unlawful nature of a new weapon, both with regard to the provisions of the Protocol, and with regard to any other applicable rule of international law. The determination is to be made on the basis of normal use of the weapon as anticipated at the time of evaluation. If these measures are not taken, the State will be responsible in any case for any wrongful damage ensuing.
- 1467 The internal rules of certain States already contained a provision of this nature.⁵ During the Conference of Government Experts in 1972, a formal proposition was tabled,⁶ which was taken over in its essential points in the draft submitted by the ICRC at the opening of the Conference,⁷ and was the object of a number of amendments.⁸

a Conference with a view to adopting agreements that implement the principle that the Parties to the conflict do not have an unlimited right of choice of means of combat.” (*O.R.* X, pp. 276-277, CDDH/405/Rev.1. For the vote in the Committee, *ibid.*, pp. 196-198, and, for the debate and the vote in plenary meeting, *O.R.* VII, pp. 16-35, CDDH/SR.47).

⁴ Commentary Art. 35, *supra*, p. 402, and *O.R.* VII, pp. 261-268, CDDH/SR.57, paras. 47-76. Draft resolution on weapons, CDDH/441 and Add.1.

⁵ See *infra*, note 19.

⁶ CE/COM III/C 56 and 59 (*CE 1972, Report*, vol. II, pp. 65-66; also see *ibid.*, vol. I, p. 130, paras. 3.21-3.22).

⁷ “Article 34 – New weapons

In the study and development of new weapons or methods of warfare, the High Contracting Parties shall determine whether their use will cause unnecessary injury.”

⁸ In fact, these are not always without interest. They represent a whole range of possibilities. One of the first proposals, which came from Pakistan, to some extent anticipates the draft Article 86 *bis* referred to above, in foreseeing that the High Contracting Parties should meet under the auspices of the ICRC for the purpose of determining which weapons should be prohibited (*O.R.* III, p. 154, CDDH/III/11). Certain delegations wanted expressly to link Article 36 to Article 35 by formally imposing an obligation on the Contracting Parties to ensure that new weapons would be compatible with this provision (*ibid.*, p. 161, CDDH/III/235, and p. 159, CDDH/III/32). Others added a reference to Article 51, paragraph 4, which prohibits indiscriminate attacks (*ibid.*, p. 160, CDDH/III/226) or, on the contrary, would prefer to refer merely to the prohibition on weapons causing unnecessary suffering, as in the ICRC draft (*ibid.*, p. 156, CDDH/III/225), sometimes even extending it to a State that is not a Party to the conflict (*ibid.*, p. 159, CDDH/III/28). One delegation asked for an explicit mention of the protection of the natural environment (*ibid.*, p. 160, CDDH/III/92). With the exception of the proposal by Pakistan, all the suggestions were aimed at leaving compliance with the obligation under the control of the State itself, as in the final text. However, a proposal by the Byelorussian SSR deserves a mention. This consisted of making the following addition: “and in cases where it is determined that such weapons or the methods of their use in fact cause unnecessary suffering, they shall transmit the problem of their prohibition to the competent international organs for consideration” (*ibid.*, p. 161, CDDH/III/ (continued on next page)

1468 For the reasons outlined above, in the end a general formula won the day in Article 36, with the addition of Resolution 22, which was mentioned above. This solution became necessary as soon as the participants failed to agree on the interpretation of Article 35 (*Basic rules*), paragraph 2.

1469 This obligation was defined by the Rapporteur of Committee III as follows:

“The determination of legality required of States by this article is not intended to create a subjective standard⁹. Determination by any State that the employment of a weapon is prohibited or permitted is not binding internationally, but it is hoped that the obligation to make such determinations will ensure that means or methods of warfare will not be adopted without the issue of legality being explored with care.

It should also be noted that the article is intended to require States to analyse whether the employment of a weapon for its normal or expected use would be prohibited under some or all circumstances. A State is not required to foresee or analyse all possible misuses of a weapon, for almost any weapon can be misused in ways that would be prohibited.”¹⁰

1470 This commentary is quite clear. However, it should be added that a State which respects the obligation provided for in Article 36, and determines that a new weapon is prohibited, is not automatically obliged to make public its finding.¹¹ This reservation is quite understandable, as modern strategy very often relies not on deployment of military means in the traditional ways, but on new possibilities resulting from research and which consists of creating an imbalance of military strength vis-à-vis the enemy precisely by means of superior technology in the form of new weapons. However, Article 36 in itself constitutes progress as it fills a gap at an international level. It implies the obligation to establish internal procedures for the purpose of elucidating the issue of legality, and the other Contracting Parties can ask to be informed on this point.¹²

1471 We emphasize the fact that this article, like *jus in bello* in general, is concerned with the use of weapons, not their possession, for prohibition of the latter falls under the heading of disarmament.¹³ Whether a weapon is prohibited with regard

231). This proposition is reminiscent of the final paragraph of the St. Petersburg Declaration of 1868 (“The Contracting or Acceding Parties reserve to themselves to come hereafter to an understanding whenever a precise proposition shall be drawn up in view of future improvements which science may effect in the armament of troops in order to maintain the principles which they have established, and to conciliate the necessities of war with the laws of humanity”).

⁹ “Standard” is used in English for the French word “norme”.

¹⁰ *O.R.* XV, p. 269, CDDH/215/Rev.1, paras. 30-31.

¹¹ See in this respect *O.R.* XIV, p. 252, CDDH/III/SR.27, para. 46.

¹² In this sense, A. Cassese, “Means of Warfare; the Present and Emerging Law”, *RBDI*, 1976/1, p. 158; and, by way of example, see *infra*, note 19, and *American Society of International Law, Proceedings*, “Should weapons of dubious legality be developed”, 72nd meeting, Washington, 27-29 April 1978, pp. 26-50. *Cf.*, in addition, Art. 48, First Convention; Art. 49, Second Convention; Art. 128, Third Convention; Art. 145, Fourth Convention. See also Arts. 80 and 84 of the Protocol.

¹³ Thus, for example, the Convention on the Prohibition of Military or any other Hostile Use of Environmental Modification Techniques prohibits geophysical means as a weapon, and it is in this respect a form of disarmament (see commentary Art. 35, *supra*, p. 414).

to its use, or with regard to its possession, is not merely a theoretical distinction. It is easy to imagine that a State equips itself with weapons whose use is normally prohibited for reasons of security, with the proviso that it may use them in certain circumstances by way of reprisal. However, it should remember that the use of these weapons is normally prohibited, and for this reason it must evaluate them in the light of the provisions of Article 36, for example, at the time of their acquisition. Moreover, it is quite clear that a State could not knowingly equip itself only with weapons whose use is normally prohibited, without placing deliberately itself in a position in which it would, when the time came, violate the spirit and the letter of the Protocol, in other words, of the *jus in bello*.

The problem of evaluation

1472 On what basis can or should this evaluation be made? Article 36 refers to “this Protocol” and “any other rule of international law applicable to the High Contracting Party”, i.e., the Party which is acquiring a new weapons or new methods or means of warfare. The methods and means prohibited by the Protocol were studied above at a general level in the analysis of Article 35 (*Basic rules*). The weapons which are prohibited by the Hague Regulations and with regard to which the prohibition is virtually confirmed in the Protocol, were listed in the analysis of paragraph 2 of Article 35 (*Basic rules*). Without necessarily being “new” in a technical sense, these arms are new for the State which is intending to acquire them after becoming a Party to the Protocol. Thus their introduction is subject to the evaluation provided for in Article 36. Regarding the clause on “any other rule of international law applicable to the High Contracting Party”, this refers to any agreement on disarmament concluded by the Party concerned, or any other agreement related to the prohibition, limitation or restriction on the use of a weapon or a particular type of weapon,¹⁴ concluded by this Party, which would relate, for example to a new generation of small calibre weapons or any other type of weapons.¹⁵ Naturally, it also includes the rules which form part of international customary law.

¹⁴ For example, the Convention on Prohibitions or Restrictions on the Use of Certain Conventional Weapons which may be deemed to be Excessively Injurious or to have Indiscriminate Effects, of 10 October 1980. Article 8 of this Convention provides for a review mechanism with the purpose of examining new categories of conventional weapons which do not yet fall under the Protocols annexed to the Convention. A Conference will be held when this is requested by a Contracting Party to the Convention with the agreement of a majority of at least eighteen of them. All States, including all Parties to the Protocol, will be invited to this Conference. Thus this provision complements the implementation of the present Article 36 in a valuable way.

¹⁵ Some further examples can be given of auxiliary means of interpretation, such as the Report of the Secretary General of the United Nations (“Rules of international law in force relating to the prohibition or the restriction on the use of certain weapons” (A/9215, 1973)), the “Comparative table of proposals” drawn up by the Ad Hoc Committee on conventional weapons (O.R. XVI, pp. 551-627, CDDH/IV/226) and the “possible elements of a prohibition of the use of weapons” drawn up by this same Committee (*ibid.*, pp. 539-549, CDDH/408/Rev.1, Appendices I and II). This concerns future law to be created by the States themselves, individually or not, on the basis of the principles which they have established, at least up to a point, during laborious discussions.

1473 This obligation applies to countries manufacturing weapons, as well as those purchasing them. There are far more countries purchasing weapons than countries manufacturing weapons, and the former may be Parties to the Protocol, while the latter, who conceive, develop, manufacture and sell the weapon may not yet be. Whatever the case may be, the purchaser should not blindly depend on the attitude of the seller or the manufacturer, but should proceed itself to evaluate the use of the weapon in question with regard to the provisions of the Protocol or any other rule of international law which applies to it. With regard to the producer countries, they are bound by Article 36 to the same extent as the purchasing countries, from the moment that they become Parties to the Protocol, though the article does not seem to oblige them to prohibit the sale and export of weapons when the evaluation contradicts the rules in force in either their own country or the purchasing country. However, it is obviously desirable that the countries which manufacture arms, which devote to this industry a considerable investment in terms of employment and finance,¹⁶ and which are mainly responsible for the fact that weapons are multiplying at an ever increasing rate throughout the world, also carry out their responsibilities in this matter.¹⁷

1474 In this respect various suggestions submitted during the session of the *Ad Hoc* Committee, such as, for example, the proposal to create an independent institution to gather useful facts,¹⁸ could be of interest one day with regard to the application of Article 36. However, in the short term the Contracting Parties have an obligation to determine themselves whether the arms that they possess, as well as the arms that they expect to produce or acquire in the future, are the object of a prohibition or not. Some of them have expressed their intention of referring for this purpose to international bodies, which could establish some degree of coordination, at least at a regional level.¹⁹

¹⁶ See “World Armaments and Disarmament”, *SIPRI Yearbooks 1978-1982*, and United Nations, General Assembly, “Protection of nature from the pernicious effects of the arms race”, Report of the Secretary General, A/S-12/9, 28 April 1982, especially paras. 18 and 29.

¹⁷ It would be desirable for the country selling weapons to make sure in all circumstances that the country buying them undertakes the obligation only to use the weapons acquired in accordance with the applicable rules of the law of armed conflict. For the view that Article 36 applies equally to any new weapon for the country purchasing it, see *O.R.* VI, p. 101, CDDH/SR.39, para. 56.

¹⁸ *O.R.* XVI, CDDH/237/Rev.1, Report of the *Ad Hoc* Committee, 1976, p. 501, para. 58.

¹⁹ The following are some of these statements:

Sweden: “The government had set up a special committee of jurists, military experts and doctors to consider all projects for the incorporation of new weapons into the arsenals of the State, and to advise the government on their compatibility with the rules of international law in force.” (*O.R.* XIV, p. 253, CDDH/III/SR.27, para. 53).

Canada: “As regards future weapons, his delegation had announced [...] that Canada had decided to set up a national body to consider the question from the point of view of international law” (*O.R.* XVI, p. 246, CDDH/IV/SR.24, para. 32. See also *Lugano Report*, p. 125, paras. 86 and 87). The French text (*Actes* XVI, p. 250) refers to “une instance internationale”.

United States: “In the United States of America the Department of Defense had issued an instruction requiring a legal review of all proposed new weapons to see that their development complied fully with international law.” (*O.R.* XVI, p. 145, CDDH/IV/SR.15, para. 26; this instruction, entitled “Department of Defense Instruction, Review of the Legality of Weapons under International Law” (55.00.15), is dated 16 October 1974).

The “Allgemeine Bestimmungen des Kriegsführungsrechts und Landkriegsrechts” (General provisions of the law of armed conflict and of the law of war on land), March 1961, of the *Federal*
(continued on next page)

1475 The scope of Article 36 is not restricted to future weapons. However, it cannot be expected that States will introduce specific prohibitions on the basis of general principles, when such prohibitions could be considered as an *a posteriori* condemnation of prior use of such weapons. It is necessary to emphasize that the work and the proposals of the *Ad Hoc* Committee were certainly also concerned with existing weapons, because their prohibition or the restrictions on their use seemed necessary, at least in certain circumstances. Even taking into account the above-mentioned Convention on the prohibition or limitation of certain conventional weapons, which has a relatively restricted scope, Article 36 remains, together with the Hague Regulations, the only instrument in the law of armed conflict that can act as a brake on the abuses resulting from the arms race or on the possibility of future abuses, a possibility that must never be lost sight of – quite the reverse! However, this article is also concerned with future weapons.

Future arms

1476 Quite independently of the problems of atomic (nuclear), bacteriological and chemical warfare (ABC), or space war, which have not been included in this context, the experts were concerned with geophysical, ecological, electronic and radiological warfare as well as with devices generating radiation, microwaves, infrasonic waves, light flashes²⁰ and laser beams.²¹ The use of long distance, remote control weapons, or weapons connected to sensors positioned in the field, leads to the automation of the battlefield in which the soldier plays an increasingly less important role. The counter-measures developed as a result of this evolution,

Republic of Germany provide as follows in para. 86: “When new weapons are developed, their employment should be preceded by a study aimed at determining whether they infringe any explicit prohibition or general principles. If they do not, the use of these weapons is permissible” (translated by the ICRC).

The Netherlands: the Ministry of Defence of the Netherlands followed a similar procedure to Canada when deciding to acquire or develop new weapons or weapon systems. “It would be a good idea to set up some sort of independent institute to collect information on the possible and actual effects of certain conventional weapons.” (*O.R.* XVI, p. 338, CDDH/IV/SR.32, paras. 38-39).

United Kingdom: “the additional Protocols had provided an opportunity for the codification of existing practice and his country was therefore at present establishing a formal review procedure to ensure that future weapons would meet the requirements of international law.” (*O.R.* VI, pp. 101-102, CDDH/SR.39, para. 58. See also *O.R.* XVI, p. 394, CDDH/IV/SR.38, para. 18).

Soviet Union: Article 34 [36] “placed on the High Contracting Parties the obligation of determining whether or not their weapons were prohibited. All States at present had facilities for determining specifically whether a particular type of weapon was prohibited.” (*O.R.* VI, p. 101, CDDH/SR.39, para. 56).

Switzerland: The Swiss representative associated himself with the important statement by the USSR representative [...] Article 34 [36] imposed an obligation on States and it was for each State to take that into account” (*ibid.*, p. 102, para. 62).

²⁰ *Lucerne Report*, pp. 79-83, paras. 260-276.

²¹ ICRC, *Weapons of a nature...*, op. cit., pp. 67-69, paras. 235- 242.

in particular electronic jamming (or interference), exacerbates the indiscriminate character of combat.²² In short, all predictions agree that if man does not master technology, but allows it to master him, he will be destroyed by technology.

- 1477 Now is it not the uncontrolled rate of technological development for its own sake, much more than the real needs of security, which is primarily responsible for the escalation of the arms race? Technological progress necessarily implies a certain *fait accompli*²³ which opens the way for new military applications, even when the research was originally oriented towards peaceful ends. Thus new weapons discovered “inadvertently” in this way, have been adopted for the sole reason that they exist or because of a fear that others will develop them. Only governments are in a position to watch constantly, as they should each in its own country, the outcome of such technical progress. They may then identify those factors which contribute to escalation and ask themselves how such escalation can take place, despite external constraints and notwithstanding the fact that it paralyzes the efforts of those who seek greater wisdom and humanity.²⁴
- 1478 Thus Article 36 correctly places the solution to the problem where it actually belongs, in the domestic government of nations, and identifies the essential point, i.e., the technological development of armaments.

Conclusion

- 1479 – The High Contracting Parties are obliged to determine the legality or illegality of the use of any new weapon introduced into their armed forces.
- 1480 – This obligation only concerns the normal use of the weapon as seen at the time of the evaluation, whether it were to be used in some or all circumstances (and not possibly misused).
- 1481 – If a weapon is found to be illegal by a State, this does not by itself create a mandatory rule of international law vis-à-vis third parties, even for the State first mentioned, nor is there an obligation for this State to make its findings public. Consequently the High Contracting Parties are not bound to reveal anything regarding new weapons which are being developed or manufactured.
- 1482 – However, Article 36 does imply the obligation to establish internal procedures with a view to elucidating the problem of illegality and therefore the other Contracting Parties can ask for information on this point.

²⁴ “Between Peace and War: The Quest for Disarmament”, Statement by a Disarmament Study Group of the International Peace Research Association, 3 *Bulletin of Peace Proposals*, Oslo, 1977, p. 277, letter a). It is significant, as the United Nations Secretary-General remarked, that there has been a continuation and even an acceleration in the arms race in the middle of the period of political détente (UN, *Monthly Chronicle*, No. 2, February 1978, p. 25).

Protocol I

Article 37 – Prohibition of perfidy

1. It is prohibited to kill, injure or capture an adversary by resort to perfidy. Acts inviting the confidence of an adversary to lead him to believe that he is entitled to, or is obliged to accord, protection under the rules of international law applicable in armed conflict, with intent to betray that confidence, shall constitute perfidy. The following acts are examples of perfidy:
 - (a) the feigning of an intent to negotiate under a flag of truce or of a surrender;
 - (b) the feigning of an incapacitation by wounds or sickness;
 - (c) the feigning of civilian, non-combatant status; and
 - (d) the feigning of protected status by the use of signs, emblems or uniforms of the United Nations or of neutral or other States not Parties to the conflict.
2. Ruses of war are not prohibited. Such ruses are acts which are intended to mislead an adversary or to induce him to act recklessly but which infringe no rule of international law applicable in armed conflict and which are not perfidious because they do not invite the confidence of an adversary with respect to protection under that law. The following are examples of such ruses: the use of camouflage, decoys, mock operations and misinformation.

Commentary**General remarks**

- 1483** Literally speaking, perfidy means the breaking of faith, and the problem of bad faith may present itself in time of peace or in time of armed conflict with regard to the whole field of international relations, whether at a political level, implicating only those participating in the decision-making process, or at the level of the application of the rules.¹
- 1484** The title of this article, “Prohibition of perfidy”, as well as the definition of perfidy given in the article, should not give rise to confusion. The article is concerned only with acts that take place in combat, as is clear from the scope of this Part, as well as this Section. Thus this prohibition is formulated with reference to those participating in hostilities, and the present article only aims to provide for that aspect of the problem.
- 1485** Article 35 (*Basic rules*), paragraph 1, which limits the choice of methods and means of warfare, is not only concerned with technical matters. For the Parties to the conflict and the combatants it also implies a certain type of conduct during combat which meets various criteria of honour² and humanity.
- 1486** The rules regarding honour are basically concentrated in Articles 37, 38 (*Recognized emblems*) and 39 (*Emblems of nationality*). However, various other provisions – Articles 44 (*Combatants and prisoners of war*), paragraph 3 (open

¹ On the subject of this distinction, see “The High Command Case”, 12 *Law Reports*, 1949, p. 69.

² Although the principle is not contested, opinions vary on the fundamental reason for its existence. Some authors consider that it is based on the necessity of forbidding anything which makes the attainment of peace more difficult; others simply state that although morality is not a recognized source of law, it nevertheless remains a condition of its existence. See also F. Lieber, *op. cit.*, Art. 30.

carrying of arms), and 46 (*Spies*), paragraph 3 (the clandestine gathering of information) – are directly related to the same principle.³

1487 This correlation is actually so important that some delegations at the Diplomatic Conference wished to defer the discussion of the problem of perfidy until other provisions concerned in Part III had also been studied.⁴ The Working Group of Committee III in practice followed up this suggestion.

1488 Finally, this Part does not aim to replace the Hague Regulations of 1907, but is concerned with developing them,⁵ and thus it is clear that the prohibition on the treacherous killing or wounding of individuals belonging to the nation or the army of the enemy, as formulated in Article 23 (*b*) of the Regulations, has survived in its entirety.⁶ However, the term “trahison” in the French text is too restricted in its meaning, and for that reason the term “perfidie” (perfidy) was preferred here.⁷

1489 It is not certain it is because of the inadequate wording of the Hague Regulations, whether decline in the respect for general international law, or a declining sense of morality,⁸ but the fact is that experts have always agreed

³ This is also the case with regard to numerous provisions of the Protocol as a whole. The various rules which prohibit protecting military targets from attack by using protected persons or objects for this purpose provide a good illustration. These prohibitions are explicitly concerned with medical units (Art. 12, para. 4), medical aircraft (Art. 28, para. 1), the civilian population (Art. 51, para. 7), and cultural objects (Art. 53, sub-para. (*b*)). Article 58, sub-para. (*a*) and (*b*) is no doubt derived from a humanitarian principle, but it is also derived from the principle of honour when it urges the Parties to the conflict to remove civilian elements from military targets “to the maximum extent feasible”. The prohibition on the use of medical aircraft which have been granted protection in order to obtain a military advantage or intelligence data (Art. 28, paras. 1 and 2) is another example. The requirement that protected personnel and installations are used only for tasks for which this protection has been authorized reflects a similar concern. This is true for medical personnel (Art. 8, sub-para. (*c*) and (*k*)), and for civil defence (Art. 67, para. 1(*b*)), and for medical transports (Art. 8, sub-para. (*g*)). The prohibition on the perfidious use of protective signs is explicitly confirmed in Art. 85, para. 3(*f*). The rule is also the same for signals (Art. 18, paras. 6 and 8). All these cases are concerned with avoiding the wrongful application for purposes which would not be honest as they would be different from those for which the protection was authorized. The same is true of relief actions (Art. 70, para. 3(*c*)).

⁴ *O.R.* XIV, p. 245, CDDH/III/SR.27, and pp. 261 and 263, CDDH/III/SR.28.

⁵ This point was not contested; for the statement to this effect, see *O.R.* V, p. 133, CDDH/SR.13, para. 33; p. 180, CDDH/SR.17, para. 40; *O.R.* XIV, p. 264, CDDH/SR.28, para. 22; *O.R.* XV, p. 271, CDDH/215/Rev.1, para. 40; see also *CE 1971, Report*, pp. 103-104, para. 522.

⁶ According to M. Greenspan, *op. cit.*, p. 317, this rule prohibits assassination, recruitment of hired killers, placing a price on the head of an adversary, or the offer of a reward for his capture “dead or alive”; proscription and outlawry of an enemy, treacherous request of quarter, and the treacherous simulation of death, wound or sickness, or pretended surrender, for the purpose of putting the enemy off his guard and then attacking him. It does not seem to prohibit attacking enemy combatants individually, whether this is in the area of combat, in occupied territory or elsewhere, even though in principle the rule which prohibits killing except in combat is still applicable. However, methods of guerrilla warfare do not seem to conform with this (*cf. US Field Manual 27-10*, para. 31, and D. Fleck, “Ruses of War and Prohibition of Perfidy”, 13 *RDPMDG*, No. 2, 1974, p. 278).

⁷ This remark had already been made at the Brussels Conference in 1874 by a delegate who pointed out that the term “trahison” was not applicable to an enemy. *Cf. Reaffirmation*, p. 80.

⁸ At the Conference itself a representative affirmed that the protection of the civilian population and the prohibition of perfidy were the principal objectives of Protocol I (*O.R.* XIV, p. 323, CDDH/III/SR.33, para. 33).

unanimously on the necessity of reaffirming this prohibition.⁹ This was also the occasion for providing a general definition of perfidy for the first time. This definition though both very useful and welcome, is not without weaknesses.

Paragraph 1 – Scope of the prohibition and definition

- 1490 Paragraph 1 explicitly prohibits a particular category of acts of perfidy, as well as giving a definition of acts of perfidy. Despite the wish which was expressed repeatedly during the preliminary discussions and during the Conference itself,¹⁰ it was not the prohibition of perfidy *per se* which was the prime consideration of Article 37, but only the prohibition of a particular category of acts of perfidy.¹¹

First sentence – The scope of the prohibition

- 1491 Following the Hague Regulations (Article 23(b)),¹² the prohibition only concerns the killing, injuring or capturing of an adversary by resort to perfidy. For reasons given above, the term “treachery”, which was considered to be too narrow, was abandoned in favour of the term “perfidy”; moreover, the capture of the adversary was added to the two former prohibitions on “killing” and “injuring”. However, bearing these considerations in mind, the present Article 37 is limited to the framework defined by the 1907 Regulations, and therefore the present article only condemns perfidy in the sense of the first sentence of the article.¹³ Nevertheless, this does not mean that even within these limitations, the interpretation of perfidy will always be easy.
- 1492 The problems arising from this provision seem to have been aptly revealed by members of a delegation to the Diplomatic Conference in a study of the results of the Conference. According to the authors of this study, the prohibition of perfidy has its weak points. If only the fact of killing, injuring or capturing an adversary by resort to perfidy constitutes a perfidious act, the question arises what an unsuccessful attempt would be called. Moreover, it seems that a prohibition which is restricted to acts which have a definite result would give the Parties to the conflict a considerable number of possibilities to indulge in perfidious conduct which was not directly aimed at killing, injuring or capturing the members of the armed forces of the adverse party, but at forcing them to submit to tactical or operational measures which will be to their disadvantage

⁹ *CE 1972, Report*, vol. I, p. 108, para. 2.415.

¹⁰ *CE 1971, Report*, p. 103, para. 521; *CE 1972, Report*, vol. II, p. 52, CE/COM III/C 9 and vol. I, p. 130; *O.R. XIV*, p. 268, CDDH/III/SR.28, para. 43.

¹¹ This conclusion, as stated above, is not diluted by the wording of the title of the article, which should be read in context.

¹² “It is especially forbidden to kill or wound treacherously individuals belonging to the hostile nation or army”.

¹³ The fact that the intention was restricted in this way obviously does not mean that one can conclude from this by a *contrario* reasoning that acts of perfidy are authorized in other cases.

(raising the white flag for the sole purpose of deflecting or delaying an attack is not a direct violation of the prohibition contained in the first sentence even though it is a violation of Article 23(f) of the Hague Regulations). On the other hand, people will then be killed, injured or captured in the course of combat. It will be no easy matter to establish a causal relation between the perfidious act that has taken place and the consequences of combat. The authors consider that it follows that there remains a sort of grey area of perfidy which is not explicitly sanctioned as such, in between perfidy and ruses of war. This grey area forms a subject of permanent controversy in practice as well as in theory.¹⁴

1493 These are real difficulties, but they should not be allowed to become out of proportion. First, it seems evident that the attempted or unsuccessful act also falls under the scope of this prohibition. Secondly, a treaty should not be interpreted so as to conflict with a peremptory norm of general international law,¹⁵ and therefore it should not be interpreted in this way.

1494 The fact is that the first sentence of Article 37 is devoted essentially to combat – as is evident from the context and the list of examples – and it is aimed at regulating one of the problems of combat: acts of killing, injuring or capturing with resort to perfidy. On the other hand, this article has the advantage of giving a definition of perfidy with a general scope in the second sentence. Although the problems which were pointed out above cannot always be resolved by resorting to Article 37, it should be possible to resolve them in the context of the Protocol as a whole, with the aid of the general principles of law and without at all giving the impression that there is such a concept as permitted perfidy. Moreover, Article 38 (*Recognized emblems*) and Article 39 (*Emblems of nationality*) make a by no means insignificant contribution to reinforcing Article 37, particularly by the absolute quality of the prohibitions formulated in them. Finally, there is more to an international treaty than the literal reading of all the words in the document may suggest; it represents one step forward in the ongoing evolution in relations between States.

1495 If any doubt should remain regarding the basic meaning, Article 1 (*General principles and scope of application*), paragraph 2, should suffice to remove these doubts. This emphasizes particularly that, in cases not covered by the Protocol or by other international agreements, combatants remain under the protection of the principles of humanitarian law derived from established custom, from the principles of humanity and the dictates of public conscience. However, in the sense of the present article, and only in this sense, it is true that there are breaches of faith which do not specifically fall under the scope of the prohibition laid down here or under Article 85 (*Repression of breaches of this Protocol*), paragraph 3 (f). Nevertheless, this is once more without prejudice to general international law and the other rules of the Protocol.

¹⁵ Vienna Convention on the Law of Treaties, 1969, Art. 53.

Second sentence – The definition of perfidy

- 1496** The first sentence of Article 37 prohibits the killing, injuring or capturing of an adversary by resort to perfidy. This makes it appropriate to have a definition of perfidy, which forms the object of the second sentence.
- 1497** The essential concept of perfidy is not difficult to grasp: a broken word, dishonesty, unfaithful breaking of promises, deliberate deception, covert threats – these are only a few aspects of this spectre to which the fundamental rule of laws “*pacta sunt servanda*” or “*fides etiam hosti servanda*” is opposed. On the other hand, it is more difficult to define this concept precisely in a particular social order. In every society, law has had a social, religious, moral or ethical basis, at least at the beginning.¹⁶
- 1498** However, these have been described as:

“three powerful spirits, which from time to time have moved over the face of the waters, and given a predominant impulse to the moral sentiments and energies of mankind. These are the spirits of liberty, of religion and of honour”.¹⁷

This sense of honour, which was nourished during the Middle Ages of Europe by chivalry, particularly in tournaments and in jousting, has contributed to the establishment of the rules which finally became assimilated into the customs and practices of war, in accordance with the principle that the law of the powerful tends to become common law.¹⁸ There were rules for attack and rules for defence, and the knight always trusted the word of another knight, even if he were an enemy. Perfidy was considered a dishonour which could not be redeemed by any act, no matter how heroic.¹⁹

- 1499** Perfidy is injurious to the social order which it betrays, regardless of the values on which this social order is founded. However, as our age is characterized by a great diversity of classification of values, it was natural that the first proposals concerned with defining the concept of perfidy were based on the concept of trust,²⁰ which forms the basis of the security of international relations. This concept seemed to be too abstract for some authorities, and it was proposed that perfidy be defined in relation to a situation protected by international law.²¹ However, the feeling persisted that the problem went beyond the rule of law, while at the same time encompassing it. Finally, Canada, Ireland and the United Kingdom submitted an amendment that obtained a majority of votes,²² and

¹⁶ In Islam, to take this example, the obligation to respect all the clauses of a treaty, both in the letter and the spirit, was a strict and actually a sacred duty. Cf. M.A. Draz, “Le droit international public et l’Islam”, *RICR*, March 1952, p. 207.

¹⁷ G.I.A.D. Draper, “The Interaction of Christianity and Chivalry in the Historical Development of the Law of War”, *IRRC*, January 1965, p. 7, quoting Hallam.

¹⁸ *Ibid.*, p. 17. On the other hand, the alliance of the military order of chivalry and the Christian religion in the Crusades had very serious consequences (see *ibid.*, pp. 10-16).

¹⁹ *Ibid.*, p. 20.

²⁰ *CE 1971, Report*, p. 105.

²¹ *CE 1972, Report*, Vol. II, pp. 63-64 (CE/COM III/C 70).

²² *O.R. III*, pp. 164, CDDH/III/233.

overcame the resistance of those who would have preferred to have abstained from any definition as they considered the attempt to be too difficult.²³

1500 The definition is based on three elements: inviting the confidence of an adversary, the intent to betray that confidence (subjective element) and to betray it on a specific point, the existence of the protection afforded by international law applicable in armed conflict (objective element).²⁴ In its turn, Article 2 (*Definitions*), sub-paragraph (*b*), specifies that this last concept refers to “the rules applicable in armed conflict set forth in international agreements to which the Parties to the conflict are Parties and the generally recognized principles and rules of international law which are applicable to armed conflict”. This is a relatively wide interpretation, and consequently the definition of perfidy extends beyond the prohibition formulated in the first sentence. For example, it encompasses war at sea, even though this subject is not dealt with in the Protocol.²⁵ As regards the characteristic material element of this wrongful act, this consists of the intentional and conscious deception of the adversary regarding a matter on which the protection provided for by the applicable law explicitly depends. Thus the formula implies a totally clear and consistent interpretation of the relevant legal rule and the act which is the condition which is the condition of its application.²⁶ The central element of the definition of perfidy²⁷ is the deliberate claim to legal protection for hostile purposes. The enemy attacks under cover of the protection accorded by humanitarian law of which he has usurped the signs. It is by inviting the other’s confidence with the intention or the will to betray it that renders perfidy a particularly serious illegality, as compared with other violations of international law, and which constitutes for its perpetrator an aggravating circumstance. In doing so, he destroys the faith that the combatants

²³ *Ibid.*, pp. 163, CDDH/III/223.

²⁴ “It is necessary that there was treacherous intent and that the adversary’s confidence was betrayed surreptitiously” (translated by the ICRC), Ph. Bretton, “Le problème des ‘méthodes et moyens de guerre et de combat’ dans les Protocoles additionnels aux Conventions de Genève du 12 août 1949”, *RGDIP*, January-March 1978, p. 1, at p. 11. However, it should be noted that the use of enemy uniforms, which is prohibited in Art. 39, was not retained in the list of typical examples of perfidy quoted in the article under consideration here (*cf. O.R.* III, p. 163, CDDH/III/223). Despite the provisions of Art. 39, the Conference considered that it could not accord to the protection granted to the signs of nationality of the belligerents the same status as the protection granted by international law to persons specifically entitled to such protection (the wounded and sick, parlementaires etc.).

²⁵ Nevertheless, this concerns only the general prohibition of perfidy and the concept of perfidy. The recognized rules relating to war at sea remain as they are: *cf.* Art. 39, para. 3 (see also *infra*, sub-para. (*d*), p. 439).

²⁶ Art. 84 invites the High Contracting Parties to communicate to each other the laws and regulations adopted in order to ensure the implementation of the Protocol. Compliance with this obligation, which could, in particular, involve the exchange of military manuals, would certainly contribute to clarifying these situations.

²⁷ It can be argued whether this “juridical” definition completely covers the concept of perfidy on the battlefield, in particular with regard to wars which go on for a long time, when the adversaries have come to know each other. The juridical element remains dominant, but various other factors such as morals, the concept of honour (*cf.* D. Fleck, “Ruses of war...”, *op. cit.*, p. 272), and the knowledge that each one has of the ideas of the adversary on these different points, all equally contribute to establishing a certain level of confidence resulting in the correct application of the legal rules. However, these elements could be included in the concept of good faith.

are entitled to have in the rules of armed conflict, shows a lack of the minimum respect which even enemies should have for one another, and damages the dignity of those who bear arms. As a result of these consequences, perfidy destroys the necessary basis for reestablishing peace.

Third sentence – The list of examples

- 1501** The idea of clarifying the rule of the prohibition of perfidy in the form of a list of concrete examples arose at the beginning of the discussions for reasons of both a practical and technical nature.²⁸ From a practical point of view, it is obvious that the enumeration of concrete situations facilitates the task of those who are responsible for giving instructions to the combatants. From a technical point of view, it is a not unimportant auxiliary element for realising a concept which is difficult to define in concrete terms.
- 1502** As this is a list of examples, it obviously does not have an exhaustive character.²⁹ Moreover, each example should be understood in the context of the paragraph taken as a whole, and not in isolation. To strike an adversary after allaying his suspicion by feigning an incapacitation by wounds or sickness is a perfidious act in the sense of Article 37. However, feigning an incapacitation by imaginary wounds with the intent of bringing about an interruption in an adversary's attack, though it certainly constitutes perfidious conduct in the sense of the second sentence, does not so obviously fall under the scope of the prohibition of the first sentence.³⁰ Feigning an incapacitation by a purely imaginary wound, with the sole intent of justifying the desire to surrender, a desire which may be quite sincere for that matter, is neither an act of perfidy nor a prohibited ruse. It is simply an expedient, used to reveal the wish to withdraw from combat definitively.
- 1503** With regard to the list itself, the Conference amended the proposals submitted by the ICRC,³¹ particularly as a matter of drafting, though there were some

²⁸ *CE 1971, Report*, p. 105, CE/COM III/C 1.

²⁹ The error made with regard to Art. 23 of the Hague Regulations should therefore not be repeated. Omitting the adverb "especially", which precedes the list of prohibitions enumerated under letters (a) to (h), it was concluded rather simply by an *a contrario* reasoning that the methods of combat which were not included in this list were authorized with the sole exception of the Martens clause, or an incontestable rule of customary law to the contrary. This reasoning was unsound (*cf.* D. Fleck, "Ruses of war...", *op. cit.*, p. 280).

³⁰ In this respect, see the considerations put forward above, p. 432. The ICRC draft (Art. 35) qualified as perfidious the acts given by way of example, "when carried out in order to commit or resume hostilities", a phrase which some would have wished to supplement with the word "immediately": "in order to commit or resume hostilities immediately".

³¹ The draft presented by the ICRC listed in Art. 35: "(a) the feigning of a situation of distress, notably through the misuse of an internationally recognized protective sign; (b) the feigning of a cease-fire, of a humanitarian negotiation or of a surrender; (c) the disguising of combatants in civilian clothing." The other proposals submitted by the Rapporteur to the Working Group of Committee III include: abusing the provisions of an international convention to gain an advantage; the use of the distinctive signs of the enemy or enemy uniform during combat (CDDH/III/GT/54) (in this respect, see the ICRC proposals at the second session of the Conference of Government Experts, *CE 1972, Report*, vol. II, p. 5, Art. 31, as well as "the creation, prior to an attack, of an impression with the enemy of being a non-combatant" (*O.R.* III, p. 162, CDDH/III/80)).

substantive modifications. At times, opinion was divided within the Working Group with regard to the choices which some considered to be debatable. At any rate, it was finally agreed that Article 37 should be restricted to a short list of clear examples, leaving aside borderline cases.³² The discussion was mainly concerned with sub-paragraph (c), which relates to the feigning of a civilian or non-combatant status, and as a result the problem of guerrillas. However, to begin with, it would be appropriate to examine sub-paragraphs (a) and (b).

Sub-paragraph (a) – “the feigning of an intent to negotiate under a flag of truce or of a surrender”

1504 According to Article 85 (*Repression of breaches of this Protocol*), paragraph 3 (f), the perfidious use of a flag of truce is a grave breach if it causes the death or serious injury to body or health of an adversary; such perfidious use of the flag of truce was already prohibited in Article 23(f) of the Hague Regulations. In general, combatants can never be too scrupulous about respecting the conditions pertaining to their non-belligerent relations.³³ This rule also covers the opening of negotiations, their pursuit and possibly their repudiation, as well as surrender, the conditions of which are defined in Article 41 (*Safeguard of an enemy hors de combat*)³⁴

Sub-paragraph (b) – “the feigning of an incapacitation by wounds or sickness”

1505 It is appropriate to refer to the First and Second Conventions, which apply to the battlefield, and impose the obligation of respecting and protecting the wounded, sick and shipwrecked in all circumstances (Article 12). In addition, reference should be made to Article 41 of the Protocol (*Safeguard of an enemy hors de combat*), which prohibits any attack on any person who is recognized, or who in the circumstances should be recognized, to be *hors de combat*. Paragraph 2 of this article defines the conditions which render a person *hors de combat*. If a person who is known to be *hors de combat* is attacked wilfully, and this results in his death or causes serious injury to his body or his health, this constitutes a grave breach under Article 85 (*Repression of breaches of this Protocol*), paragraph 3(e). The counterpart to these protections, the feigning of being *hors de combat*, therefore constitutes an act of perfidy. Under the same conditions, the perfidious use of the distinctive emblem of the red cross or the red crescent or other recognized protective signs, in violation of the article with which we are concerned

³² O.R. XV, p. 382, CDDH/236/Rev.1, para. 17, and p. 426, CDDH/III/338.

³³ See in particular the Hague Regulations, Art. 35; see also M. Greenspan, *op. cit.*, p. 320.

³⁴ A question which is sometimes raised is whether prisoners of war who attack their guards while they are being detained are committing an act of perfidy; this is not very likely, as prisoners of war are not bound by any duty of allegiance to the Power detaining them (Third Convention, Art. 87, para. 2), and the fact that the captivity is based only on a relationship of force, but such acts can compromise the application of the Third Convention.

here, is also a grave breach under Article 85 (*Repression of breaches of this Protocol*), paragraph 3(f). This perfidious use always involves the abuse of the adversary's confidence. Thus, for example, feigning death simply to save one's life would not be an act of perfidy, while feigning death to kill an enemy once his back is turned, would constitute an act of perfidy.³⁵

Sub-paragraph (c) – “the feigning of civilian, non-combatant status”

1506 The inclusion of this example brought Committee III to the heart of the problem.³⁶ To reject it would have meant compromising the fundamental distinction between civilians and combatants, which forms the basis for the law of armed conflict.³⁷ To accept it without restrictions would have meant destroying the compromise which had been achieved with regard to Article 44 (*Combatants and prisoners of war*), which in some circumstances allows a guerrilla combatant who cannot distinguish himself from the civilian population to retain his status as a combatant, by the sole fact of his carrying his arms openly (Article 44 – *Combatants and prisoners of war*, paragraph 3, second sentence). The fact that under the terms of the definition of perfidy it is not sufficient to prove the feigning or the disguise of the combatant in civilian dress, but that it is also necessary to prove the intention to mislead in the sense given in the same definition, has not sufficed to allay the suspicion of those who advocated the cause of guerrillas. For the combatant of Article 44 (*Combatants and prisoners of war*), the fact of being or having been in civilian dress at one time or another will, according to the latter, always mean that they fall under the scope of Article 37, i.e., the accusation of perfidy, if sub-paragraph (c) is not qualified by a safeguard clause. It was finally decided³⁸ that this clause would be included, not in Article 37, but in Article 44 (*Combatants and prisoners of war*), paragraph 3, where it can be found in the following form: “Acts which comply with the requirements of this paragraph shall not be considered as perfidious within the meaning of Article 37, paragraph 1(c).” The example has therefore survived, but with the reservation stipulated in Article 44 (*Combatants and prisoners of war*).

1507 A combatant who takes part in an attack, or in a military operation preparatory to an attack, can use camouflage and make himself virtually invisible against a natural or man-made background, but he may not feign a civilian status and hide amongst a crowd. This is the crux of the rule. There are a number of special situations, as described in Article 44 (*Combatants and prisoners of war*), paragraph 3, second sentence, but there is no double standard.³⁹

³⁵ *O.R.* XV, p. 382, CDDH/236/Rev.1, para. 16, and p. 426, CDDH/III/338.

³⁶ See in particular *O.R.* XIV, p. 264, CDDH/III/SR.28, para. 23.

³⁷ With regard to this example, see the statement by a delegation at the time of the adoption of Art. 37, at a plenary meeting; *O.R.* VI, p. 115, CDDH/SR.39.

³⁸ *O.R.* XV, p. 382, CDDH/236/Rev.1, para. 18.

³⁹ For proof that Art. 44 in no way invites terrorism, see M. Bothe, K. Ipsen, K.J. Partsch, *op. cit.*, p. 35.

Sub-paragraph (d) “the feigning of protected status by the use of signs, emblems or uniforms of the United Nations or of neutral or other States not Parties to the conflict”

- 1508 This example is not contestable, but it brings into play three different factors.
- 1509 With regard to the United Nations, it is appropriate to state that the wrongful use of its signs, emblems or uniforms can constitute an act of perfidy in the sense of Article 37⁴¹ only in cases where the personnel of the United Nations have the status of neutral or protected persons,⁴⁰ and not in situations where members of United Nations armed forces intervene in a conflict as combatants, even when this is for peacekeeping purposes. However, this type of abuse remains unlawful.
- 1510 The term “neutral and/or other States not Parties to the conflict” can also be found in particular in Articles 2 (*Definitions*), 19 (*Neutral and other States not Parties to the conflict*) and 31 (*Neutral or other States not Parties to the conflict*). The Conventions used the term “neutral States” to cover all States not Parties to the conflict. In the formula adopted by the Protocol, the term “neutral States” only covers States with a neutral status; hence the need to add the term “other States not Parties to the conflict”.⁴² As neutral countries were already mentioned in the Conventions, particularly in Article 27 of the First Convention, it was considered useful to retain this concept, which corresponds to the concept of neutrality in the traditional sense, i.e., to the law of neutrality. Obviously the term “other States not Parties to the conflict” refers to all States that do not participate in the conflict.
- 1511 Finally, the reference to neutral signs or emblems is not considered to affect the law governing the use of neutral flags in war at sea⁴³ any more than Article 37 as a whole affects the existing, generally recognized rules of international law applicable to the use of flags in the conduct of armed conflict at sea.⁴⁴ However, with this reservation, it is understood that the definition of perfidy given in Article 37, like the prohibition formulated in the first sentence, applies just as much to war at sea or war in the air as to war on land. The prohibition of perfidy in war is, by its very nature, indivisible.

Paragraph 2 – Ruses of war

- 1512 The law of armed conflict requires that military operations be conducted within the confines of the rules that are imposed, in good faith, without resort to perfidy or to perfidious attacks, as we have seen above. Within these limitations, the art

⁴⁰ In principle this is always the case when the United Nations plays the role of an observer; cf., for example, the agreement on the withdrawal of Israeli and Syrian forces of 31 May 1974, and the Protocol with regard to the United Nations force responsible for observing this withdrawal, UN, 2 *Monthly Chronicle*, No. 6, June 1974, pp. 26-27.

⁴¹ O.R. XV, p. 382, CDDH/236/Rev.1, para. 18.

⁴² On this subject, see commentary Art. 2, sub-para. (c), *supra*, p. 61.

⁴³ O.R. XV, p. 382, CDDH/236/Rev.1, para. 18.

⁴⁴ Art. 39, para. 3.

of warfare is a matter, not only of force and of courage, but also of judgment and perspicacity.⁴⁵ In addition, it is no stranger to cunning, skill, ingenuity, stratagems and artifices, in other words, to ruses of war, or the use of deception. There are numerous examples of these throughout history.⁴⁶ However, as imagination is too often lacking in those who invoke the right to use such practices, the ruse of war has many times served as a pretext for pure and simple violations of the rules in force. Obviously this should be condemned extremely severely. The purpose of this paragraph is to draw the borderline between the ruse which is prohibited because it is perfidious or implies a violation of the law of armed conflict, and the ruse which is permitted.⁴⁷

First sentence – The non-prohibition of ruses of war

- 1513** Article 24 of the Hague Regulations explicitly states that “ruses of war and the employment of measures necessary for obtaining information about the enemy and the country are considered permissible”. This principle, which was embodied in the Hague Regulations, was not contested by the Diplomatic Conference, although the wording of Article 24, which confuses ruses of war and gathering of information in a single provision, leaves a lot to be desired. It is not surprising therefore that agreement was easily reached⁴⁸ on the usefulness of reaffirming, in the Protocol, the admissibility of this method of combat,⁴⁹ which is rooted in custom without confusing it with the gathering of information which is actually a separate question.
- 1514** In fact, the real problem does not consist of knowing whether ruses of war are permitted, but of determining which are the ruses of war that are permissible. The ruse is very often the only course open to a weak combatant, and the law of armed conflict, if it is to be respected, should ensure that the combatants have equal chances. However, just as the use of force requires regulation – which is the object of the Protocol as a whole – the recourse to a ruse should meet certain conditions which do not jeopardize these rules.

⁴⁵ D. Fleck, “Ruses of War...”, *op. cit.*, p. 270, quoting Clausewitz.

⁴⁶ *Ibid.*, pp. 273-274.

⁴⁷ Is the ruse of war as important in our time as it was in the past when armies were in combat at a short distance from each other? Such ruses, which could formerly be decisive for the result of a battle, could today only be of marginal value at the most. However, this combat technique is not absent from the modern battlefield. “Instruction in ruses of war might well be rudimentary in highly technical armies, whereas it was fundamental in ‘amateur’ armies, whose tactics were based largely on surprise, ambushes, trickery, switching of uniforms, incitement of the enemy to rebellion, and so forth. A long list, which those disposing of multiple facilities might regard as fairly complete, would appear by no means comprehensive to others who had to fight from a position of numerical or technical inferiority” (*O.R. XIV*, p. 263, CDDH/III/SR.28, para. 20). However, it has been said that, even in highly technical armies, operations of deception such as the deflection by electronic means of jet bombers to targets in their own countries are far from unimportant.

⁴⁸ However, for these reservations, see *O.R. XIV*, p. 260, CDDH/III/SR.28, para. 6.

⁴⁹ While making these reservations, which will be examined below, Lieber states that “deception in war is admitted as a just and necessary means of hostility” and is “consistent with honorable warfare” (F. Lieber, *op. cit.*, Art. 101.)

Second sentence – The definition of ruses of war

- 1515** A ruse of war consists either of inducing an adversary to make a mistake by deliberately deceiving him, or of inducing him to commit an imprudent act, though without necessarily deceiving him to this end. Such operations are perfectly lawful on the express condition that they do not infringe any applicable rule of either the Protocol as a whole, or, *a fortiori*, the rule relating to the prohibition on perfidy. Any ruse based on the violation of a rule of the Protocol by the wrongful use of emblems of a particular nationality, for example, in violation of Article 39 (*Emblems of nationality*) is a prohibited ruse, rather than an act of perfidy, in the sense of the Protocol at any rate.⁵⁰ If this form of deception in addition invites the confidence of the adversary with regard to the protection provided for by the law of armed conflict, for example, by using the uniforms of neutral countries, it does constitute an act of perfidy. Thus a distinction should be made between a ruse, a prohibited ruse, and an act of perfidy. A ruse can never legitimize an act which is not lawful. In most cases it consists of a form of feigning, as shown in the list of examples given below, but it should never veil a violation. If it consists of an outright violation, rather than a veiled one, for example, covering an attack by a shield of prisoners of war, it is prohibited for this reason alone, without there being any visual deception.
- 1516** A ruse can resort to acoustic means (such as simulating the noise of an advancing column), optical means (creation of fictitious positions), the use of information (circulating misleading messages), operational means (simulated attacks). It can induce the adversary to make an imprudent and reckless move without resorting to any simulation, for example, by submitting an isolated post to pressure in order to encourage an appeal for reinforcements which will then be attacked as they are advancing in conditions disadvantageous to them. Within the limits assigned to it, the ruse is not only in no way unlawful, but is not immoral either. In many cases it will permit a successful operation with less loss of life than through the simple use of force.
- 1517** However, mention should be made of a particular category of weapons. Modern warfare makes a great deal of use of delayed-action weapons, such as mines and explosive or non-explosive booby-traps which are activated by the target itself, in other words, by the person or vehicle which makes contact with the device. The purpose of these weapons is to obstruct the enemy's mobility. If their whereabouts is not indicated, or if they are camouflaged, these devices may actually assume a perfidious character in a wide sense, or even in a legal sense.⁵¹ The problem was examined at length by the *Ad Hoc* Committee, and the Working Group finally formulated a number of proposals on this subject.⁵² These proposals were taken up again and further elaborated, particularly in Articles 2 and 6 of Protocol II, annexed to the Convention of 10 October 1980 on the

⁵⁰ Cf. K. Ipsen, who seems to regret the weakness of this definition in "Perfidy", in Bernhardt (ed.), *op. cit.*, Instalment 4, 1982, p. 131.

⁵¹ See *O.R.* XVI, p. 284, CDDH/IV/SR.28, para. 6; *ICRC, Weapons that may cause...*, *op. cit.*, p. 50, para. 160; *Lucerne Report*, pp. 68-71, paras. 242 and 247-259.

⁵² See *O.R.* XVI, pp. 590-591, 593-594, 598-599, CDDH/IV/226.

prohibitions or restrictions on the use of certain conventional weapons (see *supra*, p. 405): “Protocol on prohibitions or restrictions on the use of mines, booby-traps and other devices”.

1518 By “booby-trap” Article 2 means:

“any device or material which is designed, constructed or adapted to kill or injure and which functions unexpectedly when a person disturbs or approaches an apparently harmless object or performs an apparently safe act”.

Article 6, entitled “Prohibitions on the use of certain booby-traps” reads as follows:

“1. Without prejudice to the rules of international law applicable in armed conflict relating to treachery and perfidy, it is prohibited in all circumstances to use:

a) any booby-traps in the form of an apparently harmless portable object which is specifically designed and constructed to contain explosive material and to detonate when it is disturbed or approached, or

b) booby-traps which are in any way attached to or associated with:

- i) internationally recognized protective emblems, signs or signals;
- ii) sick, wounded or dead persons;
- iii) burial or cremation sites or graves;
- iv) medical facilities, medical equipment, medical supplies or medical transportation;
- v) children’s toys or other portable objects or products specially designed for the feeding, health, hygiene, clothing or education of children;
- vi) food or drink;
- vii) kitchen utensils or appliances except in military establishments, military locations or military supply depots;
- viii) objects clearly of a religious nature;
- ix) historic monuments, works of art or places of worship which constitute the cultural or spiritual heritage of peoples;
- x) animals or their carcasses.

2. It is prohibited in all circumstances to use any booby-trap which is designed to cause superfluous injury or unnecessary suffering.”

1519 This Convention is undoubtedly independent of the Protocol which, as stated above, does not contain any prohibitions on specific weapons. However, the Protocol denies the Parties to the conflict an unlimited right with regard to their choice of the methods or means of warfare. It prohibits any weapons, as well as methods of warfare of a nature to cause superfluous injury or unnecessary suffering (Article 35 – *Basic rules*). It prohibits killing or injuring by resort to perfidy (paragraph 1 of the article under consideration here), and it protects the civilian population (Article 51 – *Protection of the civilian population*), the wounded, sick and shipwrecked (Article 10 – *Protection and care*), medical and religious personnel (Article 15 – *Protection of civilian medical and religious personnel*), and objects indispensable to the survival of the civilian population (Article 54 – *Protection of objects indispensable to the survival of the civilian*

population). To associate booby-traps at any category of persons or objects protected by the Protocol would be to infringe this paragraph, by inviting the adversary's confidence as regards the protection provided for in the Protocol, with the intention of killing or wounding him. It is therefore prohibited and even perfidious, whether the Party to the conflict is a Party to the Convention on conventional weapons, or not. Moreover, one could consider that this Convention, which has taken up virtually all the proposals submitted during the Diplomatic Conference,⁵³ provides for an interpretation of prohibited ruses within the meaning of this paragraph, in the field of delayed-action weapons.

Third sentence – The list of examples

1520 The list of examples of ruses of war corresponds to the proposals presented by the ICRC in Article 35 of its draft, and did not provoke any debate. It was impossible to enumerate in the Protocol all the operations described under this heading in military manuals, and it was necessary to restrict this to an indication of certain categories. These were given only by way of example and by no means form a comprehensive list.

1521 Some military manuals actually give a fairly extensive list of procedures which are commonly described as ruses of war: setting up surprise attacks, ambushes, retreats, simulated operations on land, in the air or at sea; simulating quiet and inactivity; camouflaging troops, weapons, depots or firing positions in the natural or artificial environment; taking advantage of the night or of favourable weather conditions (fog, etc.); constructing installations that will not be used; putting up dummy aerodromes or placing in position dummy canon and dummy armoured vehicles, and laying dummy mines; use of small units to simulate large forces and equipping them with a strong avant-garde or numerous advanced bases; transmitting misleading messages by radio or in the press; knowingly permitting the enemy to intercept false documents, plans of operations, despatches or news items which actually bear no relation to reality; using the enemy wavelengths, passwords⁵⁴ and wireless codes to transmit false instructions; pretending to communicate with reinforcements which do not exist; organizing simulated parachute drops and supply operations; moving land marks and route markers or altering road signs; removing the signs indicating rank, unit, nationality or special function from uniforms; giving members of one military unit the signs from other units to make the enemy believe that it is faced with a more important force; using signals for the sole purpose of deceiving an adversary; resorting to psychological warfare methods by inciting the enemy soldiers to rebel, to mutiny or desert,

⁵³ See *supra*, note 52.

⁵⁴ This point is sometimes contested; see M. Greenspan, *op. cit.*, p. 319, note 26, and D. Fleck, "Ruses of War...", *op. cit.*, p. 274, quoting Grotius.

possibly taking weapons and transportation; inciting the enemy population to revolt⁵⁵ against its government etc.⁵⁶

1522 Obviously this list is not and does not purport to be comprehensive. In the first place, it does not take into account the problems raised by certain types of weapons, but this point was examined above.⁵⁷ Moreover, the imagination of man is too inventive for one to think that everything it could come up with can be covered in a list. Finally, the situations in combat and their evolution are unforeseeable and will always give rise to new ideas. It does not take into account the conditions of war at sea where, for example, use is still made of dummy ships or warships camouflaged by artificial superstructures, but the legality of certain type of camouflage is controversial.

Conclusion

1523 The prohibition of perfidy is a basic rule of the conduct of combat. According to the Protocol, perfidy consists of the deliberate use of international law protection in the sense of the law of armed conflict (for example the use of the red cross emblem, a flag of truce, the simulation of a protected situation) to deceive the adversary. Thus it does not consist only of the infringement, for the same purpose, of a rule prescribing some form of conduct (for example, prohibition on the use of enemy uniform to assist military operations).

1524 The rule prohibits acts performed in combat: killing, injuring and capturing by resort to perfidy. It covers attempted and unsuccessful acts. If an act of perfidy results in the death, or serious injury to body or health, it constitutes a war crime in the sense of Article 85 (*Repression of breaches of this Protocol*), paragraph 3(f).

1525 A ruse of war is not prohibited as long as there is no intention to deceive the adversary by inviting his confidence that the rules will be duly respected and that they will afford protection, provided that the adversary is entitled to have such confidence, and provided that the ruse does not infringe any rule of obligatory conduct.

J. de P.

⁵⁵ But not by inviting the enemy population to listen in by announcing information about prisoners of war in such a way that it is actually a pretext for the use of a psychological weapon (see M. Greenspan, *op. cit.*, p. 324).

⁵⁶ Cf. *US Field Manual 27-10*, para. 51; Swiss Army, *Manuel des lois et coutumes de la guerre*, 1963, chiffre 36; M. Greenspan, *op. cit.*, pp. 319-320.

⁵⁷ See *supra*, pp. 441-442.

Protocol I

Article 38 – Recognized emblems

1. It is prohibited to make improper use of the distinctive emblem of the red cross, red crescent or red lion and sun or of other emblems, signs or signals provided for by the Conventions or by this Protocol. It is also prohibited to misuse deliberately in an armed conflict other internationally recognized protective emblems, signs or signals, including the flag of truce, and the protective emblem of cultural property.
2. It is prohibited to make use of the distinctive emblem of the United Nations, except as authorized by that Organization.

Commentary

General remarks

- 1526** The very existence of a law of armed conflict implies the recognition of protective signs. In fact, the use of protective agreements affording protection for certain persons and certain objects, goes back to ancient times. Similarly, the necessities of war have always obliged the belligerents to deal with each other with some formality. Custom ultimately established the use of the white flag by those authorized by one of the Parties to enter into negotiation with the adversary, and the 1864 Geneva Convention introduced the sign of the red cross on a white ground as the distinctive sign of the protection accorded to the medical services of armies. In 1899 Article 23(f) of the Hague Regulations specifically recognized the flag of truce and “the distinctive badges of the Geneva Convention”,¹ and prohibited their improper use. This prohibition covers equally the enemy national flag, military insignia, and the uniform. This text was adopted without modification in 1907.
- 1527** In accordance with the aims and objectives of the Diplomatic Conference, these rules of the law of armed conflict were reaffirmed and developed in the Protocol, in two separate articles. The article under consideration here is concerned only with internationally recognized protective signs, which include to some extent the emblem of the United Nations.

Paragraph 1 – Prohibition of improper use or misuse

- 1528** Paragraph 1 makes a distinction between protective emblems, signs or signals provided for or created by the Conventions or the Protocol (first sentence) and other internationally recognized protective emblems, signs or signals (second sentence).
- 1529** Thus the general range of protective emblems, signs or signals referred to in this paragraph is presented in two categories.

1. *Principal emblems, signs or signals provided for or created by the Conventions and the Protocol*²

¹ It was at the Brussels Conference of 1874 that the words “as well as the distinctive badges of the Geneva Convention” were proposed for the first time. The original text prohibited misuse with the intent of deceiving the enemy, an expression which was subsequently considered to be superfluous and was omitted. The words “improper use”, replacing the term “misuse” were introduced in 1899 (A. Mechelynck, *La Convention de La Haye concernant les lois et coutumes de la guerre sur terre*, Ghent, 1915, pp. 244, 246 and 248).

² Other signs:

- a) oblique red bands on a white ground (Fourth Convention, Annex I, Art. 6);
- b) markings for internment camps for prisoners of war and civilian detainees: PG, PW, IC or means to be agreed upon (Third Convention, Art. 23, para. 4; Fourth Convention, Art. 83, para. 3);
- c) non-defended localities (Protocol, Art. 59, para. 6) and demilitarized zones (Art. 60, para. 5): means to be agreed upon between the Parties.

- a) The distinctive sign of the red cross on a white ground, the red crescent or the red lion and sun on a white ground³ (First Convention, Article 38; Protocol, Annex I, Chapter II, Article 3 – *Shape and nature*, and Article 4 – *Use*).
- b) Distinctive signals (Protocol, Annex I, Chapter III).
- c) Sign marking works and installations containing dangerous forces (Protocol, Article 56 – *Protection of works and installations containing dangerous forces*, paragraph 7; Annex I, Chapter VI, Article 16 – *International special sign*).
- d) International distinctive sign for civil defence (Protocol, Article 66 – *Identification*, paragraph 4; Annex I, Chapter V, Article 15 – *International distinctive sign*).

2. *Emblems, signs or signals to which reference is made in the Protocol*

- a) Specific references:
 - flag of truce (Protocol, Article 37 – *Prohibition of perfidy*, paragraph 1, and Article 38 – *Recognized emblems*; Hague Regulations of 1907, Article 23(f), Article 32);
 - protective emblem of cultural property (Protocol, Article 38 – *Recognized emblems*, paragraph 1; Convention for the Protection of Cultural Property in the Event of Armed Conflict, The Hague, 1954, Chapter V, Articles 16 and 17);
- b) general reference: other internationally recognized protective emblems, signs or signals.⁴

1530 This list clearly indicates the proliferation of recognized protective signs, particularly with the entry into force of the Protocol. Some wished this proliferation to be even more pronounced, although there are undeniable risks in taking this too far. An increase in the number of protective signs increases the risk of misuse and affects their credibility. In this field, as in any other, there is merit in moderation.

First sentence – Emblems, signs or signals provided for or created by the Conventions or by this Protocol

1531 When the ICRC embarked upon the task of reaffirming and developing the laws and customs applicable in armed conflict, resulting in the adoption of the Protocol, it was essentially concerned with two problems in the field of protective signs: extending the use of the red cross emblem to civilian medical units – up to that time it had been reserved for military medical services – and strengthening

³ Since July 1980 there has no longer been a Society entitled Red Lion and Sun, or any Party to the Conventions using this sign.

⁴ Art. 5 of Hague Convention IX Respecting Bombardment by Naval Forces in Time of War prescribed large, stiff rectangular panels, divided diagonally into two coloured triangular portions, the upper portion black and the lower portion white, to distinguish buildings used for religion, the arts, science or charitable purposes, historic monuments etc. on the understanding that they are not used at the same time for military purposes.

the provisions on controlling its use. In the ICRC's view, the most important point was to suppress the misuse of protective signs in times of armed conflict,⁵ not only because of the perfidious nature of this misuse, but also because very important interests are at stake. Thus there was no question of revoking Article 23(f) of the Hague Regulations. On the contrary, the ICRC was concerned with reaffirming and reinforcing it by providing for measures for the repression of breaches, which forms the object of Article 85 – *Repression of breaches of this Protocol*, paragraph 3(f).

- 1532 This paragraph is concerned only with the prohibition itself, but unlike the first sentence of Article 37 (*Prohibition of perfidy*), it has an absolute character. Any improper use is prohibited, not merely perfidious use in the sense of Article 37 (*Prohibition of perfidy*), in other words, use that results in, or is intended to result in killing, injuring or capturing the adversary. This absolute character of the prohibition is significant for the article as a whole, and as such it unequivocally reinforces Article 37 (*Prohibition of perfidy*).
- 1533 As regards the wording, this is very close to the text of the Hague Regulations: "It is prohibited to make improper use". Nevertheless, the Conference did not adopt this formula which was already included in the draft presented by the ICRC to the Conference of Government Experts, without some hesitation.⁶ A considerable number of delegations would have liked the term "improper" to be defined more precisely,⁷ and the final draft of the ICRC provided for the prohibition of the use of recognized signs "in cases other than those provided for in international agreements establishing those signs and in the present Protocol".⁸ However, the Conference finally adopted the Hague formulation with regard to the signs provided for in the Conventions and the Protocol, and a slightly different formula, as we shall see in the analysis of the second sentence, for other internationally recognized signs. On this subject the Rapporteur merely stated that although the basic principle underlying this article was readily accepted, the wording of the text turned out to be much more difficult than had been expected.⁹
- 1534 Finally the Conference probably considered that unforeseeable situations can always occur, and that it is impractical to wish to foresee all possible contingencies. Thus the use of these signs or signals in situations or for purposes

⁵ Despite Resolution 5 annexed to the 1949 Conventions, States have devoted little attention to misuse in their implementing legislation, except with regard to the suppression of commercial misuse. This Resolution reads as follows: "Whereas misuse has frequently been made of the Red Cross emblem, the Conference recommends that States take strict measures to ensure that the said emblem, as well as other emblems referred to in Article 38 of the Geneva Convention for the Amelioration of the Condition of the Wounded and Sick in Armed Forces in the Field of 12 August 1949, is used only within the limits prescribed by the Geneva Conventions, in order to safeguard their authority and protect their high significance." For the distinction between protective sign and indicatory signs, see *infra*, p. 450.

⁶ *CE 1972, Report*, Vol. II, p. 5, *ad Art. 32*. This text referred both to the flag of truce and to the protective sign of the red cross (red crescent and red lion and sun), the protective sign for cultural property and other protective signs specified by international conventions.

⁷ Cf. amendment CE/COM III/C 73: "for purposes other than those specified in the Conventions establishing those signs and in the present Protocol", *ibid.*, p. 64.

⁸ Art. 36, para. 1, of the Draft Protocol.

⁹ *O.R. XV*, p. 270, CDDH/215/Rev.1, para. 34.

differing from those for which they were specifically intended, is not necessarily always prohibited. In the field of protection, the spirit should support the letter of the law, perhaps more than anywhere else. It should always be possible to take into consideration exceptional situations with a view to the possible future establishment of a rule of customary law (*opinio juris sive necessitatis*). However, it goes without saying that the wording which prohibits the improper use of the distinctive sign and other signs, signals or emblems provided for by the Conventions or by this Protocol, should in the first place be understood strictly within the confines of the text. This point cannot be over-emphasized, and it is appropriate to remember once again that the perfidious use of the distinctive emblem of the red cross, the red crescent and the red lion and sun, or of other protective signs recognized by the Conventions or the Protocol, in violation of Article 37 (*Prohibition of perfidy*) constitutes a grave breach (Article 85 – *Repression of breaches of this Protocol*, paragraph 3(f)) if it is intentional and causes the death or serious injury to body or health of an adversary.

1. *The distinctive emblem of the red cross, the red crescent or red lion and sun*

- 1535** The prohibition of the improper use of the distinctive emblem, whether this concerns the red cross or red crescent, may cover its representation, as well as the categories of persons and objects which may rely on it. This of course amounts to some extent to determining the conditions of its use.¹⁰
- 1536** The emblem is defined in Article 38 of the First Convention. It consists of a red cross, a red crescent or a red lion and sun, respectively, on a white ground. The shade of red is immaterial. The shape of the cross is not defined; it is a graphic sign *par excellence*. The cross is formed by the intersection of two straight lines. To demand a more specific description could too easily result in misuse, for example, the refusal to respect the emblem on the pretext that one or other of the cross bars was not the correct length or width, or even that it is forgery because of allegedly different dimensions than those provided for by the Convention. The simple emblem of the red cross, freely executed, can be improvised at any time for the purposes defined by the Conventions and the Protocols.
- 1537** It has become customary to use the so-called “Greek cross”, i.e. a cross with four bars of equal length, formed by two straight lines – a vertical and horizontal line – intersecting at right angles, without touching the borders of the white ground. The simplest and most frequently used version consists of five equal squares. The dimensions, shape and orientation of the crescent are not strictly defined either. In fact, certain Islamic countries have adopted a crescent with the points pointing towards the left, while others have opted for the converse.¹¹

¹⁰ These conditions are specified in Art. 18 for persons, services and installations authorized to display this emblem: Identification. For the commentary on this article, see p. 221.

¹¹ For further details, see *Commentary I*, p. 297. Also see F. Bugnion, *The Emblem of the Red Cross, A Brief History*, ICRC, Geneva, 1977 and also Ph. Eberlin, *Protective Signs*, ICRC, Geneva, 1983.

- 1538** This emblem – the red cross on a white ground – to which the red crescent and the red lion and sun were added in due course, was chosen in 1863 for the protection of voluntary medical orderlies. Upon the conclusion of the first Geneva Convention of 1864 for the Amelioration of the Condition of the Wounded in Armies in the Field, it became the only distinctive emblem for all military medical personnel, as well as for military hospitals and ambulances. As then, it is now the visible manifestation of the protection provided by the Convention for certain persons and certain objects. It is the emblem of the Convention, and therefore an emblem of protection. It allows its bearers to venture onto the battlefield to carry out their humanitarian task. It bears witness to the totally inoffensive character of the persons and objects that it designates, as well as to the impartial, useful and orderly nature of their humanitarian task, and in return, it grants them immunity. Thus it should be displayed in good faith and in accordance with the prescribed conditions, deployed widely wherever possible and permanently under a strict control of the conditions of its use.
- 1539** However, the emblem is also used to indicate that a person or an object is connected with the institution of the Red Cross. This emblem is used in peacetime by National Societies and by millions of their members and volunteers as an indicatory sign, but this should not be confused in any way with the emblem as laid down in the Convention for the purpose of protection in time of armed conflict. It is up to the National Red Cross and Red Crescent Societies, and national legislation, to prescribe the rules for the use of the indicatory sign, and to suppress its misuse, in accordance with Articles 53 and 54 of the First Convention in particular.¹² It is of the utmost importance that the use of this indicatory sign, even if it is perfectly lawful, can in no case lead to confusion with its protective use, which is quite unrelated to it. In any situation of armed conflict the indicatory sign will always be of a small size¹³, and it may not be displayed on an armlet or on rooftops. The prohibition of the improper use of the distinctive emblem, formulated in this paragraph, is addressed to governments, which have the duty to introduce all the necessary legislation on this matter with the cooperation of the National Societies.¹⁴ If the sign of the Convention – bearing in mind that under the Convention the emblem itself is virtually the source of the protection –, ¹⁵ is to provide an effective guarantee for those who venture onto the battlefield unarmed as a “warrior without weapons”¹⁶ for the sole purpose of aiding the wounded, sick and threatened or abandoned civilians, it is essential that there should be no possible confusion on this point.
- 1540** The indispensable conditions for compliance with this paragraph in times of armed conflict are: the correct representation of the emblem; distinguishing

¹² On this subject, see J. Pictet, *Le signe de la croix rouge et la répression des abus du signe de la croix rouge*, ICRC, Geneva, 1951.

¹³ First Convention, Art. 44, para. 2.

¹⁴ See the “Regulations on the Use of the Emblem of the Red Cross, of the Red Crescent and of the Red Lion and Sun by the National Societies”, adopted by the XXth International Conference of the Red Cross, *International Red Cross Handbook*, Geneva, 1983, pp. 514-521.

¹⁵ See *Commentary I*, p. 306.

¹⁶ *Warrior without Weapons* is the title of a work published in 1947 by a former ICRC delegate, Dr. Marcel Junod, and republished a number of times since.

clearly and precisely between the protective emblem, which is for the sole use of those engaged on tasks provided for by the Conventions and the Protocol, and the indicatory emblem, and the disappearance of the signs displayed by persons, private enterprises and organizations which are not authorized to use it.¹⁷ Article 44 of the First Convention still governs the use of the indicatory sign, as the Protocol has not brought any part of this subject within its scope, and therefore contains no new provisions at all on this point (Article 18 – paragraph 7).

1541 Under the provisions of the Conventions and the Protocol, the following are entitled to the benefits of the protective emblem:

- a) *Fixed or mobile, permanent or temporary medical units of a Party to the conflict or made available to a Party to the conflict, viz.:*
 - i) military or civilian units¹⁸, including those belonging to civil defence, sickbays on board ship and civilian hospitals of a Party to the conflict (Article 8 – *Terminology*, sub-paragraph (e)), Article 18 – *Identification* and Article 66 – *Identification*, paragraph 9); First Convention, Articles 19, 28, 41 and 42; Fourth Convention, Article 18;
 - ii) military or civilian units made available to a Party to the conflict for humanitarian purposes by a neutral or other State that is not a Party to the conflict (Article 9, *Field of application*, paragraph 2(a)); or
 - iii) civilian units made available to a Party to the conflict for humanitarian purposes:
 - by a recognized and authorized aid society of a neutral or other State that is not a Party to the conflict (Article 9 – *Field of application*, paragraph 2(b));¹⁹
 - by an impartial international humanitarian organization (Article 9 – *Field of application* – paragraph 2(c)).
- b) *Military or civilian, permanent or temporary medical transports, assigned exclusively to medical transportation and under the control of a competent authority of a Party to the conflict* (Article 8 – *Terminology*, sub-paragraph (g)), viz.:
 - i) any medical transports by land (medical vehicles) (Article 8 – *Terminology*, sub-paragraph (h)) which comply with these conditions, and similarly

¹⁷ In this respect, see XXIIIrd International Conference of the Red Cross, Bucharest, 1977, Resolution XI, “Misuse of the Emblem of the Red Cross”.

¹⁸ Art. 12 stipulates that the protection of civilian medical units is subject to one of the following conditions, that they: a) belong to one of the Parties to the conflict; b) are recognized and authorized by the competent authority of one of the Parties to the conflict; or c) are authorized in conformity with Art. 9, para. 2, of this Protocol, or Art. 27 of the First Convention.

¹⁹ In the terms of Art. 27 of the First Convention, this assistance is subject to the prior agreement of the government of the country to which this society belongs, and to the authorization of the Party to the conflict itself. The adverse Party of the State which accepts this assistance will be notified before any use is made of it, both by the neutral government and by the State receiving the assistance. The application of Article 27 of the First Convention is explicitly called for by the Protocol (Art. 9, para. 2, and Art. 12, para. 2(c); see *supra*, note 18).

- ii) any medical transports by air (medical aircraft) (Article 8 – *Terminology*, sub-paragraph (j)) including those which fall under letter a), ii) and iii) above; or
 - iii) any medical transports by water, complying with the same conditions (medical ships and craft) (Article 8 – *Terminology*, sub-paragraph (i)), whether these are:
 - military hospital ships of a Party to the conflict in accordance with Article 22 of the Second Convention, even when they are transporting civilian wounded, sick or shipwrecked persons who do not belong to any of the categories mentioned in Article 13 of the Second Convention (Article 22 – *Hospital ships and coastal rescue craft*, paragraph 1; Second Convention, Articles 22, 43 and 44);
 - hospital ships of aid societies and private hospital ships originating from a Party to the conflict, under the same conditions as those mentioned above, and which comply, as far as possible, with the provisions of Article 43, paragraph 2, of the Second Convention (Article 23 – *Other medical ships and craft*, paragraph 1; Second Convention, Articles 24, 43 and 44);
 - hospital ships of aid societies and private hospital ships of neutral countries or those made available to a Party to the conflict by a neutral or other State that is not a Party to the conflict or by an impartial international humanitarian organization under the same conditions as those mentioned above (Article 22 – *Hospital ships and coastal rescue craft*, paragraph 2; Second Convention, Articles 25, 43 and 44);²⁰
 - lifeboats of hospital ships, lifeboats of coastal rescue stations and small craft belonging to the medical services under the same conditions as those mentioned above, even if the notification requirement of Article 27 of the Second Convention (Coastal rescue craft) has not been observed (Article 23 – *Other medical ships and craft*, paragraph 1; Second Convention, Articles 27, 43 and 44);
 - fixed coastal installations used by rescue craft (Second Convention, Articles 27 and 41).
- c) *Medical personnel assigned exclusively, whether permanently or temporarily:*
- i) to medical units for medical purposes;
 - ii) to the administration of medical units;
 - iii) to the operation or administration of medical transports, i.e.:
 - military or civilian medical personnel of a Party to a conflict, including the medical personnel mentioned in the First and Second Conventions,²¹ and

²⁰ In the terms of Art. 25 these hospital ships should be placed under the control of one of the Parties to the conflict, with the prior agreement of their own government and with the authorization of this Party, and in addition, the provisions of Art. 22 of the Convention, relating to notification, shall be complied with.

²¹ This concerns:

- a) permanent medical personnel of the army and of aid societies, including the administrative personnel (First Convention, Arts. 24, 26 and 40);
- b) temporary medical personnel of the army while they are carrying out medical duties (First Convention, Arts. 25 and 41);
- c) medical personnel of hospital ships and their crew (Second Convention, Arts. 36 and 42);
- d) medical personnel of naval forces and of the merchant marine (Second Convention, Arts. 37 and 42);
- e) personnel of civilian hospitals (Fourth Convention, Art. 20).

- the personnel assigned to civil defence organizations²² (Article 8 – *Terminology*, sub-paragraph (c));
- medical personnel of National Red Cross (Red Crescent, Red Lion and Sun) Societies and other national voluntary aid societies duly recognized and authorized by a Party to the conflict²³ (Article 8 – *Terminology*, sub-paragraph (c)(ii));
 - medical personnel of medical units or transports made available to a Party to the conflict for humanitarian purposes by a neutral or other State which is not a Party to that conflict (Article 9 – *Field of application*, paragraph 2(a)); by a recognized and authorized aid society of such a State (Article 9 – *Field of application*, paragraph 2(b))²⁴; by an impartial international humanitarian organization (Article 9 – *Field of application*, paragraph 2(c)).
- d) *Religious personnel, i.e., military or civilian persons such as chaplains, who are exclusively engaged in the work of their ministry and are attached either permanently or temporarily to the armed forces of a Party to the conflict, to medical units of a Party to the conflict, or are made available to a Party to the conflict* (Article 8 – *Terminology*, sub-paragraph (d)), i.e.:
- i) religious personnel of the armed forces of a Party to the conflict, whether this is the army (First Convention, Article 24), airforce or navy (Second Convention, Article 37) (Article 8 – *Terminology*, sub-paragraph (d)(i));
 - ii) religious personnel attached to the medical units or medical transports of a Party to the conflict, including sick-bays on board ship (Second Convention, Article 28), hospital ships (Second Convention, Article 36), the merchant marine (Second Convention, Article 37) and civilian hospitals (Fourth Convention, Article 20) (Article 8 – *Terminology*, sub-paragraph (d)(ii));
 - iii) religious personnel attached to medical units or transports made available to a Party to the conflict under the conditions mentioned under letter c) above (Article 8 – *Terminology*, sub-paragraph (d)(iii)); or
 - iv) religious personnel of civil defence organizations of a Party to the conflict (Article 8 – *Terminology*, sub-paragraph (d)(iv)).
- e) *Medical equipment of medical units, medical transports, medical personnel and religious personnel* (First Convention, Articles 33, 34 and 39; Second Convention, Article 41) as defined under letters a)-d) above.

