THE NATION'S RURAL ELDERLY

TUESDAY, AUGUST 17, 1976

U.S. SENATE,
SPECIAL COMMITTEE ON AGING,
Ida Grove, Iowa.

The committee met at 2:40 p.m., pursuant to notice, in the community hall, Third and Main Streets, Ida Grove, Iowa, Hon. Dick Clark presiding.

Present: Senator Clark and Representative Bedell.

Also present: Deborah K. Kilmer, professional staff member; David Harf, legislative assistant to Senator Clark; Margaret S. Fayé, minority professional staff member; and Donna Gluck, resource assistant.

OPENING STATEMENT BY SENATOR DICK CLARK, PRESIDING

Senator CLARK. If I may have your attention, we are delighted that so many of you came out on such a warm day. We are very happy to be here in Ida Grove.

This is an official hearing of the Special Committee on Aging. We have several scheduled witnesses and then we are going to try to have some time at the end for people in the audience to make statements or ask questions that they may have.

On my left is a stenographer who will record what is being said and we will then issue a printed transcript of these proceedings. If any of you are interested in getting a copy, it probably will be about a month or two before it is printed. I hope you will write to me or leave your name and address here and we will be very happy to mail you one.

I might also say that we have a form for people who do not get the opportunity to testify here but who may have something they would like to say. It simply says: "If there had been time to testify, we would like to have said the following." That will be made a part of the official record [1] of this hearing as well, so anyone and everyone who wishes to participate in that way, may.

Our subject at this and five other hearings that we are holding this week in Iowa, Nebraska, and South Dakota is "The Nation's Rural Elderly," and I emphasize the word "rural." I suggested that such hearings be held about a year ago since, as I said at our opening hearing yesterday in Winterset, we can't hope to know what is happening in rural America if we simply stay in Washington, D.C.; that is not rural America. Our chairman, Senator Frank Church,

[1] See appendix 3, p. 243.

of Idaho, agreed with this suggestion. The committee will visit many different States of the Union and talk to people in rural areas.

We are starting here in Iowa. As I said, we were in Nebraska this morning and we are going to be going to South Dakota later tonight for hearings tomorrow, and then back in Iowa again.

I want to make my statement very brief because we have a number of witnesses. We also want to hear from Congressman Berkley Bedell. So let me just try very briefly to make three or four points.

Are the Programs Working?

One of the prime objectives of these hearings is to determine the responsiveness and the practical help provided to the rural elderly by programs such as the Older Americans Act, medicare, housing programs, transportation programs, nutrition programs—all of these programs that have been set up. We would like to know whether they are working, whether you think they ought to be kept, whether you think they ought to have less funding or more funding, whether there is too much redtape—anything that you feel you want to say about it by way of trying to improve these programs.

There is a real need for this kind of evaluation because, in our view, we failed to do what we said we were going to do at the 1971 White House Conference on Aging. We really stopped at the beginning of this decade and said, "What is it we want to accomplish in the area of aging?" We have not yet arrived at a national policy on aging, particularly on rural issues. Part of the lag has been caused by lack of leadership in the executive branch. Another part has been caused by economic uncertainties that have been related to such things as inflation and unemployment.

Nationally, about 8 million people—that is, about 28 percent—of all the people in this country over the age of 60 live in rural areas like Ida Grove, but in some States that percentage actually rises to as high as 50 percent. In fact, here in Iowa about 45 percent of all people over 60 live in small towns in the countryside. So there are major differences among the States. Even though each of our hearings has a rural theme, we find that there are special circumstances in each locality that call for close inspection. That is why we are here in Ida Grove.

Delivery of Health Services

We will be especially concerned here about the lack of health services and the problems with delivery of services of this kind into rural areas. Shortage of health services in this country has reached a point, in my judgment, of extreme concern. In 138 rural counties nationwide residents do not have a single resident doctor. Now that figure is up about 37 percent—over a third from what it was in 1963. Unfortunately, it is getting worse, not better. In Iowa, the rate has dropped well below the national average.

Here in Ida County the shortage of medical care is particularly acute. The county has been designated as a medical shortage area by the Department of Health, Education, and Welfare, and today we are going to hear from health professionals of this area who will describe the barriers for the elderly persons to obtain adequate health care.

We also hope to hear from some successful programs to try to combat these barriers. The other panel of witnesses will detail the difficulties in providing any service to a rural area: The geographical obstacles, the low density of population, and the cost factors involved in providing services to the rural residents. This is what we will be discussing.

In a hearing last spring in Washington, D.C., on this very subject, I heard a great number of recommendations for removing obstacles of delivery service under the Older Americans Act. I hope that our witnesses today will have additional suggestions for improving the Older Americans Act and other Federal statutes.

Lastly, I would like to say that with the Older Americans Act programs, and in all of the others, the rural elderly must feel that no one is dictating to them. The progress that we are making in aging is due in no small part to the initiatives and the determination of older persons who are making things happen. The Federal share of their effort, if one is needed, ought to be part of the solution and not part of the problem. I think we have made much progress in the area of assisting elderly people, primarily because older people have organized themselves. Government responds to that kind of organization, whether it is at a local level, a State level, or a national level, and I congratulate you for that.

Now I would like to ask Congressman Berkley Bedell of this congressional district if he would like to make some comments before we start with the panel.

STATEMENT OF HON. BERKLEY BEDELL, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF IOWA

Representative BEDELL. Thank you, Senator Clark.

On behalf of the people of northwest Iowa in this sixth district and, more particularly, on behalf of the people that are here and our senior citizens all across the area, I want to tell you how appreciative we are of the fact that you would take your time and the committee's time to come out here, as you state, to try to learn firsthand about the problems that exist in the field.

I would like to echo what you said. I think so frequently we find people who think they know what the problems are in their organization or out in the field. I can tell you from having been in management myself that the only way you find out what the problems are anywhere is to get out there among the problems, and we certainly are grateful that you would take the time to do this.

I would like to say that I think it is important that we concern ourselves with the lives of all of our people in America, and some of those people are indeed senior citizens. So frequently I fear that they tend to be forgotten as we look at some of the issues that may be somewhat more exciting.

As we look at our senior citizens, I think we have two important things that we need to do. First, we need to help so that they can live meaningful lives. Second, I think we need to tap the assets and the capabilities that they have or that they can contribute. If any of you question that at all, you should have been here a little earlier to see the band that we had up here. Somebody mentioned to me, "Well,

I don't really have to worry about getting old when I see that band up there and the great fun that they are having."

Inflation Decreases Net Benefits

As we look at our problems, there are some specific problems that I think we need to address ourselves to. One of them is that, as the laws now stand, people who get social security cost-of-living increases frequently find that they have other problems—such as veterans pensions and this sort of thing—cut back even more than their increase. Legislation which was meant to help people get better benefits because of inflation sometimes actually decreases those benefits. I think it is important that Congress address itself to this problem and do something about it.

Senator Clark has already mentioned the problem of availability of medical care. I think that is a problem that exists all across our country—certainly it exists in rural America. We need to look at that problem.

Equally important in rural America is the problem of transportation for all of our people, particularly our senior citizens. All of our senior citizens in rural America are not where they can walk to the grocery store or walk to church or to the doctor, and it is important that they have some type of transportation available to them.

Finally, if there is one other thing, I believe it is that we have to change our value system in America. I believe we have to come to agree that we judge our success by the quality of the lives we live rather than the quantity of goods that we consume. If we are going to change that value system, I believe that it is going to have to come from rural America—from people like you. I think it is going to have to come from people who have their feet close to the soil, who have a religious heritage, who care about one another, and who are willing to do what they need to in order to help build the society. When we say what those values are and show that we care for one another and love one another, it will really change our society.

I am thankful to you people for being here and I am deeply thankful for Senator Clark and his staff being here. I am thankful for all the people who are here participating in this program.

Thank you very much, Senator.

Senator Clark. Thank you for an excellent statement, Berkley.

I think I will introduce the staff members that are here before I introduce the mayor, so if you need to contact somebody in the process of the hearing you will know who they are.

First let me say Annabelle Short is the court reporter; back here is Dave Harf, my legislative assistant, who will be happy to help any of you; Debbie Kilmer, on my right, is a professional staff member of the Committee on Aging; Peg Fayé is a professional staff member who represents the minority side of the committee; and Donna Gluck is resource assistant with the committee.

Now let's go ahead with the first panel. We came here basically to get the judgments of the people from their area. First and very appropriately we are going to hear from Theo Murphy, the mayor of Ida Grove, who serves on the county task force on aging. He is going

to describe, I understand, what it is like to be a rural official who is responsible for the needs of the elderly people.

Theo, go right ahead. We are going to try to ask each of you to limit your comments to 5 minutes because we would like to ask you some questions and have some discussion.

Mayor Murphy.

PANEL ON DELIVERY OF SERVICES

STATEMENT OF HON. THEODORE E. MURPHY, MAYOR, IDA GROVE, IOWA

Mayor MURPHY. Thank you, Senator Clark and members of the Senate Special Committee on Aging.

My remarks basically will pertain to housing, because it is my firm belief that to give dignity to people you have to provide adequate shelter—clean, well ordered, secure—something that they can live in and feel proud of in their declining years. We have not been able to do this in most of rural America.

For many years most communities in northeast Iowa—and I am familiar with most of them—have been trying to develop a housing program to provide low-rent housing to the elderly people of their community, housing that they can afford to live in with a very moderate income. I know some of you would be surprised at the income that a lot of our people are living with—under $2,000 a year. When you measure that against a need for rent and utilities that will be at least 25 percent, that means that they will be paying less than $50 a month for Ida Grove, and you know that is an impossibility.

For a number of years we in Ida Grove, and many other areas of northwest Iowa, have been trying to develop a housing program and we have had our frustrations. We have employed architects and we have employed developers. We have tried to move this thing along so we could develop 30, 40, or 50 units in a town the size of Ida Grove and it has been impossible to do this.

We have moved away from any attempt to develop housing under the so-called HUD program. It just seemed like we could not get HUD interested in a small community that needed a lesser number of units.

We went to the Farmers Home Administration 2 years ago. A low-rent housing corporation made up of individuals of Ida Grove, we raised $10,000 as our proportionate share of the cost to develop housing. We secured land to build on and then we moved along with the Farmers Home to build eight one-bedroom apartments and four two-bedroom apartments. They were completed on January 15, 1976, and they were completely occupied in 3 days' time.

EVEN LOW RENTS TOO HIGH FOR SOME

Of these 12 families that moved into the housing unit we developed, 4 of them could not afford to pay the rent that we needed, which was very minor: $100 a month for a very beautiful compact one-bedroom apartment, or $125 for a two-bedroom apartment with all utilities furnished. We tried to get a rent supplement through section

8 of HUD to help these people get along, and that was impossible. We just could not get it off the ground. By talking to relatives of these elderly people, we did get enough supplemental rent from these children to move these elderly people into the housing units.

Now we didn't stop looking for rent supplement. We went to Washington last October and met with Berkley Bedell and his Northwest Iowa Conference; we talked to Mr. Dale Elwell of the Farmers Home Administration; Department of Agriculture; and with the man representing HUD. We tried to get these people together so that they might agree that in a small community we should have a rent supplement to help you people. We could not get it off the ground at this meeting.

However, by writing letters we have got a statement that now they have an understanding between HUD and Farmers Home. They are hoping to get this implemented so we can develop 24 more units in Ida Grove. We are starting on this at the end of this month by letting the contract, and then get low-rent housing subsidies for you people who may be moving in. Right now we have 27 people on our list, and of these 27—we note from the financial statement they have given us—several cannot afford to rent our housing units.

What do we have to do? We have got to go back and beg Farmers Home to go ahead and implement this part of the program to give us these low-rent subsidies, or we have to go out and contact the relatives again to give them some kind of a rent subsidy from their pocket.

Senator Clark, we have not quit in our endeavor to get a low-rent housing subsidy from Farmers Home. With your continued help through your office and your Senate Committee on Aging, I think we can get the job done in time to get the rent supplement for these two new 24-unit buildings which are beginning this fall and hope to have completed in May 1977.

I have two copies of my statement as you requested. With them I have copies of letters to Mr. Elwell,[1] copies of letters I have received from Mr. Elwell,[2] a letter that I sent to Mr. Pim [3] who is the Iowa director of housing under Farmers Home, and a reply from him [4] in which he states: "We anticipate getting this program going in the near future." This is the place where we need the aid.

Now in our small communities we can do a lot for ourselves. As Senator Clark and Congressman Bedell stated, we can pick up a lot of the loose ends. We are organized to do a good job in helping the elderly. We cannot do it all. We have to depend on the State or the Federal Government for assistance. This low-rent housing supplement that we need is the best we can get from your office.

Thank you for this opportunity.

[The prepared statement of Mayor Murphy follows:]

PREPARED STATEMENT OF MAYOR THEODORE E. MURPHY

For several years Ida Grove, as well as many other smaller cities in northwest Iowa, have endeavored to develop low-rent housing for the elderly. There have

[1] See appendix 1, item 1, p. 237.
[2] See appendix 1, item 2, p. 237.
[3] See appendix 1, item 3, p. 238.
[4] See appendix 1, item 4, p. 238.

been many frustrations along the way: lack of funding by Congress, plans were for a lesser number of units than HUD would go along with, etc. You people have heard many times from community leaders about the housing situation for the elderly.

Two and one half years ago Ida Grove organized a nonprofit low rent housing corporation. They raised $10,000 to qualify for FmHA assistance, employed an architect, and developed eight one-bedroom units and four two-bedroom units. The only additional assistance we needed were low-rent subsidies under section 8, HUD, and this we have not been able to get. Our 12 units of housing were completed on January 15, 1976, and were filled within 3 days. Four of the tenants had to have assistance from their relatives to pay the rent of $100 per month.

Attached to this testimony is a copy of my letter to Mr. L. D. Elwell, Assistant Administrator for Multiple Family Housing, FmHA, relative to a discussion I had with Mr. Elwell and Mr. Howard L. Huttman, Jr., policy planning division for HUD, at a conference in Washington, D.C., November 10, 1975. Mr. Elwell's reply dated May 12, 1976, is also attached hereto.

As suggested by Mr. Elwell, I wrote to Mr. Robert R. Pim, Iowa State director for FmHA. On August 10, 1976, Mr. Pim replied. Copies of both letters are attached.

At this time Ida Grove has qualified with FmHA for 24 additional one-bedroom, low-rent housing units for the elderly. From our list of applicants on file at this time we know there will be many who cannot pay the required rent because of their low income status. Somehow they will need a rent supplement from HUD which we know at this time is impossible to get; from FmHA which, from Mr. Pim's letter, may be forthcoming; or from relatives of the applicants, which in several cases is quite unlikely.

So, somehow, the impetus for low-rent subsidies must be placed on FmHA. This is the big reason why I am appearing at this hearing. I know we have to do as much as possible on all matters pertaining to the needs of the aging, by the individuals concerned, by the communities in which they reside, but we also need much assistance on the State and Federal level.

Statistics show that nationally, and especially in Iowa, the elderly population continues to grow. In a survey made in Ida Grove as late as November 1975, 27 percent of our people were over age 60. This figure applied to an Ida County population of 9,300 means that over 2,500 elderly people reside here. We have just begun to take care of the needs of these people, and the situation will continue to grow from year to year.

We feel confident that you, Senator Clark, and the Special Senate Committee on Aging, will give careful consideration to our problems.

Senator CLARK. Thank you very much.

I think it is an excellent statement and Congressman Bedell and I will be very happy to work with you on it. I know that both of us supported a $750-million appropriation for elderly housing. We voted for that. We believe that people in the rural areas pay their taxes just like people in metropolitan areas and that is what this hearing is all about. That is really our purpose, to make certain that people in the smallest communities and people in the rural communities have that kind of assistance.

We are going on and hear from the other three witnesses, then we will have questions.

We are going to hear now from George Marsh, a resident of Sioux City, who is the chairperson of the State Advisory Committee on Aging. As I understand it, he is going to give us a brief description about communities in and around Sioux City and relate it to our topics of delivery of services in rural areas. I know as chairperson of the State advisory committee Mr. Marsh will be able to compare the Sioux City needs with those of the entire State of Iowa.

Mr. Marsh, you proceed in any way you think appropriate.

STATEMENT OF GEORGE E. MARSH, CHAIRPERSON, STATE ADVISORY COMMITTEE ON AGING, SIOUX CITY, IOWA

Mr. MARSH. Thank you, Senator Clark.

Appearing as a member and chairman of the State advisory committee, I would like first to indicate that this position is entirely elective and I want to describe for you the setup of this job. As a member of the various committees created to work with those who produce the services that we need, it is entirely voluntary. I began this voluntary service as a member of the Woodbury County-Sioux City group of the Woodbury County Task Force attempting to obtain financing for the Sioux Senior Citizens Center. We proceeded to attempt to develop financing from the city council and also from the Woodbury County Board of Supervisors. We were successful with one group, but not with the city council in Sioux City.

Along the way we learned of the availability of Federal funds that might be obtained on proper application. I got acquainted with the fact that we had to have an organization, not just locally, but that the requirements were such that we had to have an area of organization. I want to describe for you a little bit of these organizations that I have become acquainted with, worked with, and developed.

We did not at that time have the area organization required by the Older Americans Act which made provisions for the funds that might be available. This caused us to have to go to work to set up the organization we needed. At that point in time I discovered the existence of the State Commission on Aging and the fact that we had to get material assistance from them and the State staff in organizing the area that was allotted to us. This included the five counties up here—Monona, Ida, Plymouth, Cherokee, and Woodbury—and we worked with that organization in getting that thing together. It took a great deal of time. I want to thank the organization in Sioux City which became our sponsoring agency for the work that was done. This was very important to getting the thing set up and in place.

"WORKING FOR THE WHOLE AREA"

As the thing developed and I became a member of the advisory committee of the area, I discovered that we were not working just in the city, but we were working for the whole area, including the counties I just mentioned. The applications for services are to the State commission since the funds the State has available would have to be reviewed and passed through our hands.

We also discovered we would have a representative on the State advisory council to both the commission and Governor of the State of Iowa. For reasons rather dim to me, I became that member and went on to Des Moines and met with representatives from the other areas in the State and again became elected to the office of chairman of that group. I have had an opportunity to see the workings of the machinery that it takes to organize and deliver the services and get the funds out to local projects throughout the State.

The problems are not all local; they are areawide and statewide. I see one problem that has developed in the last 5 or 6 months, in terms

of the rural areas, in a feeling that their share of the funds that were allocated is inadequate and, perhaps, that they should have a higher proportion. I say this because these people representing those areas tell me that it costs more—and I am sure they are right—to deliver services to an individual in a rural area where the distances are great and where either the people have to be transported those distances or the services have to go out to the individuals.

Over the period of time that I have served with the committee in developing the Sioux City Center, we have come to believe that a center of the type that you people have right here is one of the important elements in reaching the people who need the services. In this way the problem of identifying the individuals or their becoming aware that the services are available is one of communication with those people who provide the services and who have the know-how to get the job done.

You have a fine center here which I believe is of the type where it will become so visible to the general public in the area that older people will recognize it as the place to go for any type of problem that they might have. Our elderly people can come to a center of this type and find the kind of services offered, although it may not be available at that particular point. At least they can find out about the service, get the information that they need, help in getting to it, or having it brought to them. This is one of the things they have learned to accomplish.

I think that is it.

Senator CLARK. Thank you very much. We appreciate your comments.

I might say you referred last to the multipurpose senior centers that you have in Sioux City and other places. The Congress has taken a particular interest in developing these centers and I know Iowa's allocation of money for this next year is about $75,000. We are hopeful that more and more of these centers will be developed.

We will have questions in a little while, but I would like to go now to Beulah Webb who is from Sioux City and who, as I understand it, has independently organized, developed, and implemented a senior center in Sioux City. She has won awards from many organizations and from the Governor of Iowa for her services to the elderly. I think she knows everyone in Sioux City and certainly everyone in Sioux City knows her. She has the kind of experience to be a good witness on problems of the elderly.

Beulah, we are very interested in hearing you now.

STATEMENT OF BEULAH WEBB, SIOUX CITY, IOWA

Mrs. WEBB. Thank you, Senator Clark.

Good afternoon to Ida Grove and thanks to the mayor for having us here. I think it is a marvelous program. The one thing that I want to say concerns our problems as senior citizens of the center. I want to let you know that I was the first black delegate, and the only one, from the State of Iowa. I was selected by our Governor to represent the senior citizens at the White House Conference in 1971. I went because I knew the housing need. My main purpose was hous-

ing, because we had just as much trouble with housing in Sioux City as you do in Ida Grove, and we are just beginning to get it. Our State and National representatives know me so well. I have sent out many letters on my own in order that they would know our need and our problems with aging.

I want you to know something about senior citizen centers. Sioux City is the only registered, nationally known center in the State of Iowa. We do not have enough centers today in our State. We are open 5 days a week from 9 to 4:30. We accept the area council and say "thanks" to those who came to our rescue. I want you to know—starting out, we went to our city, and we went to our county. I will be ever grateful to our Woodbury County. Our peers of the city didn't accept us the first year, nor did our State. That meant those who were around and helped to open the doors—some of you have heard of Arthur Samford. He is a philanthropist, and he gave us our first year. We started out with a small amount of $15,000, and from that we have grown.

The next thing that I would like to let you know is that we are here to stay. We are senior citizens and our agency is growing. Consequently, what we need is the people to back up whatever you want. Right now we have a dilemma. I don't know where to put the thing—whether to put it at the city, the State, or the Nation, but I am quite upset. I have these papers before me, but I am unable to see them. Consequently, it is very difficult for me to do the reading that I would like to do.

Many Seniors Live in Area

Project grants are slow coming in. I have four on my staff today. We have an attendance of better than 75 people a day who come in 5 days a week. I don't know how many of you get our bulletins that we put out stating our activities there. It is ongoing and I don't know how many of you know how many senior citizens we have in our area. We have better than 10,000 in Sioux City, so you can imagine how many are in area IV. If you multiply the five counties, you come up with a vast number.

The thing that is troubling me today is the delay of our grant. We are working from day to day not knowing whether we are going to be funded or not, and it is definitely known. On the way of positive thinking, we have to have operations. Our grants, when they get to us, are so very meager that I am almost out begging.

They want to know whether I am going to close the center. No. By faith we will survive. People have been very kind in the last few weeks with tremendous donations that are keeping us alive.

Our county has given us their allocation. They allocated us $7,500. As we grow we have expanded, and it takes something like $32,000 to operate our center. We have expanded into the basement; we are going to make people happy. I wish we had $32,000 on the new building. This is our third year and we are on our last appropriation grant. We have to have it by September. This shortness of time to fill our grant is the thing that has disturbed me. There is so much paperwork that our area representatives cannot come down or get ours to come to them—and the things that we need.

If you could just see the paperwork alone. I am hoping the Government some way will find out that it has become so repetitious—of all the paperwork that has to be done. When you do that, you don't get to the rural. They don't know the people. We are in the centers and know our people. Neither do our State representatives know the people in the rural areas because they are bogged down again with a lot of paperwork. We in the community are developing the funds. On the other hand, I am hoping some way that there will be more funds to be allocated.

Now I just learned that a lot of you do not know about the Community Development Act. We have a title V that has just come up and we do have a Community Development Act. I don't think any of you know anything about it. We did not know that we have title V which we could use to ask for funds. When I went to Washington last year I asked them to listen. I wanted to know what was going on. I hope to make it to Chicago to the National Council on Aging Convention.

I asked some of the heads of our agencies if they would in some way bring in title V, which I find has been passed. There are two; the State has one. I bypass the State and am going to the national, because in our State we do not have a multiple-purpose center as yet. I don't know how the multiple-purpose center is classified. At present, we don't have the facilities for a multiple-purpose center. It is not that we don't want it, but you must have the facilities to correspond with your State needs, and there is no way at the present.

Center Serves in Many Areas

We do what we can. We have marvelous programs, but health, education, and welfare, and on down the line—homemakers and everything—comes within the center. We hope in the future to appeal to both the people, our Congressmen, and to our State. They will see our need.

I would like to leave these few words with the northwest part of Iowa; it is a thought to remember. You see, I have been working for 52 years in the States and whether you know me or not, I have learned a lot and I know our needs.

First, rise up and be counted. You don't know the strength we have as senior citizens. We have the voting power.

Second, if you don't like a thing, let them know about it. Our representatives we elect, but if they don't know our problems, how can they solve them? Just remember that.

Third, state what you want when you are with them. The time is now, not tomorrow. So keep in touch with your representative and yourself.

Keep in mind. "Not for myself but for others," because we are sitting around today building bridges for those who would pass over after we are gone.

Thank you.

Senator Clark. Thank you very much, Beulah. I could not agree with you more, particularly on the closing part of your comment. I think in a democracy if people, of any age or any group, are not prepared to organize and work, and meet with their representatives at a

local level, the State level, or the national level, then it is not going to work. You really have to be organized and prepared, and have your views known, because only in that way is it going to work effectively in a democratic process.

Before we have questions, we are going to hear from Jean Sandman who is director of the AID center—that is, the assistance, information, and direction center. We are going to find out what that is first. She serves Sioux City and the vast area surrounding Sioux City—the rural areas as well. This program is an information and referral system which contacts the elderly and attempts to match them with any of the services that they might need in their area, or as individuals. In other words, they go out and try to find people and match them with the services that are available so that they are not just services and people, but that they get the two together. It is a very, very important job. We would like to hear from Jean Sandman on how she thinks it is going, what this program involves, and anything she would like to cover.

STATEMENT OF JEAN SANDMAN, DIRECTOR, AID CENTER, SIOUX CITY, IOWA

Mrs. SANDMAN. Thank you, Senator Clark.

First of all, I had better tell you what the AID center is. AID center is just a year old. We started in August of last year. We were funded by both Federal and local funds and we do serve a five-county area, which includes Woodbury, Plymouth, Monona, Ida, and Cherokee.

AID center is primarily a telephone service. You will find our cards on the table over here. We also have some brochures that tell you what we do. These are provided for you people so you will be able to call us. We have a toll-free number so there is no charge to you at all. If you have any questions about services, if you want to report something, if you feel you have some of these needs that we are talking about today, you can call AID center.

AID makes monthly reports, quarterly reports, and annual reports. We give that information to anyone who wants it. We document what people want, what they really feel—in other words, what they need. We see how satisfied they are with services or whether they are able to find what they want. We document what people call about and how many resources are available. We are probably the most complete source of information on services in northwest Iowa. We document and have information on every service that we know of.

TOLL-FREE NUMBER AVAILABLE FOR QUESTIONS

If you call us and ask us where you can write to the American Cancer Society, we can give you the local, the regional, and the national address. Any information like this that you want, we will give you. If we don't have it, we will find it. As I said, it won't cost you anything. You can call us with this toll-free number and we will answer any questions that you have. You do not have to identify yourselves if you do not wish to. We are very happy to answer your questions, even if we don't know who you are.

Senator CLARK. Jean, these look very, very practical. Were those passed out, or are they over on the table?

Mrs. Sandman. There are some on the table and I have some more with me.

Senator Clark. Fine. I think everybody here might well want that, and you have a brochure as well to explain it.

Mrs. Sandman. And the brochure has the numbers on it, too. If you don't get a card, you can take a brochure.

As I said, we are a year old and we do document what is needed by the people, which is really what we are paid for. We are not paid to answer your questions, although we provide that service. We are funded primarily by title XX and through this we are allowed to have people call us. Through these calls we document needs, and needs are used for title XX planning. So because of funding, we are not allowed to call ourselves an information and referral service.

Funding is a very difficult thing to find, although under title XX, information and referral is included in the national plan. Information and referral is not included in the Iowa State plan; an agency like ours is rather unique in Iowa. I think we are lucky in northwest Iowa to have it. We can thank Chuck Sweeney, district director of the department of social services, because he worked very hard to get this service for us.

We also discussed whether AID would be an area service. For a while the State Commission on Aging had a toll-free telephone which one could call and get his questions answered. We feel that it is difficult enough being an area service without providing statewide services. My workers and I are trying to get out into the area. We are talking to people directly so that they know us and they will feel more comfortable when they talk to us. We are very interested in serving them.

Within the past few weeks, AID staff has gone to the congregate meal sites to gather information for this hearing. I know persons from Onawa and different places have seen me there. We talked to 119 people—they were all senior citizens—and we asked them what they thought they needed. We had a very simple questionnaire and we asked them to fill it out and state their needs in preparation for this hearing. Their needs are not too different from those we are now hearing about.

In health, for example, about 47 percent of the respondents said we need more doctors, and I think we all know that.

Transportation was another big item that they mentioned.

Income maintenance, as it is termed, they wanted more coverage on medicare. Some of them need larger social security payments.

Mr. Bedell was talking about the fact that senior citizens' incomes might be cut when they have income from two or three different sources and social security is increased. They were very concerned about that.

They were concerned with inheritance tax.

Needs Documented

We documented all these needs and we are going to give this report to Senator Clark so he can find out what, at least, 119 people felt were the needs of the senior citizen in northwest Iowa.

80-462—77—3

Senator CLARK. Thank you very much. We appreciate having the report [1] and we will make it a part of the record so we will have it printed.

I would now like to ask a couple of questions of each of you.

Jean, on your AID program, how do you advertise your assistance program? How do elderly people know about your services? Now these people know about it because they can go over and pick up a pamphlet and call you because your number is on it, and so forth. But what about the tens of thousands of other elderly people in this part of the State? How do you get to them?

Mrs. SANDMAN. Yes. You have talked about our most difficult problem, because it does seem that no matter how much publicity we get, people forget about us the next day. We have been on all the radio shows that come out of Sioux City and even one in Lemars. The TV stations have all given us publicity. We sent articles to all the local newspapers. We follow up on this every few months. Getting known is our most difficult thing. We finally decided we are going to have to go out and meet the people and pass out the literature ourselves. AID center is free; anyone can call us without charge. Our one purpose is just to help people. I should mention we are getting over a thousand calls a month so you know somebody knows we are around. But publicity is a big problem.

Senator CLARK. Let me ask you—you are available to guide people to those services. What service do most people in this part of the State want or need?

Mrs. SANDMAN. That is very easy. It is housing.

Senator CLARK. Housing.

Mrs. SANDMAN. Without a doubt, it is housing, yes. We have more problems with that than anything else.

Senator CLARK. Does this AID service that you have offer any method of followup contact with the elderly persons you direct to services? In other words, do you often actually see elderly persons or follow up to find out whether they were helped by the services you put them in contact with?

Mrs. SANDMAN. Yes, that is part of our service. We do follow up. But you can understand if we do not ask persons calling to identify themselves, that does limit the amount of followup we can do. We follow up on anyone who identifies himself and accepts this service. We ask their permission to call back and find out whether they got the service they asked for and if they were satisfied with it. This information, too, is documented.

STUDENT USED AS COUNSELOR

We provided a service this summer which was rather interesting. I am sorry it has to end and that it was just for the Sioux City area. We took a college student, made him a housing counselor, and had him spend all his time looking for housing, asking people their housing needs, and trying to match people with houses. This was very successful but it is the type of program there is no funding for.

Senator CLARK. Well, that has been very good.

[1] See appendix 2, p. 239.

As I understand what you are saying, Jean, you provide any service that is available; you simply match them with the people who call you.

Mrs. SANDMAN. Yes.

Senator CLARK. What about matchmaking. Do you do any of that? [Laughter.]

Mrs. SANDMAN. You would be surprised. We get that question all the time.

Senator CLARK. I want to ask Beulah some questions.

Beulah, you have come in contact with seniors every day who come into your center in Sioux City. What do you think is the No. 1 service that they seek from your center?

Mrs. WEBB. I think one is housing, transportation, and counseling. We do have the senior citizens who do not want to go up to the AID center since they are not able to climb the hill. Through AID, Mr. Littlefield is our counselor down there.

Senator CLARK. What kind of counseling do you do?

Mrs. WEBB. Anyone who comes into the center and so desires, they get it. It may be on taxes; it may be on rent; it may be they don't understand the water bill or they don't understand the lawyer. You can go to him and he will work through with the lawyers on real estate or anything like that with the person who is confused and does not understand.

Some of the people in their home—there could be something that maybe he could help. We average from five to six people a day in that particular field.

We are the referral agents for the congregate meals. In that way, instead of them calling the average person, they call the Sioux City Senior Center. They will call and ask us rather than call the site, and so we do that.

Then we have a community action bus for out-of-the-county which serves 14 communities in Woodbury County. They come up to Sioux City, which is where they come in and register. We keep track of the people who are registering in it so we might know, and then they come back and pick them up. They come in 5 days a week for the congregate meals. The community action bus comes in and takes people. They register there for the meals for the next day, and she cares for five to seven. That bus goes to their home, picks them up, and takes them back.

Senator CLARK. Now, Beulah, I want to answer a question. I promise not to tell the answer to anybody. I understand you were the one that ran the center almost entirely on contributions, that you got the TV station to give you part of the kitchen, and that you talked the police department into giving you donations, and so forth. How do you do it?

Mrs. WEBB. Telling the truth.

Senator CLARK. What do you mean?

"I CALL THE NEWS MEDIA"

Mrs. WEBB. If they ask a question about what we need, I tell them. Consequently, if our landlord does not come across, I tell them, and I

call the news media. We had leaks in our center, and so I called the news media. I said to the landlord, "If you see me on TV mopping floors or catching this water in buckets or coming before the public asking for funds"—I just call the news media. The city does not want to always be faced with the facts of our needs, and we still are going to apply to our city for our grant. The thing that is troubling me is the revenue sharing and why our center does not get it.

Senator CLARK. Let me ask you one last question, Beulah. You come in contact with a number of elderly people, as you are right now, in other communities that would like to start a center. How do they do it? How do you recommend that they get started so that their communities could have a multicenter? You talked about this multipurpose kind of center that people could come to for services. How do you do it?

Mrs. WEBB. Well, I am not going to send them to Rick, but I do want to call for the cooperation of our director of the area agency. But how I did it—I don't know whether anybody would want to walk alone. I fought this battle since 1971. I saw the needs of our community. I saw the need of the rural elderly. There was no place for people to sit down.

I said if the opportunity for them ever presented itself, I would go out. I started out—not bellringing, but with a cry for the needs. So it materialized from the Woodbury County Council on Aging. I was the president at that time. Consequently, I sold the idea to them. We started to build up. You have to have people that work together. The most important thing in the world is the togetherness and belief in the thing that you are undertaking to do.

Everybody came in the door when they did open in July 1973. I was a volunteer, too; I was not paid then. I don't think there was any money involved, because I was the president of Woodbury. "Do you want to be my volunteer?" Everybody in the door. "Can you give me this much time?" They don't know how much. I said, "It is not how much, but what you can give."

Consequently that is the way we do it.

People had the faith and the belief in the things that were needed. They really are enjoying it, and we are growing. When you say you have, on average, 1,500 to 1,600 people a month coming in 5 days a week, it is something you needed in the five areas. They come from South Dakota and all over the Nation—dropping in. They hear about us and come to see what has been accomplished.

MANY MAN-HOURS VOLUNTEERED

The one grand thing—we have one man that I would like for you all to know. The different stations came to our rescue. We have an electric kitchen, believe it or not. Many homes don't have it, but we do. They volunteered their labor. We counted the money and figured it would cost over $17,000. You could figure out how many man-hours five or six men put in.

I will tell you a funny story and stop. For every urban renewal torn down, we would creep in and get the material to build or expand. The city inspector came and said, "You can't put that in because it isn't fireproof."

I said, "We moved it from across the street; it was fireproof over there. Does it cease to be fireproof because we bring it across the street?"

He said, "Yes."

I said, "I will see about that. I will put it in the news."

So I got it without having to call the media. [Laughter.]

Senator CLARK. Thank you, Beulah.

I want to ask George Marsh just one question, but it is a very important question. As chairman of the advisory council, I think you are in a good position to give us your judgment. It is simply this. What, in your judgment, have you found to be most lacking in the Older Americans Act—in the services that it provides? In other words, if you could tell the Congress or the President what it is that we are not doing that needs to be done, what would you recommend?

Mr. MARSH. I think, as to provisions, the Older Americans Act covers the field very well. I think probably the principal need at the present time is additional funding to get the job done. This is the biggest item. I am concerned with our local situation, particularly with our—well, we have it in Sioux City. There is a requirement in the Older Americans Act have to do with—or at least if not in the act, then in the regulations relating to it—a percentage of local public matching which I think is necessary. The problem, however, is a little involved, in that we have a need for—the term is not "project," but that is the best I can do right here—a new item coming on.

Senator CLARK. When you undertake a new program?

Mr. MARSH. Yes. If we happen to start it. If we can only get it started in one county, for example, or one town, we are eligible for 90–10 in terms of matching.

Senator CLARK. In other words, the Federal Government pays 90 percent and the locals pay 10 percent.

Mr. MARSH. Yes.

Senator CLARK. When you start new programs.

TROUBLE OBTAINING MATCHING FUNDS

Mr. MARSH. When we start a new program. Now we have run this with regard to those funds that are available. We have the area set up, and some of these programs that are regarded as areawide, we get it in one locality. Then we wind up being behind the eight ball when the next community wants to set it up in that we have already existed with this program for a year or more in the area. We have a little trouble about getting any 90–10 or 25–75. I think that is a mechanical thing that needs to be corrected. It has to do with the definition of what constitutes a component—the program in that area.

Senator CLARK. Thank you very much.

Now I would like to ask the mayor a question.

As I understand it, you have a new minibus for the elderly in Ida Grove. In fact, it is right outside here, isn't it?

Mayor MURPHY. Yes, sir.

Senator CLARK. How is that going to operate in this area?

Mayor MURPHY. It is going to operate countywide. We are going to cooperate with the sheltered workshop people in Holstein, so we will be hauling seven of their clients to begin with, and probably more

at a little later time, from the south part of the county to the workshop area. We will be making a trip up there at 9 o'clock—to arrive there at 9 o'clock each day, Monday through Friday. Then we will pick those people up from the workshop at 3:30 in the afternoon and deliver them back to their homes, wherever they may be, in this part of the county.

At the same time we will be hauling people to Battle Creek, to Arthur, to Galva, and to Holstein from Ida Grove, and from those communities back to Ida Grove or to other parts of the county. We intend to schedule regular trips every week. We intend to meet with a bus from Cherokee County at Holstein on a particular day of the week so if people from this area want to go into Cherokee County or to the city of Cherokee, they may do so on this particular day. Then we will meet them later in the afternoon at 3 o'clock and deliver them back to their homes in other parts of the county.

We expect to work the same way with Woodbury County; we may come into Holstein either on Thursday or Friday. I believe at this time they are thinking Friday. We will meet them there at 9 or 9:30 in the morning—I am not positive. They will have an express run from Holstein into Sioux City and then they will allow the people to stay there for a period of approximately 4 hours. Then they will deliver them back in express down to Holstein to be there at 3 or 3:30 in the afternoon.

We expect the Monona County bus to drive into Ida Grove from the west through Danbury, Battle Creek, and into this area. Just how often we are not sure, but it could be 1 or 2 days a week.

Trips Scheduled for Elderly

So with this kind of cooperation, we hope to have a wider area that we can cover to take these elderly people over to the places that they want to see. This runs Monday through Friday in this way. We expect to schedule trips from nursing homes and from the senior citizens centers to as many of the communities as they wish to have them scheduled, on holidays, Saturdays, and Sundays.

Our bus will haul 15 people. We expect to load in 15 people and take them to Strong Lake, Sioux City, and Ida Grove. We feel this thing can work very well throughout the entire county, and somewhat throughout this northwest Iowa area.

Senator Clark. Thank you very much, Mayor. You covered a lot of territory there and it was very valuable material. I know there are a lot of people in this room who wonder what day it is going to be where. Who would they contact to find out how to get this particular question answered?

Mayor Murphy. We have set up a special phone in the city hall in the clerk's office, and we will have a schedule out to all of the people of the county in the very near future. We have it out somewhat now as to the needs of the senior citizen groups in the various communities. They can call on a special line to our office, tell the clerk over there that they would like to have the bus stop and pick them up, even in the rural areas between here and Holstein or between here and Lamar. We can drive off the regular route and pick up people and take them into the community in which they want to go.

Senator CLARK. I want to congratulate you for providing this bus and making it available to the whole county. I know it is going to be an enormous help. Transportation continues to emerge as a major problem for older Americans and, in fact, I understand some of you came in on this bus today.

Those who did, raise your hand.

[Show of hands]

Senator CLARK. Good. Excellent.

Well, it has already been put to use.

I want to thank this panel very much.

We have one more panel with three people and we hope you can stay for that. This panel did an excellent job and gave very helpful information. We thank you very, very much.

Mayor MURPHY. Thank you, Senator.

Senator CLARK. The next panel is on health services and it is made up of Anne Snell, R.N., regional supervisory nurse, Iowa State Department of Health, Ida Grove, Iowa; Dennis Tobin, director, Department of Social Services, Ida County, Iowa; and James Krick, Ida Grove, Iowa.

Please come up to the table. We will hear from each witness and then have a question period.

We will hear first from Anne Snell. Anne has worked for years here in Ida County and she knows the health service needs of the residents here. As I understand it, she is going to relate what health services are severely lacking for the elderly now, and the consequences of what must be activated to compensate for the lack of health services in such rural dwellings.

PANEL ON HEALTH SERVICES

STATEMENT OF ANNE SNELL, R.N., REGIONAL SUPERVISORY NURSE, IOWA STATE DEPARTMENT OF HEALTH, IDA GROVE, IOWA

Mrs. SNELL. Thank you, Senator Clark.

The goal of most elderly persons is to retain their independence and live in their own homes as long as possible. This goal can be reached only through expansion of existing home health services. Are public health nurses who assume responsibility for most of the home health services provided in our rural counties serving the elderly population?

Let us look at some 1974 statistics of two counties in the area. Ida County, which we are now in, has a population of 9,100, with 1,900 persons—or 21.3 percent—being age 60 or over and 1,400—or 15.9 percent—being age 65 or older. During the fiscal year July 1, 1975 to June 30, 1976, the one public health nurse in the county made a total of 1,397 visits; 1,202—or 86 percent—of the visits were to persons age 65 and older; 112—or 8 percent—of the services were to persons between the ages of 45 and 64; and 83—or 6 percent—to persons under age 45. About 19.5 percent of the 16,000 residents in neighboring Cherokee County are age 60 or older. Of the 2,210 home visits made by two public health nurses during the past fiscal year, 1,862—or 84 percent—of the visits were to persons 65 years of age or older. So when we think about the number of visits for 65 and older, we see

that nurses are spending over 80 percent of their time in this area and still are not beginning to meet the needs of the people.

Last fall the public health nursing services and departments of social services in Calhoun and Pocahontas Counties established there was a need to provide health screening for persons age 60 and older as many of these persons do not see a physician regularly due to physician shortage, transportation problems, lack of finances, or they do not recognize the need. Around 22.7 percent of the 14,300 residents in Calhoun County are over 60 years of age, and Pocahontas County, with a population of 12,700, has 20.5 percent age 60 and older.

Screening Clinics Established

Grant funds were obtained from the Iowa State Department of Health to establish well-elderly screening clinics. These clinics are held in each of the towns in the 2 counties on a rotating basis. There are 21 towns in the 2 counties with 7 physicians located in 1 town, 3 physicians in 1, 2 in another, and 1 physician in each of 2 towns—leaving 16 communities with no physician. A hospital is located in 2 towns, and nursing homes in 8—leaving 13 communities with no health care facilities.

The well-elderly screening clinics have been in operation only 5 months. During that time, 180 persons who had not seen a physician within a year were screened. The screening program includes obtaining a social and medical history, vision screening, including glaucoma testing, blood and urine testing, a complete physical assessment, counseling regarding the findings, and referral.

To show that these clinics are needed, 107—or 57 percent—of the persons screened were referred; 71—or 66.4 percent—of the referrals were to physicians; 22—or 20.6 percent—to public health nurses, and 14—or 13 percent—to others, such as dentists, ophthamologists or optometrists, department of social services, and mental health centers. Many other counties recognize the same need but are unable to provide a similar program due to lack of funds.

A recent survey showing the length of time persons had not been seen by a physician was done at the well-elderly clinics in Powesheik County by the public health nurses. Of 245 elderly persons seen at the clinics, 43 were seen by a physician 1 year ago, 67 between 1 and 2 years, 78 between 2 and 5 years, and 57 had not seen a physician for 5 years. There were many reasons given for not seeing a physician, but the most common were, "My doctor doesn't have time to talk with me," "I can't stand to sit in the waiting room 2 or 3 hours and then see the doctor for only 5 or 10 minutes," and then, of course, the common one, "I can't afford to go."

I feel that the primary problem in providing adequate home health care services to the elderly population in our rural communities is lack of funding. Local health fund moneys are appropriated from the county's general fund, which creates problems. Many counties in Iowa receive shared salary appropriations from the State department of health for one nurse, but there are several counties in northwest Iowa who receive none as there is no money available. These counties were able to establish home health agencies through use of Federal Grant 314d funds which were available for 3 years, after which they went

on county funding. The 9 percent limit placed on increasing expenditures from the general funds has created problems in several counties. Studies show that to provide adequate public health nursing service there should be one public health nurse for each 3,000 population, whereas there usually is one nurse for 8,000 to 12,000 population. This nursing shortage is not due to lack of available personnel—there are plenty of trained personnel. It is due to lack of funding.

Limited Funds Hamper Services

Less than half of the home health agencies in northwest Iowa are certified for medicare, thus depriving many persons of the benefits they should be receiving. These people should be entitled to services provided by nurses, home health aides, physical therapists, speech therapists, occupational therapists, and medical social workers. Personnel are not available to provide these services due to lack of funds.

Studies are being done throughout the State to compare costs of home care and nursing home care. One study recently submitted to the home health agency surveyor showed the following expenses in the care of an 84-year-old lady with cardiovascular disease who was admitted to a home health agency in June 1972.

There were 100 visits by public health nurses from June 1972 through April 1976 at a cost of $1,160, and 396 visits by home health aides at a cost of $2,962—for a total of $4,122. Nursing home cost in the community from June 1972 through April 1976—1,418 days at $17.59 per day—would have amounted to $24,814.

So think of the savings in being able to keep them in their own homes.

We have found to be true what Senator Clark said in his support for the Church-Kennedy home health care amendments. People are better off when they can take care of themselves in their own homes with some assistance. Our public health services can provide that help at less public expense than institutional care. There is no other provider for this service that can meet the needs as well.

Thank you.

Senator Clark. Thank you for a very comprehensive statement—a very complete one. We thank you for it.

We are going to hear now from Dennis Tobin, who is the director of the Department of Social Services for Ida County. He has worked chiefly with the homemaker-home health programs and will relate what his aides find to be the most requested services, those which are lacking, and those which are attempting to suffice the need in predominantly rural areas.

Dennis.

STATEMENT OF DENNIS TOBIN, DIRECTOR, DEPARTMENT OF SOCIAL SERVICES, IDA COUNTY, IOWA

Mr. Tobin. Thank you.

I have been asked to speak to this committee regarding the health needs of the elderly and, more specifically, the homemaker-health aide program. In order to discuss the homemaker-health aide program, it is first necessary to explain the context in which the program functions.

The department of social services has two very basic goals: to maintain people as independently as possible, and to protect those persons unable to protect themselves.

The homemaker-health aide program and the chore service program work toward these goals while combating some of the other basic problems of the elderly, such as loneliness, boredom, special dietary needs, and lack of knowledge of existing programs.

We find few persons who are really physically unable to leave their homes. The program finds itself in a continuum of services ranging from simple financial assistance, so the elderly can avail themselves of existing services, to complete institutionalization, hopefully of a temporary nature.

Programs Listed

These programs include, but are not limited to:

(1) Financial assistance, social security, SSI, and SSA.

(2) Chore service.—A program designed to arrange for persons to perform simple daily tasks that a client is unable to do himself such as lawnmowing, snow shoveling, and heavy cleaning.

This is a very efficient program, helping a lot of clients for very little expenditure. It should be expanded substantially as an alternative to higher levels of care.

(3) Homemaker-health aide program.—Performing many types of services for clients under the supervision of a PHN and/or a social worker to make it possible for a person to live in their own home rather than leaving their home for a higher level of care. We feel that a great majority of elderly can function at this level and would prefer it to higher levels of care.

(4) Family life homes, adult foster homes, and board and room homes.—These programs allow the client a degree of freedom; however, they are no longer in their own home. We have a definite need for more of these facilities as an alternative to institutional care.

They are currently bogged down with bureaucratic problems.

(5) Custodial care.—The least confining and most flexible level of institutional care. This level of facility can care for many elderly persons as well as younger persons who do not need a great deal of physical care. This type of facility is practically nonexistent in rural areas due to the strict requirements for physical plants and low payment level. Many current nursing care patients could function in a custodial home.

(6) Nursing homes.—These facilities have, in the past, been a catchall for all types of patients unable to function in their own home. With the availability of alternative types of care, it is hoped that clients will be allowed a number of choices other than the classic home or a nursing home.

(7) Extended care facilities.—These are special highly skilled nursing homes designed as an alternative to long-term hospitalization. In rural America they have simply been strangled by Government regulations and redtape. Since this is a program paid by medicare, many elderly are cheated out of part of their medicare benefits by the lack of these facilities.

(8) Hospital care and institutional care.—We are blessed with a number of good facilities in this area. We need many lower levels of care to avoid unnecessary hospital or institutional care.

We have found the homemaker-home health aide program to be a viable alternative to these higher levels of care and ask that this committee attempt to see that State and local governments are allowed the resources and flexibility to develop these programs to their fullest.

Thank you.

Senator CLARK. Thank you very much.

We will hear next from James Krick who is, as I understand, the former mayor of Ida Grove, and I believe someone who has experience in what Dennis Tobin was just talking about in terms of homemakers and the chore aide program, and so forth. You proceed in any way you think appropriate, Mr. Krick, and then I will have some questions.

STATEMENT OF JAMES R. KRICK, IDA GROVE, IOWA

Mr. KRICK. I think you sure picked a bum person to talk after all these good talks that have been given. I suppose I would have to say most everybody here has been in contact with me or my wife since I was in the transfer business for 46 years. My wife was 79 and I am going on 83, so if there are any mistakes made, just forget it.

Friends, Senator Clark, and Mr. Bedell, Mr. Tobin wanted me to tell my experience that I have had with the new social service of Ida Grove, Iowa.

Twelve years ago my wife, Rose M. Krick, had a stroke which left her a very much crippled person, and 10 years ago she had her second stroke. She stayed in Ida Grove Hospital for, I think, 46 days, and then went to St. Vincent's for a month to learn to walk again. She got along very well and I took care of her in our home.

Then 10 years later she had another bad stroke. She stayed in the hospital for a month or so. After a long stay, I was notified that her time of medicare was up and she could not stay any longer under medicare. I could not take her to a rest home or to another hospital, it had to be a private home so that she would get her privileges back from medicare.

I talked with her doctor, J. B. Dressler, and asked him if I could get a nurse to come once or twice a week to help. He said, "Yes," so I brought her home. Mrs. Anne Snell here—my wife was one of her first patients under this new program. At that time she was a county nurse. I took my wife home and we took care of her for about a month or so. Then she went to a new job in other counties.

SOCIAL SERVICE PROGRAM HELPED

So the county got Mrs. Betty McGuire as a nurse. She did a nice job and said the new social service was here in Ida Grove and that I could get a nurse's aide and chore women to help us out. I asked her to get someone to help out, which she did, and Mrs. Delores Peffer came five times a week to take care of Rose. Later, Joan Segebart came to help and then the chore women 3 hours a day per week. Nobody knows what that meant to me after 10 years of this trouble.

Mrs. SNELL. May I interrupt to say the first two ladies mentioned are home health aides in the county.

Mr. KRICK. Yes.

They came to help me out then in any way, shape, or form.

Then in May I got my heart attack with my diabetes and could not care for my wife. I went to the hospital for 23 days and in the meantime they took Rose, my wife, to the nursing home—Morningside Manor—June 7, 1975. She stayed there for 10 months before she died on April 7, 1976. I came home from the hospital after 13 days. In the meantime the flu got bad and took my wife on April 7, 1976. We would have been married 57 years on April 9, 1976. She was buried on the 10th. She was 78 years old and would have been 79 the 15th of October. I am going on 83. I was born January 9, 1894.

I have had this social service ever since my wife died. They have been a wonderful help to me and I cannot praise them enough. I cannot say enough for the care this social service has provided. I cannot thank Mr. Tobin, Phyllis Fick, Larry Bayliss, and Delores Peffer, Joanne Segebart, and Mae Brookbank enough for their wonderful help. I feel I owe something to the social service and these wonderful people who can't do enough for the aged.

I thank Dick Clark and his staff for their help. They have done a good job for the aged. We all get there sooner or later. Phyllis Fick has done a good job for the aged in this social service work. I also want to thank my daughter Barb, her husband, Al, my sister-in-law, and all of my friends.

I thank you all for listening to me.

Senator CLARK. Thank you very much, James, and thank you for your kind comments.

Mr. KRICK. This is my first talk. I don't need to tell you that—you know it. I did the best I could, and I am surely glad to be here and help you out. There are just a few here a little older than I am. My friend over there, John Shultz, is 87. Is that right, John, 87?

Mr. SHULTZ. Eighty-eight.

Senator CLARK. Eighty-eight he said.

Mr. KRICK. I'm just a kid at 83.

If you ask me anything in the transfer business or gray line, I could have done it—most anything of that kind. I had 46 years there. I don't believe there are very many in Ida Grove that I have not been in contact with one way or the other.

I want to thank you for listening. Excuse me for my bad language.

"BEST KIND OF TESTIMONY"

Senator CLARK. I think that was the best kind of testimony that this committee could receive about the value of the chore aides and the value of the homemaker services, because it has made it possible for Mr. Krick to stay in his own home for a very long period. This simply would not have been possible had we not had these programs.

I would like to ask Dennis Tobin and Anne Snell a couple of questions before we see if there are any questions or comments from the audience.

First, Mr. Tobin. I recently conducted a survey of the title XX services that are provided to Iowa. We wrote to virtually everyone who was associated with this program and one of the expressed points

of concern was the State matching requirements of 25 percent. In other words, the Federal matching share is 75 percent and the State share is 25 percent in this program.

My question is this. Is 25 percent a reasonable share, in your view, or is it too difficult for a State like Iowa to come up with this amount?

Mr. TOBIN. I don't know what the official opinion is supposed to be, Senator Clark, but we have not found the problem to be getting match money. Our problem has been to run into the federally assigned maximum for the State. We have been able to raise the match money wherever we made people aware of the programs and how they would function. We have a breakdown in Iowa two different ways. Many programs are matched by State dollars, many of them are local dollars—and there has been some problem in some areas with the local dollars—but in this area that has not been a big problem.

Senator CLARK. Good.

Now the second question. What percentage of your service program participants are elderly? In other words, of the services that you provide, to what degree do you serve the elderly as distinguished from others?

Mr. TOBIN. I don't believe I could tell you the absolute statistics, but I think the statistics that Anne came up with would come awfully close. The vast majority of the services we provide are either to the elderly or from the handicapped.

Senator CLARK. Another question. We just heard from Mr. Krick about the benefits of the chore services and homemaking. Can you be more specific about just what that means? If they go into the home once, twice, or three times a week, what do they do? What does a homemaker do, or what do you do with the chore aides?

Mr. TOBIN. There is a basic difference between the three functions. A chore service person, at least the way we are using it, is generally a neighbor lady or a friend who can come in and do any of the simple daily tasks such as heavy cleaning, helping someone go for the groceries, and that type of thing—the type of task that a neighbor or a friend could do. We do this on a contract basis, and on an individual basis.

The homemakers, when they are functioning as homemakers, do skilled types of functions: Teaching people how to do tasks of daily living, teaching some how to function when they are physically handicapped—for example, helping them prepare special diets—this type of thing.

GRAY AREA IN SUPERVISION

There is a gray area between the homemaker and the health aide, however. When they are doing specifically health aide work they are under the supervision of the public health nurse and she has received orders from a physician. So when they are doing health aide work they are doing the types of things required for health reasons to keep them in their own home.

Senator CLARK. Fine. Thank you very much.

I would like to ask Anne Snell a question. As I understand it, approximately 90 percent of all the persons that you serve as a public health nurse in Ida County are elderly people.

Mrs. SNELL. That is correct.

Senator CLARK. Are you trained to care for the elderly specifically in that kind of program?

Mrs. SNELL. All of the public health nurses have basic nurses training, of course. Our goal is to find nurses who have public health experience or who have public health training in the program, but this is not always possible. So through some of our area technical schools, as well as the State department of health, in-service training is given so that they do learn while they go along. There does not seem to be any problem finding qualified personnel.

Senator CLARK. Suppose someone here at some future time wanted the services of a public health nurse. When you find someone, do you make regular calls or do you simply respond to telephone calls? How does that work?

Mrs. SNELL. Anyone may be referred to the public health nurse in the county. Many of them are doctor referrals, the patient, the patient's family, or a concerned neighbor.

Senator CLARK. How do they reach you?

Mrs. SNELL. Just simply call the phone number in the phone book. There are many different ways—through newspapers, and so on. They call the office, the public health nurse makes a home visit to assesss the situation and, upon an assessment, if she feels that she can provide a service she then contacts the family physician for orders. The public health nurse only works under direct supervision of the family physician unless it is general health supervision, and then she may function without a physician's orders.

Senator CLARK. Good.

I want to thank this panel very much. Please stay seated because we are going to see if there are any comments or questions from the audience.

I do want to thank you very, very much. I know that it is very warm and we are not going to take more than about 5 minutes or so. There is a microphone up here in the center and anybody that would like to walk to the microphone and make any statement or ask any questions, we welcome you to do so. I will then see if Congressman Bedell has anything to say. I am going to take about 30 seconds and that will complete the program.

Come up to the microphone and identify yourself for the record.

STATEMENT OF BOB TORRY, CHAIRMAN, CITIZENS ADVISORY COMMITTEE, CHEROKEE COUNTY HOMEMAKER/HEALTH SERVICE, CHEROKEE, IOWA

Mr. TORRY. Senator Clark, Congressman Bedell, I am Bob Torry, a farmer in Cherokee County. I have been on the health board of Cherokee County since it started. I have been on the homemaker service since that started. I report that both of our organizations in Cherokee County have been very successful.

What we need is a comprehensive program which will meet the social, psychological, and physical needs of the homebound elderly. These people who are testifying are not as concerned with health programs because they are well enough to be here. The ones that I am talking about are the ones that are found in their home.

As chairman of the Citizen's Advisory Committee for the Cherokee County Homemaker/Health Service, I respectfully recommend that Federal assistance is necessary for continuance of this vital service to the elderly and handicapped.

The Cherokee County Homemaker/Health Aide Service is designed to place responsible workers in homes where illness, disability, or other crisis threatens normal family living. Aides are assigned to the home to perform whatever duties are required to meet the needs of each individual situation.

While services are available to all citizens in need, the majority of cases involve the elderly. In the month of June, 50 individuals were provided this service in their homes. Forty-seven of the individuals served were over 60 years of age. Seventeen were unable to pay full cost for services provided. Consequently, funds generated from other sources provided the resource for subsidizing the services for those financially incapable of paying full cost of services provided.

Inflation Causes Funding Problems

We have mobilized funds to subsidize the program for those in need, such as social services, department of health, Commission on Aging, Cherokee Board of Supervisors, Mid-Sioux Community Action Agency, and citizens' contributions. Any decrease in Federal or State funding plans place an added burden on local resources. Local resources are inadequate to sustain the homemaker/health aid service. Ever-increasing costs, because of inflation, complicate the problem. This inflation really eats us up.

The Cherokee County Homemaker/Health Aide Service has citizen support in evidence by financial assistance from the county board of supervisors and concerned citizens.

We feel the program has a twofold benefit. First, many of our senior citizens can remain in their homes living with dignity and respect for an indefinite period when a helping hand is provided by the homemaker/health service. For many, the only other alternative would be institutionalized facilities. Our program is a human approach to satisfying a need for many of our elderly and others plagued with sickness.

Second, we feel it is good economics to provide this service within the home as compared to institutional care. A few hours of aide service in the home each week will satisfy the needs for many of our elderly.

We feel our citizens and county officials have responded to the need by providing financial assistance within their capability. As stated previously, local resources are inadequate to sustain the program. Without continued Federal assistance, the services of the program will have to be curtailed or discontinued.

It is the concern of the advisory group I represent that services should be expanded, but limited funds compel us to do the best we can with what we have.

I thank you.

Senator Clark. Thank you very much. That was a very good statement.

I wonder if there is anyone else in the audience who would care to say anything or ask any questions.

Rick Motz.

Let me say, by the way, that if you want to speak for only a moment or two, if any of you have a longer statement we will put that in the record as if given.

So you go right ahead, Rick.

STATEMENT OF RICK MOTZ, DIRECTOR, AREA AGENCY ON AGING FOR AREA IV

Mr. MOTZ. The first thing I want to say to you is that now is your chance to speak up. The second thing I want to say, and you already know that, I am Rick Motz. I am the director of the area agency on aging for area IV.

First of all, thank you, Senator Clark, and Congressman Bedell also, for coming to our area to listen to our concerns regarding aging programs. Your efforts at the National and State level on behalf of older Iowans are to be commended.

Aging programs have come a long way during the short time in which Older Americans Act funds have been available to our area. Transportation is evolving from a one-county, one-bus system to a multicounty, tristate system. Senior centers or clubs exist in almost every town of area IV. Other programs, such as meals-on-wheels, homemaker-health, and winterization programs have enjoyed similar success.

We have been involved with the aging concept for about 3 years now. I have two concerns regarding programs for older persons. First, I would recommend to you the elimination of the 25 percent local public cash match requirement. The rule, in effect, does not recognize cash match from entities other than local taxing bodies. For example, if a program needed a total of $10 match, $5 of it would have to be cash and $2.50 of the $5 would have to be identified as being received from a local taxing body. If a service club would give $5 for match, the program could only use $2.50 of it and hope to get the other $2.50 from local and county governments.

Second, as you are very aware, there is a large river running down the boundary of area IV. This boundary, called the Missouri River, prevents services from being delivered to many counties in Nebraska and South Dakota. The Older Americans Act has fostered a separation of State's policy thus far. I would suggest to you that future legislation encourage interstate agreements. Interstate area agencies on aging would provide the potential to serve many more older persons in the most efficient way possible.

I appreciate this opportunity to express my comments at this time.

Thank you, Senator Clark.

Senator CLARK. Thank you very much.

Anyone else who would like to make a statement, comment, or ask a question? Is there anything you would like to say?

STATEMENT OF BERNICE DAHL, WHITING, IOWA

Mrs. DAHL. I am Mrs. Bernice Dahl. My husband, Willard R., and I live in Whiting, in Monona County. Thirteen came in on the mini-

bus today. My request is: please, when you get our proposal for transportation, do all you can and all Mr. Bedell can do. We are really land locked. The Missouri River is on the one side, there are no buses going down the middle, and no trains—only on the outer edge. We would really appreciate anything you can do.

We have worked and retired from the Monona County Task Force and we have a new one, but I have been with it since it started. I am a member of the transportation committee so I ask you, please help all you can to get more transportation to our part of Monona County. The Sioux City agency is working with us. That is my need.

Also, for some of the senior citizens, we got a raise on our social security, yes, but we also got a raise in our medicare payments, so it didn't mean much. Those are things that need to be looked into because for a lot of our people, their money does not reach what they need to reach. I did learn that if a person is eligible, SSI welfare can help.

Many of our senior citizens are disturbed over the cost of hospital costs. That is the initial payment, cost of medicine and doctors. Some of us squeeze through, but it is difficult sometimes. What can be done? I don't know, but I feel that you and the committee will come to some satisfactory or helpful solution.

I certainly appreciate today and I thank you very kindly for listening.

Senator CLARK. Thank you for an excellent statement.

STATEMENT OF MARY RUTLEDGE, YOUR, INC., WEBSTER CITY, IOWA

Ms. RUTLEDGE. I am Mary Rutledge and I work in Webster City, Iowa, for a community action agency, YOUR, Inc. About a month ago I went to Washington about a consumerism program about the high cost of utilities for the Midwest. I would like to be told why utilities are low on the priority list of Senators and Congressmen in our area. It upsets me a great deal.

Senator CLARK. What do you mean by "low"?

Ms. RUTLEDGE. Liaisons from Senators' and Representatives' offices informed our agency that lifeline and energy stamps are the lowest on their priority lists. The bills have not been polished off as of now. This upsets me quite a bit because in some areas the cost of utilities has been raised 100 percent or more, and it is very difficult for elderly persons with the small amount of social security they get.

When the elderly do receive raises in their income, they are cut back or denied other necessary services. Because of these reasons, utility bills are prohibitive. This is why I would like to see the rising costs of utilities top on the priority lists of our Senators and Representatives.

Senator CLARK. Fine. That was a very good statement.

I think all of us who have paid any attention or followed the problems of the elderly are particularly concerned about the problems of inflation. One of the major reasons for inflation, obviously, is the increased cost of energy, and so it is very high on our priorities.

Yes, sir.

STATEMENT OF KEVIN BEAUVAIS, EXECUTIVE DIRECTOR, WOODBURY COUNTY COMMUNITY ACTION AGENCY, SIOUX CITY, IOWA

Mr. BEAUVAIS. Senator, my name is Kevin Beauvais representing the Woodbury County Community Action Agency in Sioux City. I have already submitted a copy of the statement that my board chairman had prepared for the committee. [See below.]

Senator CLARK. Good. It will be made a part of the record.

Mr. BEAUVAIS. I want to thank you very much for coming to the area and giving us an opportunity to be heard. Essentially the Woodbury community has identified three major concerns. Mayor Murphy talked about the problem of housing and Jean Sandman mentioned housing. We are of the opinion, after having operated a winterization program, to do some work especially in the elderly homes. There is a need to service at least the homes that we presently have.

Many people are living on a subsistence level of fixed income which makes it difficult for senior citizens to maintain a home and to keep it in a safe and sanitary condition. Also, as their lives change and their physical capability changes, sometimes that home needs to change with them. We think that comprehensive home rehabilitation or home maintenance programs for the elderly would actually be protecting two of our valuable American resources: The housing supply that we presently have, minimizing the additional need to replace housing, and also protecting the lives and health of the senior citizens that live in what was formerly a family home, which maybe now has only one or two of them left in it.

The other aspect we think, as was mentioned earlier, is in terms of counseling. Senator, we think that the governmental maze of regulations and bureaucracy, as well as the change in the economic systems of our country, various businesses and economic institutions often leave the senior citizens entirely confused by the encounter. Many times it takes a paralegal assistant, a legal aide, an attorney, or somebody that has a great deal of time to deal with them, to take them by the hand and show them the regulations, and also deal with the bureaucracy that they are encountering in order to handle or to solve the particular problem, whether it is a social security check that didn't arrive or some problem with paperwork. The regulations that they encounter as senior citizens are extremely confusing to them.

Also, concerning the aspect of consumer education or consumer rights, paralegal assistance could go a long way to help alleviate some of the complicated problems that the elderly citizens run into.

[The statement prepared by Donald Graham, chairman, board of directors, Woodbury County Community Action Agency, follows:]

STATEMENT OF THE WOODBURY COUNTY (IOWA) COMMUNITY ACTION AGENCY

Ladies and gentlemen, the Woodbury County Community Action Agency appreciates this opportunity to appear before and submit testimony to this Senate Special Committee on Aging as our comments on the problems of the rural aging in our area from our perspective.

First of all, the Woodbury County Community Action Agency is a nonprofit Iowa corporation which exists to identify, mobilize, and utilize available public and private resources to assist the low income, the minorities, and

the elderly to improve their economic conditions and standard of living. Toward this end the Woodbury County Community Action Agency applies for and receives programmatic funding from a variety of sources, principally of a categorical nature, to provide certain select services for these target populations. Our major sources of funding are the Community Services Administration (CSA), Department of Health, Education, and Welfare (HEW), Older Americans Act—Title III—Area Agency on Aging, the State of Iowa, and local county boards of supervisors, specifically Woodbury County and Monona County.

With these various resources, the Woodbury County Community Action Agency conducts a wide variety of programs; those of service to and of interest to the elderly persons included in our service area: our neighborhood center and outreach (personal contact and information and referral services) community nutrition program which funds food stamp outreach, emergency food, and related assistance, our winterization/weatherization housing energy conservation program, and a developing rural transportation program.

Participant statistics for these programs have previously been submitted to the Kansas City regional office of the Community Services Administration for submission to this Senate special committee. All of our agency's programs, except for those specifically targeted for economically disadvantaged children, include a high percentage of elderly participation as our area includes an extremely high percentage of elderly citizens. According to the 1970 census, Woodbury County contained 17,618 persons 60 years of age or over. This is over 17 percent of the entire population in Woodbury County. Of the 17,618 persons 60 years of age or over, in excess of 28 percent of this number was identified as being 65 years of age or over and living below the recognized governmental poverty level income figures.

Elderly Often "Threatened" by Change

The Woodbury County Community Action Agency comes into contact with many of these elderly persons existing on subsistence level fixed incomes in an economic environment which is continually placing essential needs and services at spiraling costs. Among these essential needs and services are food, housing, energy, medical, and transportation. We also find the elderly persons to oftentimes be intimidated and even threatened by the rapidly changing political and economic world in which they now live. There can be no doubt that the current world and the current political and economic structures are very much changed and entirely different and alien from those with which our elderly citizens had learned to confront, deal with, and operate with in their earlier lives.

The WCCAA would like to take this opportunity to offer a few ideas on behalf of our elderly citizens which we are respectfully requesting the Senate Special Committee on Aging to give careful consideration in your future deliberations on the design of programs and upon the appropriations and expenditures of funding targeted to the needs of the elderly. Others have offered or will offer testimony today from a wide spectrum of vantage points. We will limit our comments to essentially three areas of need for our elderly citizens—housing, transportation, and legal services.

Housing: During the conduct of our winterization/weatherization program geared toward energy conservation and thus home heating cost reductions for low income and elderly citizens, our agency has become increasingly aware of the inhumane and dangerous conditions in which some of our elderly citizens and homeowners are forced to exist. Homes that were once the pride and joy of a growing family are now full of hazardous situations and many are identified as containing major housing code deficiencies. In 1975, according to Sioux City's housing assistance plan, there were 4,642 low-income households in substandard housing; 32 percent of these were elderly citizens. From July 1973 through December 31, 1975, the Sioux City Housing Inspection Office has in their random housing code inspections encountered major housing code deficiencies in over 400 homes of senior citizens in Sioux City alone. We expect this type of experience to be representative of the housing situation throughout other towns and the rural areas of Woodbury County.

Subsistence level fixed incomes and the spiraling building costs have worked in combination to severely limit the capabilities of many senior citizens to maintain and to repair their family home. We are recommending the development of a program of home maintenance and home rehabilitation targeted to the

elderly homeowners. At the present time, the Woodbury County Community Action Agency has on file an approved, extremely small, pilot project application with SIMPCO's area agency on aging; but the funding has been held up by the Iowa Commission on Aging. This program calls for a meager $8,850 in Older Americans Act title III funds for materials and essential building improvement contracts targeted for 10 homes owned by elderly citizens in Woodbury County. We have also submitted a similar application for fiscal year 1977 funding in the requested amount of $75,912 to repair and to rehabilitate an estimated 35 elderly homes. This program would be targeted to the structural and building hazards such as dangerous steps and sidewalks, deteriorating plumbing systems, crumbling foundations, faulty heating systems, hazardous electrical systems, as well as insulation, weather stripping, roofing, and physical appearance/structural protective features. The results of this program would have two significant impacts: (1) the elderly owners would enjoy a much improved and safer living condition through the minimization of crippling accidents, much improved comfort and cost, and the avoidance of unnecessary premature institutionalization; and (2) the deteriorating housing in our towns and countrysides would be preserved for a much longer life; we would, in effect, be protecting two valuable American resources—our elderly citizens and our supply of safe, sanitary, and decent housing.

Funding Difficulties in Housing Programs

However, at the present funding levels and under the present match requirements, the housing maintenance rehabilitation programs targeted for the elderly citizens are extremely difficult to fund and to develop. With the competition for scarce funding, our area agency on aging cannot afford to allocate sufficient funds to relatively expensive rehabilitation programs. Secondly, local agencies such as ourselves find it extremely restrictive to generate 10 percent, 25 percent, and 40 percent matching funds. I am suggesting that the Senate special committee give consideration to a revision of the match requirement of title III to exempt this type of program or to develop a separate funding mechanism earmarked for the dual purpose of protecting both our elderly homeowners and our scarce housing resource.

Legal aid: Our neighborhood centers and our outreach staff members as well as other portions of our agency staff continually encounter senior citizens who are intimidated by the current maze of governmental agencies and regulations as well as by the complicated alien economic environment, both of which represent distinct problems to our senior citizens. Not being as well versed as some of the younger citizens in the exercise of their rights of citizenship, the elderly often suffer the pains of abusive and unresponsive governmental bureaucracy and often exploited by the various elements of our economic environment. Effective legal aid services and/or paralegal assistance could be very helpful and productive to the senior citizens in exercising the rights of citizenship through education in the utilization of the judicial system, the exercise of consumer rights, advocacy or ombudsmanship services with respect to governmental agencies in many other areas of supportive assistance. The elderly are fully cognizant of and often infuriated by seemingly unfair treatment but also are unsure of who, what, or how to seek remediation; instead they often seethe in their anger and just throw up their hands in disgust with a world which they helped to create but which has now changed so much and so rapidly as to have left them largely undereducated and largely defenseless.

Recent congressional action in appropriating additional funding for the Legal Services Corp. is one small step toward improvement of the valuable legal aid services *if* the Legal Services Corp. is required to expand the geographic coverage of its service. Two other suggestions for improvement of legal aid service availability would be to increase the Older Americans Act funding and to include legal aid and paralegal assistance in the mandated elements of state and area agency on aging plans and programming.

Transportation: The enhancement of mobility for senior citizens must be pursued. Our elderly citizens, for physical, psychological, and financial reasons, find themselves increasingly unable to utilize the most usual mode of transportation in America—the private automobile—and thereby become increasingly remote from essential medical services, desirable nutritional resources or services, and the essential business and professional communities. This distance from or inaccessibility to reliable, serviceable transportation also minimizes access

to valuable social and recreational contacts which contribute so much to a fuller life for our elderly citizens. Urban situated elderly citizens are not as adversely affected by this need for transportation *if* they can accommodate themselves to the rigid fixed routes and to relatively inaccessible equipment or can afford the relatively expensive paratransit cab facilities. For the urban elderly, even the local existence of the mass transportation and paratransit operations does not represent solutions to the needs to travel for essential medical, nutritional, business/professional, social, or recreational needs. If the urban situated elderly cannot avail themselves of available mass transit/paratransit operations, the transportation problems of the rural elderly are astronomical. The facts of low-density population and relatively long distances contribute to make rural oriented transportation virtually nonexistent. Elderly, both in the urban and rural environments, are forced into a relatively empty life existing without access to means of fulfilling basic human needs or are forced to become increasingly dependent upon family, friends, neighbors, etc., to assist them. Forced dependency is extremely distasteful to the proud elderly citizen of this area.

Transportation for Elderly Still Inadequate

In this area, Ida County, Cherokee County, Woodbury County, and Monona County have initiated efforts to overcome some of the transportation inaccessibility faced by the elderly; but much more needs to be done. The State of Iowa, local county boards of supervisors, the area agency on aging, and others, have all contributed to the initiation of rural transportation systems targeted primarily for the elderly in each of the above counties. However, Cherokee County has but one vehicle for a large rural county; Ida County has recently acquired one vehicle to serve the entire Ida County. Woodbury County has had until recently only one vehicle to service the transportation needs of an area encompassing over 17,000 persons over 60 years of age, 5,000 of which are economically disadvantaged. Monona County just recently acquired the availability of one vehicle for a county which contains 2,000 elderly citizens, half of which are below governmental poverty standards.

WCCAA has currently in the offices of the Federal Highway Administration in Washington, D.C., an application for a rural highway public transportation demonstration program of a 2-year pilot project nature with the goal of establishing a comprehensive, integrated transportation system of a regional nature. If funded, the rural transportation program would allow the region to demonstrate to ourselves, to the local communities, and to the Federal Government what can and must be done to enhance the mobility of our senior citizens.

The problems of mobility and transportation service for our senior citizens has not received enough attention and enough funding in the past. Present funding by the Older Americans Act, title III, is about to terminate because of unreasonable expectations that any project initiated by the Older Americans Act funding mechanism should be self-supporting after 3 years. Where has public mass transportation in heavily populated centers become self-sufficient? The elderly could also benefit much more by door-to-door or demand-response systems, but these services are extremely costly to perform because of the time, the mileage factors, and the capital equipment needs to cover a large scarcely populated rural area. Even the rural highway public transportation demonstration program which includes 100 percent funding for capital equipment and partial funding for operational expenses contains a requirement that the project be self-sufficient after 2 years. The local political communities could absorb the costs of these services, but they cannot be expected to do so entirely alone as they would have to rely upon property taxation (which would increase the burden upon the elderly homeowner) or upon other relatively scarce resources. It should be increasingly apparent to Congress and to the administration that units of local government are not fat with underutilized financial resources. Congress and the administration are going to have to realize that rural public transportation operational subsidies are going to be essential to the future expansion of and continuation of rural public transportation systems; Federal rural public transit operational subsidies are going to have to become part and parcel of our national transportation program.

WCCAA welcomes the opportunity to be of service to our elderly citizens and to contribute what resources we can mobilize toward the goals of helping our older Americans lead a much more productive and much fuller life for a longer period of time. We sincerely hope that our comments here today will have

contributed, even in some small way, to the improvement of that golden age life.

Senator CLARK. Thank you very much.

One more statement and then we will close.

STATEMENT OF MARY C. COLLETTI, YOUR, INC., WEBSTER CITY, IOWA

Ms. COLLETTI. I am Mary Colletti and I work for the community action agency. I am the new projects developer; I am also the public relations officer. I would just like to thank the people in Washington for their insight and foresight as related to public relations in CAA work. I have lots of gripes, but the one thing I am happy about is that they are recognizing it is very important to have a public relations program for the community action agencies. Since last year when we started, our public relations program has increased two times and are serving approximately 150 clients per month. We are now serving almost 400 a month just because the word is out. Now I wish we could have enough funds to be able to support our programs and have a little more administration for such things.

Senator CLARK. Thank you.

I think we are going to have one last statement here.

STATEMENT OF MYRTLE SIEVERTIEU, IDA GROVE, IOWA

Mrs. SIEVERTIEU. I am Mrs. Myrtle Sievertieu. I would like to bring something forward that I have been talking about for 7 years—ever since I moved from the farm to Ida Grove. My biggest problem, and it is a big problem for a lot of other people, is that I have seen my elderly neighbors over 65 years old—we put in applications sometimes to Grace Montgomery at our center where we are expected to get help with our yard work and snow shoveling in the wintertime. It is absolutely impossible to get dependable help to shovel our walks and porches and get us out of the house, after a heavy snowfall especially. After a very light snowfall maybe we can get a neighbor boy or someone to shovel and sweep, or maybe it is something that we can do ourselves.

When we have a heavy snowfall and we really need help, there is no one available. I have called Grace Montgomery on various occasions. I have been fairly successful in getting help to mow the yard or to rake leaves, but when it comes to shoveling snow it is just an impossible situation. School children can't come until the afternoon. They promise you faithfully that after school they will come and clean your walk, but when there is a heavy snowfall it just lays there and lays there until you go out and dig it off yourself. By that time it is an icy, impossible mess to clean off.

We have some wonderful facilities in this town and I am very proud of my town. I will back it 100 percent in every way I can, but when it comes to helping the elderly people clean their sidewalks in the wintertime, it is no good.

Senator CLARK. Thank you.

Mrs. SIEVERTIEU. I hate to say it, but I wish we could get some dependable snow shoveling here in the wintertime.

Thank you.

Senator CLARK. Thank you very much. It is hard to imagine snow in weather like this.

We are going to close now. I wonder if Congressman Bedell might have any further comments.

Representative BEDELL. I just want to thank you and the staff again for coming out here to Ida Grove.

Senator CLARK. Thank you.

With that we close our hearings. Thank you very much for coming.

[Whereupon, at 4:32 p.m., the hearing was recessed.]

APPENDIXES

Appendix 1

LETTERS SUBMITTED BY THEODORE E. MURPHY [1]

ITEM 1. LETTER FROM THEODORE E. MURPHY TO L. D. ELWELL, ASSISTANT ADMINISTRATOR, MULTIPLE FAMILY HOUSING, FmHA, WASHINGTON, D.C., DATED APRIL 14, 1976

DEAR MR. ELWELL: You may recall that I visited with you at the Northwest Iowa Community Conference sponsored by Representative Berk Bedell, and on November 21, 1975, wrote a letter to you regarding rent supplements under section 8.

The 12 housing units for the elderly with limited incomes was completed on January 15, 1976, and was completely occupied in less than 1 week. It appears to be operating very satisfactorily.

Now our housing corporation group have requested FmHA to finance the development of 20 additional units. Our housing survey of Ida Grove of October 1975, and the list of applicants we already have for the additional units, indicates there will be no problem in filling up the units as soon as available.

Again we have the problem I mentioned in my conversation with you in October 1975 and in my letter of November 21, 1975, "We need assistance under section for rent supplements for a number of our prospective tenants."

In your reply to my letter to your office, you indicated there was much work being done about this matter with HUD and FmHA holding meetings and that a satisfactory solution could be worked out by March 1976.

We are much concerned and I would welcome a letter from your office bringing us up to date on this matter. Our board holds monthly meetings and I would like to present your reply to them.

Representative Bedell and his wife will be visiting in my home on April 24 and I will include this subject in our conversations.

Yours respectfully,

THEODORE E. MURPHY.

ITEM 2. LETTER FROM L. D. ELWELL TO THEODORE MURPHY, DATED MAY 12, 1976

DEAR MAYOR MURPHY: This will reply to your letter concerning the present status of the rental assistance payment program for low-income prospective tenants.

Our letter of December 2, 1975, indicated that we were working on the tandem approach of utilizing the Department of Housing and Urban Development's (HUD) section 8 and the Farmers Home Administration's (FmHA) section 515 rural rental loan authorization.

The FmHA and HUD representatives have been working together to develop a memorandum of understanding which proposes to eliminate the processing of dual applications to both HUD and FmHA to obtain section 8 rental assistance payments on new construction to be financed by FmHA. It is contemplated that FmHA will handle the complete application and processing on all new construction projects financed by FmHA section 515 loans. As the situation now exists, FmHA can consider your loan application for a section 515 loan to be operated

[1] See statement, p. 205.

under plan II with interest credits the same as your previous project; however, when the proposed memorandum of understanding between HUD and FmHA is reached, there would be a possibility that the proposed project could be developed utilizing the tandem approach which may provide the rental assistance payment program you require to meet the needs of the low-income families in your community.

We suggest you contact our Iowa State director, Mr. Robert R. Pim, room 873, Federal Building, 210 Walnut, Des Moines, Iowa 50309, telephone 515–284–4121, who will be glad to keep you informed of changes within our rural rental housing program.

Sincerely,

L. D. ELWELL.

ITEM 3. LETTER FROM THEODORE E. MURPHY TO ROBERT R. PIM, IOWA STATE DIRECTOR, FARMERS HOME ADMINISTRATION, DES MOINES, IOWA, DATED AUGUST 6, 1976

DEAR MR. PIM: I am enclosing a copy of a letter I received from Mr. L. D. Elwell some months ago, relative to the rental assistance payment program.

In January 1976 the Ida Grove Low-Rent Housing Corp. completed 12 units of one- and two-bedroom apartments. They were filled within a week. No rental assistance was available from HUD or FmHA, so four of our tenants had to receive rental assistance from relatives.

Now we have been approved for 24 one bedroom units and we expect to have a letting on August 31. We know from the applicants we have on file that a number of them will need the rental assistance payment program for low-income tenants.

We have contacted HUD a number of times through the Siouxland Interstate Metropolitan Planning Council (SIMPCO) and the latest information is that we cannot qualify for low-rent assistance under section 8. If we are to receive any assistance for the low-income elderly in the Ida Grove area it will have to be through Farmers Home Administration program, so we urge you to give the fullest consideration to this matter.

If at all possible we would like to have a reply from your office before August 17 because on that date Senator Clark and his staff will hold a meeting in Ida Grove relative to the problems of elderly people, especially in the fields of housing and transportation.

Sincerely,

THEODORE E. MURPHY.

ITEM 4. LETTER FROM ROBERT R. PIM TO THEODORE MURPHY, DATED AUGUST 10, 1976

DEAR MAYOR MURPHY: In response to your inquiry dated August 6, 1976, it is our understanding that the memorandum of understanding which was referred to in Mr. Elwell's letter of May 12 has been signed by both agencies, and the implementation of the understanding now is contingent on both agencies issuing operating instructions to their field offices. As of this time we have not received any such instructions, and therefore do not have rent subsidy assistance available except as it is currently available through Housing and Urban Development section 8 program.

We anticipate that this program should be operational sometime in the near future, and our county offices will be informed as soon as it is available.

If you have any further questions, please feel free to contact us.

Sincerely,

R. R. PIM.

Appendix 2

AID CENTER REPORT, SUBMITTED BY JEAN SANDMAN [1]

AID CENTER: SURVEY OF NEEDS OF RURAL SENIOR CITIZENS IN RURAL AREAS OF NORTHWEST IOWA

The form, "Survey of Needs of Rural Senior Citizens" was given to 119 rural residents, age 60 or older, who were attending congregate meals in the towns of Cherokee, Onawa, and LeMars, and visting the Siouxland Senior Center in Sioux City.

Service categories in the survey, as well as individual service items, were adapted from the United Way of America Service Identification System (UWASIS).

Participants were requested to check service items they felt important to senior citizens, indicating either "needed," "adequate," "available," or a degree of need. Participants were encouraged to make written comments on felt needs and to note other concerns of rural older citizens. These comments are attached to a summary of survey results. No copies of the survey were signed.

From answers recorded on the survey, one can conclude rural seniors feel their greatest needs are in the areas of income maintenance, housing, transportation, and health.

Income maintenance.—Of those completing the survey, 51 percent indicated they needed increased coverage in medicare and 49 percent expressed a need for larger social security allotments. An additional 20 percent requested more coverage in survivor's insurance as well as 20 percent expressed need for emergency financial assistance service.

Housing services.—Low to moderate cost housing was checked as a need by 54 percent of the respondents while 14 percent indicated a need for assistance in housing search. Public housing units were seen as a need by 22 percent and rent supplements by 21 percent.

Low-cost transportation for older persons.—Fifty percent of persons completing the survey saw transportation within the home community as a need. Transportation to neighboring communities was indicated "needed" by 32 percent and to special functions and events by 37 percent.

Health.—Health care ranks high as a concern of older citizens. Twenty-four percent requested more public health nursing, 18 percent called for community clinics, 28 percent asked for home health care, and 24 percent indicated adequate nursing home facilities are needed. Physicians were checked as needed by 47 percent and 30 percent asked for rehabilitation for persons afflicted by crippling diseases.

Other priorities.—Other priorities include 31 percent who stated legal aid is a need, 25 percent who checked opportunities for free or inexpensive clothing as a need, and 27 percent who marked jobs for older persons as a need.

Sidelights.—One item of interest to the respondents was congregate meals which commanded a 60 percent response. Twenty-eight percent indicated more sites are needed, 4 percent requested cheaper meals, and 34 percent stated congregate meals are adequate.

Interest of senior citizens in community problems became evident through the questionnaire with 24 percent expressing need for drug and alcohol prevention and treatment and 25 percent marking a need for pollution and litter control.

Conclusions.—The survey was made as a sampling of needs of rural senior citizens in the Siouxland area. Though an unscientific and inconclusive study, the survey indicates that older persons in northwest Iowa are aware of their needs and quite ready to express their opinions. Planning for older citizens re-

[1] See statement, p. 212.

quires their involvement and a respect for their expression of needs, solutions, and methods.

(119 persons interviewed in Woodbury, Monona, Plymouth, and Cherokee Counties, in the State of Iowa)

Question: What do you feel is most needed as a service for *persons aged 60 and over* in your northwest Iowa community—a need that presently is not met?
Question: Check one or more categories which apply. *Star* those items which you feel are priority needs.

1. Employment services for persons 60 years and older:

Help in finding a job: 18—15% needed; 3—2% available.
Training for jobs: 13—11% needed; 1—5% available.
Jobs for older persons: 32—27% needed; 3—2% available.

2. Income maintenance services:

Health insurance (Medicare): 61—51% more coverage; 11—9% adequate.
Social Security: 59—49% larger allotments; 12—10% adequate.
Survivor's insurance: 24—20% more coverage; 6—5% adequate.
SSI (Supplementary Income): 15—13% more persons covered; 8—7% adequate.
Emergency financial assistance: 24—20% needed; 6—5% adequate.
Special benefits for persons aged 72 and older: 48—40% needed; 8—7% adequate.

3. Consumer protection and safety services:

Consumer Education, classes or individual: 7—6% needed; 6—5% available.
Merchandise quality control: 22—18% needed; 3—2% adequate.
Service to handle consumer complaints: 21—18% needed; 5—4% adequate.

4. Food and nutrition services:

Food stamp program: 10—8% more persons eligible; 18—15% adequate.
Congregate meals: 33—28% more sites needed; 5—4% cheaper meals; 34—28% adequate.
Meals on wheels: 18—15% needed in area; 7—6% cheaper meals; 17—14% adequate.

5. Clothing and apparel services: Opportunities for free or inexpensive clothing 30—25% needed; 16—13% adequate.

6. Housing services:

Low to moderate-cost housing: 64—54% needed; 3—2% available.
Assistance in housing search: 17—14% needed; 3—2% available.
Rent supplements: 25—21% needed; 3—2% available.
Public housing units: 26—22% needed; 2—1% available.

7. Low-cost transportation for older persons:

Within the home community: 60—50% needed; 9—8% adequate.
To neighboring communities: 38—32% needed; 9—8% adequate.
To special functions and events: 44—37% needed; 8—7% adequate.

8. Protection, justice, and safety:

Free or low-cost legal aid: 37—31% needed; 2—1% available.
Adequate police and fire protection: 24—20% needed; 11—9% available.
Public disaster services: 14—12% needed; 8—7% available.

9. Environmental protection:

Pollution—littering control: 30—25% needed; 4—3% adequate.
Environmental conservation: 2—1% needed; 5—4% adequate.
Historical conservation—buildings, etc.: 11—9% needed; 6—5% adequate.

10. Community health:

Communicable disease control: 17—14% needed; 8—7% adequate.
Public health nursing: 29—24% needed; 9—8% adequate.
Public health sanitation: 12—10% needed; 9—8% adequate.
Health education: 10—8% needed; 8—7% adequate.
Community clinics: 21—18% needed; 4—3% adequate.
Home health care: 33—28% needed; 4—3% adequate.
Adequate nursing home facilities: 29—24% needed; 7—6% adequate.

11. Medical care services:
Hospitals: 16—13% needed; 14—12% adequate.
Emergency care: 23—19% needed; 8—7% adequate.
Physicians: 56—47% needed; 6—5% adequate.

12. Mental health and mental retardation:
Psychiatric clinics: 6—5% needed; 7—6% available.
Alcoholism prevention and treatment: 12—10% needed; 10—8% available.
Drug abuse prevention and treatment: 17—14% needed; 2—1% available.
Services, treatment and care of mentally retarded: 14—12% needed; 6—5% adequate.

13. Rehabilitation:
(For stroke patients, crippling diseases): 36—30% needed; 2—1% available.

14. Optimal personal and social adjustment services:
Chore service: 10—8% needed; 5—4% adequate.
Homemaker service: 15—13% needed; 7—6% adequate.
Friendly visiting: 19—16% needed; 7—6% adequate.
Recreation—social groups/senior centers: 18—15% needed; 9—8% adequate.
Cultural opportunities: 4—3% needed; 7—6% adequate.
Spiritual services: 6—5% needed; 10—8% adequate.
Equal opportunity, civil rights: 6—5% needed; 10—8% adequate.

(Cherokee County—48 respondents)

Income maintenance:
1. Right for persons to marry without losing pension.
2. Persons can get married without losing pension.
3. Cheaper rates—hospitals and doctors.
4. Right to give your children property while you're living without gift tax.
5. Trouble getting medicare—takes forever.
6. Pension for war widows should not be cut when social security is increased. These widows sometimes have minimum social security and it is difficult for them to make both ends meet.
7. Stop cutting pensions of widows or veterans of WWI every time social security raises. Instead they need a raise.

Food and nutrition:
1. Need better meals (congregate).
2. Need better meals (congregate).
3. Deep investigation of present set-up. Make it a State law that all names of persons on welfare and those getting food stamps and those getting ADC be published monthly. Taxpayers have a right to know where their money is being spent and who is getting it (food stamp program).
4. Inequitable, unfair (food stamp program).
5. Not always fair (food stamp program).

Housing:
1. Need low-rent housing by HUD.
2. Public housing units—better built buildings.

Transportation:
1. Cab service needed in Cherokee.
2. We have excellent minibus service.

Personal and social adjustment: More service is needed to supply entertainment to those in nursing homes.

(Plymouth County—34 respondents)

Income maintenance:
1. We need a larger estate tax exemption.
2. We need a larger estate tax exemption.
3. Lower rates on dental and eye care.
4. There should be an overhaul of the inheritance tax. It is too severe for the little guy.
5. There should be an overhaul of the inheritance tax. It is too severe for the little guy.
6. Insurance for those who pick up old people in their own cars.

Food and nutrition:

1. Too much is spent and too many are not eligible (food stamp program).
2. No more persons eligible (food stamp program).
3. Overdone (food stamp program).

Housing:

1. Needed bad (low to moderate cost housing).
2. Bad. We need this (low to moderate cost housing).

Transportation:

1. County wide transportation needed.
2. Transfer rate for a minibus.

(Monona County—30 respondents)

Income maintenance: Raise the $60,000 deductible in inheritance tax.

Food and nutrition:

1. A place to meet (congregate meals).
2. Need new meeting place (congregate meals).
3. We need a place to meet of our own where there is no stairs to go up and down.

Transportation: Ride to doctors, et cetera.

Personal and social adjustment: More good fishing areas for older people.

(Woodbury County—7 respondents)

Transportation: Low-cost transportation for older persons—badly needed.

Appendix 3

STATEMENTS SUBMITTED BY THE HEARING AUDIENCE

During the course of the hearing, a form was made available by the chairman to those attending who wished to make suggestions and recommendations but were unable to testify because of time limitations. The form reads as follows:

DEAR SENATOR CLARK: If there had been time for everyone to speak at the hearing in Ida Grove, Iowa, on August 17, 1976, on "The Nation's Rural Elderly," I would have said:

The following replies were received:

MARTHA AMENT, MARCUS, IOWA

We in Cherokee County need more help in transportation. We have only one 10-passenger bus for the whole county. No other public transportation is available in the county, and that includes the city of Cherokee—plus eight other towns.

Why penalize the low-income persons when the social security benefits are raised a small percentage? All other help or supplementary income is cut back until their gain is nil.

I certainly enjoyed the meeting at Ida Grove. I have worked with the elderly for many years as volunteer, and 5 years with OEO. I can understand their problems.

MAY ANDERSON, SIOUX CITY, IOWA

I would have inquired concerning the funding of home-delivered meals under other than title VII as compared to nutrition funding under title VII.

GEORGE W. KENNEDY, IDA GROVE, IOWA

I would like to know what is being done about national health care for the population as a whole.

I speak of population as a whole, although I am a senior citizen. I think some other groups of different ages are as important as mine.

BETTY MAGUIRE, IDA GROVE, IOWA

I am a public health nurse who has functioned entirely on a county-fund payment for 2 years. Our budget has been protected this past year because it was above the 9-percent level. We really could use some sharing money to support our local health agency. There has been talk in other counties of dropping or cutting the service. I hope you can appreciate this disservice to the elderly. I can function as a nurse and earn a living without the employment. But will the elderly be helped and stay as healthy without the public nurses' services? Please try to get some tax dollar money designated to help support county-funded nurses. I don't feel the nurses that help should have to be hassled by local politics.

MARIE RABE, ONAWA, IOWA

Here in Onawa there is a lack of doctors. We do have three, but two of them are past 60 years old. All the surrounding towns depend on these doctors: Turin, Moorhead, Soldier, Ute, Little Sioux, Pisgah, Whiting, Solix, Sloan, and Blencoe—to name a few towns without a doctor. What we need is younger doctors to fill in and finally take the place of the ones we now have.

Transportation is another problem to older citizens.

To get any repair job done—even a fallen tree off the electrical wires in Onawa took several calls to the city. The tree had fallen on my roof during a storm. It took more than 2 weeks before anyone came to even look.

To get a senior citizen center in Onawa has been worse than pulling teeth. Until we even get the city council to realize that we definitely need a center—we were pushed out of the former multipurpose center over a year ago. Now we have our congregate meal program in the Methodist Church. We certainly are handicapped. Why?

JANE ROLOFF, AMES, IOWA

The North Central Regional Center for Rural Development located at Iowa State University is involved in a project to summarize and synthesize information and research concerning the rural elderly. We would appreciate a copy of the hearing as soon as it is available.

MARK K. SUZUMOTO, REMSEN, IOWA

In essence, what all the speakers asked for were more options, although there was talk of housing as the primary need, health care, and title XX programs as tantamount needs. What the government is or should be attempting is a housing program that would provide for everyday needs as well as the unexpected needs. The system is only as good as its weakest link—the government can provide adequate I & R service and dial-a-ride programs, but if inadequate income prevents the aging from owning a telephone, the programs become feathers in some bureaucrat's hat and nothing more.

The Older Americans Act in its entirety is exceptional legislation. Why are the programs administrated so strangely? The budget appropriators have the compassion of social darwinists, waiting through financial attrition for the "least fit" to fall by the wayside. Goodloe said some hundred years ago an appropriate phrase for today, "Millions for defense but not one cent for tribute." The "millions" should be changed to $104.5 billions, and the "tribute" interpreted as programs created to show our Nation's gratitude to those who helped build it.

To believe that our industrial-military complex will bow down its head "in tribute" to our Nation's aging is a pipe dream. What is perhaps a feasible national plan is to place a focus on education at all levels and in all segments of society (age, income, urban, rural). We must educate to restore the dignity of growing old—the "Pepsi generation" mentality of today is the perpetrator of many subtle crimes against the aging; it makes growing old kin to growing ugly. If we do not begin to educate our young about aging today we will continue toward further segregating our people by age and the financial burden will continue to grow. We need to create options for the elderly by trying to make their environment less hostile until this horrendous task is accomplished. I suggest that the government take a wholistic approach by adequately funding and implementing all titles under the Older Americans Act.

BEULAH E. WEBB, SIOUX CITY, IOWA

At present, everything is geared to youth.

Not too far into the future northwest Iowa will have more senior centers.

Revenue sharing has been distributed in various projects, but Sioux City seniors have not been able to receive one dime.

Since the hearing on August 17, we have been in the dark. The money for training never got to the grassroots, where the need is, but reaches workers, more personnel in homemaker services, et cetera. Yet, I know that money has been allocated. I regret to say that the majority of the elderly do not know anything concerning what region they are in or how many States are in their region. Please try, in your own way, to reach the people. My time is running out. I am 81 years of age with 50 years of service to my community. It is sad when a few people exploit the ones who need the services for their own selfishness. Thanks for coming. You and your staff were most gracious.

THE NATION'S RURAL ELDERLY

TUESDAY, AUGUST 17, 1976

U.S. SENATE,
SPECIAL COMMITTEE ON AGING,
Gretna, Nebr.

The committee met at 10 a.m., pursuant to notice, in the Municipal Building, 202 North McKenna, Gretna, Nebr., Hon. Dick Clark presiding.

Present: Senator Clark and Representative John McCollister.

Also present: William E. Oriol, staff director; Kathleen M. Deignan, professional staff member; David Harf, legislative assistant to Senator Clark; John Guy Miller, minority staff director; and Alison Case, assistant clerk.

OPENING STATEMENT BY SENATOR DICK CLARK, PRESIDING

Senator CLARK. Good morning. It is good to be with you in Gretna for this official hearing of the U.S. Senate Special Committee on Aging. We have several scheduled witnesses and then we will try to hear from people in the audience. A stenographer will record all that is said, and we will issue a printed transcript of the proceedings.

Our subject at this and five other hearings this week is "The Nation's Rural Elderly." In other words, we are emphasizing in these hearings the specific problems that people have in rural areas. We know that many of the programs are designed, in fact, for metropolitan areas. The metropolitan areas certainly need programs for the elderly as well; but the particular emphasis of these hearings will be on the problems faced by people who live in small towns, by people who live in the countryside, and what we can do to help them.

I first suggested these hearings a little more than a year ago to Senator Frank Church, who is the chairman of the Senate Special Committee on Aging, and he agreed. We held some meetings, in fact, last April in Washington, and now we are holding them here in the Midwest so we could come out to talk to people who are affected by the Federal programs that have been instituted. I want to make my statement very brief, and call on Congressman McCollister for a statement as well, and then we will have the witnesses. I want to make three or four major points before we start with these hearings.

First of all, the prime objective of these hearings is to determine the responsiveness and the practical help provided to the rural elderly by such programs as the Older Americans Act, medicare, public housing, transportation assistance—how and in what way people in small towns can ride minibuses and other kinds of buses.

Second, there is a real need for this evaluation because, in our view, we failed to do what we said we were going to do in the 1971 White House Conference on Aging. We have not yet arrived at a national policy on aging, particularly on rural areas and/or rural issues. A part of the lag has been caused, I think, by the lack of leadership that we have had in Government in these programs. Another part has been caused by economic uncertainties related to inflation and unemployment. Nationally about 8 million people, or about 28 percent of all the people over 60 years old, live in rural areas—communities like this one and smaller communities—but in some States the percentage of older people who live in rural areas rises to 50 percent or more.

For example, here in the State of Nebraska about 45 percent of all people over 60 years old live in small towns or live in rural areas. In Iowa, we have almost exactly the same percentage—almost half the people over 60 years old live in rural areas, and yet much more than half the total population lives in metropolitan areas. There are major differences among the States and even though each of our hearings has a rural theme, we find that there are special circumstances in each locale that call for close inspection.

Here in Nebraska we will be especially concerned about the delivery of services to the widely scattered rural elderly and the effects of the increasing isolation of the elderly in small towns and communities as they leave the farms and as many younger workers leave to take jobs in other areas. We will be hearing from a number of individuals from all across the State of Nebraska who have confronted some of these problems firsthand.

Another issue on which I hope we can have some discussion today is the financial ability of rural county governments to help pay for services funded by the Older Americans Act, as well as other programs of the Federal Government meant to serve the elderly. I think we often find that in many rural areas local governments are very much in support of services, but find the financial burden imposed on them in meeting the matching requirements for participation in Federal programs particularly difficult.

Finally, I would like to say that in the Older Americans Act program and in all the others, the rural elderly must feel that no one is dictating to them. The progress that we are making in aging is due in no small part to the initiatives and determination of older persons who are making things happen. The Federal share of their effort, if one is needed, ought to be part of the solution, and not part of the problem.

Now I would like to ask Congressman McCollister if he has a statement.

STATEMENT OF HON. JOHN Y. McCOLLISTER, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF NEBRASKA

Representative McCollister. Senator Clark, thank you. Thank you for two reasons: Thank you for coming to Nebraska where a large proportion of our population is in the senior citizen category and thus have a very special meaning to us, and because so many of our senior citizens do live in rural communities; and to thank you for in-

vit'ng me, a member of the other body, to participate in these deliberations today. I am grateful, too, for your generous invitation.

I think the policy of the Federal Government toward the rural elderly can only be characterized as one of benign neglect. The Federal Government has a great number of programs for elderly people in our metropolitan centers, but as I go around this State I discover that there are very few programs that are able to be delivered to the people in our smaller rural communities. Thus, these Senate hearings today can serve as a real basis for beginning to formulate policy that will change that neglect of so many of our rural senior citizens.

I think we need many programs designed to address those in rural communities—stronger nutrition programs and transportation programs. I understand in Council Bluffs this afternoon you have some hearings addressed to that subject, as well as other places around Iowa. There are a great many problems that are affecting rural senior citizens.

I say, again, I am grateful to you for your being here and for your invitation to allow me to participate. I am going to be very brief because I think the real meat of what happens here today comes from our panels and from those who will be participating.

Thank you.

Senator CLARK. Thank you very much, Congressman.

Now we are going to hear from a group of persons who are very well qualified to speak on this subject. I think we are going to go in the order in which they are printed here. First, Norman Magnusson, who is chairman of the board of governors, eastern Nebraska Human Services Agency; then we are going to hear from Evelyn Runyon, ombudsman, eastern Nebraska Office on Aging in Omaha; then Pete Lakers of Columbus, Nebr.; Glen Soukup, executive director, Nebraska Commission on Aging in Lincoln; and Marge Stine, director of Senior Citizens Industries, Inc., in Grand Island, Nebr.

I think we have asked the panelists, if they have an opening statement, to limit their remarks to about 5 minutes, and then we are just going to have discussion back and forth for a while. This panel then will probably end about 5 minutes till 11.

So you proceed in any way you think appropriate, Mr. Magnusson.

STATEMENT OF NORMAN A. MAGNUSSON, BELLEVUE, NEBR., CHAIRMAN, BOARD OF GOVERNORS, EASTERN NEBRASKA HUMAN SERVICES AGENCY

Mr. MAGNUSSON. Senator, first I want to sincerely thank you and your staff. It is very heartening to us in the Midwest to know that we have people in Congress and the Senate who are interested enough in our local problems to come and meet with us on our own grounds. So welcome to Sarpy County, and this is from all the citizens of Sarpy County. We are very happy to have you here.

I think I am known to most of you. In case somebody doesn't know who I am, I am Norman Magnusson. I am on the Sarpy Board of County Commissioners and I serve on several other boards throughout the community. I am also chairman of the Eastern Nebraska Human Services Agency Governing Board.

I am testifying today in regard to the needs and wants, or at least as I regard them, of our senior citizens in the rural area. I will start by saying that some people in the East cannot understand we people in the Midwest. We are a different type of people. We are proud of our heritage, we are proud of what we have accomplished, and we like our home—this is where we like to be.

In Sarpy County I think the board is doing a pretty good job, as far as funds go, of what we are doing for senior citizens. At the present time we have homemaker services, specialized transportation services—that is the one that, as far as I am concerned, has been a dismal failure. It is one of the higher cost ones, but it is one of the most needed. There will be some people speaking a little bit more on that. I just wanted to get in what my concerns are.

Administrative Costs Erode Funds

I am chairman of the MAPA. In case you don't know what MAPA is, it stands for Metropolitan Area Planning Agency, of the Urban Affairs Committee. Lately we have been getting all kinds of requests for grants in transportation for the elderly from various organizations. At our last meeting I requested that we hold a meeting so we can try to coordinate these services under one head. I don't like to see money going for administration when it should be going for services.

The way the transportation system is fragmented at the present time, this is what we are doing. We are spending money for administration that should be going for furnishing buses or transportation for you people to get to your doctors, to get to your church, to get to any place you want to go in the community. If it is necessary, I will try to get legislation introduced at the next session of the unicameral to take care of that, at least in the State of Nebraska, and hopefully we can get some legislation passed in Congress that will make it national instead of just one State.

We have the ombudsman service where, if you feel you have a complaint, you can go to one of the youngest ladies that I know of in spirit, not in years. She is one of my favorite people. We will hear from her later.

Information and referral services, recreation services, foster grandparents and, beginning in September, the senior companion program, retired senior volunteer program, family services, counseling services, health maintenance clinics: These are other areas that, due to the cooperation of our visiting nursing association, I cannot speak highly enough of. They have done wonders in Sarpy County since we have had them.

All of our nutrition sites—we do have a health maintenance clinic at the present time and this is not just for senior citizens. We, at one time, thought just of senior citizens but, realizing the need for this service for everybody, opened it to everybody. I hope you use it, because the service is there.

Then there are some special needs such as medical services. The older residents have difficulty in maintaining their health due to the difficulty to get periodic medical services. We hope that these health maintenance clinics that are on nutrition sites can overcome part of

that problem. If we can't, write me or call me up. We will see what we can do about it.

Transportation—I spoke about that. This is the most serious thing that we have. A lot of you have your own cars, I know, but there are also many that do not. I think you are entitled to some of the things in life that you can't get unless you can get there. I am very prone to go to church myself. The fact is, when my minister is gone, there are several other churches around and I fill them up. So church is important to me, and I hope it is to you. I hope that we can one day give you transportation so that you can go to the church of your choice on Sunday.

Legal services is another program that we so far have not been able to get off the ground.

We talk about isolation and people in rural areas, or about our children moving away. Mine have been gone for a good many years. Friends are dying off. I am afraid to look at the obituary column any more, I might find my own name there some morning. I don't have the philosophy that some people do. I don't believe in a rural area with high-rise apartments or housing for senior citizens. I still have the old kind of philosophy, "Be it ever so humble, there's no place like home." As far as I am concerned, I think that the broad effort should be made to keep you people in your own homes as much as possible and also to see that the home is taken care of, that it is kept up so it is a decent place to live, and that you have transportation to go from that home to the various activities that are already outlined.

Visiting Nurse Program Economical

Now I know this is a departure from what some people believe in. One reason we got visiting nurses is so that we could keep people out of rest homes, nursing homes, and hospitals. Last year alone the home nursing program saved Sarpy County taxpayers about $170,000—at a total cost to the county of a little over $60,000—by having the nurses go to your home, visit with you, take care of you there, and keeping you out of these costly hospital rooms and nursing homes. The most important part of all this program is that it keeps you home with your loved ones where you belong.

You are an independent people, and you should be. You should be proud of your heritage and proud of what you have accomplished in this great country of ours. It is people like you who have made this country what it is today, and the younger generation growing up can learn a great deal from you—if they just will. I think it is wrong to put your talents on the shelf and say there is no place in society for you.

Limited county revenues—yes, our revenues are limited by statute. We have a statutory limit of 14.28 mills. This is as high as the county board can go. Fortunately, we have a board in Sarpy County that feels human services are important, and I will tell you how important they think they are. The total request we had this year would have called for a budget of a little over 17 mills. We have whittled it down to 14.28. Did we whittle down human services? No, we did not, We added $5,000 to the visiting nurses budget. Senior citizens was a little over $7,000 last year; this year it is a little over $36,000.

I am told I am running over my time. I could talk all day long. Folks, this is the way I feel. This is what I think we should be doing for you.

At this time it gives me a great deal of pleasure to introduce this young lady I spoke about, Evelyn Runyon, who knows a bit more about your problems than I do, because she is your ombudsman—she is the one that takes your complaints.

Evelyn.

STATEMENT OF EVELYN RUNYON, OMBUDSMAN, EASTERN NEBRASKA OFFICE ON AGING, OMAHA, NEBR.

Mrs. RUNYON. Thank you very much, Mr. Magnusson.

Senator Clark, and all of you, my 78 years have been spent mostly in rural areas, although part of the time I have had to be an urbanite, so I see both sides working in Omaha as I have as ombudsman and hearing from people who have moved into a city to get the conveniences they need as older people. Also, I have made visits to many sites the Eastern Nebraska Office on Aging has in the rural area. I think that probably the best thing I can say is that Mr. Magnusson has just about covered everything that I wanted to cover. I do feel sure of one thing, and that is that the services that an urban agency such as the Eastern Nebraska Office on Aging can offer are altogether appropriate and applicable to those in the rural areas.

RURAL URBAN CITIZENS DIFFER IN FEELINGS

I am thinking particularly, however, that those services must be offered in an entirely different way, perhaps, than we offer them to those in the city. Rural citizens are a little different than urban people in feelings about each other; they have had green spaces between neighbors, and this is very important. This is always pointed up to me when I am called in to help someone who has moved from a rural area into a high-rise in the city.

It is a terrible adjustment because rural people are used to space and friendly neighbors and used to living in a different way than people in a city who live close together and scarcely know their neighbors. I think one of the greatest gifts that a person can have is to have grown up in a rural area. There must be a definite understanding of the mores of the rural area if our services are to be effective.

Health care and nutrition, of course, are prime needs that rural areas have, and Mr. Magnusson has told you about the health maintenance sites. I would like to see those transported into rural areas. I am thinking particularly of a visit I made sometime ago to Valley where I was asked to have some of the nurses come out and do diabetic and glaucoma tests, as well as other uncomplicated laboratory tests that are so needed.

This brings me to something that I thought of yesterday: a man in the little town of Waterloo, very close to here, I think—it is certainly close to Valley—came home from the hospital. He lives alone and the closest relative he has is a niece. He needs a homemaker; he needs hot meals; he needs everything that we have to offer. Fortunately, we were able to supply most all of his needs.

The whole thing back of all of this is the need for transportation. We must in some way find a way to either transport those from rural areas to the services or transport our services to them. This is something that I think will be a problem for people like Mr. Magnusson and other officials who have to know how to put budgets to work.

One of the truest things that I know of is that we want to keep rural people in their own homes, and this means also a handyman service. I think that is very possible in most all communities because there we will find older, skilled craftsmen who can help.

I don't want to run over my time. I could talk until 3 this afternoon, but let me stop here and introduce to you a man who probably is one of Nebraska's greatest humanitarians. I say this because he has been helping people from the Boy Scouts, the Girl Scouts, all the way through to senior citizens. The programs that he has been able to start in Platte County are really just overwhelming. It is an honor, and certainly it is a privilege, for me to introduce Mr. Pete Lakers from Columbus.

Mr. Lakers.

STATEMENT OF PETE LAKERS, COLUMBUS, NEBR.

Mr. LAKERS. Thank you very much.

Senator Clark, Congressman McCollister, and friends, I want to devote my time to the business that is most important. I might say to start with we have all the State problems, and we are trying to solve them. I do want to say something about the handyman service. It is not going full force, but yesterday we got a permanent chairman who is retired from the employment service, and that service is this—for some people, it is a hobby—for instance, one man repairs electric irons at a cheaper cost than what is the regular cost at the service center.

Last summer my wife had a heart attack—she is an invalid, but does very well for herself because her attitude for life is the same as mine. We needed someone, other than the person we had, to take care of our house. Through the handyman service we were able to get a younger person who comes to our house 4 hours a day and she eats with us, the same as we had for 2 months, which is a great deal of help. This girl was in nurses' training.

There is another instance that I can recall where the person needed the service, because of her husband. This was a young lady who came to her house to make supper, stay all night, make breakfast in the morning, and handle her work. We can expand this service in many different fields.

I also want to mention one other thing. Last Tuesday morning at 7 o'clock—we have what we call the helping hand, of different organization representatives, and we discuss the problems and work to solve them. This meets every month and we have accomplished a great deal in that group. Also, every Tuesday, and now every Wednesday, we serve a TV dinner for 60 cents with something to drink, and usually somebody brings a cake.

Well, I covered some high spots here. There are many others that we have. The reason that we are so successful is because we have 341 members in our association of retired people and we follow the old

theory of the Boy Scouts—do a good turn daily, and help your neighbor.

Thank you.

[An additional statement of Mr. Lakers was subsequently received, and follows:]

ADDITIONAL STATEMENT OF PETE W. LAKERS

In addition to what I said at the hearing in Gretna, Nebr., I would like to mention what is available through the American Association of Retired People, which was started 3 years ago here and, as of now, has a membership of 341. We have a handyman program and a halfway house program. We also have other programs in cooperation with our technical college. We had 226 participants in lifetime learning courses as follows: metric system, laymans law, cards-for-fun, printing, defensive driving, mechanics for women, and physical fitness. The courses were for 6 to 20 hours and cost from $6 to $20, enough to defray expenses.

We have bus trips to shows almost weekly; to Omaha and Lincoln at a discount. Also longer tours.

We have groups of four people calling each other four times a day to see if things are all right.

We have a monthly meeting, with an average attendance of 55. We motivate each other and help each other.

Priorities for services are: (1) transportation—we have some, we need more; (2) meals-on-wheels—we should have it in other towns; and (3) handymen or chore people.

We also have complete social security payments at 65.

We are trying to do what we can for senior citizens, but with increased costs, our problems are the same as other counties. Together we must all get more involved and work together.

Senator CLARK. Thank you.

We are going to hear next from Glen Soukup, who is the executive director of the Nebraska Commission on Aging in Lincoln.

STATEMENT OF GLEN SOUKUP, EXECUTIVE DIRECTOR, NEBRASKA COMMISSION ON AGING, LINCOLN, NEBR.

Mr. SOUKUP. Thank you, Dick.

I have heard it called the curse of all old farmers—they always move to town. Curse or not, the trend is obvious. Only the urban areas of Lincoln, Omaha, and south Sioux City have a smaller percentage of elderly residents than the countryside.

But when a farm family retires from the farm, they try to remain as close to the farm life as they can. Generally speaking, the smaller the community, the higher the concentration of elderly citizens. Based on 1970 census figures, only 9 percent of the population of our urban areas are elderly. That percentage almost doubles for communities of 2,500 to 10,000. By the time you reach towns of 1,000 to 2,500, you can anticipate about one-quarter of the population to be 65 or older.

The small rural hamlets don't even show up on the census figures, yet this is where the greatest percentage of elderly reside. These crossroad communities have become retirement centers for yesterday's farmers. They dot the map in out-of-the-way places—communities of 200 or less—with most of the residents on social security.

These could be Nebraska's retirement utopias—the basis of Nebraska's well-known legacy of longevity. In the past 15 months I have signed certificates honoring 138 centenarians. Enough of these men and women have been farm people to convince me that it is the rural way of life that is the basis of their longevity.

But I said these communities could be Nebraska's retirement utopias. Often these small towns are many miles from the nearest doctor and emergency aid. The residents live in constant jeopardy. Even the simplest consumer needs—a grocery store or library—may be in the next town 20 miles to the north. Without adequate public transportation, many are forced to rely on neighbors or their own driving skills—or simply stay home.

Not all the rural communities are slowly fading away. Much has been written about the "rediscovery of rural America." This rediscovery might be viewed more realistically as a flight from the cities. Eager for country living, many city workers commute to nearby rural hamlets "for the kids" or for their own peace of mind.

These migrating workers often maintain their finances in the city while increasing the demand for services in the rural communities. Seniors in these "bedroom communities" often find themselves faced with crushing special assessments for public works improvements.

Federal Programs Discriminatory

Rural areas lack the resources to provide necessary transportation, health, community development, and social services. Far from redressing this lack of resources, Federal programs discriminate against rural areas. Rural counties have a disproportionate share of the Nation's poor, aged, and unskilled. Yet a 1970 Government survey of 242 Federal programs revealed that only 27 percent of Federal outlays reach rural areas.

Rural America has three-fifths of the Nation's bad housing, but gets only one-fifth of all Federal housing subsidies. Rural America is served by just 12 percent of the Nation's doctors and 8 percent of its nurses. Rural counties are home for about one-half of the Nation's poor, yet the efforts of these communities to seek solutions to these problems have been frustrated by spiraling costs, economic recession, and requirements mandated by Federal and State programs.

Federal funding formulas have been heavily weighted in favor of the highly visible urban areas. The rural aged are poor and isolated—out of sight and out of mind.

A good case in point might be title IX of the Older Americans Act which provides employment opportunities for seniors. When a rider was attached to the President's swine flu vaccine bill that provided increased funding for title IX, hopes were raised that such senior employment programs as the handyman service could be extended to more rural areas. Of course, the lion's share of the funding ultimately went to the urban areas.

There are certain diseconomies in providing services to rural areas that have held back the development of needed programs. Without the social services, rural citizens have relied upon themselves and each other. But the world is changing. New problems, such as the crisis in the cost of fuel, have made it increasingly unrealistic to expect that the self-sufficiency of rural people can continue to meet these growing needs.

Much remains to be done. Through the use of paramedical personnel and visiting nurses, medical services can be provided to areas that have gone without. We need to expand volunteer opportunities. We must

stay up to date on technological breakthroughs—such as improved methods of insulating homes, and we must rediscover old methods with promise, such as windpower, if we are to meet the growing needs with our limited resources.

There are a great many skilled and capable seniors living in rural Nebraska. It is frustrating indeed that so many of these competent workers are unemployed while so many crying needs exist in the country. Elderly residents could be doing much to help improve facilities and services in their communities. For example, there are 120 older workers employed under the federally funded green thumb program in Nebraska working on community improvement programs that would otherwise go undone. Despite the fact that green thumb can serve only a small portion of the State, the program always has substantially more applicants than it can hire. This demonstrates that rural elderly people will seek out the programs that help them to help themselves if they are given half a chance.

Rural America has been last in line for too long. We must begin to extend opportunities to the elderly in both the cities and the country. Probably the most important single step we can take is to promote an enlightened awareness of the rural elderly and their needs.

Sitting next to me is a woman who has done much to promote this enlightened awareness in the Grand Island area of the State, and I am going to now let her tell it like it is on the local level.

I would like to present Marge Stine.

STATEMENT OF MARJORIE G. STINE, DIRECTOR, SENIOR CITIZEN INDUSTRIES, INC., GRAND ISLAND, NEBR.

Mrs. Stine. When I was asked to explain how we got our program started in the rural area, it is a very serious thing. How did we get the older people involved? We were under the OEO—Office of Economic Opportunity. We then went to the grassroots level and talked to the people themselves through intensive outreach. We started with five participants—that, you can imagine—and these five participants went into the areas and helped the people find out what their greatest need was. Their greatest need was additional income. They felt additional income was their greatest need.

At this meeting of these five participants, we asked them how they felt they could supplement their income. The only way they could see it at that time was to start selling their handmade crafts, so we drew on all the resources in the community. We held periodic craft and white elephant sales by some of the stores, some of the county officials, State officials, several of the service clubs, and then we had what we called a flea market that helped raise money for a small store. The store was established and we incorporated as a nonprofit organization under the name of Senior Citizens Industries, Inc. We then applied for delegate agency status from the Office of Economic Opportunity and applied for title III funds.

After the retail outlet was established, the Senior Citizens Industries, Inc., board of directors applied for a foster grandparents program. Through this funded program, 50 or 60 seniors were able to supplement their income by working 4 or 5 days a week, several hours a day, working with disadvantaged children.

With participation increasing, need was evident for the means of transporting seniors to and from activities, doctors, getting their groceries, and so forth. Through the advisory councils and the incorporated board of directors, Hall County applied to the Nebraska Commission on Aging for the handi-buses. At the present time both buses are running at peak capacity in all counties.

We then applied for a nutrition grant which we received through title VII. We are serving many meals per day at several sites, two of which are in the very rural area. This was funded for all counties by the Nebraska Commission on Aging. Through the combined efforts of the church, a meals-on-wheels program was developed serving 25 to 35 meals per day to homebound individuals.

Senior Centers Essential

At one time most of our activities centered in the Grand Island area. We have had a very difficult time getting the very rural elderly involved. We tried the news media through human interest stories, et cetera, to no avail. Outreach was sent out from the Grand Island area. It seemed everything failed. We then decided to take the programs to the rural community towns. We hired a part-time community aide from each town with the idea of developing an informational center for each area. The community became involved by providing space in churches, fire halls, town halls, et cetera. The centers became a focal point for all activities. The seniors were able to get information regarding services available to them in the community.

The seniors feel most comfortable with their own peer group and seem to develop a good rapport with the community aides. Even the most timid and withdrawn individuals become involved in one or more of the activities.

We at the rural level have found the senior center concept as a vehicle to get the local residents involved, for the simple reason the elderly have an opportunity to pitch in and help other individuals in need. By the same token, they have a feeling of dignity and pride in their own activities they themselves have helped to develop.

I came from a town by the name of Surprise, and it is a surprise, believe you me. It has a population of about 79, I think, at the present time. My mother still resides there. It is a tragic situation. Three-fourths, I would say—maybe 90 percent—of those older people have no means of transportation. The doctors' facilities are not within 23 miles of this area and they have to depend on their children or, if the children are gone, the neighbors to get to the services in the health-related field or even to buy some of the groceries that they need. This is a very unpleasant situation. I do think when we develop centers in the rural areas the community gets involved, we have information and the old people know where to go to get help.

Thank you.

Senator Clark. Thank you.

I want to thank the entire panel. I think they did a good job of reflecting the fact that the elderly people in rural communities have very wide ranging, different, and unique kinds of problems. That obviously is one of the concerns about trying to apply the Federal

system so that it does have some ability to adjust, be flexible, and to fit the specific needs of small communities.

I just have a couple of questions, and perhaps the Congressman does.

Since you still have the microphone over there by you, Marge—one of the most impressive achievements of your efforts in Grand Island is the enlistment, I think, of about 140 persons in the retired senior volunteer program, and I am just wondering, very briefly, what kinds of things they did for the community and how did you get that many people involved?

Mrs. STINE. I wrote the original RSVP program, but before it was written, we went to the volunteer sites and explained to the community what these volunteers provide. Then we went to the advisory council and explained how much the people could gain by volunteering. In the rural areas at this time we did not have transportation. Transportation was provided. This gives the older people a chance to get out and get involved in the community. I think this is one of our greatest things, that we have transportation whether we do get out or not. We have, I think, over 163 members at the present time.

Senator CLARK. Over 163 now?

Mrs. STINE. Yes.

Senator CLARK. You don't think there is any secret in how you do it, you just go out and recruit them?

Mrs. STINE. Yes; but I think actually it is getting the older people involved. I don't know. It seems like we like to help our fellowmen, and I think it is one of the secrets that if they are helping someone, you don't have much problem in getting volunteers.

Senator CLARK. Let me ask Glen Soukup a question.

As I understand it, at one time you were involved as a director of the community action program—a CAP program. Now in Winterset when we opened these hearings yesterday afternoon just south of Des Moines, we heard about a well-run cooperative effort between the community action agency on the one hand and the area agency on aging on the other, but sometimes we hear of conflicts between the two. What has been your own experience and what would you recommend in terms of the Federal Government trying to create an atmosphere of cooperation as contrasted to some of the problems that we seem to have between the community action agency on the one hand and area agencies on aging on the other? What has been your experience and what would you recommend for us to consider to try to improve that?

COOPERATION SOMETIMES LACKING

Mr. SOUKUP. Well, in my experience, there is cooperation and lack of cooperation. In my own experience years ago, of course, we had a demonstration grant from AoA which was one of the original three pilots that resulted in the title VII feeding program, so I can say our cooperation was very good.

There have been problems recently between the community action programs and the area agencies on the local level because of disputes that go back a long way. The area agencies on aging came in after the CAP agencies were there and there seemed to be some problems.

What can you do at the Federal level? Anything in the way of enforced coordination that you can do and that we can do, of course, is going to help alleviate this problem in Nebraska. We are working on that very thing right now.

We just completed a companion study with an agency on the State level which deals with community action programs going into what the problems are and looking at possible solutions to them. We are in the finalization stage of this report at the present time. I guess we all know we have very limited resources and we have to do everything we can to get these resources used in the most effective way at the local and State levels. I believe that is what the people at the local level are interested in doing; however, there are problems involved.

Senator CLARK. Thank you.

Congressman McCollister.

Representative MCCOLLISTER. Thank you, Senator.

I have two questions, but first an announcement that is, I think, very apropos to what the panel has been talking about.

Late yesterday afternoon we received word that a grant we had been working on for Douglas and Sarpy Counties of $100,000 has been made to provide a senior companion program for the elderly. Basically what it involves is the employment of 60 seniors at the minimum-wage rate, but it is nontaxable, and it also has, in addition, transportation and other services as part of it to provide some companionship for senior citizens—rural citizens in Douglas and Sarpy Countries—that I think is going to be very, very helpful. As I heard your comments, I was struck by how very different the need is of rural communities compared with the urban communities who have, to date, received the bulk of the funds.

LOCAL CONTROL OF FUNDS

Now the first question. Recognizing that difference in need, and speaking of the Federal role in these programs, it is my belief and rural communities, in the sense that we know it in urban communities, of Federal guidelines, and Federal strings attached to it, in order that each community or each rural agency may tailor their priorities to fit their need.

I will give you an example. It occurs to me that housing in most rural communities in particular are better served with a minimum is not the same thing at all. The programs of which you have spoken—maintenance and handyman services, visiting nurses—those are the things that you need in order to help the elderly maintain the highest degree of independence possible in their own community. Yet if the Federal Government sets the guideline, it seems to me, that you are likely to have mandated a priority of funds that is going to be somewhat different. Do you agree with me that there should be a maximum of local determination of how Federal funds are to be used in tailoring a program for the rural level? Any disagreement?

Mr. MAGNUSSON. No disagreement whatever, John. Speaking as a local government representative, this is one big problem with Federal funding. They don't realize the local problems like we people do. I think if we got it with less strings attached we could do a much better job.

Representative McCollister. You mentioned in your discussion on transportation that you regretted that so much of the Federal funds were used for administrative purposes at the expense of the money being directed to the actual services to be provided to the beneficiary recipients. It seems to me that it gives you a maximum of independence in the use of those funds that is helpful in reducing the administrative costs not only at the Federal level, but at the local level as well.

The question on transportation to which you referred—you said you hoped it could be consolidated and that evidently a number of different efforts, each requiring its own administrative costs, now go forward, and you are hoping that there could be some kind of combination of those transportation services. Could you elaborate a little bit to give me a little better idea of what you mean? How is it done now?

Transportation Pool Practical

Mr. Magnusson. Now there are a number of organizations who are performing services for the elderly. Each organization is requesting buses through the Nebraska Highway Department on funding that has been in effect for 2 years. Too often these buses are only used for an hour or two a day. If we had a common transportation department or a central transportation department, all of these buses could be pooled on a central dispatch and when they were not being used for the one agency, then they would go into the pool to be used by another agency who has the need.

Representative McCollister. Are you talking about multicounty, or within a county? MAPA as the coordinating agency?

Mr. Magnusson. No; multicounty, because our senior citizens are multicounty. Two counties, Douglas and Sarpy, are the only two so far that have used it. Washington County is showing a great deal of interest and we are working with them. We hope we get the other two counties in region 6 to realize what they are doing or not doing for senior citizens.

So I think it should be central transportation agencies, such as MAPA, or somebody who has the knowhow of transportation. I am not a transportation man. There is no one on the Government Board that is a transportation expert. So it should come under the heading of somebody who is knowledgeable about transportation and knows what can and can't be done.

Representative McCollister. These counties, of course, have a history—even back 6, 8, or 10 years ago—of coordinated effort. I refer, I guess, to the meeting of the tricounty watershed board, Encore, MAPA—I don't know how many others. All have demonstrated that the capacity and the attitude of these counties is to work together. I would hope that you could come together in some fashion to provide this coordinated effort.

Mr. Magnusson. It just proves what county government can do; we can pool our resources at much less administrative cost and the public can get the job done.

Representative McCollister. Thank you.

Thank you, Senator.

Senator Clark. Thank you very much.

We want to thank the panel for some excellent testimony. It has been very helpful to us.

The next panel is Dorothy Switzer, host of the Grand Generation, editor of "The Dorothy Switzer Report," and a member of the Nebraska Commission on Aging; Helen Storms, Lizzie Springer, and Henry Knape.

Following this panel we will be hearing from Richard D. Heft, who is chairman of the Harlan County Board in Alma, Nebr., and Hans Jensen, legislative committee chairman of the Nebraska Senior Citizens Council in Aurora, Nebr.

We are going to start now with Dorothy Switzer, member of the Nebraska Commission on Aging.

I might ask each of you, because of the time problem, to try to limit your opening statement to 5 minutes; then we will have more time for discussion.

STATEMENT OF DOROTHY SWITZER, HOST, THE GRAND GENERATION; EDITOR, "THE DOROTHY SWITZER REPORT"; AND MEMBER OF THE NEBRASKA COMMISSION ON AGING, LINCOLN, NEBR.

Mrs. SWITZER. Thank you.

The Grand Generation is a program which appears on the Nebraska Educational Television Network supported, in part, financially by the Nebraska Commission on Aging. It has just completed its third year and in October will begin its fourth year. It is a program designed for older Nebraskans, and we are very happy to always be of service. We have a toll-free telephone line known as the hot line on which people may call us with their problems. I am basing my testimony today largely on the letters and the telephone calls we have received—they number in the thousands now.

On each of the weekly Grand Generation programs on the Nebraska Educational Network in the months of October through June, I present an information report, "The Dorothy Switzer Report," on subjects thought to be of interest and importance to older Nebraskans. The information reports are compiled and distributed by mail twice a month to a mailing list of more than 1 thousand individuals, groups, and agencies. As many elderly Nebraskans do not have access to television, the printed report is intended primarily for them. The report is also used in numerous ways by senior citizen centers and by appropriate public and private agencies concerned with needs and problems of the aging.

My testimony, based on the kinds of inquiries that come to the Grand Generation, emphasizes very strongly the fact that the elderly in Nebraska and the rural elderly, in particular, wish to remain independent in their own homes as long as possible to avoid having to be institutionalized. They need exactly the same kinds of supportive services which, happily, are now being received by many of the urban elderly. The rural elderly urgently need access to health delivery systems and to home health care and physical therapy. They need homemaker and handyman services, congregate hot meals and, in some cases, meals-on-wheels. They also need opportunities for recreation and socialization.

Hospitals and clinics, physicians, dentists, audiologists, speech pathologists, and oculists are few and far apart in many areas in the far-flung State of Nebraska. Thus, the rural elderly need transportation in order to procure such services. They also need transportation to transact essential business, to do shopping, to attend church, to maintain social contacts, to keep active in the community, and to remain in touch with the world. Incidentally, many of them look enviously at those rows of schoolbuses parked in school parking lots for very many hours of the day when it seems to the elderly that those buses could be used to take them to places they need to go.

It was hoped at first that the Federal transportation demonstration project might help solve our problems. We all rejoiced when one of these proposed projects was notified that its application had been accepted. However, 14 months have elapsed and the application is still involved in the review process. It is now awaiting equipment specifications. No money has been received and there is no promise of action before January 1977. Similarly, application for three buses for three Nebraska cities under the Federal national transportation section 16(b)(2) have long been bogged down in equipment specifications hassles.

Post Office a Necessity

I have been asked to testify about the deep concern of the rural elderly who live in communities that are threatened by loss of small-town post offices. Such towns usually have no banks or credit unions, and they have few or no sources of general merchandise. Being largely without transportation, the rural elderly must, per force, shop by mail and must pay for their purchases by postal mail orders. If, for example, their eyeglasses, dentures, or hearing aids need repair, these must be sent and returned by mail. Because they are without legal or even paralegal services in their communities, they must often send important documents and business papers by registered or certified mail. How are they even to purchase stamps when their post offices are closed? As small communities decline, the elderly tend to become increasingly isolated, and this becomes even more acute when they have no post office. Small town post offices serve major information and referral functions, and they serve social functions, as well.

Granted that small town post offices may operate at a loss and that in many cases the postmastership is a political sinecure, there are economies which could be effected—such as decreasing the hours and days of service—without depriving the rural elderly of their greatest source of service and satisfaction.

If I may take a moment to be personal, I may tell you that my mother lived in her farm home until her death at age 82. She kept up correspondence with a host of friends of all ages, and arrival of the mail was the high point of each day. Also, one of my aunts who lived alone on her farm until her death at the same age, 82, maintained a worldwide correspondence. Both women belonged to regional and national flower clubs which, through the mail service, gave them an avid interest in life to the very last.

The rural elderly are in urgent need of legal or even paralegal assistance, such as is available in metropolitan areas of the State through

legal aid societies. Many of the appeals addressed to the Grand Generation program relate to this need.

A higher proportion of the rural than the urban elderly own their own homes, although most of these homes are exceedingly modest and often in need of repair. In small towns the tax base has been seriously eroded as local businesses have closed when population declined, thus taxes are onerous. Others will speak to a reverse trend in some "bedroom" communities, but this inevitably requires expensive extension of services. Thus, a problem of deep concern to the rural elderly, which might seem to be of local or statewide nature, is one of which the Senate Special Committee on Aging should be cognizant—it is the matter of special assessments for such things as street paving districts and water and sewer improvements. In order to pay such special assessments, the elderly are often faced with having to sell the home, acquired through a lifetime of sacrifice and thrift, in which they had hoped to live out their days.

Others will speak to the subject of the disastrous effect of ever-rising costs for fuel, electricity, telephone service, and other utilities—to say nothing of astronomical medical costs.

Another thing I would like to say is that inflation has created the most overriding problems for the rural elderly—the very people who have the least opportunity to find employment by which to supplement their limited incomes. Restrictions on earnings by social security recipients are unfair, but the lack of jobs in rural Nebraska is even more devastating. It is not lack of work. There is work which should be done throughout the State, as well as throughout the Nation, which has myriads of unmet needs.

Thousands of our rural elderly have talents and skills which should be put to use—often, indeed, to serve the needs of other less physically able older people. Elderly rural Nebraskans survived the years of drought and depression, bank failure, and crop failure. They are notoriously long-lived and self-reliant, and they do not wish to be relegated to the rocking chair or the whittler's bench. Under present circumstances, however, too many of the rural elderly—totally against their will or desire—constitute an enormous wasted human resource.

[An additional statement of Mrs. Switzer was subsequently received, and follows:]

ADDITIONAL STATEMENT OF DOROTHY SWITZER

In many of the small towns of Nebraska there are relatively few young or middle-aged families, and therefore few young people who can be employed to mow lawns, shovel walks, and do other chores and errands for older residents. In the surrounding farm areas there are often, however, sizable groups of farm boys and girls enrolled in 4–H Clubs and in Future Farmers and Future Homemakers of America. Leaders of such groups are interested in community service projects in which the members can engage, and frequently their cooperation can be enlisted to serve the needs of the rural elderly. This is a source of help for older Nebraskans which is largely overlooked. Services of the young people need not be entirely unpaid, as frequently the older people can afford to pay a reasonable amount for services rendered.

Possibilities of involvement of rural youth with the rural elderly are virtually unlimited. Youth with garden projects often have a surplus of produce which can be shared with older people who are unable to garden; those enrolled in cooking and baking clubs who are trying to perfect their skills may share some of their products with the elderly; young men in farm construction projects

often have building skills which can be contributed to help older people keep their homes in repair.

In Council Bluffs, in Senator Dick Clark's home State of Iowa, a youth handyperson program in Cass and Pottawatamie Counties provides homeowners over age 60 with free small home repair jobs. The young people are willing to work without pay because they find it spiritually rewarding; others, whose grandparents have died, just like being close to older people, it is said. Many of the elderly people have so much pride that they do not want to have something done for them for nothing, hence they reward the young workers with cookies, milk, and ice cream—and with their friendship.

There is evidence that when communities are made aware of the needs of the rural elderly, awakened concern leads to innovative and creative ways to meet such needs. For example, in Bellevue a concerned woman became aware that older people had difficulty in getting to the grocery store. She enlisted the cooperation of church groups which supply a bus and driver and a volunteer escort to take elderly residents on a weekly shopping trip. This has served not only a practical purpose, but has provided socialization opportunities for many who had previously been isolated at home for weeks at a time.

Senator CLARK. Very well said.

Now we are going to hear from Helen Storms from Western, Nebr.

STATEMENT OF HELEN STORMS, WESTERN, NEBR.

Miss STORMS. Thank you, Senator.

Senator CLARK. Western is a town, isn't it?

Miss STORMS. That is right.

Senator CLARK. Not just western, but Western with a capital W.

Miss STORMS. That is right. Western is a town of 340 people at the present time.

I wish to speak as a senior citizen and as a member of the rural community. I am truly a member of a rural community in that, on both sides, my grandmothers homesteaded within 7 miles of where the town of Western is at the present time. I have lived all my life, you might say, in Western, except for 42 years of teaching. I moved in and out, but Western has always been my home.

I would like to bring up something a little personal in some of my remarks, and I hope you will forgive me for that. In years past we had three doctors. We had a dentist, we had a registered nurse—we had two or three. They were not called practical nurses then, but they took the place of practical nurses. We had two trains a day and we were pretty well served. Today we have no doctor, no dentist, no RN. We are 18 or 19 miles away from any of those services, and that has very decidedly changed the life of the people that live in our rural community.

I would say that probably 50 percent in our town are retired. Just going up and down the street in my own mind the other day, I counted 50 people who live alone. I counted another 50 who, husband and wife, are still together but have practically no relatives within the town, which makes quite a difference.

TRANSPORTATION TOP PRIORITY

Then in 1971 there was a survey made in our country as to needs of the older citizen, and the first preference was transportation. So with the help of the community action and our county agent, who was very active in that program at the time, we established a minibus.

Well, there were lots of trials and tribulations in getting the minibus off to a good start, but we still have the minibus that we think is working very well. We serve six towns—two towns in other counties. They have doctors and hospitals in their towns. We run our bus 3 days a week—2 days we go to Lincoln and on alternate Tuesdays we go to either Fairbury or Beatrice.

Then we have a program of special tours, because it is my feeling that for some of these senior citizens a trip, purely recreational, is good therapy and perhaps does as much as a trip to the doctor. We ask them where they would like to go or if there are programs they would like to attend. For instance, we go to Abilene, Kans., almost every summer, they love to go down there. In the fall we go to Nebraska City to the apple orchards. They love that because they are always treated to a good drink of apple cider.

It has been up and down financially, but we think we are off to a pretty good start. The other day I got on the telephone and decided to make another survey of our town, which is not hard to do when you have a town of only 340 people. I asked them what their major concern was. Well, I found that they were really very satisfied with our transportation setup. They thought that was very nice. Their second preference was some kind of health service to come in.

The next preference was the handyman service, and I certainly could go along with that. It is very difficult in our small towns to get people to come to do odd jobs. Maybe you live alone and can't get out and do them all yourself. It is just a little simple thing of mowing the lawn. It is very difficult to find people. They say, "Well, how about the Boy Scouts?" Well, we don't have a Boy Scout organization. We have Cub Scouts, but they aren't old enough to do that.

It is impossible for me to trim my rose bushes because the boy mowing the lawn takes them down every time. So a handyman service is something that is very important.

Senator CLARK. Thank you very much for an excellent statement.

We are going to hear next from Lizzie Springer from Macy.

STATEMENT OF LIZZIE SPRINGER, MACY, NEBR.

Mrs. SPRINGER. Thank you.

Senator CLARK. How big is Macy?

Mrs. SPRINGER. Macy is an incorporated little town of about 300.

Senator CLARK. About 300. I feel right at home here. I am from a big city. I was raised in a town of 490. Now I find that both our communities are smaller.

Will you tell us about Macy?

Mrs. SWITZER. She lives on a farm.

Mrs. SPRINGER. Macy is practically all Indian people. There are very few non-Indians left. We have a senior citizen center which we all go to 5 days a week to eat dinner. They have come out to us and take us back, which is good, but the transportation is very poor for us to go shopping for groceries because just 14 people can go in this panel van. Then when we want to go shopping, our coordinator says we have to have more than one go—"Just one? We cannot take you." The nearest good place for shopping is Sioux City. We like to go

there because there are always bargains in the grocery stores, but we have to wait until we have more than one to go. So transportation is poor that way.

If we want to go see the doctor, the transportation is good for that. There is a van that comes out to us when we set a date for them to come.

About our housing. I live out in the country; I am a widow and I live all alone. My children and grandchildren have grown up and left me, so I live alone. Not only me, there are other senior citizens living alone—men and women.

I have pity for one man. He is a blind Indian and he lives out in the country. I get in this panel truck when they go out to him and a lot of times I have helped to lead him to the truck. I don't think anybody goes out there to see this man. We have meal service there, but I don't think they go out to see him.

There are a lot of gardens that the senior citizens fall back to. There is a lady that lives alone and her sons have a bad habit of drinking. They bother her, and we just can't do anything about that.

About our telephones—we have our telephones installed, but we have had a difficult time getting them. We even signed a petition with the non-Indians to get the phones and when the non-Indians got their phones in we didn't get ours until about 2 years after.

Senator CLARK. Why is that?

Mrs. SPRINGER. I don't know. That is what I would like to know.

Mrs. SWITZER. It took action by the Nebraska Commission on Aging and some other concerned citizens to bring it about.

Senator CLARK. You have phones now?

Mrs. SPRINGER. We have phones now. Before then we had real problems. I was sick one time and I had to walk down to the road to a farmer to take me to the hospital at that time before we had the phones. Many people have been doing it.

I don't live in fear now. I have my own phone. The rest of them with seven families have their phones now—some of them are senior citizens.

Then I don't know if I should say this. Our panel is——

Senator CLARK. Your panel is your minibus?

Mrs. SPRINGER. Yes, the minibus. It is pretty well worn out and I told our supervisor, Mr. Mayer, about it. He said that we had to go and talk to our tribal council, that they had charge of that. We have not gone to the council yet. I think maybe next week some of us senior citizens will go and talk to them to see if they can get anything else. It is very unhandy to get in and get out. There are a lot of things that different ones talk about here that we have not got.

Senator CLARK. I want to come back after we hear from Henry Knape and ask you some questions about some of those specific areas, if I may.

Mr. Knape is from Alma, Nebr. You may proceed in any way you wish.

STATEMENT OF HENRY J. KNAPE, ALMA, NEBR.

Mr. KNAPE. I will give you just a little history of our town and surrounding area. We have a population of 1,450 and we have a senior citizen center. It is progressing, in my belief, very successfully. We

are like everybody else. We have our problems and we serve five other towns around us. We have four meals a week—Mondays, Tuesdays, Thursdays, and Fridays. We serve one meal a week over at Orleans, Nebr., because they haven't any restaurants there and we are going to let them serve on Sunday so that senior citizens can be served with a hot meal on Sunday. They come over the other four times and a lot of them have participated in the meals and activities of our community. I will just give you a little rundown on the towns, the population, and the districts.

Ragan is 19 miles away from Alma and it has a population of 60, with no stores. Republican City has a population of 173 and it is 8 miles. Stamford has a population of 200 and it is 17 miles. Oxford has a population of 150 and it is 14 miles.

We have one minibus. I am just like all the rest of them—that minibus is one of the most important things in the senior citizens community to me, because it helps bring the elderly into town and it helps take them to the doctors. Besides these towns we serve, we have a phone. They go up there once a week. The bus holds eight, and they take these eight people out—different ones, of course, on different weeks—for a ride in the country.

When people get old they like to see where they live and see how things progress. Our big trouble is transportation. While we have the minibus to these other towns, we have emergencies lots of times and they have to get a person to a doctor. Then we have volunteers—we have no volunteer service. My wife is 76 and she volunteers to take these people to the doctors lots of times. I was thinking, if we could get another minibus to fill in while this one minibus is out, we could get volunteer drivers, I am sure, to run it in cases of emergencies. Then when that minibus was not busy, we could take that on a trip. Like the lady said here a while ago, take it down to the Eisenhower Museum.

My main concern is that we have to take people to a specialist lots of times. We had one this week. Well, the bus could not go because it was out of town and they wanted to go to Kearney to a specialist. If we had another minibus, that would have filled the gap.

Representative McCollister. How far is it to Kearney?

Mr. Knape. Forty-five miles. You know, when you take a bus out of town and serve these other towns it is quite a chore. I am like most of them, I think the No. 1 priority is transportation.

Chore Service Program

No. 2, as the lady said a little while ago—I am just rehearsing some of the things they have gone over—that is chore service programs. I think the chore service program is one of the most important things. We have elderly around in the small towns. They have that handyman for putting in storm windows, painting, odd jobs done, like mowing their yards. It is awfully hard to get somebody to do chore services, because most of us down there are elderly. There are just a lot of elderly there.

Of course we have the reservoir. We have people from Hastings come there to retire because it is a nice place to fish, and you know how that is. If people have someplace that they enjoy more than others, they move there. That is why I moved down, too, as far as that goes.

I think my time is just about up, so I better just leave it that way. I am very glad that I had the privilege of talking to you.

Senator CLARK. Well, I wish we had more time to visit, but let me try to keep my questions brief. As you know, if we are going to successfully fight inflation in this country, we have to limit our spending.

Mr. KNAPE. That is right.

Senator CLARK. So the question is, which of these programs is the highest priority? Which ones do we need to be putting more funds in? Which ones can we eliminate, and so forth? You have said, for example, that in your judgment you support much of what has been said here before—that transportation is a very high priority. Now, would you put a high priority on the nutrition program, on the hot meals program, and why? How high and why?

Mr. KNAPE. We have that and I think it is one of the most wonderful programs there is because there are a lot of elderly women and an awfully lot of elderly men that need a good hot meal. I didn't stress that as much as I should have, but I think that is No. 1, really. Then I think transportation is No. 2, and I think chore service would be No. 3. That is the way I would grade them.

Representative MCCOLLISTER. Did you say nutrition is No. 1?

Mr. KNAPE. Yes. I think nutrition would be No. 1—see that the elderly get a good meal as many times as you can. Yes, I would put that No. 1, I would put transportation No. 2, then I would put chore service No. 3. I would like to see chore service so you would have somebody that would do these jobs that are needed to be done for the elderly, because they like to stay in their own homes. This has been brought up before.

NUTRITION PROGRAM 5 DAYS A WEEK

Senator CLARK. Now let me ask Lizzie a question. What about nutrition programs at Macy? I don't know how many programs you have or if that is the same. Do you have a hot meals program there?

Mrs. SPRINGER. Yes.

Senator CLARK. Is that each day, once a week, or how does that work?

Mrs. SPRINGER. One a day at noon, 5 days a week.

Senator CLARK. Is there good participation in that? Do people go?

Mrs. SPRINGER. Yes. They have trays they take out to some who are unable to come in—27 trays every day, to take care of those people.

Senator CLARK. I see. Twenty-seven trays a day are taken out to elderly people to their homes.

Mrs. SPRINGER. Yes, to their homes.

Senator CLARK. The other thing I wanted to ask you about was health care. Suppose you get sick? Where do you go? How far away is it? How do you get there? In other words, what kind of health care do you have available?

Mrs. SPRINGER. We have a hospital there about 9 miles north of Macy and they have a panel car. They have a clinic right in Macy, and that car takes us over there.

Senator CLARK. Is the food good, in your judgment?

Mrs. SPRINGER. Yes, it is good.

Another thing, too, Senator, I want to tell. Some of the senior citizens that are old are in homes now—about four or five of them—and

they don't like it there, but their families can't take care of them at home. The hospital keeps them just a certain length of time and they are discharged—they have to go home. They don't want to go to these nursing homes, they just don't want to.

Senator CLARK. Let me ask you just one other question. You mentioned, when you were speaking earlier, about housing. What is the condition of housing in Macy? How would you describe that?

Mrs. SPRINGER. There are five homes for the elderly in Macy, and they are out in the country. We didn't ask for them to move there; I don't want to move out there. I have my own home, and I would rather stay there. My sister is about 75 and her home is very poor. They told us last week that they were going to try to have more housing for the elderly out in the country, but that may be just something they are talking about. This month they are going to have a meeting.

Senator CLARK. About housing?

Mrs. SPRINGER. Yes. There is a way to help us elderly out. If we could get housing, we sure would appreciate it.

Senator CLARK. Well, it is a very basic need. It is as important as food.

Thank you very much.

Dorothy, I wanted to ask you a question. We have been talking here about the most basic needs and you have mentioned several of them here very clearly, but do you think that the highest priority in rural areas is nutrition? Is it health care? Is it employment? Is it transportation? Can you evaluate those?

PRIORITIES VARY LOCALLY

Mrs. SWITZER. Well, it varies, of course, in various parts of the State. These people who are fortunate enough, as Mr. Knape is, to have transportation in their community, even if it is not quite adequate, and nutrition and various other things, are lucky. There are vast areas in the State in which there are no nutrition projects, no kind of transportation, public or otherwise, and there are vast areas in which there is no opportunity for employment.

Small towns have declined, the businesses have gone out of business. There is little opportunity for the retired farmer, who moves into town and finds a special assessment for a paving district doing devastating things to his taxes, to, in any way, earn any money to supplement his income.

So, I think it is very difficult to spot any one thing as the most needed, because it varies greatly by the area of the State and circumstances. I suppose that at every meeting I have attended, and I have attended many of them in area agencies on aging, senior citizens council meetings, and things of that kind, transportation does loom the largest.

The nutrition programs are appreciated more after they have had them, but until they have, they don't realize what they are missing. I think I would have to say transportation is most important.

Another very great need, however, is for legal assistance or paralegal assistance, comparable to what the elderly in the metropolitan areas are able to receive through the Legal Aid Society.

Senator CLARK. That is a good point. It has not been mentioned before in these hearings.

Mrs. SWITZER. It is urgent. Many of the questions which have come to us at the Grand Generation relate to this subject.

Senator CLARK. Let me ask you this, and then maybe Congressman McCollister will have questions.

You said that in your town—that is, in Western—you have what you consider to be, at least, adequate transportation now, but what about health care? Now, you said you needed that. My question really is—I think you said Western is a town of 300.

Miss STORMS. Three hundred forty.

Senator CLARK. What kind of health center could you support, that would be useful and helpful to you, and yet practical enough to do the job? I am particularly interested in writing legislation, and I would be interested in any suggestions that you have.

Miss STORMS. I think if we have somebody—I don't know just what term we should use, perhaps a visiting nurse or something like that—who could take blood pressure, and things of that sort. I have a neighbor who, once every 3 months, goes to Lincoln and has her blood pressure checked. It takes about 5 minutes. The nurse takes her blood pressure and tells her whether to take those pills, something that easily could be done at home. If she cannot get her appointment on the day that the bus goes, then she has to scrounge around and see who she can find to take her.

Senator CLARK. A registered nurse?

Miss STORMS. A registered nurse perhaps could handle a good many of those problems.

Senator CLARK. Suppose you had a place there for distribution of prescription drugs, would that be helpful?

Miss STORMS. Well, yes. I would say that a third of our people that ride the bus go for medicines.

Senator CLARK. Very well.

Congressman.

Representative MCCOLLISTER. Thank you, Senator.

I have been sitting here listening to the testimony and remembering almost half a century ago when the needs of the elderly were the same, yet our ability to administer to those needs was quite different. I suppose that many of us in this room can remember our great-grandmothers and our grandmothers living with us and we were able then to provide for their care. In the meantime, in half a century, our small towns have dried up, our society has become so mobile that numbers of senior citizens have been increased because of the fortunate increase in our longevity, yet our ability to minister to the needs of the elderly has steadily, over half a century, gone down.

THE CHURCHES' ROLE

Now my question to you is, since the family is no longer as wel, able, because of the wide dispersion over all the country—what other institutions in these communities are still able to address themselves to the community? For example, I was wondering if Western has active churches who address themselves to the needs of the elderly in providing some of these services and some of these needs—particularly I was thinking of the socialization need, the need to remain a part of the community.

I was thinking of the hot meals program. Is that a characteristic of smaller communities—that the churches minister to their congregation of senior citizens?

Miss STORMS. Well, in many of these small towns, like ours, for instance, we do not have a resident minister. The idea of the parish among the churches—our minister in Western—the one that ministers to our church—lives in Wilber 18 miles away. We have three active churches in our town and not a single resident minister.

Representative MCCOLLISTER. But there are three congregations?

Miss STORMS. Yes, there are several congregations, and they are all small, needless to say.

Representative MCCOLLISTER. I assume that their membership is on the upper side of 50 as well.

Miss STORMS. Yes. I think the largest church in our town has a membership of 167.

Representative MCCOLLISTER. Well, as we try to devise or invent systems to provide for needed services for the elderly, we think of all the institutions who used to do it and who now cannot, and what we must do to fill that gap. There is the community, there is the State government, there is the Federal Government, and I suspect that the farther away we get from the community, the less personal interest, the less efficiency, and the greater cost. So whatever we can do to devise systems to support local effort, the better off we are. Thus, what I have obtained from you and the previous panel's testimony is to whatever extent this becomes a Federal program, to do whatever we can to use it as a stimulus to make the local communities more self-sufficient. Do you all agree with that?

Miss STORMS. Yes.

Mr. SOUKUP. Yes.

Mrs. SWITZER. It has happened in many communities in Nebraska. I wish that Art Nebelsick from Crete were here, because the churches in Crete were responsible for organizing a program for the elderly and from that has developed the senior center, and all kinds of activities. There has not been a cent of Federal or State money put in it and they have one of the best programs in the State. There are other towns which have acted to solve their problems. Neligh organized a senior citizen program through the churches because it was felt there was great need for it. The Commission on Aging has recently granted a small amount to a center which was organized in much the same way at West Point. Many of the senior centers in the State have developed through the concern of church people who have initiated the kinds of activities that later developed into a larger program.

Representative MCCOLLISTER. We are grateful for your contribution.

Mrs. SWITZER. Thank you.

Miss STORMS. In our town, by far the majority of the members of the church are senior citizens.

Representative MCCOLLISTER. What town is 18 miles away—Wilber?

Miss STORMS. Yes. Wilber is 18 miles away.

Representative MCCOLLISTER. Any possibility of that church in Wilber adopting the congregation in Western to aid that congregation?

Miss STORMS. I kind of doubt it.

Mrs. SWITZER. It can happen though.

Miss STORMS. Yes, it can.

Mrs. SWITZER. In Crete, the rural churches cooperate just as much as the churches in the town.

Miss STORMS. They have some very active church members in Crete who really have pushed it. We have no nutrition program in Western or in the smaller towns. We have one town of 120, one of 160.

Representative MCCOLLISTER. Thank you.

Senator CLARK. Thank you very much.

We thank you as a panel. It has been very, very helpful to us.

Mrs. SWITZER. We appreciate the opportunity.

Senator CLARK. We have two more witnesses, and they may both come up at this time. Richard D. Heft, chairman of the Harlan County Board in Alma, and Hans Jensen, legislative committee chairman of the Nebraska Senior Citizens Council in Aurora, Nebr.

I might say as the witnesses come up that the flowers on each of the tables come from the Gretna 60-Plus Club whose representative, I think, is here. Would she stand, please.

I understand that one representative may want to make a brief statement. Am I correct about that?

Mrs. DIETZE. Yes.

Senator CLARK. Please come up to the table.

We are going to hear now from Richard Heft, chairman of the Harlan County Board. We have about 20 minutes and we have three witnesses, so we will try to divide the time evenly.

Mr. Heft, please proceed in any way you think appropriate.

STATEMENT OF RICHARD D. HEFT, CHAIRMAN, HARLAN COUNTY BOARD, ALMA, NEBR.

Mr. HEFT. Senator Clark, Representative McCollister, my name is Richard Heft, and I am from Alma, Nebr.

When Glen Soukup called me up and wanted me to speak, he went out so far that you cannot even find it from here, you have to go out someplace else. You can't get here from there.

Anyway, when he asked me to speak, I really didn't know what he wanted me to speak about, but he said I would have about 5 minutes to talk. I said, "Well, that should not be any problem because my wife says I talk so slow, it will take me 5 minutes to say what I have to say and then by the time I tell a little story my 5 minutes will be up." So I will tell you a short little story.

There was an elderly gentleman that liked his spirits, and he went into this bar and ordered a drink of whiskey. He told the bartender to put in three drops of water. So the next time the same little gentleman came in and ordered his drink, and he said, "Bartender, just put in two drops of water." And the third night he came in again, and by this time the bartender's curiosity was quite aroused, and he said, "The first time you said you wanted three drops of water in your drink, the second night you wanted two, and tonight you want one. Why?"

He said, "Well, us elderly gentlemen can still hold our whiskey, but we can't hold our water." [Laughter.]

Tax Limitation Effects

Anyway, being the chairman of the Harlan County Board, our biggest concern with the elderly is taxation. For just a small county—we have less than 5,000 population in all the county, which covers about 25 square miles. When I first went on the board about 4 years ago they appointed me to the service for the aging, and I thought it was a very worthwhile project. We had no service for the aging at that particular time.

When I went on the board, the first thing I did was to get a survey of what the people in Harlan County wanted first, and it was transportation; second was job chore, and third was a civic center. Well, I am glad to say we have all those, plus several more now. We have a nutrition program along with it. We have the medical lady that comes in and takes blood pressure at least once a month, and we hope to expand a lot further on that.

Anyway, back to taxation. Our county tax valuation is only $30 million, so 1 million brings in only $30,000. By the time you get it all divided between the 14.28 which the State requires you to have, and by the time you take care of all your services, you don't have anything left. Last year the person who represents the counties said there were 31 counties that had reached their mill levy and that there will be over 30 more that will reach it this year. So I am telling the counties that don't have the service for the aging—if they don't get the tax relief, there is no way that they will be able to handle it.

Revenue sharing, I understand, has been up before and I think that should probably continue. Before, you could not use any Federal moneys, but I think that is going to be changed to where you can use some of that revenue sharing, too, for some Federal programs. Right now we have only about 0.21 of 1 mill toward service of the aging, because it only brings in about $8,000, and Federal aid from it started off as 90–10.

Well, the predicament in Harlan County on the service for the aging came to us. Our No. 1 problem was transportation, so they said, "Well, you go on a 90–10 for the first year." When we got down to it, it came down 75–25. So we have been in it for 1 year and 9 months, and the Federal Government has come out now and said, "We are not funding any more money for transportation in Nebraska; we have it cut off."

So the State has come out and said, "Well, we will continue it at a 50–50 grant. If we had known this to start off with, there is no way in the world that our county could have gone into transportation. We have it now and we have it on the tax rolls, so there is no way that they can take it away from us. The people in our county definitely want transportation, but it makes it all for the bad when they cut it off. They guarantee you at least 3 years, and we have 1 year and 9 months.

The panel that was here before me fairly well covered every aspect of all the programs and I don't think that I need to repeat any more on that, so I will turn it over, then, to this gentleman here.

Senator Clark. Thank you very much.

We are going to hear now from Hans Jensen who is legislative committee chairman, Nebraska Senior Citizens Council, in Aurora, Nebr.

STATEMENT OF HANS O. JENSEN, LEGISLATIVE COMMITTEE CHAIRMAN, NEBRASKA SENIOR CITIZENS COUNCIL, AURORA, NEBR.

Mr. JENSEN. Senator Clark, Congressman McCollister, I am the lobbyist for the senior citizens in Nebraska without any pay. I am glad to do that for them and they probably get as much services as they pay for. However, I served 6 years in the legislature and I am glad that I have the time, and I enjoy being involved. This is one way of being involved, it gives me an opportunity to keep abreast of these things and it also gives me an opportunity to be of service to my fellow man. The world has been good to me and I would like to be of help to the people that made it possible.

One of the peculiarities about the elderly is that they have the tendency to make do. They will sit back and suffer injustices and shortages without really saying much about it.

I attended a meeting in Omaha one time and I will tell you of a little incident. We sat there and listened to the elderly testify and discuss their problems with the mayor. Along about 3:30 in the afternoon some old lady got up and led the group in singing "God Bless America." It almost brought tears to my eyes because the elderly are just as grateful, even though they have as much need as any group, or perhaps more so.

Let me just briefly cite some of the things that I put together.

MEDICARE FORMS COMPLICATED

Most elderly are confused and baffled by the forms connected with the medicare program which they are requested to fill out upon receipt of medical services and care. Oftentimes, words used are medical terms not understood by lay people. Medicare usually pays approximately 80 percent of the bill and other insurance companies are called on to pay the balance. This gives the elderly no end of trouble and concern to understand and to use. It is my opinion that oftentimes medicare is not used because of the problems it brings about.

Language used by medicare to describe action taken should be simplified and amounts covered by medicare either should be increased or charges for medical services reduced so it could all be covered by medicare. It is my opinion that the present policy used is so troublesome that it is limiting the use of medical services which the elderly need.

I am also a representative of the Damascus Farmers Union and I am doing all sorts of lobbying work for them in Nebraska for the same reason. I would like to mention something they prepared for me that I think is of interest to you. Just a brief remark about the Green Thumb program. The National Farmers Union sponsors this program in 28 States, Puerto Rico, and the District of Columbia. There are only

120 older people working under the program in Nebraska to date in 14 communities. There are 49,000 elderly eligible for the Green Thumb program in Nebraska, according to the latest census figures. Therefore, special interest should be placed on enhancing a program of this nature, a program that uses the skills of elderly and part-time work for improving the homes in which they live. It is the kind of program that gives older people the opportunity to earn a better living in our affluent State, rather than being destitute or on public assistance. I might add here, too, that as long as these elderly people feel that they have a purpose in life, they can look forward to tomorrow. I tell you, this makes life a lot easier for them to live.

Senator CLARK. Thank you very, very much.

Let me just ask you one question.

You identified yourself, Hans, at the beginning by saying that you were a lobbyist for the elderly and that you tried to speak for their interests. One of the impressions that I have in watching elderly clubs, associations, groups, and councils form is that much of the reason that the Congress, the administration, the State legislatures, the county boards of supervisors, and so forth, have responded, to some degree at any rate, to the problems of the elderly is that the elderly have themselves become organized. They have become a strong force and have, in fact, called these people in and talked with them. They have been effectively organized and are an effective voice for their own use and their own needs. Do you tend to share that view?

Mr. JENSEN. Indeed I do, and I am going to quote you on it, too.

Senator CLARK. Good. There are a lot of people who think that lobbyists are bad people or that they are bad names—and certainly they can be—but in a democracy I don't see how you can work effectively otherwise. I don't see how you can really have your own point of view represented, whether you are elderly or young, farmers or businessmen, or anybody else, without being effectively organized. I think until the last 10 years, the fact is that elderly people had not been well organized for that kind of effort. I think in the last 10 years they have, and I think it is reflected in the kind of legislation and the kinds of administrative actions that have occurred as a result of that.

Mr. JENSEN. They have the political moxie, if they just use it.

Senator CLARK. That is right.

Mr. McCollister.

Representative MCCOLLISTER. We are short on time. I yield.

Senator CLARK. Please identify yourself.

STATEMENT OF EVA DIETZE, SENIOR NUTRITION PROGRAM, 60-CLUB, GRETNA, NEBR.

Mrs. DIETZE. I am Eva Dietze.

Senator CLARK. You are here as a representative of the 60-plus club here in town.

Mrs. DIETZE. Yes.

Senator Clark and Congressman McCollister, my name is Eva Dietze and I am speaking for the senior nutrition program in Gretna, known as the Gretna 60-Plus Club, who have signed this statement. We feel that the special problem the senior citizen faces living in a rural

area is transportation. A person living in a rural or farm area who cannot continue to drive because of poor eyesight or other health problems is forced to move into town. The rural town also being without transportation forces the senior to be dependent on others to drive him to the eye doctor or to have glasses fitted—to the dentist, podiatrist, et cetera, all of which are located in the metropolitan area.

Now in the area of health care we feel that the nursing home should be required to have a registered nurse on duty 24 hours a day and a reliable resident doctor, or one that would be on call at least 24 hours a day. The nursing home should be required to have large outside areas, fenced in, where the patients can be wheeled outside for fresh air. The area should be large enough for the ambulant patients to walk around. Windbreaks of trees and shrubbery should surround this outside area. We recommend a State inspection, under Federal regulations, of nursing homes, including an inspection of the rooms, perhaps four times a year. We recommend higher and stricter standards to run a nursing home.

We feel there should be more information and education in the area of preventive health care, not only for seniors, but for every American citizen. That is, enlightening people on how to prevent illnesses and take care of their bodies before they are sick. We feel there should be more exposure and tighter controls on the chemicals and additives and the colorings and dyes that are in the foods we are eating, and steps should be taken to eliminate these additives in our foods.

Thank you.

[The written statement of Mrs. Dietze included 41 signatures. Retained in committee files.]

Senator CLARK. Thank you for a very excellent statement.

I was handed a note that there are two additional statements. Although we don't have time to actually read them, I would like for them to be included. I will distribute forms and you may send them back. They will be made a part of the official record.[1] They simply invite you to comment on any phase of discussion that we have had today, and read as follows:

Dear Senator Clark: If there had been time for everyone to speak at the hearing in Gretna, Nebr., on August 17, 1976, concerning "The Nation's Rural Elderly," I would have said:

Please feel free to fill these out and bring them to us.

I would like to call on these two people very briefly, and Congressman McCollister and I will speak about 30 seconds, then we will close the program.

If you will please keep your seats, we can have some order. I would like to call on Margaret McMullen, who is president of the State Association of Community Action Agencies.

STATEMENT OF MARGARET A. McMULLEN, EXECUTIVE DIRECTOR, MID-NEBRASKA COMMUNITY ACTION PROGRAM, INC., KEARNEY, NEBR.

Mrs. MCMULLEN. Senator and Congressman, I know you are under a tight time frame here, so I will try to make this very brief.

[1] See appendix 3, p. 196.

As the Senator noted, I am president of the association that includes all of the community action agencies in the State. Our association includes nine agencies total; seven of these are multicounty rural agencies, the other two are metropolitan agencies that also serve some limited rural area around the metropolitan centers. I believe Mr. George Woods, our State director, will be submitting some more written testimony to you before September 15, so I am just briefly going to touch upon a few things here.

As you perhaps know, the community action agencies were leaders in most areas in the development of senior citizen programs and services throughout the State. CAP agencies were established back in 1965 and the early part of 1966; CAP programs have developed over the years since then including transportation, nutrition, telephone reassurance, social and recreational activities through senior service centers, health services and clinics and, most recently, our winterization program.

Incidentally, you may be interested in knowing that in the past 2 years—or a little less—the CAP's have winterized approximately 2,550 homes, and 75 percent of these—or 1,800—were homes of elderly persons living on fixed or limited incomes.

All of these services that I have mentioned are still, in many cases, being operated by community action agencies. Other service agencies in more recent months have entered the field of providing services. This, in particular, includes the area agencies on aging. I believe Mr. Soukup spoke just briefly about some duplication and, perhaps, problems regarding this type of thing earlier. I would have to support this statement, but I hope that the CAP's and the AAA's are on their way to working out these problems and will coordinate efforts in the future. In fact, the State CAP association will be making some recommendations to the Commission on Aging at their meeting in September and, hopefully, this will help resolve some of those problems.

I think the CAP's are unique in many respects. They have capabilities that are not available or are not used by any other human service providers. One of these that I think is particularly important is the efficiency of the CAP's. By law our administrative costs cannot exceed 15 percent, and the most recent reports from throughout the State indicate that our administrative costs are approximately 11 percent at this time. I also think we have a unique capability of mobilizing volunteers. An example is in southeast Nebraska—the Humboldt area. The CAP down there has a nutrition program that only costs them about $1.35 a meal because they are using all volunteer labor. I think one can see the obvious saving here.

Another plus which I think the CAP's have is that they have combined other State and Federal moneys, such as Department of Labor funds, title XX moneys from the department of social services, and others, thus stretching the dollar so we can serve more people.

I could probably go on and on about our unique capabilities, but I know of the tightness of your time frame and that everyone is anxious to close the session here. I would like to thank you for your time. Mr. Woods will be submitting some more written testimony.

Senator CLARK. Good. We will be very happy to have that testimony and it will be made a part of the record as if given here. Any other comments that you would like to make, submit them as well.

I know Mr. John Buck of Creighton University has a statement, and again I would ask him and others here who have statements—because two or three other people approached me as we came in this morning, and others called ahead—if they would be kind enough to give us their statements in writing, they will be included in the record.

This is John Buck.

If you could just summarize your statement in about 20 or 30 seconds and then give us your written statement, it will be included in the record in full.

STATEMENT OF JOHN BUCK, CREIGHTON INSTITUTE FOR BUSINESS, LAW, AND SOCIAL RESEARCH, OMAHA, NEBR.

Mr. BUCK. I am John Buck and I am an advocate of legal services for the elderly. I do have a longer speech that I could give. The need for legal services has not really been brought out, with the exception of Mr. Magnusson's and Dorothy Switzer's comments. The first reason the agency in area 10 in Iowa found that persons were not utilizing assistance as offered by their legal services program was that the elderly persons were found to not realize they had a problem requiring legal assistance.

A second point is the National Senior Citizens Law Center has determined that approximately 90 percent of the legal questions that the elderly have can be answered without the assistance of an attorney; for example, by a paralegal person. There are retired attorneys who do belong to RSVP and who do volunteer their services.

In Nebraska, the only place that the elderly persons can presently get the assistance of an attorney, without having to pay $40, $50, or $60 per hour, are the three legal aide offices in Omaha, Lincoln, and Scottsbluff. Therein lies the problem that was mentioned about transportation needs. For example, the rural elderly don't have access to transportation to Omaha. But Omaha Legal Aid requires that legal assistance be given directly in the office—the elderly cannot call up and ask questions. They have to go into the office physically, which presents a great problem for them.

I work with Creighton University and we suggest, as a possible solution to this problem, the establishment of a legal information center for rural elderly which would operate with a WATS line, which is a toll-free telephone that anyone in the State of Nebraska could call. The center could provide answers to legal questions when a lawyer's services are not needed and where the presence of the elderly person would not be necessary. Second, it could provide case research for the attorney servicing the elderly which would then, hopefully, lower the cost of the legal services.

I am being cut off now, but Lizzie Springer brought up an excellent example where such a center could be very useful which she could have called the legal information center that we suggest. Perhaps we could have gotten the ball rolling to get her the assistance that she needed and she would not have needed to wait 2 years for a telephone.

I thank you.

Senator CLARK. Thank you.

We will make your full statement a part of the record.

[The prepared statement of Mr. Buck follows]:

PREPARED STATEMENT OF JOHN BUCK

First of all, thank you for the invitation to attend this meeting about the special needs of the rural elderly. It is most encouraging that the Senate is continuing its interest in the problems of the elderly and specifically in relation to those living in rural areas. Older Americans live "needing" adequate income, housing, health care, nutrition, and employment much more acutely than do younger people. There exists a vast array of laws which have been designed to, and in most instances do, assist the elderly to be better able to live independently within this society, but these laws are too numerous and usually too technical for a layman (especially an older person) to be able to understand. The particular area, in relation to the Older Americans Act of 1975, which I would briefly like to address is the problem which the elderly have in obtaining legal assistance, especially in rural America.

Elderly persons most often live on fixed incomes; the source of which could be social security, supplemental security income, pensions, or possibly their life savings. No matter what the source, however, these incomes are usually fixed, and less than that to which the elderly were accustomed to in their working years. They are particularly susceptible to the effects of inflation, but generally do not qualify for legal aid.

As Senator Tunney stated last year, "Unfortunately, few elderly can afford the $40, $50, or even $60 per hour fee charged by the average lawyer. Thus, they fall through the cracks of the legal system: Too rich for legal aid; too poor for a lawyer." Senator Cranston added that "The situation of the nondestitute elderly with respect to legal representation may be even more acute than that of the elderly poor. The former have too much income or resources to qualify for free legal service and yet often cannot afford to hire a private attorney." In many instances, even where attorneys are available, they may not be able to provide adequate services—often they do not have the time or resources available to keep up-to-date on the rapidly changing laws which affect older Americans' lives. This is especially a problem in rural areas, since these lawyers rarely have access to complete law libraries, and do not specialize in law affecting the elderly.

In a survey performed by the Area X Agency on Aging, the reasons for the area's elderly not seeking the assistances offered by legal services were: "(1) Not realizing that they have a problem requiring the assistance of an attorney; (2) confused or frustrated about legal affairs; (3) lack of aggressiveness; and (4) can't afford legal services." In addition, the National Senior Citizen's Law Center has estimated that approximately 90 percent of the legal questions which elderly persons have could be taken care of by the provision of legal information without direct legal representation from a lawyer. With these facts in mind, and a stated purpose of the Older Americans Act being to provide "legal and other counseling services," it seems that solutions to some of these problems should be forthcoming. Before these solutions are determined, careful consideration should be given to the long neglected problems of the rural elderly. A review of the 11 model projects funded last year (designed to promote the betterment of legal services for the elderly) reveals none with the select purpose of serving rural elderly.

The rural environment multiplies the difficulties the elderly have in procuring legal assistance. First, accessibility of private lawyers is lowered and these rural attorneys lack the necessary resources for case research. Since the legal questions of the elderly deal with such a vast number of laws, and rural attorneys would usually not have a caseload sufficient to warrant becoming an expert in the field of elderly law, the assistance which these attorneys can provide may often be limited. In Nebraska, elderly persons (over age 60) comprise the third highest percentage of population of all the States. The only legal assistance presently available to elderly citizens stems from the urban legal aid offices in Omaha, Lincoln, and Scottsbluff. These offices are usually inundated with requests from low-income persons, elderly, and nonelderly alike. In Omaha, legal aid requires that the requester of service must physically come into the office, which may often be impossible for confined elderly. In addition, what of the elderly who live too far from the legal aid offices, and what of those who are too rich for legal aid, but too poor for a lawyer? How can these older Americans receive the assistance they need to live independently in this society?

We would propose, as a possible solution to these law-related problems of the rural elderly, the establishment of a legal information center for rural

elderly, which would essentially provide service to three groups, with the end purpose to serve the needs of older rural Americans. The center would provide research to lawyers serving the elderly, would train social service personnel about the law affecting the elderly, and would directly answer some of the elderlys' legal questions in instances where the direct assistance of an attorney was not required. The center could provide information about the family farm, inheritance, consumer fraud, or tax laws and could refer elderly to such existing social services such as the small claims court. Since such a center could operate in each State, drawing on the law schools and other resources located therein, it should be designed so that, if a model is successful, it could be easily replicated by other "rural" States. We hope to propose establishing such a center in Nebraska to the Administration on Aging, and while it is not presently known whether or not it will ever be funded, it is evident that the rural elderly need legal assistance of the type that model urban programs do not and cannot provide. Any effort to promote the provision of legal services to rural elderly (such as the Older American Act of 1975) should be strongly supported by all concerned parties, and we encourage such efforts.

Senator CLARK. This room is going to be used at 12 noon for a congregate meals program, so we have to break up at this point.

I do want to call on Congressman McCollister.

Representative MCCOLLISTER. Senator, the only comment I want to make is to commend you for the organization of these 2 hours and 5 minutes that has produced, I think, a record that ought to be very useful to the Congress in determining the priorities of legislation. It has been an excellent job and I commend the Senator from Iowa for coming to Nebraska to hear from our citizens.

Thank you.

Senator CLARK. Thank you very much.

I think we have received a lot of valuable information. If I could try to summarize it in about 8 or 10 sentences, it seems to me that what we have learned here is that we have unique needs in rural areas, yet, in fact, particularly in the area of transportation, we have even greater needs than we have in metropolitan areas.

We have heard about the value here of the nutrition program—hot meals. We have heard a great deal about the need for extended health care into some of the smaller communities. We mentioned Western, but really there obviously are other communities as well across this State and across the country that are badly in need of additional health services. We have heard about the problem of housing in rural areas. We have heard just now about the need for additional legal services.

So the demands are many and I would be hopeful that coming out of this hearing and other hearings that are being held in other parts of the country we can design some programs now that are uniquely beneficial in helping to solve the problems of people who live in rural America.

We thank you very much for coming.

Mr. SOUKUP. We would like to say thank you to Senator Clark and Congressman McCollister for being here with us.

Senator CLARK. Thank you. This hearing is now recessed.

[Whereupon, at 12:13 p.m., the hearing was recessed.]

APPENDIXES

Appendix 1

LETTERS FROM INDIVIDUALS AND ORGANIZATIONS

ITEM 1. LETTER FROM EDWIN L. CORDING, OFFICE OF COUNTY COMMISSIONERS, HEBRON, NEBR.; TO SENATOR DICK CLARK, DATED AUGUST 10, 1976

DEAR SENATOR CLARK: I am the chairman of the Blue Rivers Agency on Aging which comprises Gage, Jefferson, and Thayer Counties in Nebraska, and a commitment to Richardson County for a nutrition program which is to start soon.

In the first three named counties we started with a transportation program: two buses, now a third has been added, and all are running at full capacity and as per schedule. We had some difficulty with funding. After being in operation 2 years we were informed by the Commission on Aging that the third year's funding would not be available. This problem has been worked out, however. The main problem now is in local funding as all three counties are at the mill-levy limit as allowed by the Nebraska statutes.

In Thayer County, of which I am a member of the county board, we cut 0.60 mill from our road and bridge levy last year to come under the 14.28 levy limit. This, of course, is the last one that should be cut since we need our roads and bridges updated so desperately.

Our elderly problem for the up-coming winter will be the terrific cost of fuel to keep warm which takes a large part of their welfare income and leaves very little to subsist on.

Our agency on aging sends us a monthly report of expenses and work done in the various departments. I only wish the community action programs would do the same.

I may not be able to get to the meeting at Gretna, but I am sure our director, Fred Holtz, will be there and could answer any questions you may have. Willard Gumar may also be there from our board.

I am enclosing a levy sheet[1] from Thayer County for your review if you like.

Sincerely yours,

EDWIN L. CORDING.

ITEM 2. LETTER FROM DELBERT L. NIEMEIER, STATE DIRECTOR, GREEN THUMB, INC., LINCOLN, NEBR.; TO KATHLEEN DEIGNAN, STAFF MEMBER, SPECIAL COMMITTEE ON AGING, DATED AUGUST 10, 1976

DEAR MS. DEIGNAN: Enclosed are some statistical facts and figures about the people who are enrolled in the Green Thumb project here in Nebraska.

In 1975 the estimated number of people eligible for Green Thumb in Nebraska was 49,783 persons. At that time only 107 Green Thumb positions were available. This is only 0.215 percent of the total available.

In 1975 the estimated number of people eligible for Green Thumb in the 14 counties in Nebraska where Green Thumb operates was 15,976 persons. Again only 107 positions for part-time work were available, or only 0.6 percent of the total available older work force.

In June 1976 in Nebraska, the total enrollment in the Green Thumb project was 118 people. Their average age was 70 years and 1 month. Their average

[1] Retained in committee files.

education was 8.7 years and their average income was $1,577—most of which was their social security benefits.

Nine people were enrolled between 55 and 59 years old; 51 people enrolled were between 60 and 69 years old; and 58 people enrolled were between 70 and 80 years old.

