

Celebrating Life: The U.S. President's Emergency Plan for AIDS Relief

2009 Annual Report to Congress - Highlights

President George W. Bush is joined by Annette Lantos, right, and invited guests Wednesday, July 30, 2008 in the East Room of the White House, as he signs P.L. 110-293, the Tom Lantos and Henry J. Hyde United States Global Leadership Against HIV/AIDS, Tuberculosis and Malaria Reauthorization Act of 2008.

Partnerships Create Hope

For more than 25 years, the global community has witnessed the devastating impact of HIV/AIDS. Until recently, many wondered whether prevention, treatment and care could ever make a measurable impact, particularly in resource-limited settings where HIV was a death sentence.

Just 5 years ago, only 50,000 people living with HIV in all of sub-Saharan Africa were receiv-

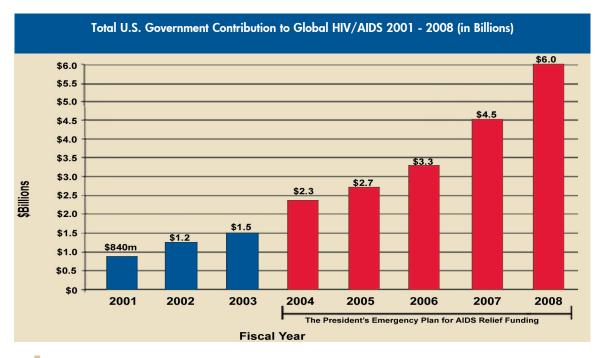

"It's important for our fellow citizens to understand that PEPFAR is saving lives, that PEPFAR is showing the good heart of our nation."

President George W. Bush PEPFAR Reauthorization Signing Ceremony July 30, 2008

ing antiretroviral treatment. Recognizing that HIV/AIDS was and is a global health emergency requiring emergency action, President George W. Bush and a bipartisan, bicameral Congress reflected the compassion and generosity of the American people.

Their creation, the U.S. President's Emergency Plan for AIDS Relief (PEPFAR), holds a unique place in the history of public health for its size and scope:

In size, with an original commitment of \$15 billion over 5 years, and a final funding level of \$18.8 billion, it is the largest international health initiative in history dedicated to a single disease and also the largest development initiative in the world. The first phase of PEPFAR went beyond a commitment to allocating resources to a commitment to achieving results, with ambitious goals to support prevention of 7 million new infections,

2 Celebrating Life: The U.S. President's Emergency Plan for AIDS Relief

treatment of 2 million and care for 10 million, including orphans and vulnerable children.

In scope, it is the first large-scale effort to tackle a chronic disease in the developing world. It moves beyond isolated efforts and pendulum swings that led programs to focus on prevention or treatment or care for HIV/AIDS, to sound public health principles — integrated prevention, treatment and care.

The success of PEPFAR is firmly rooted in a commitment to results. Through partnerships between the American people and the people of the countries in which we are privileged to serve — governments, non-governmental organizations including faith-based organizations and community-based organizations, and the private sector — we are building sustainable systems and empowering individuals, communities, and nations to battle HIV/AIDS.

Together, we have acted quickly. We have already **obligated 92 percent of the funds** initially appropriated to PEPFAR and have **expended or out-layed 68 percent of those resources**.

But success is not best measured in dollars spent. PEPFAR's success is measured in services provided and lives saved.

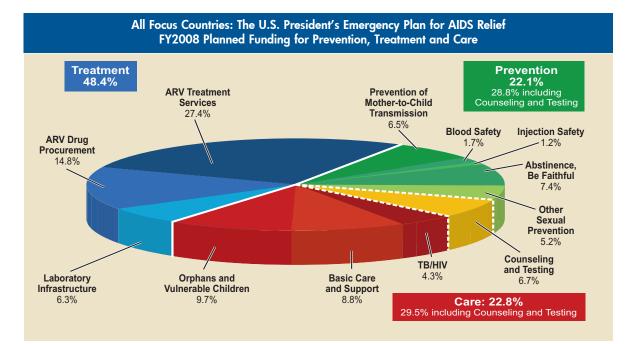

A Commitment Renewed

On July 30, 2008, President Bush signed into law P.L. 110-293, the Tom Lantos and Henry J. Hyde United States Global Leadership Against HIV/AIDS, Tuberculosis, and Malaria Reauthorization Act of 2008, authorizing **up to \$48 billion over the next 5 years** to combat global HIV/AIDS, tuberculosis, and malaria.

Through fiscal year (FY) 2013, PEPFAR plans to work in partnership with host nations to support:

- Treatment for **at least 3 million** people
- Prevention of 12 million new infections
- Care for 12 million people, including 5 million orphans and vulnerable children

To meet these goals and build sustainable local capacity, PEPFAR will support training of **at least 140,000** new health care **workers** in HIV/AIDS prevention, treatment and care.