²² Art. 66, para. 9.

²³ In fact, these societies do not seem to be very numerous; examples that could be given include the Order of St. John of Jerusalem and the Order of Malta. However, in the context of a conflict relating to Art. 1, para. 4, this might refer to a National Red Cross or Red Crescent Society in the process of being established; see also commentary Art. 81, *infra*, p. 935.

²⁴ For the conditions, see *supra*, note 19.

- f) *The international Red Cross organizations and their duly authorized personnel* (First Convention, Article 44, paragraph 3).
- g) *Hospital zones and localities established in the territory of a Party to the conflict in order to protect the wounded and sick from the effects of war* (First Convention, Article 23, and Fourth Convention, Articles 14 and 15, paragraph 1(a); Annexes I, Article 6, and 6, paragraph 2; Protocol, Article 8 – *Terminology*, sub-paragraph (a)).

1542 In the context of the list indicated above, which is taken directly from the texts of the Conventions and the Protocol, it is the responsibility of every High Contracting Party to draw up the list of persons, establishments, services and medical transports, whether military or civilian, which will be placed under its control in a time of armed conflict, and which will be allowed to display the protective emblem. The role that used to be reserved to the army by the Geneva Conventions is now assigned by the Protocol to the Parties to the conflict, as modern warfare leads to the amalgamation, or at least, the coordination between civilian and military medical services. Thus it is no longer possible to leave these matters to the army, and control has passed to the State itself. The role of the State in this area is indeed essential.

1543 These limits, imposed by the Conventions and the Protocol, on the number and type of persons and objects entitled to bear the protective emblem can be exceeded in cases of emergency by recourse to the civilian population and to aid societies, such as the National Red Cross or Red Crescent Societies, which “shall be permitted, even on their own initiative, to collect and care for the wounded, sick and shipwrecked, even in invaded or occupied areas” (Article 17 – *Role of the civilian population and of aid societies*, paragraph 1).²⁵ When something is necessary, one must find the means, it does not seem possible to refuse these civilians and these aid societies the protective emblem, while it is necessary for the task in hand. Thus they will take it upon themselves to bear it as they are acting on their own initiative. However, this does not mean that the High Contracting Party is released from its obligations, and it must ensure that all misuse is suppressed.

2. *Distinctive signals*

1544 Medical units and transports which comply with the conditions listed under 1, a) and b) above, can also make use of the distinctive signals provided for in Chapter III of Annex I to the Protocol: Article 6 (*Light signal*), Article 7 (*Radio signal*), Article 8 (*Electronic identification*). These means of signalling are

²⁵ Thus this is a spontaneous intervention of the civilian population, as distinct from an appeal which might be made by the State (Art. 12, para. 2). For example, Switzerland aims to supplement the civilian and military medical strength in time of war with the participation of the population which could reach 4% of all the inhabitants, i.e., about 250,000 people from a population of 6,000,000. This civilian assistance, organized by the State, is automatically placed under its control in the same way as civilian or military medical units or services, and therefore does not pose any problem regarding the right to wear the protective sign. They are assimilated either by being incorporated in the medical units and services or by analogy.

exclusively²⁶ intended to permit the identification of medical units and transports (Article 8 – *Terminology*, sub-paragraph (*m*)) and are normally used in conjunction with the protective emblem. However, in exceptional cases temporary medical aircraft, which cannot, either for lack of time or because of their characteristics, be marked with the distinctive emblem, may use only the distinctive signals (Article 18 – *Identification*, paragraph 5, and Annex I, Chapter III, Article 5 – *Optional use*, paragraph 2).²⁷

1545 The commentary on Annex I to the Protocol, entitled “Regulations concerning identification”, provides all the necessary details and explanations on these points.²⁸

3. *The sign for works and installations containing dangerous forces*

1546 This sign was created by the Protocol, as well as the distinctive signals mentioned above, and also the civil defence sign which is dealt with in the following section. We refer to the commentary on Article 56 (*Protection of works and installations containing dangerous forces*), and to Chapter VI, Article 16 (*International special sign*) of Annex I to the Protocol, for all matters related to the definition of this sign and the conditions of its use.²⁹

4. *The international distinctive sign of civil defence*

1547 We refer to the commentary on the articles of the Protocol relating to civil defence (Articles 61-67), in particular Article 66 (*Identification*), as well as to the commentary on Annex I to the Protocol, Chapter V, Article 15 (*International distinctive sign*).

²⁶ Nevertheless, in the absence of a special agreement between the Parties to the conflict reserving the use of flashing blue lights for the identification of medical vehicles, ships and craft, the use of these light signals for other vehicles or ships is not prohibited (Annex I, Chapter III, Art. 6, para. 3).

²⁷ See also resolutions 17-19.

²⁸ Oblique red bands on a white ground are provided for in Annex I of the Convention Relative to the Protection of Civilian Persons in Time of War, which contains a draft agreement relating to hospital and safety zones and localities, provided for in Art. 14 of this Convention. As long as these zones are reserved for the wounded and sick, they are deemed to be hospital zones which must be marked, as we have seen, by a red cross or a red crescent respectively, on a white ground. However, when access to these zones is open to persons who do not fall under the definition given in Art. 8, sub-para. (*a*), of the wounded and sick, it is no longer regarded as a hospital zone but as a safety zone. In the terms of Art. 14 of the Fourth Convention, this type of zone can shelter invalids, old people, children under fifteen years of age, expectant mothers and mothers of children under seven years of age, as well as the wounded and sick (see *Commentary IV*, pp. 125-126 and 627-629). This zone cannot be marked by a red cross, but will be marked by oblique red bands on a white ground, in pursuance of Art. 6 of the draft agreement contained in Annex I to the Fourth Convention (see *Commentary IV*, pp. 633-634). However, it should always be remembered that since the Protocol has extended the protection of the red cross sign to the civilian wounded and sick, the oblique red bands have lost a large degree of their significance.

²⁹ See *infra*, p. 1295.

*Second sentence – Other internationally recognized protective emblems, signs or signals*³⁰

1548 This provision covers all internationally recognized protective signs existing now and in the future, which are not covered by the first sentence. Thus it covers any signs which are not provided for by the Conventions or the Protocol, in particular recognized distress signals, including those established by certain international organizations.³¹

1549 During armed conflict the prohibition is absolute, in the sense that any deliberate misuse is prohibited, and not only, for example, the deliberate misuse aimed at killing, injuring or capturing the adversary. However, it should be noted that the wording differs significantly from that of the first sentence, and consequently from that of Article 23(f) of the Hague Regulations, not only because of the explicit mention “in an armed conflict” but also because of the expression “deliberate misuse”, which replaces the words “improper use” employed previously. The Rapporteur of Committee III explained this discrepancy by stating that

“a number of representatives stated that their Governments could not, in this Protocol, accept an obligation to avoid or prevent improper use of an emblem provided for in a convention to which their Governments were not Parties. On the other hand, these Governments could agree that they would not themselves deliberately misuse such an emblem”.³²

1550 This reservation concerns the distinctive sign of the Convention for the Protection of Cultural Property in the Event of Armed Conflict. A considerable

³⁰ The signs for prisoner-of-war camps and civilian internment camps are given in Art. 23, para. 4, of the Third Convention and Art. 83, para. 3, of the Fourth Convention. During the Second World War prisoners of war took the initiative, either with or without the authorization of the camp commanders, to mark their places of internment by day by means of the letters PG or PW, so that they could be clearly recognized from the air. This initiative was approved by the Diplomatic Conference of 1949, which extended its use to internment camps for civilians by means of the letters IC. Only prisoner-of-war camps and civilian internment camps can be marked in this way. In either case the possibility of marking is subject to the reservation of military considerations (on this point, see *Commentary III*, p. 190, and *Commentary IV*, p. 383-384). For non-defended localities and demilitarized zones the Protocol has made provision for signs, though it has not specified them, since it merely stipulates that the Party which is in control of a locality which is the object of an agreement not to defend that area, or a demilitarized zone, must mark it so far as possible by such signs as may be agreed upon with the other Party; these signs must be displayed where they are clearly visible, especially on the perimeter, limits and highways of the zone (Art. 59, para. 6, and Art. 60, para. 5). For both the definition of non-defended localities and demilitarized zones, and for the conditions of use of any signs for them, we refer to the commentary on the provisions relating to these matters (see *infra*, pp. 699 and 707).

³¹ See commentary on Annex I, *infra*, p. 1137.

³² *O.R.* XV, p. 270, CDDH/215/Rev.1, para. 34.

number of States are Parties to it, though some have still not adhered to it.³³ As this Convention restricts the prohibition of the use of the distinctive sign in cases other than those provided for, to situations of armed conflict, it was appropriate to include this restriction in the Protocol as well. As regards the term “deliberately”, this expresses an intent³⁴ and refers to misuse that is made with full awareness of the motives, free of any pressure and voluntarily heedless of the rule. The prohibition of “deliberate misuse” is normally equivalent to that formulated in the Convention for the protection of cultural property.³⁵ Oddly enough, the expression “deliberate misuse” is also used in Article 18 (*Identification*), paragraph 8, where it refers to distinctive signs and signals, in the context of the prevention and suppression of their misuse.³⁶

1551 The use of the flag of truce is regulated in Article 23(f) of the Hague Regulations, which prohibits its improper use, while the parlementaire himself is dealt with in Articles 32-34. Traditionally the flag of truce is white. It simply indicates the wish on the part of the person bearing it to communicate with his adversary. However, as the only object of this communication is often the negotiation of a surrender, it sometimes happens that small units or soldiers fly

³³ The distinctive emblem of the Convention for the Protection of Cultural Property in the Event of Armed Conflict “shall take the form of a shield, pointed below, per saltire blue and white” (Art. 16). The sign is used alone or is repeated three times in a triangular formation (*ibid.*). If it is repeated three times, the sign can only be used for immovable cultural property under special protection (Art. 17, para. 1(a), and Art. 8), the transport of cultural property (Art. 17, para. 1(b) and Arts. 12 and 13) and for improvised refuges (Art. 17, para. 1(c)). The immunity of cultural property which enjoys special protection can only be withdrawn in exceptional cases of unavoidable military necessity (Art. 11, para. 2), which can only be determined by the officer commanding a force which is equivalent to or larger than a division (*ibid.*). During armed conflict it is prohibited to use the distinctive emblem in any cases other than those provided for, or to use a sign resembling the distinctive sign for any purpose whatsoever (Art. 17, para. 3). As regards the Treaty for the Protection of Artistic and Scientific Institutions and of Historic Monuments in Times of War and Peace (Roerich Pact), it provides for a sign consisting of a red circle encircling a triple sphere on a white ground. This Pact binds various States of North America and Latin America. See also the commentary on Art. 53 (which does not make the reservation of unavoidable military necessity) and Resolution 20 annexed to the Protocols.

³⁴ This concept of intent, which gives the rule a personal and subjective character, is expressed not only in the definition of perfidy (Art. 37), but also in other places in the text of the Protocol in different forms, particularly in Arts. 41, para. 1 (provision prohibiting a person who is recognized or who, in the circumstances, should be recognized to be *hors de combat*, from being made the object of attack), in Art. 44, para. 3 (a combatant who misuses the absence of a distinguishing sign and benefits therefrom to take advantage of his adversary), and in Art. 55, para. 1 (means of warfare intended to cause damage to the natural environment); it is in Art. 85 (Repression of breaches) that this concept is most evident: acts committed “wilfully” or “in the knowledge” (paras. 3 and 4). In this case it implies a responsibility under criminal law.

³⁵ See *supra*, note 33. The concept of the abuse of rights is controversial; a number of lawyers distinguish acts *ad aemulationem*, i.e., the exercise of the right with the sole purpose of causing harm, from acts consisting of exercising a right for purposes different from those for which the right was granted. This distinction does not seem to be of interest except from the point of view of the intent of the person who is guilty of the abuse; it is irrelevant for the result. In either case it is an unlawful act. Finally, some lawyers sometimes deny the validity of the whole concept of abuse of rights by claiming that a right exercised for purposes different from those for which it was granted, actually does not exist.

³⁶ See commentary Art. 18, *supra*, pp. 234-235.

the white flag individually for the sole purpose of demonstrating their decision to cease combat. In this case the gesture should be accompanied by unequivocal behaviour supporting this decision. Leaving this aside, the reason for which the white flag has been used can only be known when the communication that is desired has taken place.

- 1552** Anyone who hoists the white flag must cease fire, and the act of sending an emissary should take place promptly after the flag is shown. The adversary, i.e., the Party which is requested to accept the non-belligerent contact, is not bound to cease fire, but may not direct it against the bearer of the flag and those accompanying him. The latter will advance unhurriedly towards the place which may be designated to them. The same applies to the return journey. To raise the white flag without a reason or for the sole purpose of deflecting attention away from a military operation in progress, or for other purposes conflicting with the law of armed conflict, such as threatening not to give quarter, constitutes a breach and may give rise to sanctions.
- 1553** Any soldier may find himself in a situation of seeing a white flag and should therefore be instructed in the conduct he should follow in this event.³⁷
- 1554** The colour white is also used to provide protection, even when there is no other emblem, particularly to certain aircraft.³⁸
- 1555** Despite the different formula (“improper use” in the Hague Regulations, “deliberate misuse” in the Protocol), it does not seem that the authors of the Protocol intended to alter the conditions of use of the flag of truce, which are based on customary law.
- 1556** The perfidious use of the flag of truce in the sense of Article 37 (*Prohibition of perfidy*), paragraph 1(a) is a grave breach (Article 85 – *Repression of breaches of this Protocol*, paragraph 3(f)), if it is intentional and causes death or serious injury to body or health.
- 1557** As regards the expression “other internationally recognized protected emblems, signs or signals”, this refers to any other existing or future sign, whether it is universally accepted or not, like the protective emblem of cultural property. It should be noted in particular that Resolutions 17, 18 and 19, annexed to the Protocol, recognize the competence of the International Civil Aviation Organization (ICAO), the Inter-Governmental Maritime Consultative Organization (now the International Maritime Organization (IMO)), and that of the World Administrative Radio Conference (WARC) in the field of the identification of medical transports, particularly medical aircraft. These Resolutions request these organizations either to recognize the signals provided for in the Protocol, or to establish a combined system (Resolution 18, paragraph 1(c)), or to establish appropriate procedures for the use of medical aircraft (Resolution 17, paragraph 1(a)).³⁹ Reference has already been made to Article

³⁹ For the commentary on these provisions, see *infra*, p. 1137.

5 of the Hague Convention Respecting Bombardments by Naval Forces in Time of War.⁴⁰

Paragraph 2 – United Nations' emblem

- 1558 This paragraph, which prohibits the use of the emblem of the United Nations, except as authorized by that organization, was introduced following an amendment submitted at the second session of the Conference of Government Experts⁴¹ at the suggestion of the United Nations.
- 1559 The use of the United Nations flag forms the object of a code issued for the first time by the Secretary General on 19 December 1947, and amended on 11 November 1952.⁴² Article 6 of the Code specifies that the flag cannot be displayed during military operations, except when this has been specifically authorized by a competent organ of the United Nations.
- 1560 The text of this paragraph does not state that the United Nations emblem is an internationally recognized protective emblem, but the provision relating to it is placed in the context of protective emblems, under the general title "Recognized emblems". In this respect we refer to what was said above regarding Article 37 (*Prohibition of perfidy*), paragraph 1(d).⁴³ The United Nations emblem only has a protective character to the extent that it can be assimilated to the emblems of neutral or other States not Parties to the conflict, but not when the United Nations intervenes in a conflict by sending combatants. Some seem to have regretted this restriction and would have preferred the protective character of the United Nations emblem to be always recognized when it is engaged in a peacekeeping operation.

⁴⁰ *Supra*, note 4. It is appropriate to recall at this point the declaration made by the representative of Israel at the final plenary meeting of the Conference: "With regard to Art. 36 [38] of draft additional Protocol I, the delegation of Israel wishes to declare that it attaches special importance to the second sentence of paragraph 1. This sentence forbids the misuse of any other protective emblem which has been recognized by States or has been used with the knowledge of the other Party" (*O.R.* VI, p. 116, CDDH/SR.39, Annex). This declaration relates to the red shield of David, an emblem which is not recognized by the Conventions, but which is used by the military and civilian medical services of the State of Israel, and which, in that country, fulfils the role played by the red cross and the red crescent in other countries. In this way Israel claims that the prohibition of deliberately misusing internationally recognized protective emblems, signs or signals in armed conflicts also applies to the red shield of David.

⁴² The United Nations Flag Code and Regulations, ST/SGB/132, United Nations, January 1967.

⁴³ *Supra*, p. 439.

Conclusion

1561 The prohibition of the improper use of signs provided for or created by the Conventions and the Protocol should be interpreted first of all within the confines set by the text. Any improper use is prohibited, not only the perfidious use in the sense of Article 37 (*Prohibition of perfidy*). The same is true of other internationally recognized protective emblems, signs or signals.

J. de P.

Protocol I

Article 39 – Emblems of nationality

1. It is prohibited to make use in an armed conflict of the flags or military emblems, insignia or uniforms of neutral or other States not Parties to the conflict.
2. It is prohibited to make use of the flags or military emblems, insignia or uniforms of adverse Parties while engaging in attacks or in order to shield, favour, protect or impede military operations.
3. Nothing in this Article or in Article 37, paragraph 1(d), shall affect the existing generally recognized rules of international law applicable to espionage or to the use of flags in the conduct of armed conflict at sea.

Commentary**General remarks**

- 1562** Emblems of nationality are essentially customary in nature. In international society they constitute a generally recognized language which is accorded the same respect as the spoken or written word in relations between individuals. The term “nationality” normally relates to a political entity embodied by a State. However, in certain situations it can also indicate a connection with an entity which is a “Party to the conflict” but not a State. This applies in particular in cases of conflicts of self-determination mentioned in Article 1 (*General principles and scope of application*), paragraph 4.
- 1563** This article makes a distinction between the emblems of nationality of neutral States, which form the object of paragraph 1, and the emblems of nationality of the adverse Parties dealt with in paragraph 2. Paragraph 3 confirms the existing rules applicable to espionage and armed conflict at sea.

Paragraph 1 – Emblems of nationality of neutral or other States not Parties to the conflict

- 1564** Neutrality is a status which is defined in relation to war, and which designates the position of States which do not participate in an armed conflict. Traditionally, i.e., before the appearance of treaties restricting or prohibiting the use of force by nations as a political instrument, neutrality was always defined in terms of the impartial attitude of a third State vis-à-vis the belligerent States. Recognized by the latter, this neutrality formed a source of mutual rights and duties, as codified in the Hague Conventions.¹ This is known as integral neutrality or neutrality in the traditional sense. It is not the only characteristic of this neutrality to abstain from any intervention in the war, whether this would be of a political, economic or military nature, which also implies an impartial attitude.² However, the general prohibition on resorting to war, on the one hand, and ideological differences, on the other, have gradually given birth to a concept of neutrality which is known as qualified or quasi-neutrality, or even to a status of non-belligerence where the criterion of impartiality is absent. Thus, with regard to any situation of armed conflict, there are, or there could be, two categories of third States, as described in this paragraph, namely “neutral States” and “other States

¹ In particular, the Hague Convention Respecting the Rights and Duties of Neutral Powers and Persons in War on Land of 18 October 1907 (Hague Convention V).

² On the concept of neutrality in general, see R. Bindschedler, “Neutrality, Concept and General Rules”, *op. cit.*, and, on the applicability of the rules of neutrality, D. Schindler, “State of War, Belligerency, Armed Conflict”, in A. Cassese (ed.), *The New Humanitarian Law of Armed Conflicts*, *op. cit.*, pp. 3-20. See also Ch. Swinarski, “La notion d’un organisme neutre et le droit international”, in *Studies and Essays in Honour of Jean Pictet*, *op. cit.*, p. 819.

not Parties to the conflict”.³ Of importance here, is that neither of these categories participate directly in the hostilities, and that the rules elucidated below apply in both cases.

Permitted use and limitations

1565 The prohibition of the use of the emblems of nationality of neutral or other States not Parties to the conflict is absolute “in an armed conflict”. This means that they may be used “as long as they are not used for the promotion of the interests of a Party to the conflict in the conduct of that conflict”.⁴ If this is not the case, the use is never permitted. The above-mentioned Hague Convention V⁵ does not consider services rendered in matters of police or civil administration as acts in favour of one of the belligerents (Article 18(b)). Thus the use of the neutral flag would be authorized in these circumstances, obviously on the condition, as regards police services, that they are not incorporated in the armed forces and do not participate in combat.⁶

“Also it is clear that Article 37 [39] is not intended to prohibit or restrict neutrals – or indeed any States or their agencies from using their own flags, emblems etc.”⁷

However, it goes without saying that the Party to the conflict remains responsible for this use in its territory. This concerns the recognized privileges granted to diplomatic missions and the heads of missions who “have the right to use the flag and emblem of the sending State on the premises of the mission, including the residence of the head of the mission, and on his means of transport”.⁸

1566 With regard to consular representation:

“the national flag of the sending State may be flown and its coat of arms displayed on the building occupied by the consular post and at the entrance door thereof, on the residence of the head of the consular post and on his means of transport, when used on official business”.⁹

The last-mentioned facility is important when acting as a Protecting Power; its representatives can be called upon to move around frequently and may even have to get close to areas where hostilities take place. They will do so under cover of the neutral flag; such use is perfectly lawful.

1567 According to the Hague Convention V, the responsibility of a neutral Power is not engaged by the fact that individuals have crossed the frontier separately to

³ This form of words was introduced by the amendment CDDH/45 (*O.R.* III, p. 167). For the discussion in Committee III, see *O.R.* XIV, pp. 273-274, CDDH/SR.29. See also commentary Art. 2, *supra*, p. 61, and E. Kussbach, “Protocol I and Neutral States”, *op. cit.*

⁴ Report of the Rapporteur, *O.R.* XV, p. 270, CDDH/215/Rev.1, para. 38.

⁵ *Supra*, note 1.

⁶ On this point, see commentary Art. 43, par. 3, *infra*, p. 518.

⁷ Report of the Rapporteur, *ibid.*

⁸ Vienna Convention on Diplomatic Relations of 18 April 1961, Article 20.

⁹ Vienna Convention on Consular Relations of 24 April 1963, Article 29.

offer their services to one of the belligerents (Article 6). These individuals have no right whatsoever to use the flags, emblems, insignia or uniforms of the neutral State of their origin. These “volunteers” could raise thorny legal problems if this rule is not respected. Moreover, such acts would be perfidious.

- 1568** On the other hand, the converse applies to the medical services of a neutral or other State not Party to the conflict, which are authorized to lend their assistance to a Party to the conflict. They can display their national flag in all circumstances except under orders to the contrary by the military authority, even if they fall into the hands of the adverse Party.¹⁰ Hospital ships which originate from a neutral State display, in addition to their national flag and the red cross emblem, the flag of the Party to the conflict under whose authority they have been placed.¹¹ These various activities are not such as to “favour the interests of a Party to the conflict,” since they have an exclusively humanitarian character, and the use of the emblems of the neutral State is consequently in accordance with the spirit and the letter of this paragraph in these circumstances. The same applies to medical aircraft made available to a Party to the conflict by a neutral or other State not Party to the conflict,¹² which should display, in addition to the red cross emblem, their normal emblems of nationality.¹³ As regards civilians who are nationals of neutral States and resident in the territory of a Party to the conflict, and who find themselves in the middle of military operations, this paragraph does not seem to prohibit them from using their national flag to try and broadcast their status of neutrality, provided there is no military objective in the vicinity.
- 1569** The use of the neutral flag for the purposes of espionage is certainly prohibited, as this constitutes an intervention of a military nature. In addition, the principle of impartiality would not be respected. It should also be noted that the Convention for the Protection of Industrial Property prohibits the misuse of official coats of arms¹⁴ and consequently any use of the coat of arms of a neutral State by a Party to the conflict for the purpose of espionage.
- 1570** With regard to terminology, it should be noted that whereas the French text contains the word “symboles”, the English version uses the expression “emblems” (“flags or military emblems, insignia or uniforms”) as does the Spanish text (“banderas o [...] emblemas, insignias o uniformes militares”). As these terms are roughly synonymous in this context, they should not be seen as contradicting each other, but as different customary methods of expressing identical

¹⁰ First Convention, Art. 43, para. 2.

¹¹ Second Convention, Art. 43, para. 2.

¹² *Supra*, ad Art. 38, para. 1, first sentence, point 1, letters a) and b), p. 451.

¹³ For the general conditions of marking medical aircraft, see the First Convention, Art. 39, para. 2; see also the 1923 Hague Rules of aerial warfare, Art. 17, para. 2. Art. 29, para. 1, of the Protocol provides for the notification of the means of identification. According to the 1923 Hague Rules concerning air warfare, a neutral private aircraft which flies over the territory of a Party to the conflict without displaying its emblems of nationality, or displaying false marks, may be captured (Art. 53(e)). These Hague Rules were never adopted by States, but their persuasive authority has to some extent been recognized.

¹⁴ Art. 6 *ter* of the Paris Convention of 20 March 1883 on the Protection of Industrial Property, amended on this point in particular by the Paris Convention of 6 November 1925.

principles.¹⁵ The prohibition concerns each element individually, as indicated by the conjunction “or”, and therefore refers to any customary sign used by the States concerned.

1571 In conclusion, it is appropriate to emphasize the fact that all matters relating to neutrality are of great importance to the Red Cross. Apart from the cases mentioned above, respect for the rules of neutrality is fundamental for carrying out the mandate of a Protecting Power. This includes respect for this paragraph. Although some have condemned the concept of neutrality in our times, this is because they have done so from a different point of view, the point of view of the threat to humanity of contemporary developments.¹⁶ However, in the field of law, particularly the field of law applicable in the case of armed conflict, the concept of neutrality retains its importance. By sheltering a neutral State from military operations, this concept makes it possible to carry out humanitarian activities for the benefit of the States involved in the conflict.

Paragraph 2 – Emblems of nationality of the adverse Parties

1572 All armies in the traditional sense still possess today their own distinctive national flags, emblems, insignia and military uniforms. When the fate of a war was decided in a single day in a single battle, it was enough to wear shoulder bands of a particular colour to indicate to which side the combatants in the field belonged. Standards, banners and ensigns ensured the cohesion of an army by rallying the combatants around their leader. However, in order to start out on a campaign, an outfit was needed that could stand up to the rigours of war. Such a system came into general use with the introduction of large national armies which felt a great aversion towards combatants without uniform.¹⁷ Nevertheless, in exceptional situations simply wearing a crest, an armband or a shirt of a particular colour was acceptable. The devastating fire power of modern armies eventually led to the adoption of military uniforms in colours which merged with the background to such an extent that nowadays the colour of all uniforms is more or less similar. This could obviously not constitute a breach. As a result the insignia become even more important. The same applies to heavy artillery, tanks, aircraft etc. which are supplied in large numbers throughout the world by a few manufacturers. They are all the same model, and very often it is only the emblems of nationality which unequivocally identify to which side they belong. In case of

¹⁵ According to the Shorter Oxford Dictionary, a symbol is a thing regarded by general consent as naturally typifying or representing or recalling something.

¹⁶ Cf. the declaration of President Eisenhower of 6 June 1956 in which he maintained that neutrality is not an intermediary position between legal and illegal or between right and wrong, but simply a refusal to participate in military alliances (quoted by F. Berber, *op. cit.*, p. 215).

¹⁷ During the First and Second World Wars armed persons who were captured while they were not wearing uniform, were often executed on the spot as *francs-tireurs* as they were not considered to be combatants but outlaws (cf. A.M. de Zayas, “Combatants”, in Bernhardt (ed.), *op. cit.*, Instalment 3, 1982, p. 117).

a coalition, a common sign can be adopted by the allies.

1573 Traditionally the use of the emblems of nationality of the enemy in combat was strictly prohibited by the laws of war. Lieber's code leave no room for doubt in this respect.¹⁸ However, Article 23(f) of the Hague Regulations of 1907 merely prohibited their "improper use", which left ample room for controversy.¹⁹ The famous Skorzeny case²⁰ could only further stir up feelings about this issue. The prohibition on "improper use" is not a pure and simple prohibition; it is only a relative prohibition. It requires a definition of the term "improper". The first ICRC draft, presented to the Government Experts in 1972, retained in Article 33²¹ the rule as it had been worded in The Hague, adding that the use of national emblems of the enemy is always forbidden in combat. The experts themselves were divided on this question. Some preferred a pure and simple prohibition,²² believing that the Hague formula had given rise to excessive misuse. At most, they considered that an exception might be made in situations such as those dealt with in the Third Convention (prisoners of war) and in occupied territory. Others maintained that only the use with the intention of directly facilitating acts of combat should be prohibited.²³ There was a general opinion that there was undoubtedly a reciprocal military advantage in formulating a prohibition. Finally, the draft presented by the ICRC to the Diplomatic Conference proposed the prohibition of the use of the enemy flags, military insignia and uniforms in order to shield, favour or impede military operations (Article 37). The controversy arose again between those who wished to limit the prohibition to attacks,²⁴ and those who favoured a more restrictive concept.²⁵ The final wording is a compromise between these two positions in the sense that it responds to the concerns of the former as well as those of the latter.

1574 This text, which covers attacks, i.e., acts of violence committed against the adversary, whether these acts are offensive or defensive (Article 49 – *Basic rule and field of application*, paragraph 1), and all situations directly related to military operations, put an end to the long-standing uncertainty arising from both the imprecise text of The Hague, and from unclear customary law, as well as from

¹⁸ Arts. 63 and 65.

the Skorzeny case.²⁶ However, the fact remains that certain delegations at the Diplomatic Conference considered that any regulation which did not limit itself to attacks would go beyond existing law,²⁷ although this opinion was not shared by the Conference.

- 1575 The prohibition formulated in Article 39, “while engaging in attacks or in order to shield, favour, protect or impede military operations”, includes the preparatory stage to the attack (see the first sentence of Article 44 – *Combatants and prisoners of war*, paragraph 3). It means that every possible exception should always be examined on its merits, a point that legal experts had stressed throughout.

Permitted use and limitations

- 1576 It is appropriate to recall that, in accordance with the Vienna Convention on Diplomatic Relations, the head of a mission retains his privileges, i.e., the right to use the flag and emblem of the State he represents, up to the moment that he leaves the country “even in case of armed conflict” (Article 39, paragraph 2). Moreover, a break in diplomatic relations does not *ipso facto* imply a break in consular relations and therefore the same applies to consuls until there is a break. In general, prisoners of war wear their own uniforms (Third Convention, Article 27, paragraph 1) in the territory of the Detaining Power. Conversely, if prisoners of war do not have uniforms of the army to which they belong, or if these uniforms are not suitable for the climate, they can wear the uniforms of the enemy, though without insignia. A prisoner of war who escapes may be inclined to put on the uniform of the enemy in order to conceal, facilitate or protect his escape and hinder the search for him. If he is caught before successfully completing his escape, he will be liable to disciplinary punishment (Third Convention, Article 93, paragraph 2). If he is captured again after successfully escaping, he is not liable to any punishment (Third Convention, Article 91, paragraph 2). Under the provisions of the Hague Regulations, there is no doubt whatsoever that wearing an enemy uniform is not prohibited in this case.²⁸ A delicate question arises with

²⁶ This man, who was in command of a brigade, was ordered to penetrate the enemy zone in the Ardennes on 16 December 1944, disguised in enemy uniform. His troops were to occupy three particular military objectives. His instructions specified that in the event that the deception was discovered, combat would only take place in national, i.e. German, uniform, after removing the enemy uniform. The mission failed. The military tribunal which had to try the case found the accused not guilty. This decision contributed to support that part of the legal literature which tended to consider, perhaps by analogy with a rule of maritime warfare, that though the use of the enemy flag or uniform was certainly prohibited in combat, this was not necessarily the case during the preparatory stage preceding combat or during the phase following it. However, as the tribunal did not have the authority to lay down the law on this point, but only to pronounce on the guilt or innocence of the parties concerned, the problem has still not been solved in a decisive way (“Trial of Otto Skorzeny and Others”, 9 *Law Reports*, pp. 90-93).

²⁷ O.R. XIV, p. 273, CDDH/III/SR.29, para. 16.

²⁸ It would have been strange for the Conference to retain the possibility for a spy to wear enemy uniform (see *infra*, para. 3), but to withdraw this possibility for a prisoner of war when escaping, under the pretext that this would favour a military operation.

regard to military *matériel* captured on the battlefield. For example, it is understood that a tank captured from the enemy on the battlefield may immediately be used against the adversary on condition that the emblems of nationality are removed. However, up to now it has been assumed that such *matériel* could be evacuated to the rear even when equipped with the emblems of the nationality of the adverse Party, as long as fire is not opened from the tank until the emblem has been removed. One argument in favour of a clear-cut interpretation is that, quite apart from the letter of the provision under discussion, the Conference certainly wished to put an end to the excessive number of abuses which had resulted from the Hague Regulations. These included not only infiltration under cover of enemy uniform – as in the Skorzeny case mentioned above – a practice which has been adopted on a number of occasions by troops since the Second World War, but also the approach and opening of fire on an adversary at a short distance so that the adversary would in this way be completely unable to defend himself. It should be noted once more that occupation of a country results in complex situations in which emblems of nationality of the occupying forces and the occupied country can appear simultaneously without violating the present rule.

Uniform

- 1577 What constitutes a uniform, and how can emblems of nationality be distinguished from each other? The Conference in no way intended to define what constitutes a uniform. In temperate climates it is customary for a uniform to consist of regulation headdress, jacket and trousers, or equivalent clothing (flying suits, specialist overclothes etc.). However, this is not a rule, and “any customary uniform which clearly distinguished the member wearing it from a non-member should suffice”.²⁹ Thus a cap or an armlet etc. worn in a standard way is actually equivalent to a uniform.
- 1578 The uniform and other emblems of nationality are visible signs. Although certain kinds of battle dress of different countries are very similar nowadays, it is nevertheless possible to distinguish allied armed forces from enemy armed forces by means of characteristics of outfitting and other signs of nationality. Furthermore, this makes it possible to distinguish members of the armed forces from the civilian population. Thus it is necessary that the uniform, or whatever replaces it, of each Party to the conflict should be known to the adverse Party. The Hague Conference of 1907 considered requiring a notification to this effect between the adverse Parties so that the troops could be instructed on the subject, but this question was abandoned,³⁰ leaving each country responsible for acquiring information with regard to the uniforms of its potential enemies.³¹ This is a

²⁹ Report of the Rapporteur, *O.R.* XV, p. 388, CDDH/236/Rev.1, para. 35.

³⁰ A. Mechelynck, *op. cit.*, pp. 166-167.

³¹ *Ibid.*, p. 166. Sometimes this has resulted in difficulties, particularly with regard to the clothing worn by pilots or parachutists. See A. Durand, *History of the International Committee of the Red Cross, From Sarajevo to Hiroshima*, Geneva, 1984, pp. 484-485.

common task for diplomatic missions, particularly for military attachés, who are invited to be present at military exercises and parades in the country where they are posted. Should the need arise, one Party to the conflict may request its adverse Party publicly to inform it of the sign or signs which are used by way of uniform or emblem of nationality by its armed forces.³²

1579 A final point which has already been raised with regard to Article 38 (*Recognized emblems*) concerns the insignia and the uniform of the personnel of the United Nations, particularly the forces responsible for peacekeeping. A number of representatives did in fact demonstrate the necessity of ensuring better protection for the emblems of the United Nations in these circumstances. It was finally decided not to do so in this article,

“but to consider further how such protection could best be provided. The Rapporteur pointed out that, quite apart from this Protocol, the United Nations itself could try to improve that protection through agreements concluded with the States concerned with a particular United States force”.³³

Paragraph 3 – Proviso on the rules applicable to espionage and armed conflict at sea

1580 The wording of this paragraph varied considerably during the course of the discussions. The first text, adopted by Committee III, was much simpler than the final text, and did not include any mention of either Article 37 or of espionage.³⁴ However, the Rapporteur expressed some doubts based on the fact that the Committee had had no intention of modifying the law applicable with regard to espionage, particularly Article 31 of the Hague Regulations, by means of this article. In fact, according to this article, a spy who succeeds in escaping does not incur any punishment for being a spy, if he is captured later. However, if he used the uniform of the adversary, it was feared that without Article 39, paragraph 3, “he could still presumably be punished for violations of the laws of war, which, it might be asserted, would include this article”.³⁵ Similarly, when Committee III adopted Article 37 (*Prohibition of perfidy*), paragraph 1(d), the Rapporteur reported that the reference to neutral emblems was not intended to affect the law governing the use of neutral flags in war at sea. Therefore the Committee suggested that:

³² The 1923 Hague Rules provide that all military aircraft must bear an external mark indicating its nationality and military character (Art. 3). These marks should be fixed in such a way that they cannot be altered during the flight. They should be as large as is practicable and be visible from above, from below and from each side (Art. 7). Article 43 of the Second Convention provides that hospital ships shall make themselves known by hoisting their national flag.

³³ Report of the Rapporteur, *O.R.* XV, p. 271, CDDH/215/Rev.1, para. 39, and p. 371, CDDH/III/293.

³⁴ This draft read as follows: “Nothing in this article shall affect the existing generally recognized rules of international law applicable to the use of flags in the conduct of armed conflict at sea”. It has been adopted by consensus on 10 April 1975 (*ibid.*, p. 300) during the second session.

³⁵ *O.R.* XV, p. 271, CDDH/215/Rev.1, para. 40.

“the Drafting Committee [should] consider the question whether Article 37 [39], paragraph 3, might not be made applicable specifically to Article 35 [37], as well as to Article 37 [39], so that no doubt could arise on this question”.³⁶

The Drafting Committee took up the proposal of the group of technical advisers to add the words “or Article 37, paragraph 1(d)”.³⁷

1581 The final text, which was only adopted by Committee III at the fourth session, therefore removed espionage and the conduct of armed conflict at sea from the field of application of Article 37 (*Prohibition of perfidy*), paragraph 1(d).

1582 As regards the law on naval warfare, this does not necessarily mean that the rules are totally satisfactory, as was already pointed out at the first session of the Conference of Government Experts.³⁸ It does not mean either that the concept of perfidy is not applicable to naval warfare, as was shown above.³⁹ However, it is true that when a warship during pursuit displays the enemy flag or a neutral flag, such conduct at sea is accepted, or at least tolerated, whether the ship in question is pursuing an enemy ship or is trying to escape from it,⁴⁰ though it is not accepted that fire should be opened in these conditions. Moreover, since the First World War, warfare has been extended at sea to the economic field and to the merchant navy of the belligerent countries. It even affected neutral ships or ships flying a neutral flag when it was considered that these could serve the interests of a country at war. This led to complex rules⁴¹ which cannot be changed without a thorough study, and this is the import of the proviso formulated in this article.

1583 With regard to the question of espionage, the intention was to prevent a spy who has made use of the enemy’s uniform and has successfully escaped from being punished for this act if he were to be recaptured, while he would not be punished if he had escaped in civilian clothes.⁴² However, the problem does not concern only the spy himself,⁴³ but also and importantly the authority who has given him orders. The Rapporteur makes this very clear in his report:

³⁶ *Ibid.*, p. 382, CDDH/236/Rev.1, para. 18.

³⁷ CDDH/SEC/Inf. 1, vol. II, p. 252, and *O.R.* XV, p. 210, CDDH/III/SR.59, para. 5.

³⁸ *CE 1971, Report*, p. 103, para. 518.

³⁹ *Supra*, ad Art. 37, p. 439 and p. 435.

⁴⁰ F. Berber, *op. cit.*, p. 167, and D. Fleck, “Ruses of War...”, *op. cit.*, pp. 292-294.

⁴¹ On a change of flag before or during the conflict, see, for example, F. Berber, *op. cit.*, pp. 201-202.

⁴² However, it should be noted that the problem is exactly the same for a prisoner of war who escapes. If a prisoner is recaptured after a successful escape, he shall not be liable to any punishment in respect of his previous escape (Third Convention, Art. 91, para. 2). In the event of an unsuccessful escape, if there are no attendant charges for violence against persons, the wearing of civilian clothing shall give rise to disciplinary punishment only (*ibid.*, Art. 93, para. 2). The possibility of wearing enemy uniform is not mentioned by the Third Convention because this eventuality was covered by the Hague Regulations which did not define such use as improper use.

⁴³ On this point the Rapporteur states that: “The Committee recognized that it would be of questionable wisdom to make it even marginally safer for spies to disguise themselves as civilians than as military personnel” (*O.R.* XV, p. 271, CDDH/215/Rev.1, para. 40).

“As the text was adopted by the Committee at the second session, it was subject to the interpretation that it prohibited sending out a spy wearing the enemy’s uniform. That was not the Committee’s intention, but, if so interpreted, any officer who sent out such a spy, and any officer who knew of such action and failed to stop it, could be accused of violating Article 37 [39]. Since the sending of spies has never been considered an unlawful act, this would be a drastic change in the law which should be avoided. Certainly it would be nonsensical to make the sending of a spy wearing the enemy’s uniform unlawful, while the sending of a spy dressed in civilian clothes remained lawful.”⁴⁴

1584 The new text was finally adopted by consensus, but it did give rise to some objections.⁴⁵

Conclusion

- 1585 – The prohibition on using the emblems of nationality of neutral or other States not Parties to the conflict is absolute “in an armed conflict”. This means that they can be used as long as such use does not favour the interests of a Party to the conflict: e.g., use by diplomatic missions, Protecting Powers, medical services of neutral countries etc.
- 1586 – The prohibition of the use of the emblems of the adverse Party during an attack includes the preparatory stage preceding the attack. It does not apply to prisoners of war when they are escaping.
- 1587 – Article 31 of the Hague Regulations of 1907 is confirmed. A spy who successfully rejoins the army to which he belongs, if subsequently captured by the enemy, must be treated as a prisoner of war and incurs no responsibility for his previous acts of espionage, even if these acts were committed under cover of enemy uniform. The authority which sends him on his mission, including the order to wear enemy uniform, does not fall under Article 39, paragraph 2.

J. de P.

⁴⁴ *Ibid.*, p. 450, CDDH/III/407/Rev.1, para. 14. This exception obviously does not cover sabotage.

⁴⁵ One delegate expressed himself as follows: “According to the criminal law of most States, a criminal act included the orders given to the criminal. That being so, the change made in Article 37 [39] by the mention of espionage and the idea expressed in Article 40 [46], paragraph 1, did not make sense. Consequently, although his delegation had joined in the consensus on the article, it had expressed reservations which it wished to reiterate in the plenary meeting” (*O.R.* VI, p. 103, CDDH/SR.39, para. 65). Another delegation also opposed the modification relating to espionage and maintained its reservations (*ibid.*, para. 66).

Article 40 – Quarter

It is prohibited to order that there shall be no survivors, to threaten an adversary therewith or to conduct hostilities on this basis.

Commentary

General remarks

- 1588 Articles 37 (*Prohibition of perfidy*), 38 (*Recognized emblems*) and 39 (*Emblems of nationality*) appeal to the good faith of the combatant which is a fundamental condition for the existence of law. Articles 40 (*Quarter*), 41 (*Safeguard of an enemy hors de combat*), and 42 (*Occupants of aircraft*) appeal to his humanitarian

sentiment and represent that side of man where his instincts as a human being still prevail over those controlling him as a combatant, even in the midst of battle.

1589 Since the beginning of history the rule by which the conquered enemy may not be exterminated has become established in the course of time. Initially this rule was accepted with regard to peoples of the same race, the same religion, or with whom there were neighbourly relations¹ in times of peace, but eventually it was also imposed, though not without difficulty² in favour of those who were considered strangers. The laws of Manu in ancient India, to take just one example, included a general prohibition of refusing quarter, in other words, the refusal to spare lives.³ This elementary rule, like all humanitarian achievements, has developed in stages. For a long time the rule included enslaving those prisoners who were considered to be strangers, which at that time was a way of protecting them.

1590 Once slavery – and then ransoming – had been abolished, exceptions were made to the rule, even in modern times, particularly in siege warfare. A number of military leaders, who were perfectly acquainted with the safeguard of prisoners, had no hesitation, even in the seventeenth century, of informing the commander of a heavily besieged fortress that if he intended to put up an obstinate defence, far from recognizing his courage, they would immediately put him to death once the town had been taken.⁴ These threats were by no means empty threats. The draft presented by Russia at the Brussels Conference of 1874 reflected this state of affairs when it proposed the prohibition of threats to exterminate a garrison which obstinately defends a fortress.⁵ The French Revolution, which maintained that prisoners of war are under the safeguard of the nation and the protection of law, passed decrees in 1792 and 1794, refusing quarter to certain categories of enemy troops, though these were actually never applied and were quickly repealed.⁶ It is said that the last deliberate massacres of prisoners until the Second World War took place in 1795 and 1799.⁷

Scope of the rule

1591 Thus the spirit of the Red Cross has had an effect on humanity long before the letter of the rule. As regards the Geneva Conventions, which are concerned

¹ See M.W. Mouton, "History of the Laws and Customs of War up to the Middle Ages", *RICR – English Supplement*, October 1959, p. 184.

² According to Plato's *Republic*, those who were not Greek, i.e., the barbarians, were considered to be outside the law. Consequently the laws of war did not apply to them (*ibid.*, November 1959, p. 198).

³ *Ibid.*, October 1959, p. 190; also see F. Berber, *op. cit.*, p. 21.

⁴ Vattel does seem to accept that garrisons refusing to surrender will be punished after the attack (*The Law of Nations or Principles of the Law of Nature*, book III, chapter VIII, para. 143, quoted by A. Rosas, *The Legal Status of Prisoners of War: A Study in International Humanitarian Law Applicable in Armed Conflicts*, Helsinki, 1976, p. 52, note 52).

⁷ *Ibid.*, p. 65, note 132.

above all with the condition of combatants from the time that they are in the power of the adversary, a provision which is of paramount importance is Article 23(d) of the Hague Regulations of 1907, which prohibits the declaration “that no quarter will be given”⁸. Strictly speaking, the text refers to the intention, the threat or pressure with a view to provoking an immediate surrender, or to terrorising the adversary, but behind these words one can also discern the thought that, naturally, one cannot refuse to give quarter⁹. It is obvious that if there is no quarter, in other words, no survivors, there will be no wounded to be retrieved and cared for, no shipwrecked persons to be rescued, and no prisoners to respect and treat humanely.

- 1592** This problem does not perhaps appear in quite the same light in the Protocol. In fact, Article 41 (*Safeguard of an enemy hors de combat*) is equally concerned with persons who are already in the power of the adverse Party, as with those who are defenceless on the battlefield, or on the point of surrender, as will be shown in the discussion of that article. The principle that it is prohibited to refuse quarter is covered by that provision. However, it was the opinion of a large number of delegations at the Diplomatic Conference that the problems arising from modern warfare fully justify the reaffirmation of the principle laid down in Article 23(d) of the Hague Regulations.
- 1593** However, the first session of the Conference of Government Experts hoped for a more explicit term than “quarter” and which would be a better translation of the French term “quartier”. The final wording was adopted without discussion after a few drafting corrections relating to earlier proposals.¹⁰ At the request of one delegation¹¹ Committee III separated this provision from the article relating to the safeguard of the enemy *hors de combat* (Article 41), where it was included in the ICRC draft, and made it a separate article. This was one way of underlining the fundamental importance of the principle it contains,¹² while an alternative solution would have been putting it right at the beginning of Article 41 (*Safeguard of an enemy hors de combat*).¹³
- 1594** This article confirms in the first place the Hague rule, i.e., it would not be acceptable that “combatants who went on defending themselves to the limit of

⁸ The term “quarter”, which here means that the conquered enemy’s life is spared, or that he is treated favourably, is also used to designate the quartering or encampment of a body of troops; thus to give quarter means to provide accommodation, security and by implication, life. This derivation is considered to be the most likely. It was confirmed in plenary meeting that the rule of Article 40 is perfectly in accordance with the term “quarter” used in the title (*O.R.* VI, pp. 103-104, CDDH/SR.39, paras. 67-68).

⁹ See A. Mechelynck, *op. cit.*, p. 245.

¹⁰ The draft put forward in 1972 by the ICRC (Art. 34, para. 2) reads as follows: “It is forbidden to decide to leave no survivors and take no prisoners, to so threaten an enemy and to conduct the fight in accordance with such a decision”. An Australian amendment (CE/COM III/C 46) substituted “to order” for “to decide”. (*CE 1972, Report*, vol. II, p. 59). The draft presented to the Diplomatic Conference reads: “It is forbidden to order that there shall be no survivors, to threaten an adversary therewith, and to conduct hostilities on such basis.” (Art. 38, paragraph 3).

¹¹ *O.R.* III, p. 169, CDDH/III/241.

¹² *O.R.* XIV, p. 277, CDDH/III/SR.29, para. 38; p. 280, para. 57 and p. 282, para. 64.

¹³ For the various views expressed, see *ibid.*, pp. 283-285, and *O.R.* XV, p. 427, CDDH/III/338; for the decision, see *ibid.*, p. 86, CDDH/III/SR. 47, para. 6.

their strength and finally surrendered and laid down their arms, should be exterminated".¹⁴ It also prohibits the use of a threat to that effect to accelerate surrender. The demand of unconditional capitulation, which one Party to the conflict may make of the adversary, should never be a pretext for a refusal to give quarter, whether the demand is met or not. This even applies in the event that the *jus ad bellum*, the right to participate directly in hostilities, is contested. In other words, it is always prohibited to declare that the adversary is outside the law, or to treat him as such.

- 1595 Unfortunately this rule has not always been respected in our time, and though it is true that great humanitarian ideas have progressed in stages throughout history, it is equally true that at times they have regressed.¹⁵ However, Article 40 is emphatic, and it is timely: any order of "liquidation" is prohibited, whether it concerns commandos, political or any other kind of commissars, irregular troops or so-called irregular troops, saboteurs, parachutists, mercenaries or persons considered to be mercenaries, or other cases. It is not only the order to put them to death that is prohibited, but also the threat and the execution, with or without orders.
- 1596 What attitude should be taken towards troops who do not respect this rule and do not give quarter? Traditionally it was accepted that only refusal to give quarter, and no other violation of the law applicable in armed conflict, could justify a refusal to give quarter by way of reprisal.¹⁶
- 1597 According to the Protocol the only reprisal measures which are not prohibited are precisely those which are taken on the battlefield. Reprisals can therefore only be directed at combatants and do not detract from the duty to retrieve the wounded and give them appropriate care.¹⁷ If an act of reprisal has been conducted by a unit which is unable to fulfil this obligation, for example, by the airforce, the duty to retrieve the wounded passes on to any other troops of the same Party to the conflict which are able to do so. To maintain that these troops are not involved, on the pretext that they are only bound to conform to the laws and customs of war in their "own" operations,¹⁸ would be an inadmissible argument in these circumstances and in any others. As regards the problem of reprisals in general, we refer to the introduction to Section II (*Repression of breaches of the Conventions and of this Protocol*) of Part V.
- 1598 Article 40 was adopted by consensus, with some regarding it as a rule of "great value from the humanitarian point of view",¹⁹ while others saw it as a provision concerned less with the safeguard of combatants who were *hors de combat*, which is actually the object of Article 41 (*Safeguard of an enemy hors de combat*) than

¹⁴ O.R. XIV, p. 277, CDDH/III/SR.29, para. 38.

¹⁵ E.g., see on the Second World War, "The Führerbefehl of 18th October 1942" in 1 *Law Reports*, pp. 33-34, and the order "Barbarossa", 12 *Law Reports*, pp. 29 ff., as well as "The Commissar Order" and "The Commando Order", *ibid.*, pp. 23 and 34 ("The High Command Trial").

¹⁶ On this particular point this concerns therefore reprisals in kind; see "Trial of Generaloberst Nikolaus von Falkenhorst", in 11 *Law Reports*, pp. 29-30.

¹⁷ This rule had already been stated by Lieber: "Troops that give no quarter have no right to kill enemies already disabled on the ground, or prisoners captured by other troops" (*op. cit.*, Art. 61).

¹⁸ Article 1, sub-paragraph 4, of the 1907 Hague Regulations.

¹⁹ O.R. XIV, p. 284, CDDH/III/SR.29, para. 71.

with the conduct of military operations,²⁰ though this does not detract from its humanitarian importance in any way. Independently of the points raised thus far, there is no doubt that in our age of extraordinary technical achievements with a proliferation of the most lethal weapons throughout the world, this article also raises a problem with regard to weapons, both conventional and others. It is not by any means the only article in the Protocol to raise this question, either in Part II, Part III or Part IV, but the problem is particularly relevant in Article 40. It is one of the articles referred to by a delegation at the time that Article 35 (*Basic rules*)²¹ was adopted, which “went beyond the strict confines of humanitarian law and in fact regulated the law of war”.²² This statement is unreservedly true in the context of conventional operations. Article 40 does not imply that the Parties to the conflict abandon the use of a particular weapon, but that they forgo using it in such a way that it would amount to a refusal to give quarter. In other words, the rule of proportionality also applies with regard to the combatants, up to a point. The deliberate and pointless extermination of the defending enemy constitutes disproportionate damage as compared with the concrete and direct advantage that the attacker has the right to achieve.²³ It is sufficient to render the adversary *hors de combat*. The prohibition of refusing quarter therefore complements the principle expressed in Article 35 (*Basic rules*), paragraph 2, which prohibits methods of warfare of a nature to cause superfluous injury or unnecessary suffering.

1599 As regards nuclear weapons, whether tactical or strategic, these form the object of a controversy which is examined elsewhere.²⁴ However, it would be wrong to infer from this controversy that the constraints imposed by Article 40 in favour of enemy combatants concerning the use of conventional weapons are only of marginal importance on the argument that, if a nuclear weapon were used, the situation of these combatants would in any event be much worse. The rule is the rule and nuclear weapons raise questions which should be examined in their own right in the context of the recognized rules.

Conclusion

1600 It is always prohibited to declare that the adversary is outside the law, and to treat him as such on the battlefield.

J. de P.

²¹ *Supra*, ad Art. 35, para. 1, note 38, p. 398.

²² O.R. VI, p. 101, CDDH/SR.39, para. 55.

²³ This principle of reasonable proportionality between the destruction brought about by an act of hostility and its military result is, according to Max Huber, accepted in international law for the interpretation of the laws of war. This applies especially to the balance between damage caused and the consequent reprisals (M. Huber, “Quelques considérations...”, *op. cit.*, p. 423).

²⁴ See *infra*, p. 589, introduction to Section I of Part IV.

Protocol I

Article 41 – Safeguard of an enemy *hors de combat*

1. A person who is recognized or who, in the circumstances, should be recognized to be *hors de combat* shall not be made the object of attack.
2. A person is *hors de combat* if:
 - (a) he is in the power of an adverse Party;
 - (b) he clearly expresses an intention to surrender; or
 - (c) he has been rendered unconscious or is otherwise incapacitated by wounds or sickness, and therefore is incapable of defending himself; provided that in any of these cases he abstains from any hostile act and does not attempt to escape.
3. When persons entitled to protection as prisoners of war have fallen into the power of an adverse Party under unusual conditions of combat which prevent their evacuation as provided for in Part III, Section I, of the Third Convention, they shall be released and all feasible precautions shall be taken to ensure their safety.

Commentary

General remarks

1601 The reason that the Red Cross has been able for more than a century to pursue its course through all obstacles, is that it is solely concerned with the suffering of man, alone and disarmed. This is its secret strength. Similarly, one might argue that the whole secret of the law of war lies in the respect for a disarmed man. It would be useless to deny that in the heat of action and under the pressure of events, this rule is not always easy to follow. There are many examples in history in which the conqueror was unable to control his force or his victory. However, mankind should hold onto the light revealed by examples in which the opposite was the case, and these examples too are as old as time. Unable to eliminate the scourge of war, one endeavours to master it and mitigate its effects. The safeguard of the enemy *hors de combat* on the battlefield is the logical and natural complement to the preceding provision which prohibits the refusal to give quarter. It is a rule of application which follows from this provision and, like it, is derived from the principles laid down in Article 35 (*Basic rules*). In practice it is one of the most important rules of the Protocol. It is the object of Article 23 (c) of the Hague Regulations of 1907, which forbids the killing or wounding of an enemy who, having laid down his arms, or having no longer means of defence, has surrendered at discretion.¹ This rule is implicit in the Third Convention,

¹ The first version presented at the Brussels Conference of 1874 contained the words “à merci”, which in English would be “at the mercy” or “at the discretion” of somebody: “L’homme qui porte les armes [...] pour éviter la mort [...] demande pardon à celui qui va le frapper, il lui dit: faites-moi grâce de la vie, je me rends à vous, je me constitue votre prisonnier. Son adversaire s’arrête, l’homme est sauvé. Cet homme se rend donc réellement à merci dans le sens littéral du mot; mais ce mot n’implique en soi aucune contradiction, puisqu’il est entendu qu’on ne peut pas refuser de faire quartier. Ainsi, dans le moment où cet homme est en présence de la mort, il dit: donnez-moi la vie. Voilà l’idée que la clause veut exprimer. Mais les opérations se poursuivent; une charge a lieu; on ne peut pas garder étroitement les prisonniers. Il y en a qui, ayant mis bas les armes, les reprennent et retournent pour combattre ceux qui les ont désarmés. C’est pour punir cette sorte de trahison qu’on s’est servi du mot ‘à merci’: il est rendu en allemand par le terme ‘auf Gnade oder Ungnade.’” (“A man who bears arms and wants to avoid death begs the pardon of the person who is going to harm him; he says: ‘Grant me my life. I surrender to you. I make myself your prisoner’. The adversary stops and the man is saved. Thus this man actually throws himself on the mercy of the adversary in the literal sense of the word; but the word does not in itself imply any contradiction, since it is understood that one cannot refuse to give quarter. Thus, at the moment that the man is in the presence of death, he says: ‘Spare my life’. This is the idea that this sentence expresses. However, military operations continue; a charge takes place; it is not possible to guard the prisoners too closely. In some cases combatants who have laid down arms will take them up again and resume combat against those who disarmed them. It is in order to punish this sort of treachery that the term ‘à merci’ was introduced. It is translated in German by the term ‘auf Gnade oder Ungnade.’” (translated by the ICRC) (Declaration of General de Voigts-Rhetz, *cf.* A. Mechelynck, *op. cit.*, pp. 245-246). “La Commission décide que le mot ‘à merci’ sera remplacé par celui de ‘à discrétion’ qui rend la même pensée et est plus en harmonie avec le langage moderne” (“The Committee decided that the term ‘à merci’ will be replaced by the term ‘à discrétion’, which expresses the same idea and is more appropriate for modern [French]” (translated by the ICRC), *ibid.*, p. 246).

which provides in particular that persons protected by this Convention will be treated humanely when they “have fallen into the power of the enemy” (Article 4). From the beginning of the preparatory deliberations, some considered that the connection between these two provisions of the Hague Regulations and the Geneva Convention was not sufficiently close, and that there was a need to define the conditions of surrender.² In the draft presented by the ICRC to the second session of the Conference of Government Experts, the ICRC made an attempt to meet this need by providing for two articles,³ one devoted to the safeguard of the enemy *hors de combat* – and this provision in particular took up the above-mentioned article of the Hague Regulations – the other to the conditions of capture and surrender. Following the observations made by the experts,⁴ these texts were rewritten and condensed into a single article in the draft presented by the ICRC to the Diplomatic Conference.⁵

1602 Despite these preparatory efforts, a number of difficulties arose with regard to the wording of the article.⁶ The essential problem concerned how to create a concrete link between the moment when an enemy soldier is no longer a combatant because he is *hors de combat*, and the moment when he becomes a prisoner of war because he has “fallen into the power” of his adversary. This precise moment is not always easy to determine exactly. According to the text of 1929 (Article 1), the Convention only applied to persons “captured” by the enemy, which might have led to the belief that they first should have been taken into custody in order to be protected. The expression adopted in 1949, “fallen into the power”, seems to have a wider scope, but it remains subject to interpretation as regards the precise moment that this event takes place. The central question was to avoid any gap in this protection, whatever interpretation was followed. This question was finally resolved by an overlapping clause: Article 41 prohibits the attack on an enemy *hors de combat* from the moment that he is rendered *hors de combat* and with no time-limit, i.e., the provision even protects the prisoner of war whose security is dealt with in the Third Convention. In this way the enemy *hors de combat* is protected at whatever moment he is considered to have “fallen into the power” of his adversary.

⁴ See CE 1972, Report, Vol. II, p. 56, CE/COM III/C 31; p. 62, III/C 61, and p. 63, III/C 65.

⁵ Art. 38: “1. It is forbidden to kill, injure, ill-treat or torture an enemy *hors de combat*. An enemy *hors de combat* is one who, having laid down his arms, no longer has any means of defence or has surrendered. These conditions are considered to have been fulfilled, in particular, in the case of an adversary who: (a) is unable to express himself, or (b) has surrendered or has clearly expressed an intention to surrender, (c) and abstains from any hostile act and does not attempt to escape.

2. Any Party to the conflict is free to send back to the adverse Party those combatants it does not wish to hold as prisoners, after ensuring that they are in a fit state to make the journey without any danger to their safety.”

Paragraph 3 was about giving quarter which is now dealt with in Article 40.

⁶ A first draft proposal was presented by some delegations (O.R. III, p. 170, CDDH/III/242), but it was largely rewritten by the Working Group of Committee III.

- 1603 Article 41 thus purposefully overlaps the Third Geneva Convention. It is a perfect illustration of the interrelation between Hague law and Geneva law. Within the area allocated to it, it endeavours to forge an interlocking and comprehensive system.
- 1604 Paragraph 1 provides the basic rule, while paragraph 2 defines the conditions for being *hors de combat*. Paragraph 3 is concerned with persons released on the battlefield.

Paragraph 1 – The principle of safeguard

- 1605 It is a fundamental principle of the law of war that those who do not participate in the hostilities shall not be attacked. In this respect harmless civilians and soldiers *hors de combat* are *a priori* on the same footing. Civilians should not be made the object of attack, as stated in Article 51 (*Protection of the civilian population*), paragraph 2; no person *hors de combat* should be made the object of an attack, as stated in this paragraph (the English version uses virtually the same wording in both cases: “not be [made] the object of attack”). At first sight the prohibition seems to be stricter in Article 23 (c) of the Hague Regulations, which refers to killing or wounding an enemy, almost the same expression as adopted in Article 37 (*Prohibition of perfidy*). The report explains this by indicating that:

“this change was designed to make clear that what was forbidden was the deliberate attack against persons *hors de combat*, not merely killing or injuring them as the incidental consequence of attacks not aimed at them *per se*”.⁷

This argument is all the more convincing because even civilians are not totally sheltered from military operations in modern warfare, even in the best conditions. Article 57 (*Precautions in attack*), paragraph 2, recognizes this fact explicitly in admitting to the possible incidental loss of civilian life, and only prohibits that which would be excessive in relation to the concrete and direct military advantage anticipated. Accidents of this nature are also to be expected on the battlefield itself, and the combatants are not necessarily responsible for them. However, it is specifically prohibited to deliberately make persons *hors de combat* a target.

- 1606 In the meaning of the Protocol, the expression “attacks” refers to acts of violence against the adversary, whether these are in offence or defence (Article 49 – *Definition of attacks and scope of application* – paragraph 1). In fact, it refers to the use of arms with the intent of deliberately killing or wounding the enemy. Perhaps it is because a person *hors de combat* can no longer be considered as an enemy that the Conference has also abandoned here the terminology of Article 23 (c) of the Hague Regulations in favour of the word “person”, suggested during the second session of the Conference of Government Experts.⁸ The terminology used in Article 41, as in Article 42 (*Occupants of aircraft*), which deals with

⁷ O.R. XV, p. 384, CDDH/236/Rev.1, para. 23.

⁸ CE 1972, Report, Vol. II, p. 56, CE/COM III/C 29.

persons parachuting from an aircraft in distress, is thus the same as in Part II, which refers to “persons in the power of the adverse Party” (Article 11 – *Protection of persons*) as well as to wounded and sick “persons” (Article 8 – *Terminology*, sub-paragraph (a)), and it is understood that this refers to both civilians and the military. Whatever the reason for this modification, there is no possible ambiguity in Article 41, paragraph 1. The rule protects both regular combatants and those combatants who are considered to be irregular, both those whose status seems unclear and ordinary civilians. There are no exceptions and respect for the rule is also imposed on the civilian population⁹, who should, like the combatants, respect persons *hors de combat*.

1607 Finally, this protection also extends, if necessary, beyond the period of combat, and even after the general close of military operations.¹⁰

1608 The red cross emblem was created to guarantee the safeguard of persons *hors de combat* and installations and units sheltering or transporting them, and of those who are retrieving them and caring for them.¹¹ It is not enough to decree that persons *hors de combat* shall not be made the object of attack. It is also necessary for the adversary to know who this applies to. In the confusion of the battlefield it is not always easy to determine these matters. When the red cross or the red crescent emblem is used, this problem of identification should not present itself. However, the emblem does not necessarily appear in the front line, except perhaps at the moment of rescue operations, and it is actually in the front line, i.e., in the firing line, that combatants fall or reveal their intention of surrendering.¹² Accidents cannot always be avoided. It was to make clear

“that the prohibition extended only to attacks directed against persons who were, in fact, recognized to be *hors de combat* and those who, under the circumstances, should have been recognized by a reasonable man as *hors de combat*”,¹³

that the paragraph was worded as it is.¹⁴ The expression “in the circumstances” should not give rise to difficulties: it refers to the circumstances of the case.

⁹ *O.R. XV*, p. 384, CDDH/236/Rev.1, para. 25; for the discussion on this point, see *ad Art. 42, infra*, p. 498.

¹⁰ See Art. 3, sub-para. (b).

¹¹ This was not a new idea. Lieber’s Instructions, adopted in 1863, i.e., the same year that the Red Cross was created, provide in Art. 115: “It is customary to designate by certain flags (usually yellow) the hospitals in places which are shelled, so that the besieging enemy may avoid firing on them. The same has been done in battles, when hospitals are situated within the field of the engagement.” Para. 2 of Art. 116 continued: “An honorable belligerent allows himself to be guided by flags or signals of protection as much as the contingencies and the necessities of the fight will permit.”

¹² For the use of the white flag, see *supra, ad Art. 38*, p. 457 and *infra, ad para. 2*.

¹³ *O.R. XV*, p. 384, CDDH/236/Rev.1, para. 23.

¹⁴ Various formulae have been suggested in this respect during the course of the debates, such as “it is prohibited to deliberately make [...] the object of attack [...]”, or “to make any person the object of attack in the knowledge that [...] or if it should have been known that [...]” (this proposition was adopted with respect to Art. 85, para. 3(e)), or “any person who is found or recognized to be *hors de combat*”, and finally “to kill or wound intentionally [...]”. Some feared that by referring too openly to the concept of intent, this would introduce an element of criminal law, while others considered that this might open the way to a pretext for failing to respect the rule.

1609 Article 85 (*Repression of breaches of this Protocol*), paragraph 3 (e), defines as a grave breach the fact of “making a person the object of attack in the knowledge that he is *hors de combat*” when this attack causes “death or serious injury to body or health”, and when it is intentional. There is no leeway for the argument of military necessity to justify a derogation.¹⁵

Paragraph 2 – Conditions of rendering a person *hors de combat*

1610 In accordance with this paragraph, a person is considered to be rendered *hors de combat* either if he is “in the power” of an adverse Party, or if he wishes to surrender, or if he is incapacitated. This status continues as long as the person does not commit any act of hostility and does not try to escape.

1. Sub-paragraph (a) – Being in the power of an adverse Party

1611 Article 4 of the Third Convention and Article 44 of the Protocol (*Combatants and prisoners of war*) state that prisoners of war are those members of the armed forces who have “fallen into the power” of the enemy. At first sight it might seem that all persons referred to under either Article 4 of the Third Convention or the categories listed in Article 43 (*Armed forces*) of the Protocol who are in the power of the adversary, are therefore protected and that the inclusion of the present sub-paragraph (a) in Article 41, paragraph 2, is redundant. However, this is not the case.

1612 Although the distinction may seem subtle, there could be a significant difference between “being” in the power and having “fallen” into the power. Some consider that having fallen into the power means having fallen into enemy hands, i.e., having been apprehended. This is virtually never the case when the attack is conducted by the airforce, which can certainly have enemy troops in its power without being able, or wishing, to take them into custody or accept a surrender (for example, in the case of an attack by helicopters). In other cases land forces might have the adversary at their mercy by means of overwhelmingly superior firing power to the point where they can force the adversary to cease combat. A formal surrender is not always realistically possible, as the rules of some armies purely and simply prohibit any form of surrender, even when all means of defence have been exhausted. A defenceless adversary is *hors de combat* whether or not he has laid down arms. Some delegations considered that this situation was already covered by the Third Geneva Convention. If so, those concerned are protected both as prisoners of war and by the present provision. In this sense there is an overlap. On the other hand, others considered that the Third Convention only applies from the moment of the actual capture of the

¹⁵ Cf. “Trial of Gunther Thiele and Georg Steinert”, 3 *Law Reports*, pp. 56-59.

combatant, and that therefore the present provision constitutes the only safeguard in the interim.¹⁶

- 1613** From the moment that combatants have fallen “into the hands” of the adversary, the applicability of the Third Convention can no longer be contested. They are prisoners of war and should never be maltreated, but should always be treated humanely. If they make an attempt to escape or commit any hostile act, the use of arms against them is once more permitted within the conditions prescribed in the Third Convention.¹⁷ The same applies *a fortiori* for adversaries who benefit only from the safeguard of Article 41 without being recognized as prisoners of war. In fact, the proviso at the end of the present paragraph specifically provides it.
- 1614** Not all members of the armed forces are combatants. Medical and religious personnel (Article 43 – *Armed forces*, paragraph 2) and the military personnel assigned to civil defence (Article 67 – *Members of the armed forces and military units assigned to civil defence organizations*, paragraph 1(e)), do not have the right to participate directly in hostilities. Thus, when they fall into the power of the adverse Party, i.e., when the latter is able to impose its will upon them, it is without combat, and without being rendered *hors de combat*. They therefore automatically fall under the present safeguard, independently of the protection to which they are entitled according to other provisions of the Conventions and the Protocol.¹⁸ The same applies to any unarmed soldier, whether he is surprised in his sleep by the adversary, on leave or in any other similar situation. Obviously the safeguard only applies as long as the person concerned abstains from any hostile act and does not attempt to escape. As regards those persons who accompany the armed forces without actually being members thereof (Third Convention, Article 4A(4)), they are not permitted to participate directly in hostilities. Therefore they too, automatically, fall under this safeguard.
- 1615** The situation is not quite as clear in air warfare, as an aircraft is not considered to be in distress for the sole reason that its means of combat have been exhausted.¹⁹ On the other hand, from the moment that the occupants parachute from the aircraft to save their lives, Article 42 (*Occupants of aircraft*) applies.
- 1616** A vexed question is whether, and in what conditions, fire may be opened against a civilian aircraft during times of armed conflict, irrespective of whether the aircraft belongs to a neutral country or to the adverse Power. In this respect we refer first of all in this regard to the Chicago Convention of 7 December 1944

¹⁶ For the discussion, see *O.R.* XIV, pp. 276-285, CDDH/III/SR.29, and *O.R.* XV, p. 384, CDDH/236/Rev.1, para. 22.

¹⁷ Art. 42: “The use of weapons against prisoners of war, especially against those who are escaping or attempting to escape, shall constitute an extreme measure, which shall always be preceded by warnings appropriate to the circumstances”. For the conditions that must be met if an escape is to be considered successful, see Third Convention, Art. 91.

¹⁸ First Convention, Art. 24; Second Convention, Arts. 36 and 37; Protocol, Art. 67.

¹⁹ For confirmation that Art. 41 (as well as Arts. 37, 38 and 39) of the Protocol applies to tactical or strategic airforce operations, see F.A. von der Heydte, “Air Warfare”, in Bernhardt (ed.), *op. cit.*, Instalment 3, 1982, p. 6.

which prohibits shooting down civilian aircraft in all circumstances.²⁰ However, in times of armed conflict, the problem is that aircraft which appear to be civilian may be equipped for spy missions and may even be heavily armed, thus presenting a formidable danger.²¹ Legal opinion asserts, therefore, that such an aircraft may be attacked, but only;

- a) if it refuses to obey orders or signals given to it, or
- b) if it enters a zone with regard to which notification has been given that it is a zone of military activity in which any aircraft enter at their own risk and peril, and where fire may be opened without warning.²²

Moreover, all reasonable efforts should always be made to safeguard the interests of the passengers. It is only as a last resort that recourse should be taken to attack.²³

1617 The shipwrecked, wounded and sick at sea belonging to the categories listed in Article 13 of the Second Geneva Convention, are covered by this Convention, as well as by the Convention Relative to the Treatment of Prisoners of War. However, the wording of the text of Article 41, paragraph 2, is sufficiently broad to cover any person rendered “*hors de combat*” at sea, whether or not they belong to the categories referred to in the Second Convention, i.e., also the merchant navy when it is not engaged in hostilities. Obviously the same applies for armed ships of the merchant navy from the moment that they renounce the use of their arms. This safeguard concerns only persons, but it does concern all persons in the power of an adverse Party. The wording does not seem to leave any room for doubt in this respect. Otherwise, as indicated before in Article 39 (*Emblems of nationality*), the Protocol does not aim to regulate warfare at sea, which remains subject to the customary rules.²⁴

2. Sub-paragraph (b) – *The clearly expressed intention to surrender*

1618 In land warfare, surrender is not bound by strict formalities. In general, a soldier who wishes to indicate that he is no longer capable of engaging in combat, or that he intends to cease combat, lays down his arms and raises his hands.

²⁰ The Assembly of the ICAO, the International Civil Aviation Organization, met in Montreal from 24 April to 10 May 1984 (25th session) and adopted there a proposal, dated 10 May 1984, to amend the International Civil Aviation Convention. Article 3 *bis* (a) of that Convention, as amended, now provides that “The contracting States recognize that every State must refrain from resorting to the use of weapons against civilian aircraft in flight and that, in case of interception, the lives of persons on board and the safety of aircraft must not be endangered. This provision shall not be interpreted as modifying in any way the rights and obligations of States set forth in the Charter of the United Nations.”

²¹ On this subject, *cf.* commentary Art. 28, para. 2, *supra*, p. 302.

²² J. M. Spaight, *op. cit.*, p. 402. See also, by way of background, “The Hague Rules of Air Warfare”, 1923, Arts. 30-35, in J.M. Spaight, *op. cit.*, pp. 502-503, and M.C.C. Bristol, “CRAF: Hawks in Doves Clothing”, 20 *The Air Force Law Review*, No. 1, 1978, pp. 48-70.

²³ *Cf.* by analogy, Art. 31, para. 2. For the conditions of flight of medical aircraft, see Arts. 24-31.

²⁴ See, for example, “Trial of Helmuth von Ruchteschell”, 9 *Law Reports*, pp. 82 ff.

Another way is to cease fire, wave a white flag and emerge from a shelter with hands raised, whether the soldiers concerned are the crew of a tank, the garrison of a fort, or camouflaged combatants in the field. If he is surprised, a combatant can raise his arms to indicate that he is surrendering, even though he may still be carrying weapons.

1619 In these various situations, surrender is unconditional, which means that the only right which those who are surrendering can claim is to be treated as prisoners of war. If the intention to surrender is indicated in an absolutely clear manner, the adversary must cease fire immediately; it is prohibited to refuse unconditional surrender.²⁵ In the air, it is generally accepted that a crew wishing to indicate their intention to cease combat, should do so by waggling the wings while opening the cockpit (if this is possible).²⁶ At sea, fire should cease and the flag should be lowered.²⁷ These measures can be supplemented by radio signals transmitted on international frequencies for call signs. No argument of military necessity may be invoked to refuse an unconditional surrender.

3. *Sub-paragraph (c) – Having been rendered unconscious, or otherwise being incapacitated by wounds or sickness, and therefore being incapable of defending oneself*

1620 The wounded and sick in the sense of Article 8 (*Terminology*), sub-paragraph (a), of the Protocol, are those persons who need medical care as a result of a trauma, disease or other physical or mental disorder or disability, and who refrain from any act of hostility. Shipwrecked persons in the sense of the same article (sub-paragraph (b)) are those persons who find themselves in peril at sea or in other waters, as a result of misfortune affecting them or the vessel or aircraft carrying them, and who refrain from any act of hostility. Article 10 (*Protection and care*) adds that all the wounded, sick and shipwrecked, to whatever party they belong, shall be respected and protected. This means in particular that it is prohibited for the adversary to attack or harm them in any way. Thus there is perfect agreement on this point between the rules relating to the methods and means of warfare, on the one hand, and the basic philosophy of the founders of the Red Cross, on the other hand: the soldier who is rendered *hors de combat* by an injury or sickness is inviolable from that moment and shall be respected.²⁸ However, in contrast to sub-paragraphs (a) and (b) above, it is the wound or sickness, the unconscious or shipwrecked condition – in short, the fact of being struck down, of having given up – which in this case forms the basis of the

²⁵ See, for example, the French *Règlement de discipline générale dans les armées*, of 1 October 1966, Art. 34, para. 2.

²⁶ F. Berber, *op. cit.*, p. 168, and F.A. von der Heydte, *op. cit.*, p. 7. The intention to obey an order to land is indicated by lowering the landing gear.

²⁷ Some consider that it is also necessary to stop the engines, reply to the signals of the captor, abstain from handling weapons and raise the white flag (or put on lights at night) (see “Trial of Helmuth von Ruchteschell”, 9 *Law Reports*, p. 89).

²⁸ Whenever circumstances permit, an armistice or a suspension of fire shall be arranged, or local arrangements made, to permit the removal, exchange and transport of the wounded left on the battlefield (First Convention, Art. 15, para. 2).

obligation. In fact it is not only because a person of the adverse Party is wounded, or partially handicapped, that this obligation arises, but because he is incapable of defending himself. In this respect the text goes back to the wording of Article 23(c) of the Hague Regulations, which prohibits especially the killing or wounding of an enemy who no longer has the means of defence.²⁹ On the other hand, there is no obligation to abstain from attacking a wounded or sick person who is preparing to fire, or who is actually firing, regardless of the severity of his wounds or sickness. The prohibition of attacks applies exclusively to persons *hors de combat*. The dead must be similarly respected.³⁰

4. *Proviso regarding safeguard: in any of these cases abstaining from hostile acts and not attempting to escape*

1621 A man who is in the power of his adversary may be tempted to resume combat if the occasion arises.³¹ Another may be tempted to feign a surrender in order to gain an advantage, which constitutes an act of perfidy.³² Yet another, who has lost consciousness, may come to and show an intent to resume combat. It is self-evident that in these different situations, and in any other similar situations, the safeguard ceases. Any hostile act gives the adversary the right to take counter-measures until the perpetrator of the hostile act is recognized, or in the circumstances, should be recognized, to be *hors de combat* once again. Obviously the remarks made above with regard to Article 35 (*Basic Rules*), paragraph 2, concerning the prohibition of superfluous injury or unnecessary suffering, continues to apply in full. The retort should be proportional to the measure of danger. It should not amount to a refusal to give quarter. Whatever the situation, the criterion of having been rendered *hors de combat* suffices.

