

New York State and New York City Employment and Unemployment

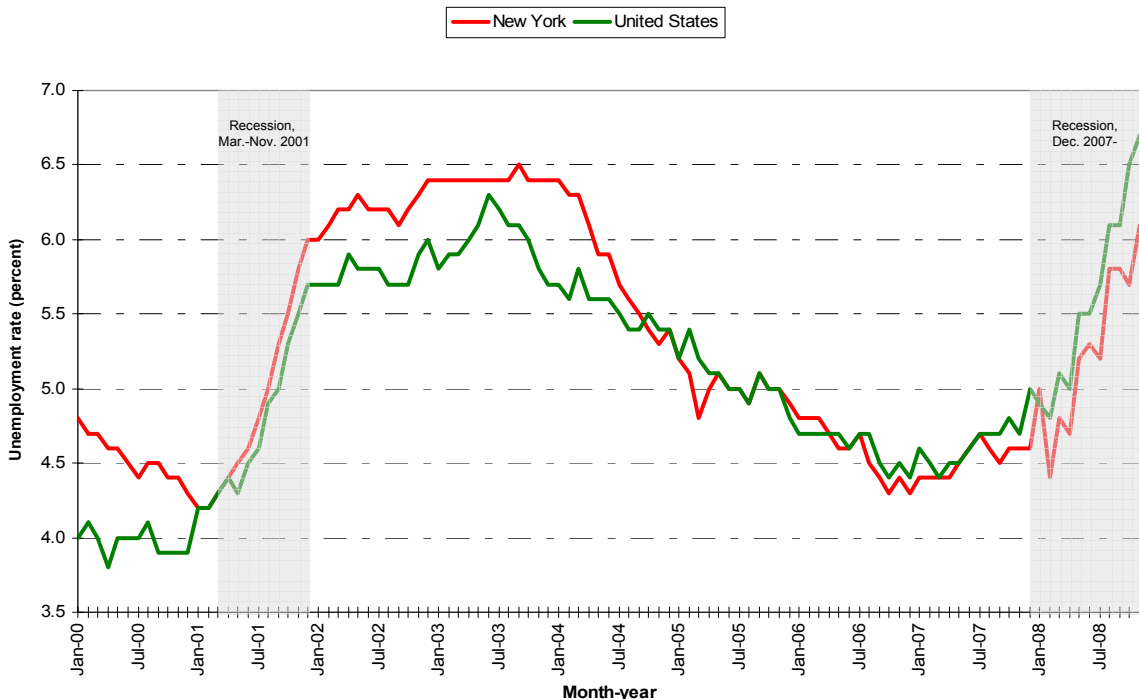

Bureau of Labor Statistics

December 2008

New York Unemployment (Seasonally Adjusted)

- The New York unemployment rate increased by 0.4 percentage point in November 2008 to 6.1 percent.
 - The State's rate had been 5.7 or 5.8 percent in the three prior months, following a steep increase of 0.6 percentage point from July to August.
- Relative to the beginning of the current recession in December 2007, New York's jobless rate is up 1.5 percentage points, on net, about the same as the 1.7-point rise in the national rate.
- At 6.1 percent, New York's current jobless rate remains 0.4 percentage point below its most recent peak of 6.5 percent in September 2003.
 - The U.S. unemployment rate in November 2008, 6.7 percent, was 0.4 percentage point above its peak following the 2001 recession, 6.3 percent in June 2003.
- The current rate for New York is below the average over its entire series, 6.4 percent, but above the average so far in the present decade, 5.2 percent.
 - The State recorded its lowest jobless rate, 4.0 percent, in April 1988 and its highest rate, 10.5 percent, in July 1976. (The New York series begins in January 1976.)
- The 6.1-percent rate for New York in November 2008 was significantly below the 6.7-percent rate for the U.S. at that time.
 - On average over the State's 32-year series, New York's unemployment rate has been 0.3 percentage point above that of the Nation.