The oldest Green Thumber is 89 years old. Actually four people enrolled are over 80 years old and working hard every day earning a better living.

Eighteen people are handicapped (loss of an eye, progressive arthritis, recuperating from a stroke or heart attack, etc.) and 13 people who are enrolled are veterans of World Wars I and II.

On July 21, 1976, we held a training meeting in Syracuse, Nebr. Part of the time was spent in a question-and-answer period devoted to the needs and problems of the elderly living in rural Nebraska. Listed are some of those discussed:

(1) Need of public low-cost transportation from rural areas to county seats, and occasionally to Lincoln, the State capitol.

(2) Need more opportunities to work at least part-time to earn a better living and not be on public welfare.

(3) Lower taxes on private property (their homes).

(4) Better health care, including dental care, and more free medical examinations.

(5) Lower utility costs for the elderly.

(6) More low-rent housing available for the older people.

(7) Social security should not be counted as income. The social security benefits are something that each older person has earned through their productive years and they are just now able to draw on these earnings after age 62 or 65.

(8) Need more winterization work done on their homes to help save on energy and on heating costs.

The Green Thumbers also believed that the maximum income guidelines should be much higher than they now are. These are the guidelines that these older people need to meet in order to qualify for programs that the Congress has enacted for their well-being.

All the Green Thumbers present believed that an older person should be assisted by whatever means possible so that they could live in their own homes as long as physically possible.

They were very grateful that they were given an opportunity to express their needs to you and the Special Committee on Aging. We enjoyed your visit to our office and we also thank you for this opportunity for "in-put."

Please contact us if you have any questions.

Sincerely,

DELBERT L. NIEMEIER.

ITEM 3. LETTER FROM FRED HOLTZ, DIRECTOR, BLUE RIVERS AREA AGENCY ON AGING, GAGE, JEFFERSON, AND THAYER COUNTIES, NEBR., TO SENATOR DICK CLARK, DATED AUGUST 13, 1976

DEAR SENATOR CLARK: I would like to address the problem of rising costs of energy and utilities faced by retired persons, especially low-income senior citizens.

Numerous complaints and comments in the fall of 1975 prompted this agency to do limited investigation into propane pricing practices. Information was hard to document and almost impossible to receive concerning wholesale prices of this fuel; however, we were able to establish that wholesale propane prices did not change through the fall and winter of 1975–76. Retail prices did fluctuate greatly with each individual dealer. Some raised prices by as much as 5 cents per gallon in the heating season and, as usual, the small user suffers the greatest increase. Volume users are and were offered up to 2 cents discount per gallon. We also found that elderly are paying 1 percent interest per month on bills not paid in 30 days. Some pay interest all summer for the past year's heating bills.

Our investigation also found that numerous persons on small incomes cannot heat their homes comfortably. Most were paying from $80 to over $125 per month for heating fuel and receiving from $147 to $178 per month social security, and unable to build any kind of reserve to fall back on. I am speaking of only

heating cost. This person still has lights, water, phone, and other utilities. We found senior citizens trying to survive on less than $30 per month after fixed utility bills were met.

Surely something (maybe a fuel stamp program) must be done to assist the senior citizens living in rural areas. They have no choice but to lock in or use this type of heating fuel, and are completely at the mercy of our energy crunch and pricing practices of local propane dealers.

I definitely feel that this problem should be investigated and addressed by Federal agencies with the thought to some type of assistance for needy low-income senior citizens.

Thank you for the chance to comment on this problem.

Sincerely,

FRED HOLTZ.

ITEM 4. LETTER FROM EVERETT W. GREEN, SECRETARY, NEBRASKA PUBLIC SERVICE COMMISSION, LINCOLN, NEBR.; TO SENATOR DICK CLARK, DATED AUGUST 31, 1976

DEAR SENATOR CLARK: This is in reference to your August 4, 1976, letter asking various State agencies for comments on what has been done by the State agency to serve the elderly with transportation subsidies and other services.

This is to advise that this commission recently assisted the Nebraska Legislature in drawing up a bill, which was subsequently passed, to exempt the transportation of the elderly from the jurisdiction of this commission.

This would be the action of any consequence for us to report.

Sincerely yours,

EVERETT W. GREEN.

ITEM 5. LETTER FROM NEBRASKA STATE SENATOR ROBERT L. CLARK, SIDNEY, NEBR.; TO SENATOR DICK CLARK, DATED SEPTEMBER 8, 1976

DEAR SENATOR CLARK: This is in reply to your letter of August 4, 1976, in which you have asked for suggestions concerning improvement of rural telephone service.

The Telecommunications Subcommittee of the Nebraska Legislature has conducted public hearings in Nebraska communities relative to rural telephone systems. The committee was instructed by the members of the 84th legislature to:

(a) Identify the unique problems and characteristics of rural telephone systems which inhibit the provision of quality service;

(b) Propose alternative solutions to the problems identified;

(c) Develop and analyze information about the size of the telephone exchanges in rural areas, and the effect of such geographic and population size upon service;

(d) To gather whatever additional information is necessary to make an assessment of the situation.

In your letter you stated that your Committee on Aging was conducting a series of hearings on "The Nation's Rural Elderly." It should be pointed out that our Nebraska Study Committee did not direct its attention specifically to the problem of the elderly, but to the problems of rural telephone systems in Nebraska.

The findings of the committee:

(1) Nearly all of Nebraska's rural homes presently have phone service.

(a) Approximately 60 percent are being served with buried cable facilities.

(b) Nearly 56 percent are being served on either 1-, 2-, or 4-party facilities, at the customer's option.

(c) Multiparty lines (eight-party service) are presently scheduled for elimination by 1982, with a few scattered projects remaining until 1984.

(2) Rural customers have submitted testimony asking for wider toll-free calling areas. The telephone companies in Nebraska, operating under rules of the Nebraska Public Service Commission, provide EAS when 65 percent of the telephone customers request such service and agree to pay the higher basic rate that is applicable to the enlarged calling area. At the request of the Nebraska Public Service Commission, the telephone industry has submitted to the com-

mission several proposals that will hopefully meet with a more favorable customer acceptance. In these proposals, charges would be applied only to those customers that would benefit from the expanded service.

(3) The costs of providing and maintaining telephone service in rural and sparsely populated areas are extremely high and will continue to be subsidized by the total rate structure of the State.

(4) The present policies of the Federal Communications Commission, which encourage competition in the most lucrative area of the telecommunications industry, will almost certainly reduce revenues for Nebraska telephone companies. Under FCC sponsorship, specialized common carriers are skimming the cream by serving the more profitable intercity market, while ignoring less populated areas. The results can only be higher telehpone costs for all customers, but particularly for those in rural areas.

Our committee will not have final recommendations for our legislature by the September 15 date which you suggested. It is my belief at this time, however, the final recommendations will be similar to the following:

(1) Consider enacting legislation that would encourage telephone companies to advance their plant modernization schedules.

(2) Review the action of the Public Service Commission on extended area service (EAS) requests and orders.

(3) Explore the possibility of legislation or a resolution supporting the Consumer Communications Act of 1976.

(4) Continue monitoring the activities of Nebraska telephone companies regarding rural service improvement programs.

If I can be of further service to you, please feel free to contact me.

Sincerely,

Senator ROBERT L. CLARK.

Appendix 2

INTERAGENCY MEMORANDUM FROM EVELYN RUNYON [1] TO LAWRIE ROBERTSON, EASTERN NEBRASKA HUMAN SERVICES AGENCY, DATED JULY 23, 1976

SERVICES TO RURAL COMMUNITIES

You have asked for my thoughts on services for the rural elderly. Most of my 78 years have been spent in small communities, though I have been an urbanite for some time. However, I have maintained close association with persons living in small towns, villages, and on farms. As ombudsman for ENOA, I am, and have, worked with the elderly who have always lived in the city and many who have come to the city from rural areas to seek the services and conveniences of the city.

It is my strong conviction that the same services offered through the area agency to our urban elderly are as needed and are as altogether appropriate and adequate for older persons in small towns, villages, and on farms. The need for transportation, health care, nutrition, companionship, and social life may be even more urgent in some locations and in numerous cases than for the urban elderly. All of the services we at ENOA offer could be taken to those in our rural areas. We can meet the needs effectively with competent, understanding staff.

In fact, there is no organization better prepared and equipped than the area agency on aging to fill and coordinate services to respond to the needs of the elderly located in rural areas. But, I feel, as I indicated, that this rural service provision will take a special approach. For the mores in rural living are vastly different from those in urban living. There is a defensiveness to be overcome, for the rural resident is most apt to be suspicious of the person from the city. This is partly because our myths have included the one that the city dweller looks on the small town citizen and the farmer as unsophisticated and uninformed. And, too, because living with space and free association possible in small communities, and living close to the soil on farms, gives a different perspective on life that the more or less impersonal and close association in city living does not afford.

The offering of services from the area agency must be accompanied by an understanding of the psychology of rural living and with a compassion born of understanding and sensitivity to the mental and emotional characteristics of the rural citizen. Any hint or semblance of welfare or patronizing should be totally lacking. It is imperative that there be empathy, if the necessary degree of rapport is established. In my opinion, in most all rural areas there would be very little, if any, difficulty in recruiting volunteers as aides in all of the programs. There does remain a residue of neighborliness that makes volunteering for many almost second nature and carries with it a badge of honor.

It can be noted that with the almost total dependence on the automobile for transportation, the handicaps that may come to the rural elderly tend to isolate many of them. This is even more so than if they lived in the city where some public transportation is available. Many women did not learn to drive, and after the death of their husbands, lose a taken-for-granted mobility; many, both men and women, have had to sell their cars because of financial need, as well, and many have physical disabilities that make driving a car impossible. Gone are the days when the family's horse and buggy provided safe transportation for those suffering handicaps, financial or physical, that most often come in later life. We tend to accept the myth of "unquestioned neighborly help" to the elderly and a rugged self-sufficiency in both the small communities and on the farm. In print, media, and television scripts this myth is perpetuated, but does not bear out what the truth is now, only as historical qualities.

[1] See statement, p. 160.

Health care, at best, is limited in rural areas. Often it is meager, if not nonexistent. For many physicians today have migrated to the city since competence beyond first aid demands the laboratories, technicians, and modern technology supplied by metropolitan hospitals. House calls by a physician are practically eliminated. Thus, with distances greater and mobility limited, rural citizens most often neglect to see a physician and do not receive preventive care.

Time was when a physician knew practically everyone in his community and his concerns for them was that of a benevolent neighbor. That too, has become a myth. Even the midwife has been replaced by a licensed practical nurse, but most small communities do not have the services of LPN's on a regular basis. A mobile unit for health service staffed with trained personnel and equipped to take blood pressures, make diabetic and other uncomplicated tests, eye and hearing examinations so as to recommend medical care when necessary could fill the vacuum in health services in the rural areas.

If food sites could be assured with added portal-to-portal transportation, then this type of facility could be utilized if necessary in lieu of a mobile van to fill the existing and growing need for health care. This also implies, of course, a health maintenance staff is available for a nutrition site.

We are apt to assume that persons in small towns, villages, and on farms raise their own food and are therefore adequately fed. This too, falls in the category of myth. The mother used to be able to can sufficient vegetables and fruit for the winter and the family together took care of the garden. Yet in reality, often the elderly are alone and these chores not possible. Cooking becomes a difficult task for the majority of elderly persons and nutritious, balanced meals are rarely on the table. Often, because the older person alone is apt to have no appetite, and/or no knowledge of the body's need, or of the harmful effects of certain food he or she may be getting in a daily diet, malnutrition often occurs. Statistics bear out the fact that nutrition sites with the carefully planned meals for the elderly, served in attractive settings and with the inherent sociability encourages and provides proper nutrition.

Nutrition sites can and do fill many needs of the elderly beyond a balanced hot meal at noon. The social activities and companionship are vital to keep the elderly active and with the feeling of belonging. The sites make it possible to reach many of the community's elderly with informational and inspirational programs on health maintenance, safety, and financial affairs. Many need knowledge of regulations in social security, taxes, homestead exemptions, and filing the necessary forms, to mention only a few matters of special interest and value to the older citizen in the rural areas. Games, recreational programs, dancing, trips, and warm congeniality that comes from eating, listening, and playing together all imply portal-to-portal transportation for many site participants.

My experience as ombudsman has brought me face to face with the lack of coordination in many valuable and needed services offered to the elderly. This is not limited just to AoA programs, but the entire spectrum of community services that eventually will be needed for a great segment of our elderly citizens, rural as well as urban. I have the distinct conviction that many programs have been designed without thinking to the long-range implications—the peripheral outcomes are often ignored. Health maintenance, nutrition (through balanced meals), social life, and the feeling of belonging are all interrelated and all dependent upon adequate transportation, and flexibly responsive programing adapted to meet the special needs of any particular group of elderly served by the AAA—whether they be rural or urban.

The Role of the Ombudsman

The role of the ombudsman is a complex one for it must deal with all conditions of human needs and characteristics. It demands careful, accurate investigation, compassionate human understanding, and must call upon certain administrative skills in resolving problems and in handling unjustified complaints.

The ombudsman is called upon to investigate any concerns of senior citizens for essentially any unresolved concern is basically a complaint that needs to be solved.

This office has investigated concerns relating to customer-vendor differences, legal situations, housing, social security misunderstanding, insurance difficulty, fear for personal safety, housing, or human associations, critical situations inci-

dental to illness as well as many referrals to other human service agencies to name some of the areas that become cases to be handled in this office.

In short, any human concern, whether personal, confidential, or impersonal, could ask for the services of the ombudsman. Often the caller only needs someone with patience and understanding to talk to for loneliness is so often the primary or triggering factor in concerns or complaints.

It is also the duty of the ombudsman to discuss with the administration possible improvement of services in the agency from insights gleaned through the investigation necessary to resolve the concerns or complaints.

EVELYN RUNYON.

Appendix 3

STATEMENTS SUBMITTED BY THE HEARING AUDIENCE

During the course of the hearing, a form was made available by the committee to those attending who wished to make suggestions and recommendations but were unable to testify because of time limitations. The form read as follows:

DEAR SENATOR CLARK: If there had been time for everyone to speak at the hearing on "The Nation's Rural Elderly," in Gretna, Nebr., on August 17, 1976, I would have said:

The following replies were received:

RUTH C. BLANKENSHIP, OMAHA, NEBR.

The hearing in Gretna, Nebr. was very worthwhile. It brought out the real needs of our rural elderly.

The testimony has given us some real guidelines.

You are to be congratulated in bringing this hearing to rural Nebraska.

HELEN M. BROWN, GRETNA, NEBR.

In Gretna, we now have delivery of mail in town. However, the Federal law says that mail is not to be delivered to anyone closer than one-quarter mile from the post office. Most of our elderly people—at least a number of them (I counted 40)—live in this area. That means they have to walk to the post office. This is also true in other towns near here. Can't something be done about this?

JOCIELL BULL, WAYNE, NEBR.

The needs of the rural elderly are the following in the line of necessity: (1) Transportation; (2) Nutrition; (3) Home nursing; and (4) Homemaker—chore service.

These should be available for all the elderly—no matter what their income is. We find in our area that those in the poverty level are better provided for than those who have a dollar or two above the poverty line!

We also feel that more services should be provided under medicare, such as: eye surgery, hearing-aids, dental work, etc.

We want to keep them in their homes as long as possible, because they enjoy being in the neighborhoods where all aged persons live. They do not want to be put on a shelf, and many do not use a rocking chair. They have knowledge and wisdom, and they want to share it with others. Let us meet their needs so they can remain in their homes as long as possible.

HELEN C. HENGEVELD, BLAIR, NEBR.

I felt this was a very worthwhile program and I was glad to attend.

ELMER F. LANGE, LINCOLN, NEBR.

ACTION has a deep concern for the rural elderly and is conducting, in rural areas. programs that are for those 60 and over. These programs are in communities with a population range of 800 and up. These programs are also operated on minimum funds, but with specific emphasis on keeping the elderly active.

ACTION elderly programs consist of retired senior volunteer programs (RSVP), foster grandparent programs (FG), and senior companion programs (SCP).

BILLIE F. LOGAN, OMAHA, NEBR.

First of all, Senator, I would like to thank you very much for your advocacy for the elderly. They are certainly a forgotten group but, thanks to individuals like you, things are beginning to look up for them. I manage 11 elderly high-rises in Omaha, exclusively for the elderly, and am aware of and a strong advocate of their needs. This has been a problem for the elderly in that when a little illness overcomes them and they need some time for recuperation, there is no intermediate-type living for them; it is either self-sufficiency or a nursing home. The homemaker service that they are able to receive has been one of the most important services for the urban elderly, and helps them maintain their independent living.

There are many services now available, and the little individual in the urban areas, as well as the rural elderly, have a difficult time learning of the services. It would seem that those agencies rendering the services would have a greater responsibility to an outreach program that would encompass all. The little elderly persons still remaining in their homes, living out among the residents of the urban city, can be more easily forgotten than those who have the capacity to learn of the programs. Then there are the SRO's, single-room occupants, living in the urban core of the great cities who are strictly loners and give no encouragement whatsoever to agencies and their services. It is a tremendous task—and much needed—to take and give a helping hand to our elderly of the Nation. These are individuals who have sacrificed time and again for their country. They suffered during the days of the depression, pulled themselves up by the bootstrap, and sacrificed again for their country—many to the extent of giving a loving son, daughter, or husband to World War II. During all these years they attempted to put some little something away in savings so they could care for their old age and not be a burden to their families or country, but inflation took care of that and left many without a penny. Their pride continued on and many still refuse assistance, thinking it is charity.

Talk about the "Grand Ole Generation," we should all certainly be proud. Still in the limited incomes, they continue to ask what they can do for their country. We all owe our elderly much more than we could ever hope to repay. There are so many things our legislature could do in helping them with their ability to live in dignity. Such things as limiting them to earnings and affecting their social security. They are forced into retirement, put on a limited or fixed income, and forced to remain there. Also, those who receive veterans' pensions are penalized by their social security increases, for social security is counted as income in computing the amount of VA received, so consequently when they receive a raise in social security, they receive a deduction in VA—fair?

The recent Federal programs of Senior Companion and Green Thumb are the greatest thus far. They permit the elderly to help one another, receive payment, and are not penalized on their other incomes. In the urban areas this takes the pressure off somewhat, for at least now they can afford a little transportation—public that is—and get around. As so many spokesman at the meeting said, "I could go on and on." It is rewarding to see so many persons interested in the elderly and I certainly feel with national politicians as yourself so interested, the elderly have a great fighter in their corner. Thank you very much, Senator.

LAVERN PLAMBECK, OMAHA, NEBR.

I believe that transportation is one of the big problems for the senior people; they also need a better health care program. The hearing was very interesting. Thanks, Senator Clark, for taking time out for this type of program.

LUCILLE PRATER, RULO, NEBR.

How would one go about handling local transportation for the rural elderly? And how would the financial end be taken care of, such as who would be in charge of maintenance and other expenses? Many need the service and are on limited income.

RUTH ANN RAILSBACK, HUMBOLDT, NEBR.

As public information officer for Southeast Nebraska Community Action Agency, I would like to inform you of the services we are making possible for the senior citizens in our area. We operate in the four-county area in the extreme southeast corner of Nebraska with winterization and nutrition services offered in the two counties to the north.

Nutrition: Seven congregate meal sites, also offering home delivered meals, plus some of the small towns with cafes prepare home delivered meals. Two more meal sites are in the process of being started.

Transportation: Regular monthly bus trips within each county from the small towns into the county seat or larger towns. This provides access to medical services, grocery, etc. Portal-to-portal services within the area for special medical needs, congregate meals sites, etc.

Winterization: Service is available in the 6-county area with over 150 homes being served and the large majority of these belong to senior citizens.

Health services: Blood pressure clinics are held at five multipurpose centers on a regular monthly basis and other clinics are held as needed, with volunteer nurses and aides conducting the clinics. Diabetes Clinics are held. Home health aides call on the elderly in their homes for nonprofessional health care. At present time, we are helping sponsor a demonstration county health project in Nemaha County with the cooperation of many agencies. This will serve all ages, with many being senior citizens.

Recreation: Recreation and educational field trips, crafts, card playing, socialization, etc., at the five multipurpose centers; senior citizen clubs in most all of the small communities which meet regularly; telephone reassurance; we helped the senior citizens form AARP chapters in each of the four counties.

Used clothing: The multipurpose centers provide used clothing for all ages, including senior citizens, some of which are used for quilting materials.

Sell food stamps: In one of the counties our outreach workers sell food stamps in every town, large and small, some of the clients being seniors.

Outreach and referral: This is a large job done by our outreach workers, keeping the senior citizens aware of the programs they are eligible to participate in.

We are proud of the services that we do offer, but fully realize that the elderly in our area still have many needs that are not being met. We need handibus service in the five counties not having one; we need chore service, handyman service, and some kind of legal service. We also need multicounty bus service. We must also admit that we need to continue and enlarge the services that we are now providing.

HENRY D. SMITH, LINCOLN, NEBR.

It seemed there were three primary concerns echoing throughout the hearing. These were: (1) transportation, (2) home health services, and (3) nutrition (meals prepared for the elderly). Most all of the speakers described these as basic needs, at least in one respect or another. I think you will also agree that throughout the hearing it was apparent there is a desire to remain independent and in the home as long as possible. It was also brought out that, coupled with the nutrition and home health services, should be health education services to teach methods of disease and disabling prevention.

The three concerns are closely related. As an example, certain needs for transportation services might be alleviated, such as to a physician, if home health services were available. Also, nutrition should consist of more than just availability of meals; nutritional quality of meals is indeed vital.

As "health" is our primary concern, we would encourage your support of home health services. Health services are a basic need for all of us, especially the elderly. Nutrition and transportation could be coupled into this or at least serve a complementary relationship.

The State department of health has placed a high priority the past several years on assisting (consultative and finanically) communities in developing their own community health services. This includes home health care and prevention through health education. Such services are furnished to everyone in need of such services, though the elderly have certainly a high rate of utilization. Since 1972, six rural counties have established such a program for a population of 80,000 persons. (Urban areas of Omaha, Lincoln, Grand Island, and Scottsbluff have had established programs for quite some time. Our emphasis has been on the rural counties.)

Fifty-one counties do not have home health services available for an approximately 600,000 population. These are rural counties with a high elderly population. The State department of health does not presently have the resources to furnish such services in this magnitude.

We heard at the hearing that counties are having a problem in providing services due to the 14.28 mill tax limit. So, even with our assistance, many counties seem unable to alleviate this problem and furnish this much-needed service for their people in need, especially the elderly.

The committee hearing was excellent. Views and needs as expressed by the witnesses certainly stress that action is needed.

Again, we encourage your support and offer our services in any way we can be or assistance to you in this endeavor.

DOROTHY TREMEL, OMAHA, NEBR.

I am a firm believer in helping people to help themselves. The agencies, and especially churches and synagogues, could do more to dispense needed services to older people. Is there any way for Federal dollars to be given in the form of small grants to initiate programs as an incentive for especially churches to get involved?

We spoke at the hearing about coordination of transportation services. There must be some way of using the expertise of MAT in Omaha, and yet let local churches, agencies, and hospitals be the spokesmen for the elderly who need transportation. Without this in-between, the system is so impersonal and hard to get that all older people experience is frustration.

MARIE WADDELL, PAWNEE CITY, NEBR.

I am a resident of Pawnee City, Nebr., in Pawnee County. We have 166 widows 65 to 90 years of age; 275 couples, widowers or bachelors 65 and over. There are 5 small towns with from 12 to 50 senior citizens in the county.

We have two doctors and one dentist in the county.

We have no transportation in the county but the Seneca bus. What has to be done in our county to get a minibus? We have low-rent housing, but it is five to eight blocks from groceries, bank, and doctors.

We are 45 to 80 miles from eye doctors or other specialists, and from 20 to 80 miles from bus, train, or plane service.

THE NATION'S RURAL ELDERLY

MONDAY, AUGUST 16, 1976

U.S. SENATE,
SPECIAL COMMITTEE ON AGING,
Ottumwa, Iowa.

The committee met at 2:10 p.m., pursuant to notice, in the Indian Hills Community Center, Ottumwa, Iowa, Hon. Dick Clark presiding.

Present: Senator Dick Clark.

Also present: Deborah K. Kilmer, professional staff member; David Harf, legislative assistant to Senator Clark; Margaret S. Fayé, minority professional staff member; and Donna M. Gluck, resource assistant.

OPENING STATEMENT BY SENATOR DICK CLARK, PRESIDING

Senator CLARK. The meeting will please come to order.

There is a larger crowd than we thought would be here and I know that the machine makes a little noise, so it may be difficult for some of you to hear. We are trying to get a microphone for the witnesses, and I will try to speak up as best I can. If we can get a microphone, that will be helpful.

I have 3- or 4-minute statement that I want to make at the beginning about the nature of the hearing.

We have two panels this afternoon, and while I am doing that perhaps the first panel could come on up to the table. The first is a panel on transportation. Edward S. McMillin, the State legislative council, American Association of Retired Persons, Inc., here in Ottumwa; Dr. Albert Burrows, professor of sociology at Penn College in Oskaloosa, and a member of the State Advisory Committee on Aging; and Ben Grismore, from Corydon. If they will come right on up here, we will start the hearing.

I want to say at the outset that I am particularly happy to be here in Ottumwa for this meeting which is an official hearing of the U.S. Senate Committee on Aging. The hearing will probably be over at about 4 o'clock. We will have the two panels, and following those we will give people an opportunity to make statements or ask questions up until 4 o'clock.

As you see on my left, a stenographer will record everything that is being said and we will issue a printed transcript of these proceedings. If you want a copy of what has been said here today, please leave your name and address with anybody here at the center and indicate that you want a copy of the printed hearings and we will be happy to supply those.

Six Hearings Being Held

Our subject at the six hearings that we are holding in the State of Iowa and outside the State—we are holding some of these hearings in Nebraska and South Dakota, as well as Iowa—is "The Nation's Rural Elderly." We are interested principally in programs as they affect rural areas, and by "rural areas," I simply mean communities the size of Ottumwa and smaller, with particular reference to the smallest communities.

So that is what we are emphasizing, not simply problems of the elderly, but problems of the rural elderly and what unique kinds of problems people face as they grow older in the small towns.

I suggested that such hearings be held about 1 year ago because it is my judgment that we cannot hope to know what is happening in rural America if we simply stay in Washington. That is why we are coming out to smaller communities in various parts of the country.

The chairman of this committee, Senator Frank Church of Idaho, agreed with this suggestion and so we are holding these hearings in Iowa, Nebraska, and South Dakota.

I want to keep my own statement brief because we want to emphasize the questions, particularly, on transportation, and our second panel is going to be talking more specifically about employment programs.

Let me sum up a few points that I think ought to be made. One of the prime objectives of these hearings is to determine the responsiveness and practical help that is provided to the rural elderly by programs such as the Older Americans Act, the medicare programs, and the housing programs.

I remember visiting some of the housing programs here in Ottumwa some time ago—transportation assistance, programs of that kind, the multipurpose centers such as this. These are the Federal programs that are in existence and we would like to have your reaction as to whether they are working or whether they are not working—what we ought to be doing differently, and what we are doing right. That is really the purpose of the hearing.

There is a real need for this kind of evaluation, I think, because we failed to do what we said we were going to do in the 1971 White House Conference on Aging. We set some very good goals, but we are a long way yet from reaching them.

We have not yet arrived at a national policy on aging, particularly as it regards rural issues. Part of the lag has been caused by a lack of leadership, I think, both in the executive branch and in the Congress.

The fact is that we still have a great number of elderly people—about 8 million, to be exact, which is more than one-quarter of our entire population—60 years and older who are from rural areas. In some States, I might say, that percentage is much higher—as high as 50 percent. Here in Iowa it is about 45 percent.

Transportation: The Key

So there are major needs in rural America and we are going to be talking here in Ottumwa today—listening, I should say—first about transportation.

Now it does not stretch anyone's imagination to realize that in rural areas transportation is particularly important. It does not really matter much what the Federal, State, or local government provides if it is not accessible to anybody.

What good is health care if you cannot get to it? What good is any service if it is not accessible? Transportation is really a key to the problems of rural services. For many elderly without an automobile or bus, there is no way to cash their retirement checks; no way to see doctors; no way to pick up prescription drugs; and no way to go to and from the grocery store. And yet, we are told by experts that even though rural areas depend more on an effective transportation system than urban areas, rural residents are losing access to any kind of system faster than other areas. In the past 15 years, nearly 150 bus companies have gone out of business in cities with less than 25,000 people.

So what do our rural elderly do? If they do not have family or friends to drive them for necessary appointments and errands, they simply stay home—stay home and become more and more isolated, unhealthy, and literally homebound.

The Ottumwa area has been more fortunate than some other areas of the country because of the 10-county bus program you have operating for the elderly. With support from the State office on aging and other agencies, there is one bus operating in each county to serve the needs of the elderly residents. But is this sufficient? Are individuals able to get direct, door-to-door service? Are schedules convenient for the riders' needs? We hope to explore these questions today.

Our other topic of focus today will be employment programs for the older worker. The employment situation for younger workers has improved recently, but the jobless rate for the older worker is still too low. The number of unemployed persons 55 or older has actually increased lately despite our modest economic recovery.

The second panel today will discuss several special employment programs for older workers that exist in this area. We will hear how such programs assist the older person in supplementing his or her small retirement check. I am sure we will also hear how employment opportunities for the older worker are vital means for keeping the person active and productive. This is a virtue that most elderly desire above all else—to feel needed. I am sure our witnesses will convey this point.

Finally, I'd like to say that in the Older Americans Act programs, and in all the others, the rural elderly must feel that no one is dictating to them. The progress we are making in aging is due in no small part to the initiatives and determination of older persons who are making things happen. The Federal share of their effort, if one is needed, ought to be part of the solution and not part of the problem.

This first panel, again, is made up of Ed McMillin, State legislative council, American Association of Retired Persons, Inc., Ottumwa; Dr. Albert Burrows, professor of sociology at Penn College, and a member of the State Advisory Committee on Aging; and also Ben Grismore of Corydon.

They are going to be talking, I think, in that order. Then we are going to have questions for the record and then our second panel.

So Ed McMillin, would you wish to start? I apologize for the fact we don't have a microphone. I know that it is a little noisy, so the louder you can speak, the better.

PANEL ON TRANSPORTATION PROGRAMS

STATEMENT OF EDWARD S. McMILLIN, STATE LEGISLATIVE COUNCIL, AMERICAN ASSOCIATION OF RETIRED PERSONS, INC., OTTUMWA, IOWA

Mr. McMillin. Thank you for the opportunity, Senator Clark, to testify before the Special Committee on Aging on "The Nation's Rural Elderly."

I guess, Senator, this area is about as rural as any area in Iowa. Statistics tell us that, per capita, we have probably more older persons than anywhere in the State of Iowa.

My many years as a public servant—18 years as Wapello County auditor—put me in touch with a great number of older persons who, through the years, expressed many of the same concerns they are expressing today.

As I retired and became one of those older-person statistics, I found the elderly of this area of Iowa are still vocalizing many of those same concerns I heard as county auditor: a need to be useful, to have adequate transportation available, and needs related to nutrition and health.

One of the key concerns, Senator, is the lack of adequate transportation in this rural area of southern Iowa. My association with the American Association of Retired Persons and my work with the area agency on aging program has placed me in direct contact with a number of older persons who are grateful for a mass transit system in Ottumwa, Iowa, even though cost and accessibility does not often meet the need.

They are also appreciative of the area agency on aging minibus program that is a source of transportation within the 10 counties of area XV.

As good as the area agency on aging transportation is, Senator, there are still a number of older persons living out in the rural areas who have extreme difficulty in getting from their homes to a doctor, a dentist, or a pharmacy, all of which may be located in a county seat town miles away.

Many of our older persons, Senator, must rely on friends, neighbors, and family, if they have any, to provide this kind of needed service.

Many Are Isolated

In addition, there are hundreds of older persons who are simply isolated from people due to a lack of transportation. There are people who have lost all contact and, as a result, begin to deteriorate mentally and physically.

AARP does provide personal, door-to-door service for a number of older persons, but the need goes well beyond AARP's ability to respond.

There is a need to bring together existing transportation potential in the area—to coordinate what is being done and to expand service beyond what is being done now.

We feel we have the capacity to expand and enrich the lives of older persons in this area of southern Iowa.

We do have organizations with the interest and the expertise to provide some kind of comprehensive transportation program for older and handicapped persons in Wapello County and all of area XV—organizations, such as the American Association of Retired Persons and area XV Agency on Aging advisory groups, both of whom have been instrumental in making suggestions and devoting time and energy to improving the lot of older persons.

Southern Iowa Economic Development Association (SIEDA), the community action agency serving this southern Iowa area, has, in my opinion, the planning and operation capacity to do something about transportation.

Area XV regional planning commission, along with the cities and counties, have that kind of expertise. These groups and organizations are planning together, Senator, to solve this serious problem, but it all takes money—money from Federal and State areas. It will also take technical assistance from Federal and State sources in a concentrated effort at solving the problem.

I understand much is being done now, and many people in this area are laboring long and hard, but more effort, cooperation, and funding has to be available if we are to be successful.

I believe this area of Iowa can establish the first workable rural transportation model in the country; we have that capacity, but we need a prolonged and concentrated commitment by government to assist us in the effort.

The problem has taken years to develop and, in my opinion, will not be quickly solved. Many of us may not be around to enjoy the success we feel will come, but surely it can and will happen.

With all the technical know-how we possess, Senator, we must have the capacity to structure a transportation system in rural America that will move an older person 14 miles to an area where needed services are available.

Surely we can collectively bridge the gap from Blakesburg, Iowa, to Ottumwa, Iowa, from Batavia to Fairfield, from Moulton to Centerville, from Deep River to Sigourney—it's a matter of a few road miles, Senator, certainly far less than the 240,000 miles to the surface of the Moon. We managed, during a war for survival, to solve massive transportation problems, Senator. Can we do less for the survival and well-being of the Nation's older persons?

Thank you for the opportunity to speak, Senator Clark.

[Additional material submitted by Mr. McMillin follows:]

TRANSPORTATION

MAJOR EVENTS AND ACTIVITIES IN AREA XV

The regional planning commission has received preliminary approval on a demonstration project for $250,000 to be spent over the next 2 years. Mr. Bruce Bullamore has initiated an advisory group to give input for the final application for this comprehensive rural system.

Area XV Agency on Aging, soon to come under the Southern Iowa Economic Development Association umbrella for programs to serve Area XV, is submitting a proposal for Urban Mass Transportation Administration funds under section 16(b)(2). Funds will be used to replace equipment currently being operated as

well as offering an additional service for the handicapped via special equipment in Wapello County.

South central Iowa community action program is applying for funds to provide transportation to handicapped people in Wayne, Monroe, and Lucas Counties. These funds would also come through section 16(b)(2).

MAJOR EVENTS AND ACTIVITIES IN WAPELLO COUNTY

An agreement has been reached with the Ottumwa Transit Authority by the Area XV Agency on Aging allowing the agency's bus to operate 3 to 4 hours daily inside Ottumwa's city limits. Service is aimed primarily toward those individuals who, for one reason or another, cannot utilize the city bus.

Ottumwa Transit Authority will be eligible to apply for a portion of the $2 million appropriated last session by the State legislature.

One application will be accepted also for the rural operation. It is hoped that this money will be spent in a fashion acceptable to the legislators so they can see their way clear to reallocate funds to the Department of Transportation for future use to provide or help provide comprehensive transportation services in Iowa.

MAJOR NEED IN TRANSPORTATION

When a system has updated its equipment, there is a need for operating assistance. In many grant applications the emphasis is on capital outlays, rather than operating expenses. That is one major point that needs attention, mainly because in rural Iowa the strain of operating a system cannot be met by local support totally.

STATISTICAL DATA, BASED ON QUARTER ENDING JUNE 30, 1976

	Area XV	Wapello County
Trips, total	19.093.00	1.752.00
Miles, total	55.160.00	6.320.00
Income, total	7.728.69	1.087.47
Cost, total	31.196.43	3.448.30
Cost per trip (area average)	1.97	1.98
Cost per mile (area average)	.61	.54
Income per trip (area average)	3.44	.63
Income per mile (area average)	.14	.17

Senator CLARK. Thank you very much. I liked your statement that if we are capable of reaching the Moon, we ought to be capable of solving the transportation problem to get back and forth to the communities of this area.

I will have some other questions, but I think we will go ahead and hear the other panelists first.

Next we are going to hear from Professor Burrows. Please proceed in any way you think appropriate.

STATEMENT OF DR. ALBERT BURROWS, PROFESSOR OF SOCIOLOGY, PENN COLLEGE, OSKALOOSA, IOWA, AND MEMBER, STATE ADVISORY COMMITTEE ON AGING

Dr. BURROWS. I want to get back from the Moon to this area. As he said, we are probably one of the two or three States with the most aging, and in this particular area probably more than anywhere else in the State. I was just checking. It takes four of our largest metropolitan counties—Woodbury, Polk, Black Hawk, and Linn.

Between 17 and 18 percent of our people are 60 or above, so we are more than twice as urban as these other metropolitan counties. That makes a big difference because that means we are scattered out over a lot of the countryside.

Before I say some other things, I wanted to say that I have not been a college teacher all my life. I am not teaching at Penn now. All these definitions, when we talk about aging—I am a little sensitive on that. I have already beat the projectors by 10 or 15 years. As far as I know, you start aging the minute you are a day old, or you could even start the minute you are conceived, so we are all aging.

I am always hearing them talk about terminal illness. After all, we are all on kind of terminal stay here. Just what do you mean by terminal, and what do you mean by aging?

In any case, we have a problem and, roughly, we think we know what it is. The transportation in Mahaska County—the county seat is Oskaloosa. We have one bus, I guess, as every other county has one bus, and we do the best we can with one bus. We have hours from 8 to 5, and they are not long enough. Particularly the later hours—folks can't get their shopping done or can't get through with the doctor, or whatnot.

So we need longer hours. If our minibus takes a load to the State fair next week, then there is no bus in the county. We ought to have another bus. We ought to have another driver or more hours for part-time drivers.

Additional Funds Needed

Of course, that takes money. So, Senator Clark, we always need more money. Today some folks think there is something happening important in Kansas City. I think the only thing important is happening here.

In any case, I lived through the thirties and the New Deal.

This middle-aged lady had finally gotten her husband to church one day, and so after church she was introducing him to the deacon of the church, newly elected. She was saying, "John, this is the new deacon"—this was in the New Deal days. He was hard of hearing.

"What?"

"The new deacon."

"What?"

"This is Mr. Jones, the new deacon."

He said, "New dealer?"

She said, "He is a son of a bishop."

"Oh," he said, "they all are." [Laughter.]

I come from Missouri, and Missouri has the Ozarks. I come from another part of the State, so don't call me an Ozarkan.

In any case, they tell the story of the old farmer who is old—I don't know what "old" is, but to me it has to be 80 or so.

Anyhow, this old farmer kind of quit his farming, but he had an old trick mule. The folks from the city—Springfield and other cities—would come out and pay a quarter to have the trick mule perform. The old man got sick—I think it was this pig flu that is supposed to be going around.

The folks would come to the door and say, "I want to see the trick mule." She got tired, so she went out and put a sign on the road gate that said, "The old jackass is sick. You can't see the trick mule until he gets better."

I didn't get those just in order, but, anyhow, it is real good. [Laughter.]

We are interested in this area—area 10—10 counties here, as rural as you find them. We do need, Senator, all the support we can get now.

I notice in one of your comments to the Senate or somewhere that the Senator knows about all these things we need already. I am sure that in this particular area we appreciate what Senator Clark does and his interest, and I think we are very fortunate to have him down in Washington.

So you know, they say, "Ask not for whom the bell tolls, it tolls for you." You know, the bells will toll for all of us. One way or another, and we have got to get the best we can out of life while we are at it.

In my teaching career, I think I learned that folks want about four things. They want security—we will make that two things. One of them is material security—that means money, housing, food—material security. And they want emotional and psychological security, probably. I don't want to leave a question mark after this, but I say "probably" easier.

At least you can know better when they are lacking in material security, but when they are lacking in psychological security or emotional security, I think what is the matter with a lot of older folks is that they don't have the emotional security.

Educational Campaign Needed

One thing that I think, Senator, that someone at Washington ought to do is to put on a campaign such as they had following World War II, I guess it was. I know the legion promoted a lot of movies, and I think others did, showing the folks back home how to treat the attitude they should have toward these crippled soldiers that came back. They had had their training and had gotten them in the proper emotional attitude toward their own missing leg or a couple of arms or something, but to tell the folks back home what attitude to have toward them.

I think they did a pretty good job getting us back home to know what attitude we should have toward these wounded, crippled ex-soldiers, but I don't think the people back home know how to react toward the aged. I don't believe they do.

I think we probably need some propaganda or education there. Incidentally, propaganda does not have to be truth.

The New Testament Apostle Paul—it was hardly ever said that Paul was the propagandist for Jesus Christ. You sell good goods as well as bad goods.

Ordinarily we think with propaganda you are selling bad goods.

We need a campaign, I think, to educate folks back home who are not as old yet as they are going to be, to know how to react toward the aging. Transportation is one of the things. I started to say we need material security. We need psychological and emotional security, and we need new experience to go to the Moon, or something.

I am not one of any of these folks to start there, but in any case we need to do something new.

In prisons they say that the worst thing that the prisoners have is boredom, just plain boredom—the same old thing every day. I think that may be true of the aged, too, to a great extent.

We need opportunity for new experience. We don't have buses enough in our county or, I guess, any other county to give the aged opportunities to go to the State fair or over to Mount Pleasant, the old reunion, or to go up to some other corner of the State and see the beauty of Arnold's Park, or something. We need more new experience.

We all talk about dignity these days. They talk about dying with dignity. I don't know how you would die with dignity, but from my point of view it would be doing it pretty fast when you get at it. [Laughter.]

In any case, we want dignity.

You know, it is pretty hard for a person who has been put on the shelf economically, because they are kind of economically minded in this country. When a fellow is put on the shelf economically, why somehow he is put on the shelf in general. He is no good for anything if he cannot do the job he has always done.

It has not worried me. I have other things that I can get into. We need one way or another of keeping dignity.

Economic Independence

So the fourth thing we need is favorable recognition. Here is the person who amounts to something in his own right. Some folks think that automobiles are tied up with economic shortages. I tell students on labor if everybody would have a job at an adequate salary, there would not be any labor disputes and that sort of thing.

So if we are independent economically—and I am thinking of transportation now—we can have some of the dignity that we want.

I want to close because I think I can sort of feel the Senator looking across here at me. [Laughter.]

We do appreciate the interest that Senator Dick Clark has in us and we are happy to be connected with this program.

Thank you.

Senator Clark. Thank you.

I did have a couple of things by way of introduction that I wanted to say of the witnesses, and I might just read those before I introduce Ben Grismore.

Mr. McMillin on my left, as I understand it, is retired and has resided, I think, in Ottumwa for about 20 years. He is on the State legislative council, as I said, for the American Association of Retired Persons—the largest, I believe I am safe in saying, organization of retired persons in the United States.

I had the privilege of speaking at their national convention a year ago in Kansas City, if I remember right. I know he has also done a good deal in tax assistance and counseling for older people.

Albert Burrows, whom you just heard, has a doctorate, and is, I think—are you still teaching economics and sociology out at Penn?

Dr. Burrows. Off and on. Mostly off.

Senator Clark. Dr. Burrows said that he didn't consider anybody old until they were at least 80. Now I notice on his biographical sketch that he is 84. [Laughter.]

He taught at Northern Michigan University for 25 years prior to coming here. He is on the State Advisory Committee on Aging and

has worked with the area agency on aging in providing transportation services, so he knows his subject.

Lastly with this panel I want you to meet Ben Grismore, who has lived in this area most of his life and is particularly interested in the transportation system. He helped with its implementation, helped to develop the first plan for a transportation system in his home county, which is over at Wayne County, and I know is very active in a number of things over there.

So, Ben, you may proceed.

STATEMENT OF BEN GRISMORE, CORYDON, IOWA

Mr. GRISMORE. Senator Clark, other dignitaries, and guests—I would like to say first, Senator, they are going to be hard for me to follow. The only way to half way keep up with them is to start out with Mars.

Senator CLARK. With Mars, yes.

Mr. GRISMORE. I will get ahead of them some way.

I, too, concur with what they have said and I would like to say that I appreciate very much this opportunity of being able to express my views, even though they may not have much value on the subject of senior citizen transportation.

It was my privilege to be able to observe this program from the very beginning. How this came about was because I think, back in 1972, give or take a year, seven or eight counties in Iowa were being considered for a model county. Well, during that time we were being interviewed a lot from agencies like the Office of Planning and Programing to see if our needs would merit this project and, of course, we are competing with seven or eight other counties.

Along in September in that same year we got that distinction from the Governor, and he did admit this was a model county.

The first thing we did was set up committees, like on HEW, community development, natural resources, and so forth, to study the needs of our county, and then they would be reported to see what would be feasible with this particular program. There were 25 or 30 people on each of these committees and they were enthusiastic in the beginning, and stayed that way. They would bring in the needs to be compiled on what they thought.

It didn't take very long to begin to see in our county, the rural county end of area 15, that the need was there for elderly people. After that need began to be compiled, then naturally committees began to get anxious to have something happen because they wanted a county that was going to be active.

TRANSPORTATION GRANT SOUGHT

We got this message through Bob Case who, at that time, was the director of rural urban development under OPB. We said, "Bob, we need a sign. We need something to happen." He said, "You are going to get it. Just in a few days we are going to get a grant, and in this grant you will be able to purchase a senior citizens bus." He said, "Now, this will be the first bus of this kind in the Nation."

That is where the Senator brought out the ground floor plan, and so in a few days this happened. We got a grant and were able to purchase a bus—I think an 11- or 12-passenger bus. We were able to employ a dispatcher, a driver, a headquarters, and start in.

We then had set up a Wayne County Senior Citizens Transportation Co-op Board and they handled the affairs at that time. The funding was through OEO and through model county, so that board handled the affairs of this operation.

It was my privilege, along with George Mosher, who was on the board also, to take this bus on its first trip. It didn't take us very long after we picked up a few riders and heard the commotion—how they began to lay plans for the future since they were going to be able to have this kind of transportation.

We realized that senior citizens transportation had a great potential. I watched this from then on and I watched this thing progress. I watched older people up in the little apartment on the third floor, in a little home of their own, or maybe in a housing program, wherever they may be—I watched them take on new—because why? Because they could now go down and do their own grocery shopping without having to send for it. They could keep a doctor's appointment. They could visit a relative across town or maybe in another town. Why? Because they feel so good about it. because they didn't want to obligate and ask their next door neighbor or their friends or their relatives, who would have been glad to have given it to them.

They would have, but yet you have to remember that these people at that age—our age, let's face it—reared their families some 40 or 50 years ago and they were brought up that they could only do it by being self-sustaining. They were not used to them doing all the favors that we have today.

They are proud people and so, therefore, if they could not do this within their budget and if they could not hire the taxi to take them these places where they wanted to go, they just simply didn't go. They just sacrificed themselves and stayed at home, as has been mentioned here before.

So with this type of transportation, they have been allowed to get out without being obligated to people. and to live like they would like to live, and live a lot longer. I am sure about it.

Now, getting back to the funding part that has been mentioned here. I hope, Senator, that it can continue to be funded through Federal. State, or however, rather than getting back at any local level.

Now maybe these things should come back to the local level, but if they did I am sure we would drag our feet enough that it would never be successful—to make a program like this efficient.

Indirect Assistance

Another thing. if it comes through these other levels high up, then we are not sensitive about it. We don't realize when we get on that bus that it is done because the board of supervisors, the chamber of commerce. the ladies aid all put some money in so they could do it. We are all too proud. It is coming indirectly and we hope it can be added to and expanded. I am sure it is going to increase riders and make every-

body ride it because the nice thing about this is what we promoted about it in our country—55 years or older, whether you have $50 million or nothing, you can ride that bus and we encourage that to see that people like that.

So for that reason I am greatly interested in the progress of it and want it to continue and not diminish in any way, but to expand. It is not going to last too long and you have a never-ending thing, except make it so it can stay there and grow.

I might say, too, that if you had been on that bus with George and I, you would be just as enthusiastic as we are.

Thank you, Senator.

Senator CLARK. Thank you.

I appreciate all three statements. I have ridden on the bus from time to time, in fact I am going to ride one on Wednesday again. I know what you mean because I have talked with a number of people who testified—in fact, even this morning over in Winterset—that, without that transportation, they never would be able to do the things that are important for them to do.

Mr. McMillin, you serve on the State legislative council of the American Association of Retired Persons. How do you represent the needs of elderly people on that council? I mean, what function? Do you have meetings? What is the mechanism by which you relate the ideas that you have to the council and what effect do you feel that they have?

Mr. MCMILLIN. Well, we are actually a legislative committee and we set up priorities during the year to go before our State legislature more than we do on a national level.

One of our top priorities the last 2 years, and will be next year, is transportation. Then we try to set up meetings with the chapters and units of the retired teachers to discuss these priorities, and they may contact their legislators to see that these priorities are considered through legislation like anything else.

It is a long process. Priorities stay at the top of the list all the way through.

Senator CLARK. Do you feel you have had a positive effect on the State legislature and on the programs?

Mr. MCMILLIN. The last session of the Iowa legislature provided an appropriation of $2 million to implement a State assistance plan for public transportation.

Also, an additional bill was passed to require the department of transportation, in part, to assist localities at their request, to coordinate transportation services as common carrier cab services, handicap, elderly, and private nonprofit agencies services.

We feel that our efforts have had some impact.

Ottumwa is in the unique position in Iowa that we don't have enough population to be in any Federal program. We are under 50,000.

Senator CLARK. Right.

DEPARTMENT PROMISES $40,000

Mr. MCMILLIN. So Iowa DOT has promised Ottumwa and Burlington about $40,000 to supplement their bus service in Ottumwa. The legislative process may seem slow to my peers, but I feel we are accomplishing something.

Transportation is just as important as the fire department or law enforcement and it is going to have to be subsidized by local taxing bodies as well as at Federal and State levels.

We have got to admit that we have to participate in this effort. People our ages paid their share before, and I think we will and can continue providing assistance.

Senator CLARK. Now, I was going to ask Dr. Burrows—any of you may pitch in on these answers where you may have some particular information. Do the elderly people of this community feel that there is a greater need for transportation—that the need is not yet completely met and that there is a greater need for services than we now have?

Dr. BURROWS. I am sure the answer is an unequivocal yes, they do feel that we need more transportation. As I mentioned, we need special days and longer hours. Our drivers work from 8 to 4, I believe. Who can get through their shopping or away from the doctor's office before?

Maybe it is 8 to 5, but they just don't have long enough there. So yes, we need more.

Of course, I am not sure, Senator, how the Federal revenue sharing goes, but I am pretty sure in our county that we get the small end of the stick on the Federal revenue sharing. I wish there was some way of gouging that up a little. I suppose that is a State affair. Maybe you don't tell the States how to share it, but I think it is there.

Senator CLARK. I might say in that regard that on a national level, only 1 percent of the revenue sharing is used for aging services, so it is very, very small.

Mr. MCMILLIN. Even under our city-financed transportation system with regard to the elderly people, Ottumwa does not have, as Dr. Burrows said, these longer hours. There is no way to get to downtown Ottumwa after 5:30, even when the stores are open on Thursday night. We don't have a way to get to the various supermarkets because the transit system is not flexible.

The cities need help to provide comprehensive transportation over the city and between towns. Some of our county seats don't even have bus service. We are lucky here to have as much as we do. Some county seats don't have any connections and it has to be provided by private, nonprofit, and/or Federal funds—a minibus service.

Senator CLARK. You only have one bus in each county, isn't that the setup?

Mr. MCMILLIN. Yes.

Senator CLARK. Is that adequate?

"WE . . . WANT TO KEEP GROWING"

Mr. GRISMORE. Senator, I say our county is only about 8,000 or 8,500, and I am not saying what is adequate. Maybe we have all we should have at the moment. We just want to keep growing. This is not true for the areas where I see these people here are from.

I will say these people make a trip twice a year—once in the spring, once in the fall. We have an all-out county picnic. We take that bus—we could use three, four, or five buses—but it would not warrant having to get other cars to do that. We just have a whale of a time. We do it twice a year and are looking forward to the next one, because

they meet Susie over here in the other county and they had not seen her for years.

Senator CLARK. Tell me, what did people do before these buses were developed in each county? You were in Wayne County, of course. How did people get around in Wayne?

Mr. GRISMORE. They just waited for their son to come in off the farm when he was not busy, and while he was willing to; but they didn't want to obligate him and they just stayed home. That is the answer.

As I said, they are a proud people and they are not going to obligate their friends and relatives any more than they have to. This is to let them live again, in my opinion.

Senator CLARK. Let me ask you one other question, Mr. Grismore. Given the status of the present program and what you have been able to do up until now, which is remarkably good, what ought we do to improve it further? What things would you like to see in the next 5 years or the next 10 years, and so forth? Do you have any particular recommendations?

Mr. GRISMORE. I am sure there are many things, but I cannot answer that as I should. I know we were able, through OEO a couple years ago, to trade back and get another bus and have money that was left over. It leaves us in a little different shape than the other counties, because we did have the go from the beginning. We had a good grant at the time and carried over enough money. Our bus is good, and so on. It would be fine if you could raise their wages—I am sure of that—because they do work hard for what they get as far as the personnel is concerned. But beyond that, I think they are giving us all that we are entitled to, compared with the way the rest of the counties are doing.

Senator CLARK. You pick up door-to-door, at the stations, or how?

Mr. GRISMORE. They pick them up door-to-door and make the arrangements in the different towns—visit the son in the evening or pick up in the evening—for a very economical charge, and it is being used.

Senator CLARK. How much is it?

Mr. GRISMORE. Thirty-five cents to anywhere in town—to go grocery shopping. Then, again, if they pick them up, it is another 35 cents. They will take them anywhere in the county for 60 cents.

Mrs. RYAN. It is not a charge, it is a donation.

Senator CLARK. Donation?

Mr. GRISMORE. That's right. I might say we tried a $5 membership to begin with as a donation. We dropped that just before Indian Hills became the sponsor about that time because we felt that even the $5, if you are watching your budget—and they live on a fixed income and a budget—they may say, "Well, we better wait and not do it." We did away with that, and the rest is a donation.

Senator CLARK. Would others like to comment on ways in which you think this program could be improved?

COMMITMENT NEEDED

Mr. MCMILLIN. I think the main thing is to have a commitment for these services from Federal, State, and local governments that these

programs are going to continue; then we can plan for the future. If we have commitments that they are going to commit funds for this type of transportation program, I am sure that the people in here, especially like this gentleman, Mr. Grismore, are going to work very hard to see that it is going to be a success.

Senator CLARK. In other words, that you not only get assistance to start the program, but that you get some operating funds.

Mr. GRISMORE. Yes.

Dr. BURROWS. More and more, I think, they are cutting down the proportion or adding to the proportion that the local must pay for, beginning October 1.

As the Senator was saying, Federal and/or State governments are going to assume less of the burden and the local has to assume more. It is hard to get the local government to go about those things, particularly in these poor rural counties.

In answer to one of your questions a while ago, we have a county that our bus runs out to—has a regular run on certain days—and goes to this town and that one at certain hours of those days, but we cannot do it but once a week that way. Most of the time it is served by more folks closer to Oskaloosa—a town of 11,000.

So we could use another bus on that and have another day's run out to these other villages, where folks are drawn together a little more.

So we do need more money for more buses. We are always, as they say, flying by the seat of our pants, because we don't know whether the Federal Government is going to come through with the appropriation the next time.

The State commission does not know, and we are all waiting, wondering, and hoping, and finally it is done. If we could get these moneys appropriated a little sooner so we could all know a little earlier what we are going to be doing the next year, it would help a lot, I think.

Senator CLARK. Good.

Mr. GRISMORE. I can understand the Government's feeling. They get these programs started and they should go back to the local level. I can understand that, but, in this particular thing, it was what I was trying to bring out a minute ago. I don't think it is advisable at all. I think it would be embarrassing to people. It would eliminate riders, and I think it should serve the people. It would be such a small amount—to do the whole thing, and do it as well as it should be done—to take care of the program; it is still not going to be a great amount, compared to other projects.

Senator CLARK. I think we might take some questions or comments from anybody here who might like to say something about it very briefly.

STATEMENT OF MATTIE HARPER, STATE REPRESENTATIVE, WEST GROVE, IOWA

Mrs. HARPER. Mattie Harper, State representative. I would like to say that you have talked all the time, and it is very interesting. I agree with everything you have said. We have worked very hard with that work, and I am glad to say that I was part of it.

You are getting money down in this area, but you must have a bus for the handicapped. I think it is very necessary to have a bus for

the handicapped with the wheelchairs. I was visiting with an elderly person here in Ottumwa just the other day and she said, "Oh, how I would like to go for a ride. We saw the senior citizens bus pass and we all know how necessary this is."

I think in our plans, as we look to the future, we should be thinking about this and including this in the bus transportation—whether you use the same bus or whatever. Everyone I talked to says they need a bigger bus in this particular area. Our counties might not need that bigger bus, but I wish you would be thinking about a bus for the handicapped.

The State has been very kind toward transportation this year.

Mr. GRISMORE. I am sorry. I had that on the tip of my tongue, because we do cater to that very much—we let it be known that 55 and older, or any handicapped.

Senator CLARK. Any other statements or questions that anybody might have?

Yes?

STATEMENT OF L. W. KLEIN, EDDYVILLE, IOWA

Mr. KLEIN. Transportation is wonderful and I am for it, but when you go to a doctor's office and he says he will see you in 2 weeks, what are you going to do about it? Now that is all over the country. I happen to do a lot of traveling. I was in Florida and I had a tooth problem. I went to the dentist. I was in a strange place and the receptionist said, "The doctor will see you in 2 weeks." I said, "Lady, I'm a snowbird and in 2 weeks I'll be so far away from here that the doctor can't see me."

I said, "If one of the two doctors in this office can't see me before noon, I want you to give me the name and address of every dentist in this town, because I have a toothache and there are some things that have to be done."

Well, she went in and came out, and the doctor—it was a father and son—and the old doctor said, "I will see him right away."

Now there it is. The majority of people when the receptionist says, "He will see you in 2 weeks," that is about all it takes for them to go out and get on the bus and go home without doing anything else.

Senator CLARK. Does anyone else have questions?

STATEMENT OF CATHERINE KURKA, FAIRFIELD, IOWA

Mrs. KURKA. Catherine Kurka.

I have a question. Cities that are not as large as Ottumwa or Burlington—say Fairfield, where I am from—we do not have a central transportation system, such as a bus. We do have a senior citizens' bus which does an excellent job for one bus, but what about people who have appointments in Iowa City, people who cannot pay or maybe have no relatives to take them out at the time? I am a Jefferson County volunteer chairman. All that the State will allow us is 15 cents a mile. For volunteers, this does not take care of your car. The bus will go once a month, and that is all.

Senator CLARK. To Iowa City?

Mrs. KURKA. To Iowa City, and you cannot always get the appointments for the people on that day.

Senator CLARK. Well, I think it is another indication of what the panel is talking about. We never have quite enough and, obviously, we could use more and use it intelligently.

Mrs. KURKA. Especially in these towns that are not as large as Burlington or Ottumwa. We depend on the bus to get everywhere in Fairfield.

Senator CLARK. That is your sole means of transportation.

STATEMENT OF CHARLES T. RINKEL, OTTUMWA, IOWA

Mr. RINKEL. Chuck Rinkel.

I agree with you in terms of employment and transportation as problems but, as you know from our correspondence, we also have the problem of social security being cut when other benefits are increased to the point where an elderly couple has to divorce in order to stay solvent and to be able to pay their bills.

I understand there is a hearing in Washington on this now. Is there anything else in on this?

Senator CLARK. Well, there is nothing in the last 2 weeks, in terms of things that happen. We have had lots of bills introduced. In fact, I introduced one of them—to disregard the social security increase when you get other increases, because if you don't, it means that the problem of inflation is just not offset.

The problem is simply to get 51 percent of the Members of the Senate and the House to start it first in committees and then the Congress. We think it is obviously one of the highest priorities we have.

STATEMENT OF MRS. FRANK HUSTED, OSKALOOSA, IOWA

Mrs. HUSTED. Mrs. Frank Husted.

We do need more transportation because I have been a widow nearly 10 years now, and I ride the bus every day. The doctor told me to get out for my own health. I go visit the shut-ins and by the time you get down there you don't have time to get around to people to visit; you just don't have time—and they need our help.

I am old, too, but they need our help. Someday I might be there, and we need to do that. We do need more transportation, especially. The bus we have—when you are as big as I am, you cannot get into those back seats.

Senator CLARK. I have that same problem. [Laughter.]

Mrs. HUSTED. Well, it is true. You cannot get into the back seats, and we do need that. I thank God for that because I would not have any other way to go, and I just thank God for it.

Senator CLARK. Thank you, and I want to thank particularly the witnesses because they did an excellent job.

Anyone else on transportation?

STATEMENT OF MILAN KENT, OSKALOOSA, IOWA

Mr. KENT. Milan Kent.

All I can say, we ride that bus every time, and the meals are here. They got two good drivers and they drive pretty well. They say, "We

will go anyplace," or "Are you in a hurry?" I say, "No; we have all day." The driver puts in pretty long hours.

Senator CLARK. Thank you very much.

I might say that we have these forms that are spread around at the doors, and so forth. If you want to testify or write down any ideas that you have, it will be made a part of the printed record.[1] It just says:

If there had been time for everyone to speak at the hearing in Ottumwa, Iowa, on August 16, 1976, concerning "The Nation's Rural Elderly," I would have said the following.

So you can just fill it out. We will be happy to have any other comments.

The next panel is going to be on employment programs for the older worker. We are going to hear from Shirley Campbell, Ruby Welcher, Robert Gilbert, and Francis Glick.

Again I am sorry that we don't have microphones; it would have been a little easier. I will ask you to try to listen as carefully as you can and we will ask the speakers again to speak just as loudly as they can so that everyone can hear.

We will hear from the witnesses in the order of the hearing list. First we will hear from Shirley Campbell.

Shirley Campbell is project director of the senior community service employment project here in Ottumwa. I know that this project, although it is located here in Ottumwa, serves a much larger area of southeastern Iowa. The project is supported by what we call title IX and title X programs which are to serve workers who are more than 55 years old.

Shirley is going to describe the program's successes and its weak points from her point of view so that we can try to get a better understanding of how these programs can continually be improved.

Shirley, if you will speak up very loudly—you may stand or sit, whichever you like.

PANEL ON EMPLOYMENT PROGRAMS FOR THE OLDER WORKER

STATEMENT OF SHIRLEY CAMPBELL, PROJECT DIRECTOR, SENIOR COMMUNITY EMPLOYMENT PROJECT, NATIONAL RETIRED TEACHERS ASSOCIATION/AMERICAN ASSOCIATION OF RETIRED PERSONS, OTTUMWA, IOWA

Mrs. CAMPBELL. The senior community service employment project, a national project, is sponsored by the National Retired Teacher's Association—NRTA—and the American Association of Retired Persons—AARP—funded through the Department of Labor.

The title IX project is a statewide program, and the title X program serves the Fourth Congressional District. Nine counties are served in this area: Appanoose, Davis, Jefferson, Keokuk, Lucas, Mahaska, Monroe, Van Buren, and Wapello Counties.

To participate in the senior community service employment project, applicants must be 55 years of age or older. Eligibility is also based on the person's income for the past 12 months. For example,

[1] See appendix 4, p. 143.

earnings for one person cannot be more than $2,800 for a 12-month period and the combined income for two members of a family cannot be more than $3,700 for 12 months.

Applicants who certify for the program are placed with nonprofit agencies 20 hours a week at $2.30 per hour. Enrollees earn sick leave and vacation time while working on the program.

Job development for unsubsidized placements is another important factor with the senior community service employment project. We work for permanent jobs with the agency the enrollee is placed in, and also in the private business sector.

The senior community service employment project puts the older worker back into the labor force, and not only supplements their incomes but also gives them a sense of value.

The older worker has proven to be a very dependable, responsible employee. Persons over 55 years of age still have a lot to offer their communities.

The local over-55 program has been allocated 145 slots in this nine-county area, and at present we have 133 enrolled on the program and still expanding. There are 77 persons working on the program in Wapello County.

Persons are made aware of the project through the news media, and we also receive referrals from the Job Placement of Iowa and other local resources.

The senior community service employment project is a very successful program and a great opportunity for the older worker. We would appreciate your support for continued funding and expansion of this program.

Thank you.

[A table submitted by Mrs. Campbell follows:]

SELECTED STATISTICS OF PERSONS AGED 55 OR OVER

	1970 census population	Jan. 1, 1977, population projection	June 1976 estimated unemployment rate [1]
County:			
Appanoose	4,651	4,350	4.7
Davis	2,394	2,610	3.9
Jefferson	3,877	3,300	3.6
Keokuk	4,194	4,010	2.8
Lucas	3,086	3,130	3.6
Mahaska	6,038	6,110	3.2
Monroe	2,817	2,820	3.1
Van Buren	2,692	2,750	3.1
Wapello	11,065	11,356	6.7

[1] As registered with job placement of Iowa.

Senator CLARK. Thank you very much, Shirley.

Now, Ruby, you work in this kind of program, don't you?

Mrs. WELCHER. I do, yes.

Senator CLARK. Your home is here in Ottumwa?

Mrs. WELCHER. That's right.

Senator CLARK. Tell us a little about why this has importance to you, why you think it is a good thing, and why you think the Government should continue to sponsor it—whatever you think about it.

STATEMENT OF RUBY S. WELCHER, OTTUMWA, IOWA

Mrs. WELCHER. About a year ago I found it necessary to go to work to support myself, because I had a very meager income. So through the employment agency and Mr. Gilbert—he interviewed me and hired me as clerical aid, and Shirley was then my supervisor. That was when the program was just under title IX.

In March of this year when the program was increased to title X as well, I was promoted and became Shirley's secretary which I have been ever since. It not only gives me the necessary funds to live as an individual and to be a responsible person on my own, because I am a widow, but it also gives me the opportunity to meet people and to help people to help themselves. I fill out their necessary papers that helps them attain work at 20 hours a week, which augments their social security, and they can be on their own and not on welfare or under someone's thumb.

As long as they are able to do this job, they are happy. They come in and I hand them their paycheck.

There is one gentleman that came to us who even asked for an advance on his salary, which we could not do. I mean when he applied for a job, he was that desperate. He is supporting a 92-year-old mother and a single person. This gentleman works in our office as a janitor. He says "God bless you" every time I hand him his paycheck.

Now this man is one of the best workers I know. The walls are washed, our office is clean. I invite you to come see it. He is happy and I am happy, because we are helping him. It gives me an emotional outlet to be working and I enjoy it very much.

Senator CLARK. How did you learn about this kind of program? You are not old enough, obviously, for social security.

Mrs. WELCHER. No; I am not.

Senator CLARK. To qualify for the program you have to be over 50?

Mrs. WELCHER. Over 55.

Senator CLARK. I see.

APPREHENSION IN SEEKING EMPLOYMENT

Mrs. WELCHER. I went to the employment office to apply for a job 6 months after my husband's death and I was told to go to two different supermarkets as a checkout lady—maybe I could get a job there. Neither one of them hired me, they just took my application.

About 2 weeks later they called me from the employment office to see if I could type, and I said yes. Well, they asked if I would come for an interview with Mr. Gilbert, and would I consider working 20 hours a week. I would have considered 10 hours a week—I was so happy to think maybe I would get a job. That was the beginning.

Senator CLARK. Do you know of other people that are in a similar circumstance that you think could profit from this kind of employment?

Mrs. WELCHER. Anyone I can, I tell them, and they come.

Senator CLARK. But do you know other people who are in similar circumstances and can benefit?

Mrs. WELCHER. Absolutely, but some of them may be $100, $200, or a little bit over this guideline. My only complaint is that I live in my own home, which has as much expense, except maybe food and clothing, as two people. But yet I could only make $2,700 to be eligible for this program. I was fortunate I did not have that much of an income.

People that make a little more and live alone like me have the same expenses I do—light bills are going up, the phone bill, everything is going up, yet they cannot make over $2,700. If they make a little more social security, then I think that ought to be raised. I think they ought to be able to make just a little more money and still come under our program.

Senator CLARK. I sponsored legislation to try to raise that, but so far we have not been successful in doing it.

Let me ask you one last question. What do you consider to be the greatest benefit of that job?

Mrs. WELCHER. Well, not only economically, but it does something for me. I can go home now and go to bed and I think that, well, today we put somebody to work. Emotionally the whole thing is very good for me, it really is. I just feel like living again finally.

Senator CLARK. So it is not just economic.

Mrs. WELCHER. No; it really isn't. There is something about that because it gives you a good feeling to help other people, and then I am being helped, too. I mean, it is not all unselfishness.

Senator CLARK. Thank you very much.

We will hear now from Mr. Robert H. Gilbert, who is the director of the senior community employment project in Des Moines, Iowa.

As I understand it, Mr. Gilbert, you have directed the pesticide program for older workers and you are going to talk some about that. It is an interesting program that has been developed in the State of Iowa, and I hope that among other things you will talk to us about that.

STATEMENT OF ROBERT H. GILBERT, DIRECTOR, SENIOR COMMUNITY EMPLOYMENT PROJECT, NATIONAL RETIRED TEACHERS ASSOCIATION/AMERICAN ASSOCIATION OF RETIRED PERSONS, DES MOINES, IOWA

Mr. GILBERT. First of all, I want to thank Senator Clark and his staff for inviting me here today. When we go rural, a lot of people say, "What's that big city dummy doing down here in the rural area?"

First of all, when title IX came into being, I came on board with the association in 1972 with a 67-slot program and worked hard to expand this to rural Iowa. So when title IX, the Older Americans Act, came in, we were mandated by Washington to work closely with the State commission on aging and the area agencies on aging, and the pesticide program came out of our meetings with the commission on aging. We started in Iowa with 72 older workers over 55 canvassing the complete State of Iowa for outdated and banned pesticides.

The second phase of the program was the empty container part of the program, informing the farmer and folks working with pesticides how to dispose of containers. We had a very successful program, which

has ended at this time, but it is known pretty well nationally for being a pilot project in the State of Iowa. We are all very proud of it and it proved to a lot of people at the capitol here in Iowa that our people over 55 could be trained to do a specific job.

For some reason they seemed to think that when a person became 55 his knowledge had been all drained out of him or something, and that he was not capable of performing these tasks. We proved a big surprise at the statehouse and they thought so much of our older workers program that last year the State funded an older workers program of their own.

This year they are starting a green thumb program with the State conservation commission.

I know you are interested in the older workers, Senator Clark, and you were pretty interested in the pesticide program. I didn't know at the time until just on the spur of the moment that this is what you really wanted to hear about.

Senator CLARK. I would like to hear about any other things you want to talk about.

Mr. GILBERT. Aside from this, I would like to mention that, first, we would like to see how much more intensive emphasis the Labor Department placed on the use of CETA funds to carry some of the load now carried by titles IX and X programs. We would like to see a proportionate amount of CETA money allocated to older workers based on the percentage of their total unemployment.

PROBLEMS FACING THE OLDER WORKER

Currently a little less than 4 percent of the CETA moneys are going to older workers. The job needs of older workers are no less great than those of younger workers, and they deserve no less attention.

Second, it would be helpful to the older workers if all upper age limits for compulsory retirement be removed. This discrimination has prevented older, able workers from working.

Third, older workers frequently complain about the limits set to wages they can earn without losing their social security benefits. This is unfair, as people living on dividends, interest, and pension income don't lose any social security benefits. This limit as to wages earned should be removed, particularly if inflation contines to rise faster than social security benefits.

Thank you very much.

Senator CLARK. Thank you.

I know, incidentally, that we have recently increased appropriations for title IX, and I think this was an amendment offered by Senator Kennedy which we cosponsored.

How do you think additional funds should be spent profitably in this case? We have some additional funding now; what kinds of things might we do?

Mr. GILBERT. I think just to expand what we are already doing—putting older people to work.

Senator CLARK. In other words, just finding useful employment that people are interested in and is productive, and expanding the program to more people?

Mr. GILBERT. That is right.

Senator CLARK. That is our biggest problem. It does not go far enough in terms of people involved. Is that a fair statement?

Mr. GILBERT. Yes.

Senator CLARK. You have got the positions, have you? In other words, if you had the money, you have the people and the positions?

Mr. GILBERT. At the present time, statewide, we have about 200 people waiting to go to work.

Senator CLARK. I liked your statement about mandatory retirement, because I think the most discriminatory single practice that we have in employment now is saying that when you get to be 60, 62, 65, or 70—that you have to retire. It is ridiculous. It is like saying that you cannot start working before you are 21 years old.

We were talking in Winterset about people in the arts who have made their greatest accomplishments after they were 65, many of them after they were 70 or 75. Some of the great painters—Picasso, who just died a couple of year ago—what was he, 90 years old, or something like that. Or Rubinstein. Many, many of the great musicians have reached their peak only after they were in their seventies, and I think it is true of a lot of other professions and occupations.

I think people ought to be able to continue. We ought to have a system in which people can retire early but that they aren't forced to retire. I mean, why should they have to retire simply because they reach a particular age? Who can measure whether somebody could continue to work effectively? It is just nonsense.

We have had discrimination in a lot of areas from time to time, and I think this is one now that we have to address ourselves to.

We are now going to hear from Francis Glick, who is here from Knoxville. I think you are going to talk to us about your own experience in these programs, what it means to you, and how it has worked, as far as you are concerned.

STATEMENT OF FRANCIS J. GLICK, KNOXVILLE, IOWA

Mr. GLICK. My name is Francis Glick. I am from Knoxville, Iowa, and I am presently employed as a clothing salesman in Des Moines.

Prior to this employment, I was unemployed. Through the senior community employment program, AARP and NRTA, in which Bob Gilbert was project director, I was hired as a liaison aide under title IX with the Iowa Department of Agriculture under the environmental protective association program which started in February 1975 and lasted approximately a year—to March 1976.

This job was on a part-time basis, 20 hours per week, starting at $2.15 an hour. About 10 months later it was increased to $2.30 an hour plus mileage. The work involves checking inventory of pesticides in the local stores and rural areas for nonregistration and open containers of pesticides, and reporting the accidents and incidents pertaining to these pesticide applications.

I was one of the 72 people that was picked in the State of Iowa. We left folders and information with the store owners, the applicators, and the farmers to instruct them as to the use of the pesticides. They gave us information on the pesticides they had, and possibly open containers, which were creating a problem with water pollution.

During this work I had quite an education in the proper handling of all types of pesticides, of which I was very unfamiliar to begin with. My work reports were mailed regularly to Mr. Lounsberry, secretary of agriculture in Des Moines, Iowa, at which time they were reviewed by Myron Van Cleave, who was supervisor of the pesticide section for the Iowa Department of Agriculture.

If any reports were of a serious or harmful nature, either to the store or to the customer, it was acted upon by Van Cleave's department.

"SENIORS COULD DO THE JOB"

The program helped get jobs for 70-some senior citizens employed through Mr. Gilbert's office. It proved that our senior citizens could do a job which the department was reluctant about starting to begin with.

Since this was a pilot program, we were to prove that a job could be done with the right people. During this part-time employment, I discussed future work with Mr. Gilbert and his department, also with the State employment office in Des Moines, on a weekly basis. This eventually led to my present job as a men's wear sales clerk where I am still employed, but not satisfied with the job. I am still looking for a better job. [Laughter.]

My previous employment was with the Marion County Community action program under Greater Opportunities, Inc., Operation Mainstream program for 1 month.

My job was to fill out Iowa State tax refunds for the elderly, which you all know about. I was discharged because my wife started 1 day ahead of me under the same program and was told that, according to the regulations, two in the same family was not allowed. She worked for approximatey 6 months and that left us without income.

Prior to that, I was self-employed in the investments and securities business which I had to give up because my net income dropped to less than $3,000 per year for 1973 and 1974, the previous 2 years. I was in this business full time for 12 years, and if any of you have invested any money, you know what happened.

Prior to this job, I managed branch offices throughout the Midwest for 13 years under a contract with the country's largest heating and air-conditioning company.

If this is any verification or confirmation that senior citizens can do the job, I think that Senator Clark should do something about it.

Thank you.

Senator CLARK. Good.

Just a couple of questions while you have the floor, Mr. Glick. I am just curious about how you found out about the pesticide program. What source brought you in touch with it?

Mr. GLICK. The pesticide program came to me from the Marion County Community Action Agency and Marion County Social Services. They said a job was available through the department to hire citizens 55 years of age or older, and I still had a 13-year-old child. I lived 50 miles from the office, but was glad to get the job.

I was not eligible for unemployment insurance by reason of self-employment, thereby I did the best I could with what was available at that time.

Mr. Gilbert got me this part-time job. Remember, 20 hours a week at $2.15 an hour does not put much bread on the table.

Senator CLARK. How did you hear of it?

Mr. GLICK. I lived in Marion County. After we completed the series of store and rural area inspections, another county was assigned to each one of us and as we completed that county, our reports were mailed in. The program was completed ahead of schedule. No more jobs were available through Bob Gilbert's office.

SPECIAL TRAINING NECESSARY

Senator CLARK. Obviously this took some expertise. I mean, I could not go out and check pesticides. Did you have some training to understand what these were, what they meant, and how they operated? How did you learn about it?

Mr. GLICK. The initial training was through the community employment program; Bob Gilbert was project director. We had a series of educational sessions at the area XI community college in Des Moines where we were instructed as to how to do this.

The Iowa Department of Agriculture supplied us with a manual describing the manufacturing of the products that were distributed by the wholesaler to the retailer for sale and use for controlling mice, rats, roaches, and what have you.

We found, through the book registration, the numbers that were supposed to be on these containers. I would say in my tour of duty about one-third of the products during the first 3 months I inspected had no USDA registration or no EPA number whatsoever.

There were open containers sitting up on shelves above counters and tables where packages were being wrapped below. Our job was not to tell them to unload it, or for us to pick it up. We were simply to report what we saw.

As I recall, no one complained or gave us a bad time. We introduced ourselves as being with the Iowa Department of Agriculture. We presented them with a picture identification which showed that we worked for the Iowa State Department of Agriculture. Only once did I receive any repercussion from the owners. One stated, "If you're so good at this, how come you are not telling me how to dispose of the empty containers?" Well, since I had no background in chemicals or the medical profession, I just told them that I would send the reports to the proper authority and then they would take action from that point on.

Of the 70 of us in the field—I am not speaking for the others. I never did get a report as to whether they followed through or not. I gave an accurate report of what I saw, but not what to do with the product. After about 2 weeks, we had a second educational program through the area XI community college. I learned a lot more because we were on the firing line for 2 weeks.

I learned more at the second program: how to present myself, where the problems were, how to discuss it with the retailer and what he should do, and the department of agriculture would come out and check him over.

Senator CLARK. We appreciate very much hearing some actual examples from someone who has benefited from the program. I am anxious to find out now if Bob can tell us what they did with the pesticide program. Did they follow up on it then?

Mr. GILBERT. Yes. Mr. Glick's testimony was very good, except it was the Iowa State Department, not the U.S. Department.

Senator CLARK. I didn't catch that.

FOLLOWUP ON REPORTS

Mr. GILBERT. Yes, they followed up on every report sent in. We had older workers working in the office also, and they were checking every report back against the big manuals in the main office in Des Moines. If the product was outdated, banned, or any type of unregistered pesticide, the Iowa State pesticide division would send an inspector out to either pick up, dispose of it, or make some other arrangement.

Senator CLARK. So all of this work was done through this program by people who were over 55?

Mr. GILBERT. Right.

Senator CLARK. Now, just one other question, Mr. Gilbert, and then I want to ask Shirley a couple of questions.

What is your chief obstacle in placing older workers? What is the major problem that you face in this program in terms of placing people?

Mr. GILBERT. Age discrimination.

Senator CLARK. Age discrimination?

Mr. GILBERT. Right.

Senator CLARK. What kind? Can you think of some particular kind where it is very clear to you that people are being discriminated against simply because of their age?

Mr. GILBERT. I can think of a lot of specifics, but we won't mention any names here.

Senator CLARK. Yes.

Mr. GILBERT. This has probably been one of the biggest. We work closely with private enterprise, but we cannot tell them who they can hire or anything else. We have done a fabulous job here in the State in educating a lot of the private enterprise people in hiring the older worker by proving to them through this program that these people are very good employees—often better than the younger people. It is rather hard to say that when you have two young folks sitting across the table.

Senator CLARK. No, it isn't.

Mr. GILBERT. I was just joking, knowing both of them.

Senator CLARK. Let me ask Shirley—can you give us an idea of the kind of jobs that you place people in? Ruby is an example which has already been discussed, but what are some of the jobs you fill?

Mrs. CAMPBELL. We have secretarial positions, receptionists, clerical, janitors, and maintenance workers. We have security guards and handymen. We have homemaker health aides. We also have tax consultants for the elderly.

For any type of job that exists, we can usually find a person to fill the job.

Senator CLARK. So you would fill about every job imaginable?

Mrs. CAMPBELL. Yes.

Senator CLARK. Again, these are people who are over 55; they are people that can only work 20 hours a week. Is that right?

Mrs. CAMPBELL. Twenty hours a week, right.

Senator CLARK. Do you have a lot of people, as Ruby discussed, that would like to work more than that?

Mrs. CAMPBELL. Oh, definitely.

Senator CLARK. How many of these people who are working and are restricted to the 20 hours would want to work more than that, would you guess?

Mrs. CAMPBELL. I would say over half of the people I have in the program.

INELIGIBLES ALSO RECEIVE ASSISTANCE

I might add, too, that we not only work with the people that meet the income guidelines, we also, when they come in and fill out their application—if they do not meet our eligibility qualifications, we still try to work with them. We have job developers who go out and visit the different businesses here in Wapello County. When they bring a job opening in to the office, I have an aide in the afternoon who will call, not only the enrollees who we try to find permanent jobs for, but also the people who are not eligible for the program, and we have them apply for these different positions also.

We have placed some who did not qualify for the program in the private business sector as well.

Senator CLARK. Let me ask you a last question. If you had the money, how many more workers could you place who really want work and who could use it effectively? Do you have any idea at all?

Mrs. CAMPBELL. Every day there is someone coming in and every day I receive calls from the other counties, "Do you still have openings? I have a person here who is eligible. Do you have an opening for him?" I could not give you an accurate figure.

Senator CLARK. But you could place a lot more people effectively?

Mrs. CAMPBELL. Yes.

Senator CLARK. All right.

Well, the panel has been very good, and I appreciate it. Again, I think we will give you an opportunity, if you have any statements or questions about employment, we will continue that, then we will open it up to other subjects.

Please identify yourselves so we can have it for the record.

STATEMENT OF JOHN ZUMWALT, IOWA STATE DEPARTMENT OF SOCIAL SERVICES, OTTUMWA, IOWA

Mr. ZUMWALT. John Zumwalt, Iowa State Department of Social Services. I would like to speak particularly on the program that Shirley operates in Ottumwa.

We were talking to Mr. Gilbert about restraints and he spoke of discrimination. He spoke very highly of the type of work that one receives in these programs. We have one young lady who works with us and is 82 years old. Last February we had a terrible snowstorm

that kept most of our employees from the office and this young lady was there on time and was one of 5 workers out of 32 that made it to work that day.

So I have employed over 21 workers at this program in the department of social services in the area. This is a very fine program.

They spoke of some constraints and I was speaking to you about the holding down of the amount of money that one has to have to be a participant in some way and still be a part of this program. I believe it would be a great opening. It is very positive and very productive. It is a good program.

Very few jobs that I know of are centered to make work. All of them are to make one feel more important and more a part of the mainstream.

Senator CLARK. Thank you very much.

STATEMENT OF WILLA MAE BENNETT, OTTUMWA, IOWA

Mrs. BENNETT. Willa Mae Bennett.

I would like to comment on compulsory retirement at 65. I just wondered, if they don't retire at 65, where are these younger kids going to work? If no one retires out of their jobs, there is going to be a lot more unemployment than there is now, it seems to me.

Senator CLARK. Certainly that is an argument and it is one that is commonly used, but I am not sure that it is more important that a person 65 not have a job, let's say, than someone 21. It just seems to me that there is so much need for productive work that we ought to be able to have a society in which people who want to work at any age could do so.

Mrs. BENNETT. Well, I think they should be able to work maybe at part-time jobs—something they wanted to do all their lives they can do after they retire.

You work 40 or 50 years of your life in a job and then you retire, you could do some of the things, maybe, that you wanted to do, and still make money.

Senator CLARK. But suppose you are, let us say, the greatest pianist in the world, or the greatest artist in the world, and now you become 65 and you are just achieving your greatest potential, or your doctorate, or you are a professor. Why should you have to quit at 65?

Mrs. BENNETT. Well, I don't say they should, but won't that increase the unemployment to a great extent?

Senator CLARK. I think that is right, if we don't find productive ways.

Mrs. BENNETT. I don't mean they should not be able to, but I think it would increase unemployment. Where would the younger ones go that are stepping into these jobs?

Senator CLARK. I think we have got to develop a system in which we have got jobs for everybody who is able to work and wants to work because we have got plenty to do in this country. I think it is true that if we are not able, we are going to have the high unemployment that we have now. For example, in Ottumwa we have about 10 percent unemployment—10 or 11 percent, the last I looked—under the present system. It is an enormous problem, there is no doubt about it.

Mrs. BENNETT. I heard a lot of people at John Deere say if they get a contract where they could have 30-years-and-out—retire—they would take it.

Senator CLARK. I think we really ought to provide opportunities for a fairly early retirement. I am not at all opposed to that. I think if a person wants to quit working and they can quit working at 60 or 62 or 65, that is fine—more power to them. I would not discourage that for a moment, but I just don't think we ought to say you have to. That is the only thing.

Are there other comments or questions? Yes?

STATEMENT OF LILLIAN BARBER, OTTUMWA, IOWA

Mrs. BARBER. Lillian Barber.

You were speaking of discrimination. In almost all of the Government programs, including this employment program, they discriminate against married people. The guidelines are $2,700, did you say?

Mrs. CAMPBELL. $3,700 for two people.

Mrs. BARBER. That is rank discrimination and that is just one group. If it is $2,700 for one individual, it certainly should be at least $5,000 for two individuals to be eligible for these programs.

The point I am trying to make is not whether two persons can live cheaper than one. I am sure you are aware that in many cases, when people are on a very limited income, they will share a dwelling place, sometimes an apartment, or perhaps rent a house. This is often two ladies, or two gentlemen, sometimes more.

This program for employment for the elderly is much needed in our area. However in the guidelines, the income limit is $2,700 for one individual or $3,700 for a couple. I consider this to be unfair, because the word "couple" refers only to persons who are married to each other. I believe this would be more equitable if each person were treated as an individual, or if more investigation were made of the living arrangements of the applicants.

Senator CLARK. Does anybody want to comment on that?

Ruby?

Mrs. WELCHER. Well, I still maintain two people only have clothing and food extra, if they live in a home, they still have the same utility bills as one person. I do not see that it takes $5,000 a year for two people if it only takes $2,700 for one, because I don't think their expenses are that great.

Senator CLARK. Thank you.

STATEMENT OF BILL HOLVOET, DIRECTOR, AREA 16, AREA AGENCY ON AGING, BURLINGTON, IOWA

Mr. HOLVOET. Bill Holvoet, Burlington, Iowa, area agency on aging director for area 16.

As I see it, the employment project is good, but it is unique. I don't believe any of our area in the southeastern corner, or maybe some of the other parts of the State, has this, so I think this needed to be brought out.

You said, "What would you do with the extra money." Don't pump it into the Ottumwa area.

Senator CLARK. In other words, if we are going to expand it, let's get it into all of the areas?

Mr. HOLVOET. Yes.

Senator CLARK. We have a comment back here.

Mr. GILBERT. We have had about four people from the area working on the pesticide program. You are right, and this is what we are trying to do. That is how the project got started.

STATEMENT OF ROGER BLOBAUM, SOUTHERN IOWA COUNCIL OF GOVERNMENTS, CRESTON, IOWA

Mr. BLOBAUM. Roger Blobaum.

Mr. Chairman, I am from area 14 to the west and am here on behalf of the Southern Iowa Council of Governments. We sponsor a number of aging programs. I have a statement that I would like to submit for the record.

In terms of the rural aspects of these programs, 77 percent of our elderly live in small towns or rural areas, and more than one-third are below the poverty line.

Senator CLARK. More than a third.

Mr. BLOBAUM. In addition, 25 percent of the people in our seven counties are 60 years of age or older—one out of four.

We have a fairly extensive program, but one of the difficulties is the ability, as one of the previous witnesses pointed out, of being sure that the needed funding is available. As we come to the end of each year, we have to scramble around trying to put together enough local money, State money, and Federal money to try to keep our programing level going, at least at its present level, for another year.

Programs in rural areas like this are more expensive. With our transportation program, for example, the vans have to travel a lot more distance. The meal preparation at our 12 meal sites has to be done on site—it cannot be done at a central place or catered in.

NEED FOR SPECIAL ALLOCATION

I was asked by our board and our aging agency to come over and make these points and to suggest that there should be some kind of special allocation, or a different kind of allocation, to make it possible to get more money into areas like ours that have a lot of low-income people, a high proportion of rural people, and a very high proportion of people over the age of 60.

Senator CLARK. Well, fine, Roger. I am pleased to have your statement so it can be made a part of the record. I do want to say that I think we do have a fairly good chance of maintaining most of these programs in terms of continuity. I know that if they were authorized for 5 years, 10 years, or so forth, you would be more assured of it.

For example, title IX that we have been talking about, we increased this year from $50 million to $90 million. We almost doubled it.

Now other programs were not that fortunate, but I really do believe that the interest that older people have had in the organizations that they put together and the kind of things we heard from the first panel has really brought an awareness to the Congress and, I think, to

the Presidency, so that it is given a high priority. It is very doubtful to me that the Congress is going to back off these programs.

I know that is not absolute assurance, but I think it would be very unlikely, because associations, groups, clubs, and centers have organized very effectively for political action.

Mr. BLOBAUM. There is a tendency under those programs, as you know, to get more of the financing taken care of at the local level.

Senator CLARK. Yes; particularly the transportation we were talking about.

Mr. BLOBAUM. Yes; boards of supervisors putting in more money; also the city councils. The aging people are raising a lot of money themselves in our area. But even so, every year we are in a really bad pinch to try to line up the money needed to get the program laid out for the next year.

Senator CLARK. Thank you very much.

[The prepared statement of Mr. Blobaum follows:]

STATEMENT OF ROGER BLOBAUM, OTTUMWA, IOWA

Mr. Chairman, I appreciate the opportunity to appear at this hearing as a representative of the Southern Iowa Council of Governments, the sponsoring agency for the area XIV agency on aging.

The local governments in our seven-county area give a high priority to this agency, established in 1973 to make a wide range of services available to the 24.9 percent of the people 60 years of age and older. This percentage of elderly is the highest served by an aging agency in Iowa.

Figures compiled by the Iowa Commission on Aging show that 77.5 percent of the elderly in our area are rural residents, by far the highest percentage of rural elderly in any area in Iowa. More than one-third of the people over 60 have incomes below the poverty level and many of the elderly, particularly those with low incomes, are widows living alone.

Deciding priorities and most of the policymaking is done by the senior citizens themselves and finalized in recommendations to the council of governments from the area aging advisory council. We are the grantee organization and have final responsibility for the agency and its programs.

The agency's first effort was the nutrition program, which the elderly in the area consistently place at the top of the priority list, and we have added others as funding became available. Our services now include congregate and home-delivered meals in 12 towns and cities, an areawide 5-days-a-week rural transportation system, handyman and homemaker programs, home weatherization, information and referral services, and an outreach program.

Our agency has working arrangements with several cooperators, including the two community action agencies serving the area. Others providing assistance include the department of social services, Midcrest Extension, the Southwest Iowa Sheltered Workshop, social security, and Southwestern Community and Graceland Colleges.

The programs authorized by the Older Americans Act meet genuine needs of elderly people. This is important because the senior citizens in our area are proud and fiercely independent and would rather be self-reliant than utilize most government programs. The aging programs have a good public image in our area, most of our senior citizens accept them, and we feel they make sense.

Our main concern as local sponsors is coming up with the money needed to maintain the programs we have. Sufficient funding was provided the first year when the allocations took into consideration the high percentage of elderly and low-income people in the area.

In the second year, however, the method of allocating Federal funds was put on a 60-plus population basis. The result was a 50 percent cut in title III funds for the period beginning in February 1975, and a 27 percent reduction in title VII funds for the period beginning in October of the same year.

Part of this deficit was covered when the legislature, for the first time, provided direct assistance to aging agencies. A substantial amount of money also

was raised locally. In the nutrition program, for example, 35 percent of the money came from county boards of supervisors and contributions received from the senior citizens themselves at the meal sites.

State Commission Supplemental Grant

For the coming fiscal year, we were able to fund current programs only because the agency obtained a supplemental grant of $40,000 from the State Commission on Aging, because meal site contributions again were greater than anticipated, and because larger quantities of commodity foods are available.

What we are suggesting is that programs for the elderly in rural areas require a stable, long-term Federal funding commitment. Once begun, these programs become very important in the lives of those who use them and their continuation should not be left in doubt at the end of each year. Once elderly people begin counting on the congregate site for their noon meal, or the vans to take them shopping or get them to the clinic, everything possible should be done to maintain these services.

Although we are grateful to the Iowa Legislature for starting direct assistance to area aging agencies, this funding cannot be relied on as a basic level of support. The $15,165 in administrative funds and $42,438 for congregate meals received from the initial funding saved this year's aging program in our area. But the legislature appropriated less money this past session and only $12,250, rather than $57,603, is available to our agency from this source for the year beginning October 1.

We have no choice, therefore, but to continue to look to Congress for basic funding for these programs. Further reductions in Federal support, combined at any point with discontinuation of State funding, would force our agency to make drastic cutbacks in some programs and to drop others.

Beyond the need to maintain present programs, there are many unmet needs. They include opening two additional meal sites to provide complete areawide coverage, upgrading several sites from the present three meals a week to five, providing more home-delivered meals, and providing more homemaker, home repair and other services that help older people remain in their own homes. There also is interest in programs involving health care and legal aid services and we would like to do more to stimulate construction of low-cost housing for the elderly.

We urge the committee to look into the possibility of making additional funding available to areas with a high proportion of low-income, rural elderly. This could be done by changing the present allocation formula, by special allocations, or by earmarking funds for rural aging agencies. A specific suggestion would be making agencies in economic development districts eligible for higher funding levels.

This special consideration is justified by lack of local services and financial resources in low-income rural areas with a high percentage of elderly people and the fact that programs in rural areas are by necessity more costly. The need for on-site meal preparation in the nutrition program and the long distances traveled daily by vans in the transportation system are just two examples.

Another important point, particularly in rural areas, is that services are quite limited, or not available at all, for people regardless of income. Many services simply do not exist in many rural counties. A large number of southern Iowa towns do not have mass transportation, dentists, doctors, low-cost housing, restaurants, and grocery stores. These services typically are available in urban areas.

We also would like to call your attention to a problem that has developed as a result of passage of the Joint Funding Simplification Act. We are aware of this because we are involved in funding simplification as the Nation's first rural IGA (Integrated Grant Administration) area. We have seen how well this approach can work, for example, in the way several Federal agencies have gone together to fund our areawide rural water system.

The problem is that HEW, and specifically the Administration on Aging, has insisted on writing a provision into the Older Americans Act to keep its funds from being integrated in areawide governmental units like ours. This creates administrative problems for our staff and we feel it is against the intent of joint funding.

We have been able to cut administrative costs and provide more services in our area by integrating all available Federal, State, and local resources. We would urge you to support the joint funding approach to all rural programs and to oppose the effort by the Administration on Aging to write itself out of the funding simplification legislation.

In closing, we would like to mention one additional problem that is not new where government programs are concerned. That is the problem of too much paperwork. We have the professional staff capability to submit the large amounts of paperwork necessary to bring services to the elderly in our area. But we also have highly competent people, both staff and policymakers, who could be delegated much more authority and responsibility. We feel the staff time involved could be much better spent in direct services to the elderly than in paperwork and would suggest a review of the Federal requirements for detailed plans, reports, and records.

Senator CLARK. I want to call on Jim Murphy, since we are talking about employment programs, because I know that he is with the Iowa Farmers' Union and they have had the Green Thumb program.

Could you give us a little bit about what that has done in employment and what you know of it?

STATEMENT OF JIM MURPHY, IOWA FARMERS UNION, GREEN THUMB PROGRAM, DES MOINES, IOWA

Mr. MURPHY. The National Farmers Union is a Department of Labor contractor for the Green Thumb program. This program is 11 years old and is being funded now by Congress to work in Iowa for the first time. We have the money for 49 part-time jobs for people 55 years old and older. We are going to have 15 of these jobs here in Wapello County.

I will be working with your area agency on aging people for these positions. We can provide the wages for workers 2½ days a week to help with winterizing poor people's homes or to help with public projects—work on parks and recreation areas.

Fifteen in Wapello County are about a third of the 49 new positions that Iowa has for this fiscal year. If we can make it a successful program with the older workers, Congress may extend and expand the program in the future.

I believe I should now ask for questions.

Senator CLARK. Any questions about Green Thumb?

Mr. HOLVOET. Yes. Again, on this particular point, we were to be able to solicit some comments from the State and we have not heard anything since then, but we are going to have 15 in area 15 already, so you know there is a communication thing here.

Senator CLARK. Between the State?

Mr. HOLVOET. Between the State commission.

Senator CLARK. State commission on aging?

Mr. HOLVOET. Yes. So I would like to have him address himself to that. I am wondering if our area—area 15—is going to have any of these slots.

Senator CLARK. Do you know the answer to that offhand?

Mr. MURPHY. I believe I do, Senator Clark. I have written to Mrs. Ryan, the director of area 15, agency on aging, and I have her reply when she acknowledges the 15 jobs, and she sent me her suggestions of what areas they should be working.

Now I intend to meet with Mrs. Ryan at her convenience to work on these jobs. This is a federally funded Green Thumb program sponsored by the National Farmers Union. This is not the Green Thumb program that works with the State conservation commission funded by the Iowa Legislature.

Mr. HOLVOET. That is fine, but how many agencies did you contact and talk with?

Mr. MURPHY. We contacted the area agencies where we have jobs available. With only 49 positions available, we want to concentrate them where they can be effective, probably 15 jobs at each county. I think if we tried to cover the entire State, we would have one person in every other county.

Mr. HOLVOET. The point I am trying to make is that it is not systematic. Everyone was not given the chance to make comments on this.

Mr. MURPHY. Yes, you are right, but by selecting Wapello County, I left out 97 others.

Senator CLARK. Mr. Gilbert.

Mr. GILBERT. I would like to address this question to you. This Green Thumb Farmers Union has a title IX project. Now, the Older Americans Act here in Iowa—why would they put out duplication of service to start duplicate administration when this is actually duplication of our programing?

Senator CLARK. I think under the new title IX authorization and appropriation, it is administered at a national level. I mean, it is not a separate program.

Mr. GILBERT. This is what I cannot understand, though. Green Thumb is one of the five contractors for title IX, so why would they move Green Thumb into Iowa when they are so heavy in Minnesota, and the Dakotas?

Senator CLARK. I think that a part of the great increase in funding, from $50 million to $90 million; a part of that increase went to Green Thumb. So obviously they are trying to go out and find additional slots as well.

Could you speak on that?

Mr. MURPHY. I think that is the major reason. The other is that Green Thumb workers on the project are restricted to rural areas. This is an attempt to expand work and find work for older people who are out of work in rural areas.

Mr. GILBERT. Do you generally work in crews on your program?

Mr. MURPHY. That is what we hope to do.

Senator CLARK. We have time for a couple more.

STATEMENT OF EDNA MORRIS, STOCKPORT, IOWA

Mrs. MORRIS. I have a comment to make. We have not talked much about the hundreds of congregate meals today. I am Edna Morris from Van Buren County in which a study [1] was made with the senior citizen group. We found that congregate meals are quite effective, and we did have some very good interviews. They were planned. There was

[1] See report, appendix 3, p. 141.

cooperation with the University of Iowa at Ames. Also, the department of health and various social agencies in Ottumwa, and others, felt it was a very logical type of interview that was made with our senior citizens.

One thing that I think came out of it was that our people felt that getting out each day was important. About 75 percent of them were widows or widowers, otherwise they would be eating alone at home. It was a good thing to get out, meet new people, get to go places in a group, and to get to meet new friends.

I think another thing that came out of our study was the fact that we found that some of our elderly citizens were not eating properly; they were not getting the recommended daily allowance of certain things. One of the things that we found was a deficiency in vitamin A, which comes from the green and yellow vegetables. They had a tendency to eat more cereals, sandwiches, soups, and things like that.

Another one was that they were not getting enough calcium. Of course, we do have a large percentage of our old people with bone structures that collapse, so we try to encourage our older people to use more milk, cheese, and things that would get more calcium into their system—and also vitamin A.

Senator CLARK. We appreciate very much having those comments. I might say that at another of our hearings we are going to feature nutrition, just as we did here on transportation.

Mrs. MORRIS. Where?

Senator CLARK. It will be either tomorrow or the next day.

Mrs. MORRIS. I was not aware of that.

Senator CLARK. We are trying to focus on different areas with panels. The nutrition program is easily the most popular single program under the Older Americans Act. It has been tremendously successful, both for nutritional and social reasons.

I know of its popularity. In fact, we increased the funding this year for the nutrition program by about $50 million. In Iowa, for example, this next year we have appropriated almost $2 million—$1,857,039. So we have recognized the importance of it. In fact, I have just eaten over at the Winterset title VII meal site before we came over here.

We appreciate your comments very much.

We have only about 5 minutes; but I do want to open it up, not only to employment, but to any of these things that you would like to talk about.

STATEMENT OF ETHAN CURTIS, FAIRFIELD, IOWA

Mr. CURTIS. Ethan Curtis, Fairfield, Iowa.

I presume you will cover this area tomorrow or the day after, but I want to get my 2 cents worth in. I happen to be chairman of the Public Housing Agency in Fairfield, and this information that I am very briefly giving is part of that from our housing applications. We have been following it up for the last 5, 6, or 7 years.

No. 1, the income of our elderly in Fairfield in 1976, as compared with 1970, has been increased only by the increase in the social security payments and supplementary security income. These increases, while helpful, have not yet risen with the increased cost of living.

No. 2, Fairfield has 3,060 elderly, and 37 percent are below poverty income limits. In other words, 1.13 people are in this low-income group. The source of this information is the U.S. Employment Office.

No. 3, the 1970 census gave 2,260 elderly in Fairfield. A 1974 actual count gave us 3,062, or an increase of 802 elderly people in the 4-year period. By applying these same figures in the past 6 years, 1970 to 1976, Fairfield has 1,005 more elderly in this group, or a total 1976 figure of 4,765. The source of this information is the Fairfield Chamber of Commerce.

SUBSTANDARD HOUSING UNITS

No. 4, we have 696 housing units occupied by low-income families. Thirty-seven percent below income limits means that we have 258 substandard units that most likely are occupied by our elderly.

In other words, the units did not measure up to the standards as being decent, safe, and sanitary. The source of this information was the Iowa State Employment Office.

No. 5, by actual count as of June 6, 1974, we had 84 vacant apartments in Fairfield. Forty-three of these eighty-four were unsuitable. Ruled out on account of location were 37, which gives Fairfield 6 qualified units for elderly housing.

We had a total of 44 vacant houses. Thirty-five of these forty-four were ruled out because they were unsuitable—because of location, condition, or rent—which gives Fairfield a total of 15 possible living units for elderly which comes within the Federal guidelines.

In 1975, the Area 15 Housing Coordinating Committee, following our survey, ruled that we had a zero percent vacancy rental for the elderly. So we are just playing dominos—someone moves in, someone moves out.

No. 6, our applications for 48 units for low-income elderly was approved in February 1976. Construction is slated to begin within 60 days. Even though this project would ease the situation a little, it will in no way meet the housing needs of Fairfield.

Thank you.

Senator CLARK. Thank you very much. That is a good report. I know that the figures that you cite are 37 percent substandard housing. It is roughly that same average all over the country, particularly in rural areas. There is an enormous area of need. In fact, I went out this morning in Winterset and went through their public housing there for the elderly—it is not just for the elderly, but it seems it is principally being occupied by the elderly. It is called the North Ward Plaza.

I have also been in units here in Ottumwa. The need is enormous. It is very hard to say we can up the income to match the growth and needed money. In fact, I have cosponsored, with Senator Church and others, an attempt to have the index reestablished every 6 months, instead of yearly, so that we don't run so far behind on increases in social security.

Well, we have a couple more minutes. Does anybody else have a brief statement?

STATEMENT OF ESTHER WHALEN, OTTUMWA, IOWA

Mrs. WHALEN. Esther Whalen, Ottumwa.

I agree that we need more buses, which is very enjoyable, and I think the meals are great. But I do say that I think there should be something done about we widow ladies. I know there are lots of us here who have a home to keep up and the minute the husband is gone, why, the social security goes down. Our bills go up, we still pay the same gas, the same amount of water, all for one person in the house. It is very hard to do it.

I don't know how to keep up unless we have some ways on the sideline. I think that social security, instead of being cut in half, should be a larger part, because we only get a percentage of that. If that is taken away, too, it is just a little hard to keep up.

Senator CLARK. Thank you very much.

STATEMENT OF BERTHA DREYFUSS, OTTUMWA, IOWA

Mrs. DREYFUSS. Bertha Dreyfuss from Ottumwa.

I would like to speak about full employment. I want to ask you, Senator, where the jobs come from, when you say let all work who want to work, out of a population tremendously increased and some jobs that perhaps employed five people 25 years ago which are performed by machines today. Everyone who is running for public office this fall is promising full employment. Where do we get the jobs from?

Senator CLARK. I think it is possible to have that kind of job market. In fact, take one country that comes to mind immediately—West Germany. They have a shortage of labor and 10 percent of their labor has to be imported from outside. Even though they have had an enormous population increase, the economy has been expanding in a way in which they do not have enough people to fill all the jobs.

One could cite other countries as well. I don't think that with modern technology necessarily comes the situation in which you have to have very high unemployment. I don't think the two can ever be economically incompatible.

The fact is that we have enough work that needs to be done. The solution is to have the economy expanding in a way which really provides those jobs.

MEDICAL ATTENTION DIFFICULT

Mrs. DREYFUSS. We need better medical care. Even those who pay their own way cannot always find a doctor who is willing to take on another patient. My husband who has become disabled the past year could not get a foot doctor in Ottumwa to take him. I had to pay someone to take him to the clinic in Bloomfield to get his toenails clipped. We need, in Ottumwa, an outpatient clinic where everyone gets service.

Senator CLARK. Any other statements?

Mr. BURROWS. I thought I would tell a joke if you folks are leaving. This is an old joke, but you folks are all young so maybe you didn't hear it when it first came out.

This son-in-law got a telegram from his in-laws. He lived way off here. The telegram says. "Your mother-in-law is dead; shall we embalm, bury, or cremate?" He writes back and says, "Do all three, take no chances." [Laughter.]

I think there is a lot of emergency about these programs, but what I want to say rather technically is very appropos. The old lump of labor argument has been brought out here—that there is so much of a wealth of labor here that if you have two folks do it, then each one could do half as much. That is all.

The old lump of labor theory was thrown out years ago when the first technology in printing was established. The labor organizations all said, "This is going to do the work of three people, and so we can't have it." They tore up the machinery, rioted, and what-not.

We have had more and more machinery and technology taking more and more jobs. We have also had a larger and larger percentage of our people gainfully employed. So we make our income and our wages as we work. and you don't have a lump there from which to take. That is one thing, I think, that has made this other idea very simple.

I thought that $2,700 ought to be moved up all along. It won't affect me. I have always been too wealthy to get help and too poor to be relied upon. [Laughter.]

So I am not sure. But it is bad for these $2,700 deals these days when prices have doubled.

Senator CLARK. I agree. Good.

Two more statements back here, and then we are going to break up.

STATEMENT OF IDA L. MILLER, CENTERVILLE, IOWA

Mrs. MILLER. Ida Miller from Centerville.

We have not talked about nutrition, but that is my first love, then transportation. When is the next hearing on nutrition?

Senator CLARK. The nutrition hearing is Wednesday morning at 9:30 in Sioux Falls, S. Dak.

Then we are going to talk about it again in Rockford, Iowa, Wednesday afternoon. Rockford is a small town up around Mason City. I would be happy to hear anything you have to say about it right now.

Mrs. MILLER. Well, I just want to know if our program is going to continue.

Senator CLARK. There is no question about whether it is going to continue. It is the most popular program, as I was saying to this lady, in the aging area. In fact, we increased the funding by $50 million this year.

Mrs. MILLER. It is the love of my life—the nutrition program.

Senator CLARK. Thank you.

STATEMENT OF TESSIE BURT, OTTUMWA, IOWA

Mrs. BURT. I am Tessie Burt.

Twenty years ago there wouldn't have been a hearing like this concerned with old people. Even if there had been, we probably wouldn't have heard about it. And if we had heard of it, we wouldn't have been able to get to it.

Things have certainly improved since then. People and governments care about the elderly, and they go out of their way to let a lot of us know that they do. And though we have some things, quite a bit is still needed.

Some towns don't have either community or senior centers, but when you get older you need some place to go so you can meet others, rest, or get a hot meal. You could have your blood pressure taken or learn exercises. But if you eat your hot meal in a church basement or a restaurant, you can't do all of the things that you want to do.

However, meals served in our own senior or community centers won't take care of those of us who are houseridden or bedridden. More money for meals-on-wheels programs would be good. And, to keep us from having to leave our own places for a nursing home, we need more homemaker aides.

Learning skills for retirement might not be a bad idea, though I think older people should be encouraged to work as long as they can instead of being made to retire at a certain age.

Being old has its advantages, and you, Senator, and others like you, have taken away some of the disadvantages.

Senator CLARK. Thank you very much. We appreciate it.

Let me just say now in conclusion that I think the witnesses and the testimony we have had today has been valuable to us. As I look back over the list, I particularly appreciated Ed McMillin talking about what the American Association of Retired Persons are doing and what the legislative council is doing; certainly Ben Grismore, in talking about how the transportation program was begun in Wayne County, and the value of it; Professor Burrows, who not only is a good story teller but knows a good deal about the problems of transportation—I thought that was valuable; certainly this panel with Shirley Campbell, talking about how as project director service employment has worked around this area; also Bob Gilbert talking at the State level about how these programs work; and then Ruby and Francis, as examples of that, and what it means to have these kinds of programs.

So I think it has been very valuable to us.

Any statements that you want to leave in writing or mail to me will be put in the record. We will have the record open for another couple of weeks so if you want to write something in a letter and say, "I think you ought to know about this, too," I will be very happy to have it and you tell me if you want it published in the hearings or if you want it kept private.

We are delighted that you came and we hope to see you again often.

Thank you.

[Whereupon, at 4:20 p.m., the hearing was recessed.]

APPENDIXES

Appendix 1

STATEMENTS FROM INDIVIDUALS

ITEM 1. STATEMENT OF PAM HUNT, TRANSPORTATION COORDINATOR, AREA XV AGENCY ON AGING, OTTUMWA, IOWA

I would like to present for the record some very positive things that are happening in the field of transportation for the elderly and the general public in area XV.

Area XV Agency on Aging, soon to come under the umbrella of programs sponsored by Southern Iowa Economic Development Association, is submitting a proposal for Urban Mass Transportation Administration funds under section 16(b)(2). These will be used to replace equipment currently being operated, as well as offering an additional service for handicapped people via special equipment in Wapello County.

South central Iowa community action program is applying for funds to provide a similar service for handicapped people in Wayne, Monroe, and Lucas Counties. These funds will also be made available through Urban Mass Transportation Administration section 16(b)(2).

The area XV Regional Planning Commission has received preliminary approval on a demonstration project for $250,000 to be spent over the next 2 years. Mr. Bruce Bullamore has initiated an advisory group to give input for the final application for this comprehensive rural system. The project would not only coordinate existing human service transportation systems, but also provide a demonstration commuter service for area XV.

Several rather significant activities have taken place in Wapello County in recent months. An agreement has been reached with the Ottumwa Transit Authority by the area agency on aging allowing the agency's bus to operate 3 to 4 hours daily inside Ottumwa's city limits. The service is aimed primarily toward those individuals who for one reason or another cannot utilize the city buses.

The State of Iowa has allocated $2 million for transit assistance. The Ottumwa Transit Authority will be eligible for application of those funds to help relieve the operating deficit. One application for these funds will also be accepted to assist rural operations in area XV. It is hoped that these moneys will be spent in a fashion acceptable to the legislators so they can see their way clear to reallocate funds to the Department of Transportation in the future for use in providing comprehensive transportation service in Iowa.

The major need which should be considered when allocating funds for transportation is operating assistance. After a system is operating or has updated its equipment, the major need is for operating assistance. In many grant applications the emphasis is on capital outlays, rather than operating expenses. In rural Iowa as well as other places, the strain of operating a system cannot be met by local support totally.

ITEM 2. STATEMENT OF JOHN H. KING, CHAIRMAN, BOARD OF DIRECTORS, SOUTHERN IOWA ECONOMIC DEVELOPMENT ASSOCIATION (SIEDA)

Thank you, Senator Clark, for the opportunity to speak at this special hearing on problems facing older persons.

I am presently chairman of the board of directors of Southern Iowa Economic Development Association, the community action agency that serves this southern Iowa area. In this role it has been my privilege to become directly involved with a number of groups of persons who have been directly affected by the work of an agency such as SIEDA. Among them are numbers of older persons, living in isolation in this southern Iowa area, out of touch with and unable to gain access to many of the services they need.

I am greatly concerned, Senator Clark, about the inability of many of our older citizens to get to a doctor, a dentist, or a pharmacy, all of which may be located in a county seat town a number of miles from where they live. There is a great need for additional congregate meal sites, now limited due to limited funding. There is a need for handyman service activities for many older persons, too proud to ask, or too poor to pay for little tasks they can no longer do for themselves. There is a need for senior service centers in some of our isolated areas, small communities in which older persons make up a large percentage of the total population. And finally, Senator, there is a great need to expand transportation services in rural Iowa to older and handicapped persons.

SIEDA will be addressing some of these problem areas I have alluded to beginning October 1, when our agency becomes the sponsor for the area agency on aging program. However, with all the expertise within SIEDA, and it is considerable, there never seems to be an adequate supply of funds or technical assistance that can be generated through both State and Federal sources.

There would seem to be a need to direct existing State and Federal funds more generously into areas such as we have in area XV—areas that have documented evidence of need that far outweighs need in other areas of Iowa. Surely the formula for parceling out money should be weighted for an area that has more older persons per capita than most or all other areas of the State. I would strongly recommend that the formula system for funding be more truly reflective of the identified need in terms of specific persons who need and require service.

As a case in point, much of area XV is economically depressed, a fact that has resulted in the area being designated as an economic development district. This would presume to alert the Federal and State governments that when funds of almost any nature become available, that area so designated would automatically become a high priority for funding and frankly, Senator, this does not seem to be the case.

Older persons' problems are not unique for southern Iowa, Senator, but they are somewhat critical due to the nonmetropolitan aspect of the area. As you know, when service is not available to you where you live, you have three options: do without the service, go to where the service is available, or have the service delivered to you. We would not suggest people do without service. We are attempting to get people to service and we will continue to bring service to people. The latter two options are both costly and time consuming in the nearly total rural environment of southern Iowa.

SIEDA has been able to assist many older persons through its community food program, through its energetic efforts to see more well-adult health clinics established, through property tax relief programs, and through such programs as RSVP—the retired senior volunteer program.

And although we feel good about our involvements thus far, we are likewise frustrated by our attempts to do more. Be assured, we shall continue to serve people who have need—it is our mandate in community action. We do need the support of persons such as you to demonstrate to the Nation that we are all committed to the effort; that we recognize the shortcoming but that we do have the energy, the enthusiasm, and the dedication of purpose to get the job done.

My lifelong work as an educator and administrator, Senator—working with youngsters is not unlike the problems we are experiencing in working with older persons. We are a catalyst for change in both areas—you, Senator Clark, along with your peers, are that catalyst at the Federal level to actively assist us in doing our task in a better and more effective way.

On behalf of the SIEDA Board of Directors, its staff, and the multitude of clients we collectively serve, may I express our pleasure at having such hearings in this area and my thanks for the opportunity to speak to you.

Appendix 2

LETTERS FROM INDIVIDUALS

ITEM 1. LETTER FROM VIVIAN B. HAMMES, SITE COORDINATOR, AGENCY ON AGING, FAIRFIELD, IOWA; TO SENATOR DICK CLARK, DATED AUGUST 13, 1976

DEAR SENATOR CLARK: As an agency on aging site coordinator, I would like to give you my views on the agency programs and what it has done for the elderly of Jefferson County.

This site was started in December 1973 with an average of 30 to 35. We now have an average of 65 to 75 daily. Most of these people come every day; the others on an average of twice a week. They even bring their children to the site so they can see where they spend their time and how well they do by themselves.

The agency on aging program has kept many elderly in their homes much longer and out of nursing homes, thereby saving the taxpayer thousands and thousands of dollars. This is every senior citizen's wish—"to stay in their home as long as possible."

These people have turned into happy people, for now they have a place to go, friends to see, and people who care about their welfare. We have seen them come out of their shells and "live again." (Granted there are a few we'd like to put back into their shells again.) The sociability is a great aspect of the program and without it the meals and minibus could never be.

Some cannot afford to pay for the meals or the bus, but this program does not leave them out. They can come—and do. The confidentiality of no one knowing if they can or can't pay keeps their dignity intact. They benefit the same as those who can afford to pay.

We have even taken the elderly home from the hospital by bus. They are taken shopping, to the doctor, drug store, beauty parlor, visiting, to the grocery store, laundrymat, the bank, to an attorney, etc. You name it, the minibus has taken them there.

These people even volunteer to help at the site. They volunteer in the community—selling tickets at the junior agricultural show, helping at the farmers market, TV marathons, selling bicentennial booklets, community parades, contest judges for school, foster grandparents to seventh grade students, etc. They are certainly no pikers when called upon, but each community must become aware that they are available, even though retired. Their experience is a vast resource for our Nation and, as yet, virtually untouched. Our elderly are a fantastic group of people and being with them daily has been a wonderful experience for me.

A prerequisite of our site is a smile, and it seems to work wonders—it is contagious. The sociability is so important—for they can be their own self and be once again important. They not only help the community, but help one another, which in turn helps themselves. They consider the site as "their home away from home."

The meals are well planned for them and they have a say-so at a monthly meeting with the dietitian. This, plus program suggestions, makes them know that this agency program is truly for them. Many claim that they would be dead except for this program.

No matter how big or small the problem, they know that my aide, Maxine Riley, the bus driver, Mescal Kennedy, and myself will listen to them and advise them if possible. We've sat at the hospital all night with them; we've stayed at the house when a death occurred; we visit the hospital when they are sick; and we go with them to the doctor. Having us there seems to lessen the fear, and they know they can depend on us anytime—night or day. Most have no families or they live too far away.

I could go on and on about the wonderful things these elderly do, but I could never do them justice. The satisfaction is seeing them smile and knowing the good the program is doing daily. Of all the programs the government sponsors, the agency on aging is one of the best and does the most good. More funding could be used for the continued support of this program.

Sincerely,

VIVIAN B. HAMMES.

P.S. Why not come and visit our site, "the best in Iowa," and see for yourself?

V. B. H.

ITEM 2. LETTER FROM MESCAL KENNEDY, FAIRFIELD, IOWA; TO SENATOR DICK CLARK

DEAR SENATOR CLARK: As the driver of our minibus, it is my opinion that the greatest blessing that ever came to Fairfield was the founding of the senior citizen site.

We have the perfect coordinator in Vivian Hammes, and assistant in Maxine Riley. They are not only interested in all of the participants while they're here at the site, but they will, and often do, look in on the senior citizens after working hours.

We have a team of volunteers who can't be beat. They are alert to other's needs, diligent workers, and extremely friendly and helpful.

Many of the elderly who seldom ventured outside their homes or apartments previously, except for visits to the doctor, began to gather 5 days a week at the site. It opened up a whole new world for them. Not only are they supplied with nutritious meals, but also the fellowship they enjoy is priceless.

The minibus is a godsend to many of the senior citizens. Those who had no means of transportation and hesitated to call on friends or relatives to drive them places now have an independence in calling their own bus for trips to the doctor, dentist, supermarket, beauty parlor, or anywhere they want to go.

It would be a great injustice to deny them this facility now. The senior citizens of Fairfield need the senior citizen's site and the minibus.

Yours Respectfully,

MESCAL KENNEDY.

ITEM 3. LETTER FROM CATHERINE KURKA,[1] FAIRFIELD, IOWA; TO SENATOR DICK CLARK, DATED AUGUST 12, 1976

DEAR SENATOR CLARK: I am a volunteer worker at the congregate meal site, and I would like to tell you how great I think this service is for our senior citizens.

I didn't really realize just how much this means to so many people until I started working at the site, once a week. It cannot be described fully to anyone who has not seen some of these people when this all started. Some of them did not get out of their homes. It is a pleasant place to enjoy a meal with friends and also to enjoy the entertainment that is offered on different days. You really need to be in the card room, or sit around and visit with the people, to get an idea of what it does for so many. We are very lucky in Fairfield in having a gal at the head of this that is so dedicated to her work. She will do most anything for these people. She is quite an advocate of theirs.

Please continue funding such projects for the senior citizens. They are a part of our country that is not as vocal as some of the others. They, for the most part, have not always had everything and have learned to "make do with what they have."

On their behalf, I thank you and please continue to work for them.

Sincerely,

CATHERINE KURKA.

ITEM 4. LETTER FROM PATSY SEALS, RSVP DIRECTOR, OTTUMWA, IOWA; TO SENATOR DICK CLARK, DATED AUGUST 16, 1976

SENATOR CLARK: The RSVP (retired senior volunteer program) began operation in Ottumwa on July 1, 1972, with a Federal grant from ACTION in Wash-

---

[1] See statement, p. 110.

ington. Ottumwa was one of the first four RSVP's funded in the State of Iowa. The function of the RSVP is to work with people age 60 and over to find them useful and worthwhile volunteer work to do in the community. We try to match the volunteer to the work very carefully so that the volunteer and the volunteer station is happy with the match. Our program oftentimes involves counseling with the volunteer and trying to help them solve the problems that they might have. Some of the problems we work with are: difficulties with their check, especially when they get word that social security has overpaid them and they won't get a check for a period of time. These people oftentimes don't have the funds to carry them for 2 or 3 months or longer. They need help to apply for food stamps and other services that they may be eligible for during the period of time that they don't receive a check. Some of our volunteers have no families and it is difficult sometimes for them to get the medical care that they need, so we sometimes help them with medical problems. Some of our volunteers that do have families have feelings of being neglected or mistreated by their children, so counseling with this problem occurs frequently. To so many of our volunteers, the people they work with in their volunteer work is the only family that they might have.

For the first 2 years that the RSVP program was in Ottumwa, our grant was administered by SIEDA, which is a CAP agency. SIEDA felt our program should be spun off to a community organization and we started investigating possible sponsors. The Ottumwa Area Chamber of Commerce had been working with the idea of starting a volunteer bureau in Ottumwa and felt that the sponsorship of the RSVP might be a step in the right direction. The chamber of commerce took over the sponsorship and has been the sponsor for the past 2 years, and we are going into our third year with the chamber. It has been very good, for we are reaching a group of people that we had not reached before.

Some of the things that our volunteers do are:

—Help supervise the handicapped clients at the TENCO workshop and also sell items made by the clients at the county fair and the local "crazy day."

—Mending items and also fold brochures for the local hospital.

—Helping at the nursing homes by feeding other patients, passing out mail, writing letters, entertaining, helping with bingo, visiting with the patients, and other things that are needed to be done. Some volunteers have been taking the patients to the doctors and other professional people that they have needed to see.

—We have volunteers that help with the department of social services with the food stamp outreach program.

—We have volunteers that do typing for organizations such as the Ottumwa Area Chamber of Commerce, Boy Scouts, Indian Hills Lake Region Tourism Council, and many others.

—We have one volunteer that does the correspondence for the business/consumer affairs council which in Ottumwa acts as the better business bureau.

—We have volunteers that do special projects such as mailings, envelope stuffing, making lap robes, putting together packets for American Cancer and Multiple Sclerosis, and any other projects that can be done in a group setting.

—Some volunteers provide transportation for other people such as our volunteers. We have volunteers that provide transportation to other people that need to get to a doctor out of town and this is something that our volunteers do if the people can pay for their own transportation or if we can get funds from other sources such as the department of social services. This is one of the big problems of the elderly of Ottumwa—transportation to out-of-town doctors.

—We have volunteers that help serve the congregate meals at the area agency on aging and also volunteers that work in the Mystic hot meals program which is a nonprofit corporation that also serves meals to the elderly.

—We have volunteers that do telephone reassurance, which involves calling on others who are shut in their homes. Volunteers have taught minicourses in such subjects as knitting and crocheting in the schools, administered first aid at the YMCA camp, helped with the voter registration program. We have volunteers working on a 1 to 1 basis with clients at the lifetime learning center which works not only with young adults but also middle-aged people to help them get their GED certificates. Our volunteers also help these people with reading difficulties. There are some of the clients who dropped out of school that need help in learning how to write a check and also many other things that we might consider to be simple in everyday life.

To provide all of these services to the community and to benefit the elderly people that we serve, we need funds. Although we do reimburse our volunteers for their transportation and meals, it nowhere near takes care of expenses. Some of the meals that our volunteers eat while doing their volunteer assignment may be the only balanced meal they have for the day. How do we carry on the program when we so badly need more dollars?

FUND SHORTAGES

In the beginning the program was partially federally funded for 5 years, and at the end of the 5 years the community had to come up with enough funds to carry on the program. In the spring of 1976, the agencies in Iowa and all over the United States were informed that the ACTION agency had frozen the programs at 70 percent Federal funds and 30 percent local funds. The decision has been made for an indefinite period of time. Although the reduction in the local match has helped the programs get their local match, if the program is to grow at all they will have to depend on the local communities for the funds which leaves so many of the programs back in the same place that they were in the beginning—not enough local funds to go around to the different agencies. Although we are to be 70 percent federally funded, the programs do not receive 70 percent of their total budgets from the Federal Government. We have programs in the State of Iowa that are in their fifth year that are at the point where their programs can't grow anymore because of lack of funds. In this case, what do you do? Do you turn down people that want to be volunteers? Do you take them as volunteers and hope that the funds come from somewhere out of the blue? What alternative do we have?

The total budget for the RSVP programs in Iowa in Federal dollars is approximately $310,000. This has to stretch for funding the State office in Des Moines, and the 16 RSVP programs in the State which involves more than 3,388 senior volunteers as of June 30. At the present time there are two proposals in the State office for RSVP programs, and there are no funds. What can we, as citizens and also as RSVP directors, do to help find funds for the existing programs and also for new programs, not only in Iowa, but all over the United States?

It has been said that the older Americans are a valuable resource, and this statement is true—but let it not be forgotten. Our older people all over the United States have forgotten more than a lot of us young people will ever know. I hope that when I get old enough to retire, that there is something that I can look forward to being a part of, such as the Retired Senior Volunteer Program of the United States of America!

What can be done about social security checks being stopped with such suddenness when there is overpayment? So often an elderly person receives notice that their social security check will either be cut or they will not receive a check for a certain length of time due to overpayment; however, they don't receive notice of this until the day they would normally receive a check. What do these people do? If they could receive notice concerning this matter at least a month in advance then they could possibly make some kind of adjustments.

Also, our local RSVP program does a lot of transporting the elderly to out-of-town doctors (if they can pay for the transportation or we can find funds from other sources such as social services) because there is not any other way for them to get to these doctors. What can be done concerning this situation?

Also, the RSVP program would like to stretch out more into the rural areas to reach more of the rural elderly, but we need funds to help do this. Our rural elderly are needed as volunteers as much as our urban elderly. What can be done to get more funds for this purpose?

PATSY SEALS.

Appendix 3

REPORT PREPARED BY MRS. EDNA MORRIS,[1] VAN BUREN COUNTY (IOWA) COMMISSION ON AGING

An Evaluation of the Congregate Meals Program in Van Buren County

This was a pilot study conducted in Van Buren County. It was conducted for the Commission on Aging of the State of Iowa, under the supervision of the Food and Nutrition Department of Iowa State University, Ames, Iowa, and under the specific leadership of Dr. Pilar Garcia.

Other agencies cooperating were: Iowa State Department of Health; Iowa Department of Social Services, Ottumwa Field Office; Van Buren County Extension Service; Area XV Agency on Aging; and Van Buren County Commission on Aging.

As I have previously mentioned, this was a pilot program on and of Van Buren County. One of the reasons it was selected was, it has one of the highest percentages of persons age 65 and over in their population of the State. And it is also considered among the lower economic level counties.

Another reason was this county has four congregate meal sites. Two located in the local cafes, Farmington and Stockport, one in a hotel dining room, and one, at the time of the study, in a church basement.

The first segment of the survey was conducted during November and December 1974. This included 74 women and 31 men, or a total of 105. All were 60 years or older. In April 1975 was the followup or second segment of the survey. This included 50 women and 19 men, a total of 69—68 were interviewed in both surveys.

Detailed questionnaires were used by trained interviewers to obtain information: general characteristics of the group, nutritional and health related data, dietary intake on a 24-hour basis of both food and beverage consumed.

All of these interviews were held at the meal sites. All of the people participated regularly in the program. About half the dietary records obtained included the congregate noon meal.

Results showed that a higher proportion of the individuals received one-third or more of the recommended daily allowance for several nutrients from the congregate meal. It also contributed a higher proportion of the daily intake of food energy and several nutrients.

Most of the 68 participants who were observed in both surveys had adequate daily intake of protein, iron, riboflavin, preformed niacin, and vitamin C. Half of the group had a satisfactory intake of thiamin. Over a fourth had vitamin A values less than 50 percent of the recommended daily allowance. Over a third had calcium intake below 50 percent of the RDA. Intake of food energy tended to be low, yet 50 percent of the participants were overweight.

Eighty-five percent of the group were 70 years old or older and the majority were women. Over 75 percent widows or widowers and the majority lived alone, which meant they ate alone when home. About two-thirds of the group were in income levels below $300 per month—only 10 percent were in income levels above $500 per month. A majority did their own shopping and lived near or within 3 miles of a grocery store. About 15 percent of the participants over age 80 did not prepare any of their meals. These were mostly men.

Approximately one-fourth of the group were on some kind of a special diet of low cholesterol, low residue, sodium restricted, diabetic, bland, or combination of several. Most had been prescribed by a physician. Only about 30 percent reported the use of vitamins or supplements. The majority of the group claimed good to excellent health.

Some questions still are unanswered. How can we measure the effects of the program on the nutritional status of the people being served? And is it possible to show the impact of good nutrition on the health of the elderly?

---

[1] See statement, p. 128.

This study and evaluation of the congregate meal program was limited to appraisal of the diets and some health-related information. One conclusion seemed evident that the participants' preference was generally low for foods that are high in calcium (milk, cheese, etc.) and in vitamin A values (dark green and yellow vegetables such as brocolli, greens, spinach, winter squash, etc.). So there is much need for more calcium and vitamin intake.

Over 40 percent felt they had changed their eating habits since beginning to eat at the congregate meals. Other benefits were indicated too: fellowship, making new friends, and better eating.

These are just a few of the highlights of the total report, as it was 31 pages long.

Dr. Garcia expressed her appreciation, "We are grateful to the congregate meal participants for their cooperation in this pilot study."

Appendix 4

STATEMENTS SUBMITTED BY THE HEARING AUDIENCE

During the course of the hearing, a form was made available by the committee to those attending who wished to make suggestions and recommendations but were unable to testify because of time limitations. The form read as follows:

DEAR SENATOR CLARK: If there had been time for everyone to speak at the hearing on "The Nation's Rural Elderly," in Ottumwa, Iowa, on August 16, 1976, I would have said:

The following replies were received:

RAYMOND ANDERSON, FAIRFIELD, IOWA

The meals program is very helpful to me. We get a good balanced meal each day.

The social part is good for the elderly, too. It is a great help to get out for a few hours each day.

The minibus is very much needed and is being used by many elderly citizens with low incomes.

I hope these programs will continue.

BERNADINE BARKER, KEOSAUQUA, IOWA

I do not agree with Mr. Bob Gilbert that employment of the older person is the greatest need. Transportation for the elderly and provisions for congregate meals are the greatest needs. In Van Buren County we have around 2,000 to 2,200 over 60, out of a population totaling around 9,000. Many of these people would not eat a single balanced meal or go anyplace for weeks at a time without these programs. I could enumerate many personal stories about people who have more or less come back to life again since this program began. Many who participate are isolated in rural areas (some isolated in small towns) and depressed, with no reason for living. We feel in Van Buren it keeps many out of the nursing homes.

We need more and continued support for these programs. We have two part-time drivers who receive only $4,500 total for the job of minibus drivers and no provisions for overtime work which they do a lot of. Our funds have been drastically cut and we do not know whether we can continue the program beyond another year! I feel in order to continue to offer these services we need assistance for the services and more funds to be able to pay a living wage to employees. Coordinators, like myself, responsible for coordinating transportation and congregate meals, dispatching buses, etc., are not paid a wage comparable to other similar positions (presently $7,700) and are told wages are frozen for another year.

In other words, no one is working in the program unless they enjoy helping people. but you don't keep good employees with a continued rise in the cost of living on that basis alone.

Low-rent housing is another great need. We do have housing units in several communities, but there is a great need for some in Keosauqua. It seems the "powers that be" in that town did not want the competition of the low-rent units so we weren't able to build any. even though there is a great need for them. A week never goes by that I don't have inquiries on the subject! We need more in the other towns, too.

BERNADINE BATES, FAIRFIELD, IOWA

The congregate meals for the elderly help me because, when alone, I don't cook properly. It's also more fun to eat with my friends.

The sociability at our senior citizens site is wonderful for us. We see all our friends, and especially enjoy the cardplaying in the afternoon where we have so much fun.

The weekly exercise class helped me become more mobile and is keeping me that way.

The coordinator stayed with me during surgery. It helps to have someone who cares and will help when I need it.

I hope the Federal Government will keep on funding this program.

EVA BATES, FAIRFIELD, IOWA

I am thankful for the minibus and meals for the elderly. I was in a nursing home, and without them I could not have come back into my own home. When I was sick, congregate meals were delivered to my home by minibus. I now get to come to the site two or three times a week, and the other days I have a home-delivered meal sent to me.

The loneliness seems to go when I can talk and be with my friends at the site. I could never have managed without Fairfield's agency on aging.

CECIL BETTIS, FAIRFIELD, IOWA

First of all I want to thank you for helping me to finally get my black lung benefits. The coordinator, Mrs. Hammes, and I appreciated your followthrough.

The meals at the site have really helped me, because now my wife has had a stroke and cooking is a problem.

The people here couldn't do without the minibus either.

More funds are needed for this agency on aging program. I'm glad you are on this committee so you can keep helping the elderly.

Thanks again, and keep up the good work.

ONA MAY BIRT, FAIRFIELD, IOWA

The minibus is the most wonderful thing for the elderly. The taxi is too expensive and we need transportation.

Our congregate meals are good, well balanced, and help my budget considerably. The sociability at the senior citizen site helps get your mind on other things and the laughter is contagious.

We all appreciate our wonderful coordinator and bus driver because they both take an interest in everyone, and your problems are their problems, too. It gives us someone to talk to and confide in.

We like the privilege of being able to volunteer at the site and feel needed and wanted.

The coordinator even stayed with me when I was operated on when my family could not. It's nice to know I can rely on her when I need help. She tries to be a friend to all.

More funds are needed for meals and for the minibus for senior citizens. This program has done more for senior citizens than anything else. Keep funding the money, we need it.

SHERMAN BISHOP, FAIRFIELD, IOWA

I am a senior citizen 78 years old, and lost my wife in June 1975. I carried out meals from agency for aging while she was sick, then started eating there. It is a wonderful place for old people to eat, get acquainted, play cards, and help one another.

We have two wonderful coordinators in Vivian and Maxine. Also the minibus and driver, Mescal. They are wonderful for people who need them.

TWYLA BOOTH, FAIRFIELD, IOWA

You have done a good job in helping the elderly by funding programs for transportation and for nutrition.

This has kept many senior citizens in their own homes which makes them happy.

To be able to get the minibus to come to the congregate meals and have fellowship with others keeps them alert mentally and helps them physically.

To be on their own, to get to the doctor, to the grocery, or to visit friends is very rewarding. Since our community has no public transportation system, the minibus is needed.

I firmly believe these benefits are less expensive than putting our elderly in nursing homes or care facilities.

I have worked with the agency on aging program in Jefferson County since the beginning and can see the many benefits for those participating.

Thank you for your interest. I hope you will keep on working for the continuance of these very worthwhile programs.

IRENE CARLSON, FAIRFIELD, IOWA

I am a widow and can't get out. The minibus takes me to the doctor and the site for meals. I could not go otherwise.

The meals are good and the low cost helps the budgets of all the elderly.

Sociability means less loneliness for us. We need the Government to keep funding the agency on aging programs.

MILDRED CARTER, FAIRFIELD, IOWA

I have a better balanced meal and more variety at the site than when I cook for one and use leftovers. I enjoy seeing and visiting with others. It is a nice change from eating alone. Some who are unable to cook or come to the site have meals delivered. Exercises, bingo, cards, movies, etc., are enjoyed by many who come to the site.

The coordinator checks on those who are sick, takes them to the doctor, sees that they get their medicine, takes them home or to the hospital, and visits those in the hospital. She helps all who need help in many ways to make them feel they are not so alone in the world.

The site would be greatly missed by many—attendance in Fairfield is increasing. I hope the site may continue and that allowance will be made so it can grow.

ESTHER D. CHAMP, FAIRFIELD, IOWA

We'd like you to continue the funding for the senior citizen site and its programs.

The meals and the minibus are a godsend for me. This is my only means of transportation and, when sick, a carryout meal is delivered to me. I have no nearby relatives to help me so I, therefore, depend on these things.

RAY CLARK, FAIRFIELD, IOWA

The minibus and congregate meals at the senior citizen site mean a lot to me. I have to have medicine and oxygen every week and the bus takes me to get them. I also depend on the bus for groceries and trips to the doctor, as I cannot walk.

As for the meals, many times I would have done without anything to eat if not for them, for I am unable to fix something most of the time.

The site is also a good place to come to visit with the folks and for good, clean recreation and fun.

Keep on funding money for this program, it is so needed.

We ride the bus each day,
Travel on every street,
Gathering senior citizens
To bring them here to eat.

We ride the bus each day,
Travel all over town,
The senior citizens know
The minibus won't let them down.

We ride the bus each day,
Travel on every street,
We have no hat upon our head,
Worn shoes upon our feet.

We ride the bus each day,
Travel all over town,
The senior citizens know
The minibus will be around.

—by Ray Clark.

GLADYS E. DEGOOD, FAIRFIELD, IOWA

I believe the senior citizen site is the best thing that has happened for the senior citizens of Fairfield, Iowa.

The money that is appropriated for operation of the site by the city, county, State, or Federal Government is used in so many beneficial ways for senior citizens. It is wonderful how so little money can do so much for so many people.

I request that a larger sum be made available for the use and benefit of senior citizens.

The senior citizens enjoy better health because of the nutritious meals that are served to them 5 days each week.

They are happier because of the fellowship and sociability of being with other people.

The minibus affords transportation for many people to go to the doctor, to the grocery stores, to the bank or the post office, and to come to the site for meals.

There is only taxi service in Fairfield, Iowa, and it is quite expensive, if used. Many senior citizens cannot afford to pay the taxi fare. The minibus fare is 35¢ anyplace in town.

Our group has organized a senior citizen chorus of six senior citizens who enjoy many hours of music practice at the site building.

The chorus has become popular and is in demand to entertain in other towns for business and church organizations on special occasions.

The card room is generally filled to capacity with card players and it is a real fun place to spend an afternoon.

It is my sincere hope and wish that an increase in money for the program will be allowed so we can help more senior citizens.

I extend a special invitation for you to visit the senior citizen site and enjoy a pleasant, happy day.

LUCY DOUGHERTY, ALBIA, IOWA

The first priority, as I see it in Monroe County regarding transportation, is to assure us we will get to keep our minibus without relying on any more local tax money—as our small county cannot support much more. It is necessary to keep the Federal dollar coming. There is always room for expansion, but to keep what we already have is most important. Keep the money coming.

We would really welcome a visit of our sites in Albia and Lovilia by you. We also invite you to ride our minibus.

JOE EMERSON, FAIRFIELD, IOWA

I use the senior citizen minibus to go to congregate meals at the site. We need both the bus and the meals for the elderly. It has helped me.

We need continued funding from the Government.

MARY S. EVANS, FAIRFIELD, IOWA

By all means keep the agency on aging program going because it is so needed in more ways than one for the elderly.

The cost is within range of my budget and the budgets of others.

The minibus is wonderful for the elderly and has taken me to the doctor and to the site many times.

I hope the Government funds this program forever, because it is needed and the potential will always be there.

HARRY AND WILLA FULTON, FAIRFIELD, IOWA

Thanks to the agency on aging, the senior citizens of this site are very fortunate in having a very capable coordinator who knows how to cope with the elderly and handle funds efficiently.

Balanced meals are furnished 5 days a week for those who are able to come to the site, and carryout meals to those who are unable to attend. Volunteers help greatly with this operation, as well as many other duties required.

Periodic blood pressure tests and tooth examinations are made free.

Card games, bingo, movies, etc., are furnished, as well as exercise classes and other entertainment.

Counseling on social security problems, rent, and tax returns, how to get free blood through the State blood bank, and how to get help when needed through various agencies.

The sick are visited and cards signed by the participants are sent. An engraved plaque with the names of the deceased is hung in the lobby.

A senior citizens chorus has been organized that has an average age of almost 80 years. They are much in demand in the southeastern part of the State.

Birthdays are remembered monthly and cake and ice cream are usually served.

Wonderful cooperation by our city council, board of supervisors, city merchants, civic organizations, churches, and private citizens make this program a wonderful and beneficial help to the aged of this county.

WILLA HUSTON FULTON, FAIRFIELD, IOWA

First I want to say thanks to the organization of our government for making this possible.

Next, thanks for the individual who has blest us with her knowledge of people and their needs.

We are a general mixture of aged people with all the characteristics of all people.

We needed guiding. Many of us were lonely—many sitting and waiting—just existing—but each capable of contributing to life if we were given the chance. First we met to eat, but "VH" was not content with just that. She made us feel like living. We have been fed wholesome meals. We learned to consider the other fellow's needs; we learned all people had problems; we learned to minimize our own and help others to do the same. We found more interesting subjects than our health—others had them too. I would have to be more than an aging 80-plus to be able to tell all this organization has done to make not only my life but many others more livable.

MR. AND MRS. ORVAL GARRISON, OTTUMWA, IOWA

We are on social security. They said one time we'd get an 8 percent raise. Ford only wanted 5 percent—we only got 6.4 percent. Did Congress compromise with him?

Another thing, we wish they would tell the truth about social security—why its about broke. Nixon took $41.5 billion. That's why it's broke. Why can't they get that back?

Can't a law be passed to keep fingers out of that? When the money has been taken out of pay checks and company payments, it is not there to help balance budgets.

Can't the crookedness of medicare and medicaid be stopped? Congress knows what's going on and they just ignore it.

MRS. HENRY GATREL, NUMA, IOWA

This is in regard to the problems of elderly citizens, which you asked for the people to send further comments to the committee. I think we need a program in which to help us in getting eyeglasses and dental care; each of these cost a lot, which a great many don't have.

These are just as important to health and are as badly needed as many other things.

ETHEL GILMER, FAIRFIELD, IOWA

What I think of the center: First, it has been a wonderful thing for the old people of Fairfield. When you go to the center it is always so clean and neat. Everybody is so ready to help with anything. The girls that are ahead of it are perfect in every way. The meals are always great and one nice thing, they all say the blessing or a prayer. Well, I told just how I feel about the center—all the good things there are, and there are no bad things. I am 86 years old and have been going about a year. I hope the center will last forever. Thanks for everything.

MILDRED GLINES, FAIRFIELD, IOWA

I hope the Federal Government will continue to help finance the senior citizens' program. It means a lot to have someone you can depend on if you need help. When I broke my hip, our site coordinator was at the hospital before they got my coat off and stayed till I had my tray and some of my family were notified.

It means a lot to have the minibus as many have no other transportation at a price they can afford to pay, to go to the doctor, store, pay bills, and go to the site where they have nutritious meals 5 days a week. They also have fellowship with others of the same age group, play cards, have movies and bingo games every other week, also a free blood pressure and dental clinics every 3 months.

CHESTER AND FLORENCE HICKENBOTTOM

We enjoy being with the senior citizens as there are so many nice folks there. I can leave home feeling real bad and feel much better when I get home. As for us, it is a wonderful thing.

FERNE HILL, FAIRFIELD, IOWA

I attend the senior citizens site 5 days a week. I live alone and the minibus picks me up and returns me to my home each day. I enjoy the bountiful, well-balanced meals, take part in the exercises once a week, and especially enjoy the visiting and games each afternoon.

I feel that the senior citizens site helps me keep my identity as an individual and sincerely hope funds will be made available to keep this very worthwhile organization going for all senior citizens who need it so badly.

FRANCES AND HAROLD HITE, FAIRFIELD, IOWA

My husband is 78 and I am 74. We really enjoy the agency on aging meal site in Fairfield. We don't go but once or twice a week, but we know we will be going more as we get older and time goes on.

My husband is still active in appraisal work and attends board meetings, including the site board here.

I am very busy doing volunteer work for the Red Cross and hospital auxiliary, but I know I will have to give up someday. Then I can help more up at the site.

Vivian Hammes is hard to beat for a coordinator. She is really great.

We can see a great improvement in some of our elderly who go to the meals regularly. They have one good balanced meal a day. They also enjoy playing cards, visiting in the afternoons, and the exercises once a week.

RHODA HOLLISTER, FAIRFIELD, IOWA

Have you ever tried to cook for one? Have you ever tried to eat alone, day after day? Have you ever tried eating leftovers time and again? We senior citizens who are alone have, and I have found the senior citizen site for the agency on aging programs the answer to these problems.

The coordinator took me to the hospital for a cardiogram and got my medicine for me. I know she and her aide will help me if I need them.

The sociability is fantastic here at the site. Keep on funding the program so it can continue and grow.

ESTHER HORTON, FAIRFIELD, IOWA

The senior citizen site in Fairfield is one of my favorite places to visit daily.

We can eat a balanced meal each day, at a price we can afford. If we cook a balanced meal at home, some of it is apt to be thrown away.

For us especially who are living alone, and many are, the site brings us together to visit friends (old and new) and keeps us from getting lonely.

The programs they have for us are good.

We can't forget the transportation system, which we can use at a reasonable fee that most can afford.

We need the site now, and the elderly of the future will need it too.

WALT JOHNSON, FAIRFIELD, IOWA

I would like the Federal Government to keep on funding the programs for agencies on aging.

I am a senior citizen and handicapped. Without the minibus, I'd have a hard time getting around.

The congregate meals are good, but there is no need to cook so much.

The sociability of being with friends is wonderful. I especially like playing cards to help pass the time.

CARL B. KETCHAM, FAIRFIELD, IOWA

I need the minibus to go to the meals at the site. The meals are good and I don't have to cook as much. Being on social security, the low cost helps me out.

More money can be used to support the program and to expand it. The Federal Government is really helping its elderly.

MR. AND MRS. JOHN KOCH, FAIRFIELD, IOWA

We feel the senior citizens site and all its activities is very important to the senior citizens of Fairfield. The carry out meal program has helped many ill and aged to have a balanced meal once per day. And the minibus helps many to make their doctor appointments and to get up to the senior citizens site to eat each day. The fellowship of meeting together and getting a balanced diet is really important and they enjoy the food.

Those in our senior citizens choir enjoy singing together and we enjoy hearing them sing. They also sing for other organizations. The library shows us films and there is a social time of games and cards several afternoons. One day a week there are exercises and every other week there is bingo.

There is also opportunity for those who wish to help in the kitchen. And some help set tables.

It is also a place to make new friends.

BILL LARUE, FAIRFIELD, IOWA

I like the meals at the senior citizen site. They are good. The 75¢ cost helps my budget.

I like to talk to my friends at the site. It gives me a place to go.

Keep on funding this program.

CECIL J. LENT, LEIGHTON, IOWA

I am 65 years old, poor, and unable to work, so I feel I can speak on the matter you discussed at Ottumwa, Iowa.

It is too bad that Dr. Burrows of Oskaloosa spoke for the poor. He knows nothing about it, as he is rich. His only qualification is that he is 84 years old.

People in county seat towns can ride—and do—the bus for the elderly all day long for free. We out in the county can call in one day a week—Thursday. Now doctors offices close Thursday afternoons, so how can all the people out in the county be expected to get to the doctor on Thursday morning?

We have to run a car—the most costly thing to us that there is.

Put me down for transportation for the poor in rural communities.

JENNIE LOTHROP, FAIRFIELD, IOWA

I need the minibus to go to the congregate meals 5 days a week. I have heart trouble so this is a big help to me. It is hard to cook for oneself. The meals are balanced and good.

We need more Federal support for the program.

GLENN MARTIN, FAIRFIELD, IOWA

The senior citizen site means everything to the older people who can't get around.

It is better to be here to pass the time than to be home alone. Here they forget their troubles and their aches and pains.

The food is good and the price is reasonable.

Vivian Hammes and Maxine Riley, the coordinator and assistant, are the best anyone can get. They are interested in the people and look after everyone, seeing that they get to the doctors when necessary.

We wouldn't want to lose our site after the joy of having it.

CATHERINE MITCHELL, FAIRFIELD, IOWA

The deeply appreciated carry-in meals first came to me following a car accident. It was indispensible as far as I was concerned. Later I had the happy experience of going to the site and enjoying the meals with the others.

Getting acquainted with participants your own age is a joyous experience warmed by appreciation for people we would never have met otherwise.

One marked change has stood out in my mind in regard to the funerals of the lonely. Since we have become acquainted, the funerals have many friends paying their respects where there used to be only a handful. Farewells have become less tragic.

There is the possibility the equalization of salaries would increase the feeling of rapport.

BEVERLY NELSON, FAIRFIELD, IOWA

I need the good meals served here at the senior citizen site in Fairfield. I am handicapped, so it helps me not to cook. The low cost helps my budget.

The sociability of being with friends and playing cards is a wonderful part of the program.

Even though I can't speak, and have C.P., I have many friends there and enjoy myself.

Please keep funding the money to sponsor this program that helps so many people.

KATHRYN M. NICHOLSON, FAIRFIELD, IOWA

I like the senior center, as I live alone, and it is nice to be with people there. Everyone is so friendly and Vivian and Maxine go all out to make things pleasant for us. Hope it continues to be a meeting place for us oldsters.

P.S. The minibus is truly a wonderful thing and Mescal is such a nice person and so helpful to all.

ESTHER OSBORN, CENTERVILLE, IOWA

I have eaten more than 65 wonderful meals and enjoyed each and every one very much. It is very good food and very well prepared. I hope this program continues. It shortens the day by being with other people and enjoying their company while dining.

MR. AND MRS. RAY PEARSON, BATAVIA, IOWA

We wish to express our appreciation for the congregate meals, the games, and entertainment provided for us at the senior citizens site in Fairfield, Iowa.

Our coordinator and her helpers are so considerate to the crippled and other unfortunate people.

We hope this program can be continued for a long, long time.

From two people who are thankful for the program.

RUTH E. PEARSON, FAIRFIELD, IOWA

I think this program for aging is the best the Government has ever funded, and I am in favor of further funding by the Federal Government so we can expand our program. I think this program has done a lot for me in several ways, namely:

The meals have helped me budgetwise, and that is important as my resources are limited. I don't have to do so much cooking and I get one hot, balanced meal a day.

The minibus is very important to me; I don't have the money to hire a cab and it is good to know that there is a bus to take me to the doctor or to the store when I need to go.

I do volunteer work at the senior citizens site and it gives me a chance to put in my time where it is badly needed. The sociability means so much to me, as most of my immediate family live over 200 miles away and don't come very often. I depend on my friends here at the site for help and advice when I need it.

ED QUICK

I'm 87 years young, one out of many that has a perfect attendance at our senior citizen site, which serves meals 5 days a week.

The program offers many benefits—transportation by minibus, to and from meals, to doctors, to the hospital, grocery stores, nursing homes, at a price the

elderly can afford. The meals are always nutritious, and along with this is sociability, which we all want and need, plus movies, card playing, bingo, lectures. There is no other place I could go to get all of this.

Sincerely hoping, now and in the future, there will be funding money for our program, for without it, what would we do?

SOFIA RAJAMETTS

Five days a week I no longer have to cook a big meal, and the cost of 75¢ sure helps everyone's budget.

The minibus takes me to the doctor and I couldn't do without it.

I like to talk to my friends at the site.

More Federal money is needed for this program.

RUBY RAY, FAIRFIELD, IOWA

I benefit from the programs at the agency on aging senior citizen site. The meals are good and help me to not cook so much with my poor eyesight.

This is the best thing the Government has done for the elderly.

BERTHA E. RILEY, FAIRFIELD, IOWA

In regard to what the senior site means to us, I think it is one of the nicest and most necessary things that Fairfield has had for years.

The site coordinator and assistant are cooperative and nice to everyone.

In regard to the meals, we have a nice selection and get a good helping at a price we can afford to pay.

We have clean entertainment—the quartet sings, we have music, some play cards in the afternoon, and also we have bingo.

In regard to the minibus, the driver and helper are always so nice to everyone—helping them with their prackages and taking them anyplace they want to go.

Let's hope we can always have the minibus and site.

MAXINE RILEY, FAIRFIELD, IOWA

I've been working for the agency on aging since December 1973. It has opened doors, many doors, for the elderly and brought about changes in their lives.

Seeing is believing, as participants get on the minibus and hand our driver, Mescal Kennedy, their fare with pride, knowing they now can afford to go many places, such as to the hospital, doctors, and grocery stores.

The nutritious meals are served 5 days a week, and some of the comments we have heard are, "I'd been dead a long time ago if it wasn't for this place," "I didn't know so many people cared," or "I saw so and so I haven't seen in 30 years."

We have movies twice a month, bingo twice a month, and card playing every day, and sometimes lectures, which they all enjoy. Sociability is one thing in life we all need and want.

In closing, I hope there will be more money funded for this program now and in future.

LAVERNE ROBINSON, OTTUMWA, IOWA

There is a need for places for the elderly to receive care other than nursing homes. There is a great deal of difference between a person who can't physically maintain their own home and a person who needs nursing care 24 hours a day.

The people who fall in this middle area have a need for custodial homes, decent boarding homes, family life homes, etc., to be available to them. A person placed in a nursing home inappropriately may soon develop a need for the care

because too many things are done for them. We have to provide for peoples' needs and not just do things for our own convenience. (By the way, it would save us money.)

EVA M. SALTS, FAIRFIELD, IOWA

I think the senior citizens site in Fairfield is the best I have seen. We enjoy the good food, the sociable atmosphere, and the personal care and attention given freely by the good managers we have here. The entertainment is an extra bonus. There are many here who depend on this place as a ritual and important part of their lives.

MR. AND MRS. ALLEN SINES, CENTERVILLE, IOWA

I am writing in regard to the senior citizens' meals.

I think it is one of the best things that has happened for senior citizens.

So many are taking advantage of it. So many older folks probably wouldn't have a good balanced meal without it. We have been to several different ones and think our own home town here in Centerville is one of the best.

All the ones in charge of it also are so friendly and helpful.

We are so thankful for it all.

BERTHA SPIELMAN, FAIRFIELD, IOWA

The senior citizen site has done a great deal for me. I think I enjoy the sociability most because I like people and I have met people I never knew before. I also enjoy the meals which are usually very good. We have a leader, Vivian Hammes, who really cares for us. I would call her a very caring person.

P.S. The minibus is my main means of transportation. We have a wonderful bus driver, Mescal Kennedy.

C. J. WEAVER, FAIRFIELD, IOWA

I think the agency on aging minibus is the best thing that has happened for the elderly.

The senior citizen site is a place to come to—and there is something to do. I get to volunteer daily and be among my friends.

I no longer need to try to cook a big meal, and for a man this is a godsend. The meals are all good. Being on social security, we need the bus and meals badly.

We also need the Federal Government to keep on supporting these programs and more money could be used to expand the program to more people.

WILLIS WOOD, FAIRFIELD, IOWA

I ride the minibus to the meals at the site every day. I am on the over-55 program with Sieda and work at the site. I am 74 years old now.

I like the people there and have a good time. I've made new friends and see a lot of old friends, too.

We need the Federal Government to keep on funding the agency on aging programs. Even more money is needed.

ZELMA WOOD

I hope you do everything within your power to keep our senior citizens site operating.

It helps the morale of all the elderly to get together for recreation in cards, movies, bingo, and other activities.

Then, too, we get a balanced diet in our foods with our dietitian, as well as the social hour while dining together.

We have an excellent director, Mrs. Vivian Hammes.

STANLEY AND GLADYS WORKMAN, FAIRFIELD, IOWA

We think this senior citizen setup is one of the best things that ever hit Fairfield, and it is hard to understand why more lonely citizens do not take part.

The food could be better and could be worse. We also think if there is quite a bit left, anyone that wants seconds should be allowed to go back as long as it lasts, instead of sending it back to be wasted or thrown out. It has been paid for and the senior citizens should have it if they want.

All in all, our complaints are few.

P.S. We think the minibus is a fine thing.

THE NATION'S RURAL ELDERLY

MONDAY, AUGUST 16, 1976

U.S. SENATE,
SPECIAL COMMITTEE ON AGING,
Winterset, Iowa.

The committee met at 9:45 a.m., pursuant to notice, in the Madison County Multipurpose Center, 114 North Second Street, Winterset, Iowa, Hon. Dick Clark, presiding.

Present: Senator Clark and Representative Thomas R. Harkin.

Also present: William E. Oriol, staff director; Deborah K. Kilmer, professional staff member; David Harf, legislative assistant to Senator Clark; John Guy Miller, minority staff director; and Alison Case, assistant clerk.

OPENING STATEMENT BY SENATOR DICK CLARK, PRESIDING

Senator CLARK. The meeting will now come to order.

Let me welcome all of you here this morning; I am particularly pleased that you came by. This is, of course, a hearing of the Senate Committee on Aging. I want to start off by particularly thanking the Hillbilly Band. You were great. [Applause.] We are very pleased that you came.

I also want to thank the people who made the arrangements for the facilities of the center for us to use. We have a number of witnesses—actually, panels of witnesses—today.

We were scheduled to start at 9:30, but we are a little bit past that, so I think we will go right ahead.

I want to make a brief opening statement and then we are going to hear from Mr. George Orr, executive director of the Iowa Commission on Aging.

Today the Senate Committee on Aging is represented here in Winterset at the start of a major inquiry into the problems and way of life of the Nation's rural elderly. In other words, we are emphasizing in these hearings, not just problems of the elderly, but, more specifically, problems of older people who live in small towns and in rural areas generally.

I asked that we meet in this community in order to set a tone of grassroots participation in all or most of the hearings that follow. Our subject—or group of subjects—is best seen up close. We cannot hope to know what's happening in rural America if we simply stay in Washington, D.C., and that is why these hearings are being held here.

I have been a member of the Senate committee since January 1975. Last year, when the Older Americans Act was up for extension, I suggested to our committee chairman, Senator Frank Church of Idaho,

that the committee hold a hearing to determine whether older Americans in rural areas were receiving their fair share of attention and help under that act.

He agreed, and I chaired that hearing. I was very glad to have the opportunity to do so.

The witnesses made a great case for flexibility and responsiveness in Federal requirements. As a result of the hearings, I attempted to advance legislation to achieve those purposes. We didn't achieve all that we wanted to, I must say, but I will certainly be offering legislation again in the next session as well.

Federal Programs for Rural Elderly

Federal policy on the rural elderly is not expressed solely through the Older Americans Act that you are familiar with. There are, of course, many other programs that affect older people. There are programs like the medicare program. It is supposed to provide equitable benefits to all older Americans throughout the Nation, but if, as in many parts of Iowa and other States, the older persons can't get to a doctor or if they have no doctor to get to, then one wonders how effective such programs are.

There are housing programs that the Federal Government sponsors through the Department of Housing and Urban Development and through the Farmers Home Administration, but again, if bureaucratic insistence upon inflexible standards stay blind to rural needs, then Congress certainly ought to act.

Then there is, also, the U.S. Department of Transportation which has funded literally hundreds of small transportation bus systems intended to serve the elderly and the handicapped. But again, if red-tape and fragmentation are getting in the way of real development of transportation systems which can become a working part of the community in which they serve, it is very hard for them to achieve that goal.

I could give other examples of Federal policies and practices which I think disturb many of us in the way they are sometimes carried out. I particularly will invite testimony on this at this hearing and other hearings. I will do so because I believe that we, as a Nation, have failed to do what we said we were going to do when we held the White House Conference on Aging in 1971.

We said that we were going to develop a national policy on aging. Certainly we have made progress since then, there is no doubt about that, and I think we are proud of the progress that has been made with centers of this kind and many of the programs that you are familiar with. But in terms of arriving at a set of national objectives and working toward them, we frankly have a very, very long way to go yet.

Now part of the problem has been within the executive branch. In my opinion, President Ford and his predecessors have beeen somewhat reluctant—in some cases, rather negative—when it comes to action on aging. I know that the President, in fact, went on record for 2 years in a row as favoring the so-called medicare reform plan which would actually cost medicare participants more and give them somewhat less. That measure was successfully opposed.

Another part of the problem has been the rather strange and strained economic state of the Nation—obviously inflation, along with unemployment. I think in many cases we have not faced up to those problems either.

In any case, we know that there are a number of programs that are working effectively in this part of the State and we are particularly anxious to hear about those. So the purpose of these hearings, simply put, is to listen to people who are involved in them.

Examination of Programs

Most of our witnesses—in fact, all but a very few—are people who are over 60 or over 65, and we simply want to hear from them—whether they think these programs are working. If so, in what way they are working. We also want to hear about their weaknesses. In other words, what are we doing right, what are we doing wrong, and what should we be doing better? That is really what it is all about in one sentence.

With that we will start. I did want to introduce three or four people so if you have a need to contact them or need particular information, and so forth, you will know who they are.

On my immediate right here is Bill Oriol, the staff director for the Senate Committee on Aging; John Guy Miller, at the far end, is the minority staff director; Debbie Kilmer, in the middle, is a professional staff member of the Committee on Aging; Alison Case, assistant clerk of the committee; and Annabelle Short, who is the court reporter.

Now we will be keeping an exact record that will be published. Those of you who wish to have copies, please leave your name with us before we leave, or drop a letter to me, Senator Dick Clark, U.S. Senate, Washington, D.C., and we will be happy to send those to you.

Well, I would like to start. We are going to be holding six hearings—four of them in Iowa, one in Nebraska, and one in South Dakota—in the next 3 days.

We are going to be hearing first from George Orr, the executive director of the Iowa Commission on Aging, who has a long history of public service to the State of Iowa. George, we are very pleased to have you come down to visit with us.

Then we are going to be having a panel of people from various areas nearby: Mr. Goeldner, Mrs. Hazel Stroeber, Mr. Willis Sprunger, and Mrs. Lucille Anderson.

Following that, we are going to be hearing from Woodie Morris, and then another panel with Mr. Pals, Mrs. Forsyth, and Jack Fickel. That will take us up to about 12 noon, I think.

We also have a form in case there are others here who do not have an opportunity to speak and who would like to be included in the record. It simply says:

> Dear Senator Clark: If there had been time for everyone to speak at the hearing in Winterset, Iowa, on August 16, 1976, concerning the Nation's rural elderly, I would have said the following.

So if you have testimony you would like to submit or write out, and so forth, we would be very happy to include that in the official record of the hearing as well.[1]

So, George you may proceed in any way you think appropriate.

[1] See appendix 4, p. 90.

STATEMENT OF GEORGE W. ORR, EXECUTIVE DIRECTOR, IOWA COMMISSION ON AGING, DES MOINES, IOWA

Mr. ORR. Thank you, Senator.

Senator Clark, members of the committee, and the others who have come here to work on these hearings, ladies and gentlemen, I am George Orr. I am a new director to the program but not new to Iowa, since I was born and raised in this State. I have a few things I would like to highlight with the Senator's and your indulgence.

You know, it seems to me that not having had direct experience with this, other than my natural life processes which somewhat qualify me for my job, we are long overdue to address the problems that I think will confront all of us at one time or another.

We are long overdue and, as I think about it, I guess I really had not given it a whole lot of thought. Maybe you did not either until it is right there, and then we try to figure out the best way that we can help.

I think that many people have been put out into retirement—and I don't say this as a dig at our distinguished U.S. Senator—because of mandatory retirement. As I look around and I see us working with our program to employ older Iowans—reemploy, I should say, because they want to work because they are productive—everything is going for them and they can look back on a lifetime of experience to bring those resources together.

We seem to satisfy many of the things that we are trying to do in this program which is to cause people to be independent longer, maybe forever—to stay in their homes and to be happier in that respect.

"I STILL HAD A LOT IN ME"

I talked to so many Iowans who said, "Well, gee whiz, I still had a lot in me," and you can tell by talking with a person because they are out working at something else now that they do have a lot to offer. So I am wondering—this is my own view, Senator—whether maybe that could be a basic problem.

If you want to look at just what 5 years would mean in terms of continued employment for those in high stress, those who are capable physically, mentally, and in all other respects, what a difference this would make.

Well, that is something that seems to me that maybe we ought to start looking at. I think if I read the experts around the country, those who write gerontology, that this is the coming thing—to consider using these valuable human resources a longer period of time.

I am particularly happy to be here with you because this is, I think, following Senator Clark's lead, what we really need. This is where the U.S. Congress can become aware. Right here is where the problems are that confront Iowans.

I think it is wonderful that this round of hearings is going to reach so many Iowans and I am just pleased as punch that we have got a full room here today.

The Senator was kind enough to write me a letter here a few weeks ago and he has asked for a more detailed report on some of the things that we are doing that are of concern to his special committee. For in-

stance, the report on the water and pesticides programs, the health facilities educator and, as it applies to rural areas, the information referral services and the older worker specialty employment.

Now I have already made reference to that latter one, and it is going well. I am also pleased to say that the legislature of the State of Iowa for the second year put its second $100,000 into this program to employ older Iowans.

If the first year was successful, and it was, the second year is steamrolling right on behind it. There are people being employed now who otherwise were sitting on their hands. They are very capable people and they have literally made placements up in the thousands, and we look for that to continue. That program seems to have a terrific impetus.

Information and Referral Service

The information referral program is kind of new. It was decentralized from the State, and the information and referral—meaning that when people have a question and they want to ask about that, they want to know something that might be particularly bothering them—where do you call? Where do you get the answer?

Well, we had one line prior to this and it went into the State. It was a 24-hour WATS line and it attempted to treat this, but a much better way would be to decentralize it to the 13 areas that we have in the State.

Now some of those are functioning already and, in fact to this date, they are receiving in those four areas that are doing it—four combined areas—to the tune of about 2,000 calls per month, and that would be expected to rise as the others get their capability. They are going to take your questions and your concerns, and they are going to try to give you an answer on them.

Now the other things I will cover more completely in the report to you, Senator, but I might just say this in closing, and then the hearings can really commence. What I found when I came to the State was that we had a need to, I think, reduce some of the bureaucracy and some of the excess layering that I saw there. I pledge to you that is what we are going to do, and I think there is a very good reason for that.

Every time we build another layer of somebody doing something, it costs money. Now the Congress or our State appropriates this money and I think, if I am reading it correctly, they want the majority of each and every dollar to go out to the place that it was really for—that is, for our elderly people in Iowa.

Every time we build something in, some artificial, bureaucratic, or administrative type of a control—it takes so many pennies away from that dollar, meaning that fewer pennies then get out to where they ought to go. That is what we are going to be doing.

We have already found that we can literally cut one heck of a lot of these things out and not feel any loss of momentum because of the way we are going to do it. This means that we could almost within a very short time, start swinging more money out which was allocated to our areas, as we have already done. So I hope this will meet with your satisfaction. Time will tell. I know that we are going to accelerate the nutrition sites throughout the States. That is coming up very fast and we are going to be coming up with about 122 percent

of what we did before, and that is a real number—122 percent of what we did before. That means we are going to be expanding both on nutrition, nutrition sites and, more importantly, aiming at the nutrition site with respect to where the people need the service.

Sites Not Always Convenient

Sometimes bureaucrats look at a map and they say, "This would be a peachy place for that nutrition site," but then they find that the people that it would serve maybe are scattered someplace else. It does not make too much sense, does it? It means you have to go into expensive transportation systems that you might not need otherwise. But if transportation is needed, we are going to try to get it there, and that is another thing that I believe is going to be very valuable. I am glad to hear a reference to that this morning, too.

Ladies and gentlemen, I certainly appreciate the opportunity to talk with you for a few minutes this morning and I hope that these hearings are going to give all of us a much better insight as to what the real need is.

Thank you very much, Senator.

Senator Clark. Thank you very much, George.

I think your point about mandatory retirement is particularly well taken. It seems to me, if you travel around this State and other parts of the country, that mandatory retirement in many ways is the most discriminatory practice that we have in this country. The fact that you have reached the age of 60 or 65 certainly ought not disqualify you from pursuing the occupation or profession that you have and that you prefer.

When you think of the number of talented people that have achieved many of their greatest achievements after age 65, you think of artists—Picasso, who died just a year or so ago—many of the great musicians—people who had their greatest years in their sixties, their seventies, and, in some cases, in their eighties.

I think it is not only true in the arts, but out of the arts. I think if there is one thing that we need to do in terms of reducing discrimination in this country, it is to eliminate mandatory retirements. I agree with you.

We are very pleased that you came, George, to get us started. In other hearings, we are going to be pursuing some of the things that you talked about, particularly employment programs—the kinds of things that you referred to in your testimony.

Thank you very much.

Now we are going to ask the panel here in the front row to come right on up to the desk and we will proceed with your testimony.

We are going to hear from Mr. Goeldner, Mrs. Hazel Stroeber, Mr. Willis Sprunger, and Mrs. Lucille Anderson.

As I understand it, Mr. Goeldner has a prepared statement, and others are just going to say what is on their mind or we will have questions and answers, however we decide to proceed.

Mr. Goeldner is chairman of the Central Iowa Area Agency on Aging, over at Earlham. I have had the pleasure of meeting him on many occasions before. He is formerly the publisher and editor of the newspaper in Earlham.

Mr. Goeldner, you may proceed in any way you like.

STATEMENT OF L. R. GOELDNER, CHAIRMAN, CENTRAL IOWA AREA AGENCY ON AGING, EARLHAM, IOWA

Mr. GOELDNER. Thank you, Senator Clark and friends.

It was suggested that I give a brief review of changes in rural Iowa during the past number of years. I think most of us here this morning can remember back in the early part of the century. Back in the early days the size of farms were smaller. What is considered an adequate size now—80 acres—would support a family, and 160 acres was considered a rather large operation. All the members of the family worked back in those days. We didn't hear of nursing homes. As a last resort, an older person would have to go to the county poor farm, which was considered just a pretty bad situation.

Most of the older people—grandparents or a maiden aunt—would live in with the family and contribute help with the farm chores and things for their remaining days.

Later on, when World War I came along, greater production was required to take care of our allies and our needs here in the United States. A sort of prosperity developed through the war needs. After the war, this continued for a short time and then we didn't need as many supplies as were required earlier, and the demand fell off.

In 1929, most all of us remember the crash when troubled times began, and we had the depression. Many lost their farms, their homes, and their life savings. People who would consider themselves fairly well to do found themselves destitute.

IMPACT OF THE DEPRESSION

At that time, relief programs were set up. One of them at that time to help those who didn't have resources was called old age pension or old age assistance. This was not a very satisfactory situation for the persons who had to receive it because they had been more or less independent. Now they had to sign over any assets they might have to the State or, if they stepped out of line, they could stand the chance of losing this pension.

Following this, we began to get our social security program established, and even with its many faults it seems to be the best program that has been improvised so far. It has restored a certain amount of dignity to the older persons who need assistance in their older days.

When World War II came along the greater strife became evident in agriculture. The farms needed to be larger, our equipment began to develop, and the horsepower began to disappear. Eventually, everything was mechanical.

The farmer in the depression time was assisted by new programs which allowed him to store his grain and to receive a loan so he could maybe take advantage of a higher market. There was land taken out of production which he received revenue for so there would not be a surplus on the market.

It is not uncommon today to have farms 800 or 1,000 acres. One farmer may operate 1,000 acres of land. He has probably an investment of maybe $50,000 to $100,000 in his equipment.

Back in the earlier days, a younger man could start out working and then rent a farm and, after a period of time, own it. In today's time it would take a large amount of money to buy the land, to buy the equipment, and stock his farm.

The older people today, when they get beyond the point where they can live in their own homes, go to a nursing home where they are taken care of for the remainder of their days.

I think that takes care of it.

Senator CLARK. Thank you very much.

Mrs. Stroeber, did you want to make any statement or were we just going to have questions and answers?

Mrs. STROEBER. Statement.

Senator CLARK. Very good.

STATEMENT OF HAZEL STROEBER, MACKSBURG, IOWA

Mrs. STROEBER. I am one of the aging. I am nearly 80 and I have lived alone on my farm since 1972 when my husband died. I am in fairly good health, only my eyes are so poor I cannot drive my car. I think, too, most of the people, as they become older—one of the biggest problems is transportation; although any time I had a real need to travel, there was always some of my neighbors or some relatives who would take me, but at times I felt very much like I was imposing on them and that maybe sometimes I was becoming a nuisance.

So I was really overjoyed when I read in the paper that there was a new minibus coming to Winterset and which would come out to Macksburg and take us in here to Winterset once a week on Monday mornings.

So right away I made an appointment with my dentist. The only time I could have was 11:30 and that is the time they eat lunch here so I didn't get to eat lunch with the group that day. The dental offices are at the edge of town, so after the driver brought me, he turned around and took me back out to the dental office; then at 12 o'clock he was there waiting to bring me back uptown.

Of course I could not eat here so I ate a little lunch at one of the restaurants, did shopping, and went to the grocery and gathered up a whole lot of groceries. The bus driver told me, "You must eat an awfully lot from the the amount of groceries you buy." I do buy quite a bit and put in the freezer because I am out 16 miles from town. Someone always will get me some, but then sometimes I need to have things there in that freezer, so I buy quite a bit whenever I get my groceries.

Well, on that first Monday, Delcie Bush and I were the first two that came in. We were the first two that used the minibus.

Senator CLARK. How long ago was that?

Mrs. STROEBER. February of this year.

TRIPS PROVE TIME CONSUMING

The next week I had an appointment with the doctor and that took up quite a bit of time. Then the next week I brought in my income tax and talked with a lawyer, and that took quite a little time.

Now there were three times that whoever brought me would have lost quite a bit of time, so I felt it was very much worthwhile. There are other times that I need to go to the bank and business and things, so in a business way it has helped me very much and I know it has relieved the pressure on some of my neighbors.

We ladies rather enjoy coming in on the bus. If we have nothing else, we come in and shop. The men—I think the big thing they like are those meals. [Laughter.]

Senator CLARK. Sounds typical.

Mrs. STROEBER. All of us live in homes by ourselves; we are all single living in our own homes. They are older homes. I don't think any of us have a fancy home. My house is over 100 years old, but we put in new floors, new windows, insulated it, and it is quite comfortable. I live there very comfortably and the minibus does help.

Now I do go to town once in a while. I don't depend on the minibus altogether; people bring me in for different things. There is something closed that is not open Monday and so other people do bring me in part of the time, but that minibus does help.

Everything that I can, I schedule for Monday, so I do not bother my friends.

Macksburg is just a little town of 142 people. There is nowhere that you can buy medicines. We have no doctor there. It was founded by a doctor—a Dr. Macks founded Macksburg 100 years ago. I have been around there for 40 years and there has not been a doctor there.

Senator CLARK. So the closest doctor would be what, 17 miles?

Mrs. STROEBER. About 16 miles. Well, maybe by the time you get in town it probably might be 17 miles. If you go the other way, it is a couple miles on farther to Greenfield. All of these are county seat towns. I don't know whether any of the little towns have a doctor any more.

Greenfield is the county seat to the west of us and I am 19 miles from it, so we are quite a little distance from a doctor. Of course, you know I must get appointments with my doctor on Monday; I can't get in through the week.

Senator CLARK. That is right; you can only get sick on Mondays. [Laughter.]

Mrs. STROEBER. I keep a kind of standing appointment once a month for a check-up, so I get along very well there.

A number of the people want to know why in the world don't I move in here to Winterset, but there is a housing shortage here. There is wonderful, low-cost housing for the elderly, but it is only half big enough. Because I own my farm, I could not get in there anyway. I might have to go up to the top of some of these stores and have a great long staircase to climb to find an apartment.

ADVANTAGE TO LIVING AT HOME

I am much more comfortable at home where I can have my garden, my flowers, and I can watch my crops grow, and go out and look my cattle over and see how they are doing, and so on. Usually if you live on your own place you see little things that need repair and things that somebody else does not notice. If it is stopped right in the beginning, it does not cost nearly so much to take care of.

This spring, we had so much dry weather. I thought, "I have never been down to that pond yet this spring. I should be going down to look at it." So I went down. It is quite a little walk down there but, I thought, I must go down and look. The pond supplies drinking water for the cattle. I went down and looked, and it was the lowest the water level had ever been while we had been there. I went around the pond.

Here was a little trickle of water flowing out and it was already only about half. Now it was not a big stream, but it was flowing. When that pond was so very, very low, and I discovered that, somebody might have pointed to that dry hole—would have come and told me that my pond was dry, that there had been a little ditch formed and the water was running out.

But I found it when it was a small amount running out and I immediately called a man that has a bulldozer to come and repair that dam, which he did. So there are a lot of little things that you can see and take care of if you are out on your own farm.

If I was in town, I would not know about it. As I say, I enjoy being out in the country.

Anyway, it is just a very small sum that we have to pay to ride in, which I pay each time when we come. I have felt this service is worth very much more to me than that, and I do give a larger contribution a couple of times a year—a single contribution—because I feel that it is worth that much to me—it is worth more to me.

Senator CLARK. Well, I am going to have some questions but I think before I question you, we are going to go on through and hear the other panelists.

I want to get all of your comments on a number of different things, so rather than asking you questions right now, I think I am going to come back a little later.

Next is Mrs. Lucille Anderson from Melcher, Iowa.

STATEMENT OF LUCILLE ANDERSON, MELCHER, IOWA

Mrs. ANDERSON. Melcher is a former mining community. I am just 15 miles from Knoxville, the county seat, and I have got a lot to say about transportation. We have had a bus for the past 2½ years and it goes to each of the towns in the county. There are six small towns.

Senator CLARK. Would you give your county?

Mrs. ANDERSON. Marion.

We have it on Friday and we have so many wanting to go that they call me to make a reservation. We have two trips on Friday with other towns. There is just one because they don't have so many wanting to go. There is no transportation to any of these small towns; none of them have anything, and people love to go to Knoxville.

A lot of them don't get out of town otherwise; they don't get away from home. They have the chance to go to the doctor, get medicine, go to the bank, go for the congregate meals, and whatever their needs are.

Of course, as I said, there are some that just never leave the house otherwise and it has been a godsend to them. We used to have the railroad; the railroad is still there, but we had a passenger train twice a day which was a big help. We went to Des Moines, but we don't have anything like that now.

Senator CLARK. How long ago did that train stop running, do you know?

Mrs. ANDERSON. Just the past, I would say, 5 or 6 years. I don't remember exactly.

Well, the passenger train—it has been longer than that, but we don't have the freights through any more either. I suppose it has been 20 years or more since we have had the passenger train.

Elderly Desire Independence

Of course, there are lot of people who will take you, but a lot of them just don't think about it. One thing I found out about these older people, they like to be independent, and if they can go on their own, they are not about to ask a relative to take them.

About 25 percent of the population in Melcher is elderly, and I imagine 25 percent of those are widows. They mostly ride in the van. I guess the men that have cars prefer to go that way. We do have some ladies that have cars and can drive, but they don't feel that they can trust themselves to drive any more.

I was born in Melcher and we had all kinds of businesses. We had just about anything that we needed there, but we don't have that any more. We had a nice clinic there and we had doctors coming from Des Moines but, as of the middle of June, they quit doing that so most everybody goes to Knoxville to the doctor or to get their medicine.

Of course, for a long time we didn't have pharmacies there. We had a sundry store, but they would order the medicine from the pharmacy in Knoxville and it would be picked up, so that was a big help. We don't have that any more. It is quite a chore sometimes.

Like the other lady said, you have to get sick on a certain day. Even when we had the doctors we could not get sick at night. I should take that back. We have a very nice rescue unit and the rescue van takes people, so we do have that.

That is true of all the little towns down around there. Any time that anybody can improve the transportation, fine. They need other things besides that. They need to take trips; they need to get out and see a little bit of the country, which they can't do.

Usually in the fall—in October—we have the use of the van on two different Mondays, and they go places. Last year we went to Lake Rathbun as the leaves were changing. We had a sack lunch with us and everybody enjoyed that—just to get away and for something to do.

