Senator Moss. Thank you, Val. Your full statement will be placed in the record.

[The prepared statement of Mr. Halamandaris follows:]

PREPARED STATEMENT OF VAL J. HALAMANDARIS, ASSOCIATE COUNSEL, SPECIAL COMMITTEE ON AGING

Mr. Chairman, we are pleased to be here this morning to present the results of our most recent investigation into Medicaid abuse. We focused on possible fraud by practitioners, including doctors and dentists and soon learned that most high-volume Medicaid practitioners work out of Medicaid mills. Consequently, Medicaid mills is the central topic of this report.

THE INVESTIGATION

In the course of this 8-month investigation Senate investigators attempted to test the Medicaid program from three perspectives: government, provider and patient. Specifically, the investigation involved:

(1) Examining in detail more than 100 major reports produced by Federal, State or local agencies detailing fraud, abuse, waste or inefficiency in Medicaid, with a particular emphasis on New York.

(2) Reviewing records in the New York City Department of Health, in the Office of the United States Attorney, Southern District of New York, in the Office of the District Attorney, County of New York, as well as offices of Michigan's Post Payment Surveillance Unit, the so-called "Fraud Squad."

(3) Manually evaluating the medical vendor statement, a computer print-out of all payments for 1974, compiled from records of the New York State Department of Social Services.

(4) Interviewing 20 public officials and sending written interrogatories to 30 additional public officials with present or past responsibility for the Medicaid program in New York.

(5) Interviewing more than 60 physicians; 50 of the interviews were conducted in Illinois last January in conjunction with the Subcommittee's report on clinical laboratory fraud.

(6) Sending questionnaires to 250 physicians in New York who were paid from $75,000 to $785,000 from Medicaid last year (1975).

(7) Committee staff and United States Senator Frank E. Moss, (see following), posed as Medicaid beneficiaries with valid Medicaid cards, presenting themselves for treatment more than 200 times. Some 120 of these visits were in New York City, the remainder were in California, New Jersey and Michigan.

(8) Announcing the establishing of a corporation for purposes of buying and operating health care facilities. Accompanied by cooperating physicians, investigators answered advertisements in the New York Times announcing "Medicaid mills" for sale in Brooklyn, Queens, the Bronx, and the lower East Side and East Harlem. This technique, along with the physician interviews, gave Senate investigators direct information as to the financial operation of numerous Medicaid mills.

(9) Monitoring the operation of a storefront "Medicaid mill" established last December by Chicago's Better Government Association.

Phase I of our work consisted of evaluating some 100 reports dealing with the operation of the Medicaid program particularly in New York. We found that the substantial problems have existed for some time. We then interviewed public officials and sent written interrogatories. We evaluated the results. Phase II was to incorporate the findings with respect to Medicaid mills which we learned in our examination of clinical labs last January in Illinois. Phase III related to our posing as patients and we would like to give you some detail on our experiences. Phase IV, which I will discuss in a few moments, related to our posing as businessmen answering ads in the *New York Times* ostensibly to buy Medicaid mills.

CONCLUSIONS

Maidcaid mills

Comparatively few physicians, (and other practitioners) the great majority of whom work in Medicand mills, are paid most of the money from the Medicaid program. However, because of complicated leasing arrangements, these doctors (mostly foreign trained practitioners) work essentially on commission and are allowed to keep only about 30 percent of the income they generate for Medicaid mill owners, generally businessmen and not medical practitioners.

Practitioners who work in Medicaid mills are under continual pressure to see more and more patients, to order more and more tests, and to spend less and less time with each patient. From personal experience Committee investigators and Senator Moss documented that the quality of care in Medicaid mills was poor in 90 percent of their visits.

As noted above, in national terms, about $2.2 billion may flow through such Medicaid mills. Some 70 percent of this amount is siphoned off by businessmen or real estate operators. Even allowing for overhead salary and other costs, the Committee staff concluded that $1 billion a year was being paid out unnecessarily to enterpreneurs who provide essentially no services.

Medicaid mill owners resort to many techniques to maximize the amount of income coming into the clinic, the first is billing for services not rendered (fraud) and the second most common is ordering unnecessary tests which is a form of over-utilization. However, in about 25 percent of the over-utilization cases experienced by the Committee staff, the efforts were so blatant, so calculated and purposeful, that the staff concluded they constituted intentional efforts to defraud the Medicaid program.

Medicaid mills: A box score

(1) $1 billion may be unnecessarily paid by Medicaid each year to businessmen and real estate speculators who own Medicaid mills. In the normal case, these men are not medical practitioners.

(2) Of the amount unnecessarily paid, the Committee staff estimates that $220 million (10 percent of all payments made to Medicaid mill practitioners or pharmacists) is outright fraud.

(3) Another $550 million of the $1 billion total (25 percent of all payments to Medicaid mill practitioners consists of purposeful over-utilization. The incentives under the present system encourage the ordering of repeated and unneeded tests and the provision of unwanted and unnecessary services.

(4) The quality of care in Medicaid mills in 90 percent of all cases is reprehensible.

NEW YORK

New York State, and particularly New York City has a historical problem of maladministration in its welfare (public assistance) and Medicaid programs (medical assistance) programs. The two are tied together because of eligibility for welfare automatically makes a client eligible for Medicaid as well. Studies by New York and federal officials continue to reveal high ineligibility rates and poor management. Despite repeated warnings from City, State and Federal officials in the form of over 100 reports (the best of which have been prepared by Comptroller Aurther Levitt), little action has followed. This is hardly news for New Yorkers who have read ad naseum about impropriety among New York nursing homes. This report suggests there is equal cause for alarm with respect to other Medicaid providers including some hospitals, clinical laboratories, and certain practitioners who work in Medicaid mills. The Committee staff used conservative estimates that $444 million is lost in New York State as a result of (a)

ineligibility, (b) fraud by all providers including nursing homes, hospitals and practitioners in Medicaid mills, and (c) overutilization of services. Most of the problem is centered in New York City which the Committee estimates loses $295 million in Medicaid funds to these three factors.

While noting these problems are critical and that New York has the worst managed Medicaid program in the Nation, the Committee staff was quick to point out that the problems were historical and not the responsibility of any one public official. On the contrary, the Senate staff had high praise for Governor Hugh Carey of New York who has taken aggressive action to stem the tide. The staff report notes a few of the positive steps taken by Governor Carey: (1) the appointment of a Special Prosecutor for Nursing Homes and more recently vesting him with authority to examine domicilliary care facilities. (One prime recommendation of the report is that the Special Prosecutor's position should be established in law and that he be given responsibility to investigate practitioner abuse in the Medicaid program as well as among institutional providers); (2) the establishment of a Moreland Act Commission to study nursing home problems; (3) the establishment of a commission to study Social Services laws and (4) proposing and then signing legislation to establish a sophisticated computer system called the MMIS (Medicaid Management Information System). It is projected that MMIS may cut Medicaid losses by as much as $160 million a year in New York.

MEDICAID FRAUD IN GENERAL

After having examined fraud and abuse among nursing homes (with more than 27 hearings), clinical laboratories, some home health agencies, a few hospitals that specialize in welfare patients, and now having taken an extensive look at Medicaid mills, Senator Moss and the Committee staff concluded Medicaid fraud is massive. "The 8 percent estimate given by HEW is too low. Fraud is at least 10 percent—$1.5 billion out of $15 billion total. More likely it is about 12 percent ($1.8 billion)," as you have said, Senator, "Adding overutilization, we may be talking about 25 percent on the entire program."

STATEMENT OF PATRICIA G. ORIOL, CHIEF CLERK, COMMITTEE ON AGING

Mrs. Oriol. Mr. Chairman, my name is Patricia Glidden Oriol. I am 53 years old. From 1959 through 1960 I was chief clerk of the Subcommittee on Problems of the Aged and Aging of the Senate Committee on Labor and Public Welfare. From 1961 through the present I have been chief clerk of the Senate Special Committee on Aging.

Through 1959 to 1965 we on the subcommittee and committee were of course deeply involved in efforts which helped make the case for enactment of medicare. We were troubled by the fact that day in and day out older persons and the younger members of their families stood in danger of financial wipeout caused by hospital or medical bills and a few of us wondered whether medicaid—enacted as a compromise theoretically to cover gaps left by medicare and to give help to low income persons in other age groups—would really do all that was hoped for it.

This is not the place or time to recite what has happened to medicare or medicaid since but I will say that at committee hearings around the country during the past year elderly witnesses said again and again that medicare was letting them down in important ways: It doesn't cover prescription drugs, it is overly restrictive on home health, it doesn't pay for eyeglasses or hearing aids, and so on. They were, in effect, repeating a complaint heard by the committee soon after medicare was enacted. It is an umbella with many holes. And when asked about medicaid, many witnesses expressed misgivings about what they regarded as a welfare program, complete with a means test and redtape.

It was natural, I think, that I wanted to see what was happening to tax dollars voted by the Congress to achieve the purposes set forth when medicare and medicaid were passed 11 years ago.

I volunteered, then, to become a "shopper" at medicaid mills partially for the reasons explained by Mr. Halamandaris: It was important for a woman to join the investigative group, especially one who was older than the other participants.

Mr. Halamandaris has already described our shopping methods.

In my case I decided that it would be wrong to dress shabbily. People—especially older women—don't go to the doctor in their worst clothing; they try to make the best appearance possible. And so I wore inexpensive, but neat, clothing. I'm glad I did; I found out that most other women in every waiting room, no matter how poor or tough the neighborhood, did the best they could. Being poor doesn't mean the lack of pride; the opposite is more often the case.

But despite the efforts and attitudes of the patients, personnel seemed to regard the patients as unworthy and unfeeling objects, rather than people. There must be some sort of rule against calling a person anything but the first name. One of my medical files just has "Ruth" and the patient number.

Many Dollars—Little Care

Mr. Chairman, I sat more than once as doctors discussed business plans for new medicaid mills. I was only a few feet away; they didn't see me or even care about me. And they were completely frank about their determination to make as many dollars as possible for as little care as possible.

As I sat in waiting room after waiting room, usually scared, I became angry as well.

Here I was, in cities where many older persons are in desperate need of health care, and yet they can't afford it. The medicare deductibles or coinsurance may be too high for them; or they can't afford even the monthly premiums. And so medicaid should come to their aid. But go to a medicaid mill? Many elderly people, I am sure, have heard from others who had tried the mills and they had been warned. And I think that they would resent being used so that people who didn't care about them could cheat them and the Government. I saw very few older Americans at medicaid mills, and yet I know that good care, given by caring personnel, would have been a blessing to them.

I thought of hearings at which older people tell our committee that they can't afford to buy the prescription drugs that medicare doesn't pay for. I would think of that testimony when, at a medicaid mill after a cursory examination, I would be given three or four different prescriptions for ailments I did not have. I would think of that kind of testimony when a person who called himself a doctor urged me to take a tranquilizer or shot I did not need, insisting that it would make "a new woman out of you in an hour." Or, another one, "Your cold will be cured in an hour."

I thought of that kind of testimony later when Dr. Capper, disturbed because I had already convinced his aide that I would not take the two shots, approached me with the two hypodermic needles and said, "You can have them either in your hip or your arm." I was terrified

because my partner cop had finished and was waiting outside and could not get back through that buzzer door even if I shouted for him. I told the doctor I would take any medicine he prescribed but please don't give me shots, that if the medicine didn't work that I would take the shots when I came back in 2 days for the rest of the tests. He insisted that the injections were not penicillin and he wanted me to take them. I finally decided that if all else failed I would put up my hand and say, "Stop, I'm an investigator for the U.S. Senate." But after giving blood and the time to this clinic, I didn't want to blow my cover. So I was very grateful when he relented. However, on top of the two injections I had refused, I was given five prescriptions for medicine.

This experience both angered me and broke my heart. If I had been the poor, single person burned out of her apartment that I was pretending to be, I would have had no defense against such treatment. I would have received the shots without a chance of refusal. I would have been trying to recover from taking seven different kinds of medicine for my runny nose. And I could only wonder how much profit did Dr. Capper receive. And how many other defenseless patients are enduring the same experience right now?

Prescription Drugs and Pharmacies Pushed

That incident occurred in Detroit, but in all four states in which I shopped I encountered "pushing" of prescription drugs and the pharmacies are often just a few steps away from the medicaid mills, or you have to exit from the clinic through the pharmacy next door in order to get to the street. In fact, in California, in a very large clinic—Rockridge Medical Care Center—the pharmacy couldn't be missed. A wide blue line of arrows had been painted down the center of the sidewalk, across the street and right into the pharmacy.

And so, my pile of prescriptions mounted. I would walk out of the final medicaid mill and pharmacy at the end of the day and bring back in my shopping bag a load of medications that would do me no good at all. In fact, if I had taken the drugs that were prescribed for me I would probably have become desperately ill.

Today everyone is conscious of the danger of additives in our food and here these people are absolutely polluting patients' systems for profit.

At another clinic in Detroit, by an assistant, I was asked trick questions such as, "If you climb four flights of stairs, are you out of breath?" And I would have to answer, "Well, yes, a little." So the complaint was written down: Short of breath. Then I was asked, "If you walk four or five blocks, are you tired?" I would have to answer again, "A little bit." And the entry was: Fatigue. When the doctor started to talk to me he asked, "How long have you been short of breath and fatigued?" This doctor, Dr. Goldberg, was much more curious about my address and why I happened to be in his office than he was about my ills. When I told him it was close to Chandler Park, he asked if that was north or south of Woodward Street. I managed to evade answering the question because I didn't know, but I learned later that Woodward runs north and south.

This was the way of the medicaid mill: A test of wits if the patient was anything but subservient and unquestioning.

In 80 Delancey Street—Delancey Street Medical Center—on the lower East Side of New York, which was a long way from the Bronx address on my medicaid card—I wasn't as frightened there as I was humiliated by the manner of treatment. This clinic is open 7 days a week and I was told that the technician works 7 days a week. Another technician told me that she works part time because she is going to medical school.

While I was being examined, the door was left open to the public corridor and waiting room, and a young man entered the room and emptied the large trash can. The expensively dressed doctor, Dr. Gupta, during his quick examination—without a word—banged a TB tine test on my arm, barely missing the other two I had received from earlier clinics. If I had been offered the chance I would have refused the test because I'm not sure how many you should receive. No explanation was given as to what it was—no circle was put on the test area, nor was I told what to watch for. The needles from my blood tests were thrown in the waste can without being broken in two.

Between receiving my X-ray and the electrocardiogram, I was forced to sit in the public waiting room in the briefest, cheapest paper gown very much embarrassed in front of my buddies.

Optician—Glasses for Everyone

In the same clinic I witnessed an optician who received an urgent call and had to leave to go home, so he asked agitatedly for the files, saying, "I'm going to measure everyone whether they need glasses or not!" He then raced around with his little ruler measuring everyone, pulling the glasses off of one woman walking by and measuring her, and even measured a young baby 6 or 7 months old!

This type of experience was completely new to me. I have never been involved in any kind of undercover or secret investigation, let alone anything so dangerous. Without our good cops here, there were many streets where I would not have ventured alone out of the van and many clinics I would have been apprehensive about visiting alone. Our other investigators who were monitoring outside often had a tough time waiting around unnoticed on the street for the long waiting periods we spent in the clinics, yet when we finally emerged from the clinic—often alone—we could feel confident that we were being protected by our buddies.

In New York our staff worked alone, also in California. In Michigan and New Jersey we worked with State people who helped provide security and direction in our investigation.

Throughout I felt that patients were just being used. The patients—or more to the point, their medicaid numbers—were just the necessary raw material for the production of profits.

What a bitter and terrible thing to happen to them, so many of whom are already on the verge of hopelessness or dull resignation. I hated every moment I spent in those medicaid mills. I am the mother of and have raised five sons and have seen a wide range of injuries and illness, but our family has always had the advantage of fine medical care from Group Health Association of Washington. I watched young families all around me in the clinics and worried about whether the visit there would do the sick youngsters and adults more harm than good.

I hope that this hearing and the reports which accompany it can help make the case for reform. It haunts me to think, as we sit in this hearing room today, that at this very moment other persons are enduring what we endured—or worse—and that their poor treatment is making others wealthy.

My experience already seems like a fading nightmare. For me, the memory recedes; for other, it is a harsh, everyday reality.

Senator Moss. Thank you, Pat. You have testified rather eloquently there and I appreciate it. It gives us the feeling of what it is to go into those clinics which the record will show you accompanied me when I went in there and I was glad to have you along because you were a veteran and I was a neophyte. You recognize the feeling of agitation and deep sadness as you sit there for an hour or two just looking at those people crowded in there, oftentimes not enough chairs for everybody to sit down and all going back and forth out through the little bathroom that is outside that is a public lavatory, taking their kids in and out. The place is not fit to enter. It really is a time of sadness.

I am sorry to interrupt you but it touched my memory.

Mr. HALAMANDARIS. Thank you, Mr. Chairman.

We would like to have Officer McDew continue at this time.

Senator Moss. All right.

Glad to have you, Officer McDew. You were on hand all of the time just outside or inside and I appreciated your presence there in New York.

STATEMENT OF DARRELL R. McDEW, TEMPORARY INVESTIGATOR, COMMITTEE ON AGING

Mr. MCDEW. Good morning, Mr. Chairman and Members of the Senate. I am Darrell R. McDew. Starting on May 12, 1976, I began posing as a medicaid patient along with other members of the staff of the Committee on Aging.

Over the next few months, I and the other five members of the team made more than 200 visits to practitioners in medicaid mills in four States.

All of us began this assignment with mixed emotions. I didn't know quite what to expect. We had no conception of the quality of medicine that was being practiced and how it compared with our family physicians or other public health clinics. We had heard about various abuses allegedly practiced by some doctors but didn't really know what people were talking about.

After 3 months all of us were thoroughly educated in the terminology. For example, all of us personally experienced an abuse called ping-ponging. Ping-ponging is the practice of referring patients from practitioner to practitioner in the same facility irrespective of need.

In some facilities we entered, ping-ponging was obvious and apparent, a premeditated policy. I would like to tell you about a few of my experiences in a little more detail.

Imagine you are with me walking into the East Harlem Medical Center. I told the receptionist I wanted to see a doctor about my feet. After waiting a while I was ushered in to see what I thought was the

podiatrist. The man turned out to be a general practitioner, Clyde Weissbart. At no time did he examine my feet. Instead he asked a few questions about my medical history, checked my back with a stethoscope and asked me if I ever had any back trouble. He then prescribed three medications, and ordered urine and blood tests and X-rays. Dr. Weissbart asked me if I used any particular pharmacy and I told him no. He then asked if he could suggest one, and I told him he could. He told me that the pharmacy next door was a good one and that I should get my prescriptions filled there. He repeated this several times.

When he gave me my chart, he told me to go upstairs. Again, I assumed I would be seeing the podiatrist. However, when I got upstairs I discovered that I was in the waiting room of the chiropractor, Dr. Abbot Cohen. He asked me if I had any problems with my back and I said, "Not really." He examined me and said my spine was crooked, pressing his fingers on my back.

"Your back does hurt you here, doesn't it?" he said.

"Yes," I said: "With you pressing it, it does hurt, but it quits when you stop." [Laughter.]

"Well, I think with six or seven visits, I can straighten you out," he said, suggesting my first visit start the next day.

Feet Examined Visually

After this examination I was directed downstairs where I finally saw the podiatrist, Dr. Napoli, about my feet. I told him my feet hurt, particularly the soles. He had me sit on a bench and take off my shoes and stockings. At no time did he place his hands on my feet. He sat in his chair across the room with his arms folded. By just looking at my feet he announced his diagnosis—"ankle strain." "When you get up in the morning you feel like you're walking on eggs, don't you," he asked.

I said, "No, not really." [Laughter.]

He insisted I probably felt like I was walking on eggs each morning and that I had strained ankles. He wrote a prescription for one pair of ankle braces fitted to size. He never told me when to start wearing them or for how long, just to fill the prescription at a medical supply house down the street and to return in about a week

I think you can understand why the phrase "ping-pong" is accruate. All of us repeatedly were bounced through the medicaid mill. Always the visits were brief. About 45 percent of the visits resulted in at least one referral or "ping-pong."

Perhaps another example or two will further make the point. At the Riis-Wald Medical and Dental Center, I complained of a headache. The receptionist asked me if I wanted to see a podiatrist or a chiropractor. I said: "No, you didn't hear me. I said I have a headache."

She told me that because of my headaches I needed to see a chiropractor. "Maybe your headaches are caused by tension," she offered.

I saw the chiropractor, Dr. Diniz. He asked about my medical history, he examined me, gave me an "adjustment" on my back and ended by cracking my neck. He sent me back to the waiting room. Not long after this I was called in to see another practitioner. He was

a podiatrist, Dr. Jackowitz. He looked at my feet and said, "Your feet sweat." I looked down at my grubby tennis shoes and remembered that it was in the 90's outside. I didn't say anything as he gave me a medication which he claimed would decrease the sweating. After having me stand barefoot on the floor, he diagnosed flat feet and hammer toes. He placed small white pads in the arches of my tennis shoes. Here they are [indicating].

Senator Moss. It looks like about the size of a silver dollar.

Mr. McDew. After another trip to the waiting room, I was called in to see Dr. Ortez, an internist. He asked me how frequently I had headaches. He told me I have to have X-rays. I submitted to about 10 of them. I was scheduled to return for further tests but nobody told me why they were needed.

An interesting postscript to this visit illustrating the "ping-ponging" we received is the fact that I encountered Dr. Jackowitz, the podiatrist, about 1 week later. This second meeting took place at the Urban Medical Group in Harlem. I had asked to see a doctor without specifying a complaint. He asked what my problem was and I said nothing except maybe my feet hurt a little. The doctor was making an examination when another practitioner stuck his head through the curtains of the cubicle. He asked my name and I responded. He told me he was the optometrist and that I should be sure to see him before I left. Minutes later the podiatrist came in the room and I recognized him at once. It was Dr. Jackowitz.

He looked at me and then at my feet. While looking at my feet he asked me, "Haven't I seen you before?" I didn't say anything. He pulled out a little book and said, "Yes; I did see you on the lower east side a couple of weeks ago."

Glasses Prescribed—Vision 20/20

Looking at me he said: "Remember what you had before? Well, you've got it again." [Laughter.] He placed little white pads in the insoles of my oxfords. To finish the story, I did see the optometrist. He told me I needed glasses and prescribed a set for me. He gave me a choice of the two standard medicaid frames and noted that if I wanted to pay a few dollars extra, I could get special frames, wire rims or other kinds of metal frames.

I should add that my vision is 20/20 and my feet and body are completely healthy.

My overwhelming impression is one of gratitude. I am grateful my financial situation does not require me to depend on medicaid for my medical care. I honestly feel, and the other investigators who are testifying today will agree, that if I had a serious illness it would remain undetected or untreated. I am sad to think that there are many people who have not been as lucky as I. They must encounter on a daily basis the horrible conditions and treatment that I experienced during this investigation.

[The prepared statement of Mr. McDew follows:]

PREPARED STATEMENT OF DARRELL R. McDEW

I, Darrell R. McDew, private with the United States Capitol Police, was placed on temporary leave of absence by resignation in order to be hired by the Special Committee on Aging of the United States Senate on May 7, 1976. I

reported to the Committee on May 7, 1976, and was sworn in as a Senate Investigator. On this date, I was examined by the attending physician of the United States Capitol, Dr. Freeman H. Carey. Dr. Carey certified that I was in excellent health with no medical infirmities, at that time.

During the period of May 10 through July 16, 1976, I participated in an investigation evaluating the operation of the Medicaid programs in New York, Michigan and New Jersey, and the Medi-Cal program in California. I posed as a Medicaid beneficiary and presented a variety of possible illnesses to various doctors in facilities that accepted Medicaid patients. My complaints included those of a general nature, such as headaches, foot problems, back pains, eye problems, and common cold. During these 10 weeks, I was seen by internists, podiatrists, opticians, opthalmologists, optometrists, chiropractors, and general practitioners.

Of the many visits I made to these facilities, there were several instances in which I felt the treatment I received was worse than poor. There were times that I felt no more human than a dog as I was sent from doctor to doctor and test to test without so much as an explanation. Medications were prescribed liberally, and in most cases I was not told what type of medication I was supposed to take or the possible reactions I could experience due to intake. I hope the following illustrations will clarify the frustrations I felt as a Medicaid recipient.

When I entered East Harlem Medical Group in New York City, I requested to see a doctor about my feet. The receptionist took my Medicaid card and told me to take a seat. After waiting a while a doctor motioned me into an examining room. At that time, I assumed that this doctor was the podiatrist. However, at no time did this man examine my feet, and it was not until the conclusion of the examination that I learned his name and specialty. The man's name is Dr. Clyde Weissbart. He gave me a very brief examination consisting of checking my chest with a stethoscope and asking me if I was having problems with my back. He then prescribed three medications, ordered a urine sample and a chest x-ray, and scheduled me for blood work. Dr. Weissbart asked me if I used any particular pharmacy and I told him no. He asked if he could suggest one. I answered yes. He told me that the one next door was a good pharmacy and that I should get my prescription filled there. He repeated this to me several times.

When he gave me my chart, he told me to go upstairs. Again, I assumed I would be seeing the podiatrist. However, when I got upstairs I discovered that I was in the waiting room of the chiropractor, Dr. Abbot Cohen. While waiting to see Dr. Cohen, I opened my clinic folder and read the chart. I saw that Dr. Weissbart had noted that I had no allergies. However, Dr. Weissbart had never asked me if I had allergies. In fact, I do have one allergy, to horse serum.

My examination with Dr. Cohen lasted approximately 10-15 minutes. He asked me a few questions about problems I have had with my back. I said I haven't had any, only on very rare occasions, a strain or stiffness, but nothing serious. He had me take my shirt and undershirt off, and began to examine me. He told me that my back was in very bad shape. Dr. Cohen said that rather than being straight in the lower section, my spine pointed towards the front and right of my body. He pressed his finger against the lower part of my back and stated, "Your back does hurt you there, doesn't it?" I said, "Yes with you pressing as you are, it does hurt, but other than that, it doesn't." Then he said, "Well, I think in maybe six or seven visits with me, I can straighten you out." He suggested that the first visit be the following day.

After this examination, I went back downstairs to the waiting room and finally saw the podiatrist, Dr. Napoli. When asked what my problem was, I complained of pain in the soles of my feet and in the back of my calves. He told me to take my shoes and socks off and sit on the bench. At no time did he ever place his hands on my feet. He sat in a chair about three feet way, with his arms folded, and just looked at them, saying that there was something wrong with my ankle. He called it ankle strain. He said, "When you get up in the morning don't you feel like you're walking on eggs?" I replied, "No, not really." He still insisted that I probably felt like I was walking on eggs in the morning and told me once more that I had strained ankles. At this time he began writing out a Medical Service Order for one pair of ankle braces fitted to size. He never told me how long to wear them, nor when I should start wearing them. He did tell me to come back in a week.

PING-PONGING PRACTICED

My experience at Riis-Wald Medical and Dental Center provides another example of the practice of ping-pong, being sent from one doctor to the next regardless of a patient's initial complaint. I went in this facility and complained of headaches. The receptionist was very courteous and nice. The place as a whole was very clean and seemed to have been well organized.