Unemployment rates in New York and the United States, January 2000 - November 2008, seasonally adjusted

NOTE: Shaded areas represent recessions as determined by the National Bureau of Economic Research (NBER). NBER has not yet determined an endpoint for the recession that began in December 2007.

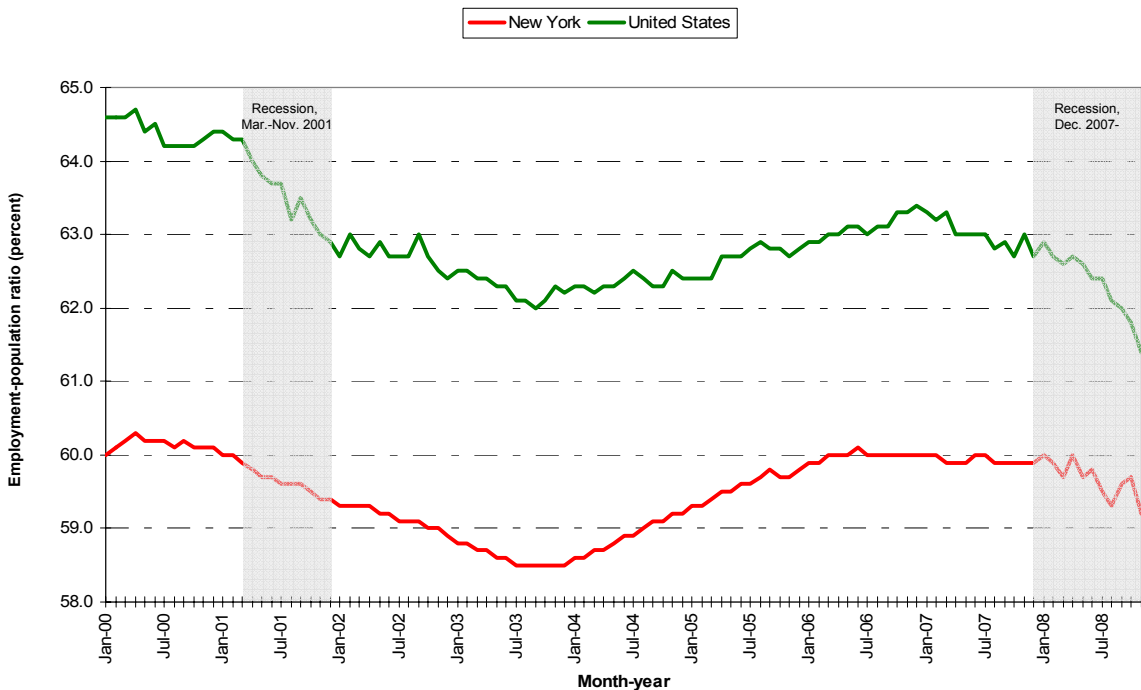

SOURCES: United States data come from the Current Population Survey. New York data come from the Local Area Unemployment Statistics program.

Employment status demographics in New York, 2007 annual averages

- In New York in 2007, men had higher unemployment rates than women across all race and ethnicity groups for which data were tabulated.
 - The black population had the widest gender gap, 9.3 percent for men vs. 6.1 percent for women.
 - The Hispanic and white populations had narrower gender gaps, 0.6 and 0.7 percentage point, respectively.
- Unemployment rates tend to decline with age, with the newest entrants to the labor force generally experiencing the highest rates. For New York in 2007, jobless rates for teenagers were nearly double those of persons ages 20 to 24, whose rates, in turn, were about double those of 25- to 34-year-olds.

Extended Mass Layoffs by Industry in New York

- The number of extended mass layoff events (involving at least 50 workers and lasting more than 30 days) in New York decreased by 54, or 15 percent, in the four quarters ending in September 2008 when compared with the same period a year earlier. The number of workers separated in those layoff actions increased by 3,519, or 6 percent, to 59,456.
- The largest increases in the number of separations occurred in finance and insurance; arts, entertainment, and recreation; and accommodation and food services. The largest decreases occurred in transportation and warehousing and administrative and waste services.