1622 When troops, after surrendering, destroy installations in their possession or their own military equipment, this can be considered to be a hostile act. The same applies in principle if soldiers *hors de combat* attempt to communicate with the Party to the conflict to which they belong, unless this concerns the wounded and sick who require assistance from this Party's medical service.³³

1623 An escape, or an attempt at escape, by a prisoner or any other person considered to be *hors de combat*, justifies the use of arms for the purpose of stopping him. However, once more, the use of force is only lawful to the extent that the circumstances require it. It is only permissible to kill a person who is escaping if there is no other way of preventing the escape in the immediate circumstances. It is prohibited to open fire as a preventive measure on persons who are *hors de combat* on the pretext that they are intending to escape, and that

²⁹ Lieber stated that: "Whoever intentionally inflicts additional wounds on an enemy already wholly disabled, or kills such an enemy, or who orders or encourages soldiers to do so, shall suffer death, if duly convicted, whether he belongs to the Army of the United States, or is an enemy captured after having committed his misdeed." (Instructions, Art. 71).

³⁰ See 15 *Law Reports*, p. 134, and First Convention, Arts. 15-17.

³¹ *Supra*, note 1; see also *Commentary III*, ad Art. 42, pp. 245-248.

³² *Supra*, ad Art. 37, para. 1 (a), p. 437.

³³ For the particular case of airmen in distress, see *infra*, ad Art. 42, p. 493.

this is known.³⁴ Furthermore, reference should be made to the corresponding provisions of the Third Convention (Articles 91-94).

1624 It is clear that it is sufficient for one of the two contingencies referred to here – a hostile act or an attempt to escape – to be committed, for the safeguard to cease. Moreover, these exceptions remain the same throughout the period of captivity.

Paragraph 3 – Release on the spot

1625 In his report the Rapporteur states: “Paragraph 3, dealing with the release of prisoners who could not be evacuated, proved quite difficult”.³⁵

“The phrase ‘unusual conditions of combat’ was intended to reflect the fact that that circumstance would be abnormal. What, in fact, most representatives referred to was the situation of the long distance patrol which is not equipped to detain and evacuate prisoners. The requirement that all ‘feasible precautions’ be taken to ensure the safety of released prisoners was intended to emphasize that the detaining Power, even in those extraordinary circumstances, was expected to take all measures that were practicable in the light of the combat situation.³⁶ In the case of a long distance patrol, it need not render itself ineffective by handing the bulk of its supplies over to the released prisoners, but it should do all that it reasonably can do in view of all the circumstances to ensure their safety.”³⁷

Committee III has adopted this paragraph of the report without comment.³⁸ Nevertheless, as a member of one of the delegations in Committee III subsequently remarked, there is another situation which inevitably springs to mind, namely the guerrilla.³⁹ Commando operations have certainly given rise to abuses in many circumstances, fully justifying the position adopted by the report, but they are not the only ones to pose problems,⁴⁰ and it is the formula relating

³⁴ 15 *Law Reports*, pp. 186-87.

³⁵ *O.R.* XV, p. 384, CDDH/236/Rev.1, para. 24.

³⁶ At the time of signing the Protocol on 12 December 1977, the United Kingdom made a declaration stating: “in relation to Articles 41, 57 and 58, that the word ‘feasible’ means that which is practicable or practically possible, taking into account all circumstances at the time including those relevant to the success of military operations”.

³⁷ *O.R.* XV, pp. 384, CDDH/236/Rev.1, para. 24.

³⁸ *Ibid.*, p. 129, CDDH/III/SR.52, para. 23.

³⁹ Ph. Bretton, “Le problème...”, *op. cit.*, p. 32.

⁴⁰ An idea of the situations envisaged by the Committee can be gained by reference to two amendments. The first text read as follows: “Where, for operational reasons, a commander in the field cannot hold prisoners under humane conditions, as required by the Third Convention, he is obliged, when releasing them, to take such precautions as may in the circumstances be reasonable to ensure their safety.” (*O.R.* III, p. 170, CDDH/III/242, para. 2). Another amendment read as follows: “A Party to a conflict shall issue instructions to forces under its control that when members of the adversary forces have been captured under conditions of combat which prevent such captives from being evacuated as provided for in Part III, Section I, of the 1949 Geneva Convention for the Protection of Prisoners of War, such captives shall be released and such precautions as may in the circumstances be reasonable, shall be taken to ensure their safety” (*ibid.*, p. 176, CDDH/III/243).

to the “unusual conditions of combat” which finally gained a consensus. The ICRC proposal, which was based by analogy on Article 2, paragraph 4, of the Geneva Convention of 1906, foresaw the possibility for the Parties to the conflict of sending the wounded and sick they did not wish to keep as prisoners, back to their own country after ensuring they were in a condition to be transported. The tenor of the ICRC draft therefore went further,⁴¹ but it was not adopted in this form.

1626 *Ratione personae*, the scope of paragraph 3 is more restricted than that of paragraphs 1 and 2. It does not cover all persons, but only those “persons entitled to protection as prisoners of war”. Read in a literal sense, the text applies equally to prisoners whose status is doubtful, as they are covered by the protection of the Third Convention pending clarification of their status by a competent tribunal (Third Convention, Article 5, paragraph 2, and Protocol, Article 45 – *Protection of persons who have taken part in hostilities*, paragraph 1). Since these prisoners cannot be evacuated in conditions of sufficient safety, there is little chance that they will ever be able to go before a “competent” tribunal.⁴² They must therefore be released.

1627 Thus there is actually an obligation here: “they shall be released” whenever the conditions of evacuation laid down in Articles 19 and 20 of the Third Convention cannot be met. Obviously this does not concern the wounded and sick who run a greater risk by being released than by remaining prisoner, because of their wounds or sickness (*cf.*, by analogy, Third Convention, Article 19, paragraph 2). This is where the notion of safety comes in. The release should be a humanitarian gesture, not an easy means of getting rid of prisoners considered to be an encumbrance. In fact, in some situations where the prisoner would have virtually no chance of survival, this would be equivalent to a refusal to give quarter. Conversely, this paragraph clearly indicates that, despite Articles 7 and 12 in particular,⁴³ the Third Convention should not be interpreted as preventing the release of prisoners, as this interpretation could result in a conduct of hostilities in which there would be no survivors.⁴⁴

1628 The text does not clarify at what level of authority decisions on release have to be taken. It might be the commanding officer in the field, or the Party to the conflict itself that gives the appropriate instructions to this effect.⁴⁵ The Conference clearly thought that this is a problem of internal organization on which the Party to the conflict concerned is competent to decide.⁴⁶

⁴¹ *Supra*, note 5.

⁴² However, on this argument, see *infra ad* Art. 45, para. 1, p. 551.

⁴³ Art. 7 refers to the non-renunciation of rights of prisoners of war, and Art. 12 provides that they are in the hands of the enemy Power, and not of the individuals or military units who have captured them.

⁴⁴ *O.R.* XIV, p. 281, CDDH/III/SR.29, para. 59.

⁴⁵ *Cf. supra*, note 40.

⁴⁶ This is similar, *mutatis mutandis*, to an article in the United States *Field Manual* which authorizes a commanding officer, when circumstances require it, to permit a unit which has fallen into his hands to return to its own lines, admittedly on parole, which is not the case in this article:

(continued on next page)

- 1629 – Judiciously applied, this text represents a triumph of humanity. Perhaps it is to the credit of some that they have occasionally set an example on this point.

Conclusion

- 1630 – The safeguard applies both to regular combatants and those deemed to be irregulars, both to those whose status is unclear and to ordinary civilians. It prohibits making any person who is recognized, or who should be recognized by a reasonable man, as being *hors de combat*, the object of attack. This applies from the moment that it is recognized that the person is *hors de combat*. A defenceless adversary is *hors de combat*, whether or not he has laid down arms.
- 1631 – Any subsequent hostile act entitles the adverse Party to take counter-measures, in proportion to the level of danger.
- 1632 – Release on the spot must be a humanitarian act, and should therefore be carried out in such a way as to guarantee the safety of the prisoner who is released.

J. de P.

“However, special circumstances, such as inability of the victor to guard, evacuate and maintain large numbers of prisoners of war or to occupy the area in which military forces are present, may justify the victorious commanders in allowing the defeated force to remain in its present positions, to withdraw, or to disperse after having been disarmed and having given their paroles, provided that the giving of paroles is not forbidden by the law of their own country and that they are willing to give their paroles.” (*US Field Manual 27-10*, para. 475 b)

It is also appropriate to recall that, according to Art. 47, para. 2, of the Third Convention: “If the combat zone draws closer to a camp, the prisoners of war in the said camp shall not be transferred unless their transfer can be carried out in adequate conditions of safety, or if they are exposed to greater risks by remaining on the spot than by being transferred.”

Protocol I

Article 42 – Occupants of aircraft

1. No person parachuting from an aircraft in distress shall be made the object of attack during his descent.
2. Upon reaching the ground in territory controlled by an adverse Party, a person who has parachuted from an aircraft in distress shall be given an opportunity to surrender before being made the object of attack, unless it is apparent that he is engaging in a hostile act.
3. Airborne troops are not protected by this Article.

Commentary

General remarks

- 1633** Military aviation really began to develop during the First World War. The novelty of this weapon, the spirit of adventure of its devotees, the prestige of its missions, and the sharing of risks created a sort of fraternity between the airmen of the two camps at that time, which was characterized by a spirit of camaraderie and by practices which are suggestive of chivalry. The adversary who had been brought down in flames was entitled, not to bullets, but to a salute as he went down, to wishes for his recovery if he were wounded, and flowers if he were dead.
- 1634** Such manifestations of a bygone age only stood up to the turmoil of the Second World War on rare occasions. On the contrary, all too often the adverse airforces confronted each other in merciless combat, even opening fire on an enemy in distress, parachuting down or shipwrecked, or action was taken to prevent the enemy's parachute from opening. Sometimes the attacker even rammed his adversary, which clearly left no possibility for anyone to survive.¹ Despite such excesses, the spirit of earlier times was not crushed in airmen at all times during the Second World War. There were cases where, notwithstanding the tragic evolution of the role of aviation after 1918, certain rules were observed with respect to the occupants of aircraft parachuting down to save their lives. There were even cases in which the victor actually used his own lifeboat craft to help the enemy who had been brought down over the sea.
- 1635** Part IV of the Protocol is essentially aimed at calling a halt to the devastation and indiscriminate effects wrought by air forces in modern warfare. The task assigned to air forces should be restricted to the destruction of military objectives, as is the case for land forces. Article 42 is meant to protect airmen who are *hors de combat*. In other words, it prohibits anyone from "hitting below the belt". However, Article 42 was the only provision in this Section not to have been adopted by consensus.
- 1636** The problem arose during the second session of the Conference of Government Experts. While a number of proposals were tabled to supplement the text presented by the ICRC² with the purpose of giving airmen in distress the possibility of surrendering when they had landed in enemy territory,³ one delegation suggested that the article should be entirely deleted.⁴ Under these conditions the ICRC endeavoured to present a more flexible text – though it was hardly less vulnerable⁵ – in the final draft submitted to the Conference. In fact,

¹ For further details, see particularly J.M. Spaight, *op. cit.*, pp. 118-119 and 158-168.

² Based on a proposal of a delegation, but considerably simplified, see *CE 1971, Report*, p. 105, CE/COM III/C 3 for the ICRC text, *CE 1972, Report*, Vol. II, p. 6, Art. 36.

³ See, for example, *CE 1972, Report*, Vol. II, p. 52, CE/COM III/C 10.

⁴ *Ibid.*, p. 59, CE/COM III/C 49.

⁵ *Article 39 – Aircraft occupants*

"1. The occupants of aircraft in distress shall never be attacked when they are obviously *hors de combat*, whether or not they have abandoned the aircraft in distress. An aircraft is not considered to be in distress solely on account of the fact that its means of combat are out of commission.

2. The use of misleading signals and messages of distress is forbidden."

this was also largely based on other proposals presented by experts. In addition, the ICRC considered that Article 42 should be joined to Article 41 (*Safeguard of an enemy hors de combat*). This point of view was shared by most of the delegations,⁶ but it was precisely with regard to this matter that difficulties seemed bound to arise. Many representatives considered that a person parachuting from an aircraft in distress and landing on territory controlled by the Party to which he belongs, or by an ally of this Party, could not be considered to be *hors de combat*. While some advocated a clear and strict rule to guarantee immunity to airmen in distress in all circumstances, and to guarantee them the possibility of surrendering on the ground in case they land on enemy territory, others refused immunity to pilot who in fact is escaping. The matter was settled in this sense, i.e., with this important exception, at the third session, with 28 votes for, 21 against and 21 abstentions,⁷ but the problem was taken up again at the fourth session with the opposite result, with 51 votes for, 12 against and 14 abstentions.⁸ The opponents did not admit defeat, and resumed the argument at the final plenary meetings. After a spirited intervention by the ICRC,⁹ the amendment was rejected, having gained only 23 votes to 47, while 26 delegations abstained.¹⁰ The article as a whole was finally adopted with 71 votes to 12, and 11 abstentions.¹¹

- 1637** This article is entirely new. The Hague Regulations of 1907, produced at a time when air warfare did not exist, was obviously not concerned with this problem. However, military manuals already contained prohibitions on firing on airmen in distress, in this way confirming its customary law character.¹² An analagous provision can be found in Article 20 of the Hague Rules on air warfare.¹³ There is absolutely no doubt that the majority considered that airmen in distress are comparable to the shipwrecked persons protected by the Second Convention.
- 1638** Paragraph 1 protects any person parachuting from an aircraft in distress during his descent. Paragraph 2 ensures the safety of this person on the ground, and paragraph 3 excludes airborne troops from the scope of this article.

⁸ *Ibid.*, p. 210, CDDH/III/SR.59, paras. 6-8, and p. 519, CDDH/III/391.

⁹ O.R. VI, pp. 106-107, CDDH/SR.39, paras. 88-90.

¹⁰ *Ibid.*, p. 110, para. 110.

¹¹ *Ibid.*, para. 113.

¹² For example, the French *Règlement de discipline générale dans les armées*, mentioned above, Art. 34, para. 2: “De plus il [...] est interdit: de tirer sur l'équipage et les passagers d'avions civils ou militaires sautant en parachute d'avions en détresse, sauf lorsqu'ils participent à une opération aéroportée”. (“Moreover, it is prohibited to fire at the crew and passengers of civilian or military aircraft when they are parachuting from an aircraft in distress except when they are participating in airborne operations.”) (translated by the ICRC).

¹³ Rules Concerning the Control of Wireless Telegraphy in Time of War and Air Rules of Aerial Warfare, proposed by a commission of jurists which met in The Hague on 11 December 1922 (see M. Deltenre, *op. cit.*, pp. 818-849). These rules were never formally adopted, but their significance as a reflection of *opinio juris* is recognized to some extent. Art. 20 provides: “In the event of an aircraft being disabled, the persons trying to escape by means of parachutes must not be attacked during their descent”. However, an airman who parachutes from the aircraft to save his life is not considered to have surrendered at discretion (see 1 *Law Reports*, “The Dreierwald Case”, pp. 85-86, and *infra*, note 36).

Paragraph 1 – Safeguard during descent

- 1639 The text appears to be unequivocal: any person parachuting from an aircraft in distress is protected during his descent.
- 1640 This rule covers both the civilian and the military occupants of an aircraft in distress, whether the aircraft itself is civilian or military.¹⁴ However, as some opposition to such an absolute rule has been apparent throughout the deliberations, as we saw above, it is appropriate to examine the arguments on both sides in more detail.
- 1641 The arguments of those who were opposed to an absolute rule are of two kinds. In the first place, they argued that an airman suspended from his parachute is perfectly capable of committing a hostile act during his descent, for example, by opening fire on persons on the ground, and consequently the text should be amended accordingly.¹⁵ Other delegates contested this view on the basis of their personal experience of parachuting,¹⁶ and the amendment did not gain a sufficient number of votes to be adopted at the plenary meeting.¹⁷ The second argument of the same delegates was that although an airman parachuting from an aircraft may be *hors de combat* during his descent, he is only *hors de combat* temporarily if he lands in friendly territory. Moreover, it is possible that he could try to escape during the descent itself by guiding the direction of the descent, though this also depends on the wind. Additionally, a person who lands in allied territory escapes capture, and therefore the conditions of Article 41 (*Safeguard of an enemy hors de combat*) are no longer fulfilled. To give airmen, who have control of tremendous firing power, this sort of advantage compared to other combatants, is out of proportion to the devastation which these airmen can cause nowadays. Such courtesy is not reconcilable with that owed the civilian population, and practice during the Second World War does not confirm any such rule.¹⁸ Moreover, it is not uncommon for airmen in distress, parachuting not into their own territory, but into enemy territory, to transmit distress signals during their descent intended to alert their own forces and lead to a rescue operation, with the aim of escape. It was stated that this clearly proves that these persons are not *hors de combat* during their descent, and certainly have no intention of surrendering. Consequently the conditions of paragraph 1 of Article 41 (*Safeguard of an enemy hors de combat*) are not fulfilled and the safeguard should not be granted.¹⁹
- 1642 The main speaker to reply to these objections was the representative of the ICRC. He considered that any decision to restrict the safeguard provided for in

¹⁴ As regards the conditions under which fire may be opened on a civilian aircraft, whether it is of neutral or enemy nationality, see *supra*, ad Art. 41, p. 485 and note 20.

¹⁵ *O.R.* III, p. 172, CDDH/413, and *O.R.* VI, p. 104, CDDH/SR.39, para. 71.

¹⁶ *O.R.* VI, p. 105, CDDH/SR.39, para. 77.

¹⁷ *Ibid.*, p. 106, para. 85.

¹⁸ *O.R.* VI, pp. 104-105, 108 and 110, CDDH/SR.39, paras. 72, 96 and 108. The proposed amendment had the following content: "unless it is apparent that he will land in territory controlled by the Party to which he belongs or by an ally of that Party" (*O.R.* III, p. 173. CDDH/414).

¹⁹ *O.R.* XIV, pp. 289-290, CDDH/III/SR.30, paras. 16-17.

paragraph 1 of Article 42 would introduce in the Protocol an element contrary to its purpose and spirit. The Geneva Conventions only contain provisions protecting victims of war, they do not give States rights against these victims. Since 1864, when States adopted the first Geneva Convention for the amelioration of the condition of wounded soldiers in armed forces in the field, they accepted that they would have to sacrifice some of their power for the benefit of human beings, for a compelling humanitarian need. The law in this respect should not be questioned again. On the contrary, it has been extended since then to other categories of victims of hostilities, including airmen in distress who are actually “shipwrecked in the air”, as it were.²⁰ Others argued that the elimination of a few pilots cannot be a decisive way of winning a war.²¹ Finally, the decision favoured by the minority could have a disastrous effect on pilots, who would either tend to avoid the risks necessarily involved in restricting their attack to the assigned military target, or would not bail out but undertake a desperate defence with the means still at their disposal, which would not be to the advantage of the adverse Party.²² A number of delegations explicitly approved the ICRC position, and the proposal of the minority was rejected, as shown above.²³

1643 The rule adopted, admittedly only by majority vote, is therefore clear and without reservations. However, its application can involve difficulties, for it is not always easy, in particular for combatants on the ground or at night, to distinguish between a parachutist in distress and a parachutist who is attacking, or even a spy,²⁴ or to realize that the crew concerned is descending from an aircraft in distress when this is flying at an altitude of 10,000 metres or more. However, these considerations should not constitute an obstacle to the application in good faith of the rule of this paragraph.

Paragraph 2 – Surrender on reaching the ground

1644 The airman who parachutes from an aircraft in distress is therefore temporarily *hors de combat*, just as if he had lost consciousness, until the moment that he lands on the ground, and as long as he is incapacitated.²⁵ Once on the ground, various situations may arise in the case where he lands in territory controlled by the adverse Party. The main problem, which forms the object of this paragraph, consists of giving the airman an opportunity to surrender before he becomes a legitimate object of attack. However, it is self-evident that the other provisions of the Conventions and the Protocol apply in the case where the person concerned

²⁰ *O.R.* VI, pp. 106-107, CDDH/SR.39, paras. 88-90.

²¹ *Ibid.*, p. 109, para. 104.

²² In this sense, see J.M. Spaight, *op. cit.*, p. 163.

²³ *Supra*, p. 494. See *O.R.* VI, p. 110, CDDH/SR.39, para. 112, and pp. 113 and 117 for the explanations of vote in favour of the minority position, and p. 116 for similar explanations in favour of the majority position.

²⁴ One delegation had proposed at the second session of the Conference of Government Experts that orange parachutes should be used for the purpose of indicating that those who were using them were intending to surrender (*CE 1972, Report*, Vol. II, p. 52, CE/COM III/C 8).

²⁵ *O.R.* XV, p. 519, CDDH/III/391.

is wounded, dead or reported missing.²⁶ The provisions of Article 41 (*Safeguard of an enemy hors de combat*) in particular apply fully to any person landing in territory controlled by an adverse Party, after parachuting from an aircraft in distress, under the conditions set out in that article. However, there is one point where this paragraph goes further than Article 41 (*Safeguard of an enemy hors de combat*), viz., with regard to the question of surrender. The intent to surrender is assumed to exist in an airman whose aircraft has been brought down, and any attack should be suspended until the person concerned has had an opportunity of making this intention known.

1645 The most thorny problems in this respect arise with regard to the civilian population. It often happens that airmen in distress do not actually land in an enemy controlled sector of the battlefield, in which case they are captured under similar conditions to those which pertain to other combatants, but altogether outside the zone of military operations. Thus they can be at the mercy of the civilian population, and the history of twentieth century warfare, both in the past and recently, contains a number of examples in which civilians have committed abuses in these circumstances.²⁷

1646 Committee III was concerned with this problem when it examined Article 41, and in the report presented at the end of the third session, the Rapporteur expressed the opinion that:

“Committee II should be asked to consider whether Article 17, which it has already adopted, should be amended by adding a reference to the protection of persons *hors de combat*. Certainly it seems that such persons should be respected by the civilian population.”²⁸

Committee II, which earlier had considered an amendment intended to refer explicitly in Article 17 to combatants *hors de combat*²⁹, examined the problem at the fourth session.³⁰ After a brief debate, it came to the conclusion that:

“the wounded, sick and shipwrecked, whether friend or foe, were protected by Article 17, so that it was not necessary to repeat in Article 17 the protection implicitly provided by paragraph 1 of Article 38 bis [41]”.³¹

²⁶ In this respect, see Arts. 33 and 34.

²⁷ For the Second World War, see J.M. Spaight, *op. cit.*, pp. 143-144, and “Trial of Peter Back”, 3 *Law Reports*, pp. 60-61. In some cases enemy pilots were lynched by the civilian population, with or without the complicity of the military authorities (see J.M. Spaight, *op. cit.*, pp. 61-62, and “The Essen Lynching Case”, 1 *Law Reports*, pp. 88-92). In some cases the police force was involved in this (*cf.* “Trial of Albert Bury and Wilhelm Hafner”, 3 *Law Reports*, pp. 62-64). Also see “CICR, Les représailles contre les prisonniers de guerre”, *RICR*, November 1947, p. 863, especially pp. 865-866.

²⁸ *O.R.* XV, p. 384, CDDH/236/Rev.1, para. 25.

²⁹ *O.R.* III, p. 83, CDDH/II/14.

³⁰ *O.R.* XII, pp. 466-467, CDDH/II/SR.99, paras. 9-16.

³¹ *Ibid.*, paras. 13 and 16. When Art. 17 was adopted at the final plenary meetings, one delegation specifically declared that “in accordance with the views expressed in Committees II and III, the protection provided by Article 17 applies also to persons parachuting from an aircraft in distress and to other persons *hors de combat*” (*O.R.* VI, p. 79, CDDH/SR.37, Annex (Israel)).

- 1647** It is therefore perfectly clear that the obligation to respect persons who are *hors de combat* applies to civilians as much as it does to combatants, and that this protection is also due to airmen who land after parachuting from an aircraft in distress. It is up to the Contracting Parties to take all measures required for this purpose, particularly by instructing the civilian population in an appropriate manner and by giving realistic directives on the conduct that should be observed in these circumstances,³² for example, by giving local authorities the competence to accept a surrender. The same should apply with respect to the police or any other armed force charged with imposing respect for domestic order. As they are combatants, these airmen are actually entitled to be treated as prisoners of war from the moment of their capture or surrender.³³ The same applies if their status is doubtful (Article 45 – *Protection of persons who have taken part in hostilities*, paragraph 1), or if the persons concerned are civilian air crews (Third Convention, Article 1A(5)). Civilians are entitled, at the very least, to the minimum guarantees laid down in Article 75 (*Fundamental guarantees*). Spies who are caught in the act cannot be punished without a previous trial (Hague Regulations, Article 30).³⁴
- 1648** *A priori*, fire must therefore not be opened on the ground against persons who have parachuted from an aircraft in distress, whether they land in or behind the enemy lines. These airmen are presumed to have the intention of surrendering, and all possible measures should be taken to enable this surrender to take place under appropriate conditions.³⁵
- 1649** There are two exceptions to this rule. The first concerns airborne troops (paragraph 3). The second is expressed in paragraph 2 by the phrase “unless it is apparent that he is engaging in a hostile act”. The Rapporteur made the following comment on this phrase:

“The Committee decided not to try to define what constituted a hostile act, but there was considerable support for the view that an airman who was aware of the presence of enemy armed forces and tried to escape was engaging in a hostile act. On the other hand, merely moving in the direction of his own lines would not, by itself, mean that he should not be given an

³² See *Commentary I ad Art. 18*, p. 187. However, civilians are apparently not expected to go so far as to retrieve the dead themselves (*O.R. XI*, p. 486, CDDH/II/SR.44, para. 8).

³³ Since 1949 there are no longer any exceptions to this rule. This was not the case under the 1929 Convention, which in the case of operations at sea or in the air, made allowance for such exceptions (derogations) as the conditions of such capture render inevitable (Art. 1, para. 2).

³⁴ The problem of uniform has sometimes led to a degree of confusion in this respect (see J.M. Spaight, *op. cit.*, pp. 104-105, and *supra ad Art. 39*, pp. 465-469). Part of the difficulty arises from the fact that the uniforms of airmen are not necessarily the same as those of the troops on the ground. However, if airmen wear not their own but enemy uniform (*ibid.*), they are probably spies or saboteurs and therefore airborne troops who are not protected by this Article (para. 3), though they are covered by the general rule of Article 41. This means that they are protected under the conditions specified in that article, but no further (see para. 3).

³⁵ It is quite common for women to serve in the airforce (see J.M. Spaight, *op. cit.*, p. 107).

opportunity to surrender, for he might not know in which direction he was going or that he was visible to enemy armed forces.”³⁶

Obviously the problem does not arise with regard to a pilot who has come down in the sea, but it has frequently happened that the Party to the conflict to which this pilot belongs has attempted to rescue him, particularly by means of hydroplanes or ships marked with the red cross emblem. During the Second World War, some belligerents refused to recognize the immunity of these medical aircraft and rescue craft,³⁷ but it is self-evident that fire could not be opened on the shipwrecked pilots under any circumstances. Article 28 of the Protocol (*Restrictions on operations of medical aircraft*), paragraph 4, prohibits the use of medical aircraft, including helicopters, to search for the wounded, sick and shipwrecked, except by prior agreement with the adverse Party. Thus, if a pilot is shot down, the Party to the conflict to which he belongs must, unless there is an agreement to the contrary, attempt to retrieve him *manu militari*, if it attempts to retrieve him, and this act undeniably constitutes a hostile act in territory under the control of the enemy, though it is not a hostile act on the part of the pilot himself. The latter only loses his right to safeguard if he actively and knowingly participates in the rescue operation mounted on his behalf.³⁸

1650 If a plane is forced to land in enemy territory, the crew's instructions oblige them to destroy the aircraft, but it is also the duty and the right of the adversary to try and prevent this, if necessary by force of arms.³⁹ This therefore constitutes a hostile act.

1651 It is appropriate to emphasize once more that if an airman in distress refuses to lay down arms or to surrender, tries to escape or engages in any other way in an obviously hostile act when he reaches the ground, only such force as is

³⁶ *O.R.* XV, p. 386, CDDH/236/Rev.1, para. 30. Von der Heydte, for his part, expresses the view that a pilot who parachutes from an aircraft is not considered to be captured as long as he is not under the control of the adversary, i.e., as long as he has not fallen into the power of persons who are qualified in the sense of international law to detain him. Up to that point they are combatants in the same way as members of enemy patrols who penetrate enemy territory. Therefore they must be in uniform or display a distinctive emblem and must bear arms openly. On the other hand, they can disguise themselves in order to escape capture, and they may resort to ruses of war. The adversary must treat them as any other enemy combatant and if they resort to the use of arms, the use of force is permitted. If they surrender, they become prisoners of war (See F.A. von der Heydte, in Bernhardt (ed.) *op. cit.*, Instalment 3, 1982, p. 6).

³⁷ J.M. Spaight, *op. cit.*, pp. 167-168 and 361-362, and R.L. Dunn, "Air-Sea Rescue Operations in Europe during World War II: Historical Perspective on a Footnote in International Law", 21 *The Air Force Law Review*, No. 4. 1979. pp. 602-619. Art. 18 of the First Convention of 1929 did not give any immunity to medical aircraft in these situations "in the absence of special and express permission" but *cf. RICR*, December 1940, pp. 992-995.

³⁸ It has been said in this respect that the transmission of distress signals by a pilot who has been brought down, does not in itself constitute proof that the person concerned does not intend to surrender because these signals are transmitted automatically when the pilot parachutes from the aircraft. For the statements made by one delegation, also see *O.R.* XIV, pp. 289-290, CDDH/III/SR.30, paras. 15-17.

³⁹ J.M. Spaight, *op. cit.*, pp. 139-142.

necessary in the circumstances to capture him or render him *hors de combat* may be used.⁴⁰ Any act of vengeance is prohibited.

Paragraph 3 – Airborne troops

- 1652** This paragraph excludes airborne troops from the scope of the protection of this article. This means that it is not prohibited to open fire on airborne troops, either from the ground, or from an aircraft, during the descent by parachute. This is perfectly understandable, for in these circumstances parachuting from an aircraft constitutes an attack, and not a situation of shipwreck. However, in his report, the Rapporteur states that this exception also applies if the troops leave their aircraft because it is in distress.⁴¹ In practice, it is actually difficult to see, during an airborne attack, when anti-aircraft batteries enter into play, how one could distinguish between parachutists who have left their aircraft of their own free will, and those who have been forced to do so by enemy fire, at least when the event takes place in the same location as the attack. Conversely, if the aircraft transporting airborne troops is brought down away from the target of the airborne attack, it will be difficult to distinguish, during their descent, these parachutists from the crew of any other aircraft in distress.
- 1653** Once on the ground, airborne troops are governed by Article 41 (*Safeguard of the enemy hors de combat*) and not by Article 42. Thus, the safeguard only applies under the conditions and within the limitations provided for in Article 41 (*Safeguard of the enemy hors de combat*) and there is no presumption vis-à-vis these troops that they have the intention of surrendering. Moreover, it is not possible to exclude the possibility that the civilian population could rise up *en masse* to oppose the action of airborne troops.⁴² However, the safeguard is obligatory from the moment they are rendered *hors de combat*. It applies to all persons and consequently includes parachutists who are on a “special mission”.⁴³ The term “airborne troops” can have a wide range of interpretations and covers units of infantry dropped from the air, as well as groups of commandos instructed to penetrate behind the enemy lines, liaison officers, spies, technical experts accompanying materiel dropped by parachute, groups of saboteurs or propagandists etc.
- 1654** All such persons and all other categories which may play a role in modern conflicts, including rescue teams entrusted with missions such as retrieving a pilot who has been brought down or liberating prisoners of war, are entitled to the guarantees of Article 41 (*Safeguard of the enemy hors de combat*) from the moment that they are *hors de combat*.

⁴⁰ Cf. *supra*, ad Art. 41, para. 2, cipher 4, p. 488.

⁴¹ O.R. XV, p. 386, CDDH/236/Rev.1, para. 29; M. Bothe, K. Ipsen, K.J. Partsch, *op. cit.*, p. 29, note 75, confirm that this was certainly the Committee’s intention.

⁴² Hague Regulations, Art. 2. This seems to have been the case in Crete during the Second World War, although these combatants were not considered to be prisoners of war after they were captured.

⁴³ Cf. *supra*, ad Art. 40, p. 476; for the Second World War, see J.M. Spaight, *op. cit.*, pp. 104-105 and 313-317.

Conclusion

- 1655** – Any person parachuting from an aircraft in distress is protected during his descent towards the ground, whether he lands in territory controlled by the enemy or by friendly forces.
- 1656** – In the event that he lands in territory controlled by an adverse Party, the provisions of the Conventions apply in case the person concerned is wounded or missing. He is presumed to have the intention to surrender, and any attack should be suspended until he has had an opportunity of revealing such intent. Appropriate instructions should be given to the civilian population.
- 1657** – The safeguard of airborne troops is governed by Article 41 (*Safeguard of the enemy hors de combat*) and not by Article 42, under consideration here.

Part III, Section II – Combatant and prisoner-of-war status

Commentary

1658 In the draft presented by the ICRC at the Diplomatic Conference this Section, entitled “Prisoner-of-war status”, contained a single article (42) entitled: “New category of prisoners of war”.¹ It was accompanied by a footnote which opened the door to the possibility of later adding a clause relating to national liberation movements.² This last point is dealt with in Article 1 (*General principles and scope of application*), paragraph 4, which places armed conflicts for self-determination as defined in that article within the scope of application of the Conventions and the Protocol. As regards Section II, this was considerably extended during the deliberations at the Conference, and now contains five articles, admittedly after some subjects, which the ICRC Draft had included under the heading *Methods and means of combat* (Article 40 – Independent missions; Article 41 – Organization and discipline), were transferred to this Section. However, on the whole Articles 43-47 certainly represent new directions and original solutions for which the Conference itself can take the credit and the responsibility.

J. de P.

¹ This draft article read as follows:

“1. In addition to the persons mentioned in Article 4 of the Third Convention, members of organized resistance movements who have fallen into the hands of the enemy are prisoners of war provided such movements belong to a Party to the conflict, even if that Party is represented by a government or an authority not recognized by the Detaining Power, and provided that such movements fulfil the following conditions:

- a) that they are under a command responsible to a Party to the conflict for its subordinates;
- b) that they distinguish themselves from the civilian population in military operations;
- c) that they conduct their military operations in accordance with the Conventions and the present Protocol.

2. Non-fulfilment of the aforementioned conditions by individual members of the resistance movement shall not deprive other members of the movement of the status of prisoners of war. Members of a resistance movement who violate the Conventions and the present Protocol shall, if prosecuted, enjoy the judicial guarantees provided by the Third Convention and, even if sentenced, retain the status of prisoners of war.”

² “3. In cases of armed struggle where peoples exercise their right to self-determination as guaranteed by the United Nations Charter and the ‘Declaration on Principles of International Law concerning Friendly Relations and Co-operation among States in accordance with the Charter of the United Nations’, members of organized liberation movements who comply with the aforementioned conditions shall be treated as prisoners of war for as long as they are detained.” For the amendments proposed to Article 42 of the ICRC Draft, see *O.R.* III, pp. 178-186. For the historical background to the origin of the ICRC proposals, see M. Veuthey, *Guérilla et droit humanitaire*, Geneva, 1976, pp. 249-259, and *id.*, “Guerilla Warfare and Humanitarian Law”, *IRRC*, June 1976, p. 277.

Protocol I

Article 43 – Armed forces

1. The armed forces of a Party to a conflict consist of all organized armed forces, groups and units which are under a command responsible to that Party for the conduct of its subordinates, even if that Party is represented by a government or an authority not recognized by an adverse Party. Such armed forces shall be subject to an internal disciplinary system which, *inter alia*, shall enforce compliance with the rules of international law applicable in armed conflict.
2. Members of the armed forces of a Party to a conflict (other than medical personnel and chaplains covered by Article 33 of the Third Convention) are combatants, that is to say, they have the right to participate directly in hostilities.
3. Whenever a Party to a conflict incorporates a paramilitary or armed law enforcement agency into its armed forces it shall so notify the other Parties to the conflict.

Commentary

Paragraph 1 – Definition of armed forces

Introduction

1659 This article defines “the armed forces of a Party to a conflict”, and provides that the members of such armed forces are combatants, subject to some exceptions. It implies that the concept of “Party to a conflict” in the sense of the Protocol is a known concept, as is the concept of armed conflict.

1660 In the terms of Article 2 common to the Geneva Conventions of 1949, these Conventions apply, apart from cases of military occupation of an area, even if such occupation meets with no resistance, in “cases of declared war or of any other armed conflict which may arise between two or more of the High Contracting Parties”. Thus this covers not only armed conflict or war in the formal sense, but also any *de facto* armed conflict, even if it is not recognized as such. An attempt has been made to define this as follows:

“Material war implies a continuous clash of arms conducted by organized armies which engage the responsibility of governments. It does not presume the condition that the belligerents must be States. The existence of war in the material sense is something to be judged by evidence not of intention, but of the activities of military forces in the field.”¹

1661 However, this must not become an expedient designed to avoid the application of *jus in bello*. A Party to a war which is not recognized as such is therefore not necessarily a State, nor even an authority representing a State. In fact, this distinction was not yet made in the texts of the Conventions, which, though they are not limited to the state of war in a legal sense,² are limited, as far as

¹ L. Kotsch, *The Concept of War in Contemporary History and International Law* (thesis), Geneva, 1956, p. 56, quoted by D.W. Bowett, *United Nations Forces*, London, 1964, p. 498. Without necessarily covering all situations, this definition seems to include the essential elements of war in a non-technical sense. For the United States, the involvement in north Vietnam was certainly a war *de facto*, even though it was not one *de jure*. Other examples include the conflict over the Falkland Islands (Malvinas) in which the United Kingdom and Argentina were opposed in 1982, and the Sino-Indian conflict of 1962-63.

² In fact, in the Geneva Conventions, any dispute, however serious, which may arise between two States and result in the intervention of members of their armed forces, is an armed conflict in the sense of Article 2, even if one of the Parties denies that there is a state of belligerency. The duration of the conflict and the more or less fatal character of its effects are irrelevant. The respect owed to human beings cannot be measured by the number of victims (see *Commentary I*, p. 32). However, when signing the Protocols, the United Kingdom made the following declaration

(continued on next page)

international conflicts are concerned, to clashes arising between two or more contracting Parties, i.e., States. However, it is clear that Article 2, paragraph 3, of the Conventions provides the possibility for their application to a Power which is not a Party to the Conventions, “if the latter accepts and applies the provisions thereof”. Some writers now consider that the term “Power” can refer to entities that are not States.³ However, it is perfectly clear that the Protocol has extended its field of application to entities which are not States (Article 1 – *General principles and scope of application*, paragraph 4). If they conform to the requirements of the present article, liberation movements fighting against colonial domination (provided that they make a declaration under Article 96 (*Treaty relations upon entry into force of this Protocol*), paragraph 3, and resistance movements representing a pre-existing subject of international law may be “Parties to the conflict” within the meaning of the Conventions and the Protocol. However, the authority which represents them must have certain characteristics of a government, at least in relation to its armed forces. Nor is it out of the question that the United Nations could be a “Party to an armed conflict” in the material sense, although the problem of the accession of the United Nations to the Geneva Conventions and the Protocol remains a delicate question which has not yet been resolved.⁴ Moreover, it cannot necessarily be deduced from the text that the scope of Article 1 (*General principles and scope of application*), paragraph 4, of the Protocol is limited to cases of decolonization and occupation still in existence at the time that the Diplomatic Conference concluded its deliberations.⁵ Theoretically at least, the notion of “Party to the conflict”, within the meaning of the Protocol, is fairly wide, involving not only resistance movements representing a pre-existing subject of international law and governments in exile, but also those fighting for conflicts of “self-determination” or “national liberation”. Those who consider this distinction to be fundamental might fear that this could result in some confusion between international conflicts and conflicts which are not international.

1662 At any rate it is to be feared that we shall have to face in future clashes of views with one of the adversaries claiming to be a Party to the conflict in the sense of the Protocol and the other one refuting such a claim. The clause allowing such a Party to the conflict to be “represented by a government or an authority not recognized by an adverse Party” will not in fact help to resolve the problem if the refutation is based on a denial of the status of Party to a conflict. In the view of

regarding Article 1 of the Protocol: “that the term ‘armed conflict’ of itself and in its context implies a certain level of intensity of military operations which must be present before the Conventions and the Protocols are to apply to any given situation and that this level of intensity cannot be less than that required for the application of Protocol II, by virtue of Article 1 of that Protocol, to internal conflicts”.

Seyersted, *United Nations Forces in the Law of Peace and War*, Leyden, 1966; Institute of International Law, “Les conditions d’application des lois de la guerre aux opérations militaires des Nations Unies”, 55 *Annuaire IDI*, vol. II, 1971, pp. 149-288.

⁵ E. Kussbach, “Status der Guerillakämpfer und Söldner in bewaffneten Konflikten”, 17 *Wiener Blätter zur Friedensforschung*, 1978, p. 4. See also J.J.A. Salmon, *op. cit.*, p. 84.

the ICRC – the originator of this proposal – the clause referred to should in no way nullify the distinction between international conflicts and conflicts which are not international. According to the commentary of the 1973 draft articles of the ICRC,

“the non-recognized government or authority must represent, or must claim to represent, a subject of international law recognized as such by the other Party to the conflict; as a rule, the subject of law will have existed prior to the conflict, which will therefore from the outset be of an international character; exceptionally, however, it may also be established in the course of the conflict, either because of its recognition as a State by the other Party to the conflict or because of its recognition as a belligerent, whereby the other Party to the conflict confers upon the recognized subject a certain limited and provisional international personality. In any case, the mere existence of a government or resistance movement is not sufficient evidence of the international character of the conflict, nor does it establish that character and hence render the application of the present Protocol mandatory”.⁶

If a resistance movement cannot be considered as a Party to the conflict within the meaning of the Protocol, it must belong to a Party to the conflict, within the meaning of Article 4A(2) of the Third Convention.

1663 According to the Conventions, combatant status is given to regular forces only which profess allegiance to a government or authority which is not recognized by the adversary, but which claims to represent a State which is a Party to the conflict.⁷ In the Protocol, entities which are not States, but which should, at least to some extent, be subjects of international law, may in certain circumstances become Parties to the conflict. Whether such Parties to the conflict claim to be a State or an entity which is not yet a State, they may take the form of an authority which is not recognized by the adversary. In any case, it is not impossible that various authorities might all claim to represent one and the same Party to the conflict, such as a “people” fighting against “alien occupation”, for example. Such authorities can take part in the fight, not only through the regular army, but through “all organized armed forces, groups and units which are under a command responsible to that Party for the conduct of its subordinates.” This is where the new definition of armed forces actually comes in.

⁶ *Commentary Drafts*, p. 50.

⁷ See Art. 4A(3) of the Third Convention. During the Second World War, i.e., before the 1949 Conventions were adopted, Germany had resolved the problem by considering the French regular army fighting under General de Gaulle as fighting for England, a Party to the conflict recognized by Germany. On the recognition of the political authority of the Free French during the Second World War, see Ch. Rousseau, *Droit international public*, Vol. III, Paris, 1977, pp. 595-596, and on their recognition as a nation, *ibid.*, pp. 607-611.

*First sentence – Composition of the armed forces**The historical background*

- 1664 “The fact that the development of aviation and the use of new arms has almost wiped out the fundamental distinction between combatants and civilians during the last World War, can in no event justify even indirectly a state of affairs which is disastrous for civilization and for human life itself. If the law of war – to the extent that it endeavours to limit the means used for conducting hostilities – is to be a reality, it is essential to re-establish the fundamental concept, which has actually never been explicitly rejected, of the military objective, and to reaffirm the basic distinction between combatants and civilians.”⁸
- 1665 This was certainly the view of the XXth International Conference of the Red Cross when it adopted a resolution in 1965, which contained a solemn declaration addressed to all governments and other authorities with responsibility for action in armed conflicts. It stressed that a “distinction must be made at all times between persons taking part in the hostilities and members of the civilian population, to the effect that the latter be spared as much as possible”. During the 23rd session of the United Nations General Assembly, this principle was expressly endorsed and was affirmed in Resolution 2444 mentioned above.⁹ In order to be able to make a distinction between persons participating in hostilities and the civilian population (Article 48 – *Basic rule*), it is necessary to begin by giving suitable definitions of these terms. The Protocol does not actually define the civilian population, but merely states that any person who does not belong to the categories included under the armed forces must be considered as a civilian (Article 50 – *Definition of civilians and civilian population*). For this reason alone, it is therefore already necessary to define armed forces.
- 1666 This was the solution adopted by the Hague Regulations of 1907 (Articles 1-3), which begin with a chapter devoted to the qualification of belligerents. These

⁸ Translated by the ICRC; original text: “Que le développement de l’aviation et l’emploi d’armes nouvelles aient presque effacé, au cours du dernier conflit mondial, la distinction fondamentale entre combattants et civils, ce fait en aucun cas ne peut consacrer, même indirectement, un état de choses désastreux pour la civilisation et pour la vie humaine elle-même. Si le droit de la guerre – pour autant qu’il tend à limiter les moyens de conduire les hostilités – doit être une réalité, il est nécessaire de rétablir la notion fondamentale, et qui d’ailleurs n’a jamais été expressément abandonnée, de l’objectif militaire et de réaffirmer la distinction essentielle qui existe entre combattants et civils.” M. Huber, “Quelques considérations...”, *op. cit.*, p. 431.

⁹ Moreover, it would be incorrect to think that the principle of this distinction has an exclusively western origin or arose recently. Thus some participants at the Diplomatic Conference recalled that a clear distinction between combatants and non-combatants had always been a principle of Islamic law (see, for example, *O.R.* V, p. 92, CDDH/SR.10, para. 9), and a number of laws adopted in Western Europe during the Middle Ages reflect the same concern (see F. Berber, *op. cit.*, pp. 68-70). One might wonder whether this rule is still understood at the present time. To take one example, members of the armed forces of national liberation movements are combatants in the sense of the Protocol; therefore they cannot claim the status of refugees under the terms of Article 1, para. 2, of the 1969 Convention of the OAU on refugees; if, nevertheless, they wish to be considered as refugees, they will definitively lose their status as combatants and, under Article 3 of that Convention, can no longer commit hostile acts against another State.

articles lay down that the laws, rights and duties of war apply only to armies and to militia and volunteer corps which form part of the army. The militia and volunteer corps which do not form part of the army should fulfil the following conditions (Article 1):

- to be commanded by a person responsible for his subordinates;
- to have a fixed distinctive emblem recognizable at a distance;
- to carry arms openly; and
- to conduct their operations in accordance with the laws and customs of war.

1667 The inhabitants of a territory which has not been occupied, who, on the approach of the enemy, spontaneously take up arms to resist the invading troops, without having had time to organize themselves in accordance with the above-mentioned rules, shall be regarded as belligerents if they carry arms openly and if they respect the laws and customs of war (Article 2 – *Levée en masse*). The armed forces of the belligerent parties may consist of combatants and non-combatants. In case of capture by the enemy, both have a right to be treated as prisoners of war (Article 3).

1668 These rules governed the two World Wars of the twentieth century. However, though the rules remained the same after 1907, the conduct of hostilities altered radically, as we have already indicated.¹⁰ Nevertheless, in 1949 during the drafting of the Third Convention, the above-mentioned rules were confirmed (Article 4). The only alterations consisted of conferring the status of prisoners of war, to members of regular armed forces who profess allegiance to a government or an authority not recognized by the Detaining Power – so that they will have the status of combatants and will be entitled to take part directly in hostilities – (Article 4A(3)), and extending such status also to resistance movements in occupied territories, provided that such movements belong to a Party to the conflict (Article 4A(2)).¹¹

1669 Without abrogating the rules referred to above,¹² this article of the Protocol actually introduces entirely new concepts, though these have been the subject of discussion since the Brussels Conference of 1874.

1670 As stated at The Hague,¹³ this is a question of enormous importance; anyone whose status as a member of the armed forces is recognized, is entitled to be treated as a prisoner of war in the event that he is captured; anyone who takes up arms without being able to claim this status will be left to be dealt with by the enemy and its military tribunals in the event that he is captured. Some wished to impose strict conditions on the definition of the status of members of the armed

¹⁰ *Supra*, introduction to this Part, p. 383.

¹¹ For a review of these rules, see R. Lapidot, “Qui a droit au statut de prisonnier de guerre?”, *RGDIP*, No. 1, January-March 1978, pp. 4-13.

¹² Article 50 refers explicitly to Article 4A(1), (2) and (6) of the Third Convention, as well as to Article 43 under consideration here. And Article 44, paragraph 6, provides that “this Article is without prejudice to the right of any person to be a prisoner of war pursuant to Article 4 of the Third Convention.”

¹³ A. Mechelynck, *op. cit.*, pp. 117-118.

forces, bearing in mind the necessities of war; others would not allow any restriction to the right and duty of taking up arms, apart from the organization required to maintain the basic rules of good faith pertaining to warfare and to prevent banditry. Finally the question was resolved at The Hague along the lines indicated above, which means that for combatants who do not fulfil the conditions imposed, nothing is provided in the Regulations, either in their favour or against them.¹⁴ These are rules of unwritten law, in accordance with the principles of the law of nations referred to in the Preamble (Martens clause). Therefore it is clear that nothing in the Regulations should be considered as tending to lessen “or suppress the right that belongs to the population of an invaded country, to carry out its duty of opposing to the invaders by any lawful means the most energetic patriotic resistance”.¹⁵

1671 However some countries do not trust unwritten law.¹⁶ They consider the principle of self-determination, exercised in accordance with the United Nations Charter, to be a principle of international law and they have been successful in their efforts to have it written into the definition of the scope of application of the Protocol, namely a reference to fighting undertaken in order to bring the above-mentioned principle to fruition (Article 1 – *General principles and scope of application*, paragraph 4). Peoples conduct such armed conflicts themselves. All combatants who are taken prisoner should consequently be accorded the prisoner-of-war status¹⁷ and this should be done in the form of a specific provision. This is the object of the provision with which we are concerned here, except that its scope is not limited to conflicts for self-determination which form the object of Article 1 (*General principles and scope of application*), paragraph 4; it generally applies to any Party to an armed conflict in the sense of the Protocol. However, as stated above, this does not invalidate the norms of the Hague Regulations and Article 4 of the Third Convention. Nevertheless, one might say that this provision does not only respond to the concerns of national liberation movements, but also to those which have been expressed since 1874, and which were briefly outlined above.

Scope of application of the provision

1672 In his report, the Rapporteur considers that the text which the Committee finally adopted “is relatively clear and requires little explanation”.¹⁸ This could mean that one should read in this text all that is written into it, and nothing but what is written into it. Only a few explanations follow below. The expression “armed forces” means “members of the armed forces”, i.e., persons, as explicitly

¹⁴ *Ibid.*, pp. 118, 120, 121.

¹⁵ *Ibid.*, pp. 118, 165.

¹⁶ *Supra*, introduction to this Part, p. 384.

¹⁷ Resolution 3103 (XXVIII) of the United Nations General Assembly, Basic principles of the legal status of the combatants struggling against colonial and alien domination and racist régimes, 12 December 1973; see also the general debate during the second session of Committee III, *O.R.* XIV, pp. 317-385, CDDH/III/SR.33-36.

¹⁸ *O.R.* XV, p. 390, CDDH/236/Rev.1, para. 42.

stated in paragraph 2. In itself it therefore does not allow, for example, the use of animals trained to attack, who are incapable of distinguishing between an able-bodied enemy and an enemy who is *hors de combat* (Article 41 – *Safeguard of an enemy hors de combat*). The term “organized”¹⁹ is obviously rather flexible, as there are a large number of degrees of organization. In the first place, this should be interpreted in the sense that the fighting should have a collective character, be conducted under proper control and according to rules, as opposed to individuals operating in isolation with no corresponding preparation or training. A “responsible” command cannot be conceived of without the persons who make up the command structure being familiar with the law applicable in armed conflict. In this respect, Article 77 of the Protocol (*Protection of children*) requires that all feasible measures are taken to prevent children under fifteen years of age from taking a direct part in hostilities, and therefore from being recruited into the armed forces. It is also appropriate to recall that the Hague Regulations (Article 23, paragraph 2), as well as the Fourth Geneva Convention (Article 51) prohibit the forced enrolment into its armed forces of nationals of the adverse Party. The particular problem of mercenaries will be examined in connection with Article 47 (*Mercenaries*). All armed forces, groups and units are necessarily structured and have a hierarchy, as they are subordinate to a command which is responsible to one of the Parties to the conflict for their operations.²⁰ In other words, all of them are subordinate to a command and to a Party to the conflict, without exception, for it is not permissible for any group to wage a private war.²¹ Under these conditions, as well as those of the second sentence of this paragraph, all armed forces are “regular”, whether they are established by a State in pursuance of appropriate laws, or by another Party to the conflict using its own methods, or even if they have risen spontaneously. Wearing or not a uniform or outfit is not a decisive criterion for the status of the individual concerned, as we will see in the examination of Article 44 (*Combatants and*

¹⁹ See *Commentary III*, p. 58, and *Commentary Drafts*, pp. 49-50. Some consider that this condition requires in any armed unit the existence of a system of authority and responsibility, in other words, a military structure such as that found in regular armies which should characteristically include a hierarchy, responsibility and discipline (see P. Verri, “Combattants armés ne pouvant se distinguer de la population civile”, 21 *RDPM DG*, No. 1-4, 1982, p. 345, at p. 354).

²⁰ This clause expresses in full the generally accepted interpretation of the word “responsible” in Article 1 of the Hague Regulations: responsible to the authority or State on whose behalf the fighting is conducted, although some also occasionally wished to detect a more general responsibility, with respect to the principles of international law, or even with respect to public opinion, which seems necessary if there is no juridical link between the combatants and the Party to the conflict to which they profess allegiance (Third Convention, Article 4A(2)). As regards the responsibility of a commanding officer for the activities of his subordinates, see J.-P. Maunoir, *La répression des crimes de guerre devant les tribunaux français et alliés*, Geneva, 1956, pp. 312-388, especially p. 346. In general, the exercise of such responsibility implies the exercise of effective control over subordinates (see also Art. 87).

²¹ In this sense, see P. Verri, “Combattants armés...”, *op. cit.*, p. 355. This type of hostilities includes terrorist methods, such as taking diplomats or businessmen as hostages or kidnapping sports or political personalities, hijacking civilian aircraft etc., all such acts having no direct link with military operations and not being directed against combatants (for examples, see M. Veuthey, *op. cit.*, pp. 115-127 and 147).

prisoners of war), even though the command must require, subject to certain exceptions, that it be worn. Neither can a decisive criterion be found in the fact that individual combatants effectively respect the rules of international law applicable in cases of armed conflict (Article 44 – *Combatants and prisoners of war*, paragraph 2), but such respect is incumbent upon the armed forces as such. According to one delegate at the Diplomatic Conference, the armed forces recognized by the Protocol therefore consist of “regular” and “irregular regular” combatants. In doing this the Conference thus took full account of the new forces which have appeared on the modern battlefield in the course of the last few decades.

- 1673 This radical solution, although it caused some surprise, barely provoked any debate at this stage. However, one delegation remarked that it had modified existing law, and when the article was adopted by consensus at a final plenary meeting, it chose to indicate its position fully in this respect.²²
- 1674 In the Hague system, the State guarantees that the rules of international law will be respected. When such guarantee is lacking, the conduct of the combatants in the field is the decisive factor. The Protocol eliminates this distinction, but subordinates every combatant, even combatants belonging to a resistance movement, to a Party to the conflict, which is not the case in the Third Geneva Convention, in Article 4A(2).

*Second sentence – Conditions of discipline*²³

- 1675 Although a member of the armed forces who does not respect the rules of international law applicable in armed conflict does not, as we have seen, thereby lose his combatant status and his right to be treated as a prisoner of war (which does not mean that he cannot be punished) the armed forces to which he belongs as such are indissolubly bound by these rules. This was already the view of the drafters of Hague Convention IV of 1907, when they provided in Article 1 of this Convention that “the Contracting Powers shall issue instructions to their armed land forces which shall be in conformity with the Regulations respecting the laws and customs of war on land, annexed to the present Convention”. This requirement is rendered here with the expression “internal disciplinary system”, which covers the field of military disciplinary law as well as that of military penal law. The modern trend is to regard violations of rules of the Protocol and of

²² “With regard to Article 41 [43], paragraph 1, of draft Additional Protocol I, the delegation of Israel wishes to declare that the enforcement of compliance with the rules of international law applicable in armed conflict is a *conditio sine qua non* for qualification as armed forces. Moreover, it is not sufficient that the armed forces be subject to an internal disciplinary system which can enforce compliance with the laws of war, but – as the expression ‘shall enforce’ indicates – there has to be effective compliance with this system in the field.” (O.R. VI, p. 116, CDDH/SR.39).

²³ The text of Art. 41 of the ICRC draft devoted to the same subject read as follows: “Armed forces, including the armed forces of resistance movements covered by Article 42, shall be organized and subject to an appropriate internal disciplinary system. Such disciplinary system shall enforce respect for the present rules and for the other rules of international law applicable in armed conflicts.”

other rules of international law as matters primarily of military penal law.²⁴ The principle of the inclusion of this rule in the Protocol was from the beginning unanimously approved,²⁵ as it is clearly impossible to comply with the requirements of the Protocol without discipline.²⁶ The expression “rules of international law applicable in armed conflict” is defined in Article 2 (*Definitions*), sub-paragraph (*b*), as indicated above. Article 86 (*Failure to act*), which concerns the repression of breaches resulting from a failure to act when under a duty to do so, and Article 87 (*Duty of commanders*), which defines the duties of commanders with regard to breaches of the Conventions and the Protocol, supplement the provision with which we are concerned here. Anyone who participates directly in hostilities without being subordinate to an organized movement under a Party to the conflict, and enforcing compliance with these rules,²⁷ is a civilian who can be punished for the sole fact that he has taken up arms,²⁸ unless he falls under one of the categories listed under (2) and (6) of Article 4A of the Third Convention (categories (1) and (3), which cover the regular armed forces, should automatically fulfil these requirements).

Paragraph 2 – Combatants

1676 The object of paragraph 1 is to establish a common denominator applicable to all, supplementing the specific rules of Article 4 of the Third Convention, without however setting them aside, with a view to defining who are members of the armed forces, as opposed to civilians.

²⁴ *O.R. XIV*, p. 295, CDDH/III/SR.30, para. 38.

²⁵ *Ibid.*, pp. 294-298.

²⁶ Cf. the remark of one delegation: “Discipline is a characteristic of the soldier, and if the internal disciplinary system includes the order to apply the rules of international humanitarian law in armed conflicts, soldiers would carry out that order.” (*Ibid.*, p. 295, para. 39). See also Ph. Bretton, “La mise en œuvre des Protocoles de Genève de 1977”, 95 *Revue de Droit Public et de la Science Politique en France et à l’Etranger*, No. 2, March-April 1979, p. 379, at pp. 390-392 and 417-420.

²⁷ For the view according to which these four conditions are inseparable and must be complied with as a whole, totally and continuously, see P. Verri, “Combattants armés...”, *op. cit.*, p. 356, and in the same sense, R. Lapidoth, *op. cit.*, p. 26. For the affirmation that these conditions together form the necessary criterion for the essential distinction between combatants and civilians, “a fundamental rule of the law of war of Islam”, see H. Sultan, “La conception islamique du droit international humanitaire dans les conflits armés”, 34 *Revue égyptienne de droit international*, 1978, p. 13.

²⁸ This problem also raised a number of questions in Committee III, in conjunction with a questionnaire on fifteen points submitted by the Rapporteur (CDDH/III/GT/75). Question No. 7 asked whether groups were obliged to act in accordance with the rules governing armed conflict; question No. 8 asked whether this was an effective obligation and whether it had to be complied with part of the time, all the time, or most of the time. The members of the Working Group gave an affirmative answer to question No. 7. With regard to question No. 8, some answered “all the time”, others answered “in combat” or “when committing a hostile act”. One delegation expressed the view that if a group did not wish to comply with the law, it put itself outside the law. For other delegations the respect for these laws by the group is a minimum or an essential condition. For the statement by Israel at a final plenary meeting, see *supra*, note 22. The ICRC in its draft provided that the rules of law have to be complied with “in military operations” (Article 42).

- 1677 The provision under consideration here goes one step further in declaring that members of the armed forces have the status of combatants, with two exceptions: medical and religious personnel. In the Third Convention, which deals only with the protection of prisoners of war, and not with the conduct of hostilities, this combatant status is not explicitly affirmed, but it is implicitly included in the recognition of prisoner-of-war status in the event of capture. The Hague Regulations expressed it more clearly in attributing the “rights and duties of war” to members of armies and similar bodies (Article 1). The Conference considered that all ambiguity should be removed and that it should be explicitly stated that all members of the armed forces (with the above-mentioned exceptions) can participate directly in hostilities, i.e., attack and be attacked. The general distinction made in Article 3 of the Hague Regulations, when it provides that armed forces consist of combatants and non-combatants, is therefore no longer used. In fact, in any army there are numerous important categories of soldiers whose foremost or normal task has little to do with firing weapons. These include auxiliary services, administrative services, the military legal service and others. Whether they actually engage in firing weapons is not important. They are entitled to do so, which does not apply to either medical or religious personnel, despite their status as members of the armed forces, or to civilians, as they are not members of the armed forces. All members of the armed forces are combatants, and only members of the armed forces are combatants.²⁹ This should therefore dispense with the concept of “quasi-combatants”, which has sometimes been used on the basis of activities related more or less directly with the war effort. Similarly, any concept of a part-time status, a semi-civilian, semi-military status, a soldier by night and peaceful citizen by day, also disappears. A civilian who is incorporated in an armed organization such as that mentioned in paragraph 1, becomes a member of the military and a combatant throughout the duration of the hostilities (or in any case, until he is permanently demobilized by the responsible command referred to in paragraph 1), whether or not he is in combat, or for the time being armed. If he is wounded, sick or shipwrecked, he is entitled to the protection of the First and Second Conventions (Article 44, paragraph 8), and, if he is captured, he is entitled to the protection of the Third Convention (Article 44, paragraph 1).
- 1678 Any interpretation which would allow combatants as meant in Article 43 to “demobilize” at will in order to return to their status as civilians and to take up their status as combatants once again, as the situation changes or as military operations may require, would have the effect of cancelling any progress that this article has achieved. Undoubtedly the success of guerrilla operations depends on the requirements of flexibility and mobility which are largely dealt with in Article 44 (*Combatants and prisoners of war*), as we will see. However, this concept of mobility could not be extended into the legal field without falling fatally back into the “presumption of illegality”,³⁰ of which guerrilla fighters have justifiably complained, and which Articles 43-45 of the Protocol have endeavoured to

²⁹ For civil defence personnel, see Art. 67, which provides that members of the armed forces who form part of civil defence shall be respected and protected, provided that they do not participate directly in hostilities (para. 1(e)).

³⁰ M. Veuthey, *Guérilla et droit humanitaire*, op. cit., p. 37.

remove. The Protocol exceptionally allows a guerrilla combatant to wear purely civilian dress, if the nature of the hostilities requires it (Article 44 – *Combatants and prisoners of war*, paragraph 3). However, it does not allow this combatant to have the status of a combatant while he is in action, and the status of a civilian at other times.³¹ It does not recognize combatant status “on demand”. On the other hand, it puts all combatants on an equal legal footing, in accordance with a desire expressed long ago, as we have seen.

1679 According to the text, these combatants “have the right to participate directly in hostilities”.³² In this respect the Rapporteur points out that a number of delegations have expressed the wish that the report should record that, in their view, the term “hostilities”, used in paragraph 2, covers the preparations for combat and the return from combat.³³ With regard to the ICRC, it expressed the view, when introducing these terms in Article 46 of its draft (now Article 51 – *Protection of the civilian population*, paragraph 3) that they cover acts of war which are intended by their nature or their purpose to hit specifically the personnel and the *matériel* of the armed forces of the adverse Party.³⁴ Undoubtedly there is room here for some margin of judgment: to restrict this concept to combat and to active military operations would be too narrow, while extending it to the entire war effort would be too broad,³⁵ as in modern warfare the whole population participates in the war effort to some extent, albeit indirectly. The population cannot on this ground be considered to be combatants, although their possible presence near military objectives (Article 52 – *General protection of civilian objects*, paragraph 2) does expose them to incidental risk. The same applies to guerrilla warfare where combatant forces can be organized at different levels, while assuring some cooperation of the civilian population.³⁶ An effective distinction between combatants and non-combatants may be more difficult as a result, but not to the point of becoming impossible. Direct participation in hostilities implies a direct causal relationship between the activity engaged in and the harm done to the enemy at the time and the place where the activity takes place. However, it would be desirable for the various Parties to a conflict to inform each other completely regarding the composition of their respective armed forces, even if this were only done through the communication of the laws and regulations which they have had to adopt to ensure compliance with the Protocol, as provided in Article 84 (*Rules of application*).

³¹ The text of Art. 44, para. 3, specifies that the guerrilla combatant “shall retain” his status as a combatant in such situations, which confirms that he has acquired it independently of the activities as such, solely on the basis of his being a member of the armed forces of a Party to the conflict.

³² Resolution 2675 (XXV) of the United Nations General Assembly entitled “Basic principles for the protection of civilian populations in armed conflicts” makes a distinction between “persons actively taking part in the hostilities and civilian populations”.

³³ *O.R.* XV, p. 330. CDDH/III/224.

³⁴ *Commentary Drafts*, p. 58.

³⁵ *CE 1972, Report*, Vol. I, pp. 143-144, para. 3.116 and 3.120.

³⁶ For examples, see M. Veuthey, *op. cit.*, pp. 195-197 and 271-274.

- 1680 It should not be forgotten that under the terms of Article 85 (*Repression of breaches of this Protocol*), paragraph 3(a), the wilful attack on a civilian population or individual civilians is included among the grave breaches.
- 1681 *To summarize:* the conditions which should all be met to participate directly in hostilities are the following: a) subordination to a “Party to the conflict” which represents a collective entity which is, at least in part, a subject of international law; b) an organization of a military character; c) a responsible command exercising effective control over the members of the organization; d) respect for the rules of international law applicable in armed conflict. These four conditions should be fulfilled effectively and in combination in the field.

Paragraph 3 – Incorporation of police forces

- 1682 During the discussions on Article 43 a proposal was made by a delegation³⁷ to specify that police forces should be excluded from the armed forces, unless national legislation has otherwise provided and the other Parties to the conflict have been notified accordingly. A long discussion followed, relating on the one hand to the meaning of the term “police force” (which can cover uniformed units as well as plain clothes policemen) and, on the other, to the incompatibility of any possible duplication of the function of internal lawkeeping and that of combatant; even the relevance of the proposed notification procedure and whether there should be any provisions on this subject were discussed. Finally the terms “para-military” and “armed law enforcement agency” were substituted for the expression “police forces”, particularly to take into account the differences in internal organization in many States. The problem of any possible duplication of functions referred to above was not explicitly solved, though some may consider that such duplication is impossible.³⁸ In his report the Rapporteur indicates that:

“the Committee recognized that, where a State had a law providing for the automatic incorporation of such forces into its armed forces in time of war, the notice requirement might be satisfied by notification to all Parties to the Protocol, through the depositary”.³⁹

³⁷ In the Federal Republic of Germany the “Bundesgrenzschutz” is an agency which acts as a law enforcement agency and frontier guard during peacetime and which may participate directly in hostilities during wartime.

³⁸ Cf. Arts. 59, para. 3, and 60, para. 4 of the Protocol.

³⁹ O.R. XV, p. 390, CDDH/236/Rev.1, para. 44. The Declaration on the police by the Parliamentary Assembly of the Council of Europe provides that in case of war and occupation, members of the police force should continue to carry out their role of protecting persons and property in the interests of the civilian population, and should therefore not have the status of combatants (31st ordinary session, Recommendation 858 (1979), and Resolution 690 (1979), Annex, sub. C(1). However, the Committee of Ministers did record some reservations on this document).

1683 In conclusion, uniformed units of law enforcement agencies can be members of the armed forces if the adverse Party has been notified of this, so that there is no confusion on its part.

J. de P.

Article 44 – Combatants and prisoners of war

1. Any combatant, as defined in Article 43, who falls into the power of an adverse Party shall be a prisoner of war.
2. While all combatants are obliged to comply with the rules of international law applicable in armed conflict, violations of these rules shall not deprive a combatant of his right to be a combatant or, if he falls into the power of an adverse Party, of his right to be a prisoner of war, except as provided in paragraphs 3 and 4.
3. In order to promote the protection of the civilian population from the effects of hostilities, combatants are obliged to distinguish themselves from the civilian population while they are engaged in an attack or in a military operation preparatory to an attack. Recognizing, however, that there are situations in armed conflicts where, owing to the nature of the hostilities an armed combatant cannot so distinguish himself, he shall retain his status as a combatant, provided that, in such situations, he carries his arms openly:
 - (a) during each military engagement, and
 - (b) during such time as he is visible to the adversary while he is engaged in a military deployment preceding the launching of an attack in which he is to participate.Acts which comply with the requirements of this paragraph shall not be considered as perfidious within the meaning of Article 37, paragraph 1(c).
4. A combatant who falls into the power of an adverse Party while failing to meet the requirements set forth in the second sentence of paragraph 3 shall forfeit his right to be a prisoner of war, but he shall, nevertheless, be given protections equivalent in all respects to those accorded to prisoners of war by the Third Convention and by this Protocol. This protection includes protections equivalent to those accorded to prisoners of war by the Third Convention in the case where such a person is tried and punished for any offences he has committed.
5. Any combatant who falls into the power of an adverse Party while not engaged in an attack or in a military operation preparatory to an attack shall not forfeit his rights to be a combatant and a prisoner of war by virtue of his prior activities.
6. This Article is without prejudice to the right of any person to be a prisoner of war pursuant to Article 4 of the Third Convention.
7. This Article is not intended to change the generally accepted practice of States with respect to the wearing of the uniform by combatants assigned to the regular, uniformed armed units of a Party to the conflict.
8. In addition to the categories of persons mentioned in Article 13 of the First and Second Conventions, all members of the armed forces of a Party to the

conflict, as defined in Article 43 of this Protocol, shall be entitled to protection under those Conventions if they are wounded or sick or, in the case of the Second Convention, shipwrecked at sea or in other waters.

Commentary

General remarks

1684 Although not explicitly stated, this article is mainly aimed at dealing with combatants using methods of guerrilla warfare. On the modern battlefield,

guerrilla warfare is a phenomenon which exists for various reasons, all equally valid, cannot ignore it. Guerrilla fighters will not simply disappear by putting them outside the law applicable in armed conflict, on the basis that they are incapable of complying with the traditional rules of such law. Neither would this encourage them to at least comply with those rules which they are in a position to comply with, as this would not benefit them in any way. The Diplomatic Conference has therefore made an effort to identify this phenomenon and cannot be criticised for so doing. The rules for armed conflict are not static; on the contrary, they must be adapted to a constantly changing world by means of appropriate modifications. This is the specific aim of Article 44, one of the most bitterly disputed articles at the Conference. Almost fifty speakers put their points of view to the Third Committee during the first debate, which took place at the second session.¹ Thirteen amendments² were aimed explicitly at modifying the text proposed by the ICRC in Article 42 of its Draft,³ which dealt with the substance of the present Article 44 as well as with that of Article 43 (*Armed forces*) of the Protocol. However, numerous other amendments tried indirectly to achieve the same by virtue of the fact that there is a certain correlation between the various proposals put forward, on the one hand in the ICRC Draft, and on the other by the delegates themselves.⁴ The essence of the debate took place at the third session, within the Working Group of Committee III. After a month of sustained effort, the text of the present Article 44 was finally established. However, it was not until the fourth session that the article was adopted by Committee III with 66 votes in favour, 2 against, and 18 abstentions,⁵ before being passed in the final plenary meeting by roll-call, with 73 votes in favour, 1 against, and 21 abstentions.⁶ Not surprisingly these votes were followed by numerous explanations of vote.⁷ In addition to giving the reasons which had led the various delegations to approve the proposed text – or, on the other hand, to abstain or even reject it – these explanations of vote contain in many cases statements on interpretation. Furthermore, many delegations felt obliged to

¹ See *O.R.* XIV, pp. 317-385, CDDH/III/SR.33-36 and, for the text *in extenso* of the statements of most of the delegations, *ibid*, pp. 447-556.

² *O.R.* III, pp. 178-186.

³ For the text presented by the ICRC, see *supra*, ad Section II, p. 503, note 1.

⁴ This refers to Articles 35, 40 and 41 of the ICRC draft, (*O.R.* III, pp. 162-165 and pp. 174-177), and also to the proposals for Articles 42 *bis* (a) and (b) and 42 *ter*, which, with the exception of the proposal for 42 *bis* (b), were finally withdrawn by their sponsors. For the texts of these proposals, see *O.R.* III, pp. 187-191. In the face of such a diversity of proposals, the Rapporteur of Committee III drew up a questionnaire on 15 points (CDDH/III/GT/75), listing the principal questions for discussion, and intended as a guide, at least to begin with, for the debates of the Working Group.

⁵ *O.R.* XV, pp. 155-156, CDDH/III/SR.55.

⁶ *O.R.* VI, p. 121, CDDH/SR.40.

⁷ See *O.R.* XV, pp. 155-187, CDDH/III/SR.55 and 56, and *O.R.* VI, pp. 121-155, 178-181, 183-184, 185-186, 189-192, 196, CDDH/SR.40 and 41.

state, either during the plenary meetings or in Committee, that they would not accept reservations to Article 44 by other contracting Parties.⁸

1685 The text of Article 44 is a compromise, probably the best compromise that could have been achieved at the time. It is aimed at increasing the legal protection of guerrilla fighters as far as possible, and thereby encouraging them to comply with the applicable rules of armed conflict, without at the same time reducing the protection of the civilian population in an unacceptable manner. Whatever the text, one might still consider that, when all is said and done, the protection of the civilian population is not assured unless both Parties to the conflict are genuinely concerned about this.

1686 Article 44, which is divided into eight paragraphs, deals successively with prisoner-of-war status, compliance with the rules of international law applicable in armed conflict, the obligation for a guerrilla combatant to distinguish himself from the civilian population, the sanction on non-compliance with this obligation, and the scope of the obligation. The provisions of Article 4 of the Third Convention are fully preserved, the wearing of a uniform for members of a regular army is confirmed, and all combatants are guaranteed the benefits of the First and Second Conventions.

Paragraph 1 – Prisoner-of-war status

1687 At first sight, this paragraph is perfectly clear. Those combatants complying with the general conditions laid down in Article 43 (*Armed forces*), which gives an overall definition of armed forces, have the right, when captured, to prisoner-of-war status. In reality matters are perhaps not as straightforward as this. It has been said that the problem is no longer one of knowing how to obtain the status of combatant (and prisoner-of-war status). The real problem is probably knowing what to do to avoid forfeiting this status. This risk particularly concerns guerrillas and the requirement of a régime of internal discipline for armed forces to ensure that they comply with the rules of international law applicable in armed conflict (Article 43 – *Armed forces*, paragraph 1, second sentence). This expression refers to the rules set forth in international agreements to which the Parties to the conflict are Parties, and the generally recognized principles and rules of international law applicable to armed conflict (Article 2 – *Definitions*, subparagraph (b)). This means that these rules must be complied with by the armed forces as such, at the risk of disqualification. As Article 44 is mainly concerned with guerrilla combatants, it is therefore appropriate to devote some attention to this issue in the context of guerrilla warfare. The problem of combatants

⁸ For the plenary meetings, see *O.R.* VI, CDDH/SR.40, p. 125, para. 37; p. 127, para. 45; p. 129, para. 57; p. 133, para. 77; pp. 138-139 (Annex) and CDDH/SR.41, p. 153, para. 49; p. 154, para. 54; p. 155, para. 59; p. 156, para. 64; pp. 190-191 (Annex). One delegation explicitly referred to Article 19(c) of the Vienna Convention on the Law of Treaties (reservations incompatible with the object and purpose of the treaty), while others referred to this implicitly. One representative considered that Articles 1, 43, 44, 45 and 96 of the Protocol should not be the object of reservations. See also *infra*, note 15.

distinguishing themselves visually is dealt with in paragraphs 3 and 4 of Article 44, while that of individual violations of the rules of armed conflict is dealt with in paragraph 2, so that the subject should be approached with these considerations in mind. However, the problem as a whole must be considered, for if the status of the group is contested, it will be the individuals who will be deprived of combatant or prisoner-of-war status.⁹

1688 It cannot be denied that guerrilla movements do not have the same characteristics as so-called regular forces, but this is not a new problem. It already existed in 1949 with regard to resistance movements, whose members are equally required to comply with the “laws and customs of war”. When Article 4A(2)(d) of the Third Convention states that members of militias, volunteer corps and resistance movements should conduct their operations in accordance with the laws and customs of war, this means that they must have been directed against resort to perfidy, ill-treatment of prisoners, wounded or dead, improper use of the flag of truce, and unnecessary violence or destruction.¹⁰ Thus there is no question – if this interpretation is accepted – of requiring compliance with all the rules of international humanitarian law applicable in cases of armed conflict, many of which require the machinery of the State for their full application. As has been stated, it would be misguided to expect equality where inequality exists,¹¹ and it is neither unreasonable nor unjust to postulate compliance with the rules in a less extensive and detailed manner when they are imposed upon guerrilla combatants than when they are imposed upon the so-called regular army.¹² The principle of good faith should be uppermost as much in the interpretation of treaties as in their implementation.¹³ Thus the requirement of assuring the respect of the rules of international humanitarian law is not asking the impossible for those guerrilla groups who wish to benefit from Article 43.¹⁴ The minimum threshold of rules whose application can always be required, whatever the situation, cannot be lower than that defined in Article 85 (*Repression of breaches of this Protocol*) and in the corresponding articles of the

⁹ There is a risk of abuse here which did not escape the notice of some delegations. See *O.R.* XIV, p. 333, CDDH/III/SR.33, para. 72, and pp. 361-362, CDDH/III/SR.35, para. 24; see also *O.R.* III, pp. 185-186, CDDH/III/259.

¹⁰ Cf. *Manual of Military Law, part III*, The Law of War on Land, para. 95 (London, HMSO, 1958). However, it has been claimed that members of national liberation movements cannot always fulfil all the conditions with which members of resistance movements can comply, though this statement was probably about the sign of visibility (*O.R.* XIV, pp. 320-321, CDDH/III/SR.33, para. 22). See, in addition, *O.R.* V, p. 70, CDDH/SR. 7, para. 30; p. 96, CDDH/SR.10, para. 35 and p. 98, para. 43.

¹¹ See J.J.A. Salmon, *op. cit.*, p. 81.

¹² See H. Meyrowitz, “Le droit de la guerre dans le conflit vietnamien”, 13 *AFDI*, 1967, particularly p. 176, and the statement of the NLF (National Liberation Front), in October 1965, that the Geneva Conventions contained provisions which did not correspond to either the activities or the organization of its armed forces (IRRC, August 1966, p. 400). However, the NLF nevertheless claimed that it employed a humanitarian and charitable policy towards prisoners that fell into its hands (*ibid.*, see also M. Veuthey, *op. cit.*, p. 341).

¹³ Vienna Convention on the Law of Treaties, Articles 26 and 31, para. 1.

¹⁴ However, one delegation affirmed that they should show that they were “in a position to respect, and were respecting the rules of humanitarian law” (*O.R.* XIV, pp. 371-372, CDDH/III/SR.35, para. 80).