Of course, housing is a big need, too. The majority of the people are on social security, but there are several older miners and their wives that are getting black lung benefits, which I am also getting as of last November. My husband signed up for it in October 1970 and he passed away in January 1971. I was turned down four times, but I just would not give up. If anybody told me something I could do, I did it.

Then in January 1974, I read in the paper where they were going to reopen some of the old applications, so I wrote to the social security representative about that and had an appointment with him. He said the only thing left that I could possibly do would be to ask for a hearing, which I did in February. I heard nothing until June 1975, to inform me that I had a hearing for July.

In the letter they suggested that I bring an attorney with me.

Well, I went to see the county attorney, but he was going to be in court that day. Then I saw three others; the last one said that it would not do any good for him to go with me as I had no more evidence to present.

Well, the main reason I wanted the hearing was to find out why I was turned down—what they were basing their opinion on. So my daughter and I went alone and I got to see all the documents—everything that had transpired in that 5 years. I saw the judge, and when I left his office my daughter and I both had the same opinion that that was the end of it, but he told me that he would not even look at this further information until October and I would hear by the end of the year.

In October I received a letter that he had decided in my favor, so the latter part of November I got a check, and it was retroactive. One thing I think could be done is to hurry it up a little more, especially for that hearing. Of course, there are a lot of people that don't get it even after the hearing. It is more or less up to the judge—what he decides to do about it.

I know for a fact that it is a wonderful thing that they have that and it really helps a lot of the people that do not get very much social security.

I believe that is all.

Senator CLARK. Thank you very much.

I want to hear now from Willis Sprunger, then we are going to have some questions and comments back and forth.

I had the occasion to meet Willis earlier this morning because I went up to visit the North Ward Plaza housing area where he lives. That is a very, very remarkable place, by the way. I had a chance to visit with most of the people there and to see various apartments, and so forth.

I hope, Willis, you might talk a little about where you lived before, how you happened to go there, and what your views are of living in the North Ward Plaza.

STATEMENT OF WILLIS SPRUNGER, WINTERSET, IOWA

Mr. SPRUNGER. I spent most of my life on the farm. That has been my past from the time I was a very young lad until I was disabled and could no longer farm. When I had to give up farming, we moved into town.

After we lived in town a year, we had our application in at the Plaza. There was an opening and we were offered the apartment that we have now. That has been our home ever since.

It has been 2 years since we moved in and I think it is a wonderful place to live. We have a lot of nice neighbors and I think I am acquainted with most of them now. It took a day or two to get acquainted, but there are not very many men there. There are mostly women there—just four men, and I am one of the four men.

Senator CLARK. You are one of the lucky ones, then.

Mr. SPRUNGER. Is that lucky? [Laughter.]

Senator CLARK. Yes.

Mr. SPRUNGER. I like the place very well. As I could no longer do the job I wanted. I had to give up on the farming. I think the place is just fine for a person to retire in.

I don't drive a car, but my wife does. Without her help, I don't know what I would do there. She does the cooking, keeps house, and drives

the car. Of course, I don't get to go as many places as I would like to go, but maybe I want to go too many places. [Laughter.]

Senator CLARK. You said you lived in an apartment when you first come to town. What are the advantages or disadvantages, let's say, of living at the Plaza compared to living where you did before you moved there?

Mr. SPRUNGER. Well, I just prefer the Plaza because it has its own heating system and it is a lot more even heat in the winter. We get too much heat in the summer, but I don't know what to do about that. We have an air conditioner, but if it runs long enough I freeze out and I have to go to the halls and visit with my neighbors a while to get warmed up again. [Laughter.]

CONVENIENT LOCATION

It is close to town; it is close to the grocery store. I don't go to the doctor very often any more. Maybe I should, but I don't. That would be five blocks, I believe, from the Plaza.

Senator CLARK. Can you walk to most of the things that you need from there?

Mr. SPRUNGER. My wife and I walked from the Plaza here this forenoon. I get awfully tired, and maybe I am a little lazy, but I would like to do more walking than I do.

Senator CLARK. How far are you from the grocery store at the Plaza?

Mr. SPRUNGER. A little over a block.

Senator CLARK. So you can walk to almost anything that you need. What about if you had to go too far? What would you do? What if you had to go someplace where you could not walk? What alternative do you have?

Mr. SPRUNGER. My wife would take me. We do go places away from Winterset, visiting. Some of our family live in Winterset and some of them live in Des Moines, but we don't drive to Des Moines.

Senator CLARK. Do you have access to a minibus—the people there who don't have cars?

Mr. SPRUNGER. Yes. I think I rode in the minibus once and that was a cold, snowy day. That was the last time I rode on the minibus. We have never called it since.

Senator CLARK. But if you didn't have a car, you would be using that more, would you not?

Mr. SPRUNGER. I certainly would. I don't think there are enough people who could ride on the minibus who do ride on it. They either don't know that it is available or they just don't want to ride on it. I don't know what the situation is, but it looks like a good deal for anybody that wanted to ride.

Senator CLARK. Let me ask you one other question, Willis. Do you know about how many people would like to get into the Plaza that are not able? I mean, the waiting list.

Mr. SPRUNGER. Well, I don't know how big the waiting list is, but there has been a waiting list long before we went there and there is still a waiting list. But I don't know how long it is. We had put our application in 2 years before we finally got in.

Senator CLARK. So there probably is a need for more units if they were built?

Mr. SPRUNGER. Oh, I am sure there is. I would not know how many more, but all the people that ever visited us there all think it is a wonderful place and they do ask questions like "How hard is it to get in?" I don't know if they are doing a little wishful thinking or if they are speaking for somebody else. I think that there would be more people come in if there was space for them or if there were more apartments or more available housing. In fact, I am sure that there would be more.

Senator CLARK. Mrs. Stroeber, I notice you said you stayed on your farm because you were able to; that is where your home is, and that is where you would prefer to live. You are obviously able to continue to live there and ride the bus in, and so forth. Have you ever had serious health problems where you felt that you were not going to be able to stay on the farm?

Mrs. STROEBER. Not in the last several years. Fifteen years ago I had cancer and was in the hospital for 3 months before I was able to come home, but my husband was still able to drive the car then. In these last few years I have been quite healthy.

Senator CLARK. The major benefit of any of the so-called elderly programs, as far as you are concerned, has been the bus?

Mrs. STROEBER. Yes.

Senator CLARK. That has been the most important thing as far as you are concerned?

Mrs. STROEBER. Yes; the transportation on the bus. Now it might be possible that, as years go on, if they build more onto that Plaza, that it would be nice. Even if they charged us more who could afford to pay more, still there would be any number that would love to live there, I am sure. As it is, I could not get in.

Senator CLARK. Let me ask you something else. It sounded as if you said when you come to town here, you come here to the meal site.

Mrs. STROEBER. Yes.

Senator CLARK. On Mondays—is that right?

THE MEALS PROGRAM

Mrs. STROEBER. Yes. I do not always eat here because if you have an appointment with a lawyer, if you have an appointment with a doctor, or some of those things, you can't get down there at 11:30.

Senator CLARK. But when you come here and eat, what do you see as the value of that program? In other words, is it a program that the Federal Government ought to continue—to try to help or not? What is your view of its value or the advantages or disadvantages of it?

Mrs. STROEBER. You mean of the meals?

Senator CLARK. The meals program, yes.

Mrs. STROEBER. I think there are big advantages, especially for the men folks who live alone. A great many of the people who have eaten here tell me that is the only hot meal they have in the day. Some of the older women just don't like to cook any more. As age comes on, it is more difficult to do things and it is easier to come here than it is to cook, so they don't cook.

Senator CLARK. Do you see any value to the program other than the food—other than the nutrition?

Mrs. Stroeber. Yes. They enjoy getting together. If somebody misses, they will say, "What was the matter? Why weren't you here before?" Of course, those that live here in town can come every day up until—I think on Saturday and Sunday it is not open, but they can come every day.

For us in the outlying districts, the bus just comes once a week. It takes a different corner of the county on different days, so we don't get in every day.

Did you hear the music when you came in?

Senator Clark. Yes, I certainly did.

Mrs. Stroeber. There is always some kind of entertainment. It is not always music—sometimes it is something else—but there is always some kind of entertainment. I think the last of the month there is a bingo game; I always notice that there are a lot more people here the day of the bingo game.

Senator Clark. So it is not just nutrition; it is a social get-together.

Mrs. Stroeber. Yes; socializing for a great many people. That has not been my reason for coming, because there is a little country church quite close to me. I am out in my own community and it is not necessary for me to come for that social life, though it is nice. As far as to come every day, I would not have time.

Senator Clark. You have to look after the cattle, you said.

Mrs. Stroeber. Yes, and I have to take care of my flowers and garden. Anyone who has a garden knows that weeds grow.

Senator Clark. I want to ask Mrs. Anderson some questions, if I may.

I was interested in the fact that you said that the doctors used to come to Melcher to the clinic from Des Moines. Did they come once a week, or what was that arrangement?

Mrs. Anderson. No, they came every day from the osteopathic college and they had been doing this for 2 or 3 years. It seemed to be going fine. They had a good business, but for some reason they decided they didn't want to drive down there any more. They were there for 5 days a week.

Senator Clark. Now you have no doctor at all?

Mrs. Anderson. We have no doctor at all; no. Years ago, Melcher had several doctors and dentists.

Senator Clark. How big is Melcher?

Population: 931

Mrs. Anderson. Well, as of the 1970 census, it was 931. It never was a great big town.

Senator Clark. That is a big town.

Mrs. Anderson. A big town, but I think around 1,200 is what it was at its peak.

Senator Clark. That is a big town for me. I was raised in a town of 450.

Mrs. Anderson. Then we have a large one. We have several new homes going up and the younger people are staying there, driving to Des Moines, Newton, or Knoxville to work. What we need is a good road.

Senator Clark. Now, according to my notes, there was also a pharmacy in Melcher until this spring; is that right?

Mrs. ANDERSON. Well, it was a sundry store. There was no pharmacy there, but the medicine was ordered from the pharmacy at Knoxville. One of the men that worked at the VA hospital picked it up and brought it in, so that was the one service that we could depend on.

Senator CLARK. Now you have lost that?

Mrs. ANDERSON. We have lost that.

Senator CLARK. So you have lost the medical center and the ability to get prescription drugs delivered in that way?

Mrs. ANDERSON. That is right.

Senator CLARK. If you need prescription drugs now, what do you do?

DRUGS DIFFICULT TO OBTAIN

Mrs. ANDERSON. Well, we wait until we can go to Knoxville and get them. Most everybody goes to the doctors there at the Collins Hospital Clinic. They can get their medicine there through the doctor or they can go to the drugstore in town and get their prescriptions filled.

Senator CLARK. Do a good number of people in Melcher receive benefits under block loan?

Mrs. ANDERSON. Yes. There are several of the old ministers still living there, but there are a lot of widows, too; several of them are getting it.

Senator CLARK. I know the long period of time that it takes to process the claims is the major complaint. I noticed you said that, too.

Mrs. ANDERSON. Yes.

Senator CLARK. What happened was, as I recall, about 2 years ago we passed new legislation saying that everybody who failed to qualify—and you referred to this in your statement—could reapply, and so suddenly there were literally tens of thousands of people who reapplied at the same time and it became an enormous problem.

Mrs. ANDERSON. Yes. I thought that was probably the problem because I had not heard for so long. Of course, when you are just sitting there wondering and waiting, all you are thinking about is yourself. I had just given it up. I thought, well, it is just one more time that I didn't get anything, but I would not give up as long as there was anything that I could do.

Senator CLARK. So as far as you are concerned, the major benefit of the programs that exist now is that you get black lung benefits and social security?

Mrs. ANDERSON. Yes.

Senator CLARK. What about the meals program—do you have access to that?

Mrs. ANDERSON. We don't have it in Melcher, but they have it in Knoxville. The people that want to go over there. We have one van which makes the trip at 9 o'clock and then there is another one at 10. If they want to eat, they try to go on the 10 o'clock van so they will be in Knoxville longer and will be able to eat. If they go at 9 o'clock, they come home before the time for the meal.

Senator CLARK. Do you have any housing programs in Melcher?

Mrs. ANDERSON. No. We need that, too.

Senator CLARK. Let me ask Mr. Goeldner a couple of questions, if I may.

I have a copy here of a magazine article published by the Department of Health, Education, and Welfare called *Aging*,[1]—the November 1963 issue. That is some time ago—nearly 13 years. It has an article in it about Earlham and their homemaking/home health aide nursing services, and so forth.

I was wondering if you might talk a little about some of the things that have happened in Earlham. It looks like you were doing these things already 13 years ago—a number of these new programs now in homemaking/home health care aides, and so forth. Tell us a little bit about the services affecting older people in Earlham.

Mr. GOELDNER. Well, we felt it would be well to keep the people in their own homes as long as possible, so we worked out this program with the assistance of some of the county welfare people in HEW. The State department of health was the agency that put up the assistance money, so we set this program up for the Earlham community. After it was in operation for a year or so, HEW suggested that we expand it, so presently it covers the entire Madison County.

Mrs. Murray Smith, who was here this morning, is presently director. When we first set up this program we had a number of different kinds of assistance, such as homemakers, meals-on-wheels and handyman services, friendly visitation or telephone visitation, visiting nurse, and transportation services.[2]

There was an elderly gentleman there who contributed his time. I think they paid him a quarter for each trip if he brought somebody downtown, or a little more if he took them to Dexter, Des Moines, or someplace else to the doctor.

We found that with this program many of the people spent their remaining days in their own home; otherwise, they would have had to go to a nursing home or some other place.

Some of them required more assistance than others. Maybe a homemaker would come in for half a day, two or three times a week or, if the person needed more help, they would come in every day for a part of the day.

Senator CLARK. Now, would you talk a little bit—in case there are people here who have not been involved in homemakers—about how they come into the home once a week, or more than that, and what kind of things they do?

HELP IN THE HOME

Mr. GOELDNER. Well, as people grow older, they need more help in things like vacuuming their house, cleaning the house or they need to have someone come in and prepare a meal for them. This was before we had congregate meals.

Maybe if there are some dirty dishes stacked up, they would wash the dishes—any particular need that the person might have. They might do a little laundry work for them or just take care of the extra things that take a little burden off the older person.

Senator CLARK. I am reading from the recent article that says that they had a meeting in Earlham with the home health aides, as well as homemakers, and the homemakers had assisted in 61 homes. I assume that is in one county.

---

[1] See appendix 1, p. 39.
[2] See brochure, appendix 1, Item 1, p. 41.

Mr. GOELDNER. That is Madison County.

Senator CLARK. During the month of June, totaling 844 hours of service by—in this case it was home health aides—and 35 visits to patients' homes were made by registered nurses. Can you talk a little about the home health aides and the nursing programs?

NURSES VALUABLE IN HOME HEALTH

Mr. GOELDNER. Well, I think the nurse, when she visits the home, if necessary, is capable of giving shots, taking blood pressure, and seeing that the person is taking their medicine properly—things of that nature.

Senator CLARK. So between those various programs, your people are able to live in their own homes much longer than they would otherwise.

Mr. GOELDNER. Yes, many of them have. Some of them lived out their remaining days; I know three persons now in nursing homes, but they lived in their own homes 10 years longer than they could have otherwise.

Senator CLARK. What about nutrition programs now in Earlham?

Mr. GOELDNER. Well, Earlham participates in the congregate meals program. Then, of course, the county bus comes over on Tuesdays to take those who need to ride the bus.

In the beginning when we first started congregate meals in the aging program, some of the people said, "Well, that is just for poor people," or "It is charity," or the like. They are getting over that notion now.

I think, as it was brought out here before, the people enjoy visiting, reminiscing, playing games, or having some music like they have here in the multipurpose center.

Senator CLARK. I want to thank you all very, very much for your testimony. It was most interesting. Thank you very much.

We are going to hear next from Dr. Woodrow Morris, and then following Dr. Morris we are going to be hearing from the other panel this morning with Mr. Joe Pals, Mrs. Forsyth, and Dr. Fickel.

Woodie, come right on up here, please.

We particularly wanted to have the doctor with us today because he played a very major role, in fact, in two White House Conferences on Aging, and I know he was appointed by the President to the National Task Force on Aging in 1970. I know that the chairman of this committee also appointed him a member of an advisory board of the committee in 1971.

I must say that I regret that in recent days Iowa has lost his services as chairman of our commission on aging. I think he knows more about problems of aging than anybody I ever met.

So we are particularly happy, Woodie, to have you here. You just proceed in any way you think appropriate.

STATEMENT OF DR. WOODROW MORRIS, ASSOCIATE DEAN, COLLEGE OF MEDICINE, UNIVERSITY OF IOWA, IOWA CITY, IOWA

Dr. MORRIS. Thank you, Senator Clark, for those kind words. I am not sure that it is all true, however, because I am following a panel that just participated a few moments ago who said almost all of the things I want to say better than I can probably say them.

I appreciate that panel's presentation very much because it was a most interesting discussion, and maybe what I can say will illuminate a little further some of the things they said.

I am delighted that you are back home, Senator.

Senator CLARK. Thank you.

Dr. MORRIS. We are always glad when you come back and conduct these important hearings. It is good to see Mr. Oriol, John Guy Miller, Miss Kilmer, and other members of the staff here.

Senator CLARK. I just want to say before you start, because I didn't make this a part of the record, that Dr. Morris is associate dean of the College of Medicine at the University of Iowa.

Dr. MORRIS. Well, as most of you folks know, I have been long interested in and deeply concerned about the need for us as a society to provide the kinds of programs and services which elderly people need and want.

I have been very pleased at the progress which has been made in this country and here in our State in working toward these objectives.

But as an Iowan of some 28 years, I am particularly concerned that we not simply pay lip service to the elderly or mislead them into believing programs and services will be available, only to have them never reach fruition in reality.

This sort of misleading is already all too prevalent in what I consider the broken promises which strew the path of the medicare program. It concerns the delivery of medical care and the provision of long-term care facilities in adequate numbers and quality to respond to the health care needs of our aging and aged citizens.

Similar remarks might also be made about the hopes engendered in the hearts and minds of the elderly that up-to-date, 1976 housing will be made available to them, only to have time pass with little or nothing actually happening in the way of actual construction of adequate housing for those who need it most.

I was delighted to hear Mr. Sprunger talk about the housing program here in Winterset, and I cannot help but think that many folks may be sitting in the audience wondering why they can't have that kind of housing in their communities. That concerns me, too.

Far too many of our older adults are living below the poverty level with no truly creative plans or programs on the drawing boards to permanently solve this problem.

It is true that we have social security and supplemental security income programs, but neither has been able to keep pace with the inroads of inflation, and neither was designed to permit older people to maintain the standard of living to which they have been accustomed or are deserving.

But these remarks are focused on the elderly in general; in Iowa and in other Midwestern States, in particular, we have a special problem, and that is the rural elderly—those to whom Senator Clark is addressing these hearings this week.

A SPECIAL PROBLEM IN IOWA

Unhappily, so far as I am aware, there is no national or State of Iowa policy regarding the rural elderly. Even a cursory examination of the situation of the rural elderly will suggest that they are all too

often underserved and underrepresented—or not served or represented at all—in Federal and State programs which should be serving them and their basic needs.

What good is it, for example, to provide even inadequate medicare benefits to the rural elderly if there are too few physicians, dentists, nurses, physical therapists, audiologists, and long-term care beds to provide the health care the rural elderly need?

Similar questions might be asked about the various programs and services provided for under the Older Americans Act and other Federal programs for the elderly in the areas of information and referral, legal assistance, housing, senior centers, congregate meals programs, and readily available and convenient transportation services.

In most if not all of these, the rural aging and aged have been overlooked and neglected. Part of this, I am sure, is due to the fact that there was no Federal emphasis on this aspect of the aging problem.

State agencies on aging and, indeed, area agencies on aging found themselves so caught up in the day-to-day business of establishing new programs and services, trying to work out the meaning of State and Federal mandates and directives, seeking adequate funding for desirable programs, and lacking manpower trained in the field of aging, simply were unable to give adequate attention to the special needs of special groups such as the rural elderly.

Designating Problem Areas Within States

As I have reported on previous occasions, it is possible to divide various areas of a State—such as counties or planning and service areas—on the basis of the general weight of the problems such areas face because of the relative dependency needs of the elderly citizens which make up a portion of their population.

It turns out that what I fondly call high-senescity counties—those with a high proportion of older citizens—are essentially in rural areas, while low-senescity counties comprise the urban areas of the State of Iowa.

I was interested, Senator, that among the materials that were distributed this morning was a copy of the Senate hearings you conducted in Washington on April 28, 1975.[1] Those of you who are interested will find in that a description of what I just referred to, high-senescity and low-senescity counties, and a map of Iowa shows where those counties are.

The southern two tiers of counties are our most high-senescity counties.

Senator Clark. Why is that true, if I could just interrupt you 1 second?

Dr. Morris. Well, I believe it is essentially true because people are moving out of these counties, particularly young and middle-aged people, and they are the people of child-bearing age. The end result of all this is that the people who are left tend to be those who are older or very, very young. This leaves a proportion of the population in these counties, which is in the range of 20 percent or more, in the age range of 65 and over.

[1] Hearing, "The Older Americans Act and the Rural Elderly," U.S. Senate Special Committee on Aging, Washington, D.C., Apr. 28, 1975.

One of the aspects of serving the needs of the elderly in rural areas is related to the density of the population in high-senescity counties in contrast to the population density in low-senescity counties.

Density data are of some interest because, in a gross way, they reflect the relative concentration or dispersion of the people who are entitled to various governmental services. It would be easier, for example, to serve 100 people living within the confines of a single square mile area than it would be to serve 100 people scattered over an area of 50 square miles.

That is all this concept means. The former situation is more characteristic of populated areas such as cities; while the latter are more typical of rural areas.

Relating this to congregate meal sites suggests that it is conceivable that a single nutrition site could easily provide services for 100 elderly people in an urban setting and none would have to travel very far to reach the site.

In the other hand, in a rural setting elderly participants would either have to be transported several miles to reach the site, or more sites would have to be provided so that they would be more accessible to the elderly.

In either case it will be more expensive to mount a satisfactory program in a rural area than it would be in the urban setting. In general, these same factors—senescity, density, and related factors—will operate to effect the establishment of senior centers under title V of the Older Americans Act, just as they are now affecting the congregate meals program under title VII.

Accessibility Is Key Factor

Accessibility to services, then, becomes a key factor which must be taken into consideration if those we wish to serve are to receive the services to which they are entitled and for which the programs were designed.

In this connection, it is obvious that one of the most important variables to be considered is to have—as you heard from the panel repeatedly this morning—a comprehensive transportation system.

In general, it is safe to say that programs now underway have not been designed to take accessibility to services into consideration when funds are allocated either by the Federal Government to the States, or by the State of Iowa to its constituent area agencies.

Furthermore, it will be difficult to do this at this point in our history without making some basic changes in the policy of both Federal and State governments to recognize the special needs of the rural elderly.

It will be difficult because the area agencies have, for a period of years, become accustomed to their portion of the Older Americans Act and other funds as they have been allocated to them. To change the formula now, without adjustments, will mean taking funds away from some areas in order to make them available to the rural area agencies.

Similarly, if corrections are to be made now in the formula allocating Federal funds to the States to take into account the rural features of some States, it will mean taking funds away from the more urban States.

In addition to the two particular programs mentioned earlier, rural areas differ significantly from urban areas in a number of other important ways. Time does not permit me to discuss all of these this morning, but let me just note a few.

They include a higher percentage of families living below the accepted poverty level, greater severity of poverty, lower population density, fewer primary care physicians, lower accessibility to the services of primary care physicians and dentists, and a less desirable relative health status index.

Finally, it seems to me that what is called for is a truly national policy regarding the provision of programs and services to the rural elderly of our Nation. Such a policy would serve to focus attention on the special situations of the rural elderly, their special needs, the requirement that specially devised progams need to be developed to respond to those needs, and that these programs be specially funded so that State units on aging will be able to respond to the grass-roots requests from the area agencies on aging.

Present Data Under Study

Senator Clark, there is much more that needs to be said about the rural elderly. We are beginning to collect relevant data at the University of Iowa and data are available and under study at Iowa State University.

Senator Clark. Thank you very much.

I think you have spoken particularly relevantly to the question of accessibility of services because, after all, it may well be that the Federal Government has the service or that the service exists from some other source, but if one cannot get to it, it really does not make much difference.

As you say, the allocation of funds in the past and at the present have not been made on the basis of how difficult it is to deliver those services.

I wanted to get your judgment on two or three specific programs that are now being funded, how you think they might be improved, or what your assessment is of these programs in rural areas.

First of all, the question of housing. Is it your judgment that we have an enormous way to go yet in our rural areas in providing the kind of housing that we talked about at the Plaza which I saw this morning? Have we begun to meet the need there, or do you think it has not been reasonably met?

Dr. Morris. No, I don't think it is being reasonably met at all. I am delighted that there are programs. I have not seen a recent survey of available housing programs for the elderly in Iowa, and you are going to hear later in this week from Governor Blue who is more expert in the field of housing that I am. He has been interested in this for many years.

I was visiting with Governor Blue just last Friday and one of the things he said to me was, now that he and I are no longer going to be intimately involved on the Commission on Aging, perhaps we and some others could work together toward providing more adequate housing for elderly people throughout the State, with particular emphasis in the smaller towns and cities in the rural areas of the State where housing is, I think, desperately needed.

I think we have a long way to go yet.

Senator CLARK. What about health care in rural areas? What do you see as the greatest need there? What should we be working toward as far as this State is concerned?

Dr. MORRIS. You are going to have an expert in a few minutes. Dr. Fickel will be talking with you about one of the most fascinating programs in the State, and Bruce Brenhold is here from the University of Iowa College of Medicine, and he has been working with Dr. Fickel on these programs.

My personal attitude toward this is that the college of medicine is working in the right direction toward developing an approach toward a solution to some of these health care delivery problems.

BETTER ORGANIZATION STRESSED

The approach is, in essence, to develop units which will provide a demonstration of how a community can organize itself better—particularly the health care community can organize itself better—to provide care throughout the community and the surrounding area.

I think if the college of medicine can continue to work toward the development of such approaches throughout the State, and if other communities will read the story of the development of a program such as the one you will hear about later in Red Oak, the whole State can lift itself up by the bootstraps.

In essence, that is the story of Iowa. You are also going to be conducting a hearing in Ottumwa. Ottumwa is in an area of 10 counties which incorporated and called themselves Tenco. This was designed to do the same thing for that whole area in general—to pull itself up by the bootstraps—by its own efforts.

This is the kind of thing I look forward to. I think this would do the most good in the health care area, the housing area, and a lot of other areas.

Senator CLARK. Good. We thank you very much, Dr. Morris, and we appreciate your coming down from Iowa City to testify.

Our last panel is going to be made up of Joe Pals, Louise Forsyth, and Dr. Jack Fickel, who has just been referred to.

We are asking each panelist to try to limit their remarks to 4 or 5 minutes so we will have plenty of time for questions. I am hoping, too, that we might end soon enough to get some questions from the audience of the panelists or members of the staff of the committee.

First, let's hear from Joe Pals who is the former executive director of MATURA Action Corp. in Orient, Iowa.

STATEMENT OF JOE J. PALS, FORMER EXECUTIVE DIRECTOR OF MATURA ACTION CORP., ORIENT, IOWA

Mr. PALS. Senator Clark, staff, and friends, I have heard it said that if you are getting a lot of static, you are not tuned in to the right wavelength. So I hope you keep me on the right wavelength this morning.

I am suposed to talk to you this morning about some of the programs that we had at MATURA—winterization and services or programs for elderly, and the future of CSA.

CSA is the national name. MATURA began in Creston, Iowa, April 25, 1966, representing six counties: Madison, Adams, Taylor, Union,

Ringgold, and Adair. At that time we were known as OEO—Office of Economic Opportunity—better known as the poverty program. The words "poverty program," I think, is one of the things that took us out, because it was more or less downgrading, or I have always thought so at least. About a year ago, our name was changed from the Office of Economic Opportunity to Community Services Administration. CSA are the initials we use.

Our primary function or mission is to help people help themselves, by referral to other agencies or into other programs or jobs. Our philosophy from the very beginning was that of cooperation with other agencies, rather than competing. Having worked in public works a good many years before I came with MATURA, it was my thinking that the only way we could accomplish anything was to work with other agencies rather than to try to compete. A new agency coming into the community, I think, probably made some of the other agencies wonder. "What are they going to do? Are they going to be taking part in what we are doing?" There were some agencies that were somewhat apprehensive about what part we would play within the community.

It has been a long road. How did we build it? I am going to talk a little about linkages for just a moment. What do we mean by linkage and linking the programs together? For example, at the Corning Center, the county board of supervisors and the AAA—the area agency on aging—bought an old school bus. We at MATURA furnished the money for the gas and oil and the part-time driver to operate the bus. So you see, you have three various entities there. You have three agencies operating together or working together to provide a service within that community.

Then what was the service for? The service was for transportation. Again we have transportation coming up, and I am sure, from what all the others have said, that we are pointing out the need here for transportation. We served approximately 45 people from towns like Carbon, Mount Etna, Brooks, Nodaway, and Prescott. These people were picked up in the rural areas and brought into different towns to buy groceries, to see the doctor, or whatever services they might need.

Besides that, there were approximately 35 people picked up within the town of Corning that were taken to the meal site within Corning itself by this same bus. MATURA also furnishes a driver and pays mileage for the car that the driver uses. The driver—in this case it happens to be a lady—uses her own personal car. She is paid mileage for this. We have transportation from Bedford and Lennox to take people to Clarinda, Maryville, Grant City, Creston, and Corning.

Few Medical Facilities In Area

This is mainly for medical and dental care. This is pointing out what Dr. Morris said a little bit ago, medical care being what it is now. We are thinking in terms of the number of doctors in the area—there aren't many. In all of these small towns, there are just no medical facilities, so somebody has to see that people get somewhere so that they can be taken care of.

Again, we are pointing out that transportation is a very, very vital thing in the area, and so is medical care. As Dr. Morris said, social security is not keeping pace. These people out there are below the poverty line at the present time, and they are underserved; some are not served at all. I think that was a statement that was very well put.

Now some of the other things that we have done, we had $18,000 of CSA money that was "one-shot" money. By that we mean it was money that was given to us that we could do with what we saw fit. About the time that we received this money, some of the meal sites were being set up in the six-county area but they didn't have funds to purchase equipment for the meal sites. Many of the programs were financed for the meals, or part of them, but they didn't have funds to buy stoves or refrigerators and that sort of thing.

Sometimes you can get used equipment. But when do you give a refrigerator away? Usually when it is worn out, sometimes not. You don't have the type of stove, usually, that they need for that. That $18,000 was distributed among the sites so that they could buy equipment, so the sites could get started, so they could have meals in various areas.

Then another $5,000 that we received from CSA was emergency food money and was supposed to be used for emergency food in some manner or other. We felt, if we called in the social service directors within the six-county area and talked to them and asked them perhaps what would be the best way, that they might have suggestions. So we called in the social service directors and talked to them. We said, "Now we have $5,000; do you have any need or can you use it or dispense with it in any way?" They said, "Yes, we can use emergency money." There are times when people come in and have to have emergency money for food and we don't always have that.

The upshot of all that was this: We gave five counties $800 each—one county $1,000. They allocated the money and sent the bills to us. We made the check out to them. That is the way it was handled.

Then we have the center systems, of which there are five. We don't happen to have one at Bedford, but they are in the backbone of our total system. You are looking at one of the centers right here—you are sitting in one of them. Louise Forsyth, sitting right next to me, will be talking about that a lot more later.

I am not going to go into any more of the organization or any more linkages of the programs, or that sort of thing. We will go into the winterization program. I think, perhaps, this is one of the best programs that we have had in a long, long time. It is one of the programs that has gotten a lot of good for a lot of people. Within this program, the original grant amounted to $26,150 Federal money and the State of Iowa allocated $3,495.

The Winterization Program

Whenever money of any kind, Federal or State, is allocated, there are always guidelines that you have to follow. Federal dollars were for all age groups, but 90 percent of the homes that we worked on were elderly occupied and, again, this was because of the need. The guidelines for the elderly poor—we could go 25 percent above poverty guidelines for winterization. State dollars were earmarked for 62 years and over. In other words, for people 62 years and older, we could use State money.

The work schedule or accomplishment: What did we do or what have we gotten done within that program? First of all, under Federal regulation we could not exceed $250 per home.

Senator Clark. You could not spend more than $250 on a home for winterization?

Mr. PALS. That is correct.

We planned to work in 185 homes. I will explain this a little more clearly. Actually, we worked on 302 homes. Now there are different phases within this project. For example, we started out, first, with what we call protecting the home from air infiltration by using plastic and caulking the home, doing the best we could. We get those that have the greatest need.

We finally decided perhaps a storm window might be a better route because plastic would not last that long, and maybe there was a better way. So we started with storm windows and we did quite a bit. We started doing that and we had 40 homes that had permanent storm windows, which was better. Then we went to ceiling insulation, and we have done 57 homes so far. So you see, we have various homes in various phases—not all complete, but in various phases. We will go back and do more next year.

Besides this, we have put in vents in the roof, vents in the side walls, and this sort of thing. We traded off 55 tons of old paper, enough to do 20 attics. We are the only agency in the State of Iowa to have done this and we have to give credit to the center people and you people who brought in old papers. This was trucked to Des Moines and traded in on insulation. We got enough by trading in to do 20 attics free; this is what it amounted to.

Then we generated 1,160 hours of volunteer time. We picked up 1,000 old storm windows. We put on plastic, and used windows where possible. Those that didn't fit right into the old windows were screwed on to the outside. We could not use all of them.

It would not have been possible to do all this without the help of our center supervisors—our CETA people. What are we talking about? We are talking about CETA people—the Comprehensive Employment Training Act.

MATURA is, or was, using five carpenters provided by CETA under titles II and VII. All of them are under a title II contract, presently, because of the funding within the two programs. The title VII funding ran out within the area, so it was all transferred to title II, and presently they are on that. As I understand, that is to run out on January 1, and I am hoping that that will continue, Senator.

Senator CLARK. We are going to be voting on that, as a matter of fact, in about 7 or 8 days, so we are hopeful that it will.

CETA FUNDS NECESSARY

Mr. PALS. It is indeed fortunate that MATURA could avail themselves of the CETA contracts, as it would have been impossible to have accomplished what we did because neither our own budget nor the winterization budget had allowed for this kind of needed manpower. Without CETA, MATURA would need at least an additional $30,000 to $35,000 to continue a program of this kind another year.

Now, as to the future of CSA—it has been kind of up and down, as you all know, and my guess is that is true of any new program. I will read what I have here on the future of CSA. I hope I keep within my time.

For those working within an organization like MATURA, especially those who have any tenure at all, realize the many frustrations we have gone through; we have never been quite sure each year if we

would be funded. When President Nixon's order came out to dismantle the total organization, this was very disheartening to CAP people. All agencies seemed to lose ground and, again, when it looked like President Ford might transfer us to HEW, it seemed almost as bad. After 10 years of dedicated work, it seems as if we are still struggling up a fairly steep incline, whereas we should be on a plateau progressing forward with less concern about annual funding as well as how much funding we will receive. MATURA has had the same funding level for the last 5 or 6 years. With cost-of-living increases—increases in rent, utilities, telephone, et cetera—there is only one answer, and by now you've guessed it.

Thank you.

[A poverty guideline table submitted by Mr. Pals follows:]

CSA POVERTY GUIDELINES FOR ALL STATES EXCEPT ALASKA AND HAWAII

	Nonfarm family	Winterization	Farm family	Winterization
Family size:				
1	$2,800	$3,500	$2,400	$3,000
2	3,700	4,625	3,160	3,950
3	4,600	5,750	3,920	4,900
4	5,500	6,875	4,680	5,850
5	6,400	8,000	5,440	6,800
6	7,300	9,125	6,200	7,750

Note: For family units with more than 6 members, add $900 for each additonal member in a nonfarm family and $760 for each additional member in a farm family.

Senator CLARK. Thank you very much. You may be on the incline, but it looks like you have accomplished a great deal; in particular, the winterization program which is the kind of program that, it seems to me, can have a lot of practical effect with a fairly small amount of money expended. We compliment you on that.

I just want to point out that Congressman Tom Harkin on my immediate right, as you know, is also sitting in on the hearings.

We are going to go ahead with the panel and then, Tom, if you have anything you would like to say at that point, we would be happy to hear you.

Representative HARKIN. Thank you.

Senator CLARK. We are going to hear now from our next witness who is, in fact, the director of this center, Mrs. Forsyth. I want to start, Louise, by saying we are very, very grateful to you for making the arrangements here and allowing us to use your center.

STATEMENT OF LOUISE FORSYTH, DIRECTOR, MADISON COUNTY MULTIPURPOSE CENTER, WINTERSET, IOWA

Mrs. FORSYTH. We are most happy to have you, and we are glad to do it. Welcome to everyone who is here. I am extremely pleased to see such a large turnout and so many strange faces. This means there are people from without our area.

My roots are planted quite firmly in Madison County. I was born and raised in Lincoln Township and have lived in Madison County all my life, except for 9 months spent in California in 1955–56. My great grandfather was a country doctor in that neighborhood in the late 1800's and early 1900's.

My personal association with Madison County Multipurpose Center was on January 16, 1974, when I began work as assistant director on a part-time basis. I did not know at that time that I would become the director, as I have in a short 2½ years. The center staff at that time consisted of the director, Mr. Herb Flint; a part-time outreach worker; and myself.

I knew relatively little about CAP agencies—their purpose, operation, or funding. When I started work, the funding for future operation was very shaky, and remained that way for quite some time. The first experience I had in dealing with public officials and others outside of the CAP agencies was when we compiled a report on center activities and services, presenting them to the mayor and city council and enlisting the support of the Madison County Board of Supervisors just in case we were not funded again through the OEO program.

When I came on board, the title VII nutrition program was operating in four sites: Earlham, Truro, St. Charles, and Winterset. The meals for Winterset participants were served 5 days a week at the multipurpose center and the associate director for the program had—and still has—her office at the center.

Countywide Transportation System

In the summer of 1974 we—the area agency on aging staff, Madison County Board of Supervisors, center people, and other interested people in the community—began putting together plans for a countywide transportation system for our senior citizens who could not provide their own and needed such a service in order to remain in their own homes. Mrs. Stroeber has told you this started off on February 3, and she and Mrs. Carter from Macksburg were the first riders.

As we worked on this plan, Glenda Knight, a planner with the area agency on aging, began to think of expanding the use of the transportation service by multifunding. This could be done by setting up a contract for purchasing services with the Department of Social Services, thereby making it possible to provide transportation to the blind, the handicapped, and the disabled, as well as those over 60 years of age.

I think, probably, if I had known how much bookwork, extra hours, headaches, hassles, et cetera, were involved, I probably would have opted out of any involvement with the program. Nevertheless, I am not sorry I didn't know, and I feel it has worked out very well. We are in our second year of operation and are gaining friends and participants every month.

One project leads to another. In the spring of 1974, the nutrition program in Winterset, particularly, was not gaining—people were not participating. With some funds that MATURA had available, they purchased a used car—a 1968 Bel-Air Chevrolet four-door—and provided a driver and gas for 6 months as an experiment to see if transportation lack was part of the reason for the low numbers participating. On about May 1, 1974, the car was put in service.

We were also aware that there was considerable misinformation circulating in regard to the program. The area agency decided to use some funds allocated for supportive service to provide an outreach worker to work exclusively at contacting people over 60 and explaining the program and its purpose.

In the 10 weeks this outreach person worked, meal participation in Winterset doubled, and also increased in the other sites. The transportation provided by the center car was a factor that could not be taken lightly. If my memory serves me correctly, I think that 60 percent or more of the people availing themselves of the use of the car were coming to the meals; this percentage has continued.

We still are operating this 1968 Chevy. We have not received any Federal, State, or county funds since the end of the first 6 months. This operates exclusively within the city limits of Winterset. The donations of the participants, the community, and the city keep it going from day to day. Sometimes it gets a little shaky but, so far, faith, the community, and the people that use the car have kept it going.

The only other public transportation in the town of Winterset is one taxi and the county van, when it is in town and which is not available 5 days a week for the people in Winterset to use. Neither the car nor the van operate on weekends, so this means that people are without transportation unless they have their own.

On February 10, 1975, Therese Brittain, associate nutrition director, and I attended a town meeting called to discuss community needs. Except for a group interested in finding a solution to the problem of inadequate sewers, we were the only ones attending. A representative from the Central Iowa Regional Association of Local Governments gave a brief résumé of the Federal Housing and Community Development Act of 1974 and the related community block grant program.

Certain city activities were eligible for funds under these programs. The one that caught our attention was acquisition, construction, and reconstruction of senior citizens' centers. Now we knew why we had attended the meeting.

Needed: A Kitchen

By this time it was becoming apparent that any congregate meal program, particularly in a small community, could operate more economically if the food was prepared at the serving site. The kitchen facilities in our center were inadequate to prepare a full meal, so we submitted plans and estimates to the city council to build a kitchen in another room of the center—the room occupied by the kitchen to be converted to office space.

Our plans were made part of the application sent to HUD for approval. On Friday, August 1, 1975, confirmation of the approval by the Department of Housing and Urban Development of the grant for $293,000—$285,000 for sewer improvement and $7,500 for the center kitchen—was received by the city mayor. Then came a long period of frustration of planning and estimating, waiting on approval, et cetera, and, in the meantime, everything had gone up in price.

Finally, all the adjustments, deletions, and changes were made and a contract to get the work started was let the first of June 1976. The kitchen is practically completed. We still lack a garbage disposal and the booster heater on the dishwasher. Today we are initiating it and will soon be preparing meals for our elderly.

I think we have proved that, with the cooperation of the community, a goal can be achieved that would have been impossible for one segment alone.

In each of the projects that have been initiated and brought to a successful completion, I think that a number of people that did not know anything about the multipurpose center or what a community service agency is supposed to do, except that we existed in what used to be the "old creamery building," now know what we are, what we do, and why we do it. I sincerely hope that such joint efforts will bring many more projects to help our fellow man to successful completions in coming years.

One of the biggest hurdles for any people program, particularly those involving people in rural areas, is reaching those people with accurate, unimbellished information about the program and its aims. I feel that personal eyeball-to-eyeball contact by an adequately trained and informed outreach person is the only answer.

Outreach Allocation Should Be Updated

Every program written and implemented should allocate enough money for this outreach. CSA centers are operating on the same allocation that they were 10 years ago so therefore cannot provide the outreach personnel necessary to reach the number of people that need to hear the news. Their expertise could be used to train and supervise the people needed to reach the prospective participants in these programs and to assess the value of the programs.

I would like to infringe on, maybe, a little bit of extra time to express my appreciation and thanks to the following people:

Herb Flint, director of the multipurpose center from its beginning in 1966 until January 1975 and under whom I started to work; H. W. Callison, Reese Bridenstine, Harvey Davis, and Joe Pals for their confidence and backing when I became acting director of the center and later as director. I could not have made it without them. To the mayors, past and present, of Winterset; the city council members, past and present; the Madison County Board of Supervisors; the area agency on aging, particularly Kay Samec, Vada Babcock, Glenda Knight, Rhonda Varnum, and Vance Baird: Les Goeldner, chairman of the area agency on aging advisory board; and the Central Iowa Regional Association of Local Governments, that is, Gary Pryor, Jerry Franke, Judy, and Joe. And for the efforts and help above and beyond the call of duty in getting things ready and in shape for this hearing today: Yvette Wilson, transportation secretary and all-round handyperson; Betty Berry, outreach worker; Fred Vierling, Dan Rater, Helen Grandfield, Lillie Moore, Florence McCauley, and Wilma Barker; Roscoe Tyer, general contractor for our kitchen; and his personnel and subcontractors.

Finally, I would like to introduce my mother, Mrs. Neva McKibban, a member of the Hillbilly Band and an active participant in center activities.

Senator Clark. Yes. Stand up, please. We need the drummer.

Mrs. Forsyth. And I would like to say a special "thank you" to her and my father, now deceased, for raising me in a home where love, thoughtfulness, and concern for others was a daily part of life.

Senator Clark. Thank you very much for an excellent statement. We appreciate it very much. We can see why people are doing so many excellent things around here.

Mrs. Forsyth. Thank you.

[A prepared statement of Mrs. Forsyth follows:]

PREPARED STATEMENT OF LOUISE FORSYTH[1]

The Madison County Multipurpose Center, located in Winterset, Madison County, Iowa, was opened in 1966, in a building that had been used to house a creamery (some of the vats and other equipment were still there and had to be removed), cream-buying business, and hatchery. There were no ceilings—just unadorned beams and hollow tile walls.

The reason for the opening and continued existence of any CSA (prior to 1974 CAP) Center was, and is, to provide help for people, particularly those with low incomes, the handicapped, blind, disabled, and/or disadvantaged.

We feel that over the past 10 years we have helped to coordinate programs that have provided help in many areas and have generated other needed programs.

From the beginning the center people have worked a great deal with the elderly and the handicapped. The center was instrumental in starting, and continues to work with, seven senior citizens' groups in the county. The center serves as the meeting place for four of these groups.

The center conducts, and has since shortly after opening, a class for adult handicapped people; most of these people reside at Horton's Custodial Home just north of Winterset. This class consists of a craft project and refreshments. The help in teaching the craft lesson and providing refreshments is all volunteers—most of whom are senior citizens.

Two very important things, or benefits, to the participants in this class have been self-discipline (learning to complete a task) and a sense of accomplishment.

It was through the center staff's concern and interest in these handicapped people that an effort was launched to start a challenge center as a satellite of the Southwest Iowa Sheltered Workshop, located at Afton, Iowa. This challenge center began operation early in 1975.

A class is still held at the center one afternoon a week for those handicapped people who are unable to attend the challenge center.

In past years the center director and others directly involved with center have worked with the health planning council to encourage doctors to come to our county and in getting new nursing homes (4) and a custodial home in operation. They also have been active on the board of the home-health agency (Earlham CARE program) and in recruiting home-health aides.

Our center has operated a rent-a-kid, or busy kid as it is now known, service for the past 5 or 6 years. We also keep in close touch with the Job Service of Iowa and make referrals to them and to the EDS Manpower Office.

Head Start, Neighborhood Youth Corps, GYOP, and many other self-help agencies received our full support and cooperation.

GED certification classes, classes in sign language for those wishing or needing to communicate to the deaf, classes in needlecraft and ceramics are held regularly at the center.

We maintain a close contact with various health agencies: i.e., the Commission for the Blind, Easter Seal Society, the Cancer Society, Crippled Children of Iowa, and Planned Parenthood.

One of our greatest areas of influence has been in alerting the community to the need for coordinated volunteer activities. Over the years a great number of women (over 200) have been involved in: (1) a clothing room (used clothing donated for use by those who need them); (2) personal shopping service to three nursing homes; (3) library service for nursing home residents; (4) friendly visitors; and (5) handicapped class once a week.

Other activities and services that came from the center's efforts are the hospital guild; Madison County Title VII Nutrition program; a car that provides transportation for people over 60 within the city limits of Winterset; the Madison County Title III Transportation System; a HUD block grant to build a kitchen at the center so that the congregate (Title VII Nutrition) meals could be prepared on site in Winterset; 51 homes weatherized (attic insulation, caulking of windows and cracks, storms and screens put on); a summer recreation (1976) program for youngsters from low-income families, ages 8 through 13—50 enrolled; approximately 400 homes reached with direct (one-to-one) information on SSI; property tax relief; rent reimbursement; countywide transportation; nutrition meals (since September 1975); and a kitchen.

As the months and years fly past, it is our hope and aim to continue to serve the people in need in our county to the best of our abilities and to continue to

[1] See also appendix 1, item 2, p. 43.

seek and enlist the help of whatever agency or individual that is needed to provide this service.

The real challenge for community centers is to be foresighted enough to recognize the changing needs of the community and be prepared to meet these needs.

Senator CLARK. I would like, Dr. Fickel, to call on Congressman Harkin. I know he has office hours downtown starting about 10 minutes ago.

Representative HARKIN. That is right.

Senator CLARK. We will take your statement now, then we are going to have Dr. Fickel's, and we will be closing.

Go right ahead.

STATEMENT OF HON. THOMAS R. HARKIN, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF IOWA

Representative HARKIN. Thank you very much, Senator Clark.

Dr. Fickel, I appreciate your indulgence.

I had previously scheduled office hours in a mobile office starting at 11:30. I am a little late.

I deeply appreciate the opportunity to be here. I am no stranger to this place, as you all know. I was just invited to stay for lunch, but I guess I am going to have to miss it.

Senator CLARK. I will eat for both of us.

Representative HARKIN. I appreciate your coming out here and having these hearings. It seems that whenever Congress holds hearings on anything about rural affairs, especially on the elderly, they usually do it in Washington, D.C., where people can't get to the hearings. So I think we ought to be thankful to Senator Clark for bringing his committee out here to where the problems really are. If there is one thing that I discovered in just a year and a half in Congress, it is that you know the answers are not in Washington—the answers are out here where the problems are. So by bringing the committee out here for the hearings, I think they will gain a very good insight into where the problems are that the rural elderly face.

Rural America in the past few years is becoming less visible in terms of priority in our Federal programs. This is so because, let's face it, those of us who represent rural areas are becoming fewer and fewer in Congress. The district that I represent is one of the most rural in America. Out of 435 congressional districts, this is the eighth most rural.

Now if I had been elected to Congress about 25 years ago, there would have been about 125 Members of Congress from areas about like this. Now there are only about 25 of us. As rural America becomes less and less visible in terms of the Federal Government, the elderly who are becoming less visible all around the country have become even less visible in the rural areas.

RURAL ELDERLY SUFFER MORE

As bad as things have been for the elderly in the cities, their problems have doubled and quadrupled in the rural areas because of the low visibility. These older persons become isolated. The poor health standards in the rural areas are something that has recently come to our attention in Washington. Also, problems with housing, and especially transportation.

Recently I just read in the *Congressional Record* the "Bicentennial Charter for Older Americans" prepared by the Federal Council on Aging. I don't know if anyone brought it up here yet to see, but it outlines a "bill of rights" for the elderly in our society which I think ought to be adopted by our Government:

(1) The right to freedom, independence, and the free exercise of individual initiative;

(2) The right to an income in retirement which would provide an adequate standard of living;

(3) The right to an opportunity for employment, free from discriminatory practices because of age;

(4) The right to an opportunity to participate in the widest range of meaningful civic, educational, recreational, and cultural activities;

(5) The right to suitable housing;

(6) The right to the best level of physical and mental health services needed;

(7) The right to ready access to effective social services;

(8) The right to appropriate institutional care when required; and

(9) The right to a life and death with dignity.

While all older Americans have had many of these basic human rights denied to them, those living in rural areas have suffered most of all. For example, in 1973, the Department of Health, Education, and Welfare spent only $7 million out of $175 million on health services delivery in rural areas, although statistics show that approximately 140 rural counties in the Nation do not have a physician and that they have very limited auxiliary health services. In the Congress we have passed legislation designed to encourage health service professionals to practice in rural areas. But it is just a step, and there is much more that needs to be done.

We do have some of the minivans now. They have been very good but, as we all know, there is not enough of them and they only service a very small fraction of the people that really need them. The Labor-HEW appropriations bill which Congress has enacted provides more funding for senior citizens and more than requested by the administration. Title III of the Older Americans Act has been increased quite a bit. The nutrition program, which provides for the congregate meals, has also been increased. One provision that I was especially pleased to see finally get funded was title V, the multipurpose senior citizens program, which has not before been funded. I suppose we have just touched on this.

Senator CLARK. This kind of center.

MUCH REMAINS TO BE DONE

Representative HARKIN. Yes. This now is being funded for the first time. Again, while we have made some progress, there is a lot more to be done. I believe that I am well represented on the Committees on Aging by Senator Clark from the Senate and Congressman Blouin from the Second District in the House of Representatives.

I am sure that it comes as no surprise to all of you here that Florida has, as I understand it, the most percentage of its people who are elderly, and second to Florida is Iowa. So I think it is very mandatory that we have someone on the Committees on Aging like Senator Clark and Mike Blouin.

Let me just wrap up by talking about money. We are all concerned about inflation. We are all concerned about the fact that those of you who are on fixed incomes see a real decline in your purchasing power because of inflation. We want it stopped, and we are trying to do everything we can to bring our Government spending under control. I hope that we can bring our budget into balance in the next few years and bring our inflation down to a reasonable level of maybe 1, 2, or 3 percent per year, but that means we are going to have to change some priorities.

You know we only have so much money and we are going to have to decide where that money is going to be spent and how it is going to be spent—that is where we need your input. No longer can we continue to go to the Federal Government to fund this and fund that, no matter how well-meaning a program may sound. So we have got to decide on our priorities.

Just let me mention one thing. The House of Representatives this year lost by 17 votes—17 votes—in an effort to stop funding for the B–1 bomber. Let me just tell you what that B–1 bomber is going to cost. I was a pilot; I flew for 8 years in the Navy, and my brother was an Air Force pilot. I can tell you the B–1 bomber is the biggest boondoggle that has ever been foisted upon us. To build a fleet of B–1 bombers and service them over a lifespan of about 20 years is going to cost this country somewhere in the neighborhood of $60 billion.

Now I just see here from the memorandum from your committee, Dick, that the Senate just approved $480 million for the Older Americans Act for the entire United States. Let's just round it out and say that is $500 million. For the cost of the B–1 bomber, we could fund the Older Americans Act at its present level—actually a little more than its present level—for 120 years. Now you tell me where your priorities are. I know where mine are, and they are with the Older Americans Act.

Thank you very much.

Senator CLARK. Thank you very much, Tom. [Applause.]

Representative HARKIN. I just want to say, again, thank you. I have to go to my office hours.

Senator CLARK. We are going to hear now from Dr. Fickel who, I think, is in a position to talk with you about a program in Red Oak that has been one of the most successful and one of the most exciting programs in terms of rural health care in America, and certainly leading the way in showing the rest of the country how this kind of program can work. So we are very, very pleased, Dr. Fickel, that you are here to talk with us about your program. Please proceed in any way you think appropriate.

STATEMENT OF DR. JACK FICKEL, MEDICAL DIRECTOR, FAMILY CARE CENTER, RED OAK, IOWA

Dr. FICKEL. Thank you, Senator Clark.

I think I will read this in the interest of brevity because I tend to wander if I speak extemporaneously. I tend to get off on another subject.

I would like first to thank you for this opportunity to present testimony to your committee. Any serious effort to consider problems of the rural elderly must, early on, deal with their health and the health care delivery system available to them.

In this brief presentation I will not attempt to define the specific health problem of the aged. It is well documented, however, that the elderly do have an incidence of chronic illness, debilitating disease, and other medical conditions requiring nursing, medical, and paramedical care which exceeds that of the general population.

Compounding the problems of the rural elderly is their decreased and decreasing access to health care facilities and personnel. They share poverty with their urban counterparts, although at a significantly higher rate. In Iowa 11.6 percent of the State's total population had an income less than the poverty level of 1969; of those over age 65, 29 percent had an income less than the poverty level. Of the urban elderly, 30.9 percent were below the income poverty level while the rural elderly, who did not derive the majority of their income from farming, had a staggering 40.6 percent. Four out of ten rural elderly were below the poverty level.

Iowa's system of indigent care at the university hospitals in Iowa City and the advent of medicare and medicaid has measurably eased the barrier poverty imposed on access to health care in those services covered by these programs. One serious problem for the elderly in their utilization of the medicare programs is the paper storm with which they are deluged by the computers after a claim is filed.

Keep in mind that many of these recipients have loss of vision, often are somewhat confused, live alone, and are totally unaccustomed to business forms and computer correspondence. Further most really do not comprehend the concept of usual and customary fees, the ever-changing level of deductibles and percentage payment of allowable charges and the variability in the percentage of payment for similar services when provided as a hospital inpatient, outpatient, or in the doctor's office.

With this in mind, then, imagine the confusion created in the mind of the poor recipients when they receive a form which gives them the detailed results of these policies, regulations, and calculations. The fact that all of the forms have the words "This is not a bill" printed in large letters is little comfort when the reader has no idea just what in the world it actually is. This problem has turned off elderly from applying for benefits under medicare; it also has caused them confusion and they have thrown away checks for the benefits. Simpler forms with less detail would aid the patients. More detailed information could always be obtained for those interested in obtaining it.

Lack of Accessibility to Health Care

The greatest problem facing health care in the rural elderly is their lack of physical accessibility to the health care delivery system. In larger urban centers, hospital outpatient facilities, public health departments, increased physician-patient ratio, and the availability of public transportation greatly facilitates the patient's entry into the system.

In rural areas, however, there is little or no public transit. Farms and small towns are remote from physicians and hospitals. Public health services in rural counties often consist of only one nurse in the entire county, and some counties have none at all. In several rural counties with a public health nurse the supervisors have been quoted as saying that they will have public health nurses in their counties

only so long as they have Federal funds to pay for them. Public health programs in the rural Midwest, if left to local government initiative and funding, will remain inadequate at best and too often will be nonexistent.

Despite efforts by the University of Iowa College of Medicine to retain primary care physicians in Iowa, the supply of doctors in rural areas continues to fall. The proportion of elderly physicians in rural counties sometimes exceeds the percentage of elderly in the country's general population. This affects both the availability and the quality of care.

In Red Oak we have initiated a program which we believe will reverse the worsening of the physician-patient ratio, improve the quality and availability of rural health care, initiate community health programs, teach medical students and family practice residents in a rural setting, and provide a model replicable in other communities who desire to achieve the same goals in their areas.

Ours is a private practice assisted by community effort and aided in the teaching and model aspects of the program by funds from the Kellogg Foundation. Two of us in private, solo general practices joined in establishing a group family practice. We adopted problem oriented medical records and relocated in a new medical office building adjacent to the local hospital. We established a satellite office in Malvern with a population of 1,200 20 miles away. We employed a family nurse practitioner who worked both in the central office and the satellite. The community actively recruited board certified family practitioners to join our group.

Within 1 year we had employed three such physicians. Red Oak had been unsuccessful in attracting any new young family practitioners since I came there in 1953. One of the new doctors joined us in July 1975 and the other two in July 1976. Our family nurse practitioner has since retired from practice for personal reasons and we are actively recruiting another physician extender at the present time. While she was in our employment we were dismayed to find that the Federal Government was imposing a major obstacle to the use of physician extenders.

Reimbursement Disallowed

Medicare refused to allow reimbursement for physician extenders' services provided in the absence of direct supervision—that is, the physical presence—of the employing physician. This makes it impossible to utilize either a physician's assistant or a nurse practitioner in an efficient and meaningful way to improve the availability of health care in rural areas.

Senator, I am aware of your efforts to direct this problem, at least in relation to the family nurse practitioner. Iowa's medicaid-medicare carrier has successfully induced HEW to include at least some of the 40 or so physician extenders employed in the State in a Social Security Administration contract study with the University of Southern California. When approved those physicians employing the physician extenders as part of the experimental study program may be reimbursed. Approval has been extremely slow and, as of my latest information, none were yet receiving reimbursement unless it was stated that the physician was present at the time of service. If the Federal

Government is truly interested in finding ways to improve the availability of quality health care in rural America, reimbursement should be available when State license and practice standards are met.

Although our program in Red Oak is in its infancy, we are encouraged by its acceptance in the community. Our successes and failures will serve as guideposts to other communities in their efforts to provide better health care. Evaluation studies are being developed to measure the impact it has on the health and well-being of the citizens it serves. Because of the age distribution of our area's population, a significant percentage of them will be among the rural elderly.

Senator CLARK. Thank you very much. I know that this program that you are developing there has been a particularly enlightening one and we enjoyed hearing about it. If you have any additional information, details, or material that ought to be made a part of the record about the center, we would be very, very pleased to have those as well.

Dr. FICKEL. I would appreciate the opportunity to submit a written report [1] in the next few weeks, Senator.

Senator CLARK. Good.

What can be done, Dr. Fickel, to promote the physician-extender concept around the State? Should the Federal or the State help? Could they be of some help by giving training, or is that not practical? In other words, what can be done to extend or to encourage physician extenders to go to the very rural areas? Are there any circuit-riding programs, or the like? Do you have any ideas about what might be done?

RESULTS MUST BE DEMONSTRATED

Dr. FICKEL. I think that to demonstrate that it works is probably the greatest tonic. As you know, six Iowa nurses went through a program at the University of North Dakota. I was preceptor for one of them. They have come back to Iowa to practice in the employment of physicians here. In Iowa, under State law, any physician extender must be employed by a physician, which I think is quite proper to provide quality health care. But proving that these will work and that they can provide service without sacrificing quality, I really think is the answer. Then we are going to have a need for funds in training large numbers of them, because I think there is a definite need and we believe that it is a very sound concept.

Senator CLARK. Thank you very much.

I notice that the hour of 12 o'clock has arrived and I know that they want to use this room to serve lunch. Thank you very much for coming and I particularly thank the witnesses that have testified. I am very pleased to have George Orr here who is the new executive director of the Iowa Commission on Aging. I thought we got a good bit of information from the panels that was very valuable to the committee.

I thought in particular the testimony in the first panel, the two ladies that talked about transportation—talked about some other problems, too, but particularly transportation—was helpful, as well as Mr. Willis Sprunger who spoke particularly about the Plaza—the housing area—and what that has meant to people who live there. Mr. Goeldner spoke about the very excellent example that we see in Earlham where they started, I guess, about 12 or 14 years ago to really

[1] Not received at time of publication.

begin to work in homes with homemaking, home health care nursing visits, transportation, meals-on-wheels—or I should say congregate meals in this case—all of the programs that they were able to develop in this kind of rural community.

We also, of course, were very pleased to have Woody Morris here who knows so very much about these programs and hear his point, particularly about the necessity for these Federal programs to deal with accessibility—not just the fact that we have got the programs, but whether or not anybody can get to them or whether they can get to the people one way or the other.

Then, also, this last panel. I particularly enjoyed Mr. Pals' talk about what you can do with a small amount of money in terms of the winterization program—the number of homes—300 some, I think you said—you were really able to help with a fairly small amount of money. Then Mrs. Forsyth, whom you have just heard, and the things that they have done here in the development, not only of a multipurpose center for so many things, but now also the development of this kitchen so that meals can be prepared right here. We also appreciate your testimony as well, Dr. Fickel. It has been very valuable to us.

We are going to go on over and hold hearings this afternoon in Ottumwa starting about 1:30 or 2 o'clock. So we are going to continue to hear various views. I think we are hearing that the major problem still seems to be lack of funds; that is to say, financial. I am speaking about an individual having enough money. The figures that you gave, and particularly Dr. Fickel, show that about 40 percent of the rural elderly are living below the level of poverty, and that is a distinguishing figure.

I think the accessibility of medical care which Dr. Fickel talked about still is obviously a problem in rural areas. We have seen the success of nutrition programs—the kind of program that we are going to take advantage of here, if I quit talking—and transportation which seems to mean so very much in rural areas, the housing, and the community center. We have started on all these things and they are very, very important, but we have got a long way to go.

Thank you very much for coming.

[Whereupon, at 12:12 p.m., the hearing was recessed.]

APPENDIXES

Appendix 1

MATERIAL SUBMITTED BY WITNESSES

ITEM 1. MAGAZINE ARTICLE AND BROCHURE SUBMITTED BY L. R. GOELDNER[1]

[From *Aging*, U.S. Department of Health, Education, and Welfare publication, dated November 1963]

A SMALL TOWN ORGANIZES BASIC SERVICES FOR ITS AGING

Earlham, Iowa, 30 miles west of Des Moines, is a farming community with a small central business district surrounded by pleasant homes in wide lawns. Earlham boasts a bank, one restaurant, an automobile dealer, a clinic, a school with a fine new addition, a weekly newspaper, and a farmers cooperative. The farmland around the town is rich and productive, except where the farms have been displaced by three gravel quarries.

Earlham is a pleasant place to live, and the people of Earlham are forward-looking and interested in improving their community. But Earlham is a small town. Only 800 people live there, only 2,000 in the entire school district, and 15 to 17 percent of these people are elderly. As in rural communities across the Nation, the percentage of the older population is higher than in most cities.

Many small American communities have thought of doing something for their older people, but most of them have felt too small or too poor. But Earlham went ahead with its plans and, in doing so, it made itself a model for community action.

As *Aging* goes to press, the Earlham Care program, initiated July 1, 1963, has already started the following activities: (1) Homemaker service; (2) Handyman service; (3) Activity center; (4) Counseling service; (5) Transportation within the community; and (6) Meals-on-wheels.

Care is planning to start friendly visiting and a telephone service this fall, and it has a visiting nurse available.

FIRST STEPS IN COMMUNITY ACTION

A group of Earlham citizens, calling themselves the Earlham Community Development Committee, started meeting informally to discuss the town's future. Earlham, they felt strongly, was a good place to live and they could build on this asset by making it an even better place. Among the things mentioned were greater services for the older people in the community.

In the spring of 1962, two members of the committee contacted the town's ministerial association with the request that the ministers secure the backing of the nine churches in town for a nursing home project. By fall, the association had decided on a thorough investigation and appointed a committee of three ministers to make a study of nursing homes and to report with definite recommendations.

By the end of 1962, the three ministers were almost ready to make their report and to recommend that funds be raised for a 25-bed, nonprofit nursing home. But, at that point, they contacted the State Department of Welfare in Des Moines. There they received suggestions on other services which might be of benefit to the elderly, and they were urged to talk to Amelia Wahl, Kansas City Regional Representative on Aging for the U.S. Office of Aging.

[1] See statement, p. 7.

DEFINITION OF NEEDS

In early January 1963, Miss Wahl and Mrs. Virgie Love of the Madison County Welfare Department met with members of the development committee and the ministerial association. At this meeting, they discussed such basic services as homemaking and home nursing care, and made plans for a survey to learn what services the elderly population needed and wanted.

By March, Earlham had a survey form ready. It asked such questions as: Do you like living in Earlham? Would you participate in an activity center if one were made available? Do you feel a nursing home is needed in Earlham?

Many of the questions were preceded by a statement explaining a particular service, for example: "Some communities provide services to help persons stay in their own homes as long as possible. They have available persons who do part-time meal preparation, grocery shopping, and some housekeeping. These programs are called homemaker services. Do you feel this kind of program is needed in Earlham?"

Thus, the survey not only produced usable information but also began the community education that was necessary before the program would be accepted. The local weekly helped by carrying stories on the survey and its purpose, and it was the weekly that called for volunteers to conduct the survey.

On March 28, the 41 people who had volunteered to act as interviewers met at the Methodist Church for a short training session conducted by Miss Wahl. During the following week, 331 people in the district who were 60 years of age or older were interviewed and their responses recorded.

APPLICATION FOR GRANT

Earlham now had the information it needed to develop a realistic program for its older people. The idea of eventually building a nursing home in the town was not abandoned, but the concept had changed slightly. When the nursing home is built, it will probably be in conjunction with the Earlham Activity Center and, possibly, with housing for senior citizens.

With the data from the survey and the help of people at the State and regional level, a proposal was developed for an Earlham home care program and submitted to the Iowa State Department of Health. The proposal included a statement of objectives, a description of the way the program will be administered, the resources available, and the services proposed. The proposal stated that the "program was being set up on a demonstration basis for an anticipated 5 years dependent upon the availability of funds to support it." It also mentions the plans for a nursing and custodial facility which will become the headquarters for both the home care program and the activity center.

Fortunately for Earlham, not all of the State formula grant funds had been committed in Iowa. These funds are allotted to all States by the Division of Chronic Diseases of the Public Health Service, U.S. Department of Health, Education, and Welfare, to be used for just such local programs. A sum of $21,000 from the Iowa funds was approved for the Earlham program.

EARLHAM CARE PROGRAM

Shortly after Earlham was notified that the proposal had been approved at the State level, the Earlham care program was incorporated and a program director was elected by the board of four officers and five members. Final approval of the project by the regional office of the Public Health Service in Kansas City was received on July 1 and the program started to operate in a temporary office next to the bank. By the time the permanent office and the community activity center were ready for occupancy, several services were already in existence.

In late August, a short institute was held to train future homemakers for the program, with speakers from the Polk County Home Care-Homemakers Service, the Des Moines Health Center, the Iowa State Department of Health, the Public Health Nursing Association, and the Iowa Heart Association. Six housewives had volunteered to do this work and three were employed almost immediately.

The elderly people using the homemakers services are billed by the care program which, in turn, pays the homemakers. The program operates as a clearinghouse, receiving requests and referring them to qualified people.

A handyman service, operated on the same basis, has proved very popular. Although one handyman is available—and two boys who mow lawns—the Care office has received so many requests it could use another man. The handyman replaces lightbulbs, makes small repairs, and is available to put up storm windows before winter comes.

One of the members of the Care board is a graduate nurse, and she is on call to visit the homes of elderly invalids.

Arrangements have been made with the local retirement home to provide meals-on-wheels.

The Care office has already been helpful in counseling elderly people on financial problems, and it also serves as an employment service, recciving requests for part-time help and helping those who desire jobs to find employment.

Earlham is off the regular route for buses going into Des Moines and efforts are being made to remedy this situation. In the meantime, an arrangement has been made with an elderly retired man, who owns a car, to furnish transportation within the town.

On Sunday, September 15, Care held an open house at the new office and activity center. A total of 135 attended the function and many others dropped in during the following week. The center will provide space for parties, programs, and table games.

A shuffleboard court has been constructed across the street, and many of the elderly men of Earlham are busy each day from 9 to 12 and from 2 to 5 playing shuffleboard, with time out in the middle of the day for lunch and a rest.

FUTURE PLANS

The future of the Earlham Care program depends on Earlham. The county welfare department is happy to see such programs as home care, homemakers service, and meals-on-wheels underway in the community. It is cheaper to pay fees for these services for recipients of old-age assistance and medical assistance for the aged, than it is to pay for nursing home services. Sooner or later Earlham may also initiate foster home care.

This fall, again with the help of the ministers, the Care program will begin a friendly visiting program. Plans are also being made for a telephone service or some other communication system for keeping in touch with those among the elderly who are ill or unusually frail. Regular contact with these people, especially if they live on isolated farms, can often prevent a tragedy. When there is no answer to a regular call, someone will investigate at once.

MODEL FOR OTHERS

Any demonstration project is designed to show how something will work. The Earlham Care program had already demonstrated one thing even before it started operating on July 1—the importance of community planning and the steps to be taken in introducing such a program. On a small scale, Earlham's program is a model for community planning.

Earlham's effort can make other communities realize that they, too, can do more than they have, that they have available resources of their own, as well as resources at the State and even Federal level, which are still untapped. But other communities may not be so fortunate as to find that, at almost the end of the fiscal year, the State department still has uncommitted funds. People in these communities should start working now toward their goals and contact their State health department as soon as they have an understanding of their needs and a plan for meeting them.

Furthermore, in many States, welfare departments may also, under the 1962 public welfare amendments to the Social Security Act, obtain demonstration funds for local programs.

For information on how these funds may be used, write to your State health or welfare departments or to your State commission on aging. For further information on the Earlham Care program, write to John R. Carson, program director, Earlham, Iowa.

[1966 brochure]

EARLHAM HOME CARE PROGRAM

(A pilot project for Earlham and Dexter communities)

What is the Care Program?

The Care program is a concerted effort of the community to extend a helping hand to the aged and chronically ill residing within Earlham, Dexter, and the surrounding communities.

Existing Services:

1. Homemaker service.
2. Visiting nurse service.
3. Handyman service.
4. Transportational system.
5. Friendly visitation and telephone visitation.
6. Meals-on-wheels.
7. Employment and counseling service.
8. Intercommunication system.
9. Community center.

Who Are the Homemakers?

Each homemaker is a mature, competent woman, carefully chosen for good health, dependability, and homemaking ability. She has had a professional training course.

Responsibilities of a Homemaker:

Homemakers shall assist the family in maintaining a cheerful, relaxed home environment enabling them to live in their own homes as long as possible.

The homemaker will perform household tasks such as light routine cleaning, preparing meals, caring for patients, marketing, and other similar tasks.

Visiting Nurse Service:

A visiting registered nurse acting under the supervision of one's own physician will make home calls as prescribed by their doctor.

Handyman Service:

Handymen put on storms, screens, rake or mow yards, etc. Fee based on type of work and time involved. This has proved to be of invaluable assistance for people within the community.

Transportation Service:

Transportation in town is 25¢ one way or 7¢ a mile out of town.

Friendly Visitation and Telephone Visitation:

This volunteer service by individuals or church groups within the communities helps shut-ins realize someone cares.

Meals-on-Wheels:

Balanced and/or special diets are available through meals-on-wheels.

Employment and Counseling Service:

As a courtesy service to the community, the office assists employers secure personnel, and job-seekers to find employment.

The office is happy to assist in counseling such subjects as insurance, social security, financing, etc. Your problems are confidential to this office.

Intercommunication Service:

An intercommunication system is available upon request.

Community Center:

Citizens are invited to visit and enjoy the facilities available in the community center located within the main office building. Please feel free to enjoy its comforts.

Requests for Service and Who Pays?

Earlham is proud to welcome the Dexter community in their program effective April 1, 1966.

Home care services are available to all senior citizens and the chronically ill.

Earlham, Dexter, and their communities may request services through their physicians, nurses, social and health agencies, and individuals by personal contact or by dialing 4341, Earlham, Iowa, or after office hours, 4711 or 2471.

All personnel are paid by the care office. No money is to be exchanged between the personnel and the patient.

All financial arrangements are made prior to commencement of services. If funds are not available, efforts to obtain assistance will be made by the office.

All charges are billed to the responsible parties monthly. All payments are to be made to the care office.

Hours Available:

Except for emergency situations, when special rules will apply, the general homemaker services will be available 5 days a week, 10 hours a day, Monday through Friday. Part time services are also available.

ITEM 2. ADDITIONAL INFORMATION SUBMITTED BY LOUISE FORSYTH[1]

WELCOME TO WINTERSET

(From the staff of the Multipurpose Center, 114 North 2d Street, Winterset, Iowa)

Through the courtesy of the Welcome Wagon, we would like to tell you about some of our activities and invite you to enjoy them with us.

We have activities for most age groups and hope to get more going soon. Most of our activities are for the senior citizens—those over 60.

To give you an idea of what we are all about, here is a list of things going on at the center regularly:

The ceramics class meets on Tuesday afternoon at 1:30 p.m. (The regular ceramics class is limited to those over 60. There are a few that are interested in cold ceramics and we have a gal in town who is willing to give some instruction. This group will be open to all ages.)

The kitchen band is one of our most active projects. It is under the direction of Gertrude Shoemaker. They practice at the center and entertain at the nursing homes, at the covered bridge festival every fall, and anywhere else they are invited to entertain as long as it is within a reasonable distance.

On the second and fourth Tuesdays of each month, the social security representative is at the center from 9 a.m. until noon.

Wednesday: A representative from the Care office at Earlham, Iowa, is here at the center from 9 a.m. until 12 noon. Care provides homemaker/home health aides for the aged and infirm in their own homes; the acute and chronically ill, the disabled and lonely, children, and entire families at times of illness in the home. This service is available countrywide.

On Wednesday afternoon the class for the handicapped meets at 1:30 p.m. Mrs. Pearl Flint is in charge of the planning end of this class and oversees the volunteers in executing the program. She is always in need of people to volunteer their help with this activity—one of becoming involved and acquainted in a new community.

Thursday: The needlecraft class meets at 1:30 p.m. Our teacher, Mrs. Peggy Taylor, can teach you a new skill or help with an individual problem.

Friday: On the first and third Friday afternoons of each month the Young-in-Heart Card Club meets to play pitch. Anyone over 60 that enjoys playing cards is welcome to come and join the fun.

On the second Friday of each month the Golden Years Club meet for a potluck meal and a program. In the winter, they meet at 12:30 p.m.; during the rest of the year, they meet in the evening.

On the fourth Monday of each month the Sixty-Plus Club meets at 1:30 p.m. for an afternoon program, bingo, and refreshments under the direction of Mrs. George Montross and Beulah Mundell.

On Monday evening and Tuesday evening from 4 to 5 p.m. we are having a needlework and craft class for fifth and sixth graders. They will be learning to knit and crochet first and other skills and crafts later as time goes on. These classes going on now have mostly girls enrolled but we will be setting up some classes for boys if there is enough interest.

Other services originating from the center are the shopping carts and bookmobile to the nursing homes. Every Tuesday and Friday mornings the clothing room is open. There is a variety of good, usable clothing available just for coming in. We also appreciate donations of good, used clothing.

We provide an information and referral service to the community as far as our knowledge and time will allow.

The staff at the center would like to again say "Welcome to Winterset." We will be happy to assist you in solving any problems that come within our area of service and invite you to come in and take part in any of our activities that interest you.

HERB FLINT,
Director.
LOUISE FORSYTH,
Assistant Director.
BEULAH MUNDELL,
Outreach Worker.

---

[1] See statement, p. 27.

NUTRITION MEALS FOR THE ELDERLY

A nutrition program for persons 60 years of age and older, and their spouse, started in Madison County, Iowa, in November, 1973. A good, hot, nutritious meal is provided at the multipurpose center in Winterset at 11:30 a.m. Monday through Friday. Cost of the meal is on a sliding scale—pay what the meal is worth to you. Reservations should be made in advance, either with Esta Bishop (462-1620) or the multipurpose center (462-4704).

Here is a sample of some of the menus served recently:

Creamed chicken on biscuits, mashed potatoes, buttered corn, cole slaw, and peaches.

Fish with tartar sauce, mashed potatoes and gravy, buttered peas, lettuce salad, and vanilla pudding.

Minishrimp, mashed potatoes and gravy, buttered peas, bean salad, and fruit cocktail.

Coffee, milk, and juice and bread and butter are served with each meal.

The meal is served by the site coordinator, Esta Bishop, and at least two volunteer helpers here at the center. Come and enjoy a good meal and companionship. Make new friends.

For further information, contact Terese Brittain, project director, at the multipurpose center (462-4704).

Madison County, Iowa, has a total population of 11,558. Out of this number we have the largest percentage of people over 60 of any county in the State.

There are 2,631 persons aged 60 and over in the county; 1,329 of these people have incomes below the poverty level.

If we stay in existence, we hope to take some kind of count right here in Winterset to determine approximately how many people living here are over 60 years of age.

The following is a partial copy of facts taken from our quarterly report to Matura for the months from December 1, 1973 through January 31, 1974:

Volunteers (number of people and total hours worked):

Nutrition program—18 women working a total of 445½ hours (this is not counting the women and hours worked from the other sites in the county serving nutrition meals (Earlham, Truro, and St. Charles).

	People	*Hours*
Shopping carts to nursing homes	29	260
Clothing Room (2 mornings a week)	18	272
Bookmobile	10	32
Kitchen band	27	432
60 Plus Club	44	176
Golden Years Club	18	54
Young-in-Heart Card Club	24	24
"500" Card Club	6	6
Friendly Visitor	1	36

Nutrition meals (average attendance per week) 68.3

Other projects and meetings and estimated attendance:

GED—80 people have gotten diplomas in the past 4 years.

Needlecraft Classes (12 meetings) average attendance 6.

Sign Language Class (8 meetings) average attendance 17.

Ceramics Class (7 meetings) average attendance 6.

Estimated number of people attending other meetings such as Boy Scouts and Cub Scouts, Hospital Guild, card clubs, etc., 309.

Total number using some facility of the center or attending a meeting here—1,363.

Total number of volunteers in all programs	219
Total number of volunteer hours	1,923

113 different families or individuals visited the clothing room—some more than once for a total of 246 visits in the three month period. Each of these times those people came in they found some item or items of clothing that they could use. All the clothing is donated.

Madison County title III transportation costs from February 3, 1975 through August 31, 1975, and other interesting data. Number of people served during this period:

18 Madison County handicapped.

15 Polk County handicapped—residing at Horton's Custodial Home or a foster home in Winterset.

1 Wapello County handicapped—residing at Horton's Custodial or a foster home in Winterset.
3 Dallas County handicapped—residing at Horton's Custodial or a foster home in Winterset.
167 other individuals.

Total number of miles driven from February 3 to August 31, 1975, is 12,830. The van is averaging 10 miles per gallon of gas.

ACTIVITIES BY AND FOR THE AGING THROUGH THE MULTIPURPOSE CENTER IN WINTERSET, IOWA

(1) Sixty-Plus Club—average attendance 120.
(2) Golden Years Club—average attendance 50.
(3) "Young-in-Heart" Card Party—average attendance 30.
(4) "500" Card Club—average attendance 12 to 15.
(5) Truro "Guys & Gals" Club—average attendance 25.
(6) St. Charles Seniors—average attendance 25.

AARP meets at the center once a month (has a membership of over 125 Madison County people). Center director assisted with organizing group and occasionally assists with programs.

(7) Earlham Care Homemaker Service: A representative is at the center every Wednesday morning and they hold their training classes at the center.
(8) Earlham Sixty-Plus Club: We work with this group.
(9) Ceramics classes and workshop (the kiln is owned by the center).
(10) Needlecraft of all types.
(11) Employment Service: The ISES representative is no longer here every week but we make referrals when we can and received job lists from the ISES office in Des Moines.
(12) Rockhound Club: No longer meets at the center but they began under the center's wings.
(13) Clothing room is maintained at the center and staffed by volunteers two mornings a week. (The volunteers are recruited and schedules made up by Betty Berry, outreach worker for the center.)
(14) Shopping cart to nursing homes.
(15) Bookmobile cart in nursing homes. (Items 14 and 15 are also staffed by volunteers recruited and scheduled by Mrs. Berry.)
(16) Big print songbooks.
(17) Big print Scriptures.
(18) Talking book machines.
(19) Big print books.
(20) Monumental park project.
(21) Senior citizens festival.
(22) Toys-for-tots.
(23) Friendly visitors.
(24) Antique show at covered bridge festival.
(25) Antique sale at covered bridge festival.
(26) Hobby show at covered bridge festival.
(27) The center is open for use as a comfort station both days of the covered bridge festival—coffee and cookies are on tap and interesting wood carvings are on exhibit.
(28) Trips to points of interest—art center, science center, Perry Conservation Park, Red Rock Dam, State fair every year, hobo day at Britt, Iowa, and many more.
(29) Programs and demonstrations on clothing and food for the elderly.
(30) Bread project—this project was discontinued with the closing of the Goode Bakery but is worthy of note. Mr. Goode bakes small loaves of bread—just the right size for a person alone.
(31) Campaigned for low-rent housing for the elderly—successfully. We now have 43 units operating as North Ward Plaza.
(32) Programs for and in nursing homes.
(33) Golden voice choir.
(34) Kitchen band (men and women) average two performances a month (25–30 senior citizens—most of whom are past 70 years). Hillbilly Band. All senior citizens.
(35) Attempted to cooperate with every agency, both governmental and voluntary, that can aid the elderly of our county.

(36) Meals-on-wheels—meals are prepared by the hospital and delivered by volunteers coordinated by Mrs. Lee (Peggy) Taylor.
(37) Nutrition meals (title VII)—these are meals served each weekday at the center. Anyone over 60 may participate, regardless of income.
(38) Classes in sign language and lip reading—have had three classes (all ages included).
(39) Transportation—we are working with CIRALG and any other agencies available to see what we can accomplish.
(40) Entries in arts festival.
(41) High school equivalancy classes—we have had 6 classes with 20 per class. Also one basic education class where four people completed the course that could not read or write.
(42) Class of handicapped people (from Horton's Custodial Home and others in the county).
(43) Young mothers group.
(44) Boy Scout Troop No. 114. Cub Scout Pack No. 114 meet at the center at this time. When there was a Webelos Pack, it met here.
(45) Lending library (mainly paperbacks)—extensively used.
(46) Administered the N.Y.C. program, Head Start, and GYOP and summer recreation program for 8 to 12 year olds.
(47) Helped dropouts.
(48) Started (helped) hospital guild—they still have an occasional meeting and their bazaar here.
(49) Representative from WINN is here every week.
(50) Recruiters for the Army and Air Force are here every week.
(51) Polling place.
(52) Groups who meet regularly at the center:
(a) M.C.A.R.C.
(b) Red Cross.
(c) American Cancer Society.
(d) N.F.O.
(e) Farm Bureau ladies' guest day.
(f) Health planning council.
(g) Girls softball meeting.
(h) Republican caucuses and meetings.
(i) Democrat caucuses and meetings.
(j) Goodwill pickup station.
(k) Classes for knitting and crocheting (for fifth and sixth graders).
(l) Showers, receptions, reunions, parties (December is already book-full for reunions and family dinners).

In the future:

(1) To acquaint more of the people living and working in Madison County of the center (for both young and the elderly) and also some of the problems of our area as concerns the elderly/particularly.
(2) Transportation—increased use in the city of Winterset and countywide.
(3) Workshop for the arthritic, elderly, and handicapped in cooperation with the extension office.
(4) Get more things going for the youngsters in the way of crafts, sewing, etc.
The equipment to operate the center and equipment materials effectively is all here: tables, chairs, the public address system (which was designed especially for the building by Fred Kuntz), game tables, and equipment.
Greater involvement by the youth of the community in recognizing and meeting its needs.

SUMMARY OF CAR RECORDS, NOVEMBER 29, 1974, THROUGH DECEMBER 30, 1975

Receipts:	
Donations from clubs, churches, and service organizations	$864.00
Participants (people who ride) donations	852.71
Trash and treasure sales and food sales	196.11
City of Winterset	1,025.00
Total	2,937.82

Expenses:		
Driver		2,225.50
Gas and repairs		541.75
Miscellaneous		25.00
Total expenses		2,792.25
Balance		145.57
Grand total		2,937.82
Unduplicated people that rode in car		140
Unduplicated handicapped people that rode in car		24
Total number of trips (one-way)		2,773
To congregate meals	1,012	(37 percent)
For shopping	280	(10 percent)
Doctor or dentist	111	(4 percent)
Recreation	232	(8 percent)
Center class and challenge center	233	(8 percent)
Other, miscellaneous	259	(9 percent)
Trips of pickup congregate meals	550	(20 percent)
Errands for senior citizens	95	(4 percent)
Trips relating directly to congregate meals		(57 percent)
Miles driven from November 29, 1974, through December 30, 1975 (according to my figures, this is about 53 cents per mile, or about $1 per person)		4,956

This car is a 1968 Bel Air Chevrolet which was purchased in May 29, 1974, to be used to provide support for the nutrition program. Since this car was purchased, it has been driven 9,474 miles. Practically all of them within the city limits of Winterset.

Appendix 2

LETTERS FROM U.S. DEPARTMENTS AND AGENCIES

ITEM 1. LETTER FROM WILLIAM B. PRENDERGAST, ASSISTANT, DIRECTOR FOR CONGRESSIONAL AFFAIRS, ACTION, WASHINGTON, D.C.; TO SENATOR DICK CLARK, DATED JULY 27, 1976

DEAR SENATOR CLARK: Thank you for your June 21, 1976 letter that advised ACTION of the intent of the Senate Special Committee on Aging to conduct field hearings in Iowa, Nebraska, and South Dakota in August. We welcome this opportunity for the committee to see firsthand some of the results of the Older Americans Volunteer Programs and other ACTION programs in the communities where the volunteers serve.

For ease of reference the questions contained in your letter are answered below in the same order as received:

Question (1). What is the official definition of a rural area in your agency?

Answer. ACTION is guided by the definition used by the Bureau of Census, with the result that communities with fewer than 2,500 inhabitants are regarded as rural.

Question (2). Do you agree with the designation—as in Administration on Aging programs—that an "older American" is of age 60 or over?

Answer. In our three older American programs, we accept as volunteers only those aged 60 or over. This standard has been set by Congress in P.L. 93-113, the Domestic Volunteer Service Act, which provides the statutory authorization for these programs. None of these programs has the statutory requirement that the recipients of services be older Americans; however, we try to maintain this as the principal thrust of the Senior Companion Program.

Question (3). How many Foster Grandparent, RSVP and Senior Companion programs are currently operating in each of the three States mentioned above; what are the locations and sponsoring agencies for each; how long has each project been in operation; what is the total volunteer enrollment for each; and what are the current total program obligations of Federal funds provided through ACTION for each project?

Answer. Note: Current Federal funding is for 1-year budget period unless otherwise indicated.

Project sponsor and location	Project beginning date	Volunteers (as of July 1, 1976)	Current Federal funding
IOWA

Question (*4*). Are there any VISTA projects or special volunteer projects serving the rural elderly in each of these three States? If so, can you provide a description of project activities and goals; sponsoring agency and location; number of elderly served; and current total Federal program obligations for each?

Answer. Note: In Fiscal Year 1976, the average Federal cost in direct payment to each VISTA volunteer was $4,470. This figure should be added for each volunteer in addition to the other support costs indicated.

Sponsoring agency and location	Number of elderly served and description of project	Current total Federal program obligations
IOWA		
VISTA:		
Commission on Aging, Des Moines.	4 VISTA's serving 600 rural elderly (with potential to 1,500)—increase awareness programs for the elderly to improve nutrition and health and raise income.	
Voluntary Action Center, Cedar Rapids.	1 VISTA serving 300 rural elderly—food stamp program awareness and Telecare.	$1,200 for volunteer transportation.
Iowa Western Community College, Council Bluffs.	4 VISTA's serving 3,500 rural elderly—identify health needs of senior citizens in 8 counties for health education and related courses.	$2,400 for volunteer transportation.
Mid-Sioux Opportunities, Inc., Remsen.	1 VISTA serving 1,500 rural elderly working with Meals on Wheels; transportation for the elderly and Telecare.	$500 for transportation contract on GSA car.
Volunteer Bureau, Waterloo	1 VISTA serving 30 rural elderly encouraging them to participate more fully in their communities through voluntarism.	$1,410 for volunteer transportation.
Minigrant: Mid-Sioux Opportunities, Inc., Remsen.	Coordinate volunteer opportunities for 15,995 persons over age 60 in 5 counties.	$2,275.
NEBRASKA		
VISTA:		
Center for Rural Affairs, Walthill.	4 VISTA's serving 180 rural elderly—establish Co-op food stores and provide information on agricultural issues.	$6,112 for volunteer transportation.
Nebraska Indian Inter-Tribal Development Corp., Winnebago.	2 VISTA's serving 120 rural elderly providing legal assistance to Indians.	$11,136 for volunteer transportation. $19,686 for volunteer supervision (both for 16 mo).
SOUTH DAKOTA		
VISTA: Northeast South Dakota CAP, Sisseton.	1,300 elderly low income in rural areas in fields of consumer education, health and nutrition, transportation, arts, crafts, referrals.	$3,000 for volunteer supervision and $2,000 for volunteer transportation.

Question (*5*). In addition to the information requested above for the Senior Companion program, can you supply the committee with a description of the volunteer settings and the number of elderly served by each of the Senior Companion programs in these three States?

Answer. As indicated above, there currently are no operating Senior Companion projects in the three States where the initial field hearings are to be held. It is contemplated that one Senior Companion project each will be funded in Iowa and Nebraska in the near future.

Question (*6*). Has your agency been unable to fund any grant applications from these three States for RSVP, Senior Companion, or Foster Grandparent programs during the last two years, and if so, how many?

Answer:

IOWA

Foster grandparents:

Cedar Rapids.

Clinton.

Ottumwa.

Senior Companions: Council Bluffs.

NEBRASKA

RSVP:
Columbus.
Kearney.
Loop City.
Seward.
Foster grandparents:
Kearney.
Loop City.

SOUTH DAKOTA

RSVP: Yankton.
Senior companions: Sioux Falls.

It is hoped that this information will be beneficial to the hearings. Please let us know if we can be of further assistance.

Sincerely,

WILLIAM B. PRENDERGAST.

ITEM 2. LETTER FROM FRANK B. ELLIOTT, ADMINISTRATOR, FARMERS HOME ADMINISTRATION, WASHINGTON, D.C.; TO SENATOR DICK CLARK, DATED JULY 15, 1976

DEAR SENATOR CLARK: This will reply to your letter concerning Federal programs for the elderly. You specifically requested information about the rural housing program of the Farmers Home Administration (FmHA) to be used at the Special Committee on Aging hearings which will be conducted in Iowa, Nebraska, and South Dakota.

We will answer the questions you asked in the order they were presented:

(1) Rural areas. Because of the nature of some of the FmHA programs, we have more than one definition for a rural area. They are as follows:

(*a*) The official designation of a "rural area" as it relates to the rural housing program follows:

> Section 520 of the Housing Act of 1949, as amended, states, "As used in this title, the term 'rural' and 'rural area' mean any open country, or any place, town, village, or city which is not part of or associated with an urban area and which (1) has a population not in excess of 2,500 inhabitants, or (2) has a population in excess of 2,500 but not in excess of 10,000 if it is rural in character, or (3) has a population in excess of 10,000 but not in excess of 20,000, and (A) is not contained within a standard metropolitan statistical area, and (B) has a serious lack of mortgage credit, as determined by the Secretary of Agriculture and the Secretary of HUD." Attachment 1* is a copy of the definition of rural areas as it apears in FmHA Instruction 444.1.

(*b*) The official definition of a rural area under the business and industrial loan program is that " 'rural' and 'rural area' may include all territory of a State, the Commonwealth of Puerto and the Virgin Islands, that is not within the outer boundary of any city having a population of 50,000 or more and its immediately adjacent urbanized and urbanizing areas with a population density of more than one hundred persons per square mile, as determined by the Secretary of Agriculture according to the latest decennial census of the United States: *Provided*, that special consideration for such loans and grants shall be given to areas other than cities having a population of more than twenty-five thousand." This definition is also applicable to industrial grants of the community programs.

(*c*) As it relates to community programs, with the exception of "industrial grants" to the terms "rural" and "rural area" shall not include any area in any city or town having a population in excess of 10,000 inhabitants according to the latest decennial census of the United States.

(2) For rural housing loan purposes, we define a senior citizen as an individual who is 62 years of age or older. This is in accordance with the provisions of section 501(b)(3) of title V of the Housing Act of 1949.

(3) Section 504 Rural Housing Repair Loans:

(a) From fiscal year 1965 through fiscal year 1975, we made 309 of these loans in Iowa; 54 in Nebraska and 99 in South Dakota.

---

*Retained in committee files.

(b) We do not have cumulative statistics on the number of these loans made to the elderly. Most section 504 rural housing loans, however, are made to elderly persons as an eligible borrower must be a owner-occupant with a very low income. Elderly persons use the loans to repair their homes.

(c) The outreach activities of the agency for the section 504 loan program include group information talks, agency representation at conventions and meetings with interested groups, such as church groups, issuance of information pamphlets, advertising the program through the local media, and publicity by other Federal agencies. The FmHA's delivery system, however, consists of approximately 1,760 county offices located primarily in county seat towns where housing loans are processed. This means that the local representative of the FmHA is located not too far from most rural residents.

(d) Reactivation of the grant portion of the 504 program would definitely make it more accessible to senior citizens. Many of those who would like to repair their homes do not have the resources and cannot afford to repay a housing loan.

(4) From fiscal year 1965 through fiscal year 1975 we made 791,305 section 502 rural housing loans, of which 33,415 were for senior citizens.

(5) Statistics on rental units provided for the elderly by rural rental loans. are only available for fiscal years 1972 through 1975. During that period, 2,675 out of 3,261 units in Iowa, 76 out of 292 units in Nebraska, and 685 out of 1,812 units in South Dakota were made available for senior citizens.

(6) Owner occupied and substandard housing:

(a) Information obtained from the 1970 Census of Housing shows that there are 279,296 owner occupied housing units in the rural area in Iowa, 131,307 units in Nebraska, and 83,655 units in South Dakota.

(b) We have no figures on the number of senior citizens living in substandard homes in Iowa, Nebraska, and South Dakota. The 1970 Census of Housing shows, however, that of the owner-occupied units in these three States, 39,671 homes in Iowa, 19,179 homes in Nebraska, and 22,879 homes in South Dakota lack some or all plumbing facilities.

(c) We have not defined substandard housing in our regulations, however, we consider homes without bath and plumbing facilities and overcrowded dwellings as being substandard. We have established the standards for an adequate but modest home and the requirements are contained in the following publications: HUD Minimum Property Standards (MPS) 4900–SFH; 4910.1 MFH; 4920.1 Care Type Housing, and; 4930.1 Manual of Acceptable Practices. The requirements contained therein, define the minimum level of quality acceptable in each specific condition. This, in addition to the appropriateness of the building site and the neighborhood, other minor considerations, and the acceptability of the property as a whole, determine an adequate home for loans from FmHA.

(7) A memorandum of understanding (see attachment 2*) on the use of section 8 of the U.S. Housing Act of 1937 and section 515 of the Housing Act of 1949 was signed by the Secretary of Agriculture and the Secretary of Housing and Urban Development (HUD) on June 23, 1976. In order to implement the program in compliance with the memorandum of understanding, both the FmHA and HUD must publish the required regulations to the field office; however, present instructions exist outlining the method for obtaining the combination of section 8 rental assistance payment program and section 515 loans in tandem.

The FmHA requires, in accordance with HUD minimum property standards, that FmHA financed rental projects as well as single family housing designed for senior citizens, include certain special architectural features to assist the elderly such as handrails for bathtubs, special lighting, minimum width halls to accommodate wheelchairs, nonabrasive walls and maximum gradient of 5 percent for driveways. FmHA housing regulations require that the location of rural rental projects designed for senior citizens be convenient to stores, medical services, churches and other facilities needed regularly by the occupants.

We appreciate your interest in our housing program and hope we have provided the information you requested.

Sincerely,

FRANK B. ELLIOTT.

---

*Retained in committee files.

ITEM 3. LETTER AND ENCLOSURE FROM WILLIAM. H. WALKER III, ASSISTANT SECRETARY, DEPARTMENT OF AGRICULTURE; TO SENATOR DICK CLARK, DATED AUGUST 3, 1976

DEAR SENATOR CLARK: This will reply to your letter concerning planned hearings to examine the effectiveness of certain Federal programs which serve older Americans in rural areas. While I am responsible, in the Department, for the operations of the Farmers Home Administration, the Rural Development Service and the Rural Electrification Administration, I believe, from the questions you asked as they relate to the FmHA's business and industry program, the Farmers Home Administration. The attachments provide answers to the questions you asked as they relate to the FmHA's business and industry program, the community programs and the rural housing programs.

We appreciate your interest in the Department's rural development activities.

Sincerely,

WILLIAM H. WALKER III.

[Enclosure]

RURAL HOUSING PROGRAMS

Questions answered in order asked:

(1) The official definition of a "rural area," as it relates to the rural housing program is as follows:

Section 520 of the Housing Act of 1949, as amended, states, "As used in this title, the term 'rural' and 'rural area' mean any open country or any place, town, village, or city which is not part of or associated with an urban area and which (1) has a population not in excess of 2,500 inhabitants, or (2) has a population in excess of 2,500 but not in excess of 10,000 if it is rural in character, or (3) has a population in excess of 10,000 but not in excess of 20,000, and (A) is not contained within a standard metropolitan statistical area, and (B) has a serious lack of mortgage credit, as determined by the Secretary and the Secretary of Housing and Urban Development."

Farmers Home Administration (FmHA) instructions, in defining rural area, basically repeat, in modified form, the above section 520 of the Housing Act of 1949, as amended. The FmHA instructions, based primarily on legislative history and other factors, also provides additional guidelines to the FMHA field staffs for making the necessary determination as to those areas which are rural and nonrural.

(2) All rural housing programs are available to Iowa, Nebraska, and South Dakota. Following is a list of the housing programs currently operating with the corresponding obligations, as of June 3, 1976, for fiscal year 1976. The rural housing programs are authorized in the Housing Act of 1949, as amended.

State and program	Number of loans	Funds obligated
Iowa—Sec. 502 (homeownership)	3,125	$56,937,980
Iowa—Sec. 504 (low-income home repair loans)	52	60,070
Iowa—Sec. 515 (rural rental housing)	113	14,441,120
Nebraska—Sec. 502 (homeownership)	1,534	32,306,600
Nebraska—Sec. 504 (low-income home repair loans)	4	6,830
Nebraska—Sec. 515 (rural rental housing)	3	307,950
South Dakota—Sec. 502 (homeownership)	1,342	24,393,890
South Dakota—Sec. 504 (low-income home repair loans)	12	30,250
South Dakota—Sec. 515 (rural rental housing)	52	6,411,440

(3) While there is no strong disagreement with the designation that an "older American" is of age 60 or older, the FmHA housing programs consider the "elderly" to be 62 years of age or older. This age designation goes back to the "Senior Citizens Housing Act of 1962" which specifically states the term "elderly persons" means persons who are "62 years of age or over." Furthermore, we believe the Social Security Administration and others have, for several years, used 62 years of age as the time a person becomes a senior citizen. We recommend that the age of 62 be used by all agencies as the time a person is considered to be elderly.

(4) All rural housing programs are available to the elderly. However, the three programs most widely used by that age group are the section 502 home ownership loans, the section 504 rural housing repair loans, and the section 515 rural rental housing loans. Following is a brief description of these housing programs.

OUTLINE OF RURAL HOUSING PROGRAMS—FARMERS HOME ADMINISTRATION

Type of assistance	Purpose	Terms	Who may qualify
Sec. 502—Rural housing loans (adequate housing).	To buy, build or improve or relocate homes and related facilities. To buy minimum adequate building sites. Also to refinance debts under certain conditions when necessary to help a family retain ownership of its home.	8½ percent interest for low- to moderate-income families. Eligible families may receive interest credits which may reduce the effective interest rates on the loan to as low as 1 percent. Up to 33 years to repay.	Low- and moderate-income families who lack adequate housing and related facilities and who will become the owner-occupants of a home in a rural area after the loan is closed; or a farmowner without decent, safe, and sanitary housing for his own use or for the use of his tenants, sharecroppers, farm laborers, or farm managers. Housing must be located in rural areas, i.e., any place which is not part of or associated with a nonrural area, is rural in character and has a population not in excess of 20,000.
Sec. 504—Rural housing loan.	To make minor repairs to homes to make them safe and remove health hazards to the family or the community.	1 percent interest and up to 20 years to repay. $5,000 limit.	Very low-income owner-occupants who do not have enough income to qualify for sec. 502 assistance. Applicant must be able to repay the loan.
Rural rental housing and cooperatively owned housing loans (secs. 515 and 521).	To build, improve, repair or buy rental or cooperatively owned houses or apartments that are economically designed and constructed for independent living. Eligible occupants must be low- to moderate-income families or senior citizens.	9 percent. Up to 40 yrs. except that projects for senior citizens may be up to 50 yrs. Loans to private nonprofit corporations, consumer cooperatives, State or local public agencies, and other nonprofit organizations will be limited to the development cost or the security value of each project, whichever is less. Loans to other applicants will be limited to 95 percent of the development cost or the security value of each project, whichever is less.	Private nonprofit corporations, consumer cooperatives, and State or local public agencies. Individuals or organizations operating on a profit basis, including those that agree to operate on a limited profit basis. Cooperatives owned, occupied and managed by eligible low- to moderate-income families or senior citizens.

(5) We are unable to keep a running account of the number of elderly persons under our housing programs. Data is not compiled to show the number of elderly people who satisfy their housing loans by payment in full or other methods and thereby graduate from the housing programs.

(6) The FmHA and HUD work together in many ways in an effort to provide housing for the elderly and others. Following is a list of some joint endeavors:

(*a*) On June 23, 1976, the Secretary of HUD and the Secretary of Agriculture signed a memorandum of understanding covering the combining of the FmHA section 515 rental housing loan and the HUD section 8 program. This is a way to provide subsidized rental housing in rural areas.

(*b*) The FmHA and HUD use the same minimum property standards (MPS). They work together, as needed in developing these standards.

(*c*) The FmHA utilizes and is a party to HUD's contracts with credit reporting agencies for the obtaining of credit reports.

(*d*) The FmHA and the Federal Insurance Administration of HUD worked together in the implementing of the Flood Insurance Protection Act of 1973.

(*e*) The FmHA and the Flood Disaster Assistance Administration (FDAA) of HUD have a memorandum of understanding permitting the FDAA to use FmHA inventory housing for disaster victims.

(7) We know of no way to accurately measure the current needs of the elderly for programs the Department administers in Iowa, Nebraska, and South Dakota. There is always a need for jobs, services, and better housing but statistical data is not available to enable us to answer this question in a responsible way.

COMMUNITY PROGRAM LOANS

Questions answered in order asked:

(1) FmHA is authorized to make loans for facilities for public use in rural areas and towns of up to 10,000 in population.

(2) See the following table:

	Iowa	Nebraska	South Dakota
Water and waste disposal loans	$91,773,103	$17,400,440	$28,820,990
Water and waste disposal grants	14,153,515	5,560,850	6,922,200
Community facility loans	3,868,000	1,500,000	2,566,000
Industrial development grants	784,900	368,000	423,800

(3) FmHA does not distinguish between elderly and nonelderly in administering its programs. However, we have no objection to the definition stated by the Administration on Aging.

(4) Funds may be used to construct, enlarge, extend or improve water, sewer and solid waste disposal systems, fire stations, libraries, hospitals, nursing homes, clinics, community buildings, recreation facilities, industrial parks and other community facilities that provide essential services to rural residents.

(5) FmHA does not distinguish between elderly and nonelderly in administering its programs. However, several nursing home projects have been funded in the three States mentioned.

(6) Not applicable.

(7) FmHA does not distinguish between elderly and nonelderly in administering its programs and has no specific information regarding the needs of the elderly.

BUSINESS AND INDUSTRIAL LOANS

The official definition of a rural area under the business and industrial loan program is that " 'rural' and 'rural area' may include all territory of a State, the Commonwealth of Puerto Rico and the Virgin Islands, that is not within the outer boundary of any city having a population of fifty thousand or more and its immediately adjacent urbanized and urbanizing areas with a population density of more than one hundred persons per square mile, as determined by the Secretary of Agriculture according to the latest decennial census of the United States: *Provided*, That special consideration for such loans and grants shall be given to areas other than cities having a population of more than twenty-five thousand."

Records indicate that under the business and industrial loan program, the following activity in each of the states from inception through June 30, 1976:

IOWA

Twenty-four loans amounting to $18,888,500 have been obligated. The projects that would provide services for the elderly that funds have been obligated for are one hospital and two nursing homes. The State Office is in the process of evaluating an additional nursing home application at the present time.

SOUTH DAKOTA

Twenty-two loans in the amount of $5,955,500 have been obligated. No specific projects that cater to the elderly have been financed. The community programs division has been able to fill this State's needs for the elderly for hospitals and nursing homes.

NEBRASKA

Six loans amounting to $4,740,000 have been obligated. The community programs division has been able to fill this State's needs for the elderly for hospitals and nursing homes.

We are unable to forecast the need for additional hospitals and nursing homes and do not have any data on the number of elderly in Iowa, Nebraska, and South Dakota.

ITEM 4. LETTER FROM SAMUEL R. MARTINEZ, DIRECTOR, COMMUNITY SERVICES ADMINISTRATION, WASHINGTON, D.C.; TO SENATOR DICK CLARK, DATED AUGUST 10, 1976

DEAR SENATOR CLARK: Thank you for your recent letter concerning the field hearings on the rural elderly that you plan to conduct during August in Iowa, Nebraska and South Dakota.

We are pleased to provide you with the information you requested from the Community Services Administration. Our Headquarters response is being coordinated with the CSA Region VII and VIII Offices that administer programs

in Iowa, Nebraska and South Dakota, respectively. Our answers have been provided in the same sequence as your questions.

(1) CSA defines a rural Community Action Agency (CAA) as one that serves an area in which the household population is 50 percent or more "rural," based on the definition of the Bureau of the Census. If an area is less than 50 percent "rural" and contains no place with a household population of 10,000 or more, it is classified by CSA as "rural," too.

(2) CSA's legislation defines an "elderly poor American" as one who is 60 years of age or older, except in one section of the Headstart, Economic Opportunity, and Community Partnership Act of 1974. Section 223 of that Act uses age fifty-five (55) years and older for employment purposes and employment opportunity "as regular, part-time and short term staff in all component programs."

(3) The CSA funds 18 CAA's in Iowa, 9 CAA's in Nebraska and one statewide CAA in South Dakota. The geographical areas covered by each CAA or delegate agencies and the number of agencies having elderly service components are being provided to your office by the CSA Region VII and VIII offices.

(4) The description of services being provided to the elderly poor by the CAA's in the aforenamed States, the number of elderly served, and the level of funding in fiscal years 1975 and 1976 are also being provided to your office by our regional offices. Additionally, descriptions of information and referral and outreach services which assist the elderly in the more rural areas are being included in the regional reports.

(5 and 6) The answers to these two questions will be reports provided by our regional offices.

(7) The CSA and the Congress have long recognized that the needs and the provision of services to assist the elderly poor cannot be met alone by the CAA's and SOS projects with their limited resources. Instead, CSA sees as its mission and function at the local, State, and Federal levels to be a catalytic agent which generates and mobilizes other sources of funding and to be of assistance in the formation of coalitions of agencies and joint funding efforts which meet the growing and unmet needs of our Nation's elderly poor. The Congress of Seniors Organizations located in South Dakota, is a good example of how we see the CSA best using our limited funding resources to assist the elderly poor.

(8) The President's budget for fiscal year 1977, included a request for the SOS program in the amount of $10 million. In the light of both the administration and the congressional budgetary ceilings, it does not seem practical at the present time to support a higher congressional appropriation for the SOS program. To a certain extent all of the programs funded and administered by CSA benefit older poor citizens, for our goal is to enhance the opportunities and lives of all the poor. However, because of the increasing and special needs of the elderly poor, CSA is supporting a number of research and action projects which we hope through their implementation and replication will diminish the impact of poverty on their lives.

(9) As you know, the CAA programs are designed exclusively for the poor as a whole, whereas the SOS programs focus on the elderly poor. Basically speaking, SOS programs provide the elderly poor with another means of obtaining information and assistance. While AoA's congressional mandate is to be responsible for programs for all the elderly poor in the Nation, CSA uses the SOS program through its CAA network to provide service delivery programs to the elderly poor. For example, in cases of emergencies or national disasters, SOS programs provide the means to meet the personal and special needs of the stricken elderly poor.

(10) We believe the ultimate value of our SOS program has been to improve the quality of life for individual elderly poor men and women, and we thank you for giving CSA an opportunity to express our effort to help them.

Sincerely,

SAMUEL R. MARTINEZ.

ITEM 5. LETTER AND ENCLOSURE FROM FAYE G. ABDELLAH, SPECIAL ASSISTANT TO THE UNDER SECRETARY, HEW; TO SENATOR DICK CLARK, DATED JULY 16, 1976

DEAR SENATOR CLARK: The enclosed report is in response to your request that our office assist the Special Committee on Aging in preparing for field hearings on the status of rural, older Americans in Iowa, Nebraska, and South Dakota by providing information on several federally funded programs in those States. The report was formulated with the collaboration of Mrs. Helen Lazenby and

Mr. Bruce Edemy of the Social Security Administration and Dr. Jerry Solon of the National Institute on Aging.

I trust that this information is sufficient for your current needs. Please do not hesitate to contact this office in your future preparations for hearings in other States.

Sincerely yours,

FAYE G. ABDELLAH.

[Enclosure]

(1) *Question.* What is the official definition of a rural area in your agency?

Answer. For purposes of classifying the older population by place of residence, this office accepts the definition of a rural area as utilized by the Public Health Services' National Center for Health Statistics (NCHS) in its 1971 National Health Survey. The NCHS definition geographically separated the population into persons residing in urban areas, inside a standard metropolitan statistical area (SMSA), and persons residing in rural areas, outside a SMSA. The U.S. Office of Management and Budget considered two primary steps of factors in establishing the boundaries and titles of SMSA's: First, a city or cities of specified population which constitute the central city and identify the county in which it is located as the central county; second, economic and social relationships with contiguous counties which are metropolitan in character.

(2) *Question.* Do you agree with the designation—as in Administration on Aging programs—that an "older American" is of age 60 or older?

Answer. Depending upon the program area involved, we believe the answer to this question may be either yes or no. In service administration or benefit programs, such as the Administration on Aging, the Social and Rehabilitative Services, and the Social Security Administration, it may become necessary to select an age at which eligibility for services or benefits begin. When, for example, legislative or administrative authority dictates that services are to be made available only to a population, specifically defined by age, the operating agency must accept and adhere to a prescribed definition. In the research and policy development areas, however, a greater flexibility in formulating concepts about age is permissible and desirable. Thus, in the latter areas, a sensitivity to the invalidity of choosing one time at which old age begins is important, and the term "older American" may take on a functional definition in which the individual is defined with reference to physical, physiological or mental capacities.

(3) (a) *Question.* How many persons in these three States are receiving long-term care services under the Medicare program?

Answer. Information was obtained on the number of admissions to skilled nursing facilities (SNF's) under the Medicare program during 1974 and 1975. Since Medicare for long-term care patients covers only services in a SNF and coverage may not be extended past 100 days for any one admission, we believe the following information presents a fairly accurate picture of the actual numbers of persons in long-term care facilities in the three States who received Medicare reimbursement.

State	Total number medicare enrollees	SNF admissions
1974:		
Iowa	362,613	3,934
Nebraska	191,170	2,239
South Dakota	84,407	815
1975:		
Iowa	365,076	3,943
Nebraska	192,971	2,219
South Dakota	85,294	679

(3) (b) *Question.* How many persons are receiving reimbursable home health services under the Medicare program in these States?

Answer. Since 1971 the Social Security Administration (SSA) has not tabulated information on the numbers of persons receiving reimbursable home health services under the Medicare program. The most relevant information attainable from SSA, in response to your question, pertains to the total number of bills paid for home health services under title XVIII, part A, hospital insurance, and part B, medical insurance, during 1974 and 1975 and to the number of bills paid for every thousand Medicare enrollees. This information does not reflect the actual number of persons receiving home health services, since one individual may have been responsible for more than one bill. The following statistics were provided:

State	Total aged enrollees	Total home health service (bills paid)	Home health services per 1,000 enrollees (bills paid)
1974 HOSPITAL INSURANCE (PART A)			
Iowa	362,613	29,653	82
Nebraska	191,170	18,428	96
South Dakota	84,407	5,505	65
1974 MEDICAL INSURANCE (PART B)			
Iowa	357,458	17,570	49
Nebraska	187,042	13,048	69
South Dakota	82,688	3,578	43
1975 HOSPITAL INSURANCE (PART A)			
Iowa	365,076	41,701	114
Nebraska	192,971	27,593	143
South Dakota	85,294	6,425	75
1975 MEDICAL INSURANCE (PART B)			
Iowa	360,405	22,903	64
Nebraska	189,940	14,483	76
South Dakota	83,723	3,405	41

(3) (c) *Question.* Can your office provide the Committee with a listing of home health agencies and day care centers for the elderly in these States, particularly those serving rural areas?

Answer. A list* of the home health agencies in Iowa, Nebraska, and South Dakota is attached. However, the Department of Health, Education, and Welfare's only responsibility, to date, for funding day care centers has been through Section 222(b) of P.L. 92-603 which authorized expenditures of monies for demonstration projects, none of which is located in Iowa, Nebraska, or South Dakota.

ITEM 6. LETTER AND ENCLOSURE FROM ARTHUR S. FLEMMING, COMMISSIONER ON AGING, HEW; TO SENATOR DICK CLARK, DATED JULY 17, 1976

DEAR SENATOR CLARK: This is in response to your inquiry of June 22, 1976 in which you asked me to prepare a summary on rural areas and the effectiveness of certain Federal Programs for the States of South Dakota, Iowa, and Nebraska.

To answer your first question concerning the official definition of a rural area, the Administration on Aging issued IM-73-28, April 16, 1973 to the State agencies on aging as a guideline to determine a sparsely populated rural area. This guideline said in part:

"If the project area of an award has boundaries essentially coterminous with those of any community (city, town, borough, village, etc.), whether incorporated or unincorporated, that has a population of less than 2,500 such project area may be considered a sparsely populated rural area. However, if an award is made to an area larger than such community and the average population density of the whole project area is less than 100 persons per square mile, then such project area may also be considered a sparsely populated rural area. However, if such larger project area contains one or more communities having a population greater than 2,500, then, the elderly outside of those communities must be served at least in proportion to their numbers within the entire project area."

The responses to the remaining questions are contained in the attached chart.

If I can be of any further assistance please do not hesitate to contact me.

Very sincerely and cordially yours,

ARTHUR S. FLEMMING.

[Enclosure]

*Retained in committee files.

RURAL AREA AGENCIES, TITLE VII AND MODEL PROJECTS

Questions	South Dakota	Iowa	Nebraska
1. Percent of area agencies located in rural areas	Single PSA [1]	50 percent	66 percent.
2. Geographical area these area agencies are mandated to serve	Total State	59 percent (58 counties)	29 percent (27 countries).
3. Elderly served by these agencies in rural areas	66,007	225,000	61,000.
4. Areas within State not served by area agency	The total State is covered because it is a single planning and service area.	No rural areas are denied coverage.	The complete State is considered rural and at present do not cover 43 percent of the elderly.
5. Total number of nutrition projects located in rural areas	12	6	7.
6. Total sites operated by rural nutrition projects	24	81	46.
7. Total number of elderly served by these sites	2,166	26,461	6,943.
8. Percentage of meals served by these sites which are home delivered	18 percent	9 percent	14 percent.
9. Number of projects which allow food stamps for congregate or home delivered meals	H.D.—7; Cong.—7.	H.D.—6; Cong.—7.	H.D.—7; Cong.—7.
10. Number of rural areas within the State which have requested a nutrition project, but denied because of lack of funding	None	None	None.
11. Number of AOA model projects funded	None	1	1.
12. Special outreach and/or information and referral operations	80 percent of elderly have access to I. & R.	100 percent of elderly have access to I. & R.	65 percent of elderly have access to I. & R.
13. State programs related or coordinated with Older Americans Act	Transportation, title XX.	Transportation	Transportation.
14. The effectiveness of South Dakota as a single planning and service area	It is not feasible at this time to ascertain the effectiveness of the single agency operation in meeting the needs of older persons in rural areas. An adequate response to this question would require an extension evaluative study. It is, however, the experience of the Administration on Aging that the effective administration of programs under the Older Americans Act in a State designated as a single planning and service area is dependent upon the characteristics of the State and its older population. Serving older persons in rural areas is emphasized both in States that are designated as a single planning and service areas and in those where there are planning and service areas with area agencies on aging. Therefore, each request by a State for designation as a single planning and service area must be reviewed on its individual merits. Primary consideration is given to the size of the State, its topography, the size and distribution of elderly population as well as to capacity of the State agency to administer the program. This latter factor, State agency capacity, is often a major consideration when assessing the effectiveness of one structure versus the other. All these factors and their interrelationship are weighed when considering whether the single planning and service areas with area agencies on aging is the most effective means of meeting the needs of the older persons in the State. The framework for this perspective is based upon sec. 301 of the act and on the intent of Congress as explicated in the reports of the Senate Committee on Labor and Public Welfare and the House Committee on Education and labor.		

[1] Single planning and service area has 1 area agency which has responsibility for the complete State.

Note: Special significance to rural elderly. Iowa—Project provides a means of part-time employment for the 60-plus person. Nebraska—Project provides for the winterizing of homes.

ITEM 7. LETTER AND ENCLOSURE FROM M. KEITH WEIKEL, COMMISSIONER, SOCIAL AND REHABILITATION SERVICE, HEW; TO SENATOR DICK CLARK, DATED JULY 27, 1976

DEAR SENATOR CLARK: I was pleased to learn in your June 23 letter about the forthcoming hearings scheduled for August by the Special Committee on Aging in Iowa, Nebraska, and South Dakota.

In your letter you requested specific information concerning the Medicaid programs in these States as they might affect the rural elderly population. Each of these questions is addressed in detail below.

What is the official definition of a rural area in your agency?

Although Social and Rehabilitation Service/Medical Services Administration has not officially adopted a definition of rural areas *per se*, we are essentially in agreement with that developed by the Office of Rural Health Initiatives (HEW/HSA). This office defines rural areas as those geographical areas which are not included within a standard metropolitan statistical area, i.e., under 50,000 persons or are not listed as an urbanized area or as unincorporated places in the current *County and City Data Book*, tables 4 and 5 (U.S. Department of Commerce).

Do you agree with the Administration on Aging (AoA) designation that an "older American" is of age 60 or older?

Congress has mandated that for a person to be eligible for Medicaid, he must be 65 or over and either be receiving "old-age cash assistance" or, in those States having medically needy programs such as Nebraska, fall within a financial range not to exceed 133 percent of the States welfare income limits. Age 60 or older as the basis for dispensing AoA grants in no way conflicts with these requirements.

How many persons in each of these States are eligible for Medicaid? How many of these are elderly? How many in rural areas? Could the committee be provided with descriptions of each State's Medicaid plans?

Current Medicaid eligibility data is not routinely available from the States although figures collected for a recent special study by the HEW regional office indicate that in fiscal year 1976 the total number of eligible in Iowa and Nebraska were 138,776 and 56,437, respectively. Of these the number of aged eligibles in Iowa was 6,695 and in Nebraska, 12,293. The most reliable figures for South Dakota is an unduplicated *recipient* count for fiscal year 1975 which totaled 41,966 persons with 11,540 of these elderly.

No information is presently available on the number of Medicaid elderly living in rural areas of these States. Enclosed is a current summary of Medicaid services by State which describes in general the scope of benefits offered in each State.

I hope this information is useful to you during the hearings and if we can be of additional support as they progress, please feel free to contact me.

Sincerely yours,

M. KEITH WEIKEL.

[Enclosure]

MEDICAID SERVICES STATE BY STATE,

JUNE 1, 1976 1/

* BASIC REQUIRED MEDICAID SERVICES. Every [illegible] must cover at least these services for at least everyone [illegible] outpatient hospital services; other laboratory and X-ray services; [illegible] services for individuals 21 and older; early and periodic screening, diagnosis, and treatment [illegible] under 21; family planning, and physician services. Federal financial [illegible] available [illegible] to expand their Medicaid programs by covering additional services and/or by [illegible] people eligible for medical [illegible] not for financial assistance. For the latter group States may offer the services required for financial assistance recipients or may substitute a combination of seven services.

Services provided only under the Medicaid [illegible] and treatment program for individuals under 21 are not [illegible] on this chart.

Definitions and limitations on eligibility and services vary from State to State. Details are available from local welfare offices and State Medicaid agencies.

● offered for people receiving federally supported financial assistance

+ offered also for people in public assistance 2/ and SSI 3/ categories who are financially eligible for medical but not for financial assistance

Additional services for which Federal financial participation is available to States under Medicaid:

FMAP 4/	BASIC* REQUIRED MEDICAID SERVICES SEE ABOVE	State	Clinic services	Prescribed drugs	Dental services	Prosthetic devices	Eyeglasses	Private duty nursing	Physical therapy and related services	Other diagnostic, screening, preventive and rehabilitative services	Emergency hospital services	Skilled nursing facility services for patients under 21	Optometrists' services	Podiatrists' services	Chiropractors' services	Care for patients 65 or older in institutions for mental diseases	Care for patients 65 or older in institutions for tuberculosis	Care for patients under 21 in psychiatric hospitals	Institutional services in intermediate care facilities

Intermediate Care Facilities (ICF): P.L. 92-223 transfers the ICF program to Medicaid (Title XIX) as an optional service, effective 1-1-72. States may at their option include institutions for the mentally retarded, both public and private. See footnote five.

1/ Data from Regional Office reports of characteristics to State programs and State plan amendments.
2/ People qualifying as members of families with dependent children (usually families with at least one parent absent or incapacitated).
3/ People qualifying as aged, blind, or disabled under the Supplemental Security Income program.
4/ FMAP - Federal Medicaid Assistance Percentage: Rate of Federal financial participation in a State's medical vendor payment expenditures on behalf of individuals and families eligible under Title XIX of the Social Security Act. Percentages, effective from July 1, 1975, through June 30, 1977, are rounded.
5/ Including ICF services in institutions for the mentally retarded.

UNITED STATES DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE — Social and Rehabilitation Service — Medical Services Administration

Division of Program Monitoring

(SRS)-76-24801*

ITEM 8. LETTER FROM ROBERT FULTON, ADMINISTRATOR, SOCIAL AND REHABILITATION SERVICE, HEW; TO SENATOR DICK CLARK, DATED JULY 28, 1976

DEAR SENATOR CLARK: Thank you for your letter of June 22 on behalf of the Special Committee on Aging requesting information about Federal programs for older Americans in rural areas. Please accept my apology for the delay in responding.

You ask specific questions concerning programs in Iowa, Nebraska, and South Dakota. In response to your first question, this agency has no official definition of a "rural area." Since title XX is a Federal-State program that is State administered or supervised, States decide what services will be offered in the dif-

ferent political subdivisions according to the specific needs in those areas. In other words, rural areas reflect rural interests, urban areas reflect urban interests.

Contrary to the Administration on Aging, this agency, under the titles of the Social Security Act, classifies an "older American" as one who is age 65 or older.

States are not required to accumulate and report precise data on age breakdowns of social service recipients. However, for your upcoming committee hearings, I requested staff in the Social and Rehabilitation Service Denver and Kansas City Regional Offices, to compute rough estimates regarding the percentage of title XX funds that are used for social services for the aged. In Nebraska, approximately 16 percent of the title XX funds are used for services to the aged; in South Dakota, 11 percent and in Iowa, 15 to 20 percent.

All three States provide the following title XX services to Supplemental Security Income recipients: health related programs, home management services, meal programs, and transportation services. Nebraska also provides adult day care services.

Title XX programs are coordinated with programs under the Older Americans Act through joint working agreements between the State title XX agencies and the State commissions on aging. This allows the agencies to work closely together when determining the needs of the aged and the programs that will be provided. In South Dakota, the State Office on Aging is under the umbrella of the State title XX agency. Therefore, South Dakota sees no reason to sign a joint working agreement.

Revisions to section 228.61 of the title XX regulations allow the States to establish any method or methods, including income declaration without documentation, when determining title XX eligibility. Nebraska and South Dakota require income documentation while Iowa requires only declaration of income.

I trust this information is helpful to your committee. Please let me know if I may be of further assistance.

Sincerely,

ROBERT FULTON.

ITEM 9. LETTER FROM LOUIS M. HELLMAN, ADMINISTRATOR, HEALTH SERVICES ADMINISTRATION, HEW; TO SENATOR DICK CLARK, DATED AUGUST 11, 1976

DEAR SENATOR CLARK: This is in further response to your letter of June 22 requesting information about the Health Services Administration's (HSA) role in serving the elderly in rural areas.

Within HSA there are several programs which serve rural areas, including the health maintenance organization (HMO), the emergency medical services (EMS), the community health centers (CHC), the migrant health, the national health service corps (NHSC), the health underserved rural areas, and the home health programs. Health service delivery programs for rural areas are coordinated through the Public Health Service's (PHS) rural health initiative (RHI) under the guidance of a PHS-wide rural health coordinating committee. The RHI is an administrative effort combining existing health resources of the Department to improve the delivery of health care to health underserved rural areas.

We shall respond to the specific questions you asked in the order presented to us in your June 22 letter.

(1) HSA has explored and is using several definitions of "rural." The RHI initially defined rural as nonstandard metropolitan statistical area (non-SMSA) counties. Data subsequently received from the Department of Agriculture indicates that approximately 38 percent of the rural population live in SMSA counties. Accordingly, we reviewed the definition we used for rural, i.e., non-SMSA, and found that it would be more appropriate to define rural as non-SMSA *or* those areas not listed as urbanized areas *or* unincorporated places (places having 25,000 or more inhabitants) in the *County and City Data Book 1972*, tables 4 and 5, U.S. Department of Commerce, Bureau of the Census, Social and Economic Statistics Administration, Washington, D.C. 1973.

HMO regulations published in the *Federal Register*, October 18, 1974, defines a rural area as any area not listed as a place having a population of 2,500 or more in Document #PC (1)–A, "Number of Inhabitants," table VI, "Population of Places," and not listed as an urbanized area in table XI, "Population of Urbanized Areas" of the same document (1970 Census, Bureau of the Census, U.S. Department of Commerce).

The EMS program defines rural areas as those areas other than urbanized areas as defined by the Bureau of the Census.

Enclosed for your information is a copy of a paper* prepared by HSA in September 1974 which examined several other definitions of rural in use.

(2) The Older Americans' Act title VII (nutrition program) requires that beneficiaries be "60 and over." Title III of the same act, however, requires that for the purposes of planning, each State should determine the age of an older person in accordance with a thorough needs assessment. Our position is that each State should determine the age in accordance with need. Farm area residents have higher incidences of chronic disability conditions, therefore, if by lowering the age (e.g., 55) individuals would have better access to health care through transportation systems, sponsored by the Administration on Aging (AoA), we would support that action. By intervening at the beginning stages of a chronic disability there is both a cost savings and slower development of disease progression. Nebraska has determined that an older person is "55" because of certain disabling conditions and is eligible to participate in a transportation system to health facilities authorized by the State AoA agencies.

(3) The NHSC assigns health professionals to critical health manpower shortage areas (CHMSA's) rather than to medically underserved areas (MUA's). Designations of CHMSA's for the States of Iowa, Nebraska, and South Dakota are enclosed. Also enclosed are lists of areas designated as MUA's. These designations are used by the CHC and HMO programs.

The PHS NHSC scholarship program was established in 1974 and the first recipients eligible for placement were assigned this year. Twenty-two scholarship recipients have been available for placement nationally through the NHSC. The remainder of the scholarship recipients who have completed their training have been assigned through the Bureau of Health Manpower and the Indian Health Service. One scholarship recipient has been placed in Faulk County, S.Dak., through the NHSC. It is estimated that 149 scholarship recipients will be available in 1977 for placement in NHSC designated CHMSA's, and this number will continue to grow as more of the recipients complete their education. The NHSC's placement of health professionals is not limited to recipients of scholarships. In addition to the physician placed through scholarship obligations in South Dakota, three M.D.s and one nurse practitioner (N.P.) were recruited and assigned to South Dakota. Also, five M.D.s and one physician extender (P.E.) were recruited and assigned to shortage areas in Iowa. The NHSC has only the one nurse practitioner serving within the three States at the present time. She is assigned to Onida (Sully County), South Dakota, and is working with a NHSC physician. Many nurse practitioners are employed by communities, however, we do not have any statistics available on such paraprofessionals. The NHSC assignees are as follows:

Iowa: 1 M.D. in Eldora County, 1 M.D. in Lyon County, 1 P.E. in Lyon County, and 3 M.D.s in Tama County.

South Dakota: 2 M.D.s in Faulk County (includes the scholarship assignee), 1 M.D. in Sully County, 1 N.P. in Sully County, and 1 M.D. in Roberts County.

(4) Iowa received $45,000 for a planning grant in fiscal year 1975 under section 1202 of P.L. 93–154 (the Emergency Medical Services Systems Act of 1973). This planning project covered a population of 339,000 (253,000 rural and 86,000 urban) in the northwestern part of the State. The 1976 appropriations for P.L. 93–154 stated that if a State and/or locale had not received monies in fiscal year 1975 under either section 1203 or section 1204 those locales were ineligible for fiscal year 1976 implementation monies. The lack of funding under these sections in 1975 precluded the operational funding of this region in fiscal year 1976. It is estimated that 42,000 or 12.4 percent of the population in this region are age 65 and over.

Nebraska has received 2 years' funding for grants under section 1203 of P.L. 93–154, fiscal year 1975, $1,236,836 and fiscal year 1976, $1,547,391. These grants cover EMS regions comprising 80 percent of the State's population and 60 percent of its land area. Of the land area covered, 80 percent of the area is rural to wilderness. The rural population in this federally funded EMS region totals 443,030 of which 65,952 (14.9 percent) are over 65. Current data being obtained from EMS facilities in Nebraska reflects only time-patient loading characteristics. Age is not now being collected for usage, but a standard ambulance form will be introduced this year which will report age of utilizing patients.

*Retained in committee files.

South Dakota received $90,000 for planning grants in fiscal year 1974 under section 1202 of P.L. 93–154. Two additional grants under section 1203 have been awarded, fiscal year 1975, $556,484 and fiscal year 1976, $714,519. These two operational grants cover 100 percent of the State and its population. Ninety-two percent of the State is estimated to be rural, 21.1 percent of the population are over 65, 55 percent of the population is classified as rural and 18 percent of the population actually live on farms. It is estimated that 42,000 rural elderly have access to the Federal service programs.

(5) At the present time the names and locations of operational or developmental HMO's in the three States mentioned are:

Iowa: None.

Nebraska: Community Health Care Association, Lincoln; Missouri Valley Group Health, Inc., Omaha.

South Dakota: Health Care, Inc., Mitchell; Rosebud Sioux Tribe, Rosebud; Western South Dakota, Rapid City.

(6) HSA has not conducted a total health needs assessment for the elderly, however, our home health program has made an assessment as to those counties within your investigation area that *do not* have home health services. It is the intention of the Under Secretary to hold regional public meetings on the status of home health care in five cities (New York, Atlanta, Chicago, Dallas, and Los Angeles) as to the needs of the chronically disabled and the elderly.

We have also enclosed for your information a list of health service delivery projects presently being supported by programs administered by the Bureau of Community Health Services, HSA.

Copies of this correspondence are being forwarded to Holman R. Wherritt, M.D., Regional Health Administrator in our Kansas City Regional Office, and to Hilary H. Connor, M.D., Regional Health Administrator in our Denver Regional Office, so they will be aware of your interest. If they can be of further assistance to you in your field hearings, their addresses are: Holman R. Wherritt, M.D., Regional Health Administrator, Department of Health, Education, and Welfare Region VII, 601 East 12th Street, Kansas City, Mo. 64106, 816–374–3291; Hilary H. Connor, M.D., Regional Health Administrator, Department of Health, Education, and Welfare, Region VIII, 19th and Stout Streets, Denver, Colo. 80202, 303–837–4461.

If we can be of further assistance, please let us know.

Sincerely yours,

LOUIS M. HELLMAN.

ITEM 10. LETTER AND ENCLOSURES FROM JAMES B. CARDWELL, COMMISSIONER OF SOCIAL SECURITY; TO SENATOR DICK CLARK, DATED AUGUST 27, 1976

DEAR SENATOR CLARK: With further reference to your inquiry of June 23, I am enclosing some material relevant to the questions which you posed in your letter.

(1) While the Social Security Administration does not officially define an area as urban or rural, we can indicate the rural status of counties by using census data (see table C). Residents of less populated areas are served by contact stations on specified days of the month. Toll-free lines are also available and district offices have a liberal policy on accepting collect telephone calls.

(2) Information for items 2(a), 2(b), and 2(c) are shown in the enclosed tables C, D, and E, respectively. While we do not know the number of beneficiaries residing in rural areas, we show in table C a breakdown of the number of beneficiaries by the rural status of the counties in which they reside. (For detailed county data on beneficiaries, see enclosed tables A and B for Iowa, Nebraska, and South Dakota.)

(3) Information for items 3(a), 3(b), 3(c), and 3(d) is shown in the enclosed table F, which summarizes information shown in the enclosed table 4, the research and statistics note No. 8, and the advance release of supplemental security income (SSI) data—March 1976. We do not have information with respect to item 3(e). We are referring your letter to the Social and Rehabilitation Service of the Department of Health, Education, and Welfare for any information which they may have with regards to this item.

(4) Information with respect to the medicare program is as follows:

(*a*) Tables 4.a.1–4.a4 show enrollment and utilization data for both the hospital insurance (part A) and the supplementary medical insurance (part

B) programs, and by aged (65 and over) and disabled. Data on enrollment are shown, as of January 1, 1975, in table 4.a.1. Table 4.a.2 shows the number of part A admissions to inpatient hospitals and skilled nursing facilities (SNF's) in fiscal year 1975, with a separate breakout for persons with chronic renal disease (CRD) who are under 65 years old but are not qualified as disabled under medicare. (These people are covered under medicare on the basis of their chronic renal disease only.) The number of admissions may be greater than the number of persons served since a person may have more than one admission to a health care facility. Table 4.a.3 shows the number of home health agency (HHA) visits for fiscal year 1975. Table 4.a.4 gives the approximate number of persons aged 65 and over using all types of part B services for calendar year 1974 by metropolitan and non-metropolitan area of residence. (Such a breakdown is not available for disabled persons.)

(*b*) With reference to your question on physician assignment rates under medicare, the physician decides on a case-by-case basis whether or not to accept assignment. He may submit assigned claims for one type of service and not another, for one patient and not another, or for a patient or service on one occasion and not on another. The percentage of physicians who accept assignment is unknown. However, the percentage of claims assigned is shown below. Assignment rate data is available only on a part B carrier basis. (A carrier is a health plan administering medicare part B on local level.) In the case of the three States in question, one carrier serves each State in its entirety (Iowa-Blue Shield, Nebraska-Mutual of Omaha, and South Dakota-Blue Shield). The available data do not permit a rural-urban breakdown.

Percent of claims assigned	Iowa	Nebraska	South Dakota
Total	41.0	41.8	38.8
Net [1]	34.9	37.6	32.6

[1] Excludes claims made by hospital-based physicians and group prepayment plans (GPPP's).

(*c*) Currently there is no reliable data on payments made to paramedical personnel (physician extenders). These people work under the direct supervision of a physician who submits claims for medicare reimbursement on their behalf. The physician is under no obligation to identify them or how much of his total reimbursement they are receiving. A program experiment, not as yet fully operational, has begun, whereby physicians who agree to participate in the experiment will begin identifying their physician extenders, the services they render, and the amount they are reimbursed by him. All claims for medicare payments will still be made by the supervising physician under his identification number. As of April 1976, there were 10 physicians' practices in Iowa which have shown interest in the experiment, 3 in Nebraska, and 5 in South Dakota.

(*d*) As of December 1975, data regarding the number of health care facilities participating in medicare for the three States are as follows:

	Iowa	Nebraska	South Dakota
Part A:			
Inpatient hospitals	173	123	60
Beds	17,293	9,828	3,511
SNF's	32	16	10
Beds	921	1,014	326
HHA's	64	12	21
Independent labs	14	7	6
Outpatient physical therapy	1	.....	.....
Part B.—Groups, clinics: [1]			
General practice groups	53	1	31
Clinics [2]	32	1	2
Group practice prepayment plans	.....	.....	.....

[1] Number of groups is approximate since a group may have more than 1 identification number. (These numbers are assigned by carriers.) For example, a group or clinic with more than 1 office or branch may have a separate ID number for each location. Also, the figures here represent only those groups or clinics which have received medicare reimbursement.

[2] A clinic is a group of physicians with at last 2 specialties.

We are unable to provide you with separate data on health care facilities in "medically underserved" areas. However, you may wish to contact Dr. Daniel F. Whiteside, Director, Bureau of Health Manpower, Public Health Service, for any information that he may have available. His address is: National Institutes of Health, Room 5C02, 900 Rockville Pike, Bethesda, Md. 20014.

You may also be interested in several publications which contain data on health resources availability. These are:

(1) *Health Resources Statistics—1975*, Public Health Service, Health Resources Administration, National Center for Health Statistics, Rockville, Md. 20852.

(2) *Distribution of Physicians in the United States, 1973*, vol. 1, region, State, county; vol. 2, metropolitan areas; American Medical Association, Center for Health Services Research and Development, 535 N. Dearborn Street, Chicago, Ill. 60610. (This publication includes data on counties with no active physician in patient care.)

I hope this information will help to satisfy your needs.

Sincerely yours,

JAMES B. CARDWELL,
Commissioner of Social Security.

[Enclosures]

TABLE C.—ALL BENEFICIARIES AND THOSE AGED 65 AND OVER FOR IOWA, NEBRASKA, AND SOUTH DAKOTA, BY RURAL STATUS OF COUNTY OF RESIDENCE, END OF 1975

Rural status of county of residence [1]	All beneficiaries	Those aged 65 and over
Iowa:		
All counties	470,003	341,195
Counties which are:		
100 percent rural	47,001	35,822
50 percent or more rural but not 100 percent	180,753	134,699
Under 50 percent rural	242,249	170,674
Nebraska:		
All counties	241,168	178,058
Counties which are:		
100 percent rural	49,104	38,410
50 percent or more rural but not 100 percent	55,380	42,387
Under 50 percent rural	136,684	97,261
South Dakota:		
All counties	113,364	80,344
Counties which are:		
100 percent rural	39,055	28,640
50 percent or more rural but not 100 percent	13,704	9,531
Under 50 percent rural	60,605	42,173

[1] Based on Census Bureau classification.

TABLE D.—SOCIAL SECURITY OFFICES IN IOWA, NEBRASKA, AND SOUTH DAKOTA, 1976

	Iowa	Nebraska	South Dakota
District or branch offices	21	10	6
Contact stations [1]	99	67	68
Institutional contact stations [1]	8	4	0
Enterprise toll free lines [2]	22	10	0
WATS lines	0	1	0

[1] A contact station is a space in some local government or other office which serves as a social security office on a prearranged number of days during the month.

[2] All offices have a liberal policy on accepting collect telephone calls.

TABLE E.—ESTIMATED AVERAGE MONTHLY BENEFIT AMOUNTS FOR SPECIFIED BENEFICIARY GROUPS IN IOWA, NEBRASKA, AND SOUTH DAKOTA

Beneficiary group	December 1975	June 1976
Iowa:		
Retired worker without dependents	$197	$212
Aged couples	345	370
Aged widow	197	212
Nebraska:		
Retired worker without dependents	194	208
Aged couples	335	360
Aged widow	194	208
South Dakota:		
Retired worker without dependents	184	198
Aged couples	314	338
Aged widow	187	201

TABLE F.—SUPPLEMENTAL SECURITY INCOME (SSI) RECIPIENT DATA

	Iowa	Nebraska	South Dakota
Recipients of federally administered SSI payments, June 1976:			
Total	28,943	15,823	8,803
Aged	15,807	8,193	5,332
Monthly amount of State supplementation:			
Individuals	$55.20	[1]	[1]
Couples	$54.20	[1]	[1]
Living arrangements of aged recipients, March 1976 (percent):			
Owns households	80.1	80.0	82.2
Another person's household	9.2	7.3	8.3
Medicaid institution	10.7	12.7	9.5
Recipients receiving concurrent OASDI benefits, December 1975:			
Total	17,400	8,800	5,100
Aged	12,500	6,200	3,900
Recipients living in nonmetropolitan areas, December 1974 (percent):			
Total	NA	NA	NA
Aged	74.6	72.8	91.3

[1] No State supplementation.

TABLE 4A–1.—ENROLLMENT AS OF JAN. 1, 1975

	Iowa	Nebraska	South Dakota
HI and/or SMI:

ITEM 11. LETTER FROM JAMES L. YOUNG, ASSISTANT SECRETARY, DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT; TO SENATOR DICK CLARK, DATED JULY 13, 1976

DEAR SENATOR CLARK: Secretary Hills has asked me to acknowledge your letter of June 23, 1976, and coordinate the Department's response to your request for certain information dealing with older Americans in rural areas.

With respect to your first question, this Department does not have an official definition of rural area, since, by and large, our programs are available to all eligible users regardless of the type of location. Section 520 of the Housing Act of 1949 does define rural area for the purposes of eligibility for Farmers Home Administration programs.* We have in the past occasionally used this definition for statistical purposes, but changes in this definition have made it less useful, particularly as a result of the addition of part (3) to section 520 in 1974, which expanded the definition to include places between 10,000 to 20,000 population if they are determined to have a "serious lack of mortgage credit."

For the purposes of providing the information requested in items 3 through 6, where appropriate, we intend to provide such data for non-metropolitan areas which we define as being outside of Standard Metropolitan Statistical Areas (SMSAs) rather than "rural." Data maintained within the Department is normally identifiable on an SMSA basis, whereas identifying the specific location of a project and then determining the population of the community in which it is located would require an extensive effort. I am informed that we would have considerable difficulty in obtaining much of the desired data by July 15, 1976, if it were necessary to utilize any other area of definition.

With respect to your second question, our housing legislation consistently defines elderly as one who is 62 years of age or more. The Department believes that there remains substantial unmet needs among those currently defined as elderly, and that an expansion of elderly housing demand through a reduction in the age standard is not warranted.

Please be assured that we will make every effort to supply you with the remaining information requested within the July 15, 1976, date you indicated.

We are pleased to be of assistance in your efforts in examining Federal activities in these areas and will be glad to be of further assistance in other hearings you are planning.

Sincerely,

JAMES L. YOUNG.

ITEM 12. LETTER AND ENCLOSURES FROM JAMES L. YOUNG, ASSISTANT SECRETARY, HUD; TO SENATOR DICK CLARK, DATED JULY 15, 1976

DEAR SENATOR CLARK: This is in further reply to your letter of June 23, 1976, requesting certain data concerning older Americans in rural areas.

The following responds to questions 3 through 6, which were not addressed in our initial response:

3. (*a*) How many persons in these States are receiving section 8 rental assistance?

*Section 520 reads as follows: ". . . the terms 'rural' and 'rural area' mean any open country, or any place, town, village, or city which is not part of or associated with an urban area and which (1) has a population not in excess of 2,500 inhabitants, or (2) has a population in excess of 2,500 but not in excess of 10,000 if it is rural in character, or (3) has a population in excess of 10,000 but not in excess of 20,000 and (A) is not contained within a standard metropolitan statistical area, and (B) has a serious lack of mortgage credit, as determined by the Secretary and the Secretary of Housing and Urban Development."

(*b*) How many of these could be classified as rural elderly?

The following represents actual occupancy through June 1976, as reported by the respective HUD Field Offices in a telephone survey done for this purpose:

State	Total number of households receiving sec. 8 assistance	Number considered elderly outside SMSA's [1]
South Dakota	65	20
Iowa	567	85
Nebraska	345	0

[1] Standard metropolitan statistical areas.

(*c*) What offices are responsible for administering the section 8 program in these States?

The Omaha, Nebr., area office has responsibility for administering the section 8 program in Nebraska, and the Des Moines, Iowa, insuring office administers the program in that State. The Denver regional office is responsible for administering the program in South Dakota. I have enclosed a listing of the full address of these offices for your information.

(*d*) Does the Department work jointly with Farmers Home Administration in meeting rural needs?

The Department and the Farmers Home Administration (FmHA) have executed a memorandum of understanding to encourage and facilitate the greater use of section 8 housing assistance for families in newly constructed projects financed under the FmHA Section 515 Rural Rental Housing program. We are drafting regulations for a joint program to implement this memorandum. A central aspect of the program is that owners will deal only with FmHA in developing projects and FmHA will certify to HUD that the proposed project is in compliance with the program requirements. We have agreed that we will set aside not less than 4,000 units for FmHA through September 30 and, subject to congressional authorization, not less than 10,000 units in subsequent fiscal years.

A copy of this memorandum of understanding signed by Secretary Butz and Secretary Hills is enclosed for your information.[1]

4. (*a*) How many units of public housing are located in each of these States?

(*b*) How many of these units are located in rural areas, and how many of these rural units are occupied by elderly persons?

PUBLIC HOUSING UNITS IN IOWA, NEBRASKA, AND SOUTH DAKOTA AS OF JULY 1975

State	Total units		Units located outside SMSA's			
	Programed	Under management	Under management	Occupied	Elderly occupied	Percent elderly
Iowa	3,890	2,927	1,730	1,718	1,505	88
Nebraska	9,436	8,609	3,473	3,312	3,110	91
South Dakota	4,998	3,713	2,368	2,234	778	35

5. What other Federally subsidized or assisted housing (i.e., 202, 221, 231, 236) for the rural elderly is available in these States. May we have a listing of rural projects in each State?

Enclosed is a detailed listing of multifamily subsidized housing available for elderly occupancy under HUD programs in nonmetropolitan areas in the three States.

6. What is the need for rural housing for the elderly as assessed in the housing assistance plans of the communities in these States?

I have enclosed a complete listing of the estimated number of elderly households in need of housing assistance as reported in the housing assistance plans submitted to HUD by the nonmetropolitan communities in the three States.

I hope you find this information useful in your coming hearings. If you require more detail on the information provided or further information, please do not hesitate to contact me.

Sincerely,

JAMES L. YOUNG.

[Enclosures]

ITEM 13. LETTER FROM RICHARD W. VELDE, ADMINISTRATOR, LAW ENFORCEMENT ASSISTANCE ADMINISTRATION; TO SENATOR DICK CLARK, DATED JULY 16, 1976

DEAR SENATOR CLARK: This is in response to your letter requesting information for field hearings to be held by the Special Committee on Aging.

I will respond to your questions in the same numerical sequence in which they were presented in your letter.

(1) The Law Enforcement Assistance Administration does not have an official definition of a rural area, and would use the definition of the Bureau of Census in developing any surveys.

(2) Inasmuch as the Administration on Aging is the agency with the expertise on this subject, we would be inclined to agree with their definition that an "older American" is of age 60 or older.

(3) Although studies have been conducted which show the crime rate on the basis of age, there have been no studies conducted comparing crime rates between rural and urban elderly residents.

(4) At present there are no programs in the three States which deal exclusively or to a large degree with the crime problem affecting rural, elderly residents.

Based on provisions of section 303(a) of the Crime Control Act of 1973, funding under LEAA programs gives priority attention to high-population areas rather than small communities or rural areas. Section 303(a) reads as follows:

"No State plan shall be approved as comprehensive unless the Administration finds that the plan provides for the allocation of adequate assistance to deal with law enforcement and criminal justice problems in *areas characterized by both high crime incidence and high law enforcement and criminal justice activity.*" (Emphasis added.)

It should be pointed out, however, that there are several requirements in the Crime Control Act, as amended, which have a favorable impact on smaller towns and rural areas.

Among the requirements of the Crime Control Act of 1973 (P.L. 93–83) are:

Section 203(c) which provides that the state planning agency must make at least 40 percent of planning funds available to units of local governments so that they may participate in the formulation of the comprehensive State plan.

Section 303(a)(2) requires that the State pass Federal action funds through to local units of governments and that the State assist localities in meeting match requirements.

Section 303(a)(3) mandates that every State plan must adequately take into account the needs and requests of the units of general local government in the State and encourage local initiative in program development. in addition, funds must be allocated between the State and localities in a balanced manner.

Section 303(a)(8) provides for a system of review whereby units of general local government can challenge allegedly adverse State decisions.

All of these congressional mandates are reflected in our guidelines and in the administration of the LEAA program.

I have enclosed a copy of the statement of Judge Henry McQuade, LEAA's Deputy Administrator for Policy Development, before the House Subcommittee on Housing and Consumer Interests Select Committee on Aging. A review of the enclosure will indicate that the entire LEAA program benefits older Americans at least indirectly, for its goal is to enhance the safety of all citizens. Mr. McQuade's statement includes a brief description of several research and action projects, supported by LEAA because of the recognition that senior citizens have special needs.

For your further information, I have also enclosed a copy of the latest National Crime Panel Survey Report entitled "Criminal Victimization in the United States, a Comparison of 1973 and 1974 Findings." I trust you will find both enclosures useful and informative.[1]

Your interest in this matter and the programs of the Law Enforcement Assistance Administration is appreciated.

Sincerely,

RICHARD W. VELDE.

ITEM 14. LETTER FROM JEANNA D. TULLY, DIRECTOR, OFFICE OF REVENUE SHARING, DEPARTMENT OF THE TREASURY; TO SENATOR DICK CLARK, DATED JULY 23, 1976

DEAR SENATOR CLARK: Thank you for your letter dated June 21, 1976, requesting information on the use of revenue sharing funds specifically in the categories of health and social services for the poor or aged.

---

[1] Retained in committee files.

As a member of my staff discussed with David Harf of your staff, the Office of Revenue Sharing does not collect specific data on the expenditure of revenue sharing funds. As you know, the State and Local Fiscal Assistance Act of 1972 provides that funds allocated to local governments must be spent within several general priority categories. Additionally, these funds must be spent in accordance with local law.

The Office of Revenue Sharing does not have an official definition of rural area. Revenue sharing funds are allocated to general purpose governments as determined by the Bureau of the Census, Department of Commerce. The Office of Revenue Sharing does not specify which individuals fall into the "poor or aged" category for the purpose of spending general revenue funds to benefit that group. The flexibility of the program allows local governments to make those distinctions as necessary.

We are unable to provide a county-by-county breakdown of funds spent in entitlement period 5 or planned for entitlement period 6. We are able, however, to give you aggregate amounts for all counties within each of the states you mentioned. Accordingly, we have prepared an aggregate report for counties by State for actual uses in entitlement period 5 and a breakout by types of government, including counties, for entitlement period 6 planned uses. This data is enclosed.[1]

I am also enclosing for your information informal notes located in our files concerning expenditures for older Americans in Dubuque, Iowa, and Clay County, Iowa.[1] In addition, we believe that general revenue sharing funds may have been used for the benefit of the aged in Sioux Falls and Huron, S. Dak., as these jurisdictions specifically listed social services as a category of expenditures. Please accept this information as unverified inasmuch as the revenue sharing act does not require specific information of this nature.

I hope that the enclosed data will be of interest to you and the committee. Please feel free to call on me if at any time I may be of assistance to you or your constituents.

Sincerely,

JEANNA D. TULLY.

ITEM 15. LETTER FROM ODELL W. VAUGHN, DEPUTY ADMINISTRATOR, VETERANS' ADMINISTRATION; TO SENATOR DICK CLARK, DATED JULY 15, 1976

DEAR MR. CHAIRMAN: This will respond to the request of Senator Clark for answers to nine questions propounded in connection with field hearings to be conducted relative to the care received by older Americans in rural areas. For your convenience, the questions have been repeated, followed by the pertinent answers.

(1) What is the official definition of rural area in your agency?

The Veterans Administration feels that every veteran or beneficiary has the right to equal service; and, therefore, this Agency does not have an official definition of a "rural area". For general working purposes, particularly with regard to our outreach efforts, we have tended to classify anything outside of the Bureau of the Census list of Standard Statistical Metropolitan Areas as a rural area. This has in no way affected our service to beneficiaries in these areas.

(2) Do you agree with the designation—as in Administration on Aging programs—that an "Older American" is of age 60 or older?

Some veterans' benefits have certain provisions in law which refer to age, such as benefits relating to minors or disability pension. However. the figure 60 should not be used as a yardstick age for all items relating to Older Americans. As to health care, the chronological and physical ages may not be the same, e.g., a veteran may need nursing home or domiciliary care at age 50. These activities are considered as Extended Care or health care facilities for the "Older American Veterans."

There should be flexibility enough in the age designation for "Older Americans," so the justifiable need of the individual is taken care of.

(3) Are there any VA supported or affiliated hospitals, nursing home, or home care programs located in the hearing States which serve a significant rural elderly population?

The following VA and VA-supported facilities and programs serve a significant rural elderly population in the States of Iowa, Nebraska, and South Dakota:

[1] Retained in committee files.

	ADPC [1]	Operating beds
IOWA		
VA hospital, Des Moines		362
Community nursing home care program	42	
VA hospital, Iowa City		360
Community nursing home care program	63	
Hospital based home care program	18	
Iowa Veterans Home, Marshalltown:		
Nursing home care	375	
Hospital	24	
Domiciliary	175

Nursing home care unit		200
Community nursing home care program	6	
NEBRASKA		
VA Hospital, Grand Island		172
Nursing home care unit		42
Community nursing home care program	4	
Nebraska Veterans Home, Grand Island:		
Nursing home	349	
Domiciliary	200	
VA Hospital, Lincoln		207
Community nursing home care program	16	
VA Hospital, Omaha		444
Community nursing home care program	33	
SOUTH DAKOTA		
VA Hospital, Fort Meade		389
Community nursing home care program	9	
VA Center, Hot Springs		232
Domiciliary		511
Community nursing home care program	6	
South Dakota State Veterans Home, Hot Springs:		
Nursing home	30	
Domiciliary	94	
VA Center, Sioux Falls		249
Nursing home care unit		57
Community nursing home care program	16	

[1] Average daily patient census.

(4) What efforts have been made in the hearing States to acquaint the elderly rural veteran with the availability of VA information and referral services?

In the States of Iowa, Nebraska, and South Dakota, several programs are in operation which have been used to inform the elderly rural veteran. Among these are:

VA mobile vans, manned by veteran benefits counselors.—Vans were in Nebraska in June of 1975 and July 1976, in South Dakota in July 1975 and May 1976, and in Iowa in April 1975 and August 1976. The vans are preceded by intensive publicity in local newspapers and on radio stations. They reach into the most remote small towns and have proved to be an effective means of reaching rural veterans.

Toll-free telephone service.—Toll-free (FX and WATS) telephone service is now available to 90 percent of the Nation's veterans. Benefits information and assistance are provided by means of VA telephone units in each regional office. This service is available in all of Iowa and South Dakota and in part of the State of Nebraska. It has proved to be the most effective medium to assist the aged in rural areas.

Vet reps on campus.—There are now almost 1,300 vet reps on college campuses nationwide. While their primary function is to assist veterans who are enrolled in educational programs, they have frequently been used to provide outreach to individual veterans, especially the aged, in areas of the States in which they work and live.

VA information service.—By means of news releases, pamphlets, radio and TV announcements, the VA information service reaches into all areas of the Nation. Many small hometown newspapers regularly carry VA news release items.

In addition, the VA provides itinerant veterans benefits counselors, who go wherever the need arises, VA counselors who visit Federal and State prisons, VA field attorneys working in the guardianship program, and community service specialists in certain selected VA regional offices. The Veterans Administration is grateful to the veterans service organizations, such as the American Legion,

Veterans of Foreign Wars, Disabled American Veterans. American Red Cross, and AMVETS, who have provided much valuable assistance in providing veterans' benefits information to the aged in these States.

The Veterans Administration has also designated representatives of the Department of Medicine and Surgery and the Division of Veterans Assistance to each of the 10 Administration on Aging Regional Committees. The regional committees serve all States in the task of carrying out the VA's information and referral responsibilities as they have been spelled out in the working agreement between the 14 Federal agencies and the Administration on Aging. Part of the VA's commitment is to acquaint all elderly veterans with the availability of VA information and referral services. Also, to see that each information and referral office has access to VA information and referral service, each VA hospital and/or outpatient clinic and the Department of Veterans Benefits, Division of Veterans Assistance Offices have been designated liaison representatives to each Administration on Aging Area Office to serve the information and referral programs under their jurisdiction. (This provides service at the local level where the "Older American Veteran" is.)

(5) Are any VA day treatment mental health facilities serving elderly rural residents of the hearing States?

Medical District No. 23 includes Iowa, South Dakota, and Nebraska. There is one day treatment center in this medical district located at VA hospital, Des Moines, Iowa. The day treatment center sees approximately 60 people per day. This generates about 15,000 outpatient visits per year. Of the 60 patients seen at the day treatment center, 5 can be considered elderly, 1 in his early 80's, 4 are over 60 years of age. None of these patients are living in rural areas.

(6) What VA social work services, including telecare, are directed toward the elderly rural veteran of the hearing States? What are the names of the affiliated hospitals?

Social work service has a long tradition of providing a wide range of services to the older veteran and to his wife and widow. This is due in part to the fact that the veteran population is essentially an aging population and because medical science and technology have made it possible to live longer than ever before. The challenge to social work has been to help older veterans live meaningful and useful lives within the limits of their health problems and their disabilities. The complicating factor in achieving this goal has been the lack of adequate social services and social supports for older veterans in the community, and the need to locate and develop a variety of reseources including income maintenance, ambulatory health services, housekeeping and other personal services, such as meals on wheels, transportation, recreational opportunities, etc.

Social work service provides a full range of services either directly or through referral to community agencies for veterans requiring discharge planning and followup assistance. Services include evaluation and counselling visits to veterans placed in nursing homes, State homes, personal care homes, their own homes or other special living situations. VA social workers are active in the development of community resources and the coordination of services veterans may require in order to achieve a satisfactory adjustment in the community. All VA hospitals have extensive field visitation programs through which social services are provided directly to the veteran in his own home.

Volunteers are being utilized in 3 hospitals to provide Telecare services to veterans with special needs who live in isolated areas. One additional hospital will have a formal Telecare program operational in 6 weeks. All programs are operating under the auspices of social work service.

The following hospitals are affiliated for graduate training in social work: VAH Des Moines, VAH Iowa City, VAH Knoxville, VAH Omaha, VAH Lincoln, VAH Grand Island, VAH Hot Springs, VAH Ft. Meade.

(7) What, if any, of the following programs are operational and serving elderly rural veterans in the hearing States: rehabilitation medical services; dietetic and nutritional programs; nursing service; or voluntary service programs?

All of these programs are operational and serving rural veterans in VA Hospitals and VA Centers in Iowa, Nebraska, and South Dakota.

(8) Have any findings resulted from your GRECC research program which are of significant interest to the rural elderly?

The geriatric research, education, and clinical centers are involved in ongoing research efforts which are of interest to rural elderly. The research is not limited, however, to just elderly people living in rural areas. Some of the early research involvements include:

Three GRECC's are engaged in demographic health needs assessment studies of their surrounding communities. Results from this work enables better long-term planning of health services, particularly for the elderly population.

Controlled research is being conducted comparing the normal and pathological states of the cardiopulmonary system in the elderly.

Research efforts at another GRECC are making possible the early diagnosis of senile dementia.

Research is being conducted in the area of nutritional effects upon development in the aging brain.

Work carried on at another GRECC has resulted in the first successful growth of human arterial smooth muscle cells which revealed significant species differences in lipoprotein uptake between human and rat cells. This finding has implications for future research in cellular aging.

Additional research is being conducted on diseases often associated with the aged: osteoporosis, diabetes, and arthroscerosis.

(9) Can you recommend any alterations in your pension and compensation programs which would enable them to better serve the rural veteran?

We have no specific recommendations on this point. Veterans' benefits are the same for all, regardless of area.

We trust that the above answers are responsive to your inquiries.

Sincerely,

ODELL W. VAUGHN.

Appendix 3

LETTERS FROM INDIVIDUALS AND ORGANIZATIONS

ITEM 1. LETTER AND ENCLOSURE FROM JOYCE LEANSE, DIRECTOR, NATIONAL INSTITUTE OF SENIOR CENTERS; TO SENATOR DICK CLARK, DATED JULY 15, 1976

DEAR SENATOR CLARK: I am pleased to be able to assist the Special Committee on Aging with its preparations for field hearings on older Americans living in rural areas. Not all of the questions you addressed to us could be answered with information from the National Institute of Senior Centers Senior Center Research Project, but I hope the enclosed information will be useful.

The attached summary of data relies on two NCOA publications, the 1974 "Directory of Senior Centers and Clubs" and the "Report of Senior Group Programs in America," and on the in-depth survey questionnaires which were used to prepare the report. Pages from both books have been copied and enclosed for use with the summary. If the committee staff would like an additional copy of the directory or the report, please do not hesitate to ask. I have also enclosed copies of materials which describe some innovative programs designed to serve the rural elderly.[1]

If you have any questions about the summary or if you need additional information, please call me or Valinda Jones of the Public Policy Department, who prepared our response. I look forward to the results of your upcoming hearings and to working further with the committee.

Sincerely,

MRS. JOYCE LEANSE.

[Enclosure]

(1) The exact number of senior centers and clubs in the United States or in any particular State cannot be determined from the senior center research project data. Although an extensive effort was made to identify and elicit responses from as many adult group programs as possible (as described on pages 3–6 of the report), 9,448 organizations of the 17,930 on the basic mailing list did not respond to the initial questionnaire. Of the 8,442 responses, only 4,870 of those that wanted to be listed in the directory met the three criteria for inclusion. To be included, an organization had to offer a program directed at older adults, meet on a regular basis at least once a week and provide some form of education, recreation or social activity.

Consequently, the listings in the directory represent the minimum number of senior centers and clubs in a region. The following chart (based on information from the director) shows the total number of listed centers and clubs, the average age membership, the average daily attendance and the range of membership totals for organizations in the three States (see pages 407 and 437 of the directory). Comparable national averages are listed on page ix of the directory.

State	Total listed centers	Average membership	Number responses	Average daily attendance	Number responses	Range of membership
Iowa	62	160.2	46	58.8	45	16–7,023
Nebraska	63	170.9	42	36.2	51	2–8,000
South Dakota	57	116.6	47	35.3	47	10–1,300

The directory lists the centers and clubs alphabetically by towns and cities within each State. That information is also attached (pp. 409–415, Iowa; pp. 429–435, Nebraska; pp. 453–459, South Dakota). A summary of the percent of centers in rural and urban areas can be found on pages 13 and 14 of the report.

[1] Retained in committee files.

(2) The National Institute of Senior Centers Senior Center Research Project did not attempt to determine funding sources for construction or alteration of facilities because, at the time the surveys were conducted (fall 1973–fall 1974), there were no active Federal programs of assistance for such activities. Title V of the Older Americans Act was not funded until this year when $5 million was appropriated for the Fiscal Year 1976 transitional quarter. Title I of the Housing and Community Development Act of 1974 (enacted August 22, 1974) allows grants for construction and alteration of publicly sponsored senior centers, but it was not an active program when the questionnaires were distributed. Pages 17–19 of the report include a general description of facilities.

The initial surveys and the in-depth questionnaires tried to determine general funding sources and the proportion of Federal, State, and local funds used by centers. Unfortunately, many of the centers did not respond completely to the questionnaires, particularly to the questions concerning financing. The proportion of Federal and other funds on the average in each State is noted on pages 408 and 438 of the directory. Pages 14–17 of the directory summarize the detailed funding information on a national basis. Additional information on funding patterns in Iowa, Nebraska, and South Dakota can be obtained from the in-depth questionnaires. The difficulty is that the number of in-depth questionnaires from each of the three States is too small to be statistically reliable (10 from Iowa, 7 from Nebraska, and 11 from South Dakota). However, the data might be useful in making some broad generalizations about funding resources. The combined data show that each program relies on several funding sources—the only exceptions being the smaller clubs that indicated a sole reliance on dues and fees.

According to the ten in-depth questionnaires from programs in Iowa, only three received financial assistance from sources other than dues, fees, or individual contributions (a "kitty" was listed by several). (Most of the respondents to the in-depth questionnaire in that State considered themselves clubs rather than centers which might explain the reliance on membership contributions.) In these three programs, funds from title III of the Older Americans Act (OAA) were listed twice; from the Office of Economic Opportunity (OEO) once; from adult social services, once; and from a city tax levy, once. Local organizations, such as the United Fund, were listed by all three.

In Nebraska, only one program of six responding to that question used Federal funds (OEO) and that also relied on local in-kind support. Of the other five programs, unspecified, state funds were listed as a revenue source once; unspecified local funds, twice; local revenue sharing funds, once; and dues, fees or money-raising projects, such as bake sales, were listed several times.

Five South Dakota programs out of nine responding to the question used Federal money. Four of these used title III OAA funds; one used Department of Labor funds. Local unspecified funds were listed five times and, again, dues, fees, projects and other membership contributions were also listed by most of the respondents.

(3) Pages 25–33 of the report summarize the findings on activities and services nationwide. For each center that provided details, the directory lists types of services and notes how often and when centers meet (see pages 409–415; 429–435; 453–459). A comparison of services and frequency of meetings can be made by States and by regions from the information listed on pages ix, 407, and 437 of the directory. Organizations noted whether they held sessions in the morning, afternoon or evening in the initial survey. The frequency of full-day sessions (mornings and afternoons—evenings were infrequent and so not considered here) in centers in Iowa, Nebraska, and South Dakota is noted below.

State	Total centers	With full-day sessions	Average full-day sessions per week
Iowa	62	22	4.5
Nebraska	63	32	4.4
South Dakota	57	16	4.6

The report suggests two standards by which multipurpose programing can be determined (see p. 25). The first is to count those groups that offer three or more nonspecific services; the other is to count those that offer the so-called three basic services (recreation, education, information, and referral or counseling). The following chart is based on information obtained from directory listings.

State	Total	3 or more	Percent	3 basics	Percent
Iowa	62	46	74	29	47
Nebraska	63	42	67	28	44
South Dakota	57	52	74	20	35

A similar chart, also based on the directory listings, shows the number of centers offering health services and, from these, the number offering health screening.

State	Total	Health services	Health screening
Iowa	62	3	1
Nebraska	63	5	1
South Dakota	57	13	4

Information on outreach programs was sought in the in-depth questionnaires, but responses were sporadic and inconclusive. A major difficulty in obtaining information is that two in-depth forms were used—one for organizations that considered themselves clubs and the other for self-designated senior centers. Only centers were asked about outreach efforts in any detail, so the number of responses is negligible. (The small number of in-depth questionnaires from each State must also be kept in mind.)

In Iowa, three outreach programs were identified from six responses to that question; in Nebraska, two outreach programs from five responses; and in South Dakota, five from eight responses. The data on the number of contacts made per month and the number of outreach workers used are too scanty to be useful. Thirty is a rough average of contacts per month through all three States. When compared with the national averages on page 39 of the report, this figure demonstrates the likelihood that the small number of responses has made the information unreliable.

(4) The senior center research project did not attempt to obtain descriptions of innovative programs and, unfortunately, correspondence to the National Institute of senior centers from Iowa, Nebraska, and South Dakota has not included many descriptions of programs which might be useful to your committee. The few that might be of interest have been copied and attached.[1]

ITEM 2. LETTER AND ENCLOSURE FROM JUDITH ASSMUS RIGGS, DIRECTOR, OFFICE OF GOVERNMENT RELATIONS, LEGAL SERVICES CORP.; TO SENATOR DICK CLARK, DATED JULY 19, 1976

DEAR SENATOR CLARK: This letter is in response to your request for information on legal services for the elderly in the states of Iowa, Nebraska, and South Dakota. It is provided as background for field hearings on the effectiveness of federal programs serving the rural elderly in those three states.

As you know, the Legal Services Corporation is a private nonprofit corporation established by the Legal Services Corporation Act of 1974 (Public Law 93-355) to provide legal assistance in noncriminal matters to persons who cannot afford to employ an attorney. The corporation makes grants to local legal services programs that previously received funds from the Office of Economic Opportunity and its successor agency, the Community Services Administration. From 1971 through 1975, Federal funds for legal services remained at the same level. As a result, there was no expansion of service and, in fact, many programs were forced to cut back services as a result of inflation. Congress has just enacted an appropriations measure for fiscal year 1977 that provides an increase in funding to enable the corporation to begin expansion of services to the vast areas of the country where the poor are still without any legal assistance at all.

Programs in Iowa, Nebraska, and South Dakota that receive grants from the Legal Services Corporation.

The corporation supports four programs serving eight counties in Iowa, three programs serving four counties in Nebraska (and one county in Iowa), and two programs in South Dakota, one that is limited to a single county and one that

[1] Retained in committee files.

serves a largely native American population in a 15-county area in the central part of the State. Several of these programs are in cities of substantial size—Des Moines and Omaha-Council Bluffs, for example—and serve a predominantly urban client population. Others serve a mix of rural and small city clients. Only two programs could be described as principally serving rural populations—Panhandle Legal Services in Scottsbluff, Nebr., and South Dakota Legal Services in Mission, S. Dak.

There is attached to this letter a list of the programs in the three states, the addresses of their main offices, the counties they serve, and their current level of funding from the corporation.

Number of elderly served.

The corporation does not have data on the number of rural poor over age 55 in the three States. According to 1970 census figures available to us, the number of rural poor over age 65 in Iowa is 43,321; in Nebraska, 24,743; and in South Dakota, 14,946. Obviously, we reach only a small fraction of that population.

None of our programs in the three States serve the elderly exclusively. The percentage of clients over age 65 varies from program to program, from as low as 5 percent to as much as 15 to 20 percent. The programs do not keep separate records on the number of clients over age 55, but if the group aged 45 to 64 is included, then the percentage of older clients increases significantly.

In most programs, the percentage of clients who are over age 55 is less than the percentage of the eligible population that is elderly. This is due largely to the transportation difficulties poor elderly people have, especially in rural areas. In addition, the elderly tend to be less aware of the fact that legal services are available and do not understand how the programs could be helpful to them.

Those programs serving a relatively high proportion of elderly clients are the ones that have engaged in aggressive outreach efforts. For example:

The director of the Legal Aid Society of Polk County (Iowa) regularly visits senior citizens centers and speaks during their meal programs. In addition, he lectures to the State welfare agency's adult protective workers around the State on the problems of the elderly.

Black Hills Legal Services, Inc. (South Dakota) has a wide-ranging program for senior citizens, including presentations in senior citizens centers and monthly newsletters published especially for senior citizens.

South Dakota Legal Services uses paralegals as well as attorneys to visit nursing homes and the elderly in their own homes to advise and assist them with their legal problems. For example, the program recently canvassed the elderly, to inform them of a South Dakota law providing special tax rebates and to help them fill out the forms needed to obtain the rebate.

Unfortunately, few of our programs have the additional resources required for adequate outreach and community education activities. Title III of the Older Americans Act is being utilized effectively by some local programs to supplement Corporation funds in order to reach the elderly in need of legal assistance. Those efforts through the Older Americans Act must be continued and expanded.

Nature of the legal problems of the elderly.

Accordingly to program directors in the three States, most of the legal problems of their elderly clients are routine and not all that different from those of other clients. However, these problems are particularly serious for older persons and often affect their very livelihood. This most common set of problems relate to their ability to obtain government benefits and services to which they are entitled—social security, SSI, medicare and medicaid, and food stamps. A second set of problems are health-related, including insurance, medical bills, and nursing home problems. The elderly also come with property and personal tax problems, and for help with wills, conservatorships, and problems associated with the death of a spouse. To a lesser degree than younger clients, they need assistance with housing and consumer problems.

The majority of these problems are resolved without litigation. In many cases, the client simply needs information on benefits available to him or her, and assistance in filling out forms. Many matters can be resolved through negotiation. The following are examples of how legal services programs represent elderly clients:

When property taxes rose as much as 45 percent in Polk County last year, the Legal Aid Society representing 2,300 elderly persons in individual protest hearings. The vast majority of those cases, 1,500 in all, were won and another 300 are on appeal.

In South Dakota, a legal services attorney represented a poor elderly client who needed life-sustaining drugs costing $80 a month. Since the State medicare plan did not include payment for drugs, the elderly had to rely on county relief. The county had set an arbitrary limit of $50 a month on payment for drugs. Negotiations failed, a successful suit was filed, and that limit was removed, providing relief not only for the particular client but for all of the elderly in similar situations.

In Iowa, a legal services attorney represented a 91-year-old woman in an eviction proceeding. Friends agreed that the loss of her home would destroy all that bound her to life. The court delayed the eviction and the attorney was able to persuade the landlord to let the woman remain.

The need for legal services for the elderly.

Evidence of the need for legal services among the elderly poor is overwhelming. In Iowa, when the State's commission on aging set up a WATS line for the elderly, the bulk of the calls were about legal matters. As a result, the commission has awarded a small grant to the Polk County Legal Aid Society and refers calls there. Often, the program can take care of the problems simply by giving the callers information, and sometimes by writing a letter for them. In other situations, they refer them to a local attorney who can help.

In Nebraska, the most recent needs assessment conducted by the State's commission on aging identified legal services as a priority among the rural elderly in three out of the four areas reporting. The Panhandle Community Action Agency in Gering, Nebr., conducted a separate five-county survey of needs of the elderly, which showed that home health services were the greatest need and legal services the second. In each of the counties, more than 70 percent of those responding to the question, "Is there a need for legal services?" said yes. In some counties, the response was as high as 89 percent.

We understand that you will be holding hearings in all three of the States during August. Representatives of legal services programs, including paralegals and the elderly clients themselves, as well as staff attorneys, program directors and board members, could provide useful testimony about the need for legal assistance and the benefits when it is available. Perhaps even more important, since those attorneys and paralegals work directly with elderly persons who find it difficult to obtain services and benefits available under Federal programs, they can offer useful insights into the way those programs are serving senior citizens.

I am enclosing letters[1] some of our programs sent in response to our request for information. If you need any further information, or if we can be helpful in identifying potential witnesses for your hearings, please let us know.

Sincerely,

JUDITH ASSMUS RIGGS.

Nebraska:	
Legal Aid Society of Lincoln, Inc., 800 Anderson Bldg., 12th and O Sts., Lincoln, Nebr. (403) 435–2161; Lancaster County	90,400
Legal Aid Society of Omaha-Council Bluffs, Inc., 7th floor, Farnam Bldg., 1613 Farnam St., Omaha, Nebr. (402) 348–1051; Sarpy, Douglas Counties, and Pottawattamie County, Iowa	277,700
Panhandle Legal Services, Inc., 701 East Overland, P.O. Box 605, Scottsbluff, Nebr. (308) 632–4734; Scotts Bluff County	66,000
Total Nebraska funding	434,100
South Dakota:	
South Dakota Legal Services, P.O. 727, Mission, S. Dak., (605) 856–4444, 15-county area in central South Dakota	290,758
Black Hills Legal Services, Inc., 714 4th St., Rapid City, S. Dak., (605) 342–7171, Pennington County	74,800
Total South Dakota funding	365,558
Total funding in 3 States	1,360,438

ITEM 3. LETTER FROM HARVEY C. DAVIS, ACTING DIRECTOR, MATURA ACTION CORP.; TO SENATOR DICK CLARK, DATED AUGUST 12, 1976

DEAR SENATOR CLARK: Matura Action Corp. has been working with and is an advocate for the low-income elderly since 1966. In the last 10 years changes have been made in public attitude toward the elderly. More affirmative thought is going into the well-being of the elderly.

Even with this progressive change in the attitude toward the elderly, some more assertive changes need to be incorporated into the programs. For instance, in housing, HUD's low-income housing has been eliminated or cut back so drastically that many of our towns and cities that had hopes of a program have been dropped and the elderly are then forced to find other means of housing. Also in the housing that has been established, the housing authorities are encouraged to keep running in the black so HUD will not have to subsidize the program. When this happens, the really low income elderly are sometimes passed over as residents because their 25 percent payment would make their contribution for the rent a little over $25 per month for the rent—and with very many of these in a housing complex, it runs in the red. HUD encourages them to eliminate running in the deficit.

Transportation for the elderly is another area that has made some progress the past 10 years, especially in Madison County.

In the other counties that Matura Action Corp. is funded, the area agency on aging has used title III of the Older Americans Act to furnish transportation. This has been a help. Matura Action Corp. has submitted a proposal to the State department of transportation for the coordination of transportation systems. This would be a boon to the area, but some of the boards of supervisors are reluctant to enter into the agreement, although they know there is a need, because it might become so popular they might be forced to contribute to the program. It is my belief that rural public transportation is going to have to be subsidized by the State, Federal, and the agencies purchasing services for the program. The elderly would benefit from this coordination of transportation systems.

Matura's network of neighborhood centers have been a home-away-from-home for the elderly. In most of the counties in our area, these need to be kept in existence by Matura and supplemented by moneys made available by the Older Americans Act. Matura was helping the elderly long before the Older Americans Act designated regional AAA. Out of our centers we also sponsor 16 other projects for the elderly in other smaller towns in the areas.

The title VII nutrition program of the Older Americans Act has been a valuable asset to our area. I have some constructive criticism: In some instances, the wealthy tend to monopolize some nutrition sites and the low-income will not attend

because of this; and in other instances, the low-income elderly are patronizing the nutrition program in large percentages and now the middle-income and above have some hesitancy to take advantage of the program.

I do not have a solution for this problem, although I think it was created in the recruiting phase of the program. I am concerned about the low-income elderly participating in the program and will use Matura's outreach and encouragement for the elderly poor to participate.

Thank you.

HARVEY C. DAVIS.

ITEM 4. LETTER AND ENCLOSURES FROM DAVID L. ADAMS, HUMAN AGING COORDINATOR, DRAKE UNIVERSITY, DES MOINES, IOWA; TO SENATOR DICK CLARK, DATED AUGUST 30, 1976

DEAR SENATOR: I was pleased to receive your request of August 11, 1976 for copies of my research on the rural elderly. I regret that I missed the hearings you held in Iowa, but am very pleased that you got to talk with Woody Morris and with Governor Blue.

I am enclosing copies of those articles which seem most directly relevant to your inquiry. Three of these apply specifically to the small town rural elderly of Missouri and have been done in conjunction with Dr. C. T. Pihlblad of Columbia, Mo.[1] We will soon issue another series based on a restudy of his sample done in 1973–74. The fourth was done for the Gerontology Society and applies to the general concept of rural elderly in America. It may be of particular use to you.

If I can be of further assistance to you, please feel free to contact me.

Sincerely,

DAVID L. ADAMS.

[Enclosure]

WHO ARE THE RURAL AGED?[2]

By David L. Adams, Ph. D., Drake University

In accepting the offer to write this paper, the task of defining the rural aged and of setting the pace for contributions which follow seemed fairly easy and straightforward. After all, there have been several studies of rural and small town elderly done in the past 15 years and while publications in this area are not as voluminous as those in urban aging, they at least offer a high degree of consistency in defining the study sample. Basically, the rural elderly are those persons aged 65 and older who reside in areas of less than 2,500 population density.

The assumption which underlies this demographic definition of the rural aged is that the social persons so named rather suddenly came into existence at the age of 65 and in the locations where they are found. Perhaps this is a necessary assumption, for it does underlie most of the gerontological research of the past 30 years. The theories of aging—subculture (Rose, 1962), role (Phillips, 1957), and disengagement (Cummings and Henry, 1961)—all presume that the variables necessary to explain the elderly are to be found in their current environments and social persons. Even the lifestyle theory (Williams and Wirths, 1965) is limited to existing, rather than preexisting styles of life. There is one approach, however, which is concerned with both past and present environments—the life-course frame of reference (Youmans, 1969).

This approach indicates that a full understanding of human aging requires that the cultural expectations and abilities associated with older age be compared with those of earlier stages of life. It also indicates that to function effectively, a given society must provide the means by which a person can move in an orderly fashion from one status position to another, and the society must provide the motivations for individuals to fulfill the roles of each position.

