(1) Describe the purpose of this DoD information system or electronic collection and briefly describe the types of personal information about individuals collected in the system.

The Basic Training Management System (BTMS) provides information and automated data processing capabilities used to support all aspects of Basic Military Training (BMT) such as recruit training administration, trainee accountability, and flight training scheduling. The system provides key decision makers with efficient output of current and historical training information used to gauge the effectiveness of the BMT program or to support AF requirements for special programs. Personal information includes, but is not limited to: Name, SSN, Rank, Date of Birth, Gender, Armed Services Vocational Aptitude Battery (ASVAB) scores, Air Force Specialty Code (AFSC). BTMS does not collect the PII information but retrieve it from an already existing system

(2) Briefly describe the privacy risks associated with the PII collected and how these risks are addressed to safeguard privacy.

The greatest risk involves misappropriation of recruit's personal data. Records are accessed by person(s) responsible for servicing the record system in performance of their official duties, and by authorized personnel who are properly screened and cleared for need-to-know. All access is based upon role-based logons. User's level of access is restricted by their role within the organization.