Conventions dealing with grave breaches (First Convention, Article 50; Second Convention, Article 51; Third Convention, Article 130; Fourth Convention, Article 147). To accept that it could fall below this minimum could only compromise the object and purpose of the Conventions and the Protocol. As one delegate stated “the long list contained in Article 74 [85][...] constitutes a mini-penal code of humanitarian law”. The International Law Commission observed that it is no accident that the obligations “whose breach entails the personal punishment of the perpetrators correspond largely to the obligation imposed by certain rules of *jus cogens*”.¹⁵ However, a Party to the conflict cannot invoke impossibility of performance without a valid reason, nor use as a pretext the constraints of the other Party in order to justify possible derogations of its own.¹⁶ No doubt much will be written on this subject in the future. It is perhaps appropriate here to refer once more to the views expressed by the Norwegian representative:

“If international humanitarian law applicable in armed conflict was not to become a dead letter, it was essential first, that the rules of that law should place the Parties on an equal footing – in other words, that the rules should be equally binding on all the Parties to the conflict; secondly, that those rules should constitute a well-balanced compromise between humanitarian considerations and military necessity; lastly, that they should be drafted in such a way as to ensure that all the Parties to the conflict would have an equal interest in their application.”¹⁷

Finally, the Rapporteur in his report points out:

“Several representatives suggested, for example, that it should be stated clearly that, if a group of combatants announced that it would not respect the laws and in fact consistently violated them, all members of the group should forfeit their right to prisoner-of-war status. Others argued, however, that such behaviour by a group was unlikely given the requirements of Article

¹⁵ *O.R.* VI, pp. 299-300, CDDH/SR.44, and *ILC Yearbook*, 1976, vol. II, Part II, p. 104, para. 21. The Protocol, like the Conventions, does not contain provisions on reservations, and therefore general international law applies, including the Vienna Convention, of which Article 19(c) prohibits any reservation incompatible with the object and purpose of the treaty. Although a number of delegations came out against the possibility of making any reservations to Article 44 (*cf. supra*, pp. 520-522, and note 8), no statement to this effect was made in respect of Article 85. However, it is noteworthy that none of the Parties to the Conventions formulated any reservations regarding grave breaches, as defined in them, and which correspond to the principles laid down in Nuremberg and by the United Nations International Law Commission in 1950. In Article 85 of its draft the ICRC had proposed that all reservations should be forbidden in respect of Articles 5[5], 10[10], 20[20], 33[35], 35, paragraph 1, first sentence [37], 38, paragraph 1, first sentence [41], 41[43], 46[51] and 47[52]. This proposal was not retained by the Conference. At a more general level, see also the introduction to Part VI, *infra*, p. 1059.

¹⁶ An illustration of this principle can be found in para. 3 of Article 44 which allows a derogation from the obligation to distinguish oneself from the civilian population in exceptional circumstances for as long as such circumstances apply, and only in favour of such categories of combatants as cannot submit to the obligation because of the nature of the hostilities.

¹⁷ *O.R.* XIV, pp. 260-261, CDDH/III/SR.28, para. 8.

41 [43], that we did no need to provide specifically for it, and that in any event, there were other and better methods for punishing and deterring such behaviour and that prisoners of war could, of course, be punished for criminal offences.”¹⁸

However, this in no way detracts from the fact that armed forces as such must submit to the rules of international law applicable in armed conflict, this being a constitutive condition for the recognition of such forces, within the meaning of Article 43 (*Armed forces*).

Paragraph 2 – Compliance with the rules of international law applicable in armed conflict

1689 Under the terms of Article 85 of the Third Convention, prisoners of war prosecuted under the laws of the Detaining Power for acts committed prior to capture shall retain, even if convicted, the benefits of that Convention.¹⁹ This means that violation by a combatant of the rules of international law applicable in armed conflict, does not deprive such a combatant of his right to be treated as a prisoner of war. However, under the Hague Regulations, this did not apply to members of militias and volunteer corps, unless they gave evidence in the

¹⁸ *O.R.* XV, p. 402, CDDH/236/Rev.1, para. 86.

¹⁹ A reservation was made in this respect by the following countries: Albania, Angola, Bulgaria, Byelorussian SSR, People’s Democratic Republic of China, Czechoslovakia, German Democratic Republic, Hungary, Democratic People’s Republic of Korea, Poland, Romania, the Ukraine, USSR, Socialist Republic of Viet Nam. The text of the reservation made by the USSR was as follows: “The Union of Soviet Socialist Republics does not consider itself bound by the obligation, which follows from Article 85, to extend the application of the Convention to prisoners of war who have been convicted under the law of the Detaining Power, in accordance with the principles of the Nuremberg Trial, for war crimes and crimes against humanity, it being understood that persons convicted of such crimes must be subject to the conditions obtaining in the country in question for those who undergo their punishment.”

The United Nations International Law Commission has defined war crimes on the basis of the Nuremberg principles as: “Violations of the laws or customs of war which include, but are not limited to, murder, ill-treatment or deportation to slave-labour or for any other purpose of civilian population of or in occupied territory, murder or ill-treatment of prisoners of war or of persons on the seas, killing of hostages, plunder of public or private property, wanton destruction of cities, towns, or villages, or devastation not justified by military necessity.”

As regards crimes against humanity, these were defined by the International Law Commission as: “Murder, extermination, enslavement, deportation and other inhuman acts done against any civilian population, or persecution on political, racial or religious grounds, when such acts are done or such persecutions are carried on in execution of or in connexion with any crime against peace or any war crime.” (Report of the ILC covering the work of its second session, 1950, supplement No. 12 (A/1316). On this point, see also the 1968 Convention on the Non-Applicability of Statutory Limitations to War Crimes and Crimes against Humanity, Resolution 2840 (XXVI) of the United Nations General Assembly on the question of the punishment of war criminals and of persons who have committed crimes against humanity and Resolution XII of the XXIst International Conference of the Red Cross (Istanbul, 1969), “War crimes and crimes against humanity”. The reservations made by the above-mentioned countries to Article 85 of the Third Convention are in no way set aside by the Protocol. In addition, See C. Pilloud, “Reservations to the Geneva Conventions of 1949”, *op. cit.*

field that they did indeed fulfil the conditions listed in Article 1 of the Regulations. Thus they had to prove that they acted in accordance with the laws and customs of war in their operations.²⁰ Article 4A(2) of the Third Convention does not seem to have modified this situation²¹ with regard to members of resistance movements, so that the paragraph under consideration here actually constitutes an amendment to that article on this point. In fact, this paragraph is perfectly clear and abolishes any distinction; whether it concerns a guerrilla fighter or a uniformed soldier of the regular army, if such a combatant has violated the rules of international law applicable in armed conflict, that fact by itself shall not deprive him of his status. Any other solution would have been considered to be unjust²², or completely inappropriate²³, because it would be seen as tending to encourage the escalation of violence. This is not without prejudice to the problem of civilian population. This forms the object of paragraphs 3 and 4 of this article.

1690 As regards members of regular armed forces, the Protocol therefore does not change the situation provided for in the Third Convention. They remain prisoners of war, even after they have been convicted for breach of the law applicable in armed conflict, unless they have been captured by a Party to the conflict which has made a reservation to Article 85 of the Third Convention.²⁴ In this case prisoner of war status is withdrawn in the case of a “war crime”.²⁵ All members of armed forces recognized by the Protocol practising guerrilla warfare, benefit from the same prerogatives and are subject to the same restrictions. However, such guerrilla fighters can never be prosecuted for the mere fact of taking up arms, as before capture they had the status of legitimate combatants.²⁶ Finally, the obligation for all combatants to comply with the rules of international law applicable in armed conflict remains in its entirety, for such combatants can be punished in case of breach. This certainly indicates that in this article the Protocol in no way legalizes terrorism, as has sometimes been claimed.²⁷

²⁰ See “The Hostages Trial”, 8 *Law Reports*, pp. 57-59 and 75.

²¹ See, for example, W.J. Ford, “Resistance Movements and International Law”, *IRRC*, October 1967 to January 1968, particularly December 1967, pp. 628-629; for the discussion of the problem, see A. Rosas, *op. cit.*, pp. 333-338 and pp. 361-375. This requirement also applied to a *levée en masse* (Third Convention, Article 4A(6) for which the conditions remain unchanged since it does not concern members of armed forces organized in accordance with Article 43 (see, in addition, *supra*, ad Art. 43, p. 510 and *infra*, pp. 532-533).

²² See in particular, *O.R.* XIV, pp. 444-556, CDDH/III/SR.33-36, Annex, in particular pp. 519-520, para. 6.

²³ *Ibid.*, p. 520, paras. 7 and 8, and pp. 547-548, para. 14; for the opposite point of view, see *O.R.* XV, p. 122, CDDH/III/51, paras. 5 and 6, and pp. 137-138, CDDH/III/SR.53, paras. 16-20.

²⁴ *O.R.* XV, p. 402, CDDH/236/Rev.1, para. 87.

²⁵ *Supra*, note 19.

²⁶ See also *O.R.* XIV, pp. 321-322, CDDH/III/SR.33, paras. 26-28.

²⁷ In this context, terrorism is understood to be the systematic attack on non-military objectives in order to force the military elements of the adverse Party to comply with the wishes of the attacker by means of the fear and anguish induced by such an attack.

Paragraph 3 – Distinction between combatants and the civilian population

1691 This paragraph comprises three sentences. The first sentence expresses the fundamental rule that combatants are obliged to distinguish themselves from the civilian population while they are engaged in an attack or in a military operation preparatory to an attack. The second sentence contains an exception to the general rule, which is itself mitigated by a concession to this rule.²⁸ The third sentence is a safeguard clause intended to prevent acts from being considered as acts of perfidy if they comply with the requirements provided for in the second sentence. Thus combatants are obliged to distinguish themselves from the civilian population, albeit not in all circumstances.

First sentence – The fundamental obligation for combatants to distinguish themselves from the civilian population

1692 This provision imposes the fundamental rule that combatants are obliged to distinguish themselves from the civilian population while they are engaged in an attack or in a military operation preparatory to an attack, or in any action carried out with a view to combat. It would be a mistake to see it as a purely perfunctory statement or a provision which, at best, refers to so-called regular military operations and not to guerrilla tactics. In reality, under normal conditions members of so-called regular forces wear uniform more or less permanently and this article is not intended to change this practice (paragraph 7). Thus it is guerrilla fighters who are the chief concern of this provision. The wording in particular has the advantage of unambiguously indicating that the exception provided for in the second sentence is certainly only an exception.²⁹

1693 According to some delegations, this distinction should be clearly recognizable,³⁰ as in Article 4A(2) (b) of the Third Convention,³¹ and throughout military operations.³² Others considered that this general rule does not “seem to differ from universally acknowledged standards”.³³ The minimum conclusion which can be drawn from these indications is that any armed combatant (see the wording of the exception in the second sentence) should, in the context of this provision, clearly distinguish himself from the civilian population by means of a

²⁸ This procedure is not exceptional in any way; see, for example, Art. 33, para. 2, of the First Convention and *Commentary I*, p. 275.

²⁹ See *O.R.* XV, CDDH/III/SR.55, p. 158, para. 17, and p. 159, para. 24; and CDDH/III/SR.56, p. 175, para. 36, and p. 186, para. 82; *O.R.* VI, CDDH/SR.40, p. 134, paras. 79 and 83; and CDDH/SR.41, p. 144, para. 19; p. 146, para. 26; p. 149, para. 41; p. 150, para. 44.

³⁰ *O.R.* XV, p. 166, CDDH/III/SR.55, para. 63; *O.R.* VI, p. 136, CDDH/SR.40, and p. 150, CDDH/SR.41, para. 44.

³¹ *O.R.* XV, p. 172, CDDH/III/SR.56, para. 19.

³² *O.R.* VI, p. 132, CDDH/SR.40, para. 74.

³³ *O.R.* XV, p. 158, CDDH/III/SR.55, para. 17.

characteristic piece of clothing which is visible, as long as he is armed, and whatever the nature of his arms.³⁴

1694 On the other hand, it seems doubtful, in the light of the wording of the second sentence of this paragraph, which deals only with “armed” combatants, that the obligation also extends to members of a guerrilla movement who are not armed and whose participation in military operations may or may not be limited, but remains indirect. As a general rule, combatants of this category, whose activity may indicate their status,³⁵ should be taken under fire only if there is no other way of neutralizing them.³⁶ However, it is self-evident that if they are in an area of military objectives, they run the risks to which these military objectives are exposed. If they are caught in the act of spying, they may be treated as spies. When they are captured, they may be treated as spies, if there are grounds to do so.

1695 Finally, the *ratio legis* of this provision is given by the clause which states that it is “in order to promote the protection of the civilian population from the effects of hostilities” that combatants are obliged to distinguish themselves. Since the adversary is obliged at all times to make a distinction between the civilian population and combatants, in order to ensure respect for and protection of the civilian population (Article 48 – *Basic rule*), such a distinction must be made possible. If, for example, the invader is confronted during his advance (the problem of occupation will be examined in the second sentence) by a combined resistance of regular forces presenting identifiable military targets, and the harassment of guerrilla forces which are indistinguishable from the civilian population, it is more or less certain that the security of this population will end up by being seriously threatened. One delegation went so far as to affirm that in unoccupied territory a guerrilla fighter can always manage to distinguish himself from the civilian population when he is engaged in a military operation.³⁷ It is certain that the humanitarian principle requiring appropriate clothing, applies throughout military operations³⁸ in all cases which are not covered by the second sentence of this paragraph.

1696 With one exception, the sanction for a guerrilla fighter failing to comply with the obligation to distinguish himself from the civilian population in accordance with this provision, when required to do so, will be “merely trial and punishment for violation of the laws of war, not loss of combatant or prisoner of war status”.

³⁴ However, it would no longer be possible to deny the status of combatant and prisoner of war to a guerrilla fighter armed only, for example, with a pistol or hand grenade, possibly concealed, by alleging that he is not carrying his arms openly (cf. *British Military Manual* quoted above, para. 94, which denies the status of combatant to a guerrilla fighter armed in this way).

³⁵ The function of such unarmed combatants can consist of carrying out reconnaissance missions, transmitting information, maintaining communications and transmissions, supplying guerrilla forces with arms and food, hiding guerrilla fighters (F.A. von der Heydte, *Annuaire IDI*, 1969, vol. 2, p. 56, quoted by M. Veuthey, *op. cit.*, p. 307)(see also *supra*, ad Art. 43, p. 515).

³⁶ Whether one considers the obligations imposed on armed guerrilla fighters, limited to the period of military operations, or the situation of unarmed guerrilla fighters, it should be noted that in either case it amounts to an amendment of Article 4A(2)(b) of the Third Convention. For the view that such limitations were already implicitly contained either partly or wholly in the above-mentioned provision, see A. Rosas, *op. cit.*, pp. 349-352.

³⁷ O.R. XV, p. 157, CDDH/III/SR.55, para. 12.

³⁸ And in particular, as stated above, as soon as a combatant is armed.

The exception leading to loss of status relates to “the guerrilla fighter who relies on his civilian attire and lack of distinction to take advantage of his adversary in preparing and launching an attack”.³⁹ It will be examined in detail in the context of the second sentence of this paragraph and of paragraph 4. Suffice it to say here that the combatant can lose his status just as easily when he fails to carry his arms openly in the exceptional situations referred to in the second sentence, as when he abusively assumes the existence of an exceptional situation and fails to wear a distinctive sign in combat.

Second sentence – Exception to the fundamental obligation and limitations on this exception

1697 The first part of this provision specifies, or endeavours to specify situations in which a guerrilla fighter cannot be required to distinguish himself from the civilian population under the conditions laid down in the first sentence. The second part of the sentence imposes the obligation on this guerrilla fighter to carry his arms openly, not only during a military engagement, but also during the period preceding the engagement, if he wishes to retain his status. These two points will be examined in turn below.

a) *Situations where, owing to the nature of the hostilities, an armed combatant cannot distinguish himself from the civilian population*

1698 As stated before, we are dealing with an exception. According to the Rapporteur,

“That exception recognized that situations could occur in occupied territory and in wars of national liberation in which a guerrilla fighter could not distinguish himself [from the civilian population] throughout his military operations and still retain any chance of success.”⁴⁰

³⁹ Report of the Rapporteur, *O.R.* XV, p. 453, CDDH/407/Rev.1, para. 19.

⁴⁰ *O.R.* XV, p. 453, CDDH/407/Rev.1, para. 19. As stated above, guerrilla warfare is caused “en partie par les inégalités existant entre les moyens militaires et logistiques des occupants et ceux des résistants: la guérilla s’efforce de compenser ces inégalités par des procédés de lutte spécifiques. La surprise, l’embuscade, le sabotage, le combat de rues ou le combat au maquis se substituent à la guerre en rase campagne et à l’affrontement d’unités militaires comparables. Dans ces procédés, le port d’armes apparent et le signe distinctif peuvent ou bien n’avoir pas de signification (pour le sabotage ou l’embuscade par exemple), ou bien être réellement incompatibles avec l’efficacité de la lutte (par exemple lorsque les guérilleros s’appuient sur la population ou sont mêlés à elle). Dès lors, refuser les procédés spécifiques, c’est refuser la guérilla. Le droit humanitaire, pour être objectif et crédible, doit laisser à chaque partie des chances égales dans le combat: si une norme de ce droit est incompatible avec ce principe et rend impossible d’avance, pour l’une des parties, la perspective de la victoire, mieux vaut renoncer à établir la norme” (“partly by the inequality existing between the military and logistic means of the occupying forces and those of the resistance forces: the guerrilla fighter attempts to compensate for such inequality by specific procedures in combat. Surprise tactics, ambushes, sabotage, street fighting or fighting in the maquis take the place of war conducted in open country and
(continued on next page)

For many delegations such situations were above all the wars of national liberation referred to in Article 1 (*General principles and scope of application*), paragraph 4.⁴¹ Some even wished to make an explicit reference to this in the context of the provision under consideration here. However, this proposal was strongly opposed by others.⁴² Thus, according to the text, it is “the nature of the hostilities” that is the determining factor (see *supra*, note 40), without explicit reference to either wars of national liberation or to occupied territory. However, for the majority of those delegations who expressed their views on this point, this clause does actually refer to situations which can only arise in occupied territory, apart from wars of national liberation, which in any case, it could be claimed, also take place in occupied territory.⁴³ Some delegations stated that this rule can only

confrontations between comparable military units. In such procedures the visible carrying of arms and distinguishing signs may either have no significance (for example, in sabotage or in an ambush), or they may really be incompatible with the practicalities of the action (for example, if the guerrilla fighters use the population for support or are intermingled with it). Because of this, refusing to allow specific procedures would be to refuse guerrilla warfare. In order to remain objective and credible, humanitarian law must allow every party an equal chance in combat. If a norm of this body of law is incompatible with this principle and makes it impossible from the outset for one of the parties to have any prospect of victory, it is better not to draft such a norm at all”) (translated by the ICRC) Ch. Chaumont, “La recherche d’un critère pour l’intégration de la guérilla au droit international humanitaire contemporain”, in *Mélanges offerts à Charles Rousseau*, Paris, 1974, p. 43, at p. 50, quoted by J.J.A. Salmon, *op. cit.*, p. 89. However, it should be noted that the Conference did not follow these views to the point of dropping the requirement of carrying arms openly.

⁴¹ For the discussions in Committee III, see *O.R. XV*, CDDH/III/SR.55, p. 161, para. 37; p. 162, paras. 42 and 43; p. 163, paras. 45 and 49; p. 165, para. 58; p. 168, para. 69; and CDDH/III/SR.56, p. 169, para. 2; p. 170, para. 6; p. 171, para. 12; p. 175, para. 33; p. 180, paras. 57 and 61; p. 183, para. 71; p. 185, paras. 77 and 79. For the discussions in the plenary meetings on Article 44 in general, see *O.R. VI*, CDDH/SR.40, p. 125, paras. 35-37; p. 126, para. 40; p. 129, paras. 58 and 61; p. 132, para. 75, pp. 138-139 (Annex); and CDDH/SR.41, p. 141, para. 2; p. 142, para. 8; p. 144, para. 14; p. 146, paras. 25-26; p. 149, paras. 38 and 41; p. 150, para. 47; p. 151, paras. 48-49; p. 152, para. 55; p. 153, para. 56; p. 154, paras. 62 and 65; p. 183 (Annex); p. 185, pp. 189-191 and 196. These references do not take into account the preliminary discussions (*O.R. XIV*, pp. 317-385, and pp. 445-556, CDDH/III/SR.33-36).

⁴² In the questionnaire submitted by the Rapporteur to the Working Group of Committee III, (see *supra*, ad Art. 43, note 28), the following question was asked under number 11: Should there be distinct norms regarding the right to prisoner-of-war status of combatants who do not comply with the requirements of Article 4 of the Third Convention, or should there only be a single norm applicable to all members of the armed forces of a Party to the conflict? Most of the delegations wanted only a single norm.

⁴³ See, for example, the declaration of understanding made by the United Kingdom, when it signed the Protocol on 12 December 1977 (1c): “that the situation described in the second sentence of paragraph 3 of the Article [44] can exist only in occupied territory or in armed conflicts covered by paragraph 4 of Article 1”; see also, *O.R. XV*, CDDH/III/SR.56, p. 172, para. 19; p. 174, para. 28; p. 176, para. 39; p. 179, para. 53 for the discussions in the Committee, and for the plenary meetings, *O.R. VI*, CDDH/SR.40, p. 123, para. 22; CDDH/SR.41, p. 146, para. 24; p. 150, para. 45; however, some of these delegations abstained from the vote on Article 44 (see *supra*, note 6). Others considered that “situations of armed conflict in which, because of the hostilities, the combatants were unable to distinguish themselves from the civilian population were not defined, but left to each party to appraise as it pleased and arbitrarily” (*O.R. VI*, pp. 130-131, CDDH/SR.40, para. 68). One delegation referred to the concept of “national and social liberation movements” (*ibid.*, p. 153, CDDH/SR.41, para. 60).

cover exceptional cases such as those which arise in occupied territories, or alternatively extremely exceptional cases which can only arise in occupied territories.⁴⁴ On the other hand, other delegations were less restrictive and envisaged “certain situations here, for instance in occupied territories”,⁴⁵ or simply “situations of guerrilla warfare”, i.e., situation in warfare to which “the weaker party normally would have to resort in the context of resistance against the domination of a territory by alien forces”, and even defence against an aggressor.⁴⁶

The problem of occupation

1699 These reservations can perhaps be partly explained by the fact that it is not always easy to determine exactly whether or not a territory is occupied in the sense of *occupatio bellica*, or from what moment that can be considered to be the case.⁴⁷ With the exception of certain cases of concealed occupation, it does not seem that there can be a question of occupation except where organized military resistance has been defeated, where the sovereign exercise of power conferred by law on the government has become impossible, and where an administration has been established for the purpose of maintaining law and order:

“The term invasion implies a military operation while an occupation indicates the exercise of governmental authority to the exclusion of the established government. This presupposes the destruction of organized resistance and the establishment of an administration to preserve law and order. To the extent that the occupant’s control is maintained and that of the civil government eliminated, the area will be said to be occupied.”⁴⁸

1700 However, as soon as control of the occupied territory is once more put in doubt as a result of fighting, whether or not this is in conjunction with forces from outside the occupied territory, the status of occupation ceases to exist in the region concerned:

“Any part of territory in which the occupant has been deprived of actual means for carrying out normal administration by the presence of opposing military forces would not have the status of “occupied” territory within the terms of Articles 2 and 42 of the Hague Regulations. The fact that other parts of the occupied country, as a whole, are under effective enemy occupation would not affect this situation.”⁴⁹

⁴⁴ See *O.R.* XV, p. 166, CDDH/III/SR.55, para. 63 and p. 186, CDDH/III/SR.56, para. 83; *O.R.* VI, CDDH/SR.40, p. 123, para. 22; p. 127, para. 47; p. 136, para. 2b (Annex); CDDH/SR.41, p. 152, para. 53.

⁴⁵ See *O.R.* XV, p. 182, CDDH/III/SR.56, para. 67.

⁴⁶ *Ibid.*, pp. 158 and 159, CDDH/III/SR.55, paras. 17 and 24; see also *ibid.*, p. 163, para. 49.

⁴⁷ When ratifying the Protocol on 11 June 1979, Yugoslavia made a declaration that under the terms of the Yugoslav Constitution, “no one shall have the right to acknowledge or sign an act of capitulation nor to accept or recognize the occupation of the Socialist Federal Republic of Yugoslavia or of any of its individual parts”. See also *O.R.* XIII, p. 120, CDDH/II/SR.65, para. 21.

⁴⁹ “Trial of Carl Bauer, Ernst Schrameck and Herbert Falten”, 8 *Law Reports*, p. 18.

- 1701 Consequently the concept of occupation can have some degree of flexibility, if only according to the development of the military situation. Apart from this, these concepts do not necessarily influence the conditions of the applicability of the Fourth Convention; as they fall into the power of the invader, the inhabitants of the invaded territory become protected persons.
- 1702 The interpretation of the clause that “the nature of the hostilities” determines the extent of the exception, would be easier to resolve if the type of combatant involved in the fighting – the guerrilla combatant – were considered in the context of a military situation which leaves no alternative⁵⁰ to one or other of the Parties to the conflict apart from guerrilla warfare. This implies either that there are no armed forces comparable to those of the adversary and capable of stopping the invasion or preventing occupation, or that the resistance of such forces has completely ceased. It would seem that only the responsible command mentioned in Article 43 (*Armed forces*) is in a position to determine the existence of such a situation and that consequently this provision is applicable for the members of the armed forces concerned.

Governmental armed forces

- 1703 However,

“Regulars who are assigned to tasks where they must wear civilian clothes, as may be the case, for example, with advisers assigned to certain resistance units, are not required to wear the uniform when on such assignments”.⁵¹

This means that the possibility for a combatant to distinguish himself from the civilian population solely by carrying arms openly, also exists for members of the regular armed forces, though only under the same exceptional circumstances as for members of so-called guerrilla forces.⁵²

Levée en masse

- 1704 Finally, in case of certain Parties to the conflict limiting the applicability of this provision strictly to occupied territories, the concept of *levée en masse* (mass

⁵⁰ To keep to the text, the key to this provision seems to lie in the reference to situations in which an armed combatant (an unarmed combatant can never lose his status unless he is a spy or mercenary): “cannot so distinguish himself [from the civilian population]”. Such situations may result from the occupation and the security measures taken by the occupying forces relating to the possession of arms by the inhabitants of the occupied territory, for example, but they are not restricted to this aspect. In fact, they cover methods of war which have become common, so-called asymmetrical conditions of combat, where the balance of power is out of all proportion in favour of one of the Parties, whether or not the legal régime applicable to occupation is in force, accepted or contested, recognized or denied (see *O.R.* XIV, p. 324, CDDH/III/SR.33, para. 37; p. 339, CDDH/III/SR.34; p. 374, CDDH/III/SR.36, paras. 8-9; *O.R.* VI, p. 124, CDDH/SR.40, para. 28; p. 127, para. 44; pp. 132-133, paras. 75-76).

⁵¹ Report of the Rapporteur, *O.R.* XV, p. 401, CDDH/236/Rev.1, para. 84.

⁵² See *O.R.* VI, CDDH/SR.41, p. 146, para. 24 and p. 149, para. 43.

uprising) could be invoked⁵³. It cannot be overlooked, as it allows the combatants to distinguish themselves solely by carrying their arms openly. It seems to be accepted nowadays that a *levée en masse* can take place in any part of the territory which is not yet occupied, even when the rest of the country is occupied, or in an area where the Occupying Power has lost control over the administration of the territory and is attempting to regain it.⁵⁴ On the other hand, it does not seem conceivable with regard to a retreating enemy, as this is manifestly no longer an invading army.

1705 According to the traditional interpretation, it is not necessary for the population engaged in the *levée en masse* to be surprised by the invasion; the provision on the *levée en masse* is also to the advantage of a population which has been forewarned, provided that it has not had time to organize itself in accordance with the requirements laid down in Article 43 (*Armed forces*). This benefit is also accorded to a population acting on the orders of its government, for example, obeying orders given by radio or through the media. The requirement of carrying arms openly must probably be understood as an obligation to always carry them visibly.

b) *Conditions under which the combatant must carry his arms openly*

1706 This obligation to carry arms openly applies:

- “(a) during each military engagement; and
- (b) during such time as he [the combatant] is visible to the adversary while he is engaged in a military deployment preceding the launching of an attack in which he is to participate.”

1707 The possibility for the combatant referred to in this provision not to always distinguish himself from the civilian population by his clothing, as indicated above, is in his interests. The obligation to respect at least the minimum conditions now indicated, is in the interests of the civilian population. The Rapporteur expressed it very well:

“The purpose of this requirement is to identify the individual as a combatant. Implicitly, the rule requires that the combatant knows, or should know, that he is visible. The purpose of this rule, of course, is to protect the civilian population by deterring combatants from concealing their arms and feigning civilian non-combatant status, for example, in order to gain advantageous positions for the attack. Such actions are to be deterred in this fashion, not simply because they are wrong (criminal punishment could deal with that),

⁵³ “Inhabitants of a non-occupied territory, who on the approach of the enemy spontaneously take up arms to resist the invading forces, without having had time to form themselves into regular armed units, provided they carry arms openly and respect the laws and customs of war” have the right to prisoner-of-war status in the event of capture (Third Convention, Article 4A(6)).

⁵⁴ See “Trial of Carl Bauer, Ernst Schrameck and Herbert Falten”, 8 *Law Reports*, p. 18; see also A. Rosas, *op. cit.*, pp. 377-378.

but because this failure of even minimal distinction from the civilian population, particularly if repeated, places that population at great risk.”⁵⁵

1708 Sub-paragraph (a): The point about carrying arms openly during all military engagements is self-evident. It means that the arms must be carried openly during the battle itself, whether it is of an offensive or defensive nature. In fact, sub-paragraph (b) is usually concerned with offensive action where the combatant concerned takes the initiative, which is certainly not typical of all combat operations. It is even possible that a skirmish might continue during retreat, in which case a guerrilla combatant must incontestably carry his arms openly, particularly when he is surrounded by civilians in flight. While combatants take up a defensive position they must carry arms openly when intending to open fire. This does not exclude the possibility of an ambush, but an ambush is subject to the same conditions as those which apply to uniformed troops. It is the natural or artificial environment which should camouflage the combatant engaged in the ambush, and not his civilian clothing, and he should carry his arms in the same way as a soldier of the regular army would in the same situation.⁵⁶

1709 Sub-paragraph (b): As stated above, deployment usually means offensive action. However, there was a considerable difference of opinion during the Conference on its interpretation. The Rapporteur summarized these views as follows:

“Some delegations stated that they understood it as meaning any movement toward a place from which an attack was to be launched.⁵⁷ Other delegations stated that it included only a final movement to firing positions.⁵⁸ Several delegations stated that they understood it as covering only the moments immediately prior to attack”.⁵⁹

1710 For supporters of the first interpretation, deployment would have commenced when the person or persons concerned moved out from an assembly point or

⁵⁵ *O.R.* XV, pp. 402-403, CDDH/236/ Rev.1, para. 88.

⁵⁶ See, for example, *Reaffirmation*, “Conclusions and Recommendations of World Veterans Federation, 1967”, p. 072, para. 5(c) (Annex XIX).

⁵⁷ In this sense, see, in the plenary meetings, *O.R.* VI, p. 123, CDDH/SR.40, para. 23; p. 128, para. 53; p. 132, para. 74; p. 136, para. 2c; and p. 142, CDDH/SR.41, para. 6; p. 146, para. 24; p. 150, para. 46; p. 152, para. 53. When signing the Protocol on 12 December 1977, the United States and the United Kingdom made a declaration of understanding stating that the term “deployment” signifies “any movement towards a place from which an attack is to be launched”. On depositing its instruments of ratification on 15 January 1982, the Republic of Korea made the following declaration: “In relation to Article 44 of Protocol I, the situation described in the second sentence of para. 3 of the Article can exist only in occupied territory or in armed conflicts covered by para. 4 of Article 1, and the Government of the Republic of Korea will interpret the word ‘deployment’ in para. 3(b) of the Article as meaning ‘any movement towards a place from which an attack is to be launched’.”

⁵⁸ To some extent, see in this sense, in the plenary meetings, the statement that “military deployment meant the last step when the combatants were taking their firing positions just before the commencement of hostilities” (*O.R.* VI, p. 145, CDDH/SR.41, para. 21; see also *ibid.*, p. 146, para. 25).

⁵⁹ In this sense, see in the plenary meetings, *O.R.* VI, p. 147, CDDH/SR.41, para. 31. For the quotation from the Rapporteur’s Report, see *O.R.* XV, p. 453, CDDH/407/Rev.1, para. 20.

rendezvous, with the intention of advancing on their objective, and at that point, regardless of risks, arms must be carried openly;⁶⁰ the words meant “any uninterrupted tactical movement towards a place from which an attack was to be launched”,⁶¹ a movement in which combatants could not use their failure to distinguish themselves from civilians as an element of surprise in the attack.⁶²

1711 The question is important: there is more than a subtle difference between “any movement toward a place from which an attack is to be launched” and the “military deployment preceding the launching of an attack”,⁶³ “the last step when the combatants were taking their firing positions just before the commencement of hostilities”⁶⁴ and the deployment “immediately before the attack, often coinciding with the actual beginning of the attack”.⁶⁵ Now the violation of this provision entails the application of paragraph 4, which opens the way to sanctions.⁶⁶

1712 However, such military deployment is only subject to the rule on the open carrying of arms by a combatant taking part in it, “during such time as he is visible to the adversary”. This clause implies that the combatant knows or should know that he is visible to the adversary,⁶⁷ and failing this, the obligation does not apply.⁶⁸ One delegation which expressed its view on this matter in plenary meeting considered that the guerrilla combatant only has to carry his arms openly “when within range of the natural vision of his adversary”.⁶⁹ A representative of a national liberation movement added, “visible to the naked eye”,⁷⁰ which would exclude electronic means of surveillance and of observation. This interpretation is justified by the fact that it is mainly in cases when he can be seen directly,⁷¹ that a guerrilla fighter can open fire and that his adversary is immediately threatened. It is therefore at that moment that the distinction between an armed combatant and an innocuous civilian should be perfectly clear, if a confusion

⁶⁰ *O.R.* XV, p. 176, CDDH/III/SR. 56, para. 38.

⁶¹ *Ibid.*, p. 167, CDDH/III/SR.55, para. 64; M. Bothe, K. Ipsen and K.J. Partsch give the following version in German: “[...] während des dem Angriffsbeginn vorausgehenden Aufmarsches”, *op. cit.*, p. 34.

⁶² *O.R.* XV, p. 179, CDDH/III/SR.56, para. 53.

⁶³ *Ibid.*, p. 174, para. 29.

⁶⁴ *Cf. supra*, note 58.

⁶⁵ See *O.R.* VI, pp. 147-148, CDDH/SR.41, para. 31.

⁶⁶ One expedient for those who cannot agree with the interpretation of the United States and the United Kingdom would be to accept that in all cases arms must be carried openly, at least from the moment that they are loaded.

⁶⁷ Report of the Rapporteur, *O.R.* XV, p. 402, CDDH/236/Rev.1, para. 88.

⁶⁸ *O.R.* XV, p. 161, CDDH/III/SR.55, para. 37. As the guerrilla fighter does not normally have any appropriate detectors, it seems difficult to accept that this clause could include “any form of surveillance, electronic or otherwise, used to keep a member of the forces of an adversary under observation” (*ibid.*, p. 165, para. 55; see also, p. 157, para. 13; p. 176, CDDH/III/SR.56, para. 38). However, this seemed to be the view of some delegations.

⁶⁹ *O.R.* VI, p. 145, CDDH/SR.41, para. 21.

⁷⁰ *Ibid.*, p. 147, para. 31.

⁷¹ In fact, it seems reasonable to accept that this rule only covers light arms with a short firing range. Heavy arms (mortars etc.) are generally camouflaged, even when they are fired, particularly against aerial view, and it is their position, not their concealment, which could compromise the security of the civilian population.

between civilians and combatants is to be avoided; the Protocol would then fail to achieve its aim (Article 48 – *Basic rule*). It is also the acceptance by the guerrilla fighter of the risk of being recognized as a legitimate military target from this moment on that distinguishes him from a terrorist.⁷²

1713 On the other hand, the formula of the open carrying of arms and of deployment does not provide an adequate answer in cases where a combatant in civilian clothing uses arms which must not be prematurely revealed if they are to be effective, for example, a hidden device consisting of a bomb in a suitcase, and this fact was not overlooked.⁷³ However, in this respect the situation is not fundamentally different from that which applies to mines and booby-traps which are also used by regular forces. Thus it is only by wearing a distinguishing sign when placing these devices in position, that these combatants can be distinguished from the civilian population.⁷⁴

1714 *In conclusion*, the wording of the second sentence of paragraph 3 represents a compromise which was only achieved after long and patient negotiation. The Rapporteur made the following remark regarding the article as a whole, which applies particularly to this point:

“it represented a major development in the law to make it conform more closely to reality, while at the same time giving the guerrilla fighter an incentive to distinguish himself from the civilian population where he reasonably could be expected to do so”.⁷⁵

However, it is a fact that no delegation at the Conference finally got precisely the terms it wished, whether this was because of the lack of explicit mention of national liberation movements or occupied territory, which some would have wanted, or of guerrilla combatants, which others would have wanted. The interpretation of the term “deployment” remained the subject of divergent views. Although the rule does not specify exactly its scope of application with regard to specific situations, it does not exclude any particular situation once reality, and consequently humanity, requires that the rule applies. From the practical point of view, the fundamental interests of the civilian population and the concern of both Parties to the conflict not to alienate this population by conduct which could lead to most serious errors or the worst abuses, should dictate the most reasonable and consistent interpretation that is possible in any specific situation. Perhaps solutions can best be found in specific situations as the outcome of a sort of interaction, i.e., the search from both sides for an intermediate interpretation that is acceptable in practice. The obligation to carry arms openly during any deployment preceding the launching of an attack should in reality, in order to be effective, present itself as an equation offering, in the final analysis, comparable advantages to both Parties to the conflict.

⁷² See *O.R.* XIV, p. 328, CDDH/III/SR.33, para. 47.

⁷³ *O.R.* VI, CDDH/SR.40, p. 121, para. 17 and p. 124, para. 31.

⁷⁴ *Cf.* the remark of one delegation which stated that the term “arms” should mean any military arms of any sort whatsoever (*O.R.* XV, p. 161, CDDH/III/SR.55, para. 37).

⁷⁵ Report of the Rapporteur, *O.R.* XV, p. 454, CDDH/407/Rev.1, para. 21.

Third sentence – Saving clause against the unfounded accusation of perfidy

1715 There is a certain contradiction in the terms between the provisions of the first two sentences of this paragraph and the text of Article 37 (*Prohibition of perfidy*), paragraph 1(c). Amongst the examples of perfidy, this article cites the “feigning of civilian, non-combatant status”. The combatants referred to in Article 44 are not always obliged to reveal their status. Certain delegations therefore made their acceptance of the above-mentioned text of Article 37 (*Prohibition of perfidy*) subject to the insertion of this safeguard clause: acts which comply with the requirements laid down in this paragraph are not perfidious. However, it follows that those which do not comply with these requirements are, or may be, perfidious. Hence the fundamental importance of a consistent interpretation of the preceding rules by the Parties to the conflict. Moreover, in all cases where the captor considers that the provisions of this paragraph have been violated, it is up to him to furnish proof (Article 75 – *Fundamental guarantees*, paragraph 4(d)).⁷⁶

Paragraph 4 – Sanctions in case of violation of the requirements laid down in the second sentence of paragraph 3

1716 The introduction of this paragraph gave rise to some difficulties. Being concerned essentially with the protection of the civilian population, certain delegations simply wanted to deprive any combatants who do not comply with the minimum requirement of visibility laid down in paragraph 3 of their combatant and prisoner-of-war status. To this, other delegations replied that combatants without visible signs are not more indifferent of the civilian population than others, and that in these circumstances all combatants who do not respect the civilian population should be deprived of their status. In addition, representatives of national liberation movements claimed that members of these movements derive their status exclusively from Article 1 (*General principles and scope of application*), paragraph 4, and considered any other solution as discrimination against them.

1717 However, towards the end of the third session of the Conference, the text of paragraph 4 finally emerged from these opposing views,⁷⁷ which had for a long time seemed irreconcilable. According to the Rapporteur, it

“[...] was considered as the best basis for a compromise. It obtained a considerable degree of support. In essence, paragraph 4 provides a separate, but equal, status for combatants who are captured while failing to observe even the minimum rule of distinction set forth in the second sentence of paragraph 3. They are not to be prisoners of war (and under paragraph 3, they will have forfeited their combatant status), but they shall benefit from

⁷⁶ On this point, see also *infra*, ad Art. 45, p. 543.

⁷⁷ See particularly *O.R.* XIV, pp. 464-467, CDDH/III/SR. 33-36, paras. 4-16; p. 476, para. 5; pp. 476-477, para. 7; p. 481, para. 6; p. 500, para. 7; pp. 513-514, para. 5; p. 515, para. 2; p. 522, paras. 10-11; p. 536, para. 7; pp. 552-553, paras. 11-15.

procedural and substantive protections equivalent to those accorded prisoners of war by the Third Geneva Convention and Protocol I. Several representatives made the point that this paragraph is not, in any event, intended to protect terrorists who act clandestinely to attack the civilian population.”⁷⁸

- 1718** The first sentence contains the principle that the combatant who has violated the provisions of the second sentence of paragraph 3, loses his right to prisoner-of-war status, but preserves the right to be treated as one. The second sentence assures this prisoner the procedural guarantees laid down in the Third Convention in the event that he is tried and punished for any offences he may have committed.

First sentence – Loss of prisoner-of-war status and treatment as a prisoner of war

- 1719** This provision covers combatants whose membership of armed forces organized in accordance with Article 43 (*Armed forces*) is not in doubt, whether or not this problem of membership is resolved by reason of the presumptions established by Article 45 (*Protection of persons who have taken part in hostilities*), paragraph 1.⁷⁹ It applies to combatants captured *flagrante delicto*⁸⁰ of a breach of the second sentence of paragraph 3. Thus this could be a combatant who distinguishes himself from the civilian population solely by openly carrying his arms in a situation where the exception allowed in paragraph 3 does not apply, or a combatant whose exceptional situation is certainly recognized, but who does not carry his arms openly under the stated minimum requirements. The text is explicit: the combatant loses his right to be considered as a prisoner of war, but he is treated as a prisoner of war (“he shall nevertheless be given protections equivalent in all respects to those accorded to prisoners of war by the Third Convention and by this Protocol”). In fact, if one refers to the wording of the second sentence of paragraph 3 (“[...] he shall retain his status as a combatant, provided that, in such situations, [...]”), it should be remembered that, above all, this person has lost his status as a combatant. Thus criminal prosecution becomes possible, even for hostile acts which would not be punishable in other circumstances. In other words, such a prisoner can be made subject to the provisions of the ordinary penal code of the Party to the conflict which has captured him. At least, this is the view of the majority of the delegations.⁸¹ However, one representative was less formalistic as he merely declared that “theoretically”, such a combatant no longer had the status of prisoner of

⁷⁸ *O.R.* XV, p. 403, CDDH/236/Rev.1, para. 90.

⁷⁹ See *infra*, p. 546.

⁸⁰ See *infra*, ad para. 5, p. 539.

⁸¹ See for the discussions of the Committee, *O.R.* XV, p. 157, CDDH/III/SR.55, para. 14; p. 159, para. 21; p. 165, para. 56; and p. 171, CDDH/III/SR.56, para. 14; p. 177, para. 45; p. 179, para. 55; p. 182, para. 68, and, for the plenary meetings, *O.R.* VI, p. 128, CDDH/SR.40, para. 52; p. 132, para. 74; and p. 146, CDDH/SR.41, para. 24; p. 151, para. 48, and p. 152, para. 53.

war.⁸² Whichever view one supports, criminal proceedings always remain available in the case of a breach of Article 37 (*Prohibition of perfidy*), i.e., in case the combatant in question would be accused of having killed or injured an adversary by resorting to perfidy.

Second sentence – Procedural guarantees in the event of penal proceedings

1720 This provision does not require a great deal of explanation. As a combatant captured while he was not complying with the requirements laid down in the second sentence of paragraph 3 is entitled to treatment as a prisoner of war, he is also entitled to all the guarantees laid down in the Third Convention regarding penal and disciplinary proceedings (Articles 82-108).⁸³ However, this also means that whenever the laws, regulations and other measures of general application in force for the armed forces of the Detaining Power do not recognize in a specific case the applicability of the rule for exceptional situations of paragraph 3, or the adversary's interpretation of it, penal proceedings can be instigated (Third Convention, Articles 82 and 85), provided that they apply equally, for a similar breach, to members of the armed forces of this Power (*ibid.*, Article 82, paragraph 2).⁸⁴ In fact, the latter is obliged to ensure compliance with the applicable law by its own troops, and in particular, to give all appropriate instructions in this respect to its military commanders (Article 87).

Paragraph 5 – Limitation of the applicability of the sanction laid down in paragraph 4 to combatants captured in the act

1721 The Rapporteur explains this provision as follows:

“Paragraph 5 is an important innovation developed within the Working Group. It would ensure that any combatant who is captured while not engaged in an attack or a military operation preparatory to an attack retains his rights as a combatant and a prisoner of war whether or not he may have violated in the past the rule of the second sentence of paragraph 3. This rule should, in many cases, cover the great majority of prisoners and will protect them from any efforts to find or to fabricate past histories to deprive them of their protection.”⁸⁵

⁸² *O.R.* VI, p. 153, CDDH/SR.41, para. 56. The representative of a national liberation movement, considered that the clause that such a combatant would receive the same protection as that accorded to prisoners of war by the Third Convention and the Protocol “[...] should not be regarded as a concession or a favour and that a member of a national liberation movement would be in exactly the same position as a regular combatant so far as these instruments were concerned” (*O.R.* XV, p. 184, CDDH/III/SR.56, para. 74), and that, consequently, such protection could not be reduced at the captor's will (*O.R.* VI, p. 148, CDDH/SR.41, para. 32).

⁸³ See *Commentary III*, pp. 406-505.

⁸⁴ With regard to compliance in general with the rules of international law applicable in armed conflict, see *supra*, ad paras. 1 and 2, p. 522.

⁸⁵ *O.R.* XV, p. 403, CDDH/236/Rev.1, para. 91.

Thus only a member of the armed forces captured in the act can be deprived of his status as a combatant and of his right to be a prisoner of war. For paragraph 4 to be applicable, it is necessary that the violation was committed at the time of capture or directly before the capture. The link in time between violation and capture must be so close as to permit those making the capture to take note of it themselves. Thus this is a case of *flagrante delicto*.⁸⁶ There is no doubt that this is, *mutatis mutandis*, analogous to the situation of the spy, and consequently there is some relationship with the concept of an unprivileged belligerent.⁸⁷ Like a spy, the combatant who does not carry his arms openly must be caught in the act for the sanction to be applicable to him. Similarly, like him, the combatant who is captured while he is not committing this breach, does not incur any responsibility for acts which he committed previously. However, it should be noted that in contrast to espionage, which is not prohibited by the law of armed conflict, but is merely made punishable, it is prohibited in the Protocol for a combatant not to carry his arms openly, and in principle the Protocol makes him responsible for this. However, in practical terms the adversary cannot do anything against him as a matter of criminal law unless he has surprised him *flagrante delicto* at the moment of capture. The prohibition exists, but the sanction can only be applied under this condition. A combatant who commits this breach preserves, at least temporarily, his status as a combatant, and his right to prisoner-of-war status. If he is captured while he is not committing this breach, he is a prisoner of war and punishment can only be meted out in accordance with paragraph 2.

⁸⁶ For a discussion of the problem in the context of the events of the Second World War and the breaches of the Hague Regulations, see J.-P. Maunoir, *op. cit.*, pp. 178-182.

⁸⁷ The concept of an unprivileged belligerent comes from a conflict of law which was peculiarly characteristic of the Hague system. Articles 1 and 2 of the Regulations clearly defined the conditions with which those who wish to participate in the hostilities should comply to be entitled to the status of belligerent and of prisoner of war in the event of capture. However, the Regulations did not prohibit the population of an invaded country from taking up arms against the occupying forces (see *supra*, *ad Art.* 43, p. 510). This resulted in a contradiction which was highlighted in Nuremberg in the Hostages' Trial. It was found that "just as the spy may act lawfully for his country and at the same time be a war criminal to the enemy, so guerillas may render great services to their country and in the event of success, become heroes even, still they remain war criminals in the eyes of the enemy and may be treated as such. In no other way can an army guard and protect itself from the gadfly tactics of such armed resistance." (8 *Law Reports*, p. 58, and W.J. Ford, *op. cit.*, December 1967, pp. 630-631). However, the use of the term "war criminal" by the Tribunal was unfortunate in that the persons referred to did not violate the laws of war as such and indeed, as pointed out, rendered their country a great service. They were thus rather "unprivileged belligerents" as they were denied the status of prisoner of war. Under the Protocol, this is still the case with regard to spies (Article 46), but the Diplomatic Conference wished to end the situation whereby guerrillas may be acting lawfully and even with the approval of the government and yet be denied prisoner-of-war status. Therefore the definition of combatant is now wide enough to cover all means of assuming a country's legitimate defence and consequently a Party to the conflict may no longer support combat tactics which do not comply with the criteria laid down in Articles 43 and 44.

Paragraph 6 – Without prejudice to Article 4 of the Third Convention

1722 According to the Rapporteur, this paragraph

“[...] is a savings clause designed to make clear that Article 42 is not intended to supplant Article 4 of the Third Geneva Convention of 1949 in cases where the latter would entitle a prisoner to prisoner-of-war status.”⁸⁸

In other words, Article 4, particularly its paragraph A(2), which refers to the four well-known conditions laid down in the Hague Regulations, remains in force and coexists with the rules of the Protocol, although Article 44 covers all situations with which a guerrilla fighter may be confronted. During the discussions of the Working Group, some delegations seemed to regret that this provision was not included in Article 43 (*Armed forces*). This concern appeared to spring from the question of *levée en masse*, as those taking part in it are combatants even when they do not comply with the conditions laid down in Article 43, particularly with regard to their organization. One might possibly conclude that although Article 44 does not deprive any of the categories laid down in Article 4 of the Third Convention of these persons' right to the status of prisoner of war, Article 43 (*Armed forces*), which does not contain the same savings clause, certainly has the effect of withholding recognition from the *levée en masse*. Thus there would be a contradiction on this point between these two articles of the Protocol. However, as nothing during the discussions could have given rise to the thought that the Conference had the intention of no longer recognizing the *levée en masse*, such an intention should not be presumed, and the rule of Article 4A(6) of the Third Convention has survived intact.⁸⁹ It would not actually seem very reasonable if the Conference should have intended to suppress this possibility of defence at a time when the risks of unexpected invasions of any territory, by whoever it may be, are greater than ever, as a result of air forces and airborne troops (also see *supra*, *ad* paragraph 3, second sentence, p. 532).

⁸⁸ O.R. XV, p. 403, CDDH/236/Rev.1, para. 92; this refers particularly to those categories listed under Article 4 of this Convention which are not covered by Article 44 under consideration here. However, according to some views at least, this provision can also cover the members of the armed forces under paragraph 1 of the said Article 4A, which would preserve their right to prisoner-of-war status, regardless of the violation they had committed, except for States which have made a reservation in this respect (Third Convention, Article 85).

⁸⁹ Article 32 of the Vienna Convention on the Law of Treaties states that recourse may be had to supplementary means of interpretation, including to the *travaux préparatoires*, when the interpretation in accordance with the general rule (Article 31 of the Convention) leaves the meaning ambiguous or obscure, or leads to a result which is manifestly absurd or unreasonable. Moreover, one delegation explicitly stated that the definition of combatant given in Article 43 would also cover the *levée en masse*, and this claim did not give rise to any objection (O.R. XV, p. 161, CDDH/III/SR.55, para. 37). Moreover, the principle *ut res magis valeat quam pereat*, the “principle of efficacy”, could also be invoked.

Paragraph 7 – Confirmation of the practice concerning the wearing of a uniform by regular troops

1723 The general character of the heading of the Section “Combatant and prisoner-of-war status” and the wording of the article itself, which refrains from referring explicitly to national liberation movements and to resistance movements, led to some concern amongst some delegations. They felt that this might lead to the interpretation that the generally accepted practice of States concerning the wearing of a uniform by combatants belonging to regular armies might be put into question. This was not the intention of the Conference, as is clearly indicated in this paragraph. Thus nothing has changed on this point regarding the recognized practice of States: a combatant of the regular army who engages in hostile acts in civilian clothing, without being able to rely on the conditions described in the second sentence of paragraph 3, is open to the accusation of perfidy (*Article 37 – Prohibition of perfidy*, paragraph 1(c)).⁹⁰ This does not mean that a combatant of a regular army can never dispense with wearing a uniform while he is engaged in hostile acts. However, this possibility is open to him, as we have seen above,⁹¹ only in the same situations and under the same exceptional conditions as those which apply to members of guerrilla forces. Although not explicitly stated, this article is primarily aimed at guerrilla fighters.

Paragraph 8 – Extension of the benefits available under the First and Second Conventions to all combatants as defined in Article 43

1724 Article 13 of the First Convention and Article 13 of the Second Convention provide a list of categories of persons protected by these Conventions, which reproduce Article 4A of the Third Convention. This might lead to the fear that this list constitutes a *numerus clausus*, excluding all the categories of persons not included there from the scope of the First and Second Conventions.⁹² The present provision of paragraph 8, which declares that all members of the armed forces of a Party to the conflict, as defined in Article 43 (*Armed forces*), shall be entitled to the protection granted by the First and Second Conventions, removes any ambiguity. It is equally clear that such protection is due to all prisoners, whether or not they have the prisoner-of-war status at the time of capture.

J. de P.

⁹⁰ O.R. XV, p. 160, CDDH/III/SR.55, para. 28. During the First and Second World Wars combatants captured when they were not wearing uniform were considered as “francs-tireurs” and because of this did not have the right to prisoner-of-war status, even if they were members of the armed forces (See A.M. de Zayas, “Combatants”, in Bernhard (ed.), *op. cit.*, Instalment 3, 1982, p. 117). However, for pilots whose aircraft had been brought down, see *supra ad Art. 42*, note 36. The decisive element was found in Article 23(b) of the Hague Regulations.

⁹¹ *Supra ad para. 3*, second sentence, letter a), p. 529.

⁹² In fact, the list of persons belonging to the armed forces is only of theoretical value in the First and Second Conventions. It does not have an exhaustive character, as might be the case in the Third Convention, and was only included for the sake of precision (see *Commentary I*, p. 145).

Protocol I

Article 45 – Protection of persons who have taken part in hostilities

1. A person who takes part in hostilities and falls into the power of an adverse Party shall be presumed to be a prisoner of war, and therefore shall be protected by the Third Convention, if he claims the status of prisoner of war, or if he appears to be entitled to such status, or if the Party on which he depends claims such status on his behalf by notification to the detaining Power or to the Protecting Power. Should any doubt arise as to whether any such person is entitled to the status of prisoner of war, he shall continue to have such status and, therefore, to be protected by the Third Convention and this Protocol until such time as his status has been determined by a competent tribunal.
2. If a person who has fallen into the power of an adverse Party is not held as a prisoner of war and is to be tried by that Party for an offence arising out of the hostilities, he shall have the right to assert his entitlement to prisoner-of-war status before a judicial tribunal and to have that question adjudicated. Whenever possible under the applicable procedure, this adjudication shall occur before the trial for the offence. The representatives of the Protecting Power shall be entitled to attend the proceedings in which that question is adjudicated, unless, exceptionally, the proceedings are held *in camera* in the interest of State security. In such a case the detaining Power shall advise the Protecting Power accordingly.
3. Any person who has taken part in hostilities, who is not entitled to prisoner-of-war status and who does not benefit from more favourable treatment in accordance with the Fourth Convention shall have the right at all times to the protection of Article 75 of this Protocol. In occupied territory, any such person, unless he is held as a spy, shall also be entitled, notwithstanding Article 5 of the Fourth Convention, to his rights of communication under that Convention.

Commentary

General remarks

- 1725** A number of considerable political upheavals accompanied the military operations of the Second World War: occupations, armistices, reversals of alliances and the disappearance, exile and creation of a number of governments. This resulted in abnormal and confused situations, characterized by an inextricable tangle of legal relations under international law. Some national formations continued to take an active part in hostilities, while the adversary denied them the right to do so, refusing to consider them as regular combatants, but as *francs-tireurs*, i.e., as individuals participating in military operations of their own volition, without forming part of the armed forces.
- 1726** The ICRC, which expended a great deal of effort to guarantee these combatants a minimum degree of protection when they were captured by adversaries, proposed in 1949 to include a provision to this effect in the Third Convention. This is Article 5, paragraph 2, which provides that if there is any doubt regarding the status of prisoner of war for a person who has committed a belligerent act and who has fallen into enemy hands, such a person shall enjoy the protection of the Third Convention until his status has been determined by a competent tribunal. To this text, which was still rather imprecise and at an embryonic stage despite the undeniable progress which it represented in 1949, the Protocol adds Article 45, the article under consideration here, which marks an important development.
- 1727** According to some delegations, the adoption of Article 1 (*General principles and scope of application*), paragraph 4, and of Article 43 (*Armed forces*) and Article 44 (*Combatants and prisoners of war*) – which give legal recognition to combatants of guerrilla warfare, and to the methods of guerrilla warfare, had

brought to light the problems of resistance under alien occupation. Consequently the guarantees of Article 5, paragraph 2, of the Third Convention still appeared to be insufficient. They were insufficient because the 1949 authors had preferred it that way, not wanting to encourage a disproportionate increase in the number of categories of persons entitled to the status of prisoner of war, nor wanting to allow too much room for the inevitable disagreements regarding the qualifications for such status which would ensue.

1728 However, this concern, laudable though it was, could no longer stand in the way of the realities of modern warfare in 1976. Since the Conference wished to take into account the various categories of combatants which had appeared in the most recent conflicts,¹ it was therefore also necessary to establish procedures which were more likely to guarantee that this status would be granted them. If this were not done, this concession would have been a sham. Thus one representative did not hesitate to state that it was in order to save the humanitarian cause² that so many delegations had presented proposals relating to the protection of persons taking part in hostilities.³ The reason is quite simple: anyone who commits a hostile act without belonging to armed forces recognized by the adversary risks being punished severely by the latter, and may even be sentenced to death.⁴ It follows that the classification used by the “competent tribunal” of Article 5 of the Third Convention will act, in the words of one delegate, as “a finger of destiny for the prisoner concerned”,⁵ whose conduct will be interpreted not in terms of his own concepts, but in terms of those of his enemy.⁶

1729 Paragraph 1 relates to the status of prisoner of war at the time of capture. Paragraph 2 deals with legal proceedings which may in due course be instituted if a captured person is not detained as a prisoner of war. Paragraph 3 guarantees

¹ Cf. *O.R.* XIV, p. 475, CDDH/III/SR.33-36, Annex, para. 1.

² *Ibid.*, p. 486, para. 11; it was obviously a case of finding a way of overcoming the differences of opinion and the uncertainty to which Article 44 could give rise in its application (in this sense, see *O.R.* XIV, p. 527, CDDH/III/SR.33-36, Annex, para. 9).

³ This concerned, more in particular, the amendment CDDH/III/260, and Add.1, presented by sixteen delegations which, in its entirety, lies at the root of this article (*O.R.* III, p. 200). Another amendment (CDDH/III/256) provided in particular that non-fulfilment of the conditions provided for in Art. 43, para. 1, first sentence, “may only be presumed if it has become clear from declarations or instructions emanating from the responsible command of an irregular force or from declarations of its members that the force is not willing or able to respect the rules and principles of international law applicable in armed conflict” (*O.R.* III, p. 183); yet another amendment (CDDH/III/82) provided that combatants who are not covered by the Protocol shall “be afforded guarantees not less favourable than those laid down in Article 3, common to the Conventions” (*O.R.* III, p. 180).

⁴ Cf., for example, Art. 88 of the Swiss Military Penal Code. In fact, during the course of the Second World War, many of these partisans who were captured were shot without any formalities; see W. Schätzel, “Le franc-tireur capturé a-t-il droit à un jugement régulier?”, 17 *Revue internationale française du droit des gens*, 1948, pp. 18-19.

⁵ *O.R.* XIV, p. 485, CDDH/III/SR.33-36, Annex, para. 5.

⁶ On this problem, see the work of P. Boissier, *L'épée et la balance*, Geneva, 1953, in particular pp. 65-96, and also *infra*, note 38.

protection under Article 75 (*Fundamental guarantees*) to any person who does not have the right to the status of prisoner of war.⁷

Paragraph 1 – The status of prisoner of war at the time of capture

1730 Contrary to Article 5, paragraph 2, of the Third Convention, which provides only for cases in which there is doubt (though it is often claimed that doubt exists only in the mind of the captor), this paragraph lists the cases where doubt regarding the status of the combatant concerned must give way to a presumption of prisoner-of-war status. If nevertheless the doubt still exists, the rule is the same as that of Article 5 quoted above, although the burden of proof falls upon the captor.

First sentence – Cases where a presumption of prisoner-of-war status applies

1731 As a general rule, members of the armed forces distinguish themselves by wearing a uniform (Article 44 – *Combatants and prisoners of war*, paragraph 7).⁸ Article 17 of the Third Convention also urges every Party to a conflict to provide any person under its jurisdiction who could become a prisoner of war, with an identity card.⁹ When these rules are complied with, and there is no argument regarding the status of the armed forces observing them, the problem of the status of prisoner of war is automatically resolved.

1732 The same does not apply to guerrilla fighters who lack such forms of evidence, either partly or wholly, for reasons which actually characterize guerrilla warfare. To put upon a guerrilla fighter the burden of proof at the moment of capture might be tantamount to taking away with one hand the benefits given with the other in Article 44 (*Combatants and prisoners of war*). Therefore, the provision under consideration here distinguishes various circumstances, and provides for three cases. However, before examining these three cases, it would be appropriate to fully understand the problems which must ultimately be resolved. The combatant of Article 43 (*Armed forces*) is not necessarily captured while taking part in a military operation, a situation in which he must distinguish himself from the civilian population, at least during the engagement itself and during a period preceding the engagement.¹⁰ It is perfectly possible, in the context of Article 44 (*Combatants and prisoners of war*) for him to fall into the power of the adversary while he is going about his normal everyday civilian activities, and at this time nothing would distinguish him from any other civilian. If the person

⁷ There is an excellent exposé of the origin of this provision in an article by G. Genot, a member of the Belgian delegation at the Conference, “Quelques garanties nouvelles offertes au combattant capturé”, 13 *RBDI*, Nos. 1-2, 1977, pp. 298-313.

⁸ On this point, see also *supra* ad Art. 39, para. 2, p. 465.

⁹ Such identity cards do not in any way establish a person's status as a member of the armed forces, but simply represent a piece of evidence.

¹⁰ See commentary Art. 44, para. 3, *supra*, pp. 527 and 533.

concerned is actually a member of the armed forces in the sense of Article 43 (*Armed forces*), he is undeniably entitled to prisoner-of-war status, regardless of his previous activities (Article 44 – *Combatants and prisoners of war*, paragraph 5). Conversely he may also fall into the power of the adversary while he is engaged in a military operation preceding an attack; in other words, while he is armed, but at a stage where he is not necessarily obliged to carry his arms openly or to display a distinguishing sign. In this case his status as a prisoner of war cannot be denied either, if he is a member of the armed forces of a Party to the conflict. Finally, it is self-evident that such a combatant could also be captured during the military engagement itself, whether the attack is directed against a military objective or not. He is entitled to the status of prisoner of war under all circumstances, whatever the cause (Article 44 – *Combatants and prisoners of war*, paragraph 2), with the sole proviso that he has a distinctive sign or that he carries his arms openly (Article 44 – *Combatants and prisoners of war*, paragraph 3, second sentence, and paragraph 4).

1733 In other words, the capture can occur in conditions when the captor has no way of finding out whether or not the person concerned is a prisoner of war, or perhaps in circumstances which give him some indication, but no proof on this point. This provision has therefore introduced a system of legal presumptions in favour of the prisoner. If the captor wants to contest such a presumption, it is up to him to present evidence that the person concerned is not a prisoner of war (this procedure is dealt with in the second sentence of this paragraph). In fact, as has been remarked, it would be unthinkable to require a prisoner, for example, in a case of urban resistance, to reveal the name of his commanding officer, and then the whole hierarchy of the organization to which he belongs, simply in order to furnish proof that he is entitled to the status of prisoner of war.¹¹ Thus there will be a legal presumption in favour of the prisoner:

a) *If he claims prisoner-of-war status*

1734 A simple statement of claim suffices. Taking into account the situations which may arise, not only in guerrilla warfare,¹² but also in other circumstances mentioned above, this condition finally appeared to be the simplest and most secure, although some feared that this would leave the door wide open to common law criminals. One delegate to the Conference showed that if it is certain that the person concerned cannot belong to armed forces organized in accordance with Article 43 (*Armed forces*) – possibly because such forces do not exist in the

¹¹ O.R. XIV, p. 492, CDDH/III/SR.33-36, Annex, para. 15. To save oneself and sacrifice the others, or to sacrifice oneself and save the others is a dilemma in which many resistance fighters found themselves.

¹² The rule can also gain significance in other situations; for example, an escaped prisoner of war in civilian clothes who has been recaptured, a pilot whose aircraft has been brought down and who is wearing a flying suit similar to civilian dress, shipwrecked persons, civilians authorized to accompany the armed forces who have lost their identity card. What about the many civilians who are employed on large military bases and who live there, sometimes with their whole family? The problem does not yet seem to have been resolved, but warrants a solution.

captor's view – the claim would be inoperative.¹³ However, it is quite possible that the individual who has been captured abstains from claiming prisoner-of-war status for fear of betraying the organization to which he belongs, or even because he is wounded to such an extent that he is no longer able to express himself. In this case he should receive the care required for his condition. If the person concerned remains silent of his own accord regarding his right to prisoner-of-war status, he may be classified under the category of civilians, although this is not necessarily the case. In practical terms, the solution may depend on the conditions listed below under b) and c). Moreover, though it is conceivable that a prisoner might forego exercising his right to prisoner-of-war status, he cannot renounce the right as such, as this is an inalienable right in accordance with Article 7 of the Third Convention. The Conference certainly did not intend to make any proposal constituting a derogation from this provision.¹⁴ The principle of legal parity between members of so-called “regular” armed forces and other members of the armed forces of a Party to the conflict is thus integrally respected.

b) *If he appears to be entitled to the status of prisoner of war*

1735 A soldier in uniform who is captured on the battlefield, whether he is able-bodied or *hors de combat*, whether or not he is able to give his name and other personal details, is automatically considered as a prisoner of war. The provision under consideration here extends this rule to all combatants of armed forces organized in accordance with Article 43 (*Armed forces*). The open carrying of arms during combat, or a visible distinguishing sign, can take the place of a uniform. If capture takes place outside the combat situation, an appropriate identification document is sufficient to indicate the position of its holder and his right to the status of prisoner of war. If such a document, distinguishing sign and arms are lacking, being present at a place which is a characteristic or important military objective (command post, fortified position) or the discovery of a muster-roll which includes the names of those concerned, or orders, plans of a military character which they are carrying, must lead to the same conclusion. In all such situations and in analogous situations, doubt is in principle excluded, whether or not the person concerned claims prisoner-of-war status, and there is no need to resort to Article 5, paragraph 2, of the Third Convention or to the rule expressed in the second sentence of this paragraph.¹⁵ It is normally up to the commanding

¹³ O.R. VI, p. 189, CDDH/III/SR.41.

¹⁴ O.R. XV, p. 433, CDDH/III/338.

¹⁵ In practice, it is above all since the Algerian conflict that combatants captured while carrying weapons in their hands (known in France as “PAM”, for “*pris les armes à la main*”) were considered as prisoners of war. However, in Malaysia and Kenya the British gave similar treatment only to guerrilla fighters who voluntarily surrendered. In Viet Nam from 1965 the United States granted not only the treatment, but also the status of prisoner of war to combatants of the NLF (National Liberation Front) captured while carrying weapons in their hands. The same applied to all those for whom there was any evidence to show that they belonged to a military unit, even a secret one, and who had taken part in an act of war of any nature, including propaganda or protection missions etc., whether these were full-time or part-time activities (see M. Veuthey, *Guérilla et droit humanitaire*, op. cit., pp. 226-232 and in note 195 on p. 231 the relevant official sources).

officer at the place where the capture takes place to determine the facts and to draw the necessary conclusions.

- 1736 However, if doubt still prevails – for example, because of the absence of a distinguishing sign, in a situation where the members of guerrilla groups generally wear one, a breach of the obligation to carry arms openly, contradictory statements, suspicion of espionage or mercenary activities etc. – the person concerned is nevertheless treated as a prisoner of war (Third Convention, Article 5, paragraph 2; see also the second sentence of this paragraph). However, the commanding officer at the place of capture must take care that all scraps of evidence available at the time are gathered together and are not lost, whichever way they point. If necessary, he should be able to call in security services which are in a position to assist him.¹⁶
- 1737 But it is also possible that there is no doubt, in the sense that it is certain that the person who has been apprehended did not participate in hostilities. In this case, this provision does not apply.¹⁷ On the other hand, in all cases where it would seem that the person apprehended is a civilian who has participated in hostilities, the second sentence of this provision applies.
- 1738 It should also be remembered that under the terms of Article 44 (*Combatants and prisoners of war*), paragraph 2, the violation of the rules applicable in the case of armed conflict does not deprive a combatant of his right to be a prisoner of war.¹⁸

c) *If the Party on which the person concerned depends claims the status of prisoner of war on his behalf*

- 1739 The subordination of the person concerned to a force organized in accordance with the provisions of the Protocol is a fundamental and unconditional requirement of the status of combatant, as we saw in the analysis of Article 43 (*Armed forces*). There is no question of granting this status to an isolated person carrying on an individual fight.
- 1740 Thus it might seem surprising at first sight that a claim made by the Party on which the person concerned depends, whether this is by means of a notification to the Power detaining him or to the Protecting Power, is not the primary consideration. In fact, some delegations considered that it would be far more

¹⁶ It is essential that such services, sometimes consisting of military police units, and which are often granted an authority similar to that of the commanding officer at the place of capture, have a thorough knowledge of the applicable rules, i.e., the appropriate rules of the Geneva Conventions and the Protocol.

¹⁷ Obviously this does not exclude the granting of the status of prisoner of war when there is occasion for this, for example, by the application of Article 4A(4) and (5) of the Third Convention, or Article 67, paragraph 2, of this Protocol. As regards medical and religious personnel, see the Third Convention, Article 4C and Article 33. In other cases the person is a civilian who will be simply released or considered as a civilian internee (Fourth Convention, Art. 78).

¹⁸ The same applies, even if there may have been a conviction, in accordance with Article 85 of the Third Convention, except for those countries which have made a reservation on this point (see *supra ad* Art. 44, note 19).

important than a statement by the prisoner himself. However, it is a fact that such notification can take some time, that it is not always possible, and that the Protecting Power, if it exists, is not always available where and when it is required. There was also a fear that a Party to a conflict would claim or would abstain from claiming the status of prisoner of war for one of its nationals for opportunist reasons. All in all, it appeared that the best guarantee lay in the prisoner's own statement, but it is self-evident that confirmation by the Party on which he depends may be decisive in cases of doubt.¹⁹

- 1741 *In conclusion*, the Conference wished to take into account the fact that it is at the moment of capture that prisoners are exposed to the gravest danger. Prisoners suffer on the way from the place of capture to the camps, or they suffer as a result of decisions taken there and then with regard to their status: the price paid by prisoners has always been heavy and the Third Convention endeavoured to remedy this situation.²⁰ This provision takes an additional step forward in eliminating in the great majority of cases the possibility of a fatal doubt, and its consequences in criminal law; it achieves this by means of a system of presumptions which operate automatically in favour of the prisoner. In these various cases the question must be considered to have been definitively solved; the person concerned is entitled to the status of prisoner of war.²¹
- 1742 If any doubtful cases remain, these are dealt with in the second sentence of this paragraph and in paragraph 2 in case criminal law proceedings are involved.

Second sentence – Prisoners whose status is in doubt at the time of capture

- 1743 Despite the precautions taken by the drafters of this article, and all the presumptions which were outlined above, it is clear that cases of doubt may occur at the time of capture. There may be doubt regarding the individual capacity of the person concerned to be granted the status of prisoner of war, as well as regarding the status of the armed forces to which he belongs, or claims to belong, which should be organized in accordance with Article 43 (*Armed forces*). However, one thing is certain, and on this point the provision is quite clear: all persons who are captured and who are not considered either as prisoners of war or as civilians who have not participated in the hostilities, are treated there and then as prisoners of war until such time as their status has been determined by a competent tribunal.

¹⁹ Provided of course that the doubt does not relate to either the legitimacy of the Party to the conflict which makes the claim (see *supra ad* Art. 43, p. 507), or to the armed forces of this Party being subject to an internal disciplinary system which ensures that the rules of international law applicable in the case of armed conflict are complied with (Art. 43, para. 1, second sentence). If there are such doubts, a claim by such a Party or quasi-Party to the conflict could do more harm than good. Moreover, the possibility is not excluded that the prisoner might rightly or wrongly contest the claim presented in this way.

²⁰ See *Commentary III*, pp. 155 ff., in particular, pp. 173-174.

²¹ For the conflict in Viet Nam, where similar rules were applied, see "Contemporary Practice of the United States Relating to International Law", 62 *AJIL*, 1968, p. 767.

- 1744 In certain cases, as we have seen, elements required for a legal presumption on the status of prisoner of war may be lacking: communications from the Party to the conflict on which the person concerned depends may be missing or may be delayed,²² lack of factual evidence, the silence or denials of the person concerned, whose attitude may be contradicted by the facts or by statements of his comrades,²³ suspicion without conclusive evidence of espionage or mercenary activity or sabotage, etc. – in other words, the doubt may concern the presumption itself.
- 1745 Independently of these uncertainties on an individual level, there is also uncertainty at a collective level. A combatant does not lose his right to the status of prisoner of war in case of capture for breaches of the law of armed conflict which he may have committed (Article 44 – *Combatants and prisoners of war*, paragraph 2). However, the organization or armed forces to which he belongs are subject to the rules of that law without restriction (Article 43 – *Armed forces*, paragraph 1, second sentence). His own disqualification for the status of combatant and of prisoner of war depends on the possible disqualification of the armed forces to which he belongs.²⁴ This point has never been doubted, even if individually the member of the said organization or armed force complies with the conditions which he is capable of fulfilling.²⁵ However, it is also necessary to establish both that the organization or armed force concerned does not submit to the rules applicable in armed conflict, and that the prisoner concerned effectively belongs to that organization or force. Therefore a “competent tribunal” is, under the terms of this provision, called upon in all these cases to determine the status of the person who has been captured. This rule is more or less based on Article 5, paragraph 2, of the Third Convention²⁶ and the question which arises is

²² Cf., for the Second World War, the declaration of General Eisenhower of 15 July 1944, whereby he recognized the French Forces of the Interior, and took them under his command (see L. Nurick and R. Barnett, “Legality of Guerilla Forces Under the Laws of War”, 40 *AJIL*, 1946, p. 581).

²³ It should be noted that since the person concerned should be treated as a prisoner of war, even in cases of doubt, no form of coercion may be inflicted to secure information (Third Convention, Art. 17, paragraph 4).

²⁴ In this respect the following case was mentioned, namely, where it has become clear from statements or instructions emanating from the responsible command of the irregular force or from statements of its members, that the force is not willing or able to respect in its operations the rules and principles of international law applicable in armed conflict (*O.R.* XIV, p. 473, CDDH/III/SR.33-36, Annex, para. 7 and *supra* note 3). However, the same representative considered that too easily evidence to the contrary might be concluded by following an inductive reasoning, that since some members of the force (how many? two, five, twenty?) have violated one or more rules of international law applicable in armed conflict, this can be attributed to the whole irregular force as its general policy, even if one has no idea about the actual size of the force (*ibid.*, para. 6). However, also see *supra*, note 3, and *ad Art.* 43, para. 1, in particular p. 513.

²⁵ *Commentary Drafts*, p. 52 and *supra*, *ad Art.* 44, para. 1, p. 523.

²⁶ This article of the Third Convention represents an important step forward, but not because persons who have committed a belligerent act without belonging to any of the categories listed in Article 4 of the Third Convention thereby escape sanctions. Recognized as civilians by the “competent tribunal”, they henceforth fall under the Fourth Convention, and in fact Article 68 does not exclude sanctions and even capital punishment for illegal participation in hostilities. Furthermore it is self-evident, as shown above, that this “competent tribunal” will be all too likely

(continued on next page)

obviously that of knowing what is meant by a “competent tribunal”. This problem had already arisen for the drafters of Article 5 of the Third Convention, who had successively suggested a “responsible authority” or a “military tribunal”. The latter solution was finally rejected as it might lead to the most serious consequences for anyone brought before such a tribunal (a court martial), in wartime and virtually on the battlefield. The consequences would be tantamount to simply depriving him of all benefits afforded by the Third Convention.²⁷ The drafters finally agreed upon the expression “competent tribunal”,²⁸ and the Rapporteur indicated in his report that “as in the case of Article 5, such a tribunal may be administrative in nature”,²⁹ which includes, in particular, military commissions.³⁰ The importance of setting up such tribunals in good time cannot be overemphasized, particularly in the case of confrontations with guerrilla fighters. However, during the course of the debates it was stated that such a tribunal should be able to draw up some guidelines, even if these are primarily related to the actual circumstances and features of the particular armed conflict.³¹ It was also remarked that guarantees should be furnished regarding its competence, its composition and its procedures,³² and that it should be impartial and effective.³³ This is a great deal to ask, so close to the frontline.³⁴ Therefore the Conference finally stipulated that each time a prisoner who is not detained as a prisoner of war is to be judged for an offence related to the hostilities,³⁵ the intervention of a judiciary tribunal is required, even for deciding the status of the person concerned, if need be, as we shall see in the analysis of paragraph 2.

to consider the facts from its own point of view and to interpret the rules in accordance with its own ideas, even though Article 4 of the Third Convention is clearer in its wording than some of the text of Article 44 of the Protocol. However, at least all captives are given the assurance that their case will be examined, that the real position of those who have not in fact committed any belligerent act will be recognized, and that they will not be executed without a tribunal set up according to the rules (Fourth Convention, Art. 66) has had a chance to judge the case.

²⁷ See *Commentary III*, p. 77.

²⁸ Experience of the Second World War had shown that decisions regarding the right of a captive to benefit or not from the protection of the Convention Relative to the Treatment of Prisoners of War had sometimes simply been taken by non-commissioned officers, particularly corporals. See J.-P. Maunoir, *op. cit.*, p. 191.

²⁹ O.R. XV, p. 392, CDDH/236/Rev.1, para. 48. In the conflict in Viet Nam the United States delegated this task of the classification of captives to tribunals consisting of three officers. In general it is considered that those who pronounce judgment on the conduct of members of the armed forces should be qualified, and, for example, that only officers of at least equal rank can judge the conduct of an enemy commanding officer (*cf.*, for example, the guarantees of Art. 102 of the Third Convention) and that the participation of at least one officer trained in law is essential (*cf.* W.H. Parks, “The Law of War Adviser”, 31 *The JAG Journal*, No. 1, Summer, 1980, p. 14).

³⁰ For examples, see M. Greenspan, *op. cit.*, p. 505, and 4 *Law Reports*, pp. 38 ff.

³¹ O.R. XIV, p. 472, CDDH/III/SR.33-36, Annex, para. 5.

³² *Ibid.*, p. 484, para. 4.

³³ *Ibid.*, p. 488, para. 11; p. 362, CDDH/III/SR.35, para. 25; and p. 350, CDDH/III/SR.34, para. 82.

³⁴ For this reason, for example, a requirement allowing the Protecting Power to be present at the deliberations was considered to be impossible.