Consider, for example, the individual who has lived a lifetime in a highly urbanized area, who has achieved considerable class, status, and power in a bureaucratic structure, who has maintained a lifestyle and a value system commensurate with this position, and who at the age of 65 leaves this lifestyle for the quiet countryside of the Ozark foothills of Missouri (Oliver, 1971). By the

demographic definition, he would be considered rural aged and there would be nothing to distinguish him from the successful store owner who has spent a lifetime in the region—but surely they cannot be considered "rural" aged in the same qualitative sense of the term. Without the earlier environmental history of the respective individuals, we would be lacking valuable information for explaining much of the variance in their current values and life styles.

The "aged" portion of this definition is also subject to qualitative inconsistencies. For instance, the successful grocery store owner mentioned above might be 75 years old, but still puts in 10 hours a day, 6 days a week at the store. He is still treated and greeted by his customers and friends as he has always been. He has come to be defined in terms of functional age, as ageless. His urban counterpart, while 10 years younger, is structurally defined as a retired old man. Consequently, while the store owner is rural, he is not aged—and his younger counterpart while aged, is not rural.

These examples illustrate the weakness of considering only the current characteristics and environments of the rural aged and emphasize the necessity of further inquiry into the past history of the rural aged and their social worlds. Central to this life-course approach are the dual concepts of social role and socialization. The roles provide for the orderly movement through the life cycle as mentioned by Youmans. Socialization provides the continuing motivations to assume these roles. As used here, socialization is considered a lifetime process of modifying adaptive mechanisms, but its foundation is in childhood socialization—the language, values, expectations, and other patterns of environmental adaptation acquired during the younger years. With respect to the current generation of rural aged, their basic socialization occurred in a period which preceeded the instantaneous communication and value exchanges made possible by automobiles, radios, telephones and television. Consequently, change in their social world was slower and social roles were less abstract or ambiguous than is the case today.

In 1942, a role theory approach to understanding adjustment to present and future roles was proposed which included the following requirements for successful adjustment (Cottrell, 1942):

(1) The clarity of such future roles.
(2) Emotionally intimate contact with persons in such roles.
(3) Practice of the role through play or other activity.
(4) The completeness of the shift in responses and expectations of others to the individual in his new role.

All of these factors were more evident in rural America of 1920 than they are today. Consequently, the rural aged were socialized not only to a different society, but also to a different pattern of socialization and speed of expected social change. They were raised to expect that future roles would remain relatively clear and unchanged during their lifetimes and that societal response to them would be towards the total individual (functional worth) rather than towards some social characteristic of the individual (structural definition).

The difference in orientation to one's social world which such a role expectation affords is vividly described by Parsons:

> . . . the (urban) father does not work in the home and his son is not able to observe his work or to participate in it from an early age. Furthermore, many of the masculine functions are of a relatively abstract and intangible character such that their meaning must remain almost wholly inaccessible to a child. This leaves the boy without a tangible meaningful model to emulate and without the possibility of a gradual initiation into the activities of the adult male role. An important verification of this analysis could be provided through the study in our own society of the rural situation. It is my impression that farm boys tend to be "good" in a sense in which that is not typical of their urban brothers. (Parsons, 1942)

If we substitute for the word "good" other descriptive adjectives—such as neighborly, family oriented, independent, etc., the relationship or comparison remains basically the same. The rural environment of the early 1900's produced a social animal well equipped for survival in a society which existed at that time, but less well prepared for a society which was to change quite drastically during the lifetime of that social animal. The remainder of this discussion represents an inquiry into the nature of this change—especially that directly related to "rural" and to "agedness." It is based on the assumption that the rural aged of contemporary America are not simply old people who happen to live in rural places—they are rural people who have aged while their environments have become progressively less rural.

RURAL ENVIRONMENTS

One of the easier methods of tracing changes in the rural scene is through the U.S. census information—not simply the enumerations, but also the changes in definitions over time. For instance, in 1900 the census definition of rural was basically all places of less than 4,000 population density. By 1910 this definition had been changed to 2,500 population. Thus something about the nature of human social environments had changed sufficiently to cause the Census Bureau to question the validity of the earlier indicator and to reduce the size of the place necessary to be considered "rural." The definition of rural was further subdivided in 1930 with the introduction of the concept of rural-nonfarm. In other words, not only the size of a place but also the occupational structure was considered a useful component of the definition. This subdivision suggested two types of rural people—the farmers and the small towners—with the latter being less rural than the former. The most recent development in this changing definition of rural environs occurred in 1960 with the concept of the metropolitan rural areas. Basically, such areas are those which would otherwise be considered rural, but which are located within the county boundaries of a standard metropolitan statistical area. The significance of this change is that an individual could now be a fully occupied agricultural producer, yet not be considered truly rural due to the proximity of a high population density. The rural areas became relegated to those farms which were at some distance from all major and many minor urban areas.

Each succeeding redefinition of rural served to maintain a degree of isolation or segregation of rural persons from those considered urban. The isolation is a product of both geographic distance and of social difference. The social difference is maintained by the occupational homogeneity of rural peoples who are conceived as agricultural producers for urban consumers. Thus the image of old age as consummatory phase of life (Parsons, 1963) which fits the urban aged may not be so applicable to the rural environments. As will be seen in later papers, this social difference accounts for considerable variance in the social environments and expectations of rural and urban aged.

Another major impact of the redefinitions has been the maintenance of a constant rural population size for the past 70 years—those years during which the rural aged gained their status as the aged. This constant population size is often ignored in the presence of the more frequently cited declining proportion of the rural population. During the period 1920 to 1970, the population of the United States increased by 97 million from 106 to 203 million. But during the same time period, the rural population (farm and nonfarm) remained almost unchanged with 52 million and 54 million respectively.

To correct for the slight error due to changing census definitions during this time, the data has been standardized according to the 1960 definition of nonmetropolitan rural (Robinson, 1965). This information is provided in table 1 and figure 1 and indicates that the constancy of rural population remains. Practically all of the population growth in this country in the past seventy years has taken place in the urban areas and their suburbs—the metropolitan rural areas. In fact, the nonmetropolitan rural population peaked in 1940 and has declined since then to a level below that of 1900. This suggests that as the rural aged leave the farms, they are not being taken over by younger generations, but seem to be passing into the conglomerates of agribusiness. Thus even in nonmetropolitan rural America, the impact of urban styles and values of life are being felt.

TABLE 1.– RURAL POPULATION OF THE COTERMINOUS UNITED STATES BY METROPOLITAN AND NONMETROPOLITAN STATUS, 1900–70 [1]

[In millions]

Year	Population				Percentages		
	Total	Urban	Metropolitan	Nonmetropolitan	Urban	Metropolitan	Nonmetropolitan
1900	75.7	30.4	5.4	40.5	39.5	7.1	53.4
1910	91.6	42.3	6.7	43.3	45.5	7.3	47.2
1920	105.3	54.5	8.2	43.3	51.1	7.8	41.1
1930	122.3	69.4	10.7	43.2	56.0	8.7	35.3
1940	131.0	74.9	13.0	44.3	56.3	9.9	33.8
1950	149.9	90.4	17.9	43.1	59.4	11.9	28.7
1960	177.7	113.4	24.7	41.2	62.9	13.9	23.2

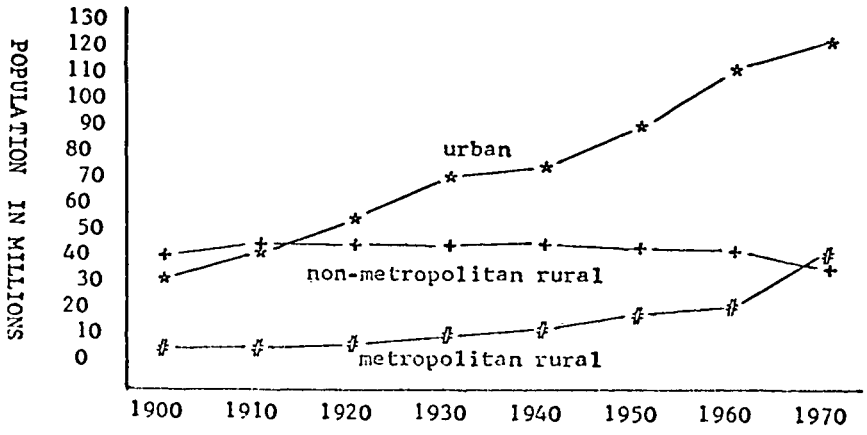
CHART 1. URBAN AND RURAL POPULATION OF THE COTERMINOUS UNITED STATES BY METROPOLITAN AND NONMETROPOLITAN STATUS, 1900–70



AGE AND SEX ENVIRONMENTS

The rural environment is only half of our consideration here—the other half deals with the aging environment of the American character. That is, not only have the rural aged gained their present status by growing older in the past 70 years, but also the structure of the American population has grown older. Further, the differential impact of mortality on men and women is sufficiently great to cause us to consider rural aged men and rural aged women separately in this section.

Given the phenomena of the migration of youth from rural to urban environs, plus the above cited fact of the stable rural farm population during the past 50 years, it would seem logical to conclude that the rural population has "aged" more rapidly than the urban segments of the population. In fact, it might seem that the 50 million in rural areas today are the same 50 million who were there a half century ago—and consequently are all rural aged. However, the census data supports such a proposition only partially.

It is a well known fact that he "aged" proportion of the American population has increased from about 4 percent in 1900 to about 10 percent today. If the above stated hypothesis were correct, then the rural population would be expected to account for more of this increase than the urban population. However, the data in table 2 indicate that both urban areas and rural farm areas have increased at about the same rate from 1930 to the present.

TABLE 2.– PERCENTAGE OF UNITED STATES POPULATION OVER AGE 65 BY RURAL AND URBAN STATUS, AND BY SEX, 1930–70

1970 distribution and location of aged	Census year				
	1930	1940	1950	1960	1970
Males:					
4 percent rural nonfarm	6.3	7.2	7.8	11.2	11.7
26 percent rural farm	5.7	7.1	8.2	8.8	9.2
68 percent urban	4.8	6.3	7.6	8.2	8.1
Females:					
5 percent rural nonfarm	6.6	7.4	8.3	13.1	15.3
20 percent rural farm	4.5	5.9	7.0	9.0	10.0
75 percent urban	5.4	7.3	9.0	10.1	11.3

Source: U.S. Bureau of the Census, 1930–70.

In each of the census years, there have been about 1 percent more males over age 65 in rural farm areas than in the cities while the reverse was true for females—a higher proportion in the cities than on the farms. For both sexes, how-

ever, the proportion over 65 in the rural nonfarm areas has grown much more rapidly than either rural farm or urban areas. For males, 12 percent of the rural nonfarm population is over age 65 compared with 8 percent and 9 percent in urban and rural areas. For females, the figures are 15 percent, 11 percent and 10 percent respectively. Our first inclination would be to interpret this higher rural nonfarm figure as supportive of the thesis that the rural population has aged faster than the urban population. However, when we realize that only 5 percent of all aged reside in rural nonfarm areas, compared to one-fourth in rural farm and 70 percent in urban areas, then the impact of this higher proportion is seen to be relatively small.

There are three possible explanations why the static population of rural areas, even with its outmigration of youth, has not "aged" faster than the more dynamic and growing urban areas. First, the rural families tend to be larger thereby holding down the proportion over age 65. The rural aged will differ from the urban aged because of this family differential in ways described later by Powers. Second, the life expectancy of rural people has traditionally been lower, thus reducing the number of people reaching the status of rural aged. This is considered in later papers by Oliver and Taietz. Finally, there has surely been some rural to urban migration by the elderly—if not from the farm to the cities, then at least from rural farm to rural nonfarm or small town environments. This is discussed in the following paper by Pihlblad.[1]

It was mentioned above that mortality, and therefore aging, has had a differential impact on rural aged men and women. For the country as a whole, the sex ratio has declined from 104 men per 100 women in 1920 to only 95 m/w in 1970. This information is presented by age and place of residence in table 3 and clearly illustrates that the decline has been the greatest in farm areas, going from 139 in 1930 to only 93 in 1970 for persons aged 65 and over. In other words, there has been a drastic change in the sex composition of the rural aged during the lifetime of the current generation. While we frequently think of the change in urban aged sex composition over the past 50 years as a trend from aged couples to urban widows, the trend during the same time in rural areas has been from rural widowers or bachelors to rural couples. If this trend continues, the implication is that more and more rural widows will be faced with the decision to remain on the land and try to farm it themselves, or to join the flow of rural widows to the nearby small towns.

TABLE 3.—SEX RATIO OF THE U.S. POPULATION OVER AGE 65 BY RURAL AND URBAN STATUS, 1930-70

Location of aged	Census year				
	1930	1940	1950	1960	1970
Rural nonfarm	101	100	97	80	71
Rural farm	139	134	128	104	93
Urban	86	82	80	76	67

Source: U.S. Bureau of the Census, 1930-70.

In concluding this section on the trends in rural aging, we have reason to believe that the rural aged may need more adjustment to their old age than do the elderly in general. Not only have they witnessed an aging of their social environment, they have seen a rural way of life to which they were socialized give way to an urban way of life for which they may not be prepared. As children they lived in a very young world which contained few older people—both in absolute size and in proportion. Because they were few in number and because of their rural environment, we have reason to believe that the rural aged of 1920 possessed a relatively high degree of status and respect (Cowgill and Holmes, 1972). It was this image of old age that the children who became today's rural aged envisioned for themselves. But as they grew older, they found themselves surrounded by an increasingly larger number of persons like themselves. This may function to provide them with a larger peer group with whom to interact, but it is generally dysfunctional to the extent that it lowers the status of the aged and affords them less respect than they were socialized to expect.

[1] Retained in committee files.

It has been the contention of this paper that the rural aged were the products of one culture, the participants of another. Unlike the urban aged who had only to learn to be "old," the rural aged had additionally to learn to be "urban." Of course, it is a matter of argument concerning the impact of the rural-urban differences on the individual's social environment. Here we have emphasized that difference. But it should be pointed out that as early as 1920 the spread of urban life styles and values to rural areas had already been observed and described as "rurbanization" (Galpin, 1920). Charles J. Galpin used this word to indicate the changing nature of community relations—especially as they dealt with family, friends, work, and government. He felt that easy and rapid communication between rural and urban areas was responsible for "rurbanization":

> Locality groups have tended to enlarge their boundaries . . . This trend has been fostered most of all by the development and diffusion of rapid means of travel and communication, especially the automobile and good roads.

Forty years after this initial invasion was described, Richard Dewey surveyed the work of eighteen authors of books and articles dealing with rural-urban sociology, looking for items believed "to be the basis for distinguishing ruralism from urbanism" (Dewey, 1960). Although he found five variables or concepts which had some degree of agreement, he ultimately concluded that "It may occur to one that, if this be all that there is to the rural-urban continuum, it is of minor importance for sociology." The five variables which he considered relatively unimportant were: (1) Homogeneity/heterogeneity; (2) intimate/impersonal social relations; (3) familiarity/anonymity; (4) simple/complex division of labor; and (5) "symbols of status which are independent of personal acquaintance." He continued by saying these should not be eliminated from sociology, but they should "be considered with the more important cultural facts, form and content, which are the sociologist's stock in trade."

While Dewey may be describing a very accurate account of rural-urban lack of difference in 1960, we cannot help but believe him guilty of shortsighted reductionism by the implication that rural-urban differences have always been relatively unimportant. It is likely that there will be little difference between rural aged and urban aged of tomorrow, for as the children of today they are being exposed to nearly identical cultural roles, expectations, and values. But this should in no way negate the differences to be found among the rural aged and the urban aged of today.

In conclusion, the rural aged are a product of a unique combination of social, historical, and technological events. Perhaps because of this they will be more difficult for the practitioner to deal with—being more difficult to reach both geographically and socially. Further, given the transitory nature of the rural aged character, perhaps the practitioner would be well advised to build service delivery programs designed to fulfill the needs of coming generations of aged, rather than attempting to construct specialized and temporary programs for this generation. This is not meant to suggest that we should fail to attempt to satisfy the needs of the present generation of rural aged, but neither should we conclude that delivery systems which are "successful" today will continue to be successful with future generations of elderly who will be healthier, better educated, more active, and more demanding of fair treatment.

Appendix 4

STATEMENTS SUBMITTED BY THE HEARING AUDIENCE

During the course of the hearing, a form was made available by the committee to those attending who wished to make suggestions and recommendations but were unable to testify because of time limitations. The form read as follows:

DEAR SENATOR CLARK: If there had been time for everyone to speak at the hearing in Winterset, Iowa, on August 16, 1976, concerning "The Nation's Rural Elderly," I would have said:

The following replies were received:

OPAL BURGER, WINTERSET, IOWA

Our parking facilities are very inadequate here at the center.

MARJORIE DRORBAUGH, CRESTON, IOWA

The CSA needs more funding to carry out its work to help keep the rural elderly better informed of programs that will help them to live a better and more comfortable life.

VERNON R. FEE, ST. CHARLES, IOWA

I am opposed to the withholding tax proposed by IRS Commissioner Alexander. He has asked the Senate Finance Committee for authority to withhold 20 to 30 percent of all interest and dividends. The attorney for the American Bankers' Association has estimated that savings amounts alone would generate 75 million pieces of paper. Alexander claims the IRS cannot afford to compare bank reports with individual tax returns. He says the Treasury loses more than $1.5 billion in revenue each year. This is bureaucracy at its best—unable to carry out an existing law, it accuses the people of tax evasion and then asks for another law to make private business their tax collector. If the IRS plan is followed, it will really fall heavy on widows, retirees, low-income families, and those living on fixed incomes. At the end of the year, the Government would have to return all it collects from those on low incomes. The added burden of paperwork will end up costing the taxpayers money.

I am opposed to the 3-day-week congregate meal program to take effect on October 1 in St. Charles. Our group has an outstanding record and, with an expansion of the program generally, I think it unwise to cut back on the existing program.

VERNE M. HIGENS, WINTERSET, IOWA

We have been carrying hospital-health-medical insurance, also life, in case we are stricken with a long-term illness, such as cancer, stroke, diabetes, or some long illness that requires intensive care. Then we found out our little savings account had dwindled to $108 at a bank here. So I wrote to A. E. Smith, director, Madison County Department of Social Services, 110 W. Green, Winterset, Iowa 50273. A lady called yesterday and told us to drop most of our insurance. I have wanted to carry insurance to provide coverage in case of a long illness or death as we have no money, no real estate, no farm to sell or live on, no business to sell on retirement, and no big pension coming. I know I could have worked after I was 65 and that would have helped me a lot and saved the Social Security Administration a lot of money. I did have a job here in Madison County as a night

watchman for Gendler Stone Products Co. and I was getting over $300 per month. I was cut off that income right after my birthday November 29, 1968, when I became 65.

So then I finally got social security and an old-age pension—both amounted to about $160 a month, so you can see what mandatory retirement has done for me.

I would like to ask if you could get $100 more for me from social security or from something else. I was forced to retire from the post office here July 11, 1975, with only 5 years' service and only 18 hours per week, so my funds and pension fund never accumulated so we could live in retirement.

I still could be working at the post office and getting money to provide all the needs, but we are being denied all this by certain laws that have been made in Congress to deprive people like us from having money to live on. I just called the hospital here and semiprivate rooms are $59 per day and $63 for private rooms. The insurance we carry pays, $1,000 per month to persons under 65, but only $500 per month to those over 65. But we pay the same premiums that those under 65 pay, so our benefits are only one-half of those under 65. We are not able to have all the medical care we need either because of no money to pay bills or office calls.

It is too bad that people here in Madison County such as us are being denied by law the right to have medical care and money to provide it. I am asking the Committee on Aging and Congress to enact some legislation to provide money for the people and let's keep more money in the United States where it belongs and take care of us who do the voting for Members of Congress and all other elective poeple. I asked the welfare department if they would buy me two new pairs of overalls to help out and so far they have refused. And that name is A. E. Smith, director (same address as before). Why not write him a letter and ask if would do this much for me—please. Thank you. I sure hope you can do something for us right away. We need it now.

We do have a car that runs, but no money to buy gasoline nor new license for 1977.

We have borrowed $800 since May 1976 just to pay bills and live on, and now I wonder how I will repay it all. And yet I have been told by one lady in the Madison County Welfare Office back in 1972 that I could have only $117 per month while my wife was in a nursing home on medicaid. They say when I am over 65 I do not need money.

ALMA MCKINNEY, WINTERSET, IOWA

I think they should do with less help in the office. with so much visiting they can't do their work with so many around. Louise Forsyth, her daughter, Mary, her mother Neva McKebbin, her Aunt Neola, and Louise's husband too. I think the one who runs the van could pick up more at a time instead of running with one or two at time. One other thing—when the clothing room opened again, they have 2 days with volunteer helpers—one or two come one-half day. The office ladies come in, go through the clothes in boxes before we can hang them up—they want to get their pick what they can use first. I don't think that's a good rule. Two other ladies have their job—Betty Berry, Teresa Brittain. They take care of their job. I go eat meals twice a week. I think they ought to have a set price—some get by with a dime or some just sign their name and go sit down. I think this money they are getting should be spent very carefully. How lucky we are to have people do this. I enjoyed your talk, and am looking forward to hear you again.

MRS. WILBUR SAVILLE, MT. AYR, IOWA

You were asking what some of the problems confronting senior citizens are. One thing that often causes a hardship to people on social security is when people who have medicare and Blue Cross insurance go to a doctor in larger cities, they have to pay cash for the doctor's services, and then wait to collect their money from the insurance company. This can really put them in a bind until time for their next social security check or the insurance money is refunded.

Another problem is the homemakers services. More money needs to be appropriated so they can provide enough help for people unable to do all of their own work. Now these services are only provided for a few of those needing help.

Also, the congregate meals program needs enough money so they can provide meals each day instead of two or three times a week. And the same thing is true for the problem of transportation in these minibuses. More buses are needed, especially equipped so that crippled people can get into the buses easier.

YVETTE WILSON, WINTERSET, IOWA

I have a job that didn't exist 2 years ago because of title III transportation, an act to help older Americans. I am a part-time van driver and the transportation secretary at the multipurpose center in Winterset. I also serve in other capacities there to directly serve and help the senior citizens, a most rewarding occupation. However, I have some misgivings about the Older Americans Act and all the other legislation which makes free services available to an ever-growing segment of our population. Because of increased advances in medical technology, Americans are living longer and, because of the declining birth rate, older people are becoming a larger percentage of the population. It is true that 40 percent of rural older folks live below the national poverty level, but this is just a statistic.

Except for increased need for medical care and its proportionately higher cost for older people, most older persons can live more easily under the poverty level than can young or middle-aged Americans who are raising and educating children, acquiring possessions needed to run a home, who require more calories from food (therefore needing more food) and need more clothing to meet the work-a-day world. Most senior citizens these days, especially in rural areas, don't require a lot of clothes because they aren't real active and don't wear out or soil the things they have. They have already had a lifetime to acquire all the material things they truly need, and many own homes bought and paid for years ago. There are exceptions in many cases, I know. I really believe though that a great many of these poverty level people don't even want the services available to them. Take the new transportation system for example: In this county of over 11,000, about 2,631 are eligible to ride the van. However, in 1976 only 212 different individuals in the county have used it once or more. Two good friends, both over 60, say they won't because, although they feel it is a good thing for some few, it doesn't justify the money spent and therefore, indirectly, the increase in taxes they and younger people of America have to pay. Even though I benefit personally from this particular program, I agree with them.

Why should we have medicare, transportation, congregate meals, reduced college tuition, reduced admittance prices to many activities, low-income housing, home health care, etc., for 60-plus people and not for the general population? It is clearly discriminatory. I know it is true that more special funds are becoming available for other age groups; for example, money for summer recreation for low-income children 8–13 (we have a program out of this center) and man-power, which helps finance jobs and education for poor young adults, but here again, all the "programs" I know about all deal with the poor, the cost of which middle income persons are carrying. I work because with four school-age kids we can't get along on his income alone, yet he makes too much to make our boys eligible for reduced price school lunches or summer recreation or winterization of our home, or reduced costs of child care for our youngest while I work. Something's wrong somewhere. Sure, these programs produce jobs for folks my age (I'm one), but I just get paid the minimum wage, as does the outreach worker here who is buying a house and raising three teenage boys on her bimonthly take-home of $175. In her case, she could make more on unemployment or welfare. I sure don't have the answers, but I do have a lot of questions. I know mandatory retirement at age 65 is for the benefit of young and middle-aged families, but a great source of human potential is literally discarded. I don't know one of the senior citizens I am acquainted with that I don't think is worthy of government help, and I'm happy for those who have benefited by it, but the contradictory attitudes I've just described still keep running through my mind and I feel we are slowly becoming a total social society, and I'm against that.

OPAL WOODS, TRURO, IOWA

We, the undersigned, would like to have the congregate meals program continue the 5 days per week. Although some of us can't attend every day nor can we meet our 25-per-day quota, we hope this service will not be discontinued as we feel there is a real need for it in our community: Mr. and Mrs. J. L. Morse, Effie B. Spencer, Veda Johnson, Frank Weitt, Enid Dudney, Margaret Winter, Daisy Barnes, Lula Smith, Alta Rhynd, Peggy Looner, Leea Snyder, Phyllis Lorenzen, Jessie Hiatt, Mildred Hazen, Gletha Lytton, Grace Perry, Mary Fenimore, Bernice Brant, Wylma Roby, Georgia Jones, Ralph Jones, Evelyn Kephart, Alvin Kephart, C. R. Woods, Opal Woods, Edith Youmans, Ruby Camp, Cleo Creger, Mabel S. Torbet, Helen Durbin, Ethel Seamans.

MARION W. YOUNG, DES MOINES, IOWA

After working in the social service field for the past 2 years as an information and referral specialist, I feel that the elderly's two biggest unmet needs are housing and handyman-chore service. Much was said at this hearing about housing, but I was surprised that handyman-chore was not mentioned (unless it was mentioned by the last panelist—I had to leave before he spoke).

Surely, people need their grass cut, weeds pulled, and certain minor repairs, such as putting in light switches and replacing washers in leaky faucets. What elderly person can pay the prevailing wages for these services?

Also, I would like to see some type of coordination between the funding agencies that allocate funds to titles III and VII of the Older Americans Act and title XX of the Social Security Act. Title XX can do anything that titles III and VII can do, except there is a means test for title XX.

My real concern is this: Most of the agencies that channel funds down to the service providers are interested in only allocating funds and the programs they fund. Personally, I think the commission on aging and the area agencies should assume the role as advocate for the elderly and, through a cooperative effort with other community resources, see that all services are delivered.

I am 61 years old!

APPENDIX

THE TRAGEDY OF NURSING HOME FIRES: THE NEED FOR A NATIONAL COMMITMENT FOR SAFETY

THURSDAY, JUNE 3, 1976

U.S. HOUSE OF REPRESENTATIVES,
SUBCOMMITTEE ON HEALTH AND LONG-TERM CARE,
SELECT COMMITTEE ON AGING,
and
U.S. SENATE,
SUBCOMMITTEE ON LONG-TERM CARE,
SPECIAL COMMITTEE ON AGING,
Washington, D.C.

The subcommittees met, pursuant to call, at 9:30 a.m., in room 318, Russell Building, Hon. Cluade Pepper, chairman of the House Subcommittee on Health and Long-Term Care, and Hon. Frank E. Moss, chairman of the Senate Subcommittee on Long-Term Care, jointly presiding.

Subcommittee members present: Representatives Pepper of Florida, H. John Heinz III of Pennsylvania, and William S. Cohen of Maine; and Senators Moss of Utah, Charles H. Percy of Illinois, and J. Glenn Beall, Jr., of Maryland.

Also present: Hon. William J. Randall, chairman of the House Select Committee on Aging, and member, ex officio, of the Subcommittee on Health and Long-Term Care.

OPENING STATEMENT OF SENATOR FRANK E. MOSS

Senator Moss. The hearing will come to order.

This is a joint hearing of the Senate Subcommittee on Long-Term Care and the House Subcommittee on Health and Long-Term Care chaired by Representative Claude Pepper, and we have the Senator from Illinois as the ranking minority member on the Senate committee, Senator Percy. We hope there will be others who will be able to join us as we proceed.

We are here to probe the causes and implications of the two recent nursing homes fires in Chicago which claimed 31 lives earlier this year.

Since we are going to be talking about two fires today, I just want to take a moment to describe each fire with the hope of minimizing confusion.

The first fire occurred in the Wincrest Nursing Home at 11:40 a.m. on January 30, 1976. This home was of modern design, basically a steel and concrete structure. It is said to have been in substantial compliance with the existing Federal fire safety standards for nursing homes: The Life Safety Code of the National Fire Protection Association. Arson was the alleged cause of the fire. The reaction of the fire department was swift, arriving at the scene 3 minutes and 40 seconds after receiving the initial alarm.

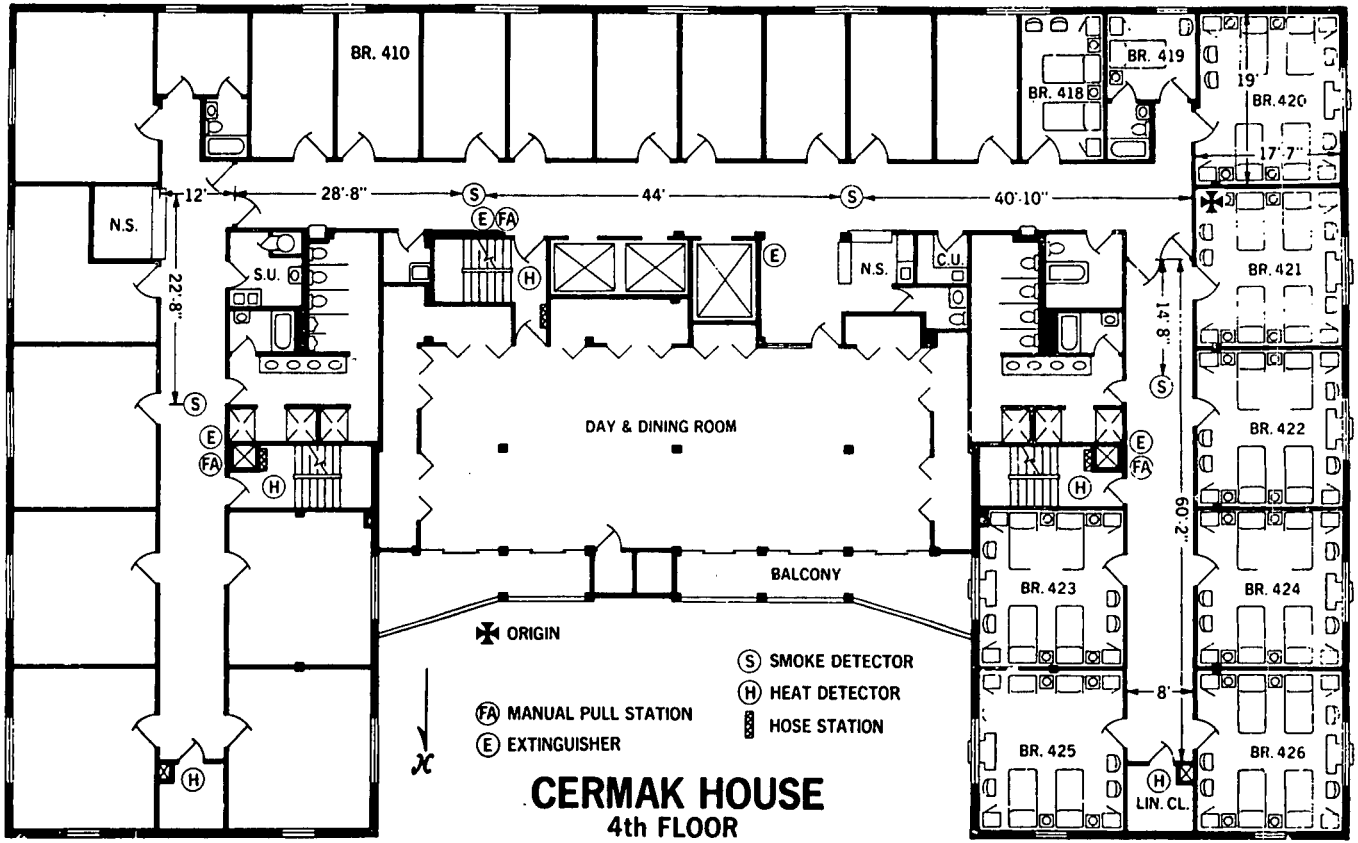
WINCREST NURSING HOME
THIRD FLOOR
CHICAGO, ILL.

SOURCE: NATIONAL FIRE PROTECTION ASSOCIATION



CERMAK HOUSE
4th FLOOR
CICERO, ILLINOIS

SOURCE: NATIONAL FIRE PROTECTION ASSOCIATION

Senator Moss. You will note by the floor plan on display here that the fire reportedly started in a patient's wooden clothing wardrobe on the third floor of the home. The contents of room 306 were totally incinerated but the fire did not spread to adjoining rooms. Employees trying to battle the fire left the door to the room open so that dense smoke filled the hall, the open rooms, as well as the chapel at the end of the corridor. Twenty-three of the home's 83 patients died in the fire. Most of them were attending religious services in the chapel at the time the fire broke out. Significantly, the chapel is at the end of a "dead end" corridor; patients had to be moved in the direction of the fire to be evacuated.

On February 4, 1976, a second fire occurred at Cermak House Nursing Home in Cicero, Ill., a modern 9-story 618-bed concrete-and-steel nursing home. The fire began at 6:30 a.m. in room 421, on the home's fourth floor. The fire department responded promptly but eight patients died, most from smoke inhalation. The exact cause of the fire is undetermined; the best theory is that it was the result of electrical failure. In this fire, as in Wincrest, most of the fatalities occurred because of a dead end corridor. Again, this means that patients had to be evacuated in the direction of the fire. Cermak House, like Wincrest, was allegedly in substantial compliance with all Federal and State fire standards for nursing homes.

These two tragedies raise a series of inevitable questions:

Why did 31 patients die in nursing homes that were ostensibly in compliance with existing Federal and State fire safety standards?

Does the existing Federal standard, which is in compliance with the Life Safety Code, adequately protect patients?

Should every nursing home receiving Federal medicare and medicaid funds be required to provide automatic sprinkler protection regardless of construction type?

Should smoke detectors be required in every facility as the first line of defense against fire?

Should the Congress enact greater controls with respect to the kinds of furnishings that may be used in nursing homes? Put differently, does it make sense to require operators to build homes of concrete and steel and yet to allow them to furnish such homes with highly flammable nightstands, wardrobes, chairs, wastebaskets, and the like?

In this connection, I want to find out why the Department of Health, Education, and Welfare has not fulfilled the promise they made to me after the January 1970 Marietta, Ohio, nursing home fire to issue appropriate flammability standards for carpeting installed in nursing homes.

I want to know why, 9 years after the enactment of the Flammable Fabrics Act, the Department of Commerce has not promulgated effective flammability standards to protect consumers. After our hearings on the Marietta fire 6 years ago, I was promised that such standards would be forthcoming. Unfortunately, both the Commerce Department and HEW continue to rely upon the anemic "pill test," a test of questionable value which provides limited protections to consumers in general and almost none to nursing home residents.

I want to know why there is little or no emphasis within the Department of Commerce or HEW on the question of smoke generation and the toxicity of burning gases. We have raised this question in the

hearings we have held on several of the major nursing home fires, and yet, little seems to have been accomplished on this score.

I hope that we can have some of these questions answered today.

I am very pleased that Representative Pepper, the chairman of the House Subcommittee on Health and Long-Term Care, is here on this joint hearing. I will ask if he has any opening remarks.

OPENING STATEMENT OF REPRESENTATIVE CLAUDE PEPPER

Mr. PEPPER. Thank you very much, Senator Moss.

I wish to thank you and your subcommittee for accepting our invitation to join with us in today's hearing. You and your staff have, over the past several years, developed tremendous expertise in the area of nursing home fire safety, and we are privileged to be able to work together. Today's hearing is our second joint effort, the first having been at Senator Moss' invitation on the subject of proprietary home health care on October 28 this past year. I also am very grateful that Senators Moss and Percy were kind enough to agree to the delay of this hearing until today because of my recent operation.

Our Subcommittee on Health and Long-Term Care of the House Select Committee on Aging is very pleased to meet with your subcommittee to consider the vital matters of safety of people all over America who are patients in nursing homes against the danger of fire, although the circumstances necessitating today's hearing are unfortunate.

Thirty-two defenseless elderly persons died and 50 were injured in two fires in nursing homes in the Chicago area earlier this year, with multiple deaths and injuries in earlier fires elsewhere across the country.

The tragedy of the recent fires mandates congressional and executive action. It is shocking to learn that so many deaths and injuries occurred in the two Chicago fires this year, and several earlier fires elsewhere, even though the buildings were supposedly fire-resistant and were in substantial compliance with the Federal fire safety requirements. Evidence to date from Chicago fire officials and others indicates that sprinklers throughout the facilities would have avoided the multiple deaths which occurred. Current Federal life safety standards are simply inadequate.

In addition, bureaucratic tangling between the Departments of HEW and HUD—which have joint authority to approve federally assisted loans for the construction of sprinkler systems—has resulted in the approval of not a single loan anywhere in the country.

Prompt action by the Congress and the executive branch is needed to make certain that repetitions of the Chicago tragedies—which we now learn were clearly avoidable if adequate standards were in effect—do not recur.

At our request, the General Accounting Office has conducted a study on the Chicago fires. The GAO report, just completed, has concluded that "Federal fire safety requirements do not insure life safety in nursing home fires." GAO's recommendations for action include requiring all nursing homes to be fully protected with an automatic sprinkler system and expediting and publicizing Federal loan procedures for sprinkler construction. I hope our joint committee will consider the possibility of loans by HEW to nursing homes which need financial assistance in order to provide sprinklers for the safety of their people,

loans that could be amortized over a reasonable period of time. In addition, some of them may require grants, and I hope our committee will study that possibility.

I hope these matters will be carefully studied with an eye both to introducing legislation and to urging Secretaries Mathews and Hills to implement the administrative recommendations.

The General Accounting Office will be a principal witness today, and I want to express our deepest gratitude to them for their prompt completion of their study in time for today's hearing. Their study will be released for the first time at this hearing. I particularly wish to thank Alan Zipp of GAO for his thorough and dedicated service in the preparation of the background work and report itself. I understand that Alan gave up a Florida vacation to complete the report and to be with us today.

The testimony of the General Accounting Office will be followed by other leading national experts in nursing home fire safety both from the executive branch and other organizations.

Following our hearings, I intend to introduce legislation upgrading nursing home fire safety standards. The hearings will be vital to letting us know just what needs to be done.

I am grateful to you, Chairman Moss, and I would like to introduce my distinguished colleague on our committee, Mr. Heinz, of Pennsylvania.

I am going to have to go back over to the Capitol for an event there and if Senator Moss is not able to stay, I understand Senator Percy will stay until we can return.

Senator Moss. Thank you very much, Congressman Pepper, for that very fine statement and for the great leadership you have exercised in the House committee, the counterpart committee on which Senator Percy and I serve.

I now recognize the senior Senator from Illinois who is interested doubly in these two unfortunate events because they occurred within the boundaries of the State which he so ably represents in the U.S. Senate.

OPENING STATEMENT OF SENATOR CHARLES H. PERCY

Senator PERCY. Mr. Chairman, before Congressman Claude Pepper leaves, I would like to thank him very much indeed for ordering the GAO report. I certainly agree with you it is an excellent job. We welcome your participation, Congressman Pepper, not because I am a native of the State of Florida but because of our common deep interest in this problem. I certainly welcome Congressman John Heinz here as well.

Mr. Chairman, there is little I can add to the analysis you and Claude Pepper have made, other than that I happened to be in Chicago on January 30. I went to the nursing home at Wincrest after I heard the radio report.

The fire department officials who led the fight at the time of the fire were still there. I would like to express my appreciation to the owners of the home, to the Chicago Police and to the fire department who spent several hours with me going through the still smoldering room where the fire began to let me examine firsthand what had happened.

I frankly went out because I expected to see exactly the same thing that you and I have seen on so many occasions in Chicago—dilapidated old converted apartment hotels bought up cheaply and written off, rented to operators who were bilking a tremendous return on investment out of elderly patients.

I was stunned when I saw the building at Wincrest. It was an outstanding facility. This irony is what makes it all the more tragic for the family and friends. The Wincrest Nursing Home and the Cermak House Nursing Home were in substantial compliance with all Federal, State, and local laws and regulations. They are excellent facilities. They are modern and well constructed, constructed of fire-resistant materials.

We immediately sent for the inspection records. The records we looked at indicated that fire drills and tests of evacuation procedures had been carried out at least by the staff.

What I think we should ask of our witnesses today is whether or not it is feasible in long-term care facilities to have any fire drill procedures, that is, evacuation procedures that could be used by the patients themselves.

Certainly, the staff here had, by the records, been well trained. When the fires were discovered alarms were turned in or automatically activated and the fire departments of Chicago and Cicero responded promptly and acted professionally. The fires were largely confined to the rooms in which they originated.

Yet, 23 persons died in the Wincrest fire and eight died in the Cermak House fire. These persons died of smoke inhalation. They died not because rules and regulations were being flaunted by operators and administrators concerned only with profits. They died in spite of what appear to be honest and well-meaning efforts by staff and operators alike to provide a safe and secure environment for the frail and infirm.

I did notice, and I am sure we will bring out in testimony today certain mistakes in judgment that were made at the time. I think it is best for our witnesses to bring those out themselves.

If 31 persons can die under these circumstances, how many are in jeopardy in those many facilities identified by this subcommittee and others which are not in full compliance with the law?

If substantial compliance with Federal, State, and local fire safety regulations still cannot guarantee the safety of the elderly, how can we achieve this objective? Or must we concede that it is impossible to attain?

Additional steps can and must be taken to reduce the possibility of future nursing home fires.

It seems clear that sprinkler systems are cost-effective ways of extinguishing fires before they become a risk to life. As has been noted many times before, no life has ever been lost because of fire in a sprinklered facility. The Congress must act to make sprinklers mandatory in all medicare and medicaid nursing homes.

I think we ought to ask ourselves, every Member of Congress, how would we like to have our mother and father in an unsprinklered nursing home facility.

I do not think sprinklers are the whole answer. They are not alone the answers.

We have learned from the Illinois tragedies that toxic smoke is the real killer. We must eliminate from nursing homes to the extent possible those furnishings and fabrics which are likely to produce toxic smoke. In addition, we must be sure that staff and residents alike are trained to the extent possible in fire prevention and evacuation.

If fire does break out, it must be possible to contain it by means of smoke-activated self-closing doors which seal off the affected portion of a corridor. Although some risks are involved, we should also contemplate similar devices for patient rooms. Occupants of rooms adjacent to those in which the Wincrest and Cermak House fires were isolated escaped injury and damage so long as the doors were closed.

I talked to the people in the room next to the Wincrest fire. They did not know there was a fire until the firemen actually came in and led them out of danger. Where doors were open, damage and death occurred.

Mr. Chairman, although time may have dimmed our memory of the Wincrest and Cermak House fires we can still apply what we have learned because of them before yet another tragedy occurs. The fact that we are holding these joint hearings with our colleagues from the House Select Committee on Aging means that there is hope for prompt and effective action.

The first incident I ever investigated in the Senate 10 years ago involved three astronauts who were incinerated on the pad. The Senate investigation made safety regulations the rule for all future flights, and we have not had a single accident since then. I think the same care and diligence must be applied in this case.

Surely, it is not asking too much to attempt to insure the same degree of safety for elderly Americans who reside in nursing homes. Surely, we have the will and the capacity to achieve this objective.

Thank you very much, Mr. Chairman.

Senator Moss. Thank you very much, Senator Percy. Not only have you worked long and diligently on this problem, but you have more firsthand knowledge of what happened in these two fires than any one of the committees, and we will be able to elicit more information from the witnesses that we need for our record.

I now wish to recognize Representative John Heinz from Pennsylvania who has served on the House Committee for any comments that he has to make. I must leave very briefly. Senator Percy will preside during the time I am out. I know of his deep interest and concern and knowledge about this matter. I shall return as soon as I can.

OPENING STATEMENT OF REPRESENTATIVE H. JOHN HEINZ III

Mr. HEINZ. Mr. Chairman, I thank you. Let me just take this opportunity before you leave to commend you on holding these joint hearings on the subject that is of great interest both in the House and the Senate, but most of all to our senior citizens in nursing homes.

I think you deserve a tremendous commendation for bringing this opportunity about.

I would also like to recognize the excellent work of my own subcommittee chairman, Claude Pepper of Florida who, quite correctly as Senator Percy pointed out, is the person who brought to the GAO the need to study the Federal fire safety regulations and has produced what is obviously a very timely and provocative report.

Finally, Senator Percy, I must say, listening to your comments about your firsthand experiences in the Wincrest Home in Illinois, I think that perhaps you should be both witness and chairman today, and you have a very special contribution that is usually remanded to the Congress and in particular this very serious problem.

I would like to identify myself with your opening statement about the necessity for swift and more congressional action to improve our Federal fire safety requirements for nursing homes.

The fact that this committee is jointly meeting here today under Representative Pepper and Senator Moss's leadership, really marks a decade of attention to this problem.

The efforts in particular of the Senate Committee on Aging have yielded important results. In fact, the social security amendments of 1967 which became effective on January 1, 1970, required nursing home facilities participating in medicaid programs to comply with the 1967 lifesaving code standards of the National Fire Protection Association.

This was the first time policy was taken to insure that residents of the nursing homes would be protected from the effects of fire.

Nonetheless, in the 6 years since 1970 that followed Federal implementation of fire safety codes, we have, unfortunately, learned much about the effectiveness of the provisions of this and later versions of the Life Safety Code.

Unfortunately, because most of the experience we have learned comes at the expense of the nursing homes, the stark tragedy of the 31 patients in the January and February Chicago medicare facilities brings our attention to the fact that our nursing home safety codes, while expensive to comply with and often lead to inconvenience to residents and administrators of homes still do not insure fire safety.

Both of the Cermak and Wincrest facilities were in compliance as Senator Percy pointed out with the current version of the code and were a relatively new fire-resistant construction.

Yet, despite quick action by the fire department and the nursing home staffs, a lethal environment was created for those residents.

The ethical and policy implications of these facts should not be lost on us here in Congress, nor on the executive branch, nor on the American public.

We continue to foster halfway approaches to critical problems faced by our institutionalized elderly and disabled population.

I hope today's testimony by our witnesses can lead us to a fuller understanding of what combination of safety measures can most effectively prevent the effects of fire and toxics and suffocating by-products from reaching lethal proportions as it so often does under the present Life Safety Code.

In that connection, I hope our witnesses will particularly address the question of sprinkler system and the most effective way to implement that kind of system in nursing homes.

In conclusion, Mr. Chairman, I would only add that earlier this year our House Select Committee on Aging, Subcommittee on Health and Long-Term Care issued a report on new prospects in health care for older Americans.

Mr. Chairman, this is a report that was drafted before these terrible fires in Chicago. In part, the report observed that, and I quote:

> Current regulatory practices may over-emphasize compliance of a physical plan to standards not fully appropriate to them.

It is a grim and slightly pathetic irony that even with our tendency to regulate to a certain extent by physical overkill, that is to say to require blanket application standards to all personal care institutions which are not sufficiently flexible or effective, such tragedies as Chicago are still commonplace.

Our mission today would seem to me is to point in a new direction, to determine how dollars and resources can best be allocated and permit our senior citizens and others to live a safe and active life in institutions.

I certainly pledge my full support to the efforts of this joint committee today, and I certainly believe that this is a very timely meeting of both our House and Senate Select Committees on Aging.

I would like, Mr. Chairman, at this point to recognize, if I may, another distinguished member of the House Select Committee on Aging who is here, but I also see that Senator Beall is here.

Let me advise the Chair that Congressman Cohen of Maine is here, a very valuable member of the minority on the House Subcommittee on Health and Long-Term Care, and I would hope that when the time comes the Chair will recognize him.

Senator PERCY [presiding]. We will be very happy to recognize Congressman Cohen after Senator Beall, who would like to make a brief statement.

OPENING STATEMENT OF SENATOR J. GLENN BEALL, JR.

Senator BEALL. Thank you, Mr. Chairman.

First of all, let me say that I heartily endorse the remarks that you just made relative to the necessity of improving the standards for fire protection in nursing homes. As one who spent most of his working life, prior to becoming a full-time legislator, in the insurance business—I know from firsthand experience the cost effectiveness of sprinkler systems. Of course, any fire prevention measure is cost effective when you consider the savings in lives and property that results from good standards effectively enforced.

I would like to point out that we must strengthen and expand the Federal role in the development of new standards for nursing homes. In addition, the Commerce Committee, of which I am a member, last year developed and the Senate and House passed legislation that established the new National Fire Prevention and Control Administration. This legislation gave the Federal Government a central administrative body that can undertake the research and development of new technology to prevent, detect, and control fires.

Some interesting experiments are now taking place at the National Bureau of Standards. One such area of research involves treating certain floor covering and wall covering materials with fire retardant chemicals. This concerted research effort on the part of the National Fire Prevention and Control Administration will help to make and market new fire prevention technology. This new technology should

be promptly put into place so that the public can get a greater degree of protection from fires.

I am pleased to have had a role in shaping the National Fire Prevention and Control Act and I congratulate the committee for holding this joint hearing this morning.

Senator PERCY. Thank you very much.

I now recognize Mr. Cohen of Maine.

OPENING STATEMENT OF REPRESENTATIVE WILLIAM S. COHEN

Mr. COHEN. Thank you, Mr. Chairman.

I would like to say that I join in the remarks of my good friend and colleague from Pennsylvania, Mr. Heinz.

I welcome the opportunity afforded by this joint meeting of the Long-Term Care Subcommittees of the House and Senate Aging Committees to focus attention on fire safety standards in our Nation's nursing homes.

This is not the first time Members of Congress have met to discuss the importance of fire safety in long-term care facilities. Deaths by fire are three times higher for older Americans than for the population as a whole and invalid patients of nursing homes are especially vulnerable to this threat. Recognizing the danger of this situation, the Social Security Act was amended in 1967 to require compliance with fire safety standards issued that year by the National Fire Protection Association, a voluntary, nonprofit organization formed to promote the science and improve the methods of fire protection and prevention, for purposes of reimbursement under medicaid and medicare.

Technological advances and further study led to revisions of the Code in 1967 and 1973. My State of Maine was one which recognized the value of the updated codes—particularly the 1973 Code which emphasized the use of automatic sprinklers. Maine is now one of two States in the Union in which long-term care facilities have been fully equipped with sprinklers.

As a result of mounting evidence underscoring the value of automatic sprinklers in protecting lives and property against the dangers of fire, I introduced legislation late last year with the other members of the Maine congressional delegation to update the Fire Safety Code requirements of the Social Security Act by incorporating the provisions of the 1973 Code. This legislation was subsequently attached to an omnibus social security bill and is now a part of Public Law 94–182. The provisions of that law concerning fire safety went into effect this week.

Since the Congress has placed itself in the position of mandating fire safety codes, it is unfortunate that we have not acted more promptly on the lifesaving benefits of the 1973 Code. It has taken such tragedies as the recent Chicago nursing home fires to make Congress fully appreciate its responsibility in this area.

The GAO report released to us today indicates that our past legislation has not gone far enough toward protecting lives and property from the dangers of fire. I was amazed by the report's conclusion that buildings constructed of fire-resistant materials, as required by the 1967 Code, do not insure life safety. In fact, GAO found evidence

that increased use of fire-retardant materials may increase the hazard of death in fires rather than reduce it—due to the toxic gases released when these substances catch fire. The report also notes that fire-resistant buildings are too often filled with flammable materials, such as carpets, curtains, and upholstery. In view of these findings, I commend GAO for recommending that all long-term care facilities be fully equipped with sprinklers.

The report's other disclosures on the ineffectiveness of fire-resistant and noncombustible construction, however, lead me to wonder if the Congress should not legislate that the requirement for fireproof construction also be modified as allowed by the 1973 code, when sprinklers, smoke detection, and other fire prevention techniques are used in a home.

I commend you, Senator Percy, for the long years you have devoted to the problems in this area, the books you have written concerning it and your continued demonstrated interest in this field, and I congratulate you for holding these hearings.

I believe we will be rewarded by our active participation in this hearing today, and I look forward to the testimony of our witnesses. Thank you.

Senator PERCY Thank you very much, indeed, and I appreciate both you and Congressman Heinz coming over to the Senate today for this joint hearing and for your contribution.

The Chair will call the first panel, the Reverend William Pollard, chapel reverend, Wincrest Nursing Home, Dr. Paul Hurwitz, examining physician, the Wincrest Nursing Home, Mr. Charles Chandler, administrator, Cermak Nursing Home.

Gentlemen, we would like you to make any statement you would care to make. If you would like to incorporate your full statement in the record, it will be so ordered and you can summarize your comments. Proceed as you see fit.

STATEMENT OF REV. WILLIAM POLLARD, CHAPEL REVEREND, WINCREST NURSING HOME, ACCOMPANIED BY DR. PAUL HURWITZ, EXAMINING PHYSICIAN, WINCREST NURSING HOME, AND CHARLES CHANDLER, ADMINISTRATOR, CERMAK NURSING HOME

Reverend POLLARD. Thank you very much, Mr. Chairman.

Gentlemen, my name is William Pollard and I am a member of the St. Patrick's Missionary Society. We are here in America offering mission education to the people of America, and we work in Africa and South America.

Mr. Chairman, I was born in Ireland and I was educated there. I was ordained in 1968 and spent 8 years in Kenya in east Africa, teaching and doing social work, with the Terrakani tribe in north Kenya.

Mr. Chairman, this is not my first time in America. I was here 5 years ago, and I came and did some mission education work and then stayed for 5 months and also took a flying course in Chicago and used my flying experience in Africa to help the East Africa Flying Doctors Service there.

Now, I have come back to study and offer my missionary experience to the people of America, and I have just arrived.

I was 2 weeks in Chicago and I was asked to go to the Wincrest Nursing Home to see the people in the nursing home.

I would like to summarize very briefly my experience there.

The chapel there, as you can see from this chart, is at the end of the building, and we had just come to the end of mass and a nurse had left the chapel area when a bell had sounded. I was not sure what this bell was, and I was happy to see her leave.

Well, she left immediately and I was happy to see her going out to find out what the bell was. She came back very quickly and said to me, "Father, there is a fire. It is serious."

At that stage, I took my vestments off, put them on the chair and went out into the corridor.

Could I stand here, please, sir?

Senator PERCY. Yes, of course.

Reverend POLLARD. I left the chapel area and went out here [indicating on chart].

When I came to the fire, the fire was in room 306. There were two men here standing on the threshold pointing fire extinguishers into the room. The door I have no recollection of seeing. Fire seemed to be in this area over here.

On the path of this room back toward the window here was very dense smoke. The two men were pointing two extinguishers into the small area, so I took an extinguisher from one of the men and asked him to go get another fire extinguisher, and I pointed the extinguisher here in this area where the fire was.

Very, very quickly in the space of seconds, I would say the white smoke turned to black smoke and it began to descend on us until we could no longer see the fire, until we could no longer breathe.

We retreated along the corridor to this stairwell here. The smoke covered the corridor and it was impossible to stay in the corridor with the black smoke, so we went out here to the other corridor.

I remember very well and I probably will remember until the day I die going down along this corridor and thinking about the poor people at the end of the corridor in the chapel area, and I prayed that the fire department would come quickly because I felt they were the only ones who could rescue those people at that stage.

Senator PERCY. Father, at that stage, how dense was the smoke?

Reverend POLLARD. The smoke had come down to about this area, about 4½ feet. It was totally dense. I could not see in front of me. I could not see who was with me.

I went out to the stairwell and very quickly the fire department arrived. The firemen put on their oxygen equipment and went down along here. I went back down the stairs and went over to this stairwell.

Very soon, the fire department had the fire under control and I gave absolution to the people as the firemen brought them out of the building, using this staircase.

That is my experience at the Wincrest, and if I would like to say one thing, I would like to say that the whole experience happened over a few seconds, just a few brief minutes. It was very, very quick.

Senator PERCY. Before you leave the chart, could you identify the objects?

You pointed to an area where you said the fire was.

Reverend POLLARD. Yes.

Senator PERCY. At the time you entered the room, what was that object?

Reverend POLLARD. I'm afraid I could not say because of the fire there, and it was smoke here and the fire.

Senator PERCY. Could you identify the object immediately behind the door?

Reverend POLLARD. No.

Senator PERCY. You do not know what that was?

Reverend POLLARD. No.

Senator PERCY. That is a cabinet, a wooden plywood cabinet jammed, apparently, with a number of personal effects. Did you enter the room later and examine those objects?

Reverend POLLARD. When the fire was over.

Senator PERCY. In other words, I want to know, did you know personally where the fire started?

Reverend POLLARD. Personally, before the fire and when the fire was going on, I did not know where the fire started.

I could only distinguish here [indicating] where there were names in this area here.

After the fire, I learned this—where it had started.

Senator PERCY. Could you determine whether or not there was at any time that you were there any windows open at any place on the floor?

Reverend POLLARD. No, I could not, I'm afraid.

Senator PERCY. Did you subsequently learn that a window had been opened?

Reverend POLLARD. Yes.

Senator PERCY. And which window? Would you point out to the committee what window was actually opened?

Reverend POLLARD. Not really. It was a window in the chapel, I believe.

Senator PERCY. A window in the chapel?

Reverend POLLARD. Yes.

Senator PERCY. And could you point out which window that was?

Reverend POLLARD. I'm afraid I cannot.

Senator PERCY. You have no idea which one it was?

Reverend POLLARD. No.

Senator PERCY. This was all so fast, I know, but at what instant was that window open?

Are you certain it was open while you were down there trying to use the fire extinguisher?

Reverend POLLARD. I do not know when it was open.

Senator PERCY. You are not certain from any questions you put to any of the staff subsequently at what point the window was open?

Reverend POLLARD. No.

Senator PERCY. What do you think the effect of that window was when it was opened?

Reverend POLLARD. I have no idea, Senator.

Senator PERCY. You have no idea at all?

Reverend POLLARD. None whatsoever.

Senator PERCY. You have no knowledge as to whether the window being open actually hurt or helped the situation as to whether the smoke went out or what happened?

Reverend POLLARD. I'm afraid not, no.

Senator PERCY. Before the Reverend leaves the chart, would any of the other members of the committee like to ask any questions?

Mr. COHEN. No, Mr. Chairman.

Senator PERCY. Then if you care to be seated again—does that complete your statement?

Reverend POLLARD. That completes my statement.

Senator PERCY. Dr. Hurwitz?

Dr. HURWITZ. Good morning, gentlemen. I am Paul Hurwitz and a physician from Chicago where I practice medicine.

I divide my time between school health and emergency medicine.

Wincrest Nursing Home is a small family business owned by my mother and uncle, and I have often been associated with it since childhood.

At the time of the fire, I was in my car transferring some cultures I had done for several studies for the board of education downtown.

I drove to Wincrest and arrived 10 minutes after the fire was struck out.

Though I normally have no professional responsibilities at Wincrest, I did so on that day because the attendant physician was in California.

I made certain observations at the time of the fire, however, and drew certain conclusions which members of your staff might continue the description of the fire scene which Father Pollard has already begun.

My first impression is, I crossed the police line and entered the building and there was pandemonium. The lobby and entire first floor was filled with horrified people, both police, fire and government officials, board of health inspectors, insurance adjusters and occasional family members which made it over very, very quickly and, of course, nursing home employees.

Everybody seemed to be attempting to provide service.

Miss Cassidy, the Administrator of Wincrest for 20 years, I first found in the ground floor hall looking terribly stressed, but as usual, working as competently as ever attempting to organize with vital components of the nursing home, remained so as to provide continuation of services to the uninjured residents living on the lower floors.

Incidentally, most of whom as we are going to learn later in the day, most of these people were not even aware that a fire, much less a holocaust, had occurred.

Over the next 30 minutes as they passed, additional members of our family arrived, both past and off duty current employees arrived and certainly other friends.

Each of us instinctively were attracted to those services which we know most about. Several minutes after my arrival, I spoke with Miss Cassidy and asked her what I could do, and she suggested that the best thing for me to do would be to go up and take a look at the remaining patients.

I did that and went to the second floor and then down to the first floor and found them to be peaceful and comfortable.

I was shocked by this, tragically shocked, by the order and the quiet, more or less retrospectively, which prevailed on the patient floors in gross contrast to what I had experienced on the ground floor, and in gruesome contrast to what I was soon to see when I went to the third floor.

I walked up after examining the patients, the remaining patients. I walked to the third floor via a rear enclosed stairwell to a rubble-strewn third floor.

While you are going to hear expert testimony throughout the day about observations and thoughts which pervaded from their lips on the first few minutes after the fire was out, was the terrible shame that the fire could not have been prevented, but the terrible smoke could not have been contained in room 306, which the Father has pointed out, which housed the fire.

Also, the news as Senator Percy has related to the hearing, several patients in room 304, which you can see right on the schematic there, that several patients were right next to the scene of the fire, came out after the fire was over.

Their door had been closed and they had asked if, in fact, there was a fire. I think it might be well to limit my initial comments to those I have made and suggest that I am in total agreement and in identification with the points Senator Percy offered in his opening remarks.

I think it might be well once again for whatever good it might serve to underscore the necessity of having confidence in fire retardants of these structures, their ability to compartmentalize the fire and smoke.

I think it is well to point out if we were to go right now to any nursing home and drag 30 people down from the third floor, you are going to kill a substantial number, and I think we have got to remember and remember throughout the day that evacuation is really futile. It is a waste of personnel and as the Father has pointed out so aptly important in time as this thing took place in such a short number of minutes, that we have to limit our efforts to those which will save lives and evacuation will not.

I thank you.

Senator PERCY. Thank you very kindly.

Any questions my colleagues would like to ask at this point?

Mr. COHEN. I have one, Senator.

Doctor, you stated evacuation is a waste of time, that you feel a certain number of patients would die when you would drag them down to the first floor.

What if you have a single-level nursing home?

Dr. HURWITZ. You drag them out. To move a patient without hurting them with a senile, fragile body requires two members of the staff over, you know, a couple of minutes and when you think of the chaos and the pandemonium that reigned under the circumstances, and remember you are dealing with human elements, and I am referring to staff elements, and you have to remember that people are not functioning quite on the level that they would in a drill.

Mr. COHEN. You also indicated we have to have confidence in fire-retardant materials.

My understanding is that the nature of materials is what produced the smoke.

What if you had had fire-retardant materials?

Dr. HURWITZ. That is right, that is in the room where the fire was. You have to have confidence. We have to think of the definition of the word "retardant" which slows the fire.

Mr. COHEN. Produces noxious gases.

Dr. HURWITZ. Obviously, even if you were to limit and legislate against component products to produce nothing but gases that would normally not provide ill health to a person breathing them, it is not going to be oxygen you are producing, and people will still die of carbon monoxide or oxygen deprivation.

Mr. COHEN. You do not think it would be worth while for us to investigate when other agencies are investigating the use of that material?

Dr. HURWITZ. I am not an expert in these areas.

I know what allows the human body to maintain its integrity and maintain life.

I am familiar with health education and you have to remember the pulmonary reserve capacity and the cardiac reserve capacity is markedly limited, depending on the disease process and aging.

You have to expose them to the least amount of trial and provide them with as normal an atmosphere of life-sustaining conditions as they are used to, because they are not doing a heck of a lot with what they have even when they are perfectly well.

Mr. COHEN. No further questions.

Senator PERCY. I would like to ask a question about the people in the chapel.

Was there confusion?

How would you describe the state of mind of those people as smoke poured in?

Dr. HURWITZ. I was not there.

Senator PERCY. I am addressing this question to Father Pollard.

Reverend POLLARD. I was surprised at the calm of the people in the chapel area, and when I left the fire there was quite a lot of noise from the fire itself, but I had no panic in the chapel area.

Senator PERCY. Did they know where the evacuation stairway was from the chapel?

Were they well aware of that?

Reverend POLLARD. Really, I could not answer that question. I am a visitor.

Senator PERCY. The principal problem was actually getting them out of the chapel, was it not, getting them to that stairway?

Reverend POLLARD. Yes.

Senator PERCY. Would it have been possible to just have formed a chain by hands? It is not very far down the corridor and they could lead each other down there.

Was not the principal problem one of getting them to that stairway through the heavy smoke-filled hall?

Reverend POLLARD. Possibly, but with the smoke they would not have been able to breathe anyway and the smoke got so dense that a chain would not have worked.

Senator PERCY. Were there patients in room 304 right next door?

Reverend POLLARD. I do not know.

Senator PERCY. You do not know. Did you hear whether or not, as I reconstructed the story that afternoon, there were actually patients in room 304 that did not realize there was a fire, and when the firemen came, they actually led them out to safety?

Reverend POLLARD. I heard last night that it was. That was my first time here.

Senator PERCY. Because you were actually there, I would like you to describe the smoke a little more which developed with the fire.

At what point did it rise? You mentioned before, it was about waist high.

At what point did it obscure your vision entirely?

Reverend POLLARD. The first occasion when I saw the smoke was just after the nurse had left the chapel area, and it was a small puff of white smoke coming into the chapel area.

Then, when I walked down the corridor, there was white smoke in the room itself but very quickly it turned black smoke, very dense black smoke which descended very quickly on us.

Senator PERCY. Did you have any sensation that the smoke was being pulled out into the corridor?

Reverend POLLARD. No.

Senator PERCY. In other words, the smoke originated from the fire inside of 306?

Reverend POLLARD. Yes.

Senator PERCY. It could have been confined, obviously, by just shutting that door.

Why was that door not shut, do you know, Father?

Reverend POLLARD. No, I do not know and I have no recollection of seeing a door.

Senator PERCY. You subsequently have learned that when doors were closed, the people inside those rooms actually suffered no damage; no smoke seeped into those rooms.

If that door had simply been closed and confined the fire to that one room, would that not have prevented what occurred subsequently?

Reverend POLLARD. In my mind, I am not an expert on fire, and I think you would need a fire expert, really, to answer your question.

When I got to the fire, as I have described it, I do not know whether the door would have stopped or not.

Senator PERCY. You have worked with nursing home patients.

I have always been concerned that we emphasize fire drills with children to get them to remember if there is a fire, to intuitively respond as in that drill.

I have been concerned that the fire drills are confined to the staff in nursing homes and that I know of no regular procedure for having fire drills among the residents, the guests in a nursing home.

Do you think working with older people confined to a long-term care facility that any kind of training by them about what to do in case of danger, how to quickly seek an exit, would be helpful?

Reverend POLLARD. From the point of view of a layman, I would certainly think so and being a father in education, I would deem it helpful, but whether they would react in a situation like that, I cannot say.

I think I pointed out that the sequence of events happened so quickly that it is difficult to know whether people would be able to respond from this kind of an education program.

Senator PERCY. Yes. Did the chapel have a door?

Reverend POLLARD. No.

Senator PERCY. It did not have a door?

Reverend POLLARD. It was an open space.

Senator PERCY. If it had a door and it simply could have been shut, could the tragedy then have been averted?

Reverend POLLARD. I would think so, yes.

Senator PERCY. It would have?

Reverend POLLARD. Yes.

Senator PERCY. Because the flames did not spread to the chapel at all.

Reverend POLLARD. It never left the chapel.

Senator PERCY. It was just the smoke.

Reverend POLLARD. Just the black smoke.

Senator PERCY. All we would have to do would be to shut the door.

Reverend POLLARD. Yes.

Senator PERCY. Did the open window cause the smoke to be drawn into the chapel at an accelerated rate, faster than it would have if the chapel window had not been opened?

Reverend POLLARD. I cannot answer that, I am afraid.

Senator PERCY. Dr. Hurwitz, you arrived shortly after the fire was extinguished and helped get the facility on an even keel.

With your years of experience with this home, what, in your judgment, was the most beneficial type of outside help you received?

Dr. HURWITZ. Well, it is really hard to put your finger on any one service considering the number of services at the time.

I really never thought that any one particular person provided the most benefit.

I think that retrospectively viewing the situation, frankly, when you look back at what happened, in view of the fact that all the injured were out of the building at the time, the staff and certainly Miss Cassidy needed the reassurance that the remaining patients were safe and medically sound.

I guess the member service that was provided was most important to get things moving.

Once we were sure that everybody was safe, everybody who needed evacuation was out, we could move in a little bit more orderly manner.

I guess that is my answer.

Senator PERCY. You provided followup medical care to many of the home survivors?

Dr. HURWITZ. Within the nursing home patients that were transferred, I did not see. A number were taken to the hospital.

Senator PERCY. Was there any significant medical pattern among the individuals that you treated?

Dr. HURWITZ. Well, not for a couple of days. There were a number of upper respiratory tract infections that evolved.

We see those every year, but in view of the number of drafts people were exposed to by the fire, by those who were forced to have doors and windows open for the first minutes during and after the fire, I think considering that we are dealing with a very fragile body that probably was the ideology of so many of these. They were pretty mild. I only had to transfer two to the hospital.

I think the remaining 55 patients, 2 of those, there were about 30 people who became ill anywhere ranging from nausea and only 1 patient became sick enough that they went into pulmonary edema from pulmonary pneumonia.

To me, that was the worst sequel of the actual fire incident.

Senator PERCY. Any further questions?

Mr. HEINZ. Mr. Chairman, if I might ask Dr. Hurwitz; a few minutes ago you indicated that it would be difficult and even impractical to move a large number of patients.

Dr. HURWITZ. Absolutely.

Mr. HEINZ. For evacuation.

Absent of the forms of protection and absent better ways of containing fire, whether through the closing of doors or sprinkler systems, what would be your opinion as to the benefit and feasibility of having some form of respirator for oxygen-breathing system available to the patients?

Dr. HURWITZ. The best breathing system available is the patient's lungs, and consequently, we need to provide them oxygen in the normal pattern they receive it so as not to excite them and cause the psychologic trauma which outside influences would impose.

Senator Percy mentioned a point that he and I discussed after the fire, the use of smoke protectors and door closers, one in each room and I would like to see something like that.

Not only would it make possible isolation of each of the rooms immediately and mechanically after smoke begins due to whatever cause, but even nursing home employees who might try to sneak a cigarette against the rules or certainly patients in a lot of sheltered-care facilities—we know patients smoke; they hide matches between the mattress and bedsprings and this would kind of blow the whistle on them.

We have ice cream parlors where they have the smoke detectors and it sounds a horn when someone lights a cigarette.

It has saved a lot of lives and private dwellings so far, and I think it would be a wonderful benefit.

Mr. HEINZ. My question is directed not so much toward those positive recommendations, but we are faced, for example, with a situation where the chapel had no door at the end of the corridor to protect the residents in the chapel against a fire that would not be contained.

Dr. HURWITZ. Absolutely, doors in any location.

Mr. HEINZ. Are you saying that some form of self-contained breathing apparatus should be available, in oxygen bottles such as are available on airplanes?

Dr. HURWITZ. We have to get them on the people's faces. They will not put them on themselves.

We had only a couple of minutes to work. What I discussed last night when I came in with a number of the Senate staff was the use of firehoses in the halls.

Again, this is also within the Code, how beneficial this might be. We suggested it might require two people to operate them.

We have all seen them in apartment buildings. You have to pull them off of a contraption and that would put the fire out at Wincrest. It would have cooled that storage closet and it would have put an end to the smoke.

If you could not breathe, you would be able to hold your breath and be able to cool those superheated particulate matter and it would have fallen to the floor.

I am not a fire official, just a layman.

Mr. HEINZ. Then you feel there is really no need under any circumstances to have it?

Dr. HURWITZ. We need to put out the fire.

Mr. HEINZ. I understand that. I was thinking Father Pollard had to evacuate himself because he had nothing more than his lungs to permit him to stay.

Dr. HURWITZ. Well, those fellows on the floor, if they had had a hose line there rather than going for a fire extinguisher, we could have put out the fire.

If it had happened at 4:30 in the morning, there would be no staff to handle the equipment or have the composure to do it, but it would have worked during the day shift.

Mr. HEINZ. Thank you.

Senator PERCY. One final question, Father Pollard, or Dr. Hurwitz.

Did other nursing homes in the area provide assistance with the patients?

Dr. HURWITZ. Yes.

Senator PERCY. Valuable assistance?

Dr. HURWITZ. Pardon me?

Senator PERCY. Was this valuable assistance that was rendered?

Dr. HURWITZ. Oh, sure, and especially with regard to information to family and assistance to the inspectors who were attempting to, as you did, gain immediate information on the fire scene.

Yes, it was terribly valuable. As it turned out, assistance to the remaining patients was not really necessary living in an urban setting. People do respond, you know, to such a stress, and as we had a number of past employees who had not been working for the home a number of years and those off duty, there were more than enough people aware of it. It was on radios at 4:30 in the morning.

Senator PERCY. I am very impressed that the aging are getting better organized all the time.

We have here today Marge Jones who has a 9,000 member senior citizens council in McHenry County, Ill.

I was up there recently and they are organizing effectively and well.

Can those councils and organizations be used in connection with fire prevention?

Can they help coordinate nursing homes so that they can render assistance in case of an emergency?

Can we coordinate better our overall activities to have available services of the kind that were available in this particular case and prove invaluable?

Dr. HURWITZ. Certainly, there is potential in anybody who is healthy and able.

Senator PERCY. Thank you.

We move now to Mr. Charles Chandler, who is the administrator of the Cermak House Nursing Home.

Mr. CHANDLER. Thank you, Mr. Chairman and gentlemen.

I am accompanied by Michael Stromberg.

Let me give you a little background information on the facility. It is a modern nursing home, fire-resistant construction with automatic closing and smoke barrier doors in the corridors and the corridor a smoke detection system.

Fire on the fourth floor room of the building west wing was filled with smoke and caused the death of eight residents on that floor.

The facility was built in 1973. It is poured concrete structure with 5-inch reinforced concrete floors, reinforced interior partitions.

The home is licensed by the Illinois Department of Public Health. There are 540 patients approved for Federal medicaid funds.

The fourth floor is typical of all other nursing homes and contains 26 rooms.

The west wing where the fire occurred has six, four-patient rooms.

Furniture in the rooms consist of wardrobes, beds, night stands.

Doors have a self-closing mechanism.

Fire alarm systems is of the smoke detection type which notifies the fire department and releases the smoke-type odors.

Ventilation shafts in the north end of the corridor creates a natural exhaust vent to the roof.

The building is equipped with standard pipe and hose systems being located in every stairwell.

Sprinklers are installed on the first floor only.

Now, as I go through the recap of the fire, I would like to invite your attention to the chart to my right and your left which lists the rooms, their numbers and the general position of the furniture as it was in those rooms on the morning of the fire.

At the time of the fire, it was 70 patients on the fourth floor.

Following the fire, four patients were found alive in room 426.

Four patients were found dead in room 425 and one had been removed by the fire department through the window of room 423.

At 6:44 a.m., the fire department received its first notification of the fire from the smoke detection connected with the facility. They responded promptly with engine and truck companies.

They immediately called for a second alarm and started attacking the fire with two, one-and-a-half-inch-hose lines from the building system.

At 6:55 a.m., the fire department had evacuated the patients from 423 and were fighting the fire on the fourth floor at the location of the smoke hose.

The 14 patients that occupied the west wing, other than the four who died in 425 and the four found alive in 426 and the one who was rescued by the fire department from 423, were out of the west wing at this time.

By 6:44 a.m., a human chain made up of staff personnel had been established in the center stairway from the fourth to the first floor, and by 6:56 a.m., 61 patients on the floor, other than the 9 I listed, had been passed down that chain to the first floor.

Some of the detail at 6:44—a male nurse and nurse's aide on the fourth floor heard strange noises.

In running to the area of 420, they saw flames to the ceiling of the room.

The male nurse led one patient, got her out of bed and carried her to the nurse's station and then went back to the wing. The smoke was dense. It was so dense that he tripped over a patient who was in the hallway and pulled her out. He went back a third time and could not get into the wing because of the smoke.

The other two patients that had been assigned to room 420 were not there when the nurse first arrived, but they did survive.

As to the patient in room 423 who was rescued from the window by the fire department, was in the washroom area and from that position as noted in the chart could have gone either through the corridor doors or down the west stairwell which was between the washroom and her room. She could have gone to safety.

She did not do either one and rather she went back to the room after her valuables and after the staff closed all the doors with the exception of room 421.

It also appears after the doors had been closed that patients went back in the rooms 423 and 425.

While it is a matter of conjecture because all the patients in room 425 died, one of those patients was seen at the elevator going down to the lower floors 10 minutes before the fire started and, yet, she was found near the window of room 425. That window had been broken and the door to the room open.

It can only be assumed she may have contributed to the death in those rooms.

The rooms in the west wing, 421, there were three beds.

One was rescued by staff, two were evacuated from the floor.

It cannot be determined whether staff rescued these persons.

In room 422, four residents, one death, three were evacuated from the floor, but it cannot be determined whether the staff rescued them from the room.

In room 424, four residents and one death.

Three were evacuated from the floor, but it cannot be determined whether or not the staff rescued them.

Room 426, four residents were found in the room after the fire occurred and all survived.

Room 423, four residents, one death, one evacuated by the fire department, one evacuated by the staff, found on the floor in the corridor and one evacuated from the floor and it cannot be determined whether staff rescued her.

Room 425, four residents and four deaths.

The nine people were evacuated from the floor by the human chain evacuation procedure.

Senator PERCY. Thank you very much.

Mr. Heinz, any questions?

Mr. HEINZ. Thank you very much, Mr. Chairman.

You mentioned that there was a smoke detector hooked up to the fire department.

Did it also ring in the nursing home to alert nursing home personnel?

Mr. CHANDLER. Yes.

Mr. HEINZ. You were also able to establish a human chain to bring your patients out.

Did the patients who were brought out of the room seem calm, suffer any trauma or have any problems of this type?

Mr. CHANDLER. Yes.

Mr. HEINZ. Could you elaborate?

Mr. CHANDLER. At the time we had teams, doctor and nurse teams, come in from two different hospitals plus one of the house physicians enroute to the hospital, and two additional physicians.

They sent other patients, other than the ones who were obviously in bad condition, they sent other patients and staff members to the hospitals as they tried to cover every patient in the house at the time and we had patients going out in 35 or 40 minutes after the fire.

Mr. HEINZ. How much of that trauma was because of smoke or because of the excitement of the situation, the fright, as they were being moved down the stairway? There was snow on the ground.

Mr. CHANDLER. I just cannot tell you. We had a lot of water on the floor and a lot of water in the building.

Afterwards, I did not see what happened right on the fourth floor, and I did not see the human chain, but, finally, they were calm and they were waiting patiently to be saved.

At that point in time, a relatively few minutes after the fire itself, calm had been restored.

The patients that were in the lounges up on the floors remained. Volunteers and staff workers went in to them and talked to them and calmed them down, and they accepted that we had had a disaster. It was accepted.

And to go forward from here quickly now to answer your question, I cannot tell you how much because of the move, there were so many contributing factors.

Mr. HEINZ. You mentioned that there was a sprinkler system on the first floor.

Mr. CHANDLER. Yes.

Mr. HEINZ. That there was not one on the fourth floor.

Had there been a sprinkler system on the fourth floor, would it have had an effect on the kind of fire that you had?

Mr. CHANDLER. At that point in time, it would have had to have an effect, yes. It depends on what the temperature you get at the ceiling levels to set off that sprinkler head and how much gases have already been created and how much smoke of a toxic nature that had already been created, had it been sufficient at that point in time to do injury.

It would have probably confined the physical damage, yes.

As to the patient injuries, I cannot answer.

Mr. HEINZ. Thank you, Mr. Chairman.

Senator PERCY. Mr. Cohen?

Mr. COHEN. Thank you, Mr. Chairman.

Can you tell me the rationale as to why you have sprinklers on the first floor and none on the second, third or fourth floors?

What would be the rationale, the design rationale for having the sprinkler system on the first floor if, in fact, it is a four-story building and the patients on all four levels?

Why a sprinkler system on one floor?

Mr. CHANDLER. Hazard risks.

Mr. COHEN. Is not the hazard greater on the fourth floor in terms of evacuation as opposed to the first floor?

Mr. CHANDLER. Let me answer in a different way, if I may.

We have a laundry on the first floor and kitchen, fire apparatus. We have machinery and at nighttime there is less occupancy. There is more storage. It is relatively unattended and in the period usually from 8:30 in the evening until some time around 5:30 in the morning, we only have one person on the floor.

For instance, there is a complement of people going around making the rounds of the nursing floors at night.

Mr. COHEN. You indicated, I think, that you had smoke detectors in the corridors, is that correct?

Mr. CHANDLER. Yes.

Mr. COHEN. You had none in the individual rooms?

Mr. CHANDLER. No, sir.

Mr. COHEN. I guess one final followup point of Mr. Heinz and Senator Percy.

I believe Senator Percy touched on the question of whether or not it would be valuable to have periodic fire drills by residents or the personnel in the nursing home.

Would you agree with the previous witness, Dr. Hurwitz, that evacuation is a waste of time?

Let me retract. I'll ask you one question before that.

How many people were moved from 6:44 a.m. when you first heard the screams to 6:46?

Mr. CHANDLER. 6:46, I do not know.

At 6:56, 12 minutes we moved 61 patients off the floor.

Mr. COHEN. You moved 61 patients. How many of those patients who were moved out died, any?

Mr. CHANDLER. Two.

Mr. COHEN. Two of sixty-one who were moved?

Mr. CHANDLER. Yes.

Mr. COHEN. And I will ask you a question: Would you agree with Dr. Hurwitz that evacuation is a waste of time?

Mr. CHANDLER. I cannot say evacuation is a waste of time, sir.

Mr. COHEN. Particularly in this case where you saved 59 out of 61 at least from potential danger.

Mr. CHANDLER. I think there might be other alternatives that could be done that would be just as effective.

Mr. COHEN. In addition to or the exclusion of?

Mr. CHANDLER. In the threat of actual evacuation of patients.

Mr. COHEN. And what would you recommend?

Mr. CHANDLER. I would like to reserve the evacuation of patients to that time when you absolutely have to move.

Mr. COHEN. You would recommend sprinkler systems, I assume, at each level.

I would assume that you would recommend that you have smoke detectors in each room, would you not?

Mr. CHANDLER. No.

Mr. COHEN. What would you recommend?

Mr. CHANDLER. OK, I think the smoke detectors in individual rooms are a good idea.

I think smoke detectors probably are one of the best means of identifying a fire long before and possibly even before a human being can smell it because they identify the vapors and the gases.

Once an alarm is sent in, you have started the function much quicker than you would have if you wait until actually smoke or flames could be detected.

It gets extremely hot and if you had your professional firefighters en route to you, you have narrowed that gap extremely, and once they are on the scene it is a short time then when everything is under control.

As to sprinklers, I will not comment on those or the door closers, but the smoke detectors, yes.

Mr. COHEN. You have no opinion with respect to sprinklers?

That is all I have, Mr. Chairman.

Senator PERCY. Mr. Chairman, could you describe the value that you feel that smoke stop doors had in saving lives?

Mr. CHANDLER. A great deal. Those smoke doors were charred. The heat was that intense on them, Mr. Chairman.

We had a great deal of smoke in the center corridor, but if it had not been for those doors, I am afraid we might have lost everybody on the floor.

I do not know, but it appears that they saved a great number of lives. It gave a barrier from behind which the firemen could fight the fire itself.

Senator PERCY. Both fires burned material that generated toxic smoke, and in the case of the Cermak Nursing Home, the fire burned a polyurethane foam rubber mattress or mattresses and this created hydrogen cyanide gas.

Do you feel there should be regulation with respect to all kinds of materials that are used in a nursing home? Should these have the most fire retardant capability practicable?

Mr. CHANDLER. I think more testing should be done or there should be some testing.

We should know what we are facing. We should know what will and will not stop fires.

Hopefully, this would be done before legislation was passed and new regulations that would have to be complied with before we know what the results will be.

If we can find out what it is that we need to stop the flame or at least stop the lethal gases from it and then go from there, fine.

The conversations, and we have had discussions since February on this subject, many people have said they do not know what the answer is until tests are done.

I understand from the comment that was made this morning by Senator Beall that there are tests on some materials being done right now.

This could be expanded so that we know where we need to put our signals, what we need to make the materials from and what materials we need to use to make the beds and everything else proper.

I think that will give us guidance.

Senator PERCY. If you were sitting in our shoes in the House and in the Senate with the responsibility to try to insure to the greatest practical extent, that is to insure the safety of patients that are receiving benefits of Federal funds, what steps would you recommend that we take?

What steps would you take to insure that we minimize the risk of death through fire?

Mr. CHANDLER. That needs some attention. Beyond that, I think we need to speed up the testing.

In the interim, we need to assure that these things that we have today in the Life Safety Code are being followed.

I think there should be some form of interpreting those and guidelines given to us on how to interpret them, but what I am afraid of is, if we enact additional legislation before we have all of this, it will be

something else we have to comply with, and from the nursing home operators' point of view, it may or may not be the solution to it.

Senator PERCY. You are an administrator of a home that has been called an outstanding facility.

Have you visited homes that you would consider to be submarginal from the standpoint of standards that you feel should be maintained where you would be concerned about having any of your own patients?

Do you think the hazard is greater in such homes than it is in a fire-resistant building such as you operate?

Mr. CHANDLER. Yes, there probably is, depending on the type of facility we are talking about.

I have seen substandard homes in terms of building, but whether or not an individual would have any greater risk versus another one, would depend on the circumstances at the time we are talking about.

I think every fire has its own contributing factors, and all of them are different, something minute.

In this instance, there are different circumstances.

Senator PERCY. The committee thanks you very much, indeed, for your appearance today.

The Chair will now call on Mr. James D. Martin, Deputy Director, Manpower and Welfare Division, U.S. General Accounting Office.

Mr. Martin will be accompanied by Mr. Robert E. Iffert, who is an Assistant Director, Manpower and Welfare Division, U.S. General Accounting Office, and Mr. Alan Zipp, Project Manager, Manpower and Welfare Division, U.S. General Accounting Office.

I appreciate you being here very much, indeed, and you may proceed with your testimony.

STATEMENT OF JAMES D. MARTIN, DEPUTY DIRECTOR, MANPOWER AND WELFARE DIVISION, U.S. GENERAL ACCOUNTING OFFICE, ACCOMPANIED BY ROBERT E. IFFERT, ASSISTANT DIRECTOR, AND ALAN ZIPP, PROJECT MANAGER

Mr. MARTIN. Mr. Chariman and members of the subcommittee, I am pleased to appear here today to discuss the results of our review of Federal fire safety requirements for nursing homes, which we undertook at your request. You asked us to investigate the reasons for the severity of two nursing home fires which occurred earlier this year in the Chicago, Ill. area, and to suggest possible actions to avoid similar situations.

The results of our review are included in a report to the Congress entitled "Federal Fire Safety Requirements Do Not Insure Life Safety In Nursing Home Fires." At this time, I will summarize some of our findings, conclusions, and recommendations.

The Department of Health, Education, and Welfare (HEW) estimates that there are about 16,500 nursing homes (referred to as skilled nursing facilities or intermediate care facilities), participating in the Federal or federally assisted medicare and medicaid programs. Of these, more than 50 percent are not required to be fully protected by automatic sprinkler systems. The Federal fire safety requirements, which include the standards of the Life Safety Code, do not require automatic sprinkler systems in nursing facilities classified as 2-hour fire resistive, or one-story, 1-hour protected noncombustible. Both

76-611 O - 76 - 3

Chicago nursing homes were classified as fire resistive. As a result, automatic sprinkler systems were not required for these nursing homes to be in compliance with the Federal fire safety standards. Neither nursing home had automatic sprinkler protection throughout the facility.

CHICAGO AREA FIRES

We reviewed reports on the fires at Wincrest Nursing Home located in Chicago, and Cermak House Nursing Home located in Cicero, Ill., a suburb of Chicago. On January 30, 1976, and February 4, 1976, fires occurred at the Wincrest and Cermak nursing facilities, respectively, which resulted in the deaths of 31 patients and injuries to about 50 patients. Both institutions were intermediate care facilities participating in the medicaid program. According to reports of investigations, these deaths occurred even though (1) the nursing facilities substantially met Federal fire safety requirements; (2) the fire departments responded promptly to the alarms; and (3) the construction of the buildings adequately confined the flames to the rooms of origin.

The deaths were reported to be caused by smoke and other products of combustion rather than burns. No fatalities occurred in the rooms of fire origin. Investigators of the fires stated that sprinkler systems would have prevented deaths in these nursing facilities.

ANOTHER NURSING HOME FIRE

On February 18, 1976, within 3 weeks of the Wincrest and Cermak fires, another nursing home fire occurred. This one, at the Plaza Nursing Home in Niles, Ill., resulted in no deaths. This facility was protected throughout with an automatic sprinkler system. The fire activated one of two sprinklers in the room which extinguished the fire before the firemen arrived. The local fire chief attributed the absence of injuries and the prompt control of the fire to the sprinkler system and the prompt response by employees.

CAUSES OF DEATH

The fires at both Wincrest and Cermak burned materials which generated toxic smoke. At Wincrest, the fire burned vinyl chloride wall and mattress covers, generating hydrogen chloride gas. At Cermak House, the fire burned foam rubber mattresses, generating hydrogen cyanide gas. In addition, carbon monoxide gas was produced from combustion of the various furnishings.

At Wincrest most of the fatalities occurred in the lounge-chapel area which did not have a door and into which lethal smoke traveled. The lounge-chapel was not damaged by fire, however, the plastic covers on the ceiling light fixtures were melted by heat.

At Cermak House, the fatalities and smoke damage occurred in residents' rooms with doors open to the corridor.

COMPLIANCE WITH FEDERAL FIRE SAFETY STANDARDS

The Illinois Department of Public Health inspectors make annual health and safety surveys of intermediate care facilities. The depart-

ment's architectural section has 14 registered architects and 2 engineers who make fire safety surveys.

The Illinois Fire Marshal's office has a staff of 44 inspectors who survey skilled nursing facilities for fire safety.

In addition, the City of Chicago Fire Department makes fire safety inspections of nursing facilities within the city.

The results of recent inspections by the State agencies at both Wincrest and Cermak House indicated that both facilities were in substantial compliance with existing fire safety standards.

FEDERAL FIRE SAFETY STANDARDS DO NOT INSURE LIFE SAFETY

The deaths from these two fires show that the Federal fire safety standards do not insure life safety in nursing home fires. Thirty-one people died, as the result of fires, in nursing homes which substantially met the Federal fire safety standards.

Investigations of other nursing home fires by subcommittees of both the Senate and the House also showed that deaths occurred in nursing homes which were of fire resistive construction but were not fully protected with automatic sprinkler systems. For example, a 1970 fire in a fire resistive nursing home in Marietta, Ohio, killed 32 people because of smoke inhalation. In 1971, a fire resistive nursing home in Buechel, Ky., had a fire which killed 10 people. In 1973, a facility classified as fire resistive in Wayne, Pa., had a fire in which 15 people died.

These and other examples had been studied by congressional subcommittees and cited as the basis for their recommendations that all nursing facilities be required to be fully protected with automatic sprinkler systems.

In the opinion of Chicago Fire Department officials, sprinkler systems provide the best fire protection because they signal the fire location and immediately spray 22 gallons of water per minute on fires which activate the system. Fire department officials believe sprinkler systems would have extinguished the fires at Wincrest and Cermak and prevented deaths.

After its investigation of the Wincrest fire, a special panel appointed by the mayor of Chicago recommended that new requirements be made part of the building and fire ordinance of the city. One of these recommendations was that sprinkler systems be installed in all new and existing nursing homes and be electrically interconnected with the fire alarm system.

On February 4, 1976, the mayor of Chicago asked the city council to require all nursing homes to have automatic sprinkler systems. The ordinance was introduced only a few hours after the Cermak fire.

On April 7, 1976, this ordinance was approved by the city council and requires all Chicago nursing homes to install sprinkler systems by February 1977.

According to an HEW engineer's report on the Wincrest fire:

> The only alternative to a well trained staff is a complete sprinkler system, smoke compartments and smoke detectors.

Another HEW report concluded, as a result of the two Chicago area fires:

The facilities in each case were of fire resistive construction, but failed to provide reasonable protection. There is a need for several fire safetv measures which exceed current regulations.

According to a report by an official of the Illinois fire marshal's office. which was presented at hearings in Illinois:

The Winerest and Cermak House fires demonstrated that ignition of coverings and furnishings can turn nursing facilities into gas chambers.

NEED FOR SPRINKLERS

We believe that a strong case can be made for a requirement that all nursing facilities, regardless of construction type, be fully protected with automatic sprinklers.

In addition to the findings applicable to the two Chicago nursing homes, which were exempt from the sprinkler requirement, our review showed that: (1) Efforts by nursing home staffs to extinguish the fires and prevent the loss of lives were unsuccessful; (2) the fires created a lethal environment in a short period of time; (3) the National Fire Protection Association has no record of a multiple death fire in any nursing home fully protected with an automatic sprinkler system; (4) the National Safety Council and the American Nursing Home Association stated that automatic sprinkler systems provide the greatest "safety to life" feature available in the fire protection field; (5) after numerous fire tests by a fire safety engineering firm, it was found that with automatic sprinklers, the fire is quickly extinguished even in rooms with combustible wall paneling and ceiling tiles.

In line with previous recommendations of congressional committees, we recommend that the Congress enact legislation which will require that all nursing facilities be fully protected with automatic sprinkler systems.

THE COST OF AUTOMATIC SPRINKLER SYSTEMS

The cost of installing an automatic sprinkler system will vary with the size and type of facility, and whether it is of new or existing construction.

In April 1976, we obtained data from seven sprinkler installation companies in the Washington-Baltimore area. According to their estimates, a complete system may cost between $0.50 and $1.75 a square foot in an existing facility. Installations during 1975 in four existing nursing facilities, three in Ohio and one in Minnesota, showed costs ranging from $393 to $625 a bed, with costs per square foot ranging from $1.21 to $1.55.

Using the highest cost per bed, the monthly cost of amortizing $625 a bed over a 20-year period with a 9¼ percent interest rate is $5.57 a bed a month, or about $0.19 a bed a day.

According to the National Fire Protection Association, sprinkler heads need replacement at the end of 50 years. However, financing sprinkler system installation over a period in excess of 20 years does not seem likely. Consequently, our computation shows the monthly payment expected over the term of a 20-year loan.

SAVINGS ON FIRE INSURANCE

Although fire insurance rates vary among States, savings are possible on both building coverage and contents insurance when nursing facilities are protected by automatic sprinkler systems. We obtained information on nursing home fire insurance rates in Maryland and Washington, D.C., and found that savings of about 30 percent are possible on building coverage and 50 percent on contents insurance.

MEDICARE AND MEDICAID WILL HELP PAY FOR AUTOMATIC SPRINKLERS

Nursing facilities participating in either medicare or medicaid will be reimbursed for these programs' share of the cost of automatic sprinkler systems through reimbursement for interest and depreciation. Medicare is federally funded and medicaid is funded by Federal, State and local governments.

The actual amounts to be paid by medicare and medicaid will vary among facilities depending on the number of residents covered by the programs. According to a report from the Social Security Administration, medicare and medicaid paid over 55 percent of the national health expenditures for nursing home care during fiscal year 1975. These expenditures include services in skilled nursing facilities, intermediate care facilities and all other homes providing nursing care.

FEDERAL LOAN INSURANCE PROGRAM

In its August 9, 1972, report, the House Committee on Government Operations concluded that unless the Federal Government provided a mechanism for insuring loans for sprinkler systems, not all facilities would be able to finance such systems. The committee recommended that the appropriate congressional committees consider legislation to provide insurance for long-term loans made for the installation of sprinkler systems as a means of assisting facilities in obtaining financing.

As a result, on December 28, 1973, Public Law 93–204 was enacted, which authorized the Secretary of the Department of Housing and Urban Development (HUD), to insure loans made to nursing facilities for the purchase and installation of fire safety equipment. This law amended section 232 of the National Housing Act which is designed to provide mortgage insurance for nursing homes.

In October 1974, 10 months after enactment of the law, the Secretary of HUD and the Acting Secretary of HEW entered into an agreement for administering this section of the National Housing Act.

LOAN INSURANCE PROGRAM HAS NOT BEEN UTILIZED

According to HUD officials, there have not been any loans approved under Public Law 93–204. As of late April 1976, only one application had been received by HUD, and this was disapproved because the facility did not meet the HUD financial requirements regarding the ability of the borrower to repay the loan.

According to HEW/HUD procedures, HEW approves parts of the application and sends certain certifications to HUD before the

facility is considered for an insured loan. HUD requires that an application be submitted through a HUD approved lending institution before it will consider insuring the loan.

According to HEW officials, there has been relatively little interest in the Federal loan insurance program for fire safety equipment. They said nursing facilities did not apply or withdrew their applications, because the program offered no advantage over conventional loans and involved much more paperwork and time.

We examined the applications received in the Chicago regional office of HEW. As of September 1975, of approximately 159 inquiries into the program, only 10 applications were received by HEW. In six of the cases, HEW refused to process the applications because the nursing home owners had already started to make corrections of their fire safety deficiencies. HUD officials had taken the position that the law did not authorize them to insure loans for previously purchased equipment. A HUD official told us that if work had begun, the purchase was considered to have previously been made, and HUD would not insure the loan.

The remaining four cases resulted in the installation of sprinkler systems, but not with HUD-insured loans. In each of the four cases, HEW processing time took between 6 and 8 months. Until HEW had approved the application, the nursing facilities could not begin work, or continue processing their applications for HUD-insured loans. Two of the nursing home owners told us they became so frustrated with the time HEW was taking to process their applications that they withdrew their applications for insured loans.

LONG PROCESSING TIME CAN BE A PROBLEM

The long processing time by HEW can be a problem to nursing homes. HEW regulations provide that a nursing facility's certification will be automatically canceled within 60 days of the date established for the correction of health or safety deficiencies unless all deficiencies are corrected or substantial progress has been made in correcting the deficiencies. HEW guidelines define "substantial progress" to mean that corrections are well underway, and that there is tangible and visible evidence of progress made. If the only progress by the facility had been a loan application, according to the guidelines, this would not be substantial progress sufficient to prevent the automatic cancellation.

If the facility begins work in order to make substantial progress in the correction of its deficiencies, to avoid the automatic cancellation of its certification, HUD will not insure the loan. If the facility waits for HEW to process the application, the long processing time could result in the facility's certification being automatically canceled.

An illustration of the problems facing nursing homes is the case of a nursing facility in Minneapolis, Minn. In January 1975, the facility was cited by the State survey agency as requiring an automatic sprinkler system to be in compliance with Federal fire safety requirements. At that time, an automatic cancellation date was established as September 1975, which was 60 days after the planned correction date.

In February 1975, the facility applied through HEW for a federally insured loan to pay for the sprinkler installation. HEW approval of the loan insurance application was not received until mid-August 1975. Very little time remained for the facility to locate a lending institution, negotiate a loan, process the HUD application, obtain a sprinkler contractor, and begin work before the certification of the facility would be automatically canceled in September. The facility obtained financing through other means in order to expedite installation.

CAUSES OF DELAYS IN HEW PROCESSING

The Deputy Director, HEW Chicago Regional Office of Long-Term Care said that it is necessary that HEW engineers physically inspect the facilities before the loan insurance applications can be processed because of the HUD requirement that HEW certify that the facility will be in compliance with Federal fire safety requirements. She said that because of past experience with the quality of State inspections in Ohio and Minnesota, HEW engineers were reluctant to rely on the State life safety code surveyors. She pointed out that neither Ohio nor Minnesota use engineers or architects to make fire safety inspections. In the case of the four facilities approved by HEW for HUD-insured loans, deficiencies were found at each facility by HEW engineers which were not identified by the State inspectors.

She said also that the processing time by HEW includes the onsite inspection by HEW engineers and evaluation of architectural drawings and exhibits. In addition, HEW evaluates cost estimates from sprinkler contractors. These documents must be obtained from the facilities. In the four cases reviewed by the Chicago office, several letters were sent to the facilities requesting this information, which delayed the final approval of the applications.

HOW TO IMPROVE THE LOAN INSURANCE PROGRAM

We believe the HUD loan insurance program could be a viable source of assistance to nursing facility owners in obtaining financing for automatic sprinkler installations.

We believe the problems encountered in the loan insurance program for fire safety equipment rest both with HEW's processing procedures and HUD's position not to insure loans on projects which have already started.

In order to alleviate the difficulties encountered by HEW, we believe both HEW and HUD should evaluate the loan application processing procedures and reduce the need for HEW's detailed review and inspection.

Currently, HEW receives copies of the State inspection reports which indicate nursing facility deficiencies of the fire safety requirements. In addition, HEW receives copies of the plans of correction, which when completed, should bring the facility into compliance with the Federal fire safety requirements. Consequently, it seems that these documents could satisfy the HUD requirement that HEW certify that correction of the fire safety deficiencies should result in compliance with the Federal fire safety requirements, because medicare and medicaid certification is contingent upon the approved correction

of such deficiencies. With regard to the certification of reasonable cost estimates by HEW, it seems that this function could be more efficiently accomplished by HUD personnel, because they deal with estimating costs in other types of construction projects. The certification of reasonable cost could be made part of the HUD underwriting procedures and thereby reduce HEW's processing time.

To solve the problem experienced by nursing facilities denied loan insurance applications because work had previously started, we believe HUD should reconsider its position regarding not insuring loans for such ongoing work. Nursing facilities can be under strict time constraints to begin making corrections of fire safety deficiencies or face the possibility of cancellation of their certifications. It would seem to be in the interest of patient safety to have the corrections made as soon as possible. In some cases, work could be started while the loan insurance application is being processed.

Based on our review of the applicable laws, we do not believe HUD is prohibited from insuring loans for work in progress or completed.

In conclusion, Mr. Chairman, our review of these Chicago nursing home fires and related matters has shown that a strong case can be made for a requirement that all nursing homes be fully protected with an automatic sprinkler system. Consequently, we recommend that the Congress enact legislation which will require all nursing facilities to be so protected. We shall be happy to answer any questions that you or other members of the subcommittees might have.

Senator PERCY. Thank you very much for the testimony and for your report which has already proven to be very valuable to us.

I would like to first talk about the fire itself at Wincrest.

Why were the staffs and the fire department unable to be present and, therefore, prevent deaths from occurring?

Was it a lack of time, lack of training, something mechanical?

You can also include the Cermak House Nursing Home.

Was there a lack of familiarity with the floor plans, the physical layout where the stairways were, how they could get out?

What were some of the human factors involved here besides the physical ones?

Mr. MARTIN. I do not think there was any indication of staff panic.

I think once the staffs at Wincrest and Cermak found the fires, they attempted to put out the fires and took whatever action they could.

By the time the firemen got there, the heat and smoke were so heavy they could not get the door closed.

They started to move patients, but these are elderly patients; the average age was 80 at Wincrest and 75 at Cermak. It was not easy to move them quickly.

There was no reason to believe, as far as we had been able to find out, that the staff panicked.

It was our understanding that they responded well in the situation.

Senator PERCY. Yet, when the fire department came, they did not require a particular skill. They just led patients out of the rooms where the doors were closed. They led them out through the blackened hallway. Is it not possible for staff to do the same thing, just lead patients out knowing where the access doors are?

Mr. MARTIN. It is possible if the patients are ambulatory.

If they are bedridden, moving them down stairways is very difficult, particularly with a limited number of staff available. I think prior testimony indicates that it takes a couple of people to move some of the patients.

It is difficult to move the number of patients involved in the short time available.

Senator PERCY. Has the GAO found out what caused the smoke to move as rapidly as it did and leave the area in room 306 and fill the halls and then start moving to the chapel at the end of the hall?

Mr. MARTIN. No, sir, we did not make that determination.

Senator PERCY. You did not get into that aspect of it?

Mr. MARTIN. No, sir.

Senator PERCY. Do you feel that the training of nursing home attendants would help in evacuation once it is required?

Mr. MARTIN. I think our review and I think the opinion of experts showed that the key to saving lives in nursing homes is to have them fully protected with automatic sprinklers.

In addition, you need smoke detectors. You also need heat detectors and a well-trained nursing home staff.

These, Mr. Chairman, are the key elements in saving lives in nursing homes in fire situations.

The training that you speak of for the patients within the nursing home is also important. I think the elements I mentioned are the key in protecting patients. They should, however, certainly be familiar as to where the stairwells are and the procedures to go through in the event of fire such as closing of doors, which is a simple thing for ambulatory patients to do, but the key is automatic sprinkler systems, smoke detectors, and fire doors.

Senator PERCY. Should the staff members of a nursing home know that to open a window in a situation that feeds oxygen to a fire which might be running out of it would cause a draft and the smoke to be pulled, and should a staff member have known not to open a window?

Mr. MARTIN. I think it is reasonable to assume that part of the training of the nursing home staff should include a discussion of the impact that an open window would have on a fire; yes, sir.

Senator PERCY. You strongly recommend automatic sprinklers.

What about smoke detectors or doors which automatically close when smoke is detected?

Mr. Chandler said smoke detectors are more valuable than sprinklers.

Mr. MARTIN. I think an important element would be to tie the smoke detectors in with the sprinkler system. The detectors can then activate the sprinkler system as well as the heat.

The automatic closing doors could be a problem with elderly patients if they bump into them when they close. In some cases, they may not be able to get them open, and they could be trapped.

If you have a well-trained staff, the first thing they should do is close the doors. In that type of situation, automatic doors would not be required.

Senator PERCY. The characteristics of both of these fires is that people died, not from burns or the flames, but from toxic smoke and gases.

What can we do to minimize the possibility of death from smoke inhalation in nursing homes?

Are sprinklers sufficient, or must standards be established also for furniture and kinds and amounts of personal clothing, et cetera?

Can we do anything through tighter regulations to prevent this kind of death?

Mr. MARTIN. I think as I indicated in the testimony, there has not been a multiple death fire in a fully sprinklered home. It goes a long way to prevent this.

It is my understanding also that the National Bureau of Standards is conducting toxicological research on fabrics which can be helpful when those results are published.

I do not believe the state of the art is such now that you could eliminate all the possible fabrics that might give off toxic substances in case of a fire.

Senator PERCY. Last year, you reported that 72 percent of the nursing homes in the country, by your sample, had one or more major violations of the life safety code.

Do you have any reason to believe that things have changed and that more homes are now in compliance?

Mr. MARTIN. We have not, at least as far as I'm concerned. One of the other fellows here might want to comment on it, but we have not followed up on the report we issued in March of 1975 to determine what the situation is now; no, sir.

I do not have any knowledge that indicates change.

Senator PERCY. Last year, you reported that many States were using nurses and other unqualified people, in some cases policemen, to conduct fire safety certifications.

Has HEW acted on your recommendation on surveyor training?

Mr. MARTIN. Not to my knowledge, they have not.

Senator PERCY. Do you think followup should be made in that case, then, to see that they do?

Mr. MARTIN. Yes; it is our standard procedure, after a certain lapse of time, to follow up on recommendations to see if they have been implemented. We will certainly continue to follow up on our March 1975 report.

Senator PERCY. As we have indicated, smoke was a major problem in both the Cermak House and Wincrest Homes fires. The Life Safety Code is silent with respect to smoke standards.

Would you favor the promulgation of smoke density standards for nursing home furnishings?

Mr. MARTIN. I think we would favor that if the state of the art is such that standards could be reasonably promulgated, yes, sir.

I am not sure of the current state of the art.

Senator PERCY. Thank you.

Mr. Heinz, any questions?

Mr. HEINZ. Thank you, Mr. Chairman.

In 1972, the House Government Operations Committee, Special Studies Subcommittee, which I was privileged to serve on, wrote a report indicating the need for sprinklers.

Subsequently, another committee of Congress did enact legislation, that is, loan guarantee legislation to install sprinklers.

I note in your report a lengthy analysis of the problems that have accompanied the joint administration by HUD and HEW of that program.

Is it your belief that the program can be administered without any further changes in the law by Congress, strictly a regulatory matter that can be solved within the agencies to make these loan insurance programs workable and available?

Mr. MARTIN. Yes, sir, we believe that the principle of the guaranteed loan program is sound; that it could be used by HUD and HEW together to improve the administrative procedures processes, yes.

Mr. HEINZ. One of the things that Senator Percy touched on was the extent to which better management, things like closing doors and the use of perhaps fire extinguishers might be improved.

Do you have any specific recommendations that come out of your careful studies as to the kind of training that nursing home personnel might properly be given in order to minimize some of the problems that we have seen here today?

Mr. MARTIN. Congressman, I would like to have Mr. Zipp respond.

Mr. ZIPP. Congressman, there are measures which can be taken to train nursing home staffs in the art of fire prevention and control.

However, the staff turnover in most nursing homes is relatively high, and from a practical perspective, you simply cannot rely on staffs to control the fire and move people to save lives.

The critical point is what Senator Percy mentioned, and that is time—time is extremely important.

I have witnessed fire tests at the National Bureau of Standards where a chair was ignited with a single piece of paper. Within 5 minutes the entire room was engulfed in flame because of technical processes called flashover and other characteristics of fire.

The problem can be solved by a number of procedures which happen automatically; which notify the staff that there is a fire, which confines the fire; and which begins extinguishing the fire.

The quicker the fire is put out the less smoke there will be, the less toxic gases and the less heat. This is the issue that we have cited as the basis of our recommendation; that if the fire is extinguished very quickly, you control smoke, heat, and the other elements of combustion itself.

The fire in Niles, Ill., could have been just as deadly as the Wincrest and Cermak Nursing Home fires. There is nothing to suggest it could not have been, but there was a sprinkler system that was activated before the fire got out of control and there were no injuries, very little damage, and no deaths.

Mr. HEINZ. I think you have helped establish a point that I want to emphasize; that is, that it is relatively almost impossible for anybody to rely on the human element in the kind of fires we're talking about.

In effect, you can try and train people to be cool under pressure as you have every right to expect them to be, but when you have an emergency, when you have that very fine chap pressed into duty coming out of church service, you cannot expect the kind of human perfection that we would think might be theoretically possible, and therefore, it is very valuable, I think, to establish once and for all that we cannot rely on nonautomatic procedures here for saving

lives in nursing homes and human beings are nonautomatic, and therefore, I think the emphasis that you are placing on some of the relatively automatic sprinkler systems, smoke detection systems, is very well placed.

I wanted to make sure the record reflects your comments on the need for relying on the automatic versus nonautomatic devices.

Thank you, Mr. Chairman.

Senator PERCY. Mr. Cohen?

Mr. COHEN. Thank you, Mr. Chairman.

I have just a couple of points.

You indicated that both these nursing homes were in substantial compliance with the Federal regulations.

Would full compliance with the regulations have, in any way, reduced the deaths?

Mr. MARTIN. The inspections of the nursing homes indicated that the standards they were not in compliance with had no impact on the severity of the fire.

Mr. COHEN. No causative factor whatsoever?

Mr. MARTIN. No, sir.

Mr. COHEN. Speaking of the sources and emission of fires, could you tell us perhaps, and it has been established for the record, but what was the origin of the fire in both the Wincrest and Cermak Homes?

Mr. ZIPP. Mr. Cohen, the Cermak fire was attributed to a faulty lamp cord.

At the time of our review, the fire investigators were investigating for other causes.

The Wincrest fire on the other hand was suspected arson and without prejudicing any cases that may be pending, we do not have any substantive evidence to support any statement to the contrary.

Senator PERCY. In what object of furniture in room 306 was the fire actually set or do you know?

Mr. ZIPP. The location of the fire?

Senator PERCY. Yes.

Mr. ZIPP. It was in a wooden wardrobe.

Senator PERCY. Behind the door?

Mr. ZIPP. Yes.

Senator PERCY. And customarily, patients in Wincrest keep their personal effects in the wardrobes.

Mr. ZIPP. Yes, sir.

Senator PERCY. A lot of those I went through are plywood chests or stand-up chests holding hanging clothes and paper bags. Ordinarily they just stuff their things in there.

Mr. ZIPP. That is correct, sir.

Senator PERCY. The personal effects of the patients.

Mr. ZIPP. Yes. I might add you can regulate furnishings. However, unless everything is made of steel, for example, you are going to have combustion problems. You are going to have a fire load which is what it is classified as, and these are homes for people.

To make them institutionalized to the point of taking everything out that will burn, which I do not think is practical, indicates that something else needs to be done. With respect to the Wincrest Home, there was a problem with regard to the standards themselves regarding the length of corridor which did not require a smoke barrier.

There is a problem with the technical definition of a place of assembly where the chapel was. There were no doors to the chapel. People were trapped at the dead end.

These types of things are technical aspects of the Life Safety Code which the facility complied with, and which questions, perhaps, might be directed toward the National Fire Protection Association.

Mr. COHEN. I just have one final question, Mr. Chairman.

As I understand it, the 1973 Life Safety Code is not a mandate with respect to a single-level fire resistant home, but it does, in fact, encourage it and apparently from your statement, that encouragement has not been very strong or the nursing home community has not been terribly responsive.

From the testimony we have received so far today, it seems to me that the emphasis is that really time is of the essence, and the emphasis today in the Life Safety Code has been on fire-resistant materials.

I was wondering, is there some point in time that perhaps we have overemphasized the fire-resistant materials. We mandate that it be resistant to fire for up to periods of 1 or 2 hours when, in fact, it is minutes that are of the critical time and we should direct more attention to the smoke detectors and sprinkler systems?

Mr. MARTIN. That is a fair statement, sir. We should shift to sprinklers, smoke detectors, and heat detectors.

Mr. COHEN. And, perhaps, get away somewhat from the expensive requirements of fire-resistant materials. We still have them but not to the point where they have to resist fire up to one or two hours at a time when, in fact, that may not be necessary to save the lives when we are really talking about quick action in a matter of minutes.

Mr. MARTIN. There should be some tradeoffs of this type if you put automatic sprinklers in there.

Mr. COHEN. What would you recommend?

Mr. MARTIN. We are not experts in the field in terms of types of fabrics, in terms of how many hours it should resist or minutes it should resist.

That, sir, is better left to the experts to research.

Mr. COHEN. That is all.

Senator PERCY. Congressman Randall, we are delighted to welcome you today.

Mr. RANDALL. Thank you very much.

I commend you, Senator Percy and Senator Moss, and all of you others for this joint hearing.

I am delighted to see that these hearings are going forward.

I would suggest that we have plowed this ground before, not we on the House Select Committee but as the Special Studies Subcommittee of the House Government Operations Committee. Beginning in 1970, we analyzed 71 fires in Pennsylvania and Ohio and we wrote a report, and I think if you will dust it off, I think you will find it has the very things that Bob Weiner and Elliott Stern and your staff have discussed, that in the big Honesdale fire and the one in Ohio deaths were not caused by anybody actually burning up and being incinerated. It was all by suffocation.

The recommendation of the report was that there be a mandate that there be sprinklers and smoke detectors.

You will find in the 1971 report that it went on to recommend a loan program to provide for sprinkler systems that had some type of Federal assistance so that there was both the carrot and the stick, the stick of a Federal regulation and the carrot of a loan.

Senator, I am grateful for you recognizing me.

Senator PERCY. We appreciate your comments very much, indeed. I think we should note that the Chicago City Council has acted. Every nursing home in the city of Chicago by 1977 will be required to have a sprinkler system.

The cities around the country do not have to wait for the Federal Government to act. They can take action on their own initiative and we encourage them to do that before the Federal Government moves in.

The Chair will recognize, in the absence of Congressman Claude Pepper, his staff director, Mr. Robert Weiner, for any questions he might have.

Mr. WEINER. Thank you, Senator.

Again, we want to express our great gratitude to the GAO for their completion of the report on a very severe deadline.

Mr. Chairman, I ask that the GAO report be included in the record.

Senator PERCY. Without objection, so ordered.

[The GAO report is reproduced in the appendix, pp. 124–182.]

Mr. WEINER. Mr. Martin, as you have pointed out, the HUD loan insurance program has been a failure to date.

Why do you believe it could be a viable source of financing for nursing homes wanting to install sprinklers? How many homes might take advantage of the program if it worked based on any similar information you might have, including FHA or other loan insurance programs?

Mr. MARTIN. I have no particular knowledge on how many might take advantage of the program.

However, I think it is indicative in Chicago there were 159 inquiries to the program itself. Only 10 followed through.

We do not know why the 149 did not follow through with it. However, I think as we previously stated, that it is a sound way in principle and theory to get sprinklers into nursing homes.

However, the administrative procedures and the length of time of 6 or 8 months it takes HEW to process paperwork has really, in effect, turned off the nursing home operators from coming to that program for a loan. They can go elsewhere and get a loan quicker.

We think those administrative procedures should be cleaned up and the time shortened and that this should be made known to nursing home operators. If this happens, it is possible they would come into the program and make it viable.

Mr. WEINER. Thank you. Would direct Federal loans rather than loan insurance be more effective for them?

Mr. MARTIN. There is certainly a possibility that it might be.

We have no reason to know whether or not at this point in time loans could not be insured adequately.

A direct loan should cut down on some of the paperwork and processing time in going through a bank and HUD.

For example, if there were HEW direct loans, it would not require two procedures. You would not go through the lending institution procedure. You would not go through the current procedures with HEW and HUD.

Senator PERCY. If anyone is having trouble in hearing Mr. Martin, would you raise your hand?

Mr. Martin, would you please pull that microphone up?

Mr. WEINER. Mr. Martin, how much time do you think is appropriate to phase in the sprinkler system required for the nursing homes?

Mr. IFFERT. I am a little reluctant to speak to the time frame. We think it should be relatively short, perhaps 2 or 3 years.

We have amortized the cost of installation over 20 years. We have a long-term view of the desirability of our recommendation in that you will be providing protection not only to the present generation of nursing home residents but also to future generations in the next 50 years.

Mr. WEINER. You reported that the cost of automatic sprinklers was about 19 cents per bed per day.

Would you elaborate on your computation and discuss the possible savings from insurance reductions and medicare-medicaid reimbursement to the facilities?

Mr. IFFERT. Well, through September 1975, there have been four nursing home applications for insured loans that have been sent to HUD, although in each case the applicant withdrew before the application was processed by the lender. The installation of sprinkler systems was accomplished but not with HUD insured loans.

For these four facilities, there were three in Ohio and one in Minnesota, the estimated cost that was approved by HEW as being reasonable under competitive bid ranged from $393 to $625 per bed, and with cost per square foot ranging from $1.21 to $1.55.

These costs per square foot were very close to information we obtained from seven sprinkler installation companies in the Washington-Baltimore area.

Using the highest cost per bed, $625 and amortizing that over a 20-year period with a 9¼ percent interest rate as the average comes out to 19 cents a bed, a day.

Mr. COHEN. Is that for new construction or existing buildings?

Mr. IFFERT. That is existing buildings.

New construction is less expensive, sir.

Mr. WEINER. Does that include the possible savings from insurance reductions and the medicare-medicaid reimbursement?

Mr. IFFERT. No.

Mr. WEINER. So that would be less still.

Mr. IFFERT. Through medicare reimbursements, the program pays part of the cost.

I do not think it is a savings. Medicare and medicaid are paying their share.

Mr. WEINER. You recommended that Congress require HEW to establish specific waiver of standards which must be met before a sprinkler waiver is issued.

Would you elaborate on why you believe such a requirement should be placed on HEW by statute? In other words, why specific waiver requirements?

Mr. ZIPP. I can respond to that question.

We found in 1975 that there were significant problems with the granting of waivers from the sprinkler requirement.

As a matter of fact, we found that 79 percent of the nursing homes we visited did not meet HEW standards for a waiver designed to insure that there would be no adverse effect on patient health and safety.

HEW had established standards only for wood framed facilities to insure that a waiver of the sprinkler requirement would not result in an adverse effect on patient safety. Seventy-nine percent did not meet these requirements.

We pointed out to HEW, in our report, of the need for establishing standards for other types of construction. This recommendation was not accepted by HEW.

We feel that in rare cases there will be situations which may exist that would create such an unreasonable hardship on a nursing home, that the installation of a sprinkler system would not be practicable.

In those rare cases, we believe that a waiver should be considered. In view of the current waiver provisions of the Social Security Act, we believe standards should be established to meet the congressional requirement that no adverse effect will result from such a waiver. We also believe that since the Department of Health, Education, and Welfare has not established standards as we suggested, we believe that a requirement by statute should be placed on them to establish those standards.

Mr. PEPPER. I believe you said that both the Wincrest and the Cermak Homes were in substantial compliance with existing life safety requirements.

Could you detail the firefighting equipment and the fire-resistant construction they did have?

Mr. MARTIN. Let me give you an answer in terms of the equipment that was available at Wincrest and Cermak at the time of the fire.

Senator PERCY. Could you please speak into the microphone, Mr. Martin?

Mr. MARTIN. At Wincrest, at the time that the fire occurred, they had four alarm boxes, heat and smoke detectors, fire extinguishers, emergency lighting, solid core doors and fire-resistant construction.

At Cermak, they had four boxes for alarms, smoke detectors, fire extinguishers, fire hoses, a public address system, solid core doors, sprinklers on the first floor, vertical pipes to the other floors, but they did not have sprinkler systems installed, and it was also fire-resistive construction.

Mr. PEPPER. Mr. Martin, in other words, these homes were in compliance with present requirements?

Mr. MARTIN. Yes, they were in compliance with the present requirements.

Mr. PEPPER. So the fact that these fires occurred, which was a tragic loss, indicates that the present requirements of Congress are not adequate to protect people against fire.

Mr. MARTIN. There is a strong case they do need one additional item, an automatic sprinkler system.

Mr. PEPPER. Are you able to tell us further that if nursing homes were protected by automatic sprinklers that multiple death fires would not occur?

Mr. MARTIN. According to the National Fire Protection Association, there have not been any multiple death fires in nursing homes fully protected with automatic sprinkler systems.

Mr. PEPPER. Are you able to express an opinion from your study of this subject as to whether any other fire protection device, other than a sprinkler system by itself or with other equipment, does have an equal record of preventing death by fires to patients?

Mr. MARTIN. Not to my knowledge, sir.

Mr. PEPPER. So I would conclude that it is your opinion after a study of this subject that the existence of adequately installed and proper operation of sprinklers is essential to the protection of patients in a nursing home against the danger of fire.

Mr. MARTIN. Yes, sir.

Senator PERCY. Mr. Pepper, if you could take over as chairman now, I would appreciate it very much, indeed.

Are you able to stay, sir?

Mr. PEPPER. I am very grateful to you and for your kindness in staying to do your duty.

Senator PERCY. I shall always regret not seeing the Magna Carta, but please go right ahead.

Mr. PEPPER. This is a very essential thing to the public interest, and you are a great public servant to stay here and carry on.

Senator PERCY. I have no further questions.

I wish to thank the witnesses very much, indeed, and want to join in expressing to the Comptroller General my appreciation for an outstanding job.

Mr. PEPPER [presiding]. Thank you very much, Mr. Martin.

Our joint committee wants to express a great gratitude to the GAO and all the experts with you in your survey for the very fine public services you have rendered.

Now, we are going to have a panel consisting of representatives from the Department of Health, Education, and Welfare and the Department of Housing and Urban Development.

This panel will consist of Dr. Faye Abdellah, Director, Office of Long-Term Care, Department of Health, Education, and Welfare, who will be accompanied by Mr. Marvin Hitt, Director, Office of Long-Term Care Standards Enforcements; Mr. Michael Morelli, Office of Nursing Home Affairs; Mr. Jonas Morehart, Office of Facilities, Engineering, and Property Management; and Mr. Gene Haislip, Deputy Assistant Secretary of Legislation.

We shall also include on the panel Mr. George Hipps, Acting Director, Office of Underwriting Standards, Department of Housing and Urban Development.

Now, then, I guess we will just call upon you in the order on which you appear on our program here.

Dr. Abdellah, you are now the Director of Office of Long-Term Care.

STATEMENT OF DR. FAYE ABDELLAH, DIRECTOR, OFFICE OF LONG-TERM CARE, DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE, ACCOMPANIED BY MARVIN HITT, DIRECTOR, OFFICE OF LONG-TERM CARE STANDARDS ENFORCEMENT; MICHAEL MORELLI, OFFICE OF NURSING HOME AFFAIRS; JONAS MOREHART, OFFICE OF FACILITIES, ENGINEERING, AND PROPERTY MANAGEMENT; AND GENE HAISLIP, DEPUTY ASSISTANT SECRETARY FOR LEGISLATION

Dr. ABDELLAH. Thank you very much, Mr. Chairman.

First, I want to thank you for your support in the change of out name to the Office of Long-Term Care. It seems quite fitting that tha becomes official today and, of course, broadens our interest and support in terms of alternatives to institutional care, and we do thank you very much.

For HEW, I will be the key witness, and to my right is Mr. Haislip, and Mr. Hitt will speak specifically to the Chicago situation.

I would like to read my prepared statement and then provide an opportunity for questions.

Mr. Chairman and members of the subcommittee:

I appreciate the opportunity to appear before you today to discuss fire safety and related problems in nursing homes.

I would first like to take a few minutes to explain how the Department of Health, Education and Welfare enforces the statutory fire safety requirements and to report on the current status of our enforcement efforts. As you know, under titles XVIII and XIX of the Social Security Act, the Department is now required to enforce for skilled nursing facilities the applicable requirements of the 1973 edition of the Life Safety Code (except for existing facilities which have already met the 1967 edition requirements)—a consensus standard published by the National Fire Protection Association (NFPA). The 1973 edition of the code was substituted for the 1967 edition by Public Law 94–182, the provisions of which became effective on June 1.

Although the law only requires that the Life Safety Code be applied to skilled nursing facilities (SNFs) participating in the medicare or medicaid programs (with waivers permitted under certain circumstances), the Department has required, by regulation, that hospitals and intermediate care facilities also comply with the code provisions. In enacting the legislation requiring the application of the Life Safety Code, Congress recognized the fact that the code contains provisions which are nationally accepted and which provide an acceptable degree of safety for patients and staff in institutional buildings.

This is a very important point we would like to make, that the standards today provide only an acceptable degree of safety, not the maximum degree of safety.

The Department's principal enforcement mechanism is direct survey of nursing homes by State surveyors. Our regional offices of Long-Term Care Standards Enforcement, which were established 2 years ago, monitor State survey activities for long-term care facilities

and provide training and consultation to State survey agencies. The directors of our regional offices of Long-Term Care Standards Enforcement, under delegated authority of the regional directors, review surveys and determine whether skilled nursing facilities comply with Life Safety Code requirements. They also pass judgment on requests for waiver of specific requirements for these facilities.

Waiver determinations for SNFs, which are explicitly authorized by law, are made on a case-by-case basis. Waivers are approved only if the waiver will not adversely affect patient health and safety and if by requiring compliance an unreasonable hardship on the facility would result. These waiver criteria can be applied to all code requirements, including the sprinkler requirement. However, the Department does not permit waiver of the sprinkler requirement in one-story unprotected wood frame facilities of multistory protected wood frame facilities, because the type of construction in these facilities offers the least resistance to fire.

In addition, specific criteria have been established for the waiver of the sprinkler requirement on one-story protected wood frame facilities. These criteria must be satisfied before a waiver of the sprinkler requirement can be considered. Although these specific criteria need not be met to approve waivers for the sprinkler requirement in other types of construction, the Department has instructed State surveyors to consider these criteria in establishing the basis for waiving the sprinkler requirement in other types of construction. The Department believes that it would be unrealistic to specify waiver criteria in all types of buildings because each building is unique and a judgment must be made on a case-by-case basis by professional surveyors. However, HEW is continuing to review this matter.

Intermediate care facilities are also subject to Life Safety Code requirements. In this case, the State survey agency determines whether these facilities comply with Life Safety Code requirements and also approved waiver requests. The Department's Directors of Long-Term Care Standards Enforcement (OLTCSE), in this case, monitor State actions to insure that Federal criteria and guidelines are being followed.

In an effort to upgrade the quality of fire safety surveys the Department has conducted a number of training sessions on fire safety. The most recent were conducted in the fall of 1974 for all of the 10 regions. Another training program is being scheduled for this summer to include in each region to orient surveyors to the 1973 Life Safety Code. Our Regional Offices, aided by the Department's Regional Office of Facilities Engineering (ROFEC), providing training and consultation to State surveyors on an ongoing basis. Regional validation surveys of a randomly selected sample of nursing homes serve not only to monitor State enforcement practices, but also identify areas where additional training may be required.

The Department's continuing efforts to improve the quality of surveys and its strong stance on enforcing Life Safety Code requirements have forced many nursing facilities to make the necessary improvements or to be dropped from participation in the programs.

In the State of Pennsylvania alone, since our last meeting, 200 field mission facilities with serious deficiencies are no longer participating in Federal programs.

I would now like to turn to the subject of the automatic sprinkler requirements which is the key issue this morning. The 1967 edition of the Life Safety Code does not require automatic sprinklers in buildings of fire-resistive construction, regardless of height, nor in one-story buildings of protected noncombustible construction. The 1973 edition exempts buildings of fire-resistive construction, regardless of height, as does the 1967 code, and buildings up to three stories in height if they are of protected, noncombustible construction. There are other variations regarding construction types and sprinkler requirements in the 1973 code.

The Secretary accepts the recommendations of the association in terms of the materials and standards under the terms of the existing code—as of June 1, the 1973 edition is the current one in effect.

The recent tragic fires in Illinois have raised serious questions as to the degree of safety provided in institutions of fire-resistive construction that are not required to have automatic sprinklers. These facilities were in compliance with the provisions of the Life Safety Code, yet 31 elderly residents perished. We in HEW are deeply concerned over these tragedies. We took immediate steps working in Chicago to investigate both fires. Mr. Hitt will speak to these a little later.

Fire safety experts within the Department and at the National Bureau of Standards have been studying the reports of these investigations and will soon make specific recommendations to us on actions which should be taken to help prevent similar tragedies in the future. In fact, a departmental committee met yesterday and is meeting again today for the purpose of recommending appropriate action.

Over the past several years, there has been an increasing body of opinion which argues for requiring automatic sprinkler protection in all nursing homes without regard to type of construction. A few States, such as California and Ohio, and most recently the city of Chicago, require that all nursing homes have automatic sprinkler protection.

I would like to suggest that, before any decisions are made with respect to requiring automatic sprinklers, we look at other possible solutions and weigh all proposals in terms of their cost effectiveness.

I might add here also that, in terms of the needs of individual facilities, there are the basic requirements of health and nutrition and occupational therapy—everything we would want elderly individuals to receive in these long-term care facilities. Their overall needs must be weighed against the desirability for sprinklers.

How much additional safety will automatic sprinklers provide? Are there other requirements or combination of requirements which, if required, will provide additional safety yet cost much less? We don't have answers to these questions, but we are trying to find out. We are looking to the National Bureau of Standards regulations to give us guidance in this direction.

Under Secretary Lynch has recently established a departmental work group to examine costs of requiring compliance with the Life Safety Code and to recommend changes which would bring about a proper balance between costs and the degree of safety provided.

In addition, the Department has a contract with the National Bureau of Standards to study the effectiveness of many of the fine safety requirements pertaining to institutional occupancies and to determine whether additional or different requirements should be

mandated. One of the things they are looking at is the placing of automatic sprinklers at selected locations rather than throughout a facility; there is no question that there is evidence to show that lives can be saved by automatic sprinklers. They may determine, for example, that placing sprinkler heads in a corridor, outside each patient room door, would save as many lives but cost much less than sprinklers throughout.

In response to our request for recommendations on Life Safety Code changes suggested as a result of the recent fires in Illinois, the National Bureau of Standards provided us with an analysis indicating the degree to which patient safety is increased for each category of change.

If the chairmen wish, we will be glad to make the report available or to have one of the fire safety engineers here today explain the report. You may also wish to discuss the report with NBS officials. I believe that the report provides a good example of the type of analysis that must be done before decisions are made with respect to extending the current provisions of the Life Safety Code to require automatic sprinklers throughout every facility.

[The report was supplied and is reproduced in the appendix, pp. 183–197.]

As you are aware, the cost of installing automatic sprinklers is considerable. Estimates range from 50 cents per square foot to $3 per square foot, depending on who provides the estimate. The General Accounting Office, on the basis of four actual installations in 1975 in Ohio and Minnesota, has indicated a cost between $1.21 to $1.55 per square foot. Using the higher cost, the GAO has indicated that the cost per bed is $625 and has amortized this cost over a 20-year period at 9¼ percent interest. On this basis the cost per bed is $5.57 or about 19 cents per bed per day.

Assuming that these figures are representative of actual costs throughout the country, which has not been established, the actual cost of installing sprinklers in all nursing homes (SNF's and ICF's) that are currently participating in the medicare or medicaid programs but which are not sprinklered would be $412,500,000. This figure is based on an estimate that 50 percent of the approximately 16,500 SNF's and ICF's currently participating in medicare or medicaid, with an average capacity of 80 beds, would have to install sprinklers. Our best estimate is that, at current prices, the national average cost for installing sprinkler systems in existing nursing homes is approximately $2.30 per square foot. At 1978 prices, the average cost approaches $3 per square foot. At $2.30 per square foot, the cost per bed would be approximately $927, resulting in a total cost of $611,820.000.

Again, this is a very large investment, one that needs to be weighed in terms of the total needs of the individuals in these facilities and arriving at a balance of both safety and health requirements.

Automatic sprinklers do help prevent multiple-death fires (defined by the NFPA as three or more deaths). The NFPA has never reported multiple death fires in buildings which were completely sprinklered. The May 1973 report of the National Commission on Fire Prevention and Control entitled "America Burning" estimated that there are between 3,500 to 4,000 fires annually in nursing homes and homes for the aging, which indicates, I might say parenthetically, that the reason there are not many more fires is because of the dedication of

the personnel in these homes and the kind of training that is now going on.

In the 20-year period from 1951 to 1970, 496 residents of facilities for the aged perished in multiple death fires.

And, while we are all in agreement that automatic sprinklers can help prevent multiple death fires, I believe that we also agree that automatic sprinklers cannot save an individual who is intimate with the source of ignition, especially if the patient is bedridden or otherwise immobile.

In conclusion, I wish to thank you for the opportunity to present our views on this most important issue. The Department will be pleased to assist the committees in whatever way we can in future deliberations. My colleagues and I will be pleased to answer any questions you may have.

Thank you.

Mr. Chairman, Mr. Hitt is on my left to speak specifically to the Chicago fires and is most knowledgeable on our staff about that.

Mr. Morehart in the second section behind me can speak very specifically about the National Bureau of Standards' studies, also about any questions that you might have regarding the carpet test and other related specific factors about the 1973 code.

Mr. PEPPER. Doctor, we will wait until we hear from Mr. Hipps before we ask some questions.

Now, we will hear from George Hipps from HUD.

STATEMENT OF GEORGE HIPPS, ACTING DIRECTOR, OFFICE OF UNDERWRITING STANDARDS, DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

Mr. HIPPS. Thank you, Mr. Chairman. I do have a brief statement directed to the loan insurance program.

Thank you for the opportunity to testify on the nursing home and fire safety equipment loan insurance program under section 232(i) of the National Housing Act.

As you know, Public Law 93–204, signed on December 28, 1973, added to section 232 of the National Housing Act a provision for FHA insurance for supplemental project loans to finance purchase and installation of fire safety equipment in nursing homes and intermediate care facilities, including those not financed with FHA insured mortgages.

The legislation specifically requires that equipment installation bring the facility into compliance with HEW requirements for providers of services under the medicare and medicaid programs. The committee reports indicated that the program should be implemented with the assistance of HEW. Carrying out this intent, meetings were held in early January 1974 with the Department of HEW to prepare for implementation of the program.

Drafting of regulations and a program handbook began immediately. Development proceeded to the point that a memorandum of agreement was prepared by HUD for signature by both Departments. Former HUD Secretary James T. Lynn signed the memorandum of agreement on March 25, 1974, and it was forwarded to HEW for

execution. Further meetings were subsequently held with HEW to resolve objections to the agreement as submitted and a revised agreement was finally executed by both parties in October of that year.

While negotiating the final memorandum of agreement, HUD drafted proposed regulations which were published for comment by HUD on June 6, 1974. Final regulations were subsequently published for effect on August 12, 1974.

During this same period, we proceeded with the preparation of a program handbook, which included HEW's participation in the program. In September 1974, we began planning for orientation meetings for personnel in both Departments. Three such meetings were held in late October to brief HUD and HEW field office personnel, and the program was operational on November 1, 1974.

During this period of time, from January to November 1974, HEW had been enforcing fire safety standards and requirements before the program became operational. As a result, we received many requests to insure loans retroactively. As you may know, FHA insurance under section 232 is on a prospective basis, thus precluding insurance of mortgages where work has commenced prior to application for insurance.

Soon after the program became operational, we informed all FHA mortgagees of the program and encouraged their participation. To date, no projects have been insured nor commitments issued.

In developing the operating procedures for the program, it was felt that we should keep as much of the processing as possible outside of HUD because of the processing time lags which have developed in some HUD/FHA programs. We believed HEW participation in the program was necessary to assure compliance with fire safety requirements applicable to the medicare and medicaid programs. For this reason, we elected to identify the 10 HEW regional offices as the initial contact point for all applicants.

The following procedural steps are followed in utilizing the program:

One: The applicant takes plans for correction of fire safety deficiencies to HEW.

Two: HEW reviews the plans and advises the applicant in writing—with copy to HUD—that the plans were acceptable and that he may submit an application to the local HUD office.

Three: The applicant submits an application to the local HUD office through a mortgage lender willing to make the loan on an insured basis.

Four: HUD/FHA processes the application mainly on the financial capacity of the proposed borrower. If HUD/FHA approval is obtained, a commitment is issued.

Five: After issuance of the commitment, installing of the equipment may begin.

Six: HEW inspects during the installation of the equipment and advises HUD when the installation has been satisfactorily completed.

Seven: HUD endorses the loan for insurance.

That completes my prepared remarks. I will be happy to respond to any questions you may have.

Mr. PEPPER. What concerns me is that these fires occurred in January and February of this year, and here it is June 3 and you representatives of two of the major departments of Government and

the ones that have to act on this matter are still studying the question and still getting reports which you have not yet evaluated and upon which you have not made a decision.

Now, that is 5 months since the fire occurred, and now you are considering, according to your statement, which is the most desirable method to use and can prevent such a tragedy as these which will get effective cost benefits.

Now, we have already sustained an enormous and immeasurable cost in the loss of 31 lives.

Does Government have to move this slowly when life or death is involved? Citizens of this country are in a way entrusting their lives to public-State authorities when they go into these nursing homes since these nursing homes are supposed to be approved by State and Federal authorities. These people who are patients there, it seems to me, are entitled to rely upon competent observation and scrutiny of these nursing homes. By the fact the nursing homes are permitted to be open and they receive Federal funds, it would seem to me that the Federal Government should confirm their competence and that the Federal Government should see to it that the elderly are safe within those homes.

Why on the 3d of June has our great Government not come up with a solution to this problem with recommendations as to what to do?

Does Government have to move that slowly?

Were you waiting for the GAO report? The report has just been officially filed and released. I do not know whether you have seen it.

Have you seen the GAO report prior to this, Doctor?

Dr. ABDELLAH. Yes, Mr. Chairman.

Mr. PEPPER. When did you see it?

Dr. ABDELLAH. I did see it wrapped up about a week ago.

Mr. PEPPER. Mr. Hipps, when was HUD aware of this?

Mr. HIPPS. Within the past week.

Mr. PEPPER. Did you all meet together on the GAO report before you made a decision on this matter on what to do or recommend to the Congress?

Mr. HIPPS. I think you have to understand HUD's position with respect to this program.

Mr. Chairman, we are the insurer of loans. We do not set the standards that are to be followed, nor do we certify the nursing homes themselves.

That, Mr. Chairman, falls within the responsibility of HEW.

Mr. PEPPER. Yours is only to make a loan certified by HEW?

Mr. HIPPS. That is the sequence.

Mr. PEPPER. Mr. Hipps, if I understand from you, there was only one application for a loan to be made, and was that certified by HEW?

Mr. HIPPS. There was one that we reviewed that HEW found acceptable which we found unacceptable because the nursing home did not have the financial capacity to pay the additional loan.

Mr. PEPPER. Did you offer them the loan payable over a long period of time?

Mr. HIPPS. I do not have the specific circumstances of the terms of that proposal, but normally, yes, it would be a long-term loan.

Mr. PEPPER. You recall how long or how long you may extend the loan?

Mr. HIPPS. It is up to 20 years.

Mr. PEPPER. You say that in this one application the nursing home was not able to pay back the loan over a period of 20 years.

Mr. HIPPS. That is my understanding.

Mr. PEPPER. And HUD certified it, but you did not find a borrower qualified because they did not have the financial capacity to repay the loan.

Mr. HIPPS. No.

Mr. PEPPER. How much of a subsidy would have been necessary in that case to justify your making a loan?

In other words, what subsidy would HUD have required in order to be able to put in a sprinkler system?

Mr. HIPPS. I cannot answer the question, Mr. Chairman. I have not particularly examined that particular application itself. That information could be obtained, I am sure, and provided for the record.

[The Department submitted the following information for the record:]

The application in question was submitted by the Nursing Home of Boaz to our Birmingham Office. The applicant was neither the owner nor the primary lessee of the facility but is categorized as a subtenant. The credit report obtained on the applicant indicated that income was not sufficient to cover operating expenses. An audited financial statement for the period ending November 1973 showed a profit to the Nursing Home of $6,335 and a similar statement for the period ending November 1974 showed a profit of $799. Our calculations, including the debt service on the proposed fire safety equipment loan, projected a $3,000 loss utilizing a 93 percent occupancy factor. To make this loan acceptable a 100 percent subsidy would appear to have been necessary.

Mr. PEPPER. Do you not think it would be desirable to set up some machinery that an applicant may be examined concerning his ability to repay all of it back within the 20-year period allowed for the loan, and if not, a subsidy could be provided to pay for the part they could not otherwise pay?

Mr. HIPPS. I think that is one thing that is under study, from what as I have read the possibility of grants as opposed to loans, but I do not think I can comment on that at this moment.

Mr. PEPPER. Would it be more appropriate for HUD to extend that subsidy if the law should allow one or would it be more appropriate for HEW to extend that?

Mr. HIPPS. I do not think I can really correctly answer that question at the moment without first having an opportunity to examine what kind of a proposal it would be and then determine who would be most appropriate to administer.

I believe HEW has administered a grant or a combination of loan and grant program in the past.

Mr. PEPPER. Does HEW now have any authority or fund to give a subsidy to a nursing home that needs to meet safety requirements that is financially unable to do so without aid?

Dr. ABDELLAH. No; we do not.

Mr. PEPPER. Would it take legislation?

Dr. ABDELLAH. Yes, sir, it would.

One of our problems in the HUD–HEW program, as indicated in the GAO report is that, as Mr. Hipps has indicated, the HUD

program is a prospective program, so that when the applicants did come in seeking a loan guarantee, they had already made arrangements and had already started to install fire safety equipment. The prospective requirement is a real handicap to the applicants.

Mr. PEPPER. Do you think it would be desirable for Congress to authorize HEW to make subsidies and make grants to nursing homes to enable them where that was necessary to meet the safety requirements?

Mr. HAISLIP. That would be a significant change from the manner in which we have proposed standards thus far.

Mr. PEPPER. Give your name for the record.

Mr. HAISLIP. Gene Haislip, Deputy Assistant Secretary for Legislation.

You have to bear in mind that the Federal Government provides extensive multibillion-dollar expenditures for health care in this area to both medicare and medicaid and the standards have been imposed by requiring that facilities meet certain standards in order to be reimbursed under these systems.

I do not know whether you prefer to characterize that as a subsidy, but that is the extent of Federal involvement and that is the manner in which standards have been imposed and not through some sort of direct grant program.

Most of these nursing facilities are private facilities and their capacity to react to regulations or requirements depends upon individual management and funding in many cases.

These are matters over which only those individual owners have control and would present a real question as to whether we simply automatically blanketly subsidize their facilities in any respect.

Mr. PEPPER. Well, it would seem from the evidence that you all have given here that you have no record of a multiple death fire in a nursing home which was protected by a sprinkler system. In addition, there were many fire deaths that occurred in the country in the last 20 years in nursing homes which did not have sprinkler systems. This would seem to indicate that the sprinkler system, even though other requirements would be made, is an essential contribution to the safety of those patients.

Now, let me ask you this, Dr. Abdellah. Is the rule or rather the provision that a fire-resistant building does not have to have a sprinkler system, is that a rule and regulation of HEW, or is that a statutory requirement?

Dr. ABDELLAH. It is part of the requirement of the code.

Mr. PEPPER. Is that passed by the Congress or promulgated by HEW or by some other department of Government?

Mr. MOREHART. My name is Jonas Morehart, Office of Facilities, Engineering, and Property Management for HEW.

Your question has to do with who promulgates the Life Safety Code? It is the National Fire Protection Association, a private nonprofit association consisting of about 35,000 members of the fire service, health care facilities, and so forth.

Mr. PEPPER. You mean there is a rule or regulation promulgated by a private association?

Mr. MOREHART. This is a national consensus standard.

Mr. PEPPER. Well, is it embodied in any rule or regulation of HEW?

Mr. MOREHART. No, sir. It is embodied by reference in the Social Security Act.

Mr. PEPPER. You mean the Social Security Act also authorizes the fire association to lay down fire protection criteria?

Mr. MOREHART. It refers to the standards as a national consensus standard.

Mr. PEPPER. What I am getting at is this: I presently believe that we should not provide any Federal money from medicare or medicaid to a new nursing home if it does not have a sprinkler system in effective operation.

Do we have to have legislation to do that, or can HEW simply eliminate the criteria of fire-resistant construction, which itself unfortunately eliminates the necessity for a sprinkler system?

Can you eliminate the practice of improper "fire-resistive" definitions which you have observed in the past?

In other words, will it take legislation to accomplish what we are looking for, or can it be done by regulation by the appropriate department of Government?

Dr. ABDELLAH. Mr. Chairman, the Life Safety Code which is recommended by the National Fire Protection Association, is the Code which the Secretary of Health, Education, and Welfare follows so that this is a mandate by Congress. Therefore, there would have to be legislation in order to carry out your wishes.

Mr. PEPPER. Now, wait a minute. What is the answer to my question?

Can the change be effectuated by rule or regulation, or does it have to be by statute of the Congress?

Dr. ABDELLAH. It would have to be by statute of the Congress because at present, the statute reads that the Secretary apply the Life Safety Code of the National Fire Protection Association.

Mr. PEPPER. There was one surprise that I got, Dr. Abdellah, from your testimony, the actual surveys of these nursing homes is not made by Federal officials but by State officials, and apparently they report to the Federal Government. Is that true?

Dr. ABDELLAH. Yes, Mr. Chairman, that is true.

The Department does not have the manpower to do the actual annual surveys for all facilities.

Mr. PEPPER. But it is Federal money being put into these nursing homes, is it not?

Dr. ABDELLAH. Yes, sir.

Mr. PEPPER. Well, I think you should be provided with the personnel to protect the proper use of Federal moneys.

How many billions of dollars go into Federal payments through medicaid and medicare to the nursing homes?

Dr. ABDELLAH. $3 billion.

Mr. PEPPER. In other words, we are spending $3 billion a year.

How many people are in the nursing homes under the Federal program?

Dr. ABDELLAH. There are 1.1 million persons.

Mr. PEPPER. 1.1 million people in these nursing homes and we are paying $3 billion a year to keep the people in these nursing homes,

yet you say the Federal Government does not have the personnel to see to it that our money is properly spent, and the people in there properly and safely protected.

Dr. ABDELLAH. May I point out something?

Mr. PEPPER. I am not saying it is your fault. Somebody is at fault for not providing inspection as to where the Federal money goes.

Dr. ABDELLAH. I do not mean to imply the Federal Government does not carry out any inspections.

Through our 10 regional offices, these facilities on a sample basis do have routine validation surveys, but we do not carry out the annual survey.

This is a State responsibility for which the Federal Government reimburses the States.

Mr. PEPPER. I am sorry, Dr. Abdellah, and you other witnesses, but I have to go for another engagement, but others will carry on. I thank all of you very much.

Mr. HAISLIP. Just to respond to which Federal funds are funneled to the States when the States make certain representations, by statute the States have the responsibility for administering the medicaid program, so they have this particular responsibility with regard to medicaid funds.

It is a different situation with regard to medicare. There again, this is a matter that is mandated by law and it would be necessary that we have a basic change in the character of this statute.

Mr. WEINER [presiding]. Mr. Abdellah, or any of the other members of the HEW panel, you say you are providing training and consultation to State surveyors on an ongoing basis.

HEW has been phasing out the surveyor training program. We understand you might phase out Tulane's excellent program and we have seen what they have accomplished.

I agree with your assessment of the surveyor training, so is not this phaseout inconsistent with your stated goal?

Dr. ABDELLAH. I realize that there have been misleading reports about Tulane.

Mr. WEINER. Are they going to continue?

Dr. ABDELLAH. At the moment, that is our only facility for training of State surveyors.

I see no choice for us to have that facility continued.

My colleagues in the Social Security Administration, the Rehabilitation Service, have recommended that that effort be continued.

There are plans to establish a Federal institute locally which is in the planning process which has some strength in that it would certainly pull upon Federal personnel and the faculty and also eventually reach out to the whole training effort.

We are committed to the training of State surveyors and we must have the training component.

I personally have recommended that this training effort at Tulane be continued. We have nothing to substitute for it, as yet.

I see no other alternative to that, Mr. Weiner. I do not wish to say that the program cannot be strengthened.

We recognize that there are problems in that situation, but at the moment that is the only one we have.

Mr. WEINER. I just want to make clear in my own mind because we have been talking about it and they are very, very upset.

That program will not be discontinued, is that right?

Dr. ABDELLAH. What I am saying is, I have recommended, as my colleagues in social security and SRS, that it be continued.

I personally have no control whether it is continued or not.

Mr. WEINER. You do not know what is going to happen?

Dr. ABDELLAH. As of this moment, it is still continuing. I have not heard that it is not.

Mr. WEINER. All right, in 1975, GAO recommended that you establish waiver standards for all nursing homes regardless of construction type to insure that sprinkler waivers did not adversely affect patient safety.

Evidently, the department did not accept that, and I read it is still your position.

Can you explain why and how you can insure patients' safety without minimum standards?

Dr. ABDELLAH. I call on Mr. Morehart.

Mr. MOREHART. The question of waiver standards which has come up here has to do with a very specific criterion that was developed for waivers for a one-story, protected wood-frame construction.

This was a very pressing need and it was developed. If criteria or standards were to be developed similarly for other types of buildings it would put a very severe restraint on the individual surveyor or the individual office making the waiver, and some types of facilities would not be able to qualify for the waiver because of these guidelines, whereas from a commonsense standpoint, they should have a waiver.

Mr. WEINER. But you are intending to promulgate any specific regulations that state what should be. You are on a case-by-case basis making a decision, so perhaps things like Chicago can happen again.

Mr. MOREHART. If every facility could be designed and built identically and operated identically, then you could begin to draw up uniform guidelines for this.

Mr. WEINER. In your opinion, do you not think the possibility of automatic sprinklers is working and do save human lives?

I am still not clear about your position on this in my own mind.

Mr. HAISLIP. I am sure OMB would have an opinion.

I think the problem here is one of taking a particular piece of resource—here, we talk about $600 million—and deciding how a maximum benefit can be achieved in terms of helping a class of people.

Now, I think Dr. Abdellah would be delighted, if you wish to listen, to give you long lists of deficiencies that need to be corrected in nursing homes.

These are deficiencies which also affect people's lives.

Mr. WEINER. It would be very helpful, but perhaps you can provide it later for the record. Would you be willing to do that?

Dr. ABDELLAH. I would be glad to do so.

[The information was later submitted and is reproduced in the appendix, pp. 198–215.]

Mr. HAISLIP. The point is: Which of these deficiencies are you going to cure and how much are you going to spend for them? This particular matter—fire safety—while extremely important, is, alas, only one of many deficiencies.

There are deficiencies in nutrition and quality of care and surveillance and many other areas which also result in people dying.

Mr. WEINER. I agree with you completely on the total of the Federal allocation dollars, but I would like to relate one personal experience having gone around to various nursing homes, having visited with residents. If you ask a patient what concerns him most about his care in a nursing home, he will generally say two things—it is fine, but not like home, and No. 2, he will say fear of a fire because they have seen and heard the stories about the Chicago fires.

They are just deadly afraid of fire, and it just seems to me that on a psychological level, if you are going to provide some kind of happiness in their twilight years, let them be assured of safety.

Mr. HAISLIP. It is very important. We agree.

Dr. ABDELLAH. One should consider balancing priorities with the limited health dollar—where funds and resources should go. We recognize that the sprinklers do save lives, and ask that consideration be given to the recommendations of the National Bureau of Standards, the report that will be coming out if we find that their recommendation is sustained it may be that sprinklers are only needed in corridors and hazardous areas.

Mr. WEINER. When can we have that report?

Mr. MOREHART. We anticipate probably at least another year, although it is part of a 5-year contract which is about 1 year down the road.

Mr. WEINER. We have to wait 1 year? Really, Mr. Pepper's point about the need to avoid delay and act promptly is very valid here.

Mr. MOREHART. If I may, I would like to set the record straight concerning what was said earlier this morning, and that is, that the human element is failing. I cannot agree that this is the case because we are having at least 10 fires in nursing homes every day of the year.

If the human element was always failing, then you can see the number of disasters that we would be faced with.

The fires we are having are accidents, and just like automobile accidents, we have millions and millions of miles driven every year when no accidents ever happen.

This is a case of multiple loss of life, and this is all we are talking about; we are not talking about the several hundred single fatalities from a fire. We are talking about 25 lives per year and the amount of money, whatever it may be, if put on other health care programs, could result in considerably more savings of life.

Mr. WEINER. Well, I think the Senate committee, if I read the summary of their report accurately, has statistics that show they are three times more heavily involved in deaths from fire as the general population as a whole.

It should be a priority. In addition, it is the single most important thing to an elderly person in a nursing home.

Mr. HAISLIP. It is a priority.

Mr. WEINER. You awarded HEW's contract to the American Health Care Association for their safety code.

What were their requirements relating to sprinklers?

Mr. MOREHART. This was a contract to the American Health Care Association? Did I understand you correctly?

Mr. WEINER. Yes.

Mr. MOREHART. As I recall, this was a series of tests, six tests; the entire building burned down.

One of the things the tests did show was that the sprinkler could effectively control the fire and confine it to the room of origin.

There is no question in my mind as a professional fire protection engineer about the effectiveness of the sprinkler system; its effectiveness is proved by 100 years of statistics. But the question that really bothered me as a professional is, we are looking at these sensational media-reported cases of multiple fire deaths, and we are not giving due consideration to solving the problem of the individual.

Mr. WEINER. For HEW, why did it take over 6 months to process the four loan applications cited in the GAO report?

Do you not think this long processing time creates a problem for nursing homes trying to make corrections within the allotted time for correction?

Mr. HITT. I am Marvin Hitt, Director, Office of Long-Term Care Standards Enforcement, and I will try to respond to your question.

I think there are delays in the processing. When we receive letters of interest in our office, we catalog them, and send out packaged materials to the inquirer. The packaged materials consist of a handbook and some of the material referred to and other correspondence.

Sometimes the providers respond immediately with other materials, and the materials they send to us might be obsolete from the standpoint they need updating.

We feel we had to make an outside inspection so we could certify to HUD that if this project was completed the facility would be in compliance with fire regulations. All of these things create some delay.

When we received plans for engineering and architectural appraisal, many times our regional engineers decided they needed additional information and they would have to go back to the provider and again we would have a time delay.

Sometimes, they just would not respond. This is beyond our control.

Mr. WEINER. Well, we have some questions on HUD on these situations also.

Again, for HUD, since you rely on validity of State inspection reports for medicaid and medicare certification, could you not rely on them for the HUD insurance program?

Why the timelag on that?

Mr. HITT. Well, that is a possibility, yes.

Mr. WEINER. Could that be done?

Mr. HAISLIP. We would have to supply that for the record.

[The material was later submitted and is reproduced in the appendix, pp. 216–228.]

Mr. WEINER. Is there any reason why it would be part of a statute since you are determining the process?

Dr. ABDELLAH. As the program was developed, we had recommended HEW involvement in the architectural review and survey because, although some States have qualified people to do this, there are many States which would not have qualified people to carry out their architectural survey. It was the intent of HEW to be helpful by providing the expertise to those States where it was not available.

Mr. WEINER. Well, OK.

Mr. HITT. I think too, if I may add, we did not rely totally on the States for this survey certification effort.

That is part of it, Mr. Weiner. They send the product of those surveys to us and we monitor the process, so it is not a total reliance on the State.

Mr. WEINER. That is what it seems to me, too, in view of the fact of HEW's great involvement here, obviously.

Certainly, with consultation, this would give at least a key to the process.

I believe that this is also recommended by the General Accounting Office.

Would you give us some examples of the situation which might exist at the qualifying nursing home in meeting a reasonable hardship requirement for a waiver?

Dr. ABDELLAH. Do you want to respond to that, Jonas?

Mr. MOREHART. Would you rephrase the question, please?

Mr. WEINER. What qualifies for a waiver in terms of unreasonable hardship?

Mr. MORELLI. If I might clarify the question as I understand it, under what grounds would a waiver be issued?

Dr. ABDELLAH. This is Mr. Morelli of my staff.

Mr. MORELLI. Our basic criteria are that a waiver may be issued if it will not adversely affect the health and safety of patients and would not result in undue hardship on the facility. I think your specific question is what would constitute an "unreasonable hardship" on the facility.

We have some guidelines we have developed, and these are in survey manuals.

One thing we look at is the estimated cost of correcting a deficiency: What would it cost to install a sprinkler system, if that is a deficiency.

Additional considerations would be the extent of destruction to the existing building, disruption of services to the patients, the availability of financing in that area, and the remaining useful life of the building. In other words, is it worth making that expenditure if the building is an old one?

Mr. WEINER. If I might turn to another matter here, Mr. Hipps, I would like to ask on what grounds does the Department support its position that it should not grant loans when the project had been begun, even though the loan is in effect?

Mr. HIPPS. That is the interpretation made by the General Counsel of the language of section 232 of the National Housing Act.

Mr. WEINER. But it is an interpretation, not in the statute.

Mr. HIPPS. That is their legal interpretation of the language of the statute.

Mr. WEINER. Would you be kind enough to supply us with a memorandum which they issued, making that interpretation?

Mr. HIPPS. Yes.

Mr. WEINER. Thank you.

[The memorandum follows:]

HUD-96 (4-72) PREVIOUS EDITION MAY BE USED

Memorandum

U.S. DEPARTMENT OF
HOUSING AND URBAN DEVELOPMENT

TO : George O. Hipps, Acting Director
Office of Underwriting
Standards, FT

DATE: JUN 7 1976

IN REPLY REFER TO:
GHM:DC

FROM : William E. Grossman, Multifamily Mortgage Branch, GHM

SUBJECT: Public Law 93-204 - Section 232(i)

This is to confirm previous advice I gave you that a loan to be insured under Section 232(i) is for the purchase and installation of fire safety equipment for a nursing home or intermediate care facility on a prospective basis rather than for equipment already installed in the facility.

I am attaching, for your information, a copy of a letter dated July 11, 1974, from the General Counsel, Robert R. Elliott, to Senator Philip A. Hart. In his letter, Mr. Elliott sets forth the Department's legal opinion that Public Law 93-204 ". . . does not authorize the insurance of loans to reimburse owners of nursing homes for previously purchased and installed fire safety equipment. . . ."

2386(1) Fire Safety hearings

Honorable Philip A. Hart
United States Senate
Washington, D.C. 20510

Dear Senator Hart:

This is in response to your letter of June 18, 1974, on behalf of Mr. Jerry C. Kole of Town and Country Nursing Home, Inc., who has requested that the proposed regulations for HUD-insured loans for "Fire Safety Equipment in Nursing Homes," be amended to provide for insurance of loans on fire safety equipment which has already been purchased and installed.

These proposed regulations implement Public Law 93-204, which authorizes the Secretary to insure loans "... to provide for the purchase and installation of fire safety equipment ..." In our view, the statute does not authorize the insurance of loans to reimburse owners of nursing homes for previously purchased and installed fire safety equipment and the proposed regulations properly provide for loan insurance only for prospective installation and purchases.

In response to your question, amending the statute to provide for loans covering fire safety equipment purchased and installed prior to the effective date of the statute, or the regulations implementing the statute, would be legally possible. However, we do not believe that it would be generally desirable to depart from the pattern established for all other mortgage and loan insurance programs under the National Housing Act in which commitments to insure are only issued for work to be performed prospectively. This procedure enables HUD to determine not only the acceptability of the construction to be performed but also the financial feasibility of insurance of the indebtedness in relation to the prospective value of the security.

We recognize that Mr. Kole was faced with the dilemma of meeting fire safety requirements, without a then-existing federal program of loan insurance, and may have had to finance the purchase and installation under less favorable terms than may be obtainable when the final rules are made effective. However, making the program available for refinancing of indebtedness or expenditures already incurred, we believe would go well beyond the objective of providing federally insured financing for the prospective purchase and installation of fire safety equipment for nursing homes which might not otherwise be able to finance the purchase and installation of required equipment.

Sincerely,

/s/ Robert R. Elliott

Robert R. Elliott

Mr. WEINER. Why do you believe that no loans have been insured under the program?

Mr. HIPPS. I think there are probably several reasons.

Recalling back to the time the program was being considered and developed, it was clear from some of the information and comments received from the people in the nursing home industry that the type of program provided was not what they thought they were going to get.

Really, many of them, Mr. Weiner, believed that they were getting a grant program. They did not really understand that this was a mortgage insurance program and that it required the participation of private lending institutions.

This is the type of program that has not been particularly attractive to mortgage lenders, although we encourage their participation.

This type of loan is not one that is typically made by a mortgage banker.

Mr. Weiner, you must remember that mortgage bankers originate the bulk of the loans insured by the Federal Housing Administration.

Those, I think, are the primary considerations.

Mr. WEINER. In your opinion, could this loan program, the insurance program work?

Mr. HIPPS. Can this insurance program work?

Mr. WEINER. Yes, Obviously, it is not working now—no loans.

Mr. HIPPS. I do not think that the program is going to work any better than it has now.

I think probably the reason it has not worked is more related to the fact that it is easier to do business with a conventional lender than it is with the Federal Government because of the typical red tape.

Mr. WEINER. It is difficult in the private loan market also.

Mr. HIPPS. The interest rate is 9.25 percent right now.

By regulation, that interest rate was established at one-quarter of 1 percent above whatever the current interest rate is for a multifamily mortgage in the FHA insurance program and is currently 9.25 percent.

I understand that kind of money is obtainable to those who have the financial wherewithal to obtain it in the marketplace.

Then you have to find a lender willing to make the loan and although at the time a program was implemented and announced, there was some initial interest on the part of a very small number of mortgage bankers about the program that interest never continued.

Mr. WEINER. Let me ask you the same question Congressman Pepper asked GAO earlier.

In view of the problems, perhaps direct loans would be a more efficient way to do it.

What would be your reaction to that?

Mr. HIPPS. I cannot respond to that. I think before you can answer that kind of question, you really need to do a complete analysis of the benefits and drawbacks of direct loans and things of that nature.

Mr. WEINER. Would it be possible for your department to provide a staff study on your opinion on this?

Mr. HIPPS. I presume it can be done. It would take a good deal of time.

Mr. WEINER. One other question. There is another loan program, too, according to the GAO in their report.

Why have regulations to implement the Housing and Community Development Act of 1974 not been published?

According to our information, this act gives you the authority to insure loans for projects which have begun.

Mr. HIPPS. That program is under title I of the National Housing Act.

It is my understanding that some of the considerations that went into the delay and implementation of the program really relate to the characteristics.

There again, you are typically dealing with the title I programs of HUD with home improvement lenders.

Those type of lenders are typically not making the kinds of loans involved here and the dollar amounts envisioned.

It was also felt that since the experience with the program under section 232 had been as it has been, that if the program under section 232 was not working well, there was no reason to think that the one under title I would work either.

You also have to remember under title I the lender who makes the loan is taking a coinsured risk, unlike the one under title II where the lender is protected up to 100 percent of his investment.

It makes it even more unlikely that many lenders would be too anxious to engage themselves in that kind of a coinsurance risk, given the dollar amounts of the loans that you can anticipate.

Mr. WEINER. Is it your intention to issue regulations?

Mr. HIPPS. I believe it is, yes, sir.

Mr. WEINER. You have any idea when?

Mr. HIPPS. No, sir, that is not in my area of responsibility.

Mr. WEINER. I appreciate that.

Well, that concludes my questions.

I just want to thank you, Dr. Abdellah and your associates, on behalf of Chairman Pepper for a very thorough, as always, presentation.

You come with an army of preparation and it is very difficult for us to match, but we really appreciate all the work you have put into it.

Also, Chairman Pepper is very grateful for your change of the title of the Office of Nursing Home Affairs to the Office of Long-Term Care to reflect greater Federal concern with developing alternatives to institutionalization.

We are very grateful that on extremely short notice, Mr. Hipps, that you have provided your testimony today. We know it was unusual. We are grateful to you and your shop for putting it together in a week. I now yield to my very distinguished and brilliant colleague, Val Halamandaris.

Mr. HALAMANDARIS. Four or five years from now, somebody will likely look back and see why nursing homes are not sprinklered and wonder why. Today's record will be available to show our resolution that they should be, along with your opposition to the requirement, based on fear of the potential cost of installation.

I have a couple of questions I would like to address to Dr. Abdellah.

In your research paper last year you suggested that two-thirds of the nursing homes of this country have four or more deficiencies.

I wonder if there has been any improvement in that, do you feel encouragement in what you have seen this past year?

Dr. ABDELLAH. Yes; I am very much encouraged. In fact, in view of our discussions, we have seen major improvements in the area leading to requirements for the Life Safety Code.

I would like to see much more emphasis on activities in relation to improvement of the quality of care, the level of care, provided. In relation to this, our undersecretary, Mrs. Lynch, announced last February phase II of the long-term care strategy campaign which is focused on services needed and provided to patients and residents. Because of the encouragement and changes in meeting the Life Safety Code requirements, we feel there should be greater emphasis on quality of care.

We do not hear about those patients who die from poor quality of care. This aspect must be addressed.

Mr. HALAMANDARIS. We all endorse that effort. However, I think we would be remiss in our duty if we did not suggest that we proceed on the other front as well. We must continue the effort to achieve fire safety in nursing homes. We do not want to lose the gains made in that direction.

Last year GAO mentioned, and, Dr. Abdellah, in your testimony reiterated the same point, that many States are relying essentially on untrained individuals to make fire safety surveys.

I am talking about using sanitarians, nurses, and policemen who make judgments as to fire safety.

Can you tell us for the record what has been done to require the States to use qualified inspectors?

Dr. ABDELLAH. Yes; I would be very happy to submit our report that was prepared by the Bureau of Quality Assurance in our Department that details the qualifications of the State surveyors.

[The report was submitted and is reproduced in the appendix, pp. 223–295.]

Dr. ABDELLAH. I am very much encouraged by their report. For example, more than half of the State surveyors today have a minimum of a B.A. degree and have specific training in survey techniques.

Much of this is picked up through the efforts out at Tulane, and some of the earlier programs.

Also, one might categorize about two-thirds of these individuals, as professionals. For example, there are 41 physicians who are doing State surveys, over 400 professional nurses, social workers, and hospital administrators.

Of about 2, 200 State surveyors, only 127 of those do not identify with a specific health discipline. There is a major change from 2 years ago and I am encouraged that most of the surveyors are committed health professionals.

Mr. HALAMANDARIS. The point is a little more specific than that.

I recall in the survey last year, we learned that 22 out of 24 inspectors in 1 State were retired Army officers.

I have nothing against retired Army officers. They may even have had a strong background in health.

My point is, they do not have an engineering background or other training which would qualify them to appropriately apply fire safety standards.

Do you see that as a problem?

Dr. ABDELLAH. Yes; of course, and many States do have very qualified individuals doing this; in each of our regional offices there is a qualified fire safety engineer. In some cases, there are three, some from a Federal level. We do have a very good picture in terms of qualified safety engineers.

In some States, some are fire marshals with limited training, but in most States, we find many of them are participating in the life safety code training courses at the local, State, and individual level.

I think the picture is changing, and I want to mention one important point that was brought out this morning. I see, as I am sure you do also, the change in involvement of industry, in this effort, the American Health Care Association has issued fire safety training manuals. They have also issued, at their own expense, a set of training manuals in patient assessment for some facilities.

I have persuaded them to shift some of their public relations money into the training effort of fire and safety for nursing home personnel. I think that there is greater understanding and an improved working relationship between industry and the States and Federal Government.

Mr. HALAMANDARIS. Good. In terms of the medicaid program it seems to me the Department of Health, Education, and Welfare is in a difficult position. Anyone trying to administer that program gets whipsawed between the Congress and States.

Have any of you reached any personal decisions about changing the nature of the medicaid program?

Have any of you reached the point where you believe direct Federal enforcement is either necessary or prudent or desirable?

Dr. ABDELLAH. That is a hard one. I think we certainly would not in any way relinquish our responsibility for monitoring our capability.

Mr. HALAMANDARIS. I just want an informal response. It is my thought that perhaps direct Federal enforcement would help.

I wonder if that concept would be supportable. Do you find it desirable?

Mr. HIPPS. Well, you have raised such a fundamental question.

In some ways the medicaid program suffers from dualness dilemma.

It is basically a State program, but yet it has a lot of Federal involvement.

It is never clear who has the final say on these particular measures, and the Federal Government does attempt to fulfill its responsibility, but again recognizes that administratively it does not have that responsibility.

The administration has proposed turning it over to the States with broader latitude to clarify. I think the question is just where you come down philosophically on the question of State and Federal relationships, and to what degree do you believe there is confidence in those two different approaches, and who do you think is closer to the problems.

There has been a lack of money in the States to do much about that. The proposal which would clarify that, and provide them with money, could change that picture.

There have been dramatic increases in State capability across the board in the last decade, relative to the past.

It is not an answer.

Mr. HALAMANDARIS. It is an intriguing problem, and I think it is one the Congress is currently grappling with.

We have the administration's proposal, and some others, but we can discuss that point at some different time. However, I am stating my own preference. I am starting to believe that the States are doing a fine job, but others are performing poorly.

I do not wish to remove the authority to regulate nursing homes from the States, but when you reach a point where we can determine that a particular State is simply not living up to expectations, and not doing the job, then I believe the Federal Government should step in and help the State to meet its responsibility.

Dr. ABDELLAH. That is a problem, and we do have a current obligation in that regard.

We are responsible for the coordination of policy related to the medicaid program, and it is a difficult problem.

You may remember about a year ago we planned to publish a regulation that would strengthen the Secretary's authority in terms of waiver for the Life Safety Code in relation to the medicaid program.

With the exception of the State of Washington, all States agreed not to give the Secretary increased authority in relation to medicaid. There seems to be reluctance on the part of the States to relinquish some of this authority to the Federal Government.

Mr. HALAMANDARIS. I would agree, however, I have a strong sense of déjà vu, sitting here today, and talking to all of you HEW officials about nursing home fires.

I have a long memory of past fires, and talking about them with various HEW Secretaries and personnel.

I must digress to applaud Dr. Abdellah with her efforts, and all of the dedicated people who work with her. However, it seems to me that promises to us made by previous HEW officials were somehow lost within the bureaucracy of HEW.

Senator Moss referred to one of these promises in his opening statement.

I am going to address my comments really to Mr. Morehart because I understand he is the officer in charge of technical standards.

Just to set the stage for you briefly, during our hearings on the Marietta, Ohio Nursing Home fire, we learned of the major role which carpet played in the fire. We learned through testimony at those hearings that the only fire test for carpet was the so-called pill test; a test for ease of ignition, a comparatively ineffective test in terms of flammability. In fact, it allows some 90 percent of the carpet made in this country to continue to be sold in the marketplace.

Second, the Steiner tunnel test was characterized as a more effective test but HEW stopped short of adopting it, saying that the chamber test was the ticket. It was HEW's recommendation we test and study, and wait awhile, and maybe this so-called chamber test was going to be the thing.

Five years have gone by with all this bickering and we still have no standard; now I hear HEW is proposing to use the pill test, and the so-called radiant panel test. The latter is a completely new test; is that correct?

Mr. MOREHART. You have a very good source of information.

The current standards that are in effect now, are those referenced in the Life Safety Code.

This is based on the tunnel test, and we have for many years required appropriate compliance with that.

We are looking at a new standard, or new criteria, which is based on the radiant panel.

This is out for comment now.

One point that you made was that the pill test is inadequate, and I cannot agree; it is a very stringent test.

The pill test probably is responsible for saving many lives in this country, which we have no way of counting of course.

The new standard is based on the radiant panel, which should solve many of the problems.

Mr. HALAMANDARIS. I cannot disagree with you, Mr. Morehart.

If my mother was in a nursing home, with a carpet on the floor, and the only standard that the carpet passed was the pill test as you propose for patient rooms, I would be worried.

I would prefer the more stringent standard, the so-called Steiner Tunnel test which the Public Health Service now requires and has recognized for a number of years. I am wondering why all of a sudden there is a change to a pill test, and then to the radiant panel. I would like to know if the radiant panel test is supported by any recognized authorities such as Underwriters Laboratories?

Mr. MOREHART. The radiant panel test simulates what happens in a corridor situation during a fire from a flashed-over room feeding hot gas into the corridor.

The hot gas travels along the ceiling of the corridor, and heat radiates onto the carpeting in the corridor, which I can only characterize as similar to raising the flash point of fuel oil to a given level.

In an open room you would not have this potential for the concentrated radiation; therefore, the radiant panel test is not applicable to an open area.

As to your concern about the inadequacy of the pill test, the National Bureau of Standards has made a series of tests, where they have actually burned a large piece of furniture, or a large amount of wood in the corner of a room, and measured the difference in the flame spread travel between a mediocre carpet, such as the minimum of the pill test, and the best that we could get, and I believe the difference in flame spread is in the neighborhood of 20 inches.

We are really not buying any additional safety in this 20 inches by making a more stringent requirement on the carpet.

Mr. HALAMANDARIS. Let us talk about the carpeting and other products which were totally consumed by the fire even though they had a low rating.

Are you troubled by the fact that these products, particularly with burning plastics, release toxic gases?

Mr. MOREHART. First of all, concerning the carpeting in the Cermak fire as I recall, there was only a very small amount of scorching in front of the door of the room of fire origin.

There was absolutely no spreading of the fire down the corridor, and I think Mr. Best could probably bear this out.

As far as toxicity is concerned, it is something that was touched on two or three times this morning. A recent study in the State of Maryland has shown that people do not die from these exotic chemicals, they die as a result of carbon dioxide.

Over 80 percent of the fire deaths in the State of Maryland the last couple of years have borne this out, so it does not matter what we have, if it is comfortable, it is going to burn, and anything that will burn will give off carbon dioxide as a matter of course.

Mr. HALAMANDARIS. Do you favor the promulgation of smoke generation standards?

Mr. MOREHART. In our new standard, we have the criteria for smoke development. It is not based on the tunnel. It is based on the new NFPA standard on smoke generation of solid materials. It has just been officially adopted by the NFPA.

Mr. HALAMANDARIS. Will you tell me once again, what is the status of this regulation that you are considering? Is that about to be promulgated?

Mr. MOREHART. The standard is currently out for comment within the Department.

Mr. HALAMANDARIS. I would be very interested in receiving a copy of it if you could send us one.

I know the Senator would like to read it, and react to it formally.

Could you do that?

Mr. MOREHART. Yes, sir.

[The information received is reproduced in the appendix, pp. 296–325.]

Mr. HALAMANDARIS. Thank you very much.

That concludes the questions I have.

Mr. WEINER. I have no further questions. Thank you.

Dr. ABDELLAH. Thank you.

Mr. WEINER. Our next panel is made up of Mr. Ross Richardson, the Assistant Illinois State fire marshal, and we have only one further witness after Mr. Richardson, Mr. Richard L. Best, fire analysis specialist, National Fire Protection Association, he will have a very useful presentation, so I hope our visitors will be able to stay.

Mr. HOLTON. Excuse me, Mr. Weiner. As you know, Francis Murphy of the Chicago Fire Department was scheduled to be here today. He was to report to us on the Wincrest fire, and the findings of Mayor Daley's commission, which investigated the causes of that fire.

Due to illness in his family, he is not able to be a witness here today.[1] Since we do have a copy of the commission's official report, which was issued shortly after the Wincrest fire, we will submit that for the record in lieu of Mr. Murphy's not being here today.

Mr. WEINER. If there is no objection the report will be accepted for the record.

So ordered.

[Cover and pp. 3–13 are reproduced in the appendix, pp. 326–337. A copy of the complete report is retained in committee files.]

STATEMENT OF ROSS RICHARDSON, ASSISTANT ILLINOIS STATE FIRE MARSHAL

Mr. RICHARDSON. My name is Ross Richardson, assistant State fire marshal for the State of Illinois.

We are the State life safety survey for the Cermak House.

[1] Chief Murphy later testified in Chicago, Ill., on Aug. 12, 1976, before the Subcommittee on Retirement Income and Employment of the House Select Committee on Aging.

We also had responsibility for the investigation of the fire that occurred on February 24, 1976, in the early morning hours.

I have a fairly brief written statement, which I will read, and then turn it over to questions.

The intent of fire prevention officials is to eliminate or reduce hazards that cause fires, and to limit the spread of fire and its deadly products if one starts.

The fire official limits fires in buildings by detection, compartmentalization, and extinguishment.

The quicker the detection, the quicker the fire can be brought under control by firefighters.

Compartmentalization serves to contain and isolate a fire within an area or specific room of a building. Extinguishment, of course, provides an automatic system to put out a fire before it can become a threat to the entire building.

All fire safety codes are based on these three principles, including NFPA–101, the code HEW has in effect for all health-care facilities receiving medicare and medicaid moneys, and the minimum standards for long-term care facilities enforced by the State of Illinois.

Under these two codes, automatic sprinkler protection is required in all nursing homes except those deemed to meet fire resistive construction requirements or protected noncombustible construction requirements if a one-story building.

The homes in which the recent tragedies occurred, Wincrest Nursing Home of Chicago, and Cermak House of Cicero, were fire-resistive construction and did not require sprinkler systems under these codes.

Fire deaths and injuries are caused, in the overwhelming majority of cases, by inhalation of smoke and toxic gases.

No one was burned to death at Cermak House or Wincrest. All victims were claimed by smoke inhalation.

The fires were limited almost totally to the room of origin. The construction of the buildings prevented the fire from burning beyond this room. Yet none of those who died were occupants of these rooms. Victims were occupying other rooms, felled as deadly smoke spread throughout the floor.

This occurred because the final link in fire compartmentalization was broken. Although all patient rooms were provided with doors to withstand the spread of smoke and heat, doors were left open, and people within these rooms died. The doors to the rooms of fire origin were left open, failing to contain the fires within those rooms.

What is the single most important fire safety improvement that can be made in nursing homes?

The Illinois Division of Fire Prevention believes that automatic door closers, equipped with smoke detection devices to trigger the closing device at the first whiff of smoke, would significantly reduce these tragedies.

Such a device would automatically contain fire to one room, protecting residents in adjacent rooms while rescue and extinguishment operations swung into action.

If these devices had been installed in Wincrest and Cermak House, certainly the number of deaths would have been reduced.

Sprinkler systems are an effective method of fire control, and the wider their application, the more we will reduce fire losses.

But we believe they are not the ultimate panacea. Most sprinkler heads are set to flow when the temperature at the head reaches 160° F. This leaves the possibility of a smoky, smouldering fire burning without triggering the head.

At Wincrest, the fire started in a closet, which might have shielded the fire from the sprinkler, had one been present. A similar situation existed at Cermak House. Nursing home patients because of age and health are extremely susceptible to smoke, and even though sprinkler systems will control and extinguish a fire when operating properly, they may not adequately control smoke to prevent death and injury. The Division of Fire Prevention is in favor of sprinklers, but we believe that all available fire safety systems must be carefully evaluated before health-care dollars are invested in them.

Another major concern is the heavy loading of patient rooms with combustible furnishings. Modern synthetic materials have increased fire hazards by the speed and toxicity with which they burn. Much work remains to be done in proper testing and evaluation of these materials. These industries must redirect their efforts to provide safer, less combustible materials in furniture construction, not only for nursing homes, but for all building occupancies across the country. We hope the Congress will take action to encourage these industries in this effort.

In conclusion, the Illinois Division of Fire Prevention wishes to stress that although nursing homes are much safer now than in the past, much needs to be done to insure greater levels of safety. We feel door-closing devices on all doors is the most important single step that can be taken, but that the issue is complex and no single action will resolve the problem. As the public becomes more conscious and concerned about fire safety, and becomes willing to expend the effort and money to insure its reality, the tragic fire loss in this country will be reduced, and in time, perhaps eliminated.

Mr. HOLTON. I thank you very much for that fine statement.

Only one or two brief questions. First, do we understand your position to be that you prefer to see smoke detectors and door closers put in place rather than sprinklers?

Mr. RICHARDSON. Yes, and now I am referring to fire resistance and combustible homes that are not now required to have sprinkler systems.

Mr. HOLTON. As opposed to a frame construction.

Mr. RICHARDSON. All other forms of construction, where sprinklers are required, and have been installed.

Mr. HOLTON. Fine.

Thank you.

One final question. As a consequence of these two fires, do you expect the State of Illinois to promulgate any standards with respect to training personnel in nursing homes, or with respect to types of contents in rooms such as vinyl chlorides, etc.?