The receptionist asked for my Medicaid card and I presented it to her. She said, "Have a seat and then I'll call you back." I assumed that during this time she had run off copies of my card, since when she called me back, I looked down and saw she had a folder in which there were two copies of it. She asked me if I wanted to see a podiatrist or a chiropractor. She said, "Because of the headaches you may need a chiropractor. Maybe your headaches are due to tension." I said, "Well, I'm not sure, but you think I need to see him, okay." She replied, "I think it might be a good idea." Then she asked if I was having problems with my feet and I said, "Well, not really." She asked, "Well, do you want to see a podiatrist?" I just shrugged my shoulders and said, "Well, I'm not sure." She said, "Well, I'll put you down to see one."

While I was waiting to see the doctor about my headaches, I was called in to see the podiatrist, Dr. Jackowitz. The doctor examined between my toes and said, "It seems like your feet sweat." He gave me a prescription for some kind of medication which he claimed would decrease the sweating. Then Dr. Jackowitz requested that I stand barefoot on the floor. He glanced briefly at my feet and diagnosed flatfeet and hammer toes. He placed small white pads in the arches of my tennis shoes and said, "I'll put these little pads in your shoes and you see how that feels." I noticed no difference with or without the pads. The entire examination with Dr. Jackowitz lasted approximately six or seven minutes.

I returned to the waiting room for a short period of time, after which I was called in to see Dr. Ortez. He apparently was the doctor that I was to see about my headaches. First I saw someone whom I assumed to be his nurse. She took a fairly complete medical history, including questions concerning asthma, epilepsy, paresis, high blood pressure, sugar diabetes, and my drinking habits in regards to alcohol, coffee, and water. She also checked my blood pressure. Then I waited for the doctor. He came in, asked me a few questions, took my blood pressure, reached inside my shirt and felt around my chest and back area with stethoscope. He asked me how frequently I had headaches, and how long had I had them. Then he questioned me about my sleeping patterns. After he had finished the examination he told me he wanted to have x-rays taken. I submitted to about 10 of them. I was also scheduled to return for further tests but no explanation was given as to why I needed them.

Once again, I returned to the waiting room and was summoned in to see Dr. Diniz, the chiropractor. He took my blood pressure, listened to my chest area with his stethoscope and felt around my spine from the base of my skull to my waistline. He asked me how I felt, did he hurt me at anytime during the examination? I said no. Then, he had me lie face down on the examining table and applied little pressure on my lower back and asked if he was hurting me. He had me turn my head to the right, and pressed down on it around my neck area, and he asked me if that hurt. Then he repeated the same thing to the left side. Finally, he said, "Well, you seem to be tense. Are you tense or nervous about anything?" I answered no to all his questions. He said, "Well, it feels like you are very tense." He then cracked my neck a couple of times. After what seemed to be a very long time, I left the clinic.

On May 25, I entered the Urban Medical Group, less than two weeks after having visited Riis-Wald Medical and Dental Center. Upon entering, I asked to see a doctor without specifying my problem. The receptionist told me to take a number and have a seat. After a while, I was called back to the desk where the receptionist requested my Medicaid card. She made approximately 8–10 copies of my card.

I was called into an examining room and a person, whom I assumed to be a doctor, came in. He never identified himself by name and began asking me some brief questions about my medical history. Finally, he asked me what my problem was, and I told him that I was having problems with my feet—that they were hurting all the time around the sole area. At this time, he told me to take off my shoes and socks and sit on the examining table. He felt the pulse in my feet and said it felt good. He mentioned that he probably would want to run a test to see if I had sugar diabetes or anything of that nature.

PODIATRIST SPLITS TIME BETWEEN MILLS

At this time, Dr. Jackowitz, the podiatrist who had examined me at the Riis-Wald Medical and Dental Center, happened to stop by the cubicle. The other doctor asked Dr. Jackowitz to take a look at my feet. He told me to stand on the floor barefoot. Dr. Jackowitz said, "This man's problem is just the fact that he has flat feet and there's nothing more." The first doctor mentioned, "Well, do you think it's necessary for me to run any tests?", at which time the podiatrist said, "No, his only problem is flat feet."

Dr. Jackowitz told me to follow him into his examining room where he checked my feet a little closer and put some padding in the arch area of my shoes. He then mentioned to me that he recalled seeing my face and told me that my voice sounded familiar. He asked me if I was sure I had not been to a medical center on Avenue D. I told him that to the best of my recollection I had not. Then, he looked at my chart and noted that the symptoms I had were also very familiar to him. He asked me if I had been in the service and I said, "Yes, I was in the Navy." At this point, he was even more sure that he had seen me and said, "Hold on a minute, "I'll check." He looked into a notebook filled with a list of names and found the name Tomas Feliciano. Then he remembered seeing me at Riis-Wald Medical and Dental Center, earlier that month.

While I was in the podiatrist's office, the optometrist stepped into the office and said to me, "Come and see me when you're finished here. I'm the optometrist."

After the podiatrist finished putting the pads in my shoes he told me to come back and see him next Thursday.

Then I went into the optometrist's office and he examined my eyes. He had me read the eye chart without the aid of any lenses. Then he used a machine and had me read the chart again while switching different lenses back and forth. Everytime he chanked the lenses, he would ask me if I could see better or worse. Finally, he said to me, "Generally, your eyes are pretty good, but you do need reading glasses." He asked me if I wanted to pay for special frames, or make do with Medicaid frames.

At Avenue C Medical Group, located on the Lower East Side, I walked in and asked to see a doctor. The receptionist asked me my complaint and I told her I was having headaches. She asked for my Medicaid card and told me to have a seat.

I waited for what seemed to be a long time. Then, she called me back to the desk and asked me if I wanted to see an optometrist. I replied, "I don't know." She said, "Well, you may be straining your eyes and that may be one of the reasons that you are having headaches. You may need glasses." I just shrugged my shoulders. She said, "Well, I will fix it up that way. You will see the doctor and then see the optometrist." She told me to have a seat again. Once more the receptionist called me back and told me that the first doctor I was originally supposed to see was out to lunch, so I would be sent in to see Dr. Barron, the optometrist first.

The first thing he asked me to do was read the eye chart. Next, the doctor held various lenses with one hand in front of my eyes, while he directed a light through the lenses into my eyes with his other hand. At no point during this part of the examination did he ask me to read the chart. Finally, he placed two lenses into a frame, put them over my eyes, and had me read the chart. He stated, "Your eyes are a little bit off here and there. You need glasses, so I'm going to write up a prescription. You can get plain glasses through Medicaid, but I suggest that you get tinted glasses. This will cost you a little more, but where I'm going to send you, the guy is pretty fair. For a few extra dollars he can fit you with some tinted glasses." I was told to come back to see a Dr. Larry.

I did return on the scheduled day to see a Mr. or a Dr. Larry to be fitted for eye glass frames. He showed me frames of various kinds and colors. I asked him if it was possible to get metal frames, and he stated that Medicaid does not pay for them. So, I chose a brown colored frame. He then wrote up a work order on that particular set of frames, and stated that I was to come back in a few days to pick up my glasses. I obtained these glasses and they have been refracted and are secured in a safe in the offices of the Committee on Aging.

I would like to make note that, to my knowledge, I have 20–20 vision. My last eye examination was prior to going on the U.S. Capitol Police Force in January of 1974. At that time, I was told that I needed no visual aid.

After Dr. Barron's examination, I returned to the waiting room and was eventually called in to see Dr. Markowski, an internist. He took my blood pressure,

my temperature, checked my throat, and asked me if I was allergic to anything. I told him that I was allergic to pencillin. He suggested that I have a B–12 shot and I told him I didn't want it because I don't like needles.

TESTS PUSHED

He also scheduled me for tests later on in the day. From what I saw on the doctor's invoice, he had about nine items listed. I returned later that day and gave a urine sample and three vials of my blood were drawn. I was also scheduled for an EKG, but I did not have it.

At Universal Medical Group my complaint was "achey" feet. Dr. Feldman, the podiatrist, examined my feet, felt around my ankles, toes, and calves. He asked if I had sugar diabetes, anemia or heart trouble. He x-rayed my feet in a flat position and also at an angle. He stated that my feet were in pretty good shape, but I needed arch supports. He took a plain sheet of paper and placed it on the floor, tracing my right foot on one side of the paper, and the left foot on the reverse side. He made two small marks on the paper at the point where the toes begin. He said the x-rays would substantiate the need for foot molds. He asked me if I had a phone and I answered no. So, he told me that he would send me a letter when the molds arrived and to be sure to come back to see him.

I entered the 164th Street Medical Group and again complained of headaches. I was seen by Dr. Enrique Davis who gave me a brief examination using a stethoscope on my back and chest and asking brief medical history. He took my height and weight. I was given an allergy test, vials of blood were drawn, and I gave a urine sample. I was scheduled for x-rays and an EKG, which I did not have since the clinic was about to close and I was told to return the next day. The clinc was very large, clean and well situated and the staff seemed to be well trained.

On my second visit to this clinic, a week and a half later, the atmosphere had changed. I noticed that there were a number of people who seemed to be addicts hanging around inside and outside the clinic. Again, my complaint was headaches and inability to sleep. Dr. Davis read over my chart from the first visit and told me that the results from my tests were okay. However, he went ahead and prescribed three medications and at this point, he still had not told me what he thought to be the cause of my headaches.

At the Willis Professional Group I again complained of headaches. I was throughly examined by a doctor by the name of Wallace. She took my blood pressure, checked my eyes, ears, nose and throat and listened to my chest and back area with a stethoscope. She felt around my abdominal area, ankles, calves, and throat. She had her assistant take my weight and height, and also had me read the eye chart. She determined I had 20/20 vision. Dr. Wallace told me that she could not see any physical reason for my headaches. She asked what I usually do when I have these headaches and I told her I take Excedrin and drink coffee. She told me she would not prescribe any medication, but to continue as I had been. She told me to return if I experienced any blurred vision or nausea. She said the headaches were probably due to tension and nothing more.

Dr. Wallace was efficient and took her time examining me. She seemed interested in me as an individual rather than as a nameless face. Of all the doctors that I visited throughout the investigation, she was the only one to give me a diagnosis with concurred with my true physical state.

Probably the most frustrating experience of the entire "shopping" venture was the endless waiting I endured in order to receive treatment. In one facility I sat for at least three and a half hours after which time I became so angry, I left. I watched as doctors walked around the clinics socializing with the receptionists and nurses instead of taking care of patients.

The filth and stench in a large majority of the facilities I visited was disgusting. I found it very upsetting to see cockroaches crawling on the floor of a medical office. The walls were dirty, cigarette butts littered the floor, and ashtrays were overflowing. Where there were stairs, they were so rickety that I had to be extremely careful when walking up or down them. The lighting in the waiting rooms was so inadequate that it made the waiting rooms appear even more dismal and depressing than they already were. One doctor's fingernails were so filthy it seemed like he had just come from changing the oil in his car.

In most instances when doctors prescribed medications for me, I was not told what kind they were nor how to take them. Nor was I told what to do if I experienced any type of reaction.

I would like to conclude by saying that I feel extremely grateful that I am not in a situation which requires me to depend on Medicaid for my medical care. I honestly feel that if I had a serious illness, it would remain undetected and untreated. I am saddened to think of the many people who have to endure the kinds of treatment and conditions that I experienced during this investigation.

Senator BEALL. When you had the 10 X-rays for the headaches, what part of the body was X-rayed?

Mr. MCDEW. The 10 X-rays consisted of four skull X-rays, chest and back and also of my feet.

Senator BEALL. Your feet?

Mr. MCDEW. Yes.

Senator BEALL. Thank you.

Senator MOSS. Thanks very much.

Mr. HALAMANDARIS. Officer Roberts.

STATEMENT OF JAMES A. ROBERTS, JR., TEMPORARY INVESTIGATOR, COMMITTEE ON AGING

Mr. ROBERTS. Good morning, Mr. Chairman and Members of the Senate. I am James A. Roberts. Starting on May 12, 1976, I began posing as a medicaid patient along with other members of the staff of the Committee on Aging.

Our investigation carried us from the lower East Side of Manhattan all the way to sunny Oakland, Calif. Yet, no matter what State we were in, there was always one thing that was consistent and that one thing is that these "medicaid mills" were always located in pockets of poverty. They were as strategically placed as sentries around the White House. Common logic would dictate that competition for patient load would be fierce, since there were so many clinics in any one small area. Continuing with that line of reasoning one would think then that the personnel would try to provide high quality care to attract the patients. Unfortunately, we did not find this to be so. If anything, our treatment demonstrated that we were thought of as being expendable.

A medicaid patient is almost always forced to surrender his rights as an individual to the clinic personnel. Officer McDew described the practice of ping-ponging, a practice which we all experienced. The purpose of ping-ponging is to bolster the clinic revenues and not, in my experience, to provide preventive health care. I would like to describe a related treatment mode. I refer to the ordering of medical and laboratory tests, many of which are unnecessary, poorly administered, and occasionally even dangerous to a person's health. These tests also appear to be done only to increase clinic profits, not to improve patient care.

I would like to give you a few examples which illustrate these points.

I entered the Gouverneur Medical Clinic in Manhattan complaining of a burning feeling when I passed water. During the examination, which was only from the waist up, the doctor told me that she detected a slight heart murmur. She told me that I would have to have an EKG to confirm her findings. As I was lying on my back, with the EKG test in progress, the doctor without warning jabbed my outstretched arm with a series of needles in what is called a Tine test for TB. I am sure that this shock had an effect on the EKG

tracing; however, the doctor dismissed my concern by telling me that this procedure was required by the Health Department for all new medicaid patients. The doctor circled the area with her ball point pen but I was given no further instruction as to what I should look for.

The important point is that two other investigators entered the same clinic. They, too, were told that they had heart murmurs, given EKGs and a battery of other tests. I found out later that an EKG is not standard procedure to verify a heart murmur. Since we were all healthy the entire procedure, including the finding of the heart murmur, was not medically indicated; rather, it was obviously a way of increasing income to the clinic from medicaid.

Tests, but No Results

A similar incident occurred at the 164th Street Medical Group on Morris Avenue in the Bronx. I presented a complaint of an earache and a cold. I was told that since this was my first clinic visit, I would need to have an allergy test. Even before I had seen a physician, I found myself again being jabbed with needles. This time there were 30 needles on a board in 3 rows of 10. The attendant took one drop from each bottle on her tray and placed it on each of the punctures. In a few minutes she wiped my arm clean.

I was never told the results of this allergy test. In fact, none of the clinic doctors or any of the clinic personnel so much as looked at my arm for a reaction.

At the same clinic I was given a test which measures hearing loss and told that this procedure was required since I complained of an earache. I was never told the results of this test either.

At the Riis-Wald Clinic in Lower Manhattan I complained of a burning feeling when I passed water. The receptionist directed me to the chiropractor. The chiropractor told me that full body X-rays were necessary. In his words, "Sometimes one appears to be healthy on the outside but X-rays are necessary to get a picture of what is going on in the bones."

The podiatrists I saw were also prone to order X-rays for questionable reasons. One told me that I had a bunion on the big toe of my right foot. Another told me that I had a bunion on the big toe of my left foot. Both said that they had to take X-rays to make sure.

If I can offer a few generalizations:

(1) A wide variety of tests were ordered on most visits. Blood was almost universally asked for.

(2) Quite often the tests had nothing to do with the symptoms that we presented. When I asked one doctor what the correlation was between an earache and a blood sample, he became visibly upset. He said that I had to give him blood or he would not treat me.

(3) The tests were usually rushed and at times haphazardly given. We were given EKGs over stockings and our blood pressures were taken over our shirt sleeves. When listening to our chests and back, often the doctors didn't bother to have us remove our shirts.

(4) Rarely were we given the results of the tests we received.

The psychological trauma of this 3 month experience was severe. In the back of my mind I always knew that I was not dependent

on these horrible clinics for my regular medical care but I am still troubled and saddened when I think of all the people in this country who really don't have any other alternatives.

[The prepared statement of Mr. Roberts follows:]

PREPARED STATEMENT OF JAMES A. ROBERTS, JR.

Mr. Chairman, my name is James A. Roberts, Jr. I am a Private in the United States Capitol Police. Our investigation carried us from Manhattan's Lower East Side all the way to sunny Oakland, California. Yet no matter what State we were in one thing was always consistent. That one thing is that these "Medicaid mills" were always located in pockets of poverty. They were as strategically located as sentries about the White House. Common logic would dictate that with such a number of clinics there ought to have been some competition among the centers for patient load. If a person's actions are indicative of his thoughts, then that thought is as far removed from their minds as a cat swimming in the Atlantic Ocean, because they treated us as though we were expendables.

I think that the best way to illustrate the conditions we encountered in our investigation, is by giving a number of illustrations of what transpired during the visits.

When I went to the Gouveneur Medical and Dental Group, I asked to see a medical doctor. The receptionist asked me what my problem was and I told her that I had a burning feeling when I passed water. She then asked for my Medicaid card—no identification—and made at least two copies of it.

I was given a dental clinic card even though I never asked for it and was there to see a medical doctor. Then there was a short wait—probably about ten minutes—before I was directed to an examining room and to a Dr. DeJesus. Dr. DeJesus asked me what my reason was for being there, and I told her that I had a slight burning sensation when I passed water. She then asked me if I was certain that there wasn't any discharge and I said yes. She asked if I was allergic to any medication and I told her that I was allergic to penicillin. She was writing on the chart the whole time that she was speaking to me. She then asked me to pull up my shirt and undershirt. She took a blood pressure reading which she said was normal. She then listened to my chest and heart. While listening to my heart, she said that she detected a "slight murmur," and I would have to have an EKG test to verify her findings. I was taken into a room where there was an examining table, and an assistant who applied the creams and began the EKG exam.

While I was on the table, and the EKG test had just started, Dr. DeJesus came into the room and without any warning, she popped me with a Tine TB test on my outstretched wired arm. I asked her what that was because it surprised me. She responded that it was a "TB test that was required by the Health Department of all new Medicaid patients." So I did not object because I did not have a chance to do so.

She circled the test area on my arm with a ball point pen, but she did not give me a specific time to return to have it read. I was not given any instructions as to what to watch for, nor was I told to report any changes to her.

After the EKG test was over, the technician told me to get dressed. Then she came back into the room and gave me a cup for a urine sample. I remembered hearing Dr. DeJesus telling the technician that she wanted me to have a urine test and that I was supposed to come back the next Saturday for a reading of the urine specimen.

When I gave the sample to the technician, she said that Dr. DeJesus said that my EKG was normal, but as I was leaving, Dr. DeJesus stopped me at the reception desk.

She seemed rather interested in my skin. She kept looking at my face and saying that there was something wrong with my skin because it looked scaly to her. I just told her that I didn't put any lotion on it that day, that I had just gotten up off of the street and come in.

After the receptionist told me to have the prescriptions filled at the pharmacy next door, I then left the clinic.

The next office (if you can call it an office) I went into was at 209 East 14th Street. From the street the place looked to be a door leading to nowhere that you would ever want to go. Yet there was a large blue awning stretched

out front that said "14th Street Medical Center." When you entered the office, you found that it was very dimly lit. The furnishings look as if they were taken directly from a junk yard. Somewhere from behind the partition came a voice that asked me what I wanted. I later found out that the voice belonged to a man dressed in a white uniform. When I told him that I had a burning feeling when I urinated he promptly referred me to the City Health Department Clinic. This, I might guess, was the best treatment that one could possibly get from this clinic. So, heeding his expert suggestion I turned and left. I got the same treatment on two return visits.

I wouldn't send a dying dog into that place. This was one of the worst looking places that I saw in all of my "shopping experiences."

EXAMINATION: 30 SECONDS

At the Third Avenue Medical Office, I received the fastest exam of my eyes, ears, nose and throat that I have ever experienced. I was complaining of an earache—that I had some mucous draining—and that I had been suffering for a day or two.

The doctor that I saw here was named Bernard. He asked me very general medical questions, about my medical history and the medical history of my family. I responded negatively to all of his questions, but I did tell him that I had an aunt who had diabetes. It wasn't until after he had taken my blood pressure that he got around to asking me why I was there.

He then took an instrument and looked into my eyes, ears, nose and throat, covering all of these areas in about thirty seconds. And that is a generous estimate; it may be more like ten seconds on the outside. This particular exam was the fastest one that I have ever had.

He next instructed me to lie up on the examining table. Dr. Bernard took his hand and ran it across my left and right ankle, just touching them. He asked me to unbuckle my pants, and he pressed around my abdominal area. He visually examined my chest area, and then told me that I could stand up.

I fastened my clothes and sat down in the chair next to him. He took my temperature, and reported it to be 99.4, even though I do not believe that I had a fever at that time. I was not feeling flushed, feverish, or any other discomfort.

It was at this point that he brought out two test tubes and a syringe so that he could take a blood sample. I refused to take the blood test and the doctor became visibly upset. He said that he didn't want to continue treating me, since he would not be able to tell what was wrong with me, unless he had a blood sample. I questioned him about the correlation between a blood test and an earache, and he said that the blood test was to determine whether or not I had diabetes. He said that since I had an aunt that had diabetes, I had a history of the disease in my family. He also rattled off other reasons for having a blood test, that I couldn't fully understand because of this thick accent. But again I refused to have the test, despite his insistence, because I did not trust him or appreciate his rough manner.

He offered to give me a prescription to relieve the pain and discomfort in my ear but he told me that I would have to be referred to another doctor or hospital. He refused to accept any liability for what may have been wrong with me, and with that, began to write furiously all over the chart. I think that he spent more time writing on my chart than actually examining me! He filled in every conceivable space that was on the examination chart, and when he finally finished, he wrote out a prescription for two medications which he placed in my folder. I was ushered back to the reception area, where the receptionist filled out the top of the prescription forms, and gave them to me. After that, I left the office.

The 164th Street Medical Group at 95 Morris Avenue was a new facility that still wore banners announcing its grand opening, like a used car lot. However, it seemed to have the full range of practitioners from surgeons to chiropractors, hearing specialists, psychiatrists, allergists, podiatrists, internists, dermatologists, and radiologists.

I entered the clinic and was greeted by a man in a white smock. He asked me why I was there and I said that I wanted to see a doctor. He asked if I had been there before and when I responded negatively, he said that he would start a file on me. This included taking my Medicaid card and making six copies of it.

After that, he said that since this was my first visit, the first thing would have to be done would be an allergy test. After a brief wait, an assistant took me

into the nurses' station and gave me the test. First she washed the underside of my forearm with alcohol. Next, she took a device that had about thirty needles on it and ran it into my skin causing multiple penetrations. Then she took one drop from each of the thirty bottles on her tray and went over the skin pricks that she had made and let it sit for a while.

I would like to make note here that after the technician wiped the drops off of my arms, no one ever took any real notice of what the reaction was, if any, that I had to the scratch test,

When she was finished with the allergy test, the technician took me into the medical examining room where I was seen by Dr. Enrique Davis.

He asked me why I was there and I repeated what I had told the male receptionist, that I had an earache the day before and that I had a mucous problem.

The physical exam itself was very brief. Dr. Davis asked me questions about my medical history and about my family's medical history. At this point, Dr. Davis stopped writing and looked me in the eye and asked me where I came from. I responded by giving him the same address that was on my Medicaid card. That answer was not what he was looking for as he asked me where I was really from. I was frightened, swallowed hard, and told him that I was born in Newark, New Jersey, but had moved to New York about five years ago. Dr. Davis slowly turned his pen in his hand as he thought about my response. By that time, my palms were sweaty and my heart was beating a little bit faster. But that answer seemed to suffice.

Many Tests—Poor Care

His assistant continued the examination. She weighed me, measured my height, and then directed me to sit on the table and to remove my shirt. She took a blood pressure reading and told her findings to Dr. Davis. He said that was an extremely high pressure reading and questioned me about any history of high blood pressure. He took my blood pressure in both arms, and decided that it wasn't high after all. Next he took his stethoscope and listened to my chest and back. He concluded his examination by pressing around my stomach a couple of times and then he went back to his desk and started to write. I was still on the table when his assistant came over and drew two vials of blood.

Dr. Davis told me that I had a viral infection in my throat and ears and that he would prescribe some medication. He wanted me to have an ear test, an EKG, and a chest x-ray. I was also to come back at ten o'clock the next Friday to be examined by the ear, nose and throat specialist.

My visit to Morris Avenue ended after I had a diagnostic hearing exam, administered by an assistant. As per the allergy test, I was never told the result of this exam either.

The overall impression that was given by the staff of the clinic, and reinforced by the way that my examination was conducted, was that the facility was there strictly as a money making operation. If the patient care was good, that was merely a secondary aspect.

One of the other more flagrant examples of "Ping-ponging" came when I entered the Riis-Wald Clinic at Avenue D and asked to see a doctor. A receptionist took my Medicaid card, made three copies of it, and then asked me what was wrong. I told her that I had a burning feeling when I passed water. I was told that I would have to wait to see a medical doctor, but that there was a podiatrist and a chiropractor that were available immediately. I declined to see the podiatrist, because I still had some dye on my foot from a previous visit with a podiatrist. She persisted, and said that since this was my first visit, I should have a complete physical which included seeing all the physicians that were available. Again I declined and she continued to press, stressing the need for a complete case history, which could only be built by seeing all of the physicians. Finally, I conceded that maybe at a later date, I would see the podiatrist. I agreed to see the chiropractor that day.

Dr. Diniz, the chiropractor, was the first practitioner that I saw. He asked me many of the general medical history questions that are usually asked by the physician. He pressed on my spine and massaged my muscles. He told me that I should return in one week, because that was when a specialist would be in, and then I could get a thorough examination. He indicated that an x-ray examination would be necessary, since "sometimes you may appear to be healthy on the outside, but full body x-rays are necessary to get a picture of what is going on in your bones." After he finished his examination and made another appointment for me, I was ushered back into the waiting room.

After about fifteen minutes, a woman in white came into the waiting room and took me back to the examining room. She asked for a complete rundown on any medical disorders that were in my family. She took my temperature and asked me what the reason was that I had come to the clinic. Shortly thereafter, Dr. Ortez entered the examining room and gave me a superficial examination. He, too, asked me what the problem was and again I repeated it. Then he asked me when I last had sex, so I assumed that he was thinking that it might be some kind of veneral disease. Then he took a swab for a culture.

Even though I complained of a burning sensation when I urinated, he did not request a urine sample. My visit with the doctor lasted approximately ten minutes.

He gave me a prescription for an antibiotic, instructed me on how to take it, and told me to return in about a week for the results of the swab test.

Upon entering the East Harlem Medical Group I was directed upstairs by the receptionist for the dentist, when I asked to see a medical doctor. My doubts about this office began when I had to ascend a flight of rickety and worn, dirty stairs.

UNTOUCHED DURING EXAMINATION

When I entered the dirty cramped waiting room I asked to see a doctor. The receptionist took my Medicaid card and made copies of it. She then made out a folder for me and told me to have a seat. After waiting for a while, I was seen by a Dr. Clyde H. Weissbart. Dr. Weissbart asked me why I was there, and I told him that I was depressed, I didn't feel well, and I couldn't sleep well at night. I requested to be given something to help me sleep at night and something to help curb my appetite. Dr. Weissbart gave me a very brief examination. It consisted of his sitting in his chair and asking me if I had had pneumonia recently, been in the hospital or had any other serious ailments. I answered no to all these questions. (The closest he came to me was when I stood on a scale and he took my weight. He did not touch me during the course of the entire examination.)