³⁵ Unlike a civilian, a prisoner of war is obviously not liable for any sanctions for his participation in hostilities. In the case of violations committed before his capture, the judicial guarantees of the Third Convention, Arts. 82 ff., are assured.

- 1746 *In conclusion*, it is obvious that in the present paragraph the authors of the Protocol intended to reduce to a minimum those cases in which a captor could arbitrarily deny the status of prisoner of war to a person who had been apprehended. To this purpose they introduced a complete set of legal presumptions which automatically operate in favour of persons who have been captured. By means of this system they have therefore reversed the burden of proof by putting it on a “competent tribunal”, in contrast with Article 5 of the Third Convention. It is up to this tribunal to furnish proof to the contrary every time that the presumption exists and it wishes to contest it. This will often be difficult, not least when it is a question of proving that the person who has been apprehended does not belong to the armed forces on which he is deemed to depend.³⁶
- 1747 However, the captor can also cast doubt by referring directly to Article 43 (*Armed forces*) and by alleging that the armed forces of the adverse Party may not qualify as such.³⁷ This problem was not resolved by the presumptions of this provision.
- 1748 Finally, without casting any doubt on the status of the armed forces of the adverse Party and the membership of the person concerned of these armed forces, the captor might have his own ideas regarding the way in which Articles 43 (*Armed forces*), 44 (*Combatants and prisoners of war*), paragraph 3, 46 (*Spies*), and 47 (*Mercenaries*) should be interpreted. Some did not fail to point out this danger,³⁸ which is all the more real as unrestrained guerrilla operations can imperil the whole regime of occupation introduced in the Fourth Convention.
- 1749 As regards the commander in the field, he has no alternative but to either release the captive (for example, if he considers that the latter is obviously a civilian and in no way implicated in any hostile act) or to treat him as a prisoner

³⁶ This is a case of proving that something has not happened (*probatio diabolica*), which, in the large majority of cases, has proved to be impossible (see J.-P. Maunoir, *op. cit.*, in particular p. 440).

³⁷ Without referring to the problem that may arise about the status of the Party to the conflict itself, for example, when this is a contested national liberation movement. Also see *supra*, note 19, and Y. Sandoz, “La place des Protocoles additionnels aux Conventions de Genève du 12 août 1949 dans le droit humanitaire”, *Revue des droits de l'homme*, 1978, pp. 138 ff.

³⁸ “While the policy of Protocol I represents a broad international consensus, its administration is substantially national in many important respects. Thus the criteria of articles 1, 43, 44, 46 and 47 are to be interpreted and applied in practice by the enemy power that has captured the individual who claims privileged combatant status. The temptation to indulge in idiosyncratic national interpretations exists during peacetime. In time of international conflict, immediate military advantage, or national misperceptions concerning it, can lead to interpretations that would substantially frustrate the policy of Protocol I. An enlightened and aroused world public opinion, however, can promote the achievement of human rights by making an impact on national decision makers even in wartime. In the same way, public opinion can compel states-parties to the Protocol ‘to respect and to ensure respect for this Protocol in all circumstances’. An effective sanctioning process, like the multilateral law-making process in Geneva from 1974-1977, is dependent upon the identification and implementation of common values, not upon common ideologies.” (W.T. Mallison and S.V. Mallison, *op. cit.*, p. 31).

The consensus procedure can justifiably be reproached for sometimes resulting in flexible texts which permit very different interpretations. However, it should also be taken into account that those who are involved in armed conflict are very often those who do not share the same ideas, and that texts adopted by majority vote would be even less helpful.

of war. In this case the captive is not in principle released until the end of the hostilities.

Paragraph 2 – The conditions under which a person who is not held as a prisoner of war can be tried

1750 Under the system of the 1949 Conventions, when a person has been classified as a civilian by the “competent tribunal” (which, it should be remembered, may be an administrative authority) of Article 5, paragraph 2, of the Third Convention, he falls under the protection of the Fourth Convention. However, if he has committed hostile acts, he may become liable to proceedings or even serious sanctions on the basis of Article 68 of this Convention.³⁹ This only guarantees the person concerned trial by a military, non-political tribunal that is properly constituted (Article 66), in accordance with general principles of law (Article 67), in the course of a regular procedure (Articles 71-75), with the right of attendance of the Protecting Power, apart from exceptional cases (Article 74).⁴⁰ If the person concerned has indeed committed hostile acts, the determination made by the “competent tribunal” continues to determine his fate, as stated above. It is with regard to this point that the paragraph under consideration here radically modifies the system established in 1949.

First sentence – The right of the accused to assert his entitlement to prisoner-of-war status

1751 If the prisoner-of-war status of the person concerned, and consequently his combatant status, have not or have not yet been established, he runs a double risk:

- a) to be accused of acts which are not necessarily offences (in the case of simply participating in the hostilities);
- b) to be deprived of the procedural guarantees to which prisoners of war are entitled, even when the acts of which he is accused are punishable.⁴¹

Thus it becomes essential for the accused to have the opportunity to assert his entitlement to prisoner-of-war status under such condition as will provide all generally recognized guarantees as to proper judiciary procedures. It would

³⁹ Article 70 of the Fourth Convention provides that protected persons may be prosecuted or convicted for breaches of the laws and customs of war.

⁴⁰ Since before 1949 the spy and the prisoner of war who have been liberated on parole and later have taken up arms in contravention of their word can only be punished by tribunals, according to international law (Hague Regulations, Arts. 12 and 30). This did not apply to civilians who had illegally participated in hostilities to the extent that in Nuremberg the guilt for absence of judicial procedure was not retained in this case (W. Schätzel, *op. cit.*, p. 19).

⁴¹ This preoccupation was already included in Article 42, paragraph 2 of the draft submitted by the ICRC: “Members of a resistance movement who violate the Conventions and the present Protocol shall, if prosecuted, enjoy the judicial guarantees provided by the Third Convention and, even if sentenced, retain the status of prisoner of war.”

undoubtedly have been easier, in theory, to provide for such guarantees right at the first stage, when the status of prisoners is determined by the “competent tribunal”. However, as we have seen, it did not seem feasible to burden a tribunal called upon to intervene on the battlefield with such a difficult task.

1752 However, as the Rapporteur of Committee III indicated, it is a fact that this provision establishes

“a new procedural right [...] for persons who are not considered prisoners of war and who are to be tried for a criminal offense arising out of the hostilities. Such persons are given the right to assert their entitlement to prisoner-of-war status and to have that question adjudicated *de novo* by a judicial tribunal, without regard to any decision reached pursuant to paragraph 1. [...] The judicial tribunal may be either the same one that tries the offence or another one. It may be either a civilian or military tribunal, the term ‘judicial’ meaning merely a criminal tribunal offering the normal guarantees of judicial procedure.”⁴²

1753 In the first instance, the tribunal called upon to decide the prisoner-of-war status of the accused may be either a civilian or a military tribunal. However, it seems quite logical to admit that from the moment that the prisoner-of-war status is recognized vis-à-vis the person concerned, Articles 84 and 102 of the Third Convention apply if the accusation is maintained. This means that strictly speaking the prisoner of war can only be tried by a military tribunal acting according to procedures which guarantee him the rights and means of defence provided for by the Third Convention. Moreover, the composition of the tribunal and the procedure must be the same as for members of the armed forces of the Detaining Power.⁴³ Finally, the fundamental guarantees laid down in paragraphs 4, 7 and 8 of Article 75 (*Fundamental guarantees*) must be fulfilled. To deprive a prisoner of war of his right to be tried correctly and impartially constitutes a grave breach of both the Third Convention and the Protocol (Article 85 – *Repression of breaches of this Protocol*, paragraph 4(e)).

1754 However, there is no guarantee that it will be possible to determine the prisoner-of-war status of the person concerned before the judgment is taken on the offence of which he is accused, as evidenced by the second sentence of this paragraph. As we saw in the analysis of paragraph 1, the offence for which he is charged may depend on factual evidence which may be interpreted in the light of national legislation (Third Convention – Article 85; Fourth Convention, Article 64) which must conform with the applicable international rule. If the national legislation merely transcribes the international rule, the tribunal should apply the

⁴² O.R. XV, p. 433, CDDH/III/338. At this stage administrative authorities, military or other commissions were therefore excluded (see *supra*, note 29).

⁴³ As a general rule codes of military justice provide that the composition of a tribunal depends on the rank of the accused (see for examples, the French Military Code of Justice, J.-P. Maunoir, *op. cit.*, pp. 159-161 and on the controversies which resulted from these problems after the Second World War, not only in France but also in the United States, *ibid.*, pp. 162-173).

latter.⁴⁴ It is no less true that the entitlement to prisoner-of-war status of the accused may depend not only on facts, for example, the submission of a list, but also on the interpretation given to the rules of the Protocol by the Detaining Power, whether this concerns Articles 43 (*Armed forces*) and 44 (*Combatants and prisoners of war*), or even Article 1 (*General principles and scope of application*), paragraph 4. Thus a formidable barrier may present itself to the accused, if the respective interpretations of the Parties to the conflict diverge too widely. However, the fact remains that the tribunal called upon to determine the status must be a judicial tribunal providing all the requisite guarantees,⁴⁵ whether these are pursuant to the Third or the Fourth Convention and, otherwise, pursuant to Article 75 (*Fundamental guarantees*).

Second sentence – The preliminary nature of the procedure to determine status

1755 There is no doubt that in principle it is preferable to determine the status of the accused with regard to the protection of the Third Convention, i.e., to make a decision regarding his status as a combatant and prisoner of war, before deciding on the merits of the case. In the case of an affirmative finding, the charges will automatically lapse if the person concerned is simply being tried for participation in the hostilities. If the accusation is related to a violation of the rules governing the conduct of hostilities, the status of prisoner of war guarantees the accused the benefit of all procedural provisions laid down in the Third Convention. However, the Rapporteur stated:

“In view of the great differences in national judicial procedures, it was not thought possible to establish a firm rule that this question must be decided before the trial for the offense, but it should be so decided if at all possible, because on it depend the whole array of procedural protections accorded to prisoners of war by the Third Convention, and the issue may go to the jurisdiction of the tribunal.”⁴⁶

⁴⁴ However, the tribunal is not entirely free, for it seems to be agreed that it must conform with the official interpretation of the government whenever treaty provisions in dispute are concerned with questions of international public order (see the joint session of the Chambers of the French *Cour de Cassation*, cited by J.-P. Maunoir, *op. cit.*, p. 170). On the general problem of the concept of direct application of international law, particularly as regards the so-called “non-self-sufficient” rules and their interpretation, J. Verhoeven, “La notion d’‘applicabilité directe’ du droit international”, 15 *RBDI*, 1980-2, p. 243, at pp. 248-249, and W.J. Ganshof Van der Meersch, “La règle d’application directe”, *ibid.*, p. 345.

⁴⁵ Aware of the problems, the sponsors of amendment CDDH/III/260 and Add. 1 had provided: “4. In the event that there is no Protecting Power, any notification required by Article 104 of the Third Convention or by Article 71 of the Fourth Convention shall be given to the International Committee of the Red Cross. On receipt of such a notification, that Committee shall be entitled to exercise all the functions of a Protecting Power in relation to the trial of the person in respect of whom the notification has been given.” (*O.R.* III, p. 190).

However, some delegations were utterly opposed to this proposal, Nevertheless, the intervention of the ICRC still remains possible pursuant to Article 9 or even 10 of the Third Convention and Articles 5 and 81 of the Protocol.

⁴⁶ *O.R.* XV, p. 433, CDDH/III/338.

Thus it is this aspect of the problem that is meant by the phrase “whenever possible under the applicable procedure”. However, it is true that the problem can be a complex one in the sense that in certain cases it will only be possible to determine the status of the person concerned by deciding first on the merits of the accusation (compliance with the conditions relating to the open carrying of arms etc.: see *supra*, p. 538).⁴⁷ Moreover, the accused has a right of appeal whether he is tried as a prisoner of war or as a civilian (Third Convention, Article 106; Fourth Convention, Articles 126 and 73).

1756 As regards the procedure followed by the tribunal, it should be remembered, and indeed it is touched on in this provision, that it should either, as a minimum, be in accordance with the corresponding rules of the Fourth Convention (Articles 64-75) (for, failing prisoner-of-war status, and until such status may be accorded him, the accused is protected by this Convention) or it should comply with the rules of Article 75 (*Fundamental guarantees*) of the Protocol. In fact, it is possible that the protection of the Fourth Convention may be denied the accused, at least at this stage of the proceedings, for example, if he has the nationality of the captor. For wars of national liberation the criterion of nationality is inoperative. However, to deprive a person protected by this provision of his right to a fair and regular trial, even when his prisoner-of-war status has not yet been determined, constitutes a grave breach (Article 85 – *Repression of breaches of this Protocol*, paragraphs 2 and 4(e)).

Third sentence – Right of the Protecting Power to attend the proceedings

1757 As regards the text, this rule reproduces almost literally Article 105, paragraph 5, first sentence, of the Third Convention and Article 74, paragraph 1, of the Fourth Convention. Its inclusion in this article is justified by the fact that it covers the proceedings concerned with the right of the accused to prisoner-of-war status, proceedings which should in principle precede those relating to the offence itself, as we have just seen. Reference should also be made to the commentary on Article 105 of the Third Convention.⁴⁸

Fourth sentence – Notification of proceedings

1758 This rule also reproduces the text of Article 105, paragraph 5 (second sentence), of the Third Convention, for the same reasons as those indicated above. This notification procedure is set out in detail in Article 104 of the Third

⁴⁷ Cf. the remark of one delegation: “Paragraph 2 obliged the tribunal seized with an offence arising out of the hostilities to admit any objections by the accused to the effect that he had been entitled to participate in combat. Such plea must be examined in accordance with judicial, not administrative, procedures, and, if possible, on a preliminary basis” (*ibid.*, p. 95, CDDH/III/SR. 47, para. 56).

⁴⁸ *Commentary III*, p. 491.

Convention⁴⁹ (and Article 71, paragraph 4, of the Fourth Convention). These rules are also applied in the context of the present Article 45, at least to the extent that the situation requires it (principle of effectiveness).⁵⁰

Paragraph 3 – The conditions under which a person who is not entitled to prisoner-of-war status may be put on trial

- 1759 This paragraph relates to persons who, while being prosecuted for their participation in hostilities, are refused prisoner-of-war status.
- 1760 However, it should be noted straight away that this paragraph does not cover combatants who are denied prisoner-of-war status by application of paragraph 4 of Article 44 (*Combatants and prisoners of war*). The latter in fact continue to fall under the scope of the procedural guarantees of the Third Convention, whereas the provision under consideration here concerns persons who are refused these guarantees. It may apply, for example, to persons who simply do not belong to armed forces constituted in accordance with the requirements of the Protocol (Article 43 – *Armed forces*) or even to spies or mercenaries.⁵¹ In addition, the paragraph provides for an explicit derogation from the régime introduced by the Fourth Convention for occupied territories.

First sentence – Fundamental guarantees

- 1761 In armed conflict with an international character, a person of enemy nationality who is not entitled to prisoner-of-war status is, in principle, a civilian protected by the Fourth Convention, so that there are no gaps in protection. However, things are not always so straightforward in the context of the armed conflicts of Article 1 (*General principles and scope of application*), paragraph 4, as the adversaries can have the same nationality.⁵² Moreover, the concept of alien occupation often becomes rather fluid in guerrilla operations as no fixed legal border delineates the areas held by either Party, and this may result in insurmountable technical difficulties with regard to the application of some of the provisions of the Fourth Convention.⁵³ This is one of the reasons why the paragraph under consideration here provides that in the absence of more favourable treatment in accordance with the Fourth Convention, the accused is

⁴⁹ See *Commentary III*, pp. 480-484.

⁵⁰ Committee III was divided with regard to the question whether this paragraph should not preferably be included in Article 75 (Fundamental guarantees) (see *O.R.* XV, p. 433, CDDH/III/338).

⁵¹ See commentary Arts. 46 and 47, *infra*, pp. 561 and 571, as well as the second sentence of this paragraph.

⁵² Article 4 of the Fourth Convention provides that “persons protected by the Convention are those who, at a given moment and in any manner whatsoever, find themselves in case of a conflict or occupation in the hands of a Party to the conflict or Occupying Power of which they are not nationals”.

⁵³ Thus, for example, Article 66 providing that the court of the Occupying Power should sit in the occupied country.

entitled at all times to the protection of Article 75 of the Protocol (*Fundamental guarantees*). This rule is confirmed in paragraph 7(b) of the said Article 75.⁵⁴ However, it is also possible that, without being denied the protection of the Fourth Convention, the accused may fall under the scope of Article 5 of the same Convention, which lays down some important derogations. In this case the guarantees of Article 75 (*Fundamental guarantees*) continue to apply in their entirety.⁵⁵ Finally, the latter also apply to the person concerned when the Fourth Convention as a whole applies to him, whenever the treatment resulting from this would be more favourable to him, whether or not the crimes of which he is accused are grave breaches of the Conventions or the Protocol (Article 75 – *Fundamental guarantees*, paragraph 7(b)). This also applies, for example, to aliens in the territory of a Party to the conflict who may have taken part in hostilities against this Party, as the Fourth Convention does not indicate what judicial guarantees they are entitled to.

Second sentence – Occupied territory

1762 This provision is concerned only with occupied territory and those persons with regard to whom the application of the Fourth Convention is not in dispute. Except as regards spies, it effectively cancels the second paragraph of Article 5 of this Convention, which provides that where:

“an individual protected person is detained as a spy or saboteur, or as a person under definite suspicion of activity hostile to the security of the Occupying Power, such person shall, in those cases where absolute military security so requires, be regarded as having forfeited rights of communication under the present Convention.”

1763 Thus we see here the abrogation of an important concession made in 1949 for reasons of state, a concession which made it possible to keep certain detained persons secretly. However, it does not apply to persons detained for espionage, as the Conference considered that it would not be realistic to try to guarantee a spy's right to communicate.

1764 The other provisions of Article 5 of the Fourth Convention are not affected by this paragraph and consequently still apply,⁵⁶ at least to the extent that they do not conflict with the fundamental guarantees of Article 75 (*Fundamental guarantees*), paragraph 7(b).

J. de P.

⁵⁴ In the case of a war of national liberation one could think, in default of the application of the Fourth Convention, of those who claim allegiance to a Party to the conflict without forming part of its armed forces.

⁵⁵ For example, in favour of a spy with a foreign nationality who is not a member of the armed forces. In the territory of a Party to the conflict such derogations could refer to “rights and privileges” which, if exercised, would be prejudicial to the security of the State (Fourth Convention, Art. 5, para. 1).

⁵⁶ For a commentary on this article, which reveals some differences between the French and the English versions, see *Commentary IV*, pp. 52-58.

Protocol I

Article 46 – Spies

1. Notwithstanding any other provision of the Conventions or of this Protocol, any member of the armed forces of a Party to the conflict who falls into the power of an adverse Party while engaging in espionage shall not have the right to the status of prisoner of war and may be treated as a spy.
2. A member of the armed forces of a Party to the conflict who, on behalf of that Party and in territory controlled by an adverse Party, gathers or attempts to gather information shall not be considered as engaging in espionage if, while so acting, he is in the uniform of his armed forces.
3. A member of the armed forces of a Party to the conflict who is a resident of territory occupied by an adverse Party and who, on behalf of the Party on which he depends, gathers or attempts to gather information of military value within that territory shall not be considered as engaging in espionage unless he does so through an act of false pretences or deliberately in a clandestine manner. Moreover, such a resident shall not lose his right to the status of prisoner of war and may not be treated as a spy unless he is captured while engaging in espionage.
4. A member of the armed forces of a Party to the conflict who is not a resident of territory occupied by an adverse Party and who has engaged in espionage in that territory shall not lose his right to the status of prisoner of war and may not be treated as a spy unless he is captured before he has rejoined the armed forces to which he belongs.

Commentary**General remarks**

- 1765** Under the terms of Article 24 of the Hague Regulations, the employment of measures necessary for obtaining information about the enemy and the country are considered permissible. This information may often be obtained by methods which, if not always detected, are at least openly employed for this purpose: a listening post, aerial photography, surface exploration etc. However, despite enormous technical progress, particularly in the field of listening-in devices and aerial photography (satellites), these methods occasionally prove to be incapable of penetrating well guarded secrets. This is where espionage comes in, i.e., resorting to the secret agent, which is not prohibited by either written or customary international law applicable in case of armed conflict, though States are left free to punish spies who are acting against their interests. Thus in times of armed conflict a spy does not engage the international responsibility of the State which sends him.
- 1766** Espionage in the true sense, whether it entails a civilian or a member of the armed forces acting in secret,¹ is traditionally distinguished from what was formerly known as “war treason”, which takes place particularly, though not exclusively, when a civilian living in occupied territory gives information to the enemy of the occupying forces.² The “war traitor” violates the law of the occupier. As such, he commits a violation of the law which the Occupying Power is entitled to promulgate,³ on the understanding that the latter shall, on its part,

¹ On this concept, see *infra*, paras. 2 and 3.

² War treason also includes all acts of sabotage and collaboration with the enemy when they are committed by persons resident in occupied territory who are not members of the armed forces, such as: the destruction of means of communication, assistance to prisoners of war who are escaping, propaganda favourable to the adversary, furnishing the latter with means of transport, abusing the function of a guide for the purpose of misleading occupying troops etc.

³ Cf. Fourth Convention, Articles 5, 64 (paragraph 2), 68. As regards nationals of a Party to the conflict who engage in acts of espionage for the benefit of the enemy, they are generally accused of high treason and are subject to national law (on the applicability of the guarantees of Article 75, see the commentary on that article). This is without prejudice to provisions of human rights legislation.

act in accordance with the rules in force, particularly the 1907 Hague Regulations (Articles 42-56) and the Fourth Convention (particularly Articles 47-78).

- 1767 Paragraphs 1 and 2 of this article confirm the traditional rules on espionage by reaffirming the essential principles of these rules. The specific object of paragraphs 3 and 4 is to extend, for members of the armed forces, the application of these rules to occupied territory. As regards persons who are not members of the armed forces, they are entitled to the guarantees laid down in Section III of Part IV of the Protocol, particularly those of Article 75 (*Fundamental guarantees*) which, in the case of arrest, supplement the other guarantees already laid down in the Fourth Convention. It is understood that the derogations contained in Article 5 continue to apply in occupied territory (Article 45, paragraph 3, second sentence). As regards this matter, the same applies to a spy who is a member of the armed forces captured in the act.

Paragraph 1 – The sanction for espionage

- 1768 This paragraph illustrates what has been termed the dialectics of espionage. As we have seen, resorting to this method of combat is not prohibited. Yet, despite (“notwithstanding”) the other provisions of the Conventions and the Protocol, any member of the armed forces who is caught while he is engaged in espionage may be deprived of his prisoner-of-war status and punished. In law this appears contradictory. In fact, the Parties to the conflict are here given a means of defence against a particularly dangerous method of combat.⁴ However, it is quite clear that this is not an obligation, but merely a power: “shall not have the right to the status of prisoner of war and may be treated as a spy”.⁵ Nevertheless, this does not mean that the corresponding provisions of the First and Second Conventions do not apply in full when a spy is wounded, sick or shipwrecked. Moreover, a spy who has been deprived of his prisoner-of-war status, like any other spy who is not a member of the armed forces, is a civilian protected by the Fourth Convention, though Article 5 considerably reduces the guarantees in this particular case. Similarly it is on this point that other provisions of the Protocol contain substantial guarantees, particularly in Article 75 (*Fundamental guarantees*). In the territory of a Party to the conflict these guarantees are also assured to a protected person who is personally subject to a legitimate suspicion that he is engaged in an activity which endangers State security or if it is established that he is in fact engaged in such activities. The Fourth Convention, Article 5, paragraph 1, provides that such persons, who may also be spies or

⁴ Cf. F. Lieber, *op. cit.*: “While deception in war is admitted as a just and necessary means of hostility, and is consistent with honourable warfare, the common law of war allows even capital punishment for clandestine or treacherous attempts to injure an enemy, because they are so dangerous, and it is difficult to guard against them” (Article 101).

⁵ It will be noted that this expression “shall not have the right” is also used in Article 47 (“shall not have the right to be a combatant or a prisoner of war”) with regard to mercenaries; Article 44, paragraph 4, deals with the case in which a combatant “shall forfeit his right to be a prisoner of war, but he shall, nevertheless, be given protections equivalent in all respects”.

persons suspected of espionage, are not entitled to claim such rights and privileges under that Convention as would, if exercised in the favour of such persons, be prejudicial to the security of the State, though it is understood that they are not deprived of the rights of fair and regular trial (paragraph 3). In occupied territory, in accordance with the same Article 5, the spy may be deprived of his rights of communication, and this restriction is not removed by Article 75 (*Fundamental guarantees*) of the Protocol (see Article 45 – *Protection of persons who have taken part in hostilities*, paragraph 3).

1769 Nevertheless, if a person suspected of espionage appears to be a member of the armed forces,⁶ he should have the benefit of prisoner-of-war status as long as there is any doubt regarding the matter of his right to such status, and until a competent tribunal has decided on this matter (Article 45 – *Protection of persons who have taken part in hostilities*, paragraph 1). In short, there may exist two conflicting presumptions simultaneously: prisoner of war or spy. The presumption of prisoner-of-war status should prevail, at any rate whenever the person concerned has not been charged on the basis of *prima facie* evidence.⁷

1770 The deprivation of prisoner-of-war status already constitutes a punishment in itself and can therefore only take place following the tribunal's decision.⁸ This applies *a fortiori* to the deprivation of prisoner-of-war treatment. Furthermore, the Conference did not intend to change the substance of the traditional rules of espionage adopted in The Hague, but merely sought to supplement and elaborate them.⁹ This conclusion was confirmed by the wording of Article 39 (*Emblems of nationality*), paragraph 3, which refers to the "existing generally recognized rules of international law applicable to espionage".

1771 Under the terms of the Hague Regulations, "a spy taken in the act shall not be punished without previous trial" (Article 30). Does this mean that the spy can only be punished as such if he is caught in the act? In fact, this is certainly the sense of the Regulations, as Article 31 provides that, "a spy who, after rejoining the army to which he belongs, is subsequently captured by the enemy, is treated as a prisoner of war, and incurs no responsibility for his previous acts of espionage".¹⁰

⁶ See *supra*, ad Art. 45, para. 1, p. 546.

⁷ This solution does not affect security measures which the Detaining Power might consider to be necessary "for reasons of imperative military necessity", whether this concerns supervision (Third Convention, Art. 126, para. 2), correspondence (Art. 76, para. 3), or trial *in camera* (Art. 105, para. 5). Such derogations should be as short as possible. The problem of the "capture card" (Art. 70) is more delicate, even though it is not obligatory, but the prisoner must be registered (Art. 122).

⁸ Moreover, there may be justifiable concern to avoid abuses during periods of psychological tension which are characteristic of armed conflict, favouring what could be called "spy mania", i.e., the fact of considering any foreigner to be a spy without a valid reason, or on the flimsiest pretext. Moreover, Art. 44, paragraph 3, increases the risk of confusion. It has even happened that escaped prisoners of war have been considered to be spies.

⁹ See *O.R.* XV, p. 99, CDDH/III/SR.47, para. 80, and p. 430, CDDH/III/338.

¹⁰ The analogy with Article 91 of the Third Convention should be noted. It provides that prisoners of war who have made good their escape and who are recaptured shall not be liable to any punishment in respect of their previous escape. However, this immunity does not extend to violations committed during the escape, if these are not linked with the escape, or if they entailed violence against persons (Art. 93, para. 2).

1772 The text of the Protocol is equally explicit when it states in the present paragraph that, when a member of the armed forces falls into the power of an adverse Party “while engaging in espionage”,¹¹ he “shall not have the right to the status of prisoner of war and may be treated as a spy”.

1773 As regards the tribunal, it is in no way obliged to take into account the motives of the accused, and may convict him equally whether he has acted from patriotic motives or for reasons of personal gain.¹² In many cases the tribunal will have to pronounce sentence merely on the basis of a presumption. The use of perfidious means such as the misuse of the flag of truce, the red cross emblem, signs, emblems or uniforms of the United Nations or of neutral or other States not Parties to the conflict,¹³ can constitute an aggravating circumstance. This may also apply to the employment for purposes of espionage of medical aircraft, which under the terms of Article 28 (*Restrictions on operations of medical aircraft*), paragraph 2, “shall not be used to collect or transmit intelligence data and shall not carry any equipment intended for such purposes”.¹⁴

Paragraph 2 – Definition of a spy¹⁵

1774 In fact this paragraph does not give a definition of a spy. Moreover, some considered that such a definition does not belong in a text of humanitarian law. However, by giving a sufficiently precise description of those who shall not be considered as spies, it is possible to deduce the constitutive elements of espionage in any specific case, by means of *a contrario* reasoning. Supplemented by the provisions of paragraph 3, which relate to occupied territory, these elements do give, after all, the complete characteristics of the spy as he is defined in the Hague Regulations.¹⁶ The resulting definition, without being fundamentally different, is nevertheless wider than that of the Regulations, and corresponds to that which is

¹¹ According to Mechelynck, and the deliberations which took place in The Hague, Article 31 of the Regulations does not only apply to members of the armed forces, but also to civilians. The inhabitant of an area which is not occupied, who seeks information in the enemy’s area of operations and returns to his own area after completing his mission, may not be prosecuted if his area falls into the hands of the enemy at a later date (A. Mechelynck, *op. cit.*, p. 302). As regards Article 30, this protects the inhabitant of occupied territory on the same basis as any other person arrested as a spy (*ibid.*, p. 299).

¹² A. Mechelynck, *op. cit.*, p. 294.

¹³ Cf. Art. 37, para. 1(a) and (d), and Art. 85, para. 3(f).

¹⁴ On the general problem of medical confidentiality, see commentary Art. 16, para. 3, *supra*, p. 204.

¹⁵ Article 40 of the ICRC draft was worded as follows: “1. Members of armed forces in uniform and other combatants referred to in Article 4 of the Third Convention, as well as those combatants referred to in Article 42 who, in their operations, distinguish themselves from the civilian population and who, having entered enemy-controlled territory or having remained therein, gather or attempt to gather military information for further transmission shall not be considered as spies.”

¹⁶ The spy is defined there in a negative and restrictive form: “A person can only be considered a spy when, acting clandestinely or on false pretences, he obtains or endeavours to obtain information, in the zone of operations of a belligerent, with the intention of communicating it to the hostile party” (Art. 29, para. 1).

found today in most military manuals. Strictly speaking, this paragraph corresponds to the second paragraph of Article 29 of the Hague Regulations, which also gives a description of those who shall not be considered as spies, though admittedly in a form which is in some respects rather outmoded.¹⁷

1775 In the sense in which spies are generally understood today, the spy corresponds to the definition that was already given by Lieber: “a person who secretly, in disguise or under false pretence,¹⁸ seeks information with the intention of communicating it to the enemy” (Article 88). It logically follows that anyone who seeks information while dressed in the uniform of his armed forces, cannot be a spy. But the expression “gathers or attempts to gather”, which is used in the present paragraph, as it is with other words (“obtains or endeavours to obtain”) in the definition of the Regulations, clearly shows that no distinction is made between the attempt and the successful operation. As regards the territorial field of application of the rule, there is no longer an intent to limit it to the area of operations. It covers all “territory controlled by an adverse Party”: national or occupied territory, area of operations (on land, at sea, or in the air), including the territorial sea. In paragraph 2, the nature of the information is not defined, while paragraph 3, which deals with occupied territory, specifies that this should be “information of military value”. This distinction in the wording is deliberate, as inhabitants of occupied territory should not be open to the accusation of espionage for no good reason. Thus it is up to each Party to the conflict to determine what information could fall under the scope of this paragraph.¹⁹ However, in general, it is accepted that nowadays information can create a military advantage, even when it does not have a military character.

1776 The problem of uniform is possibly an even more vexed question.²⁰ One delegate at a plenary meeting asked what significance it should be given “in the case of combatants who were not required to wear uniform, and who, in any case, had no chance of wearing one”.²¹ The question was by no means irrelevant, although it is understood that the word “uniform” applied not only to a uniform in the conventional sense, but to any distinguishing sign which warranted that the activity in question had nothing clandestine about it. In addition, the Rapporteur declared that this means that: “any customary uniform which clearly distinguished the member wearing it from a non-member [of the armed forces], should

¹⁷ “Thus, soldiers not wearing a disguise who have penetrated into the zone of operations of the hostile army, for the purpose of obtaining information, are not considered spies. Similarly, the following are not considered spies: soldiers and civilians, carrying out their mission openly, entrusted with the delivery of despatches intended either for their own army or for the enemy’s army. To this class belong likewise persons sent in balloons for the purpose of carrying despatches and, generally, of maintaining communications between the different parts of an army or a territory.”

¹⁸ Paragraph 3, using a similar wording to the Hague Regulations on this point (Art. 29), uses the expression “through an act of false pretences or deliberately in a clandestine manner”.

¹⁹ Thus Article 86 of the Swiss military penal code incriminates anyone who has spied on facts, dispositions, procedures or objects which are kept secret in the interests of national defence in order to pass them or make them accessible to a foreign State, one of its agents, or the public.

²⁰ On this point see also *supra*, ad Art. 39, para. 3, p. 469.

²¹ *O.R.* VI, p. 111, CDDH/SR.39, para. 115.

suffice”.²² All the same, that does not alter the fact that certain categories of combatants can, as we have seen,²³ be exempt from all distinguishing signs with the exception of the open carrying of arms.²⁴ However, as the majority of delegations only seemed to be able to envisage such an eventuality in occupied territory, this problem will be examined in the context of paragraph 3. It should suffice here to remember that, in the view of several experts, the characteristic feature of the spy is not primarily the clandestine nature of his activities, for the search for information is often carried out at night or in order to avoid capture, observers camouflage themselves, etc. The spy employs pretence and deceit, and this, depending on the circumstances, could constitute an unlawful ruse of war or even an act of perfidy within the meaning of Article 37 (*Prohibition of perfidy*).

Paragraph 3 – Occupied territory

1777 At first sight the text of this paragraph seems to express a self-evident fact, i.e., that only a spy can be considered to be a spy in occupied territory, and then only if he is caught in the act. In reality the situation in occupied territory is complex, and the rules needed to be clarified. This provision covers only residents of occupied territory who are members of armed forces, and not the civilian population.²⁵ Paragraph 4 deals with the non-resident, so the concept of residence is common to paragraph 3 and paragraph 4. The Rapporteur states that the Working Group did not devote much attention to the question who will be considered to be a resident. A number of delegations would have preferred to add qualifications such as “usual” or “ordinary” to the word “resident” in order to exclude from the benefits of paragraph 3 any person sent to the occupied territory in order to engage in espionage. However, the Rapporteur points out that such a person can always claim to have been sent there to engage in hostile acts, and that in this case, it would be impossible to furnish the proof.²⁶ The fact remains that this paragraph concerns only residents, i.e., the inhabitants of occupied territory, whether nationals or not, who are properly entitled to live in

²² *Ibid.*, para. 116, and *O.R. XV*, p. 388. CDDH/236/Rev.1, para. 35, and *supra*, commentary Art. 39, para. 2, p. 468.

²³ *Supra*, ad Art. 44, para. 3, p. 527.

²⁴ One delegation claimed in the Working Group that this was a false problem, as the fact that a spy is wearing purely civilian dress does not constitute a threat for the civilian population, since the spy has no intention of opening fire and may not even be armed.

²⁵ According to the Hague Regulations, the situation of an inhabitant of occupied territory was more or less similar to that of a prisoner on parole. He sees everything that happens, but this does not authorize him to reveal it (in this respect, see A. Mechelynck, *op. cit.*, pp. 262-263). However, it should be mentioned that the population of occupied territory owes no allegiance to the Occupying Power (Fourth Convention, Art. 68). See also *supra*, note 11. In addition, Art. 31 of the Fourth Convention states that “no physical or moral coercion shall be exercised against protected persons, in particular to obtain information from them or from third parties”. On the other hand, the Occupying Power may subject the population of the occupied territory to provisions which are essential to ensure its security (Fourth Convention, Art. 64, para. 2).

²⁶ *O.R. XV*, p. 431, CDDH/III/338.

this territory either permanently or on a long-term and ordinary basis,²⁷ which corresponds with the concept of ordinary residence.²⁸

First sentence – Definition of the spy who is a resident of occupied territory

1778 The formulation of this provision is in many respects similar to the general definition of the spy given in Article 29, paragraph 1, of the Hague Regulations. This is primarily because of the negative turn of phrase which gives the provision a restrictive scope. It should also be noted that the territorial field of application of the rule is precisely circumscribed as it refers only to occupied territory. Finally, it does not contain any mention of uniform or the absence of uniform (obviously a spy could attempt to carry out his activities under cover of the uniform of the adverse Party) but refers to the fact that he is acting under “false pretences or deliberately in a clandestine manner”. This expression is virtually identical to the text of the Hague Regulations. As stated above, the information which falls under the prohibition is specified here, whereas it is not specified in paragraph 2: it is information of military value.²⁹

1779 Now this is the crux of the matter: though the person concerned, a member of the armed forces, gathers or attempts to gather information of a military nature, he need not necessarily be a spy, even when he is not wearing a uniform. In other words, the absence of uniform or what takes the place of uniform, is not automatically equivalent to an activity undertaken “through an act of false pretences or deliberately in a clandestine manner”,³⁰ since in certain situations which arise particularly or exclusively in occupied territory, guerrilla combatants are expressly exempt from the obligation to distinguish themselves from the civilian population (Article 44 – *Combatants and prisoners of war*, paragraph 3). Admittedly such combatants are obliged to carry their arms openly in combat and preparatory to combat, and they are perfectly capable of attempting to gather information while carrying their arms openly. They are then excluded from being considered as spies. However, apart from this situation, residents who are members of armed forces

“will almost necessarily in their everyday life come across information of value to the armed forces to which they belong, and this should not make

²⁷ However, one delegation wished to make a statement to the effect that the term “resident” should be understood to include persons who had had to leave the territory as a result of excesses on the part of the Occupying Power as well as persons evacuated by the occupying authorities (see *O.R.* XV, p. 93, CDDH/III/SR.47, para. 46).

²⁸ Cf. the advisory opinion of the Permanent Court of International Justice of 21 February 1925 on the exchange of Greek and Turkish populations where the concept of “établissement” was considered to include two factors: residence and stability (W. Benedek, “Exchange of Greek and Turkish populations (Advisory opinion)”, in Bernhardt (ed.), *op. cit.*, Instalment 2, p. 92).

²⁹ It is understood that information which is not of a military nature, but, for example, economic or political, can be of military value.

³⁰ Cf. the remark of one delegation: “A member of a liberation or resistance movement would not be considered to be acting under false pretences simply because he was wearing civilian clothing” (*O.R.* XV, p. 93, CDDH/III/SR.47, para. 46).

them spies or serve as a pretext for denying them protection as prisoners of war. On the other hand, it was agreed that, if they disguised themselves in order to gain access to secret information or in other ways used false pretences or deliberate clandestine acts in order to obtain such information, they would be spies. For example, the resident who observes military movements while walking along the street or who takes photographs from his residence would not be engaged in espionage; whereas the resident who uses a forged pass to enter a military base or who, if lawfully on the base, illegally brings a camera with him, would be engaging in espionage”.³¹

Second sentence – Sanction for espionage in occupied territory

1780 The analysis of paragraph 1 revealed that the spy who rejoins the army to which he belongs does not incur any responsibility for his previous acts of espionage if he is captured by the enemy later. For a member of the armed forces who is resident in occupied territory, there is no such possibility of actually escaping from the power of the adverse Party, and thus of setting aside the jurisdiction of the latter in the matter of espionage. Does this then mean that if he is captured, a member of the armed forces who is a resident of occupied territory and who has committed an act of espionage, loses all his rights to prisoner-of-war status until hostilities cease? This is not the case, and this provision gives the appropriate guarantees.

1781 It is in fact only insofar as he is captured in the act of espionage, that the spy who is a resident of occupied territory loses his right to prisoner-of-war status. This condition is rendered here by the expression “unless he is captured while engaging in espionage”. It follows that “the spy who is a resident of occupied territory may be considered as rejoining his forces whenever he ceases to engage in espionage”.³² In this context the Rapporteur adds that:

“Although no attempt has been made by the Working Group to define more precisely when a resident may be considered as engaging in espionage, several delegates suggested that each act of espionage would end when the information obtained had been transmitted by the spy to his armed forces.³³ This approach was commended, as it would reduce the possibility that an Occupying Power could improperly deprive captured members of underground armed forces of their rights to be prisoners of war by asserting that they were captured while engaging in espionage.”³⁴

Finally, the considerations relating to Article 46, paragraph 1, apply *a fortiori* in occupied territory.

³¹ Rapporteur's Report, *O.R.* XV, p. 430, CDDH/III/338.

³² *O.R.* XV, pp. 430-431, CDDH/III/338.

³³ Cf. the statement of a delegation at a plenary meeting, that the formula “while engaging in espionage” includes all the stages of the act of espionage until the completion of the transmission of the information to the enemy (*O.R.* VI, p. 116, CDDH/SR.39).

³⁴ *O.R.* XV, p. 431, CDDH/III/338.

Paragraph 4 – Espionage in occupied territory by a non-resident

- 1782** In the case of espionage in occupied territory by a member of the armed forces who is not a resident of this territory, the rule contained in this paragraph corresponds to that of Article 31 of the Hague Regulations. Thus a spy loses his right to the status of prisoner of war and may be treated as a spy only if he is captured before rejoining the armed forces to which he belongs. This condition will not be deemed to be fulfilled whenever the spy succeeds in leaving the occupied territory and regaining either the territory of the Power to which he belongs or that of an Allied Power, or neutral territory. If he rejoins within occupied territory the clause implies the presence, if only temporarily, of adverse armed forces organized in accordance with Article 43 (*Armed forces*), whether they consist of a commando raid, a mobile column, a reconnaissance unit or a forceful search operation. Such operations do not have the effect of changing the status of the territory in which they take place, which consequently remains occupied territory subject to the jurisdiction of the Occupying Power. However, the armed forces which carry out such operations assure the spy who rejoins them the safeguards provided for in this paragraph.
- 1783** In addition, reference should be made to the commentary on paragraphs 1 and 3 above.

Conclusion

- 1784** – Only someone who gathers or attempts to gather information through an act of false pretences or deliberately in a clandestine manner, with the intention of transmitting it to the enemy, shall be considered as a spy.
- 1785** – The spy captured in the act does not have the right to prisoner-of-war status.
- 1786** – The spy captured after rejoining his armed forces is a prisoner of war. A resident of occupied territory who is captured, but not whilst engaging in espionage, should also be considered as a prisoner of war.
- 1787** – The spy who is denied the status of prisoner of war is a civilian protected by the Fourth Convention (except that in occupied territory may lose his rights of communication (Article 5)), and by Article 75 (*Fundamental Guarantees*) of the Protocol.
- 1788** – In cases of doubt, the person concerned is treated as a prisoner of war pending a decision regarding his status by a competent tribunal. Penal sanctions can only be imposed by a judicial tribunal.

J. de P.

Protocol I

Article 47 – Mercenaries

1. A mercenary shall not have the right to be a combatant or a prisoner of war.
2. A mercenary is any person who:
 - (a) is specially recruited locally or abroad in order to fight in an armed conflict;
 - (b) does, in fact, take a direct part in the hostilities;
 - (c) is motivated to take part in the hostilities essentially by the desire for private gain and, in fact, is promised, by or on behalf of a Party to the conflict, material compensation substantially in excess of that promised or paid to combatants of similar ranks and functions in the armed forces of that Party;
 - (d) is neither a national of a Party to the conflict nor a resident of territory controlled by a Party to the conflict;
 - (e) is not a member of the armed forces of a Party to the conflict; and
 - (f) has not been sent by a State which is not a Party to the conflict on official duty as a member of its armed forces.

Commentary

General remarks

- 1789 The problem of mercenaries was first raised at the United Nations in 1961 in connection with the Katangese secession.¹ Later on, in 1964, the Congolese government itself recruited mercenaries to suppress an insurrection. When they were subsequently instructed to lay down their arms, most of them refused to do so and openly rebelled against the government (1967). The latter then called upon the Security Council, as well as the Organization of African Unity (OAU), to which it had already appealed in 1964. The Security Council² and the Conference of Heads of State and Government of the OAU requested States to prevent the recruitment of mercenaries in their territory for the purpose of overthrowing the governments of foreign States. The epilogue to this unhappy affair took place in Rwanda, where the mercenaries eventually sought refuge. They were repatriated with the help of the ICRC, on condition that they undertook not to return to the African continent.³
- 1790 Since then, there has scarcely been any conflict involving military operations in which the presence of mercenaries has not played a part in one way or another. Nevertheless, since 1968 the United Nations General Assembly has adopted a firm position stating that the practice of employing mercenaries against national liberation movements is a criminal act,⁴ and the mercenaries themselves are criminals. In 1977 it was once more the Security Council which adopted, by consensus, a resolution condemning the recruitment of mercenaries with the objective to overthrow governments of Member States of the United Nations.⁵ Also in 1977 the Council of Ministers of the OAU adopted a Convention for the Elimination of Mercenarism in Africa at its 29th session in Libreville.⁶ Based partly, as regards the definition of the term “mercenarism” as such, on previous

drafts,⁷ and, with the exception of the problem of payment, on the definition of the term “mercenary” given in the present Article 47, this Convention was a response to the concern of those who see the text of the Protocol as paving “the way for the conclusion of more stringent regional instruments”,⁸ on the assumption that Article 47 was only “the first, and that other more satisfactory international texts would follow”.⁹ In fact, this OAU Convention of 1977 was an attempt to respond to the wishes of some delegations who had participated in the Diplomatic Conference, wishes which could not be met by the demands of the inevitable compromise. It condemns the mercenarism as such, and not only the mercenary himself (Article 1, paragraph 2). It contains a pure and simple prohibition on according a mercenary the status of combatant and prisoner of war (Article 3). Finally, the definition of the term “mercenary” diverges from that of the Protocol on one point, as stated above.¹⁰ At the time of writing, a draft of an “international Convention against the recruitment, use, financing and training of mercenaries” is being formulated within the United Nations.¹¹

1791 The draft presented by the ICRC at the Diplomatic Conference did not contain any provisions on mercenaries, which means that they would have been treated like any other categories of combatants and prisoners of war recognized by the Third Convention (Article 4) and by the Protocol (Article 42 of the draft), provided that they complied with the conditions laid down. The Conference, which had shown itself to be fairly liberal, as we have already seen in the analysis of Articles 43 (*Armed forces*) and 44 (*Combatants and prisoners of war*) regarding the granting of combatant or prisoner-of-war status to members of the armed forces of a Party to the conflict, came to a different conclusion on this matter, at least in principle. Whatever conclusions one could actually draw from an analysis of Article 47, the concession made by this article is not without importance, for it is not the task of humanitarian law to make distinctions based on the motives which induce a particular person to participate in an armed conflict. However, as things stand, it could be said that this was no more and no less than repatriation –

⁷ Draft Convention on the Elimination of Mercenarism in Africa, presented by a committee of experts of the OAU at the Conference of Heads of State, which met in Rabat in 1972, and Draft Convention on the Prevention and Suppression of Mercenarism, drawn up by an international investigation committee invited to be present at the trial of thirteen mercenaries who had participated in the civil war in Angola, in Luanda in 1976.

⁹ *Ibid.*, p. 201, para. 51; also see *O.R.* VI, pp. 156-158, CDDH/SR.41, and for the Rapporteur's report, *O.R.* XV, pp. 510-511, CDDH/III/369.

¹⁰ Let us recall that the Definition of aggression adopted by the United Nations General Assembly (Res. 3314 (XXIX) of 14 December 1974, adopted without a vote) includes in Article 3, sub-para. (g), amongst the acts which qualify as an act of aggression: “the sending by or on behalf of a State of armed bands, groups, irregulars or mercenaries which carry out acts of armed force against another State” when they are of such gravity as to amount to the acts listed in the preceding sections of the same article, or “substantial involvement” in such acts. It is not the mercenary who is incriminated here, but the State which permits the sending of mercenaries.

¹¹ See in particular, “The Report of the *Ad Hoc* Committee on the Drafting of an International Convention against the Recruitment, Use, Financing and Training of Mercenaries”, General Assembly Official Documents, 39th session, supplement No. 43 (A/39/43) (as regards the definition of mercenaries in this draft, see *infra*, note 18).

it could be considered a moral reparation – for past wrongs, and a preventive measure against possible damage in the future. Whatever the facts of the matter, no one, or virtually no one, at first opposed the principle of this provision.¹²

1792 Article 47 was adopted by consensus at a plenary meeting.¹³ The result of a compromise, it was approved by some unquestioningly, though it was criticized by others, who considered it to be timorous, incomplete or of doubtful orientation.¹⁴ One delegation stated that it did not belong in Protocol I, which has an essentially humanitarian character.¹⁵

1793 Paragraph 1 deals with the status of the mercenary, while paragraph 2 is aimed at resolving this most difficult problem of the definition of this category of combatants for the first time in international law.

Paragraph 1 – Status of the mercenary

1794 The refusal to confer prisoner-of-war status to those persons or categories of persons to whom this status should, in principle, be accorded, has been the subject of a number of regrettable precedents in the practice of States.¹⁶ In general, humanitarian law endeavours to extend the protection of the Third Convention to new categories of combatants or to new situations, and not to refuse this protection, as is evident from Articles 43 (*Armed forces*), 44 (*Combatants and prisoners of war*) and 45 (*Protection of persons who have taken part in hostilities*) of the Protocol. The provision under consideration here goes the other way because of the shameful character of mercenary activity.

¹² This does not mean that there were no problems. Independently of the deliberations of the Conference of Government Experts (*CE 1972, Report*, vol. I, p. 28, para. 0.23), it was during the long general debate of the second session of the Conference relating to Articles 42 and 42 *bis* (the present Articles 44 and 45), that the problem of mercenaries was broached for the first time by many delegations who were not prepared to recognize this category of combatants (*O.R. XIV*, pp. 342-343, CDDH/III/SR.34, p. 344, para. 56; p. 348, para. 75; CDDH/III/SR.35, p. 356, para. 6; p. 360, para. 18; pp. 361-362, para. 24; p. 362, para. 26; p. 369, para. 63; p. 370, para. 68; CDDH/III/SR.36, pp. 373-374, paras. 1-4; p. 375, para. 10; p. 377, para. 19; p. 381, para. 34; p. 383, para. 39. At the third session the representative from Nigeria presented a draft of Article 42 *quater* in the Working Group (*O.R. III*, p. 192, CDDH/III/GT/82) which, although it met with hardly any objections in principle, did not gain unanimous approval (*O.R. XV*, pp. 112-113, CDDH/III/SR.49, paras. 24-31), and, at the end of the session the Rapporteur of Committee III presented an extensive report on the discussions of the Working Group on this subject (*ibid.*, pp. 404-407, CDDH/236/Rev.1, paras. 95-108). The problem was then taken up at the fourth session, but with a new approach by way of private consultations between the representative of Nigeria with other delegations. The new draft which emerged from these consultations, the present Article 47, was then adopted without any difficulty by Committee III (*ibid.*, pp. 189-190, CDDH/III/SR.57, paras. 4-7; and pp. 510-511, CDDH/III/369). During the explanations of vote in the Committee, only two delegations indicated that they would have abstained, if the article had been put to the vote; see *ibid.*, pp. 191-202, CDDH/III/SR.57, and particularly p. 195, para. 28 and p. 201, para. 55).

¹³ *O.R. VI*, p. 156, CDDH/SR.41.

¹⁴ *Ibid.*, pp. 156-161, and pp. 175-176, 182, 184-185, 191-194, 197-198, 202-204.

¹⁵ *Ibid.*, p. 158, para. 82.

¹⁶ This was the case during the Second World War (see 12 *Law Reports*, The German High Command Trial), and afterwards (see *Commentary III*, pp. 413-414).

- 1795** However, by providing that a mercenary “shall not have the right” to be a combatant or a prisoner of war, the Conference still resisted the most extreme demands. In fact, many delegations wished the wording to be more stringent, viz., that the mercenary “shall not be accorded” this status.¹⁷ This would have led to a surprising situation for a humanitarian text, since any Contracting Party according such status to a mercenary, would then have violated the Protocol. The result would have been all the more shocking, as the problem was broached in the Protocol in a wider context than that of other international texts relating to the same subject. In the Protocol the problem of mercenaries is actually dealt with without taking into account the cause they serve, which is not the case in the United Nations resolutions.¹⁸ Thus, like Article 46 (*Spies*) concerning spies, the present provision permits a Party to the Protocol to deny the status of combatant and prisoner of war to a mercenary; it does not oblige the Party to deny such status, irrespective of the cause served.¹⁹
- 1796** The effect of the denial of the status of combatant and prisoner of war in case of capture is to deprive the mercenary of the treatment of prisoner of war as laid down in the Third Convention, and to make him liable to criminal prosecution. Such prosecution can be instigated both for acts of violence which would be lawful if performed by a combatant, in the sense of the Protocol, and for the sole fact of having taken a direct part in hostilities (paragraph 2(b)). This is where the crucial question of guarantees arises.
- 1797** Deprived of the status of combatant and prisoner of war, a mercenary is a civilian who could fall under Article 5 of the Fourth Convention. It is precisely this article which removes an important part of the guarantees from any person under legitimate suspicion of being engaged in an activity endangering State security.²⁰ Some delegates, who were anxious that Article 47 might be given a

¹⁷ Cf. the initial proposal of Nigeria, *O.R.* XV, p. 112, CDDH/III/SR.49, para. 24.

¹⁸ Thus Resolution 3103 (XXVIII) of the General Assembly only incriminates mercenarism to the extent that it is employed by colonialist or racist governments or governments of alien occupation against a national liberation movement. The text of the draft UN convention contains a strict version: Mercenaries shall in no case be legitimate combatants and shall not be entitled to prisoner-of-war status (Art. 3). Moreover, it proposes either to take over literally the definition of mercenary given in the Protocol, or to specify that the term “mercenary” means any person specially recruited in order to engage in violence against a (foreign) State or its government (Art. 2). However, other proposals were also advanced (see Report of the *Ad Hoc* Committee of the General Assembly, 39th session, supplement No. 43 (A/39/43, p. 28)).

¹⁹ On this point, see the remarks of E. David, *Mercenaires et volontaires internationaux en droit des gens*, Brussels University, 1978, p. 392. See also, by the same author, “Les mercenaires en droit international (Développements récents)”, 13 *RBDI*, No. 1-2, 1977, p. 197.

²⁰ Account should be taken, however, of the possible diplomatic protection of the State of which the mercenary is a national. Article 4, paragraph 2, of the Fourth Convention does in fact provide that “nationals of a neutral State who find themselves in the territory of a belligerent State [...] shall not be regarded as protected persons while the State of which they are nationals has normal diplomatic representation in the State in whose hands they are”. They are not covered by Article 5 of the Fourth Convention.

dissuasive character, wished to leave it at that. However, it still remained necessary for the mercenary status of the person concerned to be established on the basis of the definition of paragraph 2. Meanwhile, i.e., pending determination of the status of such a person by a competent tribunal (Third Convention, Article 5, paragraph 2; Protocol, Article 45 – *Protection of persons who have taken part in hostilities*, paragraphs 1 and 2), he is presumed to be a prisoner of war (Protocol, Article 45 – *Protection of persons who have taken part in hostilities*, paragraph 1) and is consequently protected by the Third Convention (Article 5, paragraph 2).

1798 If the tribunal comes to the conclusion that the person concerned is a mercenary in the sense of paragraph 2 of Article 47, Article 75 (*Fundamental guarantees*) applies, and his rights of communication continue to be guaranteed, even in occupied territory, notwithstanding the provisions of Article 5 of the Fourth Convention (Article 45, paragraph 3, of the Protocol). It is regrettable that this qualification is not expressly included in the text of Article 47.²¹ However, it is understood, as the Rapporteur's report reveals that

“although the proposed new article makes no reference to the fundamental protections of Article 65 [75], it was understood by the Working Group that mercenaries would be one of the groups entitled to the protections of Article 65 [75] [...]”²²

This interpretation was expressly accepted at a plenary meeting by the representative of Nigeria.²³ Moreover, it was confirmed by a large number of statements,²⁴ and it should therefore be considered that the question has been unequivocally settled, particularly as it directly ensues from the text of Article 45 (*Protection of persons who have taken part in hostilities*). As regards the above-mentioned OAU Convention, Article 11 of this states that mercenaries “shall be entitled to all the guarantees normally granted to any ordinary person by the State on whose territory he is being tried”. Obviously the guarantees laid down by the International Covenant on Civil and Political Rights, and all other applicable instruments relating to human rights, also continue to apply in the case of participation in this agreement.

1799 However, the solution to this problem introduced by the Conference, and Article 47 in its entirety, continued to be criticized for another reason. Several delegations from various quarters declared that the prohibition on using mercenaries should have been based on a prohibition on recruiting and enlisting mercenaries, and therefore apply at the level of States, and not, or not solely, at

²¹ Several delegations openly deplored this at the plenary meeting; see *O.R.* VI, p. 158, CDDH/SR.41, paras. 82 and 88; p. 160, para. 98; p. 161, para. 105; pp. 175, 182, 194-195, 198. The same happened in Committee III; see *O.R.* XV, p. 191, CDDH/III/SR.57, para. 14; p. 194, paras. 25; p. 195, para. 28; p. 198, para. 37; p. 199, para. 41; p. 202, para. 56.

²² *O.R.* XV, p. 511, CDDH/III/369.

²³ *O.R.* VI, p. 157, CDDH/SR.41, para. 81.

²⁴ For the plenary meeting, see *ibid.*, p. 159, para. 92; p. 160, paras. 97-98; pp. 175-176, 192, 194-195.

the level of individuals,²⁵ possibly by means of a special treaty. Some delegations expressed the wish that “the new article would encourage governments which had not yet prepared rules of criminal law prohibiting the recruitment, training, formation and commitment of mercenaries to take the necessary legislative action in order to eliminate completely the crime of the mercenary system”.²⁶

1800 One last point deserves a mention. Article 47 forms part of Protocol I, which deals only with international armed conflict to the exclusion of armed conflicts which are not of an international character. Yet the presence of “mercenaries” is frequently noted precisely in armed conflicts with a non-international character. In case of capture, these mercenaries undeniably benefit from the protection of Article 3 of the Conventions, and the corresponding provisions of Protocol II, when the latter is applicable, as well as from the provisions of international human rights legislation, when these apply. In fact, the person concerned will not normally be prosecuted on account of his mercenary status, but for endangering State security.²⁷

Paragraph 2 – Definition of mercenary

1801 There are few words which suffer greater misuse these days than the term mercenary. Whenever an armed opposition movement arises against a particular cause, the adversary is immediately defined as a mercenary. In the long run such inexact use of language could constitute a danger with regard to the respect of humanitarian law applicable in cases of international armed conflict, and for this reason alone, it was perhaps useful for the Diplomatic Conference to concern itself with this concept.

1802 Mercenaries have existed since time immemorial.²⁸ Nowadays mercenaries only represent one section of the vast category of international volunteers who are defined *lato sensu* as individuals whose voluntary personal membership of an armed force involves certain elements of a foreign character.²⁹ In principle, what

²⁵ In this sense, see in the plenary meeting, *ibid.*, p. 158, paras. 82 and 85; p. 160, para. 100; pp. 189, 193-194, 197-198, 202-204, and for the Rapporteur’s report, *O.R.* XV, p. 454, CDDH/407/Rev.1, para. 24.

²⁶ *O.R.* XV, p. 194, CDDH/III/SR.57, para. 24; p. 198, para. 38; see also the Declaration on Principles of International Law concerning Friendly Relations and Co-operation among States (Res. 2625 (XXV)).

²⁷ For example, in 1971 in Khartoum, Rolf Steiner, who had German nationality and had helped the Sudanese rebellion, was considered as a mercenary, though he was prosecuted and sentenced on quite different grounds relating to State security. Since then the intervention of mercenaries has emerged in particular in the Comoros, Angola, Benin, the Seychelles etc.

²⁸ See E. David, *Mercenaires et volontaires internationaux...*, *op. cit.*, pp. 5 ff.; O. Tandon, *Legal and Political Status of Mercenaries in History and in the Contemporary World*, dissertation, Dar es Salaam, 1978, pp. 22 ff.; P. Joenniemi, “Two models of Mercenarism: Historical and Contemporary”, *Instant Research on Peace and Violence* (Tampere Peace Research Institute), vol. 7, No. 3-4, 1977, pp. 184-196.

²⁹ Cf. E. David, *Mercenaires et volontaires internationaux...*, *op. cit.*, p. 2; for contemporary examples, *ibid.*, pp. 16-21; see also O. Tandon, *op. cit.*, pp. 52-90; T. Boumedra, “International Regulation of the Use of Mercenaries in Armed Conflicts”, XX-1-2 *RDPMDG*, 1981, pp. 35-87, provides a contemporary view of the applicable law on this subject.

distinguishes a mercenary from an international volunteer is the cause and the motive which lead him to join up, although this is not always easy to determine.³⁰ We will show that the present provision makes the pursuit of monetary gain virtually the determining factor in defining a mercenary, once the other conditions of the definition are fulfilled.

- 1803** However, before proceeding to examine these conditions, it is appropriate to recall that although, under the terms of the conventional law of neutrality, “corps of combatants must not be formed nor recruiting agencies opened on territory of a neutral Power”,³¹ the responsibility of this Power “is not engaged by the fact of persons crossing the frontier separately to offer their services to one of the belligerents”;³² as for the individual concerned, he “shall not be more severely treated by the belligerent as against whom he has abandoned his neutrality than a national of the other belligerent State could be for the same act”,³³ regardless of the motives, pecuniary or otherwise, which provoked his actions. This traditional rule no longer automatically applies under the terms of paragraph 1 to a mercenary as defined in the present provision, but this holds true only for such a mercenary.
- 1804** The various conditions enumerated sub-paragraphs (a) to (f) are cumulative, and should consequently all be met for the person concerned to qualify as a mercenary.

Sub-paragraph (a) – Being especially recruited locally or abroad in order to fight in an armed conflict

- 1805** This condition excludes volunteers who enter service on a permanent or long-lasting basis in a foreign army, whether as a result of a purely individual enlistment (French Foreign Legion, Spanish Tercio) or an arrangement concluded by their national authorities (for example, the Nepalese Ghurkhas in India, the Swiss Guards of the Vatican). Thus a volunteer who has been specially recruited locally or abroad in order to fight in an armed conflict can be considered as a mercenary in the sense of Article 47, provided that the other conditions mentioned below

³⁰ Cf. E. David, *Mercenaires et volontaires internationaux...*, *op. cit.*, p. 3: “les mobiles qui poussent un individu à s’engager dans une force étrangère sont variables: l’argent, l’esprit de “baroud”, le goût de l’aventure, la “fuite” psychologique, les instincts de destruction, l’“idéisme politique” peuvent être énumérés sans qu’il soit toujours facile de discerner la motivation déterminante”. (“The motives which lead an individual to enlist in a foreign force are many and varied: money, fighting spirit, a sense of adventure, psychological ‘escapism’, a destructive instinct, ‘political idealism’ can all be listed, though it is by no means always easy to identify the determining factor.”) (translated by the ICRC).

³¹ The Hague Convention V Respecting the Rights and Duties of Neutral Powers and Persons in War on Land of 18 October 1907, Article 4. This rule is nowadays also confirmed by the Declaration on Principles of International Law concerning Friendly Relations and Co-operation among States (Res. 2625 (XXV) and by the Definition of aggression (Res. 3314 (XXIX)).

³² Hague Convention V, Article 6; this article, which upholds the principle of individual liberty, is nowadays criticized by several authors. Cf. E. David, *Mercenaires et volontaires internationaux...*, *op. cit.*, pp. 164 ff.

³³ Hague Convention V, Article 17, para. 2.

are also met; not a volunteer who is a regular member of the armed forces of a belligerent irrespective of the particular armed conflict in which he is participating (see also below, sub-paragraph (e)).

Sub-paragraph (b) – He does, in fact, take a direct part in the hostilities

1806 Only a combatant, and a combatant taking a direct part in hostilities, can be considered as a mercenary in the sense of Article 47. Consequently this condition excludes foreign advisers and military technicians, who are found in numerous countries nowadays, even when their presence is motivated by financial gain, as far as they are concerned (sub-paragraph (c) below). The increasingly perfected character of modern weapons, which have spread throughout the world at an ever-increasing rate, requires the presence of such specialists, either for the selection of military personnel, their training or the correct maintenance of the weapons. As long as these experts do not take any direct part in the hostilities,³⁴ they are neither combatants nor mercenaries, but civilians who do not participate in combat.

Sub-paragraph (c) – He is motivated to take part in the hostilities essentially by the desire for private gain and, in fact, is promised material compensation substantially in excess of that promised or paid to combatants of similar ranks and functions in the armed forces

1807 For the protagonists of this article, this is the crux of the matter. In contrast to a volunteer who is moved by a noble ideal, the mercenary is considered to offer his services to the highest bidder, since he is essentially motivated by material gain. The highest bidder will normally be found on the richest side. However, as all soldiers of all armies receive a remuneration for maintaining themselves and their families, it was necessary, in order to be consistent, to specify that this remuneration should be substantially higher than that of the members of the army.³⁵

1808 Finally, “recognizing that some ranks and functions in armed forces are likely to be paid more than others”, the text provides for:

“an objective test to help determine motivations of persons serving with the armed forces of a Party to the conflict; such persons may not be considered to be motivated essentially by the desire for private gain unless they are promised compensation substantially in excess of that promised or paid to

³⁴ On the meaning of this expression, see also *supra*, ad Art. 43, para. 2, p. 516.

³⁵ It is in particular on this point that the above-mentioned draft Convention of the United Nations (see *supra*, notes 11 and 18) diverges from the text of the Protocol as regards the definition of mercenary. The UN text stops after the words “private gain”, while the Protocol only forbids what could be considered as unjustified enrichment. It was probably the difficulty of furnishing proof of such unjustified enrichment which led the drafters to adopt such a strict attitude (*cf. O.R.* XV, p. 193, CDDH/III/SR.57, para. 21, and *O.R.* VI, p. 160, CDDH/SR.41, para. 101).

combatants of similar rank and function in the armed forces of that Party. Thus, pilots would be judged by the same standards of compensation as other pilots, not by the standard of infantrymen”.³⁶

1809 However, this solution gave rise to a number of criticisms. In the first place, because it is far from clear that all mercenaries are essentially motivated by private gain, at least by immediate material gain.³⁷ Moreover, it was argued that this formulation would encourage the appearance of a new category of mercenaries, those who base their actions on ideology.³⁸ In the third place,

“a Party to a conflict would be hard put to it to prove generous remuneration, since mercenaries’ wages were paid either in their own countries or into bank accounts in other countries”.³⁹

However, since the intention in the Protocol, after careful consideration, was, on the one hand, to make a distinction between mercenaries pursuing their own “interests” and selfless international volunteers, and on the other hand, to disregard the particular cause served by the mercenary, and even the fact that he uses his skill to illegal ends, no other path was possible.⁴⁰

1810 In conclusion, “mercenaries” who fulfil all the other conditions of Article 47, but who receive a salary identical to that of the combatants of a similar rank and function of the army in which they are serving, are not mercenaries in the sense of the Protocol, even if they are engaged in combat against a Member State of the United Nations in a so-called war of aggression, or against a national liberation movement.

Sub-paragraph (d) – He is neither a national of a Party to the conflict nor a resident of a territory controlled by a Party to the conflict

1811 Whether or not one is sympathetic to the cause that they are serving, nationals of a Party to the conflict who voluntarily engage in combat in the ranks of that Party, are not mercenaries in the sense of the Protocol.⁴¹

1812 In many countries the enlistment into the armed forces of residents (i.e., foreigners) is expressly provided for, and even compulsory.⁴² Obviously this does not imply the right to force a prisoner of war or a person protected by the Fourth

³⁶ Report of the Rapporteur, *O.R.* XV, p. 455, CDDH/407/Rev. 1, para. 26, and p. 511, CDDH/III/369.

³⁷ *Cf. supra*, note 30, p. 577; see also *O.R.* XV, p. 200, CDDH/III/SR.57, para. 47.

³⁸ *Ibid.*, p. 193, para. 21.

³⁹ *Ibid.*

⁴⁰ The United States draft Convention not only deals with mercenaries, but also with mercenarism, which it considers as a crime against international peace and security (Art. 10).

⁴¹ For example, the Meos recruited during the conflict in Viet Nam from the country’s mountain tribes (See O. Tandon, *op. cit.*, p. 66). Obviously the same applies to nationals who are regular members of the army of their country, whether this is a professional army or not, even if this army is engaged against a national liberation movement.

⁴² For examples, see E. David, *Mercenaires et volontaires internationaux...*, *op. cit.*, pp. 293-295.

Convention to serve in the armed forces of an enemy power (Third Convention, Article 130; Fourth Convention, Article 147, “grave breaches”). However, for foreign residents in the true sense of the word, the Rapporteur explains that: “it was felt that persons in these groups should not be placed at risk of being considered mercenaries”.⁴³

Sub-paragraph (e) – He is not a member of the armed forces of a Party to the conflict

1813 Perhaps with some justification it has been said that this clause made the definition of mercenaries completely meaningless.⁴⁴ In fact, it is sufficient for States which employ them, to make them members of their armed forces for them no longer to be mercenaries. Nevertheless, this provision was necessary, because many States enlist foreigners in their armed forces on a regular basis, and without making these into corps as described in sub-paragraph (a).⁴⁵ However, such persons are not always specially recruited to take part in a particular armed conflict (sub-paragraph (a)), and this could form an element distinguishing those foreigners who are “regularly” enlisted and those who are enlisted as mercenaries, although this possibility is often expressly provided for in case of war.⁴⁶ As each of the conditions listed in sub-paragraphs (a) to (f) must be present for the definition to be met, and each State has control over the composition of its armed forces subject to the provisions of Article 43 (*Armed forces*),⁴⁷ it is clear that enlistment in itself is sufficient to prevent the definition being met.

Sub-paragraph (f) – He has not been sent by a State which is not a Party to the conflict on official duty as a member of its armed forces

1814 A mercenary is a volunteer who, at least officially, enlists on his own account and not on behalf of a third State. Thus there is no question of qualifying corps of troops who have been sent by certain States to different parts of the world for one reason or another, as mercenaries, even if they consist of volunteers who are well rewarded and who in case of need are called upon to take a direct part in hostilities.

J. de P.

⁴³ O.R. XV, p. 511, CDDH/III/369, and pp. 454-455, CDDH/407/Rev.1, para. 25.

⁴⁴ O.R. XV, p. 406, CDDH/236/Rev.1, para. 102.

⁴⁵ For examples, see E. David, *Mercenaires et volontaires internationaux...*, *op. cit.*, pp. 202 ff.

⁴⁶ *Ibid.*, p. 293.

⁴⁷ In the sense of Article 43, anyone who is not a member of the armed forces is not a combatant and does not have the right to participate directly in hostilities. However, one could conceive of an act of “aggression” (*cf.*, *supra*, note 10), carried out by mercenaries who are not members of the armed forces of the “aggressor”.

Part IV – Civilian population

Introduction

- 1815** Part IV is the longest of the six parts of Protocol I, containing thirty-two articles divided into three sections and nine chapters, i.e., virtually a third of the whole Protocol.
- 1816** It is also the most important, for Section I, entitled *General protection against effects of hostilities* obviously represents the crowning achievement of the Diplomatic Conference of 1974-1977 and the most significant victory achieved in international humanitarian law since the adoption of the Fourth Geneva Convention in 1949 relative to the Protection of Civilian Persons in Time of War.
- 1817** The contribution of 1977 is a beneficial complement to the work of 1949, which despite its size remained incomplete, at least on this point. In fact the Fourth Convention, which belongs to the whole body of Geneva law aimed at safeguarding soldiers *hors de combat* as well as persons not participating in hostilities, does not offer complete protection to civilians. Apart from some provisions in Part II, it only protects them against arbitrary and wanton acts of the enemy, leaving aside their protection against dangers arising from certain methods of warfare and the use of certain weapons. The Diplomatic Conference of 1949 did not have a mandate to deal with that particularly delicate area, which at that time fell under the Hague law laying down the rights and duties of belligerents in the conduct of military operations and restricting the choice of the means to be used for inflicting damage.
- 1818** Although Geneva law had been developed in great detail in 1949, and adapted to the requirements of the time, the Hague law had not evolved to the same extent, while the techniques of warfare had developed enormously during the two World Wars. The written rules which could be invoked for protecting civilians against the dangers of hostilities dated back to 1907, when aerial bombardment did not yet exist. Such was the tragic absurdity of the situation.
- 1819** Therefore the ICRC, the initiator of the Geneva Conventions, adopted as one of its main objectives the filling of this glaring gap when it decided in 1967 to undertake a new step in the development of humanitarian law, even if this meant going beyond the classical traditions of Geneva law. However, it did so without hesitation because of the paramount importance of the interests at stake. In fact it had always been interested in this distressing problem and had carried out numerous studies on the subject. Its initiative was fully endorsed by the Red Cross Movement, which lent its full support. This resulted in the development of an impressive body of rules which will be examined hereafter, and which finally

provide guarantees for the population of countries involved in conflicts. There can be no doubt that the population is entitled to such guarantees, though it had been deprived of them for far too long.

1820 A welcome addition to the protection for civilians is the protection of the civilian objects (Chapter III). Chapter V deals with non-defended localities, confirming and supplementing the famous Hague rule, and with demilitarized zones. Chapter VI is entirely new and was introduced in this Section after lengthy debate. It deals with so-called civil defence organizations, whose intervention is so very necessary in conflicts, particularly for the search for and aid of victims of bombardment.

1821 Part IV include two more Sections, also for the benefit of civilians, though in entirely different fields, which supplement the Fourth Convention. Section II is aimed at facilitating relief actions. Section III, which is quite lengthy as it comprises Articles 72-79, is concerned with the treatment of persons in the power of a Party to the conflict; its main concerns are measures in the interests of women and children, the reunion of dispersed families, and the protection of journalists. Moreover, the creation of the important Article 75 (*Fundamental guarantees*) is particularly welcome; all those who do not enjoy more favourable treatment under the Conventions and the Protocol can resort to this.

J.P.

Protocol I

Part IV, Section I – General protection against the effects of hostilities

Introduction

1822 Although traces of the principle of the distinction between combatants and non-combatants, made in order to spare the latter, were present in all great civilizations,¹ it took a long time to become established. For centuries it was considered that war was not only waged against States and their armies, but also against their people. As a result, civilians were at the mercy of the conquerors, who all too often, even if they spared their lives, submitted them to forced labour, looted their property and treated them in a way which showed contempt for even the most elementary rights. Especially during a siege, civilians shared the dangers faced by soldiers.

1823 The notion that war is waged between soldiers and that the population should remain outside hostilities was introduced in the sixteenth century and became established by the eighteenth century. The customs of war acquired a more humanitarian character through the process of civilization and as a result of the influence of thinkers and jurists. One of the first codifications of such rules was the work of Francis Lieber, the author of the famous Instructions given to the armed forces of the United States in 1863 when they were engaged in the Civil War. After a reminder that citizens of the opposite side are enemies, Lieber stated:

“Art. 22. Nevertheless, as civilization has advanced during the last centuries, so has likewise steadily advanced, especially in war on land, the distinction between the private individual belonging to a hostile country and the hostile country itself, with its men in arms. The principle has been more and more acknowledged that the unarmed citizen is to be spared in person, property, and honor as much as the exigencies of war will admit.”

1824 In Article 25 he added that, in regular wars, protection of the inoffensive citizen of the hostile country is the rule; privation and disturbance of private relations are exceptions.²

¹ Cf. J. Pictet, *Development and Principles of International Humanitarian Law*, Dordrecht-Geneva, 1985, pp. 5-25.

² However, Lieber states in Article 24 that in wars with uncivilized peoples, protection of individuals was the exception.

- 1825 This view, to which the work of Bluntschli³ and the Oxford Manual⁴ subscribed, was gradually adopted by governments. For instance, on 11 August 1870, King Wilhelm of Prussia declared: “I wage war against French soldiers and not against the French people”.
- 1826 Although it was never officially contained in an international treaty, the principle of *protection* and of *distinction* forms the basis of the entire regulation of war, established in Brussels in 1874 in the form of a draft,⁵ and later in the Hague Conventions of 1899 and 1907.⁶ These Conventions contain provisions which restrict resort to force and the use of weapons; they were concerned above all with sparing soldiers unnecessary or excessive suffering, by prohibiting the use of means such as poison, or bullets which expand or flatten in the body (“dum-dum” bullets) and conduct such as perfidy. These measures only affected civilians very indirectly. Protection of civilians from arbitrary and oppressive enemy action, outlined in 1899, and later in 1907,⁷ was expressed in its most complete form in the Fourth Geneva Convention of 1949, which is now supplemented by this Protocol.
- 1827 The protection of the civilian population from the dangers created by hostilities was touched on in 1907 only by some brief provisions contained in the Regulations Respecting the Laws and Customs of War on Land.⁸ They included, in particular, a prohibition on attacking towns, villages, dwellings and buildings which are not defended, and respect for certain buildings dedicated to science, charitable purposes etc. It is true that at that time the firing range of artillery was still relatively short and air-power and modern missiles did not yet exist. The importance which projectiles dropped from aircraft or sent by long-range artillery or even self-propelled missiles have assumed since that time, is clear. The First World War revealed the inadequacy of such norms. During the Second World War there was a dramatic turning point in the situation. Although the basic principle still remained unquestioned, the enormous development of the means of warfare jeopardized this principle in practice. Finally, alleging that they were carrying out reprisals,⁹ the belligerents went so far as to wage war almost indiscriminately, which resulted in heavy losses amongst the civilian population and culminated in the dropping of nuclear weapons on Hiroshima and Nagasaki. Since that time physicists have continued to make their formidable discoveries.

⁵ Project of an International Declaration concerning the Laws and Customs of War, 27 August 1874, Brussels Conference of 1874.

⁶ Above all, the Convention respecting the Laws and Customs of War on Land (IInd Convention of 1899 and IVth Convention of 1907).

⁷ Articles 42-52 of the Regulations annexed to the Hague Convention IV of 1907.

⁸ *Ibid.*, Art. 23, para. 1(g), and Arts. 25-28.

⁹ See, for example, G. Best, *Humanity in Warfare*, London, 1980, pp. 242-244.

- 1828** At this point the need for restrictive regulation became necessary. However, it was clear that the Allied Powers, which had won the Second World War, were in no hurry to pursue this path, no doubt in the fear of condemning their own conduct. This trend also emerged in other fields. Thus the war crimes listed in the Charter of the Nuremberg Tribunal¹⁰ include the wanton destruction of towns and villages as well as devastation which cannot be justified by military necessity.¹¹ There was no condemnation of such acts, however, and the attempts made in this direction were abandoned.
- 1829** The 1949 Diplomatic Conference did not have the task of revising the Hague Regulations. When proposals were submitted to prohibit the use of nuclear weapons, the Conference declared that it did not have the authority to deal with such a problem.¹² This is why the 1949 Geneva Conventions only deal with the protection to which the population is entitled against the effects of war in a brief and limited way. Only a short part of the Fourth Convention¹³ broaches this subject and does so without laying down any basic principles.¹⁴
- 1830** The fact that the Hague Regulations were not brought up to date meant that a serious gap remained in codified humanitarian law. This has had harmful effects in many armed conflicts which have occurred since 1949 involving belligerents one side having a powerful airforce while the other side had no, or hardly any, aircraft. In these circumstances, and in the absence of mandatory, clearly formulated treaty rules on bombardment, it was sometimes difficult to enforce compliance with the provisions of humanitarian law as a whole. “How can you ask us to show consideration for captured enemy airmen and treat them as prisoners of war when our wives and children are attacked and massacred in their homes and on the roads?” Such questions were sometimes asked to the ICRC representatives, and it was not easy to answer them.
- 1831** This situation led the ICRC to establish its Draft Rules for the Limitation of the Dangers incurred by the Civilian Population in Time of War,¹⁵ which reaffirmed some of the principles of customary law and offered concrete solutions to resolve problems resulting from changes and developments in weaponry.
- 1832** This draft was submitted to the XIXth International Conference of the Red Cross (New Delhi, 1957), which approved it in principle, but there was no follow-up in practical terms by governments. However, many welcomed this draft, which reaffirmed the distinction to be made between persons participating in military operations and those belonging to the civilian population.