Like many students at the Hong Cam Mining Vocational College in Vietnam, 22-year-old Pham Van Duy leads a busy academic and social life. In addition to his coursework and extracurricular activities, Duy is an active Peer Educator trained by Project N.A.M, a PEPFAR-supported project that provides a comprehensive HIV prevention program for at-risk young men in vocational schools and out-of-school settings. In 2008, 700 peer educators and club members like Duy reached more than 45,000 at-risk young men.

Partnerships for Prevention

The world cannot defeat this pandemic through treatment and care alone. The UNAIDS *2008 Report on the Global AIDS Epidemic* estimates that there were approximately 2.7 million new HIV infections in 2007.

This indicates that new infections still far outpace the world's ability to add people to treatment. The best approach to the challenges posed by HIV/AIDS is to prevent infection in the first place.

PEPFAR supports the most comprehensive, evidence-based prevention program in the world, targeting interventions based on the epidemiology of HIV infection in each country.

These include reducing sexual transmission with the ABC Strategy (Abstain, Be Faithful, correct and consistent use of Condoms), the prevention of mother-to-child transmission, the transmission of HIV through unsafe blood and medial injections, and male circumcision.

PEPFAR also integrates new prevention methods and technologies as evidence is accumu-

Prevention Summary

PEPFAR Five-Year Goal:

Support prevention of 7 million new infections.

Progress Achieved:

- Reached an estimated 58.3 million people through community outreach programs to prevent sexual transmission using the ABC approach.
- U.S. Government has supplied more than 2.2 billion condoms worldwide from 2004 to 2008.
- Supported prevention of mother-tochild HIV transmission during nearly 16 million pregnancies.
- Supported antiretroviral prophylaxis for nearly 1.2 million pregnant women found to be HIV-positive, allowing nearly 240,000 infants to be born HIVfree.

Allocation of Resources in FY2008:

 In the focus countries in FY2008, PEPFAR provided approximately \$712 million to support prevention activities. This investment represents 22 percent of focus country program funding. If counseling and testing are counted as prevention, this share increases to 29 percent.

lated and normative guidance provided. It is important for prevention activities to enter the 21st century and keep pace with evidencebased techniques and modalities that have been developed to change human behavior, especially those developed in the private sector for commercial marketing.

Kiziba refugee camp, located in the Western Province of Rwanda, is home to nearly 18,000 Congolese refugees who have fled violence from the rebel and militia fighting in Democratic Republic of Congo. With PEPFAR support and site accreditation by the Rwandan Ministry of Health, the United Nations High Commission for Refugees initiated a treatment program at Kiziba camp. Antiretroviral treatment is integrated in the full health service package that is offered to refugees, as well as the surrounding local community.

Partnerships for Treatment

AIDS is still among the most deadly infectious diseases in the world. In sub-Saharan Africa, the epicenter of the pandemic, it is the leading cause of death. More than 22 million of those infected — more than two thirds of all people living with HIV/AIDS — live in the region, and approximately 1.7 million people die of AIDS there each year, more than three-quarters of the global total.

However, there is new reason for hope. On a global basis, UNAIDS also estimates that the number of people dying of AIDS-related causes has declined in recent years, from 2.2 million in 2005 to 2.1 million in 2007. This is the first time such a decline has occurred, and the change is due largely to the increased availability of antiretroviral treatment — though improved prevention and care programs have likely contributed as well.

Lives prolonged through treatment benefit not only those on treatment. The ultimate measure of treatment is the daily impact on individual lives, and therefore on their families, communities and nations. "When we launched PEPFAR, our goal was to support treatment for two million people in five years. Today, I'm pleased to announce that we have exceeded that goal -- early.

> President George W. Bush World AIDS Day December 1, 2008

Treatment Summary

PEPFAR Five-Year Goal:

Support treatment for **2 million** HIVinfected individuals

Progress Achieved:

- Supported life-saving treatment for more than 2.1 million men, women and children through September 30, 2008.
- Treatment support is estimated to save nearly 3.28 million adult years of life through the end of September 2009.
- Increased the share of those receiving PEPFAR-supported treatment who are children from 3 percent in FY2004 to 8 percent in FY2008.
- As of December 20, 2008, 78 generic antiretroviral formulations approved or tentatively approved by the Food and Drug Administration within the U.S. Department of Health and Human Services.

Allocation of Resources in FY2008:

 In FY2008, PEPFAR provided \$1.6 billion in support of treatment programs, or approximately 48.4 percent of program funding in the program's focus countries.