Mr. RICHARDSON. It is sort of a three- or four-part question. As far as the contents of the rooms, I really believe that is a problem that is centered on the national industries involved, and is not something a State on its own can do anything about.

There is a great deal of work that has to be done, but so far there has really been no impetus to do the job, and that I would hope would come from the national level here.

Mr. HOLTON. I think your point is very salient, especially with respect to the testimony we heard earlier from HEW officials, who wish to delegate their responsibility to the States. As I understand, you are telling us that States are not equipped to do the kind of testing and set the standards necessary that we are talking about today.

Mr. RICHARDSON. Right. As far as fire safety or training goes, I feel this is very important.

In the Cermak fire, the staff failed to take one correct action, which was to close the patients' doors, and many people died as a result, and they had an opportunity to close those doors early in the fire.

We are conducting programs of fire safety training across Illinois. It is somewhat limited, there are limited funds.

I understand HEW does have small amounts of money available for this, and I would like to say certainly, HEW will be able to distribute more money to the State to provide these programs.

Mr. HOLTON. As a licensed nursing home administrator myself, I remember the great emphasis placed by State officials and Federal inspectors regarding the posting of patient evacuation plans.

There were certain other training requirements, those were primarily centered around the use of firefighting devices that were handy in the homes such as fire extinguishers.

I recall very little emphasis being placed by State and city officials or Federal agents on the aspect of door closures.

Mr. RICHARDSON. Our training program is aimed very much at immediately notifying the fire department, letting the fire department handle the fire.

Ignoring the fire extinguishers, whatever else is in there, as much as possible, we go after the other first.

We have a four-part program, where we call it RACE, rescue the patient immediately in danger; sound the alarm, close the doors, and then worry about extinguishment, and at that point the fire department is practically there anyway, so they could do the job.

Mr. HOLTON. Do you feel that nursing home employees should be required to be trained and tested in fire procedures as a precondition of employment?

Mr. RICHARDSON. I do not think you could make any precondition, but I think you could certainly institute a training program within the first 2 weeks or first month to nursing home employees on the job.

You are talking about somebody who is making a minimum wage, and possibly lower, and one of the big problems is the turnover involved; one of the things we found that Cermak House was—almost all of the employees had been there no longer than 6 months, some as short as 1, 2, 3 months.

Mr. HOLTON. What you are saying is that there should be some kind of fire training within the first 2 or 3 weeks after a person is employed in the nursing home.

Mr. RICHARDSON. Yes, some sort of mandatory training program.

Mr. HOLTON. Did you make that recommendation to the appropriate State officials?

Mr. RICHARDSON. We are working on that.

Mr. HOLTON. I have no further questions at this time. Thank you.

Mr. WEINER. I have a couple of questions.

You said that smoke detection devices should be encouraged, those that trigger something at the first whiff of smoke.

Do you want to define that?

Mr. RICHARDSON. Smoke detection devices are not enough. You have to have innovative devices which will trigger when there is even no visible smoke at all. The device I am speaking of is one that has come out, that is a door closer, incorporated with the smoke detector in it, which can be set at any opening.

Now, nursing homes have a tremendous objection to this particular device. They say people had to keep their doors closed, they cannot push the dooor open, they get caught in the doors, but the state of the art has gotten to the point where the pounds of pressure to open the door are low, where the door can be set at any opening, small or wide.

Mr. WEINER. You said at Wincrest the fire started in a closet.

Would a smoke detector be placed in a closet?

Mr. RICHARDSON. No, the smoke detector would be placed in a room, or at the doorway.

Mr. WEINER. So regardless, the sprinker would put it out just as fast or faster.

Mr. RICHARDSON. Not necessarily.

Mr. WEINER. Will you explain why?

Mr. RICHARDSON. I did it in my statement, that certain fires are not going to trigger enough heat to quickly set a sprinkler system off, and because of the placement of heads, you may get a fire going in an area where the sprinkler cannot effectively combat it.

Now, it is going to control the fire, there is no doubt about that, but the question is how much smoke is going to generate while it is controlling the fire.

That is the big danger.

Mr. HOLTON. I might just say it looks like we have two issues, one emphasis for smoke control devices, and the other emphasis for sprinklers, as the means of keeping temperatures low, and to retard flash over from taking place.

After having seen a large number of related documents over the last several months, it appears that we would be making a desperate mistake to try to rely totally on a single system. What we do in fact need is a fail-safe system that will allow several kinds and levels of defense.

Mr. RICHARDSON. Now, my point is, taking the Cermak House, that is where I was most intimately involved with, if there had been a door closer on that door, or if the door had been shut by a staff member, the fire never would have burned beyond the room, it would not have threatened anyone else on the floor, and I am very certain that no deaths would have resulted.

On the other hand, Ohio has adopted the complete sprinkler bill, and what they are getting now is a lot of nursing homes being built to be protected, and then you have the problem of concealed spaces, combustibles in concealed spaces, and when you are an inspector looking at a home already constructed, it is difficult to determine whether there are fire hazards in those spaces.

Mr. WEINER. Can you compare the fires in nursing homes with sprinklers to ones without sprinklers, and will you speculate on the potential damage on fires where sprinklers are utilized?

Mr. RICHARDSON. I believe a fire can be caused by improper use of materials, and I know of this one fire that was caused by a mattress so that there would have been a clear shot in the mattress to the head, the head would be triggered, and it would have put that fire out.

The sprinklers are very effective. I do not mean to say that they are not, but the impetus in the health industry is saying we want sprinklers, we want sprinklers, but they want everybody to, you know, back off with the other requirements of the Life Safety Code, and I think you will get some protection, but there still will be enough smoke to kill people.

Mr. HALAMANDARIS. What you are saying is that sprinklers are not a panacea, that you cannot abandon the rest of the requirements of the Life Safety Code.

Mr. RICHARDSON. That is my personal opinion.

Mr. WEINER. From your investigation and also, from your opinions, both before and after the fires in Chicago, did you find the Wincrest and Cermak homes in compliance with Federal Safety Code requirements?

Mr. RICHARDSON. The Cermak was.

In my opinion, it was an outstanding building.

Mr. HALAMANDARIS. Thank you.

The other was not?

Mr. RICHARDSON. The Wincrest was not.

Mr. WEINER. Thank you very much.

Mr. RICHARDSON. Thank you.

Mr. WEINER. Our final witness is a real expert in the field.

Will Mr. Richard L. Best please come forward?

Mr. Richard Best is with the National Fire Protection Association.

We do thank you for coming, Mr. Best, and would you please introduce your associates.

STATEMENT OF RICHARD L. BEST, FIRE ANALYSIS SPECIALIST, NATIONAL FIRE PROTECTION ASSOCIATION, ACCOMPANIED BY MARTIN GRIMES, ASSISTANT VICE PRESIDENT, NFPA; AND JOHN SHARRY, LIFE SAFETY CODE SPECIALIST, NFPA

Mr. BEST. Thank you very much, Mr. Chairman.

On my right is Mr. Martin Grimes, assistant vice president, and on my left is Mr. John Sharry, who is our life safety code specialist at the NFPA.

Mr. SHARRY. Thank you very much.

Mr. Chairman, frequent references were made this morning to the Life Safety Code of the National Fire Protection Association.

I would like very, very briefly to indicate that these codes are developed on a consensus standard system, with a committee, which has a public review and comment period, and then which creates a total adoption.

The association has numerous activities. We produce some 225 codes related to fire protection, and we in addition have published many supplementary materials and are involved in research, and the

Life Safety Code, particularly, has been the result of many years of work that we have developed.

It is in fact a total system, and one that has been greatly needed.

Any one element is supplementary or complementary to the other element.

To take one item in isolation as the last witness clearly illustrated would be wrong, and it is very important to remember this, when one talks about the value of sprinklers, and the need for other devices, to consider everything as an interaction, right from the training aspect, right through to the mechanical automatic aspects of it.

Another function apart from standards of the NFPA is in their investigation in depth of fire significance.

These investigations are carried out as best by Mr. Best, will give information on fires, and they are carried out in depth, not just for the purpose of finding out what happened in that particular fire, but too in feeding the research to various people involved in research, and to assess the performance of the standards.

Bear in mind that these standards, the Life Safety Code in particular, has been applied to State and local ordinances for a longer period than used by Federal agencies.

In that time, there has been an evolvement of the standard, and it is a continuing dynamic process.

The standards used have been reviewed every 5 years, and the Life Safety Code is generally reviewed in 3 years.

The only other aspect is the NFPA codes are developed by the NFPA, they are proposed, and this has been available for adoption by Federal, State, or local officials, and then by industry.

Thank you.

Mr. HOLTON. We appreciate your comments.

Mr. BEST. Thank you.

Mr. Chairman, the National Fire Protection Association was organized in 1896 and has continuously addressed the problems of fire safety since its inception.

With a staff of 220, it serves not only a membership of 33,000 persons drawn from the many disciplines involved in fire protection, but also the public at large.

The activities of NFPA range over the entire spectrum of fire prevention and control. The two particular activities relevant to this testimony, however, are NFPA's standardsmaking process and the investigation and analysis of fire behavior and effect.

The 225 codes and standards related to fire are produced by utilizing a balanced representative committee procedure, with a public review and comment process. Standards are developed on the basis of engineering design, technical expertise, human susceptibility and reaction, and fire experience. The standards are dynamic in that they are continuously revised as need is determined and technology advances.

One of the standards is known as the Life Safety Code, which promulgates minimum standards for protection of life from fire and other emergencies. This standard is widely used by Federal, State, and local government by adoption by reference or by inclusion in regulations or ordinances.

The other relevant activity is the in-depth investigation of significant fires with a view to further analysis for both research purposes and also to determine the effectiveness of NFPA standards.

Many such investigations are carried on in association with the National Bureau of Standards and, more recently, the National Fire Prevention and Control Administration.

The NFPA Analysis Department, in cooperation with the National Bureau of Standards, conducted an investigation of two recent fires, the Wincrest Nursing Home in Chicago and the Cermak House in Cicero, Ill. Significant factors of both fires will be contained in detailed reports which will be published in the NFPA Fire Journal in the near future. The following is a summary of the significant factors of both fires.

The Wincrest Nursing Home is located in Chicago's north side. The four-story building is of fire-resistive construction with a protected noncombustible roof. The building has enclosed stairways. Heat detectors are provided in the chapel, stairways, and some closets, and one smoke detector in the corridor near the entrance to the chapel. Approximately 42 of the occupants of the building were in the chapel on the top floor on January 30, 1976, when a fire in 1 of the patient's rooms on that floor filled the corridor and chapel with heat and smoke. Reportedly, a staff member of the nursing home has been charged with setting the fire.

The fire started in the area of a wooden clothes wardrobe and ultimately involved the contents of the entire room. Two wardrobes were side by side constructed of plywood with hinged folding doors. Mattresses were innerspring units consisting of 69 percent cotton felt and 31 percent sisal pad. These combustible contents contributed to fire growth and development. In addition, the wallpaper on sleeping room walls consisted of vinyl wall covering, which may have contributed to the smoke production.

Fire damage was limited to the room of origin and the top portion of a closet door across the corridor. The corridor opposite the room of origin sustained heavy heat damage adjacent to and in both directions from the room of origin.

Thirty-five elderly residents were hospitalized as a result of the fire. Thirteen patients died initially, but others have died since the fire, and the total now is 24 dead. No fatalities occurred in the room of fire origin, which was unoccupied at the time of the fire. All residents who died—with the possible exception of two—were located in the chapel.

The Cermak House is located in Cicero, Ill., immediately west of Chicago. The Cermak House fire occurred on February 4, 1976, less than 1 week following the Wincrest Nursing Home fire. This modern nine-story intermediate care nursing home is of fire-resistive construction with automatic closing smoke barrier doors in the corridors and corridor smoke detection. On each floor smoke barriers divided the U-shaped building into a center section and an east and west wing. The west wing housed six patient rooms with four patients per room. A fire in a fourth floor room filled the west wing of that floor with smoke and heat and caused the deaths of eight residents on that floor.

The fire started in the area of a combustible clothes wardrobe in room 421 at approximately 6:30 a.m. At this time, the patients were being awakened and were beginning their daily routine. The cause of the fire has been attributed to a faulty electrical cord to the lamp on the nightstand between the bed and the wardrobe. Combustible material in the room contributing to the fire included mattresses containing 50 percent polyurethane foam plastic and chairs padded with urethane foam plastic.

No fatalities occurred in the room of fire origin. The three occupants of this room were removed by the nursing home staff. The fatalities were from rooms in the wing of origin, except one from the center section who apparently received exposure to smoke during evacuation. Reportedly, this person was suffering from respiratory illness. The corridor smoke doors worked as designed and contained most of the heat and smoke in the wing of origin. Fire damage was limited to the room of origin. Smoke and heat damage extended throughout the wing, with smoke damage in those rooms with doors open. The carpeting in the room of origin was consumed, but the carpeting in the corridor did not burn.

Reports of the Cook County Coroner's Office have been reviewed for 30 of the 32 victims of both fires, and they show that the victims died of smoke inhalation or smoke inhalation complicated by respiratory problems.

Thirteen of the Wincrest victims died on the day of the fire, and all 13 deaths were attributed to smoke inhalation by the coroner's physician. Most of the 11 other casualties died during the next 2 weeks from smoke inhalation complicated by respiratory problems—including pneumonia—or heart condition. The average age of these victims was 80 years old.

The coroner's report of the four Cermak victims who died on the day of the fire showed the deaths as smoke inhalation. The other four residents died later. In three cases, the cause of death was listed as smoke inhalation. In the fourth case, the victim died of smoke inhalation and extensive burns. The average age of the victims was 75 years old.

The multiple death fire problem:

The Wincrest and Cermak fires exhibit similar characteristics in their place of origin, contents involvement, rapid growth and development, smoke spread resulting in untenable conditions, and their tragic results.

Both the Wincrest Nursing Home and the Cermak House fires originated in a resident's sleeping room. The combustible contents of the sleeping rooms at both fires contributed to the severity of the fires and to the large quantities of toxic smoke produced.

Fire damage was essentially confined to the rooms of origin. The construction of the walls, floors, and ceilings was adequate to confine the fire to these rooms. The door openings between the rooms and corridors were the weak links, allowing the spread of smoke and toxic gas, resulting in the tragic multiple fatalities.

Some of the methods of reducing the risk of multiple death fires in fire-resistive nursing homes include: smoke detection, smoke control systems, reduction of combustible contents, door closers, sprinkler systems, and increased staff training. These are measures that can alleviate the multiple death fire problem in nursing homes.

76-611 O - 76 - 6

The NFPA Life Safety Code stresses the need for a written institutional firesafety plan, regularly conducted fire exit drills, and provisions for the isolation of fire by the closing of all doors adjacent to a fire. If the doors to the rooms where the fires started at Wincrest and Cermak had been closed and had remained closed until the occupants had been evacuated and the fire departments had responded, the unfortunate loss of life in the two fires might have been avoided.

Although door closers are a method of confining fire to the room of origin, they are not without their problems. Even with door closers installed, the sleeping rooms may be entered by staff or firefighters during emergencies to rescue occupants or to attack the fire, allowing the smoke and toxic gases to permeate the area.

Automatic sprinklers, which will both detect and control incipient fires as well as transmit the alarm signal to the fire department, must be considered. The record of automatic sprinkler performance is good. The NFPA records do not include any report of a multiple loss of life fire in a nursing home fully protected by automatic sprinklers. The NFPA Life Safety Code requires automatic fire extinguishing protection throughout all nursing homes with the exception of buildings of fire-resistive or one-story protected noncombustible construction. Although not required in these two types of construction, the code encourages the installation of sprinklers by offering design trade offs which recognize the increased safety to life provided. Life safety will be considerably enhanced by the installation of automatic sprinkler protection in any nursing home regardless of construction.

Amendments to the Social Security Act required that skilled nursing homes and intermediate care facilities that participate in medicaid benefits comply with the NFPA Life Safety Code 1967 edition. These two intermediate care facilities were required to meet the requirements of the 1967 Life Safety Code. An analysis of the conformance of the facilities with the code was made as part of the NFPA investigation. This analysis showed a few deficiencies with varying degrees of impact on the fire problem in these two cases.

In the Wincrest Nursing Home the lack of separation between the chapel and the corridor is considered a major contributing factor to the loss of life in the chapel.

The Life Safety Code requires self-closing fire doors to separate the chapel or assembly area from the rest of the nursing home. Other deficiencies noted included: a 37-foot deadend corridor between the chapel and the nearest stairway, which is in excess of the 30 feet permitted; and a section of exit access corridor 5 feet in width, which is less than the code-required 6-foot width.

In the Cermak House, the most serious discrepancy was a presignal arrangement of the alarm system that did not permit an automatic audible alarm throughout the building. The Life Safety Code specifically prohibits the use of presignal alarm system arrangements. Another discrepancy was a deadend corridor 34 feet long which is slightly in excess of the 30 feet permitted. The effect of the audible alarm arrangement is difficult to measure, but neither of these discrepancies is considered a major contributing factor to the loss of life.

The basic multiple-death fire safety problem in health care facilities as exemplified by these two fires is the failure to confine a fire's resultant heat and smoke to the room of origin.

Fast-developing fires as occurred in the two Chicago area nursing homes produced large quantities of smoke and other toxic gases that escaped from the rooms of origin and caused occupant deaths within the area directly exposed by the smoke and heat of the sleeping room fires—the third floor and chapel at Wincrest and the west wing of the fourth floor at the Cermak House.

The combustibility of the sleeping room contents intensified the problem, providing fuel for fast-developing and heavy toxic smoke producing fires. There was insufficient time for nursing home staff to safely evacuate the occupants from the area directly exposed by the smoke and heat of the sleeping room fires.

Time is of the essence. There is a need to slow the development of the fire or at least confine its effects, somehow; by reducing the amount of combustibles, by closing the door to the room of origin, by eliminating or controlling the smoke or by extinguishing the fire. These measures will buy the necessary time for staff to evacuate occupants to an area of safety.

In conclusion, the technology is available to prevent multiple-death fires from happening. Complete sprinkler protection in all nursing homes regardless of construction in conjunction with other protective features is one solution that would significantly reduce the risk of multiple-life loss.

Thank you for letting us provide the information.

Mr. WEINER. Thank you very much.

Unfortunately, we do not have a screen to see your slide. We had it until about a half hour ago. If you would be willing at some point the next time you are in Washington to provide the staff with a presentation, we would be very appreciative of that.

Mr. BEST. We would be happy to do that.

Mr. WEINER. Just let us know, and we would like to do that where the Senate and the House staffs could both be invited.

I have just a couple of questions. I would like to say you have done a real super A-one job on your investigation, and I think everyone is grateful to you for that.

According to your prepared statement, you seem to support the automatic sprinklers in all nursing homes.

Why then does the Life Safety Code exempt sprinklers?

Do you plan to change the code?

Mr. SHARRY. The Committee on Safety Life Code, the development of the Life Safety Code, felt in these two special superior types of construction, that they should be at a reasonable level of safety, and that could be achieved by offering two alternatives.

One is, of course, the complete compartmentalization, which is included with several other features, and an optional alternative to the automatic sprinklers.

The code is constantly under review, and the committee is currently taking a look at the possibility of requiring simply automatic sprinklers as a complete alternative, rather than complete compartmentalization.

However, since there are other factors involved, we are awaiting the results of a test underway in the National Bureau of Standards.

Mr. WEINER. How will sprinklers prevent death from smoke and toxic acids?

Mr. BEST. Sprinklers have an excellent record of extinguishing fires, controlling and extinguishing fires, although there can be smoke generated in the incipient stage of a fire, and additional smoke developed even though the fire is controlled by the sprinklers, the sprinklers will reduce the amount of smoke produced in a fire, as in Wincrest, there had been sprinkler protection in the room, even if it had not been completely extinguished, and the wardrobe, it would have prevented the burning of the rest of the contents in the room.

It would have reduced the overall amount of smoke.

Mr. WEINER. Does any other method of fire prevention that you are aware of have the same track record of avoiding multiple death situations, as the sprinkler does, either in combination or separately?

Mr. GRIMES. No; the sprinkler record, right from the origin of sprinklers of over a hundred years ago, is being one of preventing multiple life losses.

The only one where the sprinklers were installed, a multiple life loss, is where these sprinklers were rendered inoperative by some individual.

Could I refer to your question about smoke production, the sprinklers will in fact react when that critical temperature occurs, but that allows a sufficient time for a fire to begin to develop before it operates.

The sprinkler then operates over the fire, over the part affected, and it has the tendency, it may completely extinguish the fire, but if it is something like a mattress, or a chair or something, it might continue to smoke, it will not spread, but what it does do in effect of life safety, smoke will go through the building, and I suggest that where there had been a sprinkler, you would have had some smoke coming through to the chapel; however, it would have been cool smoke, because it had to pass through this spray of water, and, therefore, it would not have had the pressure, or the ability to travel so far, and probably not have the same effect.

It probably would irritate, but not have so much lethal gas.

Mr. HOLTON. That cool gas would not be capable of carrying as much particulate matter as well.

Mr. GRIMES. Yes.

Mr. HOLTON. I have several questions I would like to ask Mr. Best. In the course of your testimony, regarding the Wincrest situation, and reading from your text, you said the 37-foot corridor is in excess of 30 feet permitted by the code.

Is that the 1967 edition you are referring to, or is it the 1970?

Mr. BEST. The 1970 edition.

Mr. HOLTON. Mr. Best, you also commented, with regard for the need for separation of that area by some type of door.

Is that once again 1967?

Mr. BEST. The 1967 edition.

Mr. HOLTON. Do you feel that the absence of that door was a key factor in the loss of life?

Mr. BEST. We feel that the lack of doors was definitely a contributing factor.

Mr. HOLTON. In that sense, would you conclude that that facility was in violation of the life safety code?

Mr. BEST. By our interpretation of the code, yes; we feel it was in violation.

Mr. HOLTON. Thank you.

One or two brief questions. The corridor part of the code, which called for doors every so often, my recollection is that the length was about a hundred running feet.

Mr. BEST. 150 feet.

Mr. HOLTON. 150 maximum.

Mr. BEST. Yes.

Mr. HOLTON. Approximately how many patients' rooms could have access to a 150-foot long corridor?

Mr. BEST. A good reference is your Cermak floor plan.

You have each wing, it has a separate smoke compartment, and from the main body of the room is another compartment, and I will give you the exact count.

There were 23 patients in the wing, the west wing.

There were 26 patients in the east wing, and 25 patients in the main section of the building.

We are talking of six or more rooms.

Mr. HOLTON. The point is, based on your experience at the Wincrest fire, do you feel that the standard is adequate, or needs to be further tightened to reduce the number of running feet or open corridor?

Mr. BEST. Our life safety code in this type of occupancy, in this type of construction, is based on the plan, based on the reaction of staff, that the door to the room originally had been closed, and without the door of origin being closed, we have the smoke which is exiting the room of origin, and endangering others.

Mr. HOLTON. With respect to the Cermak fire, it has been alleged that the cause of that fire was an electrical short in a lamp cord.

Apparently the plug was such that when furniture was pushed to the wall, as in normal cleaning procedures, the cord was broken, allowing the short to take place.

Have you had similar experiences with other fires of this kind of origin where personnel pushed furniture against the wall, creating some kind of electrical short?

Mr. BEST. It has not been a major problem to my knowledge.

Mr. SHARRY. I had personal experience as a fire marshal, and I have seen this happen.

Mr. HOLTON. Do you feel the adoption of a plug of different design would protect against that?

Mr. SHARRY. That might be one way of stopping this type of thing. We are starting into an area of what people can do in a building after it is occupied.

It is very hard to control what is going on in the building after it is occupied.

Mr. HOLTON. Nevertheless, we are saying that building usage might tend to reduce the fire safety of the building overall, by changing it.

Mr. SHARRY. Yes.

Mr. HOLTON. One final question; in the Wincrest Home, on the fire floor, I noticed that there was an emergency lighting system

installed, the kind that is the wet cell type, tied into the electrical lines, and triggered to set off in the course of a powerline failure.

It is the kind that has the two-bulb light fixtures attached to it.

That fixture was located relatively near the ceiling, and they had plastic hoods which supported the lights.

It was rendered essentially useless because of the smoke in this location, close to the ceiling, where the smoke was the thickest.

Secondly, the hoods melted, turning the lights down, and making them useless.

Now, in this particular instance, since it was daylight hours, emergency lighting was not critical, and, in fact, I do not think the system was activated.

Would that particular unit based on your examination meet the NFPA standards?

Mr. BEST. Was that your question?

Mr. HOLTON. Yes.

What I am asking, is, does the particular unit and the Wincrest building meet the NFPA standards, and if it does, do you feel the performance was such that those standards should be reviewed?

Mr. BEST. I examined the emergency lighting in the chapel system specifically, and I did not note any plastic hood you referred to.

The units looked like they would be operable, as they were, the lens on the lamp were coated with a black residue, which may have diminished the amount of light, and, incidentally, one of the slides in the slide presentation shows this unit which would be of interest to you.

Mr. GRIMES. Regarding the position of the unit, there is a weakness with the emergency lighting, which is normally located at the ceiling.

The point of fire obscuration by smoke, and low-level lighting system would probably be more effective, and if you ever see a hospital night-lighting system, which is usually near the floor, you will realize it would show a path under the smoke, and there is no doubt that it was desirable for this to be considered, but as far as I know, the Life Safety Code Committee has not considered any change with relation to changing the position of the light.

Mr. SHARRY. It does not specify where it will be located as far as the lights, and on the other point, the Life Safety Code or any other standard, it does not spell out any product standard.

Mr. HOLTON. That I find is somewhat shocking.

I do not mean to be derogatory. I am just surprised.

Am I to understand that the code calls for emergency lighting systems, and then does not specify their characteristics or placement?

Mr. SHARRY. It would specify the performance as to how and when, but not specify the materials.

Mr. HOLTON. In the case of emergency lighting, who normally sets standards for their manufacture?

Mr. SHARRY. They are usually done by one of the nationally recognized testing laboratories.

Mr. HOLTON. Thank you. That answers my questions.

Mr. HALAMANDARIS. I have no questions.

Mr. WEINER. If there is no objection, we would like to submit for the record a summary and conclusions of the report on "Full Scale Fire Tests in a Nursing Home Patient Room," prepared for HEW.

Hearing no objection, so ordered.

[The material is printed in the appendix, pp. 338–339.]

Mr. WEINER. I want to thank you for coming here.

Mr. HALAMANDARIS. We have always enjoyed your good deal of information and help and assistance, and we would like to continue this very fine relationship in the future, and I thank all of you for taking time to sit through this hearing.

The hearing is adjourned.

[Whereupon, at 2:05 p.m., Thursday, June 3, 1976, the hearing was adjourned.]

JOINT HEARING

Subcommittee on Long-Term Care
Special Committee on Aging
United States Senate

* * * * * * *

Subcommittee on Health Maintenance
and Long-Term Care
Select Committee on Aging
U. S. House of Representatives

STATEMENT of the AMERICAN HEALTH CARE ASSOCIATION

The American Health Care Association appreciates this opportunity to contribute our comments to the record of this hearing. The AHCA is the nation's largest organization representing long-term health care facilities, with a membership composed of some 8,000 facilities, both proprietary and non-profit.

There is no area of concern which has attracted more of this organization's attention and activity than life safety from fire in nursing homes. Over the years, AHCA and its predecessor, the American Nursing Home Association, have been in the forefront of cooperative research and educational efforts on fire safety. This Association was also instrumental in supporting the adoption of the 1967 and, more recently, the 1973 NFPA Life Safety Code editions as the Federal standard for nursing homes participating in the Medicare and Medicaid programs.

An enormous improvement has been achieved in recent years in the quality and integrity of buildings in use as nursing homes in the United States.

By any statistical measurement, nursing homes are much safer places to live than any residential occupancy. Nevertheless, we cannot be satisfied with less than the safest possible environment which is practical to attain in our nursing homes consistent with maintaining a functional and pleasing atmosphere.

While it must be stated that we will never completely eliminate fires from breaking out in nursing homes, it is incumbent upon us to reduce the consequences of fires to lives and property in any way we can.

Need for Fact-Based Requirements

Despite the acknowledged improvements brought about since the adoption by the Federal government of the NFPA Life Safety Code, the time has come when various Code requirements must be subjected to rigid empirical analysis in order to determine their validity and cost-benefit. The Life Safety Code does not stem directly from factual analysis, but represents a consensus of a wide variety of "experts" and interest groups (including nursing home administrators - let it be fairly stated), all with their respective axes to grind. Not surprisingly, a decision to include any particular provision in the Code is as much the result of good old-fashioned lobbying as anything else. Demonstrably, the NFPA Life Safety Code, while extremely useful in many respects, is not a fact-based set of requirements.

Literal adherence to the LSC in existing buildings is rarely possible; hence the statutory provision for the granting of waivers. The waiver system has been fraught with unbelievable confusion and error, resulting alternately in non-enforcement of vital Code requirements, or the unnecessary expenditure of thousands of dollars and disruption of patient care in nursing homes due to erroneous application of requirements.

Research

In view of this dilemma, the American Health Care Association has turned its attention over the last three years to the conduct of research aimed at producing evidence on which conclusions might be drawn with respect to the most important fire protection considerations. The aim of this research, and its attendant educational efforts, is to give the nursing home administrator and staff the means by which to develop and put into effect an organized system of fire protection in which available technology can be combined with community fire services and staff response to achieve the best possible result. Additionally, it is our hope that Federal and State Code enforcement can be simplified and improved as results of various research efforts now underway become available.

As a part of this effort, AHCA conducted a series of full-scale fire tests in 1974 in an abandoned nursing home in Beverly Shores, Indiana under contract with DHEW. These tests showed fire and smoke development characteristics amazingly similar to the two recent fatal fires in Chicago and Cicero, Illinois. As part of this statement, we have attached reports prepared for AHCA by Gage-Babcock and Associates, Inc. on both the Wincrest and Cermak fires.

AHCA submitted the report "Fire Tests in a Nursing Home Patient Room" to HEW in August, 1975. Although both the conclusions and the report have been available to the Department for more than eight months, no action has been taken to implement the recommendations which were made as a result of the tests.

The ability of a fire to develop very rapidly with certain types of room furnishings was shown in these AHCA tests and clearly demonstrated in both the actual fires in Illinois. The actual fires were confined to one room, as were most of the fire tests, but lethal fire gases spread into other spaces on the same floor.

The tests also demonstrated the effectiveness of closed room doors and smoke barrier doors. In the actual fires, patients in rooms with the closed doors survived, as did patients beyond the smoke barrier doors in the Cermak House, Cicero.

The patient room test at the two Indiana test sites were conducted in buildings of protected wood frame construction. However, in the critical early stages, the fires in the two fire resistive nursing homes in Illinois showed nearly identical development.

The tests also demonstrated the effectiveness of automatic sprinklers when the building does not have all the many protective features which had been provided (but were ineffective) in the Wincrest Nursing Home and Cermak House. AHCA has long supported sprinkler protection in nursing homes as the most effective single means of preventing multiple death fires. Dr. Thomas G. Bell, Executive Vice-President of AHCA, made extensive reference to the value of sprinklers in testimony before the National Commission on Fire Prevention and Control in Los Angeles, California, in June, 1972. The Association continues to support sprinklers as an effective means of protection. However, AHCA objects to treating sprinklers as "add on" to a long list of expensive and superfluous fire protection features. Current Life Safety Code requirements are not working in the best interest of all concerned. It is time to reassess these requirements and develop meaningful standards. The knowledge and technology to do this is available now.

It is essential that greatly increased fire safety features do not impinge on the well-being of nursing home residents. The impact on existing nursing homes can be lessened by concentrating on automatic sprinklers, the one fire safety measure which years of experience have shown to be effective in controlling of fire while it is still small.

All the other fire safety measures now considered to be the primary line of defense by today's codes should take a back seat to sprinkler protection. Fire resistive construction, corridor partitions, floor to floor barriers, latching hardward, increased corridor and door width, smoke barriers, stairway enclosures, smoke and heat detectors, and all the other code requirements now forced on nursing homes together have been proven to be less effective than sprinklers alone.

However, as with every protective measure, full reliance should not be placed on any single device. The key is to create a fire-safe system for each nursing home in which all factors are coordinated to achieve a level of protection which is reasonable and proper for our patients and residents.

While HEW has been slow in implementing recommendations from these fire tests, several agencies within HEW continue to cooperate with nursing homes -- notably the Health Services Administration. HSA has worked with AHCA on several projects which are of material and direct safety benefit to nursing home residents. The agency sponsored the drafting of a fire safety manual for nursing homes which was published by AHCA. More than 10,000 copies have been distributed to date. In addition to the previously mentioned fire test, HSA is currently working with the Association to develop a manual on hazardous products due for distribution to health care facilities later this year. The manual will guide the purchasing of equipment and furnishings normally found in patient rooms. The recent fires in Illinois have underscored the need to more closely control contents of patient rooms.

RECOMMENDATIONS

I. *Enforcement of the Life Safety Code should emphasize essential fire protection features. AHCA believes that both new and existing buildings can achieve a satisfactory level of safety by adopting either of the protection packages described below:*

(A) Automatic sprinkler protection in buildings normally housing patients who are difficult to evacuate.

1) Installation should be based on "light-hazard" rules, and water supply should be capable of supplying 250 gallons a minute for not less than 20 minutes (5000 gallons). Wide-coverage sidewall sprinkler heads should be specifically allowed.

2) Small closets and toilets opening into sprinklered rooms in fire-resistive buildings should be allowed to be left unsprinklered.

3) Smoke detectors and heat detectors are redundant and are unnecessary in sprinklered areas.

(B) Control of Combustibles Plus Automatic Door Closers on patient sleeping rooms.

1) Certain types of mattresses are OK: those made of cotton without inner spring or box spring, laid on flat or coil springs, or cotton ticking inner spring mattress (a wood headboard appears to present somewhat of a hazard), or a polyurethane mattress with a heavy vinyl covering. Mattress box-spring combinations are not recommended.

2) Free-standing hardboard, plywood, or cardboard wardrobes are fast burning and dangerous in an unsprinklered room. No conclusions have been reached as to the relative hazard of closets or built-in wardrobes.

3) Overstuffed furniture (chairs and couches) is unacceptable.

4) Normal wooden furniture -- dressers, night stands, and lightly padded chairs -- is not likely to cause rapid fire development. Increasing use of plastics in furniture could be a problem.

5) Door closers on sleeping rooms should close automatically in case of fire in the room. Fusible link releases are suitable for this purpose, as has been shown by test, or the releases can be actuated by smoke detectors in the room, at the door, or from a central system which closes all the doors simultaneously. Closers which keep a door closed at all times should not be used because the door inevitably will be blocked open.

6) "Hazardous" areas, in which combustibles cannot be controlled, such as storerooms, janitor's closets, maintenance shops, etc. should be sprinklered. The fire-resistive enclosures permitted by the Life Safety Code in lieu of sprinklers are not as reliable.

II. *The Life Safety Code of the National Fire Protection ASsociation should be modified to delete requirements which cause high expenditures without significant life safety benefit or which are actually detrimental to good fire safety.*

(A) Allow construction in existing buildings up to 3 stories in height with approximately 20 minutes fire resistance (i.e. wood lath and plaster) with "protection package" (A) and one hour fire resistance with "protection package" (B)

(B) Delete the requirement for partitions between patient rooms and corridors to be carried up tight to the underside of the floor or roof above unless the patient room uses a lay-in acoustic panel ceiling.

(C) Return to the pre-1966 exiting basis: one person per 150 square feet gross floor area and 30 persons per 22 inch unit of stairway width (instead of 120 and 22, respectively).

(D) Eliminate the requirement for fire extinguishers in patient areas.

(E) Modify the requirement for counting the basement as a story if it has direct exterior exiting, thereby penalizing a much safer arrangement.

(F) A building should not be downgraded from "noncombustible" to "ordinary" on account of wood stud partitions sheathed with gypsum board.

III. *AHCA further endorses the recommendations listed on p. 531-532 of Supporting Paper No. 5 of the report of the Subcommittee on Long-Term Care entitled Nursing Home Care in the United States: Failure in Public Policy.* An exception would be recommendation #8, for which our recommendation I should be substituted. Also, item 16 - adoption of the 1973 edition of the Life Safety Code - has been enacted as part of P.L. 94-182, largely through the efforts of AHCA and the Maine Congressional delegation.

IV. *Federal Responsibility for Financing*

It has been 30 months since P.L. 93-204 was enacted by the Congress authorizing insured loans for the purchase and installation of fire safety features in nursing homes.

The program has been completely ineffective, largely because (1) there has been no particular need or motivation for lending institutions to issue loans (and suffer horrendous red tape) for this purpose when more favorable investments were available for the scarce money banks had available; (2) uncertainty about what items were actually required to achieve compliance hindered necessary cooperation among banks, providers, HEW, HUD and state health officials, and (3) a general wave of Medicaid cutbacks by the States has increased the risks attached to all nursing home loans.

Loan insurance through HUD is not the answer. Congress must seriously consider direct grants or loans in conjunction, for example, with any decision to implement new equipment requirements for nursing homes. A Federal decision of this type must be accompanied by a Federal commitment of full funding based on full advance knowledge of the costs.

Decisions such as these fall properly within the political realm (although they must be based on expert technical evidence and opinion). Why? Because a decision to spend more tax dollars (as well as to force the expenditures of more private dollars) is a decision to allocate resources for one objective - marginal improvements in fire safety for nursing home patients - rather than a host of other concerns of equal or greater value to patients in nursing homes. It is clear that even the protection packages we have suggested, which are designed to avoid redundant or ineffective features, could result in several hundred million dollars in new costs and offer only marginal additional protection*. The Congress and Executive Branch must weigh the benefits with the costs, and base its decision accordingly.

* Estimate based on AHCA 1975 membership survey and figures supplied by Gage-Babcock and Associates.

Report of Fire at
Wincrest Nursing Home
Chicago, Illinois
Jan. 30, 1976

Introduction

At the request of the American Health Care Association, I investigated the circumstances surrounding a fire which occurred at the Wincrest Nursing Home, 6326 N. Winthrop, Chicago, Illinois on Jan. 30, 1976. I visited the home on Jan. 31, 1976 and talked with administrator Mrs. Cassidy and with some staff members and with Chicago City Officials. Although the home is not a member of the American Health Care Association, they were very cooperative as were the city officials.

The fire originated in a wardrobe in a third floor patient room shortly before noon on Friday, January 30, 1976. At the time of the fire approximately 40 patients were attending mass in a chapel down the hall from the room of origin. The blaze was essentially confined to the room of origin; however, there was severe smoke and heat damage to the corridor and moderate smoke and occasional heat damage to other rooms with open doors, including the chapel which had no doors. Thirteen persons were either dead on arrival or died shortly after arrival at local hospitals. Thirty one persons were injured, 10 of whom have since died. The current fatality count is 23. The fire was allegedly of incendiary origin.

The building was of fire-resistive construction and there were no deficiencies with respect to the 1967 Life Safety Code which contributed to the fire and loss. The code deficiencies that were noted were not of any significance in this fire. The fire development and spread in this fire-resistive building would have been the same if the building were of protected wood-frame construction. If the building had been of wood-frame construction with plaster-on-wood-lath interior finish and had been equipped with automatic sprinklers, I believe no loss of life would have occurred.

The Wincrest Nursing Home Fire was almost identical to full-scale fire tests numbers 5 and 7 conducted by the American Health Care Association and described in the report "Fire Tests in a Nursing Home Patient Room." All three fires were started in a wardrobe by a match. The fires developed rapidly and spread flame and smoke into the corridor and smoke filled rooms with open doors. The major difference was that there were 40 patients exposed to the fire at Wincrest.

General Description

The Wincrest Nursing Home is an 88 bed Intermediate Care Facility which had 83 patients at the time of the fire. The home was non-sectarian but Mrs. Cassidy stated most of the patients were Catholic. This accounts for the large percentage of the residents who were in the chapel on a weekday.

The building was about a 50 ft. by 125 ft., 4 level building of fire-resistive construction. The first level is partially below grade and the 2nd through 4th levels are referred to as 1st through 3rd floors.

The third floor contained 8 patient rooms, with a total of 27 beds, the chapel, a small sitting room, a nurses station and some small service rooms. The approximate configuration is sketched in Fig. 1. Patient rooms were furnished with dressers, night-stands, beds and, if there was no closet, with wooden or metal wardrobes. The beds had innerspring mattresses with a thin plastic moisture resistant covering. Ticking was cotton; there were no box springs. There was no evidence of a significant amount of polymeric materials in the rooms.

Two enclosed stairways with direct exterior exits and an elevator served all 4 levels. The chapel was approximately 800 sq.ft. with a single entrance. No doors separated the chapel from the corridor. The 1967 Life Safety Code did not require doors except on patient rooms and hazardous areas. Neither the 1967 nor 1973 Life Safety Codes require two exits from a room under 1000 sq.ft. The chapel would not be defined as a place of assembly under the Life Safety Code.

All patient rooms and storage rooms had solid core wood doors except for a very small closet which had a hollow core door. Stairways were equipped with self-closing fire-rated doors.

Dead end corridor limits were less than the 30 ft. permitted for new buildings by the Life Safety Code.

There were no smoke-stop barriers on the floor and none were required since there was less than 30 patients on a floor. Even if smoke-stop doors were installed, the logical location for them would have placed both the chapel and the fire room on the same side of the smoke stop.

The Wincrest nursing home had manual fire alarm pull stations located adjacent to each stairwell entrance and heat and smoke detectors in some locations but not in patient rooms. The building fire alarm system had an auxiliary connection to a city fire alarm box located outside the front door.

The normal first alarm response is 4 engines, 2 truck companies, a manpower squad, 2 battalion chiefs and a division marshal. The nearest fire station is less than 1 mile although it is not known if that company was available at that time. The initial report from the scene was that the 4th floor was totally involved and 40 persons were trapped.

A second alarm was sounded at 12:04 p.m. The total response would have included 8 engines, 4 truck companies, 1 elevating platform, 2 squad companies, 3 or 4 battalion chiefs, a division marshal, 2 deputy fire marshals and the chief fire marshal plus a number of fire department ambulances. Total fire department manpower would have been about 75 men without ambulance personnel.

The room of origin is located about 35 ft. down the corridor from the chapel where an estimated 40 persons were attending mass. The nearest stairway to the chapel was about two thirds the distance down the corridor towards the fire room door. There were initial attempts to fight the fire by staff personnel; their efforts were unsuccessful and they were forced to withdraw. The fire room door was left open. Nursing home personnel evacuated patients down the west stairwell until firemen arrived and ordered them to get out.

The fire was essentially confined to the room of origin. There was heavy heat and smoke damage in the corridor and moderately heavy smoke damage in rooms with open doors. The chapel had light heat damage to plastic light diffusers located in line with the entrance and had moderate smoke damage to the ceiling and upper walls. There were no noticeable smoke deposits in the chapel on the lower walls. Maximum ceiling temperature in the chapel in line with the entrance are estimated at under 250^{o}F near the entrance and about 180^{o}F in from the entrance. These estimates are based on the damage to the plastic light diffusers. Emergency lights on the west wall of the chapel had been exposed to enough heat to cause the plastic supports for the sealed beam bulbs to sag. However, the lights were still operative.

There were very heavy smoke deposits on the ceiling and walls of the west stairway indicating the self-closing door had been open much of the time. This would have been necessary for rescue and fire fighting. Rooms that had closed doors had no noticeable interior smoke damage. Some small traces of smoke deposits were noticed along the top of the doors.

The interior gypsum board walls and gypsum board and tile ceiling finish contained the fire very well. The tile in the fire room was down presumably pulled down by the fire department. The suspended ceiling grid showed no visible heat damage and the wooden form boards above were neither scorched nor sooted. Neither fire nor significant smoke had penetrated the ceiling. Parts of the interior layer of gypsum board in the fire room had been pulled

down. The unexposed side of the gypsum board on the other side of the steel studs was clean and undamaged. Wood furring strips and plywood that had been under gypsum board were also undamaged. The corridor walls and ceiling had only surface damage.

Heat and/or flames from the fire room had heavily damaged a solid core closet door in an alcove directly across from the fire room doorway. A hollow core door on a closet off this alcove had been penetrated on the top only and the door on the patient room directly across the hall was separated from its hinge strip. It appeared to me the door had been damaged by fire and then possibly by impact during fire fighting. That door had been open during the fire.

Much of the interior room furnishings had been destroyed in the fire or thrown out during fire department overhaul. However, a damaged dresser that remained was charred on the outside only; clothes in the drawers were not damaged. This indicated the fire had been of relatively short duration. A newspaper photographer I talked to stated he was on the scene in about 10-15 minutes after a working fire was reported and there was almost no sign of smoke remaining at that time.

The majority of the victims were in the chapel at the time of the fire. I was told that 2 survisors were in a third floor room behind a closed door; however, I could not confirm that.

The fire was classified as of incendiary origin, allegedly started in the wardrobe with a match. A female attendant has been formally charged with starting the fire.

Staff Actions

The nursing home staff appeared to have reacted to this emergency as would be expected. They directed their efforts at extinguishing the fire and evacuating patients. This is in accord with much published information and probably reflects typical training and is consistent with instructions contained in section 17-412, Procedure in Case of Fire in the 1967 Life Safety Code. Section 17-412 does not even suggest closing the door but emphasizes continuing extinguishment efforts even if unsuccessful. The increasing fire intensity forced the staff out of the room and by then they either could not close the room door or they did not think of it.

I was unable to obtain a clear description of the evacuation operations. However, the staff members engaged in rescue operations until they were ordered out by the fire department. At least 3 staff members were injured.

Patient Removal

Chicago has programmed disaster plans to mobilize emergency services in incidents involving many victims. Hospitals, private ambulances, police, fire and supporting services are all involved. Such a plan was activated at this incident. An estimated 25 fire department and private ambulances and police vans were used to remove victims to hospitals. (The police vans are essentially a small patrol wagon that carries a folding stretcher - emergency medical service authorities have previously strongly critized their use as an ambulance.)

Newspaper photographs and television news coverage of the removal of victims showed a few deficiencies in handling the victims. It is not know if these deficiencies were common or the exception. At the time these incidents occurred the fire was out and there were three habitable floors in the building below the fire floor. Three specific incidents documented by news coverage were:

1. An elderly woman was being carried outside in below freezing weather on a stretcher in her nightclothes only. She had no blanket or other covering over her.

2. A fireman was carrying an elderly person out over his shoulders.

3. Firemen were using their self-contained breathing apparatus to "administer" air to victims outside the building. This serves no useful purpose at best and indicates either a shortage or inadequate deployment of resuscitation equipment.

The above handling of victims is likely to have had a traumatic effect on these victims. At that time there was no imminent danger on the fire floor and there would have been ample personnel available for removing victims to ambulances.

Possible Benefits of Added Protectives

No single additional protective measure except an automatic sprinkler system would have definitely prevented this high loss of life. Other protective measures would have still depended on specific staff and fire department reactions. The existing protective measures would have been more than adequate to safeguard the occupants if the fire room had been promptly closed and kept closed until the occupants were removed to a safe location. Some of the other protective features which are being promoted or in one case required by the 1973 Life Safety Code are discussed below.

Early warning smoke detectors would not have provided any significant benefit since there was no evidence that delayed alarm

transmission contributed to the loss. Fire tests have shown that a wooden wardrobe fire can develop very rapidly and involve an entire room within a few minutes.

Automatic door closers would have quickly dampened the fire and provided time to evacuate occupants if the door to the fire room was kept closed. This would have required both the staff and the fire department to refrain from extinguishing the fire until all occupants were removed to a place of safety.

Doors on the chapel, which are required under the 1973 Life Safety Code, would have impeded smoke entrance. I believe the chapel would have remained tenable if these doors remained closed and some chapel windows were opened. However, if either the staff or the fire department attempted to "rescue" the occupants of the chapel it would negate the benefit of the doors. In addition, "rescue" efforts would have required moving the patients toward the fire area.

A second exit stairway from the chapel would have been of little benefit since most patients could not have used it. It would have probably reduced the loss of life somewhat since rescue would have been easier.

Response of City of Chicago

The City of Chicago appointed a special panel to investigate the fire and recommend corrective legislation. The panel consisted of the city building commissioner, the city health commissioner, an architect and the retired head of an insurance inspection and rating bureau. A city council committee has held hearings on a sprinkler ordinance for Chicago nursing homes.

During my investigation I talked to the commissioner of buildings and gave him a copy of the report on "Fire Tests in a Nursing Home Patient Room." I pointed out the almost identical similarities to the Wincrest Fire and the test fires.

Gage-Babcock was not invited to testify before the City Council Committee.

Report on Fire at
Cermak House Nursing Home
Cicero, Illinois
Feb. 4, 1976

Introduction

In accordance with the request of the American Health Care Association, I investigated the fire which had occurred on the morning of February 4, 1976, at the Cermak House, a nursing home located in Cicero, Illinois. I visited the site on February 5, 1976 and discussed the fire with the assistant administrator and representatives of the State Fire Marshal's office.

The Cermak House was not a member of AHCA; the management was cooperative but they were very concerned about possible legal problems and publicity. Members of the news media had not been permitted to see the fire floor. The investigation was abbreviated when a group of attorneys arrived representing Cermak House's insurance carrier. The State Fire Marshal's office would not permit interior inspection of the room of origin, although with reluctance they gave permission to enter the room briefly to take photographs.

The fire occurred shortly before 7 a.m. on Wednesday, Feb. 4, 1976, in a 4th floor patient room. The fire was confined to the room of origin but heavy smoke spread throughout one wing of the hospital. Six victims were dead on arrival or shortly after arrival at local hospitals. Eighteen were reported injured. Two of these have since died. The State Fire Marshal's office stated the fire was of electrical origin.

Cermak House was of fire-resistive construction and there were no 1967 or 1973 Life Safety Code deficiencies noted that could be identified as contributing to the life loss. If the building had been of protected wood-frame construction the number of fatalities would have been the same. If the building were of wood-frame construction with plaster-on-wood lath interior but protected by automatic sprinklers, I believe there would have been no fatalities.

General Description

The Cermak House is a skilled and intermediate long term health care facility located at 5825 Cermak Road in Cicero, Illinois. Cicero is a town of about 67,000 population and has a full paid

fire department. Adjacent suburbs with full-paid fire departments and the City of Chicago are available for mutual aid although Chicago was not requested for this fire.

Cermak House is a 9 story, 160 ft. by 110 ft. U-shaped building of fire-resistive construction. Floors are poured concrete and interior partitions in the area of the fire were gypsum board on steel studs. Fiberglass batts with no vapor barrier were installed between the gypsum board in the partitions. Room and corridor partitions extended to the underside of the floor above; there was no suspended ceiling in the corridor or rooms in the fire area. Markings on the inside surface of the gypsum board did not indicate it was a fire-rated product. Interior wall and ceiling finish in the fire area was paint on concrete or gypsum board and carpeting on the floors.

Unit convectors under each window provided heating, cooling and fresh air. There were no HVAC ducts serving the patient rooms or corridors in the fire area. A typical patient floor contained 14 four-bed rooms, 10 one or two-bed patient rooms, two isolation rooms and living and dining area, Fig. 1. The floors were divided into 3 smoke zones by a pair of smoke-barrier doors located at each leg of the U. The smoke-stop barrier doors could be bypassed by going through the washroom. However, the washroom doors were self-closing so the barrier was effectively continuous. The center corridor between smoke doors was 115 ft. long and the length of each leg was about 63 ft. Dead end corridor lengths were approximately 30 ft. Three enclosed stairways served the upper floors, one of each being accessible from each smoke zone.

All patient rooms in the fire wing contained 4 beds. Furnishings included the beds, bed stands, table lamps, dressers and semi-built-in wooden wardrobes. The beds had a wooden headboard and an innerspring mattress with straw and cotton ticking. Mattresses had a thin plastic covering over the outside. There were no box springs. There was no sign of any significant amounts of polymeric materials in the furnishings.

The building had manual fire alarm pull stations by the stairways and smoke detectors in the corridor. The ground floor was protected by an automatic sprinkler system. The alarm system was directly connected to the Cicero Fire Department. In addition, the building was protected by a closed circuit television system which covered the corridors and exterior doors. The TV monitors were located at the switchboard operators station.

The Fire

The fire originated about 6:40 a.m. in room 421, a four-bed patient room containing 3 occupants. The staff was reportedly

alerted by a young blind female patient in the room. Flames were first observed around the base of a lamp on a nightstand. The fire was also reportedly sensed by a smoke detector which transmitted an alarm to the fire department.

The fire was confined to the room of origin. The combustible furnishings of the fire room were either destroyed by fire and/or thrown out during overhaul by the fire department. The 4 bed frames and springs, deeply charred wooden headboards on two of the beds, and the bottoms of a wooden wardrobe were the only identifiable furnishing items remaining. Gypsum board surfacing on parts of the walls had been pulled down, presumably during fire extinguishing operations.

The fire had been effectively confined by the walls of the room. There was no sign of heat or smoke damage on the interior surface of the gypsum board on the opposite face of the partitions except at one location where it appeared smoke and heat penetrated along a seam. However, there was no indication of impending penetration of the opposite face.

The corridor outside the fire room had heavy smoke and heat damage. One of the pair of smoke-stop doors, which were adjacent to the entrance of room 421 had heavy damage on both sides indicating it was open during part of the fire. The other door in the pair swung in the opposite direction so only one side would have been exposed to heat on one side regardless of whether it was in the open or closed position. There was light to moderate smoke damage and a slight amount of heat damage beyond the smoke doors and in line with the corridor leg. In the central corridor which runs at right angles to the leg, no smoke damage was noted.

On the fire side of the smoke-barrier doors, heavy smoke deposits covered the entire corridor ceiling and walls to within about 4 ft. of the floor. The carpeting appeared undamaged. Incandescent electrical light fixtures in the corridor ceiling, away from the fire room, were operating although the translucent enclosures were gone. The heat at the corridor ceiling had not been high enough to damage the wiring except near the room of origin.

Patient rooms in the fire wing that had open doors had moderately heavy smoke deposits on the ceilings, walls, bedding and furniture. Rooms which had closed doors were clean.

Fire had extended out of the fire room corridor and impinged on the wall and corridor of the room above. Although the window above the fire room was broken at the time of the investigation, I was informed it had not been penetrated by fire.

State Fire Marshal's office investigators stated they believed the fire was started as a result of an electrical fault in a

cord to a lamp on a nightstand. The cord was plugged in to a wall receptacle behind a bed. Repeated movements of the bed, such as during cleaning, bent the cord back over the plug damaging the insulation. The resultant electrical fault then ignited the insulation which burned rapidly spreading the fire up to the lamp.

I do not concur with this theory of ignition, although an electrical origin is possible. Electrical insulation burns very poorly, if at all, except when it has been preheated such as by excess current flow. An electrical fault at the plug would not cause excess current flow through the wires; however, a high resistance electrical fault in the lamp would.

I was surprised at the apparent rate that this fire developed. I would not have expected a fire involving these furnishings to involve the entire room in less than 15 minutes unless the wardrobe became involved early in the fire.

The three occupants of the room of origin were safety evacuated with only one receiving injuries. All the initial fatalities on the fifth floor were at the end of the hall about 60 ft. from the room of origin. Four died in room 425; the door had been left open and they had broken a window for fresh air which apparently drew smoke in through the open door. One victim was from room 424 which had a closed door and was very clean. I do not believe that a lethal level of smoke could have entered that room. In my opinion, the victim had to either have absorbed a lethal amount of smoke outside room 424 or that the trauma of the incident was a major contributor to the fatality. The sixth initial victim was on the 8th floor and it is assumed that death was caused by a heart attack. I have no information on the two victims that died of injuries.

There was no indication of any delay in discovery, fire department notification or fire department response. One Cicero town official was quoted in the newspapers as saying the fire department forgot to bring their aerial ladder truck with them. However, even if this were true, it would not have had any effect.

Discussion of Incident

The fire was very similar to the Wincrest Nursing Home Fire which occurred a few days earlier. Both buildings essentially conformed with Life Safety Code requirements; the fire was discovered promptly; there was no indication of delayed alarm; the staff concentrated on evacuation and extinguishment; the fire was confined to one room; victims were down the corridor from the fire room; and most of the occupants had to move toward the fire to evacuate. A major difference was that there were fewer people on the fire side of the smoke-barrier doors in the Cermak House than were in the chapel at Wincrest.

The smoke deposits in the distant corridor and in rooms with open doors were much heavier than those observed in the Wincrest fire. The furnishings were sufficiently similar so the difference would not have been caused by the materials that burned. This could have been the result of the efficiency of combustion or by more heat being vented out the larger window in the Cermak House.

The open smoke-barrier door or doors during part of the fire could have been the result of fire fighting actions or it could have been blocked open. There was no evidence that this contributed significantly to the fire loss since there was no noticeable smoke damage in the center corridor. I saw no sign of any hold-open device on the smoke doors, although one could have been destroyed by the fire or damaged and removed. However, the closed circuit TV camera locations suggested the possibility that the smoke doors were normally open.

Staff actions concentrated on evacuation of the patients and apparently extinguishing the fire. I was told the fire department found two empty extinguishers in the corridor. The fire room door was not closed after the patients were evacuated from it. Had it been closed and other patients secured in a safe location before any fire fighting was attempted, I believe there would have been no fire fatalities, although the trauma of the incident could have brought on heart attacks.

A nurses aid interviewed on television stated she was on the fifth floor in the wing above the fire room. They closed all patient room doors after the fire was discovered. When the fire department arrived they told them to evacuate all the patients to the center dining room.

The fire-resistive construction did not contain the fire any better than protected wood-frame construction would have. An automatic sprinkler system would have promptly suppressed this fire. Patient room door closers would have contained the fire and since all patients would have been in rooms behind closed doors, the life loss might have been prevented. This would have required that neither the staff nor the fire department would have evacuated patients until the fire was suppressed and the floor ventilated. In addition, the patient rooms near the fire room would have had to been ventilated to prevent buildup of smoke, which would come through the walls. There was time for all this to have been done by the staff instead of attempting evacuation. However, the universal tendency and training is, and probably will remain, to evacuate all occupants at least on the fire floor. As long as codes and training emphasize fire fighting and having ample fire extinguishers available, the staff will continue to attempt to extinguish fires rather than closing a fire room door.

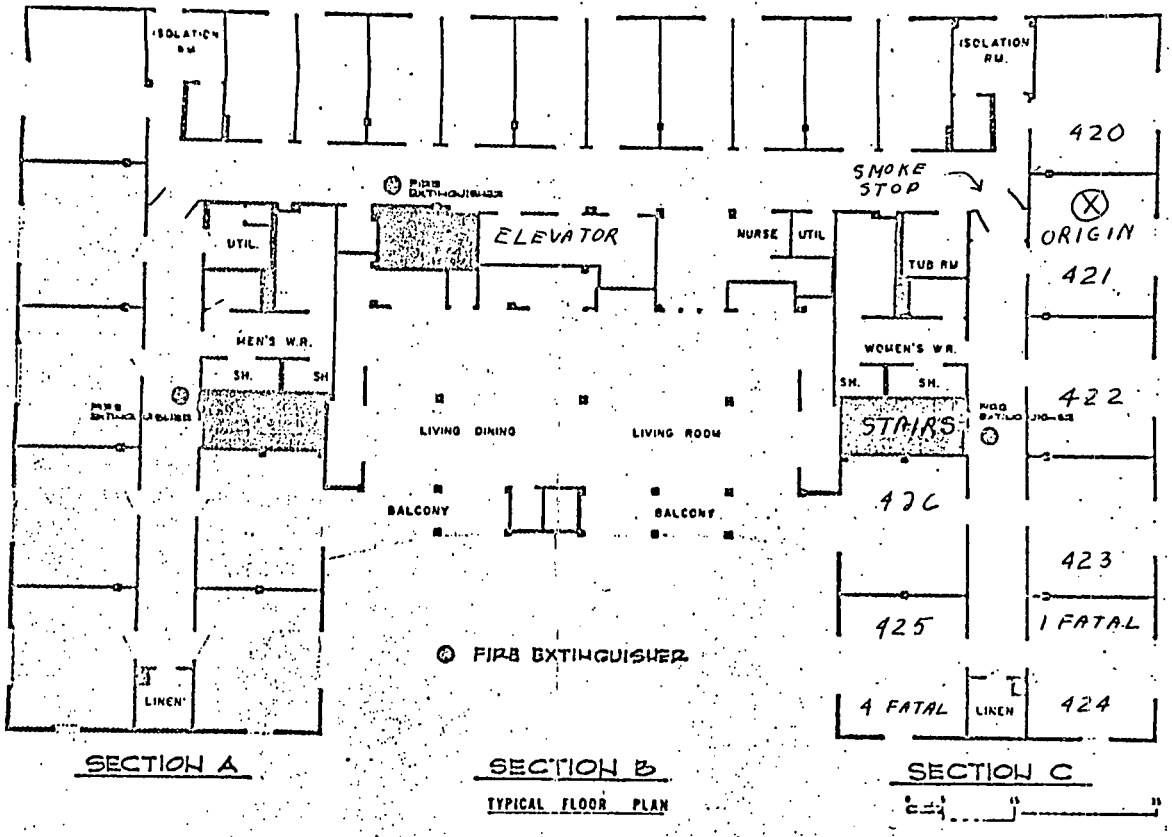

Fig. 1 Fourth Floor Plan of Cermak House Nursing Home

PREPARED STATEMENT OF HON. FRANK ANNUNZIO, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF ILLINOIS

Mr. Chairman: I very much appreciate the opportunity to testify before this subcommittee today.

In my own City of Chicago last January the Wincrest Nursing home fire killed 23 people, elderly or disabled patients whose lives were helplessly and horribly snuffed out. Within a week, another nursing home fire at Cermack House just outside Chicago claimed the lives of eight more people.

Naturally these holocausts were investigated as to the cause and possible remedies -- they still are continuing. But as a result of these two nursing facility fires this Subcommittee requested a thorough investigation from GAO, the conclusions of which have just been published. The explanations for the fires were researched as well as possible actions to avoid similar situations.

According to the reports of the investigations:

-- multiple deaths occurred in these fires even though the buildings were of fire resistant construction and were in substantial compliance with the Federal fire safety requirements.

-- Deaths were caused by smoke and products of combustion rather by flames because the flames were confined to the rooms of origin.

-- Neither facility was fully protected with an automatic sprinkler designed to activate an alarm and begin fighting the fire immediately.

-- Although local fire departments responded promptly to both alarms, the fire departments were unable to prevent the deaths which occurred.

-- Even though the fire departments responded quickly to the blazes, the fire generated intense heat and considerable damage.

The experts concluded that an automatic sprinkler system would have put both the Chicago fires out and saved the lives. And the GAO report makes a strong recommendation that the Congress enact legislation which will require that all nursing facilities be fully protected with an automatic sprinkler system. Moreover, the Congress should also require HEW to establish rigid standards which must be met by nursing facilities requesting a waiver from the automatic sprinkler requirement.

We remember that P.L. 93-204 authorized government-insured loans for installing fire safety equipment in nursing homes and intermediate care facilities. The GAO report discovered that the Federal insurance programs for fire safety equipment loans has not been successful in assisting nursing homes in installing automatic sprinkler systems. Out of 159 initial inquiries from the Chicago region for this program, HEW received only 10 applications. And because of the bureaucracy and long processing times, none of these facilities received financing through P.L. 93-204. According to HUD officials, there have not been any loans approved under this law:

These facts lead me to one inescapable conclusion: the application of existing safety standards must be re-evaluated with a view toward requiring all nursing homes to install sprinkler systems throughout their facilities. This is not the first time we have come to these conclusions. But it is time we did something definitive about it.

PREPARED STATEMENT OF HON. PETE V. DOMENICI, A U.S. SENATOR FROM THE STATE OF NEW MEXICO

Mr. Chairman: I very much appreciate the opportunity to address the Committee today.

For too long, the Congress has stood by and held proposed safety standards in nursing homes in abeyance. Especially in terms of fire safety, too little has been done for too long, and we must act as soon as possible to protest the lives of nursing home patients.

It is, however, not that the issue hasn't been broached before. Hearings have been held, words have been spoken, but action has been continually delayed.

In 1972, the Committee on Government Operations published "Saving Lives in Nursing Home Fires" -- 92-1321. The 93rd Congess also held a series of hearings dealing with fire safety in nursing homes, and in 1974, another report was issued by the Committee on Government Operations, 93-1672, entitled "Fire Safety Deficiencies in Nursing Homes." Once again, recommendations were issued, and further action was urged. The Special Senate Committee on Aging also issued a report entitled, "Nursing Home Care in the United States: Failure in Public Policy" -- subtitled, I might add, "The Continuing Chronicle of Nursing Home Fires."

Meanwhile, the patients continue to be killed in nursing home fires. Fires in Chicago claimed a total of 30 lives in two code-certified nursing homes earlier this year. Investigations now continue into the fires that killed 23 patients of the Wincrest Nursing Home in Chicago and seven more lives lost at the Cermak House in suburban Chicago.

76-611 O - 76 - 8

P. L. 93-204 authorized government-insured loans for installing life safety equipment in SCF's and ICF's. But certain questions seem in order:

- Why is the law not being more fully implemented?
- Why are not State inspections procedures more uniform or complete?
- Are we positive about the qualifications of the inspectors?
- How do we measure the quality of training of the personnel who assist patients if, God forbid, a fire does occur in a nursing home?
- Has HEW been enforcing its life safety standards, and should they be stronger?

Should we, regardless of the expense, mandate that complete sprinkler systems are installed in all nursing homes? Perhaps the GAO report, to be released today, will address these questions. I certainly hope so.

Most experts agree that sprinklers would have put both the Chicago fires out and saved the lives. Unfortunately, the State of Illinois classified the facilities as being safe according to existing rules; the homes did not require sprinklers in order to be in technical compliance with the Life Safety Code.

There are other sad examples, Mr. Chairman, of many, many lost lives in nursing homes. In a great many instances, the patients are helpless, or mentally deficient. How can we hope that they will be able to help themselves?

It is obvious that the application of existing safety standards must be re-evaluated. We should seriously consider the possibility of requiring all nursing homes to install sprinkler systems throughout their facilities.

I am hoping we move with judicious speed. Our older citizens' lives are at stake.

First Ipswich Company
Leaders in Quality Health Care

July 30, 1976

The Honorable Claude Pepper, Chairman
United States House of Representatives
Select Committee on Aging
Subcommittee on Health and Long-term Care
715 House Office Building, Annex 1
Washington, D.C. 20515

Dear Representative Pepper:

I write you in connection with your bill, H.R. 14406.

Our nursing home group is comprised of some eight skilled nursing facilities, comprising nearly one thousand multi-level beds. All of the facilities are located in the state of Massachusetts.

I am in full support of the legislation you propose, being of the opinion that the installation of sprinkler systems are greatly reducing the threat of injury and death to our elderly residents in nursing homes. The Commonwealth requires automatic sprinkler systems in all such facilities, and each of our homes is in full compliance with the applicable statute.

However, I wish to bring to your attention what I believe to be a great misuse of Federal funds and an unjust burden upon nursing homes.

Our facilities have collectively been forced to expend funds in excess of $1,000,000.00 on safety improvements mandated by Life Safety Code Legislation. The improvements have been carried out under threat of loss of federal reimbursement under Titles XVIII and XIX of the Social Security Act. Many of these expensive improvements have been shown to be ineffective methods of protecting the elderly, as was tragically pointed out in the Chicago nursing home fires early this year.

Our attempts to finance these improvements through H.U.D. have not been fruitfull. We have to date, after three attempts, been unsuccessful in getting any useful information relative to loan applications. I understand this is due to the failure of H.U.D. to promulgate regulations to implement the legislation pursued some two years ago.

Fifty-One Summer Street Rowley, Massachusetts 01969 Telephone: (617) 948-7755

Our compliance with these mandated regulations has positioned our company in such a way that our viability as providers of quality health care has come into question.

It appears that the intent of Congress has been obstructed or at best impeded by the failure of the various Federal agencies to implement such legislation.

I therefore, ask your assistance in determining a worthwhile course of action to pursue in order to obtain much needed government assistance relative to these regulations.

I would be pleased to offer testimony and evidence, based on our experience, of the necessity of framing such legislation as you have proposed in H.R. 14406.

Thank you for the kind courtesies extended.

Yours truly,

FIRST IPSWICH COMPANY, INCORPORATED

Frank C. Romano, Jr.

11 June 1976

Senator Frank E. Moss
United States Senate
Washington, D.C. 20510

Subject: Joint Hearing, June 3, 1976
United States Senate Subcommittee on Long Term Care- Special Committee on Ageing
U.S. House of Representatives Subcommittee on Health Maintenance and Long-Term Care- Select Committee on Ageing

Dear Senator Moss:

We respectfully request that this letter and supporting material be included as part of the official transcript of the subject Joint Hearing. This information is being submitted on behalf of the Smoke Control Association, a newly formed group specifically concerned with the current inappropriate reaction to smoke inhalation injuries and fatalities (Appendix I Articles of Incorporation).

Having read the entire Report to the Congress by the Comptroller General of the United States and Statement of the American Health Care Association(including engineering reports on both the Wincrest and Cermak fires), we can present our position concisely by reference to these two sources:

1. Both Cermak and Wincrest had fatal fires, Plaza did not.

2. Both Cermak and Wincrest lacked sprinklers, Plaza did not.
   - But this was not the critical point, careful reading of the reports of all three fires reveals the critical difference:

3. In both Cermak and Wincrest the door to the room of fire origin was left open, in Plaza it was closed.
   - The importance of this simple fact is further substantiated by the answer to the question "Since Cermak had a greater fire floor occupancy and denser smoke than Wincrest, why were there only one-third as many fatalitites? "

4. In Cermak there were corridor smoke doors which were closed during most of the fire (opened for evacuation) which confined all the fire and nearly all of the smoke to a portion of the fire floor.

Facts three and four above dramatize the tremendous effect of just partial smoke control in saving lives. It must be emphasized that all fatalities were from smoke inhalation (plus one coronary), none from fire or heat.

We agree that sprinklers constitute the best fire control system which can be provided in almost any building. However, the critical fact is that no degree of fire control yet available is responsive quickly enough to prevent multiple fatalities from smoke and toxic gases.

Consideration should be given to all of the following facts in formulating a bill to provide additional life safety in any sleeping occupancy, particularly one housing non ambulatory individuals:

I. Sprinklers

A. They are capable of confining the fire to the room of origin; however, the Chicago and Cicero Fire Departments also demonstrated their equal capability in this regard.

B. They are only thermally responsive, but no one died of excess heat in the subject fires. A closed bedroom fire will often be self extinguishing due to oxygen depletion without producing sufficient heat to open an ordinary temperature (160° F) sprinkler head. This was demonstrated at the "Heart of Atlanta" Fire Tests of Motel Bedrooms, 25 July, 1973 (Appendix II).

The Public has been grossly mislead into thinking that sprinklers respond immediately upon air temperatures reaching the sprinkler rating. This is not true. Sprinklers' activating elements are fusible links or similar devices, all of which are tested to Underwriters Laboratories Standard for Fusible Links (UL33). That Standard requires operation of the link (sprinkler) at ±5o F of the temperature rating when tested in liquid. However, the Operation Air Oven Test permits any sprinkler link with a rating of 135oF to 170oF to rise to 290oF before operation and still receiving "Listing by UL" ! Furthermore, while the test temperature applied reaches 165oF in 15 seconds, the sprinkler link need not operate until 6 minutes, 30 seconds-the point at which the test temperature reaches 290oF. (Appendix III)

In many smoldering fires- typically small areas like bedrooms with closed doors- the ceiling temperature never reaches 290oF. This occurred in the first Atlanta test with the room door closed. The test report states "The fire was characteristic of a smoldering low heat fire that generated large volumes of smoke that completely filled the room. To expedite burning within the room, the exterior door was opened and additional fuel was supplied 17 minutes after ignition. Thirty-five (35) minutes after ignition, the sprinkler head fused; the water coverage adequately covered the entire room and extinguished the fire. The following CO (Carbon Monoxide) readings were obtained: 2400 PPM (10 minutes) and 5000 PPM (13 minutes)".

As a result of this first test experience it was found necessary to open every test bedroom door as soon as the bedroom became smoke filled (about 3 minutes) in order to provide enough fresh air to feed the fire to build up the heat to fuse the sprinkler. In short, in order to assume sprinkler operation in a bedroom, the bedroom door must be opened to let in fresh air by releasing smoke into the corridor!

II. Compartmentation

A. Sometimes this prinicipal alone can control fire by oxygen starvation (Atlanta Motel Fire Tests).

B. This principal alone can substantially impede smoke flow and reduce the death rate (Cermak vs. Wincrest).

C. Compartmentation with pressurization can confine both smoke and fire to the room of origin (Carlyle Apartment Fire-Appendix IV).

III. Cost Effectiveness

A. More lives can be saved by confing smoke to the room of origin.

B. Compartmentation/Pressurization (Smoke Control) systems cost no more, often much less than sprinkler systems because the pre-existing doors and air conditoining/ventilating systems are utilized.

C. A smoke control system, backed up by a sprinkler system is ideal, but the economic feasibility is questionable for widespread application.

D. Particle-of-Combustion Detector operated sprinklers are under development,are most effective, most expensive, but constitute the only system capable of providing reasonable life safety within the room of origin and without resorting to evacuation. Such a device exists experimentally (Appendix V), but detector false alarms could cause some water damage and major inconvenience and shock to the bedroom occupants.

IV. Conclusion

No thermal response nor human response can be relied upon to prevent smoke inhalation fatalities, therefore early warning detectors must automatically initiate any system designed to prevent fatalities in a sleeping occupancy.

Such a system should:

1. Automatically call the fire department-direct wire, no human judgement involved.

2. Notify the appropriate staff to evacuate the immediate fire area.

3. Automatically close all room doors.

4. Automatically pressurize the corridor outside the fire room to restrain any smoke from entering the corridor during evacuation and to act as a back up system to the bedroom door closers because some ambulatory patients will open their doors "to see what's happening".

Since smoke control systems can restrain the passage of smoke and fire for a period long enough for immediate area evacuation and fire department response, such systems must be the first line of defense where life safety considerations are greater (such as nursing homes) than property values (such as warehouses). On the other hand, since smoke control systems can not be relied upon in most cases to extinguish the fire, sprinkler systems should be considered whenever the cost can be justified for them as a back-up.

A few final considerations:

1. The normal response time of a modern fire department to a low rise facility (usually less then 5 minutes) coupled with an alarm sent by an early warning smoke detector is generally faster than the thermal initiation of the first sprinkler head installed in the room of fire origin. This will be the rule in smoldering fires (beds and clothing, doors closed) not so often the case in high fuel fires where wood clothes cabinets are permitted and doors are open.

2. All fire insurance deductions resulting from sprinkler installations are offset to some degree by the additional cost of water damage insurance.

3. If a smoke control system false alarms there will be no water damage, only minor inconvenience in manual resetting of the system.

There are lives to be saved as a result of sound legislation. It will take millions of dollars of public money. It is essential that a bill be drafted to save the greatest number at the lowest cost.

Sincerely,

J. Brooks Semple, P.E.

JBS:dws

ARTICLES OF ORGANIZATION APPENDIX I

Article 1. Name. The name of this corporation is SMOKE CONTROL ASSOCIATION.

Article 2. Purposes. The purposes of the corporation (hereinafter referred to as the Association) shall be to substantially reduce fire fatalities, injuries and property loss due to smoke/toxic gas/ heat development from hazardous heat or fire by:

a. Compiling and maintaining a central library of:
   1) Information on smoke control technology
   2) Problems associated with building fires, including accounts of both successful and unsuccessful control.
   3) Records of fire deaths and injuries from smoke/toxic gas inhalation or induced panic problems due to loss of visibility.

b. Disseminating to concerned publics and media perinent information and reports concerning smoke control problems and hazards as occur in real fires and fire research testing.

c. Encouraging engineering systems development among its members to produce early responsive, effective, highly reliable smoke control systems which will:
   1) Assure a high degree of occupant safety for all those inside and outside the room of fire and smoke origin.
   2) Reduce smoke damage losses.
   3) Bring together individuals and businesses whose personal knowledge of smoke control techniques and expertise can be utilized as a source for other organizations.

d. Encouraging construction and contents standards development and code promulgation organizations to assure that smoke/toxic gas control systems are a design part of all building construction.

e. Coordinating and reporting critical research programs designed to develop better smoke control.

Article 3. Nature of Organization. The Association is a membership corporation not organized for the purposes of realizing pecuniary profit or gain to its members, but the Association may pay reasonable compensation for services rendered and may indemnify the directors, officers, employees and agents of the Association from certain unexpected consequences of their actions or omissions in the affairs of the Association, to the extent provided from time to time by action of the Board of Directors. Through membership no member is pledged to any course of action.

Article 4. The corporation is organized upon a nonstock basis.

Article 5. Membership. The membership of the Association shall consist of such class or classes with such qualifications, rights and obligations as shall be set forth in the Bylaws of the Association as the same may from time to time be amended.

Article 6. The term for which the corporation is to exist is perpetual.

KOPLON - "Heart of Atlanta" - Summary of Results *APPENDIX II*

Room		Carbon Monoxide Time	CO
#7 -	1 Viking sidewall - 160° F	10:00 min:sec	2400 ppm
	Fire smoldered - 190° - 220° max.	13:00	5000
	Door opened in 17 minutes to add oxygen		
	Sprinkler fused - 35 minutes		
#8	1 Viking pendant 160° F	0:20	450
	More paper fuel	1:00	700
	Smoky but hotter	5:00	3700
	Sprinkler fused 3 min., water off 6 - still smolders	15:00	5000
#6	1 Viking pendant 160° F with ETSR	0:20	250
	limited paper fuel	1:30	1000
	Bedspread just started	4:00	200
	Sprinkler fused at 1:25	5:00	0
	Immediate extinguishment		

#2 Grinnell Aquamatic (CO not measured)
Fire load similar to Room #7 - 2 minutes - smoke filled, 3 1/2 minutes sprinkler actuation (disk facing fire - ceiling temperature only 135° F -- radiant energy?), 4 1/2 minutes - extinguishment, but still smoldered, 6 1/2 minutes sprinkler OFF - reignition - 265° F recorded and 4 minutes for actuation - 2 minutes flow before OFF

#1 1 Viking pendant 160° F
Identical with room #2 except different sprinkler. 3 minutes - smoke filled, 4 minutes - 340° F - sprinkler activation

#3/T1 1/2" PVC pipe - reduced water supply effective with incipient detection? Viking 160° F with ETSR, 2 minutes - actuation when only a slight haze of smoke was evident. Limited water supply was sufficient.

#3/T2 1/2" PVC - Viking 160° F
Fire started in adjoining, unsprinklered closet - loaded with fuel, 4 minutes actuation from heat through open door, sprinkler controlled spread but did not reach fire source to extinguish.

Conclusion

1. Domestic water source can provide economical protection for bedrooms, giving an opportunity to designers to go "beyond the code" to improve life safety.
2. One inch supply should be minimum size.
3. Considerable smoke and toxic products of combustion are generated before actuation of conventional sprinklers; the ETSR in conjunction with a smoke detector optomizes the philosophy of early smoke warning with effective fire suppression.
4. A complete envelope of protection in sleeping occupancies can be provided using domestic water for sprinkler supply and using a smoke detector to activate both individual sprinklers and a corridor pressurization system.

Operation — Air Oven

23. Fusible links shall operate with sharp, positive action under a test load equal to the manufacturer's minimum design load, but not less than 1 pound, with complete release of all operating parts when exposed to air within the temperature and time limits shown in Table II.

24. The operating temperatures of a given model and type of fusible link of like temperature rating shall not vary more than 20° F.

25. A coating, if used, shall not melt, run, or otherwise accumulate on parts at temperatures at or below the operating temperature, in a manner likely to impair operation.

TIME-TEMPERATURE CURVES FOR OVEN TESTS

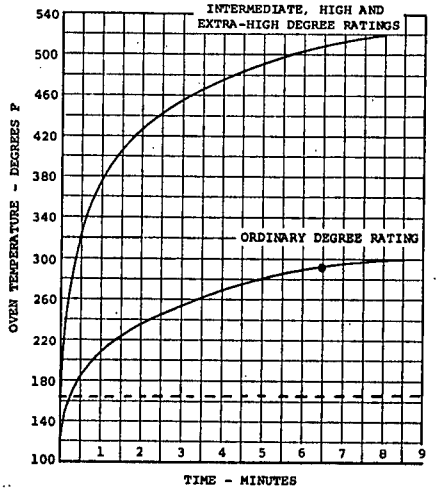

FIGURE 1

TABLE II

OPERATING TEMPERATURE RANGE

Temperature Ratings, Degrees F	Maximum Actual Operating Temperature, Degrees F	Maximum Actual Operating Time, Minutes : Seconds
125–130	245	2:30
135–170	290	6:30
175–225	445	2:30
250–300	475	4:00
325–375	505	6:30

26. At least ten samples of each size and temperature rating shall be subjected to this test.

27. An oven test is to provide for a means of subjecting samples to a rapidly rising air temperature environment where the temperature rise follows a prescribed time-temperature relationship; where the velocity and path of the air stream are controlled and are uniform in the vicinity of the sample; and where other factors influencing heat transfer, such as radiant walls, are maintained practically uniform in their effects.

28. The time-temperature relationships, as shown on the curves, such as those illustrated in Figure 1, are associated only with a particular oven design and method of test.

29. The ovens are made of copper and are provided with a water-circulating jacket. The body of each oven is cylindrical in shape with an internal diameter of 10 inches, an external diameter of 12 inches, and a height of 24 inches. Each oven is fitted with a movable lid which is 10 inches in diameter and 7½ inches in height. The natural-gas-fuel burners are manually controlled and are located at the bottom of the oven, which is open to allow air intake. Air is continuously released from the lid of the oven through a centrally located 3-inch-diameter hole. A 9½-inch-diameter baffle is located ⅝ inch above the air outlet hole to limit the air flow. The unshielded thermocouple used to record the temperature of the oven is made using No. 20 Awg wires, one chromel and one alumel, and is located centrally in the oven.

30. The fusible links are to be placed in the oven under the minimum design load, but not less than 1 pound. Starting from a prescribed ambient situation in the oven, the temperature of the oven is to be increased in the manner prescribed by the time-temperature curve applicable to the test.

31. Observations are to be made throughout the test for conformance with the requirements of paragraph 25. Coatings are to have been melted and run off or otherwise dissipated from the surfaces of operating parts at or below the operating temperature of the sample under test.

32. Observations are to be made and recorded of the time and temperature at which each sample operates and the manner in which the release of parts is accomplished.

APPENDIX III

THE CARLYLE APARTMENT FIRE:

STUDY OF A PRESSURIZED CORRIDOR

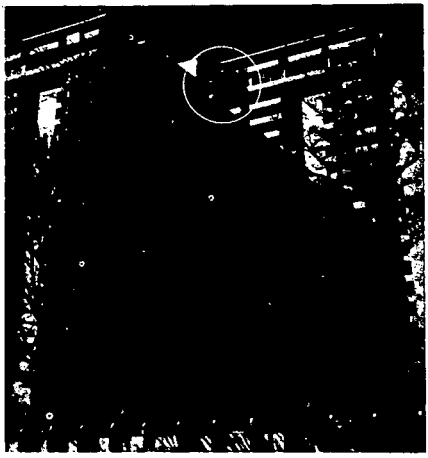

Fig. 1

With pressurization of stairwells and corridors, high-rise fires can be contained and controlled in compartmented buildings. Hopefully, such pressurization will be accepted by all concerned before another disaster occurs with old techniques. This paper was presented at the Symposium, Fire Technology Developments that affect the ASHRAE engineer, held during ASHRAE's 1975 Semiannual Meeting in Atlantic City, NJ. Other papers included: Evacuation and Other Fire Safety Measures in High-Rise Buildings, by Jacob L. Pauls, and Test Results of Duct Stairwell Pressurized System in a High-Rise Building, by Bayliss J. Erdelyi. The entire Symposium will be available on microfiche from ASHRAE Headquarters.

ROBERT E. TAYLOR
Affiliate ASHRAE

UNTIL recently, with few exceptions, if a fire department's ladders could reach the top floor of a building and the pumper could supply enough water for a deluge gun, that was all the pre-fire planning many cities thought necessary. Those life safety measures specified in NFPA 101 and learned through bitter experience were enforced by the building official when buildings were built, but seldom ever reviewed again until a fire occurred. Fire prevention was left to periodic cursory inspections. Then when a tragedy occurred, everybody pointed fingers and for awhile efforts at prevention were practiced.

R. E. Taylor is with Republic Steel Corp., Cleveland, OH.

However, in city after city, now that structures have grown in height far beyond the tallest ladder and in width so wide hose streams cannot span or are stopped by compartmentation, a cry of frustration by firefighters has risen. They ask: "How do we fight a working fire from inside a building and still move people out safely?" Some imply it can't be done.

The tendency is to reach back into the basket of time and pull out so-called tried and true methods of life safety protection such as sprinklers, hose cabinets, vented elevator shafts, and smoke-proof stair towers. Unfortunately, in many cases, practical reality indicates these approaches alone may not be an effective answer — or even a major part of the total answer. Expecially since toxic gases and smoke present an early evacuation life hazard, these methods have never controlled.

Building access, exterior and interior landscaping and design, interior contents, internal communications, available water pressure, fire department manning, automatic-detection — all play a role that needs careful assessment for every high-rise built. These basic points seldom concern themselves with how fast people can evacuate a building, or if evacuation is feasible or necessary. Furthermore, old approaches don't concern themselves with how quickly firemen can actually reach a fire above the 8th floor and still be in a physical condition to work — even under ideal conditions. What happens when people clog the stairs, when smoke and hot fire gases tear at the throat and obscure vision during an actual fire is yet another story.

Then, too, there is the current code tendency to lump all high-rise type of structures together — the apartment, hotel, office building, medical group — yet each is a separate and complex problem in itself. To lump them all under one heading isn't facing reality.

Use of a building's air system for fire fighting was virtually unheard of five years ago. Everyone knew that when a fire started you shut off the supply air and the exhaust. That would control the fire. However, the horrible record of major fires in this country has shown that this practice doesn't work. To give air to a fire was even more radical. You'd fan the flames. You'd see the fire.

Ask the veteran firefighter why he lost his battle in the big ones: Usually he's indicate he couldn't see the fire from the smoke — or couldn't find the fire because he couldn't get through the smoke and heat. He couldn't use the elevator because of "stack effect" rising heat and smoke. When he opened the stairway door (if he could) that was the end of the use of the stairway anywhere above as well.

Even if he could see the fire, he would still retort, "Well I'd like sprinklers up there — they'll handle it!" But he didn't reckon with many of today's materials which, unlike the wood age, often ignore water and go right on burning underneath and filling the air with smoke and very hazardous gases at a rate-of-smoke release far in excess of what wood and celtulosic materials give off.

What does it take to prove that air — working much as a cold front moves against a warm front — can perhaps be the best fire control measure ever designed into a building? Actual experience can. And that's what this fire report is about. A working fire that destroyed 80 percent of the interior of a luxury apartment on the 20th floor of a Lakewood, Ohio, condominium.

The fire occurred at approximately 4:30 a.m. the morning of March 7, 1974. When he discovered the fire, the occupant ran from his apartment with no clothes on and closed the door behind him. What he did for approximately 30 to 40 minutes* no one knows. But during that time, the wood door and wood door frame to the corridor burned off. He finally pounded on some doors and sounded the alarm. He was sitting on the window ledge in the corridor near the elevators when the firemen found him. Everyone

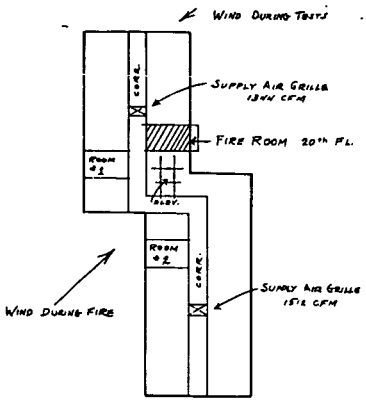

Fig. 2

evacuated safely. In fact, some people walked right by the fire room door and looked in "to see what was burning." Prior to the fire department's arrival, some even took elevators, even though they had been told not to do so in building fire procedure bulletins. Data developed after the fire shows that decision could have been fatal because the fire burned out the elevator control wiring, erroneously placed in his suite instead of the shaft.

A delayed alarm of as much as 40 minutes was involved. Lakewood firefighters had the fire under control 15 minutes after the alarm was sounded. Firemen were able to walk right up to the door of the apartment and attack the blaze using two 1½ inch fog lines.

Unusual was the tightness of the corridor and the almost complete burnout of the suite which occurred with almost no communication to the corridor.

THE FIRE

Let us review the site and see what the fire actually did. Then, we will look at the lessons we have learned from this fire. Fig. 1 shows the exterior view of the 20th floor fire location in the Carlyle. You are looking west.

Fig. 2 is a floor diagram showing the apartment of burnout in relation to the elevators and the other wing of the building. The pressure measurements taken the day after the fire were on the other side of the building in a comparable apartment location due to a 180° wind switch.

Fig. 3 is a close-up layout of the room of origin. Cause was never officially determined, although it was probably in the corner next to the elevator shaft.

Note how the wood door to the fire room burned off. The wood door frame was extensively burned. Wallpaper over the door in the corridor burned. There was almost no extension of fire or smoke into the plenum through the lay-in type ceiling tile fastened in place with hold-down clips (Fig. 4).

Escape of smoke into the corridor did little smoke damage.

* From nature of fire damage to the suite.

Note door width radiant heat marks on the wall across from fire room (Fig. 5).

Wallboard and studs against the elevator shaft in the kitchen were very heavily damaged. The EMT conduit and steel pipe were not damaged. Zinc couplings used with the EMT conduit disappeared (Fig. 6).

The living room alcove was extensively damaged (Fig. 7). Fire extended through the hole in ceiling corner to the suite above after the ceiling tile failed.

Fig. 8 shows that the insulated piping did not fail. The interior partition wall surrounding the pipe and separating the living room from the bedroom was 90 per cent destroyed. This wall was gypsum board on wood studs.

Glass fiber ductwork used with the kitchen fan failed even though glass fiber batting used for fire stopping around the vertical pipe stayed in place (Fig. 9).

The north corner of the balcony separation wall suffered severe concrete spalling. The aluminum window frames and glass virtually disappeared.

Our next step was to run static pressure tests on various floors under as comparable wind and temperature conditions as we could get to approximate conditions existing the night of the fire. Pressure differentials were taken in the fire room and at a comparable location in the next wing the day after the fire. There was a difference in measurements taken the day of the fire and several days later.

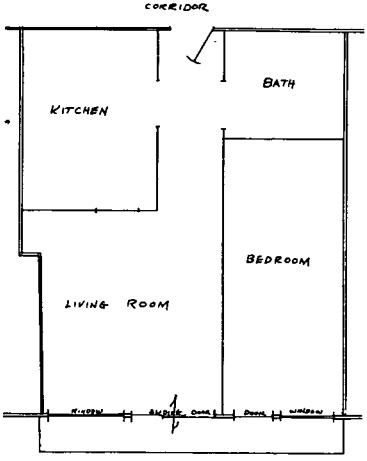

Fig. 3

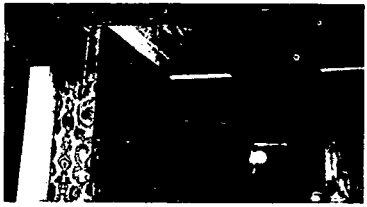

Fig. 5

Fig. 6

Fig. 4

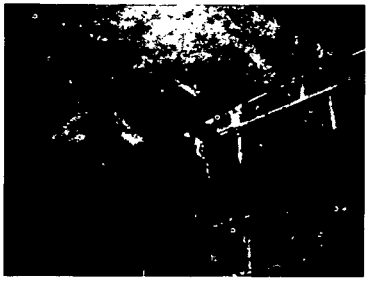

Fig. 7

On the day of the fire, air pressure differentials were taken at the former window ledge dividing the balcony from the living room. A pressure of 0.11 inches water column was developed with the fire room door open to the corridor and the plywood window coverings in place.

To approximate the volume of airflow through the fire room door the night of the fire, air velocity readings (in feet per minute) across the open doorway of an intact room in the other wing of the 20th floor were taken. The airflow was between 200 and 450 feet per minute measured at three heights with the window door to the suite open and the corridor door open.

Fig. 8

Fig. 9

THE LESSONS LEARNED

At a later date, pressures were taken on the 4th floor and 20th floor to confirm our findings. This is what we found:

- The 4th floor static pressure was .035" w.c. between the outside and the corridor, with the corridor being *low* pressure (negative).
- The 20th floor pressure was .030" w.c. between the corridor and the outside, with the corridor being *high* pressure (positive).
- The make-up air system on the 4th floor delivered 356 cfm with all doors closed. When one room was opened to the outside, the flow reversed and air flowing through the room from the outside was entrained into the make-up air system in the corridor.
- The make-up air system delivered 1329 cfm to the 20th floor with all doors closed. With one room open to the outside, the supply air increased to 1563 cfm.

This data tends to confirm work done by the Canadian Building Research Council and others. It shows:

- Fire on a lower floor below the neutral plane can be spread into a corridor by the airflow.
- Smoke from floors below the neutral plane can be spread to upper floors by entertainment into the supply air system if the system is not balanced to provide a positive supply to all floors under all conditions.
- Fire on upper floors can be contained in the fire room of origin by the airflow from a positively pressurized corridor.
- Smoke on upper floors will be forced outside.
- Comparison of later test data to data the day of the fire indicates that weather can have significant effect on the pressures in the building.

From this study it would appear that:

1. Positive pressurized corridors using a "make-up" air system can contain a fire within a suite if:
   (a) The system is properly balanced, or
   (b) The fire occured in a suite above the neutral plane.

The system should be designed to serve only a few floors at a time. Stacking 10, 20, or more floors on a common shaft probably would not be practical since effective balancing for both fire and non-fire conditions may be impossible to achieve.

2. With pressurized corridors the following are essential:
   (a) Stairwells should be pressurized more than corridors to keep smoke and fire gases out of stairwells. Vents at the top of the elevator shafts should be closed.
   (b) Noncombustible corridor construction, including doors, door frames, door hardware, acoustical ceilings, wall coverings and service conduit and pipe is critical since radiant heat is a factor despite pressurization.
   (c) Corridor exhaust systems should be of a noncombustible material.
   (d) Suite exhaust systems should be noncombustible if not going directly to the outside.
   (e) All corridor doors should have automatic self-closers.
   (f) Each fire compartment should have exterior windows or vents.

This study also indicated that sprinklers would be of dubious value in a properly pressurized corridor.

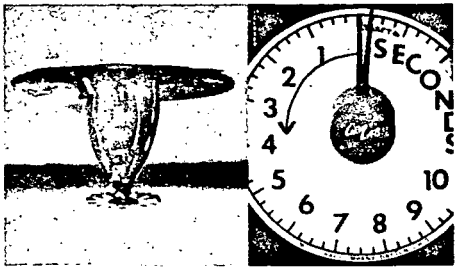
Positive air supply at approximately 0.10 inches of water pressure kept this fire out of the corridor even though the door had failed. It may be that requirements for 0.15 inches of water may be excessive in such buildings.

The best confirmation that corridor pressurization works comes from the firemen themselves. Lakewood firemen walked right up to this fire, watched it for a moment, then put it out. In a non-pressurized corridor, this fire could have spread to the entire 20th floor and to the several penthouses above.

Several months later in a fire at the apartment next door on the roof (or 31st floor), it took almost 30 self-contained breathing air packs for the firemen to get up the stairs to a fire in a storage room due to heavy smoke. They now know the difference that air — properly used — can make in controlling severe fires. They are now believers.

A great deal of further work needs to be done. But the day when turning off the air as a fire alarm goes off hopefully is near an end. With pressurization of stairwells and corridors, high-rise fires can be contained and controlled in compartmented buildings. Hopefully, such pressurization will be accepted by all concerned before another disaster occurs with old techniques. We have much of the answer — and a better answer from a life-safety standpoint. Isn't it time it is used more widely? □□

"HOT HEAD"

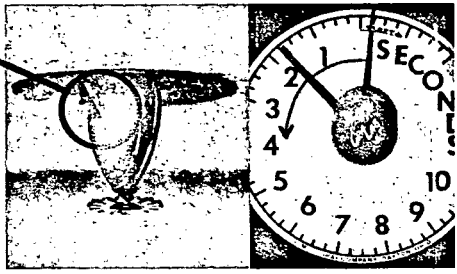


WHO?

All of you. All of us must be more concerned about life safety in buildings because of lethal gasses released from heating and burning contemporary furniture and building materials.

WHAT?

An electrically initiated chemical reactor to melt the sprinkler fusible element.

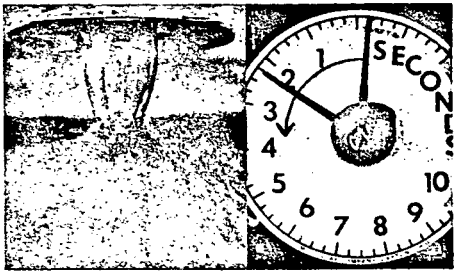


WHY?

To extinguish fires upon smoke detection, long before smoke kills and fire grows enough to fuse the sprinkler.

WHEN?

Within three seconds after the detector senses an incipient fire.



WHERE?

Wherever concern for life safety exceeds potential losses from water damage.

S•R products inc. p. o. box 308, mendenhall, pennsylvania 19357/(215) 388-7661

THE CHALLENGE

Report to the Safety to Life Committee (NFPA Std 101) by Sectional Committee on Institutional Occupancies
(Underlining by S R Products)

Selected Findings:

"We did find many instances of single fire death losses in all institutions whether they were in complete conformance with the code or whether they had a complete automatic sprinkler system or not."

"Smoke and toxic gasses, rather than burns, cause by far the greater majority of deaths in institutions."

"No building is fireproof. They can all burn, or at least their finishes, furnishings, decorations and other contents can, thereby affecting the life safety of occupants."

"Many fires result in loss of life because fires were not immediately detected, or because life saving measures and fire suppression were commenced too late."

"Evacuation cannot be relied upon in institutions as a satisfactory means of protecting life safety from fires."

A Few Conclusions:

"The majority of institutional occupants should be protected in their own rooms."

"Compartmentation is a highly effective means of preventing multiple loss of life due to fires."

"Complete automatic extinguishment systems are also highly effective in preventing multiple fire death losses."

"To require both strict compartmentation and complete automatic extinguishment would not only be redundant, but would lead to greatly increased costs. Trade-offs are, therefore, of great importance.

"Neither system will protect against the single fire death loss."

"A reasonable compromise would be to require a system of early warning detection which reacts to products of combustion, other than heat."

Implementation:

"The next chore of the Sectional Committee was to determine how much life safety would be enhanced by installation of a complete automatic extinguishing system in nursing homes and in other health care institutions. Its investigations gave clear evidence that smoky fires, as in mattresses or upholstery, have burned for periods on the order of an hour, producing lethal quantities of smoke with heavy proportions of carbon monoxide without enough heat development to actuate a sprinkler head. It concluded that one ideal solution would be a system that could detect products of combustion (other than heat) for the actuation of only the sprinkler head immediately over the smoldering source of smoke, without flooding other areas, a technically feasible but not economically nor industrially available product."

"Nevertheless, the Sectional Committee accepted the fact that ordinary automatic extinguishment is desirable when it can be made economically attractive. Therefore, with encouragement from the Committee on Safety to Lief, the Sectional Committee set out to find safe ways to maintain performance capabilities of required barriers to smoke and fire spread that would result in construction savings to help pay for a complete approved system of fire extinguishment. It concluded that its decision had to be based on the life protection integrity of the residual quality of compartmentation balanced against the calculated effectiveness of fire suppression by the extinguishment system supplied in lieu of the reduced compartmentation requirements."

THE RESPONSE

The Hot Head® was developed specifically to fill the need to economically protect against the single life loss, hitherto unprotectable. It is a high intensity jet arranged to activate standard sprinkler heads by the use of a smoke detector or any other electrical switching device. Electrical response to the signal is instantaneous, initiating a chemical reaction which melts the sprinkler's fusible element within three seconds. Any smoke, heat, rate of rise, ionization detector or any other switch may be used to control it.

The Hot Head is compatable with all major upright, pendant and sidewall sprinkler designs. The operating range is 6 to 30 volts AC or DC, one ampere trip current required, with a 2 millisecond (.002) response at 24 volts. It will operate sprinkler ranges from 135°F to 212°F (57°C to 100°C) yet, if there is no electrical signal, the sprinkler will operate in its normal, thermal manner with no interference from the Hot Head. It is installed "dry", after the sprinkler system is installed and pressure tested. The sprinkler system, new or existing, is always "on stream" during the installation of Hot Heads. The Hot Head has been tested to operate from —40°F to +175°F (—40°C to +80°C) and it meets Underwriters' Laboratories, Inc. Standard for Sprinklers (UL199) in respect to Operation, Distribution, Corrosion and Vibration.

APPENDIX II

ADDITIONAL MATERIAL SUBMITTED FOR THE RECORD

REPORT TO THE CONGRESS

BY THE COMPTROLLER GENERAL OF THE UNITED STATES

Federal Fire Safety Requirements Do Not Insure Life Safety In Nursing Home Fires

Department of Health, Education, and Welfare

Two Chicago nursing home fires killed 31 people during early 1976. GAO was asked to investigate reasons for the severity of the fires and to suggest possible actions to avoid similar situations.

GAO reported that experts said automatic sprinkler systems would have extinguished the fires and saved lives. GAO recommends that the Congress enact legislation requiring all nursing homes to be fully protected with automatic sprinkler systems.

JUNE 3,1976

COMPTROLLER GENERAL OF THE UNITED STATES
WASHINGTON, D.C. 20548

B-164031(3)

To the President of the Senate and the
Speaker of the House of Representatives

This report discusses Federal fire safety requirements for nursing homes participating in Medicare and Medicaid.

We made our review at the request of Claude Pepper, Chairman, Subcommittee on Health and Long-Term Care, House Select Committee on Aging. The Chairman's request was prompted by 2 nursing home fires in the Chicago area early in 1976 in which 31 patients died.

Two recommendations for legislative action are included in the report.

We are sending copies of this report to the Director, Office of Management and Budget; the Secretary of Health, Education, and Welfare; and the Secretary of the Department of Housing and Urban Development.

COMPTROLLER GENERAL'S REPORT TO THE CONGRESS

FEDERAL FIRE SAFETY REQUIREMENTS DO NOT INSURE LIFE SAFETY IN NURSING HOME FIRES

Social and Rehabilitation Service
Department of Health, Education, and Welfare

D I G E S T

As a result of two nursing facility fires that killed 31 people during early 1976, the Chairman, Subcommittee on Health and Long-Term Care, House Select Committee on Aging, asked GAO to investigate reasons for the severity of the fires and to suggest possible actions to avoid similar situations. (See app. I.)

According to reports of investigations:

--Multiple deaths occurred in these and several fires in prior years even though the buildings were of fire resistive construction and were in substantial compliance with the Federal fire safety requirements. (See p. 11 and app. III.)

--Deaths were caused by smoke and products of combustion rather than by flames because the flames were confined to the rooms of origin. (See p. 9.)

--Neither facility was fully protected with an automatic sprinkler system designed to activate an alarm and begin fighting the fire immediately. (See pp. 5, 6, and 7.)

--Although local fire departments responded promptly to both alarms, the fire departments were unable to prevent the deaths which occurred. (See pp. 6, 7, and 8.)

--Facility employees tried to evacuate residents and extinguish the fires, but in neither case were they successful in preventing death or extinguishing the fires. (See pp. 6 and 8.)

--Although a short period of time elapsed from the identification of the fires to

the arrival of the fire departments, the fires generated intense heat, resulting in considerable fire damage to the rooms in which the fires originated. (See pp. 7 and 9.)

--Experts said automatic sprinklers would have prevented the deaths in these homes. (See p. 12.)

Studies by congressional committees, a fire safety engineering firm, a special investigative committee, and others have pointed out the need for and the benefits of automatic sprinkler systems in nursing facilities. (See pp. 12, 15, 16, and 18.)

GAO determined that the cost of sprinkler system installations ranged from $393 to $625 a bed. The amortized cost of $625 over a 20-year period with a 9-1/4 percent interest rate is $5.57 a bed each month, or about 19¢ a bed each day. (See pp. 19 and 20.)

With the installation of a sprinkler system, savings on nursing facility fire insurance premiums are possible on both the building and its contents. Through reimbursement for depreciation and interest, Medicare and Medicaid will pay for part of the cost of sprinkler system installation. (See pp. 20, 21, and 22.)

The program which authorized the Department of Housing and Urban Development to provide Federal loan insurance for the installation of fire safety equipment has not been utilized. GAO believes that excessive processing time by HEW and the Department of Housing and Urban Development procedures, which prohibit loan insurance after work has begun, contribute to the problems facing nursing facilities applying for loan insurance. (See pp. 25 and 26.)

GAO recommends that the Secretary of HEW minimize the problem of excessive processing time by establishing procedures which make better use of existing survey and certification documents. (See p. 32.)

GAO recommends that the Secretary of Housing and Urban Development

--establish regulations to permit fire safety equipment loan insurance after work has begun (see p. 33) and

--publicize the availability of the fire safety equipment loan insurance program by revising the nursing home brochure dealing with nursing home mortgage insurance (see p. 33).

Because congressional hearings were scheduled, the chairman's office requested that GAO not delay the report to get formal comments from HEW and the Department of Housing and Urban Development. Informal comments from agency officials were considered where appropriate in this report. The National Fire Protection Association and the National Fire Prevention and Control Administration of the Department of Commerce agreed with GAO's recommendations to the Congress. (See apps. VI and VII.)

RECOMMENDATIONS TO THE CONGRESS

GAO believes that a strong case can be made for requiring that all nursing facilities be fully protected with automatic sprinkler systems. Therefore, in line with previous recommendations of congressional committees, we recommend that the Congress enact legislation which will require that all nursing facilities be fully protected with an automatic sprinkler system. The Congress should require HEW to establish rigid standards which must be met by nursing facilities requesting waiver from the automatic sprinkler requirement. (See pp. 22 and 23.)

CHAPTER 1

INTRODUCTION

In January 1976 a Chicago nursing home fire killed 23 people. Within a week, another nursing home fire just outside Chicago claimed the lives of eight people.

In his letter of February 20, 1976, the Chairman, Subcommittee on Health and Long-Term Care, House Select Committee on Aging, asked us to investigate reasons for the severity of the fires and to suggest possible actions to avoid similar situations. He also asked us to investigate:

--The fires and determine if automatic sprinkler systems would have put out the fires or lessened their severity in these facilities.

--The facilities in Chicago and determine if they met the Life Safety Code requirements for participation in federally financed health programs.

--The Department of Health, Education, and Welfare's (HEW's) enforcement of fire safety standards in Chicago and elsewhere.

--The State inspections of the Chicago facilities in question and HEW's validation of those inspections.

--The State inspection procedures including the qualifications of the inspectors.

--The quality of trained personnel assisting patients during the fires.

--The implementation of Public Law 93-204, approved December 28, 1973, which authorized federally insured loans to provide fire safety equipment for nursing homes and intermediate care facilities.

NURSING HOMES IN FEDERAL PROGRAMS

There are about 16,500 nursing homes, referred to as skilled nursing facilities (SNFs) or intermediate care facilities (ICFs), depending on the level of care provided, participating in the Medicare and Medicaid programs.

Medicaid--authorized by title XIX of the Social Security Act, as amended--is a grant-in-aid program in which the Federal Government pays part of the costs (50 to 78 percent) incurred by States in providing medical services to persons

who are unable to pay. At the Federal level the Medicaid program is administered by the Social and Rehabilitation Service (SRS) within HEW.

States have the primary responsibility for initiating and administering their Medicaid program under the Social Security Act. The act requires that State Medicaid programs provide SNF services. However, services in ICFs which provide care to patients that do not require skilled nursing services are an optional Medicaid service.

Medicare, authorized by title XVIII of the Social Security Act, is the Federal health insurance program for the aged and disabled. Part A of Medicare provides hospital insurance and also pays for all covered services in a SNF for the first 20 days after a hospital stay and all but a certain amount a day, up to 80 additional days, during a benefit period. ICFs do not participate in Medicare.

About 7,500 SNFs are participating in Medicaid, about 4,300 of which also participate in Medicare. In addition, about 9,000 ICFs participate in Medicaid. During fiscal year 1975, Federal and State Medicaid payments for SNF and ICF services were $4.6 billion, and Medicare payments for SNF services were $257 million.

CERTIFICATION PROCEDURES

Standards have been established by law and regulation which must be met by all nursing facilities participating in Medicare or Medicaid. The Federal requirements on fire safety have incorporated the Life Safety Code, established by the National Fire Protection Association.

HEW regulations require that each nursing facility certified for Medicare or Medicaid be inspected at least annually by State inspectors (employed by State agencies having contracts with the Federal Government) to determine whether the facility is in compliance with Federal requirements, including the Life Safety Code. Facilities not in full compliance with the fire safety standards may be certified for limited periods under both programs while corrections are being made.

Current HEW regulations for both Medicare and Medicaid provide for canceling a nursing facility's certification if deficiencies noted during the inspections have not been corrected within a specified time, including approved extensions.

THE LIFE SAFETY CODE

The Life Safety Code is established by the National Fire Protection Association. The primary function of the Association's Committee on Safety to Life has been to study and analyze the causes of fires involving loss of life. The code, which is based on established standards for various types of construction, is revised periodically. The latest edition was published in 1973.

The Social Security Amendments of 1967, effective January 1, 1970, require SNFs to comply with the 1967 edition of the Life Safety Code to participate in Medicaid. In October 1971 HEW extended that requirement to Medicare SNFs. Public Law 92-603, enacted October 30, 1972, incorporated in titles XVIII and XIX of the Social Security Act the requirement that Medicare and Medicaid SNFs comply with the 1967 Life Safety Code. Federal regulations requiring ICFs to meet this code became effective March 18, 1974. Nursing facilities entering the program on or after June 1, 1976, are required to meet the 1973 edition of the code, as provided in Public Law 94-182, enacted December 31, 1975.

The code requires automatic sprinkler protection throughout all nursing facilities, except those of 2-hour 1/ fire resistive construction or one story, 1-hour protected noncombustible construction. The fire resistance rating of building construction varies with the susceptibility to fire damage of the building materials used and the degree of fire protection provided for the structural members.

A building classified as 2-hour fire resistive construction is one in which the structural members, including walls, partitions, columns, floors, and roofs, are of materials having fire resistance ratings ranging from 1-1/2 to 4 hours as required by the National Fire Protection Association standards.

A building may be classified as 1-hour protected noncombustible if it is constructed of materials having a minimum fire resistance rating ranging from 1 to 2 hours.

1/The National Fire Protection Association defines the ratings of building materials in terms of hours. The ratings are the result of standard fire tests in which the materials are subjected to controlled fire conditions. The performance is based on the length of time the materials maintain their structural integrity and expressed as 2-hour, 6-hour, 1/2-hour, etc.

The requirements for these two classifications are directed toward limiting the spread of fire and maintaining the building structure to permit adequate time to safely evacuate nursing home patients.

The Social Security Amendments of 1967 permit a waiver, in accordance with regulations established by the Secretary of HEW, of specific Life Safety Code provisions, including the automatic sprinkler requirement. A waiver may be issued for specific Life Safety Code provisions which, if rigidly applied, would result in unreasonable hardship on a nursing home. Such a waiver, however, will be granted only if it will not adversely affect the health and safety of the patients.

SNF waivers under Medicare have always been issued by HEW. Initially, waivers of the Life Safety Code standards for Medicaid facilities were issued by State Medicaid agencies in accordance with HEW criteria. The Social Security Amendments of 1972, however, transferred this authority to HEW.

Under current procedures the States make recommendations for both Medicare and Medicaid SNF waivers relating to fire safety standards, but HEW regional directors make the final decisions. Waivers of Life Safety Code standards are issued by State agencies for ICFs.

Federal loan insurance for nursing home fire safety equipment

The Congress enacted Public Law 93-204 on December 28, 1973, which authorized the Secretary of the Department of Housing and Urban Development (HUD) to insure loans made to nursing facilities for purchasing and installing fire safety equipment, including automatic sprinkler systems.

SCOPE OF REVIEW

Our review included work at the regional offices of HEW and HUD in Chicago, Illinois; the Illinois State Fire Marshal's office; and the Illinois State Medicaid Agency. Work was also done at HEW and HUD headquarters in Washington, D.C.

In addition to the two nursing home fires in the Chicago area, we obtained information on other nursing home fires for comparison. We also obtained information from various other studies and reports on nursing home fires and fire safety.

CHAPTER 2

NURSING FACILITY FIRES

IN CHICAGO

On January 30, 1976, and February 4, 1976, fires occurred at the Wincrest and Cermak nursing facilities, respectively, which resulted in the deaths of 31 patients. Both institutions were intermediate care facilities participating in Medicaid. According to reports of investigations, these deaths occurred even though

--the nursing facilities substantially met Federal fire safety requirements,

--the fire departments responded promptly to the alarms, and

--the construction of the buildings adequately confined the flames to the rooms of origin.

The deaths were reported to be caused by smoke and toxic gases rather than by flames. No fatalities occurred in the rooms of fire origin. Investigators of these fires stated that sprinkler systems would have prevented deaths in these nursing facilities; however, both facilities were classified as fire resistive and, under the Life Safety Code, were exempt from the automatic sprinkler requirement.

WINCREST

The Wincrest Nursing Home fire occurred on the third floor of the facility during the morning of January 30, 1976. (See app. IV.) Wincrest, an ICF in Chicago, has 28 sleeping rooms which can accommodate 88 permanent residents. The residents included Medicaid patients.

At the time of the fire, Wincrest had the following fire safety devices (see app. IV):

--Three alarm systems: (1) pull box, (2) heat detectors (both of which activate alarms to the Chicago Fire Department and to the nursing home staff) and (3) smoke detectors which activate an alarm only to the nursing home staff. The three alarm systems were activated at approximately the same time.

--Three portable fire extinguishers.

--A public address system.

--A battery-operated emergency lighting system (not a significant factor because the fire occurred during daylight hours). The system reportedly would not have functioned properly because smoke residue covered and the heat had melted the plastic hoods on the lights.

--Solid core doors to residents' rooms--authorities considered these adequate to stop the fire, heat, and smoke if the doors were closed.

--Fire resistive floors, walls, and ceilings. These were not penetrated by the fire, although the wall coverings did burn.

At the time of the fire, 83 aged residents (many confined to wheelchairs) occupied the home. When the fire occurred, five nursing home attendents, a priest, and 40 residents were on the third floor of the home. Approximately 28 of the 40 residents were attending a religious service in the third floor lounge-chapel. The lounge-chapel did not have a door and was open to the corridor. (See app. IV.)

A nurse's aid discovered the fire in room 306, at the approximate center of the single corridor which serves the third floor (see app. IV), at about 11:40 a.m., summoned the priest, and activated a pull-box fire alarm. Initially the priest, and later two maintenance men and an administrator, attempted to put out the fire with fire extinguishers but could not contain the fire. Intense smoke and heat forced them to abandon the room after attempting to close the door to the corridor. The attendants and others began concentrating on evacuating residents from the lounge-chapel and the third floor.

The Chicago Fire Department arrived at about 11:46 a.m., approximately 3 minutes and 40 seconds after it received the alarm. In response to the first alarm, the fire department dispatched 39 firemen with 7 trucks (4 pumpers, 2 hook and ladders, and 1 snorkel). Upon arrival of the fire department, intense smoke on the third floor was already affecting elderly residents (some residents were gasping or unconscious). In response to a special call, 18 more firemen arrived at 12:01 p.m. with special equipment including another snorkel truck. In response to a second alarm, 44 firemen arrived at 12:04 p.m. with 1 helicopter, 1 communication van, and 8 trucks (4 pumpers, 2 hook and ladders, and 2 water cannon turrets).

In response to special calls, the fire and police departments and private organizations dispatched 10 ambulances to the home. The ambulances and four fire department automobiles transported the injured to hospitals.

As of February 20, 1976, 23 nursing home residents had died from smoke inhalation. The majority of which were in the lounge-chapel area at the time of the fire.

The fire destroyed room 306 and caused significant damage in the corridor. Moderate fire and intense smoke and heat damaged the corridor, the lounge-chapel (which did not have doors) and sleeping rooms in which the doors were open during the fire. Sleeping rooms in which the doors were closed during the fire did not incur smoke or heat damage.

CERMAK HOUSE

The Cermak House Nursing Home fire occurred in room 421 on the fourth floor early in the morning of February 4, 1976. (See app. V.) Cermak House is an ICF in Cicero, Illinois, adjacent to Chicago, and can accommodate 618 residents. The residents included Medicaid patients.

At the time of the fire, Cermak House had fire safety devices which included (see app. V):

--Two alarm systems: (1) pull-box and (2) smoke detectors (both of which were wired to activate alarms to the Cicero Fire Department). The smoke detectors automatically closed hall smoke doors.

--Fire extinguishers and fire hoses on each floor. Because of operator error, the fire hose on the fourth floor did not operate.

--A public address system which was used to notify nursing home staff of the fire and its location.

--Solid core doors to residents' rooms--authorities considered these adequate to stop the fire, heat, and smoke if the doors were closed.

--A sprinkler system on the first floor, with vertical pipes to the other eight floors. According to a Cermak House official, horizontal pipes and sprinkler heads of the upper floors had not been installed because of financial consideration.

According to a patient census the previous night, 460 persons occupied the nursing facility; 24 persons could have been accommodated in the fourth floor west wing in which room 421 was located.

At about 6:30 a.m. a nurse and a nurse's aide heard screams and discovered the fire in room 421. While the aide activated the pull-box alarm, the nurse evacuated two of the residents from the room. The third occupant was not in the room at the time of the fire. A security guard who responded to the alarm attempted to extinguish the fire--first with a fire extinguisher and second with a hose which he did not operate properly--but abandoned the attempt when he was overcome by smoke. Two maintenance employees directed water on the fire from a hose operated through a fifth floor window but they could not extinguish the blaze.

The Cicero Fire Department arrived promptly at 6:44 a.m. to the alarm activated by smoke detectors on the fourth floor.

The smoke detectors automatically closed smoke doors at the entrance to the corridor and contained the heat and smoke in the west wing of the nursing home. Although room 421 was adjacent to the smoke doors, residents did not sustain injuries nor did damage occur outside the smoke barrier on the west wing. Eight residents died from smoke inhalation in west wing sleeping rooms where doors to the rooms were open at the time of the fire. Smoke and heat damage also occurred in these rooms and in the corridor. In another west wing sleeping room where the door was closed during the fire, residents did not sustain injuries and little property was damaged.

Officials of the Illinois Fire Marshal's office initially attributed the fire to a faulty electric cord on a nightstand lamp and, at the time of our fieldwork, were continuing to investigate other possible causes.

SEVERITY OF THE FIRES

An official of the Illinois Fire Marshal's office attributed the severity of the fires at Wincrest and Cermak to (1) steadily burning fires, (2) combustion of gases trapped by the upper walls and ceilings in the fire rooms (flashovers), and (3) ejection of flames and lethal smoke from burning plastic and vinyl in the rooms where the fires originated.

At both Wincrest and Cermak, steadily burning fires in freestanding wood wardrobes generated intense heat, resulting in considerable fire damage to the rooms in which the

fires originated. Heavy smoke damaged the corridors, lounge-chapel at Wincrest, and resident rooms with open doors.

At Wincrest most of the fatalities occurred in the lounge-chapel area which did not have a door and into which lethal smoke traveled. The lounge-chapel was not damaged by flames; however, the plastic covers on the ceiling light fixtures were melted by heat.

At Cermak, the fatalities and damage occurred in resident rooms with doors open to the corridor.

The fires at both facilities burned material which generated toxic smoke. At Wincrest, the fire burned vinyl chloride wall and mattress covers. Combustion of vinyl covers generated hydrogen chloride gas, which sears lung tissue. At Cermak, the fire burned polyurethane foam (foam rubber) mattresses. Combustion of foam rubber generates hydrogen cyanide gas. According to experts of the National Fire Prevention and Control Administration of the Department of Commerce, all common combustible materials can generate lethal quantities of carbon monoxide when subjected to fire. Medical evidence was not available to us which could identify the specific products of combustion that were primarily responsible for the deaths.

According to a study made by a nursing home association and an engineering firm under contract to the Department of Health, Education, and Welfare, wood wardrobe fires in simulated nursing facility rooms can cause flashovers within 5 minutes after ignition. The nursing home association and engineering firm based this conclusion on an experiment which they conducted for HEW to test the 1967 Life Safety Code.

COMPLIANCE WITH FIRE SAFETY STANDARDS

In Illinois, the State Fire Marshal's office surveys skilled nursing facilities and the Department of Public Health surveys ICFs for fire safety.

The Illinois Fire Marshal's office has a staff of 44 inspectors to survey SNFs. The inspectors have fire-related backgrounds, such as work experience as firemen or a degree in fire technology. New inspectors receive classroom and on-the-job training, including training in the Life Safety Code, before making inspections. All inspectors receive fire safety training each month.

Inspectors normally spend 1 to 1-1/2 days annually inspecting SNFs for compliance with the Life Safety Code and

76-611 O - 76 - 10

State laws. Inspectors followup on deficiencies at 30-day intervals until they have been corrected.

The Illinois Department of Public Health inspectors make annual health and safety surveys of ICFs. The Department's architectural section has 14 registered architects and 2 engineers who make fire safety surveys. The Department trains its inspectors, using the Life Safety Code, and gives them on-the-job training before placing them in charge of inspections.

While we did not evaluate the quality of the State inspections or the adequacy of training provided to inspectors, we believe that these areas are critical in the enforcement of fire safety requirements in nursing homes, as pointed out in our report, "Many Medicare and Medicaid Nursing Homes Do Not Meet Federal Fire Safety Requirements," MWD-75-46, dated March 18, 1975.

Inspectors usually inspect a facility in 1 day and revisit facilities within a specified period to verify correction of serious deficiencies. Inspectors followup on minor deficiencies by correspondence or during the next annual inspection.

The HEW regional office conducts validation reviews, which are surveys of facilities to insure the adequacy of the State inspections. These validation reviews are made in facilities selected at random. The HEW regional office has one team which surveys, on a random basis, selected facilities from the 3,600 SNFs and ICFs in the region.

The regional office team did not survey either Wincrest or Cermak House because neither home had been included in the survey sample.

In addition, the City of Chicago makes fire safety inspections of SNFs and ICFs. The Chicago Fire Department, Bureau of Fire Prevention, is responsible for inspecting the 129 SNFs, ICFs (including Wincrest), and other types of nursing homes in Chicago. The department uses the Chicago Municipal Code for fire prevention rather than the Life Safety Code. Within the Bureau a specially trained department captain and 11 lieutenants are responsible for inspecting institutional facilities, such as hospitals and nursing homes. The fire department requires lieutenants who are assigned to the Bureau of Fire Prevention to attend a fire safety course at the Chicago Fire Academy.

The results of recent State inspections at Wincrest and Cermak House indicated that both facilities were in substantial compliance with existing fire safety standards.

Wincrest

The Illinois Department of Public Health noted two deficiencies at the Wincrest ICF in its December 1974 fire safety survey. According to Department documents, Wincrest corrected both of the deficiencies in April 1975. Department officials told us in February 1976 that Wincrest had substantially complied with the Life Safety Code at the time of the fire.

The Chicago Fire Department's Bureau of Fire Prevention inspected Wincrest six times in 1975, noted two deficiencies which were corrected in October 1975, and did not note any further fire safety violations in the October, November, and December inspections. According to Bureau officials, Wincrest had no known deficiencies at the time of the fire. The Mayor of Chicago's special investigation committee concluded that Wincrest had complied with exising regulations.

Nurses, nurse's aides, the administrator, two maintenance men, and a priest assisted Wincrest residents during the fire. According to an Illinois Department of Public Health report, Wincrest holds a minimum of 12 fire drills annually, including simulated fire conditions and transmission of fire alarms. According to Chicago Fire Department officials, Wincrest employees responded properly to a simulated fire emergency situation during the December 1975 inspection.

Cermak House

The Illinois Department of Public Health noted 10 deficiencies at Cermak House in its December 1975 fire safety survey. On February 7, 1976, 3 days after the fire, the Illinois Fire Marshal officials, in a special investigation of Cermak House, noted 5 deficiencies under the Life Safety Code and 27 conditions which needed to be corrected under Illinois rules and regulations.

According to Illinois Department of Public Health and Fire Marshal officials, the deficiencies noted in the inspections before and after the fire did not contribute to the ignition or the severity of the fire.

A nurse and nurse's aide, two maintenance men and others assisted residents during the fire.

According to the Illinois Department of Public Health and the Fire Marshal's surveys, Cermak House holds a minimum of 12 fire drills annually, including simulations of emergency fire conditions and transmission of fire alarms.

INVESTIGATION FINDINGS ON SPRINKLER SYSTEMS AND OTHER FIRE SAFETY MEASURES

Sprinkler systems

According to officials of the Illinois Fire Marshal's office, sprinkler systems prevent flashovers because they prevent the accumulation of excessive heat on the upper walls and ceiling. In the opinion of Chicago Fire Department officials, sprinkler systems provide the best fire protection because they signal the fire location and immediately spray 22 gallons of water a minute on fires which activate the system. Fire department officials believe sprinkler systems would have extinguished the fires at Wincrest and Cermak and prevented deaths.

After its investigation of the Wincrest fire, a special panel appointed by the Mayor of Chicago recommended that new requirements immediately be made part of the Building and Fire Ordinance of the City. One requirement was that sprinkler systems be installed in all new and existing nursing homes and be electrically interconnected with the fire alarm system.

On February 4, 1976, the Mayor of Chicago asked the City Council to require all nursing homes to have automatic sprinkler systems. The ordinance was introduced only a few hours after the Cermak fire. On April 7, 1976, this ordinance was approved by the City Council. It requires all Chicago nursing homes to install sprinkler systems by February 1977.

According to an HEW engineer's report on the Wincrest fire, "the only alternative to a well trained staff is a complete sprinkler system, smoke compartments, and smoke detectors." Of the two Chicago area fires, another HEW report stated:

> "The facilities in each case were of fire resistive construction, but failed to provide reasonable protection. There is a need for several fire safety measures which exceed current regulations."

Furnishings

According to a report by an official of the Illinois Fire Marshal's office which was presented at hearings in Illinois, "the Wincrest and Cermak House fires demonstrate that ignition of coverings and furnishings can turn nursing facilities into gas chambers." Other Illinois officials indicated that Federal standards are needed to regulate furnishings used in nursing facilities.

Fire emergency training

Illinois and local (Chicago) municipal officials emphasized the importance of fire emergency training of nursing facility employees. The committee, appointed by the Mayor of Chicago, recommended that nursing facility employees, in addition to existing training programs, be required to participate in formal fire department emergency training every 6 months.

CONCLUSIONS

--Both nursing homes substantially met the Federal fire safety requirements and were classified as fire resistive, but people still died as a result of the fires.

--The building construction adequately confined the flames to the rooms of origin.

--The deaths were caused by smoke and other products of combustion rather than flames.

--The fire departments, which responded promptly to the alarms, were unable to prevent the nursing home deaths.

--Efforts by nursing home staffs to extinguish the fires and prevent the loss of lives were unsuccessful.

--The fires created a lethal environment in a very short time.

--Experts investigating the tragedies said that automatic sprinkler systems would have saved lives in these fires.

CHAPTER 3

AUTOMATIC SPRINKLER SYSTEMS PUT OUT FIRES AND SAVE LIVES

Many studies and reports have concluded that automatic sprinkler systems are effective in putting out fires and saving lives. About one-half of the nursing homes participating in Medicare and Medicaid are not required, because of construction classification, to be protected with automatic sprinkler systems. Historically, nursing home fires resulting in multiple deaths have had two conditions similar to the Wincrest and Cermak House fires--the primary causes of death were smoke and other gaseous products of combustion, and the facilities did not have complete automatic sprinkler systems. Since 1972 several congressional committee reports have recommended that all nursing facilities be fully protected with automatic sprinkler systems. We believe that a strong case can be made for adopting such a proposal.

The cost of installing automatic sprinkler systems will vary with factors such as building size, type of construction, method of installation, and whether installation is in existing buildings or those under construction. In several installations during 1975, the cost ranged from $393 to $625 a bed. The monthly cost of amortizing $625 a bed over a 20-year period at a 9-1/4 percent interest rate is $5.57 a bed each month, or about 19¢ a bed each day.

By installing an automatic sprinkler system, some savings are possible on fire insurance for both the building and its contents. In the Washington, D.C., area, estimates on these savings are up to 30 percent on building coverage and 50 percent on contents insurance, depending on type of construction. In addition, Medicare and Medicaid will bear a share of the cost of sprinkler systems through payments on behalf of program beneficiaries.

CURRENT FEDERAL STANDARDS AND AUTOMATIC SPRINKLERS

The Life Safety Code requires, with some exceptions, that all nursing facilities be fully protected by automatic sprinkler systems. Those nursing facilities classified as 2-hour fire resistive construction or one-story, 1-hour protected noncombustible construction are exempt of the sprinkler requirements. As a result, only about half of the nursing facilities are required by the Life Safety Code to have automatic sprinklers. As pointed out in the previous chapter, both the Wincrest and Cermak House nursing facilities

were classified as having fire resistive construction and, therefore, were exempt from the automatic sprinkler requirements.

As of March 1976, the Department of Health, Education, and Welfare estimated that of the 16,500 nursing facilities participating in either Medicare or Medicaid, about 8,580 were not required to be fully protected with automatic sprinkler systems because of their construction classification, although some facilities might have installed them.

In addition to the exemptions, HEW also has the authority under the Social Security Act to waive the automatic sprinkler requirement in any nursing facility regardless of construction type.

The Office of Nursing Home Affairs could not tell us how many facilities were waived from the automatic sprinkler requirement as of April 1976 because information on such waivers is maintained at the regional offices.

Our report entitled "Many Medicare and Medicaid Nursing Homes Do Not Meet Federal Fire Safety Requirements," (MWD-75-46) dated March 18, 1975, pointed out many problems associated with the waiver procedures. We reported that, of our sample of nursing homes inspected, over 79 percent of the nursing homes granted waivers from the automatic sprinkler requirement did not meet the HEW standards for such a waiver.

We reported that the HEW waiver standards, designed to insure a level of safety equivalent to that provided by automatic sprinklers, have not been established for any type of nursing home, except those of one-story protected wood frame construction. We recommended that HEW establish waiver standards for all types of nursing homes to insure, as required by the Social Security Act, that waivers from the automatic sprinkler requirement would not adversely affect patient safety. HEW did not accept this recommendation on the basis that the propriety of a waiver should be left to the discretion of the State with the approval of the HEW regional office.

STUDIES AND COMMENTS ON THE VALUE OF SPRINKLERS

The National Safety Council and American Nursing Home Association's "Safety Manual for Nursing Homes and Homes for the Aged" states that:

> "Automatic sprinkler systems provide the greatest 'safety to life' feature available in the fire protection field. Not only can they

> automatically sound an alarm, but they will immediately start fighting the fire when activated. Automatic sprinklers are by far the most reliable and effective means of fire extinguishment. Other forms of protective equipment, as well as automatic alarms, have their special place, but none can ever be an effective substitute for automatic sprinkler systems."

According to the National Fire Protection Association, there is no record of a multiple death fire in any nursing home fully protected with an automatic sprinkler system.

During the summer of 1974, the American Health Care Association (formerly the American Nursing Home Association), under contract to HEW, made a series of monitored fire tests, some of which were carried out in an abandoned nursing home near Gary, Indiana. The tests were conducted by a fire safety engineering firm. The purpose of the contract, according to an HEW official, was to validate specific fire protection requirements contained in the 1967 edition of the Life Safety Code applicable to nursing homes.

According to an HEW official, the tests were also intended to provide the basis for policy modifications regarding fire safety standards, for making recommendations for action by HEW, and for suggesting legislative amendments.

During one of the fire tests, with fire department personnel stationed throughout the building, a fire started in a wooden wardrobe burned out of control and destroyed the building. According to the project engineer for the fire safety engineering firm, as the fire developed it traveled into the concealed spaces near the roof, and the fire department could not contain it. It gradually spread through the concealed spaces, then down to the second floor, and eventually worked its way completely through the building. The engineer pointed out that fire in concealed spaces can be very difficult to reach. He said buildings have been lost this way many times throughout the country.

The HEW officials noted that automatic fire sprinklers were not in use for the specific test which resulted in destroying the building. The project engineer pointed out a number of conclusions from the various tests, including:

--Smoke barrier doors were effective.

--Many of the ordinary doors, such as might be found in typical nursing homes, do a good job of containing fires for a short time.

--Automatic sprinklers generally did a good job of controlling and containing the fires. Even where it was arranged so the water from sprinklers could not hit the fires directly, the sprinklers still contained them.

--The fires did not last long enough to be affected even by combustible wall paneling and ceiling tiles when automatic sprinklers were used.

Fire in another Illinois nursing home with sprinklers did not result in deaths

The Plaza Nursing Home fire occurred on February 18, 1976. The Plaza Nursing Home, a skilled nursing facility in Niles, Illinois, can accommodate 300 residents. At the time of the fire, 224 residents, including both Medicare and Medicaid patients, occupied the home.

A nurse's aide noted smoke and a burning mattress in room 421 (no one was in the bed) and, with a nurse's assistance, evacuated the three occupants of the room. The nurse activated a pull-box alarm and closed the room door. The fire activated one of two sprinklers in the room which sprayed water on the fire. The sprinkler extinguished the fire before the firemen arrived, which was shortly after the alarm.

The fire did not cause any deaths or injuries to residents at the Plaza Nursing Home. Fire damage was confined to the mattress and little, if any, heat or smoke damage occurred.

The Fire Chief attributed the absence of injuries and the prompt control of the fire to the sprinkler system and the quick employee response. Because the fire was promptly controlled, it did not generate sufficient heat (160 degrees Fahrenheit) to activate the second sprinkler in the room.

An official of the Illinois Fire Marshal's office attributed the cause of the fire to the careless use of smoking materials by a resident.

FIRE RESISTIVE NURSING HOMES DO NOT INSURE LIFE SAFETY

The two nursing home fires in the Chicago area demonstrate that deaths do occur because of fire, even in fire resistive buildings. Moreover, there are other examples of fire resistive nursing homes which have had fires resulting in multiple deaths. Congressional committees have investigated these fires and used this information as the basis for

their recommendations for automatic sprinklers. (See apps. II and III.)

Causes of death in nursing home fires

The causes of death in the Wincrest and Cermak House fires were the same as other fires involving multiple deaths--smoke and toxic gases. There were similarities between these two fires and four other nursing facility fires in Marietta, Ohio; Buechel, Kentucky; Madison, Wisconsin; and Wayne, Pennsylvania, studied by the Senate Subcommittee on Long-Term Care. (See app. III.) All of these facilities were classified as fire resistive and smoke and other products of combustion, rather than flames, caused multiple deaths.

In 1972, after its investigation of multiple death nursing facility fires, the House Committee on Government Operations reported in House Report 92-1321 that most fire deaths in nursing homes were caused by asphyxiation resulting from toxic gases, rather than actual burns. In 1975 the Senate Special Committee on Aging reported in Senate Report 94-00 that nursing home patients present a particular problem because of their reduced tolerance to heat, smoke, and gases and that many patients are under sedation or bound with restraints. The Senate Committee reported that despite the importance of smoke as the major cause of fire deaths in the United States, there are no national standards governing the smoke generation properties of furnishings, including carpets and floor coverings. (See app. II.)

Following the January 1970 Marietta fire, the following quote was included in the "Fire Journal": "Had the building been equipped with an automatic sprinkler system, all the victims could have been saved." After the Buechel fire, the publication stated: "If the entire building (not just the rubbish and laundry chutes) had been protected with an automatic sprinkler system, the fire could have been confined to the room of origin, with very little smoke or fire damage."

CONGRESSIONAL COMMITTEES HAVE RECOMMENDED SPRINKLERS IN NURSING HOMES SINCE 1972

The matter of the safety of elderly and disabled patients in nursing facilities has been a subject of considerable congressional concern for many years. Congressional committees studying this problem have historically advocated a requirement that all long-term care facilities be fully protected with automatic sprinkler systems. (See app. II.)

In its report of August 9, 1972 (House Report 92-1321), the House Committee on Government Operations concluded that the best means of avoiding multiple death fires is to construct complete automatic sprinkler systems which will also transmit an alarm to the nearest fire service.

Based on its investigation and conclusions, the Committee recommended legislation requiring all nursing facilities, as a condition for eligibility under Medicare and Medicaid, to be equipped with an automatic sprinkler system.

Upon completion of additional studies of nursing home fire safety, the House Committee on Government Operations issued a second report (House Report 93-1627) on December 18, 1974, which reiterated its earlier recommendation that all nursing homes, regardless of the type of construction, be equipped with automatic sprinklers.

The Senate Special Committee on Aging issued a report (Senate Report 94-00) on nursing home fires in August 1975. The report recommended that all States should enact legislation requiring automatic sprinkler systems in each of their long-term care facilities.

THE COST OF AUTOMATIC SPRINKLER SYSTEMS

The cost of installing an automatic sprinkler system will vary with the size and type of facility and depend on whether it is of new or existing construction. However, to examine the impact of requiring all nursing homes to install sprinkler systems, we are presenting general data obtained regarding the cost of sprinklers. In February 1976 we discussed the cost of installing a complete sprinkler system with a representative of the National Automatic Sprinkler and Fire Control Association. According to the representative, the installation of a complete sprinkler system, including pumps, valves, piping, and alarms, would cost from 75¢ to $1.25 a square foot while constructing a building. Installation in an existing building would cost from $1 to $1.50 a square foot. Variables include whether the pipes were to be concealed or exposed, whether the sprinkler heads were to be recessed, and the availability of a water supply (that is, is a reservoir necessary), etc. In April 1976 we obtained data from seven sprinkler installation companies in the Washington-Baltimore area. According to their estimates, a sprinkler system might cost between 50¢ and $1.75 a square foot in an existing facility. Actual installations during 1975 in four existing nursing facilities, three in Ohio, and one in Minnesota, showed costs ranging from $393 to $625 a bed, as follows:

Facility	Number of beds	Square feet	Total HEW approved cost of sprinkler system	Cost per bed	Cost per square foot
1	30	12,100	$18,744	$625	$1.55
2	34	16,481	20,070	590	1.22
3	100	35,484	42,850	429	1.21
4	150	48,040	58,917	393	1.23

Sprinkler systems may cost about $5.57 a bed each month

Using the highest actual cost per bed, the monthly cost of amortizing $625 a bed over a 20-year period with a 9-1/4 percent interest rate is $5.57 a bed each month, or about 19¢ a bed each day.

According to the National Fire Protection Association, automatic sprinkler heads need replacement at the end of 50 years. However, financing sprinkler system installation over a period of more than 20 years does not seem likely. Consequently, our computation shows the monthly payment expected over the term of a 20-year loan.

Savings for nursing facilities with sprinkler systems

Although fire insurance rates vary among States, savings are possible on both building coverage and contents insurance when nursing facilities are protected by automatic sprinkler systems. We obtained information on the general rates in Maryland and Washington, D.C., and found that savings of about 30 percent are possible on building coverage and 50 percent on contents insurance.

According to a representative of the Insurance Services Office of Maryland, a rating bureau under the jurisdiction of the State Insurance Commission, fire insurance premiums would be less because of the installation of automatic sprinklers in nursing facilities. With regard to fire insurance on the building, he said the rate per $100 of insurance is about 8¢ without sprinklers in ordinary construction and about 6¢ with sprinklers, for a reduction of about 25 percent. In protected wood frame construction, he said the fire insurance rate per $100 of insurance is about 16¢ without sprinklers and about 11¢ with sprinklers, for a savings of about 30 percent.

According to a representative of the Insurance Rating Bureau of Washington, D.C., building contents insurance

premiums could be reduced by as much as 50 percent by installing automatic sprinkler systems. He quoted rates for nursing facilities of frame, ordinary, and fire resistive construction. He stated that in buildings of frame construction, the building contents insurance rate per $100 of insurance is about 71¢ without sprinklers and 45¢ with sprinklers, for a reduction of about 37 percent. In ordinary construction, he said the building contents rate per $100 of insurance is about 50¢ without sprinklers in contrast to about 30¢ with sprinklers, for a savings of about 40 percent. For fire resistive construction, he quoted a building contents insurance rate per $100 of insurance of about 20¢ without sprinklers and 10¢ with sprinklers, for a reduction of about 50 percent.

To illustrate the annual savings on fire insurance premiums due to the installation of an automatic sprinkler system, consider a hypothetical example of a protected wood frame facility insured for $500,000 on the building and $100,000 on the contents. Without a sprinkler system the facility would pay about $800 for building insurance at 16¢ per $100 of coverage and about $710 for contents insurance at 71¢ per $100 of coverage, for a total annual cost of about $1,510. With a sprinkler system the facility would pay about $550 for building insurance at 11¢ per $100 of coverage and about $450 for contents insurance at 45¢ per $100 of coverage, for a total annual cost of about $1,000. In this hypothetical example, the installation of an automatic sprinkler system would result in annual savings for fire insurance in excess of $500.

Medicare and Medicaid will help pay for automatic sprinklers

Nursing facilities participating in either Medicare or Medicaid will be reimbursed for part of the cost of automatic sprinkler systems through interest and depreciation.

Medicare facilities receive reimbursement for all allowable costs associated with the use of the facilities by Medicare patients. Medicare regulations (20 CFR 405.415) provide that an appropriate allowance for depreciation on building and equipment is an allowable cost. Consequently, Medicare will reimburse facilities for the cost of automatic sprinkler systems over a period of time, suggested as 25 years, based on the number of Medicare patients. In addition, Medicare regulations (20 CFR 405.419) provide that interest on both current and capital indebtedness is an allowable cost. As a result, part of the interest paid each year on sprinkler system loans can be reimbursed under Medicare.

Medicaid is required to reimburse facilities on a cost-related basis as of July 1, 1976. Under HEW proposed regulations, dated April 7, 1976, to implement this requirement, depreciation and interest may be included in the determination of costs, based on Medicaid patient utilization of the facility.

Over the long run, since depreciation and interest are allowable costs under both Medicare and Medicaid, part of the costs of installing automatic sprinkler systems in nursing facilities will be paid by Medicare and Medicaid. Medicare is all federally funded and Medicaid is funded by Federal, State, and local governments.

The actual amounts to be paid by Medicare and Medicaid will vary among facilities depending on the number of residents covered by the programs. However, according to a report from the Social Security Administration, Medicare and Medicaid paid over 55 percent of the national health expenditures for nursing home care during fiscal year 1975.

These expenditures include services in SNFs, ICFs, and all other homes providing nursing care.

CONCLUSIONS AND RECOMMENDATIONS TO THE CONGRESS

As a result of the investigations of multiple death nursing facility fires, a strong case can be made for a requirement that all nursing facilities, regardless of construction type, be fully protected with an automatic sprinkler system. Therefore, we recommend that the Congress enact legislation which will require that all nursing facilities be fully protected with an automatic sprinkler system.

From a practical perspective, however, we recognize that in some cases, such a requirement could result in unreasonable hardships, and some facilities may be unable to comply with a requirement for automatic sprinklers. Since such factors may exist, the waiver provision of the Social Security Act should be applied only in specific cases and only when approved by personnel qualified in fire protection engineering. HEW policy should be to make every effort to avoid waivers and to assure installation of complete sprinkler protection in all nursing homes.

The waiver provision of the Social Security Act allows a waiver if the enforcement of the fire safety requirement would result in an unreasonable hardship, but only if the waiver would not adversely affect patient health and safety.

Because of HEW's improper treatment of its existing waiver authority, as discussed in our 1975 report, and its lack of acceptance of the need for waiver standards for all types of construction, the Congress should require that HEW establish waiver standards which must be rigidly enforced before a waiver may be granted to any facility, regardless of construction type. This should help insure that the waiver will not adversely affect patient health and safety and will be applied in a uniform manner throughout the country.

CHAPTER 4

LITTLE USE MADE OF FEDERAL LOAN INSURANCE PROGRAM FOR NURSING HOME FIRE SAFETY EQUIPMENT

There are a number of ways nursing home owners can finance the cost of installing automatic sprinkler systems, including equity capital of the owner, commercial borrowing, mortgage financing, and federally insured loans. While we do not know why the federally insured loan program has not been successful, we believe that the Department of Health, Education, and Welfare's long processing time and the Department of Housing and Urban Development's position of not insuring loans for projects which have already started contribute to the problems facing nursing facilities applying for Federal loan insurance.

FEDERAL LOAN INSURANCE PROGRAM HAS NOT BEEN UTILIZED

In its August 9, 1972, report (House Report 92-1321), the House Committee on Government Operations concluded that, unless the Federal Government provided a mechanism for insuring loans for automatic sprinkler systems, not all facilities would be able to finance such systems. The Committee recommended that the appropriate congressional committees consider legislation to provide insurance for long-term loans made for installations of sprinkler systems as a means of assisting facilities in obtaining such financing.

As a result, on December 28, 1973, Public Law 93-204 was enacted, which authorized the Secretary of HUD to insure loans made to nursing facilities for the purchase and installation of fire safety equipment. This law amended section 232 of the National Housing Act which is designed to provide mortgage insurance for nursing homes.

In October 1974, 10 months after the law was approved, the Secretary of HUD and the Acting Secretary of HEW entered into an agreement for administering this section of the National Housing Act. HUD and HEW agreed to the allocation of functions, as well as policies, procedures, and joint working arrangements, for administering the loan insurance program. Applications for insurance would be processed as follows:

--HEW would furnish HUD a copy of the approved architectural exhibits and a determination that, with the installation of the equipment, the facility would meet the Life Safety Code or any other code required for Medicare or Medicaid certifications.

--HEW would advise HUD that the proposed cost of the installation of the fire safety equipment was reasonable.

--HUD would process the applications and issue a commitment and insure the loan on the basis of the analysis of the HUD underwriting staff.

--HEW would inspect the installation and notify HUD that the improvements had been satisfactorily completed.

--HUD would reimburse HEW for the services rendered under the agreement.

According to HUD, the following terms had been established for insuring such loans:

--$10,000 minimum loan.

--Annual interest rate not in excess of 9-1/4 percent.

--Annual loan insurance premium of 1 percent.

--Maturities of 5, 10, or 15 years. On loans of $50,000 or more, a maturity period of 20 years.

In a March 12, 1975, letter to all approved lenders, HUD pointed out that "it is crucial that this program be implemented quickly." The letter said "the program needs the support of the financial community to make the important goals of this new law a reality. Processing of these loans by our field offices will be given prompt attention."

According to HUD officials, there have not been any loans approved under Public Law 93-204. As of late April 1976, only one application had been sent to HUD and this was disapproved because the facility did not meet HUD financial requirements (relating to loan repayment).

76-611 O - 76 - 11

Little interest in the loan insurance program

According to HEW officials, there has been relatively little interest in the Federal loan insurance program for fire safety equipment. The following table reflects the low interest level and shows a concentration of inquiries in the Chicago region. This region includes Ohio which, on December 30, 1972, enacted a State law requiring nursing homes to install automatic sprinkler systems by January 1, 1975 (later extended to Janaury 1, 1976). This data, as of April 1976 (except for the Chicago regional office which was September 1975), was provided by HEW for 5 of its 10 regions. Information on the other regions was not available.

	HEW Regions				
	Boston	Philadelphia	Atlanta	Chicago	San Francisco
Number of inquiries to HEW	5	2	9	159	27
Number of applications received by HEW	0	0	2	10	11
Number of applications sent to HUD	0	0	1	a/4	0
Number of applications not approved by HEW	0	0	b/1	b/6	b/11
Number ot applications disapproved by HUD	0	0	1	0	0

a/In each of these cases the applicant withdrew before the application had been processed through the lender. HUD does not begin its processing until it receives an application from an approved lending institution.

b/These applications were not approved by HEW because work had begun and HUD would not insure loans for such projects.

HEW officials told us that the only application HUD acted on resulted in a disapproval because the facility did not meet HUD financial requirements relating to the ability of the nursing facility to repay the loan. Applications received by HEW and not forwarded to HUD were applicants who withdrew. The reason for the withdrawal was that they had begun work and HUD would not provide loan insurance for projects already begun.

According to HEW officials, nursing facilities did not apply, or withdrew their applications, because the program offered no advantage over conventional loans and involved much more paperwork and time. These officials said the insured loan program came too late to be helpful because most nursing facilities had already begun to make the necessary corrections as a result of the HEW and State enforcement efforts. They pointed out that HEW had been insisting on the correction of serious fire safety deficiencies before the enactment of the loan insurance program.

These officials said that because the interest rate on these loans was no better than could be obtained without the HUD guarantee, nursing facilities obtained needed financing through conventional means.

The HEW officials told us that it is unlikely that many nursing facilities will use the program in the future unless there are clear advantages, such as low interest rates. If the program is used in the future, they said it could be improved by simplifying the process of obtaining HEW and HUD approval.

HEW processing time

According to the Associate Director of the HEW Office of Nursing Home Affairs, it takes HEW more than 3 months to process applications for insured loans. This, he said, is too long for the nursing home operators to wait to begin loan negotiations with lending institutions. The official said the time period was long because HEW engineers needed to obtain all necessary information, to review and approve architectural plans, and to evaluate cost estimates. He pointed out that each regional office has a limited number of engineers and much demand for their services; the regional offices are simply overloaded with other work. Accordingly, the regional office staffs have been slow in processing applications for insured loans.

He also pointed out that the number of applications to HEW for such insured loans has been limited. Although a

number of inquiries have been received, very few result in actual applications for the program.

We examined the number of applications received in the Chicago regional office of HEW. Of approximately 159 inquiries, as of September 1975, in the program, HEW received only 10 applications. In six of the cases, HEW refused to process the applications because the nursing home owners had already started to correct their fire safety deficiencies.

According to a January 28, 1975, HUD memorandum to the Director of the HEW Office of Nursing Home Affairs, HUD would not insure a loan after work had started on installing the fire safety equipment or in making repairs.

The remaining four cases all resulted in the installation of sprinkler systems, but not with HUD-insured loans. In two cases, the owners told us that they became so frustrated because of the time HEW was taking to process the applications that they went ahead and obtained commercial financing. In another case, the owner told us that he could not find a lending institution willing to make the insured loan because the insured loan interest rate was too low at the time, and the banks were reluctant to make such loans to a nursing home. The owner then obtained an adjustment to his existing mortgage to finance the sprinkler system. In the fourth case, the owner said HUD wanted him to make extensive repairs to the roof which were not required by HEW. According to HUD officials, the repairs were suggested rather than required, and they were willing to begin processing the loan guarantee without such repairs. However, the owner withdrew his application and obtained financing elsewhere.

In all four cases the processing time by the HEW Chicago regional office took from 6 to 8 months as shown on the following page.

Long processing time can be a problem

HEW regulations provide that a nursing facility's certification will be automatically canceled no later than 60 days after the date established for the correction of health or safety deficiencies unless all deficiencies are corrected or substantial progress has been made in correcting the deficiencies. HEW guidelines define "substantial progress" to mean that corrections are well underway and that there is tangible and visible evidence of progress made. If the only progress by the facility has been a loan application,

according to the guidelines, this would not be substantial progress sufficient to prevent the automatic cancellation.

Facility	Date of application	Date of HEW approval	Approximate processing time
Nursing Facility A (30 bed ICF) Felicity, Ohio	1-13-75	7-21-75	6 months
Nursing Facility B (100 bed SNF) East Cleveland, Ohio	12-09-74	7-31-75	8 months
Nursing Facility C (150 bed SNF/ICF) Cincinanti, Ohio	2-04-75	8-15-75	7 months
Nursing Facility D (34 bed ICF/MR) Minneapolis, Minnesota	2-03-75	8-20-75	7 months

According to the HUD procedures, a loan cannot be insured under the program after work has started. An official said HUD believes that the law establishing the loan insurance program does not authorize insurance for loans for previously purchased fire safety equipment. He said that if work had begun, the purchase was considered to have been made and the loan would be for a retroactive project.

An illustration of the problems facing nursing facilities is the actual case of nursing facility D in Minneapolis. In January 1975 the facility was cited by the State survey agency as requiring an automatic sprinkler system to be in compliance with Federal fire safety requirements. At that time, an automatic cancellation date was established as September 1975, which was 60 days after the planned correction date. In February 1975 the facility applied through HEW for a federally insured loan to pay for the sprinkler installation. HEW approval of the loan insurance application was not received until mid-August 1975. Very little time remained for the facility to locate a lending institution, negotiate a loan, process the HUD application, obtain a sprinkler contractor, and begin work before the certification of the facility would be automatically canceled in September. Because of the long processing time, the facility obtained financing through other means during September 1975.

Causes of delays in HEW processing

The Deputy Director, HEW Chicago regional Office of Long-Term Care said the office believes that it is necessary for HEW engineers to physically inspect the facilities before the loan insurance applications can be processed to certify to HUD that the facility will meet Federal fire safety requirements. She said that because of past experience with the quality of State inspections in Ohio and Minnesota, HEW engineers were reluctant to rely on the State Life Safety Code surveyors. She pointed out that neither Ohio nor Minnesota use engineers or architects to make fire safety inspections. In the cases of the four facilities approved by HEW for HUD-insured loans, deficiencies were found at each facility by HEW engineers which were not identified by the State inspectors. At nursing facilities B and C, the State inspectors identified no fire safety deficiencies, although the HEW engineers noted several deficiencies in meeting the fire safety requirements. At facilities A and D, the State inspectors cited some fire safety deficiencies; the HEW engineers found several additional deficiencies.

She said also that the processing time by HEW includes the onsite inspection by HEW engineers and evaluation of architectural drawings and exhibits. In addition, HEW evaluates cost estimates from sprinkler contractors. These documents must be obtained from the facilities. In the four cases reviewed by the Chicago office, several letters were sent to the facilities requesting this information, which delayed the final approval of the applications.

HUD did not publicize the loan program

In April 1975 HUD published a brochure entitled, "Nursing Home Mortgage Insurance," which explains that the program under section 232 of the National Housing Act is designed to foster the construction of new nursing homes and the rehabilitation of existing ones. The brochure did not mention the availability of loan insurance for the purchase and installation of fire safety equipment as provided in section 232(i) of the act. The brochure did not publicize the loan insurance program or explain the eligibility requirements, the amounts available, the conditions, fees and charges, special requirements, and application instructions.

We believe that the brochure should have included a section explaining the availability of insurance for loans for fire safety equipment.

HOW TO IMPROVE THE
LOAN INSURANCE PROGRAM

The HUD loan insurance program could be a viable source of assistance to nursing facility owners in obtaining financing for automatic sprinkler systems. We believe the problems encountered in the loan insurance program for fire safety equipment rests both with HEW's processing procedures and HUD's position of not insuring loans on projects which have already been started.

To alleviate the difficulties encountered by HEW, we believe that both HEW and HUD should evaluate the loan application processing procedures to reduce the need for HEW's detailed review and inspection.

Currently, HEW receives copies of the State inspection reports which indicate nursing facility deficiencies in the fire safety requirements. In addition, HEW receives copies of the plans for correction, which, when completed, should bring the facility into compliance with Federal fire safety requirements. Consequently, it seems that these documents could satisfy the need to certify that correction of the fire safety deficiencies should result in compliance with Federal fire safety requirements because Medicare and Medicaid certification is contingent upon the approved correction of such deficiencies. With regard to the certification of reasonable cost estimates by HEW, it seems that this function could be more efficiently accomplished by HUD personnel, since they deal with estimating costs in other types of construction projects. The certification of reasonable cost could be made part of the HUD underwriting procedures and thereby reduce HEW's processing time.

To solve the problem experienced by nursing facilities denied loan insurance applications because work has previously started, we believe HUD should reconsider its position of not insuring loans for ongoing work. Nursing facilities can be under strict time constraints to correct fire safety deficiencies or be faced with the possibility of having their certification canceled. It would seem to be in the interest of patient safety to have the corrections made as soon as possible. In some cases work could be started while the loan insurance application is being processed.

The Chairman of the House Committee on Banking and Currency pointed out in a letter that the Housing and Community Development Act of 1974 (Public Law 93-383) provided additional statutory authority to HUD to assist in the

financing of fire safety equipment. He stated that in his opinion, the authority contained in section 309 of the 1974 Act could be used to assist in the financing of fire safety equipment which has been, or is in the process of being, installed. A HUD attorney told us that the provision cited by the Chairman was not operational because implementing regulations have not been published.

Title I, section 2 of the National Housing Act authorizes the Secretary of HUD to insure loans made by approved lending institutions for financing alterations, repairs, and improvements on or in existing structures. The Housing and Community Development Act of 1974, section 309, added fire safety equipment to eligible improvements. This section further specifies fire safety equipment in nursing facilities. Based on our review of this section, we believe that it permits the Secretary to insure loans already in existence for work which has begun or been completed.

CONCLUSIONS

The Federal insurance program for fire safety equipment loans has not been successful in assisting nursing homes in installing automatic sprinkler systems. The program could be more effective if HEW and HUD establish procedures to minimize loan insurance eligibility processing time and encourage lenders to make fire safety equipment loans. HEW and HUD should publicize the Federal loan insurance program.

RECOMMENDATIONS

We recommend that the Secretary of HEW:

--Review the current loan application processing procedures with HUD and establish procedures for HEW to provide HUD with:

  (1) Copies of State inspection reports to substantiate the violations of Federal fire safety requirements and the need for correction.

  (2) Copies of the approved plans for correction, which should indicate that correction of the cited deficiencies should bring the facility into compliance with Federal fire safety requirements.

--Eliminate the need for HEW to certify the reasonableness of the cost estimate for the installation of fire safety equipment.

We recommend that the Secretary of HUD:

--Establish regulations to permit fire safety equipment loan insurance after the work has begun.

--Publicize the availability of the fire safety equipment loan insurance program by revising the nursing home brochure dealing with nursing home mortgage insurance.

AGENCY COMMENTS

Because congressional hearings were scheduled, the Chairman's office requested that we not delay the report to get formal comments from HEW and HUD. However, we did give both agencies an opportunity to review our findings, conclusions, and recommendations. Informal comments from agency officials were considered where appropriate in this report.

In addition, we discussed the contents of the report with representatives of the National Fire Protection Association and the Department of Commerce's National Fire Prevention and Control Administration who agreed with our recommendations to the Congress. Their comments are included in appendixes VI and VII.

SELECT COMMITTEE ON AGING
SUBCOMMITTEE ON HEALTH AND LONG-TERM CARE
715 HOUSE OFFICE BUILDING ANNEX 1
Washington, D.C. 20515
(202) 225-2381

February 20, 1976

Mr. Elmer B. Staats
Comptroller General
General Accounting Office
441 G Street
Washington, D. C. 20548

Dear Mr. Staats:

Our Subcommittee and the Senate Subcommittee on Long-Term Care intend to hold a hearing in Chicago on the recent tragic nursing home fires in that city killing approximately 20 persons. Your recent reports on the subject of nursing home fires and your staff's expertise in this area are well known to me.

I would greatly appreciate your assistance in investigating the reasons for the severity of the fires and your suggestions as to possible curative actions to avoid future similar situations. In addition, please investigate:

--- whether a sprinkler system throughout the facilities would have put out the fires or lessened the severity;

--- whether the facilities in Chicago meet the life safety code requirements for participation in the Medicare program;

--- H.E.W.'s enforcement of fire safety standards in Chicago and elsewhere;

--- the accuracy of state inspections of the Chicago facilities in question and of H.E.W.'s validation;

--- the state inspection procedure, including the qualifications of the inspectors;

--- the quality of trained personnel assisting patients during the fires;

--- H.U.D.'s implementation of P.L. 93-204, authorizing insured loans to provide fire safety equipment for nursing homes and intermediate care facilities, both in Chicago and elsewhere;

APPENDIX I

--- finally, any additional matters which, in your judgement, would assist our Subcommittee in its assessment of the fires and possible action.

Kindest regards, and

Believe me,

Always sincerely,

Claude Pepper
Chairman
Subcommittee on Health and Long-Term Care

CP:ke

SUMMARY OF PERTINENT CONGRESSIONAL COMMITTEE REPORTS ON FIRE SAFETY IN NURSING HOMES

HOUSE COMMITTEE ON GOVERNMENT OPERATIONS--1972

House Report 92-1321, "Saving Lives in Nursing Home Fires," published August 9, 1972, by the House Committee on Government Operations was a part of the study on the problems of the aging begun in the latter part of 1971 by the Special Studies Subcommittee. The findings reported by the Committee included:

--In the 20 years from 1951 through 1970 a total of 496 deaths in nursing home fires were reported where multiple deaths occurred, for an annual average of 25 deaths. In 1971 there were 38 such deaths and for the first half of 1972, 30 deaths had occurred.

--The combination of a sparse night staff and aged residents, of whom 50 percent are disoriented and 40 percent are partially or totally nonambulatory, renders infeasible the successful evacuation of residents in case of a fire at night.

--The use of a fire detection alarm system connected to the nearest fire department may serve to avoid a total loss of life, but it still does not prevent, as recent fires had shown, a large number of deaths occurring, notwithstanding an extremely prompt response by the alerted fire department.

--Even fire resistive or protected noncombustible construction does not prevent contents fires in such structures. In fact, if such construction is not carefully executed, or if at the time of a fire, doors are not closed, then such construction will not stop a fire from spreading, as demonstrated by the nursing home fires in Marietta, Ohio, in 1970 and in Buechel, Kentucky, in 1971.

--Since most fire deaths in homes for the aged are caused by asphyxiation resulting from toxic gases rather than being caused by actual burns, the increased use of fire retardant materials and substances, which basically result in incomplete combustion produce toxic gases, may in the opinion of one

expert, increase the hazard of death in fires rather than reducing it.

--According to the National Safety Council and the American Nursing Home Association, automatic sprinkler systems installed throughout a facility, not only in hazardous areas, provide the greatest "safety to life" factor available in the fire protection field, because they can automatically sound an alarm and immediately start fighting the fire when activated. When activated, they are the most reliable and effective means of fire extinguishment. Other forms of protective equipment, including automatic alarms, are not effective substitutes for automatic sprinkler systems.

--This is basically the position of the National Fire Protection Association, which has voted to require early warning detection and automatic sprinklers in all new and existing nursing homes, regardless of the type of construction.

--The Fire Marshals Association of North America, which has within its membership all of the State Fire Marshals as well as those serving local government, adopted a resolution in its 1965 convention endorsing the principle of complete automatic sprinkler systems for all institutions and homes caring for the aged, regardless of construction type, detection systems, or other protection.

--The Joint Commission on Accreditation of Hospitals, in its standards of accreditation for nursing care and resident care facilities, agrees with this view and recommends that every facility be provided with a complete automatic sprinkler system.

--The best means of avoiding multiple death fires is the construction of complete automatic sprinkler systems which will also transmit an alarm to the nearest fire service.

--The cost of installing an automatic sprinkler system in an existing structure will necessarily be more than the cost of including it in new construction. The Committee has, from figures received by it, concluded that the average installation cost will be about $800 a bed for existing construction. Amortization of such installation costs on a 20-year basis, at 8 percent, comes to an annual charge of approximately $80.

--Unless the Federal Government provides a mechanism for insuring such loans, not all facilities will be able to finance sprinkler system installation costs.

Recommendations

The House Committee on Government Operations made specific recommendations in its August 9, 1972, report (House Report 92-1321) including:

--The appropriate congressional committees should consider legislation requiring that, as a condition for eligibility under Medicare or Medicaid or for housing the aged receiving old age assistance payments, each institutional facility for the aged (no matter what its name and even if not licensed under State law as a nursing home or related health care facility of some type) must have a complete automatic sprinkler system which will also transmit an alarm to the nearest fire service. No facility should be deprived of its existing Medicare or Medicaid eligibility unless it fails to comply within a reasonable period of time.

--The appropriate congressional committees should consider legislation to provide insurance for long-term loans made for installations of such sprinkler systems as a means of assisting facilities in obtaining such financing. (This legislation was enacted as Public Law 93-204, approved Dec. 28, 1973.)

HOUSE COMMITTEE ON GOVERNMENT OPERATIONS--1974

House Report 93-1627, "Fire Safety Deficiencies in Nursing Homes," published December 18, 1974, by the House Committee on Government Operations, was a continuing part of the study of problems of the aging by the Special Studies Subcommittee. The findings reported by the Committee included:

--A staff survey of Medicare facilities disclosed that half of the "unsprinklered" protected ordinary construction nursing homes housed above the street level floor, contrary to HEW regulations, blind nonambulatory or physically disabled patients. It also showed that two-thirds of the unsprinklered protected noncombustible homes also housed such patients above the street level floor.

--Under its authority to grant waivers of certain requirements under the Life Safety Code, HEW had adopted a system that had resulted in nursing facilities

receiving Federal funds, even though they had not met statutory safety requirements.

--HEW prescribed sprinkler equivalency standards in 1972 for only one class of construction--protected wood frame--leaving the granting of a waiver a matter of discretion for other types of construction. Protected ordinary construction alone accounts for almost one-third of the unsprinklered Medicare homes on HEW's Bureau of Health Insurance records.

--A sampling of homes operating under a waiver of the sprinkler requirement disclosed that 85 percent did not meet the four equivalency standards prescribed in HEW regulations.

--The same survey found that homes were granted waivers on the basis of plans to meet the HEW requirements, even though HEW policy is to grant waivers only when the four equivalency requirements are satisfied.

Recommendations

The House Committee on Government Operations made specific recommendations in its December 18, 1974, report (House Report 93-1627) including:

--The Committee reiterates its earlier recommendation that all nursing homes, regardless of the type of construction, be equipped with automatic sprinklers.

--Pending sprinklering of all such facilities, HEW should act to insure that homes presently permitted to operate without sprinklers because of construction type actually meet the Life Safety Code requirements for such construction type.

--Likewise, nonambulatory, blind, or physically disabled patients should not be housed above the first floor of any non-fire resistive structure which does not have an automatic sprinkler system.

--Waivers permitting homes to operate without sprinkler systems should not be granted to any facility, regardless of construction type, that does not meet the HEW equivalency standards.

SENATE SUBCOMMITTEE ON
LONG-TERM CARE--1975

Senate Report 94-00, "Nursing Home Care in the United States: Failure in Public Policy, Supporting Paper No. 5, the Continuing Chronicle of Nursing Home Fires," published in August 1975 by the Subcommittee on Long-Term Care, Senate Special Committee on Aging, stated:

--Older Americans make up 10 percent of the population but 30 percent of the deaths by fire. They are involved in 59 percent of all clothing fires, having a 73 percent mortality rate in such fires, as compared to 23 percent for younger persons.

--Nursing home patients present a particular problem because of several factors: (1) their advanced age (average 82), (2) their failing health (average four disabilities), (3) their mental disabilities (55 percent are mentally impaired), (4) their reduced mobility (less than half can walk), (5) their sensory impairment (loss of hearing, vision, or smell), (6) their reduced tolerance to heat, smoke, and gases, and (7) their greater susceptibility to shock.

--Despite much progress in recent years, nursing homes and related facilities still rank number one on the list of unsafe places to be in case of a fire.

--In 1973 there were 6,400 nursing home fires (17.5 each day of the year), causing $3.6 million in damage. An estimated 500 persons lost their lives in single death institutional fires. Fifty-one persons lost their lives in multiple death fires (those killing three or more). These figures represent sharp increases from 1971, when there were 4,800 fires and 31 persons killed in multiple death fires.

--Because nursing home patients often cannot take action to protect themselves in case of fire, they must rely upon the help of others. In most cases such help has not been available. There are few nursing personnel available (particularly at night), and most are untrained in rescue and firefighting techniques. Compounding the problem, many patients are under sedation or bound with restraints.

--Because the elderly cannot protect themselves and because nursing home personnel often prove incapable of taking action to save them in case of fire, automatic

detection, alarm, and extinguishment equipment are recommended. Sprinkler systems, while far from a panacea, are, by and large, the difference between life and death.

--Greater emphasis must be placed on the installation of fire-retardant furnishings. Too often fire resistive buildings are constructed only to be filled with flammable carpets, curtains, vinyl upholstery, and the like. There is no emphasis on the hazard of smoke production or on the effect of toxic gases on humans. Recent research demonstrates that deadly gases such as phosgene and cyanide are released when various plastics, acrylics, and nylons are burned. Many such products are found in nursing homes.

--Over the years, 33 percent of all nursing home fires have been caused by smoking or matches; heating or electrical problems followed next with 18 and 15 percent, respectively. Eight percent were labeled "suspicious"--a suggestion that arson was the fire's cause. Fires most frequently begin in patient rooms (35 percent) and most often take place from midnight to 6 a.m. (42 percent). About 35 percent of all nursing home fires occur in wood frame buildings; only 3 percent occur in fire resistive buildings.

Recommendations

In its August 1975 report, (Senate Report 94-00) the Senate Special Committee on Aging made several recommendations, including:

--Nursing home providers and State and Federal Government officials must work together to create an all-out effort to eliminate serious fire loss in nursing homes and related facilities. This coordinated attack must proceed on every level, encompassing the latest technology with respect to fire prevention, detection and alarm, and confinement and control.

--HEW needs to insure that States follow its procedures in recommending waivers.

--All States should enact legislation requiring automatic sprinkler systems in each of their long-term care facilities.

--Legislation should be enacted to help nursing homes repair and renovate to meet Federal minimum standards.

--State and Federal fire safety officials should place greater emphasis on the flammability of nursing home furnishings.

--A greater research effort is needed with respect to the adequacy and appropriateness of current fire safety protection for nursing home patients. Smoke production standards should be created. State and Federal policymakers should place much greater emphasis on the toxicological effects of fire on humans.

DETAILS OF OTHER FIRE RESISTIVE NURSING FACILITY FIRES INVOLVING MULTIPLE DEATHS

The 1975 report (Senate Report 94-00) by the Senate Special Committee on Aging included the following examples of fires which resulted in multiple deaths even though the nursing homes were classified as fire resistive.

Marietta, Ohio--January 9, 1970

The Harmer House Convalescent Home was an unlikely site for a tragic nursing home fire. This relatively new (built in 1966), noncombustible structure boasted the most advanced technology, design, and building materials. The latter included solid core doors, brick veneer, gypsum-board walls, roof of plywood on steel stresses, concrete floor covered with noncombustible tile and/or nylon carpet with sponge-rubber backing. This home also had rate-of-rise and fixed-temperature heat detectors connected to an internal alarm system with manual pull stops. There were no sprinklers or smoke detectors, and the alarm system was not tied in to the fire department. Of the 46 residents, 32 died of smoke inhalation, even though there were 4 regular employees and 2 private-duty nurses in the home when the fire broke out at 9:57 p.m. The probable cause of the fire was a cigarette thrown into a trash-filled plastic wastebasket which, in turn, ignited the sponge-rubber carpet backing, causing considerable smoke throughout the building. The fire department's relatively late arrival (10:15) was due, in part, to the fact that the employees tried to fight the fire and evacuate residents before calling for assistance.

Buechel, Kentucky--January 14, 1971

Westminster Terrace Presbyterian Home for Senior Citizens was a modern, four-story, fire resistive building. It was made of 8-inch concrete block with 4-inch brick veneer and equipped with rate-of-rise and fixed-temparature heat detection devices and automatic smoke-stop partitions. Sprinklers were installed in laundry and rubbish areas. There was a manual alarm but no direct tie to the fire department. Two nurses were on duty at 2:23 p.m. when the fire began, and the fire department responded in less than 3 minutes. Some 13 firetrucks, 150 firefighters, and 46 emergency vehicles responded to the blaze. In spite of these efforts, 10 of the 94 residents perished. The cause of the fire is not known but experts have labeled the fire "suspicious"--indicating that arson is suspected. This fire demonstrates the folly of constructing fireproof buildings and filling them with flammable

furnishings and combustible interior finishes. The House Committee on Government Operations reported that a postfire investigation revealed that on the first floor the smokestop partitions extended only to the suspended ceiling, and utility piping pierced the concrete floor slabs so that openings were left through which smoke could travel from floor to floor. Smoke apparently traveled to the rest of the building through these gaps in the fire resistive construction and, to a lesser extent, through the building's ventilation system.

Madison, Wisconsin--January 8, 1973

Three of the 75 residents in this comparatively new ten-story (10 year old) fire resistive apartment house with residential care facilities died in the fire. The cause of the fire was smoking in bed. In fact, 3 months before, the same occupant had been blamed for a mattress fire which caused $100 damage. The building was equipped with fire extinguishers, a manual alarm system, a public address system, posted evacuation plans, and sprinklers in stairways of the 1st-2d and 10th story levels. A switchboard operator alerted a new part-time employee that one of the residents had complained of fire. The student went to investigate; consequently there was delay in reporting. The fire department did not reach the fire which began at 9:58 until 10:15 p.m.

Wayne, Pennsylvania--December 4, 1973

On July 12 an inspection by the Pennsylvania Department of Labor and Industry revealed 13 violations of the Life Safety Code in the Caley Nursing and Rehabilitation Center which was given 6 months to comply to the code. The fire that began at 8:57 a.m. in a clothes closet killed 15 people. The fire department responded within 4 minutes. Several employees were on duty, including a physician who pulled the manual alarm to report the fire. The facility was also equipped with heat detectors. The building was a three-story, converted attic mansion of cut stone with wood frame interior walls. It had been used as a nursing home since 1951. An addition was added in 1966, largely of noncombustible material such as concrete floors and a steel-deck roof. The critical defect was the lack of sprinklers. The facility was classified as fire resistive; however, during an investigation by the Special Studies Subcommittee, House Government Operations, it was found to be improperly classified. According to a National Fire Protection Association specialist, one of the fire safety code violations noted was a lack of fire doors in the communicating openings between the new and old sections of the building. This single violation

appeared to have been most critical, since smoke movement through the new section of the second floor was significant. Of the 15 fatalities, 8 were in the new section. Had the doors been provided, the degree of smoke migration would have been significantly reduced, and the possibility of fatalities would have been proportionally reduced. Important too was the lack of automatic sprinklers, which probably would have controlled the fire early, preventing loss of life.

May 24, 1976

Mr. Alan S. Zipp
General Accounting Office
330 C Street, S.W. Room 1126
Washington, D.C. 20201

Dear Mr. Zipp:

Thank you for permitting us to review and comment on the draft report of the Controller General to Congress on Federal Fire Safety Requirements for Nursing Homes, as produced by the Department of Health, Education and Welfare. We are glad to have the opportunity to comment on the proposals for automatic sprinkler protection of nursing homes.

The Life Safety Code developed and recommended by this Association, which, as you know, is widely enforced throughout the country, calls for the installation of automatic sprinkler systems in all nursing homes of other than "fire resistive" and one-story "protected non-combustible" construction. Further, the Life Safety Code encourages the installation of such systems in nursing homes of fire resistive and non-combustible construction by offering design trade-offs which recognize the increased safety to life provided by automatic sprinklers.

There can be no question that life safety will be considerably enhanced by the installation of complete automatic sprinkler protection in any nursing home of whatever construction and thus, on purely humanitarian grounds, deserves every encouragement. The economic assistance being made available to proprietors through HEW programs should overcome many obstacles to full automatic sprinkler protection and your recommendations for a progressive yet practical approach to this matter are to be commended.

Very truly yours,

Charles S. Morgan
President

UNITED STATES DEPARTMENT OF COMMERCE
National Fire Prevention and Control Administration
Washington, D.C. 20230

May 26, 1976

Mr. Alan S. Zipp, CPA
Supervisory Auditor
U. S. General Accounting Office
Room 1126
330 C Street, S.W.
Washington, D. C. 20201

Dear Mr. Zipp:

We appreciate the opportunity to comment on the subject of fire safety in nursing homes as it relates to the GAO studies of Federal fire safety requirements for these facilities under the Medicare and Medicaid programs.

We strongly advocate that all nursing homes should be provided with automatic sprinkler systems throughout in accordance with the national consensus standard for sprinkler systems of the National Fire Protection Association (NFPA No. 13). We also urge that "trade-offs" in building construction and equipment be encouraged when automatic sprinklers are provided as specified in the Life Safety Code also produced by the National Fire Protection Association (NFPA No. 101).

The GAO is to be congratulated for its efforts.

Sincerely,

Howard D. Tipton
Administrator

BUREAU OF STANDARDS LETTER TO HEW ON PROPOSED CHANGES TO NURSING HOME REQUIREMENTS

UNITED STATES DEPARTMENT OF COMMERCE
National Bureau of Standards
Washington, D.C. 20234

March 25, 1976

Mr. Donald Brooks
Office of Facility Engineering
and Property Management
Department of Health, Education & Welfare
7th and D Street, S.W.
Washington, DC

Dear Mr. Brooks:

This is in response to your memorandum of March 9, 1976 requesting comments relative to the proposed changes to nursing home requirements resulting from the recent fires in Chicago.

An analysis of the memorandum attached to your correspondence indicates that the various recommendations and comments can be readily discussed in approximately 5 categories. These are: 1) Compartmentation to confine fire or smoke; 2) Fire and smoke detection; 3) Automatic extinguishment; 4) Fuel control, and 5) Staff capabilities.

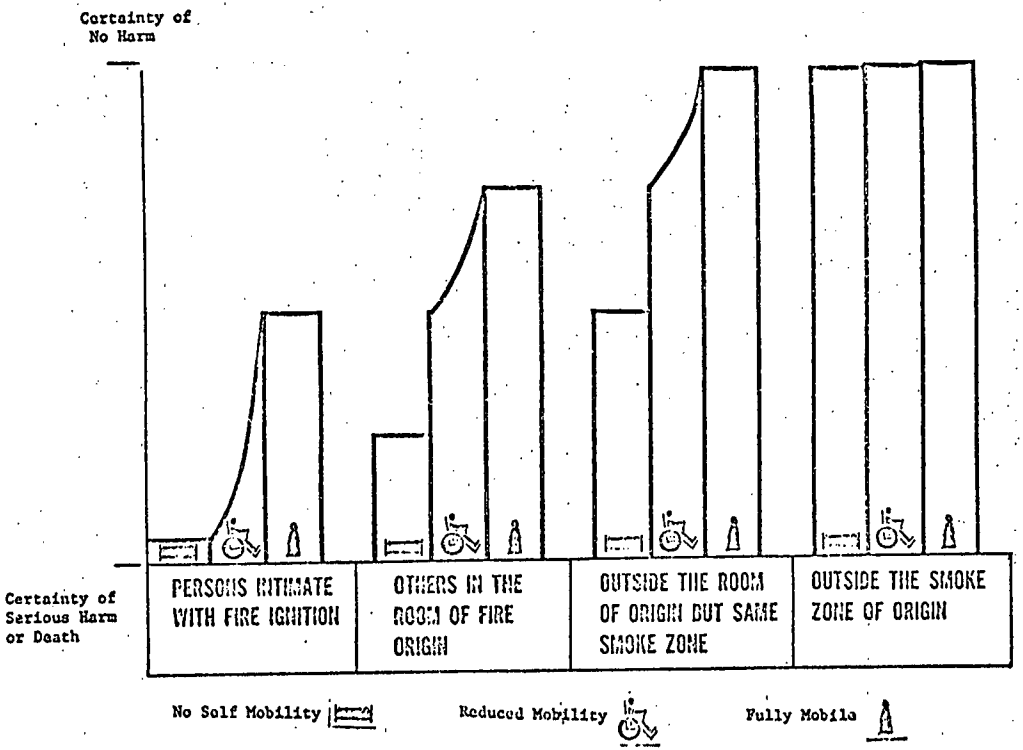
Background Statement

Every set of codes, criteria or other requirements result in some level of protection from harm. No set of documents provides complete protection. It is our belief that a health care facility conforming with the requirements of the Life Safety Code, 1973 edition, would result in protection in case of fire to the approximate degrees shown in Figure 1. (See Appendix A for a discussion of the elements and considerations in Figure 1). Throughout the rest of the discussion, we will use the comparison to the Life Safety Code (i.e., Figure 1) as the base line for discussion of the merit and impact of the fire safety recommendations and considerations being presented.

Compartmentation

The points raised on compartmentation logically divide into two areas: those related to proposals to upgrade the hardware (closers) on patient room doors to increase the security of the existing bedroom as a safe compartment; and those relating to the provision of additional compartmentation in the form of smoke barriers and cut off doors for day room activities.