¹⁰ Charter of the International Military Tribunal annexed to the Agreement for the Prosecution and Punishment of the Major War Criminals of the European Axis, signed on 8 August 1945 by France, the United Kingdom, the USSR and the United States.

¹¹ Charter, Article 6, para. *b*.

¹² Official Records 1949, II, B, pp. 495-509 (draft resolution of the USSR).

¹³ Part II (Arts. 13-26): General protection of populations against certain consequences of war.

¹⁴ These principles can be found in particular in the Preamble of the St. Petersburg Declaration to the Effect of Prohibiting the Use of certain Projectiles in Wartime, signed at St. Petersburg, 29 November - 11 December 1868; in Articles 1 and 7 of the Oxford Manual (*cf. supra*, note 4); in the above-mentioned Articles of the Hague Regulations, *supra*, note 8.

¹⁵ 1st ed., 1956; 2nd ed., 1958.

1833 However, the ICRC did not become discouraged by the lack of interest of governments; adopting another approach, it suggested at the XXth International Conference of the Red Cross (Vienna, 1965) the reaffirmation of certain basic principles; the result was Resolution XXVIII of that Conference, which solemnly declared that:

“all Governments and other authorities responsible for action in armed conflicts should conform at least to the following principles:

- that the right of the parties to a conflict to adopt means of injuring the enemy is not unlimited;
- that it is prohibited to launch attacks against the civilian populations as such;
- that distinction must be made at all times between persons taking part in the hostilities and members of the civilian population to the effect that the latter be spared as much as possible;
- that the general principles of the Law of War apply to nuclear and similar weapons”.

1834 These matters attracted the attention of the United Nations, which up to that time had only dealt with, with some reticence, a few questions relating to armed conflict. The International Conference on Human Rights, held in Teheran in 1968, marked a complete reversal in this field. Since then the United Nations has not ceased to approach these problems with unflinching interest. At the 23rd session of the General Assembly in 1968, Resolution 2444 (XXIII) was adopted taking up the principles expressed in Vienna (though with the exception of the last one). Henceforth, the General Assembly devoted one or more resolutions to the reaffirmation and development of humanitarian law at each of its sessions, thus giving important political support to the efforts of the Red Cross.¹⁶ It is appropriate to cite in particular the Resolution entitled “Basic Principles for the Protection of Civilian Populations in Armed Conflicts” (2675 (XXV)).¹⁷ When

¹⁶ 2579 (XXIV); 2673, 2674, 2675, 2676, 2677 (XXV); 2852, 2853, 2854 (XXVI); 3032 (XXVII); 3058, 3112 (XXVIII); 3245, 3318, 3319 (XXIX); 3500 (XXX); 31/19.

¹⁷ “The General Assembly, [...]

Affirms the following basic principles for the protection of civilian populations in armed conflicts, without prejudice to their future elaboration within the framework of progressive development of the international law of armed conflict:

1. Fundamental human rights, as accepted in international law and laid down in international instruments, continue to apply fully in situations of armed conflict.
2. In the conduct of military operations during armed conflicts, a distinction must be made at all times between persons actively taking part in the hostilities and civilian populations.
3. In the conduct of military operations, every effort should be made to spare civilian populations from the ravages of war, and all necessary precautions should be taken to avoid injury, loss or damage to civilian populations.
4. Civilian populations as such should not be the object of military operations.
5. Dwellings and other installations that are used only by civilian populations should not be the object of military operations.
6. Places or areas designated for the sole protection of civilians, such as hospital zones or similar refuges, should not be the object of military operations.

(continued on next page)

this Resolution is compared with the text of Protocol I, it is clear that the principles laid down by the General Assembly are incorporated almost in their entirety.

- 1835** Thus Section I of Part IV contains valid solutions to problems of great importance. If it had not been possible to impose limitations on certain methods of combat, there would have been reason to fear that the credibility of humanitarian law would suffer seriously as a consequence. The text which was adopted is not always as clear as one might have wished, but it seemed necessary to leave some margin of appreciation to those who will have to apply the rules. Thus their effectiveness will depend to a large extent on the good faith of the belligerents and on their wish to conform to the requirements of humanity.
- 1836** This Section contains nineteen articles (48-67), divided into six separate chapters. Chapter I (48-49) lays down the basic rule, defines attacks and the scope of application. Chapter II (50-51) contains the rules relating to the protection of the civilian population. Chapter III (52-56) deals with the objects to be respected and defines military objectives in so far as objects are concerned. Precautionary measures to be observed are the subject of Chapter IV (57-58), and localities and zones under special protection are dealt with in Chapter V (59-60).
- 1837** Finally, it is appropriate to make a special mention of Chapter VI (Articles 61-67), which is devoted to civil defence. The regulation which was adopted is the culmination of efforts made over a period of twenty years; the solutions adopted will permit States to organize their civil defence services on a more solid legal basis than hitherto; the definitions given, the international sign laid down, and the possible co-operation with certain military units, will undoubtedly make it possible to save many lives and to give more help to the victims of hostilities.

* * *

- 1838** Before going on to study the articles which comprise this Section, it is appropriate to reflect for a moment on the question of nuclear weapons.
- 1839** The question had already been raised in 1949, but the Diplomatic Conference, presented with a proposal by the USSR delegation meant in particular to outlaw nuclear weapons, declared that it had no authority to deal with this, and the draft resolution was declared inadmissible by a large majority.¹⁸

7. Civilian populations, or individual members thereof, should not be the object of reprisals, forcible transfers or other assaults on their integrity.

8. The provision of international relief to civilian populations is in conformity with the humanitarian principles of the Charter of the United Nations, the Universal Declaration of Human Rights and other international instruments in the field of human rights. The Declaration of Principles for International Humanitarian Relief to the Civilian Population in Disaster Situations, as laid down in resolution XXVI adopted by the twenty-first International Conference of the Red Cross, shall apply in situations of armed conflict, and all parties to a conflict should make every effort to facilitate this application.”

¹⁸ *Supra*, p. 585.

1840 When the ICRC formulated its Draft Rules for the Limitation of the Dangers incurred by the Civilian Population in Time of War in 1956, it included the following provision (Art. 14, para. 1):

“Without prejudice to the present or future prohibition of certain specific weapons, the use is prohibited of weapons whose harmful effects – resulting in particular from the dissemination of incendiary, chemical, bacteriological, radioactive or other agents – could spread to an unforeseen degree or escape, either in space or in time, from the control of those who employ them, thus endangering the civilian population.”

1841 This provision was seen by several governments as a condemnation of nuclear weapons, and it is undoubtedly mainly for this reason that there was no concrete sequel to the ICRC draft.

1842 In view of the development of air warfare and the increasing resort to bombardment, the situation of the population remained a cause for concern, apart from the problem of nuclear weapons, particularly because of the absence of a restrictive definition of military objectives. This led the ICRC to present its draft articles for the Additional Protocols without approaching this problem. In the introduction to the draft of the present Protocol, the ICRC expressed itself as follows (page 2):

“Problems relating to atomic, bacteriological and chemical warfare are subjects of international agreements or negotiations by governments, and in submitting these draft Additional Protocols the ICRC does not intend to broach those problems. It should be borne in mind that the Red Cross as a whole, at several International Red Cross Conferences, has clearly made known its condemnation of weapons of mass destruction and has urged governments to reach agreements for the banning of their use.”

1843 In the introduction to the Commentary on the Draft Protocol the ICRC, explaining its position, stated that it had not included in its drafts, apart from some general provisions, a regulation of atomic, bacteriological and chemical weapons.¹⁹ These general provisions are those which already existed in a codified form or as customary law and which were confirmed in the Protocols. They consist mainly of the provisions of Article 33 of the Draft, the present paragraphs 1 and 2 of Article 35 (*Basic rules*) (dealing respectively with the fact that the right to choose methods and means of warfare is not unlimited, and with superfluous injury or unnecessary suffering), and the customary rule confirmed by Article 43 of the Draft, now Article 48 of the present Protocol (*Basic rule*) (dealing with general protection of the civilian population, distinction between the civilian population and civilian objects, on the one hand, and combatants and military objectives, on the other). Obviously the Protocol could not restrict the scope of these already existing provisions. Moreover, in 1965, the International Conference of the Red Cross, as we saw above, had declared that “the general principles of the Law of War apply to nuclear and similar weapons”. It was also

¹⁹ *Commentary Drafts*, p. 2.

in this sense that the ICRC replied to a number of governments which had communicated with it on this matter.

- 1844** During the course of the four sessions of the Diplomatic Conference which produced the Additional Protocols, several delegations expressed their view on nuclear weapons. During the general debate, a series of governments were opposed to the Conference dealing with specific weapons.²⁰ Other delegations urged the Conference to broach the question of nuclear weapons and to prohibit their use.²¹ Finally, four States urged the Conference not to enter into discussion on nuclear weapons.²²
- 1845** The United Kingdom and the United States confirmed their position when signing the Protocols.²³ At the final meetings of the Conference France declared that it did not consider that the rules of the Protocol applied to nuclear weapons.²⁴
- 1846** Finally, when the Conference adopted Article 33 (the present Article 35 – *Basic rules*) by consensus, the delegation from India declared that it had joined the consensus because, in its interpretation, the rules contained in this article applied to all categories of weapons – nuclear, bacteriological, chemical or conventional, or any other categories of arms.²⁵
- 1847** However, this silence should not be interpreted as approval: first, some of these statements are contradictory; secondly, some were not made during the meetings, but submitted at a later date; finally, the maxim that “silence is consent” is not convincing. None of the delegations which had proposed that the Conference should deal with nuclear weapons submitted official proposals, so that there was no discussion on this subject. The same happened when the Conference dealt with Article 56 (*Protection of works and installations containing*

²³ The declaration of the United Kingdom reads as follows:
“[...] The Government of the United Kingdom of Great Britain and Northern Ireland declare that they have signed on the basis of the following understandings:
[...]

(i) that the new rules introduced by the Protocol are not intended to have any effect on and do not regulate or prohibit the use of nuclear weapons;
[...]

The declaration of the United States reads as follows:

“[...] This signature is subject to the following understandings:

A) Protocol I

1. It is the understanding of the United States of America that the rules established by this Protocol were not intended to have any effect on and do not regulate or prohibit the use of nuclear weapons.

[...]

²⁴ *O.R.* VII, p. 295, CDDH/SR.56, para. 3, sub-para. 3.

²⁵ *O.R.* VI, p. 115, CDDH/SR.39, Annex.

dangerous forces), which lays down special protection for installations containing dangerous forces. The inclusion of nuclear electrical generating stations in the list of protected installations did not provoke any special discussion on nuclear weapons. Similarly, when Article 35 (*Basic rules*), paragraph 3 (protection of the natural environment), was adopted, there was no mention of nuclear weapons, although these are capable of profoundly affecting the natural environment.²⁶

1848 The only time at which the Conference concerned itself with this problem was when it had to define the mandate given to an *Ad Hoc* Committee to study certain conventional weapons²⁷ which cause superfluous injury and unnecessary suffering. Two delegations proposed that the word “conventional” be deleted, so that the Committee’s mandate would extend to nuclear, bacteriological and chemical weapons. The Conference approved the text of the mandate with the word “conventional” by 68 votes to 0, with 10 abstentions.²⁸

1849 The *Ad Hoc* Committee expressed itself as follows in its report:

“Nuclear weapons and other weapons of mass destruction were, of course, the most destructive. In that connection, some delegations rejected the view that the debate on those weapons and their possible prohibition should be left to the disarmament discussions, and they urged that the Conference include them in its programme of work. Another delegation expressed its regret at the decision not to consider these weapons. Many other delegations, however, accepted the limitation of the work of this Conference to conventional weapons. As it was pointed out by some, nuclear weapons in particular had a special function in that they act as deterrents preventing the outbreak of a major armed conflict between certain nuclear powers.”²⁹

1850 The Diplomatic Conference formally recorded the *Ad Hoc* Committee’s report without any discussion on this point, and it was not raised again while the Conference lasted.³⁰

1851 Thus, there were no deliberations on the subject of nuclear weapons throughout the Conference, although one might have expected this subject to be broached at least marginally, in view of the positions adopted and the subjects dealt with. What can be deduced from this? There can be no question of a consensus in the current legal sense of the term,³¹ since no decision was taken.

²⁶ Cf. commentary Art. 35, para. 3, *supra*, p. 414, for the relation between that paragraph and the Convention on the Prohibition of Military or any other Hostile Use of Environmental Modification Techniques of 10 October 1976.

²⁷ In French the expression “armes conventionnelles”, which led to the confusion, was replaced by “armes classiques” in the 1980 Convention.

²⁸ O.R. V, pp. 82-90, CDDH/SR.9, paras. 12-54.

²⁹ O.R. XVI, p. 454, CDDH/47/Rev.1, para. 5.

³⁰ Cf. O.R. V, pp. 219-221, CDDH/SR.21, paras. 1-13.

³¹ The definition of *consensus* contained in Article 4 of the Rules of Procedure of the Conference on Security and Cooperation in Europe is: “Consensus shall be understood to mean the absence of any objection expressed by a Representative and submitted by him as constituting an obstacle to the taking of the decision in question”. Cf. also J. Monnier, “Observations sur quelques tendances récentes en matière de formation de la volonté sur le plan multilatéral”, 31 *ASDI*, 1975, pp. 31-51.

Could it then be considered as a tacit understanding? Legally, silence is difficult to interpret. Was there an agreement outside the Conference between the principal States concerned? This is not the place to answer such a question, but it does seem, nevertheless, that none of the States which possess nuclear weapons wished to discuss and examine during this Conference the regulation or the possible limitation of their use.

- 1852** What can be concluded from all this? In the first place, there is no doubt that during the four sessions of the Conference agreement was reached not to discuss nuclear weapons. Furthermore, there is no doubt that Protocol I of 1977 has not in any way nullified the general rules which apply to all methods and means of combat. As we saw above, these rules are in any case incorporated in the Protocol. These are, first of all, the provisions of the Hague Regulations of 1907, which are a reminder that belligerents do not have an unlimited right to choose the means of injuring the enemy, that it is prohibited to use weapons, projectiles or other devices of a nature to cause superfluous injury and unnecessary suffering. The Protocol also repeats the customary rule which is at the very basis of the laws and customs of war, i.e., the rule that a distinction shall always be made between combatants and military objectives, on the one hand, and the civilian population and civilian objects, on the other hand. Whatever opinion one may have on the scope of application of Protocol I, these rules remain completely valid and continue to apply to nuclear weapons, as they do to all other weapons. Thus it cannot be argued that by repeating such rules the Protocol excludes nuclear weapons from its scope of application.
- 1853** The foregoing is in no way contradicted by the declarations made by the United Kingdom and the United States on signing the Protocol on 12 December 1977.³² The British declaration refers explicitly to *new* rules and therefore implicitly confirms that the rules *reaffirmed* in the Protocol apply to all arms; and it is in accordance with the British Military Manual.³³ The American declaration is less clear on this point, though it should certainly be interpreted in the same way, as confirmed by the United States Military Manual.³⁴
- 1854** The exact limitations of what is prohibited by international humanitarian law as regards the use of nuclear weapons during armed conflict remains to be determined. This question does not really seem to have ever been resolved.
- 1855** In fact, the question of the lawful nature of certain uses of nuclear weapons in wartime was reopened in the Protocol, though its contents were not really modified. It is clear that this is a highly controversial problem. The fact that States did not wish to resolve it in the context of the CDDH is because it has implications

³² See *supra*, note 23.

³³ *Manual of Military Law*, 1958, Part III, para. 113: "There is no rule of international law dealing specifically with the use of nuclear weapons. Their use, therefore, is governed by the general principles laid down in this chapter."

³⁴ *The Law of Land Warfare*, 1956, para. 35: "The use of explosive 'atomic weapons', whether by air, sea or land forces, cannot as such be regarded as violative of international law in the absence of any customary rule of international law or international convention restricting their employment". In fact, by using the words "as such", the United States Manual affirms that the use of nuclear weapons by itself does not constitute a violation of international law, but does not exclude the possibility that indiscriminate use could constitute such a violation.

beyond the scope of international humanitarian law, as clearly stated in the above-mentioned report of the *Ad Hoc* Committee. However, it was perhaps also because they knew that the problem could not be solved in the short term, and that it would have paralyzed the adoption of the Protocols.

1856 Thus we are not going to end the debate in the context of the Protocol, but to position it as follows:

1857 – The existing principles reaffirmed in the Protocol, particularly in Article 35 (*Basic rules*) and Article 48 (*Basic rule*) do not allow the conclusion that nuclear weapons are prohibited as such by international humanitarian law.

Some writers certainly have good arguments for claiming that they are so prohibited, based in particular on the prohibition of poison and poisonous weapons, or even of chemical weapons. However, the other point of view is confirmed by first, the absence of a treaty specifically prohibiting or restricting the use of nuclear weapons, secondly the fact that the development of science makes it possible to create more accurate nuclear weapons with more circumscribed effects, and thirdly, and this final argument is based on the previous two arguments, the *opinio juris* of other legal experts, and above all, of governments which possess nuclear weapons.³⁵

1858 – The Protocol does not modify existing law with regard to the use of weapons during an armed conflict, but reaffirms and clarifies such law. Clearly, the hypothesis that States acceding to the Protocol bind themselves without wishing to – or even without knowing – with regard to such an important question as the use of nuclear weapons, is not acceptable. The desire not to broach it during the CDDH is a determining factor in this respect.

1859 – As we saw above, no one could take the view that nuclear weapons are “outside” international humanitarian law, i.e., that armed conflicts carried out with conventional weapons are covered by international humanitarian law, while those using nuclear weapons are not.

If the principles reaffirmed in the Protocol do not prohibit the use of nuclear weapons during an armed conflict, they nevertheless severely restrict such use.

The following principles and rules should in particular be taken into consideration:

³⁵ See in particular R.E. Charlier, “Questions juridiques soulevées par l’évolution de la science atomique”, 91 *Hague Recueil*, 1957/II, p. 213; G. Schwarzenberger, *The Legality of Nuclear Weapons*, London, 1958; N. Singh, *Nuclear Weapons and International Law*, London, 1959; United Nations, General Assembly, “Existing Rules of International Law Concerning the Prohibition or Restriction of Use of Specific Weapons”, UN Doc. A/9215, 7 November 1973, vol. I, chapter II; Y. Sandoz, *Des armes interdites en droit de la guerre*, *op. cit.*, Chapter IV, pp. 57-74; C. Pilloud, “Les Conventions de Genève de 1949 pour la protection des victimes de la guerre, les Protocoles additionnels de 1977 et les armes nucléaires”, 21 *GYIL*, 1978, p. 169; H. Meyrowitz, “La stratégie nucléaire et le Protocole additionnel I aux Conventions de Genève de 1949”, 83 *RGDIP* 4, 1979, p. 905; United Nations, General Assembly, “A Comprehensive Study of the Origin, Development, and Present Status of the Various Alternatives Proposed for the Prohibition of the Use of Nuclear Weapons”, UN Doc. A/AC.187/71, 19 August 1977; GIPRI (Geneva International Peace Research Institute), *Nuclear Weapons and International Law*, Actes du colloque préparés par. Z. Mériboute, Turin, 1985.

- the prohibition “to employ weapons, projectiles and material and methods of warfare of a nature to cause superfluous injury or unnecessary suffering” (Article 35 – *Basic rule*, paragraph 2);
- the obligation of the Parties to the conflict to “at all times distinguish between the civilian population and combatants” (Article 48 – *Basic rule*);
- the prohibition or “indiscriminate attacks” (Article 51 – *Protection of the civilian population*, paragraph 4) in particular “an attack by bombardment by any methods or means which treats as a single military objective a number of clearly separated and distinct military objectives, located in a city, town, village or other area containing a similar concentration of civilians of civilian objects” (Article 51 – *Protection of the civilian population*, paragraph 5(a)), and “an attack which may be expected to cause incidental loss of civilian life, injury to civilians, damage to civilian objects, or a combination thereof, which would be excessive in relation to the concrete and direct military advantage anticipated” (article 51 – *Protection of the civilian population*, paragraph 5(b)).

1860 – Within the scope of these rules, and in particular the principle of proportionality, it is difficult to accurately define the borderline between a use of nuclear weapons which may be lawful and a use which is unlawful: this could only be established by means of negotiations between States aimed at determining the scope and consequences, as regards nuclear weapons, of the principles and rules restated in the Protocols. For that matter, it was only possible to begin establishing such limitations with regard to conventional weapons after a diplomatic conference and the adoption of the Convention on the Prohibition or Restriction of the Use of Certain Conventional Weapons in 1980.³⁶

1861 – This uncertainty which exists regarding the scope of international humanitarian law with respect to the use of nuclear weapons is potentially harmful for such law and consequently all the victims that it aims to protect. This danger is all the greater as a first use of nuclear weapons, considered to be lawful by its user, could be considered as a violation by its victim, and clearly entails the risk of uncontrollable escalation. Therefore States ought to enter negotiations to remove such uncertainty.

1862 – As emphasized in a passage of the above-mentioned report of the *Ad Hoc* Committee of the CDDH, “nuclear weapons in particular had a special function in that they act as deterrents preventing the outbreak of a major armed conflict between certain nuclear powers”.³⁷

³⁶ Convention on the Prohibitions or Restrictions of Use of Certain Conventional Weapons which may be Deemed to be Excessively Injurious or to have Indiscriminate Effects of 10 October 1980. Three Protocols are annexed to that Convention: Protocol I on Non-Detectable Fragments; Protocol II on Prohibitions or Restrictions on the Use of Mines, Booby-Traps and Other Devices, and Protocol III on Prohibitions or Restrictions on the Use of Incendiary Weapons.

³⁷ Cf. *supra*, note 29.

This function, currently known as “the nuclear deterrence” is outside the scope of international humanitarian law. Therefore, the problem is not dealt with in the context of this commentary.

C.P./J.P.

Protocol I

Article 48 – Basic rule

In order to ensure respect for and protection of the civilian population and civilian objects, the Parties to the conflict shall at all times distinguish between the civilian population and combatants and between civilian objects and military objectives and accordingly shall direct their operations only against military objectives.

Commentary

- 1863** The basic rule of protection and distinction is confirmed in this article. It is the foundation on which the codification of the laws and customs of war rests: the civilian population and civilian objects must be respected and protected in armed conflict, and for this purpose they must be distinguished from combatants and military objectives. The entire system established in The Hague in 1899 and 1907¹ and in Geneva from 1864 to 1977² is founded on this rule of customary law. It was already implicitly recognized in the St. Petersburg Declaration of 1868 renouncing the use of certain projectiles,³ which had stated that “the only legitimate object which States should endeavour to accomplish during war is to weaken the military forces of the enemy”. Admittedly this was concerned with preventing superfluous injury or unnecessary suffering to combatants by prohibiting the use of all explosive projectiles under 400 grammes in weight, and was not aimed at specifically protecting the civilian population. However, in this instrument the immunity of the population was confirmed indirectly.
- 1864** In the Hague Conventions of 1899 and 1907, like the Geneva Conventions of 1929 and 1949, the rule of protection is deemed to be generally accepted as a rule of law, though at that time it was not considered necessary to formulate it word for word in the texts themselves. The rule is included in this Protocol to verify the distinction required and the limitation of attacks on military objectives.
- 1865** Up to the First World War there was little need for the practical implementation of this customary rule as the population barely suffered from the use of weapons, unless it was actually in the combat zone itself. The few measures adopted in The Hague in 1899 and 1907 seemed sufficient: a prohibition to attack places which are not defended, the protection of certain buildings, the fate of the population in occupied areas etc.
- 1866** The situation altered radically already during the First World War as a result of the increased range of artillery and the arrival of the first aerial bombardments from aircraft or airships. However, it was above all the development of weaponry after this conflict and its use during the Second World War which radically changed the situation. As a result the customary rule was affected to such an extent that one might have wondered whether it still existed.⁴
- 1867** By the repeated use of reprisals the point was reached where attacks were systematically directed at towns and their inhabitants.

¹ The Conventions and Declarations adopted on 29 July 1899 and 18 October 1907 by the two International Peace Conferences in The Hague include the following:

- Conventions concerning the laws and customs of war on land (II of 1899, IV of 1907);
- Declarations prohibiting the discharge of projectiles and explosives from balloons (1899 and 1907);
- Convention Respecting Bombardment by Naval Forces in Time of War (IX of 1907).

² Cf. General introduction.

³ Declaration to the Effect of Prohibiting the Use of certain Projectiles in Wartime, signed in St. Petersburg, 29 November – 11 December 1868.

⁴ See H. Meyrowitz, “Le Protocole additionnel I et le droit général de la guerre”, in “Forces armées et développement du droit de la guerre”, *Recueil de la Société internationale de droit pénal militaire et de droit de la guerre*. Brussels, 1982, p. 119, in particular p. 124 (with notes).

1868 From the beginning of its work the ICRC considered that it was necessary to explicitly confirm the concept of the distinction in a treaty. For this purpose it proposed the following:

“in the conduct of military operations, a distinction should be made at all times between, on the one hand, persons who directly participate in military operations and, on the other, persons who belong to the civilian population, to the effect that the latter be spared as much as possible.”⁵

1869 Following the debates which took place during the two sessions of the Conference of Government Experts in 1971⁶ and 1972,⁷ the ICRC introduced in the draft prepared for the Diplomatic Conference the following provision:

“Article 43 – Basic rule

In order to ensure respect for the civilian population, the Parties to the conflict shall confine their operations to the destruction or weakening of the military resources of the adversary and shall make a distinction between the civilian population and combatants, and between civilian objects and military objectives.”

1870 After several amendments had been proposed,⁸ Committee III finally decided on the present text of the article. The term “military resources” was the main object of criticism; it was thought that this was not quite appropriate in a purely humanitarian convention, and that in view of the imprecise scope of the term, this could be used to justify attacks against certain non-military objectives.⁹

1871 As finally adopted, this article has the great advantage that it clearly establishes the rule that a distinction must always be made between the civilian population and combatants, on the one hand, and between civilian objects and military objectives, on the other, and that it proclaims the respect and protection to which the civilian population and civilian objects are entitled. It was not discussed in the plenary meetings and was adopted by consensus. However, it gave rise to two explanations of vote: one delegation simply stated: “if there had been a vote, it would have abstained therefrom”, because it considered that that article “has direct implications as regards a State’s organization and conduct of defence against an invader”.¹⁰ Another delegate considered that:

“this article will apply within the capability and practical possibility of each party to the conflict. As the capability of the parties to distinguish will depend upon the means and methods available to each party generally or at a particular moment, this article does not require a party to do something which is not within its means or its capability.”¹¹

⁶ CE 1971, Report, pp. 75-77, paras. 424-439.

⁷ CE 1972, Report, Vol. I, pp. 141-144, paras. 3.97- 3.124.

⁸ Cf. O.R. III, pp. 193-195.

⁹ See O.R. XIV, p. 15, CDDH/III/SR.2, para. 18; p. 20, CDDH/III/SR.3, para. 8; pp. 26-27, CDDH/III/SR.4, paras. 8-9; pp. 31-32, para. 53 and 57.

¹⁰ O.R. VI, p. 186, CDDH/SR.41, Annex (France).

¹¹ Ibid., p. 188 (India).

In this respect it should be noted that it is the duty of Parties to the conflict to have the means available to respect the rules of the Protocol. In any case, it is reprehensible for a Party possessing such means not to use them, and thus consciously prevent itself from making the required distinction.

1872 The wording used in this article requires some explanation. First, respect and protection are terms which have long been used in the First Geneva Convention for the Amelioration of the Condition of the Wounded and Sick in Armed Forces in the Field. In the last version of that Convention (1949) these terms are used with regard to the wounded and sick (Article 12), medical units and establishments (Article 19), and medical personnel (Article 24). In general the word “respect” implies the concept of sparing the persons and objects concerned, and not attacking them, while the word “protection” implies an act of positive aid and support.¹²

1873 The civilian population is defined in Article 50 (*Definition of civilians and civilian population*), paragraph 2; it comprises all persons who are civilians. According to Article 52 (*General protection of civilian objects*), paragraph 1, civilian objects are all objects which are not military objectives as defined in paragraph 2 of the same article. In the sense of Article 43 (*Armed forces*), paragraph 2, combatants are members of the armed forces with the exception of medical personnel and chaplains.

1874 As regards military objectives, these include the armed forces and their installations and transports. As far as objects are concerned, military objectives are limited, according to Article 52 (*General protection of civilian objects*), paragraph 2:

“to those objects which by their nature, location, purpose or use make an effective contribution to military action and whose total or partial destruction, capture or neutralization, in the circumstances ruling at the time, offers a definite military advantage”.

1875 Finally, the word “operations” should be understood in the context of the whole of the Section; it refers to military operations during which violence is used, and not to ideological, political or religious campaigns. For reasons which have nothing to do with the discussions in the Diplomatic Conference, the adjective “military” was not used with the term “operations”, but this is certainly how the word should be understood. According to the dictionary, “military operations” refers to all movements and acts related to hostilities that are undertaken by armed forces.¹³ This term is used in several articles in this Section, particularly in paragraph 1 of Article 51 (*Protection of the civilian population*) and it may be useful to refer to the commentary thereon.

C.P. / J.P.

¹² For more details, cf. commentary on the articles mentioned and on Art. 10, *supra*, p. 145.

¹³ *The Shorter Oxford Dictionary*, 1973, p. 1452 defines “military operations” as a “series of warlike or strategic acts”. Cf. also the *Grand Dictionnaire encyclopédique Larousse*, 1984, Vol. 7, p. 7592: “ensemble des combats et des manœuvres de toute sorte exécutés par des forces militaires dans une région déterminée en vue d’atteindre un objectif précis” (battles and manœuvres of all kinds, taken as a whole, as carried out by armed forces in a defined area, with a view to gaining a specific objective) (translated by the ICRC).

Protocol I

Article 49 – Definition of attacks and scope of application

1. “Attacks” means acts of violence against the adversary, whether in offence or in defence.
2. The provisions of this Protocol with respect to attacks apply to all attacks in whatever territory conducted, including the national territory belonging to a Party to the conflict but under the control of an adverse Party.
3. The provisions of this Section apply to any land, air or sea warfare which may affect the civilian population, individual civilians or civilian objects on land. They further apply to all attacks from the sea or from the air against objectives on land but do not otherwise affect the rules of international law applicable in armed conflict at sea or in the air.
4. The provisions of this Section are additional to the rules concerning humanitarian protection contained in the Fourth Convention, particularly in Part II thereof, and in other international agreements binding upon the High Contracting Parties, as well as to other rules of international law relating to the protection of civilians and civilian objects on land, at sea or in the air against the effects of hostilities.

Commentary

1876 Article 44 of the 1973 draft contained the essence of the provisions of paragraphs 1, 3 and 4.¹ The Conference took up these proposals, supplementing and modifying them and adding paragraph 2, which is itself based on other articles in the draft.²

Paragraph 1

1877 The term “attacks” is used many times in Part IV. It was appropriate to provide a definition of this term and Committee III, and later the Drafting Committee, restricted themselves to minor changes of the wording. The only aspect which gave rise to controversy was the expression “against the adversary”, but Committee III decided to retain this wording with 38 votes in favour, 18 votes against and 10 abstentions.³ Those who wished to delete the words argued that the provisions of this Section of the Protocol should apply to the civilian population of all the Parties to the conflict, including the civilian population of

¹ “*Article 44 – Field of application*”

1. The provisions contained in the present Section apply to any land, air or sea warfare which may affect the civilian population, individual civilians and civilian objects on land.

2. These provisions apply to acts of violence committed against the adversary, whether in defence or offence. Such acts are referred to hereafter as ‘attacks’.

3. These provisions are complementary to such other international rules relating to the protection of civilians and civilian objects against effects resulting from hostilities as may be binding upon the High Contracting Parties, in particular to Part II of the Fourth Convention.”

² Draft Articles 48 and 66.

³ *O.R. XIV*, p. 86, CDDH/III/SR.11, para.11.

the Party concerned. It will be noted that this idea was partially retained in paragraph 2 of the article.

- 1878** The expression “attacks” is not only used in Part IV, but also in other provisions such as Articles 12 (*Protection of medical units*), 39 (*Emblems of nationality*), 41 (*Safeguard of an enemy hors de combat*), 42 (*Occupants of aircraft*), 44 (*Combatants and prisoners of war*) and 85 (*Repression of breaches of this Protocol*). The definition certainly also applies in these cases, even though it is given at the beginning of Part IV. For that matter, there was a proposal to include the definition in Article 2 of the Protocol (*Definitions*), but Committee III and the Drafting Committee considered that it was preferable to include it at the beginning of the Section dealing with the general protection of the civilian population, where the definition has a special significance.
- 1879** It is quite clear that the meaning given here is not exactly the same as the usual meaning of the word. In the larger dictionaries the idea of instigating the combat and striking the first blow is predominant. The second definition given in the Shorter Oxford Dictionary is closest to the meaning of the term as used in the Protocol, “to set upon with hostile action”.⁴ In this respect it is interesting to refer to an investigation conducted amongst its members by the International Society of Military Law and the Law of War.⁵ The questions that were raised included one relating to this question of terminology. In general the replies indicated that the meaning given by the Protocol to the word “attacks” did not give rise to any major problems, even though military instruction manuals in many countries define an attack as an offensive act aimed at destroying enemy forces and gaining ground.
- 1880** The definition given by the Protocol has a wider scope since it – justifiably – covers defensive acts (particularly “counter-attacks”) as well as offensive acts, as both can affect the civilian population. It is for this reason that the final choice was a broad definition. In other words, the term “attack” means “combat action”. This should be taken into account in the instruction of armed forces who should clearly understand that the restrictions imposed by humanitarian law on the use of force should be observed both by troops defending themselves and by those who are engaged in an assault or taking the offensive.
- 1881** During the above-mentioned enquiry the question arose whether the placing of mines constituted an attack. The general feeling was that there is an attack whenever a person is directly endangered by a mine laid.
- 1882** Finally, it is appropriate to note that in the sense of the Protocol an attack is unrelated to the concept of aggression or the first use of armed force;⁶ it refers simply to the use of armed force to carry out a military operation at the beginning or during the course of armed conflict. Questions relating to the responsibility for unleashing the conflict are of a completely different nature.

⁴ Shorter Oxford Dictionary, 1978, p. 127.

⁵ Questionnaire on the subject of armed forces and the development of the laws of war, presented during the ninth International Conference of the International Society of Military Law and the Law of War, held at Lausanne from 2-6 September 1982. ⁶ See commentary Preamble, *supra*, p. 28.

Paragraph 2

1883 This paragraph contains a provision which the ICRC had placed in the draft in two virtually identical articles (48 and 66), entitled “Objects indispensable to the survival of the civilian population”, of which the latter read as follows:

“It is prohibited to destroy, render useless or remove objects indispensable to the survival of the civilian population, namely, foodstuffs, food-producing areas, crops, livestock, drinking water supplies and irrigation works, whether to starve out civilians, cause them to move away or for any other reason. They shall not be made the object of reprisals.”

1884 This provision was addressed to the Party to the conflict in whose power were the objects indispensable to the survival of the civilian population. The Conference did not feel that it was necessary to go so far, and Committee III formulated a draft Article 66 in the following terms:

“1. The provisions of this Protocol with respect to attacks apply to all attacks wheresoever conducted, including the national territory belonging to a Party to the conflict but under the control of an adversary.

2. In recognition of the vital requirements of any Party to the conflict in the defence of its national territory against invasion, derogation from the prohibitions contained in paragraph 2 of Article 48 may be made by a Party to the conflict within such territory under its own control where required by imperative military necessity.”⁷

1885 The report of Committee III⁸ notes that because of the adoption of Article 48 in a modified form (Article 54 of the Protocol – *Protection of objects indispensable to the survival of the civilian population*), the proposal was no longer valid, but that the article permitted specifying the scope of application of Article 48 of the draft like other articles limiting or prohibiting attacks.

1886 Finally Committee III decided to allow the Drafting Committee the choice of where to place these two paragraphs (the second limiting the scope of the first) though it made some suggestions which were taken up by the Drafting Committee.

1887 Thus paragraph 1 became paragraph 2 of Article 49, which is under consideration here, while paragraph 2 became paragraph 5 of Article 54 (*Protection of objects indispensable to the survival of the civilian population*).

1888 It clearly follows from this second provision that a belligerent, part of whose territory is controlled by the enemy, cannot mount attacks in such territory against objects indispensable to the survival of the population in violation of the provisions of the Protocol, whereas the belligerent could, in case of imperative military necessity, destroy such objects in the part of its territory under its control in order to counter an invasion. In other words, in certain extreme circumstances the Protocol does not rule out a “scorched earth” policy by a retreating

⁷ *O.R.* XV, p. 492, CDDH/407/Rev.1, Annex II.

⁸ *Ibid.*, pp. 462-463, CDDH/407/Rev.1, paras. 49-53.

belligerent in his own national territory. On the other hand, an Occupying Power cannot act in this way when it is withdrawing from territory under its control.

1889 The report of Committee III notes that the French term “contrôle” means *de facto* control and not *de jure* control. This is the English sense of the term, i.e., the power to administer, subordinate.⁹ In fact the English text uses the word “control”. It was decided not to use the word “occupied” which could raise legal problems, but instead the word “control” which refers to a factual situation and not a legal concept.

1890 In addition, it should be noted that destructive acts undertaken by a belligerent in his own territory would not comply with the definition of attack given in paragraph 1, as such acts, though they may be acts of violence, are not mounted “against the adversary”. Moreover, such destruction is most often carried out by very different means from those used in an attack.

1891 Finally, this paragraph makes it clear, as is implied in paragraph 4, that the provisions of the Protocol relating to attacks and the effects thereof apply to the whole of the population present in the territory of the Party to the conflict, even if it is under enemy control – as does Part II of the Fourth Convention.

Paragraph 3

1892 The first sentence of this paragraph repeats almost literally the text of the first paragraph of Article 44 of the 1973 draft, which gave rise to lengthy discussion during the Diplomatic Conference.¹⁰

1893 The discussions during the first session of the Diplomatic Conference were concerned mainly with three points:

- a) Some delegates wished to replace the word “warfare” (in French, “opérations militaires”) by the term “attacks”. In the end¹¹ Committee III decided to retain the ICRC text on this point. It was mainly a difference of opinion regarding the wording to be used.
- b) The second point related to a matter of substance: the inclusion of the words “against the adversary”. The Committee accepted this insertion.¹²
- c) Finally, many delegations wished to delete the words “on land”. Those who recommended that they be deleted wished the definition to have an effect on the rules of law applicable to the conduct of war at sea or in the air inasmuch as this provision would be more favourable to civilians than the present rule

⁹ The normal meaning of the French verb “contrôler” is to “check” or “verify”.

¹⁰ See particularly *O.R.* XIV, p. 15, CDDH/III/SR.2, para. 11; p. 16, paras. 21 and 24, p. 17, paras. 26, 28-29; p. 20, CDDH/III/SR.3, paras. 4, 9; pp. 21-22, paras. 14-22; p. 23, paras. 31 and 36; p. 25, CDDH/III/SR.4, para. 1; p. 27, paras. 11, 13; pp. 28-29, paras. 27, 29, 31; pp. 29-31, paras. 36-37, 43, 48; p. 32, paras. 54-56, 59; p. 33, paras. 61, 65; p. 34, paras. 72, 74; p. 85, CDDH/III/SR.11, paras. 2, 5-6; pp. 86-88, paras. 16-30; p. 91, CDDH/III/SR.12, paras. 22-24; p. 92, paras. 32-34; p. 93, paras. 44-46; p. 218, CDDH/III/SR.24, para. 4; p. 221, para. 26; p. 223, para. 38.

¹¹ This proposal was rejected by 50 votes against, 10 votes in favour and 5 abstentions. See *O.R.* XIV, p. 86, CDDH/III/SR.11, para. 13.

¹² 31 votes in favour, 22 against, 11 abstentions. See *ibid.*, p. 86, para. 14.

of law¹³. This deletion was rejected by a vote by Committee III,¹⁴ but a discussion arose regarding where the words “on land” should be placed in the sentence.

- 1894** Finally the Committee referred the provision as a whole to the Working Group, which was only able to make a proposal at the second session of the Diplomatic Conference. The words “against the adversary” were not retained.
- 1895** In general the delegates at the Diplomatic Conference were guided by a concern not to undertake a revision of the rules applicable to armed conflict at sea or in the air. This is why the words “on land” were retained and a second sentence clearly indicating that the Protocol did not change international law applicable in such situations was added.
- 1896** This concern is understandable: after all, the conditions of sea warfare were radically transformed during the Second World War and in subsequent conflicts. It is therefore difficult to determine exactly which are the rules that still apply.¹⁵ As regards air warfare, there is no precise written law on this subject, apart from some unclear customary law (for example: external marks indicating the nationality of aircraft). The only codified rule is in this Protocol in Article 42 (*Occupants of aircraft*).
- 1897** Admittedly both sea and air warfare are subject to restrictions imposed by treaties of general application, such as, for example, the Hague Convention of 1954 for the Protection of Cultural Property and the Geneva Protocol of 1925 for the Prohibition of the Use in War of Asphyxiating, Poisonous or other Gases, and of Bacteriological Methods of Warfare, but there are hardly any specific rules relating to sea or air warfare, and insofar as they do exist, they are controversial or have fallen into disuse.
- 1898** The provision of this paragraph has the advantage of clearly establishing the fact that attacks from the sea or from the air against objectives on land are subject to the restrictions and conditions imposed by the Protocol. It should be noted in passing that according to the Working Group which formulated the text of this provision, the expression “on land” in this context also applies to rivers, canals and lakes.
- 1899** In the English text the first sentence remained unchanged and the word “warfare” was retained, while the first sentence of the French text was slightly modified in that the word “militaire” qualifying the word “opération” was deleted. It is clear that “opération” refers to an operation of war, and in fact the Spanish text refers to “operación de guerra”, i.e., an operation which is almost always of a military nature.

Paragraph 4

- 1900** The Fourth Convention applies in general to protected persons as defined in Article 4 of that Convention, i.e., mainly to enemy nationals in the territory of a

¹³ *O.R.* XV, p. 328, CDDH/III/224.

¹⁵ See *infra*, commentary para. 4 of that article.

belligerent and the inhabitants of occupied territory. Part II has a broader scope and covers the whole population of all countries in conflict. This Protocol has a correspondingly broad scope of application.

1901 Other international agreements binding upon the Contracting Parties¹⁶ are primarily the Hague Convention of 1907 Concerning the Laws and Customs of War on Land and the Regulations annexed thereto, the Geneva Protocol of 1925 for the Prohibition of the Use in War of Asphyxiating, Poisonous or other Gases, and of Bacteriological Methods of Warfare, the Hague Convention of 1954 for the Protection of Cultural Property, the regional and universal Conventions and Covenants relating to the protection of human rights, the 1948 Convention on the Prevention and Punishment of the Crime of Genocide, the 1968 Convention on the Non-Applicability of Statutory Limitations to War Crimes and Crimes against Humanity, the 1980 Convention on the Prohibition of Certain Conventional Weapons.

1902 All these treaties are concerned with “humanitarian protection” of individuals. As regards “other rules of international law relating to the protection of civilians and civilian objects on land, at sea or in the air”, we have already seen that as far as air warfare is concerned there are only some customs relating to actual combat; on the other hand, there are no provisions concerning the fate of civilians on board civilian aircraft¹⁷ or military aircraft, except those relating to the civilian wounded, sick or shipwrecked on board medical aircraft.

1903 At sea, civilians on board warships run the risks to which such ships are exposed. If they are on board enemy merchant ships, their fate will depend on the nature of these vessels. According to the London Procès-Verbal of 1936,¹⁸ warships, whether surface vessels or submarines, cannot sink merchant ships or render them incapable of navigation without first placing the crew, passengers and ship’s documents in safety except in the case of persistent refusal to stop or active resistance to inspection. However, during the Second World War enemy merchant ships were often armed and sailed in convoy under military protection, or even transmitted information by radio to warships. These occurrences resulted in the belligerents failing to observe the London Procès-Verbal on this point and attacking merchant vessels without warning.

1904 According to the Nuremberg International Military Tribunal, the rule is still in force, and in particular an attack on neutral merchant vessels without warning constitutes a war crime.¹⁹ All this led to the Government of the United States to give the following instructions to its naval forces:

“Enemy merchant vessels may be attacked and destroyed, either with or without prior warning, in any of the following circumstances:

¹⁶ See commentary Art. 1, para. 1, *supra*, p. 35 and Art. 51, para. 1, *infra*, p. 617.

¹⁷ See, nevertheless, the recent amendment to the Convention on International Civil Aviation cited in the commentary on Art. 41, *supra*, p. 486, note 20.

¹⁸ 1936 London Procès-Verbal. Relating to the Rules of Submarine Warfare, Set Forth in Part IV of the Treaty of London of 22 April 1930, signed in London, 6 November 1936.

¹⁹ *Trial of the Major War Criminals before the International Military Tribunal*, Nuremberg, 1948, vol XXII (discussions of 27 August to 1 October 1946), pp. 557-559 and 562-563.

- 1) Actively resisting visit and search or capture.
- 2) Refusing to stop upon being duly summoned.
- 3) Sailing under convoy of enemy warships or enemy military aircraft.
- 4) If armed, and there is reason to believe that such armament has been used, or is intended for use, offensively against an enemy.
- 5) If incorporated into, or assisting in any way, the intelligence system of an enemy's armed forces.
- 6) If acting in any capacity as a naval or military auxiliary to an enemy's armed forces.”²⁰

1905 To what extent can such rules be observed by air forces attacking enemy ships? This question is difficult to answer as attacks from the air – and perhaps even those from the sea – are often from a great distance, and it is not always possible to be aware of the exact nature of the vessel being attacked. For this reason several belligerent States have had recourse to the concept of zones in which all navigation, even innocent, is prohibited and within which attacks may be mounted against any vessel without warning.

1906 It follows that, while paragraph 3 seems to limit the prohibitions laid down in this Section to objectives on land, paragraph 4 leaves the applicability of both treaty rules and customary rules unimpaired, insofar as such rules are aimed at protecting civilians and civilian objects in air and sea warfare, and this paragraph even tends to supplement these rules. This aspect is confirmed by the provisions of Article 57 (*Precautions in attack*), of which paragraph 4 urges Parties to the conflict to take all reasonable precautions to avoid losses of civilian lives and damage to civilian objects in the conduct of military operations at sea or in the air.

Protocol I

Article 50 – Definition of civilians and civilian population

1. A civilian is any person who does not belong to one of the categories of persons referred to in Article 4A(1),(2),(3) and (6) of the Third Convention and in Article 43 of this Protocol. In case of doubt whether a person is a civilian, that person shall be considered to be a civilian.
2. The civilian population comprises all persons who are civilians.
3. The presence within the civilian population of individuals who do not come within the definition of civilians does not deprive the population of its civilian character.

Commentary

- 1907** This article reproduces almost word for word the provision contained in the 1973 draft (Article 45). It became clear that this very important Section of the Protocol required a definition of the persons to whom it applies in one of its first articles.
- 1908** Article 4 of the Fourth Geneva Convention of 1949 relative to the Protection of Civilian Persons in Time of War contains a definition of the persons protected by that Convention against arbitrary and wanton enemy action when they are in the power of the enemy; this is the main object of the Convention. However, Part II, entitled “General protection of populations against certain consequences of war” has a wider field of application; according to Article 13, that Part covers “the whole of the populations of the countries in conflict”. That definition is close to the definition of the civilian population given in Article 50 of the Protocol under consideration here.
- 1909** In protecting civilians against the dangers of war, the important aspect is not so much their nationality as the inoffensive character of the persons to be spared and the situation in which they find themselves. The definition covers civilians individually as well as collectively when they are referred to as the “civilian population”, a concept which can be found in many articles in the Protocol.
- 1910** Some delegates wished the definition to be included in Article 2 (*Definitions*),¹ but the Conference preferred the present arrangement.

Paragraph 1

- 1911** As we have seen, the principle of the protection of the civilian population is inseparable from the principle of the distinction which should be made between military and civilian persons. In view of the latter principle, it is essential to have a clear definition of each of these categories.
- 1912** In the course of history many definitions of the civilian population have been formulated, and everyone has an understanding of the meaning of this concept. However, all these definitions are lacking in precision, and it was desirable to lay down some more rigorous definition, particularly as the categories of persons they cover has varied.
- 1913** Thus the Protocol adopted the only satisfactory solution, which is that of a negative definition, namely, that the civilian population is made up of persons who are not members of the armed forces.
- 1914** This definition has the great advantage of being *ne varietur*. Its negative character is justified by the fact that the concepts of the civilian population and the armed forces are only conceived in opposition to each other, and that the latter constitutes a category of persons which is now clearly defined in international law and determined in an indisputable manner by the laws and regulations

¹ See *O.R.* XIV, p. 80, CDDH/III/SR.10, para. 18 (with reference to doc. CDDH/III/66, not published in the Official Records).

of States. Therefore it was worth taking advantage of this possibility. It is clear that a negative definition of the civilian population implies that the meaning given to “armed forces” must be pointed out. This provision of the Protocol refers to the relevant article of the Third Convention and to Article 43 of the Protocol (*Armed forces*), which supplements it.

1915 The paragraph under consideration here therefore follows a process of elimination and removes from the definition those persons who could by and large be termed “combatants”. Therefore, according to Article 4 A of the Third Convention, the following are excluded:

- “1) Members of the armed forces of a Party to the conflict as well as members of militias or volunteer corps forming part of such armed forces.
- 2) Members of other militias and members of other volunteer corps, including those of organized resistance movements, belonging to a Party to the conflict and operating in or outside their own territory, even if this territory is occupied, provided that such militias or volunteer corps, including such organized resistance movements, fulfil the following conditions:
 - a) that of being commanded by a person responsible for his subordinates;
 - b) that of having a fixed distinctive sign recognizable at a distance;
 - c) that of carrying arms openly;
 - d) that of conducting their operations in accordance with the laws and customs of war.
- 3) Members of regular armed forces who profess allegiance to a government or an authority not recognized by the Detaining Power.
[...]
- 6) Inhabitants of a non-occupied territory, who on the approach of the enemy spontaneously take up arms to resist the invading forces, without having had time to form themselves into regular armed units, provided they carry arms openly and respect the laws and customs of war.”

1916 Paragraph 1 also refers to Article 43 of the Protocol (*Armed forces*), which contains a new definition of armed forces covering the different categories of the above-mentioned Article 4 of the Third Convention.

1917 In other words, apart from members of the armed forces, everybody physically present in a territory is a civilian.

1918 The last sentence of paragraph 1 gave rise to some discussion in the Diplomatic Conference. According to the ICRC draft there was a “presumption” of civilian status, but this concept led to some problems and the Working Group decided to replace “presumed” by “considered”.²

1919 Other delegates thought that the definition might be in conflict with Article 5 of the Third Geneva Convention. Paragraph 2 of that article reads as follows:

² O.R. XV, p. 239, CDDH/50/Rev.1, para. 39.

“Should any doubt arise as to whether persons, having committed a belligerent act and having fallen into the hands of the enemy, belong to any of the categories enumerated in Article 4, such persons shall enjoy the protection of the present Convention until such time as their status has been determined by a competent tribunal.”

- 1920** The result of the discussions which took place on this subject was that there could be no contradiction between the two definitions, which are concerned with very different situations.³ In the case of the Third Convention the persons concerned have committed a belligerent act and claim the status of combatants, and therefore ask to be treated as prisoners of war. Article 50 of the Protocol concerns persons who have not committed hostile acts, but whose status seems doubtful because of the circumstances. They should be considered to be civilians until further information is available, and should therefore not be attacked.
- 1921** The methods combatants use will certainly have an influence on the application of this provision. Thus, for example, if combatants do not clearly distinguish themselves from the civilian population in accordance with the provisions of Article 44 (*Combatants and prisoners of war*), this could result in a weakening of the immunity granted civilians and the civilian population.

Paragraphs 2 and 3

- 1922** The second paragraph provides that “the civilian population comprises all persons who are civilians”. However, in wartime conditions it is inevitable that individuals belonging to the category of combatants become intermingled with the civilian population, for example, soldiers on leave visiting their families. However, provided that these are not regular units with fairly large numbers, this does not in any way change the civilian character of a population. It is also clear that as laid down in Article 58 (*Precautions against the effects of attacks*) belligerents should remove the civilian population, civilians and civilian objects under their authority from the vicinity of military objectives. A military unit is by definition a military objective and should not be placed in the middle of a civilian population.

C.P. / J.P.

³ *Ibid.*

Protocol I

Article 51 – Protection of the civilian population

1. The civilian population and individual civilians shall enjoy general protection against dangers arising from military operations. To give effect to this protection, the following rules, which are additional to other applicable rules of international law, shall be observed in all circumstances.
2. The civilian population as such, as well as individual civilians, shall not be the object of attack. Acts or threats of violence the primary purpose of which is to spread terror among the civilian population are prohibited.
3. Civilians shall enjoy the protection afforded by this Section, unless and for such time as they take a direct part in hostilities.
4. Indiscriminate attacks are prohibited. Indiscriminate attacks are:
 - (a) those which are not directed at a specific military objective;
 - (b) those which employ a method or means of combat which cannot be directed at a specific military objective; or
 - (c) those which employ a method or means of combat the effects of which cannot be limited as required by this Protocol;and consequently, in each such case, are of a nature to strike military objectives and civilians or civilian objects without distinction.
5. Among others, the following types of attacks are to be considered as indiscriminate:
 - (a) an attack by bombardment by any methods or means which treats as a single military objective a number of clearly separated and distinct military objectives located in a city, town, village or other area containing a similar concentration of civilians or civilian objects; and
 - (b) an attack which may be expected to cause incidental loss of civilian life, injury to civilians, damage to civilian objects, or a combination thereof, which would be excessive in relation to the concrete and direct military advantage anticipated.
6. Attacks against the civilian population or civilians by way of reprisals are prohibited.
7. The presence or movements of the civilian population or individual civilians shall not be used to render certain points or areas immune from military operations, in particular in attempts to shield military objectives from attacks or to shield, favour or impede military operations. The Parties to the conflict shall not direct the movement of the civilian population or individual civilians in order to attempt to shield military objectives from attacks or to shield military operations.
8. Any violation of these prohibitions shall not release the Parties to the conflict from their legal obligations with respect to the civilian population and

civilians, including the obligation to take the precautionary measures provided for in Article 57.

Commentary

General remarks

- 1923** Article 51 is one of the most important articles in the Protocol. It explicitly confirms the customary rule that innocent civilians must be kept outside hostilities as far as possible and enjoy general protection against danger arising from hostilities. This general rule is accompanied by rules of application.
- 1924** Committee III of the Diplomatic Conference began examining this article in 1974 and referred it, with the ten amendments which had been submitted, to a Working Group. Committee III adopted the text of this article by consensus. Voting took place in a plenary meeting in 1977 and the article was adopted with 77 votes in favour, 1 against and 16 abstentions.¹
- 1925** The delegation which voted against justified its vote by arguing that the article could seriously hinder the conduct of military operations against an invader and compromise the exercise of the right to self-defence recognized in Article 51 of the Charter of the United Nations. According to this delegation, the provisions relating to indiscriminate attacks should not be such as to prevent a State from defending its territory against an invader, even if this were to entail losses in its own population. Several delegations made similar statements.²
- 1926** Such fears do not seem justified. Article 51 of the Charter of the United Nations reads as follows:
- “Nothing in the present Charter shall impair the inherent right of individual or collective self-defence if an armed attack occurs against a Member of the United Nations, until the Security Council has taken measures necessary to maintain international peace and security [...]”
- 1927** However, it seems clear that the right of self-defence does not include the use of measures which would be contrary to international humanitarian law, even in a case where aggression has been established and recognized as such by the Security Council. The Geneva Conventions of 1949 and this Protocol must be applied in accordance with their Article 1 “in all circumstances”; the Preamble of the Protocol reaffirms that their application must be “without any adverse

¹ *O.R.* VI, pp. 165-166, CDDH/SR.41, para. 118.

² *Ibid.*, p. 162. One delegation emphasized that the Charter of the United Nations recognizes the right of individual or collective self-defence in the case of armed attack and that international law cannot restrict the legitimate right of a victim of aggression and occupation to defend itself (*ibid.*, p. 196, Annex (Romania)).

distinction based on the nature or origin of the armed conflict or on the causes espoused by or attributed to the Parties to the conflict”.

- 1928** It is true that in the preparatory work and during the discussions in the Diplomatic Conference the possibility was referred to of making a distinction between the rules applicable by an aggressor, on the one hand, and by the victim of the aggression, on the other.³ However, several delegations opposed this point of view.⁴ In any case, the Conference did not adopt this suggestion; on the contrary, in the above-mentioned paragraph of the Preamble of the Protocol it confirmed the equality of the Parties to the conflict with regard to the obligations laid down by humanitarian law. This is wholly reasonable, as the distinction between *jus ad bellum* and *jus in bello* is fundamental and should always be respected.
- 1929** Several delegations made spoken or written statements, during the final debate, on the meaning to be given to some of the provisions contained in this article. They will be examined with regard to the paragraphs concerned.
- 1930** In the draft the ICRC had provided that Article 51 (46 of the draft) would be among the provisions to which no reservations could be made. Finally the Conference deleted all provisions relating to reservations, but in the discussions Article 51 had been included in the list of articles to which reservations were prohibited.⁵ In the absence of a specific provision it is therefore general international law that applies, in particular the Vienna Convention on the Law of Treaties (Articles 19-23). It may be recalled that that Convention prohibits reservations which are incompatible with the object and purpose of the treaty.⁶
- 1931** During the course of the discussions and in the written statements some delegations indicated that in their view reservations to this article would be incompatible with the object and purpose of the treaty.⁷ There is no doubt that, as stated above, Article 51 is a key article in the Protocol. It constitutes a reasonable balance which was achieved with difficulty between the divergent views that emerged in the Diplomatic Conference. That is why reservations, even partial ones, could jeopardize this balance and in this way go against the object and purpose of this indispensable provision.
- 1932** The importance attached by the Diplomatic Conference to this article is corroborated by the fact that violation of several of its provisions is qualified as a grave breach. In fact Article 85 (*Repression of breaches of this Protocol*), paragraph 3, qualifies as a grave breach the act of wilfully making the civilian population or individual civilians the object of attack if this causes death or serious injury to body or health.
- 1933** The same applies for wilful indiscriminate attacks affecting the civilian population or civilian objects (or against installations containing dangerous

³ See, for example, *O.R. V*, pp. 119-121, CDDH/SR.12, paras. 13-21, and *O.R. VI*, p. 196, CDDH/SR.41, Annex (Romania).

⁴ See, for example, *O.R. V*, pp. 109-110, CDDH/SR.11, paras. 44-50; pp. 137-138, CDDH/SR.13, paras. 51-57.

⁵ *O.R. X*, p. 251, CDDH/405/Rev.1.

⁶ Cf. introduction to Part VI, *infra*, p. 1061.

⁷ *O.R. VI*, p. 167, CDDH/SR.41, paras. 135-137; p. 187, *ibid.*, Annex (GDR); pp. 192-193 (Mexico).

forces in the knowledge that such an attack will cause excessive loss of life, injury to civilians or damage to civilian objects, as defined in Article 57 (*Precautions in attack*), paragraph 2(a)(iii).

- 1934 Thus in relation to criminal law the Protocol requires intent and, moreover, with regard to indiscriminate attacks, the element of prior knowledge of the predictable result.

Paragraph 1

- 1935 This is an introductory paragraph which confirms the principle of the general protection of civilians against dangers arising from military operations. There is no doubt that armed conflicts entail dangers for the civilian population, but these should be reduced to a minimum. Such is the aim of the following paragraphs.

- 1936 According to dictionaries, the term “military operations”, which is also used in several other articles in the Protocol, means all the movements and activities carried out by armed forces related to hostilities.⁸ A mixed group of the Diplomatic Conference gave the following definition of the expression “zone of military operations”: “in an armed conflict, the territory where the armed forces of the adverse Parties taking a direct or an indirect part in current military operations, are located”.⁹

- 1937 The second sentence refers to the “other applicable rules of international law”:¹⁰ apart from some customary rules and, of course, the other relevant provisions of the Protocol, these are mainly the Hague Regulations annexed to Hague Convention IV of 1907 and the Fourth Geneva Convention of 1949. In addition, mention could be made of the rules contained in the Geneva Protocol of 1925 for the Prohibition of the Use of Asphyxiating, Poisonous or Other Gases, and of Bacteriological Methods of Warfare, as well as the Hague Convention of 1954 for the Protection of Cultural Property. Although they are not aimed directly at the protection of the civilian population, these two treaties can have a positive influence on the fate of the civilian population in time of armed conflict. The Convention concluded in 1980 on the Prohibition or Restrictions on the Use of Certain Conventional Weapons contains corresponding provisions with respect to the civilian population.¹¹

⁸ Cf. the definitions given *supra*, commentary Art. 48, note 13, p. 600.

⁹ O.R. XV, p. 338, CDDH/II/266-CDDH/III/255, Annex A.

¹⁰ We also refer to the commentary Art. 49, para. 4, *supra*, p. 606, and Art. 2, sub-para. (b), *supra*, p. 60.

¹¹ Convention of 10 October 1980 on Prohibitions or Restrictions on the Use of Certain Conventional Weapons which may be deemed to be Excessively Injurious or to have Indiscriminate Effects.

– Protocol on Prohibitions or Restrictions on the Use of Mines, Booby-Traps and Other Devices (Protocol II), Art. 3, paras. 2, 3(c) and 4; Art. 4, para. 2; Art. 5, para. 2; Art. 7, para. 3(a)(i).

– Protocol on Prohibitions or Restrictions on the Use of Incendiary Weapons (Protocol III), Art. 2.

For participation in this Convention, cf. *infra*, p. 1549.

Paragraph 2

- 1938** The first sentence gives substance to the principle of general immunity formulated in the preceding paragraph by explicitly prohibiting attacks directed against the civilian population as such, as well as against individual civilians. By using the words “directed” and “as such” it emphasizes that the population must never be used as a target or as a tactical objective.
- 1939** It should be noted that “attacks” are defined in Article 49 (*Definition of attacks and scope of application*), paragraph 1.
- 1940** In the second sentence the Conference wished to indicate that the prohibition covers acts intended to spread terror; there is no doubt that acts of violence related to a state of war almost always give rise to some degree of terror among the population and sometimes also among the armed forces. It also happens that attacks on armed forces are purposely conducted brutally in order to intimidate the enemy soldiers and persuade them to surrender. This is not the sort of terror envisaged here.¹² This provision is intended to prohibit acts of violence the primary purpose of which is to spread terror among the civilian population without offering substantial military advantage. It is interesting to note that threats of such acts are also prohibited. This calls to mind some of the proclamations made in the past threatening the annihilation of civilian populations.
- 1941** Finally, it is worthy of note that Article 85 (*Repression of breaches of this Protocol*), paragraph 3(a), defines the act of making the civilian population or individual civilians the object of attack as a grave breach, when it results in death or serious injury to body or health.

Paragraph 3

- 1942** The immunity afforded individual civilians is subject to an overriding condition, namely, on their abstaining from all hostile acts. Hostile acts should be understood to be acts which by their nature and purpose are intended to cause actual harm to the personnel and equipment of the armed forces. Thus a civilian who takes part in armed combat, either individually or as part of a group, thereby becomes a legitimate target, though only for as long as he takes part in hostilities. If the civilian is captured while he is committing hostile acts, the rules governing his fate are laid down in Article 45 (*Protection of persons who have taken part in hostilities*).
- 1943** During the course of the discussions several delegations indicated that the expression “hostilities” used in this article included preparations for combat and the return from combat.¹³ Similar problems arose in Article 44 (*Combatants and prisoners of war*) with regard to the expression “military deployment preceding the launching of an attack”. It seems that the word “hostilities” covers not only the time that the civilian actually makes use of a weapon, but also, for example,

¹² *O.R.* XV, p. 274, CDDH/215/Rev.1, para. 51.

¹³ *Ibid.*, p. 330, CDDH/III/224.

the time that he is carrying it, as well as situations in which he undertakes hostile acts without using a weapon. If a civilian is captured or arrested in such circumstances, he may have recourse to paragraph 1 of Article 45 (*Protection of persons who have taken part in hostilities*) and claim prisoner-of-war status; he must be treated as such pending determination of his status by a competent tribunal.

- 1944** What is the exact meaning of the term “*direct*” in the expression “take a direct part in hostilities”? A similar expression is already used in paragraph 2 of Article 43 (*Armed forces*). In general the immunity afforded civilians is subject to a very stringent condition: that they do not participate directly in hostilities, i.e., that they do not become combatants, on pain of losing their protection. Thus “direct” participation means acts of war which by their nature or purpose are likely to cause actual harm to the personnel and equipment of the enemy armed forces. It is only during such participation that a civilian loses his immunity and becomes a legitimate target. Once he ceases to participate, the civilian regains his right to the protection under this Section, i.e., against the effects of hostilities, and he may no longer be attacked. However, there is nothing to prevent the authorities, capturing him in the act or arresting him at a later stage, from taking repressive or punitive security measures with regard to him in accordance with the provisions of Article 45 (*Protection of persons who have taken part in hostilities*) or on the basis of the provisions of the Fourth Convention (assigned residence, internment etc.) if his civilian status is recognized. Further it may be noted that members of the armed forces feigning civilian non-combatant status are guilty of perfidy under Article 37 (*Prohibition of perfidy*), paragraph 1(c).
- 1945** There should be a clear distinction between direct participation in hostilities and participation in the war effort. The latter is often required from the population as a whole to various degrees. Without such a distinction the efforts made to reaffirm and develop international humanitarian law could become meaningless. In fact, in modern conflicts, many activities of the nation contribute to the conduct of hostilities, directly or indirectly; even the morale of the population plays a role in this context.

Paragraph 4

- 1946** This provision is very important; it confirms the unlawful character of certain regrettable practices during the Second World War and subsequent armed conflicts. Far too often the purpose of attacks was to destroy all life in a particular area or to raze a town to the ground without this resulting, in most cases, in any substantial military advantages.
- 1947** On this subject the general rule was formulated in Article 48 (*Basic rule*): belligerents may direct their operations only against military objectives. The first specification is added in paragraph 2 of the present Article 51: attacks against the civilian population as such and against individual civilians are prohibited.
- 1948** Up to now the matter is fairly clear in theory, but it is less so in practice. In fact, civilians may be inside or in the immediate proximity of military objectives, whether these consist of persons or objects; moreover, purely civilian objects may in combat conditions become military objectives, thereby endangering the

persons near them. Paragraphs 4 and 5 attempt to cover such situations. The need to achieve a consensus has led those drafting these provisions to formulate them in a way that is sometimes ambiguous. Several delegates remarked on this when the article was adopted.¹⁴

- 1949** At a more general level, other delegations pointed out that, like the whole of the Section, this provision should not be such as to inhibit the capacity for defence of a State which has to counter aggression. Yet it is well-known how difficult it is in armed conflict to determine objectively who is the aggressor. Moreover, it should be recalled that the State which is a victim of aggression is in no way exempted from the obligations incumbent upon it under treaty or customary rules of law.
- 1950** The provision begins with a general prohibition on indiscriminate attacks, i.e., attacks in which no distinction is made. Some may think that this general rule should have sufficed, but the Conference considered that it should define the three types of attack covered by the general expression “indiscriminate attacks”.

Sub-paragraph (a)

- 1951** This refers in the first place to attacks which are not directed at a specific military objective. Article 52 (*General protection of civilian objects*), paragraph 2, defines military objectives, as far as objects are concerned, limiting them

“to those objects which by their nature, location, purpose or use make an effective contribution to military action and whose total or partial destruction, capture or neutralization, in the circumstances ruling at the time, offers a definite military advantage”.

Obviously military objectives also include, indeed principally so, the armed forces, their members, installations, equipment and transports.

- 1952** The military character of an objective can sometimes be recognized visually, but most frequently those who give the order or take the decision to attack will do so on information provided by the competent services of the army. In the majority of cases they will not themselves have the opportunity to check the accuracy of such information; they should at least make sure that the information is precise and recent, and that the precautions and restrictions laid down in Article 57 (*Precautions in attack*) are observed. In case of doubt, additional information must be requested.
- 1953** The armed forces and their installations are objectives that may be attacked wherever they are, except when the attack could incidentally result in loss of human life among the civilian population, injuries to civilians, and damage to civilian objects which would be excessive in relation to the expected direct and specific military advantage. In combat areas¹⁵ it often happens that purely civilian

¹⁴ See, for example, *O.R.* VI, pp. 164-165, CDDH/SR.41, para. 122.

¹⁵ The Mixed Group defined this concept as follows: “In an armed conflict, that area where the armed forces of the adverse Parties actually engaged in combat, and those directly supporting them, are located”. *O.R.* XV, p. 338, CDDH/II/266-CDDH/III/255, Annex A.

buildings or installations are occupied or used by the armed forces and such objectives may be attacked, provided that this does not result in excessive losses among the civilian population. For example, it is clear that if fighting between armed forces takes place in a town which is defended house by house, these buildings – for which Article 52 (*General protection of civilian objects*), paragraph 3, lays down a presumption regarding their civilian use – will inevitably become military objectives because they offer a definite contribution to the military action. However, this is still subject to the prohibition of an attack causing excessive civilian losses.

1954 Outside the combat area the military character of objectives that are to be attacked must be clearly established and verified. Similarly the limits of such objectives must be precisely determined.

1955 The question arose what the situation would be if a belligerent in a combat area wished to prevent the enemy army from establishing itself in a particular area or from passing through that area, for example, by means of barrage fire. There can be little doubt in such a case that the area must be considered as a military objective and treated as such. Yet, during the Diplomatic Conference several delegations insisted on confirming this interpretation in their statements.¹⁶ Of course, such a situation could only concern limited areas and not vast stretches of territory. It applies primarily to narrow passages, bridgeheads or strategic points such as hills or mountain passes.

Sub-paragraph (b)

1956 This concerns attacks which employ a method or means of combat which cannot be directed at a specific military objective.¹⁷

1957 The term “means of combat” or “means of warfare” (*cf.* Article 35 – *Basic rules*) generally refers to the weapons being used, while the expression “methods of combat” generally refers to the way in which such weapons are used.

1958 As regards the weapons, those relevant here are primarily long-range missiles which cannot be aimed exactly at the objective. The V2 rockets used at the end of the Second World War are an example of this. It should be noted that most armies endeavour to use accurate weapons as attacks which do not strike the intended objective result in a loss of time and equipment without giving a corresponding advantage. Thereby the margin of error of missiles is gradually reduced. Here, military interests and humanitarian requirements coincide.

1959 From the point of view of the protection of civilians, the use of land or sea mines raises some problems. There were lengthy discussions in the *Ad Hoc* Committee on Conventional Weapons of the Conference. The work of this Committee¹⁸ served as a basis for the Conference convened by the United

¹⁶ See commentary Art. 52, para. 2, *infra*, p. 635.

¹⁷ A note on the drafting of the French text: the use of the pronoun “on” is unusual in French legal draftsmanship as it is rather indeterminate. This is avoided in the English wording where the word “attacks” is the subject of the sentence.

¹⁸ See *O.R.* XVI.

Nations in 1979 and 1980. That Conference adopted a Convention (10 October 1980) and three Protocols, one of which was on the prohibition or restrictions on the use of mines, booby-traps and other devices.¹⁹ Briefly, this Protocol requires Parties to take measures to keep adequate records and to give proper warning when minefields are laid, so that the population is not endangered. As regards mine-laying by aircraft or remotely-delivered mines, such operations are prohibited in principle unless such mines are only used in an area that constitutes a military objective or that contains military objectives; even in that situation the location of mines that are laid must be recorded, or the mines must be equipped with a remotely-controlled mechanism to detonate then or must self-destruct when they have lost their military value.²⁰

1960 However, the question may arise at what point the use of mines constitutes an attack in the sense of this provision. Is it when the mine is laid, when it is armed, when a person is endangered by it, or when it finally explodes? The participants at the meeting of the International Society of Military Law and the Law of War (Lausanne, 1982) conceded that from the legal point of view the use of mines constituted an attack in the sense of the Protocol when a person was directly endangered by such a mine.²¹ It may be considered that mines also come within the scope of sub-paragraph (c) discussed below.

Sub-paragraph (c)

1961 This sub-paragraph concerns attacks which employ a method or means of combat the effects of which cannot be limited as required by this Protocol. Like sub-paragraph (b) this provision was not contained in such a precise manner in the ICRC draft; the Working Group of Committee III presented a more elaborate text which was referred back to the Working Group, and finally Committee III adopted an article which contains all the elements of the present article,²² although the wording has been revised and modified reasonably successfully by the Drafting Committee of the Conference.

1962 On this provision the report of Committee III contains the following passage:

“The main problem was that of defining the term ‘indiscriminate attacks’. There was general agreement that a proper definition would include the act of not directing an attack at a military objective, the use of means or methods of combat which cannot be directed at a specific military objective, and the use of means or methods of combat the effects of which cannot be limited as required by the Protocol. Many but not all of those who commented were of the view that the definition was not intended to mean that there are means

¹⁹ *Cf. supra*, note 11.

²⁰ Art. 5 of the above-mentioned Protocol II. Also see Y. Sandoz, “A New Step Forward in International Law – Prohibition and Restrictions on the Use of Certain Conventional Weapons”, *IRRC*, January-February 1981, p. 3 (offprint available with the text of the Final Act of the said United Nations Conference, originally published *ibid.*, pp. 41-55).

²¹ See “Forces armées et développement du droit de la guerre”, *op.cit.*, p. 303.

²² *O.R.* XV, pp. 304-305, CDDH/215/Rev.1, Annex.

or methods of combat whose use would involve an indiscriminate attack in all circumstances. Rather it was intended to take account of the fact that means or methods of combat which can be used perfectly legitimately in some situations could, in other circumstances, have effects that would be contrary to some limitations contained in the Protocol, in which event their use in those circumstances would involve an indiscriminate attack.”²³

- 1963** However, there are some means of warfare of which the effects cannot be limited in any circumstances. It is different with regard to other means, such as fire²⁴ or water²⁵ which, depending on the circumstances of their use, can have either a restricted effect or, on the contrary, be completely out of the control of those using them, causing significant losses among the civilian population and extensive damage to civilian objects. The nature of the means used is not the only criterion: the power of the weapons used can have the same consequences. For example, if a 10 ton bomb is used to destroy a single building, it is inevitable that the effects will be very extensive and will annihilate or damage neighbouring buildings, while a less powerful missile would suffice to destroy the building. There are also methods which by their very nature have an indiscriminate character, such as poisoning wells.
- 1964** Several delegations considered that it was necessary to confirm the views expressed by the Rapporteur²⁶ in their explanations of vote. According to these delegations the provision does not mean that there are means of combat of which the use would constitute an indiscriminate attack in all circumstances.
- 1965** This point was discussed above; it is true that in most cases the indiscriminate character of an attack does not depend on the nature of the weapons concerned, but on the way in which they are used. However, as stated above, there are some weapons which by their very nature have an indiscriminate effect. The example of bacteriological means of warfare is an obvious illustration of this point. There are also other weapons which have similar indiscriminate effects, such as poisoning sources of drinking water. Of course, bacteriological means of warfare have been prohibited since 1925, and the use of poison was prohibited in 1899 by the Hague Regulations.
- 1966** Nevertheless, States in making such statements were more concerned with nuclear weapons. A thorough analysis of the connection between the Protocol and the use that may be made of nuclear weapons is included in the introduction to this Section, and we refer the reader to that text.²⁷

Paragraph 5

- 1967** The attacks which form the subject of this paragraph fall under the general prohibition of indiscriminate attacks laid down at the beginning of paragraph 4. Two types of attack in particular are envisaged here.

²³ *Ibid.*, p. 274, para. 55.

²⁴ Cf. the Protocol II referred to *supra*, note 11.

²⁵ On this subject reference may be made to Article 56 of this Protocol.

²⁶ See *O.R.* VI, pp. 168-172, CDDH/SR.41.

²⁷ See *supra*, p. 589.

- 1968** The *first type* includes area bombardment, sometimes known as carpet bombing or saturation bombing. It is characteristic of such bombing that it destroys all life in a specific area and razes to the ground all buildings situated there. There were many examples of such bombing during the Second World War, and also during some more recent conflicts. Such types of attack have given rise to strong public criticism in many countries, and it is understandable that the drafters of the Protocol wished to mention it specifically, even though such attacks already fall under the general prohibition contained in paragraph 4. According to the report of Committee III, the expression “bombardment by any method or means” means all attacks by fire-arms or projectiles (except for direct fire by small arms) and the use of any type of projectile.²⁸
- 1969** This paragraph was adopted with some difficulty; the expression “clearly separated and distinct” in particular led to lengthy discussions. In their first report the Working Group had given Committee III a choice between various proposals: “widely separated”, “distinct”; or alternatively the introduction of a final phrase, “unless the objectives are too close together to be capable of being attacked separately”.²⁹
- 1970** Rather than going on to vote on these various proposals, Committee III decided to refer the subject back to the Working Group and requested it to try and come up with an expression that might meet with general approval. The Group presented the Committee with a new draft which had been accepted by consensus within the Group.³⁰ Committee III adopted this proposal without further discussion and it forms the present text of paragraph 5.
- 1971** It will be noted that the Conference adopted a wording very similar to that which the ICRC had proposed, namely, “at some distance from each other”. It was decided not to add the phrase cited above, no doubt through fear of encouraging area bombardment, for in such a case the attacking forces could use their own judgment, taking into account the weapons available and the circumstances, as to whether the individual objectives were too close together to be attacked separately.
- 1972** Having said that, the interpretation of the words “clearly separated and distinct” leaves some degree of latitude to those mounting an attack; in case of doubt they can refer to sub-paragraph (b) and assess whether the attack is of a nature to cause losses and damage which would be excessive in relation to the military advantage anticipated.
- 1973** The question may also arise whether the prohibition formulated here is not already covered by paragraph 4(a), which prohibits attacks not directed at a specific military objective. In fact, areas of land between military objectives are not themselves military objectives. It must be accepted that in open areas which are sparsely populated, such as forests, attacks may be mounted against the whole of the area if it has been established that enemy armed forces are present. On the other hand, in a town, village or any other area where there is a similar

²⁸ Cf. O.R. XV, p. 275, CDDH/215/Rev.1, para. 56.

²⁹ *Ibid*, p. 329, CDDH/III/224.

³⁰ O.R. XIV, p. 30, CDDH/III/SR.31, para. 5.

concentration of civilian persons and objects, the military objectives in that area may only be attacked separately without leading to civilian losses outside the military objectives themselves. This also applies for temporary concentrations of civilians, such as refugee camps.