A young girl rests her head on Mrs. Laura Bush's lap Sunday, February 17, 2008, as Mrs. Bush visits with orphans and caretakers in the Living Room of the WAMA Foundation, a non-profit organization founded by Salma Kikwete, First Lady of Tanzania.

Partnerships for Care

As the pendulum on HIV/AIDS interventions swings between prevention and treatment, it is often care that is lost. Yet care is a critical element of a truly comprehensive approach to fighting HIV/AIDS.

As defined within PEPFAR, there are three key dimensions to care: care for orphans and vulnerable children; care and support (other than antiretroviral treatment) for people infected with or affected by HIV/AIDS; and HIV counseling and testing (which has been counted as Care during the first phase of PEPFAR, but will be counted as part of Prevention for future years). Despite significant progress by PEPFAR in all three areas, much more needs to be done.

Recognizing the central importance of preserving families, PEPFAR focuses on strengthening the capacity of families to protect and care for orphans and vulnerable children by prolonging the lives of parents and caregivers.

PEPFAR also provides "care and support," which refers to the wide range of services other than antiretroviral treatment offered to people living with HIV/AIDS and other affected persons, such as family members. Care and support comprises five categories

Care Summary

PEPFAR Five-Year Goal:

Support care for 10 million people infected and affected by HIV/AIDS, including orphans and vulnerable children.

Progress Achieved:

- Supported care for more than 10.1 million people affected by HIV/AIDS worldwide, including more than 4 million orphans and vulnerable children.
- Supported HIV counseling and testing for nearly 57 million people.
- Supported tuberculosis treatment for more than 395,400 HIV-infected patients through September 2008.

Allocation of Resources in FY2008:

In FY2008, PEPFAR provided \$953 million, or 29.5 percent of focus country program resources, in support of care activities.

of services: clinical (including prevention and treatment of opportunistic infections and AIDSrelated malignancies, and pain and symptom management), psychological, social, spiritual, and preventive services.

In addition, knowing one's status provides a gateway for critical prevention, treatment, and care. Millions of people must be tested in order for PEPFAR to meet its ambitious prevention, treatment and care goals. PEPFAR programs have worked to ensure that counseling and testing is targeted to those at increased risk of HIV infection such as tuberculosis patients and women seeking services to prevent the transmission of HIV from mother-to-child.

To address the critical shortage of health care professionals in Côte d'Ivoire, PEPFAR collaborated with the National Training Institute for Health Care Workers (INFAS) to support the hiring of 35 instructors at 3 INFAS locations. These skilled instructors have eased the burden on medical personnel and allowed the faculty to introduce best practice methods through regular oversight, assess areas of need for improved student development, and provide a combination of theory and practice for optimal capacity development.

PEPFAR: Part of a New Era of Development

PEPFAR is the largest international public health initiative aimed at a single disease that any nation has ever undertaken. It represents a bold change from traditional thinking about HIV/AIDS and development, and is part of a new era of partnerships for international development.

Under the leadership of President Bush, and with the bipartisan support of Congress, this new era — with a particular focus on Africa — represents both a massive commitment of treasure and a strengthened sense of compassion for those most in need. The United States is changing the paradigm for development, rejecting the flawed "donor-recipient" mentality and replacing it with an ethic of partnership that emphasizes country ownership, good governance, and accountability.

In addition to PEPFAR, President Bush has presided over a near tripling of support for development worldwide, and a quadrupling of resources for Africa. The United States has also more than doubled trade with Africa and provided 100 percent debt relief to the poorest countries.

Promoting Sustainability and Accountability

PEPFAR supports enduring contributions that build health systems as part of a broader development approach. PEPFAR is working to ensure a sustainable response by building the capacity of public and private institutions in host nations to respond to HIV/AIDS.

With support from PEPFAR, host countries are developing and expanding a culture of accountability that is rooted in country, community, and individual ownership of and participation in the response to HIV/AIDS.

While HIV/AIDS is unmistakably the focus of PEPFAR, the initiative's support for technical and organizational capacity-building for local organizations has important spillover effects that support nations' broader efforts for sustainable development.

Capacity Building Summary

Progress Achieved:

- In FY2008, PEPFAR partnered with 2,667 organizations – of which 86 percent were local – up from 1,588 in FY2004.
- From FY2004 through FY2008, PEPFAR supported an estimated 3.7 million training and retraining encounters for health care workers. In FYs 2006 and 2007, PEPFAR provided approximately \$322 million to support training activities. In FY2008, PEPFAR provided an estimated \$310 million to support training activities.
- PEPFAR estimates that approximately \$734 million in FY2008 resources were invested in capacity building in the public and private health sectors to support service delivery sites for prevention, treatment and care.