New York Nonfarm Payroll Employment (Seasonally Adjusted)

- In November, nonfarm payroll employment in New York declined by 23,300, or 0.3 percent, from the prior month. Among industry supersectors, trade, transportation, and utilities reported a significant over-the-month job loss (-7,200), the bulk of which came in retail trade (-6,700).
- Relative to the onset of the recession in December 2007, New York's employment has fallen by 44,200, or 0.5 percent, on net. The State has experienced at least slight job losses in 8 of the last 11 months, with over 80 percent of the net decline occurring over the last two months.
 - Employment in the U.S. contracted by 1.4 percent (shedding a total of 1,911,000 jobs) between December 2007 and November 2008.
 - National employment has trended down in every month subsequent to the recession's onset, with about two-thirds of the cumulative loss occurring in the last three months.
- Since December 2007, the largest job losses in New York have occurred in financial activities (-16,700); trade, transportation, and utilities (-16,100); professional and business services (-15,900); and manufacturing (-15,400).
 - Offsetting these somewhat have been net job gains in education and health services (+16,200) and government (+7,600).
- With respect to the 2001 recession, New York's employment declined by a total of 3.6 percent from December 2000 through July 2003 (State's peak-to-trough).
 - The number of jobs in the U.S. as a whole contracted by 2.0 percent between February 2001 and August 2003 (national peak-to-trough).

**Total nonfarm employment in New York and the United States,
January 2000 - November 2008, seasonally adjusted**

NOTE: Shaded areas represent recessions as determined by the National Bureau of Economic Research (NBER). NBER has not yet determined an endpoint for the recession that began in December 2007.

SOURCE: Current Employment Statistics survey

Distribution of employment by industry in New York and the United States, 2007 annual averages

- The distribution of employment by industry supersector in New York differs somewhat from that of the Nation.
 - The State has a substantially higher share of jobs in education and health services (by 5.0 percentage points) than the U.S. as a whole.
 - New York also has relatively more jobs in financial activities than the Nation (8.4 vs. 6.0 percent).
 - Manufacturing accounts for relatively fewer jobs in New York than in the U.S. overall, by -3.8 percentage points.