He then told me that he could see that I was depressed and something was bothering me. He directed me to return the next day to see the psychiatrist. He prescribed medication for me in the meantime. In addition, he directed his assistants to give me an x-ray and to draw blood from me. I also gave a urine sample. Dr. Weissbart then asked me "Do you know where the pharmacies are in the area?" I said, "No, I don't." He said," "There's one across the street on both corners, and there is one downstairs. It might be easier for you to fill these prescriptions downstairs." Dr. Weissbart then asked if I were having any trouble with my feet. I said no, not that I knew of. Nevertheless, he suggested that I see the podiatrist for a routine examination.

After a wait I was examined very briefly by a Dr. Napoil. He told me to take off my shoes. He looked at the tops and bottom of my feet, but not between my toes; had he looked he might have discovered that I had a mild case of athlete's foot. After looking at my feet he decided I had a bunion on my right foot. This is the reason he ordered x-rays of both feet. I was later instructed to return in a week for further examination and to get results of today's testing.

On the following day, I went to the Family Health Professional Office at 2369 Second Avenue, New York. At this center, I saw a podiatrist named Luckower. Dr. Luckower examined my feet and told me he thought I had the beginnings of a bunion on my left foot. He told me the great toe of my left foot was pushing too far to the left. He too took an x-ray of my feet. His method of x-raying was unique of all the x-rays I have had. Dr. Luckower directed me to put my feet on a large yellow envelope while he positioned what appeared to be a dental x-ray machine above my feet. He then took the cord attached to the machine and stepped back into the hallway and operated the x-ray machine from there.

In conclusion, I must say I found it astonishing that Dr. Napoli could think I might have a bunion on my right foot and Dr. Luckower believe the same condition existed on the opposite foot.

Senator MOSS. Thank you, Jimmy. Very good.

Mr. HALAMANDARIS. Mr. Chairman, we are very pleased to have Catherine Hawes, an investigator of the Committee on Aging. Miss Hawes has done a lot of research in the nursing field, and we were very fortunate to have her participate as an investigator and do some shopping for us.

Senator MOSS. Thank you.

STATEMENT OF M. CATHERINE HAWES, INVESTIGATOR, COMMITTEE ON AGING

Miss HAWES. Good morning, Mr. Chairman and members of the Senate. I am Catherine Hawes. Starting on June 14, 1976, I began posing as a medicaid patient along with other members of the staff of the Committee on Aging.

Like Privates McDew and Roberts and Mrs. Oriol, I am troubled and offended by the conditions I discovered during this investigation of the health care available to the aged and others utilizing medicare and medicaid.

The practices described by Privates McDew and Roberts such as ping-ponging and overutilization of diagnostic tests are terrible drains on the public purse. I often wonder how many people are deprived of desperately needed services because Government funds are wasted by the kinds of medical practices we encountered in many clinics.

But if the waste of a few million dollars does not outrage you, then the destruction of the health of millions of aged and poor individuals should, for these clinics fail abysmally to provide even adequate health care to these people. We believe this failure is the most important issue.

It is our conclusion that 90 percent of the examinations we received are inadequate Our standard of comparison emerges not only from personal experience but also from discussion with professors of medicine and health sciences at George Washington University and at Georgetown University. We asked these medical men what we could reasonably expect by way of examinations for the various symptoms we presented. In the great majority of cases, the examinations we received were deficient in one or more respects. For example:

We have been given EKG's when the tapes were not marked and dated.

We had allergy tests that were not read.

We had TB Tine tests where the area was not circled—as is standard medical practice—nor were we told what reaction to watch for or what to do in case of a reaction.

We had EKG's taken with the electrodes placed over our stockings.

In many instances when a stethoscope was used, it was placed over our clothing.

We have seen used urine sample bottles returned to the shelf for use after thay have been rinsed only once with water.

We have seen clinics with only one thermometer.

In all the time we spent in medicaid mills we never had anything approaching an adequate medical history taken.

We rarely spent more than 4 minutes with any particular practitioner having a physical exam made.

We saw X-rays being given to us without plates in the machine. We had numerous X-rays given without changing plates, and we had chest and feet X-rays with dental X-ray equipment.

QUALITY OF CARE "HORRIFYING"

Clearly the magnitude of this mistreatment is astounding and horrifying. What is even sadder is the fact that the sloppy medical practice which causes such errors is commonplace in too many medic-

aid mills, as our own experience indicate. I found the quality of care provided to me as a medicaid patient in New York, New Jersey, and California to be horrendous.

My experience at 43 Avenue C Medical Group in the lower East Side of New York, though hardly isolated, is a classic case of such treatment. In some sense, the treatment here typifies every evil I found in the clinics I visited—ping-ponging, long waits in filthy, roach-infested waiting rooms, perfunctory physical examinations, sloppy medical practice and unneeded tests, prescriptions written to be filled at an affiliated pharmacy.

In this clinic I asked the receptionist for an appointment with a medical doctor, telling her that I had a cold. Yet she suggested that I also see the foot doctor and the eye doctor, too. I replied that really all I had was a cold, but she insisted, explaining that the medical doctor was busy and would be for a while. She said that I could see the others while I waited.

After 15 or 20 minutes I was directed to the podiatrist's office. He asked me what was wrong and I said that I had a cold. Despite this he told me to sit down, and he proceeded to examine my feet. He told me that I should come in monthly to have dead skin trimmed from my feet, offering the explanation that if I did it, I might cut too deeply and hurt myself.

He inadvertently demonstrated this danger by then slicing quite deeply into my toe. Hastily, he slapped on a bandage without even applying any antiseptic. I assume he was hoping that I wouldn't notice the damage, but the toe bled on and off for 3 days.

He was about to do some more unnecessary carving on my feet, but realizing this I told him I thought I was going to throw up. He immediately said my feet were fine and quickly sent me back to the waiting room. All of this took no more than 3 minutes.

After a long wait while watching roaches wander leisurely around the room, I was shown back to the office of the medical practitioner. He asked what my problem was and I responded again that I thought I had a cold. He told me to sit on an examining table and took my blood pressure over my rolled up sleeve, then listened to my breathing and heart with his stethoscope just under my collarbone and on my back over my shirt and T-shirt. He asked no questions about mine or my family's history but did ask if I was allergic to any medications. Then he wrote out two prescriptions, without offering any explanation or instructions on their usage. During the 3 minutes I was with him in his office I don't think he ever really looked at me or considered me as an individual. I honestly felt like a siphon, a nonentity.

Eye Examiner Not Qualified

I fared no better during the cursory exam I received from a person I presumed to be the "eye doctor." Although he did seem to use the proper equipment, he took only 3 or 4 minutes to arrive at the prescription for glasses. Thus when he wanted to do a glaucoma test which, according to him, required that he put anesthetic drops in my eyes, I refused.

He insisted that I had to have the test, trying to convince me by stating that his examination had disclosed that I had "deep cups," a condition of the optic nerve which is frequently a symptom of glau-

coma. He was quite forceful in his insistence that I had to have this test, implying that I was being ignorant and childish to refuse. I told him that I didn't have to do anything, so he reluctantly agreed to let me off without the drops and test but scheduled me for an appointment a few days later with the optometrist. This was the first time I knew that the man examining my eyes was not the real "eye doctor."

Thus I had entered Avenue C Medical Group complaining of a cold I did not really have. I not only got treated and received prescriptions for this nonexistent illness, I also came out with a prescription for glasses and foot powder—outgrowths of medical treatment I did not request and did not want. To make matters worse, my foot now actually did need medical attention and I was afraid that I might have a serious eye disease. In short, I came out of this medical facility in much worse condition than I entered it.

I, however, am fortunate enough to have good alternative medical care available. I was able to go to my regular ophthalmologist 2 weeks later and find that, like most nearsighted individuals who do not have glaucoma, I have shallow cups, not deep ones.

I kept thinking to myself—suppose that like most of the other patients we encountered during our investigation, we were dependent for care on clinics like these. For instance, our other investigators received equally serious middiagnoses, ranging from heart murmurs, hypertension and chest spasms, to kidney and bladder infections. Then we, too, could have been subjected to costly and plainful mistreatment. I remember this every time I think of a woman I met in a New Jersey clinic who had been told she had a lump in her breast.

Unfortunately, in terms of the quality of medical care, the clinics in New Jersey and California provided no evidence to me of markedly better care. At the Inter-Med Clinic in Los Angeles, I received what seemed to me to be the most thorough physical examination I had had in all of the clinics, yet the doctor prescribed medication for a sore throat I did not have. In addition, the nurse recorded my height as 2 inches shorter than it actually is, and she replaced on the shelf an unsterile urine sample bottle.

Yet the worst thing I saw in terms of quality of care occurred in a clinic in Brooklyn when a woman rushed into the clinic holding a little boy in her arms. His foot was cut and bleeding profusely, yet the receptionist told her that the doctor was busy and would not see her son for an hour. In fact, the doctor had spent much of the last hour in conference with a well-dressed man who was not a patient.

Clinics Only Available Medical Care

I think about what it would have been like if I had been that woman and if the boy had been my child—if I had been unable to get desperately needed health care. The point is, as investigators, we could leave those places. But for people who live in those areas, what we received in the weeks of our investigation is, for practical purposes, all they have available for everyday medical care.

Even all I have said, however, can't convey what it's like in these clinics, what it's like to get medical treatment in conditions so unsterile

that roaches roam the floors freely, to know that what the majority of medicaid facilities I visited provide is costly billing for the Government and callous care for the sick, poor of this Nation.

[The prepared statement of Miss Hawes follows:]

PREPARED STATEMENT OF CATHERINE HAWES

Mr. Chairman, Members of the Senate, my name is Catherine Hawes, and I am currently employed as an investigator for the United States Senate Subcommittee on Long-Term Care of the Special Committee on Aging. Under the auspices of the Committee, I was involved in an evaluation of the health care available to the aged and others dependent on Medicare and Medicaid. Like Privates McDew and Roberts and Mrs. Oriol, I am troubled and offended by the conditions I discovered during this investigation.

The practices we encountered such as "ping-ponging" of patients from one clinic physician to another and the overutilization of diagnostic tests are terrible drains on the public purse. The waste of tax money engendered by this kind of fraud and abuse, of necessity, limits the funds available for other public programs. I often wonder how many other people are deprived of desperately needed services because government funds are wasted by the kinds of medical practices we encountered in many clinics.

But if the waste of a few million dollars does not outrage you, then the destruction of the health of millions of aged and poor people should, for these clinics fail abysmally to provide even adequate health care to these individuals. I found the quality of care provided to me as a Medicaid patient in these clinics to be horrendous.

In some sense Avenue C Medical Group in the Lower East Side of New York typifies everything I found wrong with the health care available to the elderly poor and other medically indigent individuals in this country—ping-ponging of patients from one doctor in the clinic to another, long waits in filthy, roach-infested waiting rooms, perfunctory physical examinations, sloppy medical practice and unneeded tests, prescriptions written to be filled at an affiliated pharmacy.

In this clinic I asked the receptionist for an appointment with a medical doctor, telling her that I had a cold. Yet she immediately suggested that I see the foot doctor and the eye doctor, too. I replied that really all I had was a cold, but she insisted, explaining that the medical doctor was busy and would be for a while. She said that I could see the others while I waited.

After 15 or 20 minutes, I was directed to the podiatrist's office. He asked me what was wrong, and I said that I had a cold and had come to see the medical doctor. Despite this, he told me to sit down and proceeded to examine my feet. Then he told me that I should come in to see him monthly to have the dead skin trimmed from my feet, offering the explanation that I might cut too deeply into a callous and hurt myself—something he inadvertently demonstrated by slicing quite deeply into my toe. He hastily slapped on a bandage without ever applying any antiseptic. I assume he was hoping I wouldn't notice the damage, but the toe bled on and off for three days after I removed his bandage. He also stated that I seemed to have a problem with excessively sweaty feet—something even my best friends and worst enemies have never suggested—and wrote out a prescription for a foot powder and fungicide. He was about to do some more unnecessary carving on my feet, but realizing this I told him I felt sick to my stomach. He immediately said my feet were fine and sent me back to the waiting room. All of this took no more than three minutes.

After a long wait while watching roaches wander leisurely around the room—I was shown back to the office of the medical practitioner. He asked what my problem was, and I responded that I thought I had a cold. He told me to sit on an examining table and took my blood pressure over my rolled-up sleeve, then listened to my breathing and heart with his stethoscope on my collar bone and on my back over my shirt. He asked no questions about mine or my family's medical history but did ask if I was allergic to any medications, and then he wrote out two prescriptions. During the three minutes I was with him in his office, I don't think he ever really looked at me or considered me as an individual. I honestly felt like a cipher, a nonentity.

MONEY, NOT CARE, IS MAJOR CONCERN

Again I was sent back to the waiting room. As I sat there, I observed a heated argument between the receptionist and one of the clinic physicians, from all evidence, a foreign medical doctor. This doctor was complaining bitterly that the owner wasn't paying him quickly enough for the patients he treated. The receptionist pointed out that some of those patients were on Supplemental Security Income and that their bills hadn't yet been paid. Therefore, according to her, the doctor couldn't receive his percentage until the bills were paid. The doctor shouted that he didn't see why he should be working if he wasn't getting paid, complained about his hours, and stalked back down the hall. During this same time there was another shouting match in another of the clinic's halls. Someone was literally screaming about the $1000 a week he was paying and asking what his "one percent" was going for. Unfortunately for me, a child started crying during this last argument, and I was unable to hear the entire discussion.

But this kind of dissention among the doctors and the staff serve to highlight what I believe are their major concerns—how much money they can make rather than how much good medical service they can provide to the community. My belief in this was heightened by the cursory eye exam I received from a person I presumed to be the eye doctor. Although he did seem to use the proper equipment, he took only 3 or 4 minutes to arrive at the prescription for my glasses. Thus, when he wanted to do a glaucoma test which, according to him, required that he put anesthetic drops in my eyes, I refused. He insisted that I had to have the test, trying to convince me by stating that his examination had disclosed that I had "deep cups," a condition of the optic nerve which is frequently a symptom of glaucoma. He was quite forceful in his insistence that I had to have this test, implying that I was being ignorant and childish to refuse. I told him that I didn't have to do anything, so he reluctantly agreed to let me off without the drops and test and scheduled me for an appointment a few days later with the eye doctor. This was the first time I knew that the man examining me was not the real eye doctor.

Thus I entered Avenue C Medical complaining of a cold I did not have. I not only got treated and received prescriptions for this non-existent illness, I also emerged with a prescription for glasses and for foot powder—outgrowths of medical treatment I did not request and did not want. To make matters worse, my foot now actually did need medical attention, and I was afraid that I might have a serious eye disease. In short, I came out of this medical facility in much worse condition than I entered it.

I, however, am fortunate enough to have good alternative medical care available. I was able to go to my regular ophthamologist two weeks later and find that, like most nearsighted individuals who do not have glaucoma, I have shallow cups, not deep ones.

I keep asking myself—suppose that like of the other patients we encountered during this investigation, we were dependent for care on clinics like these. Our other investigators, for instance, received equally serious misdiagnoses, ranging from heart murmurs, hypertension, and chest spasms, to kidney and bladder infections. Then we too could have been involved in costly and painful mistreatment.

While this treatment at the 43 Avenue C Medical Group typifies the evils I witnessed, it is not alone. At Midwood Medical Center in Brooklyn, for instance, I received archetypical treatment—a long wait in a grimy waiting room in order to have a medical practitioner spend only 1½ to 2 minutes on a physical examination. Actually I was amazed at his speed—in that time he used a stethoscope to listen to my breathing, glanced into my ears, nose and throat, using a flashlight, and placed the back of his hand against my forehead to see if I had a fever. Then offering no explanation or instruction on proper usage, he wrote out his prescription for medication and dismissed me.

Of course, occasionally a doctor would spend more than two minutes with me. At Grand Humboldt Medical Center in Brooklyn, a doctor spent nearly 15 minutes with me, some of it on the physical exam but most of it asking me about my problems in raising children in this area of the city. While he seemed nice and concerned about me as an individual patient, he could afford to be leisurely with me since I was the only patient in the clinic, aside from investigator Darrell McDew. Actually I began to wish that I hadn't received quite so much personal attention from the doctor. After he put a tourniquet around my arm in preparation for drawing a blood sample, the doctor then spent so much time waiting for the nurse to bring a disposable syringe, that my entire lower arm temporarily

lost all feeling. Here too, as at most of the clinics I visited in New York and New Jersey, some member of the medical staff of the clinic directed me to have my prescriptions filled at a specified pharmacy.

AVERAGE EXAMINATION, 3 MINUTES

People's Medical Center in Brooklyn presented a fairly typical physical setting for the clinics I visited in New York, except that it was incredibly crowded. When I arrived around 11:30 a.m., there were already 12 or 13 people in the waiting room, and by the time I got "treated," almost two hours later, there were at least 25 adults and 10 to 15 children sitting and standing in the waiting room and on the sidewalk outside the entrance. No doctors were in the clinic until 1:00 when the podiatrist arrived. The gynecologist and internist were in attendance by 1:30. The line in the waiting room was quickly reduced in as much as the internist spent less than 3 minutes with each of his patients, including the Medicare recipient who preceded me, an elderly black man with a baseball-sized tumor on his head.

The internist took about the same amount of time with me, spending most of it filling out a second billing form. The only things he did which even approached a physical examination were to look in my throat with a pencil flashlight and listen to my breathing with his stethoscope placed outside my shirt and T-shirt. He did take the time to prescribe Valium for me when I replied "Yes" to his question, "Do you ever get nervous?" He also took the time to "ping-pong" me to the podiatrist when I asked him for a band-aid for a blister on my heel, after seeing a box of band-aids on his desk. He told me that he couldn't do anything for my feet—that I'd have to see the podiatrist. I repeated that I only wanted a band-aid, but he insisted that I see the podiatrist for it. He also ordered a blood test for me.

One of the unhappy aspects of treatment in these clinics is the rough manner of the clinic personnel. For instance, when the nurse came to draw the blood sample, we had a slight argument over which arm she would draw it from. I insisted that she take it from my left arm, since I knew I had a bruise on my right arm from a sample taken at another clinic. Finally she took the blood from my left arm. By the following day, I had bruises on both arms, just another indicator of sloppy health practice.

The podiatrist, whom I saw next, was a very friendly man, who chatted with me about what good feet I have while he trimmed some dead skin off the bottoms of my feet. I asked him not to do that, since I had to walk quite a bit more that day and stating again that all I came in for was a band-aid. He assured me that his trimming wouldn't make my feet tender at all—which turned out to be false. Walking was painful for at least 2 days. He assured me that he would "fix (my) feet right up," and then he clipped two toe-nails on my left foot. After that he said that I would have no more pain from the "turned-in" nail, as he called it. I replied that I never had had any pain or discomfort from it, and he responded, "Well, you certainly won't have any trouble with it now."

While still telling me that I had good feet and saying that "we should just make sure," he slid an 8½'' by 11'' manilla folder with "KODAK" printed on it under my feet and pulled what appeared to be a Ritter dental x-ray machine down over my feet. He then moved to the corner of the room—approximately 8 feet away—and pressed a button at the end of a long cord. After putting another KODAK folder under my feet and turning my feet slightly so they rested on their sides, he repeated the procedure. But the podiatrist also took an interest in other aspects of my health. He suggested that I see the clinic's gynecologist. He even went out to the desk and made an appointment for me, and he recommended the clinic's pediatrician to me for my children. All of this I got for the complaint of a common cold which I didn't have.

I found the situation in New Jersey Medicaid facilities to be much the same as in New York. At Park Medico Center in Paterson, for instance, the doctor listened to my breathing and heart and took my blood pressure over my clothing. As a matter of fact, during the entire investigation, I was never directed to remove any article of clothing other than my shoes and socks. Most of the time, the doctors would take blood pressure and place their stethoscopes over clothing. Occasionally they would pull my shirt to the side or up in back to place their stethoscopes properly, but in general, their main concern seemed to be to get the billing form filled out and to get rid of me as a patient quickly, expending the least amount of effort and time as possible.

It's hard to realize now just how horrible the filth in those clinics is, but I was particularly struck with this realization during one weekend. I had returned

to my home here in Washington and on Sunday afternoon was in a laundromat. A woman who worked there was sweeping the floor. With a start I realized that the floor of this laundromat—even before she swept it—was cleaner than any medical clinic I'd visited for treatment in the previous two weeks.

PATIENTS DEPRIVED OF PRIVACY

The Broad Street Medical Clinic in Newark, New Jersey, is another classic of its kind. I entered the clinic complaining of a sore throat. After half an hour in the waiting room. I was called by the nurse into an examining room. An elderly black woman was still in the examining room and despite my presence, the nurse proceeded to discuss details of the woman's treatment with her and to belittle her ability to follow the doctor's instructions. The nurse exhibited a noticeable impatience with the woman and with her questions about her medical condition, displaying an attitude I found extremely objectionable even to observe. But the elderly patient evidently found this to be standard treatment, in as much as she exhibited no surprise at being so addressed in front of a stranger or at being deprived of privacy.

After that patient was dismissed, the nurse turned to me and proceeded to ask questions about my medical history and to weigh me, measure my height, and take my temperature. She also extolled the virtues of this clinic and of being treated by "specialists," assuring me that they could take care of all my health needs. The nurse asked me when I had had my last Pap Smear. Fearing any contact with a gynecologist in this clinic, I answered that it had been just two months. Nevertheless, the nurse asserted that I should really have another and signed me up for an unsolicited appointment with the clinic's gynecologist. The nurse then asked if I had any trouble with my skin. I said I didn't, but she persisted, and I admitted that I do have some wrinkles. Peering at me she replied, "Yes, I can see that," mumbled something about "those blemishes" and said I should see the clinic's dermatologist. Again she made an appointment for me. At this point, I wanted to rush to a mirror to see if I'd suddenly developed a horrible case of acne; but before I could leave, the nurse suggested that I see the clinic's podiatrist to have my feet taken care of, despite my assertion that I had no problem. After this—but before I had seen *any* physician—the nurse scheduled me for blood and urine tests and for chest x-rays, despite my pleas that I really didn't have enough time for all of that today and promised that I would have those tests when I returned for my other appointments. My unwillingness had no effect, however, on the nurse. It was at this same clinic that this nurse in the presence of the doctor, told me that he could prescribe some pills for me that would "make a new woman" of me. She noted that unfortunately Medicaid would not pay for such pills, but she suggested that I give up smoking and use the money saved to buy the pills. I hastily replied that I had never smoked and thus couldn't save money by quitting and that I had no extra money for pills.

It was also at this clinic that I witnessed one of the incidents which has caused me the most sadness. While I was in the waiting room, I struck up an acquaintance with a woman and her child who were also waiting to see one of the clinic physicians. Because long waits were usual and reading material was rarely available in the clinics, I carried yarn with me. I was crocheting while I waited, and the child wanted me to teach her how to crochet. While I did, her mother and I had a very pleasant conversation about children and family. Later, as I was sitting in the examining room, this woman walked by on the street outside and we waved at one another through the window. By way of extolling the virtues of the clinic doctors, the nurse said, "Oh, you know her? She has a lump in her breast, you know, and she's being treated by one of our specialists." I still remember that woman's gentle face and am horrified to think of her being dependent for diagnosis and treatment by people such as many of the ones we encountered on this investigation. I despair when thinking of what this woman and many like her must endure at the hands of those physicians who are more intent on profits than on care.

In my opinion, California differed in some respects from the picture of Medicaid mills in New York and New Jersey. For instance, in my investigation, I found no evidence of "ping-ponging of patients from one 'specialist'" in the clinic to another, but while Medi-Cal rules may have reduced or altered this kind of monetary fraud and abuse, I have no evidence that the program is providing better medical care than that found in the other State programs we investigated.

It was in San Francisco, for instance, at the Geary Street Medical Office, that

I went in complaining of a sore throat and was examined only by a nurse. I never even saw the doctor. However, it was also in California that I got what I personally feel was the most adequate exam.

At the Inter-Med Clinic in Los Angeles, I received what seemed to be the most thorough physical examination I had in all of the clinics I visited. Nevertheless, he prescribed medication for a sore throat I did not have. Furthermore, the nurse provided a glaring example of poor health practice.

SOAPY "URINE" SAMPLE "NORMAL"

It seemed sloppy enough that the nurse measured me and recorded my height as two inches shorter than it actually is, but then the nurse handed me a smudged urine sample bottle and directed me to the bathroom. Because the place itself was grimy and because it was my second and third exam of the day, I filled the urine cup with a mixture of water and green liquid soap I found in the bathroom. The nurse not only accepted this offering, she tested it with a dip stix and announced that the four colored tabs indicated no abnormality in my urine. I was really relieved that I hadn't actually used the urine cup as ordered, since the nurse emptied the contents into the sink and then merely ran water over the bottle, rinsing it out only once with water, before returning it to the shelf with the rest of the "clean" bottles, ready to be used again on some other unsuspecting patient.

Yet the worst thing I saw happened in a clinic in Brooklyn. Ten to twelve women and as many children crowded into the waiting room which was made grimier and noiser by the continual coming and going of workmen and their equipment into the space being added onto the clinic. Although the office roster listed six doctors, only one was on duty that morning, and he was seeing patients only sporadically, spending much of the first hour in the clinic in discussion with someone who appeared to be a drug and equipment salesman. Soon after the salesman's departure, a woman rushed into the clinic, holding a little boy in her arms. His foot was cut and bleeding profusely, and she was clearly upset as she asked the receptionist to see a doctor. But the receptionist said that it would be at least an hour before the doctor could see the child and suggested the woman go down the street to another clinic. She went out, still carrying the child, looking for help, but evidently she didn't get it at the other clinic either, because I saw her a few minutes later coming back down the street from the direction of the other clinic, and the boy was still untreated, still bleeding.

I keep thinking about what it would have been like if I had been that woman and if that had been my child—if I had been unable to get desperately needed health care. The point is, as investigators we could leave those places behind. But for the people in these areas, what we received in the weeks of our investigation is, for practical purposes, all they have available for everyday medical care. As a Medicare or Medicaid patient you can expect long waits in dirty waiting rooms and exams so cursory that the medical personnel don't even bother to have you remove your clothing when taking blood pressure or listening to your heart or breathing. You can expect bathrooms that would shame the worst service station you've ever been in, unsterilized urine sample cups and disposable syringes that aren't broken after being used to draw blood. You can expect blood tests to be given so clumsily that your arms are badly bruised, hardly ever having your arm swabbed before they jab the needle in, rarely being told why tests are being made and what the results are. You can expect to be treated in a demeaning manner by medical personnel who exhibit little regard for your right to be informed or for privacy. Many times I shared an examining room with another patient while one or both of us was subjected to tests or was having our medical history taken, and on at least one occasion, the other patient was male. Rarely are you told by the physician what his or her diagnosis is or what or how many bills he or she is submitting. In most clinics, outside California, the receptionist has photocopied your Medicaid card one or more times, and as a patient you have no responsibility or authority to review or sign the billing form. Even after you are told to go to what is probably an affiliated pharmacy—you are required to sign a blank billing form before your prescription is filled. Yet even all of this can't begin to convey what it's like in these clinics, what it's like to get medical treatment in conditions so unsterile that roaches roam the floors freely, to know that what the majority of Medicaid facilities I visited provide is costly billing for the government and callous care for the sick, poor of this Nation.

