

# Titan & Europa Essay Contest

## *For Students in Grades 5-12*

Here's your chance to learn about Saturn's moon Titan and Jupiter's moon Europa, and find out how and why scientists want to explore these places using orbiters and a balloon or a lander.

What do you think should be the next NASA mission to the Outer Solar System?

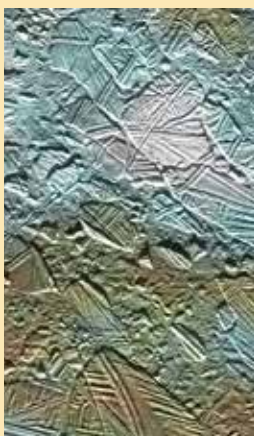

Watch videos about Titan and Europa, conduct your own research, and write an essay to tell us what you think. All entrants will receive a certificate of participation. Winning essays will be posted on a NASA website. Winners and their classes will talk to NASA scientists.

The contest is sponsored by the NASA Astrobiology Institute, including JPL's Icy Worlds and Titan teams.