New York

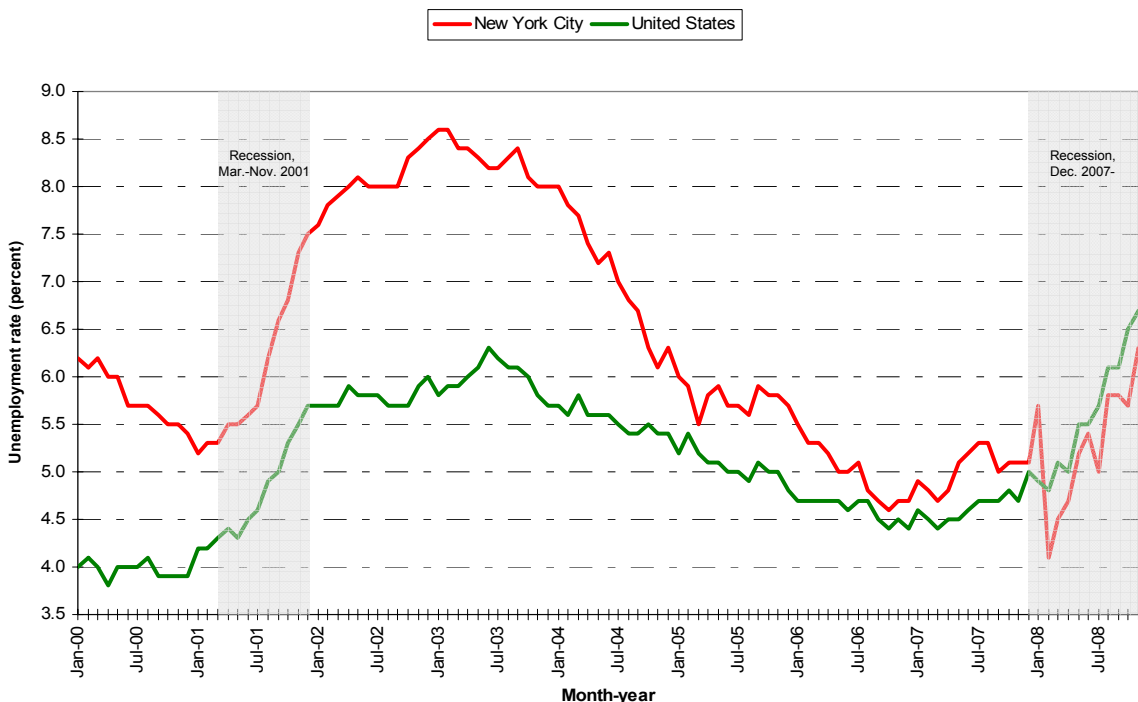

United States

New York City Unemployment (Seasonally Adjusted)

- In November, the New York City jobless rate increased by 0.6 percentage point to 6.3 percent.
- Since the start of the recession in December 2007, the City's rate is up 1.2 percentage points, on net. This is less than the 1.7-point rise in the U.S. rate over the same period.
- The New York City rate has been volatile in 2008, having experienced significant increases in January (+0.6 percentage point), August (+0.8 point), and November (+0.6 point) tempered by a significant decrease in February (-1.6 points).
 - Previously, the rate had ranged between 5.0 and 5.3 percent from May to December 2007. (Revised data for prior years tend to be smoother than those for the current year.)
- Following the 2001 recession, the City's jobless rate peaked at 8.6 percent in January and February 2003 and is down by 2.3 percentage points on a net basis through November 2008.
 - The U.S. unemployment rate in November 2008, 6.7 percent, was 0.4 percentage point above its post-2001 recession peak, 6.3 percent in June 2003.
- The current rate for New York City is well below the average over its entire series, 7.8 percent, but equal to the average so far in the present decade, 6.3 percent.
 - Prior to the low rates of February and March 2008 (4.1 and 4.5 percent, respectively), the series low for New York City had been 4.5 percent in February 1988.
 - The City recorded its series-high jobless rate, 11.7 percent, in September 1992. (The New York City series begins in January 1976.)
- On average over its 32-year series, New York City's unemployment rate has been 1.8 percentage points above that of the Nation.

Employment status demographics in New York City, 2007 annual averages

- In New York City in 2007, women generally had lower unemployment rates than men, 4.9 vs. 5.5 percent, for the total population.
 - Blacks had a wider gender gap (6.4 percent for women vs. 8.6 percent for men) than whites (4.2 percent for women vs. 4.6 percent for men).
 - The Hispanic population had essentially no gender gap, with men and women reporting jobless rates of 7.0 and 7.1 percent, respectively.
- Unemployment rates tend to decline with age, with the newest entrants to the labor force generally experiencing the highest rates. For New York City in 2007, rates for teenagers were nearly double those of persons ages 20 to 24, whose rates, in turn, were more than double those of 25- to 34-year-olds.

^P = preliminary.

- In New York City in 2007, unemployed women were more likely to have left their jobs than men, while unemployed men were more likely to have been on temporary layoff than women.
- In general, no race or ethnic group for which data were tabulated differed substantially from the City's total population in terms of its distribution of unemployment by reason. Blacks were more likely than whites to have been labor force reentrants and less likely to have been job losers or to have completed temporary jobs.

Percent distribution of unemployed persons by sex, race, and Hispanic or Latino ethnicity, and reason for unemployment, 2007 annual averages ^P