Senator Moss. Thank you very much for your good testimony.

Mr. HALAMANDARIS. At this point, Mr. Chairman, may we bring in the medications which the six healthy Senate investigators received in this brief period of time? These are the medications that we received while posing as patients. Keep in mind that the Senate investigators were perfectly healthy.

Senator MOSS. Are my prescriptions included in there?

Mr. HALAMANDARIS. Yes, sir. Some of the drugs are presently being analyzed by the Food and Drug Administration.

Senator PERCY. That is enough to kill all of us.

Senator BEALL. Was there an average cost associated with this?

PRESCRIPTIONS CHECKED BY FDA

Mr. HALAMANDARIS. We are trying to establish that, Senator Beall. As I indicated, the Food and Drug Administration is finding some substitutions, some illegal contraband. When the Food and Drug Administration is through, we will have some interesting results.

Senator MOSS. That is what I acquired in two visits.

Senator BEALL. You have not told us whether you were healthy before you went there.

Senator MOSS. I will defer that to Dr. Carey. He gave me a clean bill of health.

Senator PERCY. How have you been feeling since you came back?

Senator MOSS. Pretty lousy.

Senator BEALL. Is that one visit?

Senator MOSS. No; two clinics to get this, and all I complained of is I thought I had a cold.

Senator BEALL. What is it?

Senator MOSS. You can read on it. I cannot tell you what they are all for.

Senator PERCY. Family pharmacy.

Do you want to try some?

Senator BEALL. No; thank you.

Senator MOSS. Have a swig on me.

Well, I think the staff has made the point very dramatically.

None of the people that entered any of these clinics had any real medical problem, is that correct?

Mr. HALAMANDARIS. That is correct.

I would like to make a couple of points. The medications that are on the table obviously are all marked. This is going to be evidence in whatever criminal trials progress as a result of our investigation and findings that have been turned over to the U.S. attorneys in Michigan and New York.

The billings are just starting to come in. That is going to be the real story of this investigation in my judgment. I want to discuss that; I think I would like to take about 4 more minutes wrap up and clarify some remaining misconceptions.

Senator MOSS. Go ahead.

Mr. HALAMANDARIS. I would like to refer you to page 48 of the report, if I may. On that page there is yet another chart which we constructed after conferring with the U.S. attorney on the court records that he had dealings with eight medicaid clinics. As we indicate, the principals, two doctors, received $2,222,000 from the medicaid program. There is a breakdown where the money goes.

The first 12 percent off the top goes to the factoring firm, $10,000, and with a kickback it comes back to the principals—25 percent of the gross, of the roughly $2 million, is rent which is then paid to the principals. Then we have the remainder which is divided 50–50 between the owners of the clinics and the practitioners which also means that we are talking about another $700,000 which goes to the principals. To this amount you add in whatever amounts the principals received as kickbacks, and in this particular case they have a 30-percent kickback from the clinics which amounts to about $217,000. So the grand total that the two principals in these eight clinics made is about $1.5 million from the clinics that they owned out of the $2 million that the clinics received.

Businessmen Receive 70 Percent of Money

Now the point is this: This distribution of funds is a common industry practice among medicaid mills. The landowners take about 70 percent of the money that is paid to medicaid mills. Only 30 percent goes to the doctors who do the work. We think this is one of the most egregious practices we found.

The common industry practice is for the businessman, who essentially does nothing more than own the building or own the lease to receive roughly 70 percent of the money that flows through medicaid mills. We think there is something wrong with this. We don't think this is what the Congress had in mind when they appropriated medicaid funds.

How large is the problem of medicaid mills? Let's talk about national figures. Medicaid in 1975 was at the $15 billion level. Of this amount, roughly $3 billion was paid to physicians and dentists and chiropractors and podiatrists, pharmacies, and clinical laboratories.

We estimate that about $1 billion a year flows through medicaid mills. As much as 50 percent of this may be unnecessarily paid.

This has nothing to do with any estimates of fraud, it is simply our judgment that this is money that need not be paid. New York figures are more problematic because of the condition of the New York data. Nevertheless in New York the best we could find out, $3.2 billion to the medicaid program, about $320 million in New York State goes to dentists and physicians and pharmacists and clinical laboratories and approximately $240 million is our projection of the amount that goes to medicaid mills of the entire State, not to be confused in New York City. In short, about $168 million is paid to practitioners, medicaid mill entrepreneurs. Our estimate is that $112 million is paid out unnecessarily.

I would like to generalize a little bit more and summarize and say 90 percent of the care that we found was substandard, and I think Miss Hawes was very eloquent in giving the standards of comparison that we used. When you say that you have a cold and the doctor does not look down your throat, we think that is substandard care. When you say you have a cold and the doctor looks down your throat with a normal flashlight 5 feet away, we think that is inadequate care. When the doctor does not look at your ears, when he does not check your eyes, when he does not take your blood pressure, when he takes your blood pressure over your sleeve, when he tries to put a stethoscope on your chest and does not ask you to take your jacket off, we think there is

something wrong. It is our estimate that 90 percent of the care is substandard.

In approximately 70 percent of our visits we found some unnecessary testing going on. In about 45 percent of the cases we got a referral of some kind to another practitioner. About 25 percent of the time we encountered blatant ping-ponging or, that is to say, obvious overutilization. The exact figures for outright fraud as opposed to overutilization is difficult to compute at this point because we have only received about 40 billings back. However, we can make one statement with certainty. Every one of the 40 bills that has been received has justified payment to medicaid by indicating the diagnosis of some disease that we didn't have.

Again let me repeat that. Everyone of the some 40 statements or billings that have been presented to medicaid indicate as a justification for payment, a disease that none of us had.

Now there are more blatant cases. If you want to talk about the extreme cases, I'll tell you of my experience when I went into a medicaid mill on the Grand Concourse in the Bronx. I saw a general practitioner for 4 minutes. The billing that came back to the U.S. attorney indicated that I not only had seen the general practitioner but that I also saw a psychiatrist and podiatrist. Interestingly enough, this podiatrist also billed for seeing Officer McDew and Officer Roberts. In fact, the podiatrist didn't see any of the three of us.

You noticed in today's paper that the State Department of Social Services is calling in about a thousand doctors to discuss this problem, so we are delighted to see that action.

I would like to close by asking your consent, Mr. Chairman, to have entered in the record the New York Times article from August 12 which indicates that excess payments, overutilization, and ping-ponging were also found in so-called nonprofit clinics in New York as distinguished from the for-profit medicaid mills which were the subject of our investigation.

Senator Moss. Is that this year?

Mr. HALAMANDARIS. Yes, sir. They estimated an $18 million loss and they project an overutilization as distinguished from the for-profit medicaid mills we visited.

Senator Moss. Without objection, that will be placed in the record at this point.

[The article follows:]

[From the New York Times, Aug. 12, 1976]

EXCESS PAYMENTS FOUND IN CLINICS

MEDICAID AUDIT OF NONPROFIT UNITS IN NEW YORK PUTS TOTAL AT $18 MILLION

(By David Bird)

As much as $18 million in overpayments for Medicaid patients may have gone to private nonprofit clinics here last year, according to a preliminary audit released yesterday by the New York City Health Department.

The audit showed that as much as 12.8 percent of the $140 million paid in 1975 to the nonprofit clinics, including those in some of the most noted teaching hospitals in the city, might not have been justified.

Medicaid, which pays medical bills for the poor, is financed 50 percent by the Federal Government and 25 per cent each by the city and state.

PRACTICE FOUND WIDER

Previously the Health Department, with limited staff, had concentrated on auditing the private, profit-making so-called "Medicaid mills," where excessive and illegal Medicaid billing had been found.

Now the same pattern is being found, according to the Health Department, in the private nonprofit (voluntary) hospital clinics and other clinics operated by charitable organizations.

"Abuses such as overutilization of services, ping-ponging of patients and poor documentation of services, which previously had been thought to be exclusively a practice of 'Medicaid mills' have been documented in almost all voluntary hospitals and free standing clinics studied," said a statement from the Health Department.

Pingponging is the term applied to the practice of sending a patient from one specialist to another, whether he needs the attention or not, and collecting a fee for each visit.

So far, more than a dozen of the nonprofit institutions have been studied, according to Dr. Martin Paris, associate commissioner of health and executive medical director of Medicaid.

The sample covers a wide spectrum of the nonprofit institutions, from the smaller to the largest, Dr. Paris said, and is a strong indication of what is happening in the entire system.

Dr. Paris said that, as a result of the audit, Mount Sinai Hospital already had returned $67,000 for billing irregularities noted in its dental clinic.

MANY VISITS MADE

Dental clinics showed signficant abuses, according to the Health Department.

"We have seen cases of patients returning 40 and 50 times to a clinic for routine dental services, generating costs of over $2,000," said Dr. Thomas Travers, director of the Health Department's Division of Institutional Ambulatory Care. "In private practice, these services would require less than five visits and cost less than $300."

At Mount Sinai, Dr. S. David Pomrise, the executive vice president, issued the following reply to the audit:

"The services in question were performed by the dental clinic. The patients had been identified as Medicaid eligible but prior authorization, as required by Medicaid regulations, had not been received."

The Health Department said "Boys Club of New York Inc., which operates dental clinics has similarly refunded $11,000 for billing irregularities."

FRAUD IS DENIED

Anthony Siste, controller of Boy's Club which operates dental clinics in its clubhouse for 5,000 boys, said:

"No fraud was involved. One of our dental clerks just misinterpreted their regulations."

The Health Department said that lack of adequate controls, rather than the greed that motivated at least some Medicaid mills, apparently was the reason for excessive payments to nonprofit institutions.

"The outpatient clinics have always been considered the stepchild at hospitals, which are concerned primarily about inpatients," Dr. Paris said. "They don't care about the out-patient system, don't have administrative control systems and, since nobody's watching, the system goes wrong. Maybe it's not the same motivation as at the Medicaid mills, but the result is the same."

In addition to the dental audits, the Health Department has completed an audit of a wide range of ambulatory services at a sample of 12 voluntary institutions. It estimates that as much as $6.7 million of the $29 million in Medicaid bills from these institutions are questionable.

The institutions are: Long Island College Hospital, Bronx Lebanon Hospital, Methodist Hospital of Brooklyn, Misericordia Hospital, Unity Hospital, Lyndon Baines Johnson Family Health Center, St. Luke's Hospital, Maimonides Hospital, Long Island Jewish-Hillside Medical Center, Hospital for Joint Diseases, Arthur C. Logan Memorial Hospital and St. John's Episcopal Hospital.

COOPERATION CITED

Dr. Paris praised the involved institutions and the Greater New York Hospital Association for their cooperation in the investigation.

For its part, the association expressed confidence through its executive vice president, Dr. John V. Connorton, that the Health Department's statements "will prove to have grossly overstated the problem."

Some of the abuses charged by the Health Department included double-billing where doctors services were charged for twice, billing for appointments that patients did not keep and multiple billing for different clinic visits on the same day, violation of the law allowing only one clinic bill per patient in one day.

Of the more than $420 million paid for outpatient care for Medicaid patients here last year, about $120 million went to private practitioners, $140 to nonprofit organizations and $160 to municipal hospital clinics and emergency rooms.

Mr. HALAMANDARIS. In short, Mr. Chairman. on the basis of this examination into medicaid mills and on the basis of our examination into nursing homes and clinical laboratories, we are concluding that, there is massive fraud in the program. A conservative estimate would be 10 percent of the total. If it is $15 billion total, then we estimate that approximately $1.5 billion of the $15 billion is ripped off and the figure could be as high as 12 or 15 percent. These are only ball park estimates and I think we will know a lot better when the Department of Health, Education, and Welfare complete their investigation in a number of States.

I thank you very much for your attention. We appreciate the opportunity to work with all of you; it is a pleasure.

Senator Moss. Well, as I said in the beginning, the whole investigation carried on over such a long period of time has been remarkably well handled and you are to be commended for your direction on all of these people and others who participated certainly are to be commended for their sensitive attention to the very difficult job. I had only 1 day and I had enough people around me that I guess I should not have felt apprehensive at all but I did feel apprehensive at going into those clinics and I was pleased to have people along who had been through it before and therefore bolstered me.

Mr. HALAMANDARIS. I guess that is the point. When we were describing what we saw to you, I remember the look of shock and disbelief on your face when we first told you what we had found. You have to experience it yourself to realize what it is like, otherwise it is like trying to describe red to a blind man. I am glad that you went through it. Mr. Chairman, so that you could talk about it.

Senator Moss. Thank you.

Has New York begun any kind of program to remedy some of these glaring oversights in the supervision and detection of fraud?

SPECIAL PROSECUTOR FOR NURSING HOMES

Mr. HALAMANDARIS. Yes, sir, Mr. Chairman. It is a pleasure to know that Governor Carey has taken a number of initiatives, one of them being an appointment of a special prosecutor for nursing homes. Recently, at your request, he has given him authority to look into boarding homes and now is considering giving him jurisdiction over medicaid mills. That is one step.

The second step relates to funding by the legislature. At Governor Carey's request, the medicaid management and information system,

which they estmiate in New York will save $160 million, was funded. As you know, the New York Times today said the department of social services has cracked down on physicians; we are delighted to see their action.

Senator BEALL. On that point, do I gather that even though the States, including New York, pay about 50 percent of the cost of medicaid and they have had to cut back on the services because of a lack of funds, it is just now that we are taking steps to police the program?

Mr. HALAMANDARIS. Well, actually, sir, the initiative started in January 1975. Governor Carey came into office at the same time that a major nursing home investigation was underway.

Senator BEALL. But they had no ongoing oversight connected with this program in their department of social services?

Mr. HALAMANDARIS. Yes, sir, that is correct. It is my impression that there is a man named Dr. Martin Paris in the city who has been working very hard on the medicaid abuse, but he has only been in his position now for about 3 or 4 months and I think he would like to do a lot more. We should say that there were efforts promulgated by the city regulating medicaid mills, but their regulations were essentially shot down by vested interests. I think it is important to bring that out. Some people have been trying to do the job.

Senator BEALL. Another question comes to mind that is very disturbing. All of these services are being rendered by licensed physicians, what steps, if any, have been taken by the licensing authorities in the State or by the professional groups in the State to police their own people? Obviously there is unscrupulous activity taking place from what you said here today.

Mr. HALAMANDARIS. That is correct, Senator. We wrote to the professional societies. It is interesting to note that Senator Moss received notice that the State board of education is issuing regulations effective tomorrow, August 31, which would bar the percentage leases we are talking about. Thus it will be illegal to hire a doctor on commission, allowing him to keep 30 percent of the money he is paid with the entrepreneur keeping 70 percent.

Senator BEALL. How about the State medical society?

Mr. HALAMANDARIS. They have done precious little, to be frank.

Senator BEALL. How about the PSRO's? Are the PSRO's doing anything?

ASSOCIATIONS AND SOCIETIES "INACTIVE"

Mr. HALAMANDARIS. They are concerned with the quality of service offered by institutional providers and not necessarily with fraud. So they are not involved basically.

Senator BEALL. But this is the delivery of care.

Mr. HALAMANDARIS. I would agree. I would be in favor of giving them the authority to enable them to jump in and take hold of this problem but there has been no action to date.

Senator BEALL. The professional associations and societies have been very inactive in this whole thing.

Mr. HALAMANDARIS. With one exception and that is in Illinois. The Illinois Medical Society and the Illinois Physicians Union came to us and gave us the original evidence that we had on medicaid mills. Mr. Roger White and his colleagues told us essentially everything that we have reported to you today.

Senator Moss. The Senator from Illinois.

Senator PERCY. I think we probably all ought to note for the record that, whereas we pointed out briefly that the nursing homes should always try to put it back in perspective, the whole system has not gone rotten just because of a few bad apples in the barrel and for every single abuse that we point out there are a dozen that are honorable and carry on their work in a fine way.

Since 1969, while looking into medicaid fraud and abuse, we have pointed out nursing home operators, pharmacists, medical laboratories, medicaid administrators, vendors, physicians, dentists. Is there any group that touches this program that has not in some way been implicated in fraud and abuse?

Mr. HALAMANDARIS. I would like to come in the back door on the question and refer people to page 204 of the report. One thing we found which was most interesting was looking at the number of audits in the medicaid area conducted by the HEW audit agency. We found that the HEW audit agency has conducted 264 audits. You will note that an audit generally can deal with one or more audit areas. There is a total of 12 areas so there have been about 264 audits issued and 740 areas audited.

As noted in the italic type, 3 percent related to hospitals. If there is any area of the medicaid field that has not been investigated to any extent, it is hospitals. Neither this committee and not any other that I know of have investigated hospital fraud. It is my feeling that when we begin to do so we are going to find the same sort of abuses. I believe the entire medicaid system is faulty.

Senator PERCY. When we have gone into other fields where there has been abuse, generally there is a trade association or some group that pulls them together that has some degree of responsibility, particularly in the professional field. In investigating hearing aid problems we went into the hearing aid industry and their association and asked for their assistance and help.

RESPONSIBILITY NEEDED IN MEDICAL PROFESSION

We have found abuse in New York and Chicago involving the medical profession. What is the position of the American medical profession in this regard? Do they accept the degree of responsibility? Do they feel that this is a blight on their house that they themselves must somehow deal with and can't leave everything to the Government to handle? You have got to have some need within the industry so that we get after this rather than through Government investigation.

Mr. HALAMANDARIS. I would agree. It is refreshing to note that the American Medical Association has a canon which makes professional leasing unethical. They have no power to enforce the standard but their position is on the record. As Senator Domenici pointed out, they are in the rather peculiar position that most of the physicians that work in medicaid mills are foreign trained that essentially work on commission. The money is not going to the physicians; it is going to the entrepreneurs that own the clinics. You will find in our report in appendix A a list of doctors making over $100,000 from the medicaid program but when you trace it back you find out that these people

are merely conduits and the money is going into the hands of the businessmen.

Senator PERCY. Can you give us any further, specific examples of how medicaid fraud and abuse activities have grown in scale and in sophistication or has your testimony been pretty comprehensive?

Mr. HALAMANDARIS. I think the problem of fraud is pretty pervasive, Senator. Senator Moss has a memorandum which indicates not only the investigations we have done, but those we just have not been able to follow up on. For example, in the area of home health care we found substantial amounts of fraud, particularly among for-profit providers. The memorandum indicates a substantial amount of fraud continues among the clinical laboratories we have investigated.

The chairman has a GAO audit of 30 nursing homes which indicates every single one of them had problems associated with the handling of patients' funds. The problem is massive.

Senator PERCY. Have you heard of medicaid mills in States other than New York and Illinois? Do they exist in other States?

Mr. HALAMANDARIS. Yes, sir, they do. Let's analyze the list of high volume doctors and you can see exactly where they are. If you refer to the State of Texas, you are going to find that most of them are in San Antonio. If you refer to the State of California, you trace the addresses as we did and you find most of the high volume providers have mills in Los Angeles. High volume providers in Michigan as we indicated also practice out of Detroit medicaid mills. It's a general pattern.

Senator PERCY. We discovered that nursing homes became a new growth industry and you can buy stock in them on Wall Street. Is this a new growth industry that is springing up?

Mr. HALAMANDARIS. I think so.

Senator PERCY. Medicare mills.

Have you found medicare mills also?

MEDICARE MILLS IN FLORIDA

Mr. HALAMANDARIS. Yes, sir. I think the problem is just beginning. As you know, we did find medicare mills in Florida. In fact, one of the gentlemen that we interviewed in the course of pretending that we were businessmen from Chicago wanting to buy medicaid mills indicated that he had six or eight of them in Florida. Florida is one State that has a very low medicaid commitment. However, they have a substantial number of medicare beneficiaries down there. He said, "We play the same game in Florida but we don't call it medicaid down there, we call it medicare." He said, "There is no dental business down there but we do a hell of a lot of EKG's."

Senator PERCY. Will you describe how you actually went about setting up a dummy corporation to purchase medicaid mills?

Mr. HALAMANDARIS. It is not very difficult. Some of our investigators cooperated. We simply incorporated in the State of Delaware and paid our $44. I would like not to disclose the name of the corporation. We listed the purpose of the corporation: the buying and selling of health care facilities. It was just a precaution in case somebody checked us out. An answering service was hired in Chicago and we had a post office box, all by way of providing us with a cover.

Senator PERCY. Did you contact, during the course of the investigation, officials of the State and local officials in Illinois, New York, Michigan, and California and ask for their assistance and help. What degree of cooperation did you get from them?

Mr. HALAMANDARIS. We received great cooperation. In New York we also worked with Mr. Charles Hynes, special prosecutor for nursing homes. We worked with George Wilson, assistant U.S. attorney who advised us every step of the way. We worked very closely with the Special Commission on Investigation in New Jersey, the Michigan Fraud Squad, and in California our contact was the Joint Legislative Audit Committee and they have received our results. We wanted some criminal prosecutions to result from this rather than just putting on a show. Our main purpose however is legislation.

Senator PERCY. Mr. Chairman, I join with you in commending our staff who were temporarily assigned to this work. I don't think anyone can sit in this room and not have a feeling that you have an absolute necessity to find ways to correct this problem. You cannot go through what you just did, Ted, and not have a feeling that something has to be done.

Now the bottom line is where we go from here. We are not a legislative committee or subcommittee and it is for this reason that some time ago I contacted the Finance Committee, wrote them officially, asked them if they would undertake this burden of responsibility and I suggested that they go right to the State of Illinois, my own State, and investigate the situation that we simply knew ourselves required a legislative remedy.

S. 3205 has been introduced. Senator Moss and myself are cosponsors of that bill and I know it is going to have the full support and backing of Senator Beall. I would like to just pick a few things out of that as typical of the kinds of things we are going after and ask you for your appraisal as to whether or not these changes of the Finance Committee in this legislation would be of assistance and help to us.

BILL CONSOLIDATES FINANCING

First of all it seemed to me we did have a proliferation of departments and agencies within HEW and the bill combined the medicare and medicaid office of nursing home affairs and the bureau of quality assurance agencies into a single administration for health care financing. That consolidation focused the intention right into one area where there is no place they can pass the buck, and you are responsible for that. Would that organization help in HEW?

Mr. HALAMANDARIS. It is my feeling that it would, Senator. There are other provisions that I liked even better, that is the creation of the Office of Inspector General.

Senator PERCY. Now we have, I am sure, representatives of HEW sitting in the room and they have a degree of devotion to their job as we have to ours. I make my observation, excluding the Secretary, who is a very pragmatic and very hard hitting fellow, and I think he has been shocked at some of this. There is a naivete in HEW that really is almost rampant. They feel, well it is almost an attitude, that no one would ever dare defraud them in the fields of health, education, and welfare.

When Senator Nunn and I tried to discover why there was $1 billion defaulted on student loans, they had an investigator that came to the school and found there was a man who had declared himself dead so his wife would not be able to find him, and he is running a school dealing with very large sums of Federal funds. He just wanted to make money, he was not interested in education. There was money to be made in education and he made it.

I think HEW must reconize they have a tremendous internal responsibility. It is far too late when we get into the job or when U.S. attorneys do. By then the crime has been committed. So this legislation that we are proposing and Senator Talmadge is offering would create an essential fraud and abuse unit right within an agency. Now would that help?

Mr. HALAMANDARIS. It is my feeling that it would, sir, particularly if the agency is headed by an Inspector General. We have been discussing these problems informally on a staff level. We have come to the agreement that the Talmadge bill would solve many of the problems we face.

Senator PERCY. Mr. Halamandaris, would you assume that an agency that spends 1 out of 4 of our Federal dollars should have an Inspector General?

Mr. HALAMANDARIS. Absolutely.

Senator PERCY. Are you rather shocked that they don't have an Inspector General?

Mr. HALAMANDARIS. I am, sir. I am shocked that the Senate has passed the bill two or three times but the House has never acted.

Senator PERCY. Under the provisions of this bill, S. 3205, the Inspector General then would take over the direction of an essential fraud and abuse unit and also the general counsel of HEW would be authorized to prosecute directly civil fraud cases where U.S. attorneys have not acted in a timely fashion. Do you think that will help?

Mr. HALAMANDARIS. Absolutely.

Senator PERCY. Give them some of the clout to followup the sense of responsibility that they should have. They are the ones that are responsible for seeing that it is spent without fraud.

SAMPLING FINDS 15 PERCENT FRAUD

Mr. HALAMANDARIS. Yes, absolutely. I add one word from Dr. Keith Weikel who is sensitized to this issue. As he reported to the Finance Committee last Thursday, they were finding about 15 percent fraud in their sampling in New York State which makes our estimates of 8 and 10 percent very conservative.

Senator PERCY. Now, finally, getting into some of the implications on how we make payments it seems to me that percentage arrangements are just that. I am always suspicious of percentage arrangements, I would rather have a flat fee. I don't want them to have an incentive to find ways to spend money. Now don't you think these percentage arrangements ought to be illegal and no reimbursement paid to contractors, employees or related organizations and not have them recognized if there is a percentage arrangement involved?

Mr. HALAMANDARIS. Yes, sir.

Senator PERCY. I think that, alone, would remove one of the administrative problems that we have and that the Secretary's determination of the reasonableness of cost or charges would include consideration of the relationship between the direct and indirect overhead costs or charges in the direct cost of the provision of service. In other words, they would have to see what this superstructure is that has been established so that they would have to find some way to get behind it.

Now don't you think it would be desirable for a provider or an agent, when requested by the Secretary or the Comptroller General of the United States, to provide a full financial disclosure as to the arrangements? Who owns them? How much they are getting in rent? Who is skimming off the cream on the top? Who is making the money on this operation? There is no reason, as long as it is public money, why that should not be provided as information basic to the establishment of the treatment.

Mr. HALAMANDARIES. I could not agree more.

Senator PERCY. Then, finally, the closing of loopholes in the law. We have found some loopholes particularly in the payment of medicare and medicaid reimbursement to anyone other than the billing physician or hospital.

Lastly, I am really shocked to find that fraud under medicaid and medicare is now statutorily a misdemeanor. This bill would change it. The fraud will be punishable as a felony with penalties up to 2 years imprisonment and a $10,000 fine.

Now that is the exact same mechanism we used last year in a bill we unanimously adopted to really try to stamp out fraud in these student loan programs. I think these people realize they are going to go to jail and they are going to pay heavily and it is a crime, it is a felony, and not just a misdemeanor, for them to be robbing, stealing the public blind and taking advantage of the kind of people that all of us represent.

PEOPLE BARTERED LIKE PROPERTY

You can imagine the attitude of people when they sit and listen to them being bartered like a piece of property as to how doctors can actually make money, and what attitude do they have toward society and their Government when you see it going on right under their own noses? The experience that you have had, I am sure, is hardened. Maybe there is cause for a lot of crime in the ghetto level where people figure there is just no way to beat the system—the system is set up for those who are benefiting from it, not us, we are just being taken advantage of. I think you performed a truly remarkable service.