FIGURE 1. APPARENT LIFE SAFETY OBJECTIVES OF THE LIFE SAFETY CODE (NFPA 101 - 1973)



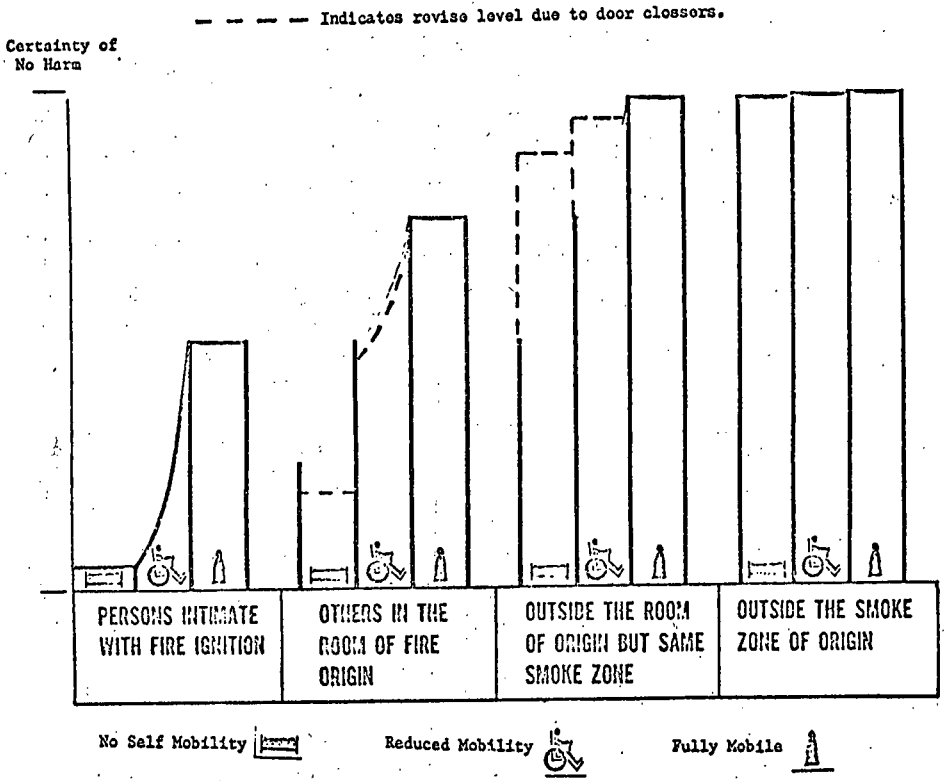
A. Provision of smoke operated door closers on patient room doors. Figure 2 demonstrates the manner in which the provision of smoke operated door closers on every patient room door could affect the overall safety of occupants in nursing homes. The result would produce no measured safety for the person intimate with the fire ignition. There may be some reduction in the safety of immobile occupants in the room of origin due to the potential interference with rescue operations should the door automatically close before the patients are removed. The protection of persons outside the room of origin but inside the same smoke zone would increase significantly, particularly the protection of the immobile persons who are dependent upon rescue or protection in their beds. There would of course be no measurable change in safety outside the smoke zone of origin. The help in confining the fire to the room of origin would of course potentially reduce the risk to the entire building. The level of protection devices specified by the Life Safety Code and the amount of redundancy in the code, however, provide such a high level of protection outside the smoke zone of origin that this would not show any increase in safety.

In considering these devices there are several items that are of important note. First in regard to the fire in the Wincrest and Cermack house our information is slightly different than that upon which Mr. Fisher and Mr. Hitt apparently based their proposals. In both cases, the door to the room of fire origin was originally closed. At the Wincrest house it was closed early in the fire by a nurse's aid. In the Cermack house it appears that it was closed at the time of fire ignitiation. In each case the door was opened. In the Wincrest house to attack the fire with fire extinguishers; and in the Cermack house to rescue the two patients that were still in the room. In each case the staff apparently knew that it was important to close the door after they had failed to extinguish the fire or had completed rescuing the patients. In each case, however, they claim they were unable to do it because of the ferocity of the fire. In line with Mssrs. Fisher and Hitt, however, the staff apparently never attempted to close any other doors. Detectors on the doors to the occupied rooms particularly at the Cermack house might have well closed the doors prior to the entry of lethal smoke.

Our estimate on costs suggests that the figure quoted by Mr. Hitt would be proper only if the door closers were designed in a new construction project. The estimates we have suggest $400 to $500 per door for a retrofit job in an existing building: more if the devices on all doors are interconnected so as to either sound an alarm or so that all doors will operate if one detects smoke.

We also do not have any reliable data on either the long term reliability or maintenance problems associated with these somewhat complex door closers. They represent a new technology and in all probability

FIGURE 2. PROVISION OF SMOKE OPERATED DOOR CLOSERS ON PATIENT ROOM DOORS



there will be some problems. The type of devices being proposed have been on the market in modest numbers for five to ten years and the limited experience has been quite variable. If HEW were to mandate such door closers, it should be expected that there would be reliability and use problems in the first five to ten years.

At this time we also do not have any data regarding the capability of the door closer on the room of origin if the door should be opened during the fire sequence in attempts to rescue or fight the fire. Warping the door or bending of the hinges however would be expected to be a significant factor on reclosing the door.

The statements in some of the letters regarding the use of self closing doors in the codes are not quite correct. For example, any new building built in communities following the Uniform Building Code requires that patient room doors have either smoke operated door closers or self closing doors. Self closing doors may for all intents and purposes be impracticable and its doubtful if any facility could live with doors that close as soon as the person passing through them lets loose of the door or its handle.

B. Increasing the amount of compartmentation. Two recommendations are included in the proposals of Mssrs. Fisher and Hitt: first to require that every floor have at least one smoke division regardless of the number of patients on that floor; and second to require that day rooms or other assembly areas have doors. The adoption of these proposals would not change the levels of protection as depicted in Figure 1; but, would change the amount or number of persons in each group. In the Wincrest home, the provision of a smoke barrier would have probably had little impact on the outcome. The logical place to establish a smoke area would have been the point where the building narrowed between rooms 303 and 305. The effect of this would have been to have four bedrooms on each side of the smoke barrier. Bedroom 306 (the room of fire origin) and the chapel would still have been on the same side of the smoke barrier. This does not decrease the worth of Mr. Fisher's recommendation. It only points out that the provision of smoke barriers in small buildings tends to reduce the number of people in immediate danger but not eliminate the danger. Some of the codes, by the way, say that if there are more than 5 occupants per floor the smoke barrier should be used.

The point on providing doors for chapels or other day rooms is very pertinent and appropriate. In the Life Safety Code (1973) such doors are required on all day rooms over 250 square feet in new buildings. They are not, however, required in existing buildings. The extension of this to existing buildings, would in many cases, be quite practical as it would have been at the Wincrest installation. There are undoubtedly, however, numerous floor plans in which such enclosures

may be difficult. In such cases other alternate schemes of protection (total sprinklers, wide-scale use of detectors, may reasonably be considered instead). The protection of such areas, however, is a very important consideration as was emphasized in the Wincrest disaster. There are periods of time in which considerable numbers of patients are collected together in recreation, eating, religous, or other gatherings. This would appear to be more attuned to long term care installations than critical medical hospitals. In these situations, large groups are subjective to a common tradegy. We would strongly endorse this recommendation.

Fire and Smoke Detection

Three points are considered. These include smoke detectors in the corridor as specified for new buildings in the Life Safety Code, 1973, smoke detectors in every room, and heat detectors. Figure 3 plots the estimated increase in safety that would result from these three approaches. These conclusions are more tentative than some of the others; and are based on the assumption that proper response will be made after the detector alarms. The series of full scale burns to be run at the NBS site during the next 12 months are specifically aimed at getting better answers on the degree of safety lead time provided by various types of detectors in various locations. It is expected that the initial series of tests will give relatively quick data on detectors in the room of origin. It is expected that more extensive and possibly some follow up testing will be needed before firmer statements can be made on the value of detectors in the corridor.

The provision of smoke detectors in every room would increase possibly by a factor of two or three the level of safety for immobile person intimate with fire ignition. The safety here would primarily be that for a smouldering fire. In such case a smoke detector in a room has a good possibility of detecting the fire before serious harm is done to the patient. If the fire is an open flaming fire, however, the possibility of reaching an invalid patient before he or she has received serious harm is low. Corridor smoke detectors and to a greater extent a smoke detector in each room would, of course, increase the level of safety for others than those in the room of fire origin; and they would be most effective at night. Where corridor smoke detectors are involved, the aerodynamics of the air handling systems in the building would be of extreme importance in determining their location and effectiveness. The main point of concern is the lead time which these type of detectors would provide for the responding nursing staff. They fall short of total protection because some fires, particularly those which rapidly develop in an open flaming mode, would progress with such speed that the lead time between the operation of the detector and the development of lethal conditions would be too short to effect any positive actions. The heat detector has no value because the lead time it can provide is so little as to be of virtually no use to increase safety for those in the same room of the fire.

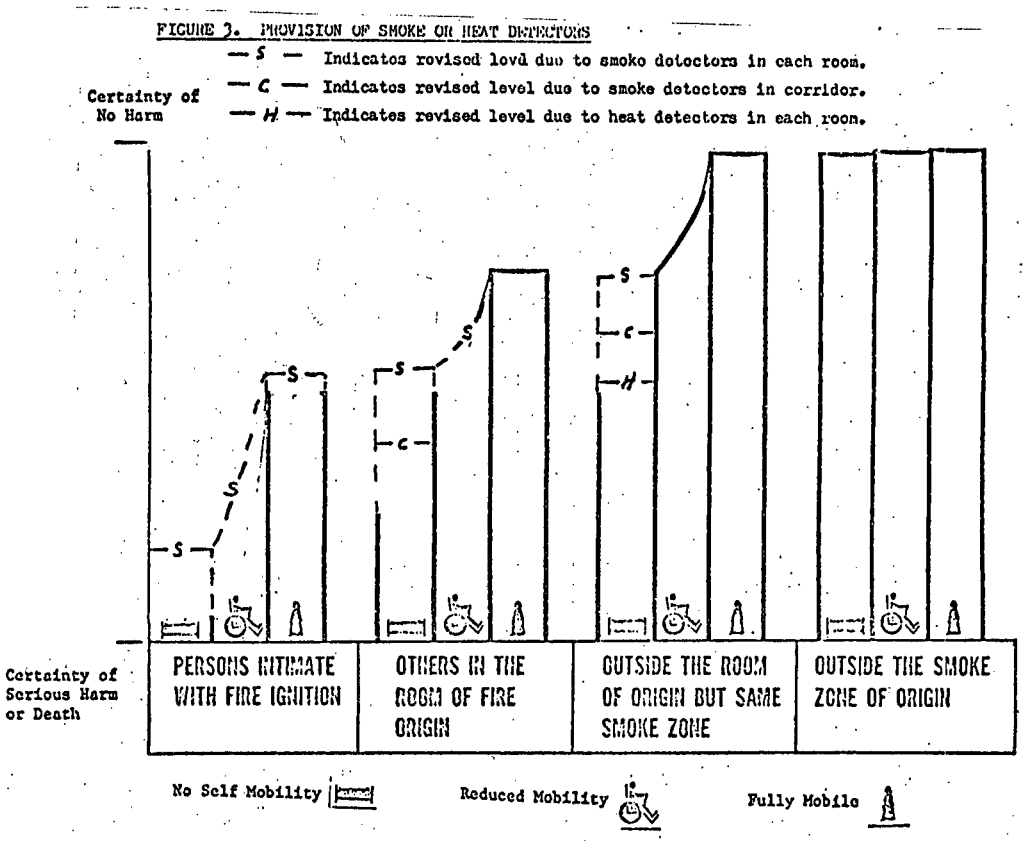


FIGURE 3. PROVISION OF SMOKE OR HEAT DETECTORS

Fully Mobile

Protection provided outside the room of origin but in the same smoke zone has a similar distribution of increased protection over the basic NFPA 101, 1973 level. An increase in safety with corridor detectors is shown above the basic level shown in Figure 1, since for the existing building situation no corridor detectors are required. Heat detectors in each room shows a small positive value, to indicate the worth of such protection in the specific condition where the door to the room of origin is closed. For this situation, heat detection would provide information on a concealed fire that might otherwise go undetected. The value of a heat detector in a room with the door open is considered to be negligible. At the more extensive levels of exposure, the value of the detectors decreases because the inherent capabilities of the basic fire protection system function well in these areas and the impact of the detectors is redundant to the other protection systems.

Automatic Extinguishment

Consistently the question of sprinkler protection arises. Sprinkler protection can be either total (covering every room, closet, toilet, passage, etc.) or partial. Figure 4 gives the estimated level of protection provided at each degree of exposure to the fire by several approaches to increased automatic sprinkler protection. The three approaches considered are 1) total sprinkler protection; 2) the provision of a sprinkler head in the corridor outside of each patient room, and the location of at least one sprinkler head in each patient room; and 3) the provision of a sprinkler head in the corridor outside each patient room without any sprinklers in the individual patient rooms.

Again there are some unanswered questions regarding the type of product gases that can be produced during sprinkler operation particularly if the fire involved is being controlled by the sprinklers rather than extinguished. Sprinkler installations are also limited by the reliability of the sprinkler. This, of course, is true for detectors, door closers, and essentially all of the mechanical protection devices available to increase the level of safety above that inherently provided by the rigid building structure. The patient room burn tests which will be run at NBS are being carefully instrumented to provide measurements of the gases emitted from patient room doors with and without sprinkler protection, to increase the knowledge in this area. Until that data is developed, the question on the effluent during sprinkler operation will remain unanswered. Sprinkler operation from any of the three approaches covered can be expected to mitigate the overall fire situation and control the fire to where it is possible for the staff to close the door on the room of fire origin.

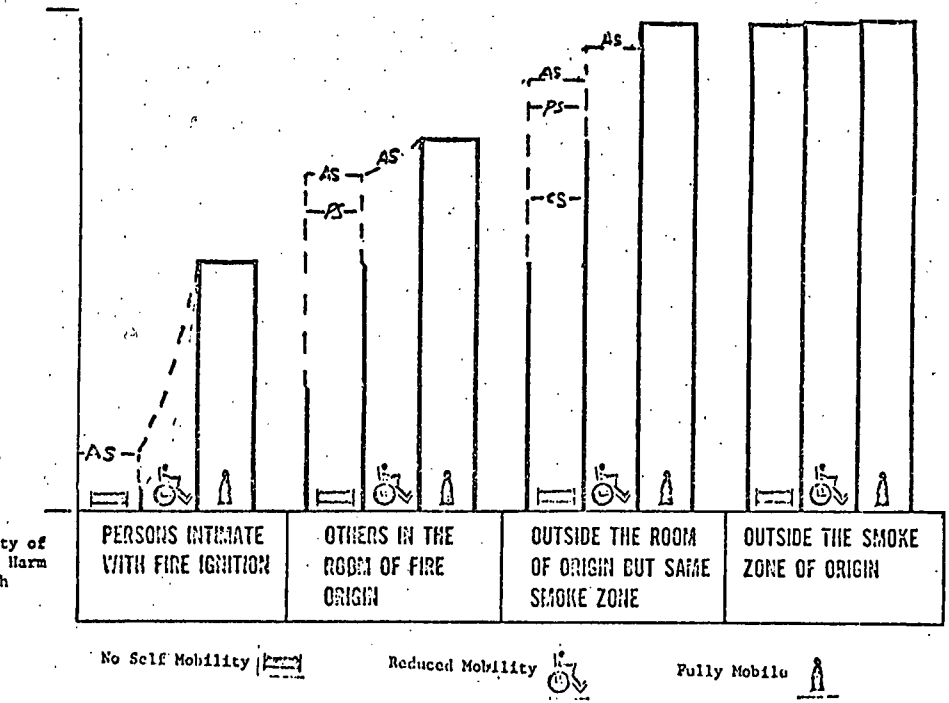
The installation of sprinkler protection retrofit situation can be quite expensive. The principle economy factors are choice of system

FIGURE 4. PROVISION OF TOTAL AUTOMATIC SPRINKLER PROTECTION

— AS — Indicates revised level due to total sprinkler protection

— PS — Indicates level due to sprinklers in rooms and corridors.

— CS — Indicates level due to sprinklers in corridors at patient room doors.



(i.e. total or partial) and the level of decor. If the sprinkler system is run exposed under the existing ceiling, the cost is greatly reduced. If the decor demands that the sprinklers be concealed above the ceiling space, a major increase of costs in the order of two to three times will occur due to the cost of removing portions of the ceiling to insert the sprinkler piping and then replacing it. If an exposed system is acceptable in a building, the cost of installing the sprinkler system could well be the same order of magnitude as the cost of installing detector operated self closers on each door. The comparison in this case, of course, is dependent on the number of doors versus the total size of the patient rooms. A principle value of total sprinkler protection, not readily apparent in Figure 4, is their capabilities of controlling the overall energy within the fire zone, and thereby protecting areas outside the smoke zone of origin. This is not an important need if a building currently meeting all of the stringent structural requirements prescribed in the Life Safety Code in either the 1967 or 1973 editions; but will provide a backup if some of the requirements are not adequately met. In considering alternatives to building deficiencies, it is common to allow total sprinkler protection to compensate for some degree of structural shortcomings in nonconforming buildings. In larger buildings where smoke control systems beyond simple doors become important the provisions of sprinklers will also reduce the requirements on the smoke control system and increase the probability of its effective operation.

The mention of sprinkler protection other than complete coverage is a break with tradition. The rationale for raising the potential of such systems is based on the success of such partial systems in extensive tests conducted at NBS over the past two years and the substantial cost difference between total systems and either of the other approaches. The type of partial sprinkler protection systems discussed here must include specifically engineered positioning of sprinkler heads on the basis of discharge patterns in line with the NBS research results. While the less than total approaches provide somewhat less safety, they do, as shown in Figure 4, result in significant safety increases over the present requirements. This is particularly true in terms of protecting those outside the room of fire origin but in the same smoke zone.

Fuel Control

Both Mssrs. Fisher and Hitt mentioned the value of controlling fuel. Mr. Fisher specifically discusses the wood wardrobe where the fire in the Wincrest house almost certainly initiated. We have not plotted a risk figure to show the impact of fuel control. If fuel could be completely controlled, the risk of fire would be eliminated, but this type of control is not possible. For example, with

wardrobe or other clothes containers it is important to recognize that the material inside the storage unit and the position of the door can be a greater factor than the actual construction of the compartment. The same risk can occur from a closet built into a room. The reduction of room furniture and the control of bedding can greatly reduce the fire problem. This was pointed out to some degree in the tests conducted at Beverly Shores. The tests to be conducted at NBS are even more directed at evaluating the differences that can occur from the fuels that relate to the bedding and the interior finish. At this time we know of no practical way to totally control the fuel in furniture used in a health care facility. We expect that the tests that we are going to conduct may point out some areas such as mattresses where a direct attack can be made. A long term program to discourage wooden furniture, improved closet or wardrobe design, and eliminate highly combustible mattresses and related bedding would be meritous but expensive. At NBS there are several long range programs running parallel to the HEW project which are aimed at improved mechanisms in evaluating the hazard of furniture. These, however, are several years from developing mechanisms that could be effectively used as procurement controls.

Improving Staff (and Patient) Capabilities

The question of staff training and capabilities is interesting. It is impossible to put this on a graphic presentation. In the Wincrest home, our interviews left the impression that the staff operated as a reasonable organized team, though they were disrupted in their efforts by the abortive action of an outsider. At the Cermack house, the impression of our investigators was that the staff did not operate as a team but each member did what he or she felt best at that time. In each case, the entire team directed their attentions more towards the extinguishment of the fire than removal of the patients. In each of these cases and in other case histories that we have been studying, we sensed a repitition of underestimation of the level of impact, speed of development, and lethalness to the patients of the fire situation being faced. In this area we are developing two approaches which may be of help in the reasonable future. One involves the development of educational material abstracted from fire histories and our fire research data to better educate the nursing profession in the real nature of the threat of fire. This sort of information could be carried from job to job and would be important in any instant of a fire threat. The second area is one in which we are just now considering. In this case, we are considering an investigation on the relevance of behavior in emergencies to the type of planning, training programs, and drills involved in nursing homes. The initial study will be one of modest depth. If it shows great worth, additional follow up will be made. In the meantime, it does not appear that

anyone has a solid proposal of a mechanism to improve training other than an attempt to try to do more of the same and we question the value of "more of the same."

Summary Statement

As can be seen from the various Figures, the improvement or addition of protection items and mechanisms can raise the safety in nursing homes. The raising of the level of safety will in each case be costly. In general, the mechanisms are only modestly additive. For practical purposes if one considers the simultaneous use of more than one of these protection systems the end result could be considered at each level of exposure as equal to the better of the two, but not equal to the sum. We would not recommend without further study the requirements for both door closers and sprinklers. In general, either one could contribute to life safety with the sprinklers probably making the greater contribution. But, we question the cost benefit of using both together. Of the protection mechanisms proposed, sprinkler protection by its capability of reducing the basic fire threat offers the major potential for "trade-off" or the acceptance of deficient buildings. Figure 5 is a composite of Figures 1-4.

We also strongly endorse the requirement for a door at the entrance to all lounge, assembly or recreational area.

It is suggested that the level of protection that would be provided by compliance with the existing requirements in the Life Safety Code be reviewed and a determination made as to whether this level meets the fire safety objectives of HEW in its nursing home activities. If it is felt necessary to raise the safety level, then the type of analysis provided here can demonstrate both the requirements and options available.

We would be pleased to meet with the OFEPM Committee or any other persons in HEW to discuss the points in this letter or other factors related to nursing home and other health care facility fire safety.

Sincerely,

H. E. Nelson, Chief
Program for Design Concepts
Center for Fire Research

APPENDIX A. Apparent Life Safety Objectives of the Life Safety Code (NFPA 101-1973)

Figure 1 is an expression of an evaluation of the life safety objectives for health care facilities that would be achieved by full compliance with NFPA 101-73. To develop this figure, we have divided the occupants of the health care facility in two ways. The first consideration is the proximity of the exposed person to the point of fire origin. We have divided it into four classes consisting of 1) persons intimate with the fire ignition (ignition of their clothing, bedding, or other material in direct contact with them); 2) persons in the room of fire origin other than anyone who may be intimate with fire ignition; 3) any persons outside the room of origin but within the same smoke zone; and those persons outside the smoke zone of origin (if the floor is divided into separate smoke zones these persons can be on the same floor with fire origin. If, however, the floor is not so divided than this would apply only to persons on different floors).

Secondly, we have divided the character of the occupants by mobility consisting of 1) those who are not capable of any mobility without outside assistance. In this category, we include bedridden patients, patients under sedation, and those patients which might become mobile if someone were to assist them, as into a wheelchair; but can not initiate their mobility on their own. These are depicted on the graph by a cartoon of a person in bed. 2) Those persons who are partially mobile. We define these people as ones having an ability to initiate their own action for evacuation or other self preservation, but an inability to move or operate with the speed or assurance of a totally mobile person. The degree of mobility, of course, can vary from very slight mobility to almost as capable as a fully mobile person. The graph accounts to this by the sloping character of the line used to indicate safety of such persons. This is depicted by a patient in a wheelchair. 3) Those fully mobile persons, indicated by an erect figure.

The current Life Safety Code does not attempt to protect any person if their clothing, bed, or chair becomes ignited. The safety of these people depends upon either shedding the burning clothing or bedding, etc., or getting the fire promptly extinguished. The immobile patient is almost entirely dependent upon outside assistance and, as indicated, has a very low probability of survival under such case. With the person who is fully capable their percentage of survival rises. This difference, however, is based on the difference in their ability to take care of themselves rather than on anything related to the Code.

For other persons in the room of origin the Life Safety Code also provides relatively little protection. The primary activity in the Code in this area is to constrain the flammability of the interior finish; and for new buildings to specify detectors in the corridors, which may or may not provide detection early enough to help a person

in the room. In this case, inmobile patients are dependent upon obtaining assistance to remove them from the room of origin or on having the fire extinguished prior to any toxic impositions. The mobile person on the other hand has the ability to leave the room. The rates of development of fire in health care facilities while sometimes rather quick are not normally so speedy as to prevent the fully mobile person from leaving the room. In the Carmack house fire, at least one patient in the room of fire origin obtained the assistance necessary to get herself removed by shouting for help.

The Life Safety Code specifies the patient room enclosure in such a manner that the room is a separate entity from the corridor and reasonable separate from adjacent patient rooms. The concept is to provide a first line of defense at the patient room door. The Code, however,, depends upon staff to assure that the door is closed. While no statistics are solidly available, it is roughly estimated that somewhere in the range of 50% of the time that the staff will close the door to a room containing a fire and that it will be kept closed. Experience seems to indicate a lesser assurity that doors on other patient rooms will be closed by the staff or by mobile occupants in that room. Again the immobile person is almost entirely dependent upon the closing of these doors. The times involved in evacuation or relocation of such persons is such that in the majority of fire incidents immobile persons in their beds must obtain protection from fire in the place. Where they are in wheelchairs or geriatric chairs, the possibility of movement is increased if a place of safety is obtainable on the same floor. The level of safety for ambulatory and fully mobile persons outside the room of fire origin is very high, as they can either evacuate under their own ability or take refuge behind the doors to their rooms. If the doors are not automatically operating they are capable of closing them. It is felt that the Life Safety Code provides an extremely high level of safety for these persons.

For persons outside the smoke zone of origin, including, of course, those on other floors or other fire segments of the building, the Life Safety Code provides a near certain level of protection for all, regardless of their degree of mobility. The Life Safety Code in fact provides significant redundancies in providing structural soundness, protection of high hazard locations, subdivision of floors, and compartmentation which tends to limit the impact of the exposing fire.

LIFE SAFETY CODE DEFICIENCY REPORT

The number of Skilled Nursing Facilities with a reported deficiency have been entered next to the requirement on the attached Fire Safety Survey Report Form SSA-2786. For example: 809 facilities are deficient with respect to 2 - 1 construction type. The total number of SNFs in the Medicare/Medicaid Automated Certification System at the date of report preparation was 7990.

FIRE SAFETY SURVEY REPORT
Medicare – Medicaid

1 (A) PROVIDER NUMBER	1 (B) MEDICAID I D NO
K1	K2

Part I is a guide to surveying for compliance with the Life Safety Code (21st edition, 1967). Part II contains those Medicare and Medicaid fire safety requirements not otherwise identified in the Life Safety Code. Part III contains a certification form to be completed by the fire authority when waiver of a specific provision of the Life Safety code is recommended. Building sketches can also be included in Part III.

Identifying information as shown in applicable records. Enter changes, if any, alongside each item, giving date of change.

2. NAME OF FACILITY	2 (A) MULTIPLE CONSTRUCTION (BLDGS) K3 A. BUILDING ____ B. WING ____ C. FLOOR ____	2 (B) ADDRESS OF FACILITY (STREET, CITY, STATE, ZIP CODE)
3. SURVEY FOR: ☐ MEDICARE ☐ MEDICAID	4 DATE OF SURVEY K4	

5. SURVEY FOR CERTIFICATION OF: (K5)
1. ☐ HOSPITAL 2. ☐ SKILLED NURSING FACILITY 3. ☐ INTERMEDIATE CARE FACILITY

IF "B" OR "C" IS CHECKED, CHECK APPROPRIATE ITEM(S) BELOW:

(1.) ☐ ENTIRE FACILITY (2.) ☐ DISTINCT PART OF: (SPECIFY) _____

(3.) IF DISTINCT PART OF HOSPITAL, IS HOSPITAL ACCREDITED BY JCAH? a. ☐ YES b. ☐ NO

6. BED COMPOSITION:

a. TOTAL NO. OF BEDS IN THE FACILITY.	b. NUMBER OF HOSPITAL BEDS CERTIFIED FOR MEDICARE.	c. NUMBER OF SKILLED BEDS CERTIFIED FOR MEDICARE.	d. NUMBER OF SKILLED BEDS CERTIFIED FOR MEDICAID.	e. NUMBER OF ICF BEDS CERTIFIED FOR MEDICAID.

7. A. (K6) ☐ THE FACILITY MEETS, BASED UPON (CHECK ALL APPROPRIATE BOXES):
1. ☐ COMPLIANCE WITH ALL PROVISIONS 2. ☐ ACCEPTANCE OF A PLAN OF CORRECTION 3. ☐ RECOMMENDED WAIVERS

such standards of the NFPA Life Safety Code (21st edition, 1967) as are applicable to hospitals or nursing homes as well as other Medicare and Medicaid requirements as shown in Part II of this form.

B. ☐ THE FACILITY DOES NOT MEET THE STANDARD

FIRE AUTHORITY OFFICIAL (SIGNATURE)	TITLE	OFFICE	DATE

FORM SSA-2786 (11-74)

I.D. PREFIX	YES	NO	N.A	PART I — Items Identified In LSC	EXPLANATORY REMARKS
K8 809				2-1. **Construction Type** - Building construction complies with Section 10-1321 and 10-1322.	
K9				2-1. Indicate type of construction as defined in NFPA 220 (Standard Types of Building Construction, 1961.) A. 1. ☐ FIRE RESISTIVE 5. ☐ PROTECTED ORDINARY 2. ☐ NON-COMBUSTIBLE 6. ☐ HEAVY TIMBER 3. ☐ PROTECTED NON-COMBUSTIBLE 7. ☐ WOOD FRAME 4. ☐ ORDINARY 8. ☐ PROTECTED WOOD FRAME	
K10				B. _____ Number of stories, not including basement or cellar	
K11				C. _____ Floors on which patient rooms are located if multi-stories	
K12				D. _/_/__ Date original building permit issued or approval given by appropriate authority *(Complete sketch in Part III showing original and subsequent construction dates)*	
K13 497				2-2. **Corridor Walls** - Corridors shall be separated from sleeping rooms and treatment areas by construction having at least a 1-hour fire resistance rating with openings therein, other than doors, limited to 1296 square inches and glazed with wired glass in approved steel frames. 10-1331	
K14 1,073				2-3. **Corridor Doors** - Doors to patient rooms and diagnostic and treatment areas are 1¾" solid wood bonded core doors or the equivalent with any openings limited to 1296 square inches with wired glass in approved steel frames. *(Undercutting of such doors is not permitted).* 10-1332	
K15 398				2-4. **Subdivision of Floor Areas** - Each floor used for sleeping rooms for more than 30 patients, unless provided with a horizontal exit, is divided into at least two sections by a smoke barrier. *(New buildings are required to provide compartmentation on patient floors regardless of the number of patients). (See definition of horizontal exit in 5-5111).* 10-2311	

I.D. PREFIX	YES	NO	N.A		EXPLANATORY REMARKS
K16 433				3-1. **Smoke Barriers** - Smoke barriers or horizontal exits divide corridors into sections of not more than 150 feet in length. 10-2312	
K17 913				3-2. **Smoke Barriers** have at least a ½ hour fire rating and are continuous from exterior wall to exterior wall and floor to floor or roof deck above. *(In new buildings the smoke barrier has a fire-resistance rating of one hour).* 10-2313	
K18 148				3-3. **Common Wall** - If the building shares a common wall with a non-conforming structure, the wall is at least a 2-hour fire rated partition with any openings protected by a self-closing Class B 1½ hour fire door. 10-1131	
K19 385				3-4. **Stairway Enclosures** - Each stairway between stories is enclosed with partitions having at least a 1-hour fire resistance rating to prevent the spread of fire between stories. 10-2321	
K20 97				3-5. **Doors in stairway enclosures** are not equipped with hold-open devices. 10-2246	
K21 402				3-6. **Doors in walls separating hazardous areas** are not equipped with hold-open devices. 10-2246	
K22 137				3-7. **Stairs and smokeproof towers** are Class A or Class B. *(Class B specifications are not acceptable in new construction).* 10-2251, 5-3121	
K23 301				3-8. **Vertical Shafts** - Elevator shafts, light and ventilation shafts, chutes, and other vertical openings between stories are protected as required in item 3-4. 10-2322	
K24 129				3-9. **Fire-Stopping** - Combustible concealed spaces between the basement and the first floor are fire-stopped. *(Fire stopping in new construction shall be in accordance with 6-1311)* 10-2323	
K25 185				3-10. **Linen and Trash Chutes** - Any linen or trash chute which opens directly on to a corridor is sealed by fire-resistive construction to prevent further use or is provided with a door assembly suitable for a Class B location. *(In new construction, chute and incinerator flues do not open directly on to an exit corridor and chutes are sprinklered.)* 10-2324, 7-113	

I.D. PREFIX	YES	NO	N/A		EXPLANATORY REMARKS
K26 243				4-1. **Exits - Number and Type** - At least two exits, remote from each other, are provided for each floor or fire section. At least one of the exits is a door leading directly outside the building or to an interior stairway leading outside the building. 10-2211, 10-2212	
K27 278				4-2. **Access** - Every aisle, passageway, corridor exit discharge, exit location and "access" has a readily available egress leading to the exit. *(In new buildings, corridor dead-ends shall not exceed 30 feet).* 10-2231, 10-1234	
K28 16				4-3. **Capacity** - The capacity of exits providing horizontal travel is 30 persons per exit unit. Where travel is over stairs, the exiting capacity is 22 persons per exit unit. 10-2221	
K29 84				4-4. **Horizontal Exit** - Any horizontal exit is in accordance with section 5-5 and has at least 44 inches in clear width. 10-2261	
K30 155				4-5. **Corridor Width** - Aisles and corridors are a minimum of 48 inches in clear width when serving as a means of egress from institutional sleeping rooms. *(For new construction the corridor is 8 feet in clear width).* 10-2233, 10-1233	
K31 32				4-6. **Room Egress** - All sleeping rooms have a door leading directly to a corridor providing access to an exit, unless there is a door leading directly to grade. See 10-2234 for allowance of one intervening room.	
K32 36				4-7. **Travel distances** to an exit are 100 feet or less from the entrance door and 150 feet from any point in a room. *(In buildings completely protected by an automatic sprinkler system these distances may be increased by 50 feet.)* 10-2232; for new construction: 10-1232	
K33 398				4-8. **Door Width** - Any door to a patient's sleeping room, any door between occupied spaces and the required exits and exit doorways are at least 40 inches in clear width. *(44 inches in new buildings.)* See 10-2242 for allowable exceptions.	
K34 76				4-9. **Doors in Line of Exit Travel** - Every door in the line exit travel from a patient's sleeping room is of the swinging type. 10-2244	

I.D. PREFIX	YES	NO	N.A		EXPLANATORY REMARKS
K35 79				5-1. **Patient Rooms** - Locks installed on patient sleeping room doors other than doors not leading directly to the exterior of the building can be locked only from the corridor side. All sleeping room locks are readily opened by the patient from inside the room without the use of a key. Patient room doors lockable from the inside are permitted provided they can be unlocked from the corridor side and the keys are readily available to attendants. 10-2242	
K36 91				5-2. **Windows** - Every patient's bedroom, unless it has a door leading directly outside of the building, has at least one outside window which can be opened from the inside without the use of tools. 10-2213	
K37 1,440				5-3. **Doors in Fire and Smoke Partitions** - Every door in a fire partition, horizontal exit, and smokestop partition shall be self-closing. Doors may be held open only by electric hold-open devices and are capable of being opened and closed manually. Doors shall be closed upon actuation of the fire alarm system and by one of the approved methods shown as A, B, C in Explanatory Remarks. However, if more than one of the protection systems is installed, each system upon actuation, must close all fire and smoke partition doors. 10-2245, 10-2313	
K38				5-4. **Closing Fire and Smoke Doors** - Indicate which of the following methods will automatically close those fire or smoke doors which are normally held open: 1. ☐ A. Activation of the sprinkler system. 2. ☐ B. Actuation of any detector of a complete smoke or products of combustion detection system. 3. ☐ C. By local detection devices installed to detect smoke or other products of combustion on either side of the door opening.	
K39 654				5-5. **Stairwall doors** bear an appropriate sign indicating that this is a fire exit and must be kept closed. 5-2133	
K40 305				5-6. **Exit Lighting** - Means of egress are illuminated to permit safe evacuation of patients. 10-2272, 5-10113	

I.D. PREFIX	YES	NO	N.A		EXPLANATORY REMARKS
K41 512				6-1. **Exit and Directional Signs** are continuously illuminated with a reliable light source and include the word EXIT in easily visible letters. 10-2271, 5-11121	
K42				6-2. **Hospitals Only:** *(Indicate Not Applicable for Nursing Homes)* **Central electrical systems** are designed, installed, and maintained to assure continuity of electrical power in accordance with NFPA Standard No. 76 *(Essential Electrical Systems for Hospitals, 1967)* 10-1293	
K43 331				6-3. **Emergency lighting** of Type I, II or III is provided in facilities with an inpatient capacity of 30 or more persons. *(In new buildings only types I or II are permitted.)* 10-2273, 5-102, 10-1294	
K44 293				6-4. **Required emergency lighting** is automatic and not manual. 5-10215	
K45 268				6-5. **Interior finish** of walls and ceilings is Class A or Class B. *(In completely sprinklered buildings, Class C interior finish may be continued in use. In newly constructed buildings, means of egress and patient rooms accommodating more than 4 patients have Class A interior finish).* 6-2, 10-1351, 10-2331	
K46 395				6-6. **Floor Covering** has a flame spread rating not in excess of 75 when tested in accordance with NFPA Standard 255, "Flame Spread Tests". *(Flame spread rating of floor covering in completely sprinklered existing buildings is not over 200).*	
K47				B. Indicate floor covering test score: 1. ☐ CONCRETE, MARBLE, TERAZZO, ETC. 2. ☐ RESILIENT 3. ☐ CARPETING	
K48				6-6. A. **Floor Covering** Indicate type of finish floor or floor covering: 1. ☐ 0-75 3. ☐ OVER 200 2. ☐ 76-200 4. ☐ NOT TESTED	
K49				C. Testing Laboratory:	

I.D. PREFIX	YES	NO	N A		EXPLANATORY REMARKS
K50 1,012				7-1. **Sprinkler Coverage** - Automatic Sprinkler protection is provided throughout the facility with adequate water supply and pressure *(15 psi at the most remote sprinkler heads).* Fire resistive buildings or 1-hour protected non-combustible buildings of one story should be marked "Not Applicable." 10-2341, NFPA Std. 13	
K51 456				7-2. **Sprinkler System Maintenance** - Automatic sprinkler systems are maintained, inspected and tested in accordance with NFPA Standard 13A *(Care and Maintenance of Sprinkler Systems)* 6-4131	
K52 →				7-2. A. _____ Date sprinkler system last checked & necessary maintenance last provided.	
				B. Show who provided the service:	
K53 →				C. Note the source of water supply for the sprinkler system:	
K54 1,159				7-3. **Sprinkler Alarm System** - The automatic sprinkler system is electrically inter-connected with the fire alarm system 10-2342	
K55 1,301				7-4. **The main sprinkler control valve** is electrically supervised so that at least a local alarm will sound when the valve is closed. 10-2342	
K56 1,073				7-5. **Manually operated fire alarm system** is provided. In new buildings it is electrically supervised. *(Pre-signal system is not acceptable).* 10-2344, 10-1365	
336 K57				7-6. **The fire alarm system** is tested at least weekly. 17-1412	
K58 277				7-7. **Portable fire extinguishers** are provided in accordance with NFPA Standard 10 *(Installation of Portable Fire Extinguishers).* 10-2345	
K59 335				7-8. **Fire extinguishers** are maintained in accordance with NFPA Standard 10A *(Maintenance and Use of Portable Fire Extinguishers).* 6-4221	
K60 1,014				7-9. **Air Conditioning and ventilating equipment** is maintained in accordance with NFPA 90A *(Installation of Air Conditioning and Ventilating Systems).* 10-2411	
K61 82				7-10. **Fuel-burning space heaters** and portable electric space heaters are not used. 10-2412	
K62 196				7-11. **Combustion and ventilation air** for boiler, incinerator and heater room is taken from and discharged to the outside air. 10-2413	

I.D. PREFIX	YES	NO	N/A		EXPLANATORY REMARKS
K63 1,654				8-1. **Hazardous Areas** - Every hazardous area has automatic fire protection or is separated by construction having at least a 1-hour fire resistance rating. Where a hazard is severe, both automatic fire protection and fire-resistive construction are used. 10-2351	
K64				8-1. A. The following hazardous areas are protected by automatic extinguishing systems and/or fire-separated. AES - Automatic extinguishment system S - Separated N/A - Not Applicable	

	(1) AES	(2) S	(3) N/A	
(a)				boiler, heater rooms
(b)				incinerator
(c)				laundries
(d)				repair shops
(e)				laboratories using hazardous quantities of flammable solvents
(f)				areas storing hazardous quantities of combustibles
(g)				trash collection rooms
(h)				employee locker rooms
(i)				soiled linen rooms
(j)				kitchen
(k)				handicraft shop
(l)				gift shop

K65 191				8-2. **Fire Protection Plan** - The facility has in effect and available to all supervisory personnel written copies of a plan for the protection of all persons in the event of fire and their evacuation to areas of refuge and from the building. 17-4111	

I.D. PREFIX	YES	NO	N/A		EXPLANATORY REMARKS
K66 342				9-1. **Evacuation Plan Posted** - The evacuation plan is posted in prominent locations on all floors. 17-4111	
K67 512				9-2. **Fire Drills** - A minimum of 12 fire drills are conducted annually at irregular intervals to familiarize employees on all shifts with their responsibilities. 17-4113, 17-11	
K68 232				9-3. **Furnishings and Decorations** - Furnishings and decorations do not obstruct exits or the ability to locate exits. 17-1211	
K69 409				9-4. **All combustible draperies and curtains** *(including cubicle curtains)* are rendered and maintained flame-retardant. 17-4151	
K70 568				9-5. **Wastebaskets** are of non-combustible material. 17-1213, 17-4161	
K71 429				9-6. **Smoking** - Regulations to control smoking have been adopted and implemented and are prominently posted throughout the building. 17-4141	

I.D. PREFIX	YES	NO	N/A	PART II — NON-WAIVERABLE Requirements Specified by Federal Regulations 405.1022(b), 405.1134(a)	EXPLANATORY REMARKS
K72 324				10-1. **Nonflammable medical gas systems** such as oxygen and nitrous oxide used for the administration of inhalation therapy and resuscitative purposes comply with NFPA Standard 56B *(Inhalation Therapy, 1968)*	
K73 194				10-2. **Piped-in oxygen systems** shall comply with NFPA Standard 56F *(Nonflammable Medical Gases, 1970)*	
K74				10-3. **Hospitals Only** *(Indicate Not Applicable for nursing homes)* **Anesthetizing areas** and rooms used for the storage of flammable anesthetic agents are designed, operated and maintained in accordance with NFPA standard 56A *(Inhalation Anesthetics, 1971)*	
K75 35				10-4. **Nursing Homes Only** *(Indicate Not Applicable for hospitals)* **Housing of Blind and Non-Ambulatory Patients** - Blind patients and non-ambulatory or physically handicapped patients are not housed above the street level floor unless the facility is of fire resistive construction, 1-hour protected non-combustible construction, or fully sprinklered 1-hour protected ordinary or fully sprinklered protected wood frame constrction.	

I.D. PREFIX	YES	NO	N A	PART III	EXPLANATORY REMARKS
				A. Alternative Provisions for Sprinkler Requirements - If item 5-7 on sprinkler coverage has been answered "NOT MET" and the facility is a one-story protected wood frame facility, answer the next four items.	
K76 519				11-1. **Hazardous Areas**- All hazardous areas are sprinklered.	
K77 347				11-2. **Detection Systems** - Automatic fire detection devices are installed in all areas required by the Life Safety Code to be protected by an automatic sprinkler system. The detection system is currently listed with UL's Fire Protection List. The system is arranged to close all fire doors in barrier partitions and, where possible, shall be hooked into the local fire department or central control. At a minimum, the detection system must activate an alarm system inside and outside the building.	
K78 21C				11-3. **Compartmentation** - Patient rooms are separated from each other and all other areas by construction having at least a 1-hour fire resistance rating.	
K79 126				11-4. **Fire Department Response** - The response time and capability of the local fire department is adequate, in the judgment of the State fire authority official, to provide an acceptable level of protection for an unsprinklered facility.	

B. RECOMMENDATION FOR WAIVER OF SPECIFIC LIFE SAFETY CODE PROVISIONS

For each item of the Life Safety Code (21st edition, 1967) recommended for waiver, list the survey report form item number and state the reason for the conclusion that: (a) the specific provisions of the code, if rigidly applied, would result in unreasonable hardship on the facility, and (b) the waiver of such unmet provisions will not adversely affect the health and safety of the patients. (If additional space is required, use reverse side.)

INVENTORY OF HEALTH CARE FACILITY SURVEYORS

INTRODUCTION

During the months November, 1974 through January, 1975, a nation-wide survey of health facility surveyors for Medicare-Medicaid was conducted by CPI Associates, Inc., under a contract to the Division of Provider Standards and Certification (DPSC). This report contains a compilation of data derived from that survey.

A questionnaire was developed for the survey and is included in the Appendix. The questionnaire sought information concerning age, sex, professional discipline, education, work experience, work status and activities, surveyor training, survey structure, program responsibility, kinds of facilities surveyed, and survey functions. The purpose of the questionnaire was to obtain information on all State and county employees, including life safety code surveyors, who as part of their normal duties conduct on-site surveys and complete at least a portion of the survey report form for facilities covered under Title XVIII (Medicare and Title XIX (Medicaid).

BACKGROUND

The 1974 national inventory of health facility surveyors constitutes the second of its kind. The first was conducted in 1972 by the Community Health Service through the Community Profile Data Center and the Division of Medical Care Standards. In the 1972 Surveyor Inventory, questionnaires were sent to 2,061 individuals, 1,886 of whom were later determined to be employed in survey-related activities. Fifteen-hundred fifty-one persons responded after three mailings and one phone call was made in an attempt to elicit response. The findings of the inventory are included in "Inventory of Health Care Facilities Surveyors; United States—1972" (DHEW Publication No. HSM 73-6503).

The 1974 inventory of surveyors was quite similar in format to that of 1972. There were, however, differences in definitions of health facility surveyor, and in methodology, as will be delineated below. Thus, comparability of the two studies is somewhat limited.

PURPOSE OF SURVEY

The Division of Provider Standards and Certification, of the Bureau of Quality Assurance, Health Services Administration, in cooperation with the Social Security Administration, Social Rehabilitation Administration, and the Office of Nursing Home Affairs, is responsible for operation of a continuing program designed to improve the effectiveness of State health certification procedures. A major part of this mandate is the training of State and Federal personnel engaged in survey activities. Such training is the responsibility of the Bureau of Quality Assurance, Division of Provider Standards and Certification.

In 1971, the President stated that there would be 2,000 surveyors trained by 1973 for the survey of health facilities. According to the Under-Secretary of Health, Education, and Welfare, in a speech to a conference of State long-term care facility surveyors in St. Petersburg, Florida in June of 1974, that goal has been reached.

Over the period that training has been conducted, there have been six university-based training programs involving one or more of three courses. First, there has been a basic training course for surveyors with emphasis in four major areas: (1) techniques of surveying health facilities, (2) techniques of proper documentation, (3) techniques of consultation, and (4) techniques of programming for improvement. Second, there has been an advanced course for surveyors that emphasizes the four areas covered in the basic course, but which offered an opportunity for surveyors with one to two years of experience to refine their skills. Surveyors in the advanced course have been given greater instruction on the technical and professional aspects of their jobs and have taken optional training in such topical areas as investigation of complaints, comprehensive health planning, and quality of life. The third course offered has been the supervisor training institute. The institute has been directed towards improvement of the certification process in general and has involved basic training in management by objective theory.

The information in this inventory is provided as a basis for planning and development of any future training activities for surveyors. The report contains data concerning the characteristics of surveyors, their responsibilities and activities, the kind of training received by surveyors, and areas where training could be improved.

METHOD

When the 1972 surveyor inventory was conducted, 335 nonsurveyors—Director, Supervisors, or consultants—were included in the population analyzed in the inventory. To achieve a more "pure" analysis of surveyors per se, a formal definition of surveyor was composed for the 1974 inventory. The definition was as follows:

> Any individual who as part of his/her normal duties makes on-site inspection visits to facilities which, under law (Medicare-Medicaid), require certification and is responsible for completing at least a portion of a survey report form documenting information derived from observations made during on-site visits.

In September, 1973, the ten HFSIP Regional Coordinators provided the Division of Provider Standards and Certification with the names of surveyors that they had obtained from the directors of the State survey agency in their respective regions. During August of 1974, the heads of the Regional Offices were asked to obtain an update of the lists that took into account the above definition of health facility surveyor. The lists of surveyors' names were transmitted to CPI Associates and they served as the basis for the inventory. The lists and the time at which they were submitted may have affected the quality of the inventory. First, some States provided more comprehensive lists than others. For instance, some States sent names not only of surveyors but also of all individuals employed in the licensure and certification program. And some States neglected to include the life safety code surveyors in their lists. Second, the lists were not completely current because of an OMB clearance delay that precluded mailing the questionnaires before November.

The questionnaire itself was based upon the 1972 questionnaire in format. Changes were made, however, to accommodate alterations in regulations made since 1972. For instance, in 1972 surveyors had the Federal survey functions for only the Medicare program—hospitals, nursing homes, and home health agencies. By 1974 functions had been expanded to include the Medicaid Program—hospitals, skilled nursing facilities, intermediate care facilities, institutions for the mentally retarded and other related conditions, home health agencies, independent laboratories, outpatient/physical therapy services, domiciliary facilities, and portable x-ray facilities. Questions were added in the 1974 questionnaire to elicit information about these additional facilities.

The 1974 questionnaire also varied from the 1972 instrument in that more elaborate information was requested in some areas. For example, the 1974 questionnaire included questions on survey structure (single surveyor vs. team survey construction) whereas the 1972 questionnaire did not. Also, the 1972 questionnaire did not include questions on the number of facilities surveyed and the number of hours spent in survey. The 1974 questionnaire included such questions.

Given that the basic questions were the same in both the 1972 and 1974 questionnaires, an extensive pre-test was not conducted. The "pre-test" for the 1972 questionnaire was considered by the Division of Provider Standards and Certification to have been the 1972 inventory. New questions were perused extensively by personnel in the DPSC and tested on a selected number of surveyors.

On November 14, 1974, the first mailing of the questionnaire occurred; the total number of questionnaires mailed was 2,118. There were two follow-up mailings, the last of which brought the overall response rate of 88.5 percent (cf. Table 1). Eleven States had response rates of 100.0 percent—Alaska, Arizona, Delaware, Hawaii, Nevada, New Hampshire, North Carolina, South Carolina, South Dakota, Vermont, and Wyoming. Detracting from the overall rate were States which had relatively low response rates, e.g., five States had less than 70.0 percent return—the District of Columbia, Iowa, Puerto Rico, Virgin Islands, and West Virginia.

The method used differs from that used in 1972 in that in the 1972 inventory non-respondents were contacted by phone in an attempt to obtain the information asked for in the questionniare. Such a procedure was not followed in the 1974 inventory. Phone calls were made only to ascertain whether or not individuals were surveyors. Through these phone calls it was determined that 86.4 percent of the persons who actually survey facilities responded. The difference in information gathering techniques between 1972 and 1974 may account for the difference in response rate to the two instruments. Moreover, because it has been found that information elicited in telephone interviews differs from that which would be elicited through questionnaires, the comparability of the two sets of data is limited.

The number of persons included in the analysis and who met the definition of surveyor was 1,541 of the 1,875 who returned their questionnaires. Three hundred and thirty-four respondents were deleted from the analysis because: (1) they were no longer employed by the agency, (2) they had clerical or other duties not related to surveying, (3) they functioned as supervisors of surveyors per se, (4) they served only as consultants and performed no direct survey functions, or (5) they functioned as administrators and/or directors and conducted no on-site surveys. This deletion represents a variation from the approach used in 1972, as noted above, since in 1972, directors, consultants, and supervisors were included. The variation further limits comparability.

In the following sections information about health facility surveyors based on the responding population of 1,541 will be provided. The results should be interpreted in light of the fact, as in any mail survey, the validity of response may have been affected by the construction of questions in the questionnaire, the accuracy and completeness of the listing of the surveyors' names submitted by the State Survey Agency to the DHEW Regional offices, and/or by the respondent's views and manner of reporting.

SECTION A. CHARACTERISTICS OF SURVEYORS

This portion of the report is concerned with basic information about the 1,541 surveyors who responded to the questionnaire. The fifteen tables presented in this section include demographic data, information concerning educational attainment, and data concerning surveyors' professional disciplines.

Some summary information may be presented:

(1) The mean age for those who answered the question concerning age was 46 years. The median age was 47 years.

(2) Approximately 50 percent were male and 50 percent were female.

(3) The average number of years employed as a surveyor was four years. Ninety-seven percent of the surveyors served in a health field prior to becoming surveyors, spending on the average of 16 years in such employment. Twenty-eight percent of the surveyors had been employed in a non-health field that has aided them in the survey activities. The average number of years spent in such a non-health field was ten years.

(4) Ninety-eight percent were employed by the State.

(5) Thirty-eight percent of the respondents were nurses; 13 percent, sanitarians; and seven percent, hospital administrators. Seventy-one percent of all respondents were certified or registered in their professional disciplines.

(6) As might be expected given the number of nurses in the surveyor population, 33 percent of the respondents held nursing diplomas. Sixty-six percent of all respondents held baccalaureate degrees. Approximately 45 percent of the surveyors had completed at least some graduate work, 27 percent receiving graduate degrees. Thirty-eight percent of those receiving technical school certificates received them in health-related fields. The vast majority of respondents attending universities at any level obtained their training in health-related fields.

Total	8	102	38	111	72	506	1,012	297	415	6

[1]Persons who attended high school or received a high school diploma and went no further were included in the categories referring to high school. Persons who went further than high school were coded in other categories. If they had credentials in more than one area, they were coded in all areas that applied, with two exceptions. (1) People who received baccalaureate or associate degrees were not included in the "some college" category, and (2) persons who received graduate degrees were not included in the category "some graduate work" unless the field of study listed by the respondent under "some graduate work" differed from that in which the respondent received a graduate degree.

[1]This category includes: persons who called themselves surveyors, persons who left the question regarding discipline blank, and persons whose professional disciplines could not be coded in the above categories.

[2]Persons who attended high school or received a high school diploma and went no further were included in the categories referring to high school. Persons who went further than high school were coded in other categories. If they had credentials in more than one area, they were coded in all areas that applied, with two exceptions. (1) People who received baccalaureate or associate degrees were not included in the "some college" category, and (2) persons who received graduate degrees were not included in the category "some graduate work" unless the field of study listed by the respondent under "some graduate work" differed from that in which the respondent received a graduate degree.

8 or more years	0	15	7	24	7	78	165	44	83	0
Not Ascertained	0	6	1	8	0	9	20	6	8	3
Total	8	102	38	111	72	506	1,012	297	415	6

[1]Persons who attended high school or received a high school diploma and went no further were included in the categories referring to high school. Persons who went further than high school were coded in other categories. If they had credentials in more than one area, they were coded in all areas that applied, with two exceptions, (1) people who received baccalaureate or associate degrees were not included in the "some college" category, and (2) persons who received graduate degrees were not included in the category "some graduate work" unless the field of study listed by the respondent under "some graduate work" differed from that in which the respondent received a graduate degree.

SECTION B. TRAINING OF SURVEYORS

In this section of the report there are seven tables describing the kinds of training that surveyors have had. As in Section A, several general points may be derived from these tables and from additional information found in the questionnaire:

(1) Sixty percent of the surveyors responding to the questionnaire have attended one or more of the DHEW-sponsored university-based courses. Fifty-nine percent had attended the basic course; 9 percent, the advanced course; and 4 percent, the supervisor training institute. By region, Regions VI and IX had the highest percentage attendance at the DHEW-sponsored courses.

(2) Not included in the tables is information pertaining to the location and date of attendance at the university-based courses. The data reveal that 45% of the 861 persons who reported the university they attended for the basic course had received training from Tulane. Twenty-one percent received their training from the University of California at Los Angeles; 13 percent, the University of Colorado; 13 percent, the University of Maryland; and 8 percent; the University of New Hampshire. Most had taken the basic course during 1972 or 1973.

(3) The likelihood of attendance at a university-based course increased with the number of years that a surveyor had been employed. Only 30 percent of those employed one year or less had attended any of the courses. Sixty percent of those employed two or four years had attended a course. And 73 percent of those employed five to seven years or 8 or more years had attended.

(4) Percentagewise, the professional discipline most likely to be in attendance at any university-based course were hospital administrators, health administrators, registered nurses, social workers, speech or audiological therapists, and nursing home

administrators. Nurses, who represented 38 percent of the total population of surveyors, had 71 percent attendance for at least one course.

(5) Fifty-four percent of the respondents reported having professional disciplines that required continuing education. Of these individuals, 62 percent stated that the DHEW-sponsored university-based courses met the discipline's requirements. Courses most likely to meet requirements were the basic and advanced courses.

(6) Those most likely to have attended a university-based course were those who had received at least one higher-educational credential. Those least likely to have attended were those who had attended high school only or received a high school diploma only.

(7) Aside from the university-based courses, respondents had opportunities to attend other continuing education conferences. Approximately 70 percent availed themselves of that opportunity since 1972.

TABLE 17

ATTENDANCE AT DHEW-SPONSORED COURSES,
BY REGION, 1974

Region	Attendance at any DHEW Course			Number Who Attended [1]		
	Attended	Did Not Attend	Not Ascertained	Basic Course	Advanced Course	Supervisor Training Institute

[1]Persons who attended high school or received a high school diploma and went no further were included in the categories referring to high school. Persons who went further than high school were coded in other categories. If they had credentials in more than one area, they were coded in all areas that applied, with two exceptions, (1) people who received baccalaureate or associate degrees were not included in the "some college" category, and (2) persons who received graduate degrees were not included in the category "some graduate work" unless the field of study listed by the respondent under "some graduate work" differed from that in which the respondent received a graduate degree.

[2]Persons who attended more than one course were included in all categories that applied.

TABLE 22

ATTENDANCE AT DHEW-SPONSORED COURSES,
BY NUMBER OF YEARS OF SURVEY EXPERIENCE, 1974

Number of Years of Survey Experience	Attendance at DHEW Courses			Number Who Attended [1]		
	Attended	Did Not Attend	Not Ascertained	Basic Course	Advanced Course	Supervisor Training Institute
1 year or less	105	242	4	105	2	2

SECTION C. SURVEY RESPONSIBILITIES AND ACTIVITIES

This section of the report deals with surveyors' activities and responsibilities. There are 22 tables in this section which describe program responsibility, functional responsibility, survey structure, kinds of facilities surveyed, conditions of participation and standards surveyed, estimated number of facilities surveyed per year, and estimated number of hours spent surveying particular kinds of facilities.

General points that may be drawn from these tables include:

(1) Seventy percent of the surveyors are responsible for Title XVIII, Title XIX, and Licensure.

(2) Twelve percent of those reporting that have survey activities spent one to 25 percent of their time as surveyors. Nineteen percent spent 26 to 50 percent; 16 percent, 51 to 75 percent; and 43 percent, 76 to 100 percent. The estimates of 10 percent were not ascertained. (Not included in the tables is information about the number of hours spent in survey-related activities. These may be summarized as follows. Reporting surveyors spent an average of four hours per week in pre-survey file review. They spent an average of 16 hours per week in actual surveying. An average of nine hours per week is spent in report writing and other survey-related activities, while an average of eight hours is spent in travel. An average of seven hours is spent in consultation and/or follow-up. Seven hours are spent in other activities. This brings the average work week for surveyors to approximately 51 hours. This average may be somewhat inflated, but some surveyors reported that travel was on the "surveyor's own time" and others reported that they normally worked a longer than 40 hour week.)

(3) In addition to their survey activities, one percent of the surveyors spent their time in director positions. Eight percent reported that they spent a portion of their time in administrative duties in offices. Twelve percent acted in supervisory capacities. Sixty-two percent functioned as consultants.

(4) Those most likely to hold administrative duties are those who hold higher-educational credentials.

(5) The likelihood of holding administrative positions is directly associated with the number of years of survey experience.

(6) Males are significantly more likely than females to hold administrative positions.

(7) Seventeen percent always work as single surveyors. Fifty-one percent sometimes as single surveyors and sometimes as part of a team. Thirty-one percent always work as part of a team.

(8) Facilities for which a team is most likely to be used include general hospitals, psychiatric and TB hospitals, skilled nursing facilities, intermediate care facilities, institutions for the mentally retarded and other related conditions, outpatient/physical therapy services, and domiciliary facilities. Facilities for which a surveyor is likely to be solely responsible include home health agencies, independent laboratories, and portable x-ray facilities.

(9) Persons in almost all disciplines were likely to survey other conditions of participation or standards as well as their own areas of expertise.

TABLE 24

PROGRAM RESPONSIBILITY OF SURVEYORS,
BY PROFESSIONAL DISCIPLINE, 1974

Professional Discipline	Kind of Program Responsibility							
	Title XVIII	Title XIX	Licensure Only	Title XVIII & Title XIX	Title XIX and Licensure	Title XVIII and Licensure	All Programs	Not Ascertained
Hospital Administrator	13	2	0	16	1	4	68	1

Laboratory Technician	8	6	1	0	15
Fire Marshal; Life Safety Code Surveyor; Health Inspector	38	34	7	1	80
Counselor	1	0	0	0	1
Educator	2	2	1	0	5
Nursing Home Administrator	0	5	1	0	6
Surveyor[2]	24	78	26	0	128
Total	264	788	472	17	1,541

[1]Of those respondents who sometimes work as single surveyors or always work as single surveyors, 770 use consultant support back-up, 146 do not, and the answers of 136 were not ascertained.

[2]This category includes: persons who called themselves surveyors, persons who left the question regarding discipline blank, and persons whose professional disciplines could not be coded in the above categories.

TABLE 31

NUMBER OF SURVEYORS WHO WORK AS SINGLE SURVEYORS, SOMETIMES AS PART OF A TEAM, OR ALWAYS AS PART OF A TEAM, BY EDUCATIONAL LEVEL, 1974

Level Of Educational Attainment[1]	Survey Structure				Total
	Always Work As Single Surveyor	Sometimes Work as Part of a Team[2]	Always Work As Part of a Team	Not Ascertained	
Some High School Only	0	7	1	0	8
High School Diploma Only	32	53	15	2	102
Some College	9	22	7	0	38
Technical School Certificate	23	55	30	3	111
Associate Degree	10	42	18	2	72
Diploma in Nursing	103	242	156	5	506
Baccalaureate Degree	148	509	346	9	1,012
Some Graduate School	36	166	93	2	297
Graduate Degree	58	194	157	6	415
Not Ascertained	1	5	0	0	6

[1]Persons who attended high school or received a high school diploma and went no further were included in the categories referring to high school. Persons who went further than high school were coded in other categories. If they had credentials in more than one area, they were coded in all areas that applied, with two exceptions, (1) people who received baccalaureate or associate degrees were not included in the "some college" category, and (2) persons who received graduate degrees were not included in the "some graduate work" category unless the field of study listed by the respondent under "some graduate work" differed from that in which the respondent received a graduate degree.

[2]Of those respondents who sometimes work as single surveyors or always work as single surveyors, 770 use consultant support back-up, 146 do not, and the answers of 136 were not ascertained.

TABLE 32

NUMBER OF SURVEYORS SURVEYING PARTICULAR KINDS OF FACILITIES, BY SURVEY STRUCTURE[1]

Survey Structure[2]	Kind of Facilities[3]											
	General Hospitals	Psychiatric and/or Tuberculosis Hospitals	Skilled Nursing Facilities	Intermediate Care Facilities	Institutions for the Mentally Retarded and other Related Conditions	Home Health Agencies	Independent Laboratories	Outpatient/Physical Therapy Services	Domiciliary Facilities	Portable X-Ray Facilities	Whether or not team is used depends on whether surveyors can get together as a team	Whether or not team is used depends on size of facility
Work as Single Surveyor	469	257	585	522	189	126	65	44	87	14	6	5
Work as Part of a Team	758	361	910	769	322	91	32	77	104	12	6	5

[1] The kinds of facilities surveyed with a particular structure could not be ascertained for 73 of the 1,541 respondents.

[2] Respondents who "sometimes work as part of a team" were divided and coded into the other two categories, "work as single surveyors" and "work as part of a team." See question G. 1 in questionnaire.

[3] Respondents who survey more than one kind of facility were included in all categories that applied.

TABLE 33

NUMBER OF SURVEYORS SURVEYING PARTICULAR KINDS OF FACILITIES, BY REGION, 1974

Region	Number of Surveyors Who Survey [1]								
	Hospitals	Skilled Nursing Facilities	Intermediate Care Facilities	Institutions for the Mentally Retarded and Other Related Conditions	Home Health Agencies	Independent Laboratories	Outpatient/Physical Therapy Services	Domiciliary Facilities	Portable X-Ray Facilities

[1]This category includes: persons who called themselves surveyors, persons who left the question regarding discipline blank, and persons whose professional disciplines could not be coded in the above categories

[2]Respondents who survey more than one kind of facility were included in all categories that applied.

TABLE 36

KINDS OF FACILITIES SURVEYED,
BY EDUCATIONAL LEVEL, 1974

Level of Educational Attainment[1]	Kinds of Facilities[2]								
	Hospitals	Skilled Nursing Facilities	Intermediate Care Facilities	Institutions for the Mentally Retarded and Other Retarded Conditions	Home Health Agencies	Independent Laboratories	Outpatient/Physical Therapy Services	Domiciliary Facilities	Portable X-Ray Facilities
Some High School Only	8	8	7	6	2	0	1	1	0
High School Diploma Only	72	94	91	67	12	2	8	13	2
Some College	19	36	31	18	3	1	2	9	1
Technical School Certificate	87	96	83	59	14	7	6	14	8
Associate Degree	50	59	54	34	13	5	12	8	1
Diploma in Nursing	241	409	387	177	97	4	43	92	6
Baccalaureate Degree	768	791	699	423	155	82	134	146	22
Some Graduate School	211	250	221	132	53	16	47	47	8
Graduate Degree	328	309	251	172	62	38	51	46	9
Not Ascertained	4	5	5	2	1	0	1	1	0

[1]Persons who attended high school or received a high school diploma and went no further were included in the categories referring to high school. Persons who went further than high school were coded in other categories. If they had credentials in more than one area, they were coded in all areas that applied, with two exceptions, (1) people who received baccalaureate or associate degrees were not included in the "some college" category, and (2) persons who received graduate degrees were not included in the category "some graduate work" unless the field of study listed by the respondent under "some graduate work" differed from that in which the respondent received a graduate degree.

[2]Respondents who survey more than one kind of facility were included in all categories that applied.

[1]Respondents who survey more than one kind of facility were included in all categories that applied.

CONCLUSIONS

Summary characteristics have been presented at the beginnings of Sections A, B, and C and need not be presented here. But some general conclusions may be derived from the data.

The majority of the surveyors have received training. However, due to turnover and expanding State survey staffs necessary to meet Medicare/Medicaid demands, there is a continuing need for entry-level training. Likewise, there is need for training staff who survey in specialty areas such as fire safety and laboratory services.

The focus of future training must be sensitive to special needs of States, regions, disciplines, and years of survey experience so that basic as well as specialized training requirements are met in the most effective manner.

APPENDIX

CONFIDENTIAL: *All information which permits the identification of the individual will be held strictly confidential, will be used by personnel engaged in and only for the purposes of the survey.*

Dear Health Facility Surveyor:

The Division of Provider Standards and Certification has been periodically conducting a national inventory of surveyors to update our census on surveyors to assist in the development and projection of plans for the surveyor training programs. We have contracted with CPI Associates, Inc. to perform and to prepare a report on this inventory study. However, we do need your assistance in completing the enclosed questionnaire.

The purpose of the questionnaire is to obtain information on all State and local employees who survey health care facilities and home health agencies. This includes surveys conducted for State licensure programs, Title XVIII (Medicare) and Title XIX (Medicaid) certification, Life Safety Code, and inspections for compliance with local health facility ordinances. For purposes of this inventory, the term "Surveyor" includes any individual who, as part of his normal duties, makes on-site visits to facilities, which, under law (Medicare/Medicaid), require certification, and is responsible for completing and documenting at least a portion of a survey report form. No individual respondent will be identified in the final report since it consists of a summary of all questionnaires. Confidentiality measures will be in effect throughout the study and a copy of the final report will be sent to each respondent.

Please complete all questions on this form and return it within five days in the enclosed self-addressed envelope.

Thank you for your interest and support.

Sincerely yours,

Michael J. Spodnik, Jr.
Acting Director
Division of Provider Standards
and Certification

16 ☐ Other; Specify: _____	☐	☐	☐

D. EXPERIENCE

1. How many years since 1966 have you worked as a health-related facility surveyor under the Medicare-Medicaid programs? _____
2. How many years did you work in the health field prior to becoming a Medicare-Medicaid surveyor? _____
   Specify field(s): _____
3. How many years did you work in a non-health field that has aided you in your job as surveyor? _____
   Specify field(s): _____

E. 1. Do you, as part of your normal duties, make on-site inspection visits to facilities which, under law (Medicare-Medicaid), require certification?

1 ☐ Yes 2 ☐ No

2. Are you responsible for completing at least a portion of a survey report form, documenting information derived from observations made during these on-site visits?

1 ☐ Yes 2 ☐ No

3. Type of agency in which employed for surveying activities (Check appropriate box)

1 ☐ State (Specify State: _____)

2 ☐ County/Parish (Specify County/Parish and State: _____)

3 ☐ City (Specify City and State: _____)

4 ☐ Other (Specify location: _____)

4. Official name of agency: _____

5. Address of agency: _____

_____

_____

6. How many hours per week are you employed in:

Pre-Survey File Review _____ Travel _____

Actual Surveying _____ Consultation and/or Follow-up _____

Report Writing and Other Survey-Related Activities _____ Other _____

7. What responsibilities do you have in the Licensure/Certification Program?
(Check ALL that apply and estimate the percentage of time you spend in fulfilling that responsibility; percentages should not exceed a total of 100%)

Responsibilities	Percentage of Time
1 ☐ Director	_____
2 ☐ Administrator (in office)	_____
3 ☐ Supervisor (of field operations)	_____
4 ☐ Surveyor	_____
5 ☐ Consultant	_____
6 ☐ Other Specify: _____	_____

F. SURVEYOR-RELATED TRAINING

1. Have you attended and completed any of the DHEW-sponsored university-based health facility surveyor training courses?

1 ☐ Yes 2 ☐ No

IF **YES** is checked, which one(s)?

1 ☐ Basic course (Specify university and date: _____)

2 ☐ Advanced course (Specify university and date: _____)

3 ☐ Supervisor training institute (Specify university and date: _____)

2. Does your professional discipline require continuing education?

1 ☐ Yes 2 ☐ No

IF **YES** is checked, do any of the courses mentioned in question 1 of this section meet your discipline's requirements?

1 ☐ Yes 2 ☐ No

IF **YES** is checked, which one(s)?

1 ☐ Basic course

2 ☐ Advanced course

3 ☐ Supervisor training institute

3. Since 1972 have you attended other continuing education conferences that have helped you in your survey functions and responsibilities?

1 ☐ Yes 2 ☐ No

IF **YES** is checked, specify subject area(s): _____

OMB# 68-R1289
Expires June 30, 1977

G. TYPE, AREA AND FUNCTIONAL RESPONSIBILITY

1. Do you work as:

1 ☐ a single surveyor

2 ☐ sometimes as a single surveyor, sometimes as part of a team

3 ☐ part of a team (two or more persons, excluding life safety code surveyors, who are responsible for surveying the same facility)

If you work **at least sometimes** as a single surveyor, do you utilize consultant support back-up?

1 ☐ Yes 2 ☐ No

If you work sometimes as a single surveyor and sometimes as part of a team, for what kinds of facilities do you function as a single surveyor? _____ For what kinds of facilities do you function as part of a team? _____ .

If you work **at least sometimes** as part of a team, please answer the following questions:

What is the average size of the teams on which you worked during past year _____ .

Specify the professional disciplines represented on the teams with which you worked during the past year (Check **ALL** that apply)

01 ☐ Hospital Administrator

02 ☐ Health Administrator

03 ☐ Medical Records Administrator

04 ☐ Medical Technologist

05 ☐ Nurse, RN

06 ☐ Nurse, LPN or LVN

07 ☐ Nutritionist

08 ☐ Dietitian

09 ☐ Occupational Therapist

10 ☐ Pharmacist

11 ☐ Physical Therapist

12 ☐ Physician, DO

13 ☐ Physician, MD; Specify specialty(s): _____

14 ☐ Sanitarian

15 ☐ Social Worker; Specify field(s): _____

16 ☐ Other; Specify _____

Do you survey facilities together as a team or do you conduct individual visits on separate days?

1 ☐ Survey facilities together as a team

2 ☐ Conduct individual visits on separate days

2. Program Responsibility (Check **ALL** that apply)

1 ☐ Title XVIII Certification

2 ☐ Title XIX Certification

3 ☐ Licensure

3. Survey Functions

1. Do you survey **hospitals**?

1 ☐ Yes 2 ☐ No

If **YES** is checked, please answer the following questions:

Please estimate the average number of hospital facilities you survey yearly _____

Please estimate the average number of hours spent in facility for survey _____

What kind of hospital facilities do you survey? (Check **ALL** that apply)

1 ☐ General

2 ☐ Psychiatric

3 ☐ TB

OMB#68-R1289
Expires June 30, 1977

What condition(s) of participation do you survey in hospitals? (Check ALL that apply)

01 ☐ Compliance with State and Local laws
02 ☐ Governing Body
03 ☐ Physical Environment
04 ☐ Medical Staff
05 ☐ Nursing Department
06 ☐ Dietary Department
07 ☐ Medical Records Department
08 ☐ Pharmacy or Drug Room
09 ☐ Laboratories
10 ☐ Radiology Department
11 ☐ Medical Library
12 ☐ Complementary Department
13 ☐ Outpatient Department
14 ☐ Emergency Service or Department
15 ☐ Social Work Department
16 ☐ Utilization Review Plan
17 ☐ Life Safety Code

2. Do you survey **skilled nursing facilities?**

1 ☐ Yes 2 ☐ No

If YES is checked, please answer the following questions:

Please estimate the average number of skilled nursing facilities you survey yearly _____

Please estimate the average number of hours you spend in facility for survey _____

What condition(s) of participation do you survey in skilled nursing facilities? (Check ALL that apply)

01 ☐ Compliance with Federal, State, and Local laws
02 ☐ Governing Body and Management
03 ☐ Patient Care Policies
04 ☐ Physician Services
05 ☐ Nursing Services
06 ☐ Dietetic Services
07 ☐ Specialized Rehabilitative Services
08 ☐ Pharmaceutical Services
09 ☐ Laboratory and Radiologic Services
10 ☐ Dental Services
11 ☐ Social Services
12 ☐ Patient Activities
13 ☐ Medical Records
14 ☐ Transfer Agreement
15 ☐ Physical Environment
16 ☐ Infection Control
17 ☐ Disaster Preparedness
18 ☐ Utilization Review
19 ☐ Life Safety Code

3. Do you survey **intermediate care facilities?**

1 ☐ Yes 2 ☐ No

If YES is checked, please answer the following questions:

Please estimate the average number of intermediate care facilities you survey yearly _____

Please estimate the average number of hours you spend in facility survey _____

What standards do you survey in intermediate care facilities? (Check ALL that apply)

01 ☐ State Licensure
02 ☐ Conformity with Federal, State, and Local laws
03 ☐ Administrative Management
04 ☐ Transfer Agreement
05 ☐ Arrangements for Services
06 ☐ Resident Record System
07 ☐ Life Safety Code
08 ☐ Environment and Sanitation
09 ☐ Dietetic Services
10 ☐ Drugs and Biologicals
11 ☐ Health Services
12 ☐ Disclosure of Ownership
13 ☐ Administrator
14 ☐ Resident Services Director
15 ☐ Rehabilitation Services
16 ☐ Social Services
17 ☐ Activities Program
18 ☐ Physician Services

OMB #68-R1289
Expires June 30, 1977

4. Do you survey institutions for the mentally retarded and other related conditions?

1 ☐ Yes 2 ☐ No

If YES is checked, please answer the following questions:

Please estimate the average number of mental retardation facilities you survey yearly _____

Please estimate the average number of hours you spend in facility for survey _____

What standards do you survey in institutions for the mentally retarded and other related conditions? (Check ALL that apply)

01 ☐ State Licensure
02 ☐ Conformity with Federal, State, and Local laws
03 ☐ Disclosure of Ownership
04 ☐ Transfer Agreement
05 ☐ Admission of Residents
06 ☐ Active Treatment
07 ☐ Administrative Management
08 ☐ Administrator
09 ☐ Qualified Mental Retardation Professional
10 ☐ Arrangements for Services
11 ☐ Services as Needed
12 ☐ Direct Care Staff
13 ☐ Health Services
14 ☐ Dietetic Services
15 ☐ Drugs and Biologicals
16 ☐ Resident Record System
17 ☐ Life Safety Code
18 ☐ Environment and Sanitation
19 ☐ Relationship to 249.13

5. Do you survey home health agencies?

1 ☐ Yes 2 ☐ No

If YES is checked, please answer the following questions:

Please estimate the average number of home health agencies you survey yearly _____

Please estimate the average number of hours you spend in facility for survey _____

What condition(s) of participation do you survey in home health agencies? (Check ALL that apply)

01 ☐ Compliance with Federal, State, and Local law
02 ☐ Organization, Services, Administration
03 ☐ Group of Professional Personnel
04 ☐ Acceptance of Patients, Plan of Treatment and Medical Supervision
05 ☐ Skilled Nursing Service
06 ☐ Therapy Services
07 ☐ Medical Social Services
08 ☐ Home Health Aide Services
09 ☐ Clinical Records
10 ☐ Evaluation
11 ☐ Qualifying to Provide Outpatient Physical Therapy Services

6. Do you survey independent laboratories?

1 ☐ Yes 2 ☐ No

If YES is checked, please answer the following questions:

Please estimate the average number of independent laboratories you survey yearly _____

Please estimate the average number of hours you spend in facility for survey _____

What condition(s) of participation do you survey in independent laboratories? (Check ALL that apply)

1 ☐ Compliance with State and Local laws
2 ☐ Clinical Laboratory; Laboratory Director
3 ☐ Clinical Laboratory; Supervision
4 ☐ Clinical Laboratory; Tests Performance
5 ☐ Clinical Laboratory; Technical Personnel
6 ☐ Clinical Laboratory; Records, Equipment, and Facilities

OMB#68-R1289
Expires June 30, 1977

7. Do you survey **outpatient/physical therapy services?**

1 ☐ Yes 2 ☐ No

If **YES** is checked, please answer the following questions:

Please estimate the average number of outpatient/physical therapy services you survey yearly _____

Please estimate the average number of hours you spend in facility for survey _____

What condition(s) of participation do you survey in outpatient/physical therapy services? (Check **ALL** that apply)

01 ☐ Compliance with State and Local laws

02 ☐ Administrative Management

03 ☐ Patient Care Policies

04 ☐ Program Evaluation

05 ☐ Physician Service and Plan of Care

06 ☐ Physical Therapy Services

07 ☐ Rehabilitation Program

08 ☐ Arrangements for Physical Therapy Services to be Performed by Other than Salaried Clinic or Agency Personnel

09 ☐ Clinical Records

10 ☐ Emergency Procedures

11 ☐ Physical Environment

8. Do you survey **domiciliary facilities?**

1 ☐ Yes 2 ☐ No

If **YES** is checked, please answer the following questions:

Please estimate the average number of domiciliary facilities you survey yearly _____

Please estimate the average number of hours you spend in facility for survey _____

9. Do you survey **portable x-ray facilities?**

1 ☐ Yes 2 ☐ No

If **YES** is checked, please answer the following questions:

Please estimate the average number of portable x-ray facilities you survey yearly _____

Please estimate the average number of hours you spend in facility for survey _____

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE 65

BUREAU OF QUALITY ASSURANCE
DIVISION OF PROVIDER STANDARDS AND CERTIFICATION

Dear Surveyor:

Approximately two weeks ago, you were sent a questionnaire concerning your duties as a surveyor of facilities participating in the Medicare and Medicaid programs. This questionnaire was to be returned within five days after receipt, and your questionnaire has not yet been received.

The Division of Provider Standards and Certification has been periodically conducting a national inventory of surveyors to update our census on surveyors and to assist in the development and projection of plans for the surveyor training programs. To make a more reliable assessment of training needs and the nature of the surveyor population, a high rate of response by surveyors is needed. Therefore, we would like your questionnaire as soon as possible.

We have enclosed a copy of the questionnaire, which also includes a letter giving a more detailed explanation of the survey. As we note in the letter and on the questionnaire, all answers will be kept confidential.

Thank you for your cooperation.

Sincerely,

Michael J. Spodnik, Jr.
Acting Director
Division of Provider Standards
and Certification

MANUAL.....
PART ..

CHAPTER 8-40

Safety Standard for Flammability of Floor Coverings

DRAFT

8-40-00 Purpose

To establish a Department of Health, Education, and Welfare safety standard on the flammability of floor coverings.

8-40-10 Policy

It is the policy of the Department of Health, Education, and Welfare to assure a safe and healthful environment insofar as practicable, for its employees in the performance of their assigned responsibilities and to those members of the public whose environments may be affected by activities or programs of the Department, through the establishment of appropriate Departmental safety and health standards, criteria, policy and guidance for uniform and consistent use on a Department-wide basis.

8-40-20 Applicability

This standard is applicable to all types of floor coverings and surfacings used in all facilities owned or operated by the Department of Health, Education, and Welfare and to all program areas of the Department including Federally aided and grant programs.

8-40-30 Effective Date

This standard is effective on January 1, 1977; floor coverings installed prior to the effective date of this standard may be continued in use. In those cases where a purchase contract or similar commitment to install floor coverings was entered into prior to January 1, 1977, but for installation to commence after that date, the policy standards in this chapter should be adhered to if it is feasible to renegotiate the contract or

8-40-30 (continued)

similar commitment.

8-40-40 Standard for Flammability

A. Floor coverings used in corridors and means of egress in health care facilities shall have a minimum critical radiant flux of 0.45 watts per square centimeter as determined by the Flooring Radiant Panel Test (FRPT). See Exhibit X-25.

B. Floor coverings used in corridors and means of egress in facilities other than health care shall have a minimum critical radiant flux of 0.22 watts per square centimeter as determined by the Flooring Radiant Panel Test (FRPT). See Exhibit X-25.

C. Carpets and rugs used in spaces other than corridors and means of egress of all facilities (including health care) are required by Federal Law to meet "Standard for the surface Flammability of Carpets and Rugs" DOC FF-1-70 (Pill Test).

See Federal Register, April 10, 1970. Only those floor coverings installed after April 10, 1970 are required to meet DOC FF-1-70. Floor coverings of other materials used in spaces other than corridors and means of egress of all facilities may be required to meet the interior finish requirements of the "Life Safety Code," 1973 edition as published by the National Fire Protection Association as determined by the authority having jurisdiction.

D. When floor coverings are composed of multi-layered materials, such as a carpet over a separate pad, the minimum criteria above shall apply to the entire assembly.

E. When an additive or process has been applied to either the basic material or to the final floor covering material which significantly decreases the flammability of the floor covering and enables it to meet the acceptance criterion of this standard, the test method calls for a washing or other determination that such treatment or process is not easily removed by normal maintenance procedures.

F. Special treatments, such as carpet shampoo which may render a floor covering less flammable, shall not be used to comply with above criteria. The use of such treatments requires judgment on the part of the enforcing official as to the acceptability of such treatments for previously installed floor coverings.

8-40-50 Standard for Smoke Developed

Floor coverings, installed throughout any facility, after the effective date of this standard shall possess a "smoke developed" rating of 450 or less as determined by the standard "Smoke Generated by Solid Materials".
(Note: This standard is currently National Fire Protection Association's No. 258T and was developed as National Bureau of Standards Technical Note No. 708. The smoke developed rating is intended to permit hardwood floors and most resilient (vinyl, asbestos, etc.) floor coverings).

8-40-60 Standard for Static Build-up

Floor coverings, unless in conflict with another safety or medical standard, installed after the effective date of this standard, shall not build-up a static level exceeding 3.5 kV when tested by the AATCC Test Method 134-1969. In locations where flammable liquids, vapors, gases, and highly combustible solids are present, there should be no measurable build-up of static electricity charges.

8-40-70 Standard for General Safety

Floor coverings, installed throughout any facility after the effective date of this standard, shall be of types which do not present an unusual slipping or tripping hazard to those persons traveling over them.

8-40-80 Standard for Use by Handicapped

All carpeting in areas subject to use by handicapped individuals shall, in addition to meeting other requirements of these standards, be specified as high density, low uncut pile, and non-absorbent. Underlayments are permissible provided they are specified as firm or hard and do not exceed 3/8 inches in depth. Carpets,and underlayments if used, shall be installed stretched taut and securely anchored at all edges to the floor. Edging strips shall not project higher than 3/8 inches above the floor line.

8-40-90 Previous Standards for Departmental Facilities

Floor coverings in use in Department owned or operated health care facilities prior to the effective date of this standard and installed after May 17, 1973 are required to have a flame spread rating of 75 or less as determined by ASTM E-84 test method (Steiner Tunnel).

(Note: This ASTM E-84 standard will no longer apply to floor coverings installed after the effective date of this standard.

8-40-100 Previous Standards for Program Facilities

Floor coverings in use in facilities under a Department funded or grant program were required to meet various standards according to the particular program. These floor coverings may be continued in use, provided they met the applicable standards of the specific program (Hill-Burton, Medicare, Medicaid, etc.) at the time of installation.

(Note: These program standards will no longer apply to floor coverings installed after the effective date of this standard.)

8-40-110 Exceptions

When deviations from the basic intent of this standard are required to meet specific conditions or problems, justifications supporting such determinations may be submitted to the official possessing waiver authority for the specific program or facility involved. In the case of Departmental owned or operated facilities justifications shall be submitted via appropriate organizational channels to the Director, Office of Safety Management, in accordance with 8-00-40 of the Safety Management Manual, DHEW.

76-611 O - 76 - 20

FLOORING RADIANT PANEL TEST (FRPT) EXHIBIT X-25

1. Scope

1.1 This method of test describes a procedure for measuring the critical radiant flux of horizontally mounted floor covering systems exposed to a flaming ignition source in a graded radiant heat energy environment, in a test chamber. The specimen can be mounted over underlayment, a simulated concrete structural floor, bonded to a simulated structural floor or otherwise mounted in a typical and representative way.

1.2 This method measures the critical radiant flux at flame out. It provides a basis for estimating one aspect of flame spread behavior for floor covering systems in corridors or exitways of buildings. The imposed radiant flux simulates the thermal radiation levels likely to impinge on the floor of a corridor whose upper surfaces are heated by flames and/or hot gases from a fully developed fire in an adjacent room or compartment.

2. Summary of Method

2.1 The basic elements of the test chamber, Figure 1, are: 1) an air gas fueled radiant heat energy panel inclined at 30° to and directed at 2) a horizontally mounted floor covering system specimen, Figure 2. The radiant panel generates a radiant energy flux distribution ranging along the 100 cm length of the test specimen from a nominal maximum of 1.0 watts/cm^2 to a minimum of 0.1 watt/cm^2. The test is initiated by open flame ignition from a pilot burner. The distance burned to flame out is converted to watts/cm^2 from the flux profile graph, Figure 6, and reported as critical radiant flux, watts/cm^2.

3. Significance

3.1 This method of test is designed to provide a basis for estimating one aspect of the flame spread behavior of a floor covering system installed in a building corridor. The test environment is intended to simulate conditions that have been observed and defined in full scale corridor experiments.

3.2 The test is intended to be suitable for regulatory statutes, specification acceptance, design purposes, or development and research.

3.3 The fundamental assumption inherent in the test is that "critical radiant flux" is one measure of the sensitivity to flame spread of floor covering systems in a building corridor.

3.4 The test is applicable to floor covering system specimens which follow or simulate accepted installation practice. Tests on the individual elements of a floor system are of limited value and not valid for evaluation of the flooring system.

4. Definitions of Terms

4.1 Critical Radiant Flux is the level of incident radiant heat energy on the floor covering system at the most distant flame out point. It is reported as watts/cm^2 (Btu/ft^2 sec).

4.2 Flux Profile is the curve relating incident radiant heat energy on the specimen plane to distance from the initiation of flaming ignition point, i.e. 0 cm.

4.3 Total Flux Meter is the instrument used to measure the level of radiant heat energy incident on the specimen plane at any point.

4.4 Black Body Temperature is the temperature of a perfect radiator--a surface with an absorptivity of unity and, therefore, a reflectivity of zero.

5. Flooring Radiant Panel Test Chamber -- Construction and Instrumentation

5.1 The flooring radiant panel test chamber employed for this test shall be located in a draft protected laboratory.

5.1.1 The flooring radiant panel test chamber, Figures 3 and 4, shall consist of an enclosure 140 cm [55 in] long by 50 cm [19-1/2 in] deep by 71 cm [28 in] above the test specimen. The sides, ends and top shall be of 1.3 cm [1/2 in] calcium silicate-asbestos fibre, 0.58 g/cm^3 [36 lbs/ft^3] nominal density, insulating material with a thermal conductivity @ 200 F of 0.96 cal (gm)/hr cm^2 deg C per cm [0.77 Btu/(hr) (ft^2) (deg F per in)]. One side shall be provided with a draft tight fire resistant glass window so that the entire length of the test specimen may be observed from outside the fire test chamber. On the same side and below the observation window is a door which when open allows the specimen platform to be moved out for mounting or removal of test specimens.

5.1.2 The bottom of the test chamber shall consist of a sliding steel platform which has provisions for rigidly securing the test specimen holder in a fixed and level position.

The free, or air access, area around the platform shall be in the range of 1950-3550 cm^2 [300-500 square inches].

5.1.3 The top of the chamber shall have an exhaust stack with interior dimensions of 12.5 cm [5 in] wide by 38 cm [15 in] deep by 30 cm [12 in] high at the opposite end of the chamber from the radiant panel.

5.2 The radiant heat energy source shall be a panel of porous refractory material mounted in a cast iron frame, with a radiation surface of 30.5 x 45.7 cm [12 by 18 in]. It shall be capable of operating at temperatures up to 816 C [1500 F]. The panel fuel system shall consist of an aspirator for mixing gas and air at approximately atmospheric pressure, a clean dry air supply capable of providing 28.3 NTP m^3 per hr [1000 Standard Cubic Feet per Hour] at 7.6 cm [3.0 in] of water, and suitable instrumentation for monitoring and controlling the flow of fuel to the panel.

5.2.1 The radiant heat energy panel is mounted in the chamber at 30° to the horizontal specimen plane. The horizontal distance from the 0 mark on the specimen fixture to the bottom edge (projected) of the radiating surface of the panel is 8.9 cm [3-1/2 in]. The panel to specimen vertical distance is 14 cm [5-1/2 in] (see Figure 3).

5.2.2 The radiation pyrometer for standardizing the thermal output of the panel shall be suitable for viewing a circular area 25.4 cm [10 in] in diameter at a range of about 1.37 m [54 in]. It shall be calibrated over the 490-510 C (914-950 F) operating black body temperature range in accordance with the procedure described in Appendix A.

5.2.3 A high impedance potentiometer voltmeter with a suitable millivolt range shall be used to monitor the output of the radiation pyrometer described in 5.2.2.

5.3 The specimen holder (see Figure 5), is constructed from heat resistant stainless steel[1] having overall dimensions of 115 cm [45 in] by 32 cm [12-3/4 in] with a specimen opening of 20 cm [7.9 in] x 100 cm [40 in]. Six slots are cut in the flange on either side of the holder to reduce warping. The holder is fastened to the platform with two stud bolts at each end.

5.4 The pilot burner used to ignite the specimen is a commerical propane venturi torch[2] with an axially symmetric burner tip having a propane supply tube with an orifice diameter of 0.0076 cm [0.003 in]. In operation, the propane flow is adjusted to give a pencil flame blue inner cone length of 1.3 cm [1/2 in]. The pilot burner is positioned so that the flame generated will impinge on the center line of the specimen at the 0 distance burned point at right angles to the specimen length (see Figures 3 and 4). The burner shall be capable of being swung out of the ignition position so that the flame is horizontal and at least 5 cm [2 in] above the specimen plane.

5.5 Two 0.32 cm [1/8 in] stainless steel sheathed grounded junction chromel alumel thermocouples[3] are located in the Flooring Radiant Panel Test Chamber (see Figures 3 and 4).

5.5.1 An indicating potentiometer with a range of 100-500 C (212-932 F) may be used to determine the chamber temperatures prior to a test.

5.6 An exhaust duct with a capacity of 28.3-85 NTP m^3 per minute (1000-3000 SCFM) decoupled from the chamber stack by at least 7.6 cm [3 in] on all sides and with an effective area of the canopy slightly larger than plane area of the chamber with the specimen platform in the out position is used to remove combustion products from the chamber.

5.7 The dummy specimen which is used in the flux profile determination shall be made of 1.9 cm [3/4 in] inorganic 0.58 g/cm^3 [36 lbs/ft^3] nominal density calcium silicate asbestos fibre board (see Figure 5). It is 25 cm [10 in] wide by 107 cm [42 in] long with 2.7 cm [1-1/16 in] diameter holes centered on and along the center line at the 10, 20, 30 ---- 90 cm locations, measured from the maximum flux end of the specimen.

5.7.1 The total heat flux transducer used to determine the flux profile of the chamber in conjunction with the dummy specimen should be of the Schmidt-Boelter[4] type, have a range of 0-1.5 watts/cm^2 (0-1.32 Btu/ft^2 sec), and shall be calibrated over the operating flux level range of 0.10 to 1.5 watts/cm^2 in accordance with the procedure outlined in Appendix A. A source of 15-25 C cooling water shall be provided for this instrument.

5.7.2 A high impedance or potentiometric voltmeter with a range of 0-10 m.v. and reading to 0.01 m.v. shall be used to measure the output of the total heat flux transducer during the flux profile determination.

5.8 A timer shall be conveniently mounted on the chamber for measuring preheat and pilot contact time.

6. Safety Precautions

6.1 The possibility of a gas-air fuel explosion in the test chamber should be recognized. Suitable safeguards consistent with sound engineering practice should be installed in the panel fuel supply system. These may include one or more of the following: 1) a gas feed cut off activated when the air supply fails, 2) a fire sensor directed at the panel surface that stops fuel flow when the panel flame goes out, 3) a commerical gas water heater or gas fired furnace pilot burner control thermostatic shut off which is activated when the gas supply fails or other suitable and approved device. Manual reset is a requirement of any safeguard system used.

6.2 In view of the potential hazard from products of combustion, the exhaust system must be so designed and operated that the laboratory environment is protected from smoke and gas. The operator should be instructed to minimize his exposure to combustion products by following sound safety practice, e.g. insure exhaust system is working properly, wear appropriate clothing including gloves, et al.

7. Sampling

7.1 The samples selected for testing shall be representative of the product.

7.2 Standard ASTM sampling practice shall be followed where applicable, see ASTM Method E-122.

8. Washing of Textile Floor Coverings

8.1 If the carpet has had a treatment, or is made of fibers which have had a treatment as the term "treatment" is defined in 8.2, the selected sample shall be washed as prescribed in Appendix C, unless this method can be proven to be unsuitable for the particular fabric involved. In this case, such other method as the manufacturer determines is likely to be used on the carpet in service and which is agreed to by the purchaser, may be used. Alternatively, the carpet may be washed and dried as many times under such other washing and drying procedures as shall have been demonstrated to be the equivalent of ten washings under the washing procedure described herein.

8.2 "Treatment" as that term is used in this standard shall mean any process, such as spraying, padding, dipping, brushing, or otherwise applying a material onto the pile or primary backing of a carpet at any stage of manufacture, which has the effect of reducing flammability.[5]

8.3 This washing requirement may be modified or waived by the purchaser if the manufacturer will certify that washing does not affect the permanence of the fire-retardancy resulting from the treatment.

9. Test Specimens

9.1 The test specimen shall be a floor covering system sized to provide for adequate clamping in the mounting frame. Its minimum dimensions shall exceed the frame width [20 cm (7.9 in) nominal] and length [100 cm (39.4 in) nominal] by about 5 cm (2 in). It may be necessary to notch or punch holes in the specimen to accommodate the mounting frame bolts (see Figure 5).

9.2 Insofar as possible, the floor covering system specimen should simulate actual installation practice. Typical examples follow:

9.2.1 A carpet mounted over the standard[6] cushion or the standard simulated concrete subfloor[7] (see Appendix B2.1).

9.2.2 A carpet with or without integral cushion pad bonded to a high density inorganic sheet simulating a concrete subfloor (see Appendix B2.2).

9.2.3 A resilient floor bonded to a high density inorganic sheet simulating a concrete subfloor (see Appendix B3.1).

9.2.4 A hardwood floor nailed to a plywood subfloor, then sanded and finished according to standard practice (see Appendix B4.1).

9.3 A minimum of three specimens per sample shall be tested.

10. Radiant Heat Energy Flux Profile Standardization

10.1 In a continuing program of tests, the flux profile shall be determined not less than once a week. Where the time interval between tests is greater than one week, the flux profile shall be determined at the start of the test series.

10.2 Mount the dummy specimen in the mounting frame and attach the assembly to the sliding platform.

10.3 With the sliding platform out of the chamber, ignite the radiant panel. Allow the unit to heat for one hour. The pilot burner is off during this determination. Adjust the fuel mixture to give an air-rich flame. Make fuel flow settings to bring the panel black body temperature to about 500 C (932 F), and the chamber temperature to about 180 C (356 F). When equilibrium has been established, move the specimen platform in the chamber.

10.4 Allow 0.5 hours for the closed chamber to equilibrate.

10.5 Measure the radiant heat energy flux level at the 40 cm point with the total flux meter instrumentation. This is done by inserting the flux meter in the opening so that its detecting plane is 0.16-0.32 cm (1/16-1/8 in) above and parallel to the plane of the dummy specimen and reading its output after 30 ± 10 seconds. If the level is within the limits specified in 10.6 the flux profile determination is started. If it is not, make the necessary adjustments in panel fuel flow. A suggested flux profile data log format is shown in Figure 7.

10.6 The test shall be run under chamber operating conditions which give a flux profile of the form shown in Figure 6. The radiant heat energy incident on the dummy specimen at the 40 cm point shall be 0.5 ± 0.02 watts/cm^2 (0.44 ± 0.017 Btu/ft^2 sec).

10.7 Insert the flux meter in the 10 cm opening following the procedure given in 10.5 above. Read the m.v. output at 30 ± 10 seconds and proceed to the 20 cm point. Repeat the 10 cm procedure. The 30 - 90 cm flux levels are determined in the same manner. Following the 90 cm measurement, make a check reading at 40 cm. If this is within the limits set forth in 10.6. the test chamber is in calibration and the profile determination is completed. If not, carefully adjust fuel flow, allow 0.5 hours for equilibrium and repeat the procedure.

10.8 Plot the radiant heat energy flux data as a function of distance along the specimen plane on rectangular coordinate graph paper. Carefully draw the best smooth curve through the data points. This curve will hereafter be referred to as the flux profile curve.

10.9 Determine the open chamber black body and chamber temperatures that are identified with the standard flux profile by opening the door and moving the specimen platform out. Allow 0.5 hours for the chamber to equilibrate. Read optical pyrometer output and record black body temperature in C. This is the temperature setting that can be used in subsequent test work in lieu of measuring the radiant flux at 40 cm using the dummy specimen. The chamber temperature also should be determined again after 0.5 hours and is an added check on operating conditions.

11. Conditioning

11.1 Specimens shall be conditioned according to standard practice for the floor covering being tested unless otherwise specified; see ASTM E-171-63.

12. Test Procedure

12.1 With the sliding platform out of the chamber, ignite the radiant panel. Allow the unit to heat for one hour. Read the panel black body temperature and the chamber temperature. If these temperatures are in agreement to within ±5 C with those determined in accordance with 10.9 above, the chamber is ready for use.

12.2 Invert the sample holder on a workbench and insert the flooring system. Place the steel bar clamps across the back of the assembly and tighten nuts firmly. Return the sample holder to its upright position, clean the test surface with a vacuum and mount on the specimen platform.

12.3 Ignite the pilot burner, move the specimen into the chamber and close the door. Start the timer. After 2 minutes preheat, with the pilot burner on and set so that the flame is horizontal and 5 cm above the specimen, bring the pilot burner flame into contact with the center of the specimen at the 0 cm mark. Leave the pilot burner flame in contact with the specimen for 10 minutes, then remove to a position 5 cm above the specimen. If the specimen does not ignite within 10 minutes following pilot burner flame application, the test is terminated by extinguishing the pilot burner flame.

12.4 For specimens that do ignite, the test is continued until the flame goes out. Observe and record significant phenomena such as melting, blistering, penetration of flame to the substrate, etc.

12.5 When the test is completed, the door is opened, the specimen platform is pulled out.

12.6 Measure the distance burned i.e. the point of farthest advance of the flame front, to the nearest 0.1 cm. From the flux profile curve, convert the distance to watts/cm^2 critical radiant heat flux at flame out. Read to two significant figures. A suggested data log format is shown in Figure 8.

12.7 Remove the specimen and its mounting frame from the moveable platform.

12.8 The succeeding test can begin as soon as the panel black body temperature is verified (see 12.1). The test assembly should be at room temperature prior to start up.

13. Calculations

13.1 The mean and standard deviation of the critical radiant flux test data on the three specimens are calculated in accordance with ASTM standard practice (ASTM Manual on Quality Control of Materials 1951 Edition STP 15C).

$$S = \sqrt{\frac{(\Sigma X^2 - n \bar{X}^2)}{n - 1}}$$

where S = estimated standard deviation

X = value of single observation

n = number of observations, and

$\bar{X}$ = arithmetic mean of the set of observations.

14. Report

14.1 The report shall include the following:

14.1.1 Description of the flooring system tested including its elements.

14.1.1.1 If a textile floor covering is tested, indicate whether it has been washed in accordance with 8.1.

14.1.2 Description of the procedure used to assemble the flooring system specimen.

14.1.3 Number of specimens tested.

14.1.4 Average critical radiant flux and standard deviation.

14.1.5 Observations of the burning characteristics of the specimen during the testing exposure, such as delamination, melting, sagging, shrinking, etc.

15. Precision[8]

Defining a test result as the average of 3 replicate determinations, the repeatability (within laboratory variability) is about 20 per cent of the measured value[9] and the reproducibility (among laboratory variability) is of the order of 35 per cent of the measured value.[10]

APPENDIX A

Procedure for Calibration of Radiation Instrumentation

A1 Radiation Pyrometer

A1.1 Calibrate the radiation pyrometer by means of a conventional black body enclosure placed within a furnace and maintained at uniform temperatures of 490, 500, and 510 C (914, 932, 950 F). The black body enclosure may consist of a closed chromel metal cylinder with a small sight hole in one end. Sight the radiation pyrometer upon the opposite end of the cylinder where a thermocouple indicates the black body temperature. Place the thermocouple within a drilled hole and in good thermal contact with the black body. When the black body enclosure has reached the appropriate temperature equilibrium, read the output of the radiation pyrometer. Repeat for each temperature.

A2 Total Heat Flux Meter

A2.1 Calibrate the total flux meter against a standard quartz lamp source having a radiant energy output of approximately 0.15 watts/cm^2 in accordance with the procedure [NBS Report of Calibration, Test No.: 221.12/ 1B/74 Interdivision Work Order No. 490-2220, dated 10/17/74] developed by the NBS optical radiation group. The precision (3 sigma limits) of the calibration based on 25 measurements at the above single point is of the order of ±1%. For a calibration across the operating range of the instrument, the manufacturer of the transducer should be contacted. This calibration can be good to ±5%.

APPENDIX B

Guide to Mounting Methods

B1 Introduction

B1.1 This guide has been compiled as an aid in selecting a method for mounting various flooring materials in the fire test chember. These mountings are suggested for test method uniformity and convenience.

B2 Mounting Procedures

B2.1 Carpet and Cushion Pad Over Concrete, Simulated -- Carpet specimens should be cut in the machine direction. To mount a specimen, invert the holder on a clean, flat surface. Insert the test specimen in the holder. Then insert the cushion pad with the waffle side facing the carpet followed by a 0.64 cm [1/4 in] thick cement asbestos board* and a 1.2 cm [1/2 in] 0.58 gms/cm^2 [36 lbs/ft^3] inorganic millboard. Finally, place the steel bar clamps across the assembly and tighten firmly. Turn the specimen upright and vacuum to remove any foreign particles. Brush the surface to raise the pile to its normal position. Mount the test assembly on the specimen transport frame so that the pile lay faces the panel.

B2.2 Carpet with or without Integral Cushion Pad Bonded to Concrete, Simulated -- carpet specimens should be cut in the machine direction. The adhesive shall be that recommended by the carpet manufacturer (see note B5.1). Apply the adhesive to the smooth side of the cement asbestos board according to the directions provided by the adhesive manufacturer. Mount the specimen in testing frame as described in B2.1 and test according to standard procedure.

*The cement asbestos board may spall during a test. This can be avoided by heating for 12 hours at 325°F.

B2.3 Carpet, Other -- The actual sub-floor may be substituted for the standard cement asbestos board substrate.

B3 Resilient Flooring

B3.1 Follow and/or simulate commerical installation practice. This will in most instances mean bonding to the standard cement asbestos substrate.

B4 Hardwood Flooring

B4.1 Follow and/or simulate commerical installation practice. In a typical system, the substrate would be a 5/8" plywood sheet covered with building paper. The oak flooring strips would be nailed to the plywood then sanded, sealed, and waxed. The assembly should be treated with the moisture content of the oak at 7-8%.

B5 Notes

B5.1 Taylor's Multi-purpose Latex Base #260 or equivalent.

APPENDIX C

Method for Washing Textile Floor Coverings

C1 Purpose and Scope

C1.1 This laboratory procedure is designed to produce results comparable to the "Rotary Brush" and the "Roll-A-Jet" methods customarily used for textile floor coverings in service. The method is suitable whenever cleaning procedures, in which a textile floor covering is wetted-down, scrubbed, rinsed, and dried, are to be simulated.

C1.2 This method is applicable to either soiled or unsoiled textile floor coverings.

C1.3 This method is applicable for evaluating the permanence of fire-retardant treatments for textile floor coverings.

C2 Principle

C2.1 The test is performed by wetting the textile floor covering with water, applying a solution of a sodium alkylsulfate surfactant, hand scrubbing with a nylon bristle brush, rinsing, extracting excess water, and then drying in a vented oven.

C3 Apparatus and Materials

C3.1 Cleaning agent--a 1%, by volume, solution of a sodium alkylsulfate (see note C5.1).

C3.2 A brush having nylon bristles 0.056 to 0.066 cm (0.022 to 0.026 in) in diameter and a bristle height of 2.2 to 2.9 cm (0.88 to 1.13 in). Width of the brush should be approximately 5 cm (2 in). A desirable length of the brush should be approximately one dimensional width of the test specimen (see note C5.2).

C3.3 A hydro extractor (see note C5.3).

C3.4 Laboratory oven, a vented circulating air type, capable of removing the moisture from the specimens when maintained at 105 C (221 F) for 2 hours (see note C5.4).

C4 Procedure

C4.1 Cut three test specimens, 110 x 30 cm (41 x 11 in) in size from the sample free from defects or creases. The perimeter shall be stitched, if necessary, to prevent delamination, distortion, or other degradation.

C4.2 Immerse the test specimen to be washed in a container of water at 18 to 30 C (65 to 85 F) until it appears to be uniformly wet. Remove specimen, drain until excess water runs off, and then position on a flat working surface with traffic surface up.

C4.3 Apply 250 ml. of the surfactant solution at a temperature of 18 to 30 C (65 to 85 F) distributed uniformly over the traffic surface of the test specimen. Hand scrub, with minimum pressure, the traffic surface with the nylon bristle brush for 10 strokes in the long direction, lifting the brush between strokes. Attempt to keep the brush centered on the specimen during each stroke. Rotate the specimen a half-turn and repeat the brush strokes, doing this until the specimen has been stroked 10 times in each long direction for a total of 20 strokes.

C4.4 Thoroughly rinse the specimen on both sides by spraying forcibly with water at 46 to 52 C (115 to 125 F) until foaming ceases.

C4.5 Position the washed and rinsed test specimen in the hydro-extractor to extract excess water so there is no over-lapping and spin-dry for approximately 3 minutes.

C4.6 Place the damp-dry specimen in the oven at 104 to 110 C (220 to 230 F) for 30 minutes and then remove for additional washing.

C4.7 Repeat steps C4.2 to C4.6 nine times until the specimen has been washed a total of 10 times.

C4.8 On the 10th and final cycle, keep the specimen in the oven until dry, or for not less than 2 hours. Remove the specimen from the oven and allow to stand at least 8 hours in order to come to equilibrium conditions with the laboratory environment.

C4.9 Cut the three specimens to 105 x 25 cm (40 x 10 in) in size, condition as prescribed in paragraph 11.1 of the test method, and test.

C5 Notes

C5.1 Orvus WA Paste has been found to be suitable. Available from Procter and Gamble Company, Textile Specialities Section, P.O. Box 599, Cincinnati, Ohio 45201.

C5.2 A suitable brush may be obtained from the Atlanta Brush Company, 19 Hilliard Street, Atlanta, Georgia 30312 (stock number 1-4638).

C5.3 A satisfactory means of extracting excess water from specimens is the use of the spin-dry cycle only in a home laundry type of washing machine. Care must be used in setting the machine or closing the water valves so that no rinse water is admitted during this spin-dry cycle.

C5.4 Procedure 2 of ASTM D 2654-71, "Moisture Content and Moisture Regain of Textile Material," without the predrying feature for the incoming air describes a satisfactory oven.

Report of the Investigation of the Wincrest Nursing Home Fire on January 30, 1976

Prepared By The Special Panel
Appointed By
Mayor Richard J. Daley
City Of Chicago

TABLE OF CONTENTS

Introduction

Purpose of Investigation

Mayor Richard J. Daley appointed a special panel to investigate and record all facts related to the fire and subsequent deaths which occurred at the Wincrest Nursing Home, 6326 North Winthrop Avenue, Chicago, Illinois on January 30, 1976, and to draw such conclusions as are supported by the facts and to make recommendations to prevent a similar tragedy from recurring.

Panel Members

The following people were named to this special panel:

Fire Commissioner ROBERT J. QUINN (*Chairman*)

Health Commissioner DR. MURRAY C. BROWN

Building Commissioner JOSEPH F. FITZGERALD, F.A.I.A.

MR. JACK D. TRAIN, F.A.I.A., Metz, Train, Olson and Youngren, Incorporated, Architects

MR. ELMER RESKE, P.E., Consultant to Metropolitan Chicago Loss Bureau

CONDITION AT THE TIME OF THE FIRE

BUILDING DESCRIPTION

General Features

The building had been designed as a nursing home for 88 permanent residents in 28 sleeping rooms and was constructed in three stages. The three additions are of fire resistive construction. The original brick building was removed prior to the second stage of construction in 1966.

The three stages of construction were as follows: (See Plan)

In 1959, a 47'-8" x 42'-0", 1,906 square foot fire resistive building consisting of two floors and a garden level, totaling 5,719 square feet, was added to the rear of the existing two story basement and attic brick nursing home. This addition was constructed with precast concrete floor and roof slabs on steel beams and columns. In 1966, the original building was demolished and replaced by a three story and garden level precast concrete floor and roof slab structure with 2,367 square feet of area per floor for a total of 9,466 square feet. At the same time, a third floor was added to the existing two floors and garden level building constructed in 1959. The roof of this third floor addition was of steel bar joist construction and gypsum roof deck with a 5/8" gypsum board suspended ceiling. In 1973, the third addition was added at the rear of the existing building. This addition was 40' x 20' with a connecting 10' corridor having 903 square feet per floor. It consisted of three floors and a garden level, for a total of 3,613 square feet of floor area. The construction was precast concrete floor slabs and metal roof deck on steel bar joists with a suspended 3/4" mineral acoustical ceiling. All partitions are 16" O.C. metal studs, covered with 5/8" thick one hour fire rated plasterboard or masonry with 1/2" plasterboard on 3/4" furring strips.

As each addition was constructed, there were changes in the use of certain areas. At the time of the fire the use consisted of patient care rooms with supporting services such as nursing station, lounges, small kitchens, (no cooking appliances), bedpan closets, bathrooms, toilets and small storage closets on the 1st, 2nd, and 3rd floors. The garden level was a non-resident floor consisting of the entrance and supportive facilities such as laundry room, boiler room, storage rooms, kitchen, dining room, examining room, lounge and offices. A combination chapel-lounge approximately 18' x 32' was located on the 3rd floor of the 1973 addition.

Stairs

There are two enclosed stairwells of two hour fire rated construction. The east stairwell door on the 3rd floor is located 5' from the east end of the corridor. The west stairwell door is located approximately 50' from the west wall of the lounge-chapel. The east stairwell exited at grade on the north side of the building and continued down approximately 4' to the garden level in the front lobby area. The west stairwell exited at grade on the north side of the building and continued down approximately 5' to the garden level floor in the boiler room area.

Elevators

One standard hospital size hydraulic elevator was provided across the corridor from the east stairwell.

Exterior Walls

The exterior walls consist of brick and concrete block backup with gypsum board on furring strips.

Interior Partitions

The interior partitions are 5/8" gypsum board on steel studs.

Structural System

The structural system consists of reinforced concrete foundation walls and footings below grade, floor slabs of 8" thick precast concrete with 2-1/2" of concrete fill, supported on fire protected steel columns and beams. The roof slab of the east section, constructed in 1966, is precast concrete, while the middle section constructed at the same time is gypsum roof deck on steel joists. The roof of the 1973 addition on the west end is also gypsum deck on steel joists.

Doors (third floor)

The doors leading to the two enclosed stairways are both 3'-8" x 6'-8" x 1-3/4" wood, class "B", one-hour rated fire doors with single 10" x 10" wire glass windows, operated by approved hydraulic type door closers.

All other doors, with the exception of one hollow-core door on the small linen closet adjacent to Room 305, are 1-3/4" solid core. The doors to all patient rooms are 3'-8" wide by 6'-8" high.

All doors are mounted on self casing metal frames with integral metal door stops.

Wall Finish Materials (third floor)

The 3rd floor contains five different wall finish materials: paint, ceramic tile, vinyl-fabric wallpaper, vinyl-paper wallpaper and a vinyl-asbestos tile wainscot.

All toilets and bathrooms have 4"x4"x 1/4" ceramic tile set in mastic over plasterboard, extending 4'-4" above the floor. The upper walls of these rooms are both painted and in some cases, covered with vinyl fabric wallpaper.

The walls in the new 1973 lounge-chapel section are all painted, over plasterboard, including the short corridor walls to the lounge-chapel.

All walls in the patient care rooms and the front lounge are covered with a vinyl coated fabric wallpaper.

The entire corridor, up to the 1973 section, is covered with either a vinyl wallpaper or a vinyl fabric type wallpaper, probably "Vinyl Weave."

A vinyl-asbestos tile, 12"x12"x1/16", formed a wainscot, approximately 4' high, adjacent to rooms 305, 306, and the west stairwell. It was covered with the vinyl-fabric wallpaper on the north side of the corridor.

Specifications kept by the management for the 'Vinyl Weave' vinyl fabric-backed wallpaper indicate a flame spread rating of 8, a fuel contribution of 2, and a smoke density of 8. Positive verification of receipts and identification of materials was attempted.

Ceiling Construction (third floor)

The 3rd floor contains 3 different types of ceiling construction: exposed flexicore, suspended plasterboard and suspended acoustical mineral tile.

Exposed (painted) flexicore ceilings cover patient rooms 301, 302, 303 and 304, both stairways, and the front lounge (built in 1966).

The entire corridor up to the 1973 addition, the nurses' station, all closets, toilet rooms, bathroom, janitor's closet, kitchen service areas and rooms 305, 306, 307 and 308 have suspended 5/8", one hour rated, plasterboard ceilings attached with sheet metal screws to metal channels and rails.

The lounge-chapel section and the short corridor leading to it contains a suspended 12"x12"x3/4" acoustical mineral tile ceiling with a one hour fire rating. The tile is set in metal channels, and interconnected with metal spleens. The upper tile surface is suspended approximately 8" from the bottom of the 14" bar joists spanning the lounge-chapel roof.

Floor Finish (third floor)

The entire floor is covered with vinyl-asbestos floor tile laid directly on the concrete deck. This includes all rooms, service areas, corridors and stairwells except for bath and toilet rooms which are covered with 1" x 1" ceramic tile.

The base in every room (except bath and toilet rooms) corridor and stairwell is 4" high rubber base attached to the wall with mastic.

There was no carpeting, throw rugs or runners evident on the 3rd floor.

Heating

With the exception of the 2nd floor recreation room and the 3rd floor lounge-chapel which are also partially heated and cooled by 220 volt G.E. electric 'through-the-wall' units, the entire building is heated by hot water radiant baseboard copper fin radiators supplied from two gas boilers: one supplying the basement only, and the other supplying the 1st, 2nd and 3rd floors.

Hot water is supplied by a high recovery gas-fired water heater. Combustion air is supplied to the boiler room through screened and louvered openings in the west exterior wall.

Ventilation

The 1st, 2nd and 3rd floor patient rooms, lounges and 3rd floor lounge-chapel are ventilated by natural ventilation means, employing sliding type and double-hung windows.

All bath and toilet rooms on the 1st, 2nd and 3rd floors are mechanically ventilated. Sheet metal ducts run horizontally above the dropped corridor ceiling to vertical risers and to the roof mounted exhaust fans.

The garden floor contains the admission and administrators' offices, lounge, nurses' office, examining room, kitchen, dining room and laundry room. All garden floor rooms are mechanically ventilated through the dropped ceiling with a sheet metal ducted air sup-

ply system utilizing a hot water heating coil supplied by the hot water boiler. The kitchen is mechanically exhausted through the kitchen range hood. The hood system is constructed of 14 gauge black iron and runs horizontally, through the west wall and up to the roof level exhaust fan.

Electrical System

The building has a 600 AMP, 3 phase, 4 wire, 220/440 volt service to a main distribution panel located in the basement boiler room, plus a separate 60 AMP, single phase, 3 wire, 120/240 volt emergency service.

Each patient floor has a 100 AMP general purpose circuit breaker panel to handle the floor's electrical load.

Separate circuits are provided for all special equipment such as the seven 220 volt electric heater-air conditioner units in the 1973 addition.

The building also contains the required System II emergency exit sign and corridor lighting system. This system operates on an automatic transfer switch, turning on the emergency corridor lights in the event of failure or power loss in the buildings' normal lighting circuits. This system is wired separately on special fused circuits, from its own separate and remote 60 AMP service.

Although not required, battery-operated emergency lighting was installed in two locations on the 3rd floor, set to illuminate the entire corridor in the event of a failure of the normal lighting and the System II emergency lighting. In the event of a neighborhood 'brown-out' or a total power failure within the building, these units would automatically activate.

Patient Room Furnishings and Contents (third floor)

Each patient is furnished with or shares a specific amount of furniture plus half of one free standing wardrobe.

Each patient is supplied with a bed and a bedside table, and shares one or two 4 drawer chests with other patients.

The rooms are also equipped with one or more movable servicing tables and have from no chairs to 5 chairs. All chairs have vinyl covered cushions (seat and back) on wood or metal frames.

The personal property of patients is limited to necessary clothing, toiletries, pictures, books, magazines and portable television sets and radios.

All of the furniture in Rooms 305, 306 and 307, including the wardrobes and head and foot boards on the beds were of wood construction. Rooms 301, 302, 304 and 308 had a mixture of metal and wood furniture and wardrobes in each room.

Room 303 had all metal furniture including bedboards and two metal wardrobes. There was no chest of drawers in this room.

All windows in the patient rooms, front lounge, corridor and rear lounge-chapel have single panel fibreglass draw drapes extending to the window sills. Each window is also equipped with a vinyl-fabric shade, most of which were in a rolled up position.

Each patient room is equipped with a metal 'through-the-wall' unit air conditioner sleeve under the window. The sleeves were sealed and secured with sheet metal covers. None of the sleeves contain an air conditioner.

Each bed consists of a metal crank-type hospital frame with open metal spring and a 7" thick hospital type, cotton felt, polyurethane and sisal mattress. The mattress is covered with a clear vinyl plastic cover, 3 cotton sheets, 1 or 2 cotton blankets, and 1 or 2 pillows filled with feathers. The pillow cases are cotton, covered with a clear vinyl plastic and cotton pillow cover. One bedspread of quilted nylon or white cotton is provided for each bed.

PRIVATE FIRE PROTECTION AND FIRE ALARM SYSTEM

Fire Alarm

The home was equipped with a manual and automatic fire alarm system that is connected directly to the main fire alarm office of the Chicago Fire Department. The alarm system is designed to give the code or box number of the alarm station activated.

Two manual pull boxes are located on each floor and an exterior city fire alarm box is located in front of the home.

Automatic alarms are transmitted by rate of rise 136 degrees fixed temperature heat detectors placed in areas as required in the Municipal Code. Heat detectors on the 3rd floor were located in the center of the lounge-chapel, small storage closet and in each stairwell.

In addition to the required fire alarm system described above, a local smoke detection system was installed with smoke detectors located at the entrance of

76-611 O - 76 - 22

the chapel-lounge on the 3rd floor, and also the lounge entrance on the 2nd floor. The 3rd floor smoke detector did activate, transmitting a house alarm to the 2nd floor nurses' station.

Private Fire Protection

The 3rd floor is equipped with (3) hand-held fire extinguishers and (2) automatic battery operated emergency lighting units, and a public address loud speaker.

The 3 fire extinguishers are hand held, 2-1/2 gallon, pressurized water type.

The 2 automatic emergency lighting units are dry cell operated, designed to switch on in the event of a power failure in the 3rd floor lighting system. Each have 2 beam type bulbs set to illuminate the entire length of the corridor.

Each floor is equipped with a one way loud speaker located above the closet door adjacent to the front (east) enclosed stairway. The speaker is connected to a public address system at the switch board in the garden level and is used to summon various employees and give messages to staff personnel on each floor.

INSPECTION REPORTS

1. Health Department

This facility was inspected on a monthly basis by the Health Department. The last visit was January 8, 1976. No significant violations of the Municipal Code were found at this time.

2. Fire Department

This building was inspected on a monthly basis by Fire Department lieutenants from the Fire Prevention Bureau. The last inspection was made on December 31, 1975. No violations of the Municipal Fire regulations were found.

3. Building Department

This building is required to be inspected on an annual basis. The last inspection was made on September 8, 1975, by an inspector from the Institutional and Assembly Bureau. No violations of the Municipal Building code were found.

BUILDING CONDITION

The building was well built, well maintained and well operated. The building complied with all city rules and regulations governing its construction and operation. Prior to the fire, this nursing home would be considered a good example of a typical and proper institutional use of this type.

CHRONOLOGY OF THE FIRE

At the time of the fire the building contained 83 permanent residents and was staffed by 3 nurses, 6 nurses' aides, 2 maintenance personnel, 5 office personnel and 4 kitchen and laundry personnel.

Approximately 28 of the residents were attending mass in the third floor lounge-chapel with an approximate total of 40 residents, 5 attendants and a priest on the entire 3rd floor.

Fire was detected in Room 306 at the approximate center of the single corridor which serves the third floor. Fire-fighting attempts were made by the priest and attendants. The fire alarm box was also activated by an attendant.

The initial alarm was received by the Fire Alarm Office at 11:43 A.M., Friday, January 30, 1976. This alarm was transmitted as Fire Alarm Box 31769 and was activated by either of the following two methods:

1. One or more of the heat detectors on the 3rd floor.
2. The fire alarm box located at the entrance to the west stairwell on the third floor.

Note: The fire alarm box was activated by nursing home employees and may have followed or preceded the alarm from the heat activated device..

These 2 devices are on a single circuit. Consequently, the device that operated or sequence of their operation cannot be identified.

The usual institutional box alarm response that is dispatched by the Fire Department to either a school, hospital, nursing home or similar occupancy, was sent. This response consisted of 4 engine companies, 2 hook and ladder companies, a flying squad, a snorkel, a division marshall and 2 battalion chiefs.

The first fire company arrived on the scene 3 minutes and 40 seconds after the initial alarm at 11:46 A.M., and verified the fire. They found the 3rd floor heavily charged with smoke and elderly patients, many in wheel chairs, gasping or unconscious, and in need of immediate evacuation and removal to nearby hospitals for emergency care.

Disaster Plan No. 3 was put into effect at 12:16 P.M., and other organizations, utilities, city officials and city departments, etc., notified by the Fire Alarm Office.

The fire was struck out at 1:28 P.M. Room 306 was completely gutted while the corridor sustained only moderate fire damage but intense to heavy smoke and heat damage. Three other patient care rooms with open doors to corridors suffered moderate to intense smoke and heat damage, while 4 of the 8 patient care rooms suffered no heat or smoke damage because doors to the corridor were closed.

No fire, smoke or heat damage was evident on the 2nd, 1st or garden floors of the building. Water damage was minor.

Total damage from fire, smoke and water was relatively minor.

The death toll from the fire, on the date of this report, 2/20/76, is twenty-three.

INVESTIGATION OF THE FIRE

ORIGIN AND CAUSE

Reports of eyewitnesses who fought the fire initially, indicated that it started in a plywood wardrobe located in the southwest corner of Room 306, on the 3rd floor. The room was occupied by four female patients.

Approximately 28 patients, including those in Room 306, were attending a Roman Catholic mass that was being held in the lounge-chapel at the west end of the 3rd floor and Room 306 was unoccupied at the time the fire was discovered.

Inasmuch as the cause of ignition could not be determined, it is the Committee's considered opinion that this fire was of incendiary origin.

A Police Arson Bureau investigation has resulted in the arrest of a temporary housekeeper who has been charged with multiple counts of murder by arson in connection with this fire.

FIRE AND SMOKE SPREAD

The blackened ceilings and side walls indicate that a large volume of smoke and hot gasses raced through the corridors and entered rooms where doors were left open. Whereas smoke damage was confined mainly to the 3rd floor, some smoke entered the front and rear stairwells as rescue attempts were carried out along with fire fighting operations. Standard fire fighting procedures require the closing of all doors and windows to confine fire and cut off oxygen supply, however, a nurse's aid opened a window in the lounge-chapel at the west end of the building. Due to the wind direction and strength (N.W. at 15-25 M.P.H.) this action appears to have reduced the amount of smoke and gas that would normally have entered the lounge-chapel area and undoubtedly saved lives. The pattern and direction of the heat and smoke are clearly demonstrated in the pictures included with this report.

FIRE FIGHTING OPERATIONS

Nursing Home Personnel

A nurse's aid discovered the fire in Room 306, summoned the priest who was conducting the mass in the lounge-chapel, and activated the pull box which summoned the Fire Department. The priest attacked the fire with a 2-1/2 gallon, pressurized, water type extinguisher, to no avail.

He was joined by the administrator who came from the first floor and two maintenance men from the 2nd floor. All were summoned by the sounding of the local fire alarm system throughout the building which was activated by a pull station or a thermal detector. Also activated was the smoke detector on the third floor which sounded an alarm at the 2nd floor nurses' station.

Each of the other three persons also used a 2-1/2 gallon, pressurized, water type extinguisher. The combined efforts of all four persons failed. Smoke and heat forced retreat and an unsuccessful attempt was made to close the door to Room 306.

Six of the 2-1/2 gallon extinguishers were found at the scene.

All fire extinguishment efforts having failed, efforts were then concentrated on evacuating patients from the lounge-chapel.

Fire Department

At 11:43 A.M. on January 30, 1976, the Chicago Fire Alarm Office (main) received an alarm from station 31769 which is in front of the Wincrest Nursing Home at 6326 North Winthrop. The following units responded on the box alarm: 4 engine companies, 2 hook and ladder companies, 1 flying manpower squad, 1 snorkel, 2 battalion chiefs and 1 division marshal (Deputy District Chief) with a total of 39 men.

The first fire unit on the scene was Battalion 27 arriving in 3 minutes and 40 seconds, with Engine Company 70 arriving a few seconds later from a station one mile to the west. Smoke was seen on the top floor but the fire was not visible from the front of the building because the involved room was located in a setback on the north side of the structure.

At 12:01 hours, 2 flying squads and snorkel squad 1 were dispatched with a total of 18 men.

A second alarm at 12:04 hours brought 4 more engines, 2 trucks, 2 Deputies, Fire Commissioner Quinn,

the Chief of Fire Services, 2 turret squads, 1 helicopter, 2 air bottle trucks, and 1 communication van with a total of 44 men.

Special calls brought 10 ambulances with 27 men, 4 battalion chiefs' cars to be used as ambulances, 8 men and 2 flying manpower squads with 9 men.

Disaster Plan No. 3 was put into effect at 12:16 P.M.

Fire Commissioner Robert J. Quinn responded on the second alarm and assumed command upon his arrival at 12:31 hours.

Victims were transported to 4 hospitals by fire and police vehicles.

CONCLUSIONS

Evidence to date indicates fire of an incendiary origin. No matter what the cause of ignition, this fire demonstrates that a modern, well-built, well-maintained nursing home that complies with present regulations is still vulnerable to a disaster of this magnitude.

Initial fire-fighting efforts by the staff were natural and proper reactions to a fire of this type. The attempts to subdue the fire with the available hand-held extinguishers proved futile and subsequent attempts to close the fire room door were also unsuccessful because of the heat. While these initial attempts to extinguish the fire were being made, heat detectors and/or a pull box alarm notified the Fire Department directly and a smoke detector in the lounge-chapel alarmed the 2nd floor nurses' station.

Fire personnel arrived on the scene and proceeded to rescue the residents and fight the fire without delay. An emergency plan summoned available ambulances for immediate transport of the injured to four local hospitals. The four receiving hospitals, having been notified that a Fire Department "Disaster III" plan was in effect, initiated their own "in-house" emergency action plans to treat the fire victims.

It appears that the opening of the window in the west wall of the lounge-chapel, assisted in reversing the flow of smoke, heat and gas that was moving towards the lounge from the room of origin. This may have saved lives in the lounge area.

There is no evidence of panic. The problem lay with the inability of the elderly residents to evacuate themselves from the fire floor, and the difficulty of moving wheel-chair patients down the available stairs.

Occupancies of this type must be capable of protecting the residents during the course of a fire without relying on evacuation. Toward this goal the following considerations must be kept in mind:

a) Limiting combustible personal items, furniture and bedding would not entirely solve the problem and would be in part dehumanizing;

b) Providing self-closers on corridor doors held in the open position with magnetic hold open devices activated by smoke detectors would be an inadequate form of protection for institutional sleeping rooms. These devices are too subject to various types of failure and could prove dangerous to older people who may accidently bump such a door, releasing the self closer. Facing the practical operational realities, wedges and furniture would very likely be placed to negate the effectiveness of the door closers;

   In addition, self closing devices activated by smoke may trap a number of residents in the fire room making it difficult for them to exit themselves or with attendants' assistance. Also, these devices are by no means an inexpensive solution in both their initial and maintenance costs;

c) Smoke detectors or heat detectors only notify that there is a fire. Many of the people in nursing homes cannot take proper action, themselves, but must then rely on attendants. There are not normally enough attendants to move all threatened residents to a safe enough location to endure the fire, smoke and gasses that may develop in an uncontrolled fire before the arrival of the Fire Department;

d) Smoke barriers in corridors protect the occupants on the non-fire side but are not a solution for those on the fire side;

e) The proper emergency action of attendants is important but again is not a complete solution. Their decision to fight a fire or use that time to remove residents from a dangerous area must be made in split seconds. Should the fire proceed beyond their control, they must have enough time and training to remove all affected people to a safe area. Quite often that time is not available or the training inadequate;

f) Sprinklers detect a fire, give an alarm and either extinguish or hold a fire in check until outside aid arrives. They also control, indirectly, the amount of smoke generated. They would limit a fire to a size that would be controllable by attendants and would also provide the time necessary to remove residents to a safe area. They will not, however, prevent fire nor will they prevent a person in the immediate vicinity of a fire from being affected by that fire. They will, however, protect other residents by controlling the fire and thereby the smoke, gas and heat, and will also give attendants the time necessary to affect the immediate relocation of threatened individuals.

RECOMMENDATIONS

The following list of recommendations have been separated into various parts. The recommendations for immediate code revisions are considered of primary importance. This should not, however, detract from the importance of the other recommendations which will, in certain instances, require extensive deliberations by the Mayor's Advisory Committee on Building Code Amendments in the consideration of additional code revisions dealing with other aspects of the general category of institutional occupancies. These studies could eventually lead to furnishing combustibility and other standards on a national basis.

The following requirements should immediately be made part of the Building and Fire Ordinances of the City:

1) Sprinkler systems to be installed in all new and existing nursing homes and be electrically interconnected with the fire alarm system for water flow. In addition, local valve supervision shall be provided;

2) Formal Fire Department emergency training to be required for all nursing home personnel every six (6) months to supplement the monthly inspection programs and existing training programs. The nursing homes themselves should also provide emergency training for all personnel at least each month;

3) Dead-end corridors to be disallowed in all new nursing homes.

The following recommendations should be enacted by the Board of Health:

1) Training of nursing home staff should include the following:

   a) The transporting of patients during an emergency;

   b) The keeping of patients not in immediate danger calm and comfortable;

   c) The maintaining of designated areas for family members;

   d) The establishment of a system of 'Round Robin' on-call nursing home personnel to be continually available for emergency duty.

2) Nursing home management shall require pre-employment screening of all employees as defined in the Illinois Department of Public Health Rules and Regulations concerning Long-Term Care Facilities;

3) Disaster plans and dates of drills shall be on file with the Department of Health as well as the Fire Department. Disaster plans are to be in written form, approved by both departments and posted at all nursing stations;

4) All residents shall have identification bands (wrist bands) which shall include name, medical diagnoses and age;

5) Smoking rules are to be enacted by the nursing homes which include the designation of smoking areas and the requirement of strict smoking supervision with a staff member in constant attendance.

Further detailed study and evaluation should be made in the following areas of concern:

1) The allowed location of assembly areas, or what might be utilized as assembly areas should be examined. This analysis should include a review of Section 48-12.2 Auxiliary Uses;

2) Standards for smoke detection and furnishing combustibility should be promulgated and considered for inclusion in institutional occupancy requirements;

3) An analysis of toxic gas emissions emanating from various types of building and furnishing materials as well as fire retardant treated materials should be made which would eventually result in adequate standards.

REPORT #7463

FULL-SCALE FIRE TESTS IN A NURSING HOME PATIENT ROOM

1.0 SUMMARY

A series of 14 full-scale fire tests were conducted to validate provisions of the 1967 Life Safety Code which are applicable to existing nursing homes. This code is the fire safety standard which nursing homes must meet if they are to be certified under the Medicare or Medicaid Programs. Five of these tests were conducted in a fire test laboratory which was representative of a nursing home of fire-resistive construction. Three tests were conducted in a vacated wood-frame nursing home and six in a modified apartment of brick-wood joist construction.

The primary conclusions of this program were that current fire-safety construction standards and corridor wall construction having a 1-hour fire resistance rating provide no significant firesafety function in buildings protected by automatic sprinklers.

The results also suggested that some changes in room door standards may be possible and that interior furnishings can be very significant in non-sprinklered buildings. However, additional experimental work is necessary before any standards can be established in these areas.

6.0 Conclusions

The conclusions of this program are directed to protection against the rapidly developing fire which poses a multiple life loss threat in an existing nursing home. The smoldering fire which generally poses a threat to a single life was not within the scope of the program.

The principal conclusions of the program was that ordinary non-combustible interior finish such as 1/2 in. gypsum board or plaster on wood, metal or gypsum lath commonly found in existing wood-frame and brick, wood-joist buildings, provides adequate fire protection for the combustible structure in sprinklered buildings. Although plaster on wood lath was not used in the test buildings, other fire tests have shown it to perform as good or better than the ordinary gypsum board that was installed, ref. 13. In the early stages, a fire develops and spreads in the same manner in a full fire-resistive building as in a wood-frame building with common non-fire rated gypsum board or plaster interior finish. With automatic sprinklers, the fire does not last long enough for its behavior to be affected even by Class C combustible wall paneling and ceiling tiles. Even in fire tests without sprinklers, the ordinary plaster or gypsum board walls resisted the fires very well.

These tests also indicate that in real room fires other common types of doors may provide a level of protection equivalent to that of the presently required 1-3/4 in. solid core wood door. These tests results are different than would be predicted from a standard ASTM Fire Test. More experimental work is necessary with real room furnishings to establish accurate and sufficient door criteria.

TO: Subcommittee on Health and Long-term Care
Attn: Alan Zipp

FROM: Education and Public Welfare Division

SUBJECT: Cost estimate of a smoke detector system for a nursing home.

This is in response to your request asking us to obtain an estimate on the cost of purchasing and installing a smoke detector system for a nursing home. We contacted Simplex Time Recorder Company, Gardner, Massachusetts, a firm which installs smoke detector systems and asked them to give us an estimate on equipment and installation costs for a 1-story, 25 bed nursing home; a 2-story, 50 bed nursing home; and a 100-bed, multiple story facility.

Mr. Praskiewiez, Washington, D.C. sales representative for Simplex supplied us with the following estimates.

1-story, 25 bed nursing home: equipment cost--$5,000; installation cost--$5,000; total cost--$10,000.

2-story, 50 bed nursing home: equipment cost--$10,000; installation cost--$10,000; total cost--$20,000.

multiple story (4-6 stories), 100 bed nursing home: equipment cost--$25,000; installation cost--$25,000; total cost--$50,000.

Equipment costs would include the costs for fire alarm equipment, stations, gongs, and smoke detector units.

Mr. Praskiewiez cautioned us that the figures represented only estimated costs and these costs might vary higher or lower depending upon the amount of equipment and system purchased by the home.

We hope this information helps you. Please call if we can provide you with additional assistance.

TRENDS IN LONG-TERM CARE

FRIDAY, MARCH 19, 1976

U.S. SENATE,
SUBCOMMITTEE ON LONG-TERM CARE
OF THE SPECIAL COMMITTEE ON AGING,
New York, N.Y.

The subcommittee met, pursuant to notice, at 9:30 a.m., at 14 Vesey Street, New York City, Hon. Frank E. Moss, chairman, presiding.

Present: Senators Moss and Domenici, Representatives Koch and Scheuer, Assemblyman Andrew Stein, and Assemblywoman Gerdi Lipschutz.

Also present: Val J. Halamandaris, associate counsel; David L. Holton, investigator; Caroleen Silver, legislative assistant to Senator Domenici; John Guy Miller, minority staff director; Kathryn T. Dann, assistant chief clerk; and Alison Case and Dorothy Miller, assistant clerks.

OPENING STATEMENT BY SENATOR FRANK E. MOSS, CHAIRMAN

Senator Moss. The hearing will please come to order.

We are pleased to be here this morning to conduct a very important hearing. This is a hearing by the Subcommittee on Long-Term Care of the U.S. Senate Special Committee on Aging.

Senator Domenici is sitting here with me, and he is an active member of this subcommittee. We are pleased to have Senator Domenici with us.

Congressman Scheuer and Congressman Koch are here, both from the New York area representing their districts, and Assemblyman Andrew Stein is seated with us.

We gave notification of this hearing to all New York Congressmen and invited them to come if they wished to sit with us and to hear the testimony we expect to have today.

We are here to examine alleged abuse and profiteering in New York's adult care homes.

Our subcommittee has conducted 29 hearings concerning the problems of the infirm elderly in the past 6 years. We have produced numerous reports and numerous pieces of legislation including the 48-bill medicare-medicaid reform package that I introduced last year. Following the hearings we had right here in New York, some of these bills were enacted. We expect others to be enacted when the Senate Finance Committee takes up medicare and medicaid reform later this year.

One of the issues we have been examining is the national trend of dumping thousands of former mental patients into nursing homes

and smaller community-based facilities. Today we are releasing our report on this subject entitled: "The Role of Nursing Homes in Caring for Discharged Mental Patients and the Birth of a For-Profit Boarding Home Industry."[1]

Minimal Supervision Given to Dischargees

Our report suggests that in virtually every State of the Union mental patients are being discharged wholesale into facilities that offer board and room with minimal supervision. These facilities go by various names. In New York you call them adult care homes, domiciliary care facilities, or private proprietary homes for adults. In other States they are called foster care homes or shelter care homes.

Our report suggests that since January 1973 there has been an increasing trend to move expatients from State hospitals into these facilities. A major reason was the enactment of supplemental security income—or SSI—the Federal welfare program for the aged.

The recent report by Assemblyman Andrew Stein and the grand jury report concerning the starvation of an adult home resident prompted me to come to New York to see things for myself. I visited the psychiatric ghettos in Long Beach and Far Rockaway, N.Y. I toured the old hotels and boarding homes where the forgotten Americans live. I have seen their world of cockroaches and peeling wallpaper, of flaking paint and falling plaster.

I have seen the broken windows letting the cold air into rooms without radiators. I have seen leaking roofs and holes in ceilings. I have seen exposed electrical wiring, overloaded sockets, and fire extinguishers that have not been inspected for years. I have seen sharp staircases with low clearances, and makeshift doors made out of cardboard or burlap.

I saw hungry people with their faces up against vending machines begging for a quarter. I saw three patients cooking eggs on a hotplate in their room while breakfast was being served in the dining room. I learned that they had bought these eggs with money they received from begging. These patients, distressed by the quality of food in this New York boarding home, had formed their own co-op. Pooling their meager resources, they had purchased a small supply of foodstuffs of which they were most proud.

I saw a patient who complained of a recent head injury who said she had asked to see a doctor several days before but nothing had been done by the boarding home operator.

I saw patients sitting in rows at 9:30 in the morning staring blankly at a television set in which the picture was continuously rolling.

I talked to patients who said that operators required them to work and paid them little. One man told us he helped out in the kitchen 8 or more hours a day for which he received $5 a month.

I saw medication rooms that were wide open. Almost anyone who wanted to could walk in and steal large quantities of amphetamines and barbiturates—some of which have tremendous street value at the present time. I met no licensed nurses in my tour; most drugs were being given by unlicensed personnel who probably could not

[1] Supporting Paper No. 7 in the series, "Nursing Home Care in the United States: Failure in Public Policy."

protect patients against possible adverse reactions and side effects from taking large numbers and kinds of drugs over a protracted period. There were no physicians or psychiatrists in any of the facilities we visited.

I saw activities schedules posted, but no activities in progress. I saw therapy rooms with no one using them. These discrepancies were generally explained by telling me that the therapist was on vacation and that if I would come on any other day I would see the normal routine.

"MENTAL PATIENTS ARE A GOOD INVESTMENT"

It became evident to me that operators were cutting corners every way that they could in order to be able to maximize profits. Apparently, mental patients are a good investment in New York as well as in Illinois. In that State we found one operator received $385,000 a year to care for about 100 former mental patients. He kept 13 percent of patient income—over $50,000—as profit. Another increased his investment—equity—in an old hotel from $10,000 to $250,000 in 10 years. He housed 180 former mental patients receiving $400,000 a year and managed to keep $185,000 of this amount—46 percent of total revenues—as profit. One of the ways he accomplished this feat was to spend 54 cents per patient per day for food. He defended this profit, telling us it was below industry expectation. A third partnership received over $1 million to care for expatients and kept 30 percent of it—over $300,000—as profit.

Given the marginal quality of life that we have found in these kinds of facilities in New York and all over the United States, I have every reason to believe that other operators are making similar profits. Since the source of these funds is the new Federal welfare program for the aged—SSI—which will cost the taxpayers $2 billion this year, I intend to do everything in my power to restore some accountability in this program. The taxpayers deserve to know how their money is spent. Right now it looks like the funds are going to line the pockets of the greedy who pretend to be offering care and services to the needy.

As my opening statement suggests, there are many significant problems in the use of SSI funds, and it is my hope that in today's hearing we can focus on some of the Federal issues. I hope we can find some way to improve the quality of life for these people who live in substandard boarding homes.

In this connection, I am informed that Mr. Charles J. Hynes, the New York special prosecutor for nursing homes, has some suggestions concerning large amounts of fraud and potential criminal activity in the New York domicile care program.

I am told that Mr. Hynes requested permission to follow these leads and that the Governor of the State, the Hon. Hugh Carey, agreed to pursue this, subject to the approval of the State Board of Social Welfare. I am further informed that the State Board of Social Welfare has jurisdiction over adult care homes, and that it has refused to give the special prosecutor its consent to go after the lawbreakers.

I find this action on the part of the board unconscionable. It is difficult to understand in view of the fact that many of the same people

who have nursing home interests also own adult care homes in New York.

I cannot immagine why the State Board of Social Welfare is blocking the prosecutor's effort to route out fraud and abuse.

We have here with us this morning Mr. Bernard Shapiro, the executive director of the State Board of Social Welfare, and I intend to ask him for some explanation.

State Cuts Surveillance Unit From Budget

While I am on the subject of blocking the efforts of the special prosecutor, I must say that I was appalled beyond words to learn that the State legislature eliminated $2.3 million that Mr. Hynes had requested to establish a permanent audit and surveillance unit in the State Department of Health.

In the first place, such units are required by Federal regulations, and they are preconditions to the State's participation in the medicaid program.

The State of New York has the responsibility to ferret out those individuals who are guilty of fraud and abuse.

It has already been pointed out that auditors in the New York State Department of Health have returned $15 for each dollar of their salary. Auditors trained by Mr. Hynes have returned $30 for every dollar of their salary.

In short, especially in these troubled economic times, failure to accede to Mr. Hynes' request for funds is not very farsighted. I can understand why some people charge there are political motives involved. But the question of the motive for the cuts really is beside the point.

I think we should assume that this matter is just an oversight, or the work of poorly informed, overzealous budget cutters.

To be sure, the State's elected leaders could do much to restore confidence and dispel the current mood of cynicism if they exercise their leadship role in a forthright manner and restore the requested $2.3 million for the additional auditors and investigators that are needed.

I would now like to call on my colleague from New Mexico, Senator Domenici.

STATEMENT BY SENATOR PETE V. DOMENICI

Senator Domenici. Thank you, Mr. Chairman.

I want to compliment you and the Special Committee on Aging for scheduling these hearings today. The care and attention given the elderly in this country is an extremely important issue, and I am pleased this committee and, in particular, the Subcommittee on Long-Term Care is in the investigative forefront.

We are here today to examine the operation of the Federal supplemental security income program. As you know, in 1972 Congress wrestled with the question of whether we should federalize welfare. At that time, Congress decided instead to federalize only one part of it—the old age assistance payments. Under this program we call SSI, the Federal Government makes a flat payment of $157 per

month to those senior citizens with incomes below the poverty line. The SSI checks come directly from Baltimore, since this program is administered by the Social Security Administration.

Some States which had higher welfare payments to the aged were required by the Congress to supplement the $157 minimum SSI payment. New York, for example, adds $229 of its own money for a total payment of $386 per month.

The exorbitant profits made by boarding home operators which you described in your opening remarks, Mr. Chairman, are possible because operators can finagle other provisions left in the 1972 law.

Congress barred the payment of SSI funds to residents in institutions. The word "institution" is defined rather broadly to include nursing homes, mental hospitals, and the like—not adult-care centers or boarding homes. Congress also required that SSI funds be cut by one-third when recipients live with related individuals. Furthermore, Congress prohibited the use of SSI funds to individuals who need medical care. It was made clear that medicaid was the appropriate vehicle to take care of those people who needed nursing or medical care.

From these facts, it is clear that SSI was intended to be used only as a cash grant program for the poor elderly—those who are physically well and are ambulatory—who can decide for themselves where to live and how much of their SSI money they want to use for housing, for food, and for other expenses.

Misuse of SSI Funds

From what I have observed, it is clear to me that the State of New York is technically in violation of the law. In the first place, patients from State mental hospitals are discharged by the State and placed into particular boarding homes which are called domiciliary care facilities—DCF. Such facilities, I believe, would come within the definition of "an institution" for purposes of the SSI law. Second, New York has, for all intents and purposes, warped SSI from a cash grant program to a vendor payment program. The residents of these boarding homes are still the payees of Federal SSI checks here in New York, but yet the residents never see them most of the time. Residents endorse these checks over to the operator. In some cases, I understand, the endorsement is simply an "X" on the back of the check signed by the operator himself. Finally, several reports by State agencies and our own evaluation indicate that large numbers—perhaps as high as 40 percent—of DCF patients need medical attention. In short, SSI funds are being used to care for patients who need medical care, again in violation of the SSI Act.

I realize these are serious charges, particularly when those who transfer mental patients from State hospitals into DCF residences believe what they are doing is in the best interests of the patients.

As the report released today points out, there are several States besides New York that also have significant problems with discharged mental patients. I have visited facilities in Illinois and in my own State of New Mexico. I was shocked when I visited some boarding homes. I realize boarding homes are not designed or licensed to provide medical care to the elderly. But several facilities did take in

elderly residents whether they were well or not. Many boarding home residents suffer from gross neglect. The basic needs of the residents are ignored, such as: failure to provide adequate or nutritious food, failure to provide a change of clothing for helpless residents, and failure to perform such elemental services as cutting toenails—to the point they curl up under the feet making walking impossible.

In my own State, our hearings on this issue were successful in getting the State of New Mexico to increase its enforcement efforts. I am hopeful that today's hearing can produce similar results here in New York. I am also hopeful that we can come away from today's hearing with some suggestions for legislation to improve conditions in similar facilities across the United States.

Senator Moss. Thank you very much.

Congressman Koch, do you have any remarks? Congressman Koch has done a great deal of work in this field and has sat with our subcommittee before. He is a leader in the House of Representatives. Ed, I am very pleased that you are here looking at the problem and trying to help us find some solution.

STATEMENT OF HON. EDWARD I. KOCH, A U.S. REPRESENTATIVE FROM THE 18TH DISTRICT OF NEW YORK

Representative KOCH. I just want to thank you, Senator Moss and Senator Domenici, for bringing your subcommittee to the city of New York, because until the quagmire that exists here is totally eradicated, there is much that needs to be done. The special prosecutor has exercised good leadership in this area and he has done an outstanding job, but the fact is, had you not come to New York when you did many months ago, we would not be where we are today. So on behalf of the elderly people of the State of New York, I just want to thank you.

Senator Moss. Thank you very much. You played a part in our investigation a year ago, and I appreciate your participation again today.

Congressman Scheuer is also interested in this field, and he has done good work in it. I am glad you are here.

STATEMENT OF HON. JAMES H. SCHEUER, A U.S. REPRESENTATIVE FROM THE 11TH DISTRICT OF NEW YORK

Representative SCHEUER. I am very happy to be here, Senator.

I join with my colleague, Congressman Koch, in congratulating you in the work that you have done in this area, and I am very happy to join Congressman Koch in welcoming you to New York. It is a pleasure for me to be here this morning at this hearing to examine alleged abuses among New York's domiciliary care facilities.

Of course, the subject of this hearing is extremely important because I represent the 11th District, which includes the Rockaway's and which has about 48 or 49 percent of the nursing homes. We are sinking beneath the surface of the Earth with this population; out of a population of 100,000 people, we seem to have about 17,500 people living in nursing homes and health related facilities.

We have thousands upon thousands of expatients from the State mental health institutions. They are dumped upon our neighborhoods, as you indicate in your statement, with perhaps very little more, as Senator Domenici pointed out, than room and board. They lack the tender loving care and compassion they need.

My district is saturated with these people. It is not good for them, and when they are uncared for, when they are unwatched, and when they are unloved, they do wander around the streets. Their conduct to other people in the neighborhood is bizarre and sometimes offensive, even though pathetic and touching. They are a great danger to themselves, and we have had recent accidents where they left their beds in an aimless state and walked out onto the roof or walked out into our streets. One patient froze to death under the most tragic and pathetic circumstances.

It is a subject, as you have both indicated, that literally cries out for government solution. I think the fact is we have not met that challenge at the Federal, State, or local level.

Congress Shares Responsibility

Most of the funding seems to come from the Federal Government. I am on the Health Subcommittee of the Interstate Commerce Committee. We had hearings that I chaired a couple of weeks ago right here in New York, and I would be the first to say that Congress has by no means done its job or met its challenge in watching where the Federal dollars go—to make sure that some of the concerns and professionalism follow those dollars. I think this is the challenge that all levels of government share, and I congratulate you for bringing us here to face our portion of the challenge too.

We have a number of problems that have been highlighted by your committee.

First and foremost: These residents who were recently released from mental hospitals generally find themselves in facilities that are unable to deal with their complex medical and social problems.

Second: Family members often stand by to watch as their loved ones are placed in facilities far from home. There is a distinct lack of any programs to help these families to maintain their loved ones in their own homes.

Third: The communities in which these patients are placed find their resources taxed to the limit. Angry citizens have written to all of us complaining of the presence of these people in their neighborhoods and of the bizarre behavior they often exhibit.

Fourth: Mental health personnel are finding it impossible to keep track of discharged patients and to insure that appropriate followup care is provided.

Fifth: State health and welfare officials appear incapable of resolving the conflict between meeting the needs of this population and the high cost of providing these services. One answer may be the direction that Senator Domenici pointed out, that perhaps we ought to make it more financially feasible for the family to take care of these people.

Sixth, adult home operators often find themselves caught in the gap between community expectations for care and the reality that the only way to make a profit is to cut care, food, and services.

I want to make it clear that I join with my colleagues here in the House and Senate in an effort to find some solutions for this important problem. Solutions will not be easy to find because the issues involved are so complex but we must make the effort. Working together, I am sure we can help improve the quality of life for the frail elderly who live in our domiciliary care facilities.

I congratulate you for holding these hearings. I think we are well on the road to finding some solutions. They will not be easy to find, because the issue is complex, but we must make the effort together. In working here today, and in working together, I am sure that with the assistance of legislators like Assemblyman Stein at the State level, we can improve the quality of life for the elderly who live in our domiciliary health care facilities.

Thank you very much.

Senator Moss. Thank you, Congressman, for that fine statement, and your continued concern and efforts to finding a solution to the problem.

I also want to recognize Assemblyman Andrew Stein, who has worked on this program at the local level. He was involved in our hearing in New York last year, and I ask him if he has any comments to make.

STATEMENT OF ANDREW STEIN, NEW YORK STATE ASSEMBLYMAN

Assemblyman STEIN. Thank you very much, Mr. Chairman.

First of all, I would like to personally thank you. Since you were here approximately a year ago—your committee, and Senator Domenici—we have achieved many results in our nursing home investigations which has improved the quality of care and saved tremendous amounts of funds. I do not think it would have been possible without both of you Senators, your committee, your fine staff, and of course my Congressman—Congressman Koch—who has done such an excellent job, and Congressman Scheuer.

I would like to say, Senator, that in New York State the fiscal crisis we have been having here, and you have been feeling in Washington—it is amazing to us; we spend $70 million of Federal and State moneys without one single audit being performed.

We do have a fiscal crisis here, and there has not been one audit done by any State or Federal agency since $70 million in funds have been given out.

You and I have been privately to some of these homes and we saw these terrible conditions—similar to conditions in many of the nursing homes.

There is another element too, Mr. Chairman, which I think is very important. That is a bill that passed the State senate last year that would have provided audit funds. It passed the Senate, but then it went to the Committee of Government Operations in the assembly where it was supposed to have been reported out of the committee. This bill would have given power to conduct audits. All of a sudden it was sent from the Government Operations Committee in the assembly to a health committee which had already ceased business. This meant the bill had met a very certain and quiet

death. I think it may be of interest to this committee to look into why this bill was killed, because if it had passed, we would already have had an auditing procedure for this important industry.

Mr. Chairman, I want to take this opportunity to welcome you to New York. This investigation is essential if we are to clean up the adult home industry in this State and in this Nation.

Unfortunately, we have had to meet before in this room to consider problems similar to those we examine today; earlier, it was disclosures of fraud and inadequate care within the nursing home industry that held our attention. This time we meet to consider a new industry, one that grew almost unnoticed, yet one that in New York alone already consumes 70 million of the taxpayers' dollars.

"Human Tragedy of Vast Dimension"

As we found before, so again we are finding a human tragedy of vast dimension. The improper medical care, inadequate diet, poor supervision, and almost total lack of Government regulation that marked nursing homes are now becoming the sad trademark of adult homes.

Mr. Chairman, as it did with nursing homes, the stink of fraud permeates this industry.

Once again, a few powerful individuals—through coercion, manipulation, and harassment—are monopolizing control of essential human services.

Once again, politicians are protecting the interests of money at the expense of people.

Once again, corruption and the pursuit of the almighty dollar have replaced the simple compassion our elderly, and now our mentally ill, have a right to expect.

As you know, here in New York we have begun to investigate this industry, and the catalog of abuses we have unearthed is as distressing as it is long:

Residents are tranquilized beyond necessity, even when they object.

Physicians and psychiatrists provide minimal care, sometimes "examining" as many as 40 patients a visit.

Inadequate diets are provided on a take-it-or-leave-it basis.

Overcrowding abounds, with up to four residents in a bedroom.

Social and recreational activities are virtually nonexistent.

Drugs are stored and dispensed by unqualified personnel, with little regard for their potential danger.

Thousands of former mental patients, who have been tossed into these homes, receive care inadequate to their special needs.

These are only examples and, clearly, not all adult homes permit such travesties. But such instances of abuse must be accepted for what they are: symptoms of the unseen rot which pervades the adult home industry, here and around the Nation.

The inescapable truth is that when hospitals report admitting adult home patients who are encrusted with filth or who give signs of severe physical neglect; when residents fear to speak to outsiders, knowing that they risk whatever meager benefits they do receive; when custodial staff demand tips for serving food or helping with baths or assisting with dressing—something is very much wrong.

Till now Government has not acted as it must to deal with these problems. Regulation is all but nonexistent.

Insufficient Inspection Force

In this State, for instance, only 27 field inspectors are available to scrutinize the 428 proprietary adult homes which hold more than 17,000 elderly and disabled persons. This kind of meager enforcement is all the more disturbing when we recall the similar circumstance which led to nursing home abuses.

It is time for government to end its neglect and devote the resources required to do a proper job of regulation.

Mr. Chairman, unfortunately, though the need for adult home regulation has been clear for some time, what we have seen in New York has not been government action but a continuation of politics as usual. In adult homes, as in nursing homes, political indifference—if not political influence—has blocked effective regulation.

The fate of recent regulation in the New York legislature is a case in point. The aim was modest: to establish a basic auditing system to determine how State and Federal dollars were being used.

Apparently, however, even such obvious safeguards could not get through the legislature. Although the bill cleared the senate without major difficulty, it was quietly killed in the assembly.

When one committee—government operations—showed that it was prepared to approve the legislation, the assembly leadership immediately sent the proposal off to a second committee.

But this time it was guaranteed that the bill would not be seen again. The committee chosen was no longer meeting, and the bill was dead.

Mr. Chairman, such practices have been all too common. The results are visible across the State: the scandalous treatment of elderly and disabled individuals.

As we proved last year with nursing homes, only this kind of national investigation, coupled with vigorous State investigations, can bring such practices to a halt in adult homes.

Mr. Chairman, the abuses we find in our nursing and adult homes represent the culmination of a traditional social policy to dump our elderly out of sight and thereby put them out of mind.

To walk through many of these homes is to see the human devastation this policy has wreaked. That we still permit these institutions—that we still force into them those who are able to lead active lives—does not speak well for this society.

This is why I welcome you to New York today.

Though we in this State intend to carry on our efforts to end the abuses, this national investigation will strengthen our attempts to reverse the years of neglect that have done such harm. The efforts of this committee will help us fashion a better way to treat our older citizens and our mentally ill—a way that recognizes that they are people, not piecemeal problems.

If we can fashion this new way, we will begin to provide these citizens with the kind of life they require. We will begin to provide them with the kind of life they deserve.

Senator Moss. Thank you very much, Mr. Stein.

We are now ready to begin our testimony. I am going to ask first if Mr. Charles J. Hynes, the deputy attorney general of the State of New York and the special State prosecutor, will please come to the table, and you are accompanied by?

Mr. HYNES. Robert Schwartz, my first assistant.

Senator Moss. Mr. Schwartz, we welcome you.

STATEMENT OF CHARLES J. HYNES, DEPUTY ATTORNEY GENERAL AND SPECIAL STATE PROSECUTOR, STATE OF NEW YORK

Mr. HYNES. Mr. Chairman and members of the committee, my name is Charles J. Hynes and I am deputy attorney general of the State of New York and special prosecutor for health and social services.

I would like to begin by saying how much I appreciate this opportunity to appear before the members of the committee to testify on the problems facing the elderly today.

Mr. Chairman, I would like to read you something:

> Beyond the specific instances of fraud and deceit as they may be revealed and must be dealt with, we are bending every effort to produce constructive results that will prevent recurrence of cheating and misrepresentation—results that will strengthen administration of regulatory and medical care programs of city departments and, above all, results that will upgrade proprietary nursing homes in respect to operational effectiveness and quality of patient care—all in the public interest.

Mr. Chairman, these words were spoken some 16 years ago by Louis J. Kaplan, then New York City investigations commissioner and author of the now celebrated Kaplan report.

I chose them to demonstrate what I perceive to be a major problem facing me as special prosecutor for nursing homes—namely: How to prevent a recurrence of the problem once the prosecutions are completed. And by "problem," I mean the dreary sordid history of aggression practiced against helpless old people by unscrupulous entrepreneurs in the nursing home field.

What we saw in the days of the Kaplan report was a cycle of exposure, outrage, and, I am sad to say, indifference.

Mr. Chairman, we must not permit the cycle to be repeated. Instead of exposure, outrage, and indifference, we must make it exposure, outrage, and remedy.

This is where the role of government—local, State, and Federal—can complement the role of a prosecutor. It is not sufficient simply to indict, try, and convict those who are victimizing our elderly today. We must do our utmost to make sure that this situation does not recur again. Otherwise, Mr. Chairman, our work will only be half done.

"ENORMOUS SQUANDERING OF TAXPAYERS' DOLLARS"

As a result of some 14 months' experience investigating nursing home abuses in New York State, I have seen at first hand the conditions that have led to an enormous squandering of taxpayers' dollars through fraud and gross mismanagement.

I have proposed to Governor Carey a program designed to end this situation now, and to prevent its recurrence—while at the same

time assuring that a substantial portion of these wasted moneys will be recovered.

For your information, I will briefly outline my program.

I requested funding for 164 additional positions: 96 auditors and 68 additional support staff, including some 30 investigators and 9 lawyers. This addition to my existing staff would provide the essential personnel to carry through to completion several main thrusts of my investigation:

The audit and investigation of reimbursement claims submitted during the past 6 years by all nursing home facilities in order to recapture the funds misappropriated from the State;

The determination of the extent of medicaid fraud in other public health areas;

The development of a permanent fraud control mechanism to prevent any recurrence of medicaid abuse once my office goes out of existence.

Unless those objectives are achieved, my investigation will make but a temporary contribution to the sound management of the medicaid system and the provision of decent care for the elderly. The funds misappropriated at their expense will be beyond our reach forever as the statute of limitations runs.

It has been suggested that a workable alternative to my proposal would be for my office to use 120 of the 288 new auditors provided in the State's new budget for the State department of health. I think this suggestion needs careful analysis and clarification. The department of health is only gaining 120 new auditors. The remaining 168 positions will be filled by patient-care survey personnel. Under legislation you passed in the 1975 session, you required the department of health to make at least two inspections annually in order to review the adequacy of care in all residential health facilities. These 168 positions presumably will carry out that obligation. They are not fiscal auditors.

Additional Auditors Sought

In actuality, the legislature provided the department of health with 120 new auditor positions. These are not a resource we could effectively draw upon to do fraud audits covering 5 years of past reimbursement claims of nursing home operators.

This addition of 120 auditors will give the department of health a total of 204 auditors. Perhaps that figure sounds impressive, but not when it is measured against the department's obligations. These auditors must:

One: Audit the current year's returns of all nursing homes and health related facilities, a total of 780 institutions with 1975 medicaid expenditures of $1.25 billion. This requirement was imposed by the legislature in their 1975 session.

Two: Review the Blue Cross and Blue Shield audits of 360 hospitals, with 1975 medicaid expenditures of over $1 billion.

Three: Audit the construction, under articles 28A and 28B of the public health law, of nonprofit health care facilities—both hospitals and nursing homes. The current workload is 120 projects with a total construction cost of approximately $500 million.

Four: Audit all other facilities, such as home health care agencies and clinics, under the department of health's jurisdiction—more than 400 facilities with 1975 medicaid expenditures of some $500 million.

Five: Address the problems of some 700 medicaid mills, currently operating without any effective supervision.

This is a staggering task that will easily consume all health department audit personnel, both existing and newly budgeted.

Moreover, the proposal to use health staff in my investigations bears no relation to the way my office functions. My office conducts sophisticated fraud audits, which take my staff behind nursing home books to scrutinize vendor dealings and to identify the nature of and participants in potentially corrupt transactions. I must have my own audit staff trained and skilled in sophisticated fraud audit techniques. Equally indispensable are the legal, investigative, and support personnel who do the fieldwork and develop materials for prosecution.

My proposal is carefully structured. It grows out of the experience of my office in more than a year of investigation and prosecution, where I found the common thread among nursing home operations to be a sweeping pattern of improper claims for reimbursement.

It comports fully with the desire of Governor Carey to identify and deal swiftly with misuse of medicaid funds in other health areas, as part of his long-term goal of reforming health care management in New York State.

Finally, it was based on my own personal belief that these abuses, which undermine high standards of patient care, must never be allowed to recur; that the sequel to this office shall not be another round of scandals once the public expressions of concern have faded. Only the development of an effective and permanent fraud audit unit to supplement the day-to-day work of the department of health can guarantee this.

The size of this budget request is modest, particularly in the context of the size of a $3.2 billion medicaid program. I envision that if this budget request is approved, my work can be completed by the spring of 1978, and the diversion of medicaid funds from patient care eliminated.

Estimated $70 Million Could Be Returned

My proposal offers immediate and concrete fiscal benefits to the State, far in excess of its cost. My audit of nursing homes' past claims would identify a minimum of $70 million in overpayments for recovery and return much of this money to local, State, and Federal governments. These millions are to be lost if my request is denied.

The identification of overstated costs in past returns will play a real role in controlling spiralling medicaid costs. Once overstated, many costs remain permanently in a nursing home's rate base, falsely inflating expense ceilings, depreciation allowances, and equity returns. Identifying and correcting cost overstatements will insure that future medicaid reimbursement is limited to the amount actually expended on patient care, and reduce the rate of growth of medicaid payments to nursing home operators.

These conclusions are not based upon speculation. Rather, they are founded upon analysis of the findings of our audits to date. My

auditors have already identified more than $13 million in overpayments which will be available for recovery by the State. I have received actual restitution, in hand, of $237,000; moreover, additional restitution is to be made in several other cases.

I would like to take this opportunity to give the committee some background of my investigation conducted over the past 14 months.

I was appointed January 10, 1975, by an executive order of Governor Hugh Carey after widespread allegations of nursing home abuse.

In the many years preceding my appointment, hundreds of millions of dollars in medicaid funds have been reimbursed to nursing home operators in New York State with relatively minor attention to auditing the validity of expense reimbursements. No attempt was made by the New York State Health Department auditors to look beyond the vouchers of expenses offered by nursing home operators for reimbursement; and indeed, there was no authority for them to do so.

It was in this posture of events that I established seven regional offices throughout the State and that I commenced an intensive investigation to confirm and identify fraudulent claims for medicaid reimbursement, and those responsible in the nursing home industry. A number of investigative techniques were applied, the most prominent of which was the coordinated investigation by my special auditor-investigative staff, aimed at unravelling suspect complicated financial transactions and disclosing fraud.

Our original suspicions were quickly confirmed. Every single audit has established significant overpayment of medicaid funds to nursing home operators.

Working as independent units, lawyers, special investigators, and special auditor-investigators have reviewed the books and records of nursing homes, vendors, and suppliers, analyzed nursing home reimbursement expense claims, interviewed hundreds of proposed witnesses, and presented evidence to grand juries throughout the State. The results so far are encouraging from a prosecutor's point of view.

Twenty-One Indictments Filed

As of today, my office has presented substantial testimony and physical and documentary evidence before 24 grand juries throughout the State of New York. These presentations have led to the filing of 21 indictments. Thus far, 11 defendants have been convicted.

Since my appointment, the thrust of my investigation has been threefold:

(1) To examine allegations of fraudulent misuse of medicaid funds;

(2) To examine allegations of human suffering implicit in questionable standards of patient care; and

(3) To examine allegations of intervention by public officials in the nursing home approval process.

Each of these investigative objectives has borne fruit. Since June 1975, 21 indictments have been returned throughout the State.

The investigations to date indicated more than merely isolated instances of nursing home fraud. More significantly, they appear

to confirm widespread financial skulduggery and wholesale misappropriation of taxpayer funds. The common thread is sweeping fraudulent application for reimbursement for expenditures that have nothing whatsoever to do with nursing home patient care.

The evidence suggests that the taxpayer has unwittingly subsidized personal maids, private residential landscaping expenses, personal travel expenses, personal food items at phenomenal levels, personal luggage, personal business interests, works of art, vast quantities of liquor, interior decorating expenses, personal dental and medical care, personal pharmaceuticals, heating fuel for private residences, personal charitable contributions, political contributions, profits to investors, private pension plans, extensive vacation expenses, real estate taxes, private automobile expenses, mink coats, personal investment stock, personal servants, renovations to private residences, entertainment, legal fees, theater tickets and tickets for sporting events, private stereo equipment, and extensive secret personal profit.

The investigations into allegations of patient abuse are among the most difficult to prove beyond reasonable doubt because of the frequently deteriorated physical and mental condition of the victim-witness. We have successfully commenced criminal prosecutions in a number of instances. One complaint of assault has already resulted in the conviction of a nursing home employee, and other complaints of assault and reckless endangerment are currently under active investigation.

Public inquiries conducted by Chairman Morris Abram's Moreland Act Commission, and other investigations, have brought to light apparent activities and intervention by elected and appointed public officials in aid of private nursing home entrepreneurs.

Based in part upon these disclosures, I have focused my investigation upon the questions of whether or not particular public officials have violated the law by their actions and interventions. The continuing active nature of these statewide inquiries prevents a disclosure here of the investigative techniques and subjects of these efforts.

This avenue of our investigation is aimed at reconstructing just what actions were taken by public officials, who those officials are, whether these actions were motivated by profit, and whether their actions or their accounts of their actions have risen to the level of provable crime.

Restoring Public Confidence

The permanent elimination of patient abuse patterns, the appearance and fact of excesses by public officials, and wholesale fraudulent profiteering in the nursing home industry is essential if public confidence in the quality of government-funded health care delivery is to be deservedly restored.

It is my sincere hope that, through the efforts of your committee, my investigations, and investigations like mine in other States, our elderly will be able to live out their last years in human dignity.

Senator Moss. Thank you very much for your fine statement.

Mr. Hynes. Thank you. Only yesterday I received a commitment from Governor Carey to make every effort to restore these funds

and I think it is just one further example of what Governor Carey has done in terms of supporting this investigation, and having a real interest in doing something about the conditions in the nursing home as it affects the elderly.

There is a series of bills being offered on Monday, which is an amendment to the budget, and Governor Carey has given me full assurance of his total commitment to have this budget restored.

In addition, I have received enormous support from the commissioner of the Department of Health of the State of New York, in which he has indicated that there is a pressing need to have this budget restored, and for us to get about the business of aiding the elderly.

There have been a number of legislators, Mr. chairman, who have contacted my office over the last several days, and they have indicated their total support. I am, at this point, very hopeful that on Monday there will be at least one amendment to restore that budget.

Senator Moss. Actually that money enables you to recover funding, often, that far exceeds any expenditures.

Now, in addition to punishing those who do wrong, there is the fact of recovering funds that are improperly paid out. What has been your experiences and what have you been able to do in that area?

Mr. HYNES. Mr. Chairman, we have, in terms of the criminal prosecution, received almost $4 million in restitution in just 12 cases. There are a number of indictments for fraud currently pending.

In addition, we have turned over to the State department of health a package which would amount to something more than $1 million of civil fraud recovery. That is one of the two purposes of our investigation—to prosecute—and we hope to get restitution as a part of that prosecution. But in addition to identifying civil frauds, we turn those cases over to the department of health for recovery.

At the time I submitted the annual report to Governor Carey in December of last year, I had indicated that in just 40 homes we identified $12 million. As I sit here today, that figure has risen to over $19 million, and if we are given the budget to look at the entire industry, from 1969 to 1974, I am fully confident a minimum of $70 million will be identified and ultimately recovered by the State of New York.

EXPANDED JURISDICTION NEEDED

Representative SCHEUER. In addition to getting more funding to do the job, would you like to see your jurisdiction expanded to include the very domiciliary care facilities we are talking about now?

Mr. HYNES. Yes, I would. May I say, in December last year the Governor's office made inquiry, and I indicated at that time, on the basis of complaints and some preliminary investigation that we had done in the seven regional offices that we have throughout the State—the principle cities—that we are certain substantial evidence would lead us to these investigations that we feel are necessary.

We have not yet been given that jurisdiction.

Representative SCHEUER. I very much hope that Assemblyman Stein will join with our colleagues and with Representative Koch to urge this be restored. It is the preventive medicine we need.

Senator Moss. I have been informed that Assemblywoman Lipschutz is here, and if she would like to join us, fine.

Senator DOMENICI. I would like to ask a couple of questions.

You have indicated you would like to extend your jurisdiction into the domiciliary care area, and plan some very strict legal responsibilities on the operators in the same way as on the operators of nursing homes.

Without getting personal about the individuals, could you tell us some of the reasons you want to extend your jurisdiction? What do you expect to be the violations of law?

Mr. HYNES. I try to make it a policy not to be specific concerning people under investigation.

I can tell you, Senator, that as of December of last year, we had received more than 60 complaints from various areas of the State and in our seven regional offices.

Those matters are currently under investigation for the simple reason there is ample evidence of abuses in the adult home area as there has been in the nursing homes. But I am limited in the way I can answer the question because of my prosecutorial role.

Senator Moss. There is not much of a line in going from the nursing homes to the adult homes, except a little absence of medical care.

Mr. HYNES. I suspect that is correct.

Senator DOMENICI. Let me ask you if your investigation at this point supports some remedial legislation. Your very excellent remarks indicate it is not going to be enough to find fraud and misrepresentation.

ONGOING INVESTIGATIONS ESSENTIAL

Mr. HYNES. One of the things that must happen, Senator—at the time that the investigation ends, I fully expect it can be wrapped up within 1 more year, unless there is an ongoing procedure within the State department of health—a self-contained fraud audit unit—to have a constant vigilance that we never return to pre-1975. It makes little sense to spend the type of money that has been spent for any investigation, wrap it up at the end of 2 years, and close shop. What we indicated in our report to the Governor was that, No. 1, there must be a concentrated effort to evaluate every home in the State, to do a full audit of every home in the State, to review the medicaid reimbursement formula, and bring it into a reasonable proportion. No. 2, to turn over to the State department of health a self-contained unit of criminally trained fraud investigators—I am happy to see that Dr. Wells issued a statement yesterday conceding we have the facilities to train these people—to turn over to criminal lawyers who work with us and turn over to investigators, keep that unit ongoing so that they can operate as an investigative check of not only nursing homes, but in every area where medicaid funds are used.

Now, we have a $3.3 billion medicaid budget in this State, half of which is paid for by the State of New York. I would that members of the legislature should not engage in penny-wise and pound-foolish conclusions.

Senator DOMENICI. Mr. Chairman, might I just make one comment. It does appear to me, in reference to medicaid, we have a couple of problems on SSI with the concept you described. But with reference to medicaid, if there is one thing that is absolutely positive—if we see no upturn in the State process and exercising a willingness to investigate, audit, and supervise, it appears to me that a minimal standard of the Federal Government ought to be proposed. Even if it is difficult to monitor, one should exist. And if that is in the law, we would have some reason to find out whether it will work.

As it is now, it is left totally up to them, and you are only describing a chronic illness across the land, with few exceptions.

Thank you, Mr. Chairman.

Senator Moss. Congressman Koch?

APPARENT RESISTANCE FROM STATE BOARD

Representative KOCH. First I want to say that Governor Carey's nomination of you for the appointment of special prosecutor is one of the major achievements of his administration, indicating a desire to root out the corruption that exists in the industry. I am very interested in your comment on the resistance that you have apparently received from the State board of social welfare with respect to your desire to investigate the facility end of the nursing home business.

I wonder whether you could give us some insight with respect to their opposition?

Mr. HYNES. I wish I could answer that. I was happy to hear that Mr. Shapiro is going to be here. I simply cannot answer your question at this point.

Representative KOCH. But it is your desire to engage in investigations and, under the existing law, without the board's consent, or without a change in your mandate by the legislature, you simply do not have the lawful authority to do that; is that correct?

Mr. HYNES. Congressman, someone has to take a look at these homes. What we have now are allegations, and it leaves a cloud over many of the owners of these homes.

I would be more than happy to take a look.

Representative KOCH. And at this moment you are prevented from doing so by virtue of the resistance of the State board of social welfare.

Mr. HYNES. That is correct. I have no jurisdiction at this time.

Senator Moss. I would point out that in the State of Georgia, the Governor down there ordered an audit of every nursing home, and the results were astounding—what they were able to uncover in the way of fraud, of overcharges, and various things. I suppose one of the most healthy of pictures we could have is consistent audit of these places. This is what you are seeking to have funding for, isn't it?

Mr. HYNES. Yes; sir.

Senator Moss. Assemblyman Stein?

Assemblyman STEIN. Mr. Hynes, supposedly the reasoning for cutting out your funds for additional auditors was for financial reasons. Did you make a statement or issue any report in which you said

that if you had those auditors, you could save many times that money?

AUDITORS SAVE TEN TIMES THEIR SALARY

In our investigations, we found that every auditor saves 10 times what he gets, based on all of the medicaid reimbursement charges. Is it your impression that it is really penny-wise and pound-foolish, that it is not a budgetary savings but, in fact, it is a loss?

What is your figure that you say you could save?

Mr. HYNES. I think the most interesting figure we have come up with is every time you turned an auditor into the field, he recovers $2,500 worth of fraud—that is, every day.

Senator Moss. Thank you very much, Mr. Hynes. We appreciate your appearance.

Before you leave, Congressman Scheuer has a question.

Representative SCHEUER. Mr. Chairman, Mr. Hynes, I take it part of your problem is money—part of the problem of the State legislature is that there is no money up there.

I put in a bill that provides where any county, city, or State sets up a prosecuting unit to develop medicaid or medicare fraud, that the Federal Government will pay the preponderance of the costs of that prosecuting unit. The Federal Government, of course, will recover a substantial part in restitutions.

Do you think that kind of provision, if it becomes law, would make it easier for Governors—like Governor Carey—who have financial constraints on them, that this would encourage them to set up prosecuting units to discover medicaid and medicare fraud?

Mr. HYNES. Without a doubt. I commend you for that, and I would strongly support such an action.

May I add one point to your question? The $2.3 million, which I have heard several times, is reimbursable by 75 percent, so we are not talking of $2.3 million—we are talking of something less than $600,000.

Representative SCHEUER. Thank you very much.

Senator Moss. Thank you. We appreciate your testimony very much.

Mr. HYNES. Thank you.

Senator Moss. Before we call our first panel, Mr. Gerald Fried has asked that he be heard. We are pleased to accommodate you, sir, and will hear from you before we call our first panel.

STATEMENT OF GERALD M. FRIED, EXECUTIVE DIRECTOR, STATE ASSOCIATION OF HOMES FOR ADULTS, INC., NEW YORK CITY

Mr. FRIED. Mr. Chairman, on my side is Mr. Julius J. Rosen. He is my general counsel for the State Association of Homes for Adults, Inc., Mr. Chairman.

Senator Moss. We are glad to have you.

Mr. FRIED. Mr. Chairman and gentlemen, I have been requested by the State Association of Homes for Adults, Inc., a not-for-profit corporation which represents private proprietary homes for adults—PPHA's—in the New York City metropolitan area, to submit to you a statement in behalf of its members. The purpose of this statement is fourfold:

(1) To clarify what appears to us to be a basic confusion among legislators and the public of the purpose and functions of PPHA's;

(2) To describe the physical and operational characteristics of PPHA's;

(3) Review the costs and the remuneration for these homes for the services and facilities provided; and

(4) The methods of supervision of and remuneration to the operators of PPHA's.

Senator DOMENICI. May I ask a question? In your opening paragraph, you indicate the corporation you are representing is nonprofit.

Mr. FRIED. Yes.

Senator DOMENICI. But the members that make up your corporation—they are not nonprofit?

Mr. FRIED. No, sir, they are proprietary homes for adults.

Senator DOMENICI. Are there any nonprofit homes that belong to your association?

Mr. FRIED. No, sir.

SOURCES OF MONEY QUESTIONED

Senator DOMENICI. Where do your clients—the members of your association—get their money from?

Mr. FRIED. They get it from the Federal Government, generally; 25 percent is paid by the State government.

Senator DOMENICI. I know where it comes from, but I am just wondering why the paragraph in your statement seems to indicate that you are not getting paid from public moneys. Actually, it seems to me almost all of it is either State or Federal money that is being paid to sustain these homes. When your residents turn the check over to you, is that not SSI money—State and Federal money?

Mr. FRIED. What I said in my statement was, as opposed to statements that were heard here previously, that that money was paid to nursing homes, directly to the facilities, but that no SSI check is made out directly to a facility that is an adult home.

My name is Gerald M. Fried and I am the executive director of the State Association.

The State Association of Homes for Adults, Inc., represents 50 homes in the New York metropolitan area with an aggregate bed capacity of more than 9,000. This is more than 50 percent of the total number of proprietary adult home beds in the entire State of New York.

The association was established to serve as a spokesman for the proprietary adult home industry, to represent members before Federal, State, and local agencies, to provide representation in union negotiations, and to inform and educate the public as to alternative programs for those elderly who require residential care facilities. To this end the association is actively, in conjunction with State authorities, attempting to improve the quality of the lives of residents in each member home. For instance, the association voluntarily contributed substantial funds directly to the New York State Board of Social Welfare to assist the board in establishing a pilot recreational program for residents of PPHA's. In addition, we also initiated efforts several years ago to develop a "need" criteria for approval of certificating new PPHA's. The result of our efforts, finally

joined in by the State board of social welfare, was the present moratorium on establishment of new PPHA's as well as a limitation of the number of beds in any future certificated PPHA. Our primary concern in contributing to the recreational program and in endeavoring to limit the number of new beds in the industry was to improve the lives and living conditions of residents at PPHA's.