- 1974** As stated above, the size of the area over which military objectives are spread and the distance separating them are relatively subjective notions. In case of doubt, the general rule of respect for the civilian population must always be observed.
- 1975** When the distance separating two military objectives is sufficient for them to be attacked separately, taking into account the means available, the rule should be fully applied. However, even if the distance is insufficient, excessive losses that might result from the attack should be taken into account.
- 1976** The *second type of attack* envisaged in paragraph 5 includes those which have excessive effects in relation to the concrete and direct military advantage anticipated. Once again there were long discussions in the Diplomatic Conference and it was difficult to come to an agreement. The formula that was adopted is very similar to that proposed by the ICRC.³¹ It is based on the wording of Article 57 (*Precautions in attack*) relating to precautionary measures. Committee III had suggested either a straightforward reference to Article 57 (*Precautions in attack*) or reproducing the formula used in that article. Finally, the Drafting Committee, which was requested to resolve the question, opted for the second solution. Thus reference may be made to Article 57 (*Precautions in attack*) for further details.
- 1977** Paragraphs 4 and 5 were criticized in the Diplomatic Conference and subsequently. The criticism was directed particularly at the imprecise wording and terminology. For example, according to some, the Protocol fails to specify the size of the area over which military objectives may be spread and the distance which must separate them. It was also pointed out that modern electronic means made it possible to locate military objectives, but that they did not provide information on the presence of civilian elements within or in the vicinity of such objectives.
- 1978** Such criticisms are justified, at least to some extent. Putting these provisions into practice, or, for that matter, any others in Part IV, will require complete good faith on the part of the belligerents, as well as the desire to conform with the general principle of respect for the civilian population.
- 1979** Comments were also made in various quarters that paragraph 5(b) authorized any type of attack, provided that this did not result in losses or damage which were excessive in relation to the military advantage anticipated. This theory is manifestly incorrect. In order to comply with the conditions, the attack must be directed against a military objective with means which are not disproportionate in relation to the objective, but are suited to destroying only that objective, and the effects of the attacks must be limited in the way required by the Protocol; *moreover*, even after those conditions are fulfilled, the incidental civilian losses

³¹ “to launch attacks which may be expected to entail incidental losses among the civilian population and cause the destruction of civilian objects to an extent disproportionate to the direct and substantial military advantage anticipated” (draft, Art. 46, para. 3 (b)).

and damages must not be excessive. Of course, the disproportion between losses and damages caused and the military advantages anticipated raises a delicate problem; in some situations there will be no room for doubt, while in other situations there may be reason for hesitation. In such situations the interests of the civilian population should prevail, as stated above.

- 1980 The idea has also been put forward that even if they are very high, civilian losses and damages may be justified if the military advantage at stake is of great importance. This idea is contrary to the fundamental rules of the Protocol; in particular it conflicts with Article 48 (*Basic rule*) and with paragraphs 1 and 2 of the present Article 51. The Protocol does not provide any justification for attacks which cause extensive civilian losses and damages. Incidental losses and damages should never be extensive.
- 1981 This clearly shows the importance attached by the drafters of the Protocol to this article; these provisions should therefore lead those responsible for such attacks to take all necessary precautions before making their decision, even in the difficult constraints of battle conditions.

Paragraph 6

- 1982 This provision is very important. In fact, the belligerents in the Second World War recognized in their public declarations that attacks may be directed only at military objectives, but on the pretext that their own population had been hit by attacks carried out by the adversary, they went so far, by way of reprisals, as to wage war almost indiscriminately, and this resulted in countless civilian victims.³²
- 1983 The text is that proposed by the ICRC. During the discussions in the Conference the question of reprisals was examined with regard to several articles and in each of these a clause prohibiting reprisals was included (see also Articles 20 – *Prohibition of reprisals*; 52 – *General protection of civilian objects*; 53 – *Protection of cultural objects and of places of worship*; 54 – *Protection of objects indispensable to the survival of the civilian population*; 55 – *Protection of the natural environment* and 56 – *Protection of works and installations containing dangerous forces*). This is why several delegates raised the question during the discussions whether a single general provision might not suffice, while others considered that it was not very realistic to prohibit all reprisals, and that it was better to try and restrain them by laying down specific rules. Finally Committee I was charged with examining the general problem.³³ It decided to leave the specific clauses prohibiting reprisals in the articles where they occurred, and not to draft a general prohibition.³⁴
- 1984 The prohibition contained in this article is not subject to any conditions and it therefore has a peremptory character; in particular it leaves out the possibility of derogating from this rule by invoking military necessity. As in the 1949

³² Cf. G. Best, *Humanity in Warfare*, London, 1980, pp. 273-277.

³³ O.R. XIV, p. 414, CDDH/III/SR.38, para. 65; O.R. V, p. 375, CDDH/SR.31, paras. 20-23; O.R. X, pp. 184-185, CDDH/405/Rev.1, paras. 21-30.

³⁴ On the general question of reprisals, cf. *infra*, p. 981, introduction to Part V, Section II.

Conventions, this provision confirms the right of an individual not to be punished for acts which he has not himself committed.

- 1985** This prohibition of attacks by way of reprisals and other prohibitions of the same type contained in the Protocol and in the Conventions have considerably reduced the scope for reprisals in time of war. At most, such measures could now be envisaged in the choice of weapons and in methods of combat used against military objectives.

Paragraph 7

- 1986** This provision affords measures of protection to the whole of the civilian population and all civilians, thus extending to them measures which already exist for two categories of persons: prisoners of war and civilians protected by the Fourth Convention. In fact, according to Article 23 of the Third Convention, prisoners of war may not be used to render certain points or areas immune from military operations.
- 1987** As regards persons protected by the Fourth Convention, Article 28 of the latter provides that they may not be used to render certain points or areas immune from military operations. Article 19 of the First Convention and Article 12 of the present Protocol (*Protection of medical units*) contain a similar rule with regard to medical units. For its part, Article 58 of the Protocol (*Precautions against the effects of attack*) also deals with measures to be taken to remove the population from the vicinity of military objectives, and we refer the reader to the commentary thereon.
- 1988** This paragraph develops and clarifies these various rules. The term “movements” in particular is a new one; this is intended to cover cases where the civilian population moves of its own accord. The second sentence concerns cases where the movement of the population takes place in accordance with instructions from the competent authorities, and is particularly concerned with movements ordered by an Occupying Power, although it certainly also applies to transfers of prisoners of war, and civilian enemy subjects ordered by the authorities of a belligerent Power to move within its own territory.

Paragraph 8

- 1989** The ICRC had proposed in its draft the following provision which related to the provision contained in paragraph 7:

“If a Party to the conflict, in violation of the foregoing provision, uses civilians with the aim of shielding military objectives from attack, the other Party to the conflict shall take the precautionary measures provided for in Article 50.”³⁵

³⁵ Now Art. 57 of the Protocol.

- 1990** It is fairly clear from the deliberations and the report of Committee III³⁶ that the prohibitions referred to in paragraph 8 are those contained in paragraph 7. Military objectives are defined as far as objects are concerned in Article 52 (*General protection of civilian objects*), paragraph 2. Thus, even if civilians were intentionally brought or kept in the vicinity of military objectives, the attacker should take the measures provided for in Article 57 (*Precautions in attack*), especially those set out in paragraph 2 (a)(ii) and (iii) and (c). It is clear that in such cases a warning to the population is particularly appropriate as civilians are themselves rarely capable of assessing the danger in which they are placed.
- 1991** This provision is concerned with the situation in which other provisions of the Protocol are not complied with. It is an attempt to safeguard the population even when the appropriate authorities do not take the required measures of protection with regard to them.
- 1992** Article 60 of the Vienna Convention on the Law of Treaties provides that a material breach of a multilateral treaty entitles a Party especially affected by the breach to invoke it as a ground for suspending the operation of the treaty in whole or in part in the relations between itself and the defaulting State. Without even going into the question whether non-compliance with paragraph 7 constitutes a material breach of the Protocol, it is pleasing to note the tenor of the last paragraph of the same Article 60:
- “5. Paragraphs 1 to 3 do not apply to provisions relating to the protection of the human person contained in treaties of a humanitarian character, in particular to provisions prohibiting any form of reprisals against persons protected by such treaties.”³⁷
- 1993** Thus, in the case of this Protocol, it is compulsory to apply it, even if another Party has committed a violation. It should be noted that provisions protecting the human person now bear the stamp of customary law.

³⁷ For more details, see commentary Art. 1, para. 1, *supra* p. 34, and the introduction to Part V, Section II (section concerning reprisals), *infra*, p. 981.

Protocol I

Article 52 – General protection of civilian objects

1. Civilian objects shall not be the object of attack or of reprisals. Civilian objects are all objects which are not military objectives as defined in paragraph 2.
2. Attacks shall be limited strictly to military objectives. In so far as objects are concerned, military objectives are limited to those objects which by their nature, location, purpose or use make an effective contribution to military action and whose total or partial destruction, capture or neutralization, in the circumstances ruling at the time, offers a definite military advantage.
3. In case of doubt whether an object which is normally dedicated to civilian purposes, such as a place of worship, a house or other dwelling or a school, is being used to make an effective contribution to military action, it shall be presumed not to be so used.

Commentary

- 1994** This article is of considerable importance. In fact, in order to apply the basic rule contained in Article 48 (*Basic rule*), it is necessary to know what constitutes civilian objects, on the one hand, and military objectives, on the other. For a long time attempts have been made to define military objectives.
- 1995** For example, Hague Convention IX of 1907 Concerning Bombardment by Naval Forces in Time of War¹ contains the following provisions:
- “Article 1 - The bombardment by naval forces of undefended ports, towns, villages, dwellings, or buildings is forbidden [...]
Article 2 - Military works, military or naval establishments, depots of arms or war *matériel*, workshops or plants which could be utilized for the needs of the hostile fleet or army, and the ships of war in the harbour, are not, however, included in this prohibition [...]”
- 1996** These rules are accompanied by provisions relating to the warning which must be given before attacks; they have rarely been applied, but they give some idea of what was meant by military objectives at that time.
- 1997** The Commission of Jurists which met in The Hague in 1922 with the task of examining a partial revision of the laws of war, drew up a draft², Article 24 of which is devoted to the definition of civilian objects and military objectives:

¹ The Hague Conference of 1899 had not adopted a convention on this subject.

² This Commission was constituted in accordance with a resolution of the Washington Conference (1922) on the limitation of armaments; it was intended to lay down draft rules relating to air warfare and the use of radio in time of war. Experts from France, Italy, Japan, the Netherlands, United Kingdom and the United States attended.

“Article 24

1. An air bombardment is legitimate only when directed against a military objective, i.e. an objective whereof the total or partial destruction would constitute an obvious military advantage for the belligerent;
2. Such bombardment is legitimate only when directed exclusively against the following objectives: military forces, military works, military establishments or depots, manufacturing plants constituting important and well-known centers for the production of arms, ammunition or characterized military supplies, lines of communication or transport which are used for military purposes;
3. Any bombardment of cities, towns, villages, habitations and buildings which are not situated in the immediate vicinity of the operations of land forces is forbidden [...];
4. In the immediate vicinity of the operations of the land forces, the bombardment of cities, towns, villages, habitations and buildings is legitimate, provided there is a reasonable presumption that the military concentration is important enough to justify the bombardment, taking into account the danger to which the civil population will thus be exposed [...].”

1998 This attempt to define civilian objects and military objectives was not followed by a codification and the two Geneva Conventions of 1929 relating to the wounded and sick and to prisoners of war did not contain any provisions on this matter, even though they were based on the existence of a distinction between combatants and military objectives, on the one hand, and civilians and civilian objects, on the other.

1999 The same was true in 1949 in Geneva during the drafting of the four 1949 Conventions. Nevertheless, military objectives are repeatedly referred to explicitly in the 1949 Conventions. For example, Article 19 of the First Convention requires that the responsible authorities ensure that medical establishments and units are, as far as possible, situated in such a manner that attacks against military objectives cannot imperil their safety. Article 18 of the Fourth Convention contains a similar provision for the benefit of civilian hospitals.

2000 Although States in general recognized that attacks should only be directed against military objectives, there was no agreed definition of such objectives, and in fact, during the Second World War and during several armed conflicts which have taken place since then, each belligerent determined what should be understood by such objectives as it pleased. It should be noted that their ideas often differed considerably, depending on whether the territory concerned was their own, enemy territory, or territory of an ally occupied by enemy forces. Thus a restrictive definition was necessary if the essential distinction between combatants and civilians and between civilian objects and military objectives was to be maintained.

2001 A partial definition was offered incidentally by the Hague Convention of 1954 for the Protection of Cultural Property. Article 8, paragraph 1, of that Convention reads as follows:

- “1. There may be placed under special protection a limited number of refuges intended to shelter movable cultural property in the event of

armed conflict, of centres containing monuments and other immovable cultural property of very great importance, provided that they:

- a) are situated at an adequate distance from any large industrial centre or from any important military objective constituting a vulnerable point, such as, for example, an aerodrome, broadcasting station, establishment engaged upon work of national defence, a port or railway station of relative importance or a main line of communication;
- b) are not used for military purposes.”

2002 In 1956 the ICRC submitted its Draft Rules for the Limitation of Dangers incurred by the Civilian Population in Time of War, Article 7 of which provided that:

“Article 7

In order to limit the dangers incurred by the civilian population, attacks may only be directed against military objectives.

Only objectives belonging to the categories of objective which, in view of their essential characteristics, are generally acknowledged to be of military importance, may be considered as military objectives. Those categories are listed in an annex to the present rules.

However, even if they belong to one of those categories, they cannot be considered as a military objective where their total or partial destruction, in the circumstances ruling at the time, offers no military advantage.”³

³ Here is the list drawn up by the ICRC with the help of military experts and presented as a model, subject to modification.

List of Categories of Military Objectives according to Article 7, paragraph 2:

“I. The objectives belonging to the following categories are those considered to be of generally recognized military importance:

- (1) Armed forces, including auxiliary or complementary organisations, and persons who, though not belonging to the above-mentioned formations, nevertheless take part in the fighting.
- (2) Positions, installations or constructions occupied by the forces indicated in sub-paragraph 1 above, as well as combat objectives (that is to say, those objectives which are directly contested in battle between land or sea forces including airborne forces).
- (3) Installations, constructions and other works of a military nature, such as barracks, fortifications, War Ministries (e.g. Ministries of Army, Navy, Air Force, National Defence, Supply) and other organs for the direction and administration of military operations.
- (4) Stores of arms or military supplies, such as munition dumps, stores of equipment or fuel, vehicles parks.
- (5) Airfields, rocket launching ramps and naval base installations.
- (6) Those of the lines and means of communication (railway lines, roads, bridges, tunnels and canals) which are of fundamental military importance.
- (7) The installations of broadcasting and television stations; telephone and telegraph exchanges of fundamental military importance.
- (8) Industries of fundamental importance for the conduct of the war:
 - (a) industries for the manufacture of armaments such as weapons, munitions, rockets, armoured vehicles, military aircraft, fighting ships, including the manufacture of accessories and all other war material;
 - (b) industries for the manufacture of supplies and material of a military character, such as transport and communications material, equipment for the armed forces;

(continued on next page)

2003 The Institute of International Law, which met in Edinburgh in 1969 in order to study weapons of mass destruction, included in its definition of military objectives

“only those which by their very nature or purpose or use, make an effective contribution to military action, or exhibit a generally recognized military significance, such that their total or partial destruction in the actual circumstances gives a substantial, specific and immediate military advantage to those who are in a position to destroy them”.⁴

2004 When the ICRC was called upon to draw up the Draft Protocol in 1970-1971, it faced a difficult problem. Should it define civilian objects which may not be attacked, or, on the contrary, should it define military objectives which may be attacked? Finally a compromise was achieved. The ICRC draft reads as follows:

“*Article 47 – General protection of civilian objects*

1. Attacks shall be strictly limited to military objectives, namely, to those objectives which are, by their nature, purpose or use, recognized to be of military interest and whose total or partial destruction, in the circumstances ruling at the time, offers a distinct and substantial military advantage.

2. Consequently, objects designed for civilian use, such as houses, dwellings, installations and means of transport, and all objects which are not military objectives, shall not be made the object of attack, except if they are used mainly in support of the military effort.”

2005 The Diplomatic Conference finally adopted a similar formula which combines the two possibilities; it begins by declaring civilian objects immune and continues with an *a contrario* definition in defining military objectives.⁵

2006 Before discussing the three paragraphs which this article comprises, it might be appropriate to devote some attention to the terminology used.

2007 The English text uses the word “objects”, which means “something placed before the eyes, or presented to the sight or other sense, an individual thing seen, or perceived, or that may be seen or perceived; a material thing”.⁶ The French

-
- (c) factories or plant constituting other production and manufacturing centres of fundamental importance for the conduct of war, such as the metallurgical, engineering and chemical industries, whose nature or purpose is essentially military;
 - (d) storage and transport installations whose basic function it is to serve the industries referred to in (a)-(c);
 - (e) installations providing energy mainly for national defence, e.g. coal, other fuels, or atomic energy, and plants producing gas or electricity mainly for military consumption.
- (9) Installations constituting experimental, research centres for experiments on and the development of weapons and war material.
- II. The following however, are excepted from the foregoing list:
- (1) Persons, constructions, installations or transports which are protected under the Geneva Conventions I, II, III, of August 12, 1949;
 - (2) Non-combatants in the armed forces who obviously take no active or direct part in hostilities.
- III. The above list will be reviewed at intervals of not more than ten years by a group of Experts composed of persons with a sound grasp of military strategy and of others concerned with the protection of the civilian population.”

⁴ 53 *Annuaire IDI* 2, Edinburgh session, 1969, p. 376.

⁵ This was the first time that a military objective was defined in an international treaty.

⁶ *The Oxford English Dictionary*, Oxford, 1970, Vol. VII, p. 14.

text uses the word “biens”, which means “choses tangibles, susceptibles d’appropriation”.⁷

- 2008** It is clear that in both English and French the word means something that is visible and tangible.
- 2009** As regards the word “objective”, in English this is an abbreviation of the expression “objective point”, defined by the Oxford Dictionary as follows: “the point towards which the advance of troops is directed; hence, [...] the point aimed at”.⁸
- 2010** In French the word “objectif” is defined as follows in the Dictionnaire Robert: “point contre lequel est dirigé une opération stratégique ou tactique; par extension: résultat qu’on se propose d’atteindre par une opération militaire”.⁹ There is however no doubt that in this article both the English and French texts intended tangible and visible things by the word “objective”, and not the general objective (in the sense of aim or purpose) of a military operation; therefore the extended meaning given by the Dictionnaire Robert is not included in this article.

Paragraph 1

- 2011** The first sentence lays down the general principle of immunity of civilian objects. Attacks are defined in Article 49 (*Definition of attacks and scope of application*). As regards the prohibition of reprisals, reference may be made to what was said above with regard to Article 51 (*Protection of the civilian population*), paragraph 6.
- 2012** The second sentence defines civilian objects by means of a negative method, which is already used in Article 50 (*Definition of civilians and civilian population*) to define the civilian population. This method is justified by the fact that there are far more civilian objects than military objectives.
- 2013** A vote was taken in Committee III on retaining the words “nor of reprisals” in this paragraph; the Committee decided to retain them.¹⁰ In explaining why it abstained from voting on this article at the plenary meeting, one delegation indicated that it was opposed to a prohibition of reprisals against civilian objects that would apply in all circumstances; it considered that “the availability of this sanction may persuade an adversary not to commit violations of the law in the first place”;¹¹ but, as stated above, the Conference did not share this point of view.

¹¹ *O.R.* VI, pp. 175-176, CDDH/SR.41, Annex (Australia).

Paragraph 2

- 2014** The first sentence confirms the principle laid down in paragraph 1.
- 2015** The second sentence raised a problem of a moral nature for many, particularly for the ICRC: should a humanitarian treaty describe objects which may be attacked? After a great deal of thought it seemed impossible to ensure effective protection for the civilian population without indicating what objectives could legitimately be attacked. Therefore in the draft the ICRC used the wording that is found in this text, which includes a definition of military objectives. This definition will prove useful for the population itself, for it is in the latter's interests to know whether or not it should avoid certain points that the adversary could legitimately attack.
- 2016** The definition of military objectives had been the object of study for a long time, and the solution adopted by the Diplomatic Conference is broadly based on earlier drafts. The text of this paragraph certainly constitutes a valuable guide, but it will not always be easy to interpret, particularly for those who have to decide about an attack and on the means and methods to be used.
- 2017** It should be noted that the definition is limited to objects but it is clear that members of the armed forces are military objectives, for, as the Preamble of the Declaration of St. Petersburg states:

“the only legitimate object which States should endeavour to accomplish during war is to weaken the military forces of the enemy; [...] for this purpose it is sufficient to disable the greatest possible number of men”.

Article 43 (*Armed forces*) defines armed forces and provides that members of such forces are combatants, that is to say, they have the right to participate directly in hostilities; the corollary is that they may be the object of hostile acts.

- 2018** The definition comprises two elements:
- a) the nature, location, purpose or use which makes an effective contribution to military action;
 - b) the total or partial destruction, capture or neutralization which in the circumstances ruling at the time offers a definite military advantage.

Whenever these two elements are simultaneously present, there is a military objective in the sense of the Protocol.

- 2019** The ICRC proposal contained one element which was not retained: the objects should be recognized to be of military interest. On the other hand, the definition adopted introduces an additional element: the location. Similarly the concepts of “capture” and “neutralization” were added. According to the Rapporteur, the adjective “definite” was discussed at length. The adjectives considered and rejected included the words: “distinct” (distinct), “direct” (direct), “clear” (net), “immediate” (immédiat), “obvious” (évident), “specific” (spécifique) and “substantial” (substantiel). The Rapporteur of the Working Group added that he was not very clear about the reasons for the choice of words that was made.¹²

¹² O.R. XV, p. 332. CDDH/III/224.

- 2020 A closer look at the various criteria used reveals that the first refers to objects which, by their *nature*, make an effective contribution to military action. This category comprises all objects directly used by the armed forces: weapons, equipment, transports, fortifications, depots, buildings occupied by armed forces, staff headquarters, communications centres etc.
- 2021 The second criterion is concerned with the *location* of objects. Clearly, there are objects which by their nature have no military function but which, by virtue of their location, make an effective contribution to military action. This may be, for example, a bridge or other construction, or it could also be, as mentioned above,¹³ a site which is of special importance for military operations in view of its location, either because it is a site that must be seized or because it is important to prevent the enemy from seizing it, or otherwise because it is a matter of forcing the enemy to retreat from it. It should be noted that the Working Group of Committee III introduced the location criterion without giving reasons.
- 2022 The criterion of *purpose* is concerned with the intended future use of an object, while that of *use* is concerned with its present function. Most civilian objects can become useful objects to the armed forces. Thus, for example, a school or a hotel is a civilian object, but if they are used to accommodate troops or headquarters staff, they become military objectives. It is clear from paragraph 3 that in case of doubt, such places must be presumed to serve civilian purposes.
- 2023 Other establishments or buildings which are dedicated to the production of civilian goods may also be used for the benefit of the army. In this case the object has a dual function and is of value for the civilian population, but also for the military. In such situations the time and place of the attack should be taken into consideration, together with, on the one hand, the military advantage anticipated, and on the other hand, the loss of human life which must be expected among the civilian population and the damage which would be caused to civilian objects.
- 2024 Finally, destruction, capture or neutralization must offer a *definite military advantage* in the circumstances ruling at the time. In other words, it is not legitimate to launch an attack which only offers potential or indeterminate advantages. Those ordering or executing the attack must have sufficient information available to take this requirement into account; in case of doubt, the safety of the civilian population, which is the aim of the Protocol, must be taken into consideration.
- 2025 Some statements and declarations were made with regard to the interpretation of this paragraph in the final discussion or when the Protocols were signed. The statements related to two points:
- a) a specific area can constitute a legitimate military objective in view of its location and the circumstances (Canada, Federal Republic of Germany, The Netherlands, United States).¹⁴ The United Kingdom made a similar statement in a plenary meeting,¹⁵ and repeated this in a written declaration when signing Protocols;

¹³ *Supra*, p. 620.

¹⁴ *O.R.* VI, pp. 175-176, CDDH/SR.41, Annex (Australia); pp. 178-179 (Canada); pp. 186-188 (France, FRG); pp. 192-193 (Mexico); pp. 194-195 (The Netherlands); p. 204 (United States).

¹⁵ *Ibid.*, p. 169, CDDH/SR.41, para. 153.

b) the paragraph is not intended to deal with the question of damage caused incidentally by attacks directed against military objectives.¹⁶

2026 These interpretations were not discussed during the Diplomatic Conference; nevertheless, they appear to be reasonable. Of course, an area as described under a) can only be of a limited size. In addition, this concept is only valid in the combat area.

2027 It should be noted that the expression “a definite military advantage” is very similar to the terms used in Articles 51 (*Protection of the civilian population*), paragraph 5(b) and 57 (*Precautions in attack*), paragraph 2 (a)(iii) and (b). These articles use the expression “concrete and direct military advantage anticipated”.¹⁷ In the draft the ICRC had used the same expression in both articles: “distinct and substantial military advantage”. The documents of the Diplomatic Conference do not contain any indication about the reasons why different expressions were preferred. One is therefore left to analyze the meaning of the words used.

2028 In the case of Article 52 there must be a definite military advantage for every military objective that is attacked. In the case of Article 57 (*Precautions in attack*) this condition must also be fulfilled, but in addition, the military advantage which should also be concrete and direct must be weighed against the civilian losses and damage which could result from an attack.

Paragraph 3

2029 This is a rule which was not contained in the ICRC draft, or at least not in this form. The amendments submitted during the Conference did not contain it either; it was introduced in the draft presented by the Working Group of Committee III.¹⁸

2030 The presumption established here constitutes an important step forward in the protection of the civilian population, for in many conflicts the belligerents have “shot first and asked questions later”.

2031 When the paragraph was presented to Committee III it contained *in fine* a phrase which did not meet with general agreement. It provided that the normal presumption of civilian use for objects would not apply in contact areas when the security of the armed forces made such an exception necessary.

2032 The Rapporteur of the Working Group commented on this phrase as follows:

“[...] infantry soldiers could not be expected to place their lives in great risk because of such a presumption and [...] in fact, civilian buildings which happen to be in the front lines usually are used as part of the defensive works. The phrase was criticized by other delegates on the ground that it would unduly endanger civilian objects to permit any exceptions to the presumption”.¹⁹

¹⁶ Cf. *supra*, notes 14 and 15.

¹⁷ See *supra*, p. 625.

¹⁸ O.R. XV, p. 332, CDDH/III/224.

¹⁹ *Ibid.*

- 2033 Finally Committee III decided to delete this phrase²⁰ and since then the paragraph has not been altered except for some editorial changes.
- 2034 Therefore even in contact areas there is a presumption that civilian buildings located there are not used by the armed forces, and consequently it is prohibited to attack them unless it is certain that they accommodate enemy combatants or military objects. Strict compliance with the precautions laid down in Article 57 (*Precautions in attack*) will in most cases bring to light the doubt referred to in this provision or the certainty that it is a military objective.
- 2035 This article was adopted only after long and difficult discussions. Many delegations would have wished for a more precise definition, possibly containing a list of examples of civilian objects and military objectives. The Conference preferred a general definition. The three examples of civilian objects given in paragraph 3 was as far as it was willing to go.
- 2036 It is true that a more pragmatic definition would have been useful, and the ICRC paved the way for this in the 1956 Draft Rules.²¹ However, it soon became clear that drawing up a list of military objectives or civilian objects would have raised insuperable problems, and the ICRC therefore abandoned the attempt.
- 2037 However, it remains the case that the text adopted by the Diplomatic Conference largely relies on the judgment of soldiers who will have to apply these provisions. It is true that there are clear-cut situations where there is no possibility of doubt, but there are also borderline cases where the responsible authorities could hesitate. In such circumstances the general aim of the Protocol should be borne in mind, i.e., the protection of the civilian population. In any case an essential step forward has been taken in that belligerents can no longer arbitrarily and unilaterally declare as a military objective any civilian object, as happened all too often in the past.
- 2038 During the final debate some delegations remarked that in their opinion the article was insufficiently precise on too many points and that it would give rise to controversy.²² Finally one delegation remarked that, in its opinion, this article, like Article 51 (*Protection of the civilian population*), could not be made the object of reservations as it is fundamental.²³

Article 53 – Protection of cultural objects and of places of worship

Without prejudice to the provisions of the Hague Convention for the Protection of Cultural Property in the Event of Armed Conflict of 14 May 1954, and of other relevant international instruments, it is prohibited:

- (a) to commit any acts of hostility directed against the historic monuments, works of art or places of worship which constitute the cultural or spiritual heritage of peoples;
- (b) to use such objects in support of the military effort;
- (c) to make such objects the object of reprisals.

Commentary

General remarks

- 2039 In the draft the ICRC did not include a provision relating to the protection of cultural objects as this had been provided for by an international instrument especially designed for this purpose already in 1954, i.e., the Hague Convention concluded under the auspices of UNESCO.¹
- 2040 However, the Diplomatic Conference considered that the Protocol should contain a provision of this type thereby revealing its concern for the cultural heritage of humanity. In this respect the fact that the 1954 Convention had by no means entered into force worldwide was taken into consideration.² In any case the article is short, limited to the essential points, prohibiting the making of cultural objects into military objectives, as well as prohibiting their destruction.
- 2041 Thus during the second session a proposal was submitted as an amendment³ to Committee III. It formed the basis of this article.
- 2042 Although all the delegations quickly agreed to the protection of historic monuments and works of art, the question of places of worship led to lengthy discussions. Some considered that all places of worship should be protected without exception, while others considered that this should apply only to some important places of worship which constitute the “heritage of peoples”.
- 2043 Committee III adopted a first draft⁴ which opted for the second solution, i.e., that only some important places of worship were covered. In the light of discussion on the same subject when Article 16 of Protocol II (*Protection of cultural objects and of places of worship*)⁵ was examined, Committee III returned to this matter and adopted a second version of the article⁶ in which any reference to places of worship had disappeared.⁷ In fact places of worship had been mentioned without restriction in Article 52 (*General protection of civilian objects*), paragraph 3, as one of several examples of objects normally used for civilian purposes – and they must therefore be presumed to have a civilian character and enjoy the general protection to which such objects are entitled. In addition, places of worship which fall under historic monuments or works of art covered by Article 53 would benefit from the protection accorded under this article.
- 2044 In the plenary meetings the Conference considered that it was useful to reintroduce the reference to places of worship, specifying that the provision only

⁷ *Ibid.*, p. 456, CDDH/407/Rev.1, para. 30.

applies to those which constitute the “spiritual heritage of peoples”.⁸ The article was finally adopted by consensus.⁹

2045 The first few words of the article specify that it is not aimed at replacing the relevant existing international instruments. The second part lays down three prohibitions which constitute special protection for the protected objects.

First part – Reference to other international instruments

2046 The protection laid down in this article is accorded “without prejudice”¹⁰ to the provisions of other relevant international instruments. From the beginning of the discussions regarding Article 53 it was agreed that there was no need to revise the existing rules on the subject, but that the protection and respect for cultural objects should be confirmed. It was therefore necessary to state at the beginning of the article that it did not modify the relevant existing instruments. For example, this means that in case of a contradiction between this article and a rule of the 1954 Convention the latter is applicable, though of course only insofar as the Parties concerned are bound by that Convention. If one of the Parties is not bound by the Convention, Article 53 applies. Moreover, Article 53 applies even if all the Parties concerned are bound by another international instrument insofar as it supplements the rules of that instrument.

2047 The Diplomatic Conference adopted Resolution 20, which stresses the fundamental importance of the Hague Convention of 1954, and states that the adoption of Article 53 will not detract from the application of that Convention in any way; moreover, it urges States which have not yet done so to become Parties to it.

The Hague Convention of 1954

2048 The Convention is accompanied by Regulations for its execution, which form an integral part of it, as well as a Protocol¹¹ aimed primarily at preventing the export of cultural objects from occupied territory.

2049 The Convention contains first of all a definition of cultural property; this covers basically movable or immovable property of great importance to the cultural heritage of peoples.

⁸ O.R. VI, pp. 170-173, CDDH/SR.41, para. 157-181.

⁹ *Ibid.*, pp. 205-206, CDDH/SR.42, paras. 1-11.

¹⁰ In the French text of Article 16 of Protocol II the term “sans préjudice” is replaced by the term “sous réserve”, though there is no difference in meaning; see *Actes VII*, p. 145, CDDH/SR.53, para. 12. The English version of the text uses the same terms in both articles: “without prejudice”.

¹¹ At 31 December 1984, 72 States were Parties to the Convention and 60 to the Protocol, Parts I and II.

2050 The complete definition given in Article 1 of the Convention reads as follows:

“Definition of cultural property

For the purposes of the present Convention, the term ‘cultural property’ shall cover, irrespective of origin or ownership:

(a) movable or immovable property of great importance to the cultural heritage of every people, such as monuments of architecture, art or history, whether religious or secular, archeological sites; groups of buildings which, as a whole, are of historical or artistic interest; works of art; manuscripts, books and other objects of artistic, historical or archeological interest; as well as scientific collections and important collections of books or archives or of reproductions of the property defined above;

(b) buildings whose main and effective purpose is to preserve or exhibit the movable cultural property defined in sub-paragraph (a) such as museums, large libraries and depositories of archives, and refuges intended to shelter, in the event of an armed conflict, the movable cultural property defined in sub-paragraph (a);

(c) centres containing a large amount of cultural property as defined in sub-paragraphs (a) and (b), to be known as ‘centres containing monuments’.”

2051 Protection is accorded automatically to all objects which fall under the definition. It comprises two aspects: safeguarding and respect for such property. The Convention does not specify the form which such *safeguarding* should take; it simply imposes an obligation upon the Contracting Parties to take “such measures as they consider appropriate” in time of peace (Article 3).

2052 Article 4, relating to *respect* is more detailed:

“Respect for cultural property

1. The High Contracting Parties undertake to respect cultural property situated within their own territory as well as within the territory of other High Contracting Parties by refraining from any use of the property and its immediate surroundings or of the appliances in use for its protection for purposes which are likely to expose it to destruction or damage in the event of armed conflict; and by refraining from any act of hostility directed against such property.

2. The obligations mentioned in paragraph 1 of the present Article may be waived only in cases where the military necessity imperatively requires such a waiver.

3. The High Contracting Parties further undertake to prohibit, prevent and, if necessary, put a stop to any form of theft, pillage or misappropriation of, and any acts of vandalism directed against, cultural property. They shall refrain from requisitioning movable cultural property situated in the territory of another High Contracting Party.

4. They shall refrain from any act directed by way of reprisals against cultural property.

5. No High Contracting Party may evade the obligations incumbent upon it under the present Article, in respect of another High Contracting Party, by reason of the fact that the latter has not applied the measures of safeguard referred to in Article 3.”

- 2053 The Convention also provides for a system of *special protection*¹² (Articles 8-11; Regulations for Execution, Articles 11-17). Places falling under such protection include refuges intended to shelter movable cultural property in the case of armed conflict, centres containing monuments and other immovable cultural property of very great importance, provided that:
- they are situated at an adequate distance from any important military objective;
 - they are not used for military purposes; and
 - they are entered¹³ in the “International Register of Cultural Property under Special Protection” held by the Director-General of UNESCO.
- 2054 Property under special protection granted immunity by the Convention must be marked with a special emblem¹⁴ and be subject to international control.
- 2055 The Convention also contains important provisions on the transport of cultural property and the personnel assigned to the protection of cultural property.

¹² Art. 9:

“Immunity of cultural property under special protection

The High Contracting Parties undertake to ensure the immunity of cultural property under special protection by refraining, from the time of entry in the International Register, from any act of hostility directed against such property and, except for the cases provided for in paragraph 5 of Article 8, from any use of such property or its surroundings for military purposes.”

Art. 11:

“Withdrawal of immunity

1. If one of the High Contracting Parties commits, in respect of any item of cultural property under special protection, a violation of the obligations under Article 9, the opposing Party shall, so long as this violation persists, be released from the obligation to ensure the immunity of the property concerned. Nevertheless, whenever possible, the latter Party shall first request the cessation of such violation within a reasonable time.

2. Apart from the case provided for in paragraph 1 of the present Article, immunity shall be withdrawn from cultural property under special protection only in exceptional cases of unavoidable military necessity, and only for such time as that necessity continues. Such necessity can be established only by the officer commanding a force the equivalent of a division in size or larger. Whenever circumstances permit, the opposing Party shall be notified, a reasonable time in advance, of the decision to withdraw immunity.

3. The Party withdrawing immunity shall, as soon as possible, so inform the Commissioner-General for cultural property provided for in the Regulations for the execution of the Convention, in writing, stating the reasons.”

¹³ Article 11 of the Regulations provides an exception for “improvised refuges” set up in the course of a conflict; such refuges may benefit from special protection before they are entered in the Register.

¹⁴ “The distinctive emblem of the Convention shall take the form of a shield, pointed below, per saltire blue and white (a shield consisting of a royal-blue square, one of the angles of which forms the point of the shield, and of a royal-blue triangle above the square, the space on either side being taken up by a white triangle” (Convention, Art. 16, para. 1). Property under special protection must display this emblem repeated three times; other property may only display the emblem alone (*ibid.*, Art. 17).

*Other instruments*1. *The Hague Conventions of 1907*

2056 Two Hague Conventions of 1907 contain provisions relating to cultural property, viz., Convention IV, particularly its Regulations Concerning the Laws and Customs of War on Land,¹⁵ and Convention IX, Respecting Bombardment by Naval Forces in Time of War.¹⁶

2057 Article 27 of the Regulations annexed to Convention IV reads as follows:

“In sieges and bombardments all necessary steps must be taken to spare, as far as possible, buildings dedicated to religion, art, science, or charitable purposes, historic monuments, hospitals, and places where the sick and wounded are collected, provided they are not being used at the time for military purposes.

It is the duty of the besieged to indicate the presence of such buildings or places by distinctive and visible signs, which shall be notified to the enemy beforehand.”

2058 Article 5 of Convention IX contains a similar provision, but gives a description of the sign to be used:

“In bombardments by naval forces all the necessary measures must be taken by the commander to spare as far as possible sacred edifices, buildings used for artistic, scientific, or charitable purposes, historic monuments, hospitals, and places where the sick or wounded are collected, on the understanding that they are not used at the same time for military purposes.

It is the duty of the inhabitants to indicate such monuments, edifices, or places by visible signs, which shall consist of large, stiff rectangular panels divided diagonally into two coloured triangular portions, the upper portion black, the lower portion white.”¹⁷

2059 Article 56 of the Regulations annexed to Convention IV, which applies in the case of occupation, provides that:

“The property of municipalities, that of institutions dedicated to religion, charity and education, the arts and sciences, shall be treated as private property.”¹⁸

All seizure of, destruction or wilful damage done to institutions of this character, historic monuments, works of art and science is forbidden, and should be made the subject of legal proceedings.”

¹⁵ *International Red Cross Handbook*, 12th ed., Geneva, 1983, pp. 322-332.

¹⁶ *Ibid.*, pp. 336-337.

¹⁷ Article 36 of the 1954 Hague Convention provides that the new emblem provided replaces that of Hague Convention IX of 1907.

¹⁸ This is a reference to Article 46: the principle of respect for private property; Article 47: pillage forbidden; and Articles 52 and 53: restrictions on requisitions in kind and seizure.

2060 Even for States Parties to the Hague Convention of 1954 these provisions remain applicable to cultural property not covered by the more recent Convention, i.e., to property referred to in Articles 27 of the Regulations and 5 of Convention IX, which is not of “great importance for the cultural heritage of peoples”, and to buildings dedicated to charitable purposes and education, as well as property of municipalities. In the context of the Protocol such property is protected by virtue of its civilian character (Article 52 – *General protection of civilian objects*).

2. *The Roerich Pact*

2061 Another relevant instrument, with a limited geographical scope, since it was concluded under the auspices of a regional organization, is the Treaty for the Protection, in Time of War and Peace, of Historic Monuments, Museums and Institutions of Arts and Science (Roerich Pact), signed in Washington on 15 April 1935 by the members of the Pan-American Union, which later became the Organization of American States.¹⁹ The main provisions of this treaty are contained in Articles 1 and 5:

“Article 1.

The historic monuments, museums, scientific, artistic, educational and cultural institutions shall be considered as neutral and as such respected and protected by belligerents.

The same respect and protection shall be due to the personnel of the institutions mentioned above.

The same respect and protection shall be accorded to the historic monuments, museums, scientific, artistic, educational and cultural institutions in time of peace as well as in war.”

“Article 5.

The monuments and institutions mentioned in Article 1 shall cease to enjoy the privileges recognized in the present Treaty in case they are made use of for military purposes.”

3. *Two UNESCO Conventions of 1970 and 1972*

2062 Two international conventions adopted by the General Conference of UNESCO deserve a special mention: the Convention on the Means of Prohibiting

¹⁹ This treaty was drawn up at the suggestion of Professor Nicolas Roerich of New York and was discussed by the International Office of Museums of the League of Nations. Private conferences took place in Bruges in 1931 and 1932, and in Washington in 1933, recommending governments to adopt it. In 1933 the 7th Conference of American States recommended its signature, which took place in 1935. Article 36, paragraph 2, of the 1954 Hague Convention supplements the Roerich Pact and substitutes its distinctive emblem (red circle with a triple red sphere in the circle on a white background) by the new emblem. On 31 December 1984, 11 States were Parties to the Pact.

and Preventing the Illicit Import, Export and Transfer of Ownership of Cultural Property, adopted in 1970,²⁰ and the Convention of 16 November 1972 Concerning the Protection of the World Cultural and Natural Heritage.²¹

Second part – Definition of protected objects; three prohibitions

Definition of protected objects

- 2063** The special protection conferred by Article 53 applies to three categories of objects: historic monuments, works of art, and places of worship, provided they constitute the cultural or spiritual heritage of peoples.²² The initial draft referred to the heritage of a country, but it was considered preferable to use the term heritage “of peoples” as problems of tolerance could arise with regard to religions which do not belong to the country in question, and with respect to places where worship takes place.
- 2064** Article 1 of the Hague Convention of 1954 refers to property which is “of great importance to the cultural heritage” and not, as in the present Article 53, to objects which “constitute the cultural or spiritual heritage”. Despite this difference in terminology, the basic idea is the same.²³ However, the reference to places of worship and to the spiritual heritage clarifies the qualification of protected objects by introducing the criterion of spirituality. It was stated that the cultural or spiritual heritage covers objects whose value transcends geographical boundaries, and which are unique in character and are intimately associated with the history and culture of a people.²⁴
- 2065** In general the adjective “cultural” applies to historic monuments and works of art, while the adjective “spiritual” applies to places of worship. However, this should not stop a temple from being attributed with a cultural value, or a historic monument or work of art from having a spiritual value. The discussions in the Diplomatic Conference confirmed this. However, whatever the case may be, the expression remains rather subjective. In case of doubt, reference should be made in the first place to the value or veneration ascribed to the object by the people whose heritage it is.
- 2066** Thus all objects of sufficient artistic or religious importance to constitute the heritage of peoples are protected,²⁵ including those which have been renovated or restored.²⁶

²⁰ At 31 December 1984, 53 States were Parties to this Convention.

²¹ At 31 December 1984, 53 States were Parties to this Convention.

²² The concept of a people should be understood here in a cultural sense and not in the legal sense used in Article 1, para. 4, of the Protocol.

²³ During the CDDH there was no question of creating a new category of cultural objects.

²⁴ *O.R. XV*, p. 220, CDDH/III/SR.59, para. 68.

²⁵ The text of the article is clear. The absence of a comma before the words “which constitute the [...] heritage” clearly shows that only objects complying with this condition are covered. If there were a comma, the clause introduced by the relative pronoun would be a statement or a commentary, which is unusual in an international convention.

²⁶ *O.R. XV*, pp. 277-278, CDDH/215/Rev.1, paras. 68-70.

- 2067** The Conference rejected the idea which was put forward by some delegations of including any and all places of worship, as such buildings are extremely numerous and often have only a local renown of sanctity which does not extend to the whole nation. Thus the places referred to are those which have a quality of sanctity independently of their cultural value and express the conscience of the people. Article 53 lays down a *special* protection which prohibits the objects concerned from being made into military objectives and prohibits their destruction. This protection is additional to the immunity attached to civilian objects; all places of worship, regardless of their importance, enjoy the protection afforded by Article 52 (*General protection of civilian objects*).
- 2068** Historic monuments and works of art must be considered as generic terms: in case of doubt, reference should be made to the detailed definition given in the 1954 Hague Convention.

Sub-paragraph (a)

- 2069** It is prohibited to commit any acts of hostility directed against the protected objects.
- 2070** The 1954 Hague Convention contains a similar provision: “by refraining from any act of hostility directed against such property” (Article 4, paragraph 1). The Roerich Pact simply provides that the objects shall be “respected and protected by belligerents” (Article 1). An act of hostility must be understood as any act arising from the conflict which has or can have a substantial detrimental effect on the protected objects.²⁷ In fact the article prohibits not only substantial detrimental effect, but all acts *directed* against the protected objects. For a violation of the article to take place it is therefore not necessary for there to be any damage.
- 2071** The obligation here is stricter than that in the Hague Regulations of 1907. According to Article 53 of the Protocol: “it is prohibited to commit”, while Article 27 of the Hague Regulations requires: “to spare, as far as possible”.
- 2072** The obligation is also stricter than that imposed by the 1954 Hague Convention, since it does not provide for any derogation, even “where military necessity imperatively requires such a waiver”.²⁸ As long as the object concerned is not made into a military objective by those in control – and that is not allowed – no attack is permitted.
- 2073** As there are no exceptions, the obligation must be considered to apply to all objects concerned, regardless of the territory where they are situated.

²⁷ An act of hostility includes in particular the destruction of any specially protected object by any Party to the conflict, either by way of attack or by demolition of objects “under its control” (cf. M. Bothe, K.J. Partsch, W.A. Solf, *op. cit.*, p. 334, para. 2.5.2).

²⁸ When the Parties to the Protocol are also Parties to the Hague Convention of 1954, these derogations continue to apply, though it is understood that an attack may never be launched against an objective which is not a military objective in the sense of the Protocol. If one of them is a Party to the Protocol and not to the 1954 Hague Convention, no derogation is possible. Also see *infra*, note 30.

2074 It should be noted that attacks against historic monuments, works of art or places of worship may constitute a grave breach.²⁹

Sub-paragraph (b)

2075 It is prohibited to use protected objects in support of the military effort.

2076 The 1954 Hague Convention contains a similar rule, which seeks to prohibit any use of protected objects which could put them in danger of becoming military objectives: it prohibits “any use of the property and its immediate surroundings or of the appliances in use for its protection for purposes which are likely to expose it to destruction or damage in the event of armed conflict” (Article 4, paragraph 1).

2077 This prohibition forms the essential counterpart for the respect due under sub-paragraph (a): the use of such objects “in support of the military effort” would in fact be clearly incompatible with the obligation for the adversary to respect them.

2078 The “military effort” is a very broad concept, encompassing all military activities connected with the conduct of a war. It is prohibited to benefit from protected objects (passive support), as well as to use them (active support), for example, by including them in a defence position.

2079 If protected objects were used in support of the military effort, this would obviously constitute a violation of Article 53 of the Protocol, though it would not necessarily justify attacking them. To the extent that it is admitted that the right to do so does exist with regard to objects of exceptional value, such a right would depend on their being a military objective, or not, as defined in Article 52 (*General protection of civilian objects*), paragraph 2. A military objective is an object which makes “an effective contribution to military action” for the adversary, and whose total or partial destruction, capture or neutralization “in the circumstances ruling at the time, offers a definite military advantage” for the attacker.³⁰ These conditions are therefore stricter than the simple condition that they must be “in support of the military effort”. For example, it is not permitted to destroy a cultural object whose use does not make any contribution to military action, nor a cultural object which has temporarily served as a refuge for combatants, but is no longer used as such. In addition, all preventive measures should be taken to terminate their use in support of the military effort (warnings, injunctions etc.) in order to prevent the destruction or damage of cultural objects. However, if it is decided to attack anyway, the principle of proportionality should be respected, which means that the damage should not be excessive in relation to the concrete and direct military advantage anticipated, and all the precautions required by Article 57 (*Precautions in attack*) should be taken.

²⁹ See Art. 85, para. 4 (d), and the commentary thereon, *infra*, p. 1002.

³⁰ The prohibition on attacking objects which are not military objectives, as well as the definition of the latter given in Article 52, para. 2, also apply when the Hague Convention of 1954 is applicable: thus the effect of Article 52 of Protocol I is to limit the possibilities of derogations allowed by the Hague Convention. This is an important development for the protection of cultural objects.

Sub-paragraph (c)

- 2080** It is prohibited to make protected objects the object of reprisals.³¹
- 2081** This reiterates a prohibition which applies to all civilian objects (see Article 52 – *General protection of civilian objects*, paragraph 1).
- 2082** As in the 1954 Hague Convention there can be no derogation from this prohibition.

C.F.W.

³¹ On the question of reprisals in general, see introduction to Part V, Section II, *infra*, p. 981.

Protocol I

Article 54 – Protection of objects indispensable to the survival of the civilian population

1. Starvation of civilians as a method of warfare is prohibited.
2. It is prohibited to attack, destroy, remove or render useless objects indispensable to the survival of the civilian population, such as foodstuffs, agricultural areas for the production of foodstuffs, crops, livestock, drinking water installations and supplies and irrigation works, for the specific purpose of denying them for their sustenance value to the civilian population or to the adverse Party, whatever the motive, whether in order to starve out civilians, to cause them to move away, or for any other motive.
3. The prohibitions in paragraph 2 shall not apply to such of the objects covered by it as are used by an adverse Party:
 - (a) as sustenance solely for the members of its armed forces; or
 - (b) if not as sustenance, then in direct support of military action, provided, however, that in no event shall actions against these objects be taken which may be expected to leave the civilian population with such inadequate food or water as to cause its starvation or force its movement.
4. These objects shall not be made the object of reprisals.
5. In recognition of the vital requirements of any Party to the conflict in the defence of its national territory against invasion, derogation from the prohibitions contained in paragraph 2 may be made by a Party to the conflict within such territory under its own control where required by imperative military necessity

Commentary

2083 Although the comprehensive protection of civilian objects and the explicit prohibition of the starvation of civilians are new features in codified humanitarian law, it should be noted that the Diplomatic Conference of 1949 had taken the first step in this direction with the adoption of Article 23 of the Fourth Convention, which provides for aid in favour of the most vulnerable categories of the population, and Article 53, which safeguards necessities of life of civilians in occupied territory.

2084 The article under consideration here was profoundly revised by the Diplomatic Conference of 1974-1977. The ICRC draft, which did not contain paragraphs 1, 3 and 5 read as follows:

“Article 48 – Objects indispensable to the survival of the civilian population

It is forbidden to attack or destroy objects indispensable to the survival of the civilian population, namely, foodstuffs and food-producing areas, crops, livestock, drinking water supplies and irrigation works, whether it is to starve out civilians, to cause them to move away or for any other reason. These objects shall not be made the object of reprisals.”

2085 The question gave rise to lengthy discussions in the Working Group of Committee III, but it finally succeeded in reconciling the different opinions and the article was adopted by consensus in the Committee and then in the Conference.¹

2086 One point of terminology deserves a mention: the title of the article, like the text (paragraph 2), refers to “objects indispensable to the survival of the civilian population”, while Article 69 (*Basic needs in occupied territories*) refers to

¹ *O.R. XIV*, p. 301, CDDH/II/SR.31, para. 11; *O.R. VI*, p. 208, CDDH/SR.42, para. 19.

“supplies essential to the survival of the civilian population” (while the title uses the term “basic needs”). In the French text of these two articles the difference in terminology is only in the adjective: reference is made to “*biens indispensables*” and “*biens essentiels*”, respectively. In their contexts the two terms must be considered to have the same meaning.²

Paragraph 1

- 2087** It is not sufficient to condemn specific indiscriminate or particularly cruel weapons, since it is possible to use weapons or means that are legitimate in themselves, or to provoke the release of natural phenomena, in a way equally dangerous for the population. It is therefore necessary to prohibit methods of total warfare, and to have done so is one of the great achievements of the Diplomatic Conference.
- 2088** An example of this achievement can be seen here in this succinct paragraph, which prohibits starvation as a method of warfare. There is no doubt that this is a significant step forward. It can also be seen with respect to Article 55 (*Protection of the natural environment*).
- 2089** The term “starvation” is generally understood by everyone.³ To use it as a method of warfare would be to provoke it deliberately, causing the population to suffer hunger, particularly by depriving it of its sources of food or of supplies. It is clear that activities conducted for this purpose would be incompatible with the general principle of protecting the population, which the Diplomatic Conference was concerned to confirm and reinforce.
- 2090** Starvation is referred to here as a method of warfare, i.e., a weapon to annihilate or weaken the population.
- 2091** As we have seen, the statement of this general principle is innovative, and a significant progress of the law. It arose from an amendment.⁴ However, a general principle only of course becomes fully operative when it is accompanied by rules of application: the remainder of the article is concerned with such application, as are several other articles in the Protocol, particularly those relating to relief actions. This rule could have been placed in Part III, Section I, “Methods and means of warfare”, but as it directly concerns the civilian population, its position seems justified. The principle is applicable both in occupied territories and in territories that are not occupied.
- 2092** According to the Rapporteur of Committee III: “The fact that the paragraph does not change the law of naval blockade is made clear by Article 44,⁵ paragraph 1.” This remark appears to be correct.

² The Robert Dictionary defines “*essentiel*” in everyday language as “*qui est nécessaire, inséparable de quelque chose*” (Vol. II, p. 644) and it refers to “*indispensable*”. The same dictionary defines “*indispensable*” as “*qui est très nécessaire, dont on ne peut se passer*” (Vol. III, p. 703) and it refers back to “*essentiel*”.

³ Starvation is defined by the Shorter Oxford English Dictionary (1973) as the action of starving or subjecting to famine, i.e., to cause to perish of hunger; to deprive of or “keep scantily supplied with food” (p. 2111). The word “starvation” is also used in para. 3(b) *in fine*.

⁴ O.R. III, p. 218, CDDH/III/67.

⁵ In the final text this has become Article 49, para. 3.

- 2093 However, it should be noted that there is some uncertainty as regards the present state of the customary law relating to blockades.⁶ In fact, although they were codified in the Declaration of London of 24 February 1909, this instrument was never ratified. Furthermore, the rules were not always complied with during the Second World War.⁷ Thus it is to be hoped that the rules relating to blockades will be clarified as part of a future revision of certain aspects of the laws of war at sea, a revision for which there is a great need. Such a reexamination should make it possible to duly take into account the principles put forward in the Protocol which prohibit starvation as a method of warfare.
- 2094 Nevertheless, the fact remains that the possibility of a blockade exists provided that some conditions are fulfilled. Thus, it must be preceded by a declaration indicating its duration and the area covered; it must be effective and applied impartially to ships of all countries; neutral States must be informed of blockades which have been implemented against a Party to the conflict.
- 2095 It should be emphasized that the object of a blockade is to deprive the adversary of supplies needed to conduct hostilities, and not to starve civilians. Unfortunately it is a well-known fact that all too often civilians, and above all children, suffer most as a result. If the effects of the blockade lead to such results, reference should be made to Article 70 of the Protocol (*Relief actions*), which provides that relief actions should be undertaken when the civilian population is not adequately provided with food and medical supplies, clothing, bedding, means of shelter and other supplies essential to its survival. Such actions may be very extensive.⁸
- 2096 Moreover, if it turned out to be impossible to send sufficient aid for that part of the population of a besieged or encircled area that is particularly weak, the principle of the prohibition of starvation should henceforth dictate the evacuation of such persons; this was already made possible, though not prescribed, by Article 17 of the Fourth Convention.
- 2097 Finally it should be mentioned that an action aimed at causing starvation would constitute a violation of this Protocol, but it could also be a crime of genocide if it were undertaken with intent to destroy, in whole or in part, a national, ethnical, racial or religious group, according to the terms of the Genocide Convention.⁹

⁶ O.R. XV, p. 279, CDDH/215/Rev.1, para. 73.

⁷ The Nuremberg Tribunal acquitted Admiral Doenitz of the accusations brought against him relating to his conduct of submarine warfare against British armed merchant vessels, but, although he was found guilty of a violation of the Protocol in relation to neutral vessels, he was not sentenced on the ground of his breaches of the law of submarine warfare on the basis of the *tu quoque* principle, as the adverse Parties had also used practices of which he was accused.

⁸ Thus, for example, from 1942 to 1944 the population of Greece enjoyed considerable aid requiring the intervention of a whole fleet. See the final report of the commission administering aid to Greece under the auspices of the ICRC, Athens 1949.

⁹ Convention on the Prevention and Punishment of the Crime of Genocide of 9 December 1948, particularly Art. II(c).

Paragraph 2

- 2098 This provision develops the principle formulated in paragraph 1 of prohibiting starvation of the civilian population; it describes the most usual ways in which this may be applied.¹⁰
- 2099 The adopted text is very similar to the ICRC draft, although some important details were incorporated which led to lengthy discussion.
- 2100 The Conference added removal and rendering useless of objects indispensable to the survival of the civilian population to the prohibition on their attack or destruction. With regard to rendering such objects useless, this refers mainly to irrigation works and installations.
- 2101 It should be noted that the verbs “attack”, “destroy”, “remove” and “render useless” are used in order to cover all possibilities, including pollution, by chemical or other agents, of water reservoirs, or destruction of crops by defoliants, and also because the verb “attack” refers, either in offence or defence, to acts of violence against the adversary, according to Article 49 (*Definition of attacks and scope of application*), paragraph 1.
- 2102 As regards the objects which are especially protected, the Conference mentioned agricultural areas for the production of foodstuffs, drinking water installations and supplies, and crops, which should be interpreted in the widest sense, in order to cover the infinite variety of needs of populations in all geographical areas.
- 2103 Furthermore, the words “such as” show that the list of protected objects is merely illustrative. An exhaustive list could have led to omissions or an arbitrary selection. As the text reveals, the objects concerned are basically objects for subsistence. General protection of civilian objects follows from Article 52 (*General protection of civilian objects*). However, it cannot be excluded that as a result of climate or other circumstances, objects such as shelter or clothing must be considered as indispensable to survival.
- 2104 The clause “for the specific purpose of denying them for their sustenance value” led to lengthy discussion. The Working Group¹¹ and then Committee III¹² had adopted the words “for the purpose of denying them as such”.¹³ The Drafting

¹⁰ The relationship between these two provisions is particularly clear in Article 14 of Protocol II, the second sentence of which begins with the words “It is therefore prohibited”.

¹¹ O.R. XV, p. 249, CDDH/III/264/Rev.1.

¹² *Ibid.*, p. 279, CDDH/215/Rev.1, para. 74.

¹³ In this respect it is appropriate to quote the report of the Committee: “In paragraph 2, drafting problems were posed by the fact that two of the objects listed – food-producing areas and irrigation works – might be useful to combatants for purposes other than directly for sustenance. Thus, the phrase in paragraph 2 ‘for the purpose of denying them as such’ was designed to cover both the denial of food and drink as sustenance and the denial of food-producing areas and irrigation works for their contribution to the production of sustenance. On the other hand, it was not intended to cover their denial to the enemy for other purposes, including the general purpose of preventing the enemy from advancing. Thus, bombarding an area to prevent the advance through it of an enemy is permissible, whether or not the area produces food, but the deliberate destruction of food-producing areas in order to prevent the enemy from growing food on them is forbidden. Similarly, destroying a field of crops in order to clear a field for fire or to

(continued on next page)

Committee finally proposed the present wording, which was adopted in the Conference by consensus.¹⁴

- 2105 Even if the wording is not perfect, the meaning is clear: the objects indicated must be respected in order to guarantee the survival of the population, unless – following paragraphs 3 and 5 – military necessity requires that they be attacked, destroyed, removed or rendered useless. On this subject the examples given by the Rapporteur are meaningful.¹⁵ The restrictions laid down in Article 57 (*Precautions in attack*) must of course be respected.
- 2106 It will be seen, when examining paragraph 3(b), that even if the objects listed here were used in direct support of military action, the adverse Party should, when using force, ensure that the population is not reduced to starvation or compelled to move. This requirement must be considered *a fortiori* as applying here with regard to objects intended exclusively for the population.
- 2107 The text continues: “for the specific purpose of denying [...] the civilian population or [...] the adverse Party.” Why should it mention the adverse Party? To understand this, reference should be made to paragraph 3, which makes an exception to the rule of paragraph 2 if objects are used in a certain way “by an adverse Party”. Thus the provision under consideration here means that it is prohibited to attack etc. objects indispensable to the survival of the civilian population wherever it is, or to deprive the enemy State of such objects indispensable to the civilian population.

Paragraph 3

- 2108 This provision was not contained in the ICRC draft; it appears to be the result of an amendment.¹⁶
- 2109 Sub-paragraph (a) is undoubtedly concerned with foodstuffs and the agricultural areas producing them, crops, livestock and supplies of drinking water, but not with installations for drinking water or irrigation works.
- 2110 It is important to determine how foodstuffs, crops, livestock and supplies of drinking water could be used in direct support of military action, as suggested in

prevent the enemy using it for cover is permissible, but destroying it to prevent the enemy from consuming the crops is forbidden. This is a heavy burden of meaning to be carried by the two words ‘as such’, and several representatives expressed the hope that the Drafting Committee would ultimately find a clearer form of words.”

(O.R. XV, p. 279, CDDH/215/Rev.1, para. 74).

¹⁴ O.R. VI, p. 208, CDDH/SR.42, para. 19.

¹⁵ Cf. *supra*, note 13.

¹⁶ O.R. III, p. 219, CDDH/III/74. The Rapporteur of Committee III expressed himself as follows in this respect: “The phrasing of paragraph 3 is only slightly more satisfying than that of paragraph 2. Here the drafter continues to be plagued by the necessity of distinguishing between uses of the objects as sustenance and other uses. Paragraph 2(a) was intended to apply only to those objects which clearly are assigned solely for the sustenance of the armed forces. The term ‘civilian population’ referred to in paragraph 2(b) was not intended to mean the civilian population of a country as a whole, but rather of an immediate area, although the size of the area was not defined.” (O.R. XV, p. 280, CDDH/215/Rev.1, para. 76). It should be noted that the passage quoted above incorrectly refers to 2(a) and 2(b) while it should refer to 3(a) and 3(b).

sub-paragraph (b). Although some supplies of foodstuffs or drinking water can serve to sustain the armed forces, this possibility does not seem sufficient reason for depriving such objects of the protection it was agreed to afford them, and the restriction contained at the end of this sub-paragraph confirms this point of view. The phrase “direct support of military action” in sub-paragraph (b) refers to the type of military operation quoted in footnote 13 above, namely, bombarding a food-producing area to prevent the enemy from advancing through it, or attacking a food-storage barn which is being used by the enemy for cover or as an arms depot etc.

2111 If the civilian population is reduced to starvation or forced to move, acts of destruction are prohibited in any case; in this situation it should also be recalled that under Article 70 (*Relief actions*), relief actions must be undertaken provided that the agreement has been obtained from the Parties concerned with such relief actions.

2112 To summarize, the following rules can be laid down:

1. Supplies of foodstuffs intended for the sole use of the armed forces may be attacked and destroyed (agricultural areas or drinking water installations are hardly likely to be used solely for the benefit of armed forces).
2. When objects are used for a purpose other than the subsistence of members of the armed forces and such use is in direct support of military action, attacks and acts of destruction are legitimate unless they are bound to have serious effects on supplies for the civilian population and the latter would thereby be reduced to starvation or forced to move away.

2113 Finally, a general remark may be made which is common to the first three paragraphs: objects indispensable to the survival of the civilian population are protected by this article when they are located in the territory held by the Party to the conflict concerned or that of a co-belligerent as well as in enemy territory.

2114 If they come by sea, the fate of such objects depends on the provisions of the laws of war applicable to ships transporting them. As the Rapporteur of Committee III stated, this article does not replace the recognized rules on naval blockades. One may also note in passing that the objects referred to in paragraph 2 do not fall in the category known as “absolute contraband of war”, and that consequently ships of neutral countries which transport foodstuff destined exclusively for the civilian population may do so without risk of seizure or confiscation.

Paragraph 4

2115 This provision was contained in the ICRC draft and the Conference decided to make it into a separate paragraph. Again it was preferred to repeat this prohibition of reprisals here, rather than grouping together everything related to reprisals in a separate article.¹⁷ On the general problem of reprisals reference should be made to the introduction to Part V, Section II (*infra*, p. 981).

¹⁷ O.R. VI, pp. 219-220, CDDH/SR.42, Annex (Australia).

Paragraph 5

- 2116** This provision was not contained in the ICRC draft. At the Diplomatic Conference it soon became clear that many States did not wish to limit the means available to them of defending their national territory against an invader, including carrying out “scorched earth” actions which would prevent or slow down the advance of the adverse forces. There have been some notorious examples of such “total defence” in the recent past which have often resulted in significant long-term damage for the country and its population: forest fires, breaching dykes, flooding cultivated land with sea water, destroying bridges, roads or other means of communication, factories, food supplies etc.¹⁸
- 2117** The suggestion of the Rapporteur was taken into account and, after an examination of Article 66 of the draft, Committee III adopted a new text whose paragraph 2 became this paragraph after being revised by the Drafting Committee, which had been asked to ascertain where this provision could best be placed. Paragraph 1 became paragraph 2 of Article 49 of the Protocol (*Definition of attacks and scope of application*).¹⁹
- 2118** The words “under its own control” refer to *de facto* control, i.e., the ability to exercise effective control. In the French text the word “contrôle” is used in the English sense implying a power to direct and take decisions, though the usual French meaning of this word is to “supervise” or “check”.
- 2119** It follows from this provision that a belligerent Power, while preserving the interests of its own population, may carry out destructions in that part of its own territory where it exercises authority, but that it may not do so in any part of its territory that may be under enemy control, any more than it may do so in the territory of the enemy Power itself, for that matter.

¹⁸ When he presented Article 48 the Rapporteur of Committee III expressed himself as follows: “Finally, Article 48 raised the question whether the prohibitions in paragraph 2 other than that on attack (which by definition is against the adversary) apply to acts by a State against objects under its control and within its own national territory. A number of representatives expressed the view that it was not intended to have such an effect and that an express reservation of rights within one’s own territory was unnecessary. At the suggestion of the Rapporteur, it was agreed to review subsequently the extent to which the provisions of this Section were intended to have such an effect within a State’s own territory and reflect the conclusions of the Group in some appropriate way in the text. It is apparent that some provisions, for example Article 46, paragraph 5, on movement of civilians to shield military operations, are intended to apply to a State within its own territory. This review will be made in the context of Article 66.” (*O.R. XV*, p. 280, CDDH/215/Rev.1, para. 77).

¹⁹ On this subject the Rapporteur stated: “Paragraph 2 [of draft Art. 66] proved relatively easy to agree upon once it was phrased in terms that recognized the vital requirements of a State defending its national territory against invasion. The Committee generally considered that it would be impossible to prohibit completely the conduct of a scorched earth policy where the armed forces of a State were being forced to retreat within the national territory of that State, and the best protection on which agreement was possible was to permit derogation from the rules of Article 48, paragraph 2 only where required by imperative military necessity. Several representatives expressed dissatisfaction with that standard because of its apparent anti-humanitarian implications, but it was generally regarded as the most demanding standard that would be acceptable.” (*Off. Records XV*, p. 462, CDDH/407/Rev.1, para. 51).

- 2120** As regards Occupying Powers, Article 53 of the Fourth Geneva Convention of 1949 prohibits the destruction of real or personal property, except where such destruction is rendered absolutely necessary by military operations. This is a general rule which is now supplemented by the provisions of Article 54 of the Protocol as regards objects indispensable to the survival of the civilian population.
- 2121** “Scorched earth” policies exercised by an Occupying Power withdrawing from occupied territory were judged legitimate if required by imperative military necessity.²⁰ Article 54 does not change that situation except as regards objects indispensable to the survival of the civilian population. In other words, an occupation army which is withdrawing may, if military operations render it absolutely necessary, carry out destructions (bridges, railways, roads, airports, ports etc.) with a view to preventing or slowing down the advance of enemy troops, but may not destroy indispensable objects such as supplies of foodstuffs, crops ripe for harvesting, drinking water reservoirs and water distribution systems or remove livestock. To summarize:
- 2122** – In the case of imperative military necessity a belligerent Power may in an extreme case even destroy objects indispensable to the survival of the civilian population in that part of its own territory which is under its control. On the other hand, it may not carry out such destruction in the part of its territory which is under enemy control.
- 2123** – An Occupying Power may not destroy objects located in occupied territory which are indispensable to the survival of the civilian population. Any “scorched earth” policy carried out by an Occupying Power, even when withdrawing from such territory, must not affect such objects.

C.P. / J.P.

²⁰ See in particular, 8 *Law Reports*, pp. 67-69.

Protocol I

Article 55 – Protection of the natural environment

1. Care shall be taken in warfare to protect the natural environment against widespread, long-term and severe damage. This protection includes a prohibition of the use of methods or means of warfare which are intended or may be expected to cause such damage to the natural environment and thereby to prejudice the health or survival of the population.
2. Attacks against the natural environment by way of reprisals are prohibited.

Commentary

- 2124 As we have said before, one of the great merits of the Diplomatic Conference is that it condemned methods of total warfare: the prohibition of starvation is followed by this prohibition on causing damage to the natural environment.¹
- 2125 Once again, this is a new feature. Respect for the environment, even in peacetime, has only recently become a matter of concern,² but today it is foremost in the conscience of nations. Threatened at all times by natural disasters, such as drought, or human scourges such as pollution, what would become of mankind if in time of conflict, wilful destruction resulting from man's ruinous actions were added to all this ?
- 2126 The concept of the natural environment should be understood in the widest sense to cover the biological environment in which a population is living. It does not consist merely of the objects indispensable to survival mentioned in Article 54 (*Protection of objects indispensable to the survival of the civilian population*) – foodstuffs, agricultural areas, drinking water, livestock – but also includes forests and other vegetation mentioned in the Convention of 10 October 1980 on Prohibitions or Restrictions on the Use of Certain Conventional Weapons,³ as well as fauna, flora and other biological or climatic elements.
- 2127 On 10 December 1976 the United Nations General Assembly approved the text of the Convention on the Prohibition of Military or any Other Hostile Use of Environmental Modification Techniques. The following definition is contained in Article 2:
- “[...] the term ‘environmental modification techniques’ refers to any technique for changing – through the deliberate manipulation of natural processes – the dynamics, composition or structure of the Earth, including its biota, lithosphere, hydrosphere, and atmosphere, or of outer space.”
- 2128 The protection of the environment was already dealt with in Article 35 (*Basic rules*), paragraph 3, of this Protocol and we refer to the commentary on that article.

Paragraph 1

- 2129 The ICRC draft did not contain provisions aimed at safeguarding the environment specifically, although several of the articles proposed, in calling for general protection, implied respect for natural resources and, in particular, for objects indispensable to the population.

¹ See G. Herczegh, “La protection de l’environnement naturel et le droit humanitaire”, and A. Kiss, “Les Protocoles additionnels aux Conventions de Genève de 1977 et la protection des biens de l’environnement”, in *Studies and Essays in Honour of Jean Pictet, op. cit.*, p. 725 and p. 181 respectively.

² The ecological concerns expressed previously by isolated but prophetic thinkers were recognized at an international level in 1972 (Stockholm Declaration). The massive use of defoliants during the war in Viet Nam is not unrelated to this.

³ In its Protocol III on Prohibitions or Restrictions on the Use of Incendiary Weapons, Art. 2, para. 4.

- 2130 However, several delegations considered that this concern should be mentioned explicitly in a separate provision. As a result two proposals were put forward.⁴ The Working Group of Committee III, to which these amendments were referred after a debate in Committee, drew up a text which finally became Article 55 after being adopted by consensus by the Committee and in plenary.⁵
- 2131 The text drawn up by the Working Group contained in the first paragraph the words “to such a degree as to disturb the stability of the ecosystem”. Committee III decided to delete these words. On the other hand, it decided to retain the second part of the phrase “health or”, though a proposal had been made to delete it.⁶
- 2132 The Conference had also been presented with similar proposals with regard to Article 33 (the present Article 35 – *Basic rules*); they were examined at the same time as those which resulted in Article 55. Finally, on the basis of the report of its Working Group,⁷ Committee III decided to adopt the two articles proposed.⁸ According to the report of the Working Group, the use of the same words, “widespread, long-term and severe damage”, ensures that the two provisions are coherent.
- 2133 While Article 35 (*Basic rules*) broaches the problem from the point of view of methods of warfare, Article 55 concentrates on the survival of the population, so that even though the two provisions overlap to some extent, and their tenor is similar, they do not duplicate each other.⁹ It will be noted that the text begins with the words “care shall be taken in warfare to protect the natural environment”. To some extent this formula seems to reduce the effect of the provision by allowing some latitude of judgment. However, the second sentence of the paragraph refers explicitly to a *prohibition*, which strengthens the provision. Moreover, that sentence emphasizes the duty incumbent upon Parties to be vigilant. It should be noted that the expression “care shall be taken” is not used in Article 35 (*Basic rules*), paragraph 3, which is therefore more stringent. On the other hand, it is used in Article 57 (*Precautions in attack*), paragraph 1.
- 2134 It will also be noted that the population is mentioned without the use of the qualifying adjective “civilian”, the way in which the expression is used in many other articles in the Protocol. According to the report of Committee III, this omission is deliberate; it serves to emphasize the fact that damage caused to the environment may continue for a long time and affect the whole population without any distinction.¹⁰
- 2135 The word “health” is used to indicate that the provision is concerned not only with acts which jeopardize the survival of the population, but also with those which could seriously prejudice health, such as congenital defects, degenerations

⁶ O.R. XIV, pp. 405-406, CDDH/III/SR.38, paras. 16-17.

⁷ O.R. XV, p. 358, CDDH/III/275.

⁸ O.R. XIV, pp. 404-406, CDDH/III/SR.38, paras. 7 and 16-17.

⁹ Cf. commentary on Art. 35, where these problems are studied in detail, as well as the relationship between the Protocol and the Convention on the Prohibition of Military or any Other Hostile Use of Environmental Modification Techniques (*supra*, pp. 410-420).

¹⁰ O.R. XV, p. 360, CDDH/III/275.

or deformities. Temporary or short-term effects are not taken into account in the prohibitions laid down in this article.¹¹

2136 In the final debate several delegations indicated that in their opinion the words “widespread, long-term and severe” do not have the same meaning in the Protocol as the corresponding words in the Convention on the Prohibition of Military or any Other Hostile Use of Environmental Modification Techniques.¹²

2137 One delegation stressed that in its opinion the article clearly prohibited all forms of ecological warfare.¹³

2138 Finally, mention should be made of the efforts made during the Diplomatic Conference with regard to the protection of natural resources. The Working Group of Committee III submitted a draft Article 48 *ter* which was as follows:

“Article 48 ter

Publicly recognized nature reserves with adequate markings and boundaries declared as such to the adversary shall be protected and respected except when such reserves are used specifically for military purposes.”¹⁴

2139 This proposal was not unanimously accepted in the Working Group¹⁵ and did not meet with a very enthusiastic response in Committee III. The report of that Committee on its second session mentions its referral to the Working Group,¹⁶ but since then the Official Records of the Conference have remained silent on this draft article, which is not contained in the final text of the Protocol.

Paragraph 2

2140 This provision specifies that attacks against the environment made by way of reprisals are also prohibited.

2141 In this respect we refer to the commentary on Article 51 (*Protection of the civilian population*), paragraph 6. On the general problem of reprisals, reference can be made to the introduction to Part V, Section II (*infra*, p. 981).

Protocol I

Article 56 – Protection of works and installations containing dangerous forces

1. Works or installations containing dangerous forces, namely dams, dykes and nuclear electrical generating stations, shall not be made the object of attack, even where these objects are military objectives, if such attack may cause the release of dangerous forces and consequent severe losses among the civilian population. Other military objectives located at or in the vicinity of these works or installations shall not be made the object of attack if such attack may cause the release of dangerous forces from the works or installations and consequent severe losses among the civilian population.
2. The special protection against attack provided by paragraph 1 shall cease:
 - (a) for a dam or a dyke only if it is used for other than its normal function and in regular, significant and direct support of military operations and if such attack is the only feasible way to terminate such support;
 - (b) for a nuclear electrical generating station only if it provides electric power in regular, significant and direct support of military operations and if such attack is the only feasible way to terminate such support;
 - (c) for other military objectives located at or in the vicinity of these works or installations only if they are used in regular, significant and direct support of military operations and if such attack is the only feasible way to terminate such support.
3. In all cases, the civilian population and individual civilians shall remain entitled to all the protection accorded them by international law, including the protection of the precautionary measures provided for in Article 57. If the protection ceases and any of the works, installations or military objectives mentioned in paragraph 1 is attacked, all practical precautions shall be taken to avoid the release of the dangerous forces.
4. It is prohibited to make any of the works, installations or military objectives mentioned in paragraph 1 the object of reprisals.
5. The Parties to the conflict shall endeavour to avoid locating any military objectives in the vicinity of the works or installations mentioned in paragraph 1. Nevertheless, installations erected for the sole purpose of defending the protected works or installations from attack are permissible and shall not themselves be made the object of attack, provided that they are not used in hostilities except for defensive actions necessary to respond to attacks against the protected works or installations and that their armament is limited to weapons capable only of repelling hostile action against the protected works or installations.

6. The High Contracting Parties and the Parties to the conflict are urged to conclude further agreements among themselves to provide additional protection for objects containing dangerous forces.
7. In order to facilitate the identification of the objects protected by this Article, the Parties to the conflict may mark them with a special sign consisting of a group of three bright orange circles placed on the same axis, as specified in Article 16 of Annex I to this Protocol. The absence of such marking in no way relieves any Party to the conflict of its obligations under this Article.

Commentary

- 2142 In time of combat man has always tried to strike at his adversary by releasing natural or artificial forces. Without going right back to Archimedes, it is worth recalling the Battle of Morgarten in 1315 when the Swiss made rocks and tree trunks hurtle down a steep slope to cause panic in the ranks of the adverse Party,

which decided the victory. At the same time, though in a different part of the world, belligerents were using a new weapon, “Greek fire”,¹ to set fire to enemy ships or fortified buildings occupied by the adversary. Nearer to our time it will be remembered that in the seventeenth century the Dutch, despite protests from the peasants, did not hesitate to flood part of their cultivated land by breaching the dykes in order to prevent the advance of adverse troops. In 1938 the Chinese authorities breached the dykes of the Yellow River near Chang-Chow to stop the Japanese troops, resulting in extensive losses and widespread damage. In 1944, again in the Netherlands, German troops flooded many thousands of hectares of agricultural land with sea water to prevent the advance of the enemy.

- 2143** It was also during the Second World War that deliberate attacks were mounted against hydro-electric dams. The best known are those which destroyed the dams in the Eder and the Möhne in Germany in May 1943. These operations resulted in considerable damage: 125 factories were destroyed or seriously damaged and in addition 3,000 hectares of cultivated land were lost for the harvest of that year, 1,300 persons were killed, including some deported persons and allied prisoners, and finally, 6,500 head of livestock were lost.²
- 2144** During the war in Korea aircraft attacked dams used for irrigation in the north of the country. In the Viet Nam War attacks were mounted against dams and dykes, though the United States declared that the damage caused, insofar as this was established, was accidental or secondary.³ According to the delegate from the Democratic Republic of Viet Nam at the Diplomatic Conference, 661 sections of dyke had been either damaged or destroyed during the course of the war.⁴
- 2145** Public opinion had reacted against such forms of warfare and for that reason the ICRC, when it presented its Draft Rules for the Limitation of the Dangers incurred by the Civilian Population in Time of War in 1956, had already introduced an article on the protection of installations containing dangerous forces.⁵ In fact it was only an invitation to governments to seek agreement on granting such installations general immunity. To dams and dykes the provision added nuclear power stations, a new potential source of danger which had appeared since the end of the Second World War. Following the failure of the Draft Rules, the ICRC undertook in 1968 to develop new proposals. It went back to the text of Article 17 and presented it to the meetings of experts which it had called. That provision was considered too weak by the experts, which led the ICRC to present an article to the Diplomatic Conference containing a prohibition, without room for exceptions, on attacks or destruction of dams,

¹ A mixture of saltpetre, sulphur, resin and other inflammable materials which had the virtue of adhering to objects and burning them without allowing water to penetrate.