Senator, I just want to say once again to you, to be able to take your shirt off and get in there and put those coveralls on—you are going to have religion like no one has had it—no one is going to be able to stand up to you on the floor and say this bill is not really necessary.

Senator Moss. Thank you.

Senator Beall.

Senator BEALL. I agree with Senator Percy's analysis of this legislation and the need for an inspector general certainly.

I ought to point out that about a year or two ago, Secretary Weinberger included the request for a team of fraud investigators in the HEW budget request and the Senate Appropriations Committee cut that request out of the budget. As a matter of fact, it subjected the

Secretary to a great deal of abuse during the hearing process, accusing him of trying to set up a "plumber" type operation. I think some previous Secretaries have also raised the need to establish a fraud investigation unit of some type.

Mr. Halamandaris, do you associate the difficulties in controlling medicaid with the fact there is joint control between the Federal Government and the State?

Mr. HALAMANDARIS. I do, sir, definitely, jurisdiction is split between the Federal Government and State government and in some cases with local jurisdictions as well. It's like Abbot and Costello playing baseball—I have got it, you take it. The responsibility seems to fall between the cracks.

Senator BEALL. Some States are doing a good job and some States aren't.

Mr. HALAMANDARIS. Correct, sir, the better States include California, Michigan, and New Jersey.

Senator BEALL. What about Maryland?

Mr. HALAMANDARIS. Maryland is one of the better States.

Senator BEALL. Second, would the illustration you point to come from large urban areas?

Mr. HALAMANDARIS. That is right.

Senator BEALL. We have just passed health manpower legislation through the Senate as you know. Is it true that most of these situations occur in areas where there is not an adequate supply of primary care physicians and probably results from the maldistribution of health personnel across the country?

Mr. HALAMANDARIS. I believe that is a fact, yes, sir.

Senator BEALL. Do you find these abuses in rural areas, too?

ABUSES FOUND IN HIGH DENSITY AREAS

Mr. HALAMANDARIS. We have not found abuses in the rural areas. The mills exist in high density urban areas. If you travel to Chicago or to Los Angeles, you'll see them dotting the landscape almost like the pornographic book stores.

Senator BEALL. There is no available alternative for people who are sick? There is no other facility to be used other than this store front operation?

Mr. HALAMANDARIS. That is the best thing that can be said about medicaid mills, they are located in the ghetto. But so many people told us: "We don't go there if we're really sick. If we're really sick, we go to the hospital emergency room."

Senator BEALL. Thank you.

Senator Moss. Thank you very much.

In New York the responsibility financially is 50 percent Federal, 25 percent State and 25 percent in the city, is that right?

Mr. HALAMANDARIS. That is right, sir.

Senator Moss. So that is a three tiered financial responsibility which leads, as you say, to the scrambled lines and the failure to take full responsibility for audit and inspection and policing and so on.

Well, I want to say again how much I appreciate the work done by this staff. It must be realized that we are simply a subcommittee of the special committee and we don't have a lot of manpower or a lot of facilities to carry on this kind of investigation and it was because of

the pressing needs of this that the staff has devoted itself so wholeheartedly to this matter.

While I am speaking about that, calling on the Capitol Police force to suppy some manpower and some assistance to us was an innovative thing to do and certainly the two men who were assigned did an exceptionally fine job. I have here this morning a letter that Senator Church who is chairman of the full committee executed and I want to give this to each of those men for the outstanding work that they did. Their devotion was great indeed as it was for the entire staff in this matter.

The report that has been prepared is an excellent one. It covers an area of great importance to us.

I think we are going to have to involve other committees of the Congress as we are doing now with the Finance Committee and others to supply the added manpower we need to make sure we have got this thing in hand.

Is there anything further to be offered?

Mr. HALAMANDARIS. No, sir.

Senator Moss. Let me thank you all very much.

Let me ask Private McDew and Private Roberts if they would come up here and let me give them each a letter.

[Letters presented to Private McDew and Private Roberts.]

Senator Moss. We will now hear from Dr. Bruce P. Reiter from the city of New York.

Dr. Reiter, will you come forward, please.

We welcome you before this committee. We appreciate your cooperation and your willingness to come and we would be glad to receive your testimony at this point.

STATEMENT OF BRUCE P. REITER, M.D., NEW YORK CITY

Dr. REITER. Good morning, Mr. Chairman and Members of the Senate.

My name is B. P. Reiter, and I am a physician. I am a graduate of the Albert Einstein College of Medicine in New York City. I trained at Metropolitan Hospital, the Kingsbridge VA Hospital, and at Bellevue. In 1975 I was certified by the American Board of Radiology as a specialist in radiology.

I am a physician, and I also do a bit of writing. If you will indulge me, I will read a few things that I wrote in New York Magazine some while ago.

Once I finished medical school, I figured I would go out and get rich. Not superrich, but rich enough to move out of my one-room apartment. I also wanted to buy a new motorcycle, and perhaps pay off a few of the constellation of loans I had collected in medical school.

I could do none of these things. It turned out I had an M.D., but I had no license. You need at least a year of internship in order to get a license to practice medicine. I went and did an internship. A lot of interesting things happened; but I survived. And I got my license.

Well, I thought, now I'm going to go out and get rich.

"What are you talking about?" my friends said. "You have to specialize."

"I do not want to specialize," I said, "I want to get a job."

"You can't get a good job unless you specialize in something."

I specialized in something. Three years later I had my M.D., my license, and my specialty. I'm not going to talk to anybody this time, I thought. I'm just going to go out and get rich. I planned to open an X-ray office.

I called the X-ray equipment company and said, "hello; I'm a young radiologist and I'd like to open an office." The X-ray equipment company said no problem, they could set me up, on a modest scale of course, for about $220,000. "Oh," I said.

I didn't have $220,000. If I'd had $220,000, I wouldn't have opened an office. I would have closed the office and gone to Jamaica fishing.

Well, I figured, maybe I can find a job in the New York Times. What with the doctor shortage and everything, there ought to be a job some place for a radiologist.

Indeed, there was a whole string of ads in the Sunday Times. "Medicaid Clinics! Serve the community! No overhead, no investment, high volume. All types of doctors needed. Should speak a little English."

I speak a little English, I said to myself. I called up one of the clinics.

"I'm a radiologist," I said, "and I was wondering . . ."

Medicaid Mills Hard to Miss

"Come in," they said. "Come in and see us!" I drove to Brooklyn the next day and found the place. It was hard to miss—there was a gigantic, multilingual sign out front advertising medical care, dental care, chiropractic care, any kind of care you wanted. Everything but topless waitresses. Right next door, a similar, slightly smaller sign identified a conveniently located pharmacy. Also gladly accepting medicaid.

I went inside. There was a small waiting room, with a very big guard standing in the corner. I walked up to the little glass window.

"Hello," I said, "I have an appointment here."

"What?" the woman on the other side said through an intercom thing.

"I have an appointment. I am a doctor."

The piece of plate glass between us was about 3 inches thick, and she couldn't hear anything. It was like a checkcashing place on the Bowery. "What?" she said again.

"I said I'm a doctor," I yelled. "I've got an appointment!"

The guard came over and shook his stick at me. "Sit down and be quiet," he said to me, "or you won't get your methadone."

"I don't want any methadone," I said. "I'm a doctor and I have an appointment about a job here."

"Sit down and be quiet," the guard said, looking nasty. He was twice as big as I was and I sat down.

I looked around the little waiting room. This was a high volume operation all right, no question. I had to take a seat way in the back, but there was another great big sign up front with an illuminated, moving message. It was certainly big enough and bright enough not to be missed, even from the cheap seats.

"V.D. Tests," it announced in several languages. "Pregnancy Tests, Pap Tests, Road Test, Learners Permits, Auto Insurance, Life Insurance, Personal Loans—Low Rates."

"What am I doing in this place?" I said to myself. Two gentlemen dressed up in long white coats appeared from behind the armored window and came hurrying over to me.

"Are you the doctor who called up yesterday?" the smaller one said. "The radiologist?"

I admitted I was the radiologist.

"Wonderful, wonderful," he said. "This is my partner. Come with us, doctor."

We went inside. The guard did not frisk me but he looked like he wanted to.

The three of us sat down in a plasterboard office that had padlocks on everything.

"Would you like a cigar, doctor?" the little one said.

"No, thank you," I said. "I'd like a job. I finished my residency last June and I'm pretty well trained in general radiology, isotopes and angiography."

Furnish Everything for 70 Percent

"That's very nice," he said. "We take 70 percent."

"Pardon me?"

"You give us 70 percent of your billing."

"I don't understand," I said.

"Let's say you become our radiologist," the little one said with a kindly look on his face. "We handle everything for you. We take care of all the equipment, we buy the film, we pay the technician. All you have to do is read the films."

"I see. Well, who supervises the technician's work?"

"Oh, we do," the big one said. "We watch him very closely."

"Yes," the little one said, "you don't have to worry about anything. All you have to do is read the films and give us 70 percent of your billing."

"Seventy percent? You're kidding."

"This is a wonderful opportunity for a young doctor like you," the little one said enthusiastically. "Do you know how much that equipment costs?"

I knew. "Well, I'm not sure," I said. "I mean, that doesn't leave very much for me."

"Look at it this way. This is a very high volume clinic. Let's say you have $1,000 worth of billing. That's $300 a week for you right there. By the way, have you ever done any medicaid work before?"

"No. This is my first job."

"Well, there's one more thing," the big one interjected. "We like to get paid right away."

"Yes," the little one said, "that's true. We have a lot of overhead."

"What do you mean?" I asked innocently.

"It works like this. Let's say there's $1,000 worth of billing for 1 week. You come in and read the films, you pick up the invoices, and you give us a check for $700. For our overhead."

"You mean I have to pay you to work here?"

They both chuckled. "No, no, doctor," the big one said. "You're looking at it the wrong way. You send the invoices to medicaid and they pay you the $1,000. And you've got $300 free and clear."

"How long does that take?"

"Oh," the little one said casually, "not more than 4 months."

"Wow," I said "You mean every week I give you $700 and 4 months later I get it back from medicaid?"

"Well, more or less. You know, we have to meet our overhead here."

"I'm sorry," I said, getting up. "I don't have any money. That's why I was looking for a job."

"Sit down, sit down," they both said, still extremely genial. "No problem, doctor. We'll take care of everything, don't worry. We factor."

"Oh," I said. "What's that?"

Factoring Covers 4 Months Wait

"We'll help you out. We have a company that loans money to young doctors. You know, just until the bureaucrats at medicaid get around to sending out your checks. That 4 months can be a long time."

I was learning. "How much?" I said.

"Just 10 percent. We try to help our doctors along."

"You're joking," I said "That's 30 percent a year. How much do I keep? Eleven dollars?"

The two of them chuckled again. "You'll do very well," the big one said, "don't worry. It just takes a while for a young fellow like you to get started."

"You mean," I summed up, "you loan me money at 30 percent a year, and I lend the same money back to you for nothing? That's crazy."

"You're looking at it the wrong way, doctor," the little one said.

"I don't think I can afford to work here," I said.

They changed the subject. "Say, would you mind looking at a case for us? Our last radiologist got discouraged and left. This patient's been waiting weeks for his results."

I love to look at films. I examined their case for them, holding the films up to the window and squinting at them. It was an oral cholecystogram.

"Where are the rest of the films?" I asked. "This is a very incomplete study."

"Well," the little one said, "things have been kind of slow. The technician tries to save us a little money sometimes—the film is expensive. We've got a lot of overhead, you know."

"Yeah," I said, "you must have some electric bill for all those signs out there."

I inspected the films again and made a learned discussion about adenomyomatosis and cholesterolosis. The little one looked at me absoluately blankly.

"What?" he said.

I figured maybe he was a psychiatrist or something and he had been away from clinical medicine for a while. "What's your specialty, doctor?" I asked politely.

He thrust his hands into the pockets of his white coat and leaned back in his swivel chair."Oh, I'm not a doctor," he said.

"Well, who are you?" I asked.

"I'm the executive administrator," he said. "My partner is the doctor."

I turned to the bigger one. "What was your feeling about this case?" I inquired.

"Me?" he said. I'm a chiropractor. We have a different concept of disease, you know."

"Oh boy," I said.

A family with a large number of children wandered into the office. "Excuse me," the mother said, "is this where we find out about the apartment that's for rent?"

"No, no," the chiropractor said, hustling them out, "that's down in the basement. Go back downstairs."

He came back in looking annoyed. "I don't know how they got past the guard," he muttered.

"Oh yes, there's one more thing, doctor," the chiropractor said. "Some of the patients don't have medicaid or medicare, so you read those films for free."

"You mean like for indigent patients?" I said. "Sure, that's okay."

The chiropractor looked at me oddly. "We have no indigent patients," he said. "I mean for private patients."

"I don't understand. Why don't you bill the private patients?"

"Oh, we bill the private patients," the chiropractor said. "You don't bill them.It's sort of a service you provide for us."

"I still don't understand," I said. "Why do you get paid if I read the films?"

"Well," the chiropractor said, "with cash changing hands and everything, it's just easier. Ask around, all the medicaid clinics work that way."

"Yeah," I said, "I bet they do."

Diagnosis Never Normal

It was the executive administrator's turn. "There's just one more thing," he said, holding up an invoice. "See where it says 'diagnosis'? Never put down 'normal,' no matter what."

"But suppose that the films are normal?" I said. "Don't you ever ever get any normals?"

"Oh, yeah," he said, "all of them are normal, just about."

"Well, what am I supposed to put down?" I asked.

"It doesn't matter what you put down," he said, "as long as you don't put down 'normal.'"

"You mean you want me to make things up? I can't do that."

"No, no, of course not," the executive administrator said, beginning to look impatient. "Just use the referring doctor's diagnosis."

"This is getting kind of tricky," I said. "Is this legal?"

"Would we break the law?" the executive administrator said. "Let's go downstairs, and we'll show you."

We all went back downstairs. The chiropractor had to go and reprimand a patient who was kicking the soda machine. The executive administrator led me to a tiny examining cubicle with "Dr. So-and-so, Doctor of Chiropractic" on the door.

"This is Dr. So-and-so," he said. "Dr. So-and-so, this is the new radiologist. He needs some help in learning how to fill out the invoices."

The chiropractor was crowded into the little room with a young, hulking, very healthy-looking patient. There were a couple of view-boxes on the wall and this chiropractor was looking at some curvical spine films. Parenthetically, upside down. He stood up.

"Glad to meet you," he said. "The invoices are a snap to fill out." He gestured at the X-rays. "This young man, for instance, is suffering from a cervical radiculopathy."

"A what?" I said.

"A cervical radiculopathy. Look at the films."

I went over and, as casually as I could, turned the films right side up. "Where?" I said. "I don't see anything."

"Right there," the chiropractor said, pointing. "Look at those spurs."

"Those little osteophytes? Everybody has them. That's practically normal."

The chiropractor gave me a very hostile look and motioned me out into the corridor. He closed the door on the patient.

"What's the matter with you?" he said. "Do you want the patient to hear you?"

Film Shots Held to Minimum

"But there's nothing wrong with him on those films," I said. "Besides, if he's got neurological symptoms you've got to look at the neural foramina. You can't even see those on the lateral films. Where are the oblique films?"

"All you M.D.'s think you're so smart," the chiropractor said, retreating back into the examining cubicle. "You guys give me a pain in the ass." He slammed the door.

The executive administrator took me by the arm. "We don't take that many obliques here," he said. "We find we don't really need them. Don't worry, you'll catch on. Where are you parked?"

"Right out front."

"Come on, I'll walk you out to your car," he said expansively.

"Is the interview over?"

"Sure, sure," he said, lighting up a large cigar. "All these details are simple. Don't worry about them. You know, we're opening a new place in Queens next month. You might be interested in doing some work for us out there, too. We're going to have a real empire. You're pretty lucky—you can get in on the ground floor."

We walked out into the street. "Oh, that's too bad," he said, looking at my ancient Volkswagen—about 10 or 15 years old. "You've got M.D. plates on your car."

"What's wrong with that?" I said.

"Well, nothing. Just keep changing your schedule. You know, don't show up at the same time every day. Otherwise you might get jumped."

"Me?" I said. "Why would anybody want to take me off? I don't have any money."

The executive administrator looked tolerant and amused. "The methadone. They'll think you've got the methadone. See you Monday."

This is not fiction, as I am sure you are aware by now; this is just the beginning, as a matter of fact. What makes a medicaid mill like this, a reprehensible place like this, possible? Why do they spring up? Legislation was passed that provided money to help take care of older people, of poor people. What happened?

This is an opinion, on my part. I think a couple of things happened. First of all, an enormous amount of regulations, guidelines, and rules spewed forth, from a number of different agencies. I don't own a medicaid center, I am just on the list of what they called "vendors." This is some of the stuff that I got, telling me what to do, when to do it, when not to do it. [Holds up large pile of forms.]

These two sheets, with single-spaced typing on both sides, with some pictures, two of these sheets deal exclusively with the medicaid ID card. When you can't treat patients or when you can treat them. The rules and the guidelines and the regulations and the forms all keep changing, keep altering, and when you comply with them, they are followed by silence. When you treat a patient and you then want to get paid for it, it takes 3 months, 4 months, 6 months, 8 months to get paid. When you get paid, if you do, you get paid almost at random, it seems to me. You get "reduced," which means patients' names come back with code numbers on them. You call medicaid, and they hang up on you. You call again, and they hang up. You call the third time and you say, "Don't hang up, don't hang up, I just want to get the forms to get paid."

"Oh, sure, we will send them right out." They never do.

Structure Promotes Abuses

Then, when you do get paid by medicaid you really don't get paid particularly much. There is a bad effect from these things. What happens, I think, is that this structure—of papers, of forms, of changing rules—tends to disgust those people who are there to deliver health care, those people who are there to take care of sick people. It selects out against those doctors who simply want to take care of sick people, and selects into the process those people who are willing to sit down with their lawyer, and their accountant, and figure out just what the latest medicaid form says and what it does not say, and, more to the point, figure out how to outwit the very regulations that are supposed to contain the kinds of abuses they commit.

One of the reasons for this happening is that, to sit down and open a medicaid mill, you don't have to be a physician, or dentist, or podiatrist, or even a chiropractor. All you have to do is get a big sign that says "medicaid clinic," and you are in business. For the people who own medicaid mills, taking care of sick patients is something that they have to live with, just like income tax or overhead. It is something for them to do as cheaply and as efficiently and as quickly as possible. To be gotten out of the way, so they can attend to the business that they are there for—which is to make money and generate profits.

Now, I am not against profits. I would very much like to make some profit myself—to get a haircut, maybe get a new motorcycle.

But my concept of medicine is a doctor, in an office, with a patient, and my concept of medicine is not some guy who has never even considered what it means to be sick, or frightened of dying, or getting old. I think it is disgusting that a businessman, an individual who is just a young hustler, a guy that is younger than me, can sit there with his lawyer and accountant and figure out how to generate money out of people's illnesses.

Thank you.

Senator Moss. Thank you, Dr. Reiter. Your rather humorous recitation carries through the bitter disillusionment that came to you and reflects to us. To have you come back and explain, perhaps trying to be sure that the proper steps were taken and real attention given to the whole thing which is bogged down with a long list of forms and outline and a lot of material impedes rather than enhances the delivery of the medical care that people need.

Like you, I am frustrated in knowing how we get between these two. How do we get people who are trained as doctors in various specialties to care for their patients and to appropriately reward them for those services and not fall off on either side?

We constantly feel the necessity of pointing out that we still have great faith in the medical profession and most of them, the vast majority of them, want to serve. That is the reason they took all that training and went into that field. Others have been able to abuse the system and we need some way to try to single them out.

Care for Poor and Old As Real Purpose

Your experience is—unfortunately I guess it occurs to others who find themselves one way or another introduced into this system. Hopefully we will find a way because we are anxious to see that care is given to the poor and the old and those who are unable to go in the regular channels that most of us can go when we need medical care. That is the purpose of this whole hearing.

I cannot tell you how grateful we are to have you come and put this thing down clearly on a personal basis before us so that we can look at it and see if we know the way, and maybe we don't, but we have to try and struggle to try to find a way to make the system work out and enable people to get the medical care that they need and to which they are entitled. So I want to thank you.

Are you practicing alone, Doctor, or what kind of practice do you carry on?

Dr. Reiter. I am a writer. I have just finished a novel, "The Saturday Night Knife and Gun Club."

Senator Moss. You just write now, you are not actually practicing?

Dr. Reiter. I still don't have $220,000 to open an X-ray office.

Senator Moss. I can understand.

Dr. Reiter. If I could add another parenthetical remark about that. To open a private X-ray office, one does need a quarter of a million dollars. The one medicaid clinic, for example—although this is quite common—that I spoke of here, which collected 70 percent of the fees from the radiologist's work—supposedly for the service of providing this very expensive X-ray and the X-ray technician—outfitted their X-ray facilities for $8,000. Secondhand equipment, that cost them $8,000.

Senator Moss. Cost $8,000.

Dr. Reiter. Now, keeping in mind that about a quarter of a million dollars worth of stuff is needed to set up an adequate and competent office, which has the equipment to do the proper kinds of examinations and procedures, and only $8,000 these fellows shell out, you can imagine what kind of stuff they are working with there. That is routine, too.

Senator Moss. Yes. As you may have heard some of the other shoppers report being given X-rays, sometimes not even plates and sometimes the dental X-ray equipment to take X-rays of feet and things of that sort indicating the absolute ludicrous lack of equipment that is used simply again to generate dollars.

Dr. REITER. If I could indulge in one tiny bit of propaganda. The question was posed before about organized medicine. What, if anything, have the medical societies done? I belong to the State medical society and in fairness to them, there is a little note which I have got here that points out that last spring the New York State Medical Society sent a delegation to Albany to specifically request that the percentage leasing arrangement—which seems to be one of the linchpins of these medicaid mills—be made against the law or against the regulations or against something. The board of regents, which I think received that request by the State Medical Society in New York, has recently declared that such an arrangement is "unprofessional conduct"—which means that one's license can be taken away upon conviction for that charge. This may have some effect on the leased-space facilities where the rent is calculated on a percentage basis and the practitioner frequently receives only a small part of the fee paid. I think some credit should perhaps be given to the medical society there. They did move.

HELP FURNISHED BY MEDICAL SOCIETY

Senator Moss. I am glad to have you point that out. I think there is some movement and I expect more yet will be done by the medical society. Perhaps it is slow to move but I think they will move now in a lot of this area.

The Senator from Illinois.

Senator PERCY. Doctor, how many were in your graduating class? Where did you graduate for medical school?

Dr. REITER. I went to the Albert Einstein Medical College in the Bronx, New York.

Senator PERCY. How many were in your class?

Dr. REITER. We graduated something over 100. This is a guess. Between 105 and 110.

Senator PERCY. Did they all go on to specialize?

Dr. REITER. Heavily, yes. I would say that, yes.

Senator PERCY. In your own specialty, how many were in that class when you got your degree?

Dr. REITER. Well, at the stage we graduated we had not yet specialized. We all took a year of general internship, or did at that time, and then subsequently went on to specialty training. This is off the top of my head, but I estimate 8 percent, 9 percent, something in that range, of my class entered radiology.

In terms of how many of our people went into, let's say, internal medicine, family practice, pediatrics and gynecology, which is more or less the group of primary physicians that patients first come to see, I am really guessing now—58 percent in 1974.

Senator PERCY. Do you know any members of your graduating class that have actually gone to work in a medicaid mill or have they all gone into hospitals, private practice, perfectly legitimate pursuits of their vocation?

Dr. REITER. To my knowledge I am the only individual from my class who had the distinction of working with the medicaid mills. Generally speaking, these kinds of operations don't attract American graduates of American schools. As was pointed out previously, they kind of tend to prey on the doctors, as well as on the patients, and they single out a lot of doctors from other countries who don't have that good a grasp of the language to begin with, who are overwhelmed by the idea of setting up a practice, and attracting patients and all the associated complexities. That is an intimidating situation to be in, and can be taken advantage of.

Senator PERCY. From the very fact that in the ad you commented, some knowledge of English was necessary, wouldn't the assumption be that essentially they are trying to attract the foreign born and trained doctors who for one reason or another possibly can't get a license to practice in this country and therefore would be eligible to work in a medicaid mill but not other places? Is that generally the kind of person that ends up there? How would you describe the kind of people that you have met who end up in the medicaid mills?

FOREIGN-TRAINED PHYSICIANS IN MILLS

Dr. REITER. Well, as I understand it, one has to have a license to be reimbursed by medicaid—I am not 100 percent sure of this, but I am fairly certain. If that is the case, then obviously they are licensed. But again, there are all kinds of licenses. Someone who is a perfectly competent physician in his own language, may have adequate credentials elsewhere, and have gotten an equivalency license in this country, and still be overwhelmed by the unfamiliar situation of a new culture. I would agree with you, and with the speakers who were here today, that the medicaid mill physicians seem to be foreign-trained.

Senator PERCY. You said that you started out with the intention, honestly stated, of making some money and getting rich. Now when an opportunity was offered to you to make some money, and possibly get rich, why did you turn it down?

Dr. REITER. I didn't go to medical school for that.

Senator PERCY. You didn't what?

Dr. REITER. I didn't go to medical school for that. I went to medical school to be a doctor. Even though there is a problem with bad apples, I think there is still quite a selection process that goes on, starting at the point when you apply to medical school in this country. I would like to think that the bulk of our people come out of medical school with pretty much the same ideals that they took with them when they went in. I think to a large degree that is true. I hope it is true.

Senator PERCY. By your testimony you said, once you finished school you figured you would go out and get rich, not super rich but rich enough to move out of your one room apartment and buy a motorcycle.

Dr. REITER. Yes.

Senator PERCY. In other words, the association here simply was not the kind that you were willing to connect yourself to though it did involve making money?

Dr. REITER. I want to practice medicine; I am a physician. These medicaid mills people are not doctors. The people who run these places are not there to provide medical care. This is not like going to a bunch of doctors and saying, "What can you give to your community" and joining their group and seeing patients. This is just a scheme for grabbing a lot of Government dollars; it has nothing to do with practicing medicine.

Senator PERCY. How did you come to the attention of our subcommittee staff?

Dr. REITER. Mr. Bill Halamandaris called me. Apparently he looked at the article I had published, which I quoted to you, in New York magazine last summer. He asked me to come down.

Senator PERCY. You were aware of the work of this subcommittee and the interest that we had in this field?

Dr. REITER. Not in detail, but yes.

Senator PERCY. Thank you very much.

Dr. REITER. My pleasure.

Senator MOSS. Thank you very much, Dr. Reiter. We surely appreciate your coming and adding to our hearing record.

We have now Joseph Rodriguez who is chairman of the New Jersey Commission of Investigation. He will be accompanied by Anthony Dickson who is counsel to the commission.

We made some reference to New Jersey earlier and what they have done so we are very pleased to have Mr. Rodriguez here. He also has a report that I understand he will present and if he does that, we will make that report part of our record.

STATEMENT OF JOSEPH H. RODRIGUEZ, CHAIRMAN, NEW JERSEY COMMISSION OF INVESTIGATION, ACCOMPANIED BY ANTHONY G. DICKSON, COUNSEL

Mr. RODRIGUEZ. Thank you.

