Zetron Supplies P25 Console to NTIA for Compliance Assessment Tests (4/11/12)
Zetron supplied a two-position Acom EVO Project 25 (P25) console system to the U.S. Department of Commerce National Telecommunications and Information Administration (NTIA). The system was installed and will be tested at the NTIA's Institute for Telecommunication Sciences (ITS) in Boulder, Colo.

The system will be connected through the P25 Console Subsystem Interface (CSSI) over Ethernet links to live Cassidian Communications and Raytheon infrastructure. The project is designed to help ITS personnel gain a thorough understanding of how a console system operates within a P25 network.

Zetron also trained ITS personnel on the system's operation and maintenance. Personnel trained on the Acom system's operations will use the system to develop P25 compliance assessment tests. It will remain at the site through Jan. 30, 2013.

"This collaboration with the Department of Commerce NTIA demonstrates Zetron's ongoing commitment to P25 and our active involvement in projects that further the development, understanding and adoption of P25-compliant technologies," said Zetron President and CEO Ellen O'Hara.