² See P. Brickhill, *Dam Busters*.

³ See in particular, “Ecological Consequences of the Second Indochina War”, *SIPRI Yearbook*, 1976, pp. 57-58, and “Weapons of Mass Destruction and the Environment”, *ibid.*, 1977, pp. 54-55.

⁴ *O.R.* XIV, p. 161, CDDH/III/SR.19, para. 2.

⁵ Article 17 – Installations containing dangerous forces.

dykes, and nuclear generating stations.⁶ After a long discussion in a Working Group that provision led to the text of the present article, which was accepted by the Diplomatic Conference by consensus.⁷ The importance of the new provision should be underlined and the prohibition on reprisals which it contains should be welcomed.

Paragraph 1

- 2146 The definition of works and installations to be protected gave rise to a number of discussions.
- 2147 According to some amendments, the list which is given should have been merely illustrative.⁸ However, as the Rapporteur indicated, it was only after it was decided to limit the special protection granted by the article to dams, dykes and nuclear electrical generating stations and other military objectives located at or in the vicinity of these works or installations, that it was possible to draw up a text which was generally acceptable.⁹
- 2148 It is clear that there are other works or installations which can release dangerous forces in the case of attack; for example, one need think only of factories manufacturing toxic products which, if released as a gas, could endanger an entire region; such incidents, which can sometimes be serious, have recently occurred in various countries in peacetime.
- 2149 Several delegations wished to include other installations in the list, in particular oil production installations and storage facilities for oil products.¹⁰
- 2150 It appears that the consultations were not successful, as the sponsors of the proposals in this field finally withdrew them.¹¹ There is no doubt that Article 55 (*Protection of the natural environment*) will apply to the destruction of oil rigs resulting in oil gushing into the sea and leading to extensive damage such as that

⁶ "Article 49 – Works and installations containing dangerous forces

1. It is forbidden to attack or destroy works or installations containing dangerous forces, namely, dams, dykes and nuclear generating stations. These objects shall not be made the object of reprisals.

2. The Parties to the conflict shall endeavour to avoid locating any military objectives in the immediate vicinity of the objects mentioned in paragraph 1.

3. In order to facilitate their identification, the Parties to the conflict may mark works and installations containing dangerous forces with a special sign consisting of two oblique red bands on a white ground. Absence of such marking in no way relieves a Party from its obligations under paragraphs 1 and 2 of this article."

⁷ O.R. VI, p. 209, CDDH/SR.42, para. 30.

⁸ Cf. O.R. III, p. 225, CDDH/III/59/Rev.1 and p. 224, CDDH/III/76.

⁹ O.R. XV, p. 282, CDDH/215/Rev.1, para. 85.

¹⁰ On this subject the Rapporteur of the Working Group expressed himself as follows: "Finally, it should be noted that some representatives requested the inclusion in this article of special protection for oil rigs, petroleum storage facilities, and oil refineries. It was agreed that these were not objects containing dangerous forces within the meaning of this article and that, if these objects are to be given any special protection by the Protocol, it should be done by another article, perhaps by a special article for that purpose. The Rapporteur has agreed to consult further with interested representatives on this question." (O.R. XV, p. 352, CDDH/III/264/Rev.1).

¹¹ *Ibid.*, p. 449, CDDH/407/Rev.1, para. 12.

described in that article. As regards the destruction and setting alight of refineries and petroleum storage facilities, it is hardly necessary to stress the grave danger that may ensue for the civilian population. Extending the special protection to such installations would undoubtedly have posed virtually insoluble problems, and it is understandable that the Conference, when it adopted these important prohibitions, limited them to specific objects.

- 2151** The Protocol does not mention fire as a “dangerous force”, for it is difficult to see how it can be unleashed by works and installations. However, it should be recalled that the Convention of 10 October 1980 on the prohibition of certain conventional weapons prohibits the use of incendiary weapons against civilians and even against military objectives situated in an area where civilians are concentrated.
- 2152** The works and installations covered are protected against attacks, i.e., according to Article 49 (*Definition of attacks and scope of application*), acts of violence against the adversary. It should also be recalled that in accordance with Article 49 (*Definition of attacks and scope of application*), paragraph 2, the prohibition of attacks contained in Article 56 also applies to a Party’s own territory under the control of the adverse Party. On the other hand, the works and installations are not protected against destruction, removal or being rendered useless, as in Article 54 (*Protection of objects indispensable to the survival of the civilian population*), with regard to objects indispensable to the survival of the civilian population. It therefore clearly follows that if circumstances so require, a government may destroy works and installations located in that part of its own territory which is under its control or may render them useless. It is up to the government to take all necessary measures to ensure that the civilian population is not affected. Similarly, an Occupying Power, or another Power which has control of a region, may destroy property or render it useless in certain cases if, as provided in Article 53 of the Fourth Convention, such destruction is rendered absolutely necessary by military operations. In such circumstances the Power concerned must ensure that there is no damage to the civilian population, and exceptionally this may require the evacuation of the civilian population in the circumstances laid down in Article 49 of the Fourth Convention. According to Article 46 of the Hague Regulations annexed to Hague Convention IV of 1907 the Occupying Power has a general duty to respect the life of individuals in occupied territories.
- 2153** The works and installations concerned are civilian objects *a priori*, and may therefore not be attacked. If they become military objectives, as defined in Article 52 (*General protection of civilian objects*), they enjoy special protection and may not be attacked when such attacks may cause severe losses among the civilian population because of the release of dangerous forces. If such an attack cannot cause severe losses it is legitimate, provided that the works or installation which is attacked has clearly become a military objective in the sense of Article 52 (*General protection of civilian objects*), i.e., provided that it makes an effective contribution to military action and its total or partial destruction, in the circumstances ruling at the time, offers a definite military advantage.
- 2154** The word “severe” is equivalent to “important” or “heavy”. As so often in this Chapter, this concept is a matter of common sense and it must be applied in good faith on the basis of objective elements such as the proximity of inhabited

areas, the density of population, the lie of the land etc.

- 2155** The second sentence of the paragraph deals with military objectives located at or in the vicinity of such works or installations, which, if attacked, could lead to the release of dangerous forces. This does not refer to military forces assigned to guard or defend the works or installation – they are dealt with in paragraph 5 of the article – but to objectives which are either incorporated in the installation or located in the immediate vicinity.
- 2156** As an example, the Rapporteur cites a hydro-electric power station incorporated in a dam or located in the immediate vicinity. If such an installation has become a military objective under the terms of Article 52 (*General protection of civilian objects*) as a result of the circumstances of the conflict, it cannot be attacked if such an attack could lead to the destruction of the dam.
- 2157** It is conceivable that a dam, dyke or nuclear electrical generating station is situated in the immediate vicinity of some civil engineering works, for example, a bridge or a railway line, and that, in the circumstances of conflict, that bridge or a section of that line could become an important military objective. In this case too, no attack may be undertaken against such a bridge or railway line if the attack could affect the dam, dyke or nuclear electrical generating station, and in this way cause the release of dangerous forces.
- 2158** It should be noted that launching an attack against works or installations containing dangerous forces under certain conditions is condemned by Article 85 (*Repression of breaches of this Protocol*), paragraph 3(c), of the Protocol as a grave breach.

Paragraph 2

- 2159** This provision envisages situations in which the protection laid down in paragraph 1 might cease. However, it should be stressed at the outset that in such cases where the highest human interests are at stake, the decision to deprive them of protection can only be taken at a high military level.
- 2160** In the French text, it may be noted that the word “prévues” (provided), contained in the first line, should be in the singular, referring to the protection and not to the attacks. However, the meaning is not affected by this.

Sub-paragraph (a)

- 2161** This sub-paragraph deals with dams and dykes. The use of words calls for some comment. First, the term “military operations” should be understood to mean movements, manœuvres and actions of any sort carried out by armed forces with a view to combat.¹² Then, the expression “other than its normal function” means that the dam or dyke is used for a purpose other than containing an actual or

¹² Cf. commentary Art. 48, note 13, *supra*, p. 600.

potential mass of water, which is the normal function of such a structure; if the dam or dyke is not used for any other purpose, it must not be attacked under any circumstances.

2162 It may happen that a dyke forms part of a system of fortifications, or that there is a road across the top of a dam which could, in combat conditions, become an essential route for the movement of armed forces. Even in such circumstances protection may cease only if the dam or the dyke constitutes a regular, significant and direct support of military operations, and if such an attack is the only feasible way of terminating such support. The language used indicates that the support given to military operations must be at the same time regular, significant and direct. This triple qualification, which is also found in sub-paragraphs (b) and (c), may seem to be subject to subjective interpretation, but these terms merely express common sense, i.e., their meaning is fairly clear to everyone. They need to be interpreted in good faith on the basis of objective elements. The word “regular” relates to time. It means that accidental or sporadic use is not sufficient; there must be some continuity in the use, or at least some rhythm. The word “significant” is less precise, but must be understood in relation to a scale of degrees of significance that may be established. The support must not be negligible nor should it be merely an incidental circumstance, but it must be sizeable having a real and effective impact. The term “direct” means: not in an intermediate or a roundabout way. Thus the relation between the act and its effect must be close and immediate. What is meant is support which would benefit military operations themselves and not merely intermediary objectives which themselves would be related to such operations. It is clear that the termination of special protection can occur only in the event that a number of very restrictive conditions are all met at the same time.

2163 In addition, it should be noted that some dams and dykes are irrigation works in the sense of Article 54 (*Protection of objects indispensable to the survival of the civilian population*), paragraph 2; some works have a combined function serving partly for irrigation and partly to generate electricity. Thus an attack on such works is subject to the additional condition imposed by paragraph 3 of Article 54 (*Protection of objects indispensable to the survival of the civilian population*), namely, that they are used only for the subsistence of members of the armed forces or otherwise in direct support of military action. Even in these cases it is still prohibited to take action against such objects when such action may be expected to leave so little food or water for the civilian population that it will be reduced to starvation or forced to move away.

Sub-paragraph (b)

2164 This sub-paragraph is concerned with nuclear electrical generating stations. If these were bombed, this could affect stocks of radioactive products, or even the core of the installation, and in this way releasing lethal radiation. The condition imposed for the special protection to cease is that such a station produces electricity in regular, significant and direct support of military operations, and that such attack is the only feasible way to terminate such support.

- 2165** In general, electricity is conducted to various different types of destinations, civilian or military, which are closely interwoven, particularly as grids are often integrated, thus pooling generating capacity. It would not be reasonable to claim that merely supplying electricity constitutes direct support of military operations in accordance with the definition given above. Moreover, troops on the move use virtually no electricity, or if they do, they generate it themselves. The Rapporteur of Committee III¹³ considered that the expression “military operations” could cover factories producing armaments, ammunition and military equipment.¹⁴ We consider this interpretation to be excessive. If it had been the intention to include such supplies, an explicit provision should have been made. However, the Rapporteur added that the expression does not cover the production of civilian objects, even if they are also used by the armed forces.
- 2166** It may be added that in the case of nuclear electrical generating stations it is relatively easy to stop electricity reaching its destination by attacking the electricity lines. In this way the desired result is achieved without the risk of releasing dangerous forces.

Sub-paragraph (c)

- 2167** This sub-paragraph deals with military objectives located at or in the vicinity of the works or installations in question. With regard to these, reference should be made to what was said above regarding the second sentence of paragraph 1. The restrictive conditions imposed on the cessation of special protection are the same in this case as sub-paragraph (b).

Paragraph 3

- 2168** It seemed appropriate to specify that in any attack directed against a dam, dyke or nuclear electrical generating station which had ceased to enjoy special protection, all other rules protecting the civilian population must be respected.
- 2169** These are mainly the general rules contained in Article 51 (*Protection of the civilian population*) and the precautions prescribed in Article 57 (*Precautions in attack*).¹⁵ In particular, even if the conditions imposed for special protection to cease are all met, the attacker must always respect the principle of proportionality between losses inflicted and military advantage gained from the destruction of the objective.¹⁶

¹³ O.R. XV, p. 283, CDDH/215/Rev.1, para. 91.

¹⁴ The expression “military operations” also occurs in Article 59, para. 2(d). Article 54, para. 3(b) refers to “military action”, which appears to be an equivalent term. Article 60, para. 3(d), refers to activity linked to the military effort; this expression seems to have a wider scope.

¹⁵ Cf. commentary Art. 51, *supra*, p. 613 and commentary Art. 57, *infra*, p. 677.

¹⁶ On this subject the Rapporteur expressed himself as follows: “In the case of a dam or dyke, for example, where a great many people would be killed and much damage done by its destruction, immunity would exist unless the military reasons for destruction in a particular case were of an extraordinarily vital sort.” (O.R. XV, p. 282, CDDH/215/Rev.1, para. 86).

2170 In the case of an attack on an objective which has lost special protection, belligerents must take all practical precautions to prevent dangerous forces from being released. On this subject the Rapporteur remarked that given the panoply of weapons available to modern armies, this provision should ensure real protection against the catastrophic release of dangerous forces.¹⁷

Paragraph 4

2171 The prohibition of reprisals against dykes, dams and nuclear electrical generating stations supplements the foregoing provisions harmoniously. The ICRC draft did not go as far as this, but the Conference included a prohibition of reprisals in nearly all the rules in Part IV. In the final meetings some delegations expressed some doubts regarding the advisability of prohibiting all reprisals in this field, but a large majority was in support of such prohibitions.¹⁸ The introduction to Part V, Section II, contains an account of the way the problem of reprisals was dealt with by the Diplomatic Conference.¹⁹

Paragraph 5

2172 This provision is completely new. In 1973 the ICRC restricted itself to presenting the problem without going so far as to submit specific proposals.²⁰

2173 As we see, the Conference surmounted the real difficulties inherent in this problem and adopted a seemingly realistic solution. In fact it does not seem very likely that in time of war security and defence measures should fail to be taken for dykes, dams and nuclear electrical generating stations, if only to protect them against acts of sabotage from whatever source. It may therefore be taken for granted that any works or installation of any importance would at least be assigned a picket guard, and probably the protection of an anti-aircraft battery.

2174 Two of the amendments submitted to the Conference contained in embryonic form the concept which underlies this paragraph.²¹ According to the Rapporteur, the type of weapons authorized for defence were discussed at length in the Working Group. In the end it was decided not to adopt any other limitations than

¹⁷ *Ibid.*, p. 284, para. 92.

¹⁸ *O.R.* VI, pp. 205 ff., CDDH/SR.42.

¹⁹ *Infra*, p. 981.

²⁰ It therefore pointed out that according to some experts, belligerents might be afraid to rely only on the prohibition contained in paragraph 1 for the protection of their works containing dangerous forces; in order to shield their population from the very serious consequences of attacks launched either by mistake or in violation of that rule, they might, for example, be led to position anti-aircraft guns for the sole purpose of defending the works concerned. In the view of these experts the article should authorize setting up a defence. In the ICRC's view the problem with this lies in the fact that it is not possible to judge objectively what is the intention of the Parties to the conflict, particularly the Party taking such "defensive" measures (*Commentary Drafts*, p. 63).

²¹ *O.R.* III, p. 222, CDDH/III/10 and p. 224, CDDH/III/65.

those mentioned at the end of the provision, i.e., that they must be weapons capable only of repelling hostile action against the protected works or installations.²²

2175 If the works or installations are at a distance from the combat area, it is mainly a matter of defending them against attacks mounted by combatants who have been infiltrated or parachuted, or against attacks by guided missiles or projectiles dropped from aircraft. Thus there will be needed, on the one hand, a military guard equipped with light individual weapons, and on the other hand, anti-aircraft artillery. In the second case such artillery may only be used against aircraft which are out to attack the protected works or installations, but not against aircraft flying over the works or installations on their way to attacking another military objective. It cannot be denied that this could pose serious difficulties of judgment.

2176 If the works or installations are located within the combat area, the military guard and the anti-aircraft artillery protecting them will of course be part and parcel of the total military system, and it will be difficult to make a clear distinction between military deployments designed to defend the works and installations and other troops fighting in the area. In such circumstances the Parties to the conflict may be induced to take preventive measures, such as emptying reservoirs or closing down nuclear electrical generating stations; they may also envisage the possibility of not defending such works or installations so that these can be occupied by the adversary without destructive attacks which could release dangerous forces.

Paragraph 6

2177 The invitation made to Parties to conclude further agreements to ensure the protection of objects containing dangerous forces is undoubtedly very useful. One might think of extending special protection by agreement to objects other than dams, dykes and nuclear electrical generating stations. As we saw above, there are many establishments or installations whose wanton destruction would expose the civilian population to severe losses, such as, for example, fuel storage installations, factories producing toxic products etc. One could also conceive of the neutralization of dams, dykes and nuclear electrical generating stations and the surrounding areas with the supervision of the Protecting Powers or other organizations. Such an agreement could also set out the conditions of implementation of this article.

2178 However, it should be recalled that concluding agreements in time of war is no easy matter, and it is better to rely on already existing provisions which can be directly applied. Parties to a conflict which have resorted to war do not frequently negotiate with the enemy, even about humanitarian matters. Moreover, hostilities render the procedures slow and uncertain. This was the case on many occasions, particularly during the Second World War. Such agreements are provided for in the Conventions in common Article 6/6/6/7.

²² *O.R. XV*, p. 284, CDDH/215/Rev.1, para. 92.

Paragraph 7

2179 In the draft the ICRC had provided that the Parties to the conflict would have the possibility of marking dykes, dams and nuclear electrical generating stations entitled to special protection by means of a sign consisting of two oblique red bands on a white ground. This sign was already prescribed in the Draft agreement relating to safety zones annexed to the Fourth Convention. The 1973 draft also provided for the marking of non-defended and neutralized localities. The Conference did not take up these proposals. For non-defended localities and demilitarized zones the way in which they are to be marked should be established by agreement with the adversary.²³ For works and installations entitled to special protection the concept of a special sign was retained and the responsibility for determining what this should be was entrusted to a special Sub-Group of the Working Group. This Sub-Group adopted the following directing principles:

- a) the distinctive sign must be as simple as possible;
- b) it must be of no political or religious relevance whatsoever;
- c) it must not be confused with any other distinctive sign already in use;
- d) it should be visible and distinguishable as such from all directions and from as far away as possible;
- e) the choice of colour should be made according to available technical knowledge,²⁴ which had led the Sub-Group to choose bright orange.

2180 Taking into account various proposals the Sub-Group chose a sign consisting of three bright orange circles and drafted paragraph 7 accordingly as well as Article 16 (*International special sign*) of the Regulations concerning identification annexed to the Protocol.²⁵

2181 It may be noted that in accordance with paragraph 6 the Parties may agree on another method of marking, or even add other means of identification to the marking prescribed, such as, for example, the transmission of radio or electronic signals.

2182 Marking is optional; the special protection is therefore due even if the works or installations are not marked. Yet it seems clear that it is in the interests of a Party to the conflict which wishes its dams, dykes or nuclear electrical generating stations to be respected to communicate a list of them with their geographical location to the adversary through the intermediary of the Protecting Powers or organizations replacing them.

2183 Finally, it should be noted that, subject to certain conditions, Article 85 (*Repression of breaches of this Protocol*), paragraph 3(f), of the Protocol condemns the perfidious use of protective emblems as a grave breach.

C.P. / J.P.

²³ See commentary Arts. 59, para. 6, *infra*, p. 705, and 60, para. 5, *infra*, p. 712. There is nothing to prevent the Parties concerned from adopting the sign of red bands on a white ground provided by the Fourth Convention of 1949.

²⁴ *O.R.* XV, p. 471, CDDH/407/Rev.1, Annex I, para. 2.

²⁵ *Cf.* commentary Annex I, Art. 16, *infra*, p. 1295.

Protocol I

Article 57 – Precautions in attack

1. In the conduct of military operations, constant care shall be taken to spare the civilian population, civilians and civilian objects.
2. With respect to attacks, the following precautions shall be taken:
 - (a) those who plan or decide upon an attack shall:
 - (i) do everything feasible to verify that the objectives to be attacked are neither civilians nor civilian objects and are not subject to special protection but are military objectives within the meaning of paragraph 2 of Article 52 and that it is not prohibited by the provisions of this Protocol to attack them;
 - (ii) take all feasible precautions in the choice of means and methods of attack with a view to avoiding, and in any event to minimizing, incidental loss of civilian life, injury to civilians and damage to civilian objects;
 - (iii) refrain from deciding to launch any attack which may be expected to cause incidental loss of civilian life, injury to civilians, damage to civilian objects, or a combination thereof, which would be excessive in relation to the concrete and direct military advantage anticipated;
 - (b) an attack shall be cancelled or suspended if it becomes apparent that the objective is not a military one or is subject to special protection or that the attack may be expected to cause incidental loss of civilian life, injury to civilians, damage to civilian objects or a combination thereof, which would be excessive in relation to the concrete and direct military advantage anticipated;
 - (c) effective advance warning shall be given of attacks which may affect the civilian population, unless circumstances do not permit.
3. When a choice is possible between several military objectives for obtaining a similar military advantage, the objective to be selected shall be that the attack on which may be expected to cause the least danger to civilian lives and to civilian objects.
4. In the conduct of military operations at sea or in the air, each Party to the conflict shall, in conformity with its rights and duties under the rules of international law applicable in armed conflict, take all reasonable precautions to avoid losses of civilian lives and damage to civilian objects.
5. No provision of this Article may be construed as authorizing any attacks against the civilian population, civilians or civilian objects.

Commentary

- 2184** This article was a subject that required lengthy discussions and difficult negotiations in the Diplomatic Conference, and the text which was finally agreed upon is the fruit of laborious compromise between the various points of view.
- 2185** In the first place, it will be noted that no distinction is made here between various situations that may occur. In the early stages of the discussions on the codification of the law of bombardments, the possibility had been entertained of expressly providing the standard of precision required for bombardments on towns and cities which were not closely linked with military operations on land or at sea (i.e., those well behind the lines), as it was feared that the general rule of bombardments of reducing incidental loss to a minimum was insufficient for this particular situation.¹

¹ See, for example, *Draft Rules*, 1956, Art. 9, para. 2, and *ICRC Memorandum*, May 1967.

- 2186 During the *travaux préparatoires* the differences of opinion were such that the ICRC had to present a draft containing two alternative solutions for the steps to be taken for the identification of objectives.²
- 2187 The differences of opinion were mainly related to the very heavy burden of responsibility imposed by this article on military commanders, particularly as the various provisions are relatively imprecise and are open to a fairly broad margin of judgment. These concerns were reinforced by the fact that, according to Article 85 (*Repression of breaches of this Protocol*), failure to comply with the rules of Article 57 may constitute a grave breach and may be prosecuted as such. Those who favoured a greater degree of precision argued that in the field of penal law it is necessary to be precise, so that anyone violating the provisions would know that he was committing a grave breach. As we will see below, several delegations considered that this condition was not met and that the article was dangerously imprecise.³
- 2188 Two delegations argued that in their opinion Article 57 imposed stricter precautions on the aggressor than on the victim of aggression.⁴ Without even dwelling on the difficulty of how to impartially designate an aggressor, there is no doubt that such a view is contrary to the wording of this article and to the general principles underlying the Protocol (Article 1 – *General principles and scope of application*). Moreover, the last paragraph of the Preamble specifies that the provisions of the Protocol apply to the persons concerned, without any adverse distinction based on the nature or origin of the armed conflict, or on the causes espoused by or attributed to the Parties to the conflict. On the level of the *jus in bello*, Article 49 (*Definition of attacks and scope of application*) defines attacks as covering both offensive and defensive acts, i.e., all combat activity. All these considerations mean that Article 57 applies to all attacks, whether they are acts of aggression or a response to aggression. The fact that a Party considers itself to be the victim of aggression does not exempt it from any of the precautions to be taken in pursuance of this article. Obviously this does not prejudge in any way the responsibility which may be incurred, at a completely different level, for having committed an act of aggression.
- 2189 Finally, it should be noted that to some extent Article 57 reaffirms rules which are already contained explicitly or implicitly in other articles, in particular: Article 48 (*Basic rule*), which lays down the “basic rule” of distinction, Article 51 (*Protection of the civilian population*), which reiterates the general immunity enjoyed by the civilian population and prohibits indiscriminate attacks, Article 52 (*General protection of civilian objects*), which restricts attacks to military objectives and defines these, and Article 54 (*Protection of objects indispensable to the survival of the civilian population*), which protects indispensable objects. We refer to the commentary on these articles.
- 2190 It is clear that the precautions prescribed here will be of greatest importance in urban areas because such areas are most densely populated.

² Draft, Art. 50.

³ O.R. VI, pp. 219 and 230, CDDH/SR.42, Annex (Afghanistan, Italy).

⁴ *Ibid.*, pp. 232 and 236 (Madagascar, Romania).

Paragraph 1

2191 This is a general principle which imposes an important duty on belligerents with respect to civilian populations. This provision appropriately supplements the basic rule of Article 48 (*Basic rule*), which urges Parties to the conflict to always distinguish between the civilian population and combatants, as well as between civilian objects and military objectives. It is quite clear that by respecting this obligation the Parties to the conflict will spare the civilian population, civilians and civilian objects. Even though this is only an enunciation of a general principle which is already recognized in customary law, it is good that it is included at the beginning of this article in black and white, as the other paragraphs are devoted to the practical application of this principle. The term “military operations” should be understood to mean any movements, manoeuvres and other activities whatsoever carried out by the armed forces with a view to combat.

Paragraph 2*Sub-paragraph (a)(i)*

- 2192** This sub-paragraph is devoted to the identification of military objectives which a Party wishes to attack.
- 2193** The history of the Second World War and subsequent conflicts contains numerous cases of attacks which were launched in error against non-military objectives, or against objectives whose destruction produced only an insufficient military advantage compared with the losses inflicted on civilians.
- 2194** The requirement of a precise identification of objectives should be especially welcomed, as the effective implementation of the safeguard principles expressed in the Protocol largely depends on this. The examination should not only relate to the exact nature of any military objectives and civilian objects, but it should also be verified, as provided in the text, whether or not the objects concerned are subject to special protection, and in particular whether they are cultural objects or places of worship (Article 53 – *Protection of cultural objects and of places of worship*), works and installations containing dangerous forces (Article 56 – *Protection of works and installations containing dangerous forces*), or of course whether they are medical units (Article 12 – *Protection of medical units*).
- 2195** Thus the identification of the objective, particularly when it is located at a great distance, should be carried out with great care. Admittedly, those who plan or decide upon such an attack will base their decision on information given them, and they cannot be expected to have personal knowledge of the objective to be attacked and of its exact nature. However, this does not detract from their responsibility, and in case of doubt, even if there is only slight doubt, they must call for additional information and if need be give orders for further reconnaissance to those of their subordinates and those responsible for supportive weapons (particularly artillery and airforce) whose business this is, and who are answerable to them. In the case of long-distance attacks, information will be obtained in particular from aerial reconnaissance and from intelligence units, which will of

course attempt to gather information about enemy military objectives by various means. The evaluation of the information obtained must include a serious check of its accuracy, particularly as there is nothing to prevent the enemy from setting up fake military objectives or camouflaging the true ones. In fact it is clear that no responsible military commander would wish to attack objectives which were of no military interest. In this respect humanitarian interests and military interests coincide.

- 2196** In close combat on land the evaluation of the nature of objectives will be based, in addition, on more direct information: the commanding officer ordering an attack will generally have information supplied by his own troops who are in direct contact with the enemy, and his task will therefore be much easier. In general, the presence of enemy troops in buildings, structures or installations will make an attack against them legitimate, subject to any further precautions prescribed under (ii) and (iii), and to any special protection to which such buildings, structures or installations may be entitled. It is clear that a belligerent who accommodates troops in purely civilian buildings, for example, in dwellings or schools, or who uses such buildings as a base for combat, exposes them and the civilians present there to serious danger: even if attacks are directed only against members of the armed forces, it is probable that they will result in significant damage to the buildings.
- 2197** The terminology used in this provision led to some criticism and explanatory statements. Some considered that the introductory words (“those who plan or decide upon an attack”) could lay a heavy burden of responsibility on subordinate officers who are not always capable of taking such decisions, which should really fall upon higher ranking officers.⁵ This view is not without grounds, but it is clear that a very large majority of delegations at the Diplomatic Conference wished to cover all situations with a single provision, including those which may arise during close combat where commanding officers, even those of subordinate rank, may have to take very serious decisions regarding the fate of the civilian population and civilian objects. It clearly follows that the high command of an army has the duty to instruct personnel adequately so that the latter, even if of low rank, can act correctly in the situations envisaged.
- 2198** The words “everything feasible” were discussed at length.⁶ When the article was adopted some delegations stated that they understood these words to mean everything that was practicable or practically possible, taking into account all the circumstances at the time of the attack, including those relevant to the success of

⁵ *O.R.* VI, p. 212, CDDH/SR.42, paras. 43 and 46. Switzerland made a reservation to Article 57, para. 2, according to which this provision only creates obligations for commanding officers at the level of battalion or group or above.

⁶ In the draft the ICRC had used the expression “take all reasonable steps”. This wording was not retained by the Diplomatic Conference, which opted for the words “everything feasible”. The translation of “feasible” into French by “*possible*” did not seem satisfactory, even though this is one meaning of the English term. According to the Oxford Dictionary, feasible means “capable of being done, accomplished or carried out, possible, practicable”. Finally agreement was reached on the present French text “*tout ce qui est pratiquement possible*” which seems to translate the intent of the drafters of the English version.

military operations.⁷ The last-mentioned criterion seems to be too broad, having regard to the requirements of this article. There might be reason to fear that by invoking the success of military operations in general, one might end up by neglecting the humanitarian obligations prescribed here. Once again the interpretation will be a matter of common sense and good faith. What is required of the person launching an offensive is to take the necessary identification measures in good time in order to spare the population as far as possible. It is not clear how the success of military operations could be jeopardized by this.

2199 Finally, one delegation remarked that the identification of objectives depended to a large extent on the technical means of detection available to the belligerents.⁸ This remark seems to be correct. For example, some belligerents might have information owing to a modern reconnaissance device, while other belligerents might not have this type of equipment.⁹

Sub-paragraph (a)(ii)

2200 This sub-paragraph deals with the choice of means and methods of attack to be used so as to prevent loss or damage to the population. As regards weapons, their precision and range should be taken into account; such precautions coincide with the concerns of military commanders wishing to economise on ammunition and to avoid hitting points of no military interest. When a well-placed 500 kg projectile is sufficient to render a military objective useless, there is no reason to use a 10 ton bomb or a series of projectiles aimed without sufficient precision. However, it is clear that the circumstances of combat and the control of airspace may render it more difficult to observe this rule. Finally, mention may be made of the precautionary measures taken by the Allied forces during bombardments carried out during the Second World War against factories located in territories occupied by German forces; in order to avoid hitting the people working in these factories, the attacks took place on days or at times when the factories were empty; the desired effect was to destroy the factories without killing the workers.

2201 In itself this rule does not imply any prohibition of specific weapons. During the *travaux préparatoires* two specific issues were brought up: some proposed that the Parties to the conflict should be obliged to draw up maps of *minefields*, so that they could be communicated to any authority responsible for the safety of the population when hostilities ceased; it was also proposed that Parties to the conflict should fit weapons which are particularly dangerous to the population with safety devices to render them harmless if they fell out of the control of the user.

⁷ O.R. VI, pp. 226 ff., CDDH/SR.42, Annex (*ad Art. 50*).

⁸ *Ibid.*, p. 228 (India).

⁹ Austria made a reservation to Article 57, para. 2, according to which this provision will be applied, provided that the information actually available at the time of the decision is decisive. Switzerland made a similar reservation.

- 2202** The problem of mines, booby-traps and other devices later became the object of Protocol II, annexed to the Convention of 10 October 1980 on Prohibitions or Restrictions on the Use of Certain Conventional Weapons.¹⁰ That Protocol gives a definition of the expression “feasible precautions”.¹¹
- 2203** Finally, a remark on drafting: to avoid all ambiguity it would have been better to say “with a view to reducing incidental loss [...] to a minimum”.

Sub-paragraph (a)(iii)

- 2204** The rule of proportionality is laid down in this sub-paragraph. During the Diplomatic Conference this gave rise to lengthy discussions and negotiations between the delegations. The wording which was adopted is very similar to the proposal suggested in the 1973 draft: “not disproportionate to the direct and substantial military advantage anticipated”.
- 2205** The concept of proportionality occurs twice in Article 57: in the sub-paragraph under consideration here and in sub-paragraph (b) following it. However, it is also found in Article 51 (*Protection of the civilian population*), paragraph 5(b). It occurs again in Protocol II (Article 3, paragraph 3(c)) annexed to the 1980 Convention on Prohibitions or Restrictions on the Use of Certain Conventional Weapons, with regard to land mines laid outside military zones. In these four cases the wording used is deliberately identical.
- 2206** The entire law of armed conflict is, of course, the result of an equitable balance between the necessities of war and humanitarian requirements. There is no implicit clause in the Conventions which would give priority to military requirements. The principles of the Conventions are precisely aimed at determining where the limits lie; the principle of proportionality contributes to this.
- 2207** This article, like Article 51 (*Protection of the civilian population*), is not concerned with strategic objectives but with the means to be used in a specific tactical operation. In this context proportionality is not quite at the same level as the fundamental principles governing the matter. It appears in a secondary or subsidiary role in Article 51 (*Protection of the civilian population*) as a type of indiscriminate attack, and in Article 57, in the context of precautionary measures. It cannot therefore destroy the structure of the system, nor cast doubt upon the fundamental principles of humanitarian law. The principle of proportionality merely contributes to the clarification of matters, though it is true that this is important. Thus an attack cannot be justified only on grounds of proportionality if it contravenes the above-mentioned principles.
- 2208** Even if this system is based to some extent on a subjective evaluation, the interpretation must above all be a question of common sense and good faith for

¹⁰ On this Convention and its Protocols, *cf.* commentary Art. 35, *supra*, p. 402.

¹¹ Art. 3 – General restrictions of the use of mines, booby-traps and other devices, para. 4, second sentence: “Feasible precautions are those precautions which are practicable or practically possible taking into account all circumstances ruling at the time, including humanitarian and military considerations.”

military commanders. In every attack they must carefully weigh up the humanitarian and military interests at stake.

- 2209** However, let us return to a systematic commentary on this paragraph. The terminology used in this provision gave rise to some differences of opinion. Some would have preferred the words “which risks causing” rather than “which may be expected to cause”. Committee III adopted the present wording. The expression “concrete and direct” was intended to show that the advantage concerned should be substantial and relatively close, and that advantages which are hardly perceptible and those which would only appear in the long term should be disregarded.
- 2210** Despite these clarifications, the provision allows for a fairly broad margin of judgment, as stated above; several delegations regretfully stressed this fact. In contrast, other delegations commended the fact that in future military commanders would have a universally recognized guideline as regards their responsibilities to the civilian population during attacks against military objectives.¹²
- 2211** Some delegates proposed deleting the words “which would be excessive in relation to the concrete and direct military advantage anticipated”, but Committee III decided to retain them.¹³
- 2212** Proportionality is concerned with incidental effects which attacks may have on persons and objects, as appears from the reference to “incidental loss”. The danger incurred by the civilian population and civilian objects depends on various factors: their location (possibly within or in the vicinity of a military objective), the terrain (landslides, floods etc.), accuracy of the weapons used (greater or lesser dispersion, depending on the trajectory, the range, the ammunition used etc.), weather conditions (visibility, wind etc.), the specific nature of the military objectives concerned (ammunition depots, fuel reservoirs, main roads of military importance at or in the vicinity of inhabited areas etc.), technical skill of the combatants (random dropping of bombs when unable to hit the intended target).¹⁴
- 2213** All these factors together must be taken into consideration whenever an attack could hit incidentally civilian persons and objects. Some cases will be clear-cut and the decision easy to take. For example, the presence of a soldier on leave obviously cannot justify the destruction of a village.
- 2214** Conversely, if the destruction of a bridge is of paramount importance for the occupation or non-occupation of a strategic zone, it is understood that some houses may be hit, but not that a whole urban area be levelled.
- 2215** Other more complex situations may pose difficult problems for those responsible. The golden rule to be followed in such cases is that contained in the first paragraph, i.e., the duty to spare civilians and civilian objects in the conduct of military operations.

¹² O.R. VI, pp. 211 ff., CDDH/SR.42.

¹³ O.R. XIV, p. 303, CDDH/III/SR.31, para. 31.

¹⁴ In his book, *Fighter – The True Story of the Battle of Britain*, p. 243, L. Deighton relates how, on 25 August 1940, a German bomber which was to attack fuel storage depots in Thameshaven, lost his way and dropped his bombs on the City of London, which led to the bombing of Berlin by way of reprisal.

- 2216** Article 85 (*Repression of breaches of this Protocol*) provides that a violation of Article 51 (*Protection of the civilian population*) and of paragraph 2(a)(iii) of Article 57 here being considered is a grave breach, i.e., a war crime which may carry severe punishment. It provides for the punishment of those who wilfully launch an indiscriminate attack gravely affecting the civilian population in the knowledge that such attack will cause loss of life, injury to civilians or damage to civilian objects, when such loss, injury or damage is excessive in the sense of this provision. The same reference is made with regard to any attacks launched against works or installations containing dangerous forces, even if these become military objectives; these attacks are qualified as grave breaches when they are launched intentionally in the knowledge that they will cause loss of life, injury to civilians or damage to civilian objects excessive in the sense of this provision, and when they actually do serious harm to the civilian population.
- 2217** During the final adoption of the article the words “in relation to the concrete and direct military advantage anticipated” were made the object of interpretative statements in which several delegations gave their view of the expression’s meaning.¹⁵
- 2218** These statements, which all have the same tenor, seem redundant; it goes without saying that an attack carried out in a concerted manner in numerous places can only be judged in its entirety. However, this does not mean that during such an attack actions may be undertaken which would lead to severe losses among the civilian population or to extensive destruction of civilian objects. Nor does it mean that several clearly distinct military objectives within an urban area may be considered as a single objective. This would be contrary to Article 51 (*Protection of the civilian population*), paragraph 4(a). Moreover, even in a general attack the advantage anticipated must be a military advantage and it must be concrete and direct; there can be no question of creating conditions conducive to surrender by means of attacks which incidentally harm the civilian population. A military advantage can only consist in ground gained and in annihilating or weakening the enemy armed forces. In addition, it should be noted that the words “concrete and direct” impose stricter conditions on the attacker than those implied by the criteria defining military objectives in Article 52 (*General protection of civilian objects*), paragraph 2.
- 2219** In conclusion, this rule, such as it is, is aimed at establishing an equitable balance between humanitarian requirements and the sad necessities of war. It is by no means as clear as it might have been, but in the circumstances it seems a reasonable compromise between conflicting interests and a praiseworthy attempt to impose some restrictions in the domain where arbitrary behaviour has existed too often.

¹⁵ On this subject we may quote the statement of the Italian delegation: “As to the evaluation of the military advantage expected from an attack, referred to in sub-paragraph 2(a)(iii), the Italian delegation wishes to point out that that expected advantage should be seen in relation to the attack as a whole, and not in relation to each action regarded separately.” (O.R. VI, p. 231, CDDH/SR.42, Annex (ad Art. 50)).

Sub-paragraph (b)

- 2220** The rule set out here, relating to the cancellation or suspension of attacks, applies not only to those planning or deciding upon attacks, but also and primarily, to those executing them. The text is sufficiently clear for lengthy comment to be superfluous. For the meaning of the words “concrete and direct military advantage anticipated” reference may be made to what was said in respect of sub-paragraph (a)(iii). As regards military objectives, they are defined in Article 52 (*General protection of civilian objects*), paragraph 2.¹⁶ As regards the concept of proportionality, reference is made to the commentary on sub-paragraph (a)(iii).
- 2221** It is principally by visual means – in particular, by means of aerial observation – that an attacker will find out that an intended objective is not a military objective, or that it is an object entitled to special protection. Thus, to take a simple example, an airman who has received the order to machine-gun troops travelling along a road, and who finds only children going to school, must abstain from attack. However, with the increased range of weapons, particularly in military operations on land, it may happen that the attacker has no direct view of the objective, either because it is very far away, or because the attack takes place at night. In this case, even greater caution is required.

Sub-paragraph (c)

- 2222** This contains the rule about prior warning in case of attacks. Article 26 of the 1907 Hague Regulations already required that the officer in command of an attacking force should, “before commencing a bombardment, except in cases of assault, do all in his power to warn the authorities”. There have been many examples of such warnings in the past; towns subject to attack were frequently declared open cities; in other cases, the population was evacuated.
- 2223** In the case of bombardment by long-distance projectiles or bombs dropped from aircraft, giving warning may be inconvenient when the element of surprise in the attack is a condition of its success. For this reason the rule allows for derogation: “unless circumstances do not permit”. Committee III had two proposals. The one now in sub-paragraph (c) was adopted by majority, but other delegations would have preferred the expression “whenever circumstances permit”, or even no derogation.¹⁷
- 2224** During the Second World War, particularly in the case of objectives situated in occupied territory, warnings were made by radio or by means of pamphlets; there were also cases in which aircraft flew very low over the objective, giving civilians, workers or just townspeople, time to leave. Of course the possibility of giving such warning depends to a large extent on who has air control and on

¹⁶ See *supra*, p. 635.

¹⁷ O.R. XIV, p. 303, CDHH/III/SR.31, para. 29.

what air defences there are. An example was given during the Diplomatic Conference.¹⁸

2225 Warnings may also have a general character. A belligerent could, for example, give notice by radio that he will attack certain types of installations or factories. A warning could also contain a list of the objectives that will be attacked. Even though ruses of war are not prohibited in this field, they would be unacceptable if they were to deceive the population and nullify the proper function of warnings, which is to give civilians the chance to protect themselves.

Paragraph 3

2226 This rule, described “as the lesser of two evils”, was already in the Draft Rules of 1956 (Article 8(a), paragraph 2). It was included in the 1973 draft and the Conference accepted it without much discussion. It is in accordance with the actual practices of belligerents in certain cases, particularly with respect to occupied allied countries.

2227 In this field mention could be made of attacks launched against enemy road and rail traffic; some belligerents have tried to attack the adversary only when this would not result in severe damage for the population. Instead of attacking railway stations, which are usually located in towns, the railway lines were hit at crucial points, but away from inhabited areas; the same action was taken with respect to roads.

2228 Such examples show that it is possible to choose objectives so that their destruction does not imperil the population and civilian objects, while still gaining the same military advantage. There is no doubt with regard to economic target of military importance, that it is possible to attack only certain parts the destruction of which will result in paralyzing the whole structure.

Paragraph 4

2229 This rule was not in the ICRC draft or in the various amendments presented during the Diplomatic Conference. It appeared for the first time in a report of the Working Group of Committee III.¹⁹

2230 The provisions of this Section apply to any attack from the sea or from the air, directed against objectives on land. This is set out in paragraph 3 of Article 49 (*Definition of attacks and scope of application*). Therefore that is not what is meant here. This provision is more concerned with the effects on the civilian

¹⁸ *Ibid.*, p. 186, CDDH/III/SR.21, para. 27.

¹⁹ *O.R.* XV, p. 353, CDDH/III/264/Rev.1. The report of Committee III on this subject reads as follows: “In recognition of the limitation of the scope of this Section, as set forth in Article 44, paragraph 1 [the present Art. 49 – Definition of attacks and scope of application – para. 3] on the effect on the law applicable to armed conflict at sea or in the air, paragraph 4 was added to Article 50 to ensure that all reasonable precautions would nevertheless be taken in the conduct of armed conflict at sea and in the air.” (*Ibid.*, p. 285, CDDH/215/Rev.1, para. 99).

population and civilian objects of military operations at sea or in the air. It is regrettable that in the debates during the Conference no practical examples were given. However, one could conceive that hostilities between adverse fleets could endanger the civilian population, with or without the intervention of the airforce, because missiles could miss their target or civilian ships or aircraft could get mixed up in the battle. Similarly, fighting between adverse military aircraft could have incidental repercussions on the civilian population – for example, when a crippled aircraft crashes. It should be noted that “all reasonable precautions” must be taken, which is undoubtedly slightly different from and a little less far-reaching than the expression “take all feasible precautions”, used in paragraph 2. As the nuance is tenuous, the purpose of the provision appears to be to reaffirm the rules that exist to protect civilians in such situations.

- 2231 As regards the rules of international law applicable in armed conflict, these are defined in Article 2 of the Protocol (*Definitions*), sub-paragraph (b).
- 2232 The rules of international law governing war at sea are rather uncertain. Hague Convention VIII of 1907 Relative to the Laying of Automatic Submarine Contact Mines had laid down a number of provisions, and the London Procès-Verbal of 1936, was mainly aimed at laying down certain restrictions on submarine warfare. The international military tribunal which sat at Nuremberg examined the application of the provisions of that Procès-verbal, taking into account the attitude adopted by the allied naval forces, but it remains uncertain to what extent these provisions have binding force. The same doubt continues to exist with regard to mines on the high seas.
- 2233 On the other hand, no one can doubt the rules concerning the shipwrecked, hospital ships and coastal rescue craft. These were first expressed in Hague Convention III of 1899 for the Adaptation to Maritime Warfare of the Principles of the Geneva Convention of August 22, 1864. This Convention was revised in 1907 (Xth Convention), and in 1949 it became the Second Geneva Convention. Finally, this Protocol has developed the rules relative to hospital ships and coastal rescue craft in Articles 22 (*Hospital ships and coastal rescue craft*) and 23 (*Other medical ships and craft*). Mention should be made in particular of the fact that the provisions on protection are extended to cover civilian wounded, sick and shipwrecked.
- 2234 As regards air warfare, this has not so far been regulated in a special instrument, as has war on land and to some extent, war at sea.²⁰ However, reference could be made to the Rules of Aerial Warfare drafted by a commission of jurists convened at The Hague in 1922 to 1923. Although these Rules did not take the form of a treaty binding upon States, some of them are of importance as an expression of customary law. They contain some interesting definitions and deal in particular with the identification of aircraft, overflight of foreign countries, aerial bombardment, protection of civilians and certain buildings, the powers of military authorities over enemy aircraft, and the right of visit, search and capture by these authorities.

²⁰ The *Bibliography of International Humanitarian Law Applicable in Armed Conflict*, Geneva 1980, p. 169, contains a list of works relating to air warfare. Reference should be made in particular to J.M. Spaight, *op. cit.*

- 2235** Since then some usages have become established but which do not necessarily have the binding nature of customary law. Thus, for example, it is customary for an aircraft to be equipped with an emblem showing the nationality of the armed forces to which it belongs. The usefulness of this rule is doubtful in a time when modern aircraft fly at supersonic speeds. Recognizing to which Party an aircraft belongs is hardly ever done visually, but usually by wireless transmission systems, particularly the “friend or foe” system. Another usage is for crippled aircraft wishing to make an emergency landing on an enemy airfield to show their intention by tipping their wings or lowering their landing-gear. However, the enormous speed of modern aircraft renders such practices problematic.
- 2236** According to another customary practice, members of the crew of a crippled aircraft parachuting out to save themselves, should not be attacked. This is incorporated in Article 42 of this Protocol (*Occupants of aircraft*).
- 2237** On the other hand, medical aircraft were made the object of provisions relating to their protection in the Geneva Convention of 27 July 1929. However, these rules, which were revised and developed in 1949, did not allow for such aircraft to fly in conditions of sufficient security. Fortunately this Protocol has now improved the situation; in fact, Articles 24-31 make it possible for medical aircraft to fly over areas under the control of their own forces without the necessity of resorting to prior notification and receiving the agreement of the adverse Party, which had up to then, according to one medical officer, “nailed” medical aviation to the ground. The reader is referred to the commentary on these articles. As medical aircraft may carry wounded and sick civilians as well as military wounded and sick, their activities will in future be of direct concern to the population at large, particularly as medical aircraft may henceforth be civilian aircraft.

Paragraph 5

- 2238** This paragraph, possibly self-evident, is a confirmation. The law relating to the conduct of hostilities is primarily a law of prohibition: it does not authorize, but prohibits certain things. However, in view of the wording of some of the provisions of this article which take into account military necessity, it is understandable that the Diplomatic Conference wished to stress that these provisions may not be construed so as to justify attacks against the civilian population.

C.P. / J.P.

Protocol I

Article 58 – Precautions against the effects of attacks

The Parties to the conflict shall, to the maximum extent feasible:

- (a) without prejudice to Article 49 of the Fourth Convention, endeavour to remove the civilian population, individual civilians and civilian objects under their control from the vicinity of military objectives;
- (b) avoid locating military objectives within or near densely populated areas;
- (c) take the other necessary precautions to protect the civilian population, individual civilians and civilian objects under their control against the dangers resulting from military operations.

Commentary

- 2239** This article is a corollary to the numerous articles contained in the Protocol for the benefit of the population of enemy countries. It is not concerned with laying down rules for the conduct to be observed in attacks on territory under the control of the adversary, but with measures which every Power must take in its own territory in favour of its nationals, or in territory under its control.
- 2240** Belligerents may expect their adversaries to conduct themselves fully in accordance with their treaty obligations and to respect the civilian population, but they themselves must also cooperate by taking all possible precautions for the benefit of their own population as is in any case in their own interest.
- 2241** From the beginning of its work the ICRC has felt the need to lay down provisions for “passive” precautions, apart from active precautions, if the civilian population is to be adequately protected. Article 11 of the 1956 Draft Rules already contained the norms expressed in this provision.
- 2242** The experts who convened in 1971 and 1972¹ generally confirmed that such a provision would be appropriate, and Article 51 of the 1973 draft, with some modifications, has become the present article.
- 2243** This article did not give rise to as much discussion during the negotiations as did Article 57 (*Precautions in attack*). However, during the final debate several delegations indicated that in the view of their governments, this article should in no way affect the freedom of a State Party to the Protocol to organize its national defence to the best of its ability and in the most effective way.²
- 2244** Nevertheless, the fact remains that States have subscribed here to a triple duty to act, which must imperatively be translated into instructions to be given, and first of all into measures to be taken already in peacetime, even though, strictly speaking, the article is only addressed to Parties to a conflict. Some of these measures have a preventive or precautionary character since they are concerned with preventing the construction of certain buildings in particular places, or removing objectives from an area where such buildings are located, or otherwise separating the population and their homes from dangerous places. For that matter, as stated above, it is in their own interest that States should take such measures.

Introductory sentence

- 2245** Once again the term “feasible” is used.³ In fact the Diplomatic Conference often used this expression to illustrate the fact that no one can be required to do the impossible. In this case it is clear that precautions should not go beyond the point where the life of the population would become difficult or even impossible.

¹ *CE 1972, Report*, Vol. I, pp. 153-154.

² *O.R.* VI, pp. 213-214, CDDH/SR.42, paras. 55, 57 and 60; pp. 231, 234-235 and 239, *ibid.*, Annex (Italy, Republic of Korea, United Republic of Cameroon).

³ In French “pratiquement possible”. On the meaning of these words, see *supra*, commentary Art. 57, p. 681.

2246 Moreover, a Party to the conflict cannot be expected to arrange its armed forces and installations in such a way as to make them conspicuous to the benefit of the adversary; several delegations raised this point during the discussion of the article. For example, one delegate, while accepting the article, explained his position as follows:

“With regard to the interpretation of the provision, with particular reference to sub-paragraph (b), it is the understanding of my delegation that this provision does not constitute a restriction on a State’s military installations on its own territory. We consider that military facilities necessary for a country’s national defence should be decided on the basis of the actual needs and other considerations of that particular country. An attempt to regulate a country’s requirements and the fulfilment of those requirements in this connexion would not conform to actualities.”⁴

Sub-paragraph (a)

2247 It is clear that authorities with a sense of duty will endeavour to remove the civilian population from areas where the risk of attack is greatest. Sometimes only certain categories of the population may be removed in this way: children, mothers, the elderly, the sick etc. Evacuation requires preparatory measures, often taken even in peacetime. Sometimes the whole of the population is evacuated.

2248 In this field Occupying Powers only have limited freedom and must comply with the provisions of Article 49 of the Fourth Convention: imperative military reasons, security of the population, proper accommodation to receive the persons concerned, satisfactory conditions of transfer (hygiene, health, safety, nutrition, members of the same family not separated, the Protecting Power be kept informed). In addition, the Occupying Power may not detain civilians in any area particularly exposed to the dangers of war unless the security of the population or imperative military reasons so demand. It is conceivable that a Party to the conflict would not wish to jeopardize movement of its own armed forces by allowing civilians to take over the roads and trains.

2249 As regards civilian objects, it seems clear that moveable objects should be removed whenever possible away from military objectives; thus a food depot intended for the civilian population should not be placed next to a fortified position or other defensive installations. However, the circumstances of war can change very rapidly and a building or installation which does not seem to be of any military interest can quickly become a major military objective. It will be recalled that Article 52 (*General protection of civilian objects*), paragraph 2, defines military objectives as:

⁴ *O.R.* VI, pp. 234-235, CDDH/SR.42, Annex (Republic of Korea). It should be noted here that with regard to Article 58, Austria and Switzerland made similar reservations indicating that because of the term “to the maximum extent feasible”, sub-paragraphs (a) and (b) will be applied subject to requirements for the defence of the national territory.

“objects which by their nature, location, purpose or use make an effective contribution to military action and whose total or partial destruction, capture or neutralization, in the circumstances ruling at the time, offers a definite military advantage”.

2250 Immovable objects cannot be removed and are therefore endangered as a result of being in the vicinity of military objectives; if the persons located there are to be protected, they must be evacuated.

Sub-paragraph (b)

2251 This sub-paragraph covers both permanent and mobile objectives. As regards permanent objectives, governments should endeavour to find places away from densely populated areas to site them. These concerns should already be taken into consideration in peacetime. For example, a barracks or a store of military equipment or ammunition should not be built in the middle of a town.

2252 As regards mobile objectives, care should be taken in particular during the conflict to avoid placing troops, equipment or transports in densely populated areas.

2253 In both cases it is likely that governments are sufficiently concerned with sparing their own population and that they will therefore act in the best interests of that population.

2254 In this context we refer briefly to the problem of camouflage. If military objectives located in an urban area are camouflaged, for example, so as to appear to be inoffensive buildings, but the adversary knows that they exist, the danger for the population is increased, particularly because of the incidental damage caused by bombing or artillery fire.

2255 The provision contained in sub-paragraph (b) is also addressed to Occupying Powers which might be inclined to ignore the fate of the population of the occupied territory and only take into account the fate and the safety of their own troops. It should be recalled that in this respect Article 28 of the Fourth Convention prohibits Occupying Powers from using protected persons to shield certain points or areas from military operations. The same provision is contained in much greater detail in Article 51 (*Protection of the civilian population*), paragraph 7, of the Protocol.

2256 Several delegates at the Diplomatic Conference stressed the fact that for densely populated countries this provision was difficult to apply.

Sub-paragraph (c)

2257 As regards persons, the other measures that can be taken by a Party to the conflict consist mainly of making available to the civilian population shelters which provide adequate protection against the effects of weapons. In some countries real efforts are made to supply the population with such shelters, both collectively and individually, the latter when every dwelling includes a shelter for

the occupants. The organization of well-trained civil defence services, adequately equipped, can also alleviate the fate of the civilian population.

2258 As regards objects, those which are entitled to special protection should be kept in mind, such as monuments, hospitals, works containing dangerous forces, civil defence installations etc. There too the presence of well-trained civil defence services will serve to limit damage, for example, through effective fire-fighting.

C.P. / J.P.

Part IV, Section I, Chapter V – Localities and zones under special protection

- 2259 It should be noted that the possibility of creating places of refuge, as an option, was already provided for in the Geneva Conventions. Thus Article 23 of the First Convention provides for “hospital zones and localities” for protecting the wounded and sick of the armed forces. In addition, the Fourth Convention provides for the establishment of “hospital and safety zones and localities” in order to shelter the civilian sick, children, the elderly etc. Article 15 adds the possibility of establishing “neutralized zones” in regions where fighting is taking place intended to shelter from danger not only the wounded and sick, but also civilians not participating in hostilities.¹
- 2260 The Protocol supplements these provisions with the present Chapter, which comprises two articles dealing with non-defended localities and demilitarized zones, respectively. These are not specifically concerned with sheltering particular categories of the population such as those who are especially vulnerable (the wounded and sick, children etc.) – although there is nothing to prevent these from being allowed in. The intention is rather to place certain localities or zones with their entire population, apart from combatants, outside the theatre of war, as was already the case with the neutralized zones of the Fourth Convention (Article 15).
- 2261 The reason why the Diplomatic Conference, on the ICRC’s initiative, decided to lay down new rules is that the 1949 provisions were not applied in practice as had been the intention. However, the ICRC had achieved various temporary solutions to this effect, in Dacca in 1971, Nicosia in 1974, Saigon and Phnom-Penh in 1975, Nicaragua in 1979 and the Falkland Islands (Malvinas) in 1982.²
- 2262 Experience has shown that it is very difficult for States to prepare places of refuge already in time of peace, and if they do so, they take care to keep it confidential. In truth the only way in which it is possible to establish protected zones or places of refuge is in the “heat of the moment”, i.e., when the fighting comes close and the defence of the particular locality or zone is of no military interest or of relatively minor interest in comparison with the civilian losses which

¹ The “Jacquinot zone” established in Shanghai in 1937 and the neutralization by the ICRC of a large hotel in Jerusalem in 1948 have been mentioned as examples of such places of refuge. *Commentary IV*, pp. 121-124 gives a historical background on places of refuge which it was possible to set up on various occasions with limited degrees of success.

² Cf. Y. Sandoz, “Localités et zones sous protection spéciale”, a study presented at the Tenth Round Table of the International Institute of Humanitarian Law, San Remo, 1984, in *Quatre études du droit international humanitaire*, Geneva, 1985, p. 35; S.-S. Junod, *Protection of the Victims of Armed Conflict Falkland – Malvinas Islands...*, *op. cit.*, pp. 33-34.

might result from a protracted defence. This convinced the ICRC that the creation of a non-defended locality should be possible unilaterally and very rapidly. The Conference followed these proposals to a very large extent, as evidenced by the fact that a declaration of an open city will have effect if it is not immediately contested. This represents an important reaffirmation of and elaboration on customary law. The other achievements of this Chapter are certainly useful, but since they are subject to the agreement of the Parties to the conflict, they have less chance of being put into practice as it is often difficult to conclude agreements once the Parties are actively engaged in hostilities.

C.P. / J.P.

Protocol I

Article 59 – Non-defended localities

1. It is prohibited for the Parties to the conflict to attack, by any means whatsoever, non-defended localities.
2. The appropriate authorities of a Party to the conflict may declare as a non-defended locality any inhabited place near or in a zone where armed forces are in contact which is open for occupation by an adverse Party. Such a locality shall fulfil the following conditions:
 - (a) all combatants, as well as mobile weapons and mobile military equipment must have been evacuated;
 - (b) no hostile use shall be made of fixed military installations or establishments;
 - (c) no acts of hostility shall be committed by the authorities or by the population; and
 - (d) no activities in support of military operations shall be undertaken.
3. The presence, in this locality, of persons specially protected under the Conventions and this Protocol, and of police forces retained for the sole purpose of maintaining law and order, is not contrary to the conditions laid down in paragraph 2.
4. The declaration made under paragraph 2 shall be addressed to the adverse Party and shall define and describe, as precisely as possible, the limits of the non-defended locality. The Party to the conflict to which the declaration is addressed shall acknowledge its receipt and shall treat the locality as a non-defended locality unless the conditions laid down in paragraph 2 are not in fact fulfilled, in which event it shall immediately so inform the Party making the declaration. Even if the conditions laid down in paragraph 2 are not fulfilled, the locality shall continue to enjoy the protection provided by the other provisions of this Protocol and the other rules of international law applicable in armed conflict.
5. The Parties to the conflict may agree on the establishment of non-defended localities even if such localities do not fulfil the conditions laid down in paragraph 2. The agreement should define and describe, as precisely as possible, the limits of the non-defended locality; if necessary, it may lay down the methods of supervision.
6. The Party which is in control of a locality governed by such an agreement shall mark it, so far as possible, by such signs as may be agreed upon with the other Party, which shall be displayed where they are clearly visible, especially on its perimeter and limits and on highways.
7. A locality loses its status as a non-defended locality when it ceases to fulfil the conditions laid down in paragraph 2 or in the agreement referred to in

paragraph 5. In such an eventuality, the locality shall continue to enjoy the protection provided by the other provisions of this Protocol and the other rules of international law applicable in armed conflict.

Commentary

Paragraph 1

2263 This paragraph reiterates almost entirely the rule contained in Article 25 of the Hague Regulations of 1907.¹ Under this paragraph, which confirms and codifies customary law, a locality becomes a non-defended locality whenever the

¹ “The attack or bombardment, by whatever means, of towns, villages, dwellings, or buildings which are undefended is prohibited.” (Article 25 of the Hague Regulations of 1907. *Cf.* also Article 1 of the 1907 Convention Respecting Bombardment by Naval Forces in Time of War, which provides that:

“The bombardment by naval forces of undefended ports, towns, villages, dwellings or buildings is forbidden.

A place cannot be bombarded solely because automatic submarine contact mines are anchored off the harbour.”

conditions laid down in the following paragraphs are met. Unilateral declarations and agreements merely serve to confirm this situation. This is an important difference with the provisions laid down regarding demilitarized zones in Article 60 (*Demilitarized zones*) in which the status of such a zone depends on an express agreement.

- 2264** Moreover, it should be noted that even if a locality contains military objectives and hostile acts are perpetrated from such objectives, that does not in any way justify the total destruction of the buildings in that locality. In fact, it may be recalled that Article 51 (*Protection of the civilian population*), paragraph 5(a), prohibits treating as a single military objective a number of clearly separated and distinct military objectives located in a city, town, village or other area containing a similar concentration of civilians or civilian objects.
- 2265** This refers to acts of violence committed by means of projectiles fired from a distance. If the combat is taking place within a city or a town, and there is fighting from house to house, which is frequently the case, it is clear that the situation becomes very different and that any building sheltering combatants becomes a military objective.
- 2266** Defended localities include not only fortified towns or those equipped with a fixed defence system, but also localities in or around which troops have taken up position.

Paragraph 2

- 2267** Paragraph 1 lays down the rule, which must be obeyed even in the absence of a declaration or an agreement and the article continues by defining the conditions with which a non-defended locality must comply.
- 2268** The introductory sentence lays down two conditions which could just as easily have been included in the list that follows:
- the inhabited place must be near or in a zone where armed forces are in contact. The words used are based on a definition given by a special Working Group of the Diplomatic Conference;²
 - the inhabited place must be open for occupation.³ This condition is essential and all practical steps must be taken in advance to ensure its implementation, such as, for example, opening up road blocks or removing mines. Once the

² Report of a mixed group, March 1975, *cf. O.R. XV*, p. 338, CDDH/II/266-CDDH/III/255, Annex A: “*Contact Area* means, in an armed conflict, that area where the most forward elements of the armed forces of the adverse Parties are in contact with each other.”

³ The French and Spanish texts of the Protocol, contained in the Final Act, used the word “open” in the feminine form of that adjective (“*ouverte*” and “*abierta*”). However, it was the masculine form that was adopted by Committee III (*cf. O.R. XV*, p. 315, CDDH/215/Rev.1) and the plenary Conference finally adopted it by consensus, without a modification (*cf. O.R. VI*, p. 214, CDDH/SR.42, para. 62). There is no doubt that in the English version the adjective “open” qualifies “any inhabited place” – as is only logical. A proposal to correct the error was put forward on 20 January 1981 by the depositary; as the latter did not receive any objections within the prescribed period of 90 days the depositary notified the correction of the authentic French and Spanish texts on 8 May 1981, changing the adjective into its masculine form, “*ouvert*”.

declaration of a non-defended locality has been transmitted, it is clearly no longer possible to go back on it without giving sufficient prior warning to the adversary – otherwise the declaration could be considered as an act of perfidy (see Article 37 – *Prohibition of perfidy*).

- 2269** It may happen that the circumstances of combat change and that in the end the locality is not occupied by the adversary. However, it will retain its status as long as the declaration is not withdrawn or the adversary does not object.
- 2270** The four conditions laid down sub-paragraphs (a)-(d) do not require much comment. The fact that all combatants and military equipment must be evacuated is self-evident. Fixed military installations must not be used for any hostile purpose. Thus refugees may be sheltered in barracks, but military air traffic control stations may not continue to operate.
- 2271** It is clear that factories situated in the locality should abstain from manufacturing weapons, ammunition or other objects of military use.
- 2272** It is also clear that roads and railways passing through the non-defended locality must not be used for the movement of combatants or military equipment, not even for transit purposes.
- 2273** Works containing dangerous forces must not be used in regular, significant and direct support of military operations as this could expose them to attack under the terms of Article 56 (*Protection of works and installations containing dangerous forces*), paragraph 2.
- 2274** Finally, the intention was to prevent the area declared as a non-defended locality from being used as a logistic base by groups of combatants, whether or not in uniform, who would carry out raids and then hide in the locality dressed as civilians.
- 2275** Article 59 is silent on the question of overflight of non-defended localities by friendly or enemy aircraft. In the absence of a specific provision it must be accepted that such overflight is possible and does not compromise the status of the non-defended locality.

Paragraph 3

- 2276** This provision refers to certain categories of persons whose presence in the locality will not deprive it of its status. In the first place, this applies to wounded or sick members of the national armed forces and prisoners of war who are being treated in military or civilian medical institutions. Military medical personnel looking after them are also included, as well as chaplains. Medical establishments, whether fixed or mobile, may continue to function wherever they are, even if they belong to the military.
- 2277** Special mention should be made of civil defence personnel as defined in Articles 61-68 amongst the categories of persons enjoying special protection under the Conventions and this Protocol, as well as of civilian medical and religious personnel. Although Article 59 does not mention this explicitly, it is clear that personnel assigned to the protection of cultural objects defined by the Hague Convention of 1954 are also covered by this paragraph.
- 2278** As regards police forces left behind in the locality, this can only refer to members of uniformed police units which form part of the armed forces of the

State as laid down in paragraph 3 of Article 43 (*Armed forces*). In fact the civilian police force falls under the civilian population and therefore does not need to be evacuated when the locality is declared a non-defended locality.

- 2279 In many countries the municipal, provincial or national police is purely civilian. In other countries the national police forms part of the armed forces.⁴
- 2280 The presence in a non-defended locality of police forces which are part of the armed forces could pose some problems if the locality is occupied; in any case, members of such police forces should refrain from any hostile act. However, the question remains what their status will be when they fall under the control of the adversary. If they are captured, they are entitled to prisoner-of-war status, but in many cases they will be required to continue their function under the Occupying Power. In this respect reference could be made to Article 67 (*Members of the armed forces and military units assigned to civil defence organizations*), paragraph 2, which has dealt with the question of military personnel serving in civil defence organizations: they will be considered to be prisoners of war, but in occupied territory they may be employed on civil defence tasks.
- 2281 To avoid all problems it would seem preferable to entrust police tasks in a non-defended locality to the municipal police or another purely civilian police corps. In any event the presence of and effective action by a police force are essential in such difficult circumstances to maintain law and order, protect lives and property and, if need be, prevent the locality from being overrun by unauthorized elements.

Paragraph 4

- 2282 The adverse Party must be notified. The use of the word “addressed” was intended to show that a public declaration is not sufficient. Various channels are conceivable: direct transmission by a parlementaire bearing the flag of truce in the actual field of operations, contact through telecommunication, transmission through a Protecting Power, another State not Party to the conflict, inter-governmental organizations such as the United Nations or regional organizations, or alternatively through a humanitarian organization, such as the ICRC.

Who must send the declaration ?

- 2283 In principle the declaration must be sent by the authority capable of ensuring compliance with the terms of the declaration. In general this will be the government itself, but it may happen that in difficult circumstances the declaration could come from a local military commander, or even from a local

⁴ For example, this is the case in Italy with the “Carabinieri”, in France with the “Gendarmerie nationale” and the “Compagnies républicaines de sécurité”; in the Federal Republic of Germany the “Grenzschutztruppen” are under the control of the Minister of the Interior in peacetime, but are transferred to the control of the Minister of Defence in time of armed conflict and therefore become part of the national armed force.

civil authority such as a mayor, burgomaster or prefect. Of course, if the declaration comes from a local civil authority, it must be made in full agreement with the military authorities who alone have the means of ensuring that the terms of the declaration are complied with.

Contents of the declaration

2284 The paragraph only mentions the geographical limits of the non-defended locality, but other elements can certainly be taken into consideration, such as the time from which the conditions laid down in paragraph 2 will be met. To avoid any misunderstanding it seems preferable to wait until the conditions have been met before making the declaration. If the limits of the locality are visually marked, the declaration must indicate what marking is used, by day and night, for acceptance by the adversary. The same applies for the conditions of supervision.

Obligations of the adverse Party

2285 The adverse Party must acknowledge receipt of the declaration. In fact it is necessary for the other Party to know that its declaration has arrived at its destination. Acknowledgement of receipt does not create the protection which is accorded to that locality, but it is an important element of security. At the same time the adverse Party must accord the locality the treatment due to non-defended localities. If the adverse Party considers that the conditions laid down are not fulfilled, it must immediately so inform the Party making the declaration. Any unnecessary delay would be contrary to good faith. If it sends a negative response, the adverse Party must indicate the exact points on which the conditions laid down have not been fulfilled, in such a way that those who made the declaration can remedy them, and then make another declaration. In fact, this could also result in negotiations as described in paragraphs 5 and 6. However, it should be noted that the objections of the adverse Party may only relate to the fulfilment of the conditions laid down in paragraph 2. If those conditions are fulfilled, the non-defended locality has the status of a protected locality and the adverse Party cannot impose any other conditions.

2286 The last part of the paragraph is an appropriate reminder that even in the event that the declaration is validly rejected, the locality continues to enjoy protection under other provisions of the Protocol and other rules of international law applicable in armed conflict. In the first place, there is no doubt that a locality which fulfils the conditions laid down in paragraph 2, but about which a declaration has not been sent, may not be attacked in any way. If some conditions cannot be fulfilled, for example, if it is impossible to remove all military objectives or to put a complete halt to the transit of combatants and military equipment, all the precautions laid down in Articles 50-57 must be applied. According to Article 51 (*Protection of the civilian population*), paragraph 5, the presence of military objectives does not justify a general attack against a locality. If it is considered to be essential from a military point of view to disrupt the lines of communication,

this must be done, wherever possible, at points where the population is not endangered.

Paragraph 5

2287 This paragraph deals with a second case envisaged by this article: the conditions laid down in paragraph 2 are not fulfilled and the Parties to the conflict, possibly after the rejection of a unilateral declaration, conclude an agreement to grant a locality the status of a non-defended locality. No special form is prescribed for such an agreement, but undoubtedly an agreement in writing is preferable; it could be concluded directly in the field by parlementaires negotiating under the flag of truce or at a diplomatic level through the intermediary or on the initiative of Protecting Powers or a humanitarian organization such as the ICRC.

2288 The principal points of such an agreement should be:

- a) exact geographical limits (generally to be shown on a detailed map);
- b) date and time of entry into force;
- c) duration;
- d) rules on marking the limits and the type of marking to be used;
- e) persons authorized to enter the locality;
- f) if necessary, the methods of supervision;
- g) ultimate fate of the locality, possibly the conditions under which it may be occupied by enemy troops.

Paragraph 6

2289 This provision is perfectly clear and requires hardly any comment. It will be recalled that the Draft agreement annexed to the Fourth Convention provided that hospital and safety zones should be marked by means of oblique red bands on a white ground, placed on buildings and outer precincts.⁵ Paragraph 6 now provides that the signs to be used should be agreed with the adverse Party, though without defining such signs even approximately.

2290 There is nothing to prevent the Parties to the conflict concerned from adopting the sign laid down in the Fourth Convention (oblique red bands on a white ground), but they may also choose another sign.

2291 It is evident that any signs used must be as visible as possible, even though in the case of non-defended localities the geographical position is known to the adverse Party, which can therefore easily spot them.

2292 To mark the limits on main roads, flags bearing the colours or coat-of-arms of the town could be used, as this emblem is often readily available. This form of marking is sufficient for armed forces on land who generally depend on what they can see, but it is probably insufficient for the airforce. For the latter, the agreed signs could be painted on the highways at the limits of the locality, on inclined

⁵ See commentary Art. 56, para. 7, *supra*, p. 675.

panels on the approaches to the locality or on the roofs or courtyards of buildings situated on the perimeter.

2293 Such signs are relatively efficient for daytime use. At night it is necessary to use other means, and particularly to ensure that there is adequate lighting, at least along the perimeter of the locality. However, the presence of an “island of light” in the middle of the darkness can pose difficult problems of military security and the agreement must deal with this point.

2294 Finally, it is also possible for the non-defended locality to identify itself by means of the transmission of distinctive radio signals or by electronic means, in the same way as those laid down in Articles 5-8 of the Regulations annexed to this Protocol⁶ for the identification of medical units and transports. There too, an agreement between the Parties to the conflict is required.

Paragraph 7

2295 This paragraph seems to be self-evident: if one or more of the conditions laid down in paragraph 2 is not fulfilled, the defended locality loses its status.⁷ However, if the zone where armies are in contact becomes further removed from the locality, it does not seem that the status of the locality should be affected, provided that the other conditions continue to be fulfilled.

2296 The most frequent case is, of course, that in which the locality is occupied by adverse forces; it may be that the adversary decides to allow the locality to retain its character of a non-defended locality. In this situation the adversary’s own armed forces should obviously not be installed in the locality, and the adversary should confine itself to setting up a system of administration. It remains to be seen whether the national government will accept the extension of the non-defended locality status. Its decision will no doubt depend on the strict observation by the Occupying Power of the conditions laid down in paragraph 2.

2297 There is no doubt that when a non-defended locality loses its status, it continues to enjoy protection under other treaty or customary rules. On this subject reference can be made to the definition given in Article 2 (*Definitions*), subparagraph (*b*), of the Protocol, and what was said above on paragraph 4.

C.P. / J.P.

⁶ Cf. *infra*, commentary Annex I, Arts. 5-8, p. 1199.

⁷ However, it is recommended that before taking measures against a locality a declaration should be made or reasonable notice should be given with a view to recreating a situation compatible with paragraph 2.

Protocol I

Article 60 – Demilitarized zones

1. It is prohibited for the Parties to the conflict to extend their military operations to zones on which they have conferred by agreement the status of demilitarized zone, if such extension is contrary to the terms of this agreement.
2. The agreement shall be an express agreement, may be concluded verbally or in writing, either directly or through a Protecting Power or any impartial humanitarian organization, and may consist of reciprocal and concordant declarations. The agreement may be concluded in peacetime, as well as after the outbreak of hostilities, and should define and describe, as precisely as possible, the limits of the demilitarized zone and, if necessary, lay down the methods of supervision.
3. The subject of such an agreement shall normally be any zone which fulfils the following conditions:
 - (a) all combatants, as well as mobile weapons and mobile military equipment, must have been evacuated;
 - (b) no hostile use shall be made of fixed military installations or establishments;
 - (c) no acts of hostility shall be committed by the authorities or by the population; and
 - (d) any activity linked to the military effort must have ceased.

The Parties to the conflict shall agree upon the interpretation to be given to the condition laid down in sub-paragraph (d) and upon persons to be admitted to the demilitarized zone other than those mentioned in paragraph 4.
4. The presence, in this zone, of persons specially protected under the Conventions and this Protocol, and of police forces retained for the sole purpose of maintaining law and order, is not contrary to the conditions laid down in paragraph 3.
5. The Party which is in control of such a zone shall mark it, so far as possible, by such signs as may be agreed upon with the other Party, which shall be displayed where they are clearly visible, especially on its perimeter and limits and on highways.
6. If the fighting draws near to a demilitarized zone, and if the Parties to the conflict have so agreed, none of them may use the zone for purposes related to the conduct of military operations or unilaterally revoke its status.
7. If one of the Parties to the conflict commits a material breach of the provisions of paragraphs 3 or 6, the other Party shall be released from its obligations under the agreement conferring upon the zone the status of

demilitarized zone. In such an eventuality, the zone loses its status but shall continue to enjoy the protection provided by the other provisions of this Protocol and the other rules of international law applicable in armed conflict.

Commentary

- 2298** The Rapporteur of Committee III noted that it was difficult to find an adequate term to describe the protected zones which it was felt should be created. The terms discussed included “neutralized zones”, “non-militarized zones” and in French even the term “zones civilisées”, but finally the term “demilitarized zones” was adopted.¹
- 2299** In fact, this expression is not in itself very accurate; to be precise, it ought to be “delimitarized zones in the sense of Article 60 of the Protocol”. Demilitarized zones could actually mean very different institutions. Thus, for example, some peace treaties have imposed on the defeated Party the demilitarization of certain areas. Articles 42-44 of the Treaty of Versailles of 1919 laid down that Germany could have no fortification or military establishment of any sort on the left bank of the Rhine and in an area fifty kilometres east from that river. The Peace Treaty signed in 1947 by the Allied Powers and Italy provides that certain territories,

¹ *O.R.* XV, p. 287, CDDH/215/Rev.1, para. 110.

in particular islands such as Pantelleria, should be demilitarized and remain so; the same Treaty provides that the Dodecanese Islands, ceded by Italy to Greece, should be demilitarized and remain so under the new sovereignty. Annex VIII, Article D, of that Treaty gives a definition of the terms “demilitarization” and “demilitarized”.²

2300 In other cases two or more States have agreed to provide in an international treaty that a particular territory should be demilitarized. This occurred, for example, with regard to the Aaland Islands, situated between Sweden and Finland, in the Gulf of Bothnia. It also applies to Antarctica pursuant to the Treaty concluded in Washington on 1 December 1959.

2301 Finally there is a third category of demilitarized zones: those established following an armistice, which are generally known as “buffer zones”. The main objective of such zones is to prevent the adverse armed forces from being in contact, and they are often placed under the authority of an armistice commission, or in some cases, of a peacekeeping force of the United Nations. The best known recent cases are the demilitarized zones in Korea and in the Middle East between Israel and its neighbours.

2302 It is quite clear that the drafters of Article 60 did not have such zones in mind, even though they provided that demilitarized zones could be created already in time of peace. In fact, such different types of demilitarized zones, created by treaty, as mentioned above, are not created for wartime but for peacetime, or at least for an armistice.

2303 In fact, this is the essential character of the zones created in Article 60: they have a humanitarian and not a political aim; they are specially intended to protect the population living there against attacks. Admittedly, there is nothing to prevent a demilitarized zone created by a peace treaty, armistice or any other international agreement, from becoming a demilitarized zone in accordance with Article 60 in the case of armed conflict, provided this is done by means of a new agreement.

Paragraph 1

2304 This paragraph contains the basic rules relating to demilitarized zones. In the first place, such zones can only be created by agreement: in other words, a simple unilateral declaration is not sufficient, even if the zone fulfils the other conditions laid down in the article. The prohibition concerns the extension of military operations to such zones. It does not, as in the preceding article (*Non-defended*