Mr. Chairman and distinguished members of the committee, on behalf of the New Jersey State Commission of Investigation, known as the SCI in New Jersey, I would like to thank you for this opportunity to appear before you and testify about the commission's investigation of the practices and procedures of practitioner groups receiving State and Federal moneys under the medicaid program. I understand that this committee is currently considering regulatory and statutory reforms on the Federal level to correct certain harmful abuses in, and exploitation of, the practitioner component of this well-intentioned program. By a report first made public here today and by our testimony we are prepared to share with you our insights concerning the operation of the medicaid program and our suggestions concerning its reform and improvement.

By way of background, let me briefly tell you something about the New Jersey SCI and the manner in which this particular investigation of practitioner groups receiving medicaid funds and the report [1] which we release here today were developed. At the outset I wish to make it clear to you that the New Jersey State Commission of Investigation has no role in the administration of the medicaid program. Our

[1] See appendix, p. 599.

investigative staff of less than 25 is charged with the responsibility of advising the State legislature and the public of problems of organized crime, official corruption and any other matter affecting the public trust. We have no prosecutorial powers but like the Ervin Committee we do have the obligation to fully investigate particular problem areas, report our findings to the public and recommend a course of curative action to the legislature.

Early in 1975 the commission began an evaluation probe of the entire medicaid program in New Jersey at the request of our Governor, Brendan T. Byrne. The SCI proceeded to set up three investigative teams to look into three principal medicaid cost areas—nursing homes, hospitals, and other purveyors of services, including independent clinical laboratories, professional practitioner groups and pharmacies. The commission has held public hearings and issued reports in many of these areas and more are shortly forthcoming. We have testified before several congressional bodies—including this distinguished committee—concerning the results and recommendations which stemmed from our investigation. Our probe into medicaid ripoffs by independent clinical laboratories was the subject of a national television network's documentary aired in April of this year.

In this investigation the commission centered scrutiny upon the practices and procedures on a sample of relatively large dental and physician groups, their relationships with other providers of medical care and services—especially pharmacies—and the adequacy of existing regulations and integrity monitoring methods utilized by the State body administering the medicaid program, the Division of Medical Assistance and Health Services.

Investigation Focused on "Professional Centers"

The commission focused upon practitioners associated together in professional groups, "professional centers" housing various unassociated tenant practitioners and offices of single practitioners in which other physicians would regularly share space in either an employee or independent contractor capacity. More than 12 facilities located in welfare project highrise buildings, converted stores, warehouses and tenements in impacted areas across the State—each having at least a 75-percent volume of welfare patients and bringing in substantial medicaid moneys yearly—were examined.

The commission received valuable and full cooperation from the Division of Medical Assistance in this investigation and established a working relationship with Val Halamandaris and other staff members of this committee. Books and records were subpoenaed and reviewed, facilities were visited by investigators of the SCI and the Select Senate Committee on Aging who posed as patients, and sworn testimony was taken from practitioners, facility employees, medicaid recipients and State program administrators.

The facilities which we examined typically were divided into a reception area for patients equipped with rows of theater-type seats and several smaller compartments used for patient examination, X-ray services and laboratory services. Several locations also contained in-house pharmacies. Each facility had an owner or equivalent of a business manager to supervise the day-to-day running of the operation, take on and terminate medical, nursing, and clerical staff, and

arrange liaison with out-of-house specialists and suppliers of goods and services. In many cases, the owner or business manager was a layman.

Through examination of books and records and sworn witness testimony, the commission was able to discern the financial arrangements between the staff or tenants of the facilities and their owner/operators. In early years of the medicaid program many facilities paid associated physicians a salary, which in some cases amounted only to $15 per hour. The facilities received all fee for service medicaid moneys accruing because of these practitioners and, in many instances, the amount could be hundreds of dollars per hour. We strongly doubt that the drafters of the medicaid program or professional groups which loaned their support to it envisioned such practices.

Nor do we believe legislative draftsmen on the Federal and State level foresaw the rise of percentage arrangements between professional practitioners and facility owner/operators whereby the practitioner would keep from as little as 30 percent to as much as 70 percent less $100 monthly of the fees for service paid by medicaid. The Commission identified several such relationships and on the average practitioners were required to turn over 50 percent of the taxpayers' money they received to facility operators or landlords. For their 50 percent operators and landlords provide space, telephone, nursing and clerical service. This latter "service" usually consisted of the presence of the operator's secretary to keep accurate tabs for the owner/operator of amounts billed by the practitioner.

Percentage Arrangement Unrealistic

The Commission recognizes that certain expenses are indeed borne by the facility but suggests that economies of scale accruing to large facilities should lessen the necessity of high percentage arrangements. We believe that these percentage arrangements should be outlawed. As our report indicates, they are incompatible with the goal of providing necessary quality care to recipients at reasonable cost to taxpayers. Such arrangements foster overutilization. It is unrealistic to expect program providers to practice fiscal restraint when the amount they earn at a facility directly depends upon the amount billed.

Percentage arrangements also incite "ping-ponging" which was defined here today, and our report also defines what we found in New Jersey as "family ganging"—a practice which we define as requiring a patient to return without medical justification to the facility for billable visits. They receive one medicaid patient and then require that the entire family go in for medical care. They call that family ganging.

The Commission received sworn testimony from physicians and facility staff indicating that owner/operators—very often lay owner/operators—would leave instructions for patients to be referred amongst the various in-house specialists and pressured physicians to follow instructions. Your own investigators can tell you how they were scheduled by clerical personnel to return to facilities for visits to dermatologists, radiologists, podiatrists and other specialists prior to being examined or even seen by a physician. They also can tell you of the brief amounts of time spent upon them by examining physicians

and you can review for yourselves the office visit charges in excess of $30 for the visit.

You can compare the statements of your own investigators with bills which your investigators were required to sign in blank and which were submitted by New Jersey physicians and find requests for payment for blood which was not drawn, injections which were not given and urinalysis and tine tests which were not performed, and even drugs billed for patients who had been dead for weeks. We know of cases where lay owner/operators have themselves steered patients into the house pharmacy or contacted the associated drugstore by direct phone link to have prescriptions filled and even a case where a lay facility administrator examined and prescribed medication for a female recipient. Our report also outlines the X-ray abuse for charging each time when the eye focuses rather than when the shutter snaps.

Dangerous Corner Cutting

We also found that facility owner/operators try to decrease their own expenses wherever possible. Your own investigators who visited several facilities in New Jersey with our staff will tell you of the filthy premises they often encountered. Our investigative record, which we leave here with you today, will demonstrate instances of potentially dangerous corner cutting through the use of untrained clerical personnel to administer injections and physical therapy treatments which were billed as if physicians actually performed the service.

Medicaid moneys were received unjustly by practitioners who billed the program for office visits when recipients telephoned for prescription renewals. Testimony indicates the decision to renew particular medication was often made by clerical personnel. Practitioners also billed medicaid and insurance companies for services rendered to recipients involved in accidents. In these instances the public paid twice—first in higher insurance premiums and second with tax dollars assigned to medicaid.

One facility and pharmacy in New Jersey which is contained in our report were involved with others in an ingenious scheme designed to maximize personal property. A lay entrepreneur who owned property banded together with a relatively small group of physicians, pharmacists and clinical laboratory operators to form a company which would arrange for laboratory tests to be performed, and repackaged and resold relatively inexpensively generic drugs under its own name. Stockholders included the physicians who would write prescriptions for their corporation's products and lay medical facility owners. For these prescription sales, stockholder equity in the corporation increased. Questions of product quality aside, such a situation raises grave questions of conflict of interest and temptation to overutilize scant medicaid program funds.

One product so administered to that corporation was a tonic which one doctor described as having as much alcohol as Old Grand Dad. Certainly this practice represents a blatant conflict of interest and should be prohibited.

We have also brought along with us a modest example of the prescriptions which were prescribed for your so-called healthy investiga-

tors who visited the State of New Jersey. We brought a modest sampling with us, yet they were billed for many and the prescriptions were never filled.

We have purposefully covered the names of the pharmacies that are involved because we intend to submit our report to the law enforcement agencies of the State of New Jersey for possible criminal prosecution and we thought for the purposes of this hearing we would have the pharmacies' names blanked out. This is a modest example of so-called healthy people being prescribed for medication.

We wish to point out that many of the abuses outlined here today—extensive use of paramedical and even lay personnel for duties which are reimbursable only to physicians, double billing, ping-ponging and family ganging—can be and are being detected by the State Division of Medical Assistance and Health Services through the use of sophisticated computer screens and the time studies. We commend the Division and specifically the Bureau of Medical Care Surveillance for the effectiveness of current methodology. Existing computer program comparison procedures, however, do not uncover abusive practices in each and every case but only when certain factors are present.

Undercover Agents Effective

To further protect the integrity of the program, we recommend that New Jersey and all other States obtain and regularly employ the services of undercover agents who would pose as recipients seeking medical care. The Commission found that the use of such agents provided a quick, reliable, and efficient method of uncovering practices inconsistent with the aims of the medicaid program. Evidence gathered by such investigators could and should be aggressively used in suspension hearings or passed along for the review of appropriate law enforcement agencies.

At this point I would like to personally thank the members of the Capitol Police and investigators from this committee who assisted our investigators in obtaining some of this information. I would, if I may, take the personal privilege of pointing out that we affectionately call the following—runny nosed Oriol, earache McDew, sneezy Roberts and a-choo Hawes—and thank them for their heroic services in obtaining this medical care when it was not needed and incurring the risk many times of potential overradiation when X-rays were required in a haphazard manner.

We additionally recommend that facilities performing substantial amounts of medicaid work be annually inspected and registered. As a part of the registration procedure, facilities should disclose to administering agencies the names and positions of employees. This information which, of course, should be updated periodically, will prove helpful in detecting use of paraprofessionals in place of physicians. We would also suggest that the administering agencies consider legitimatizing the use of qualified medical paraprofessionals in certain instances. Services rendered by such individuals, however, should be paid at a rate lower than that now designated for physicians.

We also recommend that administering agencies consider the possibility of contracting with an insurance clearing house. Our own experience indicates this to be an effective step in obtaining reliable in-

formation on the presence of sources of medical payments other than the medicaid program.

Lastly, we urge that steps be taken to insure that recipients be made aware of services billed to medicaid on their behalf and be given an opportunity to challenge the accuracy of physician requests for reimbursement. At the very least, a procedure should be instituted and strictly followed requiring recipients to sign only completed, itemized claim forms. We further recommend that recipients be advised of services billed on their behalf, either by a State compiled listing of billings periodically through the year or simply by adding a copy claim form to be given to the recipient by the physician at the time of service as a receipt. We anticipate that costs incurred as a result of the adoption of either of these proposals would be offset by savings realized from more truthful billings. Either procedure would build a sorely needed check and balance into the existing system.

With respect to pharmacies, the Commission is pleased to point out that a major step in reducing program costs was taken by the medicaid division during the pendency of our probe. Under present regulations, generic rather than brand drugs should be prescribed and dispensed whenever possible. Additional steps can be taken to further reduce abuse and unnecessary expenditure of limited program moneys.

Computer Information Needed

The State currently has the computer capability to develop a prescriber profile on medicaid program physicians. This program would analyze prescribing patterns of physicians and display questionable or abusive practices. Unfortunately, the profile is not effectively used because program providers choose not to supply necessary information on claim forms. We recommend that the State assume a tough stance on this issue and reject for payment any claims not containing relevant information.

To facilitate the gathering of information relevant to program integrity, we suggest that a standard medicaid multicopy prescription/claim form be developed. The name of the prescribing physician could be prestamped on the form. The physician should list the medication desired and draw a line immediately under the last item prescribed and personally sign the form. Space can also be provided for the physician to list a substantiating diagnosis. A copy can be kept for the physician's record and the balance forwarded to the pharmacy via the patient for use as a description of drugs to be dispensed and the pharmacist's billing invoice.

Existing program regulations prohibiting the referral of patients to a particular pharmacy by physicians should be broadened to encompass all facility employees and stringently enforced. It should be made clear to all that the physician may not require nor may he recommend that a prescription be filled by a particular pharmacy; nor may his receptionist or any employee do so. Patients who ask must be reminded of their free choice of pharmacy. Any liaison—including direct telephonic connection and common entranceway—between physician and pharmacist should at the very least create a presumption of impropriety and such relationships should be subjected to special scrutiny as to pharmaceutical utilization.

Landlord tenant relationships present perhaps the greatest temptation to over utilize pharmacy services. Even without direct steering by facility staff, patients are usually required to pass the pharmacy entrance to pick up coats or children before arriving at the public street. The in-house pharmacy truly has a captive audience. For this reason, the common entranceway should be prohibited. Moreover, when a physician or landlord owns a pharmacy or has a pharmacy for a tenant, he is induced to take whatever steps are necessary to see that the pharmacy succeeds. Inhouse pharmacies also present opportunity for profit based upon the precise nature of inventory kept and the ability to obtain volume discounts on drugs. We recommend that the State take these savings into consideration along with the fact that inhouse pharmacies primarily—if not exclusively—service patients of the facility and reimburse these pharmacies at a lower institutional pharmacy medicaid rate.

Mr. Chairman and distinguished members of the committee, thank you for your cooperation with the New Jersey State Commission of Investigation in its own probe of the medicaid program and for listening to me today. I will now attempt to answer any questions you may have.

Senator Moss. Thank you very much, Mr. Rodriguez, for your testimony and also for the report that you have provided for the committee, and it is being released just today. This report will be included in our record.[1] This is a very significant document that gives us a viewpoint of what is being done in New Jersey.

How large a staff do you have on S.C.I.?

Mr. RODRIGUEZ. We have approximately 16 investigators, 4 attorneys, 4 accountants, 4 commissioners and an executive director.

Senator Moss. Do you find that staff to be adequate or is that pretty small?

MORE INVESTIGATORS NEEDED

Mr. RODRIGUEZ. Sir, when you have 16 investigators looking into a program of New Jersey that encompasses approximately $400 million, it is really not adequate. The men that we have are extremely qualified men, specially picked. They do a tremendous amount of work in uncovering the abuses in many of our programs. This is not the only investigation that has been conducted over the past 2 years.

Senator Moss. Our staff here tells us of the great cooperation that it received from you in New Jersey and they speak highly of your staff and the work you do. I was under the impression also that the volume of work to be covered was probably more than your personnel is able to cover adequately and that you were probably straining at the limits of what your staff could do.

Mr. RODRIGUEZ. That is very true, sir, because while we were doing the medicaid investigation since 1975 we have reported on one phase of the nursing home and we have reported on the clinical phase, we are reporting on this phase today. We have another report being generated on the capitalization of nursing homes which is another massive abuse. Coming shortly is our report on the hospitals in New Jersey, and we have covered several of the other purveyors.

We keep a continuing eye on the movements of organized crime in New Jersey which is one of our main thrusts, and I think we have

[1] See appendix, p. 599.

received some credit for moving some of the top crime out of the State of New Jersey. We have to maintain a certain amount of our personnel constantly vigilant in other areas. The amount of work they have done, I would like to personally say today in public that is free for the taxpayers of the State of New Jersey and with the assistance of your investigators this will hopefully start a national trend that will save some of these billions that are being ripped off with not 1 cent going to the quality of medical care, it is just rip-off money so I don't like to hear statements of it is defensive medicine that is required. This is quality care money that is now being taken from the poor, it is rip-off money. I think these reports of your investigators clearly indicate that it is an abuse and it should be stopped as quickly as possible.

Senator Moss. Has the degree of cooperation been satisfactory with the State enforcement, legal prosecutors, State attorneys and whoever else does that work?

Mr. RODRIGUEZ. When we submit information to them, many times the results are not forthcoming as quickly as we feel perhaps they might be. I don't believe that there has been a sufficient aggressive management by medical societies of the ethical problems that develop, but by and large New Jersey is or has been taking giant steps in trying to correct the situation, but much has to be done.

Senator Moss. Well, again let me say how very much we appreciate what you have done and what you have brought in to illustrate the type of investigation which was carried on in New Jersey. I think it is one of the bright spots we have uncovered in New Jersey, and Michigan probably will do more in attempting to adequately investigate and police these activities and other States, at least the ones that we are familiar with.

So we want to commend you for that and to offer you our continued cooperation. We hopefully can try to press forward on the Federal level to get better tools to deal with this. Basically law enforcement, this is the local level and it comes to licensing and inspection and criminal procedures so we need to depend on the strong arm of the States with your showing in New Jersey.

Mr. RODRIGUEZ. Thank you, sir.

INDICTMENTS NEEDED

I would like to make one other point that many times our Commission feels through this method of public hearing and disclosing the abuses that it is not necessary for the integrity of the program to obtain an indictment here or there. I think when the proof is there they should be aggressively pursued of the indictment but what is more important is to bring to public light the abuse and the correction so that we don't constantly pay for the mistakes of the past but plug the hole in that pocket.

If we can obtain that objective, then I am willing, as our Commission does many times when it takes testimony and grants witness immunity for obtaining essential information for corrective action, that in the long run the taxpayers gain, and I think that is the main thing that hopefully will come from these hearings, the corrective action immediately, and then let the prosecution follow so that the rules are clear in the future. Then when you find a transgression, you must stamp on it as quickly as possible because it becomes symptomatic.

Senator Moss. Thank you very much. You state the proposition very well and we are pleased to have been able to work with you.

Senator Percy.

Senator PERCY. Mr. Chairman, your testimony today confirms the findings of the subcommittee staff and it is good to have that verification.

Are there any types of medicaid fraud that exist in New York that do not exist in New Jersey?

Mr. RODRIGUEZ. Well, New Jersey did not have the factoring problem that New York had but by and large we find that it is symptomatic. If you find it in New York, you will find it any place you have the medicaid program. Unfortunately I have to make that statement. I don't think we can write off any State that has a large amount of medicaid money flowing to it and say it does not exist in this State. I don't wish to point out New Jersey necessarily as being the culprit but I think we are symptomatic in the problem.

Senator PERCY. Would it be fair to assume that, just like the kickbacks and payoffs in the aircraft industry, what developed to be a part of Lockheed happened to be adopted by various companies, and eventually spread like a cancer through the industry? Is this the kind of thing that is likely—if it starts some place—word is likely to get around that this is the way it is done? Does someone come up to New York and study how it is done so that we really kind of assume that if it exists there in New York and New Jersey, Illinois, California, and Michigan, it probably exists virtually any place in the country where you have large scale expenditures for medicare?

UNCOVERING TECHNIQUES IS KEY

Mr. RODRIGUEZ. I think that is a fair assumption.

Senator PERCY. Finally, has the New Jersey Commission developed any techniques that can effectively curtail medicaid fraud and abuse activities that you could share with the public totally? Have you developed an approach that you think would be helpful and useful to us as we prepare to introduce legislation and offer amendments to it on the floor? Anything you can help us with, either now in your testimony or that you could furnish subsequently to the subcommittee, would be appreciated.

Mr. RODRIQUEZ. First, as part of our statement we do make certain recommendations that we have made this morning to our legislature with respect to this phase of the program but we found, as we did in our clinical blood lab investigation, that there are certain techniques that you can uncover that once you uncover the technique it is only a matter of seeing its application in other phases of the program. The so-called ordering through medicaid, or ordering through a facility the dinner and then charging medicaid a la carte is one of the problems that we find in many areas where they can submit a blood test which we found in our clinical blood lab investigation.

The computer printout would read some 8 to 12 findings and for $3.50 this would be accomplished at one of the laboratories where one of the clinical labs dealing with medicaid would pay the $3.50 and then a la carte the blood test to medicaid and charge 12 times or 8

times. Well, that system we find is also uncovered when I made reference to the X-rays, when they were read each time or billed each time. Look at the right, look at the left, look at the lumbosacral joint. That is three readings when it is actually one plate. They don't charge each time the shutter snaps, they charge each time the eye focuses. So it is a matter of again going to the a la carte method of going to the X-ray plate. I think integrity dictates that when you are dealing with taxpayers money that you give them a little more consideration when you deal with that kind of fund.

I know the reference was made to performance, and we made some reference here when I concluded my testimony, but when I hear Mr. Halamandaris talk about $1.5 billion perhaps being ripped off nationally—in this phase alone New Jersey perhaps had $3 to $4 million ripped off—I think few taxpayers would refuse the Federal Government the thread to sew the hole in the pocket. Unfortunately, these things must be recommended and we recommend a modest example of it here.

Mr. PERCY. Thank you very much, Mr. Rodriguez.

Senator Moss. This has been an exceptionally interesting and revealing morning of testimony and I think all of us understand the problem a little better now.

This will complete our hearings for today. We will meet again at 9:30 in the morning and we hope to be joined by Senator Talmadge and Senator Muskie.

We are now recessed.

[Whereupon, at 1 p.m., the subcommittee recessed, to reconvene at 9:30 a.m., Tuesday, August 31, 1976.]

APPENDIXES

Appendix 1

REPORT OF THE NEW JERSEY STATE COMMISSION OF INVESTIGATION ON THE PRACTICES AND PROCEDURES OF PRACTITIONER GROUPS PARTICIPATING IN THE NEW JERSEY MEDICAID PROGRAM, DATED AUGUST 30, 1976, SUBMITTED BY JOSEPH H. RODRIGUEZ[1]

Introduction and Summary

As part of its evaluative probe of the entire Medicaid program in New Jersey made at the request of Governor Brendan T. Byrne, the New Jersey State Commission of Investigation (S.C.I.) assigned one of three investigative teams to look into the area of health services encompassing providers of other than nursing home and hospital care. Among the major components of this section of the program are dentists and physicians practicing in groups or otherwise associated by virtue of sharing space at a common facility. The practitioner phase of the investigation focused upon the workings of individual medical facilities devoting at least 75% of their practice to Medicaid and bringing in substantial amounts of Medicaid money and the manner in which these facilities are administered by the New Jersey Division of Medical Assistance and Health Services (D.M.A.H.S.).

During the course of this investigation, staff of the Division's small Bureau of Medical Care Surveillance provided valuable assistance to the Commission. We wish to publicly express gratitude to Division Director Gerald Reilly and Surveillance Bureau Chief Boniface Damiano for extending many courtesies and total cooperation. The New Jersey State Commission of Investigation also established a working liaison with the United States Senate Select Committee on Aging which is reviewing the Medicaid program—a program under which Federal and State tax dollars are paid to providers of medical care for necessary services rendered to the indigent—on the National level.

Evidence obtained by the Commission on some twelve sample facilities is not sufficient to dispute statements that only a small minority of practitioner groups receiving substantial Medicaid monies engage in improper or questionable conduct. However, the Commission recognizes that the potential for the abuses outlined in this report is great and accordingly, the Commission is recommending the following steps to promote program integrity, guard against unnecessary utilization and ultimately, conserve State and Federal tax dollars.

The principal thrusts of these recommendations, which are reviewed in some detail subsequently in this report, are:

Promulgation of a scheme to identify and register on an annual basis, medical facilities receiving substantial amounts of Medicaid monies.

Periodic inspection of such facilities for proper procedures and cleanliness.

Outlawing percentage arrangements between facility owner-operators and practitioners.

Establishment of a liaison between the Division of Medical Assistance and Health Services and an insurance clearing house to obtain accurate information on payments made by insurance companies to physicians on behalf of Medicaid recipients.

Addition to the staff of the Bureau of Medical Care Surveillance of undercover agents who would pose as recipients seeking medical cases to ferret out:

[1] See statement, p. 588.

"Ping-ponging": Practice of requiring a patient to see several specialists in the same facility without medical need.

"Family-ganging": Practice under which covered family members are seen by facility personnel without initially requesting care.

"Churning": Practice of unnecessarily requiring patients to come to a facility for billable visits.

"Steering": Practice of directing patients to specific specialists or pharmacies.

Use of para-professionals; requirements to sign claim forms in blank.

Notification to recipients of services billed by physicians.

Require that physicians and radiologists justify the need for radiology procedures and holding both the requesting physician and radiologist separately and equally responsible for assuring that all requested procedures are consistent with the patient's diagnosis.

Outlaw direct telephonic links and common entranceways between medical facilities and pharmacies.

Reduction in Medicaid reimbursement rates to pharmacies sharing space in medical facilities.

Enforcement of State statutes prohibiting lay personnel from participating in the practice of medicine.

Medicaid Group Practice—Characteristics of New Jersey Mills

In connection with its evaluation of New Jersey's Medicaid Program, the Commission determined to examine the professional group-pharmacy aspect component for possible abuse. Scrutiny was centered upon the practices and procedures of relatively large dental and physician groups, their relationships with other providers of medical care and services—especially pharmacies—and the adequacy of existing regulations and integrity monitoring methods utilized by the Division of Medical Assistance and Health Services (D.M.A.H.S.).

The Commission focused upon recognized professional groups, "professional centers" housing various unassociated tenant practitioners and offices of single practitioners in which other physicians would regularly share space in either an employee or independent contractor capacity. More than twelve facilities across the State—each having at least a 75% volume of welfare patients and bringing in substantial Medicaid monies yearly—were examined. Books and records were reviewed, offices were visited by investigators posing as patients, and sworn testimony was taken from practioners, facility employees, Medicaid recipients and program administrators.

The facilities reviewed were located in poverty areas—Camden, Hoboken, Irvington, Jersey City, Newark, Passaic and Paterson—and housed in places such as welfare project high-rise buildings, converted stores, warehouses and tenements. Typically, the facilities were divided into a reception area for patients—some of which were equipped with rows of theater-type seats consistent with mass production technique—and several smaller compartments used for patient examination, X-ray services and laboratory services. Several locations also contained in-house pharmacies.

Each facility had an owner or the equivalent of a business manager to supervise the day-to-day running of the operation, hire and fire physician, nursing and clerical staff, and arrange liaison with out-of-house specialists and suppliers of goods and services. In many cases, the owner of business manager was a layman.

Arrangements are made between owner or administrator and physicians who desire to practice at the facility. In the main, staff practitioners were comprised of foreign physicians and recent graduates anxious to put together enough capital to open their own practice elsewhere. As one doctor told us of plans to stay at a medical center:

> I don't think I'd want to be involved with something so fly-by-night. My main attention is for my private practice, and when it's built up enough, this is where I want to be, in my private practice.
>
> Q. In the Passaic area you mean?
>
> A. No, in Englewood.

In earlier years (1971–1973) many facilities paid staff physicians a straight salary averaging only $15.00 per hour regardless of the number of patients seen or amount of services billed to Medicaid. A pharmacist who owned part of two facilities described early salary arrangements:

> Q. With reference to the salary arrangements at * * * Medical Center and when it was existing at the * * * Medical Center, were doctors permitted to bill, if you know? Were doctors permitted to bill Medicaid, for

instance, for services they performed, or would those monies accrue to the medical center?

A. Well, I'm—I'm sure that doctors filled out their forms and submitted it, but I'm quite sure the monies or the checks coming in from Medicaid or Medicare, whatever, were made out to * * * Medical Center. If that's what you're asking.

Q. Yes. Okay. In other words, what I'm really wondering is, did the doctors get anything more than $15 an hour?

A. No.

Salary arrangements between facility operators and staff practitioners declined because of a fear that such arrangements might subject facilities to the licensing and cost review requirements of the Health Care Facilities Planning Act, *N.J.S.A.* 26:2H–1, *et seq.* A center owner described the strategy:

Q. Do you know how the Doctors and other personnel at the center were hired?

A. When we first took over there was a salary basis. But then there seemed to creep up this certificate of need and we went to two meetings and it seemed as though if you were going to be an organization that hired physicians or opened a medical installation, you had to attain this certificate of need.