Member homes are certificated, supervised, and regulated by the New York State Board of Social Welfare and fall between medical facilities and independent living; that is, for individuals who do not require either skilled or custodial nursing care but who do require some assistance in daily living.

Two Categories of Adult Homes

The association basically is comprised of two types of adult homes. One category serves those who, because of advancing years and/or moderate physical disabilities, need to dispense with housekeeping for themselves, and choose to be with their peers in a congenial residential atmosphere. The second category is adult homes that provide aftercare for persons who had been in State institutions and who have been medically certified as competent to reside in a nonmedical facility with minimum restrictions until they are able to resume fully the normal life of the community.

Certificated PPHA's provide assistance in daily living for people who can substantially tend to their own needs and requirements, with moderate staffing for aid in daily living, and so forth.

The purpose of adult homes to the extent economically feasible is to provide an atmosphere that will give all residents: to the aged, the ability and the will to savor life, to participate in activities that will be physically and mentally invigorating, and enjoy their later years to the fullest possible extent; and to encourage those younger ones who are physically able to return to full, independent living and community life. In this regard, member homes in the association provide, among other services, recreational and educational programs, libraries, hobby classes, and current events sessions that enable the aged to remain informed, and various other programs—some with pay—for younger residents. PPHA's receive no direct payment for the services they furnish from either the Federal, State, or local authorities. The operators receive no medicare or medicaid payments for any services they provide but rather are paid directly by each resident out of the $386.70 per month supplementary security income payments they receive. Unless the resident is on social security, he normally retains a spending allowance out of his monthly SSI check. Thus the payment made to the facility by the resident is less than $12.72 per day.

Gentlemen, I think that you will agree that at $12.72 per day none of you would be able to obtain a decent or even halfway decent room in a hotel or motel in the metropolitan area, let alone food and the other services our homes provide.

The elderly poor who require residence in PPHA's are the political and journalistic footballs of our society. Indeed, so startling is the lack of concern by the State, Federal, and city governments for these elderly poor that all too many times these individuals arrive at an adult home from a hospital or State institution with no more cloth-

ing than a hospital gown. No funds are made available to these individuals through their SSI payments for the purchase of decent clothing and if it weren't for the fact that individual proprietors dig into their own funds and solicit charitable organizations, these individuals would remain in the same poor condition as they were under State care when the State was receiving from 8 to 10 times the amount that the residents receive to pay for their residency at the adult home.

Representative SCHEUER. [Discussion off the record.]

Senator DOMENICI. You may proceed.

Mr. FRIED. The only category of residential care—which includes furnishing aides to assist in tasks of daily living, such as assistance in feeding, dressing, washing, and walking; establishing recreational and vocational rehabilitation programs; safe, clean, comfortable quarters; properly nourishing and dietarily sufficient three meals daily; two snacks daily, and a good living environment—in which the cost-of-living factor has not and does not merit consideration, is the proprietary homes for adults.

PHYSICAL STRUCTURE REQUIREMENTS

PPHA's are required to be physically equal in almost every respect—for instance, room area, corridor widths, dining and recreational areas, sanitary and kitchen facilities, furnishing, fire retardation and safety devices, and so forth—to the physical structures and furnishings of health-related facilities, which are medical facilities. Yet they receive from their residents' SSI payment a maximum of $12.72 per day.

How do those who allege PPHA "ripoffs" explain medicaid payments of $35 to $40 per day to pay for almost identical services in a physically almost identical facility merely because it is called a health related facility and is defined as a medical rather than a residential facility based on allegedly established actual operating cost? How can PPHA's be expected to continue to operate on less than $12.72 per day when such proprietary adult home may be located on the same block or within a few blocks, be almost identically constructed, have the same labor union, pay similar real estate taxes, furnish substantially similar services, and, at worst, have a very slightly smaller staff than the HRF?

Much criticism has been directed against alleged real estate profiteering by PPHA's because a large percentage of the moneys paid them goes toward rental and/or mortgage and financing costs.

It should be pointed out that a 50 percent real estate cost for a large, newer metropolitan PPHA equals only $6.45 per resident per day.

It is a known fact that the HRF's average a real estate cost recognized as "reasonable" by New York State and medicaid of approximately $8.50 per patient per day. The average medicaid rate paid to HRF's located in the metropolitan New York City area is approximately $37.50 per patient per day. This reflects an average real estate percentage cost of HRF's of 23 percent of their total rate.

Accordingly, it is clear that critics of PPHA real estate costs are playing a numbers game. Your committee is aware that a similar physical facility in a similar area, subject to similar construction

and financing costs, must reflect such costs regardless of the gross rate paid. In short, gentlemen, the cost of construction, real estate, and financing is a real cost which is paid by the operator. This, rather than being a cause for criticism, should be a cause for serious concern, and only highlights the gross inadequacy of $12.72 per day.

Our association is deeply concerned over the fact that the government and the public appear disinterested with the fate of residents in PPHA's. If the resources known as PPHA's are forced into bankruptcy, where will these residents go? The alternative will be chaos and the return of thousands of residents to State hospitals or to the department of social services who will then have no alternative but to pay the much larger costs of caring for these individuals at other facilities. But even more devastating will be the impact on these individuals who do not require medical care and whose last remaining years must be spent in turmoil and inappropriate surroundings, compliments of the State, city, and Federal governments' callousness with their lives and the affairs of those individuals who have, under the most adverse circumstances, endeavored to perform an extremely valuable and necessary service to the community and these individuals by operating the PPHA's.

Two Facilities File for Bankruptcy

This chaos has commenced. Last summer, 1975, two of the State association's newer facilities filed petitions in bankruptcy. I have available with me for the committee's consideration a transcript [1] containing the bankruptcy judge's remarks which conclude that these two facilities could not survive even if fully occupied on $12.72 per resident per day. The history of efforts to obtain a proper rate is as follows:

Prior to 1974 when SSI payments came into existence, the rate paid to residents of adult homes was a negotiated rate for New York City and established by the commissioner of the Department of Social Services of the City of New York, who at that time was Henry Rosner. Commissioner Rosner, in March of 1973, while indicating that he was well aware that the then rate of $366 per month was grossly inadequate based on figures in his possession, stated that due to the President's wage-price stabilization freeze he had no power to give more than a 2½ percent raise which would increase the rate to these individuals to $375 per month. He stated that as soon as the freeze was lifted he would negotiate a fair rate which would be in excess of the then-established rate of $375 per month.

In December 1973, the proprietors met with the commissioner of Social Services of New York State, Abe Lavine, and his assistant commissioners in Albany. They were advised that due to the tremendous inflationary pressures since the Arab boycott, the previously inadequate $375 plus $28.50 personal allowance rate was now impossible for the homes to survive on. We requested an emergency fund as immediate aid. Commissioner Lavine sympathetically advised he would assist the proprietors to get this increase in a reason-

[1] Bankruptcy proceeding in the matter of Klein's Forest Manor, Inc. (75-B-1566) and Klein's Golden Manor, Inc. (75-B-1567) D.I.P. Aug. 4, 1975, U.S. Courthouse, Brooklyn, N.Y. Retained in committee files.

ably brief period. The implication clearly was that this assistance, even if emergency until all legislative problems which took longer to resolve were concluded, would be forthcoming in a matter of weeks.

Nothing happened for several months. Then we were advised that a financial survey would be made by Peat, Marwick, Mitchell to determine actual costs in order to justify immediate increases. Our member homes fully cooperated with Peat, Marwick, Mitchell in making available to that organization all relevant records and financial data requested with regard to operational expenses. Since this survey covered the costs of operation for the calendar year 1973, it was to have considered the inflationary factors of labor increases, food, fuel, energy, construction, interest, and so forth, taking into account a 1974 inflation projection. New Home costs were essential to be considered since, by 1975, over 50 percent of all beds in proprietary adult homes in the New York City metropolitan area would be in new construction and the cost of new construction and financing thereof were substantially above similar construction in existing facilities. The results of this financial survey were to be completed prior to June 1974, and a new proposed rate promulgated by July 1, 1974.

SURVEY RESULTS DELAYED

Even though this survey was completed in June 1974, the division of the budget for the State of New York, for some reason known only to itself, refused to reveal the results of this survey until April 11, 1975, and then only because counsel for the association demanded the release of this financial survey pursuant to the Freedom of Information Act.

Mr. HALAMANDARIS. A few minutes ago we extended you the courtesy of giving some time and to even placing you at the beginning of the witness list, because you asked in the name of fairness to give a brief opening statement, and to lay the foundation for forthcoming testimony.

We have been sitting patiently listening to your exhaustive remarks. I would appreciate it if you would stick to our agreement. Could you take a couple of minutes in summarizing your statement? We will see if the Senators have any questions to ask you, and thereafter if you feel a need to continue your statement, then we can arrange something at the end of the day.

Mr. FRIED. Fine. We can finish after the other witnesses finish today.

Senator DOMENICI. Proceed to summarize in a couple of minutes, and if you feel a need to testify further, we will try to work you in.

Mr. FRIED. May I say there are only 3½ pages left. It is a total of 4 or 5 minutes.

Senator DOMENICI. We can all read. I think you have made most of your points from what I can tell.

Mr. FRIED. The survey did not consider new construction costs, other inflationary factors such as labor increases, and so forth, nor a 1974 general inflationary projection. Subsequently, after numerous emergency letters, calls, and conferences we were advised that a supplemental audit of several new homes was being made. The survey

results reflected the gross inadequacy of the SSI rate of $375 in effect in 1974. To date, we have been advised the Governor cannot do anything without Federal cooperation—and so nothing has been done.

The proprietary adult home owners in the New York City metropolitan area have been advised most recently by the State that it is the "Feds" who have reneged on their obligations whereas the State can do nothing about it because if it does, it will bear the entire burden of such increased costs. The Federal Government must bear a large portion of the blame for this deplorable and inhumane situation. However, the State cannot so easily disregard its own major share of its responsibility. Over the past several years, it has discharged literally multiple thousands of former mental patients from State institutions into proprietary adult homes. When these individuals resided in the State institutions, the State contributed 25 percent, the Federal Government 50 percent, and the local government 25 percent of the costs of supporting them in the State institutions.

Since the average hospital cost per patient per day is $90, the total monthly cost per patient in these State institutions is $2,700.

Referrals Reduce Costs

The referrals of such individuals, when considered and declared competent by State psychiatrists for residence at adult homes, immediately reduces the cost via the vehicle of SSI payments, as follows: Federal $156.70 per resident per month, State $114.50 per resident per month, and city $114.50 per resident per month.

This creates a massive savings on each such referred individual of $1,193.30 per resident per month Federal, $536.50 per resident per month State, and $536.50 per resident per month city.

In gross, the savings on these referrals to the State and city alone aggregates hundreds of millions of dollars.

Nevertheless, the governmental authorities refuse to pay a survival rate which will enable PPHA's not only to continue to provide their essential services but also to continue to save massive dollars for the Federal, State, and local governments.

Finally, the incongruity of having three separate New York State departments control proprietary adult homes becomes apparent when it is considered that the New York State Board of Social Welfare has the authority to oversee staffing, construction, and operation of these homes. It can formulate rules which increase construction requirements, which increase staffing requirements, and which generally increase substantially the costs of operation of these facilities. However, it has no authority to compensate these facilities for these excess costs imposed upon them.

The department of social services which contributes to the payment has thus far indicated that it has no control over the Federal Government and therefore cannot increase the rate even though it has clearly determined it inadequate and even though it could justify such increases. It does not want to do so because it might cost the State money, or at least more money than it believes the State should contribute. The New York State Department of Mental Hygiene

is also imposing additional requirements without additional compensation. Insofar as medical facilities are concerned, the same department which calls for added costs—or even which is notified of legitimate added costs—can and does increase the rate of these facilities to compensate the hospital, nursing home, and health related facility operators for such increased costs. The sole department handling such factors is the Department of Health. By this means, medical facilities are able to withstand the inflationary costs, provide required services, and yet receive their costs plus a profit margin.

INEQUITIES MUST BE CORRECTED

This statement is submitted for the purpose of indicating that this industry affects every single individual in this State. Most individuals, upon arriving at an age where they require this type of assistance—and this pertains to 98 percent of the population, regardless of current age—will require adequate care and residence, preferably at an adult home. The denigration being achieved by paying a rate which is inconceivably low at this point in time and which has been maintained at this low level for a full 3 years, despite all other areas of the economy requiring substantial increases to merely stay even, is well on the road to depriving the Federal, State, and local governments of an invaluable resource. It is factually and historically true that the Government is incapable of providing equivalent services directly at even triple the rate currently being paid by SSI to PPHA residents. Further, it would take years and billions of dollars to duplicate on a public or voluntary basis the existing proprietary facilities. Therefore, every effort should be made by the State and Federal Governments to correct the flagrant inequities outlined herein and to preserve the integrity of the existing facilities.

Senator DOMENICI. I have a few questions of you, but I will yield first to the Congressman.

Representative KOCH. Thank you.

I remember that almost a year ago we heard testimony similar to yours. Those hearings were held as a result of the desire of public officeholders to examine an industry which had not previously come under public scrutiny. I suspect that as a result of those hearings a number of people now hold a different point of view with respect to the nursing home industry. There are several people, as you know, who have since been indicted and perhaps even some will go to jail.

Now, you tell us we ought not be interested in the domiciliary end of the industry, in the sense of having hearings and determining whether people are receiving adequate care. You have pointed out that these homes are getting only $12.72 a day for each individual, and you ask where a person could receive the kind of care provided in these proprietary homes—provided to people who are the direct recipients of Government payments which they sign over to the home. And you say that is not Federal money.

Having made that premise, I am perplexed by the special prosecutor's statement that he has come up against considerable resistance in his efforts to investigate the nursing home industry, including the proprietary homes. You say there is no resistance to looking into this matter.

Mr. FRIED. May I interject?

Representative KOCH. In one minute, and then you may.

You say there are already three State agencies in some way or other controlling the investments of these homes. Is that not what you told us?

Mr. FRIED. Yes.

Representative KOCH. Apparently they are not doing the job, according to the special prosecutor, so why do you think your industry should be exempt from scrutiny?

INVESTIGATION WELCOMED

Mr. FRIED. Congressman Koch, first of all, I would like to explain. I do not believe, in any part of my statement, that I am trying to exempt the adult home from being investigated. On the contrary, I would welcome an investigation. I welcome this opportunity. I want to thank Senator Moss and Mr. Halamandaris for giving me the opportunity to express my views.

We have been trying for 3 years to get somebody to pay attention, to explain that we are not nursing homes—that there is a difference between $12.72 and $60 a day.

Representative KOCH. Maybe we are not so far apart then.

Mr. FRIED. In reference to Mr. Hynes—we have no objection to Mr. Hynes coming in.

Representative KOCH. That is the key, because at this moment, although I am not aware that any of your member homes is in violation of existing laws, there ought to be an investigation, because allegations have been made that the kind of care given is inadequate. You just told us that you welcome such an investigation. Is that correct?

Mr. FRIED. That is a fact.

Representative KOCH. And are you not coming before this committee with basically a plea for an increase in your rates? Is not that what you are telling us?

Mr. FRIED. First of all, it is to educate the public—to differentiate between nursing homes and adult homes.

Representative KOCH. I understand, but all I am saying is that you feel that your rates are not adequate; you do not want to be compared in terms of care with the nursing home; and you would like to receive more money than you do at present. For what purpose? Explain that.

Mr. FRIED. I am requesting an increase in rates for the proprietors of the adult homes, but for the sole purpose of trying to comply with all the rules and regulations for the residents in the facilities.

Representative KOCH. I understand, but this is not a rate agency body.

Mr. FRIED. This is a factfinding commission.

Representative KOCH. Exactly.

Mr. FRIED. I want to give you the facts, and to let the public know what they are, so that everyone will judge on that basis.

Representative KOCH. And the facts as to whether the nursing homes or domiciliary facilities are providing the level of care that they are required to give will not be established over this table. It will be established by an independent audit to be made by the special prosecutor. And you have no objection to that?

Cooperation With State Audit

Mr. Fried. On the contrary. I explained to you before, when the State budget department audited, we volunteered the information.

We have sent the commissioner of social services a telegram, volunteering financial statements. We never got any result.

Representative Koch. Let me conclude my questioning by saying this: I hope such an audit takes place, and I hope after the audit has taken place by the special prosecutor that we do not find what we found in the case of Dr. Bergman.

Mr. Fried. That is why I came here—to avoid that kind of allegation; that is why I requested the opportunity to speak.

Senator Domenici. Congressman Scheuer?

Representative Scheuer. I am impressed by your answer to Congressman Koch. I hope that you would feel that with some extra funds you could also perform the additional functions, something in terms of looking after these patients.

Do you have provisions for emergencies—the kind that have been widely covered in this paper? For example, bed checks, perhaps several bed checks, one at 11 and then one at 1:30 a.m., to see that people are not missing from their beds. What about adequate staff for recreation, entertainment, and various kinds of therapy programs?

It is perfectly obvious that you cannot afford that on $12.72 a day, but I would hope that with more funding, you could provide the kind of services, facilities, and protective support necessary for these patients. They are urgently needed.

Mr. Fried. I believe in your file you should have a letter from your office to mine, and a reply from mine to yours, whereby you requested a few months ago that you were doing a report on adult homes, and you requested information.

I believe in my letter, I volunteered all of that information to you—and my help and my office's help at any time.

As far as your statement is concerned, yes, we request, and we would like to have an investigation of the industry to give us a chance to get publicity, but perhaps good publicity, and an opportunity for residents to get the extra care that we feel they need and deserve.

Representative Scheuer. I agree with you, and I hope that when you get extra Federal funding it will include guidelines for such facilities. This should include fire and safety measures, adequate inspection of services and programs, as well as professional standards for the administrator and other personnel.

Mr. Fried. May I explain——

Representative Scheuer. We should have really thoughtful and meaningful control, not only over the quality of the food and board and the real estate and sustenance, but over the quality of care, quality of TLC—tender loving care—the missing element.

Mr. Fried. I do not want to go into it too lengthily, but I just have in front of me—I am glad the executive director of the State board of social welfare is here, but this is his testimony at a joint public hearing before the Committee on Mental Health in Albany, in which Mr. Shapiro states—and I am sure he will reaffirm—that there is extensive supervision, that there are extensive laws, that all

of these homes must be fireproof, even though the homes must have sprinkler systems, and there is a constant inspection day and night.

Fund Shortage Thwarts Adequate Supervision

However, I would agree. It is impossible to completely supervise these homes, because there is a lack of funds, and the homes themselves cannot comply with what they would like and what the State and local agencies would like because of a lack of funding.

Mr. Rosen. The thing that appalls us, the proprietary operators, at least in our association—you must recognize that these homes are the mainly large homes located within New York City, in Nassau County, and the metropolitan environs; the result of that is that they face the largest real estate taxes, the highest cost of operation, the highest union costs in the State, and they have the problem of inflation.

As a result, if any facilities are to be provided before the shell—that is, the facilities available for these people—there must be certain costs to be met.

What we are concerned with—both Senators, in their statements, implied that various physical facilities, as well as the services, were not being provided satisfactorily in these homes.

It is inconceivable that these homes can support these large, necessary, and very complex constructions, these facilities, particularly in the New York metropolitan area, on $12.72 a day.

There is no room for ripoff. The reason staffing is not fully complied with in many homes is that they cannot be foreclosed, they have to meet their rental or their financing costs, which in many cases comes to $7 to $8 a day per patient.

If you get $12.72 a day, and in order to have that facility survive and not have it close down, you must pay these costs, which are considered completely reasonable. You must keep in mind that these are not medical care facilities and they will not have the care of a nursing home. But for 4 years, most urgently, the last 2 years, these homes have been going before the New York State Senators—that is, the Federal Senators—their Congressmen, the assemblymen, the State senate, and the facts are important here, these are facts. What is of concern to me is that we got no reaction, except we got these very denigrating remarks, and that is because there is not a clear distinction in the mind of your committee between domiciliary care facilities and medical facilities. It is crazy to think that there can be a ripoff on $12.72 a day, comparable—as the comments that Congressman Koch made—to someone getting $40 to $50 a day. There is an awfully lot of difference, and there is room for ripoff.

Again, one of the reasons it appears to me that Mr. Hynes is unable to get the permission of the board of social welfare—and I cannot speak for them, I did not know that until today—it would appear to me the board of social welfare has no control whatsoever over funding or financing or payments of the rates of these people.

Criminal Activity Denied

Medicare and medicaid are not involved; therefore, it would appear if there is any crime—that is why we so urgently invite an investigation, more than just welcome it. Mr. Hynes cannot find a criminal

activity here that you could find with nursing homes because all we have here is an approved agreement, one that has been approved by the board of social welfare, which is an agreement between the residents and the homeowner.

Obviously, who are they ripping off at $12.70 a day? What crimes can they possibly have committed?

Mr. Hynes indicated there is some connection between nursing home operators. To our knowledge, at least in our members' homes, that is absolutely untrue.

Senator DOMENICI. All right. We have a very lengthy agenda to go through yet.

Senator Moss. We have given you the courtesy of putting you on at the beginning of the agenda, when you came forward and asked us to do it.

We have heard you fully, and we appreciate your statement. We will consider it very carefully. But we do have a pressure of time. We are running about an hour late at this point from where we had planned to be.

Mr. FRIED. Thank you, Senator.

Assemblyman STEIN. Mr. Chairman, just very briefly.

As you know, I have been to many of these adult homes, and I think there is a lack of definition in what we are talking about. It seems to me they are not really adult or boarding homes. The majority of the people there are really people from mental institutions. I went to one last night where the owner told me that 95 percent of the people were former mental patients—some with 40 percent, some with 50 percent mental disabilities.

It seems to me, and I have talked to many of these patients—it is a bad idea to mix these former mental patients with ordinary elderly people who are just going there for residence. We are running behind now, and some of what you say is true.

I think other things you said are not true. There is a lot of bad care going on in these homes, and in many cases the funds are insufficient. I think Mr. Hynes would do well to investigate, and I think you would find a lot of criminal activity.

Let me ask you this question: What do you think about mixing the number of mental patients with people who need a place to live?

Mr. FRIED. First of all, let me explain, that I know—I have been apprised of the homes you have visited. You have visited just a few of the homes so far.

Assemblyman STEIN. I visited six.

Mr. FRIED. You did not visit any of the real nice homes. You picked out one or two individual homes that are comprised of former mental patients of the State hospitals. Your question specifically was: Is it a good idea to mix?

I believe that the New York State Department of Mental Hygiene, in an agreement with the State board of social welfare, limits the residence of former mental patients to 40 percent of the facility for the expressed purpose, and keep this in mind, that the adult home is not the final point that the nursing home is.

HOMES USED AS "STEPPING STONE"

It is a stepping stone for the individual from the hospital to be reintegrated into the community, and this will give them an oppor-

tunity—these former mental patients, who have been certified by any competent psychiatrist to leave these hospitals—to go into these homes, mix with the population, and use these homes as a stepping stone to return to the community.

We have many of the homes that absolutely have none, and I would invite you and the committee to possibly visit some of these.

Assemblyman STEIN. I have been to eight. My staff has been to two dozen of them. All of those places we have been to have had an overwhelming number of mental patients.

Mr. FRIED. As I explained to Congressman Koch, we would welcome an inquiry.

Assemblywoman LIPSCHUTZ. If I could state—I am wondering why people would want to go into the adult home business if they are not making a profit.

How many of the adult homes in the Rockaways are members of your association—the State association?

Mr. FRIED. Well, I would say 95 percent of the adult homes in the Rockaways are.

Assemblywoman LIPSCHUTZ. All right.

Was that unfortunate incident that we had of a resident freezing to death—was that from a home that was a member of your association?

Mr. FRIED. No, and I would like to explain. That is a medical facility—a health related facility that had nothing to do with an adult home.

Senator Moss. Well, we do have a long agenda, and we must go on.

We thank you very much. Your documents have been received—the public assistance programs analysis [1] and the transcript in the matter of Kleins' Forest Manor, Inc., and Klein's Golden Manor, Inc.[2]

We will now turn to the panel made up of Mr. Charles Platzner, Far Rockaway, N.Y.; Mrs. Sarah Klein, Palace Home for Adults, Long Beach, N.Y.; Mrs. Joffe, Cornish Arms, and Mr. Ted Connolly, Sutton Place.

All of the members of the first panel please come on up.

Let us start with Mr. Platzner.

Mr. Platzner, I am told you are a retired plumber, is that correct?

STATEMENT OF CHARLES PLATZNER, FAR ROCKAWAY, N.Y.

Mr. PLATZNER. Yes, sir.

Senator Moss. Where do you live now?

Mr. PLATZNER. I am now living with my son.

Senator Moss. You formerly lived in the Paradise Home?

Mr. PLATZNER. Yes.

Senator Moss. When did you move into the Paradise Home?

Mr. PLATZNER. May 14, 1975.

Senator Moss. Will you tell us how old you are, Mr. Platzner?

Mr. PLATZNER. Seventy-six.

---

[1] "Public Assistance Programs Analysis: Medicaid, SSI, and Home Relief for the Aged, Blind, and Disabled," by Mark E. Hamister, president, Upstate SSI Action Coalition of Adult Homes, Inc., Rochester, N.Y., dated Jan. 20, 1976. Retained in committee files.

[2] Retained in committee files. See footnote, p. 3557.

Senator Moss. You were telling us when you moved into the Paradise Home, now will you tell us why you moved into the Paradise?

Mr. PLATZNER. My wife died on the 17th of November 1974. My children did not want me to continue down there, so I came up north, and I got very lonely.

My daughter went to work. She left home for work at 8:15 in the morning, and I was going crazy.

Senator Moss. You were alone all day long?

Mr. PLATZNER. Yes. I cooked my own breakfast and lunch, and I finally joined one of these senior clubs, which gave me about 2 or 2½ hours a week, and it got pretty lonely.

I moved in with my son, and he was out of work. He is still out of work. He is a New York plumber, and he gets a job here and there. I asked him, at Long Beach, I said: "Let us take a look at one of these things."

I told him that I cannot go on like this any more—that I had to be with people, if you call them people. I finally wound up at the Paradise.

Senator Moss. And that is when you moved into the Paradise—you decided to move in there at that time?

PRESSURE USED BY THE ADMINISTRATOR

Mr. PLATZNER. Yes. When I talked to him, he tried to pressure me to move in the next day. I told him my daughter is away for a few weeks, and I could not move in right away. He says if you move in right away, I get my money more quickly, and I said I would move in on the 14th. It looked pretty good. The food was not bad. I am of the Jewish faith, and it was not too bad.

Senator Moss. It looked like it suited you very well from your appearance.

Mr. PLATZNER. I lost weight.

Senator Moss. You are back with your son now?

Mr. PLATZNER. Yes. There are five or six points that I would like to mention.

There were several problems. There were five or six people at a table in that home, and the flatware, I had to take the flatware and put it in a glass of water, and take a couple of paper napkins to wipe it off. The plates were dirty, and the food stuck to the plates.

Well, anyhow, the elevator would break down seven or eight or nine times a week.

I walked by the men's room one morning and I saw a young person—not young—I mean a short man about this tall, may his soul rest in peace; he is dead now. He was using the waste basket for putting his urine.

I just happened to walk by, and I said to him: "It is going right over the top of your head if I see you do that again." I walked over to the desk and I told them that I saw this man using the waste-basket, and I told them if I see him do it again, I will turn it upside down and put it over his head. I got a laugh from them.

Senator Moss. Did the elevator break down frequently?

Mr. PLATZNER. Very frequently. Some people had to walk up five or six floors.

Senator Moss. How many floors are there in the Paradise?

Mr. PLATZNER. I think six. I was in 603.

Senator MOSS. Six floors?

Mr. PLATZNER. Yes.

Now, immediately opposite my room there is a fire exit door. We could not open it, but if you got it open by kicking the door with your foot—you might open it that way. The lock was shot. I fixed the lock a few times. I reported it, and if that door is in that same condition—Lord forbid, if a fire ever broke out, nobody could ever open that door.

You can just close it, and that is it. And the firehose there ought to be replaced.

Now, it was at this time I made up my mind that I was going home. I think in the course of about 9 weeks seven or eight went out horizontal. One lady took an overdose; she was in her bed dead, covered. A policeman was sitting outside her door for 3 nights and 2 days.

Senator MOSS. Well, was there a doctor that came to the Paradise? Did you have a doctor that visited with you frequently?

Mr. PLATZNER. Periodically, at the end of every month, I was checked.

QUALITY OF MEDICAL CARE QUESTIONED

I doubt very much that the kid was licensed. Back in the lobby, two young girls came there before the doctor did and would take the names, what was wrong, and—the main thing—then we had to sign the medicare slip.

Senator MOSS. The medicare form?

Mr. PLATZNER. The form for the money.

Well, the doctor would finally sit down, take out his stethoscope, and that was the end of the examination.

Senator MOSS. Did he examine you one at a time, or several at a time?

Mr. PLATZNER. Several at a time.

Well, I made up my mind that I was going to do a little bit of checking around. One month they had about 25 or 30 people there. I sat in the lobby, and it took them 10 or 15 minutes. What kind of an examination can a doctor give in that amount of time?

I was told the next morning to come in for the results. I got a cardiogram and I got a chest X-ray. The nurse said to sit down outside of this room. I said, "What is next?" She said, "Blood test." I said, "I am sorry; I am not taking any blood test here."

She asked why, and I said I was not going out of there with an arm full of holes.

You take this blood test, and sometimes they hit the right spot. If they do not, you get a blue mark on your arm for a week. I said I would not take the test here, and I would go somewhere else.

Now, there are some people that should not have been there.

Senator MOSS. Are there a lot of sick people in there?

Mr. PLATZNER. Yes.

Senator MOSS. Very sick?

Mr. PLATZNER. There were three sisters. One of them was sick at the time I was there; one of them was blind; and then the third sister was pretty spry—she was mobile. She just pulled along the

other; she fed her. Then they went back up, and that is all these two girls had ever done. That is all I ever saw them do.

Senator Moss. Did you have trouble with the heating at all over there?

Mr. PLATZNER. Yes. At the time I was there, I did not need any heat. I went out on the 17th of September. We did have some cold nights, but the heat was not bad.

Well, I declared myself. I said I was going out. I said I could not stand it there any more. I told my son that the food is rotten. When they serve you sour cream, you need a straw to drink it.

I said to the waiter, "Joe, why don't you get me some good sour cream?" He said, "Yes; I like you."

I said, "Will you do me the favor? Whenever you serve my sour cream, just make sure it is good."

Senator Moss. You wanted sour cream which you could pick up with a spoon and not use a straw?

Mr. PLATZNER. That is correct. He said, "I know," and he patted me on the shoulder. He said, "OK, Charlie, you will get good sour cream."

Assemblyman STEIN. Mr. Platzner, did the manager of the home ever suggest that you sign over the SSI check to him, even if you went on vacation?

Mr. PLATZNER. Not in the Paradise.

Assemblyman STEIN. No, in the Jackson Home.

"SSI CHECK GOES TO MANAGEMENT"

Mr. PLATZNER. I could mention that one party I know of goes there every summer. I did see him—when he disappeared, he went away to see his son, and someone told me the story that when he goes away for a period of time, he keeps his social security check, and the SSI check goes to the management. I had this approach made to me, that if I could jump to the Jackson Home—I had been contemplating for about a month to go to Florida in January. I told one of the new owners, supposedly—I said to this guy, "Nat, I met a nice lady, and I am contemplating going to Florida for the month of January."

So he said, "Are you coming back?" and I said, "I don't know, Nat."

I said I might stay a month; I might stay 2 months. I said, "I am going to want my SSI check, and when I come back, I think I will move in with my son. I cannot stand these places anymore."

He said, "Don't do anything with the social security check. You go to Florida, and you let me know where you will be. I will mail you both checks, you keep your social security check, and mail me back the gold check; just endorse it."

I may sound stupid, but I said, "What are you going to do? Are you going to keep the check?"

He said, "At least, you will come back to a room, and I will hold the room for you. I will keep the gold check, and you keep your social security check."

I said, "Wait a minute. I do not live that way." So I gave him a deal, I said, "Suppose we split the gold check—you keep half, give me half?"

Senator Moss. That is the SSI check?

Mr. PLATZNER. Yes. He said, "Look, I am keeping the room for you."

I said, "Nat, don't keep the room for me; rent the room. When I get back, maybe I will come in here. If you do not have a room, I will go elsewhere."

Well, anyhow, I said, "When the check comes, I am going home, because I have got to take this check to the city hall building on Friday afternoon," and that was December 5, which I did. I went off SSI, and I reapplied for medicaid.

Now, I think it was the 2d, the 3d, or the 4th of December—this could be verified—at 10:30 or 10:15 that night. It was 24 degrees and you could not close the window.

You hit it, and it would jam a quarter of a inch high. That is it. I went to bed that evening but I could not fall asleep because of the cold.

I came downstairs for the night man. I said, "Can you send some heat up here? I am frozen up here."

He said, "I cannot get heat up until tomorrow morning." Well, my roommate, they gave him a warm room on that cold night. I told them that I can stand it better than he can, but when it gets down to 24 or 26 degrees, it is cold.

LAMP USED TO KEEP WARM

I took the lamp off the night table; I took the shade off—it had a 100-watt bulb in it—and I stuck it by my head. I got dressed, and I went down to the lobby. I figured if I sat in a soft chair, maybe I could fall asleep, but I could not.

Well, the same thing happened the next night. I went back up into the room about 2:30 and I packed my clothes—packed everything up. Then after breakfast, I called my son, and I said, "Will you come down for me?"

I got my things down. Now, I might add, I beat it out of there, because I was in there enough to owe them something. But my son was a little late; I had most of my things downstairs, and I had my little refrigerator.

When I came up for the refrigerator, this guy was already in my room. He took my refrigerator out, and my son came in. He demanded $114 from us.

I said to my son, "Have you got that?" and he said, "I don't have it with me."

Senator Moss. So you wound up at the Jackson, and then you went back with your son?

Mr. PLATZNER. Yes.

Senator Moss. Well, we do have some other members of the panel, and then we have a couple more panels, so I think we better move on and hear the other members of this panel.

We will now hear from Mrs. Sarah Klein of the Palace Home for Adults, Long Beach, N.Y.

You are Mrs. Sarah Klein?

STATEMENT OF SARAH KLEIN, PALACE HOME FOR ADULTS, LONG BEACH, N.Y.

Mrs. KLEIN. Yes.

Senator Moss. Where do you live?

Mrs. KLEIN. At the Palace Home.

Senator Moss. How long have you been there?

Mrs. KLEIN. Since July 12, 1973.

Senator Moss. And can you tell us what is wrong with the Palace Home, if anything?

Mrs. KLEIN. Everything is wrong. I cannot see one thing that is right.

First, I went there on a 2-week vacation from where I lived, and it had become a nightmare. It was a jungle where I lived. I got sick. I went for 2 weeks' vacation, and I figured, why go back to the same thing, and I stayed at the Palace. Then I started with this nightmare; when I got my mail, they opened it.

They look over everything, they sort everything, and they call you in. He opens up the mail, and he turns around and says "Sign it."

Senator Moss. This is the manager?

Mrs. KLEIN. Yes.

Senator Moss. And he opened the mail, took the check out, and asked you to sign it?

Mrs. KLEIN. Yes, and that is not all. I have quite a bit to tell you.

Now, I got $300 per month. I was short $46, with my union pension and my social security.

TIPS NECESSARY TO OBTAIN FOOD

My son went to Mineola to apply for the difference. I was allowed $20 spending money. I did have it, but I had to pay the tips—if I did not pay the tips, they would not give me anything to eat.

I went to Mr. Appel and said that I had a problem. I said the waiter would not give me anything to eat, because he raised the tipping from $2 to $2.50, and I cannot afford it.

He said to give him a little extra money. I said, "You want me to run the hotel and pay him?"

I have not got the money. I am still being treated as a stepchild because, at the present time, I do not pay my tips because I cannot get along on $20 per month.

Another thing: They made the mistake and sent $451 retroactively. It was retroactive for July.

In January, they kept on asking me for the $75 a month extra, because they had made a mistake. They sent it to me retroactively, and I said to him, "Why do you want me to give you the $75? Where is it to come from? Do you want me to rob a bank?" He insisted that every month, "When are you going to give me the $75?"

I said, "You write to them; that is your problem. You are asking for an increase, and every time we get an increase, you take it out of us."

I said "You not only take it all, but you take money that you are not supposed to take."

Now, there is something wrong with my union pension, which was $71.50. Then the computer machine made a mistake, and he did not get the money, so he asked me for the gold check—the SSI check.

They sent me $29, and he then took $9 out of it, and I could not get along with the $20 either.

To finish up, there was a lovely lady there, and she was the only one to help me. I have been all around, asking where I stand, what happens here, but whenever I went anywhere, they told me that I have no trust in anybody in Long Beach. Another time I was sent a check for $611. I never asked for one penny, and then they asked me to endorse a check and send it back.

I did, but I had a photostatic copy made of it.

Anyway, I wrote a letter, and after consideration, they wanted me to keep this $611. But the social security office had it over there.

Senator DOMENICI. Who asked you?

Mrs. KLEIN. The social security office in Freeport. In fact, I gave a gentleman—Mr. Feldman of Andrew Stein's staff—all of the mail. I am ashamed to say what he—Mr. Appel—called me. This was before I gave my mail to Mr. Feldman, in reference to the money.

He was afraid of me. He thought I knew too much, and that I was talking to too many people.

Those people don't like me because I can read the letters, sew on the buttons for the people that live there, and they look to me for help. He does not like that. One day he grabbed my wrist and called me a—I am afraid to say it—but it was "son-of-a-bitch," and he grabbed hold of my wrists and said I can go to the Crown or to the Jackson. So I am afraid of him.

ALLEGED THEFTS OF CHECKS

He is very handy with his hands, and many a person there do not get their checks for the $20. He keeps them. They confide in me and tell me.

Senator Moss. What you are saying is that he keeps the spending money?

Mrs. KLEIN. Yes.

Senator Moss. I see.

Mrs. KLEIN. The check I get is mine, and it is not to be spent on tips. I stopped giving tips, and I am being treated like a stepchild. Four times the waiter refused to give me my food just because I did not give him tips, and I got so angry. I said I will eat what I have upstairs, and the waiter said, "You see this boiling water? The next time you say that, I will throw it at you." I told the waiter the other day, "You forgot again to give me something to eat," and he said, "I am not afraid of you."

I said, "I am not afraid of you." He said, "Hit me."

I said, "I cannot hit first. You hit me, and I will hit you back."

Well, I am afraid of this man, and I am afraid of Mr. Appel. If he finds out that I am here, I will have an accidental death.

Senator Moss. We thank you very much, Mrs. Klein. We'll try to make sure that doesn't happen.

We will now hear from Mrs. Joffe.

Mrs. Joffe, do you have a problem?

STATEMENT OF REBECCA JOFFE, CORNISH ARMS, NEW YORK CITY

Mrs. JOFFE. I am not on SSI. There are other people on SSI, and they pay extra money besides what the SSI allows the home.

I do not believe they—the owners—are making money. They claim they are not, and I believe they are not. But there are a lot of things that could be corrected with the money they are receiving.

I live at the Cornish Arms, a home for adults. Most of the residents here are aged, with a sprinkling of younger residents who are mentally ill, blind, or otherwise disabled. There are alcoholics here too. None get rehabilitation services.

The mentally ill deteriorate mentally and physically. I have noticed in the past year they have lost a good deal of weight, and they talk to themselves more than ever.

Occasionally, when one gets out of hand, the switchboard operator will give the person a tranquilizer.

No one bothers talking with them. They live in their own world. No one, including the aged, get any assistance in bathing or dressing. As long as one can walk with the help of a walker or cane, the resident is admitted. The blind depend on other residents.

There are many deaths here. Evidently the residents do not realize their illness is very serious, because they do not get a physical examination here when they are ill. Some will ask to go to the hospital—sometimes too late. Others say nothing; they just call the switchboard operator to have their meals sent up.

The management often does not know that the resident is ill. When one is missed in the dining room—at the dining room table—a friendly tablemate might call to find out why.

ELEVATORS IN DISREPAIR

There are two elevators, but they break down often. When in use, they are overcrowded, with no one in charge.

Over 200 have to come down to the dining room for their meals. When those elevators are out of order, the freight elevator is used, which is not insured. Some residents use the stairway. Most residents do not navigate very easily.

The windows do not open or close easily because they are stuck and are very dirty. They have not been cleaned since the hotel became a home for adults. The rooms are carpeted and have drapes, which makes a first good impression. There is quite a staff, but none for assisting those that need assistance for bathing and dressing. As a consequence, they have body odors. Their clothes are not clean.

Senator MOSS. Who wrote that letter?

Mrs. JOFFE. I wrote that letter to the Moreland Commission, but since last week, all of a sudden, there is a lot of activity.

They have thrown out the dirty furniture on the 12th floor where they want us to sit with these people who are fighting all the time, drinking, and smoking. Some of us do not go up there. What we do is stay in the dining room a while after our meals. We sit until the cook chases us out and turns off the lights. He uses very vile language, because we do not want to go up to the 12th floor.

Senator DOMENICI. What is the name of your home?

Mrs. JOFFE. The Cornish Arms, and this is at 315 West 23d St.

Senator DOMENICI. In Manhattan?

Mrs. JOFFE. Yes, New York.

Since I wrote this letter, they—the management—have started doing things that they could have done a long time ago. I got the code on smoking from the health department. They handed it right back to me after I showed it to them—that no smoking is permitted in the elevator and in the dining room. Most of the people who smoke blow the smoke in the others' faces, and when we asked them not to smoke, for spite they blow the smoke right into our faces.

This week they changed the seating arrangement. They put the smokers in one dining room and nonsmokers in another.

Last week they threw out the dirty, burned furniture.

Senator Moss. They are making some progress?

Mrs. JOFFE. Yes; somebody called me up and said that there were going to be changes, because I wrote to the Moreland Commission.

I know there will be reprisals against me when they find out that I testified at this hearing.

Senator Moss. This is what we will try to make sure does not happen.

Mrs. JOFFE. And when they fight with each other——

Assemblyman STEIN. What do you mean by "they"?

Mrs. JOFFE. Just some very mean, bad-tempered residents who are alcoholics, not the mental patients.

There are a lot of alcoholics, and only last week they put a mental patient in the hospital. One alcoholic was transferred a few months ago.

I am afraid to go into the elevator. I got a karate chop across my wrist one time for holding the button for those that wanted to come in. There are those that want to go down in a hurry, and they do not want to let anybody in, so you have to be careful.

I walk downstairs now, which are poorly lighted and very dirty, but I want to escape being hit.

Senator Moss. I would like now to hear from Mr. Ted Connolly of Sutton Place.

STATEMENT OF TED CONNOLLY, NEW YORK, N.Y.

Mr. CONNOLLY. Thank you.

Senator Moss. And you are Ted Connolly?

Mr. CONNOLLY. Yes.

Senator Moss. And you are the son-in-law of Henrietta Stuve, and she has been missing from Leben Home since August of 1975?

Mr. CONNOLLY. She has been missing since November 17, 1975.

Senator Moss. Will you explain how she was lost?

Mr. CONNOLLY. The first report any member of the family had of her being missing, or of anything irregular happening, was approximately 32 hours—the next day. At approximately 5 p.m., the family was notified—not that she was missing, but a call came to the family: "Do you know where she is? Is she with the family?"

My wife—the daughter specifically got the call.

She naturally became excited. She said, "No we do not know where my mother is. She is supposed to be there."

We immediately started making calls—investigating. My call was made back to the home, and I was told, "I am sorry; we cannot notify the police. The police cannot be notified until somebody is missing for at least 48 hours."

I said, "This is kind of irregular," and I just wanted to verify it.

I called the local precinct, which is the 110th precinct, and asked the desk officer to explain the situation. He said, "By no means do they have to wait 48 hours. We are supposed to be notified immediately."

He said, "I will send a police officer to get the details."

He said that was being done. This is now Wednesday morning, 2 days after my mother-in-law had been missing—or at least reported at the time of her disappearance from the home. The actual time is in question, and my wife and niece went to the home to try to determine from her belongings what, possibly, she was wearing to help the police identify her.

Home Delays in Notifying Police

When they got to the home, the police still had not been called. When the home said that the family was extremely agitated, they very haggardly called the police. The local police precinct—the police officer—arrived and started to get the details.

The representative of the home said to the police officer, "This is not necessary; we do not require a missing person's alarm to be sent out. We have our own means and methods of investigating these things."

The police officer immediately turned to the family, and then he said, "Are you declaring her missing?"

The family said yes. The police officer informed the home, and then the family's request took precedence.

They proceeded to fill out the details—what she was wearing. I might say, on this date in November, quite cold, all that we know is that she was wearing a pair of blue house slippers, a black and gray dress, no coat, no sweater—no outer garments whatsoever—and yet, this was the middle of November and very cold.

The 110th precinct filled out the details and said it would be filed with the missing persons bureau. That evening, as a matter of procedure, I called the missing persons bureau to list an additional telephone number that we could be notified at, and which was in operation 24 hours a day.

The missing person's bureau advised me that, "We cannot even talk to you about this case." The home interceded, and they said the family was not to be notified—that there was a mistake made, and that the home was to be notified.

I said this is not the case at all.

He said to call the 110th precinct to get it corrected. I did that. The 110th precinct called the missing person's bureau and said that the family was to be listed—the two telephone numbers were to be listed. I can say that the missing person's bureau—the detective in charge of the case—has been most cooperative.

Also, I would like to say that the police officers of the 110th precinct have been most cooperative.

Subsequent to this, I was at the 110th precinct, at the invitation of the officer, to address all of the police officers at 7 a.m. to appeal to them, with a picture, for help.

They have been commended for this, but by the same token, I would say for the record that the home has been very negligent—and I would emphasize that, negligent—in withholding information and in not cooperating.

It can only be emphasized by the fact, when calling there for information, the manager was not available. He was always too busy.

I finally had to get the social service department to give the name of another one of the owners—which, up until that moment, did not even know of the problem—to intercede and to get the information.

The home has not cooperated in any manner with a fulfilling of this investigation—to the contrary. After 2 months had lapsed we felt it best to go to the home to remove her clothing. The home was called during the day and told we would be out that evening to get her belongings.

When we arrived that evening, the office had not communicated with anyone about us removing this.

Staff Reports "No Patients Missing"

Going back to the police investigation and to prove negligence, when the police from the 110th precinct went to the home to get information, they were very politely turned away by the staff, saying "There are no patients missing from our home." They said that every one of their patients had been accounted for.

It was only after many hours that there was an admission that she was missing at approximately 9 a.m., and this is only their time of disappearance. This cannot be substantiated by them in any fashion. This was the second time on record of a disappearance from the Leben Home. In July 1975, Mrs. Stuve disappeared from the Leben Home sometime in the morning, and we cannot be sure of the time. She was found to be wandering, incoherent—apart from the fact she was found 6 miles away by the police department.

The police department did some investigative work, and found a family contact. The granddaughter was told to go to the Jamaica Hospital to retrieve her grandmother.

She called the Leben Home and they said they have no means of going out there: "You take a cab, and you go out there and bring her back. We will reimburse you."

To this date, there has been no effort made on the part of the Leben Home to reimburse.

We immediately resisted the Leben Home's answer and insisted that Mrs. Stuve be seen by a doctor.

We were told that she would be seen the following day. I said, "No; we want her to be seen now."

She was seen, and it was said the following day that she would be seen by a medical doctor and the psychiatrist, if it was found necessary.

We asked the Leben Home if it was not advisable to remove Mrs. Stuve from their premises, because of lack of security. If she had

been able to walk away once, what would prevent her from walking away in the future? We were told that they had very, very tight security there now.

She could not have possibly gone out through the front door. The only way they could suggest that she had disappeared from the home was through the service entrance gate being left unlocked for a truck delivery.

The proprietor of the home said, "You can rest assured that the best thing is to leave her here. It is not necessary to take her out of here. We have informed our entire staff that that gate is to be kept locked at all times, and that Mrs. Stuve was not to be allowed out of the home under any conditions unless escorted by a member of the family or a trusted friend."

We understood this as a tightening of their security.

We removed Mrs. Stuve for a weekend, and we took her to the country. We signed her out on the log in the office.

Home Denies "Signing Out" Restriction

Within one month after her going in the home, she lost her husband of 55 years. She was taken out for the funeral. The home was notified, she was signed out, and there was no problem. I emphasized this to refute statements made in the press by the home saying that the patients could come and go as they wanted, and specifically, that Mrs. Stuve had done this. This was not true by any stretch of the imagination.

Assemblyman Stein. Mr. Connolly, did you receive notice that medicare was billed by the Leben Home for ambulance service when your mother-in-law was hospitalized? How, in fact, did she get to the hospital? Was it by ambulance that medicaid was paying for?

Mr. Connolly. We were notified that she was in the hospital and, again, the family had not even been notified that she was in the hospital.

Assemblyman Stein. She was hospitalized?

Mr. Connolly. She was hospitalized, and we were told by the Leben Home that she was taken there by ambulance. We investigated and found under no circumstances was she taken to the hospital in an ambulance. She was taken there in a private automobile.

Assemblyman Stein. If that is true, then there was a falsified medicaid form that was filled out.

Mr. Connolly. Yes.

Assemblyman Stein. That is the kind of thing that Mr. Hynes should be able to investigate.

Mr. Connolly. Yes, definitely.

Senator Moss. Thank you. It is a tragic story. There have been no clues that turned up as of this time?

Mr. Connolly. No, sir, we have had articles in the paper, for which we paid. Just last evening, on the 11 o'clock news, Mrs. Stuve's picture was on television for anybody who could have noticed her, to notify us.

Senator Moss. Well, we do appreciate your report on that, and we do appreciate all of the witnesses coming in to talk with us.

We regret that our time is as limited as it is.

Mr. CONNOLLY. Could I just add one additional remark to this?

For the record, the social services department—when they referred Mrs. Stuve to the Leben Home—did not even mention that the home had any patients from the mental institutions.

To the contrary, they denied that there were any mental patients in the Leben Home. I think this should be a matter of record, that the social services department recommended this home, and stated emphatically that there was 24-hour-a-day medical attention.

MEDICAL COMPETENCE QUESTIONED

They said there were qualified medical personnel on the premises for administering medicine. We questioned this. We saw medication being administered by questionably qualified personnel. We also saw the patients in the home standing in line to draw their part of their $20 spending money from social security.

I saw, in fact, these patients stand in line from 2 to 3 hours—sitting on the floor, mind you—waiting for the doling out of money which was rightfully theirs. In many cases, patients had never gotten the money that was rightfully theirs.

Assemblywoman LIPSCHUTZ. One question, if I may. I would like to address my question to both Mr. Platzner and Mrs. Joffe.

He stated that he kept a refrigerator in his own room. I would like to know whether there were other patients—or other guests in the home, let us put it that way—who also had to administer medication to themselves, whether they were capable of judging whether medication was necessary, and so forth. I would like to direct the same question to Mrs. Joffe, when she speaks about alcoholics—were they under medication and, if so, who administered the medication?

Mrs. JOFFE. I do not know whether the alcoholics were on medication.

Assemblywoman LIPSCHUTZ. You do not know?

Mrs. JOFFE. No; but I do know some people are not capable of taking medication themselves.

Assemblywoman LIPSCHUTZ. Do you know if medication was administered by a nurse?

Mrs. JOFFE. I would take my own, but for those that the management feels cannot take care of themselves, someone at the desk or switchboard gives them their medication.

Senator Moss. Thank you very much, ladies and gentlemen. We appreciate your coming here to help us fill out the record and to give some of your direct personal experiences. As I said, I hope we can assure you that there will not be any reprisals.

Mrs. JOFFE. I would like to add—after I wrote to the commission for the aging and I called various people, I wrote to the Governor and he sent two people to talk to me. They made me the culprit, and told me, "Why don't you get out of there and why don't you mind your own business?" I spoke for the people who are inarticulate and do not know how to go about anything or do not know where to go or how to help themselves. I try to help those people. That is the answer I got.

Senator Moss. These are State people?

Mrs. JOFFE. These are people that were sent by Governor Carey who investigated me.

HOME FOR ADULTS—$225 PER WEEK

I went to another place, and they wanted $225 a week, also a home for adults—a private home for adults.

I cannot afford to pay that kind of money. They think if you are not on medicaid or if you get no assistance from anybody, they can tell you to get out. What do you do?

We also need help. Just because we did take care of our money—we put money aside for a rainy day—that does not mean that we should be neglected completely.

Only those on SSI are taken care of. The private people—they do not listen to us at all. They say, "If you do not like it, get out."

Senator MOSS. Thank you, Mrs. Joffe, for your comments, and thank you, Mr. Connolly, and the others.

Mrs. JOFFE. Thank you.

Senator MOSS. We have told Mr. Bernard Shapiro, the executive director of the State Board of Social Welfare, that we would permit him to leave by 12:30. We did not quite do it, but we will ask Mr. Shapiro to come up at this time.

Mr. SHAPIRO. Mr. Chairman, Mr. Maull, the chairman of the board of the State Board of Social Welfare, is here with me, and with your permission, I indicated to Mr. Halamandaris that Mr. Maull would be with us and would make a statement. Mr. Maull would also like to address himself to your remarks, and to the remarks of the special prosecutor.

Senator MOSS. You may proceed, Mr. Maull.

STATEMENT OF BALDWIN MAULL, CHAIRMAN, NEW YORK STATE BOARD OF SOCIAL WELFARE

Mr. MAULL. Thank you, Mr. Chairman.

I am Baldwin Maull, chairman of the New York State Board of Social Welfare. Mr. Shapiro, our executive director, and I are very happy to speak to this distinguished group today.

The board is a 15-member group of citizens appointed by the Governor with the consent of the State senate. The chairman is selected by the Governor from this group and serves at his pleasure. Formed in 1967, the board has a long history of involvement with the social needs of New York State. Its duties and responsibilities come from the State constitution itself and from statutes in the executive law concerning the care of children and adults living away from home, the regulation of charitable fundraising, and certain nonprofit corporations. It is an enforcement arm, working for the health, welfare, and safety of the children and elderly and infirm persons under its care, but also a coordinating and planning body and advocate for these most vulnerable groups.

Enforcement is based not only on State laws but also on board rules which have the effect of law. Guided by these rules and also by board procedures and administrative letters, staff in six area offices actively inspect the facilities supervised by the board, including

adult homes—to check their compliance with the law and board rules.

The adult homes under our jurisdiction are intended for persons who are basically well, though they may need help. They do not require the continuous nursing care that is provided in nursing homes and health related facilities—intermediate care facilities under its Federal designation—which are supervised by the State department of health.

THREE-FOURTHS OF ADULT HOMES ARE "FOR PROFIT"

According to our latest census, as of January 15, there are 547 of these adult homes under the board's supervision. About three-fourths of them—426—are private proprietary homes for adults, or PPHA's, operated for profit. The other 117 are not-for-profit facilities, operated by voluntary organizations, counties, or other government units. The total population of these homes is 22,000—17,000 in PPHA's.

The key to enforcement, of course, is our staff who inspect. The law requires the inspection "from time to time," but board policy is to make at least two surveys a year of each of these homes scattered across New York State.

The great majority of these inspections are unannounced and 15 percent are made at night. Besides reporting violations of board rules, the staff works with the proprietors of homes and advises them on how to bring matters into compliance and improve quality of care.

We have only 22 field staff to inspect all these homes and these 22 must spend an estimated one-half of their time on other duties. The State budget cuts and budget freezes have badly hurt our enforcement program but we have been asking for more adequate staff since 1971 when the board was given these responsibilities. It is quite clear that the board cannot satisfactorily perform its statutory duties with this limited staff. I cannot stress too strongly our need for greater quantity and quality of staff.

The board strongly supported legislation in 1974 under which operating certificates are issued to the facilities the board is responsible for. The board can suspend, limit, or remove the certificate from any facility in serious violation of its rules.

Mr. Shapiro will outline in more detail both the board's accomplishments and our remaining problems.

Let me only repeat that we welcome the assistance of this honored group in our advocacy for what is a most dependent element of society. We are eager to supply you with any information you need, and we welcome any recommendations you may make on the national scene.

I would like to add, Mr. Chairman, that we have proposed a bill in the legislature which would give us the power to require financial statements from these homes, and the power to audit and investigate.

If that legislation should fail, we have considered whether we could do it by rule, and we were advised very clearly and strongly that we have no authority to do it by rule.

I might add, before I arrived at this hearing, I am told, it was stated our board had been asked by the Governor to request some

authority for Mr. Hynes. That is not correct. We have had no request either from the Governor or Mr. Hynes in that regard.

Authority Questioned

I had a letter from Mr. Berger, the commissioner of welfare, suggesting there was a question as to Mr. Hynes' authority in relation to PPHA's, and suggesting that we should suggest to the Governor it be expanded. Let me say, first, that we are no judge of Mr. Hynes' authority. We do not know whether he can expand to include the PPHA's or not. No. 2, the Governor does not need anything from us if he wants to expand that authority. No. 3, what is really needed to put this house in order is to give us the tools to do our job, and I so notified Mr. Berger.

I would be glad to offer my letter in evidence.

Senator Moss. We would be glad to have that for the record as a part of your testimony. Is this your letter to Mr. Berger?

Mr. Maull. Yes.

Senator Moss. All right. That will be included in the record.[1]

Did you have any objection to any investigations?

Mr. Maull. We have no objections. Our job is to get the needed job done. We want to be able to do our own job, and we have no objection to any investigations.

Senator Moss. I am wondering if I got the wrong connotation from the last sentence of your letter.

You appear to conclude that an investigation would not do any good in this area.

Mr. Maull. I will modify that. I will say anything that brings close attention to our needs or that calls attention to our needs will help the elderly. We will cooperate with that.

Senator Moss. We had the prosecutor on earlier, and he said in order for him to exercise investigatory authority he would have to have approval of your board, and that it was not forthcoming.

Mr. Shapiro. Mr. Maull was not here when Mr. Hynes testified, but I was. He indicated he had received a number of complaints and he was looking into these complaints.

We have worked with Mr. Hynes on all of these complaints that came to his attention, and we have made our records available. We have cooperated in every possible way in regard to the complaints that have come to his attention and this is for the record.

Senator Moss. I am sorry Mr. Hynes is not here now. However, he stated that he has been denied permission to investigate in this area.

Mr. Shapiro. He has not been denied access, and we will cite actual records he and his staff have read and have pursued on the basis of individual complaints that have come to his attention.

Representative Koch. Mr. Chairman, Mr. Maull, what you are saying in the last sentence is that in your judgment the investigation would not serve any purpose. Could you expand on that?

Do you think the powers of the special prosecutor would not provide the necessary help to the elderly people living in the adult homes?

[1] Not received at time of publication.

Mr. MAULL. What I am saying is that that is a one-shot job, which would not provide adequate——

EXPANSION OF DUTIES INITIALLY RESISTED

Representative KOCH. All I am saying is that you seem to indicate a negative attitude to expansion of the special prosecutor's duties. The special prosecutor said, in his judgment, that it was necessary in one or two ways to secure jurisdiction, and one way would be your permitting him access, and the second way would be the legislature authorizing it.

Now, it is apparent from that letter that you were not encouraging it, but that it is OK. As I understand that, you welcome it now.

Mr. MAULL. We are very glad to cooperate with the special prosecutor, and we said at the start that we would be glad to cooperate, and we welcome it, if that is what is necessary.

Representative KOCH. Fine. So if the request is made of you that the special prosecutor's jurisdiction should include the homes under your supervision, you will respond by saying we welcome it. Is that a fact?

Mr. MAULL. Yes. I said that in advance, and I said we would be glad to cooperate, but believe me, it is not up to us to tell the special prosecutor. That is the Governor's job.

Representative KOCH. The problem I have found with agencies is one of a defensive mechanism that they all have, and it is not related to you. You are not paid?

Mr. MAULL. Right.

Representative KOCH. And you maintain this position because you are good government minded, and I appreciate that.

Mr. MAULL. Our board receives a fee for attendance at meetings.

Representative KOCH. But what I want to state is that in almost any case involving an investigation in which Government is concerned, whether the people involved are former employees, or volunteers, as the nature of your position is, there is a defensive mechanism, which is: "We are doing our job, and we do not need outside overseers. If you would only give us additional money and additional power, we would do a better job."

Mr. MAULL. I recognize that.

Representative KOCH. Our purpose today is to obtain your consent now, that you welcome the introduction of the special prosecutor's office into this area, if that is what is required for him to enter. And you have already told us that you will do that, that you do not have to respond any further.

Mr. MAULL. Yes, and if the Governor wants him to, we would be glad to have him, but we are not the one that deals with it.

Representative KOCH. I understand.

Now, the second question I have concerns the special prosecutor's earlier statement today, that for every investigator out in the field, it has been his experience that the State picks up some $2,500.

You were not here when he said that, but I think Mr. Shapiro was. You will verify he said that?

Mr. SHAPIRO. Yes.

Representative KOCH. As I understand, your people spend half of their time investigating, so it is approximately 11 people working full time.

Will you tell us what your experience is with respect to recovery of money based on their investigations into these areas?

RECOVERY OF COSTS "NOT RELEVANT"

Mr. SHAPIRO. They do not produce any return, because they do not look at finances, and also these homes are not paid on a cost-plus basis the way the nursing homes are, which is that the recovery of costs are not relevant here.

There is a fixed amount paid regardless of costs, and I would guess from my observation that some homes are run at a loss, but also that some are making a profit.

It depends on how they are run and also probably on whether they have low or high building costs.

Representative KOCH. I understand. Your investigators do not relate to the financial aspect. They relate more to the life saving code.

Mr. SHAPIRO. Yes, and even if they did, it would not affect the amount that was paid, so I do not see the savings.

Representative KOCH. I understand. It makes perfect sense. Your investigators are not related to the financial aspect. Now, who is?

Mr. SHAPIRO. State Social Services Commissioner Berger is the one that makes the payment.

Representative KOCH. Do you know of any department investigating the financial aspect? Perhaps Mr. Shapiro could respond to that since you are only a part-time employee, so to speak, as a volunteer.

Mr. MAULL. I will say that I just don't know of one.

Representative KOCH. Maybe Mr. Shapiro can answer that. Is there anyone looking to the financial details?

Mr. SHAPIRO. No. The statement made here from the committee itself and the distinguished members at the table indicated exactly what we have said, and that is, that in 1975, the State board had a bill sponsored to request financial disclosure.

That bill passed in the senate, and it failed to pass the assembly. We again have that bill in the assembly and in the senate, and we hope it will pass at this time.

Representative KOCH. So at this moment, to your knowledge, there are no investigators looking into the financial aspect of these homes. Is that a fact?

Mr. SHAPIRO. That is a fact.

Representative KOCH. Would you not say that is outrageous?

Mr. SHAPIRO. That is the purpose we requested the legislation, to be able to do it.

FINANCIAL INVESTIGATION NEEDED?

Representative KOCH. Does the fact that there has not been, over the years up until the present time, a financial investigation in these homes indicate a special urgency that the special prosecutor should get into this?

Mr. MAULL. We know what is needed. If he can produce something, fine.

I would say that we think we know what is needed to be done, and if he can produce it, well and good—so much the better.

Senator DOMENICI. Of course, you think you need more authority and more investigators so you could get a better performance.

He could be looking at something completely different from that.

Mr. MAULL. Outside of our jurisdiction, it could well be.

He will not be looking in the nursing home in relation to financing, because that was to establish costs, and that is not pertinent to payments under our jurisdiction.

He will be looking for some other type of criminal activity.

Senator DOMENICI. Who has jurisdiction over acts of neglect that might be criminal?

Mr. MAULL. We do. We have jurisdiction over their performance, yes.

Senator DOMENICI. And those 22 inspectors are part time?

Mr. MAULL. They look at it, in the first place, and we have building inspectors. Then those who go in and look at the way the place is run, the personnel, the food.

We had two nutritionists. They are both gone, and we have not been able to replace them. We have no nutritionists now, either in this or in the children's field.

Senator DOMENICI. You indicated in your prepared remarks that operating certification is part of your role.

Mr. MAULL. Yes.

Senator DOMENICI. That is not too old a role. In fact, it is rather recent—I think you said something like September 1974.

Mr. MAULL. Yes.

Senator DOMENICI. What is the criteria for granting operating certificates? Perhaps Mr. Shapiro would have it in writing. Do you ever set up criteria?

Mr. SHAPIRO. Adequate performance in accordance with the rules of the board and we will be glad to make all of these rules available to the committee.

Senator DOMENICI. Will you make these rules as they apply to certification of domiciliary homes available for the record? [1]

Mr. SHAPIRO. Yes, I will.

Senator DOMENICI. Let me ask you this, with reference to the kind of services required under your regulations. Can you just briefly summarize for this committee, aside from adequate shelter and physical plants and food, what are the services and capacities for services as required by your certification?

Mr. SHAPIRO. Nutrition, recreation, health, safety, comfort, well-being of the residents.

Senator DOMENICI. You said recreation?

Mr. SHAPIRO. Yes, adequate nutrition, adequate building and equipment, adequate space requirements suitable and comfortable beds, adequate supply of clean linen, hospital beds shall not be used, and recreation.

Senator DOMENICI. I know we are running late. I want to ask you just one more question.

[1] Not received at time of publication.

Do you have any qualifications in writing as to the 22 inspectors you turned out?

Mr. SHAPIRO. Yes, these are all people under the civil service; they do have to be college graduates; they have to have a number of years of experience in the field in which they are working.

Senator DOMENICI. What procedure do you have to protect the SSI funds, with regard to sick people not going to these kinds of homes?

MEDICAL CERTIFICATE REQUIRED

Mr. SHAPIRO. We have a requirement that they produce a medical certificate that, in effect, requires that they do not require medical care upon admission.

That certificate must be produced within 30 days, and we require a followup medical examination once a year to indicate for those under 65 to the effect their medical situation has not changed, and that they can continue to stay there.

We have a rule which requires those over 65 to have a medical statement three times a year, which means three examinations per year, that they are suitable to stay there. The regulations further require that anybody who does not belong there should not be accepted and should be moved.

Senator DOMENICI. Mr. Shapiro, if, as a matter of fact, there are many sick people in these kinds of domiciliary homes, wherein does the fault lie in their being there, and how come we have not caught them?

You do not have to believe it is true, but I am asking you in your answer to assume it is true in this statement. If it is true, where does the blame lie?

Mr. SHAPIRO. I think the blame lies among a number of agencies and a number of people.

I think in the first instance, a doctor is not supposed to give a statement when, in fact, somebody does not belong there.

The department of mental hygiene, on behalf of the first deputy commissioner, Dr. McKinley, with whom we work very closely—he is here, and he is ready to testify before your committee to indicate a screening of persons is required before they are placed in these homes. We have a cooperative agreement with that department. The State Board of Social Welfare and the State Department of Mental Hygiene have agreed with regard to the screening of patients with regard to notification to the local social service commissioners in advance, with regard to the appropriateness of placement, and this will be borne out, as Dr. McKinley will indicate to all of the medical directors in the State institutions.

I understand this was not always so. This is something we have developed by working very, very hard over the past year and a half with the department of mental hygiene.

Before that, I think you indicate in your remarks, throughout the Nation there has been a wholesale discharge of mental hygiene people. In New York State, discharges are about 30,000 to 40,000 each year, of whom a certain percentage—over 1,000 a year—wind up in our institutions.

Senator DOMENICI. We could go on all day. I just want to ask this simple question. Is there one agency in this State responsible for enforcing that basic rule, that people should not be in these kinds of homes if they are sick?

Mr. SHAPIRO. We have promulgated such a rule.

Senator DOMENICI. I did not ask you that. I said is there one agency responsible to see that that is the case?

Mr. SHAPIRO. We are.

Senator DOMENICI. I am asking you, are you satisfied that this State has set into motion the machinery to enforce that?

Mr. SHAPIRO. No, we have not.

Senator DOMENICI. Thank you.

Representative SCHEUER. You are responsible for the recreation, safety, comfort, and well-being of the patient for their nutrition, space, and so forth.

DUTIES OF INSPECTORS QUESTIONED

When your inspectors go to a home, what do they find out about the adequacy of all of these elements you are responsible for?

Mr. SHAPIRO. We have our own inspectors here, and they will testify.

Representative SCHEUER. I am asking you to tell me what they do. Don't you know what your inspectors do?

Mr. SHAPIRO. Yes. There is a very long, very comprehensive list of items that we need to look at.

Representative SCHEUER. Do you have a checklist? How do they check, for example, inadequate nutrition, recreation, and so on?

Mr. SHAPIRO. On adequate nutrition, we have two nutritionists that made unannounced visits, and during the unannounced visits, they made sure that they tasted the meals at the time they visited. Also, they asked for the actual menu; this is where we first came upon the idea that we need a disclosure of information, because the two items the board really was concerned about basically were staffing services and nutrition—we emphasized that—and when we began to ask the operators, not only for the daily menu and the daily meal, but to give us their purchases over a period of a whole year—as related to the number of people that they have—so that we could get a picture whether the three meals per day cost $1 a day, $2 a day, $3 a day, or what.

Senator Moss. Did you say the industry resisted that disclosure?

Mr. MAULL. Yes.

Representative SCHEUER. Do you have that information now?

Mr. SHAPIRO. No.

Representative SCHEUER. You did not get the information on how much they spend per day?

Mr. SHAPIRO. Some do not keep adequate records.

Representative SCHEUER. Do you require them to keep adequate records?

Mr. SHAPIRO. No, because we did not get passed by the legislature the disclosure of information required under the law.

Representative SCHEUER. Do you mean that you cannot require them to tell you how much they spend for food per patient per day?

Mr. SHAPIRO. They will tell us, but we cannot get the records that we need to determine that what they say is correct.

Representative SCHEUER. Do you have authority to find out how much they are spending for recreation or safety?

Mr. SHAPIRO. We have asked for legal authority to give us the complete disclosure of information statements.

I will file with the committee the material that we have developed, and it is quite comprehensive.

Representative SCHEUER. Let me go ahead.

VIOLATION OF RULES WARRANTS SUSPENSION

You say you can suspend or remove the operators' certificates from any facility in serious violation of the rules, is that correct?

Mr. SHAPIRO. This is in my statement. That is correct.

Representative SCHEUER. But you do not have the right to get needed information?

Mr. SHAPIRO. We are asking for it, and we hope it will pass the legislature.

Representative SCHEUER. There seems to be a void or vacuum in the law right now?

Mr. SHAPIRO. That is correct.

Representative SCHEUER. Now, you have the right to suspend or to remove the operators' certificates for violation of the rules?

Mr. SHAPIRO. Right.

Representative SCHEUER. In how many cases of the 426 private proprietary homes have you commenced proceedings for suspending, limiting, or removing the operating certificates for gross violation of your rules?

Mr. SHAPIRO. We have four we have actually removed. We have a number of others in process.

Representative SCHEUER. How many?

Mr. SHAPIRO. About 3 or 4 additional ones in process, and we have a number of wildcat operations, operations that pawn themselves off as a hotel, but actually they are homes of that nature, like the private proprietary homes. Those have been referred to the attorney general for enforcement.

Representative SCHEUER. For criminal prosecution?

Mr. SHAPIRO. Yes.

Representative SCHEUER. Have you commenced any prosecutions?

Mr. SHAPIRO. There are a number of them in progress, yes.

Representative SCHEUER. Criminal prosecutions going on?

Mr. SHAPIRO. Well, we started the investigations. We do not know if it is of a criminal nature or not.

Representative SCHEUER. So you have three or four in progress?

Mr. SHAPIRO. Four have already had their licenses removed.

Representative SCHEUER. Plus another four?

Mr. SHAPIRO. Yes.

Representative SCHEUER. So that is a total of eight or nine—out of 426, that is about 2 percent.

Mr. SHAPIRO. Yes.

Representative SCHEUER. Would you say that 98 percent of the institutions are operating up to snuff?

Mr. SHAPIRO. No, but we have one counsel who does all that work, and that is what Mr. Maull was talking about, need for staff for enforcement.

Representative SCHEUER. You do not have any legal and inspection ability to enforce your requirements and to prosecute those that are in violation of your rules?

Mr. SHAPIRO. Not inflagrant violations, violations of the rules—but we have indicated we have revoked certificates.

Representative SCHEUER. You have four in progress, and another four that have been revoked.

HEARINGS HELD TO CONSIDER REVOCATION

Mr. SHAPIRO. During 1975, the first full year of the new program, I called to your attention that the board arranged for hearings as required by law to determine whether to remove certificates.

Two hearings resulted in revocation, the third home surrendered its certificate the day before the hearing. The fourth is in process of releasing its operational certificate and transferring its property to a new owner acceptable to the board.

Representative SCHEUER. How about the other 98 percent?

Mr. SHAPIRO. Wildcat operations are referred to the attorney general. Four actions of this type are in litigation, and two homes have been closed.

Representative SCHEUER. How about the 98 percent? Are they running in substantial compliance with your regulations, would you think?

Mr. MAULL. I am sure a lot of improvement is needed.

Mr. SHAPIRO. There is a lot of improvement that is needed, as the chairman has pointed out.

Only half of the inspectors are available for this type of investigation.

Representative SCHEUER. Do you have authority over deciding what percentage of their time is spent on inspections?

Mr. SHAPIRO. Yes.

Representative SCHEUER. Why don't you increase the half to 75 percent?

Mr. SHAPIRO. We would not get the new applications done.

Representative SCHEUER. Is it not more important to make sure that existing institutions are running properly, rather than licensing new institutions that you will also not be able to supervise adequately?

Mr. SHAPIRO. I agree with you.

Representative SCHEUER. So maybe you have your priorities wrong.

Mr. SHAPIRO. It is to do a total job.

Representative SCHEUER. But if you cannot do the total job, then you have to have priorities to do the more important things first. Before you license institutions, would it not be intelligent to make sure that existing facilities are functioning properly?

Mr. SHAPIRO. Yes.

Representative SCHEUER. I suppose the nonprofits are doing a better job than the for-profits, are they not?

Mr. MAULL. Yes.
Representative SCHEUER. By and large.

NONPROFIT HOMES REFUSE MENTAL PATIENTS

Mr. SHAPIRO. The nonprofits—and this is a very important point—the nonprofits by and large have refused to take mental hygiene patients. They have mainly, with the exception of a very few, people who are aged and infirmed, and not the mental hygiene people.

Now, I think what your committee can do, and the Congress can do, is to encourage more funding for the voluntary agencies—to give them an incentive to go into this.

Representative SCHEUER. We are talking about the job you are doing.

It seems to me you ought to look at the functions of these 22 inspectors. If any of them can be deferred from licensing new facilities, I would think you would be able to put them on inspecting old facilities.

Mr. SHAPIRO. It would still be 22 inspectors.

Representative SCHEUER. It seems to me, that if you take them away from certification and concentrate more on criminal prosecutions, you will capture the minds of a lot of the operators of these institutions.

If they want to keep their franchises operating, they will have to perform up to standard. Maybe we'll get a little self-enforcement in the industry if you send a few to the cooler.

I think Dr. Bergman, if he goes to the cooler, and I hope he will, it will be a lesson for a lot of other operators who would think twice before committing the outrageous abuse against these pathetic people who cannot take care of themselves just to make an extra buck.

They'll notice a significant chance of their being brought in a criminal proceeding. It seems to me it would behoove you to spend more time with those inspectors to bring into line more of the 426 that are doing a grossly inadequate job.

Let me ask you one last question. As you may have heard, I am sponsoring legislation whereby the Federal Government will pay the costs of prosecution in medicare and medicaid fraud and abuse cases. If the funds come from the Federal Government for this kind of inspection and preparation of criminal cases, do you think that would help you do your job better?

Mr. SHAPIRO. It would help us very much to do the job better. The basic thrust is that we need staff to do that job, and that includes attorneys, enforcement officers, auditors, and inspectors.

Representative SCHEUER. Thank you, Mr. Chairman.

Senator MOSS. Assemblywoman Lipschutz?

Assemblywoman LIPSCHUTZ. Mr. Shapiro, I was just asked by the chairman of the Assembly Committee of the Aged to form a Subcommittee on Safety and Security.

CUSTODIAL SUPERVISION NEEDED

I would like you to tell me, many of these persons released from the mental hygiene institutions—do you feel these people need custodial supervision?

Mr. SHAPIRO. They need custodial supervision very much, and that is why I am waiting to read my statement in connection with the mental hygiene situation, if the chairman will permit me, and then a lot will fall in place.

Assemblywoman LIPSCHUTZ. That is up to the chairman. May I ask you, are you familiar with the term "transitional services"?

Mr. SHAPIRO. I am familiar with it, but I think Dr. McKinley, deputy mental hygiene commissioner, is the one to talk about it, because that is a mental hygiene term.

Assemblywoman LIPSCHUTZ. Will that come partially under your supervision as well?

Mr. SHAPIRO. Basically it will come under mental hygiene supervision.

Assemblywoman LIPSCHUTZ. Would it involve the 22 inspectors in any way?

Mr. SHAPIRO. No, it would not involve services that are needed to be given to persons who are located in the homes who are discharged from mental hygiene facilities.

Assemblywoman LIPSCHUTZ. So there is no relationship?

Mr. SHAPIRO. For whom there is an outreach service, doctor care service, and actual placement of staff in many of our homes.

Assemblywoman LIPSCHUTZ. I see. Then there is an interrelationship.

Mr. SHAPIRO. There is an interrelationship there, and also between the local departments of social services. This is a very important point because before the advent of SSI, January 1, 1974, it was the local commissioner of social services, and I am talking about some 58 jurisdictions—New York City, Nassau County, Erie County and so forth—it was the local social services commissioner who negotiated the rate.

It was the local social services commissioner who knew his client—who issued the check—and therefore the local social services commissioner delivered the service.

The moment SSI came into being on January 1, 1974, the checks are all coming out of Washington. They are received directly by the client, and very little local social services are being delivered to these homes and to the people who need the services.

Now, when we asked them—the local social services commissioners—and cajole them, and direct them that they should give services, we also asked the State commissioner for social services that the social services be given, that efforts be made by the social services departments; they say there is a closed-end budget for services, and we have to determine where to deliver the social services most needed—to the children or to the people in these adult homes. One of the things Congress can do is allow more money for social services. The thing to do is get the job done.

Assemblywoman LIPSCHUTZ. Are you going to refer to transitional services?

Mr. SHAPIRO. No; Dr. McKinley, the mental health commissioner, will. He is here.

Assemblywoman LIPSCHUTZ. Fine. I did want you to know that some of the legislation being asked for in your statement—it, in fact,

went into the hopper as of late Thursday afternoon—it is legislation that will be introduced into the assembly by myself.

Mr. SHAPIRO. Thank you very much. It is very worthwhile, and we will support it.

Senator Moss. We have all jumped into questioning this witness and Mr. Shapiro has never given his statement. You may go ahead and read your statement.

STATEMENT OF BERNARD SHAPIRO, EXECUTIVE DIRECTOR, NEW YORK STATE BOARD OF SOCIAL WELFARE

Mr. SHAPIRO. Thank you, Mr. Chairman.

The State Board of Social Welfare is responsible for the health, welfare and safety of more than 22,000 persons in 547 adult care homes—domiciliary care facilities—throughout New York State. Three-fourths of the facilities are private proprietary homes for adults—PPHA's; the others are owned by nonprofit organizations or governmental units, usually counties.

The traditional population of elderly and infirm persons has been joined in recent years by large numbers of dischargees from mental hygiene facilities, following a policy decision several years ago by that department to shift patients from institutional to community living.

Domiciliary care is distinct from that provided by skilled nursing homes and intermediate care facilities since it does not include medical and nursing care services. Domiciliary care facilities focus on meeting the nonmedical needs of persons who, because of old age or disability, cannot function in totally independent living arrangements.

The board, through its rules and through inspections by staff in six area offices, monitors the safety and adequacy of buildings, the physical care of residents, and activities to maintain their mental and emotional as well as physical well-being.

The board welcomed new enforcement legislation which was effective September 1, 1974. The board now issues operating certificates and can limit, suspend, or remove the certificate from a facility which violates its rules.

During 1975, the first full year of the new program, the board arranged four hearings, as required by law, to determine whether to remove certificates. Two hearings resulted in revocation; the third home surrendered its operating certificate before the hearing; the fourth is in the process of surrendering its operating certificate and transferring its property to a new owner acceptable to the board.

Wildcat operations—homes which have not applied for board approval—are referred to the attorney general for action. Four cases of this type are in litigation and two homes have been closed.

PROPER PLACEMENT IMPORTANT

A most important concern is that residents be in the appropriate level of care. Adult care homes offer help in getting about, eating, dressing, and bathing.

Upon entering an adult home, each resident must have a physical examination and a physician's statement that this level of care is

appropriate. A new board rule concerns annual physicals for residents.

The board has requested the cooperation of other State agencies in urging local health, sanitation, mental hygiene, and social services staff to supplement board inspections by reporting inappropriate placements as well as any deficiencies.

Between 30,000 and 40,000 patients a year have been discharged from mental hygiene facilities under the 1968 policy. Over 1,000 persons a year enter adult care homes. Now 30 percent of the residents in board-supervised homes are former patients—more than 5,000 of its 17,000 PPHA residents.

Percentages are highest—up to 72 percent—in counties which have mental hygiene facilities. In 93 adult care homes where 40 percent or more of the residents are former patients, they form 80 percent of the total.

Formal agreements between the board and the departments of mental hygiene and of social services have set procedures, including plans for needed services before a patient is discharged and for continuing aftercare in the adult home or its community.

Since most expatients take prescription drugs, the board worked with health and mental hygiene to formalize medication procedures. These specify how much a home's employees may help a resident to take medicine, how to store medicines—especially controlled drugs—and what records are necessary.

Nearly 70 percent of the residents in board-supervised homes receive U.S. supplemental security income—SSI—which went into effect on January 1, 1974, amounting to over $80 million. While this flat payment avoids abuses revealed in the cost-plus medicaid reimbursements to nursing homes, other problems are created.

The flat SSI payments provide for $386.70 for each resident. This same amount is paid no matter what the quality of the home—it may be excellent, good, or just plain or minimal. As a result, when SSI came into being on January 1, 1974, some homes received windfalls, whereas others who charged above the flat rate claim that they are suffering losses because they cannot keep up with the quality of care they wish to provide on the basis of the SSI reimbursement rate.

Technically, an SSI check goes directly to the resident, who negotiates a rate with the home. Practically, however, a resident with no other income will likely have no money for personal expenses if the rate equals the whole SSI payment.

When the SSI statewide payment for congregate care rose this year from $375 to $386.70 a month—$229 of it given by New York State through the Federal Government—the board strongly urged operators, through an administrative letter, to allow residents to keep the additional $11.70 as an allowance.

Senator DOMENICI. Are they doing it?

Mr. SHAPIRO. Some are, and some are not. It is very regrettable, and I will have to make a recommendation at the end of my statement which I hope the Congress can do something about.

CHANGES IN SSI PROCEDURES URGED

The board continues to work with other State agencies—social services, budget, and mental hygiene—in urging changes in Federal SSI

procedures. One suggestion is that the Federal Government send separate checks, one to be turned over to the home and one to be kept for personal use.

The board is again supporting legislation, which failed to pass in 1974, to require each home to file an annual financial statement of its operating and capital costs. Such information is essential for State recommendations to the Federal Government on the level of SSI payments. It is most important for us to have such financial disclosure so that we will know how much is paid for administration and general expenses, for leasing or rental, for equipment leasing, if any, for plant operation and maintenance expenses, for dietary expenses, for laundry and services, for housekeeping services, for social and recreation expenses, and gross income, and drawings of proprietors or partners. Our main concern is to assure quality of care and to analyze how much is available for proper staffing, for services, and for nutrition.

Domiciliary care facilities offer an enterprising alternative to the very expensive nursing home and health-related facility care.

The administrator of an adult care home—this may be the owner or a person he hires—is the key to the quality of its care.

A new board rule spells out qualifications for administrators—age, education, experience, et cetera—and requires them to continue training in such subjects as business management, geriatrics, recreation, and recordkeeping.

Senator Moss, I understood you were to visit one of the homes yesterday—Queens Manor. I visited that home. There were three recreationists there, and it makes all the difference whether you have a recreation program or not. The place is alive. There is a reason for living.

Recreation is especially important for persons whose time is almost all leisure. We do not want people to just sit all day long and stare vacantly into space; they become alive when there are recreation or other activity programs. Activity programs are emphasized in board rules. Project Recreation, funded by members of adult home associations, has completed its first year with notable successes.

In a pilot project to be applied statewide, the board's recreation specialist worked with 43 adult homes in the Rockaways, Long Beach, and Rockland County.

As a result, several homes have added full- or part-time recreation staff. One home bought a schoolbus for trips and outings, and other homes are cooperating on joint projects. Staff of the homes have attended workshops and courses about activities for older or mentally disabled persons.

Some improvements cost nothing: moving lobby chairs into conversation groups, getting on mailing lists for announcements of local events, arranging for a bookmobile to bring large print books, records, and films.

For little cost, homes can add a radio, record player or piano, an aquarium or pet, a gardening project, or just outdoor seating.

Volunteers Participate With Residents

Community groups have welcomed residents at senior citizen centers, and volunteers take residents to parks, shopping centers, movies,

or just come to the home to visit. Some funding has come from local and State government agencies and voluntary groups.

Through Project Recreation, the Associated YM/YWHA's of Greater New York ran a pilot project from its senior citizen centers in the Rockaways. With funding from the New York community trust, three recreation workers have started programs at homes and urged residents to use the centers.

To make sure that residents understand their rights, the board is requiring each home to post an information statement the board has prepared and to distribute copies to the residents.

This statement explains admissions agreements; the right to privacy for visitors, mail, personal business; freedom to move to another home; and the availability of help from staff in the board's area offices.

The rapid discharge of mental hygiene patients over the past 7 years is a major problem in the metropolitan area and an increasing concern upstate. This development has intensified the board's concern with medication procedures, activities suitable for these generally younger persons, placement criteria and agreements with State agencies about care for these residents.

The board is working with the department of mental hygiene in developing community residences for the mentally disabled. These were supervised jointly by that department and by the board in order to obtain public assistance funds. Since the start of the Federal supplemental security income program on January 1, 1974, however, these residents now receive a flat $386.70 a month—before $375—from SSI and the department of mental hygiene has now taken complete responsibility for the community residences.

Programs to adapt our adult care homes for mentally disabled residents include a 200-bed ceiling on new facilities, a staff specialist in recreation and diversionary activities, guidelines on PPHA staffing and on qualifications for administrators, and procedures on medication.

A new board policy limits approvals for new facilities according to the vacancy rate in the relevant planning region. Applications are not accepted where the vacancy rate is 20 percent or more, and are more stringently evaluated where the vacancy rate is between 10 and 20 percent. The board is proposing legislation that would strengthen its enforcement power in requiring a demonstration of need for new facilities.

The board has encouraged training of adult home staffs on the special problems of serving the mentally disabled. In Rockland County, for instance, in response to accusations between local mental health agencies and PPHA operators, the board has arranged regular meetings between the homeowners and other agencies. These help to resolve problems and have resulted in workshops on nutrition, recreation, recordkeeping, medication, and other matters.

Guidelines Developed by Board

The board has developed a statement of principles with the department of mental hygiene to assure predischarge planning, appropriate placement, and suitable aftercare within the facility or the com-

munity. In Far Rockaway, for instance, board staff has met with representatives of the public agencies to encourage expanded mental health, health, and vocational programs in that community.

Assemblywoman LIPSCHUTZ. Mr. Chairman, Mr. Shapiro, when you refer to recreation workers, how many workers did you say there are in the Rockaways?

Mr. SHAPIRO. We indicated that our staff members gather the home operators together and try to teach the homes——

Assemblywoman LIPSCHUTZ. How many homes?

Mr. SHAPIRO. We have one recreation worker for the State.

Assemblywoman LIPSCHUTZ. One for the State?

Mr. SHAPIRO. Yes, for the whole State. That was done with private money.

Assemblywoman LIPSCHUTZ. There are no qualified on staff recreational workers for the adult homes, is that correct?

Mr. SHAPIRO. There are some in some homes.

Assemblywoman LIPSCHUTZ. But not in the Rockaways, sir. I would also advise you——

Mr. SHAPIRO. We have the person here, Miss Dolores Pascarelli. who works on Project Recreation and can fill you in as to the work she does in the Rockaways.

Assemblywoman LIPSCHUTZ. She does it on a visiting basis, which is not on a regular basis.

Mr. SHAPIRO. I am talking about getting the people involved, getting the operators involved, and some of the things outlined that can be done that do cost money, but some that do not cost money.

Assemblywoman LIPSCHUTZ. The other thing I would like to know, that is in the senior citizen centers, which operate under the city, or under a combined program with the Y—the people of the Rockaways that work the senior citizen day centers that go to visit the guests of an adult home—it is not the other way around in most instances is it?

Mr. SHAPIRO. Either way. It is very helpful if we can get them out from staring into space.

Assemblywoman LIPSCHUTZ. But it is a question of who is going to whom, is it not?

Mr. SHAPIRO. Either way is our concern. I must frankly admit the problems caused by the influx of discharged mental hygiene patients. Admittedly, problems stem from the prejudices of our residents, most of them elderly and infirm. Some stem from the lack of services in the community. Some stem from the home staffs' lack of training and experience in this special field.

The board is now working with the department of mental hygiene to set down principles to guide us in solving these problems. These include the ideal locations for mentally disabled persons: not too large a home, and one with access to services, in a safe enviroment, et cetera.

"REAL LIFE MIX" OF RESIDENTS DESIRABLE

Ideally, too, mentally disabled persons should not form a separate ghetto within an adult home—there should be a real-life mix of men and women, black and white. We have not answered one question, however, whether a wide spectrum of ages is also desirable—whether

young but severely disabled persons should be placed with our elderly residents.

The board's genuine concern, for what affects its policy on permitting the commingling of the increasing number of mental hygiene dischargees and the aged resident population has on the residents in board-supervised facilities, impelled it to seek the answers through a research project.

A proposal for the project was developed and submitted to the National Institute of Mental Health recently with the objective to determine if commingling should be continued as at present, ended, or encouraged. The major outputs of the research would be a set of policies for dealing with commingling which could be implemented by the board.

In addition to determination of policies by the board, the findings would be of real national significance since there has been within the last few years a nationwide trend in the policy of mental hospitals and institutions toward the releasing of large numbers of patients into the community.

There have been a number of arguments over the issue of commingling: Advocates suggest that both groups benefit from commingling; that is, the aged residents benefit from the stimulation of living with the generally younger former mental patients and that former mental patients benefit from living in a protected environment with persons who have never experienced the dehumanizing effects of a mental hygiene confinement.

Opponents of the commingling process have been concerned that the aged residents may be harassed or in other ways disturbed by the generally younger former mental patients. Further, domiciliary care facilities—PPHA's—have been geared to the aged so long they cannot easily make adjustments necessary for the new resident group of former mental patients such as in the areas of nutritional, activity, and recreation needs.

If our research proposal is approved by NIMH, we should be in a position to address the question of commingling to the benefit of the present and future residents of DCF's.

To uncover any evidence of rentals and purchases from related companies, the board adopted a rule requiring a detailed financial report on any real estate companies that lease their property for domiciliary care facilities. Under State law, the owner of a home cannot be a corporation. This form, required of any new owners and including changes in partnerships, requires a list of all partners, stockholders, and shareholders in companies which rent property—with the amount of their investments.

The board has urged legislation to require annual uniform financial reports from every home, covering operating and capital costs. This legislation failed to pass last year and the board is urging it again this session.

Suggested Changes in Regulations Listed

Flaws in the administration of SSI, however, cannot be remedied at the State level. We strongly recommend the following changes in Federal regulations:

One: Differential payments based on facilities' quality and perhaps on the area cost of living.

Two: A point system based on the type and age of physical plant; such routine services as housekeeping, food, maintenance; and such special services as recreation, activities, and special programs.

Three: A separate check for personal allowances in addition to the check turned over to the home for the monthly payment.

DCF's are a preferable environment for those who do not need intensive care in a nursing home. And it offers savings, too—an average of no more than $400 a month compared with $900 in this State for health-related facilities and $1,600 in nursing homes.

What we need is more monitoring of costs, more efforts to improve quality, and more coordination to provide homes that operate efficiently and with commitment to the welfare of their residents.

Adult care homes are not inferior nursing homes. They are a separate category. It would be short-sighted to eliminate this type of care because some residents should be in health facilities, some programs need improvement, or because some operators are motivated solely by profit.

It is possible—and can be profitable—to operate this type of home with quality care and with commitment. It is Government's duty to provide the leadership and enforcement needed.

In conclusion, I must stress the commitment of the board members and staff to the well-being of those vulnerable persons. In many ways the board stands as their advocate—between operator and resident—guarding residents' safety, comfort, and happiness.

This is the point we make constantly to individual operators and to their associations and to State and local representatives of government.

As I told proprietors from across the State at a conference in January:

> For many of our residents, old age is a time of peril and loneliness. They are threatened by poverty and infirmity. All too many have been neglected. They have no contact with relatives, old friends, old interests. What I urge is not so much to spend more money as it is to spend more feeling, more mercy, more respect, to provide the best life possible for those in our care.

At the heart of our concern is to assure that those who need service receive it, that the quality of care is adequate and that it is provided at reasonable cost.

Senator Moss. Thank you, Mr. Shapiro. That is a fine statement. I concur with you very much on the need for more than just the minimal services.

Mr. SHAPIRO. Thank you. I appreciate your being here. I think we are both crusaders. That is the way it should be. This is the only way to improve this country of ours.

Senator Moss. I do appreciate that very much and I know we have had quite a long session.

We have time to finish up with a few questions, if there are any that remain.

Senator DOMENICI. I just want to make a comment to Mr. Shapiro.

Mr. Shapiro, I am impressed with your suggestions, regarding the national legislation. However, it seems to me that the thrust of the SSI payment at the national level was never intended to be used the way it is.

I will not be so harsh as to say it is being used illegally. I think in a very real way, however, technically, it is being used illegally. It was intended that you receive the check. Then you turn it over to someone furnishing you a service, and that service charge is related to the SSI payment. It seems to me that when you recommend that we have a personal allowance check, we have also a regional disparity for costs of providing care. A third consideration might be that mental patients in the transition be treated differently from others. What we need to do is look at the whole concept of SSI in this area. It is not just an add-on. The whole thing has to be looked at again. Is that correct?

Mr. SHAPIRO. That is correct. We did not establish SSI for that purpose. Instead of having SSI, as now is established with something like five groups and different rates for each group, and then you have the situation when the check comes in to the PPHA people—the SSI check—these home operators get that whole check, which leaves the residents without money for personal needs.

There were some homes, when SSI came into being, that were getting only $200 a month. All of a sudden they are getting $375. These homes received a real windfall.

Who do you think is getting the money? The operators are.

Senator DOMENICI. That is a very good observation. I wonder if there is any area——

Mr. SHAPIRO. Perhaps the State department of social services can also do this. We will be working with the State department of social services, negotiating with SSI. We—the board—will be doing that, because every time we get into it, the department of social services says the Federal Government will not pursue that. We need your help in that; that is, the help of Congress.

One other item in regard to the personal allowance in turning over the check. Perhaps it would be a good idea, considering all of these people who are mental dischargees—they have been in mental hospitals for the last 20, 30 or 40 years. I want to stress this—and not to apologize for the homes—because we are here to do the best that we can. These dischargees have many problems, and this is why we have our inspectors and this is why we ask the department of social services to do their job and why we have asked the mental hygiene people to do their jobs. The thing that we really need is to guard against this kind of thing, the taking away their personal allowance, particularly with the mental hygiene discharged people.

They do not know how to handle the money. There should be a requirement that there be a guardian appointed to handle the money function for them—whether that guardian be the local social services commissioner or someone else, a relative or a voluntary agency.

This would cut out many of these abuses, and this would have to be a Federal thing. It cannot be done just by the State, because the State would lose the Federal money and be cut off because they are restricting public assistance grants.

Senator DOMENICI. Mr. Shapiro, we are looking for a lot of reform, but let me ask you a very basic question.

NEW OPERATORS SHOULD BE APPRISED OF COSTS

It would seem to me, with reference to the costs of the particular parts of that which goes into a home—how much are the real estate and building costs, how much are the basic health costs, how much are the kitchen costs, the food—you could almost predict in advance to certain new operators that they cannot make it and provide adequate services. Because if the real estate costs vary, as I understand they do in New York, you can have a potential operator going in the home that has 40 percent of its operational budget in real estate taxes and the mortgage, so he would not make it. Or he would provide nothing else. Are you developing those kinds of facts?

Mr. SHAPIRO. That is part of the disclosure of information requirement which is in the legislation we are sponsoring, because then we would really know how much is being spent for each because the real estate costs—it must be known exactly what these costs are—and these people, the owners, that may not be called Bergman's, they could be called something else, some other name, but the builders are the ones. They build and then they lease. This is where the profit is—where the money appears to be made.

We should know how much goes for rental, and how much goes for lease. Then our most important concern is to figure out how much is left for services, how much is left for staff, and how much is left for nutrition. Those are the things we are concerned about.

Now, together with the department of social services, we are in favor of sponsoring the legislative bill to get that disclosure, and then to get the auditors and analyze all of these figures.

Senator DOMENICI. Thank you.

Senator Moss. Mrs. Lipschutz?

Assemblywoman LIPSCHUTZ. No questions. Thank you.

Senator Moss. Thank you very much, gentlemen.

You have given us very good testimony, and some insights as to what the problem is. You are, of course dealing with the new phase, really, and you are just getting started.

Mr. SHAPIRO. We are happy that you are holding these hearings, Mr. Chairman. This is the way to solve the problem, before it becomes a real nursing home scandal situation. We are very happy that you are here and that you are holding these hearings. It will prevent in the 1980's what happened in he 1970's with nursing homes.

Senator Moss. That is our purpose in coming. We have been much longer than we planned, and obviously, we will have to have a brief recess for lunch.

At the recommendation of Mr. Stein, we will recess until 2:30, at which time we will return and continue with the panels.

The subcommittee stands in recess.

[The subcommittee was recessed at 2 p.m.]

AFTER RECESS

Senator Moss. The subcommittee will please come to order.

We have two panels to hear. Panel No. 2 is composed of Dr. Bernard Lanter of Peninsula Hospital; Detective Gary Messina, the 101st precinct; and Morris Schneider, the city manager of Long Beach.

We are pleased to have you before the subcommittee and anxious to hear what you have to say as we try to understand and simulate the situation that exists here in New York and in other parts of the country—this matter of adult homes.

First, we will ask Dr. Lanter if he would proceed.

STATEMENT OF DR. BERNARD LANTER, PENINSULA HOSPITAL, FAR ROCKAWAY, N.Y.

Dr. LANTER. Mr. Chairman, members of the panel, I am Dr. Bernard Lanter, director of Emergency Service at Peninsula Hospital.

We are one of the two hospitals that Congressman Scheuer mentioned, that it is in an area surrounded by 17,000 senior citizens who live in nursing homes, health-related facilities and senior citizen hotels. Here are some of the numbers that we have accumulated providing the health care for this population. The entire group represents 12 to 13 percent of our total emergency room visits. A breakdown of these patients is:

One: Of the patients who come from the nursing homes, 40 to 45 percent require admission to the hospital.

Two: Of the patients from the health-related facilities, 35 percent require admission.

Three: Of the patients coming in from the senior citizen hotels, 25 percent require admission.

Comparing this population against the cross section of the average population that appears in a voluntary hospital emergency room, 5 percent of the average population that utilizes the emergency room requires admission. It becomes quite apparent that this population—nursing home, health-related facilities, senior citizen hotels—is in need of closer medical supervision than the average population. In caring for these patients, we feel some of these recommendations might be helpful.

PHYSICAL EXAMS INADEQUATE

The senior citizen hotels do not require having a physician on the premises. They are required to have a preadmission history and physical. These exams are very rapid and often inadequate. There is no central record kept of these examinations. When the patients appear in our emergency room they are often filthy, wearing all the clothes they own, and are totally ignorant of the medications they are on. These people are often senile and wander off. We suggest since we are the providers of the care, when these people become acutely ill, that we create an outreach department and do the initial physical examinations, maintain a central file, and make an identiband that the patient wears which would identify him, his medical illnesses, and the medication he is receiving. There should then be a mechanism whereby the social services department of the hospital would be able to follow through to make sure that the patients receive their required diets and are receiving the necessary medications.

This would not cost the government any additional funds since examinations are being paid for at present by medicare and medicaid.

Most of the people in this situation are on medicaid. We treat all medicaid people, so there is no expense to the patient; it is of no expense to the hotel, and these people would get a good physical examination.

Senator Moss. If they have a medicaid card, then that is billed off to medicaid?

Dr. LANTER. That is right.

Senator Moss. Is that 25 percent you mentioned—are all these people from the domiciliary homes?

Dr. LANTER. No. We are surrounded by nursing homes and health related facilities.

The 25 percent of the patients comes from these hotels and they are ill enough to require hospitalization, so this number really stands out. These people are ill.

Senator Moss. What condition are these people in when they come in?

Dr. LANTER. We see some of them completely disoriented. Some have three pairs of trousers, two pairs of jackets; some of them have all of their belongings on them.

Senator DOMENICI. With all these patients being released from these mental hospitals, does that have an impact on you?

Dr. LANTER. The only way it would have an impact on us is that they would all come to us. We do have some that do come into our hospital and some are retarded, but we do render care to them.

Senator DOMENICI. Do you have any observations as to the state of their health with reference to the diet of these people that you see?

Dr. LANTER. There are some who come in quite dehydrated—with weight loss. There are others that come in with various types of illnesses.

Senator DOMENICI. For this age group, compared with their counterpart age group of those who are not in these institutions, is there a noticeable diet deficiency?

Dr. LANTER. There have been, but not totally.

ONE HOSPITAL TO SERVE 17,000 PATIENTS

Assemblywoman LIPSCHUTZ. Also, I would like you to bring out the fact that the hospital you are representing is projected to become the only hospital in the area, and I would like you to talk about that.

Dr. LANTER. There are two hospital facilities in our area.

There is the possibility by the end of June of one being closed completely. Or there is the possibility if it is kept open, within the next 2 years it will be relocated about 8 or 9 miles away, and just on the other side of the city line. This would make us wholly responsible for 17,000 patients.

This will be a tremendous impact on us, and this is one of the reasons that we thought about setting up this program of reaching out, to provide the medical care. It is not only for the hotels, but we felt also the nursing homes needed this and the health related facilities—having each facility being run parallel. If the beds in these facilities are utilized and patients are moved out of these facilities, then the hospital beds can be moved. If they can be con-

trolled through an agency that is primarily concerned with the health care of the patient, and the proper utilization of the patient, there would be better use of the beds in this area.

Now, to address the question on malnutrition, we see there is enough of these individuals to realize that there is a range of services, so there is a need. There is much to be desired.

The patients in these homes and hotels represent about 3 percent of the volume, and about 25 percent of those come in by police car, or they wander in, or sometimes the family sees that there is something wrong and they bring them in.

Some are in a chaotic state, some are mentally retarded, and there is no way of finding out from the patient in many, many cases what their history is or what their diet is. Are they diabetic, are they on some kind of pills, and then we have to go out and fish for that information.

In dealing with some of these homes, it is very readily given to us. In others it is not so readily obtainable.

In other places, if you call after 5 in the afternoon, the manager has left and there is no one there except custodial help.

Other times, the patient being presented in an emergency room in a comatose condition, you have to start from ground zero to work them up.

We run into this problem in the hospital and on an in-patient basis. We run better than 100 percent occupancy, and it is tough when you have to spend this amount of time with this added burden. If there was some kind of identification on a permanent basis, it would help us.

Senator Moss. I thank you, Dr. Lanter.

We appreciate that very much.

Dr. LANTER. Thank you.

Senator Moss. I want now to turn to Detective Gary Messina of the 101st precinct. I would like you to tell us what kind of burden these homes place on the police department.

Detective MESSINA. Thank you, Mr. Chairman. With me is my precinct commander, Captain Kelly, who will present our statement, and I will assist him in answering any of your questions.

Senator Moss. Very good. We are glad to have you. You may proceed in any way you want.

STATEMENT OF CAPT. JOHN J. KELLY, 101ST PRECINCT, NEW YORK, N.Y.; ACCOMPANIED BY DETECTIVE GARY MESSINA

Captain KELLY. Thank you, Mr. Chairman.

As the doctor pointed out, many of these people wandering around become police problems and, in addition, become hospital problems.

They are sometimes in a comatose state. They do not know where they are staying and when you ask them where they stay, they will give you an address of 25 or 30 years ago; then we find the address is wrong. So we do have that problem of identifying where they stay, especially when these people are senile.

Sometimes we find them in an unconscious situation, or in an accident, and we are the precinct that Congressman Scheuer

referred to earlier in which the lady walked out on the roof in January and froze to death—literally froze to death on the roof before she was found to be missing. After that incident, the rest of our staff met with a group of concerned people—private citizens—and with Assemblywoman Lipschutz and Mr. Fried, who spoke here earlier this morning representing his group. We have gotten together sort of an ad hoc committee to mutually work out some of the security problems—some of the problems that are involved.

As you know, we are in a budgetary crisis. There is no hope of getting more manpower in the police department so we have to look for ways to conserve our time. We have gone through our records, and I find we have 67 lost adults reported from the various facilities.

So from some of the nursing homes and from some of the adult related facilities, 67 people were reported missing last year.

Patient Identification Important

Each one of these persons require an investigation by the police department involving missing persons, and a great many of the police officers—this is one of the problems that we try to approach with the various people and with the owners and administrators of the adult homes—identification problems—we should have some means of identifying these people, a picture, a brief rundown of who the patient is, where he or she is from, his blood type, any allergies he might have.

In addition to many nursing homes and health homes, we have a school for retarded children—functionally retarded—who will put this together for us.

They will make these cards and laminate them at a cost of 25 cents per card.

Now, our suggestion to the adult-home owners was that they have two of these made: One to remain in the file of the adult home in the event they report the person missing, and then we have a picture to start with; and the other one is to be given to the patient to carry on his person.

At first we had a little resistance because of the 25-cent cost, but the reasoning has been pointed out to the senior citizens; that is, since we have had this program going, we have put out an identification card [1] and we now have these people buying these on their own because they want to have this on their person to notify the hospitals and the police in case of an accident.

[1] See page 3603.

SENIOR CITIZEN IDENTIFICATION CARD

The person described on the reverse side of this card is a resident of

PRECINCT

Blood Type Allergies

Emergency Telephone

Birthdate Soc. Sec.

We have had people in the community who are willing to spend the money to rent the camera and, I think, on March 28, we will start going into the nursing homes. We will have these as of early next month, and one of our problems will be reduced to a degree.

Senator Moss. I was going to ask, would it be possible to punch that and let them hang it on a dog tag?

Detective MESSINA. They have had the necklaces and bracelets in some of the homes and, apparently, some of the guests feel this is marking them in some way and have removed them as soon as they get out on the street.

This is why we have suggested in this particular area that we send men in and explain the benefit of carrying one of these cards.

Senator Moss. I see.

Captain KELLY. That is part of our program, and we will talk to the people and show them the benefits of using these; that it is not a concentration camp identification thing—like numbers tatooed on the hand—but that it is of a benefit to us and a benefit to them.

TOO MANY IN "LOST" CATEGORY

Senator DOMENICI. Excuse me.

Officer Kelly, the 67 people that you cannot find in the homes who are in the lost category—this does not tell me very much in terms of whether that is abnormal. Relative to what? Tell us a little bit about that.

Captain KELLY. This is the adult category. I would say maybe in the course of a year you would have four or five lost adults from other areas, other than from the various homes.

Again, that 67 represents an across the board—nursing homes and adult homes. We do not break them down and classify them.

This was another reason for calling the meeting to clarify this matter, for there was some confusion of what a nursing home is and what an adult home is. All of these labels: What services are being provided by each; who are dispensing what drugs. We did have a lot of information from the mental health people. They were very helpful to us.

Then on another day we met with the seven adult home proprietors and administrators, and came up with this plan. We made some recommendations to them regarding security; I would also like to point out, regarding the lady who froze on the roof—we did call a search procedure.

This fixes responsibility for some one in that hotel or hospital to look on the first floor, look on the roof, look in the basement, closet, T.V. room, the laundry room, corridors, patios—if they have them—and that kind of thing. The person who conducts that search, since it is documented as a search that was, in fact, conducted by someone and is not left for someone else to do—we know where to point the responsibility. It's documented who did it, and what the time was.

The reason for this is that some confusion can develop if, after 5 at night when the staff is greatly reduced, Joe thinks John did it, and then we have someone go through the scene and see what areas have been searched and have not been searched, and where to go from there.

This also was accepted by the adult-home owners. They have these now, and this procedure is now in effect as of last week.

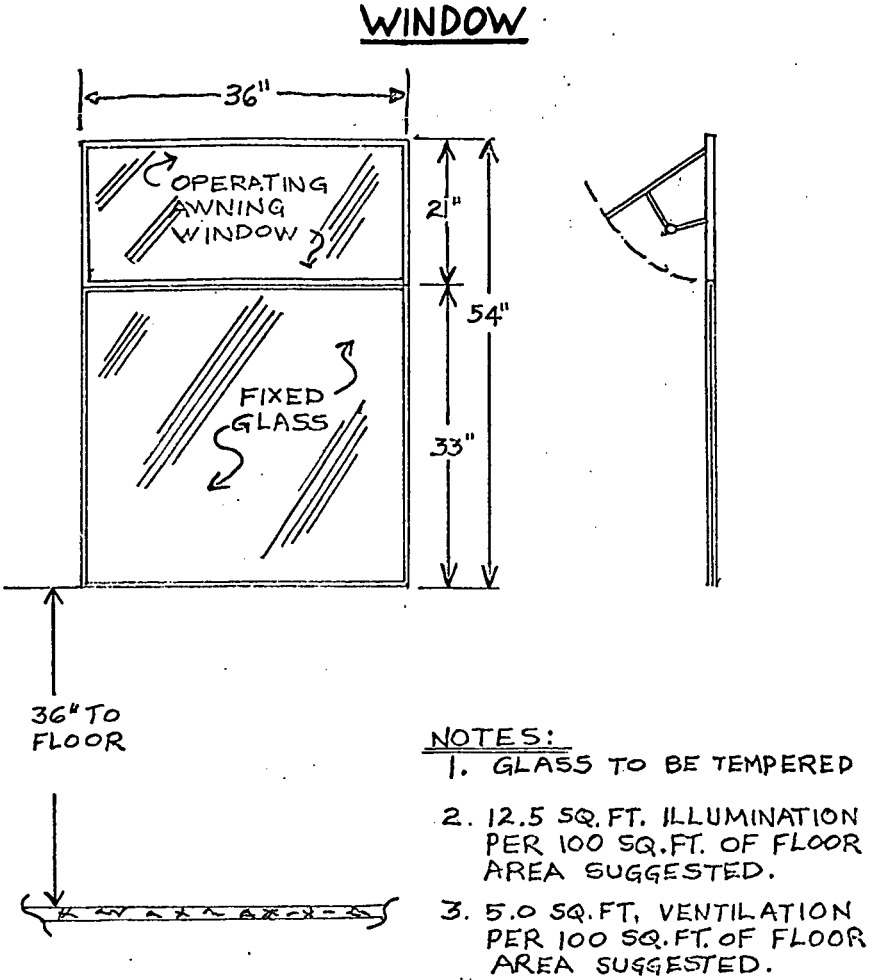
Detective MESSINA. In that location, the female was found out on the roof, and this was a health-related facility.

Also, the time lapse was over 2 hours 45 minutes between the time this individual was reported lost and the time she was found. Apparently the employees were aware of the fact that she did go to the roof area frequently. We have that report also.

Captain KELLY. Additional recommendations—some will cost money, others will not cost much, when made.

The search procedures cost nothing. We have the diagram [1] for

[1] See page 3605.



that type of window in which the patient will not be able to fall out or have an accident from.

Locks Serve Double Function

We have recommendations on locks that should be equipped where it is opened easily enough from the inside, but will keep intruders out.

You also have the problem of residents wandering outside and intruders wandering in. The security responsibility—someone has to be placed in charge of security, to check the doors to see that they are secure.

With regard to new construction being done, we have procedures that we can recommend.

Some of the homes have TV cameras and they can monitor them. We recommend that they be set up at main entrances to see the people coming out, and to see who is coming in. We understand that people are not locked in these buildings. They are guests: they can come and go as they please. But the person leaving should sign out to a specific destination, and then we would have some place to start from if they did that.

We did get resistance on that, because the owners stated that it would require an additional person on their payroll that they cannot afford.

It would be a big help as far as controlling people in and out of the building, from our point of view.

As far as people wandering in the streets, even though the person is, in fact, out on his own free will—oftentimes he is not dressed appropriately. He may have slippers on, or no coat, on a cold and rainy day.

Some of them may be the type of individual, like the woman who comes to the station almost every day and solicits cigarettes—when they find out that the cops are pretty generous—and she comes for a cigarette every morning.

We do get some slack also, and these are what help us in controlling the people.

When we talk about the psychotic patient who has to be referred back, a police officer is required to take that individual in an ambulance. This ties him up for 3 or 4 hours at a time in that kind of service.

That is all I have.

Senator Moss. Thank you very much.

Do you have anything to add to that, Detective Messina?

Alarm Systems Suggested

Detective Messina. Just to elaborate on some of the things the committee had come up with in the area of alarms. Apparently, there is nothing that says that alarms are a must in any of the types of facilities, yet they do house many people in an area. I do not want to get Mr. Fried angry at us, but it was a health related facility. To go to the situation where a female was out on the roof, there should be a large sign on the door saying that if you cannot open the door or if the door is jammed, push the panic button—a very large button—which will notify others of the problem. In this way someone could get up there to save the person out on the roof. Again, if we go into an alarm situation, this would be advantageous to us, not only to the police department, but to the community as well. Some of these people might get out to the streets at night and they themselves might become the victims.

It is not that they are endangering the community as much as they become victims of crime.

Senator Moss. You have suggested many procedures which are sensible and that would help. They should be implemented. I appreciate your help very much.

Senator DOMENICI. Are you in communication with Mr. Shapiro and his agency with reference to these suggestions?

Detective MESSINA. We have had communications with that agency relative to complaints that have been given to us by other police officers relative to these facilities. Since February 4, we have received two.

Senator DOMENICI. It would seem to me some of the things you are suggesting are properly within the jurisdiction of a State agency that controls the properties, the facilities and some minimal standards that might be incorporated on a broader scale.

We cannot do some of the things on a national level, but the kind of work you are doing is a tremendous contribution. I think you and your representatives ought to push it up the ladder, where you can, wherever it applies to minimum standards.

This is the only way to solve some of the problems, and I appreciate your telling us about them.

Assemblywoman LIPSCHUTZ. Being one of the members of the ad hoc committee who has worked this out, first of all, I do want to give a good commendation to the captain.

It was a very difficult job. It took more than 6 weeks through the cooperation of many people, all over. Since then, I have taken this report and used most of it in a bill which I placed in the hopper this past week.

It has not been assigned a number as yet, and therefore has not been committed to a committee. But hopefully it will be next week, and as soon as it has, I should think that I will be able to rally support in the State assembly. Hopefully, we will get the option of the State senators as well.

Congressman Scheuer.

PROFESSIONALISM EVIDENT

Representative SCHEUER. I think the testimony of Captain Kelly and of Detective Messina speaks for itself. I take great pride in the professionalism that the captain and the detective are showing in the 101st precinct. We have enough problems in the Rockaway's nursing homes and health related facilities. If we did not have men of this caliber in our local precinct, I just do not know what we would do. We would have a disaster instead of a service—a very difficult situation.

I want to commend them for their very thoughtful contribution.

Senator Moss. Thank you very much gentlemen. We appreciate your appearance and your testimony.

Detective MESSINA. Thank you.

Senator Moss. We now have a panel of domiciliary owners and operators.

They are made up of Dov Bercu Stoleru, owner of the Royale Manor, and Solomon Ripstein, owner and administrator of the Shalom Adult Care Home.

We will begin with Mr. Ripstein at this time.

Mr. Ripstein, tell us about the Shalom Adult Care Home.

STATEMENT OF SOLOMON RIPSTEIN, OWNER/ADMINISTRATOR, SHALOM ADULT CARE HOME, NEW YORK, N.Y.

Mr. RIPSTEIN. I am the owner and administrator of the Shalom Adult Care Home.

Mr. Lerner was also an owner. We provide the best possible care for our residents, and I myself welcome this opportunity to testify.

[Mr. Lerner did not appear to testify as requested. The committee received the following letter for the record:]

Re: Joshua Lerner.

TO WHOM IT MAY CONCERN: Mr. Lerner is my patient. He is currently under observation and treatment for both a heart condition and the after-effects of abdominal surgery.

There is drainage at the site of the surgical scar on his abdomen. He had surgery for the removal of polyps 1 year ago. This required removal of part of the large intestine.

He suffers from arteriosclerotic heart disease with angina pectoris and is unable to do anything which requires exertion. He is, for all practical purposes, confined to his house. He should avoid any emotional or physical stress.

Very truly yours,

GEORGE METZ, M.D.

Mr. RIPSTEIN. I sincerely wish you would come back, and we hope that this committee will get to the bottom of everything. We want our problems out in the open. I think Mr. Bernstein has contacted Mr. Scheuer's office in the past and has spoken to his secretary, and we have had correspondence. I also want to emphasize that we welcome any help, and we hope that the State ultimately will live up to its responsibilities to its senior citizens and to its former mental patients. Hopefully, we will see some progress.

Senator MOSS. Is this a proprietary home or is it a nonprofit home?

Mr. RIPSTEIN. It is a private home for adults.

Senator MOSS. How many people do you have?

Mr. RIPSTEIN. Approximately 117.

Senator MOSS. Are they on SSI?

Mr. RIPSTEIN. Exclusively on SSI.

Senator MOSS. What is your gross income per month?

Mr. RIPSTEIN. About $44,000 a month—somewhere in that area.

Senator MOSS. You have medical personnel in the home?

REGULAR SCHEDULING FOR PHYSICIANS

Mr. RIPSTEIN. We have doctors who come to see the residents on a regular basis, and we have optometrists, podiatrists, and we are alert to any conditions that the residents might have. If there are any problems, we also arrange for them to see specialists, urologists, or other types of specialists, and we usually bring them down to the out-patient clinic and pick them up.

Senator MOSS. Do these doctors come on a regular schedule?

Mr. RIPSTEIN. On a regular schedule, yes.

Senator Moss. They are available on-call as well?

Mr. RIPSTEIN. Not always, but usually.

Senator Moss. How many people do you have in your employment to take care of these residents?

Mr. RIPSTEIN. We have a full staffing, as demanded by the board of social welfare.

As a matter of fact, we have more than full staffing, because we recently hired a maintenance firm which takes care of our maintenance problems in the buildings. This firm has worked in nursing homes and other adult homes.

Senator DOMENICI. I have an awfully lot of questions that I would like to ask, but we will certainly run out of time.

Let me ask you, what is the monthly rate?

Mr. RIPSTEIN. $386.70.

Senator DOMENICI. Go ahead.

Mr. RIPSTEIN. For the residents, we receive $386.70, but ever since the inception of the SSI program, we have always managed to give out some money to these patients, and sometimes we receive nothing.

At first we gave them $17, and we just could not afford it. But now we give them $10.50, because we do have to give them some dignity.

Senator DOMENICI. What is the normal fee for somebody that wants to stay there full time?

Mr. RIPSTEIN. $386.70.

Senator DOMENICI. Why do you say that reluctantly?

Mr. RIPSTEIN. That is it; $386.70.

Senator DOMENICI. You have two different rates, or are they all the same?

Mr. RIPSTEIN. They are all the same.

Mr. DOMENICI. Now, if these people are on SSI, they get checks, do they not?

Mr. RIPSTEIN. Yes.

Senator DOMENICI. What is the process of handling the checks? After they turn them over to you, how do you handle them?

Mr. RIPSTEIN. We ask them to sign their checks.

Senator DOMENICI. They bring them to a certain place in the building?

Mr. RIPSTEIN. We do not line them up. We usually do everything alphabetically. It is senseless to have them line up and wait.

We deposit the checks and then afterwards they receive a refund. Anything over the $386.70 goes to the resident.

Senator DOMENICI. Do you have a contract with these people?

Mr. RIPSTEIN. Yes.

Senator DOMENICI. Did you bring one along?

Mr. RIPSTEIN. I did not, but you are free to see it.

Senator DOMENICI. I would like to have one for the record. Supply one for us, will you?

Mr. RIPSTEIN. We would be glad to. We will mail it to you.

[The contract follows:]

ADMISSION AGREEMENT

Name of resident_____

Agreement of Home for Adults	*Agreement of Resident*
1. To furnish lodging, board, linens and beddings, and such personal services as may be required for the safety, good grooming, and well-being of the resident.	1. To provide such personal clothing and effects as needed or desired by the resident.
2. To secure the services of a licensed physician of the resident's choice whenever necessary, or the services of another licensed physician if their own is not available.	2. To be responsible for physicians' fees, medications, and other treatment or aids ordered by physician.
3. To arrange for transfer of the resident to an appropriate facility when the home is no longer able to provide suitable care. Such a transfer to be arranged in agreement with the personal physician and/or responsible party.	3. To be responsible for transportation costs, hospital or nursing home charges if transfer of resident becomes necessary.

The resident or responsible party agrees to pay and the home for adults agrees to accept this payment in full consideration for above listed services.

$386.70 per month.

If the resident receives public assistance, the financial cost agreement with the local Welfare department and the resident is the following _____. Total _____.

The resident agrees to pay for the following items which, if provided, are not included in the basic weekly or monthly financial agreement_____

_____

Either party may terminate this agreement on 10 days.

_____	_____
(Signature of proprietor)	(Signature of resident or responsible person)
_____	_____
(Witness)	(Date)

Senator DOMENICI. Let me ask you, do many of your boarders give you a check for more than they owe you? Do you ever hold any money for them that belongs to them?

Mr. RIPSTEIN. No. Only if they—sometimes they will ask you to please hold some money. "I do not want to lose it," they say. We do it as a favor to them; we try not to make it a practice.

Senator DOMENICI. So you do not have a cost accounting system set up with your holding in trust for each one of your patients?

Mr. RIPSTEIN. No.

Senator DOMENICI. Let me see if I can get some yes or no answers.

Did you tell us how many people you have full time at your place to handle an average load of 117.

Mr. RIPSTEIN. I did not tell you.

Senator DOMENICI. How many is it?

Mr. RIPSTEIN. I think it is about 22 or 23, not counting rehabilitation workers from the department of mental hygiene. I think it is 22.

Senator DOMENICI. Do you have any recollection of how many of those are involved in social type work, like recreational activities?

Mr. RIPSTEIN. Yes.

Senator DOMENICI. Will you tell us?

Mr. RIPSTEIN. We have one full-time recreational therapist. We have, I think, five people assigned to us from the rehabilitation department.

They are departmental hygiene workers, and they assist the people in rehabilitation. We have sheltered workshops for the residents which are run by the department of hygiene, and there is a recreational program.

Senator DOMENICI. Do you have a program where your patients work for you part time in the delivery of services? Do you employ any of your patients part time or full time?

Mr. RIPSTEIN. No.

Senator DOMENICI. Are you aware that in some of the States they are experimenting with this?

Mr. RIPSTEIN. I am aware that sometimes residents may do some therapy work, but it is only for their own therapy. We do not take advantage of any of our residents.

Senator DOMENICI. I did not ask you that question.

Mr. RIPSTEIN. I know that.

Senator DOMENICI. In Chicago they do work, and they earn some money, and they enjoy it. They are paid under Federal law. They are paid less than the minimum wage, but they help with the dishes and they help clean up the place. This work is therapy, and people do like it.

I was not asking whether or not there is abuse, but are you familiar with it?

$7 PER WEEK FOR DOING LAUNDRY

Assemblyman STEIN. A complaint letter was received by the board of social welfare that someone was receiving $7 a week, that is, to do all the personal laundries of 124 residents.

This was verified by the board of social welfare. It is in the report to the social welfare board.

Mr. RIPSTEIN. We have aides around the clock—at least one aide around the clock—to do bathing. Most of the bathing is done during the 8-to-4 shift.

Most of the shaving is done by people in the unions. It is not done by our residents.

I do not know of any letters. We do not use our residents to do laundry. That is it.

Assemblyman STEIN. Specifically, in the report, the board of social welfare said in a particular case they give $7 a week to residents to do laundry for 124 people.

Mr. RIPSTEIN. That is ridiculous.

Assemblyman STEIN. Perhaps we should straighten out this thing here.

Senator DOMENICI. I will yield.

Mr. SCHEUER. I have no questions.

Senator Moss. Perhaps you could remain here; you may want to come back.

Assemblyman STEIN. Were there compliance hearings against the Shalom this year.

Mr. RIPSTEIN. We have been, since November 1974—we started this before—this refurbishing of our facilities. We started this to modernize our facilities and to make ourselves competitive with the other homes.

Assemblyman STEIN. But you were not in compliance?

Mr. RIPSTEIN. Excuse me? There is no hearing as far as I know, but can I say something?

Assemblyman STEIN. Sure.

Mr. RIPSTEIN. Most of the violations that we had received in 1975 had to do with decor, but we have undergone a complete remodernization. We have refurbished the building—actually the furniture—put in new furniture; completely redid the rooms and the lobby. You can see it for yourself.

Senator Moss. I wonder if you could furnish us, for the record, your last year's income and that of the owner's salary, the manager's salary, and any dividends that you pay out.

Mr. RIPSTEIN. Can I send that in to you?

Senator Moss. Yes, if you would, please.

Mr. RIPSTEIN. There is no problem.

[The information follows:]

SHALOM HOME FOR ADULTS.—STATEMENT OF PROFIT AND LOSS FOR THE YEAR ENDED DEC. 31, 1975

Income	$594, 268. 80
Expenses:	
Dietary costs	65, 968. 03
Laundry	3, 056. 16
Cleaning and rubbish	4, 239. 24
Insurance	6, 508. 59
Repairs and maintenance	14, 681. 61
Recreation and services	2, 164. 05
Telephone	6, 676. 71
Fuel	14, 638. 48
Supplies	10, 727. 48
Auto expenses	567. 63
Professional fees	3, 938. 73
Rent	222, 000. 00
Taxes	14, 955. 86
Equipment leasing	2, 571. 69
Payroll	178, 174. 92
Dues	6, 812. 00
Electric	9, 451. 70
Bank charges	438. 52
Miscellaneous expenses	169. 78
Depreciation	2, 323. 73
Total expenses	570, 064. 91
Net profit	24, 203. 89
Partners drawings	20, 213. 00
Net profit after drawings	3, 990. 89

Senator Moss. Thank you very much.

Mr. RIPSTEIN. Thank you, Mr. Chairman.

Senator Moss. We will now turn to Mr. Bercu Stoleru, or his representative, I believe.

STATEMENT OF JERRY KLEINMAN, ADMINISTRATOR, ROYALE MANOR HOME FOR ADULTS, LONG BEACH, N.Y.

Mr. KLEINMAN. Mr. Chairman, Mr. Stoleru received a telegram at 6 p.m. last night, and due to the fact that there was an incorrect ZIP code, he just received it then. No one was home to receive it, and there it was under the door. So I am here—I am the administrator and I can try to do whatever I can.

Senator Moss. All right. Mr. Kleinman, where is the Royale Manor located?

Mr. KLEINMAN. Long Beach.

Senator Moss. How long have you been connected with it?

Mr. KLEINMAN. Approximately June 1974.

Senator Moss. And how many residents do you have there?

Mr. KLEINMAN. 185 residents.

Senator Moss. And what staff do you have?

Mr. KLEINMAN Off hand, maybe 27.

Senator Moss. And are these all full time?

Mr. KLEINMAN. Yes.

Senator Moss. And do you have a flat rate?

Mr. KLEINMAN. Yes.

Senator Moss. What is your flat rate?

Mr. KLEINMAN. The rate is $386.70, which is negotiated with each resident on a contract. Each resident comes into the office, sits there, and negotiates the rates, basically.

Senator DOMENICI. You do not have a flat rate then?

Mr. KLEINMAN. We have some residents who receive more money back which seems, afterwards, that we get less money.

Senator Moss. Everything they may have comes off of the $386.70—you pay back to the resident anything over?

Mr. KLEINMAN. Yes.

Senator Moss. Do you set a trust account for these people?

Mr. KLEINMAN. Yes.

Senator Moss. As soon as the check comes in.

Mr. KLEINMAN. Yes.

Senator Moss. Do you employ any of the people there—any of the residents?

"MAKE-WORK" EMPLOYED

Mr. KLEINMAN. Yes. It is all make-work. It is a thing that we have tried to stop before. A lot of the money that is received is for make-work, and it was very difficult to stop.

The board of social welfare is aware of this. It has worked out very well, in a sense, for the residents. They are making some extra spending money and they are regulated as to how much they can work. None of this work has to be done for the facility.

One thing I can guarantee: If these residents do not work, the facility does not suffer.

All of this is make-work. This is a condition we found when we came into the facility. I will give you an example. This one woman received a small stipend, and then she was not able to do anything. We had to keep giving her the stipend. There is no way we can stop it. She has no money, and this money is in addition to whatever she receives from her check.

Senator Moss. Would you mind furnishing us with a statement of accounts [1] as I have asked Mr. Ripstein to do?

Mr. KLEINMAN. I will have to ask Mr. Stoleru. This is of the previous year?

Senator Moss. Yes; the previous year.

Mr. KLEINMAN. I would imagine so.

Senator Moss. Have you had any difficulty of people wandering away, such as the woman that we talked about earlier today?

Mr. KLEINMAN. When we find problems, we straighten it out right away. Our residents have a bracelet which states the name of the home and their room number.

Also, anytime a resident is missing, we try to report it, but they can come and go as they please from this facility.

If the resident has nowhere to go and that person is missing, we fill out a missing person's report.

I just put on the report what they are wearing and the fact that the person is wearing a bracelet, and to contact us immediately when they find them.

Senator Moss. How much does that bracelet cost to provide?

Mr. KLEINMAN. Ten cents, or something like that.

Senator Moss. A very small amount.

Mr. KLEINMAN. Yes. I believe it is 10 cents each. It is like those you find in the hospital.

Senator Moss. So that would identify them.

Mr. KLEINMAN. Yes; and again, I am in the facility almost 7 days a week, from early morning until late at night.

I know the habits of every single resident. I am very, very close to my residents, most of whom I know by their first name. That is all I can say.

Senator Moss. Assemblyman Stein.

BUSINESS RELATIONSHIP QUESTIONED

Assemblyman STEIN. Thank you, Mr. Chairman.

I noticed that you lease the building and property, which is owned by a realty corporation, which is owned by Mr. Stoleru.

On August 30, 1970, Mr. Stoleru drew up a lease for himself and his wife to lease that property and building. The question is: Is Mr. Stoleru the landlord and tenant?

Mr. KLEINMAN. I'm not sure about that. I don't think so.

Assemblyman STEIN. Would it be possible for you to get Mr. Stoleru to answer that?

---

[1] Not received at time of publication. See appendix, item 3, p. 3628.

Mr. KLEINMAN. Yes.

Assemblyman STEIN. In writing?

Mr. KLEINMAN. Yes.

Assemblyman STEIN. This is the same kind of thing that we ran into in the nursing home investigations, where we have these arms-length agreements.

Mr. KLEINMAN. The point is, I believe it is arms-length here.

Assemblyman STEIN. On August 30, 1970, the annual rent was $35,000. Today, from January 31, 1975, it is around $120,000 paid to himself.

Would you not state that 340 percent increase in less than 4½ years is high?

Mr. KLEINMAN. I don't know. I am not familiar with Mr. Stoleru's financial condition.

Assemblyman STEIN. I am sorry that Mr. Stoleru is not here. Maybe you can have him answer some of these questions. I will give you a copy of this,[1] and see what you can do with it.

Mr. KLEINMAN. What difference does it make if he does that, since we are not on a cost-plus rate?

Assemblyman STEIN. First of all, I am asking the questions, even though you may be better than I am. But to me, 343 percent increase in rent is a little bit high.

Senator DOMENICI. It might make a difference as we attempt to evaluate whether or not the amount of money being paid to these homes as a direct result of a national SSI law, supplemented by the State, pays enough so you can pay this kind of rent. It may not be in the sense of a deal, in the sense of doubledealing under the previous law, where we were paying any excess that occurred in a non-arms-length transaction, but we are trying to evaluate why the resident patients are not able to get more service in this State. It is obvious that one reason is the real estate costs. They are very high here, yet the rates are flat.

SERVICES NOT COMPARABLE TO OTHER AREAS

I have been to Chicago, and $328 gets a tremendous amount of service—more service than you are giving—for the same kind of alleged facility with the same kind of management.

In one of the best homes in Chicago, they charge $335 a month, and the ratio in staff is a great deal better. All recreation is provided in-house, and all sorts of services are provided in-house.

It is very relevant as to whether or not you ought to be talking about expensive downtown buildings, or about getting out somewhere in rural areas. All that affects the profit picture. I'm not saying that it is criminal, but it is just what we want to know.

I would like to ask you, what are the biggest problems you have in operating these homes?

Mr. KLEINMAN. We would like to be able to give more service. I would like to have a larger staff. Our staff has been enlarged and we would like to increase it more. We would like to have full-time

[1] See appendix, item 3, p. 3628.

recreation. Some of these people like bingo all day long, and some like to watch a movie all day long.

I would like to have recreation for all. This is something we would like to have.

Senator DOMENICI. You are saying, as manager, the amount of money you are receiving per month does not permit you to provide the kind of service that you think the people need—is that correct?

Mr. KLEINMAN. Right. We provide the kind of service that is approved by the board's code, but I feel that I would like to do more.

Senator DOMENICI. One question about the state of health of your clients. I understand you are supposed to have, in your facility, people who are ambulatory and who do not need constant attention.

Mr. KLEINMAN. Yes.

Senator DOMENICI. Is this a serious problem, whether you can maintain a healthy group of people that do not require medical attention?

Mr. KLEINMAN. None of my residents are all nonambulatory.

I interview everybody personally, and the first question I ask: "Are you ambulatory? Can you take care of yourself?" If not, they go to a nursing home.

Senator DOMENICI. Do they get physical examinations?

Mr. KLEINMAN. Yes.

Senator DOMENICI. Who does those physicals? Is it a doctor, do you, or do you have a staff?

Mr. KLEINMAN. Every resident is examined by a doctor within 24 hours of admission to the facility.

Senator DOMENICI. What do you do with the doctor's examination when it comes back? Does it say to admit the person, or does it say not to admit him?

Mr. KLEINMAN. Based upon the original interview with the social worker, if the person has been under the doctor's care, they will tell you—documentation will tell you this. If he is a person with diabetes or if he has any infectious disease, the person receiving the examination will learn of these things.

A number of doctors provide care to facilities.

Senator DOMENICI. Thank you, Mr. Chairman.

Senator MOSS. I thank you.

We will now hear from Mr. Milton Klein.

STATEMENT OF MILTON KLEIN, NEW YORK, N.Y.

Mr. KLEIN. Thank you, Mr. Chairman.

My name is Milton Klein, and we operate four facilities in the city of New York.

I have been in the business for the past 15 years. I had been in it before—they were known as adult homes, but they were run as hotels for senior citizens.

Two of our facilities come under the grandfather clause. They are old, and two of them are newer facilities. Within the last 4 years—it must be brought to mind this morning the question of why any operator would go into this business and be losing money.

No business is put together over night. It takes us approximately 3 to 4 years to draw up plans of location then get started.

When we started building these facilities 4 years ago, no one thought, you might say—at that time our rate was $375; we were receiving pay for and by the city and the State of New York.

In the 4 years' time, there has been no increase for the operators. The SSI program in January a year ago took away the payments, and they started sending in the SSI checks.

Somehow, in all that time, we were all forgotten. No one thought that our expenses were going sky high—taxes, food, health costs, insurance, license—no matter how many meetings we had with various agencies we were promised increases, but nothing ever developed.

First, we were told we could look to a certain percentage, but our costs continued to go up—that is, the maintenance. The social service board asked for more staffing, and our costs continued to go up.

I, for one, have complied, and I am in full compliance with all regulations and with staffing. In fact, we are above staffing. I do not believe in cutting services, food, or anything, in any of our places.

Costs Increasing

Two of our new facilities—last July we were forced into a chapter 11 bankruptcy proceeding. The costs of running these facilities have gone up—the costs are tremendous.

Fortunately, I was in a position where I owned the property and also operated it. The mortgage that was taken out—the payments have to be made to the bank, and we will not take anything out after we make those payments.

An increase must be given to this industry for it to survive. The operators cannot keep on taking money out of their pockets in the amount of hundreds of thousands of dollars and to keep borrowing to keep their doors open, and to continuously keep operating.

We've got to have relief. We must have that relief to give service and to provide service to people.

Now, we know there are certain homes that may cut services and take away things from the guests. I am sure that most of the industry does not condone this action, but the mere fact three or four or maybe six homes may do this does not constitute a condemnation of the entire industry. No more than three or four or seven crooked politicians should condemn the entire political system, and that goes for us, too.

We welcome this investigation and hearing—it is about time it was held—so that the truth and, maybe, some relief will finally come out of it, to see that the elderly get what they so justifiably deserve.

Thank you.

Senator Moss. Thank you, Mr. Klein, and I agree with you. We need to find out whether or not the costs are sufficiently met and I wish you would furnish a balance sheet also.

Mr. Klein. I think you have it. You were given it this morning—the transcript[1] of our bankrupt proceedings.

Senator Moss. That is fine. That will help us and we will look at it.

Where are your four homes located?

Mr. Klein. Three in Brooklyn and one in Staten Island.

[1] Retained in committee files. See footnote, p. 3557.

If I may continue—there has been a lot of talk about people coming from mental hospitals into these facilities. I think it is only fair that the talk of these people coming from mental hospitals should be clarified.

Most of the people that are coming have been deemed to be released from the State hospitals into the homes, and most of them, by today's standards, should never have seen the inside of a mental hospital.

It was not uncommon 30 years ago to have a mother or father or child in these facilities with nothing being done for them. In the thirties after surviving the depression when hundreds and hundreds of people jumped from windows and from roofs, they suffered a lot. Thousands suffered mental breakdowns due to business and financial failure.

They wound up in these same hospitals. At that time, it was not uncommon for a husband or a wife who wanted to put a mate away to have such done by just a signature.

Nonresidents Experience Discrimination

I know in our facility we do a good and thorough screening job before we take anyone in. We go through three screening processes. Unfortunately, in the community of Staten Island, we run into the very severe community problem of the last 2 years where the community does not believe that Staten Island is a part of New York City, or the State of New York, or even of the United States. They have applied much pressure to the South Beach Hospital to withhold services for these people unless they were residents or former residents of Staten Island.

They absolutely refuse—it is a matter of public record that they will not service these people or to allow anybody to be discharged from another hospital through our Staten Island facility.

Now, I think that is an outrage. After all, the mental person is a human being also, and he does have rights. He has a rightful place when he is discharged back into the community.

Senator Moss. Well, we do thank you very much. I appreciate your discourse of what has happened in the years past. With regard to mental hospitals—and I agree with you—the fact that many are coming out does not necessarily indict them provided they are screened properly. But we know that many are being left adrift.

We regret that we are going to have to terminate this hearing because we have an airplane to catch, but we do appreciate your testimony. I think you have added a good bit to our record.

We do have two additional documents that were furnished that I will place in the record. We have a statement from Dr. McKinley, who stayed here all day, and I appreciate very much that he has given us a written statement.

This statement and that of Mr. Haugh will be made a part of the record.

[The statements follow:]

STATEMENT OF ROBERT A. McKINLEY, ACTING FIRST DEPUTY COMMISSIONER, NEW YORK STATE DEPARTMENT OF MENTAL HYGIENE

I am Robert A. McKinley, acting first deputy commissioner of the New York State Department of Mental Hygiene. I feel that it is appropriate that I testify

here inasmuch as of the 17,000 people residing in proprietary homes for adults, 5,000 are former patients in State and local psychiatric centers. It is quite likely that more than these are in need of some form of psychiatric care.

To put the problem in perspective, it should be realized that there were about 33,000 patients released from State mental hygiene facilities during 1975. Of this number 1,100—or 3.3 percent—have found their way into proprietary homes for adults. Annually, over the past 10 years, about 6,000 chronic patients have been released from State centers. I mention these statistics not to minimize the problem but to point out that it should be manageable.

Until appropriate living arrangements can be made available for the mentally disabled and perhaps all persons, the problem will continue to exist. PPHA's now provide an alternative to living in a departmental institution—an alternative which many people prefer.

What Are We Doing?

(1) We are in the beginning stages of implementing a program to develop treatment plans for every discharged patient. These plans include arrangements for appropriate community care. In this effort we are working with the Board of Social Welfare and the Department of Social Services. This cooperative effort needs to continue and expand.

(2) Currently, we, along with others, do provide some treatment, though inadequate in amount, to clients residing in PPHA's. We estimate the equivalent of 120 State full-time Department of Mental Hygiene staff now provide service to clients in PPHA's. Local mental health programs and in some instances private psychiatrists in the surrounding communities also give some care. To the extent resources are available we are asking department facilities to provide more service.

(3) We have stopped our facilities from placing clients outside their own catchment areas unless assurances are given by the director from the receiving area that he can follow the patient adequately.

(4) We are studying all of our State facilities for multipurpose use with the view to develop domiciliary care programs for patients already in residence but who will require a lesser degree of care. We do not necessarily see this as a long-term solution but an intermediate step in dealing with the problem. We must now secure non-State sponsorship for these arrangements.

(5) We need more facts. In collaboration with the Board of Social Welfare, the Department of Mental Hygiene is undertaking an assessment of the needs of PPHA residents so we can plan more effectively for their care. This assessment will be completed by late spring of 1976.

What Can Be Done?

(1) Federal legislation should be enacted to permit medicaid payments to persons between the ages of 21 and 65 who are admitted to State mental hygiene facilities. The denial of medicaid effects a substantial number of our citizens in New York. About 80 percent of admissions are in this age group as are about 60 percent of the patients residing in psychiatric centers on any particular day. This could make more resources available so that patients would be more adequately prepared for community life.

(2) Presently supplemental security income recipients cannot live in residential arrangements operated by a State agency. A change in Federal law is needed to permit State sponsorship.

(3) Mandate that any federally funded mental health center must take into account this population in its annual plan. This would include a survey of this high risk group in their service area and a requirement to see that quality care is provided. This should be part of a larger program to insure that federally funded mental health centers are truly comprehensive and that they are serving the most seriously disabled.

(4) SSI recipients residing in PPHA's should receive an adequate amount of spending money as an aid to their rehabilitation so that they can participate more actively in the life of the community. Regulations should be developed to assure that this happens.

I hope some of these remarks will be helpful in moving toward a solution of some of these very complex problems. There are no easy answers, particularly since we all realize that resources will always be limited and attitudes toward those with mental impairment change slowly. I feel that the trend

toward treating most of the chronically mentally disabled in the community will continue and that it is desirable on a programmatic basis. PPHA's are not, in many instances, the preferred residential arrangement, but they will continue to be an option for some dependent persons for many years to come. People should be served in PPHA's on the basis of their need and the capacity of the home and other supporting elements to meet that need. Diagnosis of a mental illness, or any other illness, should not be the determining factor.

We will provide the committee with any data we have available and would be pleased to meet with committee staff to discuss these problems in detail.

STATEMENT OF BRIAN HAUGH, DIRECTOR, PUBLIC INFORMATION AND RESEARCH, STATEN ISLAND, N.Y., COMMUNITY CORP.

Ladies and gentlemen, my name is Brian Haugh, and I am here representing the Staten Island Community Corp. We have come to raise several questions regarding the vital issue of domiciliary care for our citizens.

Since April 1974, the Staten Island Community Corp. has been actively investigating the patterns of nursing home and domiciliary care facility ownerships. While we have focused our attention primarily on Staten Island facilities, our efforts have led to inquiries regarding related properties in other boroughs, as well.

Our interest in these institutions began 2 years ago, when Bernard Bergman began an intensified lobbying effort for his Danube Nursing Home (also known as Island View Nursing Home and Richmond Manor—Home for Adults). Bergman proposed to place Department of Mental Hygiene patients, then residents at Willowbrook Developmental Center, into his facility at an inflated annual rate. For, although his contract would call for reimbursement at a rate appropriate for a skilled nursing home, Bergman planned to deliver only domiciliary care.

It seemed to us that Bergman had a facility built as a nursing home, but capable of being licensed only as a domiciliary care facility. And, since there was a limited potential for excessive profit-making in the domiciliary care field, Bergman desired a means of increasing his profit.

The main difference in reimbursement for these facilities lies in the area of medicaid. Since a domiciliary care facility provides only "hotel" services, its residents are usually ineligible for health-related benefits such as medicaid. Even now, the real profits remain in nursing homes.

But, despite this lack of current profit potential, several areas of New York have continued to experience an increase in the number of domiciliary care facilities being constructed in their communities. Staten Island, for instance, has seen a disquieting "boom" in the number of DCF beds available in the borough. No less than five new facilities, with a combined total of more than 1,000 beds, have been constructed on Staten Island during the past 2 years.

There is, however, little need for these 1,000 domiciliary care facility beds in this borough. Quite simply, a population sufficient in number to fill these beds does not exist in Staten Island. Most of these beds, therefore, remain empty. Four domiciliary care facilities, in fact, have not even opened their doors. It is as though they are waiting for their "ship to come in"—a ship bearing medicaid reimbursements and New York State Department of Mental Hygiene contracts.

Many Department of Mental Hygiene patients have already been placed in domiciliary care facilities during the past few years. Several facilities, owned by the Klein family, have filled their beds with a number of former mental patients.

The Klein family are associated with at least six facilities, including two in Brooklyn and one in Staten Island that house former mental patients. These residents, many of whom still require some supervision and out-patient care, have found themselves in domiciliary facilities where they receive little more than bed and board.

The results of such care (or lack of care) have, on occasion, been quite tragic. At Klein's Forest Manor, located on Staten Island, there have been a number of "accidental" deaths where residents fell from windows or rooftops. These deaths have always been classified as suicides.

At Klein's Ocean Manor, in Brooklyn, two former residents were involved in an altercation last year—it resulted in murder. Obviously, these former

patients were in need of therapy and care—the kind they were not receiving in a domiciliary care facility.

Why do tragedies like these occur? The reasons are many, but the fact that these DCF's are not really community living situations is a contributing factor. The State has sought to empty its mental hygiene and retardation facilities following the exposure of conditions in places such as Willowbrook. Unfortunately, instead of developing group and foster homes for these patients, the State has chosen the easy way out—by transferring these patients from a large institution to a smaller institution. And, in mini-institutions such as DCF's, the quality of care is frequently worse than that provided directly by the State.

"PERCHED LIKE VULTURES"

The four vacant DCF's on Staten Island are in close proximity to two State facilities—Willowbrook and South Beach Psychiatric Center. It seems obvious that these buildings are perched like vultures, waiting to snatch State mental patients as they exit the larger institutions.

More disturbing, however has been the continuing efforts of some facility owners to win outright contracts with the State Department of Mental Hygiene. For instance, there is a 300-bed facility on Haven Avenue in Manhattan that has remained empty for 2 years.

Owned by the Walter Scott Co., a realty firm that has garnered the attention of several investigative reporters, including the Village Voice's Jack Newfield, the Haven Avenue facility has been considered as a residential facility for 300 Willowbrook residents. According to a Willowbrook mother who toured the facility, the owners emphasized the chandeliers and Ethan Allen furniture—but said little about available care. "They kept asking: 'Now, isn't this better than Willowbrook?'" she recalls.

Obviously, many developers are looking to the State as a source of bail-out money and contracts for facilities that can't be filled by conventional means. The question of who receives these State patients, and why they are assigned to a particular facility or chain of facilities, remains a most curious and puzzling issue. Certainly, the potential for corruption exists in such State contracts.

We are opposed to this placement of mental hygiene patients in domiciliary care facilities for another reason, as well. The Staten Island Community Corp. has always supported the deinstitutionalization of these patients and their settlement in foster homes and small-scale group homes. Frequently, we encounter neighborhood resistance to a group home's establishment—the local residents fear for their children, their property values, and themselves.

They have heard stories about the patients "running wild" at Klein's Forest Manor, and they fear that sort of atmosphere in their communities. We try to explain the difference between those unsupervised mini-institutions and a group home, but it's a difficult case to make.

Certainly, the questions regarding ownership and illegal profiteering in the DCF industry deserve the attention of this committee. Just as Bergman, Heisler, and Hollander emerged as the heads of nursing home syndicates, certain names frequently appear, in various combinations, as DCF owners.

The Klein and Scharf families, for instance, are involved in a number of facilities. Sidney Pullman, a facility developer who operates under a variety of corporate names, is also heavily involved in the industry—especially in Staten Island. There are even instances of international ownership in DCF's—Broadview Manor, a Klein-Pullman venture, included two residents of Vienna, Austria, as owners.

And, regarding the Haven Avenue facility, there have been ownership changes complicated enough to rival any Bergman property. A half-dozen listed owners (including a carpet company), all residing at the Walter Scott address, have been listed as owners during the past few years.

Considering the rather confusing nature of this industry and its questionable reliance on a State agency for patients, the domiciliary care facility business seems a most appropriate target for this Senate committee's investigation.

Senator Moss. We stand adjourned.

[Whereupon, the subcommittee was adjourned at 4 p.m.]

APPENDIX

LETTERS FROM INDIVIDUALS AND ORGANIZATIONS

ITEM 1. LETTER FROM CHARLES J. HYNES,[1] DEPUTY ATTORNEY GENERAL, STATE OF NEW YORK; TO STANLEY STEINGUT, SPEAKER OF THE ASSEMBLY, STATE OF NEW YORK, DATED MARCH 18, 1976

DEAR MR. STEINGUT: Three days ago, on the very day the Senate was voting upon the budget, I learned for the first time of the proposal to withhold the additional funds I requested to complete my medicaid investigation. I am addressing this letter to you in your capacity as speaker of the assembly to underscore the details of my budget request. I am convinced, based on more than a year of investigating nursing home abuses, that these funds are vital to the success of my office. I therefore request that next Monday, when the legislature votes on certain changes in the budget, you move the restoration of the deleted funds.

I requested funding for 164 additional positions: 96 auditors and 68 additional support staff, including some 30 investigators and 9 lawyers. This addition to my existing staff would provide the essential personnel to carry through to completion several main thrusts of my investigation:

(1) The audit and investigation of reimbursement claims submitted during the past 6 years by all nursing home facilities in order to recapture the funds misappropriated from the State;

(2) The determination of the extent of medicaid fraud in other public health areas;

(3) The development of a permanent fraud control mechanism to prevent any reoccurrence of medicaid abuse once my office goes out of existence.

Unless those objectives are achieved, my investigation will make but a temporary contribution to the sound management of the medicaid system and the provision of decent care for the elderly, and the funds misappropriated at their expense will be beyond our reach forever, as the Statute of Limitations runs.

It has been suggested that a substitute for my proposal would be my use of 120 of the 288 new auditors provided in the new budget for the department of health. I think this suggestion needs careful analysis and clarification. The department of health is only gaining 120 new auditors. The remaining 168 positions will be filled by patient-care survey personnel. Under legislation you passed in the 1975 session, you required the department of health to make at least two inspections annually in order to review the adequacy of care in all residential health facilities. These 168 positions presumably will carry out that obligation. They are not fiscal auditors.

In actuality, the legislature provided the department of health with 120 new auditor positions. These are not a resource we could effectively draw upon to do fraud audits covering 5 years of past reimbursement claims of nursing home operators.

This addition of 120 auditors will give the department of health a total of 204 auditors. Perhaps that figure sounds impressive, but not when it is measured against the department's obligations. Those auditors must:

(1) Audit the current year's returns of all nursing homes and health related facilities, a total of 780 institutions with 1975 medicaid expenditures of $1.25 billion. This requirement was imposed by the legislature in the 1975 session.

[1] See statement, p. 3545.

(2) Review the Blue Cross and Blue Shield audits of 360 hospitals, with 1975 medicaid expenditures of over $1 billion.

(3) Audit the construction under articles 28A and 28B of the public health law of nonprofit health care facilities—both hospitals and nursing homes. The current workload is 120 projects with a total construction cost of approximately $500 million.

(4) Audit all other facilities, such as home health care agencies, and clinics, under the department of health's jurisdiction—more than 400 facilities with 1975 medicaid expenditures of some $500 million.

(5) Address the problems of some 700 medicaid mills, currently operating without any effective supervision.

This is a staggering task that will easily consume all health department audit personnel, both existing and newly budgeted.

OFFICE CONDUCTS SOPHISTICATED AUDITS

Moreover, the proposal to use health staff in my investigations bears no relation to the way my office functions. My office conducts sophisticated fraud audits, which take my staff behind nursing home books to scrutinize vendor dealings and to identify the nature of and participants in potentially corrupt transactions. I must have my own audit staff, trained and skilled in sophisticated fraud audit techniques. Equally indispensable are the legal, investigative, and support personnel who do the field work and develop materials for prosecution.

This request has been carefully structured. It grows out of the experience of my office in more than a year of investigation and prosecution, where I found the common thread among nursing home operations to be a sweeping pattern of improper claims for reimbursement.

It comports fully with the desire of Governor Carey to identify and deal swiftly with misuse of medicaid funds in other health areas, as part of his long term goal of reforming health care management in New York State.

Finally, it was based on my own personal belief that these abuses, which undermine high standards of patient care, must never be allowed to reoccur; that the sequel to this office shall not be another round of scandals once the public expressions of concern have faded. Only the development of an effective and permanent fraud audit unit to supplement the day-to-day work of the department of health can guarantee this.

The size of this budget request is modest, particularly in the context of the size of a $3.2 billion medicaid program. I envision that if this budget request is approved my work can be completed by the spring of 1978, and the diversion of medicaid funds from patient care eliminated.

My proposal offers immediate and concrete fiscal benefits to the State, far in excess of its cost. My audit of nursing homes' past claims would identify a minimum of $70 million in overpayments for recovery and return to local, State, and Federal governments. These millions are to be lost if my request is denied.

The identification of overstated costs in past returns will play a real role in controlling spiralling medicaid costs. Once overstated, many costs remain permanently in a nursing home's rate base, falsely inflating expense ceilings, depreciation allowances and equity returns. Identifying and correcting cost overstatements will insure that future medicaid reimbursement is limited to the amount actually expended on patient care, and reduce the rate of growth of medicaid payments to nursing home operators.

These conclusions are not based upon speculation. Rather, they are founded upon analysis of the findings of our audits to date. My auditors have already identified more than $13 million in overpayments which will be available for recovery by the State. I have received actual restitution, in hand, of $237,000; moreover, additional restitution is to be made in several other cases.

I have extensively detailed my first year's experience and the considerations which led me to make this request for additional staff in my first annual report to the Governor. I have enclosed a copy of this report for your information.

The issue before you here is the extent of our commitment to reform the sagging medicaid system and to provide top quality care for the elderly. Failure

to restore these funds to my investigation would be an unmistakable signal that the State's commitment to qualify medical care for the aging is limited and tentative, as my investigation would then have to be.

I view my duty in light of the goals set out by Governor Carey at the time of my appointment: to fight to change a system that has left thousands of our older citizens to live out their lives in misery; to see that those who have exploited and mistreated our elderly for gain must feel the full force of an outraged people; to insure that institutions built to serve the elderly are scrutinized and reshaped. I have submitted this budget request pursuant to that duty and to carry out successfully the obligations it imposes.

Sincerely,

CHARLES J. HYNES.

ITEM 2. LETTER AND ENCLOSURES FROM CAPT. JOHN J. KELLY,[1] NEW YORK CITY POLICE DEPARTMENT; TO SENATOR FRANK E. MOSS, DATED APRIL 12, 1976

DEAR SIR: Enclosed please find a copy of a report on security conditions in homes that house senior citizens.

This report was dated February 4, 1976.

Very truly yours,

JOHN J. KELLY, *Captain.*

[Enclosures]

POLICE DEPARTMENT,
New York, N.Y., February 4, 1976.

From: Commanding Officer, 101 Precinct
To: Commanding Officer, Queens Area
Subject: Recommendations Re: Security at homes for senior citizens.

1. In response to an incident in which an 82-year-old female was found frozen to death on the roof of a "Health Related Facility," the undersigned directed the 101 precinct crime prevention and community affairs specialists to research problems at senior citizen's facilities.

2. An ad hoc committee was formed, and on February 4, 1976, a meeting of that committee was held in the office of the 101 precinct commander.

3. The attached report contains recommendations formulated by said committee which will be made to the operators and administrators of nursing homes, health related facilities, and adult homes within the 101st precinct.

4. I call your attention to paragraph No. 7 and suggest that the recommendations made in this report be forwarded to the crime prevention section and the legal bureau for consideration of formulation of such legislation.

JOHN J. KELLY, *Captain.*

[Enclosures]

POLICE DEPARTMENT,
New York, N.Y., February 4, 1976.

From: Commanding Officer, 101 Precinct
To: Commanding Officer, Queens Area
Subject: Nursing homes, health related facilities, and adult homes within the confines of the 101 precinct.

1. On January 17, 1976, at a health related facility located within the confines of the 101 Precinct, a resident exited from the roof door, undetected, and was later found dead on the roof. The administrator of this facility stated that he had checked the door alarm that evening before leaving, and it was in good working order. Further investigation indicates that in the year 1975, 67 people were reported lost from nursing homes, health related facilities, and adult homes located within the confines of the 101 Precinct. These were individuals lost over a period of 24 hours, and our reports do not indicate how many others are lost for a lesser time and do not come under the heading of "Missing Persons." Of the 67 reported lost, 30 were from the location where the female was found dead on the roof.

---

[1] See statement, p. 3601.

2. In an attempt to correct existing conditions and prevent further occurrences, Captain John J. Kelly, commanding officer, 101 Precinct, directed his staff to draw together the expertise of certain selected individuals in the community and solicit their help and suggestions. This ad hoc committee consisted of the following individuals:

Mr. Bernard Feuer, nursing home administrator;
Mr. Herbert Rothman, health related facility administrator;
Ms. Anne Wyden, South Shore Rockaway Mental Health Service;
Mr. Antonio Blanco, director, South Shore Mental Health Services;
Mr. Gerald Fried, State Association of Homes for Adults;
Mrs. Gerdi Lipshutz, community liaison, Rockaway Health Council;
Mrs. Pearl Appelman, mayors office, Neighborhood services;
Detective Gary Messina, crime prevention specialist, 101 Precinct; and
Detective Frank Favilla, community relations specialist, 101 Precinct.

3. Generally, these institutions are divided into three categories: Nursing homes; health related facilities; adult, or proprietary homes.

Information relative to these institutions is as follows:

A. Nursing homes:

1. Regulated—New York State Department of Health.
2. Registered nurse—on premises 24 hours per day (one per "X" number of patients).
3. Controlled drugs—dispensed by authorized personnel.
4. Administrator—licensed by the State.
5. Service—complete medical care for injured; mentally retarded; etc.

B. Health related facilities:

1. Regulated—New York State Department of Health.
2. Registered nurse—on premises 40 hours per week, Monday through Friday (one).
3. Controlled drugs—can be possessed by resident, at the discretion of the administrator.
4. Administrator—licensed by the State.
5. Service—supervisory care for ambulatory residents.

C. Adult—or proprietary:

1. Regulated—New York State Board of Social Welfare.
2. Registered nurse—not required on premises.
3. Controlled drugs—held by administrator and brought to the guest at meal time. Not dispensed by a registered nurse or practical nurse.
4. Administrator—not licensed.
5. Service—food, shelter, custodial care, recreation.

4. There are no existing laws or regulations that mandate:

A. Bed checks.
B. Alarm installations.
C. Camera surveillance.
D. Search procedures.
E. Security responsibility.

5. All the above indicates a lack of laws or regulations that are specific in the areas pertaining to drug control, building security, and the safety of the individual patient, resident, or guest. Rules that merely state "The safety of the patient, resident, or guest will be the responsibility of the administrator" are vague and are not generally enforceable. Many administrators have provided security techniques and controls on their own; however, some have been remiss in the matter.

6. Security suggestions:

(a) *Bed checks.*—We suggest bed checks to be conducted by the outgoing and incoming shift, and recorded on a form. Responsibility will then be placed on an individual. We also recommend an additional bed check at 0400 hours. We feel that this is necessary because if an individual does leave one of these facilities unnoticed, the lack of pedestrian traffic on the street will lessen chances that he or she will be observed and reported to the police.

(b) *Alarms.*—We suggest a "proprietary alarm" installation. All exterior doors and doors that lead to sensitive areas should be equipped with alarms that terminate at either a central point at the nursing station, or at another point within the premises. The alarms should be equipped with two reset

switches. One will be at the desk and one at the point of origin. This will force a visual check of the door and area, and prevent the turning off of the alarm without the knowledge of the person at the desk (zoned panel, light indicator, and audio).

Panic alarms should be installed on the roof, terraces, etc. If an individual was accidentally locked out or could not open the door, they could press the panic alarm—which would ring at the desk.

(c) *Surveillance cameras.*—We suggest the installation of closed circuit television cameras with monitors at the control desk to enable constant viewing of selected areas.

(d) *Search procedure.*—We suggest a search procedure form to be instituted. This form will be an itemized search procedure which will list all areas to be searched; who searched them; and, if necessary, the times the police were notified and responded. [See below.]

(e) *Photo identification.*—We suggest the issuing of identification cards to all residents. The cards will have a photo affixed and list address and medical peculiarities. We also suggest a duplicate card to be filed at the location in a resident photograph file, and given to the responding police when a person is reported lost. (Card annexed hereto [See p. 3603.].)

(f) *Windows.*—We suggest all windows to be installed no lower than 3 feet from the floor and constructed in two sections. The lower section to be of tempered glass and of solid construction. The upper section would operate from below by means of a crank and would open out (awning windows). This type of window would provide the necessary amount of illumination and ventilation, deterring burglaries, and accidental falls from windows by residents. (Diagram enclosed [See p. 3605]).

(g) *Locks.*—All exterior doors should be equipped with antipanic locks that prevent entry from the outside without the use of a key, but allows quick emergency egress.

(h) *Security responsibility.*—One individual in the institution should be designated "security coordinator." This person will be responsible for monitoring the internal security of the building, carrying out all mandated security measures, provide security programs unique to the location, and maintain records. Members so designated could be afforded the opportunity to attend the security management course conducted by the New York City Police Department Academy.

(i) *New construction.*—Security procedures and equipment be given major consideration when new facilities are contemplated. Initial installation of such equipment would provide for maximum security at less cost. Providing better security will enhance the image of these facilities and provide greater protection to the residents, and the community.

7. It is further recommended that this department consider the feasibility of initiating security standards for all facilities in which aged or disabled persons reside, or are being treated. These standards would require legislation similar to the regulations promulgated by the New York City Fire Department.

JOHN J. KELLY, *Captain.*

[SEAL]

MISSING PERSON SEARCH PROCEDURE

In an attempt to provide greater security and safety for residents of nursing homes, health related facilities and adult homes, within the confines of the 101 precinct, the following is a suggested systematic search procedure that could be followed:

Date of report_____ Time of report_____

Name of missing person_____ _____
((*Last name*) (*First name*)

Person discovering absence_____ _____

ITEM 3. LETTER AND ENCLOSURES FROM JULIUS J. ROSEN, NEW YORK ATTORNEY; TO SENATOR FRANK E. MOSS, DATED MARCH 31, 1976

DEAR SENATOR MOSS: You will recall that at the conclusion of the hearing of subject subcommittee in New York City on Friday, March 19, 1976, Mr. Stein requested Mr. Kleinman, the administrator of Royale Manor Home for Adults, to have Mr. Dov Bercu Stoleru, the certified operator of the Royale, and also two other adult homes, respond to certain questions set forth and marked on the typewritten sheet which was given to Mr. Kleinman. The subcommittee also asked if Mr. Kleinman could have Mr. Dov Bercu Stoleru submit a financial statement of his operations.

Mr. Dov Bercu Stoleru submitted to our office to forward in his behalf for your subcommittee, responses to those questions. I enclose herewith such responses together with the sheet on which the questions were propounded.

I trust this is the information you require.

Very truly yours,

JULIUS J. ROSEN.

[Enclosures]

QUESTIONS SUBMITTED TO DOV BERCU STOLERU BY NEW YORK ASSEMBLYMAN ANDREW STEIN. MR. BERCU STOLERU'S ANSWERS FOLLOW EACH QUESTION

Question. Mr. Bercu, the building and property that the Paradise Manor stands on is owned by the Gerax Realty Corp. Is that true?

Answer. The building and property constituting Paradise Manor Home for Adults is owned by Gerax Realty Corp.

Question. I noticed that from the lease of August 1, 1974, the Gerax Realty Corp. has the same address as the Paradise Manor. What is the reason for that?

Answer. Since the lease from Gerax to Paradise Manor Home for Adults was a strenuously negotiated arms-length lease, and since none of the partners of the lessee have any connection with or control over Gerax, we can only conjecture that the reason for Gerax having the same address as Paradise Manor is because prior to our leasing this facility, Gerax leased to its own principals who were the certificated operators of Paradise Manor and they merely failed to correct the address when the then-certificated operators were replaced by the new lesses.

Question. Do you personally know any of the partners of the Gerax Realty Corp.? Partners: Jeno Berger, Louis Buchler, Jeno Friedman, Simon Friedman, Bernat Reisman, Armin Reisman? How have you known them?

Answer. I know all of the partners of Gerax Realty Corp. named in your question. However, I know them as former operators and owners of the real estate constituting Paradise Manor. They have never been partners of mine in any business transactions and my dealings with them have been as fellow operators of NNHA's and as lessors with lessees in an arms-length negotiated transaction.

Question. I noticed that from the lease of the building and property that the Ila Adult Home stands on is owned by the 325 West Realty and that 325 West Realty is owned by you. Is that not correct? On August 30, 1970, you drew up a lease for yourself and your wife to lease the property and building. That is, you are both the landlord and the tenant. Does the 325 West Realty Co. buy and sell other real estate (probably not)? Then the sole purpose of this realty company is to lease the property to you? Do you get any benefits from this type of transaction? (Tax deductions?)

Answer. 325 West Broadway Realty Corp. is a wholly owned subsidiary of 401 Boardwalk Corp. which is entirely owned by my wife and myself. Therefore, we do indirectly own and control 325 West Broadway Realty Corp. (sometimes called "325"). 325 does not buy or sell other properties. We would point out to you that the reason a lease was made to my wife and myself for the Ila is because the board of social welfare does not permit a corporation to operate a PPHA. They were fully aware of the fact that this was not an arms-length lease. The purpose of this lease was exclusively to comply with the requirements of the board of social welfare at the time an application was made to certificate our operation of the Ila. The only benefits we received from the transaction indicated was a substantial loss since, as will be explained in the answer to No. 13 below, we did not consider the necessary carrying charges of the property in preparing this non-arms-length lease whose sole function was to comply with the requirements of the board of social welfare. 325 was not formed for the purpose of leasing the Ila to my wife and myself. Instead, it was formed for the purpose of purchasing the real estate and the hotel business in 1969. It was not until over one year later that application was made for certification and at that time the $35,000 lease was executed.

Question. In your August 30, 1970, lease, your annual rent paid to yourself was $35,000. Today, taken from your January 21, 1975, application for an operating certificate, your annual rent is $120,000 paid to yourself. Wouldn't you say that a 34 percent rent increase in less than 4½ years is exorbitant, to say the least?

Answer. The annual rental of $35,000 in the 1970 lease did not include costs of interest, taxes and amortization of the first and second mortgages which alone amount to over $60,000. Between the time of that lease and the new lease which provides a $120,000 rental, the property was sold in an "arms length" transaction and the carrying charges alone are approximately $95,000 to $100,000. There are now obligations of taxes, interest and amortization to the current owners which come close to the new rental. The implication of your question No. 13 is not only erroneous but it is not based on any legitimate and correct facts. We point out to you as was done by our administrator, Mr. Kleinman, that we have every right, legally and morally, to cover all costs and even make a legitimate return on our real estate investment. We are not required to disclose our financial situation to either you or the Board of Social Welfare but we have always done so voluntarily.

With regard to the submission of financial statements, our accountants have advised that due to pressure of year end statements they will be unable to furnish us with same until some time after April 15, 1976. Upon receipt of the statements, we will be pleased to furnish you with a copy of same.

Respectfully submitted,

DOV BERCU STOLERU, *Partner.*

ITEM 4. LETTER FROM ROBERT A. McKINLEY, M.D., ACTING FIRST DEPUTY COMMISSIONER, NEW YORK STATE DEPARTMENT OF MENTAL HYGIENE; TO SENATOR FRANK E. MOSS, DATED MARCH 23, 1976

DEAR SENATOR MOSS: I would like to send along some additional comments which I would have made in response to questioning had time allowed me to speak at the PPHA hearing last Friday. It was a privilege to be there and to hear about some positive steps that were being taken, especially by the police in Long Beach and the Peninsula Hospital in Far Rockaway.

The saturation of areas with health and welfare facilities has indeed been a big problem and one would hope to see this better controlled by having all of them come under the purvue of the health planning agencies.

We are attempting to provide alternatives to the PPHA's but it is a fact that many patients who have had an emotional or menal illness are candidates for admission to them and certainly have the right to be considered along with those who may be suffering from other chronic diseases such as diabetes mellitus, arthritis, and heart trouble. As was mentioned, work is being done to develop community residences (capacity no more than 40) and hostels with capacity of 10 to 20. We were pleased to note that federally funded mental health centers can now secure construction money for hostel development and this effort should be expanded. Money for leasing might perhaps be even more appropriate. It would be advantageous if these mechanisms could be expanded to those areas not covered by mental health centers.

The problem, age old and at times made worse by ill advised placement efforts, of community resistance to the mentally ill in their midst is ever present and not easily countered. The provision of space in public housing for patients returning should also be considered.

The thing to remember in all of this is that the discharged mental patients do not form a homogenous class but are as different as the diabetic in coma and the diabetic able to play professional football.

Sincerely,

ROBERT A. McKINLEY, M.D.

MEDICARE AND MEDICAID FRAUDS

MONDAY, FEBRUARY 16, 1976

U.S. SENATE,
SUBCOMMITTEE ON LONG-TERM CARE
OF THE SPECIAL COMMITTEE ON AGING,
Washington, D.C.

The subcommittee met, pursuant to notice, at 9:30 a.m., in room 318 Russell Building, Hon. Frank E. Moss, chairman, presiding.

Present: Senators Moss, Percy, and Domenici.

Also present: William E. Oriol, staff director; Val J. Halamandaris, associate counsel; William A. Recktenwald, David L. Holton, and William Halamandaris, investigators; John Guy Miller, minority staff director; Margaret S. Fayé, minority professional staff; Patricia G. Oriol, chief clerk; Eugene Cummings, printing assistant; and Dona Daniel, assistant clerk.

OPENING STATEMENT BY SENATOR FRANK E. MOSS, CHAIRMAN

Senator Moss. The subcommittee will please come to order.

We would like to welcome you here this morning as the Subcommittee on Long-Term Care continues its hearings into various aspects of medicare and medicaid fraud and abuse.

At our September 26 hearing, Mr. Edmond Morgan, president of the Illinois Clinical Laboratory Association, testified that he feared the criminal element was muscling into the ownership of clinical laboratories in his State.

He added that $1 out of every $6 in medicaid payments to clinical laboratories was fraudulent. He cited the most frequent abuses among certain quarters of his profession as: (1) performing additional tests not ordered by a doctor; (2) claiming lab tests were performed manually when they were performed by automated machines; (3) billing twice for the same services by falsifying dates; (4) reporting the completion of procedures when the clinic does not have the equipment to perform the tasks.

I asked the staff of the Committee on Aging to make a full investigation into this matter. The investigation focused on the States of Illinois, New Jersey, California, Pennsylvania, and New York. This report, "Fraud and Abuse Among Clinical Laboratories," is the result of an intensive 6-month staff effort.

The report concludes that a small number of clinical laboratories control the bulk of medicaid payments. In New York, 17 labs control 70 percent of the medicaid business. In New Jersey, 12 labs control nearly 60 percent of medicaid payments. In Illinois, 26 labs control over 90 percent of the medicaid business.

Kickbacks Necessary To Secure Business

The report concludes that, at least in the States which come under investigation, kickbacks are widespread among labs specializing in medicaid business. In fact, it appears to be necessary to give a kickback in order to secure the business of physicians or clinics who specialize in the treatment of welfare patients.

The average kickback to physicians or medical center owners in Illinois was 30 percent of the monthly total the lab received for performing tests for medicaid patients. Kickbacks took several forms, including cash, furnishing supplies, business machines, care, or other gratuities, as well as paying part of a physician's payroll expenses. Most commonly it involved the supposed rental of a small space in a medical clinic.

The report concludes that it is apparent that the law passed by the Congress in 1972 prohibiting kickbacks and mandating a $10,000 fine and a year in jail upon conviction is not being enforced.

When I was confronted with an early draft of this report I was shocked by the conclusions that the staff reached in their work with Chicago's Better Government Association. I decided to go to that city and see things for myself, accompanied by Senator Pete V. Domenici, of New Mexico.

I saw the proliferation of so-called medical clinics spreading like mushrooms all over Chicago.

I saw their glaring signs beckoning medicaid patients to utilize health care services.

I visited a postage-stamp-size clinical laboratory which billed medicaid for almost $200,000 last year. There was little in the way of equipment and no lab technicians in evidence. While the owner assured us as to the quality of the work performed, I heard from the owner himself that he chose to send his wife's blood test to another laboratory.

I visited the sparkling new laboratory of Illinois Masonic Hospital and saw its sophisticated new machines—only to learn that the hospital could not obtain much medicaid lab business because of its refusal to offer kickbacks.

Tests Not Ordered by Physician

I interviewed a physician who received over $100,000 from medicaid last year. I asked him to check nine lab invoices presented to medicaid for payment by D. J. Clinical Laboratory of Chicago against his records. The doctor told us that he had not ordered 55 percent of the $259 total in lab tests for which D. J. had billed the Illinois medicaid program on these nine invoices. This same doctor told us that he received a rebate of $1,000 per month from the laboratory in exchange for sending them all this medicaid business. The kickback was disguised as rent for a 6- by 8-foot room in the physician's office. The doctor's rent for the entire suite was $300 a month, and yet he received $1,000 per month for the "rental" of a 6 by 8 room.

Finally, I interviewed a man who owns two medical clinics which received about $300,000 in medicaid payments last year.

This man admitted sending all of the lab business to one company in Chicago. He told us he received a rebate of 50 percent of the amount medicaid paid for laboratory tests which physicians in his clinics ordered for welfare patients.

As a result the work of the staff and the BGA, as well as my own personal investigations, I am even more convinced that the medicaid program is rampant with fraud and abuse.

I renew my pledge to root out those who abuse the system in whatever quarter they may lie. It is my belief that eliminating fraud, abuse, waste, and inefficiency in the Federal health care programs may make it possible for us to move toward that balanced Federal budget that we all desire.

And it will, no doubt, improve the quality of health service to the poor and aged.

The Senator from Illinois, Senator Percy, is the ranking Republican member of this subcommittee. He has engaged in all of these efforts, he has done tremendous detailed work, and I am pleased that he is here this morning. I will ask him if he has an opening statement.

STATEMENT BY SENATOR CHARLES H. PERCY

Senator PERCY. Thank you very much, Mr. Chairman.

I would like to first comment on the rather unusual alliance that has been formed between this Senate subcommittee, a civic organization—the Better Government Association—and the media.

This is a technique that has been developed over a long period of very careful work.

The Better Government Association formed its Operation Watchdog almost a decade and a half ago. I had the privilege of serving as its founder and first chairman.

The Better Government Association at first only screened candidates for political office. We felt at that time there was need for an oversight operation that would look at what government was actually doing at the State and local level in Illinois. I know that there were charges at that time that the forestry department was padded with city workers who were not working. There were strong denials from the city of Chicago.

The simple techniques of having a camera go out and follow these crews to see where they were at what time, how they were using State or city equipment, if it was for their own personal usage, to see the amount of working time they were putting in—revealed the whole story once and for all. Someone said a picture is better than a thousand words. There was no disputing the facts that the camera revealed. Since then, various techniques have been used to simply provide public disclosure to put the spotlight on abuses.

EXPOSURE NECESSARY IN COMBATING FRAUD

We cannot investigate every single thing, but what we can do is spot check enough things so that with the help of the media, who have been extraordinarily cooperative, we can reveal things that will cause a cleanup. I think what has actually been done in nursing homes has been as a result of the exposure that the work of this

committee has given to regulations that were not adequate and regulations that were not being enforced. So I think that this new effort, carefully planned ahead of time by the subcommittee staff, under Val Halamandaris' direction, has proved remarkably successful.

There is no question but that there is a terrific ripoff of the public purse here. It is engaged in by professions that should be above that. They have a code of ethics that should be accepted. But the exploiters have moved in to take advantage of Federal programs in such a way that I do not see how, Mr. Chairman, it is going to be possible for this country to even act on national health insurance.

I think that what we are doing is simply demonstrating that we do not have the capability or the linkage between Government and the private sector that would enable us to move into a program the size of national health insurance. Only if we correct some of these abuses can this be anticipated.

We have here a program that should be administered carefully. The ones we investigated in the clinic setup in Rogers Park that was revealed on "60 Minutes" last night are in an area just a few blocks from where I spent my entire childhood.

The neighborhood in Rogers Park is now densely populated by the elderly. To have these people exploited, and the public exploited in this way, is reprehensible.

As our report indicated, in practical terms, it is possible for any medical testing laboratory, which is so inclined, to bill medicaid for a patient that a doctor has seen, for blood never drawn, for tests never performed, at a rate exceeding costs of four times—and twice the prevailing charge for private paying patients—with the nearly absolute assurance they will not be caught and prosecuted; that is, until today.

I think we have changed all that. Certainly the State of Illinois has been moving very agressively in recent periods, and within recent weeks. There has been an admission by State officials that this investigation has caused them to perform in a way we expected the States to be doing all along.

We do not have Federal enforcement agencies out there; we do not have Federal enforcement officers. We depend on the States to do this, and it is not just the State of Illinois that has not been doing it, it is many, many other States.

Nationwide Pattern Indicated

What we are revealing today is a pattern, not just in Illinois, or peculiar or unique to Illinois, it is a pattern that possibly can be developed, and has been developed in many, many other States. The purposes of these hearings is to alert the country once again that this particular aspect of the care of elderly patients is going to be in the spotlight and that these kinds of practices are going to be stamped out.

Just as I am pleased to report that we are making considerable progress now in nursing homes and in correcting the abuses in this area, which this subcommittee, under your leadership, Mr. Chairman, found some time ago, so too I feel that in this particular area, the

one revealed in the study released today, we can and will make progress. We warmly welcome the active participation of the distinguished Senator from New Mexico, Senator Domenici. He has gone with our chairman to see for himself in Chicago some of these abuses, and can report firsthand. The reports that were made to the Nation last night are not exaggerated; they are factual accounts of the ripoff occurring in this particular activity.

Senator Moss. Thank you, Senator, especially for pointing out that we need law enforcement. Our report has already been filed with the Justice Department here in Washington, and it has been sent also to the U.S. attorney and the State attorney in Illinois. We hope that they will now undertake prosecution for those who are guilty of violating the law.

I am pleased to have the Senator from New Mexico, my colleague, Senator Domenici, here, and I will ask him if he has any opening comments. He was in Chicago when I was there.

STATEMENT BY SENATOR PETE V. DOMENICI

Senator DOMENICI. Thank you, Mr. Chairman. If I appear to be tired, or if my voice sounds tired, it is only because I just got in on what we call the red-eye special, Senator Percy—that means I leave Albuquerque at 2:10 in the morning. I love to spend time in your great city of Chicago, but not at 4 in the morning, and not for 2 hours to wait for another plane. I was, however, pleased to visit the city of Chicago and tour some of the facilities during this recess.

I have a rather lengthy statement that enumerates, Mr. Chairman, the attention that was focused by this committee on the abuses in nursing homes, and I firmly believe that what we are doing today will cause the same kind of reforms in medicare and medicaid.

I think those hearings have served a very valuable purpose. We know those hearings have led to large numbers of indictments and, more indirectly, to expanded nursing home investigations in other States.

Preliminary investigations by the staff of this committee have indicated that fraud and abuse seems to be everywhere. Medicaid in particular has been a "sitting duck." In my opinion, neither HEW nor the States have been equipped to meet this problem, and recently, HEW had less than 10 investigators. The majority of the States have neither audited a single provider for medicaid fraud nor referred any cases of fraud to HEW and the Department of Justice.

I understand, however, in the city of Chicago—perhaps you covered this, Senator Percy—our recent probe is the result of some local investigations, and apparently it will yield some further attack on this problem at the State level.

VISIT LEAVES LASTING IMPACT

What I am saying today, however, is that abuse and fraud in certain programs do not seem to be new for most of the people in this room. We have heard the stories with growing frequency. However, all of the talking in the world cannot equal the impact of one visit-

I recently had an opportunity to visit one of the poorer areas in Chicago, and what I saw troubled me greatly.

I saw the proliferation of medical clinics in dilapidated buildings all over the poverty area, where pornography shops now house more lucrative enterprises. Fancy signs attract the poor and elderly with promise of free care. The care may be free to the poor and aged who have medicaid cards, but it is not free to you and me and the other taxpayers of this country.

