GREEN ECONOMIC RECOVERY

THE AMERICAN RECOVERY AND REINVESTMENT ACT WILL CREATE OR SAVE 3.5 MILLION JOBS...

... An estimated 500,000 of these will be green jobs that put Americans to work in renewable energy and efficiency-related jobs that reduce our dependence on foreign oil, cut pollution and save consumers and businesses money on energy bills.

The stimulus package represents a step toward re-powering America, **doubling our renewable energy production** and investing \$60 billion in jobs that put shovels in the ground and windmills in the sky. It jump starts waste-cutting efficiency projects and invests in desperately needed advanced battery technologies to ensure the clean cars of tomorrow are **built here at home**.

Here are some of the important GREEN RECOVERY items included in the American Recovery and Reinvestment Act:

Renewable Energy & Green Jobs

With a mixture of tax incentives, loan guarantees, deployment and research funding for WIND, SOLAR, GEOTHERMAL and other renewable projects, the recovery plan invests \$25 billion to put manufacturing workers into green jobs that help our economy and our planet.

Building Clean Cars

To help get fuel efficient and alternative fuel cars built here in America, the recovery plan funds programs that will help cars to get 35 mpg by 2020. This will save families money at the pump while eliminating the need for 4.1 million barrels of oil a day, nearly twice the amount of oil we currently import from the Persian Gulf. It also provides \$2 billion in critical funding for advanced battery and clean car technology.

GAS SAVINGS

Smart Grid & Transmission Modernization

The recovery plan puts shovels in the ground, building 3,000 miles of new transmission lines, and outfitting millions of homes with smart meters to cut energy waste and save money.

JOBS

Efficiency Measures for Buildings and Appliances

Mayors from around the country have identified hundreds of money-saving energy efficiency projects which will receive a \$10 billion investment from the recovery plan. Improving the efficiency of federal buildings alone will save taxpayers \$2 billion a year.

SAVINGS

Weatherizing Homes

Weatherizing homes will save working families an average of \$350 on their energy bills per year, cutting their costs by nearly one third. This \$5 billion smart investment will generate 140,000 jobs.

JOBS

Mass Transit & High Speed Rail

\$16 billion invested into mass transit systems will create over 300,000 jobs, reduce the amount of oil we import and minimize traffic congestion by taking cars off the highway.