Q. From the Health Department?

A. Right. Well, being a nonprofessional. And at this meeting it became evident that they didn't like the idea of nonprofessionals in the medical business, so you had to either go—that idea was canned as far as salary, if you wanted to continue it, and at this point being involved financially I thought we would have to find another way. Then we decided to rent the premises to physicians and that's what we did. We rented the area to physicians.

Arrangements shifted to "rental" or "partnership" agreements based upon a percentage of the fees earned by the practitioner. The Commission identified specific relationships under which the amount kept by the practitioners varied from as little as 30% to as much as 70% less $100. On the average, practitioners involved in such arrangements turned over 40 to 50% of their earnings to facility operators or landlords. Typical negotiations with a lay landlord owner were described by a physician:

Q. Do you recall the substance of that interview; the offer, if any, that he would have made to you?

A. Well, he asked, you know—I told him that at the time I was looking for a job and I was going, you know—I would be interested in working in the clinic and he said he was looking for a general practitioner for his clinic and if I was interested, you know, I could—you could—you know, I could start working at his clinic on the exact day of opening. It was set at the time.

Q. And did you indicate to him that you were interested?

A. Well, I was interested very much to stay in that area because I had a lot of my own patients from * * * that I knew would follow me, and I didn't really want to move out of the area which was acceptable to all of my patients buswise and areawise and at the time I didn't feel very secure to—by myself, to open an office in the Newark area at that area where it was. So I felt it was a very good deal for me. I would still be seeing my patients; I would be in the same location and at the same time I had the security that I wasn't alone * * * practicing in, you know, in an area of Newark that is not really very safe.

Q. Did Mr. * * * suggest some type of financial arrangement or salary to you at your meeting with him?

A. Yes, we discussed that too.

Q. Can you give us the terms of the financial arrangements.

A. Yes. We discussed, and in his terms, I was to bring my knowledge and my stethoscope and he would provide me with space and telephone service, and, you know, all medication, nurses, secretarial work, everything, and so for that he would charge me a definite amount of fee.

Q. What was the definite amount of fee? Was it a percentage?

A. Well, the fee was—yes, it was 50 percent.

Q. How would the 50 percent reach Mr. * * *? Would you have to write a check or would he write a check to you after certain deductions would have been made?

A. I was to write him a check.

Q. Would you bill Medicaid under your own name?
A. Yes, sir, I billed Medicaid in my own name.
Q. Then after you received a check from Medicaid.
A. Yes.
Q. —would you then just take half that?
A. Yes. I would write him a check for half of the amount that was paid to me.
Q. Did Mr. * * * require any type of proof from you as to the amount of money that Medicaid had paid you?
A. All the billing that came to—through * * * and there was a secretary——
Q. I see.
A. —who kept track of it.

The presence of the operator-owner's secretary to keep a watchful eye on billings was not at all uncommon.

Facility administrators contend that the high percentage return to the center is justified by the space utilized by staff practitioners—including all common areas—and expenses including salary of nursing and secretarial personnel as well as other operating costs. The Commission recognizes that certain expenses are indeed borne by the facility, but suggests that economies of scale accruing to large facilities should lessen the necessity of high percentage arrangements. We believe that these percentage arrangements lead to unreasonable profit for facility owner/operators and foster abuses which will be detailed later in this report.

More recently, arrangements between facilities and staff have involved fixed payments which increase with growth of practice. At one facility, a lay owner-operator charged a specialist $500 per month. On its face, the fee did not appear high. The physician went on to testify that he was present at the facility only two days a week.

Q. Can you tell us who the principals in the * * * Medical Center might be?
A. Mr. * * *.
Q. Could you classify him as owner or an operator or——
A. He's owner of the building, I think. I don't know. He owns * * * Medical Center. That's his.
Q. Is there one physician who might be in residence at the * * * Medical Center more than anyone else?
A. I can't answer. I'm there two days.
Q. Is there a physician who might be a director of the center?
A. No.
Q. No. Would you know which physician might be at the center more than two days?
A. I don't think anybody is.
Q. How much rent do you pay to the * * * Medical Center?
A. * * * and I worked out an arrangement that I have to pay the equivalent of $500 a month.

As the physician indicated, he was not the only physician who practiced at the center on a part-time basis. The Commission questioned the owner-operator about his costs and other arrangements at the center. It came to light that he leased the entire building for only $225 per month and had "arrangements" returning much more:

Q. You're paying $225 a month for the floor to * * *?
A. Right, sir.
Q. How much rental do you get? Or any company that you are principal in, what do they get in rent a month?
A. Several thousand dollars. I can't give you an exact number.
Q. So you're taking in several thousand dollars a month as a landlord, correct?
A. Right, sir.

At another facility, a building was leased for $500 per month by a physician. He himself practiced there, and sublet space to dentists for $200 per month and to a physician specialist for $550 per *week.*

At yet another center, physicians paid the lay-owner operator a weekly fee.

Q. How do you determine how much rent a particular doctor in one of your offices should pay?
A. Well, they are—the full time doctors, they paid $300, you know.

Q. Is that a month or a week?

A. This is a week. It depends upon also the medicines and supplies that they use.

Q. So it would be like a flat fee plus the cost of whatever materials they use; is that right?

A. Yes.

Pharmacies also have arrangements with medical facilities. At one medical group, a pharmacy paid in excess of $1050 per month rent for some 225 square feet of space. It is significant to note that the rental increased from $550 to $850 to its present amount within two years and without any concomitant increase in space.

Several of these facilities were visited by investigators from the State Commission of Investigation and the United States Senate Special Committee on Aging. In many cases, investigators reported filthy conditions and questionable and fraudulent practices by employees which will be detailed throughout this report. Our experience with these facilities, as partly set out in this document, demonstrates the need for a new approach by the Division of Medical Assistance and Health Services.

Initially, we recommend that facilities receiving substantial Medicaid monies and having several staff practitioners be identified, registered and periodically inspected for proper procedures and cleanliness. We believe that the Division of Medical Assistance and Health Services presently has power to promulgate an administrative scheme to accomplish this purpose. During the course of the Commission's investigation the Division drafted such a scheme and we add our support to it. We suggest, however, that a more effective solution might be to amend existing State health facility licensing law (*N.J.S.A.*26:2H–1 *et seq.*)—the very law which facility operators now seek to evade—to provide for Health Department jurisdiction irrespective of the nature of the financial arrangements between owner-operators and staff over these facilities which receive substantial amounts of taxpayer dollars. We note that such a statutory amendment would also place in the Health Department power to review and set reasonable rates of reimbursement for these facilities which, hopefully, would be more in keeping with the goals of a public welfare program rather than private profit motive.

Percentage arrangements in a Medicaid setting should be outlawed. As this report will indicate, they are incompatible with the goal of providing quality care to recipients at reasonable cost to taxpayers. Such arrangements foster and incite over-utilization of services, ping-ponging, family ganging and churning. It is unrealistic to expect practitioners to practice fiscal restraint when salary is dependent upon the amount billed.

We further urge that an identification system be developed to indicate on the claim form which specific practitioner rendered service to the recipient and the precise location where the service was rendered. Such information—which is not now readily available—will provide program surveillance personnel with easy access to accurate information on monies flowing through particular locations and facilitate detection of ping ponging, and family ganging.

It will also track Medicaid Doctors who wander from facility to facility. The Commission discovered one physician who visited three facilities in different cities a week. Such a practice raises serious questions about continuity of care and treating physician availability to patients.

The testimony also raises serious questions about possible violations of the Professional Practices Act (*N.J.S.A.*45:9–1 *et seq.*) by facility lay owner-operators who share in the profits of facility associated physicians. The Commission will forward a copy of its investigative record to the State Board of Medical Examiners for consideration of this and other issues.

Affiliated Radiology Services

Once the treating physician determines radiologic services are necessary, a requisition specifying the X-ray procedure desired is drawn. The service may be rendered in one of several ways: The patient can be referred to a specific radiologist or hospital facility; the X-rays can be taken, developed and "read" by a radiologist member of the group using his own equipment and personnel; films can be taken on the group's equipment by a technician paid by the group and interpreted by the radiologist whose office may be located off the group's premises.

Ideally, in this latter situation, the radiologist will closely supervise the work of the X-ray technician and will himself perform (or be present for) more esoteric

procedures. During the course of the investigation, however, the Commission discovered one instance where a radiologist receiving in excess of $118,000 of Medicaid funds between 1972 and 1975 was employed full time at a New York hospital. Despite the fact that Medicaid claim forms signed in his name represented that the radiologic services, including intravenous pyleography, mammography and tomography, "were personally rendered" by him or by a qualified individual in his actual presence, office employees—including the X-ray technician—saw him only once or twice over the years. In the absence of the radiologist, numerous X-rays of questionable medical value were ordered by office physicians and taken by the technician. The radiologist could only review medical necessity on an after the fact basis and, according to the X-ray technician, would question the number of films taken on individual patients:

Q. All right; but what would he say, for instance?
A. Why was an X-ray taken? Or, why was this taken?
Q. He would ask you?
A. Yes.
Q. Would he ask anyone else?
A. No.
Q. Did he sound sort of complaining when he would ask you?
A. I don't know what you mean, complaining.
Q. Well—
A. That I shouldn't do it?
Q. Yes.
A. I don't know. He would ask me why did I take it.
Q. I'm sorry. I missed the last part of that.
A. He would ask me why did I take it.
Q. Okay. And you would say what?
A. Because I was told to take it.

The testimony raises serious questions about the quality of care received by office Medicaid patients in this highly sensitive and potentially dangerous area of health care delivery. The record also raises questions about the conduct of certain physicians which appears to transgress basic standards of medical ethics in practice, issues which are beyond the scope of this report.

At another facility, with the radiologist located in a nearby city, evidence exists that unqualified persons were permitted to take X-rays. Rather than hire a licensed X-ray technician, the lay group administrator allegedly instructed a licensed practical nurse (LPN) to take films. If questioned by authorities concerning X-ray procedures, group personnel were supposedly rehearsed to claim that the LPN only positioned the patient and that a physician actually "pushed the button". Questions concerning these allegations to a physician-partner of the group drew the following responses:

EXAMINATION BY COMMISSIONER LUCAS

Q. During your stay at * * * Health Group was there an employee of the health group by the name of Sonia?
A. Yes.
Q. And do you know how long Sonia was with the group?
A. I'd say about a year.
Q. All right. Do you know what her duties were; that is, were they administrative as opposed to medical?
A. I plead the Fifth and Fourteenth Amendments.
Q. Did Sonia dress in the garb of a nurse?
A. I plead the Fifth and Fourteenth Amendments.
Q. Do you recall if Sonia dressed in the garb of a lay person in the office of a doctor?
A. I plead the Fifth and Fourteenth.

* * * * * * *

Q. All right. Now, in the spring of 1974 was there an X-ray technician—strike that.
In the spring of 1974 was there a young lady at the * * * Health Group by the name of Sonia, who would take X-rays?
[Whereupon, the witness confers with counsel.]
A. I plead the Fifth and Fourteenth Amendments.
Q. Do you know if—strike that.
Do you know whether or not Sonia was a certified X-ray technician?
A. I plead the Fifth and Fourteenth.

Q. Did you ever hear * * * instruct physicians to say that they, the physicians, rather than Sonia took X-rays if anyone should ask?

A. I plead the Fifth and Fourteenth Amendments.

After the group obtained the services of a licensed technician, problems again developed when the facility's lay administrator himself allegedly took X-rays. The physician-partner again raised constitutional privileges when asked if it was ever brought to her attention that the administrator may have taken X-rays. The administrator denied taking X-rays but acknowledged that he could position patients and develop X-rays for a physician who would "push the button".

Radiologists associated with Medicaid Mills, like other practitioners, often work on a percentage fee arrangement. The Commission commonly found group associated radiologists keeping only between 35–40% of Medicaid dollars paid for radiology services with the balance flowing to the facility. Other situations were encountered in which the radiologist would pay the group a lower fixed percentage of his fees plus a monthly rental. (30% of fees plus $100/month is one example of this type arrangement.)

In any percentage relationship, incentive exists to increase dollars received by increasing volume of work performed. The radiologist can maximize his income by billing for as many procedures as possible on each patient. The group can maximize its earnings by supplying as many patients as possible to the radiologist through the practice of "ping-ponging". These temptations often materialize in pressure exerted upon group physicians to order unnecessary X-rays for their patients and radiologists engaging in "creative billing"—billing based upon the number of readings rather than the number of anatomic areas filmed—and false billing for services not performed.

In one mill administered by a layman, a pediatrician preferred to use the services of a radiologist in whom she had "tremendous confidence" rather than the radiologist associated with the facility. The landlord-administrator chided the pediatrician for referring patients to outsiders and suggested that the Mill's radiologist—who paid the landlord a percentage of his fees plus a fixed amount monthly—should be utilized.

Q. Did Mr. * * * ever tell you why he wanted you to use Dr. * * * rather than another radiologist who might be outside the group?

A. He felt that the medical center would make more money if we used our own and he installed the machines and went into the expense to put everything, that we should utilize what we have in the clinic.

At another group where the radiologists received 40% of the Medicaid fees for radiology services, a physician complained the lay administrator would approach him with respect to specific patients and ask, "You're going to order X-rays, aren't you?" On other occasions he was chastised by a physician partner for allowing a patient to have X-ray services performed at a near-by hospital rather than at the group.

* * * * * * *

I remember the incident, Dr. * * * called me aside and said to me, "Why did the patient have the X-rays done at St. Michael's?" I don't remember if it was an upper G.I. series. It possibly was and/or a chest X-ray. But I was taken aback by her and I said, "* * *." I said, "the form that I used for the requisition for the X-ray for the patient was to have it taken at the office of a radiologist, and the hospital has a very similar requisition and the patient can go any place he wants for that X-ray." She says, "Well, we offer the service here. Why didn't you have it done here?" I said, "* * *, the patient had the X-ray done at St. Michael's. I'm only interested that the patient had the X-ray procedure done, not where she had it done." But she was very, very angry with me and I controlled myself * * *

* * * * * * *

When questioned about pressures exerted by the lay group administrator on physicians to take numerous X-rays, a physician partner responded:

* * * * * * *

Did Mr. * * * ever suggest to you that you yourself should order a certain number of X-rays on your patients?

[Whereupon, the witness confers with counsel.]

A. I respectfully plead the Fifth and Fourteenth Amendments and decline to answer the question on the ground that the answer may tend to incriminate me.

The CHAIRMAN. Doctor, in the event we have occasion to rely on those privileges again, the record will indicate the complete context of your statement, but you would simply have to say you plead the Fifth and Fourteenth Amendments. All right? Instead of going through the entire process.

The WITNESS. Fine.

Q. Doctor, are you aware of any advice or suggestions that Mr. * * * may have given to other physicians at the * * * Health Group concerning the number of X-rays they should order for their patients?

A. I plead the Fifth and Fourteenth Amendments.

* * * * * * * *

The radiologist associated with the group maximized his percentage earnings by billing Medicaid for an additional esophogram whenever the group X-ray technician would perform an upper G.I. series and even though the treating physician would not request such a procedure. The X-ray technician testified that he only took films for an upper G.I. series and forwarded a Medicaid claim form to the radiologist which billed only for the procedures he actually performed:

A. I would do a GI series and that would be all. And then one morning I noticed the forms were on the counter and then underneath it, the GI series, and in another person's handwriting "and esophagus," and it had a certain amount of money written on the side.

Q. So "and esophagus" was added in?

A. Right.

Q. You didn't do anything to the esophagus?

A. No.

Q. Right?

A. No.

Q. Who signed the form, do you know?

A. Dr. * * * [the radiologist].

Q. Are you sure?

A. Yes.

Q. Were the words "and esophagus" written in the same color pen as Doctor * * * (radiologist) signature? Did you notice that?

A. Right, yes.

Q. It was. All right. How many times did this happen, often?

A. On practically every G.I. series.

This technician was also instructed by the radiologist to take films other than those requested by the treating physician:

Q. Okay. Did anyone ever tell you or suggest to you that, as the X-ray technician, you should do more X-rays than the X-rays requested by the physician?

A. Right, Doctor * * * [radiologist].

Q. Doctor * * * [radiologist]. What did Dr. * * * say?

A. Doctor * * * requested that if it was a finger, that I would do a full hand on the frame.

Q. Did he tell you why you should do a full hand?

A. No.

Q. He just said do it?

A. Right.

Q. And this is even though the prescription or the written request that you would get from the doctor requesting the X-ray would say the finger?

A. Right.

Q. What would you do, the finger or the full hands?

A. I would do the full hand.

Q. Any other particulars, such as a foot, ankle?

The WITNESS. Yeah. He said if it was an ankle I was to do a foot and ankle.

Q. Right. In other words, if the request said please X-ray right hip—

A. I was to do both hips.

Q. In other words, if the request said please X-ray right hip, you would do both hips?

A. Both hips.

Q. Do you know why doctor would make that request—Doctor * * * [radiologist]?

A. Just for a comparison. But most comparison studies are done between children under sixteen.

Q. And you say children under sixteen. Were most of these hips X-rays taken of children?

A. Not really.

When questioned concerning the practice of the affiliated radiologist to engage in "creative billing", the physician partner invoked the Fifth Amendment.

Steps can be taken to safeguard the program from overutilization of X-ray services and "creative billing". Primary physicians requesting radiologic procedures should be required to document *clearly* the medical necessity of such procedures in the patient's chart. The requesting physician should then specify the precise X-ray procedure desired on a multi-copy combination Medicaid X-ray requisition claim form. A line should be drawn under the last test required and immediately thereunder the requesting physician should list the diagnosis and "rule-outs" for the benefit of the consulting radiologist and Medicaid surveillance personnel. The requesting physician should then personally sign the form and forward it to the radiology consultant for use as a description of services to be rendered and as his own program billing invoice. Both the requesting physician and the radiologist should be separately and equally responsible for assuring that all requested procedures are consistent with the patient's diagnosis. If a radiologist believes that services requested should be modified, extended, or rejected, he should be required to consult with the requesting physician. Claims not submitted in complete accord with the above procedure, should be rejected by the processing agent.

Steps should be taken to make it clear to providers that radiology billing should be based on the number of anatomic areas filmed rather than on the number of readings. While for example, a pelvic film allows interpretation of multiple anatomic segments, a radiologist should not bill for readings of "right hip," "left hip", "pelvic", lumbosacral spine", etc. Only the minimum number of views necessary to delineate anatomic pathology should be taken.

The Commission also suggests that the Division of Medical Assistance and Health Services give serious consideration to the amount and method of reimbursement to program radiological providers. The fact that many providers are willing to accept 35–40% of the present Medicaid fee itself suggests that the fee may be high. 60–65% of that fee, or the portion taken by the group, may contain excess profit in addition to monies sufficient to cover costs related to radiological procedures. The Division may well decide to adopt a method similar to that now utilized by New York City whereby one fee is paid to the radiologist for X-ray interpretation and another to the entity which owns and operates the equipment.

Not Getting Our Money's Worth

The Commission's investigation disclosed a number of practices used by physicians to maximize unfairly the amount of Medicaid reimbursement they receve. Many of these practices contravene the requirement (*N.J.A.C.* 10:54–1.1) that reimbursable services be rendered by the physician or in his actual presence:

"Physician's services" means those services provided within the scope of practice of the profession as defined by the Laws of New Jersey, or if in practice in another state by the laws of that state, by or under the direct personal supervision of an individual licensed by the State of New Jersey to practice medicine or osteopathy. It includes services furnished in the office, the patient's home, a hospital, a skilled nursing home or elsewhere. Direct personal supervision means that the services must be rendered in the physician's presence.

One method of maximizing Medicaid income is to disguise non-reimbursable treatment through the use of codes applicable to reimbursable procedures. Medicaid pays for physical therapy under certain conditions. Payments are not made for "physical medicine procedures administered by a physician, or physical therapy which is purely palliative such as the application of heat *per se* in any form, massage, routine calisthenics or group exercises, assistance in any actiivty or use of a simple mechanical device not requiring the special skill of a qualified physical therapist." *N.J.A.C.* 10:54–1.7.

At one facility, patients were scheduled to come in for diathermy, hydroculator and electric muscle stimulator (E.M.S.) treatments at a time when the physician was not in the office. A facility clerical employee who operated the equipment testified as follows:

Q. I see. Now, would you run this EMS and hot pack machine when Dr. * * * was not in the office?

A. Sure. That's when we used it. We used it mostly in the morning because when he came in he had patients to see, and, you know, if we had a

patient in there taking treatment it would tie the room up and we needed the room. So we advised most of the patients to come in the morning for their treatment.

Q. I see. What about the EKG. Now, was this another situation where an EKG would be taken in the morning when Dr. * * * would be absent?

A. Yes.

Q. Was that standard procedure?

A. Yes, because it took time and it was also done in the same room and that took time to do also.

Q. Is all this equipment that we are talking about located in the one room?

A. Yes.

Q. And is this room also used for the examination of patients?

A. Yes.

Q. I see. So that any patients who would require treatments from these various electronic devices would be handled in the morning?

A. Yes, because if they came when he was seeing patients they would tie up that room for like ten or fifteen minutes and we only have four examination rooms to work with.

The clerical employee often "treated" as many as 30 patients per day out of the physician's presence.

Medicaid claim forms were submitted for these services in the name of the physician. The services rendered were described as "prolonged office visit" and processed for payment by the fiscal intermediary. The facility's registered nurse, who handled much of the Medicaid billing, testified as follows:

Q. When would you write prolonged office visit?

A. Whenever we give a physical therapy treatment.

Q. But, again, the physical therapy treatment might be diathermy?

A. Diathermy, EMS, EMS and hot packs, hot packs.

Q. So in your own mind were all these words and descriptions synonymous, they all meant the same?

A. No, because the diathermy machine is a different machine than the electro—electro-muscle stimulator machine.

The WITNESS. Did you get that lisp in there?

Q. No. But the prolonged office visit category, okay, would be used sometimes at least when physical therapy services would be rendered?

A. Would be used all the time when physical therapy service is rendered.

Q. All the time?

A. Yes.

The women who operated the physical therapy equipment and also gave injections, had no medical training. One of them testified concerning her background as follows:

Q. Are you a registered nurse?

A. No.

Q. Are you an L.P.N. or practical nurse?

A. No.

Q. Do you have any kind of training in the medical field?

A. I'm a medical secretary by training.

Q. And where were you trained?

A. Lyon's Educational Center, 900 Broad Street, Newark, New Jersey.

Q. And how long did you attend Lyon's? How long did you study there?

A. It was a year.

Q. Did you receive some sort of certificate—

A. Yes.

Q. —or diploma?

A. Yes, a thousand hours.

Q. And generally what kind of training did you receive there? What did they teach you?

A. Well, medical terminology. I had shorthand already in school, so I had shorthand, medical office procedures. I had typing. I imagine that's about it. English.

Q. Did you learn to operate any type of office equipment at Lyon's, any medical equipment?

A. No.

Q. Like a diathermy machine?

A. No.

Q. Did you learn how to give injections at Lyon's?

A. No.

Q. Did you learn how to take blood from a patient at Lyon's?
A. No.

She went on to detail the methods she used to give electric muscle stimulation treatments:

Q. What's a EMS and hot packs?
A. Electrical muscle stimulation. That was part of that machine. It was just like—I never knew heads or tails what it did. I was just told that's the way I had to do it. You just put the lotion on and you just iron; give him certain amount of watts. You ask him if he feels it. If he feel it, then you just leave him there and iron him for ten minutes. Just rub him back and forth.
Q. And did Dr. * * * leave you instructions as to what degree of voltage you should use with each patient?
A. Well, he showed me a couple of times and he said you would normally leave it on—like it was just a knob and it has numbers from one through eight, and like I used to put it midway, somewhere between four, five and six, you know, unless the patient said it was too much. Then I would turn it down. That's all.

One must seriously question the quality and value of these services.

Another abuse involved billing Medicaid for injections administered by a nurse or clerical assistant rather than the physician under the guise of an office visit. A registered nurse testified as follows:

Q. You mentioned earlier you gave injections, right?
A. Yes.
Q. Suppose the patient came in for an injection and you actually gave the injection. Would you fill out a Medicaid form——
A. Yes.
Q. [Continuing]. If the patient were a Medicaid patient? All right. And would you sign it in Doctor * * * name?
A. Yes. When a patient comes in for an injection and walks in the door, it's an injection that Doctor * * * has said, "Mrs. Jones, you come here each week for an Imferon injection each week and she comes for an injection.

The nurse claimed that in addition to giving the injection, she would check the patient's weight and blood pressure and ask questions about general well-being. Again, the services billed were not rendered by the physician although claims were submitted in his name.

Medicaid was also billed for office visits when patients telephoned the facility for prescription renewals. Often the decision to renew the medication would not even be made by a physician but by a nurse or clerical assistant. The nurse explained her procedure when a call from a patient was referred to her by the receptionist:

Q. Suppose she gave it to you, what would you do?
A. I check the patient's chart.
Q. Then what would you do?
A. See when her last visit was. If it was somebody who I was familiar with and her medications were normally renewed, they would be renewed. If it was somebody I was not familiar with or if she hadn't been there for a long time, I'd have her come in or I would hand it over to Dr. * * *.

In addition to the nurse, clerical personnel in the office renewed prescriptions. Instructions from the physician called for a Medicaid claim to be submitted in these situations. The medical secretary testified as follows:

A. Yeah. A lot of times I would go ahead and refill it and I would tell the patient, you know, you would have to come in and see Doctor some time this week.
Q. Okay.
A. Nine out of ten they would never show.
Q. What would happen as far as someone filling out a Medicaid form based upon my telephone call?
A. You see, I never did it. But it has——
Q. Would (the nurse)?
A. Yes.
Q. Well, what were her procedures? Would you make a list?
A. Doctor would tell—if Doctor was there and I told him a patient called and wanted meds renewed and I renewed it already, he had said get a form

and fill it out. Any one of us could do that. Just fill out the top part, the name and Medicaid number. We would hand it over to him or (the nurse) and they would take it from there.

* * * * * * *

Q. But the Medicaid form that's filled out is based upon the telephone call?

A. Right.

Q. Right. Not the patient coming in to see the Doctor?

A. Right.

Q. Right, Okay. Do you know what procedure code—you know what a procedure code is——

A. Yeah.

Q. [Continuing]. in Medicaid?

A. Um-hum.

Q. Do you know what procedure code is placed in or on that Medicaid form?

A. Triple o-one.

Q. Triple o-one means what to you?

A. Just a regular office visit.

A related problem involved instructions giving by facility employees to patients who would call in for prescription renewals. The receptionist described her procedures which were geared to getting the patient into the office for a billable visit:

Q. Have you ever answered the phone and gotten people on the other end who want to renew their prescriptions?

A. Yes.

Q. Well, what did you do? What is your procedure when that happens?

A. Well, I usually tell them to come down and talk to Dr. * * * about it.

Q. You ask them to come in in person?

A. Yeah.

Q. What would you say to them? Suppose I were the patient. What would you say to me?

A. Well, say, you know, you better come down to the office and bring your bottles, you know, the empty bottles and talk to him. If he can renew it, then he'll give it to you. If not, you know, whatever he says.