This year we will spend some $15 billion on this kind of care, and I for one am in favor of doing all we must. But I certainly am not in favor of what I saw there and what, I speculate, is the real tip of the iceberg.

I am disturbed by many aspects of the problem. For instance, the owner of a so-called medicaid mill may be renting an office space in a building. The building itself may be owned by another corporation, in which the clinic operator has an interest.

The second possible problem is that many clinics are not even owned by physicians, but rather by private entrepreneurs. The recent evidence is that businessmen not only share in the profits of the medical practice, but they also pressure the doctor into taking unnecessary tests to increase clinic revenues.

Yet another factor disturbs me. Most of the physicians working in the clinics are from foreign countries. Many do not have deep ties to the United States, or to any particular city. Many have centers in the clinic as a way to make some money in a hurry and return to their home country. In other cases, the overriding ambition is to open a medicaid clinic or mill of their own as soon as possible.

I am afraid many of these physicians are carrying the mistaken notion that kickbacks in medicaid are the norm of medical practice in the United States.

I am sure that many of them do not even know they are breaking the law when they request or receive a kickback. The possibility for kickbacks in these medicaid mills is endless.

Generally, one person rents the clinic for, let us say, $300 a month, and then subleases a tiny part of this space to a pharmacist who pays him $1,000 a month in rental. The payment is disguised as rent. It is certainly more than that, and I regret to say the example I have just given is not hypothetical.

We visited just such a place, with just such a rental arrangement in the city of Chicago. Senator Percy, when you were there the people operating at that late date last week were not reluctant to give us this kind of information. A person rented a store building for $300 a month. He remodeled it, and then he got $2,600 a month rent from people that served in that clinic as the captives of the basic doctor that operated.

"Ping-Ponging" Becoming Growing Practice

But there is yet another practice that is very offensive that is beginning to be called "ping-ponging," which describes the procedure where the welfare recipient will be seen by all of the practitioners in a clinic irrespective of need.

Typically, a patient will be seen, or at least medicaid will be billed for such visit, by the general practitioner, the podiatrist, the dentist, the optometrist, and the chiropractor—all in one visit on 1 day.

It is apparent to me that something must be done immediately to head off the uncontrolled proliferation of these medicaid mills. After my visit to Chicago, I can understand why some experts project that $1 out of every $5 we spend for health care under medicare and medicaid is ripped off.

Furthermore, I don't think we should stop with efforts to reform medicaid mills. I think the problem of factoring companies requires our immediate attention. A factoring company is a brokerage. Physicians who have large outstanding accounts that are not paid promptly sell these for cash, and I wonder if these factoring procedures are going without any specific laws that govern our small companies, like loan institutions. If they are governed in some States, I wonder why we should be part of a system which is so out of touch with our times that anything like 10 to 15 percent of the money we thought was going to services goes to a factoring entrepreneur. I think this is rampant in the city of Chicago, and whether this committee or the State itself looks into it, it deserves more than just quick attention.

I would also like to mention clinical laboratories. I don't believe I will ever forget the visit to a tiny lab in the back of one of these medicaid mills. This lab does about $200,000 in business from medicaid. You would think with that dollar volume the lab would be buzzing with technicians. It was, in fact, as quiet as a church. There was a distinct lack of sophisticated laboratory equipment. It looked like a rundown high school chemistry lab.

I must say, I would have serious doubts about the quality of the work performed by the laboratory. I wonder if they billed for the tests not authorized by physicians as we found with respect to other labs. I wonder if they are claiming lab tests performed manually when, in fact, they were subcontracted and performed more cheaply by machine at some nearby laboratory. I wonder about the full extent of rebates and kickbacks. Did the lab owner pay them to his suppliers? Did he pay kickbacks to physicians, and nursing homes?

I wonder if the laboratory ever uses the "sink test." That consists of pouring the specimen down the sink and then writing down some meaningless numbers which are sent to the ordering physician. We heard of this being done.

I wonder what percentage of the tests in this facility were inaccurate and what were the consequences to the totally helpless people waiting expectantly for life-or-death news from the laboratory.

Programs Needed, Despite Problems

I wonder why neither the State nor HEW was around to check up on these schemes that I have witnessed. May I suggest at this point that perhaps large spending programs involving both the State and the Federal Governments are not ever going to be efficiently administered? Too many problems, such as enforcement, fall between the

cracks of bureaucracy. Yet the programs are needed. Perhaps medicaid should be run entirely by the Federal Government. In return, the Federal Government should relinquish its control over other programs best handled by the State alone.

I know the Senators here this morning share my concern about this particular scandal. I think that it is time we knew the answers to some of these questions.

I think it is time that the Congress stepped in and ended this gold rush in the area of health care of the poor and aged. As our report says, it is time to stop the hemorrhage of Federal funds.

I plan to do everything that I can to bring about some improvement in the present sorry state of affairs. I want to see for myself how medicare and medicaid are working at the street level. I invite the members of this subcommittee to join me. It appears that we have much to do and we must begin at once if we are ever to control the massive and wholesale fraud that feeds upon the public dollar.

I thank you, Mr. Chairman.

Senator Moss. I thank you very much for your very good work on this committee, and especially your visit to Chicago, Senator Domenici.

As you may recall, we observed in many places what the Senator from Illinois referred to, that the medicaid—or public—charge for a particular lab procedure is often double the price that is charged a private patient. The conclusion is that we are paying twice as much as we should for lab services.

Not only are costs inflated, oftentimes bills were submitted for work not performed. The system encourages this because the doctor sends his slip to the laboratory saying what he wants, and the laboratory fills out another one and sends it to the State for payment. It does not necessarily follow that the two forms are identical. The physician has no way of checking which tests have been billed to the State in his name.

Outstanding Investigative Work

Well, we are very pleased with the investigative work done by the staff in this area of Chicago, Ill., but I do want to emphasize that, although our focus was Chicago, this is by no means the only place where we find fraud and abuse. We will hear later this morning about at least one other State which has had similar problems. I would like to compliment our staff for a very fine investigation, which was carried out by Val Halamandaris, the associate counsel of the Senate Special Committee on Aging, and William Recktenwald, Mr. David Holton, and Mr. Bill Halamandaris, who are investigators. They worked in conjunction with investigators from the Better Government Association of Chicago, to which Senator Percy referred.

I am going to ask Mr. Halamandaris and Mr. Recktenwald to come to the table with J. Terrence Brunner, Douglas Longhini, and Geralyn Delaney.

Val J. Halamandaris is the associate counsel, Senate Special Committee on Aging; William Recktenwald is an investigator for the

Senate Special Committee on Aging; J. Terrence Brunner is executive director, Better Government Association, Chicago, Ill.; Douglas Longhini is an investigator, and Geralyn Delaney is a staff secretary, also with the Better Government Association, Chicago, Ill.

As was pointed out, the Better Government Association is a private, nonprofit voluntary association that was formed in Chicago 52 years ago. We have worked with them several times in the past 6 years.

In this case they were of great service to us; they carried much of the load in this investigation.

Now, we welcome all of you before the subcommittee and, Mr. Halamandaris, I think you should proceed. You will probably want to refer the matter to various members of the panel as you report to us what you found in Chicago.

STATEMENT OF VAL J. HALAMANDARIS, ASSOCIATE COUNSEL, SENATE SPECIAL COMMITTEE ON AGING

Mr. HALAMANDARIS. Thank you, Mr. Chairman, Senators. I must say it is a little bit different sitting on this side of the table, rather than being at your elbow.

I think we have a rather important purpose here today. We want to put into the record all the facts and specifics of the fraud investigation that we have undertaken in the State of Illinois and elsewhere.

You gentlemen have very eloquently indicated the parameters of our investigation and conclusions that we reached. I would like it understood that our purpose is to provide specifics, names, places, and dates. With your permission, Mr. Chairman, I would like to supply at this time a key to our staff report. We did not use names in our staff report, preferring to provide them here this morning, under oath. With your permission, Mr. Chairman, I would like us to be sworn.

Senator Moss. I believe that is an excellent idea, since there may be controversial matters.

Will you all stand and raise your right hand? Do you all solemnly swear to tell the truth, the whole truth, and nothing but the truth, so help you God?

[All witnesses affirmed in the positive.]

Mr. HALAMANDARIS. Mr. Chairman, in the course of our investigation, we examined more than two dozen clinical laboratories in the State of Illinois. We visited some 50 medical clinics, and we interviewed more than 50 physicians in the State of Illinois.

In addition, we also examined whatever evidence we could find in the clinical laboratories in every other State. There are three or four States that have conducted intensive investigations, including the State of New Jersey. It was in this connection that we contacted Mr. Holstein, the executive director of the commission of investigation, Trenton, N.J., who is here today, and who will provide testimony to this committee.

In short, we pulled together all of the information we could find on fraud and abuse among clinical laboratories, and I would like to state our conclusion for you.

"Few Labs Control Most Medicaid Business"

First of all, comparatively few labs control most of the medicaid business in the United States. In New York, 16 labs controlled 70 percent of the medicaid business. In New Jersey a dozen labs controlled nearly 60 percent of medicaid funds. In Illinois, 26 labs control over 90 percent of medicaid funds paid to clinical laboratories. In Wisconsin, 12 labs control the bulk of the business.

Our second conclusion: Competition for medicaid accounts is fierce. It seems that the only way to obtain a medicaid account is to offer a kickback. If you do not provide a kickback, you cannot get services. The greater the kickback offer, the more likely the lab will be to obtain medicaid business.

Three: The average kickback is about 30 percent. This is about the figure we projected for kickbacks between pharmacies and nursing homes in the exhaustive study we completed 2 years ago. Kickbacks can take any form from cash, gifts, supplies, long-term credit arrangements, to the furnishing of supplies and business equipment. Most commonly, the technique used is the "rental" of a small amount of space in a medical center or the payment of part of the physician's overhead or payroll expenses.

The root of the problem is the overgenerous fee schedules for clinical lab services. The fee schedules were established in 1967 when medicaid went into effect and most tests were performed manually.

Since that time, there have been rather major advances in terms of technology for clinical laboratories, and yet the fee schedule has not been changed to take advantage of their technology. Whatever cost savings have accrued—and there have been a lot—simply have not been passed on to consumers. Instead, they have been used for promotion devices or marketing or physician inducements.

In short, they are used for kickbacks.

In order to maximize their ability to succeed in the kickback game, we found that labs have learned ways to increase their income from medicaid. The predominant way of increasing income in order to offer more kickbacks is simply to charge for tests not authorized by the physician.

That is the easiest way. There are other ways, of course, such as billing for component parts of what is a panel of tests. For example, there is a series of tests called SMA–12, and the law and regulations require they be billed as a panel at one set amount. Typically the charge of that panel of tests might be $15; however, for component parts of this series billed separately, the reimbursement for the same 12 tests can go up to $100 or more.

Senator Moss. As I understand it, many of these tests are run by machine and the labs bill separately for component parts, which amounts to claiming the tests were performed by hand.

Mr. Halamandaris. Right.

Senator Moss. They bill each one separately, even though the tests are performed as a panel.

"Mechanical" Tests Billed Separately

Mr. Halamandaris. Exactly, Mr. Chairman, and, as you know, pretending tests are being performed by hand when in actuality they

were performed by machine is another device by which you can increase the amount of medicaid money that you have coming in, to be able to pay out in kickbacks.

We estimated, by conservative estimate, that at least $45 million out of the $213 million in medicare and medicaid payments to clinical laboratories is either fraudulent or unnecessary. This is a conservative estimate because a reasonable case can be made that about 50 percent of current payments are inappropriate. I cite New Jersey's experience where fee schedules were reduced by 40 percent as well as New York's analysis that lab payments could be cut in half by incorporating the principle of regional laboratory programs.

Studies in these States reached the conclusion that the amount of money paid for medicaid, clinical laboratory services could exactly be cut in half. This was also the conclusion we reached in our Illinois investigation. We believe Illinois could cut their current fee schedule by more than 50 percent; or if you want to put it another way, that the State is overpaying labs by 116 percent.

Restating again, if the State of Illinois were paying for lab services performed for its medicaid patients at the same rate that private patients pay for these same lab services, then Illinois would save about half the money it now spends.

A couple of more points:

As you know, in 1972 Congress enacted the specific statute which prohibits kickbacks, making the offer or receipt of money or other considerations illegal, and punishable by a $10,000 fine, 1 year in jail, or both.

When our report concerning kickbacks between nursing homes and pharmacists was published a year ago, Mr. Chairman, we concluded that the statute was not being enforced. It was one of our major recommendations that the Department of HEW and the Department of Justice should begin enforcing the law with respect to kickbacks.

Only One Indictment Issued to Date

I am sorry to say there has only been one case that has ever been brought under the 1972 statute, and that is the indictment issued by the Honorable Sam Skinner, U.S. attorney for the northern district of Illinois, about 2 weeks ago.

Senator Domenici. Do you have the language of that so-called kickback statute in front of you?

Mr. Halamandaris. Yes, sir, we do; and if you have a copy of the report,* it is on page 10.

Senator Domenici. Thank you. You do not have to read it.

Mr. Halamandaris. Yes, sir. It is explicit. In practical terms, what this all means is that any laboratory that is so inclined can bill medicaid for tests for patients the doctors have never seen, for blood that is never drawn, for tests never performed, at a rate exceeding four times costs, and twice the prevailing rate to private patients, and in so doing violate laws and regulations of general and specific application with nearly absolute assurance that they will not be caught and prosecuted.

---

*See S. Rept. 94–944, *Fraud and Abuse Among Clinical Laboratories.*

That is the end of my formal statement, Mr. Chairman.

At this time I would like to introduce Mr. William Recktenwald, who is seated on my immediate right.

Mr. Recktenwald is the chief investigator of the Better Government Association in Chicago. As you stated we have been working together with the BGA for the last 6 or 7 years, and we have the greatest respect for the BGA, particularly for Mr. Recktenwald and for his boss, J. Terrence Brunner, who is also seated here today. We have been fortunate to have Mr. Recktenwald on a leave of absence and working with us for the past 6 months.

I would like to have Bill tell you how he got into this investigation of clinical labs.

STATEMENT OF WILLIAM RECKTENWALD, INVESTIGATOR, SENATE SPECIAL COMMITTEE ON AGING

Mr. RECKTENWALD. Thank you, and good morning, Senators. After our hearing on September 26, Mr. Chairman, we were contacted by Herbert Meyer, a physician in general practice on the south side of Chicago. Some 80 percent of his patients are elderly. More than 90 percent qualify under medicare or medicaid.

On October 14, 1975, at approximately 1:20 p.m., I was present in his office when he was visited by a man who identified himself as Riaz Khan, a sales representative for Westlawn Clinical Laboratory. In the first 6 months of fiscal year 1976, this laboratory received $448,369.50 from the Illinois Department of Public Aid in medicaid funds. I was seated in a closet adjacent to Dr. Meyer's office. From that position I was able to overhear the conversation between Mr. Khan and Dr. Meyer. Mr. Khan offered Dr. Meyer a return of 30 percent of each month's gross billings submitted to the Illinois Department of Public Aid. He said this kickback could take several forms, it could be paid either as a rental to the physician or disguised as payment toward the salary of one of Dr. Meyer's employees.

The following is taken from a sworn statement I prepared at that time [reading]:

Mr. KHAN. It's good to see you, Dr. Meyer. I'm glad you are considering our services.

Dr. MEYER. Well I can't make anything definite until I talk with my lawyer who won't be back until next week. (Dr. Meyer then asked some questions about how soon the work would be completed and how many pick-ups per day were made.)

Will you go over your incentive plans you mentioned to me last time again?

Mr. KHAN. Yes, it's 30 percent—there are several ways to handle it. We can pay your rent or cover your overhead.

Dr. MEYER. Well, my rent here is not very high.

Mr. KHAN. Don't worry about a thing. There are a number of ways this can be handled. We can pay your rent or cover part of your overhead or cash. My chief can give you all the details. I would like to set up a meeting with the two of you.

Dr. MEYER. Well, anything I get, anything coming in here goes on the books.

Mr. KHAN. Don't worry, this is all legal. There are loopholes to every law. We do this with doctors and clinics all over town.

Dr. MEYER. Who else do you handle this for?

Mr. KHAN. Northtown Clinic (and mentioned several others). In three clinics alone we have almost 24 doctors plus about 15 other individual doctors.

Dr. MEYER. Now this 30 percent, is that of gross or net?

Mr. KHAN. It's 30 percent of all your public aid business.

Dr. MEYER. What about medicare? I have many patients on medicare.
Mr. KHAN. I'm not sure about that. My chief could give you details about that and about private work.
Dr. MEYER. Do you bill public aid directly on these things?
Mr. KHAN. Yes; we handle all billing.
Dr. MEYER. I've got to check this with my lawyer before I go ahead.
Mr. KHAN. This has been cleared with our lawyer and everything is perfectly legal.
Dr. MEYER. What is your lawyer's name?
Mr. KHAN. It is a Mr. (F. N. U.) Greenberg.
Dr. MEYER. Let me show you the rest of our operation here. (Both left room)

I exited the closet and met the doctor and Mr. Khan in a different room. The doctor asked Khan if he had met me and Khan said, "No." The doctor said: "Stanley, meet Mr. Khan, who represents a medical laboratory." I asked him if he did any work for dentists and he said, "No." [Continues reading:]

Mr. RECKTENWALD. Herb, is this the fellow you were telling me about last week?
Dr. MEYER. Yes.
Mr. RECKTENWALD. Well, I hope you get things made clear (motioning to Khan), Herb thought you were offering him some type of kickback.
Mr. KHAN. Oh no, just help with your overhead.

Khan said goodbye and started to leave. I said I was going across the street to get cigarettes and left at the same time. Outside the building I spoke with Khan.

We have a photo * here taken by one of the BGA investigators. That is Mr. Khan on the right [indicating]. [Continues reading:]

Mr. RECKTENWALD. You know, you really had Dr. Meyer worried; he thought he might get in some trouble if he got involved with your rebate program.
Mr. KHAN. There is nothing wrong with it, nothing illegal. We just pay part of his overhead, part of the rent, or however he would like it, it just works out to 30 percent of his public aid business. Everyone does it. There is nothing wrong with it. See, when he takes samples and things here, that is wear and use of his office, so we just pay him back by helping with the overhead.

MEETING ARRANGED

With Dr. Meyer's cooperation, and at the suggestion of Mr. Khan, a meeting was arranged on October 20, 1975, with Mr. Trivedi, one of Mr. Khan's superiors in the clinical lab. Present with Dr. Meyer was William Hood,** who was introduced as a replacement for Dr. Meyer's regular attorney who was said to be out of town. Mr. Hood is an attorney who, until December 1975, served as an investigator with Chicago's Better Government Association. He had served as an investigator—consultant—with the Senate Committee on Aging since March of 1971.

Under questioning from Hood, Mr. Trivedi confirmed the offer extended by his associate, Mr. Khan. Trivedi said the arrangement would allow the doctor to get back from the lab 25 to 30 percent of the gross monthly medicaid billing sent to the lab. Mr. Trivedi concluded: "My personal feeling is, that the best way is for us to pay your rent or to pay an employee. It works simplest that way."

Mr. Khan, who was also present at this meeting, expressed amazement, as did Mr. Trivedi, that Meyer had any doubts about the legality of procedures they proposed. They said he was the first doctor who had ever raised any questions with them about this.

—Photo by James Huenink, BGA

Mr. Riaz Khan (right), sales representative, Westlawn Clinical Laboratory, Chicago, Ill.,

Senator PERCY. I think that is one of the concerns I have. You are never able to police something 100 percent. But when you work with a profession which presumably has ethics, then I must ask how widespread is the knowledge among doctors that this practice goes on? How many cases were turned over to the Illinois State Medical Society or turned over to the district attorney, the Attorney General, for investigation?

What goes on here? Do they just silently acquiesce with it and do nothing about it?

Mr. RECKTENWALD. Senator, these statements, together with the number of physicians allegedly involved in a similar practice, the fact that no one apparently had ever questioned the legality of the practice, led the committee staff to again question how widespread the practice of offering kickbacks was in the Illinois medicaid program.

Moreover, the flat insistence by Mr. Khan and Mr. Trivedi as to the legality of this practice caused the staff to recheck the pertinent medicare and medicaid statutes relating to kickbacks. The law is explicit. The law is reprinted on page 10 of the staff report. The identical language can be found in both medicare and medicaid.

In addition to this specific provision, there are other applicable fraud provisions in the United States Code.

CLINIC OPENED BY INVESTIGATORS

Satisfied that the practice was clearly illegal, committee investigators set out to find an answer to an essential question: How common was the practice? An extensive discussion among the staff of the committee led to the conclusion that the best way to test the extent of such practices would be to simulate the actions that would be taken by an independent physician beginning a practice specializing in public aid—welfare—patients. To this purpose, it was decided that a storefront clinic would be opened in an appropriate area. Only from the perspective of the practitioner, at street level, could the committee gain information on the mechanics of these highly questionable operations. And only through understanding the mechanics of the operation could effective corrective legislation be proposed.

A decision was made to go ahead with this plan in conjunction with the Better Government Association—BGA—of Chicago, Ill., a nonprofit, nonpartisan civic organization which has cooperated with the committee for more than 6 years in a number of areas of investigation. Subsequently, due to considerations of time and money, the BGA assumed primary responsibility for setting up and operating the storefront clinic with committee staff present only as observers. Two Illinois physicians cooperated with investigators to the extent of allowing their names to be used.

A small storefront was rented at 1520 West Morse in the Rogers Park area of Chicago. Mr. Holton has a photo* here of the storefront. This neighborhood has the highest proportion of aged in any area in Chicago, and possibly one of the highest in the Nation. A

*See p. 424.

The storefront clinic, located at 1520 W. Morse Ave., Chicago, Ill.—Photo by George Quinn, *Chicago Tribune*

sign announcing the opening of the clinic was placed in the window. A number was listed with the statement: "Professional inquiries invited." Mr. Douglas Longhini, a BGA investigator, posed as a business representative of the two doctors. He is with us today accompanied by Mr. J. Terrence Brunner, executive director of the BGA, and Geralyn Delaney. He will explain what transpired in that storefront clinic.

Senator Moss. Mr. Brunner, please go ahead and carry on the story.

Mr. BRUNNER. Mr. Chairman, BGA Investigator Doug Longhini was present for every meeting; also present was Mrs. Delaney, our secretary who transcribed the conversations in shorthand, and she is also present today.

Senator Moss. Why didn't you just set up a tape recorder?

Mr. BRUNNER. Senator, the Illinois eavesdropping statute prohibits the taping of any conversation without the consent of all parties. We were very careful throughout the investigation never to violate any Federal or State statutes. As an alternative to taping, we had Mrs. Delaney sitting right there across the table from the lab representatives taking everything down in shorthand and then transcribing her notes immediately afterwards.

Senator PERCY. Were they not a little nervous when you were taking this down in shorthand?

Mrs. DELANEY. I was a little worried that they might be, that they might wonder why I was taking all of this down in shorthand, but they did not seem to be.

Senator Moss. They did not complain about it, and you were able to transcribe it later, so anything you tell us under oath is what you transcribed?

Mrs. DELANEY. Yes.

Senator Moss. You may proceed, Mr. Longhini.

STATEMENT OF DOUGLAS LONGHINI, INVESTIGATOR, BETTER GOVERNMENT ASSOCIATION, CHICAGO, ILL.; ACCOMPANIED BY TERRENCE BRUNNER, EXECUTIVE DIRECTOR, AND GERALYN DELANEY, SECRETARY

Mr. LONGHINI. Thank you, Senator.

In December 1975, the Better Government Association, CBS "60 Minutes," and the Chicago Tribune obtained the use of a $400-a-month storefront office in Chicago's Rogers Park community. Located on Chicago's northeast side, Rogers Park is a predominantly white, Jewish and Catholic neighborhood with a substantial elderly population.

The sign we placed in the storefront window advertised that a medical clinical would soon open at that location. Also, in early December, I telephoned representatives of 15 Chicago-based clinical laboratories. I told each lab that I represented two Illinois physicians who were opening a medical clinic in Rogers Park. I informed each that the new clinic would require laboratory services, and I invited each lab to send a representative to the medical clinic to discuss the availability of their services.

Over a 3-week period, I spoke to representatives and owners of 13 different clinical laboratories. After each interview I wrote detailed affidavits of each conversation,* and on January 6, 1976, the conversations were filmed and recorded by CBS's "60 Minutes."

ELEVEN OF THIRTEEN LABS OFFERED KICKBACKS

Of the 13 laboratories I spoke to, 11 labs offered the doctors a kickback or rebate on the dollar amount of laboratory business referred

*See appendix 2, p. 490.

by the medical clinic to the lab. Through additional interviews outside of our clinic in Rogers Park, the BGA found a total of 13 independent clinical laboratories giving kickbacks to doctors and medical clinics. These 13 laboratories alone account for 65 percent of Illinois' medicaid payments to clinical laboratories in 1975.

The kickbacks were all based on a percentage of medicaid billings for a week's or a month's laboratory tests referred by the doctors to the labs. The kickbacks were expressed in terms of percentages of the volume of business given to these laboratories. These percentages varied from 15, 25, 40, to as high as 50 percent of a week's or a month's total medicaid billings for lab tests.

Although these percentages of kickbacks varied, the method of payment was consistent from lab to lab. Each of the laboratories giving kickbacks also offered to rent space at our storefront offices in Rogers Park. The laboratories only required enough space to accommodate a laboratory technician to draw blood. This space could literally be 2 square feet—enough space for a blood-drawing chair—or one small room within the clinic.

The laboratories explained that the rent they would pay the medical clinic for this small space had no relationship to the amount of space used by the lab technician. The rent, as the laboratories proposed it, would be based solely on the volume of laboratory business referred to the labs. The actual rent would be calculated by multiplying an agreed-upon fixed percentage by the volume of business the individual laboratory received during a week or a month. "It is just our way of saying thank you," one lab owner said.

If the volume of medicaid laboratory business was $4,000 a month at our clinic in Rogers Park, and the fixed percentage was 50 percent—two laboratories offered kickbacks of 50 percent: United Medical Labs and Northside Clinical Labs—then that month's rent paid by the clinical laboratory to the doctors would be $2,000.

This could be $2,000 a month—$24,000 a year—for 2 square feet of space. Again, the whole storefront rented for approximately $400 a month. But as Ernest Villanueva of Ridgeland Medical Laboratory pointed out: "I don't have to know how much rent you are paying for the medical clinic."

The laboratory representatives said that the amount of rented space—the number of square feet actually utilized—would not increase if the volume of business increased. However, the amount of rent paid by the laboratories would increase as long as business did. Mr. Robinson of Chicago Medical Laboratory said: "The rent is adjusted to whatever the volume is." Robinson advised me not to worry about the amount of space the laboratory would rent at the medical clinic. Robinson told me, "It's just a box"—referring to the rented space—"and you don't worry about a box. What you're interested in is the money coming out of that box every month."

Although the laboratories would send the medical clinic weekly or monthly rent checks through the mails, some of the laboratories would not, initially, sign legal leases or subleases with the medical clinic. Robinson of Chicago Medical Laboratory felt that, "Leases are used only if you have a good thing going."

However, most of the laboratories offering kickbacks suggested or agreed to signing a legal lease or sublease. Mr. Simos, owner of Claremont Laboratory, said that a rebate based on a percentage of the volume of medicaid business was "dirty business; the doctors would get clobbered"—apparently if Government officials investigated. Mr. Simos assured me, however, that: "As soon as the State sees a rental agreement, they stop questioning the doctors." Simos offered our clinic a 30-percent kickback disguised as rent.

The rental scheme appeared to many laboratory representatives to be their private loophole to avoid charges of kickbacks to medical clinics. For example, William Footlick, owner of Division Medical Laboratory, said our clinic could receive between $5,000 and $6,000 a month from Division for the rental of one blood drawing chair. When I asked Footlick if this was a rebate on the volume of business, he said: "A rose, is a rose, is a rose. I look at it as a rental." Footlick had earlier assured me that "I"—Division Labs—"am able to be looked at * * * by the FBI; this is not frowned upon. It is a percentage as a starting base"—from which to establish the initial rent.

Senator PERCY. How did the doctors handle this on this income tax return?

Mr. LONGHINI. I was told by the laboratory representative that he handled this as business income.

Senator PERCY. As income?

Mr. LONGHINI. Yes, that it would be declared.

Senator PERCY. No questions, to your knowledge, have ever been raised as to why you would have income sometimes exceeding the amount of the basic lease?

Mr. LONGHINI. They were not worried about that.

Senator DOMENICI. Could I ask you a question regarding payment of percentages? Does the clinic pay this amount, whether they get paid or not? Do they pay it regularly, or do they pay when they get paid?

Mr. LONGHINI. They pay it regularly.

Senator DOMENICI. On invoice amount, rather than amount received?

Mr. LONGHINI. Yes, on invoice amount.

Senator MOSS. Was there any discussion which invoice would be controlling—the one the doctor sent to the lab or the one the lab sent on?

Mr. LONGHINI. The one the lab sent out to the State to be paid. I do not think they expected an invoice from the doctors. They just directly billed the State.

The laboratories offering to lease space at the medical clinic said that they would reevaluate the lease every month, or 3 months or 6 months. Footlick of Division Laboratories said: "We pay a flat rental and determine that rental on the first month's volume. The rental must stay as a fixed amount; but rent is reviewed every 3 to 4 months." Mr. Simos of Claremont Laboratory said that he would renegotiate the lease every month. And finally, Nemie LaPena of Northside Clinical Laboratory said—we have a picture:* "I don't

*See p. 429.

know how legal"—it is—"but rental agreement could say that we are giving you back 45 percent of the volume of the medical tests ordered." LaPena told me that Northside presently maintained this type of sublease with a number of medical clinics.

Clinic Is Dropped if Volume Stays Down

There can be pressures applied when it is time to reevaluate the lease. According to Judy Pedgrift, a representative of United Medical Laboratory: "If a clinic's volume goes down any month, I call up the clinic and tell them they had better get the volume up the next month. If the volume stays down, we have to drop the clinic."

Simos of Claremont Laboratory told me that he would like to have our medical clinic see between 15 to 20 patients a day, and order two or three tests per patient. Simos left a clear impression that two or three laboratory tests per patient was the minimum. Simos gave me this advice, "What the hell, go ahead and order 10 tests"—for a patient—"just go ahead. The State pays for it."

The stress on volume can invite the medical clinics and doctors to milk one sector of the community as much as possible and ignore other people in need of competent medical services. Riaz Khan, a representative of West Lawn Medical Laboratory, urged this business tack.

Khan said: "The secret to the success of a medical clinic is in promotion." Khan asked me if there were any black neighborhoods near our clinic in Rogers Park. I said there was a relatively small black neighborhood about five blocks north of the clinic. Khan said: "Well, that is where you should promote; the money is where the blacks are. There isn't any money in these old people"—referring to Rogers Park elderly population. "Old people are dried up. There's not much blood you can draw out of old people."

Thank you.

Mr. Halamandaris. Mr. Chairman, if I could be allowed to continue for a few more minutes, I would like to tell you what we did next. We had found some 13 or 14 laboratories we knew offered kickbacks. We then went to the controller's office and constructed a profile of all the physicians who used those particular laboratories.

We then had a reasonable idea that the 100-some doctors we found using these labs received kickbacks.

At the same time, we integrated into our list the names of Illinois physicians who made more than $100,000 from medicaid last year. We then selected about 50 physicians for interview.

On the morning of January 7, the investigators from the Special Committee on Aging and the Better Government Association began visiting physicians all over the city of Chicago.

On that day alone we interviewed about 25 physicians. Our search for the physicians led us to the clinics that Senator Domenici described. Some might have once been taverns, others were once pornography stores, but now signs heralded free medical care for the fortunate with medicaid cards.

Senator Domenici. The sign also states: "We accept green cards."

Mr. Halamandaris. Yes, and the signs are so vivid they fairly grab you off the street.

—Photo by Carlos Contreras, BGA

Mr. LaPena said, "You'll make lots of money . . ."

Senator Moss. And the green cards is the medicaid cards?

Mr. HALAMANDARIS. Exactly. Although the card might be different colors in different States. To begin with, we had the idea that a lot of physicians were ripping off the system, so we confronted some of them, including a physician named Jose Hilao.

PHYSICIAN ON SALARY BY CLINIC OWNER

Dr. Hilao threw us a curve. He indicated he did not know anything about kickbacks. He said he was on salary, and he worked for somebody, and he referred the committee staff to Mr. Robert C. Parro, who owns two clinics in the city of Chicago. We visited Mr.

Parro and he was very candid. He told us two clinics received about $300,000 of medicaid funds the previous year from the department of public aid. He candidly admitted he was receiving a rebate from the laboratory; that he now uses the Park-Dewatt Laboratory; and that his present rebate arrangement amounted to 50 percent of the amount his clinic charged medicaid for lab services on behalf of medicaid beneficiaries.

He added that he was troubled by this arrangement in that some might think it illegal.

The other point he made is that he did not go to the Park-Dewatt Laboratory out of greed, but that they had the best program in town.

Mr. Chairman, you visited with Mr. Parro, and I am sure you recall his admission that the laboratory he had been using, the Northside Medical Laboratory, in fact, offered him a kickback of 55 percent, which he turned down, because he was unhappy with the quality of their services.

Senator Moss. Yes, I recall he said that.

Mr. HALAMANDARIS. The man was very open and concerned about the practice. The point he made was that the law should be clarified. In his view, the statute is not explicit enough.

Speaking as an investigator, as a lawyer, I think it is very specific. Later, we interviewed a clinic administrator, Mr. Roy Oliver, the gentleman we have identified in the report as Mr. F.

Senator PERCY. May I ask—if we have a key to the report, why was it necessary to print the report with "G, H, Y," and so on? As long as you have a key, why could you not print the names?

Mr. HALAMANDARIS. The decision was made that we should not use names until we testified under oath, and only after the particular parties who would be named could be notified. We have done that. The chairman sent a registered letter to all of the parties involved, indicating their names might be mentioned, telling them that they might want to have somebody here to listen to the testimony, that they are entitled to appear to answer our charges today at this same hearing, and that they are entitled to have counsel appear with them.

Senator PERCY. This procedure you adopted is a good procedure, and certainly provides an opportunity for the laboratories and the individuals named in the allegations and against whom charges are made to answer them. It might be well for you to determine now whether there is anyone who has appeared, who is in the room today, who is named in the report, and who has received notification from this subcommittee, to see whether or not it is their intention or desire to testify today. We can then determine how long the committee will be holding this session.

OPPORTUNITY GIVEN TO DEFEND AGAINST ALLEGATIONS

First, I would say the statute is explicit. I would like to read the and we will then ask if anyone who has been named in here in any way would care to come forward. It is in order to avoid the problem that you alluded to, Senator, that we decided to go this route, to make sure everyone was appropriately notified with time to come here if they wanted to come here.

Mr. HALAMANDARIS. I would like to supply for the record the experience we had together, Senator Domenici and Senator Moss, in visiting Dr. C.

Dr. C's name is Julio Lara-Valle, and we visited Dr. Lara-Valle at his establishment, which was a converted tavern that he made into a medical clinic, for which he is paying a rent of $300 a month. The doctor is receiving a rent of $1,000 a month for a closet-size room in this clinic.

Mr. Chairman, you remember this as well as I do. Why don't you tell us of your views. You went in, and you can verify this.

Senator Moss. Yes. This is one more experience that I had personally, and Senator Domenici was there in this crowded little place, several people waiting to see the doctor. We talked to the doctor awhile, and he took us back to see the room that he was subleasing. A young girl was in there. There was a blood-drawing chair, another chair, and a small table that was not even 3 feet square. Finally, there was a little cabinet with some needles and syringes in it. That is all there was there. The entire room might have been 4 by 6 feet.

She could hardly turn around in this space that was there, but the doctor received $1,000 a month in "rental" for this little room.

When we asked Dr. Lara-Valle about it, he tried to justify it as legitimate rental. He said the $1,000 helped defray some of the cost of remodeling. He was also receiving $1,000 a month from a pharmacy that was subleasing space in his clinic.

Mr. HALAMANDARIS. The lab that paid him the money was the D. J Medical Laboratory of Chicago, and I understand the company is now no longer in business. However, the doctor told us that in the interim he had secured a similar arrangement from another laboratory.

Senator Moss. He said, "D. J. flew."

Mr. HALAMANDARIS. Yes. He did not complete the idiom. He said "flew," instead of "flew the coop."

I would like to turn to Mr. Recktenwald who will help place things into perspective.

Senator PERCY. Mr. Halamandaris, before you turn it over to Mr. Recktenwald, I would like to again put on notice those who might be in the room, representing any of these labs or clinics, that criminal actions may have been committed. I think the people who believe that there is no criminal action here are rather naive. I have here the Internal Revenue Code that would seem to be very clear in its intent and purpose. Will you describe for us what you mean by a kickback?

Mr. HALAMANDARIS. I would like to answer the question in two parts.

STATUTE EXPLICIT ON DEFINITION

First, I would say the statute is explicit. I would like to read the two lines from the statute. This will answer the first part of your question, and then I would like to respond in detail to the notion that these payments are not kickbacks but are really fair rentals.

First of all, what the statute says is that whoever furnishes items or services to an individual in the medicaid program, who offers,

solicits, receives any kickback or bribe in connection with furnishing services, or making payments, rebates, or any fee charge with individuals, for furnishing such services shall be guilty of a misdemeanor.

Senator PERCY. Will you read the last sentence, describing what a kickback is, to be certain that the use of the term "kickback" you have been using is in accordance with the Internal Revenue Code description?

This is the Internal Revenue Service Code 162(c), subparagraph 3. "For purposes of this paragraph, a kickback includes payment and consideration of the referral of a client or customer."

Now, does that describe what you have all been talking about as a kickback?

Mr. HALAMANDARIS. Exactly.

Senator PERCY. And that fits it?

Mr. HALAMANDARIS. Yes.

Senator PERCY. So the code refers to it, and the Congress wrote this into the code in 1970 at suggestion of the Senate Finance Committee staff. It was done anticipating this possible situation. The code is very, very clear, and I think, and I suggest, Mr. Chairman, that we refer this entire testimony to the Internal Revenue Service and request they investigate whether or not these labs have been taking kickbacks as business deductions, and, therefore, might be in criminal violation of the Internal Revenue Code. That is why I ask the question: How do you suppose they are handling these on the income tax? Are the clinics handling it as income? Are the labs handling it as a business expense?

Mr. HALAMANDARIS. Good question.

Senator Moss. This will be referred to the Internal Revenue Service. We have referred it to the Department of Justice already, but we will specifically send it to the IRS as well.

"KICKBACK" DEFINED

Mr. HALAMANDARIS. I would like to make the second point, and Senator Domenici had discussion with me on this very point. The question is: When is it legitimate rent, and when is it a kickback, and how do you tell the difference between the two? That is the legal issue we are addressing. The Senator from New Mexico echoed my belief when he said if it is a flat fee, and reasonable, and it does not change from month to month, the labs may have a reasonable argument that this is a rent; however, if the flat fee rental is renegotiated frequently, then it is entirely a kickback.

Second, if the rent fluctuates from day to day, week to week, with the volume of business they send medicaid, then obviously it is a kickback.

It is a kickback if the amount of money paid, cash or other considerations, just happens to equal a set percentage of medicaid business, that is, if it just happens to equal 30 percent of your payments, then to me that is a kickback. If the payment is a precondition of getting a physician's account, then it is a kickback.

It is a kickback if it is undisclosed. It is a kickback if the space is small or unused, that is, if the space is one foot square in the middle of a hallway.

To me it is a kickback if the space is never used by the laboratory; more important, if the rent that is paid is inappropriate or excessive as compared with the cost of rental of space in that geographical area and similar real estate values.

Senator Moss. You have addressed yourself to this rental technique but there are, of course, other ways of paying kickbacks; such as paying part of the overhead, paying for the doctor's employees, supplies, equipment, and things of that sort.

Mr. HALAMANDARIS. Yes.

Senator DOMENICI. Mr. Chairman, I might just add a few words on the last statement. I certainly, at this point, do not agree that just because the rent would be fixed, that it would be legal, and that it would not be a kickback.

Senator PERCY. If there is no relationship to space.

Senator DOMENICI. Precisely. It seems to me we are on the tip of an iceberg, which is far bigger than just labs. Everyone of these little clinics has a pharmacy in it; a little tiny cubbyhole. One told us that he paid $1,000 a month rent even though he only served the doctor there—that is one full-time doctor. I think that we will find this is as broad as there are kinds of services that can be rendered in one of these clinics. I would assume that you would find it in the delivery of frames for glasses and shoes from podiatrists—we saw advertisements for a podiatrist. That region of your State, Senator Percy, will have the best feet in the United States. They approved podiatrists, and they had an ad on the wall with brochures how you could take care of your feet, because podiatry is not bound by some of the rules as the medical people are. Six different brochures were available for the people to take home so they would know how to get their feet checked.

That would require another service. I am sure they sell them something.

ONE PHARMACIST DISSATISFIED

One pharmacist, he would not tell us, but he was delighted to see a representative of the U.S. Congress. He said the whole pharmacy business is changed by this setup. "I do not like what I am in," he said:

> I happen to be here because the typical pharmacy does not work any more. You have to be inside one of these little places, and you just serve these doctors. I do not like what I am, but it is the only place I can make a living at this point.

We asked, "What rent do you pay?" On that question, he said, "It is my business." As I recall, however, with regard to the other pharmacists, I think your last statement is relevant, Senator Percy, with reference to income tax violation—violation of the IRS Code. One pharmacist is paying $1,000. That has gotten to be big business.

He just works for pharmaceutical companies. That company owns 11 of those little leases, and he is the pharmacist in charge.

It would be interesting to see what that owner of 11 pharmacies in all of these little clinics gets.

What other kind of relations do they have? Their "business" is all predicated upon what I perceive as a whole new subculture for the delivery of medical care and drugs and services to the poor people under medicaid and the medicare program.

Mr. HALAMANDARIS. I have a personal observation. We are constantly confronted with some pharmacists, or other provider telling us, as staff members of this committee, or telling the Senators, that the kickbacks and fraud are rampant. We have often been in the position of persuading this provider to come forward and tell the Senate what is going on so we could learn first-hand about fraud and abuse. We then could be able to make the necessary changes in the laws. Despite our coaxing, we are constantly confronted with people who are greatly reluctant to talk, because they will probably lose the accounts they now have and probably will be ostracized by the members of their own profession.

Nevertheless, we have insisted in the past that people come forward to testify. But the people named as receiving kickbacks have not been prosecuted. Nothing has happened. We published this in a beautiful little report on nursing home kickback 2 years ago, and we sent the specific cases of abuse to the attorneys general in 4 or 5 different States. However there were no prosecutions brought. This is a syndrome we have seen so often. Someone testifies before the Senate committee, and the next thing that we know we have some association's representative, who comes up here and says: (1) "we are all against crime, but I am happy to tell you, we do not have much of it in our profession," (2) "these are isolated instances; they do not represent the general pattern of the industry," (3) "they are made by representatives who do not know what they are talking about."

"PROBLEM HAS REACHED THE CRISIS STAGE"

The importance of our investigation and testimony today is that we have demonstrated, once and for all, that fraud is rampant, and it is blatant. Providers came off the street offering us money, so we can put to rest any misgivings we had about the extent of this problem. The problem has reached the crisis stage with wide implications for all of us as taxpayers and as users of medical services in the United States.

Senator PERCY. You really have to go to those parts that are actually fraudulent, that are of criminal violations, and that is just a tip of the iceberg that is perhaps characteristic of our society.

We saw, for instance, what I consider to be illegal—but how do you catch them—the practice among nursing homes of a group going in and buying the nursing home, and then setting up a corporation just to own it and renting it at an exorbitant rent to the operators of the nursing home. It is the same people; they just have two heads, and they have an income or two, and it is difficult to detect.

The other areas where they are selling services to these people, whether it is head to foot, and so forth—I was struck this weekend by talking with a constituent, who had recently moved from a

Scandinavian country. I said: "How do you like this country?" and he said:

I thought America was a healthy country—a healthy people—but I have been looking at television. It is unbelievable. You have more aches and pains, ailments; and you have more things that you can take for them. It must talk people into feeling ill, to just sit there, hour after hour, and see all of the things that go wrong with you.

I imagine, if you start pushing foot care, you can boom that business. There is money to be made, just as they say in this report in Rogers Park. There is money to be made among the old people, particularly if you are old and a member of a minority group. Those are the groups these vultures move in on and exploit. We have a part of our society that we have a real obligation to do something about and focus in on.

Senator DOMENICI. Specifically, with regard to Mr. G, in your report—I was told about him, but did not meet him. It is clear he is not a medical doctor.

Mr. HALAMANDARIS. That is correct.

Senator DOMENICI. It is clear he owns a medical clinic in the usual sense of ownership.

Mr. HALAMANDARIS. Correct. He has registered that ownership with the city of Chicago.

Senator DOMENICI. It is clear he receives, as owner, some substantial portion of what the Government pays as medicaid that is related to the amount of professional services rendered in those clinics.

Mr. HALAMANDARIS. That is my understanding.

Senator DOMENICI. Is there anything in our law that makes that illegal? Is there anything in our law that says we cannot pay an entrepreneur for delivery of what a doctor is supposed to deliver? We never intended that. Is it illegal or not?

Mr. HALAMANDARIS. I do not know that there is any specific statute. The canons and ethics of the American Medical Society do prohibit it.

Senator DOMENICI. He is not a doctor. He is not bound by the canons. They cannot expel him.

SOME PHYSICIANS VICTIMS OF ENTREPRENEURS

Mr. HALAMANDARIS. Yes, I am aware of that problem. We found this again and again. Many foreign physicians were employed by laymen who, to some degree, took advantage of them. These entrepreneurs are in this business to make money. They push these poor doctors to order tests that are not necessary in order to increase the amount of money coming into the clinics which they own.

To me, this is a reprehensible practice.

Senator PERCY. Do you want to identify the Robert Taylor Medical Center? This is one of the largest public housing projects in this country—just block after block of high-rise public housing. I presume Mr. Robert C. Parro operates in a medical center, in or near those public housing buildings.

Mr. HALAMANDARIS. Yes, Mr. Parro is the owner. He has a clinic in this area. I forget the exact address, but it is on Chicago's south side.

Senator PERCY. The south side?

Mr. HALAMANDARIS. Yes.

Senator PERCY. And he has another clinic called the Professional Medical Center. Where is it located?

Mr. HALAMANDARIS. On 51st Street. I do not have the exact address in front of me.

I would like to shift for a brief moment, from the subject of kickbacks to the question of the quality of services performed, and to some of the ways in which laboratories increase the amount of medicaid reimbursement, making kickback more possible. I am talking about such things as billing for tests which the physicians have not authorized.

I would like to turn it over to my colleague, Mr. Bill Recktenwald, who has some charts and presentations.

Mr. RECKTENWALD. One of the things we determined, was the fact that there were two pricelists. These labs would charge one amount to private patients and a higher amount to those in the medicaid programs for the same service.

Now, this practice violates HEW regulations that require all bills submitted to medicaid to be the usual and customary charges for these services.

HEW regulations further state if there are two pricelists, the lower of the two will be charged and used as the basis for reimbursement.

DOUBLE PRICE LISTS

The BGA examined more than $10,000 worth of paid bills for 14 selected tests. These 14 tests are ones which we knew had two prices. This information came from salesmen visiting the Morse Avenue Clinic. In order to arrive at $10,000 in paid bills for these 14 selected tests, considerably more than $10,000 worth of bills were examined.* Mr. Bostick of the Library of Congress has prepared some charts for our use. As you can see, D. J. Laboratory was paid by the State $9,274 for certain tests that would have cost a private person only $3,514.50—a 164-percent overcharge to the State.

The Northside Clinical Laboratory was paid $10,749 for tests which would have cost the private sector only $4,864—a 121-percent overcharge to the Government.

The Norsom Medical Reference Lab, which has some 60 nursing homes as their clients, was paid $10,696 for tests which would have cost the private sector only $4,978.50, or a 115-percent overcharge to the Government.

The Illinois Medical Laboratory was paid $12,997 for tests for which private patients would have paid $6,190, or an overcharge to the Government of 110 percent.

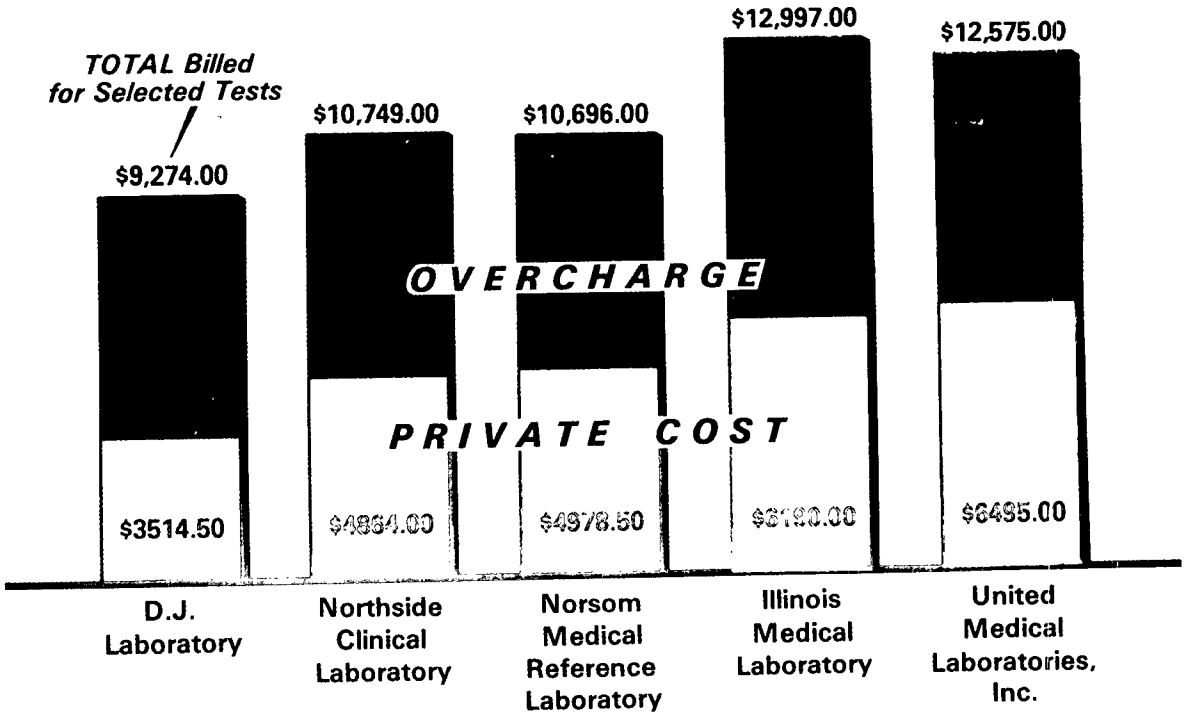
The United Medical Laboratories, Inc., which is an Illinois corporation, was paid $12,575 for tests which would have cost the private sector $6,495, or a 94-percent overcharge.

Senator MOSS. Do every one of these have two pricelists—the private and the medicaid?

*See chart, p. 437.

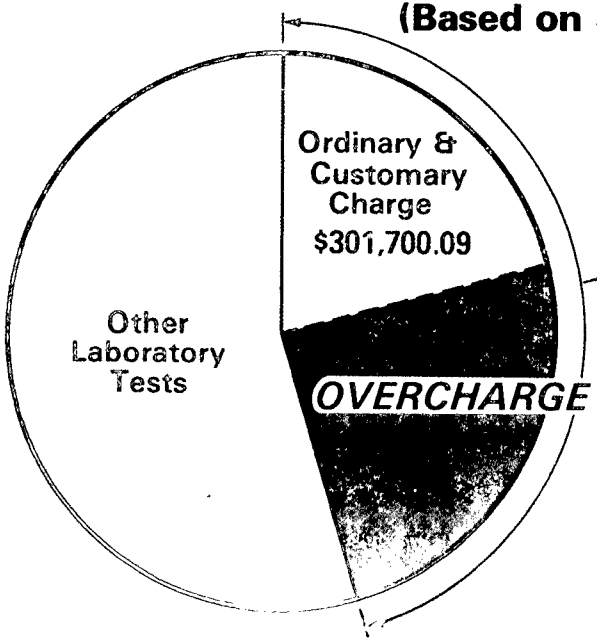
70-482 O - 76 - 3

Overcharge to Medicaid for Selected Laboratory Tests



PROJECTION OF OVERCHARGES OF FIVE CLINICAL LABORATORIES

(Based on 8 Percent Sample)



Selected Laboratory Tests
$655,869.76
(45.5%)

$1,441,472.08 (Paid by Medicaid for the first 6 months of F.Y. '76)

Mr. RECKTENWALD. Yes, sir, most of them do. The bulk of the information about double pricelists was gained by Mr. Longhini and Mrs. Delaney in the Morse Avenue Clinic. They would be told about the double pricelists by the laboratory representatives.

During the first 6 months of fiscal 1976, these five laboratories were paid some $1,441,000.

From the information gained in the examination of these selected tests, it is our projection, based on an 8-percent sample—which is a very large sample—that the State of Illinois has overpaid $354,000-some-odd to these laboratories just for these selected procedures. Again, we are talking of only these five laboratories for a 6-month period. It is a very large piece of the pie that we have overpaid these people.[1]

Now, in still another area of fraud—laboratories charging medicaid for tests not ordered by physicians—we pulled some 20 bills at random submitted by D. J. Laboratory on behalf of Dr. Bascon. We have these bills on charts.[2] These are actual bills.

Senator MOSS. These are facsimiles of the bills themselves.

Mr. RECKTENWALD. Yes; Xerox copies.

Perhaps, Mr. Chairman, if you want to go over and look at them closely—it is difficult to get them blown up.

Senator MOSS. I just wanted to see how they are laid out. They are all on a regular form.

Mr. RECKTENWALD. Yes; if you will notice the date of service on that particular bill,[3] the date of service on the left-hand column——

Senator MOSS. Yes, February 5.

DOCTOR NEVER SAW PATIENT ON STATED DATE

Mr. RECKTENWALD. According to the doctor's record, that patient never visited the doctor until February 17. It would be difficult for the doctor to draw blood on a patient who never visited the doctor.

Out of these cases, the doctor had no record of having any patient visit him anywhere near the time when the alleged service was given.

In one case, they had no record of a patient with that name. In two cases, the first visit to the doctor was after the alleged date of service. Then in many of the cases, the doctor found that he had not, in fact, requested these tests, nor had he received any results.

Senator PERCY. I wonder if Senator Domenici could mention publicly the possibility which he mentioned to me, that in some of these cases where it says no tests requested, it may reflect a change of attitude by the doctor now that the heat is on.

Senator DOMENICI. I saw a couple of these, and there is no doubt in my mind to begin with, that the labs can, and probably are, adding tests that are not ordered by the doctors; however, I think that there is another possibility that the doctor, by the time he starts interrogating, begins to get kind of queezy and scared about this whole process. He went through a file that we cannot even understand, and said, "I did not order these three."

---

[1] See chart, p. 438.
[2] See appendix 1, p. 469.
[3] See p. 476.

I think they could have developed an attitude of being scared of the whole process, and they will fudge on the short side, and pin it on somebody else. I think that is a possibility, although we will never be able to find out, because the doctor's name is on each of these. From what I saw, there is no way you could distinguish the point of time and the laboratory tests, either written in or checked in. It is always the same kind of script; it is pretty hard to tell.

You could just see him flip through, and say, "I did not order these four." I think it is a possibility—it is a real possibility that——

Senator PERCY. In your judgment, is it a possibility?

Mr. RECKTENWALD. Senator, on these particular bills, the doctor made a very careful examination. He first checked the patient chart to see the date on which he saw the patient—this also notes what exams or tests that he had requested—then he checked the patient files to see what results he had received from the laboratory. Then, as a third check, the doctor kept a book in which he entered the date, name of patient, and type of test requested for every lab test. So at least on these 20 bills, chosen at random, we have not one or two, but actually three different cross-checks.

There are also other strange things about the tests. For example, when the doctors' records show that only a urine sample was taken and the lab bills for blood tests. Out of the 20 bills, only 1, No. 15,* had all the tests billed for been requested by the doctor.

The total amount that was billed to medicaid, just on these 20 tests, was $855; the amount that was actually referred by the physician was only $119, leaving $766 of extra charges that were just added on.

Senator PERCY. Were you able to determine that the established quota of two or three tests per person was pretty well maintained? Was there any greater frequency of the number of tests to medicaid patients as opposed to those patients who had to pay the bill themselves?

MEDICAID MORE LUCRATIVE THAN MEDICARE

Mr. RECKTENWALD. During one of the conversations that Mr. Trivedi and Dr. Meyer had during the investigation, Trivedi suggested that medicare patients not be given tests. "Don't test those people. There is no money to be made on medicare. The money is to be made on medicaid." That is what I overheard Trivedi say.

Dr. Meyer said that may be good business, but certainly not good medical practice.

Senator PERCY. Did you discover a disparity in the number of tests based simply on the ability to get paid for these tests?

Mr. RECKTENWALD. You can see in some of these bills, in their eagerness to make money from the State, that they had actually listed CBC—complete blood count—twice on the same bill.

It gives me the impression that someone was just writing things down—taking test names out of the blue.

*See p. 483.

Mr. BRUNNER. Senator, the random sample that Mr. Recktenwald is talking about is not just an isolated incident. Working with the subcommittee staff, we went out in teams to visit clinics.

I was on a team that visited a clinic in Bridgeport where Mayor Daley lives. It was a very well organized clinic. The doctors had everything computerized. Their records were excellent. The doctors very carefully looked at the bills we gave them and in many instances, after checking them against patient records, they said, "No, I did not order these tests run."

One doctor had the best looking records I had ever seen, and we found instance after instance of laboratory tests billed for that were never ordered by the doctor. This is in the area on the southwest side of the city of Chicago, a white area as opposed to the black area that Mr. Recktenwald was talking about. I think the conclusion you might draw is that the practice is very widespread.

Mr. RECKTENWALD. Some of the inappropriate tests ordered like EKG's, with interpretation, for people diagnosed as having arthritis, and sickle cell tests being ordered for middle-aged white adults. This leads us to believe that people were just writing in test names, and that these tests were never requested, they were never made, and results never given.

Senator PERCY. I would like to have you amplify, and perhaps our chairman would be interested in this matter. We, many times, have maintained that we are not trying to set up a Federal bureaucracy to oversee these programs. We delegate this to the States, and we pay the costs. The States have a great responsibility to carry this out.

Now, can you indicate whether, say, in the State of Illinois, any State agency ever did routinely have the kind of audit that would determine whether or not the bills are valid bills, whether they actually were submitted for services that had been rendered?

Has there been any audit of that kind that you know of?

NEWLY ASSIGNED INVESTIGATORS

Mr. RECKTENWALD. There are about 50 public aid investigators that have been assigned to check the medical laboratories in Illinois.

Senator MOSS. Just recently assigned?

Mr. RECKTENWALD. Yes, sir.

Senator PERCY. How many were there before?

Mr. RECKTENWALD. To my knowledge, none, sir.

Senator PERCY. So this is a recent flurry of activity, since the investigation has been carried on.

We are pleased that they have responded, but I cannot help but ask the question: Why was it not done before?

Is there any incentive for the State to properly audit, so long as they are being reimbursed by the Federal Government anyway? Is there a State cost involved?

Mr. HALAMANDARIS. On the contrary, Senator, there is little cost to the State.

As you know, Congress, in its infinite generosity, decided in 1972 that the Federal Government would pick up 75 percent of the cost

of moving each State into the computer age. So if you are a director of a health department or welfare department, you know that the Federal Government will pay 75 percent of the costs of installing and operating computer systems. The Federal Government also pays 100 percent of the cost of making State inspections, which relates to the quality of health services. Senator Moss has a bill pending that would provide 100 percent Federal funds for that purpose and to help States accomplish annual audits.

There are 50 percent matching funds available now for auditors. As we learned in New York, we recover anywhere from $6 to $15 for every $1 invested in the salary of auditors so there should be an incentive for the States to set up surveillance units.

Senator Moss. But States do have to monitor the medicaid program to insure there is no fraud or abuse.

Mr. HALAMANDARIS. Yes, the State has a vested interest in doing so and indeed, they are required to do so under the medicaid regulations.

Senator Moss. You recall, when we heard testimony relating to the fraud squad in Michigan—they were doing some auditing and follow-through, providing a good example for every State in the Union.

Mr. HALAMANDARIS. The fraud squad is really a superb group. The official name is Post-Payments Surveillance in Michigan, and their computer system is cranked up to the point where they pay 97 percent of the bills within 30 days, and the computer automatically catches any sort of suspicious practices. They have a group of investigators that follow and visit people suspected of ripping off the system, and they have recruited a fantastic amount of money. For every dollar they have invested, the surveillance—the fraud squad—has recovered $6.

I think there is a precedent that other States ought to follow there.

Mr. BRUNNER. With respect to Senator Percy's question regarding the program in Illinois, the BGA delved into the State's effort to combat fraud prior to this investigation, and the State of Illinois had roughly 100 welfare inspectors.

INSPECTORS NOT CONSCIENTIOUS

Now, before Mr. Recktenwald came to work for the Senate, he had investigated those inspectors to find out what they did. Mr. Recktenwald's investigation found that many of them were retired Chicago policemen. Many have never bothered to even come to work, except to sign in. Very often, they spent the day shopping, or working in another job, and those roughly 100 investigators only filed 200 cases against individuals who should not have been on the welfare roles. Illinois' fraud inspection was a complete misuse, at least in my judgment, of the people who were on the staff to do investigative work. They were concentrating on individual cases of welfare recipients as opposed to concentrating on large scale welfare fraud. One of the conclusions of this investigation is that much money in Illinois—we estimate some $3 million of $11 million in this lab area—is being ripped off. This $3 million could help an awfully lot of people and make health care delivery more efficient.

Dollars that you are appropriating for health care in Illinois are not getting to people who need help. Very often, as you know, Sen-

ator, the suggestion has been made by the Illinois Department of Public Aid that there is no real welfare fraud, and only a small number of offenders. Yet these labs that we investigated—about thirteen labs that do a $6.19 million business—are a fair sample.

We are talking about 65 percent of the lab business, so the fraud we encountered is anything but an isolated instance.

Senator PERCY. Were these retired policemen? Were they supplementing their income? Were you able to determine if they were political workers as well?

Mr. BRUNNER. I think there was no doubt those people had political clout and got jobs on public aid because of their expertise as Chicago policemen.

I think in my experience, you just cannot go about this sort of thing that we are talking about, catching people doing what we are talking about, with people who have this sort of background. You need accountants, you need lawyers, you need people who have expertise, in order to find these sort of crimes.

Since IDPA took over this program in January 1975, as opposed to the county running it. Mr. Trainor has gone out of his way to try to remove these people and get people who are qualified to do this sort of work. I think there is a realization on his part that it has to be done, and certainly the program is much better than it was before.

Mr. Trainor has told us, and he told Mike Wallace on "60 Minutes," and as John Simon who wrote the report testified before you, there was no fraud inspection program in the Illinois Department of Public Aid until the fall of 1974.

John Simon told me as recently as last week that the investigators he found in the department of public aid, when he went there, were unable to find their rear end with both hands. That is what Mr. Simon said about the investigators that he found in the Illinois Department of Public Aid.

FULL COOPERATION NEEDED

I have a lot of respect for him. I worked with him in the Department of Justice. He knows how to conduct fraud investigation and I think he did his best under the circumstances. But certainly you cannot approach these problems without full cooperation from State government.

Senator PERCY. Could Mr. Recktenwald comment on the political activities of the personnel that were paid, as investigators? They apparently did not really work for the Public Aid Department.

Mr. RECKTENWALD. What we are talking about, Senator, is an investigation which took place in spring and summer of 1974.

It turned up evidence that Cook County public aid investigators, who are supposed to track down welfare cheaters, are themselves cheating the public.

Loafing and inefficiency on the Cook County staff resulted in operational costs three times higher than the court fines finally recovered. In 1972, 73 public aid investigators managed to find only 222 prosecutable cases out of nearly 1 million welfare recipients in Cook County.

The Bureau of Special—public aid—Investigations in Springfield, with a nine-man staff, referred more cases a month for litigation than the Cook County unit did with 73 men. The Springfield bureau is responsible for investigating welfare fraud in every county in Illinois except Cook.

Many of the Cook County investigators were spending their working hours taking leisurely lunch breaks or running personal errands.

On one occasion, BGA staff members saw a public aid investigator head for home at 10:30 a.m. He remained there most of the day, after visiting a bank and a grocery store. Investigators are paid to work until 4:30 p.m.

Another investigator was seen driving 1 hour each way in order to eat his lunch at home. Members of the Cook County unit are allowed 45 minutes for lunch.

Senator PERCY. What was the source of funds being used to pay these investigators?

Mr. RECKTENWALD. This is when they merged the county welfare department with the State.

Senator PERCY. Could the staff determine for us what the source of those funds would be?

Mr. RECKTENWALD. Yes.

Senator PERCY. We know the way the game is played in Chicago. Workers are held to very high standards of performance on election day, but what happens to the public aid patients? What happens to the fraud and all of that? Is it none of their business?

This is a very callous operation. I certainly am pleased to get your reports that this has been discovered and that was the situation you found, and that they are doing something about it.

Senator Moss. Is there any licensing or inspection system of the laboratory equipment itself?

LUNCH, BLOOD SAMPLES SHARE REFRIGERATOR

I am thinking about the lab where you opened the refrigerator and there were blood samples and a bottle of milk, and a sandwich—all of this together—and it sort of made me feel I would not want to get my lab work done there.

Senator PERCY. You would not want to get your sandwich there either.

Mr. RECKTENWALD. Senator Moss, as you know, we discovered that one lab owner was sending his wife's blood sample out to another laboratory. There is a licensing regulation for the clinical laboratories. I believe that in Illinois they are licensed by the State department of registration and education, and that they do have periodic inspections. There is a requirement that the lab owner or supervisor be a medical doctor, that he has certain expertise in biochemistry, but they have perhaps only one inspection a year.

Senator Moss. They must not have very rigid inspections to permit these little holes in the wall to operate and, as I said in my opening statement, we visited the laboratory over at the Illinois Masonic Hospital, just blocks away, but they can't get any medicaid business.

Mr. RECKTENWALD. Even the labs that you and Senator Domenici visited, I am sure, would be sparkling clean on inspection day.

Oftentimes in Illinois people know when the routine annual inspection is coming, and they are prepared.

Mr. HALAMANDARIS. I think we are getting close to wrapping things up, but I would like to explain this item here.

At the present time, there are many laboratories that charged $25 for so-called combined SMA–12, and also for determining the albumin-globulin ratio. That sounds complicated, but it is really not.

When the SMA–12 is run, they charge $15 as posted, and all that is necessary is to take this little computer and pull the tab until the two readings are in line, and you have the index. [Illustrating] I just earned $10. The State of Illinois, in its wisdom, is paying $10 for this procedure, and a lot of other States are too. This helps make the point that the fee schedules in some States are really antiquated.

Mr. Holstein in his statement suggests they are in the horse-and-buggy era with lab fees. Most of them were promulgated in 1965 and 1967 and 1970, when medicare was first coming into operation.

These fee schedules do not take into consideration the new technology, which makes it possible to perform tests for 7 cents or less.

Let me give an example. The cost of performing a simple urinalysis is 7 cents to 25 cents. What is involved is taking a little piece of paper, sticking it in the urine, and reading it, that is, comparing it to a color chart. That process costs 25 cents, let us say.

A private patient in Illinois pays about $3 for this test. However, the State of Illinois, more specifically medicaid, is charged $10 by some labs and more for this simple procedure.

I do not know why Uncle Sam has to get clipped. I do not know why we have to assume that money which is paid—paid in Federal funds—like medicare and medicaid belongs to nobody and is up for grabs. To illustrate the point, let's talk about the cost of a urinalysis. In Illinois, the cost to do it is 25 cents; private patients are charged $3; and in medicaid, the Government is charged $10.

AMA VIEWS SOUGHT

Senator DOMENICI. Mr. Chairman, I must leave. Could the staff give us one additional item which we might all be interested in? Would you furnish us with the American Medical Association's rules regarding the ethics that pertain to the subjects which we have been discussing? I think it is very important that we consider sending them some of this record so that there is no claim that we have not asked them to do their share.

I think in the area of rebates, in the area of kickbacks, in the area of fee splitting, there are some rather precise rules and regulations that govern the majority of medical doctors. Those who deliver the services—I do not think much of what we have found here is condoned by most doctors, or even would be ethical at all in the bona fide medical profession. I would like to have that information, with some analysis by the staff, so we could look at it, Mr. Chairman.

Senator Moss. We would be glad to do that.

Senator PERCY. I think that would be very valuable, and you might also go one step further, and determine what the AMA—in this case, the Illinois State Medical Society—feels its responsibility is.

There is no group that is less governed than the AMA, and there is no practice being carried on that calls for more intervention than this.

Certainly the members of the board of directors of the Illinois Medical Society that I know would just be as appalled as we are at these activities.

Here is a profession that has every reason to want to see these practices and abuses stamped out. They know that it is a small proportion of their total profession, but it is there, and it has got to be rooted out.

To amplify on what their responsibility is or should be: Once the ethics have been established, do you know if they have any self-policing within the profession?

Mr. HALAMANDARIS. In fairness, I should say Mr. Roger White, the executive director of the Illinois Medical Society, had contacted the staff in late October and met with Mr. Recktenwald and myself.

He was very helpful and very cooperative. He indicated from the beginning that these practices have existed, they were widespread, that a number of physicians were taking advantage of the system, but they wanted to do everything possible to eradicate fraud and abuse. I wanted to put that on the record.

Senator PERCY. I am delighted to hear that. I would not be surprised at all—once they see a problem, they usually jump right on it.

Senator MOSS. Now that the report is completed though, we can send that to him and ask for a response in writing from their governing body.

Mr. HALAMANDARIS. With your permission, Mr. Chairman, I would like to ask the Better Government Association to submit for the record the sworn affidavits they made concerning what took place at the storefront clinic, the people that came in, the conversations that took place, the solicitations that were made, et cetera, and have them printed as part of the hearing record.

Senator MOSS. You can do that; fine.

Mr. BRUNNER. We have those records.*

Senator PERCY. I have just a couple of questions. Can you give us some idea as to what portion, what percentage of independent clinical labs are engaged in the questionable, if not illegal, practices you have been assessing here today?

SMALL PERCENT CONTROL BULK OF MEDICAID BUSINESS

Mr. HALAMANDARIS. The percentage would be small. I would say, if we have 3,000 independent clinical laboratories in this country, about 150 would control the bulk of the medicaid business. That would be my estimate.

Senator PERCY. But of those that control the bulk, what proportion do you think are engaged in these fraudulent practices?

Mr. HALAMANDARIS. In my opening statement, I made a pretty flat statement that you apparently must give a kickback to get the account, and it is my impression that laboratories which garner large

*See appendix 2, p. 490.

amounts of medicaid funds must be offering a kickback. I am sure there are exceptions, but this is my basic assumption. For the most part it appears that if you have got medicaid money coming in, you are giving a kickback.

Senator Moss. Could I intervene? In my visit to the Masonic Hospital laboratory, the director there was pointing out that they had unused facilities.

They could have run another shift—a whole shift of people—and these facilities were not being used up to the maximum by any means. Yet they got very little—almost no medicaid business. Although the administrator was rather carefully choosing his words, he indicated that a major reason was because they had no kickback or inducement system.

Senator PERCY. That is why they are not getting the business.

Senator Moss. Yes.

Senator PERCY. How is it that these phony rates can be established? They are not based on costs. It seems that they have this tremendous leeway, that they charge these vast amounts, mainly paid by Uncle Sam. How can it be that the fee gets established and is paid? Cannot an audit by a competent Government agency determine there is no relationship between costs and charges?

Mr. HALAMANDARIS. We have something called the HEW Audit Agency. They conducted only about 200 medicaid audits since the beginning of the medicaid program. From our records and our analysis, the agency did only one audit of the clinical laboratories since the medicaid program began in 1967 to the present. The one audit of laboratories concerned the State of Illinois. It was released in 1974.

That audit is referred to in our staff report. There has been very little attention paid to the matter. As I noted, the fee schedules have not been evaluated by the States or by the Federal Government for years.

I would suggest very strongly that it is time that this were done. Perhaps the impetus might a letter from the two of you to Secretary Mathews of HEW, suggesting that we need to take a look at these fee schedules.

California has 28 separate fee schedules for clinical laboratories, if that is not confusing enough.

Senator PERCY. I would suggest, Mr. Chairman, that this be done either through Secretary Mathews or we might send a letter ourselves directly to the Governors of every State.

MILLIONS OF DOLLARS COULD BE SAVED

They are all working under tremendous pressure on budgets, and here they are paying 50 percent on costs. Here is an area where they can pick up millions of dollars just by simply enforcing a law, as it now exists.

If you can use the term "loophole" that exists in the law, is it your judgment, Mr. Halamandaris, that the loopholes have been plugged by the Federal Government? We do have an Internal Revenue Code adequate to cover this, but are we not enforcing it?

Mr. HALAMANDARIS. Yes. As I stated, the kickback statutes are explicit. There are Federal and State laws that apply. There are IRS

provisions. There are even general fraud statutes that apply. They could not be any more explicit. But none of these laws are being enforced.

Senator Moss. Well, we thank you very much for this report and for your testimony. Especially, I wish to commend the Better Government Association for their fine work and in aiding our committee staff so well in this matter.

In fact, it was indicated that, because of the funding problems, the Better Government Association, along with CBS, did pick up the costs—the rental, and whatever else was needed—to get the storefront set up. I want to express my appreciation and thanks to them.

It is a chilling report, and its implications are vast. The report is certainly welcome because it will enable us to get at fraud and abuse in medicare and medicaid. We thank you all very much.

Mr. HALAMANDARIS. Thank you, Mr. Chairman.

Senator Moss. Now, I want to give an opportunity to anyone who is named in our report, or any lab representative who desires to address the committee. If they want to refute the charges made, they have that opportunity now. The labs will be sent a copy of this transcript to which they may respond in writing.

Is there anyone that would like to come forward now?

Mr. FULLER. Mr. Chairman, I am not one of the persons that you have referred to here, but I am Garret Fuller, attorney here in Washington, representing the organization that has been known for many years as United Medical Laboratories. They are based in Portland, Oreg. It is not the United Medical Laboratory, the one that is referred to here, that was referred to last night on the "60 Minutes" show. I would like the record to show that, with your permission.

Senator Moss. It certainly will be, and I am glad you have come forward to make that clear; we do not want the two companies to be confused.

I think Mr. Recktenwald did clarify the record and I am glad you are here to underscore that the lab referred to earlier is not United Medical Laboratories which are based in Portland, Oreg.

Mr. FULLER. That is correct.

Senator Moss. Thank you very much.

Mr. FULLER. Thank you.

NO REBUTTALS TO ALLEGATIONS

Senator PERCY. I think the record should show, Mr. Chairman, that a full opportunity was provided. We offered to provide this forum to anyone against whom allegations have been made, either on the "60 Minutes" show last night, or in the news media, or in the comments made today. No one has come forward to testify on his own behalf, or on behalf of any of the organizations they represent.

I thank you very much, Mr. Chairman, for establishing that.

Senator Moss. Thank you.

Mr. FULLER. Thank you, Mr. Chairman.

Senator Moss. Now we have two very good witnesses to hear yet, and we will shift the locale from Illinois to New Jersey.

Senator PERCY. I am happy to have it shifted, Mr. Chairman.

Senator Moss. I saw you smile.

Mr. Frank L. Holstein, executive director, Commission of Investigation, Trenton, N.J., and Mr. Anthony Dickson, counsel, Commission of Investigation, Trenton, N.J.

Will those gentlemen please come forward?

STATEMENT OF FRANK L. HOLSTEIN, EXECUTIVE DIRECTOR, COMMISSION OF INVESTIGATION, TRENTON, N.J.; ACCOMPANIED BY ANTHONY DICKSON, COUNSEL

Mr. HOLSTEIN. Mr. Chairman, I am Frank L. Holstein, executive director of the New Jersey State Commission of Investigation.

With me, as you mentioned, is Mr. Anthony Dickson, also of our commission of investigation.

Senator Moss. We are pleased to have you before the committee, and we looked forward to your testimony.

You may proceed.

Mr. HOLSTEIN. Mr. Chairman, members of the committee, on behalf of the New Jersey State Commission of Investigation—SCI—I would like to thank you for this opportunity to appear before you and testify about the commission's investigation of independent clinical laboratories receiving moneys under the medicaid program. We believe we can be of particular assistance in this area because, to our knowledge, we were pioneers in undertaking such an in-depth probe into the practices and procedures of independent clinical laboratories and in exposing the abusive methods by which some of those laboratories can literally bilk the medicaid program for high profits which flow directly to the laboratory owners and, via them, also to some of the doctors supplying those laboratories with medicaid-funded test business.

Perhaps more importantly, our investigation demonstrated that the shortcomings and loopholes which had developed in the New Jersey Medicaid program presented a virtual open door to those laboratory owners to profiteer at the taxpayers' expense. Therefore, I will be putting considerable emphasis in my remarks today on how the lessons learned in our investigation have pinpointed the areas of controls and surveillance capabilities which must be improved to prevent further abuses.

NEW JERSEY PROBE NEARING COMPLETION

By way of background, let me state briefly how this particular investigation of independent clinical laboratories and the ensuing public hearings were developed by the New Jersey SCI. Early in 1975, the commission began an evaluation probe of the entire medicaid program in New Jersey, a probe which was mandated to us by request of the Governor. The SCI proceeded to set up three investigative teams to look into the three principal medicaid areas: nursing homes, hospitals, and purveyors of services other than nursing homes and hospitals. It was the last of these three major areas which covered the flow of medicaid dollars to independent clinical laboratories, doctors, pharmacists, and others. Having held several interim public

actions during this overall investigation of medicaid, we are nearing completion of that probe and hope to make a final report and recommendations to the Governor in the months ahead.

As to the other purveyors-of-services phase of our medicaid investigation, one of the earliest signs detected by us as to possible abusive practices related to the operations of some independent clinical laboratories. With the cooperation of the New Jersey State Medicaid Division, it was quickly determined that 12 of the 184 independent clinical laboratories in New Jersey were receiving more than half of the $2.2 million in medicaid funds flowing annually to all of those laboratories. Attachment A* to this statement lists medicaid reimbursement to those 12 laboratories. Additionally, data obtained from that division's bureau of surveillance indicated patterns of apparent irregularities in the practices of those laboratories which were doing an inordinate amount of medicaid-funded business. Accordingly, an in-depth investigation of those laboratories was immediately authorized by the commission.

The practices and procedures of independent clinical laboratories have quite technical aspects which can present confusing complexities to a layman without expertise in this particular field. It should be remembered these laboratories perform a wide variety of tests, the results of which are used in the diagnosis, treatment, and prevention of disease. Fortunately, the commission was able to enlist the cooperation of the New Jersey State Health Department which assigned personnel with expertise in the clinical laboratory area to assist the SCI in this investigation.

The expert personnel made field inspections of the laboratories, analyzed many hundreds of pertinent documents, and then provided the SCI with comprehensive written and oral reports. On this solid foundation, the SCI then used its investigative expertise and its full subpena and witness immunity powers to develop facts about abuses of the medicaid program in the following principal areas:

Subcontracting Reaps Large Profits

(1) The reaping of windfall profits by some small and largely unautomated independent clinical laboratories which marked up by as much as 300 percent or more the cost of tests performed on a subcontract or referral basis by large, automated laboratories and then collected the markups from medicaid. The facts gleaned in this area as well as other areas discussed below were instrumental in documenting that the New Jersey medicaid fee schedule for reimbursing independent clinical laboratories was much too high and in need of revision downward.

(2) Numerous instances where some independent clinical laboratories were able to overbill medicaid for certain tests and even render false test claims, without these practices being detected at either the prepayment or postpayment processing levels.

(3) Rebate or kickback type practices whereby some laboratories either returned a set percentage of medicaid test fees to some of the doctors referring business to those laboratories or indulged in some

*See p. 467.

other financial-inducement-type payments to the doctors under the guise of paying for "rented space" or "office salaries" in the doctors' offices.

The transcripts of our public hearings have been made available to the committee. They contain numerous specific instances of the type of abuses summarized above. Those transcripts contain sworn testimony and reference to substantial documentary evidence which detail how specific laboratories, middlemen, and doctors engaged in the abuses of the system. That same extensive factual picture in the transcripts demonstrates that the abuses were not sparse but rather general and quite widespread in nature. Relying on those transcripts as the full and complete record of our investigation, I will review only some sample instances of various abuses in this statement, so that members of this Senate committee will have a capsule picture of how medicaid can be specifically bilked by independent clinical laboratories.

In the area of huge markups by some of the laboratories, it should be noted that in New Jersey, medicaid establishes a maximum fee level at which it will reimburse independent clinical laboratories for the tests performed.

We have submitted as an exhibit to the staff of this committee a schedule of these maximum reimbursement levels of certain tests.*

In one particular instance, we addressed ourselves as did this committee staff, to the SMA–12 test.

We showed a relatively small unautomated laboratory which was paid a maximum of $12.50 by medicaid for allegedly performing an SMA–12 test.

We uncovered a relevant document and we demonstrated that in actuality the test was never performed by this small laboratory, but was referred to a larger automated laboratory, specifically the Center for Laboratory Medicine, Inc.

This highly automated lab billed the small lab only $3.50.

Excess Payments Should Be Eliminated

Naturally, of course, the smaller lab turned around and billed medicaid $12 for basically doing nothing but providing a delivery van, and it was our suggestion, Senator, that serious consideration be given to cutting out the excess profits of the middleman.

There was absolutely nothing at that time in New Jersey medicaid plans or rules and regulations to preclude this particular kind of price gouging tactic, so you had an instance here where the State system almost constituted an open invitation for middlemen and smart money entrepreneurs to move into this particular area, and to exploit the system to a maximum profit in the manner I just described.

Also, relevant to this area of overbilling, our hearings demonstrated frequent practice by some of the laboratories of taking a single test, which produce the multiple component part results, such as the SMA–12 test. Mr. Chairman, I think you described that very well earlier this morning; we like to call that our a la carte, so that

*See attachment B, p. 467.

really you can get the whole meal, so to speak, for one very low price. But the labs were very good in the razzle-dazzle of overbilling, and would break down basically a very simple chemical and mechanical process, and charge on an a la carte basis, sometimes tripling and quadrupling the total bill in that way.

As to a specific example, the director of the Park Medical Laboratory in New Jersey conceded under questioning at hearings in New Jersey that his relatively small and unautomated laboratory did indulge in the overbilling practice of collecting for medicaid for the component parts of the multiple results tests including, in one instance, where they took seven parts of an SMA–12 test, which was performed by this Park Medical Laboratory by a big automatic lab for a mere $3.40. By this a la carte billing that we have described, he was able to bill medicaid a total of $58, by the technique that you have heard earlier this morning that you have referred to.

Obviously, that is almost five times the maximum permissible reimbursement for SMA–12 tests, and also, of course, very disturbing, Senators, that the medicaid system in New Jersey was not structured in a way to have the kind of fine filters and screens to select out this kind of semifradulent overbilling and protect the taxpayer's dollars. Since the time of our hearing and the inception of the work of this Senate subcommittee, there have been changes in the regulations that make it explicit that this is a "no-no" in the medicaid program.

There was also very significant and troubling exploits and abuses of the system in another way. This is documented as a specific example of how this Park Medical Laboratory, and some other laboratories, billed and received from medicaid $15 for each German measles test, which is known as the Rubella test. But in fact and in truth, the test had not been performed by this small and independent laboratory.

Lab Charges for "Free" Testing

The fact of the matter was that the tests had been performed free of charge for the Park Medical Laboratory by the New Jersey State Department of Health, because the New Jersey State Department of Health runs a public laboratory wherein it does testing for certain kinds of contagious and public health type diseases, and German measles is one of them. Some of the smart money boys in New Jersey in the laboratory business were sending their tests to the State owned and operated lab, where it had been done for free, and then, of course, they had turned around and billed medicaid for it.

The officials or, rather, representatives of this laboratory conceded at our hearings that this is a regular practice, so this is not an isolated example.

In the third and final area of our work—to wit, rebate or kickback type payments—we heard testimony from laboratories who do not indulge in these practices. We are referring to testimony from businessmen, physicians, and technicians who have formed and put into operations the large, very professional, and highly automated laboratories in New Jersey.

For instance, Dr. Paul Brown, who is the head of MetPath, Inc., operates a very large and highly automated laboratory, which made

it straight, and his staff of salesmen and employees were under strict orders and policy directives not to take kickbacks, not to offer kickbacks, and not to offer rebates.

As a very tragic result of this very straight policy by this laboratory, they simply were not able to get medicaid business from many of the large medicaid mills.

The testimony from Dr. Brown was that the kinds of inducements and kickbacks that some of the unscrupulous labs entered into were in several forms. First, there were the cash payments, which were euphemistically referred to as "greens," which are made by the laboratories, either directly to the doctors, or indirectly to the doctor via an office manager or nurse.

A second technique by some of these slippery operators was providing of personnel to the doctors by the laboratories, and the paying of the salaries of those personnel by the laboratories for work allegedly performed in the doctor's office.

Third, the rent of the space, such as a closet in the doctor's office or shelf in the refrigerator, and you have heard ample testimony about that here this morning.

Fourth, the providing to the doctors of goods and services such as surgical supplies or miscellaneous items such as cigars and cigarettes, or even some expensive equipment for free—is another form of inducement to get the doctor to send the lab work to a particular lab.

However, the testimony of the operators and managers of some of the ethical laboratories—some of the very sophisticated laboratories—was that they would not offer these inducements.

Now, the tragedy of that, as I respectfully see it and subject to your judgment, Senator, is that these highly automated labs, first of all, could have passed along to the taxpayers of New Jersey the benefits of technological cost saving techniques.

Technology Should Help Consumers Save

I think, Senator Percy, you will agree that one of the great points of pride in America is that we have been able to pioneer technological advances in many fields in this country, and one of the great benefits of those advances has been the ability to pass along cost savings to consumers and taxpayers because of more efficient and modern methods. So here we have a sad situation where a lab is very competent, professionally managed, and very advanced technological equipment could have been used. It would have been able to do the medicaid work for a very low price but, because it would not knuckle under to those shakedowns, it was not providing the very necessary cost savings in services.

Senator Percy. Is this lab—MetPath, Inc.—a proprietary lab?

Mr. Holstein. Yes, sir.

Senator Percy. I have difficulty in understanding why the ordinary business procedures do not operate here.

I can remember times in my own corporate experience when we had the supplier come in and say: "I cannot get business; there must be something wrong down there." Sometimes we would discover there was something wrong, and they were the ones that really brought it

to our attention. We did not depend on the police department to do this. We depended on competition in the field to figure out that even though the quality of the product is high, when you cannot get the business there must be something wrong.

Why did they not complain before you contacted them, and bring it to the attention of the district attorney, or whoever it may be? Why did they not say that there are fraudulent practices in our industry, and we want them rooted out? We want to do business the way it should be.

Mr. HOLSTEIN. That is an excellent point, Senator.

One of the discoveries we made was that in the early formulation of the medicaid program in New Jersey, some of these men were standing up in public proceedings and trying to be heard. But they were not heard; they were not listened to.

Why, and what the motivation was for not listening to them, I don't know.

Senator MOSS. In earlier hearings, the pharmaceutical associations said some of this was going on, and that is one of the reasons our investigation got focused. There are some men in each profession that try to clean up fraud and abuse. They should be credited for their good work.

Mr. HOLSTEIN. We have been impressed, of course. I am sure you Senators know the frustration of hearing details and accounts of rather abusive practices, but I am sure you will agree that one of the very pleasant parts of our work is that you do hear on occasion from men of integrity and professional excellence in the medical profession. So there are the good and the bad.

Senator MOSS. Is there any evidence in here of organized crime being involved? We keep hearing little overtones from our investigations on nursing home problems.

POSSIBILITY OF ORGANIZED CRIME INVOLVEMENT

Mr. HOLSTEIN. I would want to carefully select my words. I would want to avoid inflammatory conclusions where perhaps evidence is not of the kind or substance that you gentlemen, I am sure, would want, before I made such conclusions.

Let us say that there are some that do—that have the possibility of organized crime involvement, and I make that statement on a rather limited basis.

We did have a situation in New Jersey during the time of the investigation hearings where a particular middleman—salesman—between some of these unscrupulous physicians and these laboratories, which were engaged in the practices I have described—where this particular middleman did claim and invoke the privilege against self-incrimination.

The New Jersey State Commissioner of Investigation concluded that he can give relevant material evidence concerning these abusive and illegal practices, and so he was granted immunity from the use of this testimony, and he was then compelled to testify.

This person refused to testify even then. He stood moot; he remained silent. The State commissioner of investigation was com-

pelled to secure an order of contempt from the superior court—which order was obtained, sir.

The witness was then ordered by the court to answer our questions. The witness again refused and stood moot. The witness was then incarcerated some 4 or 5 days for his refusal.

I think you will agree that it was highly unique, in a field such as laboratories and doctors, that a witness would be so recalcitrant as to go to jail rather than answer the questions.

Finally, after 4 or 5 days of incarceration in one of the local county jails in New Jersey, in late June or early July and in non-air-conditioned facilities, the witness had a change of heart and did testify.

In his testimony before the commission, he, of course, described these relationships and unethical practices which we have heard of this morning concerning kickbacks, rebates, over billing, and so forth; however, we also made inquiry of him as to why he was so adamant in his original refusal to testify.

I again caution that here is the testimony of only one man—this middleman. It is unsupported; it is merely an indication of a possible danger in the shadows.

Portion of Ear Used in Threat

It is not a foundation that is strong enough but, very simply, this person testified that he received a very clear threat from some very shady characters he had never met before. He was shown, and they were shown, as part of their threat, portions of an ear. So you have the classical and very melodramatic threat that he must remain silent. It was allegedly delivered on behalf of those who did not want certain financial relationships uncovered.

Now again, I respectfully guard against talking too much from this one man's testimony, but we did receive that.

Senator Moss. But this is one single instance that you are aware of?

Mr. Holstein. Yes, sir.

Senator Percy. And we certainly know that there are markups of this kind. Persuasion is an element of salesmanship. They move in rather rapidly. The potential is very much there.

Mr. Holstein. That is correct, Senator.

Of course, as you have heard before, there were many efforts made to cover up rebates and kickbacks and to justify them in very nice euphemistic terms. You gentlemen have heard descriptions of these efforts.

Oftentimes it was said that the kickbacks were merely payments of salary, for services, or rental of space actually made available; however, the kickback story was finally told like it really is at our hearing by James Dimitrion, the supervisor of the Fairlawn Clinical and Sytology Laboratory.

Inside Mr. Dimitrion's laboratory—and, by the way, this laboratory did more medicaid business than any other medicaid lab in New Jersey—you could see that its gross revenue went very markedly up on the scale of revenues, and it doubled and tripled from 1 year

to the next. That doubling and tripling coincided with its employment of this very same salesman, who I just mentioned had invoked the privilege against self-incrimination before the commission; however, Mr. Dimitrion, the supervisor of the lab, was also given immunity to testify to the regular practice of giving kickbacks.

I think the most important question, though, is the adequacy of the maximum fee schedule.

I think our hearings demonstrated as well as the work of this committee that the New Jersey fee schedule, even when it was adopted in 1970, was keyed to a horse-and-buggy era of manual laboratory testing.

There was a lot of fat there in the fee schedules because of failure to respond to modern advances in technology, and the fat financed these mammoth, maximum kickbacks.

The basic stress of our recommendation, and I think you gentlemen respectfully have felt the same way here this morning, was that rather than having the middleman salesman get the benefits of these huge markups, let's eliminate the fat from the fee schedule and, therefore, allow the taxpayer to benefit with the savings.

The New York medicaid division reduced its maximum fee schedule for independent laboratories by 40 percent after the SCI hearings.

We suggested that a special panel be formed of persons with expertise in modern technological advances so a new fee schedule could be formulated to take into account modern technology.

During our investigation, the New Jersey medicaid division, which administers the medicaid program, undertook a substantial revision of the medicaid manual.

Tightening of Provisions Recommended

We have recommended that there should be simultaneous and thorough tightening of the provisions of both the fee schedules and the manual, so that there are more explicit definitions of various test requirements and their component parts.

We found that the language of the State fee schedule and manual required improvements were vague. As you gentlemen well know, there is always the implication to interpret and to construe to the detriment of the taxpayer, so we recommended that there be more provisions prohibiting certain practices.

It certainly is true that on the Federal level the Federal legislation prohibiting these kinds of growing kickbacks and rebates is very explicit; however, in New Jersey, up until the very recent time, there was no explicit prohibition, so you had the strange situation where, at the Federal level, it was clearly against the law to obtain or to give kickbacks, but there was the New Jersey regulation or the statute clearly providing for it. If I could be so presumptuous, Senator, I would say the one thing the Congress might consider, now and in the future, is that when it starts to involve itself in one of these 50–50 type partnership arrangements with a State in a health care situation, that the Congress may want to consider requiring from the State that the State also enact certain very explicit regulations and statutes barring such practices as condition of membership

in the program. I think this would enable State prosecutors, attorneys, and other investigative agencies to have the legal weaponry to address themselves to some of these abuses privately.

I think it is necessary to run to Washington for prosecution or for investigations, but it also would be desirable that it is done on the State level.

I think putting aside the question of illegality, it is the potential arm to the quality of laboratory work that most concerns us in a rebate situation.

In addition to rebate and financial kickback arrangements, we had uncovered situations where actually doctors had part ownership interest in laboratories.

Of course, when Mr. Dickson and I first began to work in the laboratory field, we visualized a laboratory as a big shiny, modern, clean, very dazzling operation. Of course, some of these are thankful that they are that way; however, the principle laboratories in New Jersey that are engaged in the medicaid business constituted a shock to our idealized vision of what a laboratory was. Very tragically, many of them were not operated in accordance with good sanitary conditions. In fact, this principle that they are very big—the kind of laboratory that I referred before, the Fairlawn Sytology Laboratory—did the most medicaid business of all labs in New Jersey. It was operated out of a basement. For instance, in the manual dipstick test, certain dipsticks would be used, and then used again, and again, and again, for multiple specimens, thereby contaminating each specimen.

Mr .HALAMANDARIS. Am I correct that the dipstick test costs less than a penny?

SHODDY TESTING PRACTICE SAVES PENNIES

Mr. HOLSTEIN. I would say about a penny and, of course, you put the finger right on the candle. To save a few pennies, they were using the same dipstick to maximize the profit, and removing any possibility of a fair and accurate test.

The most scary and most dangerous aspects, in addition to this, is that some of these tests involved specimens where contamination was certain to be present and would be highly contagious. This laboratory is being operated out of its basement in the middle of a residential neighborhood and these specimens are then thrown out in the garbage can. Modern technology has developed some very good machinery in which to put such specimens so that they are burned up or otherwise dealt with, so that any possibility of contamination is neutralized.

Senator PERCY. You said you were shocked as an investigator, but you have no medical background, have you?

Mr. HOLSTEIN. No, sir.

Senator PERCY. It shocked you when you saw these conditions?

Mr. HOLSTEIN. Yes.

Senator PERCY. Here was a service being performed for doctors and payments were being made. Did the doctors not investigate the labs from which they got their tests to make certain that the operation should be supported?

Mr. HOLSTEIN. Senator, you just put the finger on the point I was trying to make and I got off the track. I thank you.

That is what really upset us. Obviously, the physicians—those who get a kickback from the laboratory or who have a part proprietary interest in the laboratory—have little or no motivation to go to that lab and to take a look to see if the quality of the testing and the conditions are good or bad. Their eyes are focused on the "greens" and, therefore, the doctors tends to become unmotivated to check up on the quality.

Senator PERCY. This again is the pattern we found in the nursing homes—a lack of concern. They just do not give a damn about what kind of care is given.

They are after the buck; the faster the buck, the better. Apparently this is the case here with some doctors and some clinical labs.

Senator Moss. Did you find any linkup between these laboratories and the nursing homes—specimens coming in from there?

Mr. HOLSTEIN. We are hesitant to comment on that, because our investigative work in that area is in the process, rather than completed. I would rather not make a reckless assertion without our being able to complete it.

Senator Moss. We will allow you to complete it, just so you tell us later.

Mr. HOLSTEIN. Fine, sir.

LAB EXPERTISE SHOULD BE REQUIRED

I think another very important contribution the Congress might make is in the area of the kind of personnel the State medical administration must have.

Obviously, after months and months of work, Mr. Dickson and I have a little bit of understanding of what an SMA–12 is, although I still do not get it right. I am sure your staff has concurred that some of the technology or chemistry, and so forth, is difficult to understand, but it is absolutely imperative that the personnel staff of the State medicaid program includes people with expertise in the laboratory field.

They ought to go out and hire some lab technicians. We found they were not employed in New Jersey—not one person who had that kind of background or expertise. So these razzle-dazzle confidence-types of billing practices went right by the laymen who were kind of supposedly present to filter out the overbilling and the fraud.

We may be conversant in it now, having heard the testimony on it, but it is important that every State administration have this kind of personnel. That is one recommendation we felt very strongly about.

Senator Moss. That is a good one.

Mr. HOLSTEIN. There must also be a sufficient number of personnel, of course. Numbers are important just so that you can have good quality control in the State apparatus.

As you know, many States use fiscal intermediaries: that is, they use insurance companies as the first level to filter, so that when that

bill comes in from the doctor or the lab, it often goes to an insurance company, which acts as a fiscal intermediary under contract with the State.

That intermediary is supposed to make the original pay or no pay decision on the claim form that comes in from the lab or the doctor.

Now, whether the State apparatus is doing it through State employees or whether you are using a fiscal intermediary—that is, an insurance company—in either event, I, respectfully think the Congress might want to give attention to stipulating what constitutes a good surveillance program.

Requirements Should Be Enumerated

I think you might want to think about this in the future, if there is additional health care legislation, so that the Congress, with its expertise, could say: "Now listen here, you folks in New Jersey, Illinois, and New York, if you are going to have a State medicaid program and we are going to give you 50 percent of the funds, here is what you have to have: you have to have a computer and we will lend you some computer experts who will tell you how to set this up; you have to have some people who are expert in laboratory work and nursing home work; and you have to have some people who should be good hard-shot-type investigators in accounts."

I do not mean to build another huge bureaucracy by this suggestion, but you have to plan on who is going to be your cops, when you institute the new system, because you sure as heck are going to have your robbers. I think that is an area where the Congress can be of assistance.

Thank you very much.

Senator Moss. Thank you for a very good presentation Mr. Holstein.

The need for inspection and expertise in fraud detection certainly comes through very clearly. Even if you have a computer, and you have clerks that can interpret its printouts, you have to have somebody that knows enough about programs and procedures to understand what has to be done.

Mr. Holstein. That is right. That is exactly right.

Senator Moss. Have you noticed an increase in the number of laboratory procedures ordered with this increase in malpractice suits and premiums we are hearing so much about? Have doctors widely increased the numbers of tests they are asking for?

Mr. Holstein. Mr. Dickson, would you like to respond?

Mr. Dickson. Senator Moss, many members have come before the commission and testified as a reaction to malpractice, and large amounts of malpractice tests are ordered by physicians.

Whether or not it is a malpractice discovery, I am not prepared to say at this point; but certainly the term is used.

Senator Moss. I have heard that allegation, and that is the reason why I posed the question.

Mr. Dickson. We do not have that type of a feel for it as yet.

Senator Moss. When did New Jersey reduce its fee schedule by 40 percent?

Mr. HOLSTEIN. Sometime in the summer or fall.

Mr. DICKSON. The fees were reduced by the same medical division immediately upon the conclusion of our hearings. They would have been announced in July and, I believe, effective sometime in early September this past year.

Senator MOSS. Did this make any appreciable difference in the use of the services? Have labs gone out of business because the fees dropped?

Mr. HOLSTEIN. There was a great cry raised when the fee reduction was first announced, that many small labs would be forced out of the business.

NO DECREASE IN PARTICIPATION

We were informed by physicians, as recently as last Friday, that there has been no decrease in the numbers of labs involved in the program.

Senator PERCY. At the bottom of page 3, you talk about reaping of windfall profits, and so forth. Are markups of this size one of the reasons why medical costs are going up so high?

We know that malpractice insurance is forcing hospital bed rates up, but if the lack of surveillance in certain areas is like this, if people are reluctant to really question something of a sacrosanct nature like a clinical test or analysis, then we must conclude that individuals are not questioning what they get for very high fees. Can you not bring down the costs of medical care if you squeeze out these exorbitant profit margins and unnecessary markups?

Mr. HOLSTEIN. I think that is very well put, Senator. It is clear with proper attention paid, for instance, by the Senate Committee on Aging, that that kind of goal can be reached.

It does require a constant vigilance, because the unscrupulous entrepreneurs are, of course—they wish to take advantage of these opportunities. I think with oversight in this, you will be able to reduce the cost of health care.

Senator PERCY. I would like to ask you a question, because I feel certain that after seeing "60 Minutes" last night, a lot of people might say: "Well, that is Illinois; that is Cook County. That is not the way it is here in my State." Yet on page 4 of your prepared testimony, you say that rebates or kickback-type practices involve inducement-type payments to doctors under the guise of paying for rented space, or office salaries, in the doctor's offices. These are absolutely the same phrases technique, and methods used in Illinois.

My observation is, what happens in Illinois appears to be happening in New Jersey—the same identical pattern. Do you think this is a national pattern, that probably we would find this in as many States as we might go in, at least in the large industrial States that have very, very high concentrations of people receiving this type of service?

Mr. HOLSTEIN. I have no doubt of what you stated is correct, Senator.

I think it is a problem throughout our highly industrialized States. Basically, I think that if they have the kind of techniques that could

be used to exploit the system in one State, or New Jersey and Illinois, they can be used anyplace.

I think it is fair to presume that men and women will certainly follow the profit motive whenever government programs allow them to exploit the system.

Senator Moss. I have said that news travels fast. If they can do it in one place, they will do it in another.

Senator PERCY. That is right. It may well be as we found in nursing homes, that they were syndicated and then sold on Wall Street. It became a national pattern.

There is money to be made on the old and the poor, and so, too, there is money to be made in this field.

REDUCING PROFITS MAY BE DETERRENT

On page 8, you very wisely recommend that we have to prevent the outrageous ripoff of taxpayers' health care programs, and to bring fees down as low as possible in relation to advancing technology with respect to independent clinical laboratories and similar industries.

If we take the big or exorbitant profits out, will we automatically squeeze out all of the malpractice going on?

Mr. HOLSTEIN. I think so.

Senator Moss. Or you would take the incentive out.

Mr. HOLSTEIN. That is well put, Senator. I agree with that.

Senator Moss. On the top of page 4, it was the fat in the fee schedule that financed the markups, the overbilling practices, and the 25- to 30-percent kickbacks.

Here we are not talking about a service that has a lot of research and development behind it, where there are a lot of possible failures which build up costs. So there is no real reason to charge those exorbitant rates; is that right?

Mr. HOLSTEIN. That is correct, Senator. Ironically, the witnesses who testified from some of the large, inefficient, automated laboratories said the most important component of this overhead was not the cost of doing the test, which were a minimum cost because of automation, but the major cost is filling out the medicaid forms and then transporting the test results back to the physician.

It can be done very efficiently and very professionally if the system promotes that kind of care.

Senator PERCY. Finally, I would like to make a suggestion to States that are now investigating this area. As I look at attachment A,* it is possible to see that the Park Medical Laboratory increased from $35,565 in 1972 to $164,849 in 1974, and then increased to $205,852 in 1975.

Could you explain what happens here? That is quite a dramatic increase in business compared to the drop from $35,000 to $346 between 1972 and 1973. Could you explain what happened here? Why such a dramatic dropoff in business, unless they closed up for that year? Maybe they were closed, and then suddenly they are back flourishing.

*See p. 467.

I never saw a business that grew that fast after a precipitous downdrop. That is better than the photographic business with its cycles.

Mr. DICKSON. Senator, we have correlated the earnings of these laboratories with the appearance of the entrepreneur—salesman—on the scene.

It is these moneymen—with different means available to them to secure business. That is the answer to it.

STATES SHOULD CHECK MEDICAID RECORDS

Senator PERCY. My suggestion to every State in the Union that wants to cut their own costs and to cut down their medicaid payments, would be to just pull out of their files an annual report or record of the medicaid payments to clinical laboratories and see where the trend goes. If they see one fairly stabilized, maybe there is not much of a problem. Perhaps it would be wrong to imply that if all of them would have a dramatic increase, that this means they are engaging in these practices. But your judgment is it would be a very good thing for them to look at it?

Mr. DICKSON. Yes, sir.

Senator MOSS. I would say the States would be negligent and derelict if they did not do that.

Mr. HOLSTEIN. Evidence has been provided to you by the State of Illinois, and now the State of New Jersey, to take a good hard look to see how you can correct the malpractices.

Senator MOSS. It is obvious that some people can easily move in and really rip off the system. Medicaid, which was a noble concept when it started, has degenerated into something riddled with fraud and abuse.

Mr. HOLSTEIN. I agree with the chairman. The testimony has been extraordinarily valuable, and it would not have been complete if we did not have the highlights on Illinois.

Senator MOSS. I certainly agree with that.

I do thank you gentlemen very much.

Counsel has a question for you.

Mr. HALAMANDARIS. One last question. We discovered that a lab owner that Senator Moss visited was sending specimens from Chicago to Columbus, Ohio. He admitted to us that he was doing this, and I ask you, what precautions could he take of the specimens to insure that they were preserved? Do you see the problem I am suggesting?

Mr. DICKSON. Yes, I see it. We have seen it in New Jersey, but we were not so concerned with sending specimens out of one State and into another as much as we were in sending them from the city of Newark to, perhaps, a laboratory in the city of Patterson. The transportation was made in something of a styrofoam container.

Certainly the quality of testing done on these specimens is subject to certain conditions.

Senator MOSS. Thank you very much. I do commend you for this fine testimony. We will make your statement and its attachments a part of the record in full, so we will not lose any of it when the transcript is printed.

Thank you very much.
Mr. HOLSTEIN. Thank you, Mr. Chairman.
[The prepared statement of Mr. Holstein follows:]

PREPARED STATEMENT OF FRANK L. HOLSTEIN

Mr. Chairman and members of the committee, on behalf of the New Jersey State Commission of Investigation—S.C.I.—I would like to thank you for this opportunity to appear before you and testify about the commission's investigation of independent clinical laboratories receiving monies under the medicaid program. We believe we can be of particular assistance in this area because, to our knowledge, we were pioneers in undertaking such an in-depth probe into the practices and procedures of independent clinical laboratories and in exposing the abusive methods by which some of those laboratories can literally bilk the medicaid program for high profits which flow directly to the laboratory owners and, via them, also to some of the doctors supplying those laboratories with medicaid-funded test business.

Perhaps more importantly, our investigation demonstrated that the shortcomings and loopholes which had developed in the New Jersey medicaid program presented a virtual open door to those laboratory owners to profiteer at the taxpayers' expense. Therefore, I will be putting considerable emphasis in my remarks today on how the lessons learned in our investigation have pinpointed the areas of controls and surveillance capabilities which must be improved to prevent further abuses.

By way of background, let me state briefly how this particular investigation of independent clinical laboratories and the ensuing public hearings were developed by the New Jersey SCI. Early in 1975, the commission began an evaluation probe of the entire medicaid program in New Jersey, a probe which was mandated to us by request of the Governor. The SCI proceeded to set up three investigative teams to look into the three principal medicaid areas—nursing homes, hospitals, and purveyors of services other than nursing homes and hospitals. It was the last of these three major areas which covered the flow of medicaid dollars to independent clinical laboratories, doctors, pharmacists, and others. Having held several interim public actions during this overall investigation of medicaid, we are nearing completion of that probe and hope to make a final report and recommendations to the Governor in the months ahead.

As to the other-purveyors-of-services phase of our medicaid investigation, one of the earliest signs detected by us as to possible abusive practices related to the operations of some independent clinical laboratories. With the cooperation of the New Jersey State Medicaid Division, it was quickly determined that 12 of the 184 independent clinical laboratories in New Jersey were receiving more than half of the $2.2 million in medicaid funds flowing annually to all of those laboratories. Attachment A to this statement lists medicaid reimbursements to those 12 laboratories. Additionally, data obtained from that division's bureau of surveillance indicated patterns of apparent irregularities in the practices of those laboratories which were doing an inordinate amount of medicaid-funded business. Accordingly, an in-depth investigation of those laboratories was immediately authorized by the commission.

EXPERTISE NECESSARY IN INVESTIGATION

The practices and procedures of independent clinical laboratories have quite technical aspects which can present confusing complexities to a layman without expertise in this particular field. It should be remembered these laboratories perform a wide variety of tests, the results of which are used in the diagnosis, treatment, and prevention of disease. Fortunately, the commission was able to enlist the cooperation of the New Jersey State Health Department which assigned personnel with expertise in the clinical laboratory area to assist the SCI in this investigation.

The expert personnel made field inspections of the laboratories, analyzed many hundreds of pertinent documents and then provided the SCI with comprehensive written and oral reports. On this solid foundation, the SCI then used its investigation expertise and its full subpena and witness immunity powers to develop facts about abuses of the medicaid program in the following principal areas:

(1) The reaping of windfall profits by some small and largely unautomated independent clinical laboratories which marked up by as much as 300 percent or more the cost of tests performed on a subcontract or referral basis by large, automated laboratories and then collected the markups from medicaid. The facts gleaned in this area as well as other areas discussed below were instrumental in documenting that the New Jersey medicaid fee schedule for reimbursing independent clinical laboratories was much too high and in need of revision downward.

(2) Numerous instances where some independent clinical laboratories were able to overbill medicaid for certain tests and even render false test claims, without these practices being detected at either the prepayment or postpayment processing levels.

(3) Rebate or kickback-type practices whereby some laboratories either returned a set percentage of medicaid test fees to some of the doctors referring business to those laboratories or indulged in some other financial-inducement-type payments to the doctors under the guise of paying for "rented space" or "office salaries" in the doctors' offices.

The transcripts of our public hearings have been made available to this committee. They contain numerous, specific instances of the type of abuses summarized above. Those transcripts contain sworn testimony and reference to substantial documentary evidence which detail how specific laboratories, middlemen, and doctors engaged in the abuses of the system. That same extensive factual picture in the transcripts demonstrates that the abuses were not sparse but rather general and quite widespread in nature. Relying on those transcripts as the full and complete record of our investigation. I will review only some sample instances of various abuses in this statement, so that members of this Senate committee will have a capsule picture of how medicaid can be specifically bilked by independent clinical laboratories.

In the area of huge markups by some of the laboratories, it should be noted that in New Jersey, medicaid establishes a maximum fee level at which it will reimburse independent clinical laboratories for the tests performed. Attachment B to this statement shows that maximum reimbursement level for certain tests as of the time our investigation was being carried out. The specific, sample markup instance I will now review involves a blood chemistry analysis test performed by a device known as an SMA–12. This device reports almost instantly on the status of as many as 12 blood chemistries in any given test sample.

In this sample instance, we showed that a relatively small, unautomated laboratory, Physicians Laboratory Service, Inc., was paid the maximum of $12.50 by medicaid for allegedly performing an SMA–12 test. But by reference to appropriate documents, we showed that in actuality that test was performed on a referral basis for Physicians Laboratory by the larger, automated Center for Laboratory Medicine, Inc., which, in this instance, billed Physicians Laboratory only $3.50 for the SMA–12 test. What's more, there was nothing at that time in the New Jersey State medicaid manual of rules and regulations covering independent clinical laboratories to preclude this price-gouging tactic.

Multiple Tests Billed Separately

In the area of overbilling, our hearings demonstrated the frequent practice by some of the laboratories of taking a single test which produces multiple, component-part results, such as the chemistries by an SMA–12, and billing for each component part as if it were a separate test. As to a specific sample, Edward Gibney, director of the Park Medical Laboratory, conceded under questioning at our hearings that his relatively small, unautomated laboratory did indulge in the overbilling practice of collecting from medicaid for the component parts of multiple results tests including one instance were seven parts of an EMA–12 test, performed for Park Medical by an automated laboratory at a cost of $3.40, were billed to medicaid for a total of $58. That is almost five times the maximum permissible reimbursement of $12.50 for an SMA–12 test. And again, at the time of our investigation, the State medicaid manual contained no specific prohibition against this overbilling practice.

As to false billing, the hearings documented a specific example, among others, of how the same Park Medical Laboratory billed and received from medicaid $15 for a German measles test known as rubella titer, when, in fact, that test

had been performed free of charge for Park Medical by the New Jersey State Department of Health. The same Mr. Gibney conceded further at our hearings that it would be fair to state that during 1974 alone, there were 197 instances where Park Medical billed medicaid for rubella titer tests performed free of charge by the state. And again, there was no specific restriction in the medicaid manual at that time against this abuse of the system.

In the third area of rebate or kickback-type payments, we heard testimony from several heads of laboratories who do not indulge in those practices—that their laboratories, as a result, received only minuscule amounts of medicaid-funded business. Dr. Paul A. Brown, head of MetPath Inc., a very large and highly automated laboratory which played it straight, testified his staff has found four basic kickback techniques are being used to induce doctors to refer medicaid-funded business to independent clinical laboratories. They are, in his words:

(1) Cash payments known as "greens" which are made by the laboratories either directly to the doctors or indirectly to them via their nurses.

(2) The providing of personnel to the doctors by the laboratories and the paying of the salaries of those personnel by the laboratories for work allegedly performed in the doctors' offices.

(3) The renting of space, such as a closet, in the doctors' offices, with the "rent" often being determined as a percentage of the amount of medicaid-funded test work referred to the laboratories by the doctors.

(4) The providing to the doctors of goods and services, such as surgical supplies or miscellaneous items such as cigars and cigarettes.

The testimony of the heads of some of the laboratories indulging in financial-type inducement payments to doctors provided resounding support for Dr. Brown's testimony. For example, Saul Fuchs, director of Physicians Laboratory Service, Inc., conceded under questioning that he paid 20 percent to some doctors of what he received from medicaid for test business referred to his laboratories by those doctors. He contended the rebate payments were for the drawing of blood samples and the filling out of medicaid forms in the doctors' offices. He also conceded that he "rented" space for $150 per month in the office of another doctor who referred medicaid business to his laboratory.

Robert Kupchak, president of North Hudson Clinical Laboratories, Inc., testified he paid 25 percent of his medicaid-funded business to his laboratory. He contended these payments were for "services rendered" by the doctors in processing the specimens referred to his laboratory.

The kickback story was finally told like it really is at our hearings by James Dimitrion, supervisor of the Fairlawn Clinical and Cytology Laboratory. Mr. Dimitrion, testifying under the compulsion of a grant of witness immunity, testified to instance after instance where he agreed to kick back a specific percentage of his medicaid reimbursements to doctors supplying his laboratory with medicaid-funded test business. The initial negotiations for Fairlawn's kickback arrangements were conducted by Harry Hirshman, Fairlawn's middleman-salesman. And Fairlawn's business boomed. Mr. Dimitrion testified that 90 percent of the laboratory's business came from doctors with whom Fairlawn had arrangements to kick back 25 to 35 percent of medicaid reimbursements. He testified further that a kickback was a kickback whether it was a cash percentage or under the guises of services rendered in the doctors' offices or of payment of salaries for personnel in the doctors' offices.

Fee Schedules Should Be Updated

I now address myself to the all-important question of how do you prevent such outrageous ripoffs of a taxpayer-supported health care program for the impoverished. First of all, the State-set fee schedule for reimbursing independent clinical laboratories must be kept as low as possible in relation to advancing technology in the independent clinical laboratory industry. Our hearings demonstrated that the New Jersey fee schedule was, even when it was adopted in 1970, keyed to an already passing horse-and-buggy era of manual laboratory testing. It was the fat in the fee schedule that financed the mammoth markups, the overbilling practices, and the 25 or 30 percent kickbacks to the doctors.

After our hearings, the New Jersey Medicaid Division reduced the maximum fee schedule for independent clinical laboratories by 40 percent. Our suggestion that a special panel be formed to devise a new fee schedule geared to the industry's technology has been followed. Maximum fee schedules for reimbursement of the laboratories must be revised from time to time to reflect advances in automation.

During our investigation, the New Jersey Medicaid Division undertook the first substantial revision of the medicaid manual covering independent clinical laboratories in an attempt to close glaring insufficiencies in the controls and regulations provided by that document. We have recommended that there should be simultaneous and thorough tightening of the provisions of both the fee schedule and the manual so that they are very explicit as to the various tests and their component parts. The language of a State fee schedule and a State manual should specifically bar gross markups by middlemen-type laboratories and any practice of charging separately for component parts of a test.

The medicaid manual should, of course, contain a strong and comprehensive prohibition against any type of rebate or kickback payments from the laboratories to the doctors. We also have recommended supporting statutory reform to make it a criminal offense to engage in such practices.

Whether it is "rented space" or "office salaries" or what have you, there should be no special, favorable relationships between laboratories and physicians, even if the money paid to a doctor by a laboratory might exactly compensate the value of the work done in the doctor's office. Relationships of this type amount to an inherent conflict of interest in that the physicians have an inducement not to judge the quality and performance of the laboratories but rather to send the test business to the laboratories on the basis of personal financial gain.

The most important preventive measure, in our opinion, lies not with schedules, regulations, and laws, but rather in the detection of abusive practices both before medicaid claims have been paid to the laboratories and after such payments have been made. The medicaid division of a State must have personnel who are expert in the clinical laboratory field—individuals who can, as the experts from the State Health Department did for us in our investigation, discover and flag billing abuses in a technologically complex area. The New Jersey Medicaid Division has not had such expertise in the past, and we have recommended that this weakness be corrected.

Besides sufficient expertise, there also should be sufficient numbers of surveillance personnel to ride constant herd not only on the laboratories which have received medicaid payments but also on the State's fiscal intermediary used to process the medicaid payment claims from the laboratories. New Jersey, like many other States, uses insurance companies with extensive computer capacity to do such prepayment processing. Our investigation showed that despite one company's capacity and capability, billing abuses in numerous instances had gone unflagged.

The responsibility for alert monitoring of the performance of the fiscal intermediary rests with the State medicaid division. The division must have the expert personnel who can constantly check to see if insufficiently educated and trained personnel are being used by the intermediary to process claims or if a random sampling method of validating claims by the intermediary is insufficient or if any other failures are occurring.

Any investment by a State in a superior and effective surveillance system should be viewed as a productive and rewarding step in that it can both stop overpayments to the laboratories before those payments occur and also recover any overpayments that have been made to the laboratories.

Mr. Chairman and members of the committee, thank you for listening to me today. I will now attempt to answer any questions you may have.

ATTACHMENT A.—MEDICAID PAYMENTS TO CERTAIN INDEPENDENT CLINICAL LABORATORIES (1972–75)

	1972	1973	1974	1975 (January–April
Fair Lawn Clinical and Cytology Lab	$27,114	$127,707	$253,855	$39,650

Physicians Lab Service, Inc	1,509	19,300	52,466	14,377

ATTACHMENT B.—MAXIMUM MEDICAID REIMBURSEMENT FOR CERTAIN LABORATORY TESTS

Code	Name	Maximum medicaid reimbursement
8628	Complete blood count, hemoglobin white cells, red cells and/or hematocrit, differential.	$5.00
8710	Protein bound iodine (PBI)	10.00
8719	SMA–12/60	12.50
8751	T–3	10.00
8752	T–4	10.00
8961	Pregnancy test—immunologic	7.50
8962	Pregnancy test—animal (rabbit or rat)	10.00
8652	Cholesterol, total	5.00
8654	Cholesterol, total and esters	7.00
8761	Triglycerides	15.00
8936	Urine Analysis (complete routine chemical and microscopic)	2.00
8722	Glucose (sugar) quantitative or 2-hour pp/3-hour pp	5.00
8675	Flocculation tests (Kline, Mazzini, each VDRL, etc.)	2.50
8476	Ova and parasites, concentrated method	2.50
8459	Culture with sensitivity studies, bacterial disc technique, up to 10 antibodies	15.00
8911	Cytological study (Papinicolaou smear)	5.00
8745	Urea nitrogen (or N.P.N.)	5.00
8664	Creatinine or creatine	5.00

Senator Moss. I want to say that this committee will continue on this type of investigative effort; perhaps we will not be on the laboratories next time, but we will be looking at all phases of care for the elderly, and the possible medicare and medicaid abuses that may exist.

We now stand in recess.

[Whereupon, the hearing was adjourned at 12:40 p.m.]

APPENDIXES

Appendix 1

Twenty bills, chosen at random, presented for payment by D. J. Medical Laboratory in Chicago, Ill., purportedly on behalf of Dr. R. Bascon, 4809 West Madison. In 12 of the 20 cases, the physician had no record of seeing the patient. The aggregate total paid by medicaid for these 20 bills was $885. According to Dr. Bascon's records, only $119 of this amount was actually ordered by him. Following each individual bill is a caption with specific details.

21. CERTIFICATION

This is to certify that I have rendered the services and provided the items set forth and the information above is true, accurate and complete, that payment therefor has not been received, that the charges approved by the Department of Public Aid will constitute the full and complete charge therefor, that I will not accept additional payment from any person or persons. I hereby agree to keep such records as are necessary to disclose fully the extent of services provided to individuals under TITLE XIX of the Social Security Act and to furnish information regarding any payments claimed as the State Agency may request. I understand payment is made from Federal and State funds and that any falsification or concealment of a material fact may lead to appropriate legal action. I further certify that in compliance with TITLE VI of the Civil Rights Act of 1964 I have not discriminated on the grounds of race, color, or national origin in the provision of service.

Appendix 2

AFFIDAVITS SUBMITTED FOR THE RECORD BY DOUGLAS A. LONGHINI,* GERALYN DELANEY, AND WILLIAM R. HOOD, BETTER GOVERNMENT ASSOCIATION, CHICAGO, ILL.

STATE OF ILLINOIS,
County of Cook, ss:

AFFIDAVIT

I, Douglas A. Longhini, being first duly sworn, do state under oath that the following is true to the best of my knowledge:

1. That I am an employee of the Better Government Association located at 360 North Michigan Avenue, Suite 1118, Chicago, Ill. I am employed presently as an investigator by the Better Government Association and was so employed throughout the month of December 1975.

2. That on December 12, 1975, I telephoned West Lawn Medical Laboratory located at 4255 West 63d Street, Chicago, Ill. I spoke to a man who identified himself as Riaz Khan.

3. That on December 12, 1975, while speaking to Riaz Khan on the telephone, I told Riaz Khan that my name was Luke Kolman and that I represented two (2) licensed Illinois physicians who were going to open a medical clinic at 1520 West Morse, Chicago, Ill., I told Riaz Khan I was going to be purchasing medical laboratory testing services for the proposed medical clinic located at 1520 West Morse, Chicago, Ill., I made an appointment for 9 a.m., December 16, 1975, to personally meet Riaz Khan at 1520 West Morse, Chicago, Ill.

4. That on December 16, 1975, between the hours of 8:30 a.m. and 12 p.m. and 12:45 p.m. and 6 p.m., I was at 1520 West Morse, Chicago, Ill.

5. That at approximately 9 a.m. on December 16, 1975, a man entered the building at 1520 West Morse and identified himself as Riaz Khan. Riaz Khan gave me a business card identifying Riaz Khan as a technical representative of West Lawn Medical Laboratory located at 4255 West 63d Street, Chicago, Ill.

6. That on December 16, 1975, Riaz Khan stated that West Lawn Medical Laboratory would provide the medical clinic at 1520 West Morse with a laboratory technician to draw blood at the clinic. Riaz Khan stated that West Lawn would pay the laboratory's wages for drawing blood. These statements were made in the presence of Geralyn Delaney and myself.

7. That on December 16, 1975, Riaz Khan stated that if the volume of medical tests ordered from the proposed medical clinic reached between five (5) and ten (10) public aid patients a day then West Lawn Medical Laboratory would sublease space at the proposed medical clinic. Riaz Khan stated that the rent for this subleased space would be paid for by West Lawn Medical Laboratory. The amount of rent to be paid in U.S. currency would be based upon a percent of the volume of medical tests ordered from the proposed clinic and done by West Lawn Medical Laboratory. These statements were made by Riaz Khan in the presence of Geralyn Delaney and myself.

8. That on December 16, 1975, Riaz Khan stated that if the medical clinic would be ordering medical tests on between 15 and 20 public aid patients a day, then West Lawn would not take any profit on medical tests ordered by the medical clinic for private, nonmedicare, nonmedicaid patients. Khan stated: "If you draw blood from a public aid patient and blood from a private patient, we can forget the profit on the private patient; that profit is yours." These statements were made in the presence of Geralyn Delaney and myself.

*See statement, p. 425.

9. That on December 16, 1975, Riaz Khan stated that there would be no written agreement and/or contract between West Lawn and the medical clinic. Khan said there would be nothing written between the laboratory and the clinic formally arranging for medical testing services. Khan said there would be no formal, written sublease of space within the clinic for the use of West Lawn. These statements were made in the presence of Geralyn Delaney and myself.

DOUGLAS A. LONGHINI.

Subscribed and sworn to before me this 13th day of January, 1976. Geralyn L. Delaney, notary public.

STATE OF ILLINOIS,
County of Cook, ss:

AFFIDAVIT

I, Douglas A. Longhini, being first duly sworn, do state under oath that the following is true to the best of my knowledge:

1. That I am an employee of the Better Government Association located at 360 North Michigan Avenue, Suite 1118, Chicago, Ill. I am employed presently as an investigator by the Better Government Association and was so employed throughout the month of December 1975.

2. That on December 12, 1975, I telephoned Azteca Laboratory. I spoke to a man who identified himself as Dr. Velez. I told Dr. Velez that my name was Luke Kolman and that I represented two (2) licensed Illinois physicians who were going to open a medical clinic at 1520 West Morse, Chicago, Ill. I told Dr. Velez that I was going to be purchasing medical laboratory testing services for the proposed medical clinic. I made an appointment for 11 a.m., December 16, 1975, to personally meet with Dr. Velez to discuss the possibility of purchasing medical testing services from Azteca Labs.

3. That on December 16, 1975, between the hours of 8:30 a.m. and 12 p.m. and 12:45 p.m. and 6 p.m., I was at 1520 West Morse, Chicago, Ill.

4. That on December 16, 1975, at approximately 11 a.m., a man entered the medical clinic offices at 1520 West Morse, Chicago, Ill., and identified himself as Dr. Velez.

5. That on December 16, 1975, Dr. Velez stated what he called a "professional service discount" on all public aid billings for medical tests on public aid patients. Dr. Velez said the discount on the medical tests would be a percentage of the price and/or cost of a total month's billing for medical tests for public aid patients. This statement was made in the presence of Geralyn Delaney and myself.

6. That on December 16, 1975, Dr. Velez presented me with a copy of a billing statement of medical tests done for public aid patients by Azteca Labs for an unnamed medical clinic. Dr. Velez stated that that month's bill to the State was $3,853 for this same unnamed clinic and that by applying what Dr. Velez again referred to as the professional services discount Dr. Velez was able to give the unnamed clinic back $1,000 of the total $3,853 in medical test billings. Dr. Velez said such a discount was paid by sending the clinic a check for $1,000. These statements were made in the presence of Geralyn Delaney and myself.

7. That on December 16, 1975, Dr. Velez stated that Azteca Labs would apply a percentage of the clinic's total medical testing bills back to the clinic in the form of rent. Dr. Velez stated that there would be no written contract for medical testing services between Azteca Labs or himself and the medical clinic or its representatives. Dr. Velez said that if the medical clinic had between 10 and 15 patients a day and a corresponding number of medical tests ordered, Azteca would lease a certain amount of space in the clinic. Dr. Velez stated that the amount discounted by Azteca from the monthly billing statement would be applied to the rest of the medical clinic. Dr. Velez said, "Five hundred, a thousand, two thousand dollars, whatever, will be applied to the rent, according to the volume of business in the clinic." These statements were made in the presence of Geralyn Delaney and myself.

DOUGLAS A. LONGHINI.

Subscribed and sworn to before me this 13th day of January, 1976. Geralyn L. Delaney, notary public.

STATE OF ILLINOIS,
County of Cook, ss:

AFFIDAVIT

I, Douglas A. Longhini, being first duly sworn, do state under oath that the following is true to the best of my knowledge:

1. That I am an employee of the Better Government Association located at 360 North Michigan Avenue, Suite 1118, Chicago, Ill. I am employed presently as an investigator by the Better Government Association and was so employed throughout the month of December 1975.

2. That on December 12, 1975, I telephoned Chicago Medical Laboratory located at 1518 North Ashland, Chicago, Ill. I spoke to a man who did not identify himself. I told this man that my name was Luke Kolman and that I represented two (2) licensed Illinois physicians who were going to open a medical clinic at 1520 West Morse, Chicago, Ill. I said I was going to be purchasing medical laboratory testing services for the proposed medical clinic. I made an appointment for 1 p.m. on December 16, 1975, to personally meet with Mr. Robinson of Chicago Medical Laboratory.

3. That on December 16, 1975, between the hours of 8:30 a.m. and 12 p.m. and 12:45 p.m. and 6 p.m., I was at 1520 West Morse, Chicago, Ill.

4. That on December 16, 1975, at approximately 2 p.m., a man entered the building at 1520 West Morse, Chicago, Ill., and identified himself as Mr. Robinson. Mr. Robinson stated that he had believed that our appointment was for 2 p.m.

5. That on December 16, 1975, Robinson stated that Chicago Medical Laboratory would rent a certain amount of square feet in the medical clinic. Robinson stated that if the clinic had a monthly rent of $1,000, Chicago Laboratory would sublease between 10 and 20 percent of the $1,000 monthly rent for the medical clinic. Robinson stated that Chicago Medical Laboratory would set a fixed percentage on a fixed figure, Robinson here stated the rent, if the volume of medical testing business ordered by the clinic increased Chicago Medical Laboratory would raise the fixed percentage. Robinson stated that the rent was to be adjusted to whatever the volume of medical testing business was. Robinson stated that he would not be able to provide us with medical testing services without establishing a fixed percentage of the rent to be paid by Chicago Medical Laboratory. These statements were made in the presence of Geralyn Delaney and myself.

6. That on December 16, 1975, Robinson stated that Chicago Medical Laboratory would apply forty (40) percent of all the costs for medical tests done for private, non-medicare, nonmedicaid, patients to the Chicago Medical Lab's rented space in the medical clinic. Robinson stated an example of a private patient getting a series of tests for SMA–12 and urinalysis, Robinson said the cost would be $20, but the medical clinic would get forty (40) percent of that $20. These statements were made in the presence of Geralyn Delaney and myself.

7. That on December 12, 1975, Robinson stated that Chicago Medical Laboratory would send the clinic a check through the U.S. mail system each month for the rented space. This statement was made in the presence of Geralyn Delaney and myself.

8. That on December 16, 1975, Robinson stated that initially there would be no written lease, sublease, or contract between Chicago Medical Laboratory and the medical clinic. Robinson stated that "I wouldn't worry much about leases until we get started. Leases are only if you have a good thing going." These statements were made in the presence of Geralyn Delaney and myself.

DOUGLAS A. LONGHINI.

Subscribed and sworn to before me this 13th day of January, 1976. Geralyn L. Delaney, notary public.

County of Cook, ss:

AFFIDAVIT

I, Douglas A. Longhini, being first duly sworn, do state under oath that the following is true to the best of my knowledge:

1. That I am an employee of the Better Government Association located at 360 North Michigan Avenue, Suite 1118, Chicago, Ill. I am employed presently as an investigator by the Better Government Association and was so employed throughout the month of December 1975.

2. That on December 12, 1975, I telephoned General Medical Laboratories located at 914 West Diversey, Chicago, Ill. I spoke to a man who identified himself as Dr. Charlip. I stated that my name was Luke Kolman and that I represented two (2) licensed Illinois physicians who were going to open a medical clinic at 1520 West Morse, Chicago, Ill. I said I was going to be purchasing medical laboratory testing services for the proposed medical clinic. I made an appointment to meet with Dr. Charlip at 3 p.m. on December 16, 1975.

3. That on December 16, 1975, I was physically within the building located at 1520 West Morse, Chicago, Ill., between the hours of 8:30 a.m. and 12 p.m. and 12:45 p.m. and 6 p.m.

4. That on December 16, 1975, at approximately 3 p.m., a man entered the building at 1520 West Morse and identified himself as Dr. Charlip.

5. That on December 16, 1975, Dr. Charlip stated that General Medical Laboratories had two different price lists for medical tests performed by the laboratories. One price list described the prices that General Medical charged private, non-public-aid patients and the other price list described the prices which General Medical charged the State of Illinois, Department of Public Aid for the same tests. Dr. Charlip stated that the prices that General Medical charged for private patients were about three times lower than the prices for medical tests that General Medical charged the State of Illinois Department of Public Aid for patients on medicaid. These statements were made in the presence of Geralyn Delany and myself.

6. That on December 16, 1975, Dr. Charlip stated that he would speak to the two physicians that were opening the clinic at 1520 West Morse and explain to these physicians how to use the Illinois Department of Public Aid's codes for billing the department for medical tests. Dr. Charlip stated that there were a lot of tricks to a physician billing the Illinois Department of Public Aid, and that by using different codes a physician could get between $8 and $24 from the Department of Public Aid for the exact same medical test. These statements were made in the presence of Geralyn Delaney and myself.

DOUGLAS A. LONGHINI.

Subscribed and sworn to before me this 13th day of January, 1976, Geralyn L. Delaney, notary public.

STATE OF ILLINOIS,
County of Cook, ss:

AFFIDAVIT

1. Douglas A. Longhini, being first duly sworn, do state under oath that the following is true to the best of my knowledge:

1. That I am an employee of the Better Government Association located at 360 North Michigan Avenue, Suite 1118, Chicago, Ill. I am employed presently as an investigator by the Better Government Association and was so employed throughout the month of December 1975.

2. That on December 12, 1975, I telephoned Division Medical Laboratory located at 2625 West Division, Chicago, Ill. I spoke to a man who identified himself as a Mr. Celso (may be incorrect spelling). I told Mr. Celso that my name was Luke Kolman and that I represented two (2) licensed Illinois physicians who were going to open a medical clinic at 1520 West Morse, Chicago, Ill. I told Mr. Celso that I was going to be purchasing medical laboratory testing services for the proposed medical clinic. I made an appointment for 10 a.m., December 16, 1975, to personally meet a representative of Division Laboratory whom Mr. Celso said was named Felix.

3. That on December 16, 1975, between the hours of 8:30 a.m. and 12 p.m. and between 12:45 p.m. and 6 p.m., I was at 1520 West Morse, Chicago, Ill.

4. That at approximately 10 a.m. on December 16, 1975, two (2) men entered the building at 1520 West Morse and identified themselves as John Todd and Felix Salamanca. Todd gave me a business card identifying John B. Todd as director of nursing home division for Division Medical Laboratory. No title was given to Salamanca.

5. That on December 16, 1975, Todd offered to provide the medical clinic with a laboratory technician, a portable X-ray machine and, if required, an EKG machine. Todd said all of these would be provided without any charge to the medical clinic, that all costs involved with these services and/or machines would be borne by Division Laboratory. This offer was made in the presence of Geralyn Delaney and myself.

6. That on December 16, 1975, Todd offered to sublease space in the medical clinic to be used by the technician and to house the X-ray machine and EKG machine. Todd suggested that I tell him what rent the clinic would want for the subleased space and that Division Laboratory would pay something although not necessarily what I had been asked to suggest. This offer was made in the presence of Geralyn Delaney and myself.

7. That on December 16, 1975, Todd stated that the rent for the subleased space would be reviewed by Division Laboratory every 3 months. Todd said the rent would be reevaluated based upon the volume of the medical tests ordered by the medical clinic and going to Division.

8. That on December 16, 1975, Todd agreed with a statement I made that the rent collected by the clinic and paid for Division for the small subleased space could be two (2) or three (3) times greater than the rent the clinic paid for the use of the whole space at 1520 West Morse. Todd said that the rent the clinic paid for the use of the whole space would not be a ceiling on the rent collected from Division for the subleased space. This offer was made in the presence of Geralyn Delaney and myself.

9. That on December 16, 1975, Todd stated that if the medical clinic was seeing 20 to 30 patients per day, Division Laboratory would pay the full salary of the clinic's secretary and/or nurse in addition to the full salary of the laboratory technician. This offer was made in the presence of Geralyn Delaney and myself.

DOUGLAS A. LONGHINI.

AFFIDAVIT

I, Douglas A. Longhini, being first duly sworn, do state under oath that the following is true to the best of my knowledge:

1. That I am an employee of the Better Government Association located at 360 North Michigan Avenue, Suite 1118, Chicago, Ill. I am employed presently as an investigator by the Better Government Association and was so employed throughout the month of December 1975.

2. That on December 12, 1975, I telephoned D. J. Medical Laboratory located at 1708 West Chicago Avenue, Chicago, Ill. I spoke to a man who identified himself as Joe Espino. I stated that my name was Luke Kolman and that I represented two (2) licensed Illinois physicians who were going to open a medical clinic at 1520 West Morse, Chicago, Ill. I said I was going to be purchasing medical laboratory testing services for the proposed medical clinic. I made an appointment to meet with Mr. Espino at 10 a.m. on December 17, 1975.

3. That on December 17, 1975, I was physically within the building located at 1520 West Morse, Chicago, Ill., between the hours of 8:45 a.m. to 12 p.m. and 1 p.m. to 4 p.m.

4. That on December 17, 1975, at approximately 10 a.m., a man entered the building at 1520 West Morse and identified himself as Joselito Espino. Espino gave me a business card that identified Joselito C. Espino as president of D. J. Medical Laboratory, Inc.

5. That on December 17, 1975, Espino stated that D. J. Medical Laboratory maintained two separate price lists for medical tests. Espino stated that there was one price list for medical tests done on public aid patients and another price list for private non-public aid, non-medicare patients. Espino said that he thought that the maintenance and application of these two lists was illegal, but that as long as he did not have the two separate lists written down there would be nothing wrong with the two separate lists. These statements were made in the presence of Geralyn Delaney and myself.

6. That on December 17, 1975 Espino gave me a small green sheet of paper with the words "Laboratory Tests" in large letters on the paper. The paper listed the medical tests performed by D. J. Medical Laboratory. Espino stated that D. J. Medical Laboratory charged $3.50 for an SMA–12 test for a private, non-public-aid patient and that D. J. Medical Laboratory collected $15 from the State of Illinois, Department of Public Aid, for the same exact test for a public aid patient. Espino stated the medical testing costs for private and public aid patients for a number of other tests. Espino stated the following:

Tests	Charge to private patient	Charge to State of Illinois for public aid patient
SMA–12	$3.50	$15.00
CBC	2.50	6.00
Urinalysis	1.50	3.00
VDRL	3.00	(1)
ABO	1.50	3.50
Rh	1.50	3.50
Glucose	2.50	5.00
Pap smear	4.00	10.00
All culture tests	5.00	10.00
GC smear	1.50	3.00
TEC	1.50	3.00
Stool O/P	1.50	3.00
TIBC	3.00	7.00
EKG	6.00	12.00
T–3	6.00	12.00
T–4	6.00	12.00
PBI[2]		
Sed rate	1.50	4.00
Pro elec	6.00	12.00
BUN	2.50	5.00
Uric acid	2.50	5.00
Cholesteral	2.50	5.00
Na. (sodium)	2.00	3.00
K. (potassium)	2.00	3.00
Creat	3.00	7.00
ASO	2.00	5.00
Pregnancy test	3.00	8.00
ANA	6.00	12.00
SGPT	2.50	5.00
Ceph. floculation	2.50	5.00
Thymol	2.50	5.00
Latex RA	2.00	5.00
CRP	2.00	5.00
Alkali phosphate	2.00	5.00

[1] No payment.
[2] D. J. send these tests to Mason and Baron Laboratories.

DOUGLAS A. LONGHINI.

Subscribed and sworn to before me this 13th day of January, 1976, Geralyn L. Delaney, notary public.

STATE OF ILLINOIS,
County of Cook, ss:

AFFIDAVIT

I, Douglas A. Longhini, being first duly sworn, do state under oath that the following is true to the best of my knowledge:

1. That I am an employee of the Better Government Association located at 360 North Michigan Avenue, Suite 1118, Chicago, Ill. I am employed presently as an investigator by the Better Government Association and was so employed throughout the month of December 1975.

2. That on December 15, 1975, I was told by the answering service for telephone number 372–7100 that a man identifying himself as Mr. Simos of Hilltop Medical Laboratory had telephoned the answering service. On December 16, 1975, I telephoned Mr. Simos at Hilltop Medical Laboratory located at 1325 West 87th Street, Chicago, Ill. I stated that my name was Luke Kolman and that I represented two (2) licensed Illinois physicians who were going to open

a medical clinic at 1520 West Morse, Chicago, Ill. I said I was going to be purchasing medical laboratory testing services for the proposed medical clinic. I made an appointment to meet with Mr. Simos at 11 a.m. on December 17, 1975.

3. That on December 17, 1975, I was physically within the building located at 1520 West Morse, Chicago, Ill., between the hours of 8:45 a.m. and 12 p.m. and between 1 p.m. to 4 p.m.

4. That on December 17, 1975, at approximately 11 a.m., a man entered the building at 1520 West Morse and identified himself as Mr. Simos. Mr. Simos stated that he was manager of Hilltop Laboratory but that he was about to start his own laboratory, Claremont Medical Laboratory, and that he was representing Claremont and not Hilltop Laboratory.

5. That on December 17, 1975, Simos stated that Claremont Medical Laboratory would provide the medical clinic with a laboratory technician and that Claremont would pay that technician's salary. Simos stated that Claremont would pay that technician's salary. Simos stated that Claremont would rent a certain amount of square feet at the medical clinic for the use of the laboratory technician. Simos stated that the dollar amount of rent for this space would be based on the volume of medical tests ordered by the medical cilnic. Simos stated that the dollar amount of rent was not to be based on the actual number of square feet utilized by the laboratory technician. Simos stated that the number of square feet used by the laboratory technician would have nothing to do with the actual dollar amount of rent paid by Claremont to the medical clinic. Simos stated that the arrangement of renting a certain number of square feet in the medical clinic for the use of a laboratory technician and Claremont paying a percentage of the gross medical testing billings back to the medical clinic was to make it look like Claremont was renting space in the medical clinic. Simos stated that auditors from the State of Illinois and unspecified individuals from the Federal Bureau of Investigation will not investigate a medical laboratory's rental payments to a medical clinic if these agencies and/or individuals see that there is a written lease or sublease between the medical clinic and the medical laboratory. These statements were made in the presence of Geralyn Delaney and myself.

6. That on December 17, 1975, Simos stated that there could be an open lease for a specific price signed between Claremont Medical Laboratory and the medical clinic. Simos stated that the lease could be renewed tomorrow at a different price. Simos stated that with this arrangement "the FBI cannot catch us this way. This protects the doctors. Once FBI sees sublease, they stop investigation." Simos stated that Claremont would not actually use the rented, subleased space. Simos stated that Claremont would evaluate the rent every three (3) months always with respect to the volume of medical tests ordered by the clinic. Simos stated that if the medical clinic were seeing thirty (30) patients a day, between $500 and $700 would be applied by Claremont to the rent in the medical clinic. Simos stated that Claremont would not give back more than thirty (30) percent of gross volume in medical tests in the form of rent. Simos stated that thirty (30) percent is very hard to explain to a State auditor already, and that any percent more than thirty (30) percent was much too difficult. Simos stated that a medical laboratory giving back a percentage of gross billing for medical tests to a medical clinic was dirty business. Simos stated that "the doctors would get clobbered, so we rent space." These statements were made in the presence of Geralyn Delaney and myself.

7. That on December 17, 1975, Mr. Simos stated that Claremont would give the medical clinic a forty (40) percent discount on all medical tests ordered for private, non-public-aid patients. These statements were made in the presence of Geralyn Delaney and myself.

8. That on December 17, 1975 Simos stated that he would consult with the two physicians at the medical clinic to show them how to order medical tests for public aid. Simos stated that Claremont would like the doctors to see a minimum of 15 patients a day and order two (2) or three (3) medical tests for each patient. Simos stated that a doctor does not have to worry about the expense of ordering tests for public aid patients like he does with private patients. Simos stated that because the State of Illinois is paying for the medical tests and not the public aid patient that "what the hell, go ahead and order

ten (10) tests—just go ahead." These statements were made in the presence of Geralyn Delaney and myself.

9. That on December 17, 1975, Simos stated that he would consult with the two (2) physicians at the medical clinic to show them how to diagnose cases for public aid. Simos stated that an example of a public aid diagnosis was the instance of submitting to the State tests for anemia and hypertension at the same time. Simos stated that the State of Illinois Department of Public Aid will not pay for both tests at the same time because the tests are not related to one another. Simos stated that a laboratory can bill the State for both tests at the same time if the public aid patients' physician writes "rule out" before the word hypertension. Simos stated that writing the words "rule out" before the name of a medical test will result in the State paying the medical laboratory for performing the tests. These statements were made in the presence of Geralyn Delaney and myself.

DOUGLAS A. LONGHINI.

Subscribed and sworn to before me this 20th day of January, 1976. Geralyn L. Delaney, notary public.

STATE OF ILLINOIS,
County of Cook, ss:

AFFIDAVIT

I, Douglas A. Longhini, being first duly sworn, do state under oath that the following is true to the best of my knowledge:

1. That I am an employee of the Better Government Association located at 360 North Michigan Avenue, Suite 1118, Chicago, Ill. I am employed presently as an investigator by the Better Government Association and was so employed throughout the month of December 1975.

2. That on December 15, 1975, I telephoned Ridgeland Medical Laboratory located at 101 Madison Street, Oak Park, Ill. I spoke to a woman who identified herself as Mrs. Villanueva. I stated that my name was Luke Kolman and that I represented two (2) licensed Illinois physicians who were going to open a medical clinic at 1520 West Morse, Chicago, Ill. I said I was going to be purchasing medical laboratory testing services for the proposed medical clinic. I made an appointment to meet with Ernesto Villanueva at 11 a.m. on December 18, 1975, at Ridgeland Medical Laboratory.

3. That on December 18, 1975, at approximately 11:15 a.m., Geralyn Delaney and myself entered the 2d floor offices of Ridgeland Medical Laboratory in Oak Park. We met a man who identified himself as Ernesto Villanueva. Mr. Villaneuva stated that the was the owner of Ridgeland Medical Laboratory and also had another laboratory named Clinical Lab Service located at 3940 West Division, Chicago, Ill.

4. That on December 18, 1975, Villanueva stated that if the volume of medical tests ordered by the medical clinic warranted it, Ridgeland Medical Laboratory would rent a room at the clinic and place a laboratory technician there to draw blood. Villanueva stated that Ridgeland would pay 50 percent of the technician's salary and that the medical clinic would pay the other 50 percent. Villanueva stated that the technician would not be drawing blood the whole 8 hours each day she is at the medical clinic. Villanueva stated that the technician may spend 30 percent of her time drawing blood and the other 70 percent of the time the technician could spend helping out the medical clinic's secretary with filing, etc.

5. That on December 18, 1975, Villanueva stated that the medical clinic would charge the lab a base rent for a certain amount of space at the medical clinic. Villanueva stated that if the volume of medical testing business referred to Ridgeland goes up then the rent can also be increased, but that the amount of square feet used by the lab at the medical clinic would not increase.

6. That on December 18, 1975, Villanueva stated that the rent Ridgeland would pay the medical clinic would be based on the volume of medical testing business, referred to the lab. Villanueva stated that there would be no ceiling on the amount of rent the medical clinic could charge the laboratory. Villanueva stated, "I don't have to know how much rent you are paying for the medical clinic." Villanueva stated that if the volume of medical testing business warranted it, the medical clinic could receive more money in the form of rent

from the few square feet rented by the lab, than the entire amount of money that the clinic paid each month for rental of the whole medical clinic.

7. That on December 18, 1975, Villanueva stated that Ridgeland would sign a legal sublease of space at the medical clinic. Villanueva stated that Ridgeland would evaluate the lease every 6 months, or 1 year, to see what the volume of medical testing business was. Villanueva stated that the lease can be negotiated every 6 months or so, if the volume of medical testing business increases, then a new lease is drawn up and the amount of rent paid by the laboratory to the medical testing business was. Villanueva stated that the lease can be negotiated (10) times, rent could go up ten (10) times."

8. That the above statements were made in the presence of Geralyn Delaney and myself on December 18, 1975.

DOUGLAS A. LONGHINI.

Subscribed and sworn to before me this 20th day of January, 1976. Geralyn L. Delaney, notary public.

STATE OF ILLINOIS,
County of Cook, ss:

AFFIDAVIT

I, Douglas A. Longhini, being first duly sworn, do state under oath that the following is true to the best of my knowledge:

1. That I am an employee of the Better Government Association located at 360 North Michigan Avenue, Suite 1118, Chicago, Ill. I am employed presently as an investigator by the Better Government Association and was so employed throughout the month of December 1975.

2. That on December 22, 1975, I telephoned North Side Clinical Laboratory at 185 North Wabash, Chicago, Ill. I spoke to a man who identified himself as Mr. LaPena. I told Mr. LaPena that my name was Luke Kolman and that I represented two (2) licensed Illinois physicians who were going to open a medical clinic at 1520 West Morse, Chicago, Ill. I told Mr. LaPena that I was going to be purchasing medical laboratory testing services for the proposed medical clinic. I made an appointment for 12 p.m., December 23, 1975, to personally meet Mr. LaPena at the medical clinic.

3. That on December 23, 1975, Geralyn Delaney and myself were physically present at the medical clinic located a 1520 West Morse, Chicago, Ill., between 8:40 a.m. and 1:30 p.m.

4. That at approximately 12 p.m., on December 23, 1975, a man entered the medical clinic located at 1520 West Morse, Chicago, Ill., and identified himself as Mr. Nemie LaPena.

5. That on December 23, 1975, LaPena stated that North Side Clinical Laboratory would charge the medical clinic fifty (50) percent less for medical tests on private patients seen by the medical clinic than the laboratory would charge for public aid patients.

6. That on December 23, 1975 LaPena stated that the medical clinic could keep all of the billings for private patients if the medical clinic was seeing between 80–90 percent public aid patients a day. The laboratory would then charge nothing for doing medical tests for private patients.

7. That on December 23, 1975, LaPena showed Geralyn Delaney and myself a laboratory testing tally sheet. LaPena stated that he would have a copy of this sheet and that the medical clinic would have a copy of an identical sheet. LaPena stated that he would maintain a list of the tests ordered by the medical clinic each week and that the medical clinic should also keep a record of the medical tests ordered each week. LaPena stated that at the end of each week he would total the dollar amount of tests ordered by the medical clinic and then each Tuesday of the week the clinic would receive a check from North Side Clinical Laboratory equal to 45 percent of the previous week's billings for medical tests. LaPena stated that if the medical clinic were to send more than $1,000 in medical tests to North Side, then North Side would send the medical clinic a check for 50 percent of the previous week's billing, again so long as that billing exceeded $1,000. LaPena stated that the weekly checks would be for payment of rental of space at the medical clinic. LaPena stated that North Side would not actually use the space North Side would rent at the medical clinic.

8. That on December 23, 1975, LaPena stated that North Side would sign a written sublease for space at the medical clinic. LaPena stated, "I don't know how legal, but rental agreement could say that we are giving you back 45 percent of the volume of medical tests ordered." LaPena stated that he presently maintained this type of sublease with a number of medical clinics.

9. That on December 23, 1975, LaPena stated that if the volume of medical testing business referred to North Side was high enough that North Side would pay the medical clinic a flat fee of $600 a week for rental of space at the clinic. LaPena stated that the medical clinic would have to order tests on at least eight (8) patients a day if North Side was to collect $1,200 in lab fees a week.

10. That on December 23, 1975, LaPena stated that if the volume of medical tests ordered by the medical clinic exceeded $1,200 per week that North Side would then pay part of the salary of the clinic's secretary and/or nurse. La Pena stated that North Side could pay some of the clinic's utility bills.

11. That the above statements were made in the presence of Geralyn Delaney and myself on December 23, 1975.

DOUGLAS A. LONGHINI.

Subscribed and sworn to before me this 20th day of January, 1976. Geralyn L. Delaney, notary public.

STATE OF ILLINOIS,
County of Cook, ss:

AFFIDAVIT

I, Douglas A. Longhini, being first duly sworn, do state under oath that the following is true to the best of my knowledge:

1. That I am an employee of the Better Government Association located at 360 North Michigan Avenue, Suite 1118, Chicago, Ill. I am employed presently as an investigator by the Better Government Association and was so employed throughout the month of December 1975.

2. That on December 22, 1975, I telephoned United Medical Laboratories located at 8 South Michigan, Chicago, Ill. I spoke to someone who did not identify themselves. I stated that my name was Luke Kolman and that I represented two (2) licensed Illinois physicians who were going to open a medical clinic at 1520 West Morse, Chicago, Ill. I said I was going to be purchasing medical laboratory testing services for the proposed medical clinic. I made an appointment to meet with Ms. Judy Pedgrift, a representative of United Medical Laboratories, at the medical clinic at 1520 West Morse, Chicago, Ill., for 9 a.m. on December 23, 1975.

3. That on December 23, 1975, Geralyn Delaney and myself were physically present at the medical clinic located at 1520 West Morse, Chicago, Ill., between 8:40 a.m. and 1:30 p.m.

4. That at approximately 9:40 a.m. on December 23, 1975, a woman entered the medical clinic located at 1520 West Morse, Chicago, Ill., and identified herself as Judy Pedgrift of United Medical Laboratories.

5. That on December 23, 1975, Pedgrift stated that United Medical Laboratories would make available to the medical clinic two separate price lists for medical tests. Pedgrift stated that one price list would be for private patients, and the second, and higher price list, would be for public aid patients. Pedgrift stated that in order to use the lower private patient prices, the medical clinic would have to directly bill the private patient. Pedgrift stated that "on private patients, if you [the medical clinic] bill the patient, then the medical clinic will pay the prices indicated on the [lower] price list and then the clinic can charge the patient whatever it wants to charge." Pedgrift stated that "some doctors still pay higher prices for tests on private [patients]. They don't realize the lower prices. If volume is good than $5 is fine, instead of $8, for the same test."

6. That on December 23, 1975, Pedgrift stated that United Medical Laboratories would "pay back rent to the medical clinic [based] on all public aid tests" ordered by the medical clinic. Pedgrift stated that "on public aid, we have to cover rent and equipment, rent for room and technician. We work out equitable rent situation with you."

7. That on December 23, 1975, Pedgrift stated that United would not pay any rent to the medical clinic during the first month of business at the clinic.

Pedgrift stated that after the medical clinic's first month of business, United would "get [an] idea of volume and then figure monthly rent." Pedgrift stated that some medical clinics serviced by United have rents of $800 and Pedgrift says United absorbs the entire $800 rent. Pedgrift stated that if United is paying a flat rent the laboratory is constantly evaluating the rent. If a medical clinic's volume of medical tests goes down United will call the clinic and tell them that they had better get their volume up.

8. That on December 23, 1975, Pedgrift stated that if the volume of medical tests ordered by the laboratory is constantly low, then United will lower the amount of rent it is paying to the lab. Pedgrift stated that if the volume increases United will re-evaluate the rent and raise the rent.

9. That on December 23, 1975, I asked Pedgrift if United actually looked at the volume of medical tests ordered by the medical clinic and take a percentage of that and apply it to the rent for the clinic. Pedgrift stated, "Right."

10. That the above statements were made in the presence of Geralyn Delaney and myself on December 23, 1975.

DOUGLAS A. LONGHINI.

Subscribed and sworn to before me this 20th day of January, 1976. Geralyn L. Delaney, notary public.

STATE OF ILLINOIS,
County of Cook, ss:

AFFIDAVIT

I, Douglas A. Longhini, being first duly sworn, do state under oath that the following is true to the best of my knowledge:

1. That I am an employee of the Better Government Association located at 360 North Michigan Avenue, Suite 1118, Chicago, Ill. I am employed presently as an investigator by the Better Government Association and was so employed throughout the month of December 1975.

2. That on December 22, 1975, I telephoned Norsom Medical Reference Laboratories, Inc., located at 710 Higgins Road, Park Ridge, Ill. I spoke with a man who identified himself as Mr. Paradise. I told Mr. Paradise that my name was Luke Kolman and that I represented two (2) licensed Illinois physicians who were going to open a medical clinic at 1520 West Morse, Chicago, Ill. I told Mr. Paradise that I was going to be purchasing medical laboratory testing services for the proposed medical clinic. I made an appointment for 1 p.m., December 23, 1975 to have Mr. Paradise come to the medical cinic at 1520 West Morse.

3. That on December 23, 1975, between the hours of 8:40 a.m. and 1:30 p.m., I, along with Geralyn Delaney, was physically present at the medical clinic located at 1520 West Morse, Chicago, Ill.

4. That at approximately 1 p.m., December 23, 1975, a man entered the medical clinic and identified himself as Mr. Paradise of Norsom Medical Reference Laboratories, Inc.

5. That on December 23, 1975, Mr. Paradise stated that if the clinic did the billing on private patients and drew the specimens the lab would have a flexible profile on private patients. Mr. Paradise stated that the lab would charge less for private than they would for medicaid.

6. That the above statement was made in the presence of Geralyn Delaney and myself.

DOUGLAS A. LONGHINI.

Subscribed and sworn to before me this 5th day of February, 1976. Geralyn L. Delaney, notary public.

STATE OF ILLINOIS,
County of Cook, ss:

AFFIDAVIT

I, Douglas A. Longhini, being first duly sworn, do state under oath that the following is true to the best of my knowledge:

1. That I am an employee of the Better Government Association located at 360 North Michigan Avenue, Suite 1118, Chicago, Ill. I am employed presently as an investigator by the Better Government Association and was so employed throughout the month of January 1976.

2. That on January 8, 1976, Geralyn Delaney telephoned Tenn Clinical Laboratory, located at 1057 West Argyle, Chicago, Ill. Ms. Delaney told a man, who identified himself as Mr. Diancin, that two (2) licensed Illinois physicians were going to open a medical clinic at 1520 West Morse. Ms. Delaney said that the doctors would be purchasing medical laboratory testing services for the proposed medical clinic. Ms. Delaney made an appointment for 10 a.m., January 9, 1976, to have Mr. Diancin come to the medical clinic at 1520 West Morse.

3. That on January 9, 1976, between the hours of 9 a.m. and 11:30 a.m., I was present at 1520 West Morse, Chicago, Ill. Also present at this address during this period was George Bliss and Jean Butzen.

4. That at approximately 10 a.m. on January 9, 1976, a man entered the building at 1520 West Morse and identified himself as Ted Diancin. Diancin gave me a business card identifying Ted Diancin as president of Tenn Clinical Laboratory, Inc.

5. That on January 9, 1976, Diancin stated that Tenn would charge the medical clinic 50 percent less for medical tests performed for private patients than the laboratory would charge the State for tests performed for medicaid patients. Diancin stated that if a test cost $5, Tenn Laboratory would charge the medical clinic $2.50 for private patient tests.

6. That on January 9, 1976, Diancin stated that Tenn Clinical Laboratory would rent space at the medical clinic for a blood drawing station. Diancin stated that the rent the laboratory would pay the clinic would be based on a percentage of the volume of medical testing business that the clinic referred to Tenn Laboratory. Diancin sated that if the clinic referred $1,000 in medical tests to the laboratory a month, the monthly rent paid by Tenn would be 15 percent of that $1,000. Diancin stated that if the clinic referred more than $4,000 in medical tests to the laboratory, the monthly rent paid by Tenn would be 25 percent of that month's billings.

7. That on January 9, 1976, Diancin stated that Tenn could sign a legal sublease or lease of space at the clinic. Diancin stated that the rent would be evaluated monthly by Tenn. If the volume of medical testing business referred by the medical clinic would decline than the rent paid by Tenn to the medical clinic would also decline proportionately. Diancin stated that Tenn would rent as little as one square foot of space at the medical clinic. Diancin stated that Tenn would not actually use the rented space. Diancin stated that the only reason Tenn would legally sublease the space at the clinic was "just for the IRS, just to make it look legal."

8. That on January 9, 1976, the above statements were made in the presence of Jean Butzen, George Bliss, and myself.

DOUGLAS A. LONGHINI.

Subscribed and sworn to before me this 5th day of February, 1976. Geralyn L. Delaney, notary public.

STATE OF ILLINOIS,
County of Cook, ss:

AFFIDAVIT

I, Geralyn Delaney, being first duly sworn, do state under oath that the following is true to the best of my knowledge:

1. That I am employed by the Better Government Association, 360 North Michigan, Suite 1118, Chicago, Ill., as a secretary, and have been employed there since April 1, 1974.

2. That on December 16, 1975, at 11 a.m., I was present at 1520 West Morse, Chicago, Ill., when a man entered the premises. He identified himself as Dr. Velez from Azteca Laboratory.

3. That on December 16, 1975, Dr. Velez stated for private patients our clinic would get a "professional service discount" on lab test prices and if our clinic received 10–15 private, medicare, or medicaid patients a day, Azteca would lease a certain amount of space in our clinic. Our clinic would get a statement every month which would show us our volume, gross, etc., and Dr. Velez said, "The lab will give you some percentage applied to your facilities. This is legal." Dr. Velez gives "$1,200 a month to one clinic, but he has the volume."

4. That on December 16, 1975, Dr. Velez showed Doug Longhini and myself a statement to the Illinois Department of Public Aid showing the amount Azteca charged for a certain test, for example $49, and the cash value the State pays

for the same test, for example $39. Other tests were listed on the statement for public aid patients and the total amount charged came to $4,994 and the total amount received from the State was $3,853. Dr. Velez stated Azteca would give the clinic the $1,000 difference, about a 25 percent discount applied to our rent.

5. That the above statements were made in the presence of Doug Longhini and myself.

GERALYN DELANEY.

1. That I am employed by the Better Government Association, 360 North Michigan, Suite 1118, Chicago, Ill., as a secretary, and have been employed there since April 1, 1974.

2. That on December 16, 1975, I was present at 1520 West Morse, Chicago, Ill., at 10 a.m. when two (2) men entered the premises. Both men identified themselves as being from Division Laboratories; one identified himself as John Todd and the other as Felix Salamanca.

3. That on December 16, 1975, John Todd stated Division would sublease space in our clinic for the technician to draw the blood. Mr. Todd stated Division would review the payment for the subleased space every three (3) months. Mr. Todd also stated Division could provide electrical and plumbing contracting services for our medical clinic.

4. That on December 16, 1975, Mr. Todd stated Division would pay the salary of the clinic's secretary and/or the nurse that draws the blood.

5. That Division would provide the necessary equipment—ekg and X-ray, and a technician who would be on Division's payroll or the doctor's payroll.

6. That the above statements were made in the presence of Douglas Longhini and myself.

GERALYN DELANEY.

1. That I am employed by the Better Government Association, 360 North Michigan, Suite 1118, Chicago, Ill., as a secretary, and have been employed there since April 1, 1974.

2. That on December 16, 1975, I was present at 1520 West Morse, Chicago, Ill., at 9 a.m. when a man entered the above-stated premises. His business card identified him as Riaz Khan from West Lawn Medical Laboratory.

3. That on December 16, 1975, Mr. Khan stated that West Lawn Medical Laboratory would not charge our medical clinic for the tests done on private patients if we got five (5) to ten (10) public aid patients a day. He also stated that if our clinic received a volume of between 15–20 patients a day, West Lawn would charge us the minimum on lab tests.

4. That on December 16, 1975, Mr. Khan stated the prices on West Lawn's medical testing price list were negotiable, but he would have to talk with the doctors. If the doctors could guarantee the private and medicaid business, prices of lab testing could be negotiated.

5. That on December 16, 1975, Mr. Khan stated that business between our medical clinic and West Lawn would not be arranged by contract; rates would all be verbal.

6. That on December 16, 1975, Mr. Khan stated West Lawn would sublease space in our clinic for a technician to draw the blood and West Lawn would pay

us for this space. The amount of rent West Lawn would pay us would be based on volume.

7. That the above statements were made in the presence of Douglas Longhini and myself.

GERALYN DELANEY.

AFFIDAVIT

I, Geralyn Delaney, being first duly sworn, do state under oath that the following is true to the best of my knowledge:

1. That I am employed by the Better Government Association, 360 North Michigan, Suite 1118, Chicago, Ill., as a secretary, and have been employed there since April 1, 1974.

2. That on December 16, 1975, at 2 p.m. at 1520 West Morse, Chicago, Ill., I was present when a man entered the premises. His business card identified him as Mr. James Robinson from Chicago Medical Laboratories.

3. That on December 16, 1975, Mr. Robinson said, "We make arrangements in terms of rent." Mr. Robinson stated the lab could lease space in our clinic. Douglas Longhini asked Mr. Robinson if our clinic would sign a sublease with Chicago Medical, and Mr. Robinson said, "I wouldn't worry much about leases until we get started." "Leases are only if you have a good thing going." Mr. Robinson stated the clinic could expect a check back, and put it toward rent. Mr. Robinson said, "Rent is adjusted to whatever volume is."

4. That on December 16, 1975, Mr. Robinson stated Chicago Medical Labs could give back to the clinic a percentage based on a fixed figure and if the volume of medical tests rose the percentage would be adjusted substantially. Mr. Robinson said, "I can give you service in terms of percentage." Mr. Robinson said, "I can't deal without a fixed percentage," and stated the percentage is higher on private patients, two times as much. He also stated that if Chicago Medical got an SMA–12 and a urinalysis from the clinic, which would amount to $20, then the clinic would get back 40 percent of that figure (this being on private patients).

5. That on December 16, 1975, Mr. Robinson stated it would be to our advantage to let Chicago Medical license the clinic, that way we can get a tax writeoff. Chicago Medical does this for large facilities.

6. That the above statements were made in the presence of Douglas Longhini and myself.

GERALYN DELANEY.

Subscribed and sworn to before me this 13th day of January, 1976. Robert C. Howard, notary public.

1. That I am employed by the Better Government Association, 360 North Michigan, Suite 1118, Chicago, Ill., as a secretary, and have been employed there since April 1, 1974.

2. That on December 16, 1975, at 3:05 p.m., I was present at 1520 West Morse, Chicago, Ill., when a man entered the premises. He identified himself as Dr. Charlip from General Medical Laboratories, Ltd.

3. That Dr. Charlip stated General Medical had two separate price lists; one for private patients, the other for medicare and medicaid patients, the latter two paying a higher amount of money. Dr. Charlip said he would send us the two price lists.

4. That on December 16, 1975, Dr. Charlip said when the physician is billing his patients, "There are a lot of tricks so you can get the full benefit, so when you need it, let me know." Dr. Charlip stated there are codes that will get the clinic $8–$25.

5. That the above statements were made in the presence of Douglas Longhini and myself.

GERALYN DELANEY.

Subscribed and sworn to before me this 20th day of January, 1976. Robert C. Howard, notary public.

STATE OF ILLINOIS,
County of Cook, ss:

AFFIDAVIT

I, Geralyn Delaney, being first duly sworn, do state under oath that the following is true to the best of my knowledge:

1. That I am employed by the Better Government Association, 360 North Michigan, Suite 1118, Chicago, Ill., as a secretary, and have been employed there since April 1, 1974.

2. That on December 17, 1975, at 10:50 a.m., I was present at 1520 West Morse, Chicago, Ill., when a man entered the premises. He identified himself as Mr. Simos, manager of Hilltop Labs, but was representing himself for Claremont Laboratories, a lab that he was going to open soon.

3. That on December 17, 1975, Mr. Simos said, "If you have good volume you will get very good rent from us. We have to make it look like rent. Which is a way to say thank you. We are renting the availability of business within the premises and that is legal." Mr. Simos stated the rent his lab would pay the clinic is based upon volume.

4. That on December 17, 1975, Mr. Simos stated that his lab will give the clinic a discount of up to 40 percent but it is up to the clinic to draw the blood. No technician is provided to draw the blood if the clinic gets a 40 percent discount. Mr. Simos said, "The lab will give you a discount on lab prices if you want to collect the money yourself. You can get a discount on private patients."

5. That on December 17, 1975, Mr. Simos stated after 1 to 2 months the lab would evaluate our volume and if it increases the amount of discount will increase, but the discount is not to exceed 30 percent of the volume. Mr. Simos said, "I can give you up to 50 percent but auditors can check up on it."

6. That on December 17, 1975, Mr. Simos stated if the clinic received 30 patients the clinic could get $500 toward rent plus salary of the blood drawer. The lab must have a sublease, but the lab will not need that space. Mr. Simos said, "As soon as they [auditors] see the rental agreement they will stop talking to the doctor." There is an "open lease that we could negotiate and renew tomorrow."

7. That on December 17, 1975, Mr. Simos stated he could provide the clinic with a pharmacy, but it would be more profitable for the clinic to have their own pharmacy set up.

8. That Mr. Simos stated that if the clinic received 30 patients the lab would provide a technician to draw the blood; and if the clinic receives under 30 patients the clinic must draw the blood themselves.

9. That the above statements were made in the presence of Douglas Longhini and myself.

GERALYN DELANEY.

Subscribed and sworn to before me this 13th day of January, 1976. Robert C. Howard, notary public.

STATE OF ILLINOIS,
County of Cook, ss:

I, Geralyn Delaney, being first duly sworn, do state under oath that the following is true to the best of my knowledge:

1. That I am employed by the Better Government Association, 360 North Michigan, Suite 1118, Chicago, Ill., as a secretary, and have been employed there since April 1, 1974.

2. That on December 17, 1975, at 10 a.m., I was present at 1520 West Morse, Chicago, Ill., when a man entered the premises. His business card identified him as Joselito C. Espino, president of D. J. Medical Laboratory, Inc.

3. That on December 17, 1975, Mr. Espino stated D. J. Labs has two (2) separate price lists for their medical testing; one for private, the other for public aid. Following is the list of prices Mr. Espino stated to Douglas Longhini and myself:

Test	Prices charged for private	Prices charged for State
SMA-12	$3.50	$15.00
CBC	2.50	6.00
Urinalysis	1.50	3.00
VDRL	3.00	(1)
ABO	1.50	3.50
Rh	1.50	3.50
Glucose	2.50	5.00
Pap smear	4.00	10.00
All cultures	5.00	10.00
G.P. smear	1.50	3.00
TEC	1.50	3.00
Stool O/P	1.50	3.00
TIBC	3.00	7.00
T-3	6.00	12.00
T-4	6.00	12.00
PBI[2]		
Na	2.00	3.00
K	2.00	3.00
Creatinine	3.00	7.00
ASO	2.00	5.00
Pregnancy	3.00	8.00
ANA	6.00	12.00
SGPT	2.50	5.00
Floculation	2.50	5.00
Thymol	2.50	5.00
Latex	2.00	5.00
CRP	2.00	5.00
Ekg	6.00	12.00

[1] No payment.
[2] D.J. does not take these tests, they send to Mason and Baron.

4. That on December 17, 1975, when asked by Doug Longhini if our clinic could get into trouble because of the low prices charged for private patients as compared to public aid, Mr. Espino stated the clinic would not get into trouble because none of these prices are written down, they are all verbal.

5. That the above statements were made in the presence of Douglas Longhini and myself.

GERALYN DELANEY.

Subscribed and sworn to before me this 13th day of January, 1976. Robert C. Howard, notary public.

STATE OF ILLINOIS,
County of Cook, ss:

AFFIDAVIT

I, Geralyn Delaney, being first duly sworn, do state under oath that the following is true to the best of my knowledge:

1. That I am employed by the Better Government Association, 360 North Michigan, Suite 1118, Chicago, Ill., as a secretary, and have been employed there since April 1, 1974.

2. That on December 18, 1975, at approximately 11:15 a.m., Douglas Longhini and myself entered the Ridgeland Medical Laboratories, which are located on the 2d floor at 101 Madison Street, Oak Park, Ill. The man who met us introduced himself as Mr. Villanueva, the owner of Ridgeland.

3. That on December 18, 1975, Villanueva said, "If it warrants we rent a room from you and place a girl there to draw the blood." Villanueva stated that Ridgeland will evaluate the lease every 6 months to a year, to see what the volume is. If the volume increases then a new lease is drawn up and the amount of rent increases. Villanueva stated that if the volume warrants we could be getting more than what we pay for the whole rent. If the volume goes up 10 times, the rent could go up 10 times. Villanueva stated there is no ceiling on the amount of rent the clinic can charge the lab. Villanueva said, "I don't

have to know how much rent you are paying." Our clinic would charge the lab a base rent for a certain amount of square feet of space. If the volume goes up the clinic can increase rent, but the amount of square feet of space does not increase. Villanueva stated his lab would only need to rent from the clinic just a couple square feet of space, just enough for the girl to be able to draw the blood.

4. That on December 18, 1975, Villanueva stated the technician will not be drawing blood the whole 8 hours she is at our clinic. She may spend 30 percent of her time drawing blood and the other 70 percent helping out secretarially with filing, etc. Ridgeland would pay 50 percent of her salary and the clinic would pay the other 50 percent of her salary, even though she might work 30 percent drawing blood and 70 percent doing secretarial work.

5. That the above statements were made in the presence of Douglas Longhini and myself.

GERALYN DELANEY.

Subscribed and sworn to before me this 20th day of January, 1976. Robert C. Howard, notary public.

STATE OF ILLINOIS,
County of Cook, ss:

AFFIDAVIT

I, Geralyn Delaney, being first duly sworn, do state under oath that the following is true to the best of my knowledge:

1. That I am employed by the Better Government Association, 360 North Michigan, Suite 1118, Chicago, Ill., as a secretary, and have been employed there since April 1, 1974.

2. That on December 23, 1975, at 12:10 p.m., I was present at 1520 West Morse, Chicago, Ill., when a man entered these premises. He identified himself at Mr. LaPena from Northside Clinical Lab.

3. That on December 23, 1975, Mr. LaPena stated he had a special price list of medical tests for private patients. For example, for an SMA–12 the State would pay $15, but for private an SMA–12 would be $4.50. Mr. LaPena stated if the clinic's public aid patients comprised 80–90 percent of entire volume, Northside would not charge for private patients. LaPena said Northside charges "50 percent less for private patients on all tests."

4. That on December 23, 1975, Mr. LaPena stated the percentage paid back to the clinic by Northside is up to the clinic. Anything the clinic has in mind Northside will compromise. Northside will give the clinic a percentage of the volume or a flat fee.

5. That on December 23, 1975, Doug Longhini asked how the lab will work the arrangement stated in (4) above. LaPena stated that some medical clinics have a flat fee of $600 and some get back a percentage on total volume of both public aid and private. The clinic totals up its gross for the day, then multiplies that by 45 percent, and this is applied to the rent. For one week if the clinic grosses more than $1,000, the clinic gets back 50 percent. Doug asked, "How is it paid back?" LaPena replied, "Every Tuesday I will be ready with a check." Doug asked, "For rental of space?" LaPena said, "Yes." Doug asked LaPena, "Will you be using that footage?" LaPena answered, "No. All we need is a blood machine and a chair. If you have EKG machine, then we wlil need a room."

6. That on December 23, 1975, LaPena stated if the lab provides a blood technician then his salary will be taken out of the 45 percent given back to the clinic.

7. That on December 23, 1975, Doug asked LaPena if there would be a sublease written up. LaPena stated it would be up to the clinic, whatever the clinic would want. LaPena said, "I don't know how legal it is, but rental agreement could say that we are giving you back 45 percent." LaPena stated any surplus over the $1,200 gross, the lab would apply to paying clinic's secretary and telephone bill, etc.

8. That on December 23, 1975, Doug asked LaPena if the clinic's volume was high enough will the clinic get a $600 flat fee back. LaPena stated that if the clinic had at least eight patients a day for tests to equal $1,200 in lab fees for a week, then yes we would get a $600 flat fee back.

9. That the above statements were made in the presence of Douglas Longhini and myself.

GERALYN DELANEY.

Subscribed and sworn to before me this 20th day of January, 1976. Robert C. Howard, notary public.

STATE OF ILLINOIS,
County of Cook, ss:

AFFIDAVIT

I, Geralyn Delaney, being first duly sworn, do state under oath that the following is true to the best of my knowledge:

1. That I am employed by the Better Government Association, 360 North Michigan, Suite 1118, Chicago, Ill., as a secretary, and have been employed there since April 1, 1974.

2. That on December 23, 1975, at 9:45 a.m., I was present at 1520 West Morse when a woman entered the premises. She identified herself as Judy Pedgrift from United Medical Laboratory.

3. That on December 23, 1975, Ms. Pedgrift stated United charges $15 for an SMA–12 test downtown for public aid. In the suburbs United bills the patients $10, because the patients in the suburbs cannot afford the $15.

4. That when Douglas Longhini asked Ms. Pedgrift if the prices for lab tests would remain the same despite the volume, she replied, "Yes."

5. That on December 23, 1975, Ms. Pedgrift said, "On public aid we pay back rent to cover your expenses." Ms. Pedgrift stated that with private patients, if the clinic bills the patients, the clinic pays the price indicated on the list and the clinic charges the patients whatever it wants. Ms. Pedgrift stated that United Labs would help the clinic cover its rent and equipment expenditures, the rent for room and technician. She said, "We'll work out an equitable rent situation with you."

6. That on December 23, 1975, Doug asked Ms. Pedgrift if the clinic would have an actual sublease. Ms. Pedgrift stated that United Labs would have to get an idea of the clinic's volume and then figure the monthly rent. Usually United does not give a first month's rent because they want to get an idea of the clinic's volume first. Ms. Pedgrift stated that all the clinic's expenses must be paid. Some clinics ask for 60 percent of their volume to be paid back by the lab, some ask 40–50 percent. Ms Pedgrift said, "How can we make any money? We would rather work out something fair to both parties.

7. That on December 23, 1975, Doug asked Ms. Pedgrift if the percentage was based on volume. Ms. Pedgrift stated that some clinics pay a straight rent of $800 and the lab absorbs that $800.

8. That on December 23, 1975, Doug asked Ms. Pedgrift how often the rent was reevaluated Ms. Pedgrift stated that for flat rent United constantly evaluates the rent. When some clinic's volume goes down, United calls them up and tells them they had better get their volume up again to where it was. Doug asked Ms. Pedgrift if United would lower the rent paid back if the clinic's volume were to go down. Ms. Pedgrift stated that if the volume of the clinic is constantly low, then the clinic takes a cut in rent. Doug asked Ms. Pedgrift that if the volume of the clinic were to go up would United reevaluate the rent, and Ms. Pedgrift replied, "Yes."

9. That on December 23, 1975, Doug asked Ms. Pedgrift if United would provide the clinic with a lab technician. Ms. Pedgrift stated that the clinic would have to find their own technician for that area. United has to pay $600 a month for the technician's salary.

10. That Doug asked Ms. Pedgrift if United actually looked at volume and took a percentage of that, and Ms. Pedgrift said, "Right."

11. That Doug asked Ms. Pedgrift if the clinic would have a legal lease and she answered, "That can be done."

12. That the above statements were made in the presence of Douglas Longhini and myself.

2. That on December 23, 1975, at approximately 1 p.m., I was present at 1520 West Morse, Chicago, Ill., when a man entered the above-stated premises and identified himself as Mr. Paradise from Norsom Medical Reference Laboratories, Inc.

3. That on December 23, 1975, Mr. Paradise stated that Norsom had reference fees that they would charge the clinic, and the doctors could set their own fee of what they would want to charge. Paradise stated that for a chemistry profile test Norsom would charge us $4.80 (reference fee) and public aid allows $15. The only time Norsom would not charge us $4.80 is when they take care of the billing on public aid patients. On a glucose test Norsom would charge the clinic $2.40, public aid pays $6–$8.

4. That on December 23, 1975, Mr. Paradise stated Norsom could provide Ph. D. consultation services for the doctors.

5. That the above statements were made in the presence of Douglas Longhini and myself.

1. That I am employed by the Better Government Association, 360 North Michigan, Suite 1118, Chicago, Ill., as a secretary, and have been employed there since April 1, 1974.

2. That on January 6, 1976, at approximately 4:25 p.m., I was present at 1520 West Morse, Chicago, Ill., along with Douglas Longhini and Patrick Riordan, investigators for the Better Government, when Bill Footlick and Felix Salamanca, both from Division Medical Laboratory, entered the above-stated premises.

3. That on January 6, 1976, the following conversation took place:

Footlick stated Division was the largest Public Aid lab in the State. "If we charge private patients less than the State, then we lose the privilege of dealing with the State. We charge private the same as the State. You can charge more if you want," said Footlick.

Doug asked what the arrangements were.

Footlick: ". . . percentage of the volume of business in dealing with public aid. Our lab is in good standing with the State. We do a legitimate business. We pay a flat rental and determine that rental on the first month's volume." Rental "must stay as fixed amount but rent is reviewed every 3–4 months."

Riordan asked what percentage Footlick was talking about.

Footlick: "Depends on volume. It ranges between 25–30 percent. Any lab that talks more than that is only kidding you. The lab cannot afford more than that for rental."

Doug asked if Division makes an estimate during first month based on volume, somewhere between 25–30 percent. Is rent evaluated every 3–4 months and does it depend on the volume.

Footlick: "Not drastically and not on a constant basis; on a long period of time because again we don't want a part of percentages."

Doug asked if this arrangement is just between Division and the clinic.

Footlick: "I am able to be looked at. What we discuss here . . . by FBI. This is not frowned upon. It is a percentage as starting base."