New York City

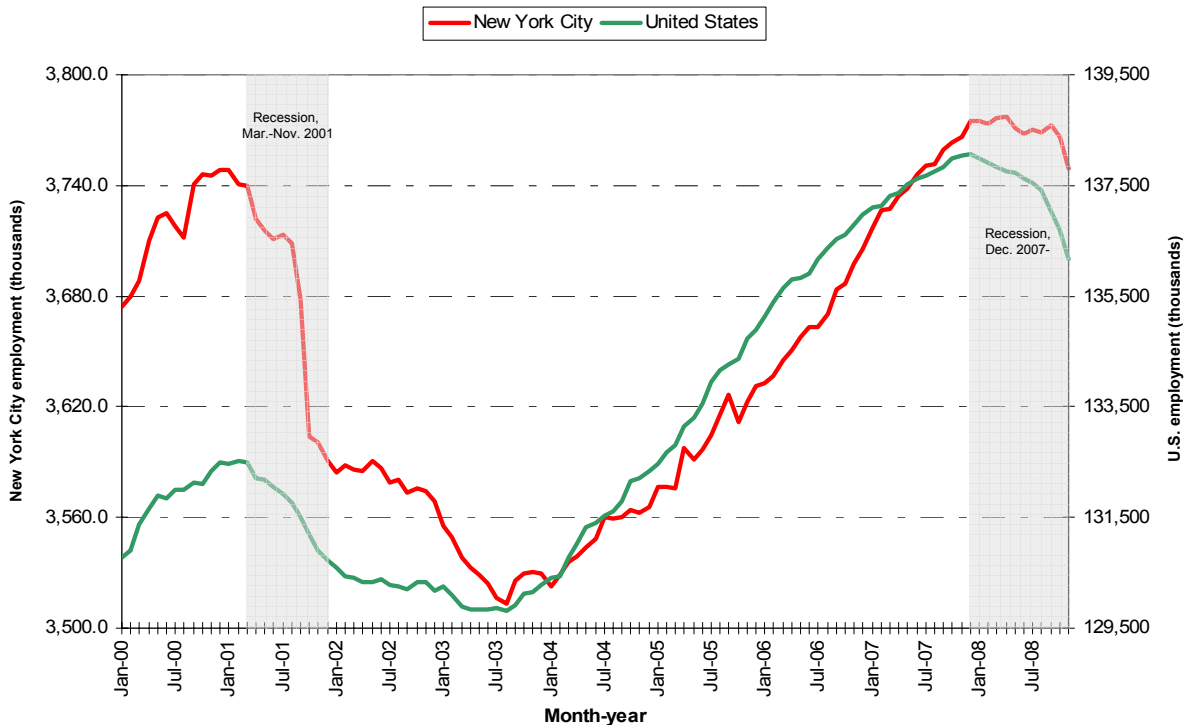

Population group	Total unemployed		Job losers and persons who completed temporary jobs		Job leavers	Reentrants	New entrants
	Number (in thousands)	Percent	Total	On temporary layoff			
Total	198	100.0	49.5	7.7	7.5	29.9	13.1
Men	112	100.0	50.4	9.5	5.4	31.6	12.6

New York City Nonfarm Payroll Employment (Seasonally Adjusted)

- On a seasonally adjusted basis, nonfarm payroll employment in New York City was down sharply in November, as 17,000 jobs were shed. The 0.5-percent contraction over the month was the largest for the City since October 2001 (when it fell 2.0 percent in the aftermath of the September 11th terrorist attacks).
- Relative to the onset of the recession in December 2007, New York City's employment has declined by 25,700, or 0.7 percent, on net. The City has experienced at least slight job losses in 7 of the past 11 months, but over 90 percent of the net loss has occurred in just the last two months.
 - Employment in the U.S. contracted by 1.4 percent (shedding a total of 1,911,000 jobs) between December 2007 and November 2008.
 - National employment has trended down in every month subsequent to the recession's onset, with about two-thirds of the cumulative loss occurring in the last three months.
- With respect to the 2001 recession, New York City's employment declined by 6.3 percent from January 2001 through August 2003 (City's peak-to-trough).
 - The number of jobs in the U.S. as a whole contracted by 2.0 percent between February 2001 and August 2003 (national peak-to-trough).

**Total nonfarm employment in New York City and the United States,
January 2000 - November 2008, seasonally adjusted**

NOTE: Shaded areas represent recessions as determined by the National Bureau of Economic Research (NBER). NBER has not yet determined an endpoint for the recession that began in December 2007.