This is one example of techniques which we label as "churning" or unnecessarily requiring patients to come into a facility for a billable visit. A medical secretary at one facility described another technique:

Q. Was there any practice or procedure that you were aware of on the part of the doctor or anyone else in the office acting under his instructions to get patients to come back on any type of a regular basis?

A. I don't understand what you mean.

Q. Well, for instance, did Dr. * * * ever instruct you or the receptionist or any other persons working in the office to instruct the patients to return next week or the week after——

A. Yes, me.

Q. [Continuing]. to—all right. How would that work? What would his instructions be like?

A. Well, he would see a patient and say the patient had a cold, So he would say tell her I would want to see her Wednesday or Thursday. If they came in on Monday, tell her to come back Wednesday or Thursday to see me.

Q. And would the doctor actually examine these patients when they came back the second time?

A. He would come in and say, you know, "How do you feel?" you know, "How's the medicine working?" And they would say, "Okay." He would say, "Finish up your medicine and come back and see me again." That's what he would say.

Q. So he would want them to come back a third time?

A. Yeah. A lot of them came back three times a week.

Q. Three times a week?

A. (The witness nods her head.)

Q. What would happen the third time?

A. The same thing. He would come in and say, "How do you feel?" You know, "Cold all gone?" and they would say "Yeah." "Okay. Take it easy." And that was it.

Q. Okay. But there wouldn't be any further physical examination?
A. No.
Q. On his part?
A. No.

Another abuse involved billing medicaid *and* an insurance company for services rendered to recipients in connection with auto accidents or workmen's compensation claims. Medicaid claim forms presently ask the following questions:

8. Was patient's illness or injury connected with his employment? Yes/No
If yes, give name and address of employer here.

10. Did injury result from automobile accident? Yes/No

The fiscal intermediaries depend on accurate and truthful responses to these questions in determining whether treatment for certain conditions is reimbursable under the program. At one facility, these sections purposefully would be left blank. The fiscal intermediary processed the claims in this condition rather than rejecting them, and Medicaid was billed and paid for services which would also be billed and paid by an insurance company. The medical assistant/secretary testified as follows:

Q. Do you know of any instances where patients who were involved in accidents received payments from the insurance company or an insurance company and some of these payments from the insurance company went to Dr. * * *?
A. Yes.
Q. But Medicaid was also billed for services that Dr. * * * rendered to these patients?
A. Yes.
Q. What can you tell us about that type of a situation? How would that work?
A. Well, that patient—we had an invoice card on the patients. So whenever they came in, we would put down the date and at the end of the twenty-five or thirty treatments, you know, the secretary would type the bill up and send it into the lawyer. Meanwhile, if they were on Medicaid, we still had to fill out a form and submit the form to Medicaid. That's all.
Q. Do you recall any specific names of patients where this happened?
A. Yes.

Because of this rule, Medicaid monies could not only be paid to the physician, but also to pharmacies, laboratories and other providers of care.

The Division should take a hard stand with respect to this double billing. Any physician submitting claims to Medicaid who also claims reimbursement for identical services from another third party payer should be immediately and permanently suspended from the program.

We further suggest that appropriate State and Federal agencies consider such conduct in connection with possible actions against professional licenses and criminal sanctions.

Rather than relying upon the accuracy of information provided on the claim sheets or the good faith of hospitals or physicians in notifying Medicaid of any inquiries indicating the existence of an insurance claim, we suggest that the Division consider establishing a liaison with a local insurance clearing house. During the course of the investigation the Commission subpoenaed one such clearing house for information relevant to Medicaid recipients treated by suspect physicians for "trauma." The clearing house was quickly able to provide details of treatment and insurance company payments for which Medicaid was also billed.

Other common abuses include ping-ponging—the practice whereby a Medicaid recipient will be seen by many or all practitioners in a clinic, and family ganging—the practice under which covered family members of the patient are seen by facility personnel without initially requesting medical care. "Family ganging" often occurs when small children accompany a "Medicaid mom" to a facility.

A medical secretary described the procedure at one office:

Q. All right. Did Dr. * * * himself or did Dr. * * * instruct personnel in his office to try to get patients to bring their children in to him?
A. Well, no. He would ask the patient when they were there—you know, if the mother had the child with her, he would, you know, ask her if, you know, the child had all his baby shots. That's what he hit them with most, the baby shot bit. And she would say no or something and he would say get a form, fill out a chart and then we would start with the baby.

Q. And the mother would return with the baby to get the shots?
A. Um-hum.
Q. And who would give the shots?
A. Me.
Q. You would. Would the Doctor see the baby?
A. No, not unless the baby was sick.

At one facility, ping-ponging to the Dentist-tenant was common.

Q. And do you know who would, if anyone, make suggestions to the patients that the dentist be seen?
A. Usually Dr. * * *.
Q. Did he ever make that suggestion in front of you?
A. Yes.
Q. What would he say?
A. Your teeth look bad. I want you to see the dentist.
Q. And would he then escort them to the dentist's office?
A. Yes, most of the times he would.

Another employee corroborated ping-ponging to the dentists:

Q. Were there any other medical personnel associated with Dr. * * *? How about dentists?
A. Dr. * * * and Dr. * * *.
Q. All right. And would they come to Dr. * * * office?
A. The office was right behind us. All we had to do is walk through a hall.
Q. And were these two dentists in every day?
A. Yes, well, they would take turns.
Q. I see. One of them would be present every day?
A. Yeah.
Q. And how did Dr. * * * refer people to the dentist? Strike that question. Did Dr. * * * refer his patients to the dentists?
A. Yes.
Q. How would that happen?
Q. He would look at their mouths, you know, and like he would just ask them, "When was the last time you saw a dentist?" And he would send them right over to them.
Q. Would this be the same day that Dr. * * * saw the patient?
A. Yeah.
Q. He would send them to the dentist?
A. Yeah.
Q. Would the dentist then do something?
A. Take it from there.

At another facility a physician was pressured by the lay owner to refer patients to other in-house facilities, even for procedures which did not require services of a specialist:

Q. All right. Can you give us an idea of the nature of his advice; what did he suggest or advise you to do?
A. To have, for example, breast screening done on more female patients over age thirty.
Q. This would have entailed the services of the radiologist?
A. Yes.
Q. On the premises?
A. Yes.
Q. Possibly it was Dr. * * *?
A. Yes.
Q. All right, any other advice concerning what might be done with the patients or for the patients?
A. Well, that, for example, I shouldn't be—while there was available a GYN man on the premises that I should utilize his services.
Q. And was this the suggestion to you to utilize the service of the GYN man in connection with some specialized service that only a GYN man could render?
A. No. The pap smears I presume could be done by a general practitioner as well.

This facility was visited by investigators from the New Jersey State Commission of Investigation and the United States Senate Select Committee on Aging who posed as Medicaid recipients. Each of the three "patients" was greeted by a receptionist who extolled the merits of the facility and the various specialists

who practiced there. Before each of the investigators was examined or even seen by a physician, the receptionist made appointments for return visits with the dermatologist, radiologist, podiatrist, gynecologist, optometrist and dentist.

At another medical group a physician described pressures to ping-pong exerted by the lay administrator.

Q. It started——

A. When the Group got downstairs which was approximately May of '74 and the new office suites were ready and the dentist had then come in the area and there was an optometrist there part time and then the optometry office was on the side of the clinic. When we got downstairs, I was told to make referrals to the dentist, to the optometrist, to the obstetrician, to the gynecologist and also with the orthopedic doctor who was coming in eventually. And my answer at that time, I recall, to Mr. * * * was that if I think it's medically necessary for this patient to be seen by the dentist, I will tell him to go to a dentist, but I will not tell him to go to your dentist. I will not tell him to go to this eye doctor or that eye doctor. I will ask him when was the last time your vision was checked and examine eyes, which is a normal part of my routine exam.

* * * * * * *

Q. Okay. Now, you have indicated to us that Mr. * * * approached you with suggestions that you make referrals to certain of the other physicians in the group?

A. That's right.

Q. Are you aware of Mr. * * * or anyone else approaching other physicians and making a similar request for referrals?

A. Yes. I know that he was quite frequently harassing. I'll use the word harassing, Dr. * * * to make referrals to the gynecologist and eye, ear, nose and throat specialist or an orthopedic doctor.

* * * * * * *

Q. Do you have any idea why he requested the referrals to be made?

A. I assume that he was looking to ping pong his patients. That's an assumption—a presumption on my part, and that he was going to get a percent of the billing from the particular consultant, which would increase his income, certainly not mine.

The physician claimed that these pressures were one reason which caused him to disassociate himself from the group. The administrator involved allegedly referred group patients as "warm bodies" and urged physician staffers to "keep the warm bodies flowing" ("ping-pong"). A physician partner was questioned about the activity of the lay administrator:

Q. Doctor, have you ever heard Mr. * * * use the term "warm bodies" in connection with the patients at * * * Health Group?

A. I plead the Fifth and Fourteenth Amendments.

Q. Doctor, have you ever heard Mr. * * * suggest to physicians at the * * * Health Group that they should circulate the warm bodies amongst themselves?

A. I plead the Fifth and Fourteenth Amendments.

The lay administrator's actions apparently did not end at advising physicians how to practice medicine. One female Medicaid recipient told of being examined at the facility by a "physician who did not wear a white coat."

Q. What did this man, this person do? Did he examine you?

A. He examined me with that thing around his neck. With it up here. The thing that you put on your ears and hangs on your neck.

Q. Did he listen to your heart?

A. He put it in a lot of places and in back and in front.

Q. Do you remember what he told you or did he tell you anything?

A. No, he didn't say anything to me.

Q. Did you tell him you felt sick?

A. Yes, I did.

Q. And then he examined you with a stethoscope?

A. Um-hum.

Q. Now, let's go back to when this person examined you, okay? Did he ask you to open your mouth and say ah?

A. He put something in my mouth and looked into my throat and he just examined my throat and then he gave me the pills.

Q. But he listened to your body with an instrument, didn't he, besides examining your throat?

A. Yeah.

The INTERPRETER. She doesn't know——

A. I don't know the name of the instrument he used, but he put it in his ears and examined my back and front and all over.

Q. When he was examining you with this instrument, did he tell you to breathe in and out deeply?

A. Yes, he told me to breathe deeply.

Q. When he was examining you, did he ask you to put on a gown?

A. Yes—he asked me to put another gown on—no.

The INTERPRETER. She just——

A. He just had me lift my blouse—open my blouse. I had pants on at the time.

The individual—who also prescribed medication for the recipient—was positively identified by the recipient as the group's lay administrator.

The Commission also discovered it a prevalent practice for Medicaid recipients to be required to sign claim forms in blank and prior to having any service rendered. This practice allows physicians to bill the program for other than services actually rendered. United States Senate Select Committee on Aging personnel who assisted the New Jersey State Commission of Investigation were required to sign forms in blank virtually at every facility visited. A comparison of claims submitted by the facilities for services allegedly rendered with detailed investigative notes itemizing services actually rendered showed gross discrepancies in many cases. Physicians billed for injections that were not given, for blood which was not drawn and for urinalysis and tine tests which were not performed.

The Commission is also concerned with the amount of time spent with Medicaid patients by physicians. In several facilities visited, undercover investigators from the United States Senate Special Committee on Aging reported that physicians would spend only minutes with them and give the most cursory examination for which Medicaid was billed $30.00. Such minimal procedures again do not appear consistent with quality medical care.

Many of the abuses outlined above—extensive use of paramedical and even lay personnel or duties which are reimbursable only to physicians, double billing, ping-ponging and family ganging—can be and are being detected by the Division of Medical Assistance and Health Services through the use of sophisticated computer screens and time studies. We commend the Division and specifically the Bureau of Medical Care Surveillance for the effectiveness of current methodology. Existing computer program comparison procedures, however, do not uncover abusive practices in each and every case, but only when certain factors are present. To further protect the intergity of the program, we recommend that the Division obtain and regularly employ the services of undercover agents who would pose as recipients seeking medical care. The Commission found that the use of such agents provided a quick, reliable and efficient method of uncovering practices inconsistent with the aims of the Medicaid program. Evidence gathered by such investigators, who we envision would be assigned to the Bureau of Medical Care Surveillance, could and should be aggressively used by the Division in suspension hearings or passed along for the review of appropriate law enforcement agencies.

We additionally recommend that facilities performing substantial amounts of Medicaid work be required to disclose to the Division the names and positions of employees. This information which, of course, should be updated periodically, will prove helpful in detecting use of para-professionals in place of physicians. We would also suggest that the Division consider legitimatizing the use of *qualified* medical para-professionals in certain instances. Services rendered by such individuals, however, should be paid at a rate lower than that now designated for physicians.

We again recommend that the Division consider the possibility of contracting with an insurance clearing house. Our own experence indicates this to be an effective step in obtaining reliable information on the presence of sources of medical payments other than the Medicaid program.

Lastly, we urge that steps be taken to insure that recipients be made aware of services billed to Medicaid on their behalf and be given an opportunity to challenge the accuracy of physician requests for reimbursement. At very least, a procedure should be instituted and strictly followed requiring recipients to

sign only completed, itemized claim forms. We further recommend that recipients be advised of services billed on their behalf, either by a Division listing of billings periodically through the year, or simply by adding a copy claim form to be given to the recipient by the physician at the time of service as a "receipt". We anticipate that costs incurred as a result of the adoption of either of these proposals would be offset by savings realized from more truthful billings. Either procedure would build a sorely needed "check and balance" into the existing system.

Unholy Alliances Between Mills and Pharmacies

During the course of the investigation, the Commission discovered a number of questionable relationships between pharmacies and mills. At one location an owner of the pharmacy and a lay "entrepreneur' 'also "owned a substantial interest in a medical center located less than a block away. The pharmacist paid the salaries of physicians at the Center and subsequently played a role in determining the "rent" physicians would pay for use of the facility. According to the pharmacist, Center patients initially numbered more than 50 a day and rose to the point where they comprised about a third of his business. We believe this estimate to be conservative.

Q. Do these prescriptions from the * * * Medical Center constitute any significant part of your business?

A. Enough to make me notice. I didn't want to lose it due to the fact when I took over my store we were only doing about fifty a day, and when the physicians were there at the medical center I had seen, you know, quite a few.

Q. Give us a ball park figure.

A. I would say about a third of my business.

Q. About a third?

A. My prescription business is from the medical center.

Q. Was that in May of 1973 or are we talking about today?

A. No. It's the same as it was.

Q. All the way through?

A. Right.

According to the pharmacist, Center patients patronized his store because of convenience. He claimed that the next closest pharmacy was four blocks away. In order to determine whether factors other than convenience were involved, personnel from the State Commission of Investigation and the United States Senate Select Committee on Aging recenly visited the subject medical center. Following an examination, a physician at the Center contacted the pharmacy by an automatic-dial phone and ordered several prescriptions for a Committee undercover investigator. The Center receptionist then directed the investigator to the pharmacy to pick up her medication.

In another area, a pharmacy and a medical center located directly across the street were sold as a "package" to a pharmacist and a lay person. Initially, physicians at this Center were paid a salary and subsequently, arrangements changed to a percentage "rental". The County Medical Society recently objected to the pharmacist and his lay partner acting as owners of the Center. Accordingly, arrangements were made to the end that the Center was "sold" to a physician. The physician now pays rent to a realty company whose principals are the former owners, a fee for the former owners to open and close the facility daily, and a fee to the "former" owner's brother who acts as facility bookkeeper. Investigators from the State Commission of Investigation and the United States Senate Select Committee on Aging who visited this facility were directed to the "former" owner's nearby pharmacy for prescriptions.

A comparison of the location of the medical center and that of the pharmacy rendering service to significant numbers of the center's patients may itself suggest impropriety. Surveillance personnel should closely scrutinize situations where pharmacies distant from centers provide service to large numbers of center patients. The Commission was surprised to find one situation where the majority of one medical facility's patients were having their prescriptions filled by a pharmacy located some five to eight miles away, notwithstanding the fact that at least two drugstores were located within blocks of the office. Prescriptions from the one facility alone accounted for 55% of the drugstore's total business and 80% of its Medicaid volume.

Investigation disclosed that the pharmacy was once a tenant of the physician. When the physician relocated to another town, direct telephone lines were estab-

lished to the subject pharmacy. The physician, as well as his registered nurse and lay office help, would phone in prescriptions to the pharmacy and the pharmacist would then type a script with the relevant information for his files. Evidence indicates that the pharmacist would be supplied with blank prescriptions pre-signed in the physician's name by his registered nurse. These blanks were apparently used in violation of Federal Law to record transactions involving controlled substances.

The medical facility involved maintained a cardboard box into which was placed drug samples left by pharmaceutical salesmen and medications returned to the physician by patients. According to several present and past employees, the pharmacy's delivery man would regularly pick these up. The facility's registered nurse described the items placed in the box as follows:

Q. All right. Now, did Mr. * * * ever take things away from Doctor * * * office?

A. Yes.

Q. What type of items would he take away?

A. Samples.

Q. What type of samples? You mean pharmaceutical samples that salesmen might drop off?

A. Yes.

Q. Any other type of material?

A. Sometimes he would pick up my laundry for me.

Q. Well, relating to medicine, would patients ever bring in syrups or pills into Dr. * * * office?

A. Yes.

Q. Well, would these ever go to Mr. * * *, these syrups or pills the patients would bring in?

A. Yes.

Another employee agreed that the box contained mainly sample pills and syrups.

Q. * * *, do you know what an injectable is, something that you inject into a patient rather than give the patient orally?

A. An injectable?

Q. Yes, an injectable is a drug that you might inject into a patient.

A. Yes.

Q. As opposed to something you might take like a pill or some syrup.

A. Yes.

Q. All right. What type of items would go into the box? What type of samples, pills or syrups or injectables?

A. Mainly pills and syrups.

The pharmacy's deliveryman recalled picking up only outdated vaccine and specifically denied ever taking pills and syrups. He recalled picking up samples only between one and three times a year. While the drugstore's employees maintained that he personally placed the medication in a trash receptacle, a real possibility exists that these items were redispensed. In addition to this possibility, the Commission has received material from the State Division of Consumer Affairs indicating that the pharmacy had been billing the Medicaid program for expensive brand name drugs while actually dispensing cheaper "look-alike" generic drugs.

Another abuse involved the short-circuiting of normal checks and balances between the pharmacy and recipients. The pharmacy's deliveryman would take the prescriptions to the facilitiy's patients. The Medicaid claim forms acknowledging receipt of and requesting payment for the medication were not signed by the recipients. They were pre-signed in the patient's name by another pharmacy employee. With such a procedure, there is no need for the recipient to ever see the claim form and no way for the recipient to compare drugs billed on his behalf with drugs actually received.

All of the facilities and pharmacies mentioned above were involved with others in an ingenious scheme designed to maximize personal profits. A lay entrepeneur who owned substantial interests in several medical centers banded togther with a relatively small group of physicians, pharmacists and clinical laboratory operators to form a company which would arrange for laboratory tests to be performed and repackage and resell relatively inexpensive generic drugs under its own brand name. Stockholders included the physicians who would write prescriptions for their corporation's products and lay medical facility owners. With each prescription and sale, stockholder equity in the corporation increased. Questions of

product quality aside, such a situation raises grave questions of conflict of interest and temptation to overutilize scant Medicaid program funds.

The Commission's investigation also surfaced what appears to be a new trend in the medical center-pharmacy alliance. More and more centers are opening with on-site pharmacies whose hours of operation exactly coincide with those of the facility. These pharmacies often "rent" small amounts of floor space at high rates and share waiting room and entrance space with physicians. Because these pharmacies cater almost exclusively to center patients, they are able to concentrate upon maintaining an inventory of only those items which center physicians prescribe. Thus, they may qualify for volume discounts or institutional rates on drugs purchased and at the same time save monies by not stocking drugs facility physicians do not commonly prescribed.

Problems of steering are exacerbated in physician groups having an on-premises pharmacy. At one facility the in-house pharmacy "rented" some 225 sq. ft. of space for in excess of $1050 per month. Entrance to the pharmacy was via the facility's door and waiting room. A plexiglas partition separated the two areas and prevented the patient from physically entering the pharmacy. Employees of the facility testified that it was the practice of the lay administrator to approach patients following an examination and say in English or in Spanish, "You can obtain the prescription at the pharmacy and you can wait in the waiting room," or "Honey, could you please take your prescription to the pharmacy and then have a seat outside." Another facility employee told of instructions to direct patients to the pharmacy which were given by the lay administrator.

Q. Would Mr. * * * instruct any of the girls or any of the doctors to send the patients in to the pharmacy?

A. Especially he told me himself.

Q. Mr. * * * told you to send patients to the pharmacy?

A. Right.

Q. What did he tell you?

A. When the pharmacy was open, he go straight to the lab and he told me that they should tell the patient to go to the pharmacy to pick up the prescription. .

Q. And along with his instructions, did you tell the patients to go to the pharmacy?

A. It was in front of the patient and most of the patients understands a little bit in English.

Q. So you didn't have to tell them, they heard?

A. Right.

The same employee, who was neither a State licensed registered nurse (RN) or practical nurse (LPN)—described another ploy used upon patients to insure that prescriptions would be filled at the in-house pharmacy:

Q. Did you ever hear any of the other doctors who worked at the * * * Health Group telling patients to go into the pharmacy with their prescriptions?

A. No, only if the patient had to have penicillin injection I am. So then I have to tell the patient to go to the pharmacy and get it and bring it back to the lab. Then I give it to the patient.

Mr. DICKSON. Off the record.

(Whereupon, there is a discussion off the record.)

A. (Continuing) The patient handed the needle, right.

Q. The patient handles the needle, yes.

A. And back again to the lab.

Q. Where you are?

A. I am right in my office. I call my office, anyway. I give the needles to the babies or the patients. Is the patient from Dr. * * * [the internist], sometime I give the needle for them, right, or the babies.

Q. But you have to tell the patient first you have to go to the pharmacy?

A. Yes.

Q. To get the penicillin?

A. Yes, they have to go there and sign, and the girl in the pharmacy give it to the patient. The patient come inside again and I give it to the patient.

When the patient presented the prescription for the injectable at the pharmacy window, another employee would request all other prescriptions and promise that these could be ready for pick-up after the injection was given.

The faciilty also maintained a double standard as to whether a charge would be made for injectable drugs. Private patients would not be charged for injecta-

bles while the taxpayers picked up the bill for injectables given to Medicaid recipients. An employee described the practice as follows:

Q. Now, Mrs. * * *, suppose a Medicaid patient comes in and he needs an injection of penicillin. What would happen?

A. Then the doctor give the prescription and the patient go to the pharmacy. We tell the patient, "Get in the pharmacy, get the needle," you know, because for the patient it's very easy to tell that way, and come back to the lab and I give it, the needle, to the patient.

Q. And at the pharmacy would the patient sign a Medicaid form for the penicillin?

A. Yes, they have to sign.

Q. So Medicaid would be billed for the penicillin injection, right?

A. Right.

Q. Now, suppose a private patient came, somebody who didn't have Medicaid or Medicare but was going to pay cash, and suppose the private patient needed an injection of penicillin. What would happen?

A. Well, we have a salesman supply some samples, right, and we got some sample, you know, for like we have 600 dozen units of penicillin and we keep it for special patient you know, private patient, and we supply, you know. Like a doctor do a little favor, save a little money.

Q. No charge?

A. No charge.

Q. So the Medicaid patients would have to pay for the penicillin and the other injectables, right?

A. If the doctor order, yes, yes.

Q. Yes.

A. Like Detanusdozide, D-e-t-a-n-u-s-d-o-z-i-d-e.

Q. My point is, if it's a Medicaid patient, Medicaid gets billed for the injectable; but if it's a private patient, then the patient doesn't get billed for the injectable, it comes with the visit, right?

A. Right, right, yes.

A physician-partner of the facility was questioned concerning allegations of abuse involving pharmacy and center staff. The testimony was as follows:

EXAMINATION BY MR. DICKSON

Q. Doctor, we spoke about the pharmacy being located on the premises at one point in our discussions today. Are you aware of any circumstances where anyone in the * * * Health Group would direct patients of the * * * Health Group to the pharmacy in order to have prescriptions filled?

A. I plead the Fifth and Fourteenth Amendments.

Q. Have you ever had occasion to hear Mr. * * * [lay administrator] speak to * * * Health Group's—I'm sorry—* * * Health Group patients in Spanish and direct them to the * * * Medical Pharmacy?

A. I plead the Fifth and Fourteenth.

Q. Would you sometimes write prescriptions for injectables?

A. Yes, I would.

Q. What would you do with prescriptions for injectables?

A. The same thing that I gave—that I did with the prescriptions for oral medication; gave it to my nurse.

Q. Would your nurse indicate to the patient that an injectable should be obtained from the * * * Medical Pharmacy and brought back to you so that an injection could be administered?

A. I plead the Fifth and Fourteenth Amendments.

Q. Doctor, did Mr. * * * or anyone else at the * * * Medical Group or Medical Pharmacy suggest to you that Medicaid patients should be regularly given vitamins?

I'm getting a mixed response.

ATTORNEY: You're not getting any response yet.

A. I plead the Fifth and Fourteenth Amendments.

Q. Did Mr. * * * or anyone else at the * * * Medical Group or Medical Pharmacy give you suggestions or advise as to prescribing vaporizers for patients of the * * * Health Group?

A. I plead the Fifth and Fourteenth Amendments.

The Commission has received material from the State Division of Consumer Affairs indicating that the subject pharmacy short-weighted or short-counted

medications going to Medicaid recipients. Information from the Division of Medical Assistance and Health Services suggests over-prescribing of vitamins, preparations and vaporizers.

In another pharmacy, which had a direct telephone link to a doctor's office, evidence of the following additional abusive practices came to light: Medicaid recipients were required to sign forms in blank and prior to receiving medication; billing Medicaid for drugs not dispensed; billing Medicaid for drugs covered by the program and dispensing a drug not so covered; tracing recipients' signatures from old claim forms onto blank forms and billing for drugs allegedly supplied to recipients who were deceased.

A major step in reducing program costs was taken during the pendency of the Commission's probe by the Division of Medical Assistance and Health Services. Under present regulations, generic rather than brand drugs should be prescribed and dispensed whenever possible. Additional steps can be taken to further reduce abuse and unnecessary expenditure of limited program monies. The Division currently has the computer capability to develop a prescribed profile on Medicaid program physicians. This program would analyze prescribing patterns of physicians and display questionable or abusive practices. Unfortunately, the profile is not effectively used because program providers choose not to supply necessary information on claim forms. We recommend that the Division assume a tough stance on this issue and reject for payment any claims not containing relevant information.

To facilitate the gathering of information relevant to program integrity, we suggest that a standard Medicaid multi-copy prescription/claim form be developed. The name of the prescribing physician could be pre-stamped on the form. The physician should list the medication desired and draw a line immediately under the last item prescribed and personally sign the form. Space can also be provided for the physician to list a substantiating diagnosis. A copy can be kept for the physician's record and the balance forwarded to the pharmacy via the patient for use as a description of drugs to be dispensed and the pharmacist's billing invoice.

Existing program regulations prohibiting the referral of patients to a particular pharmacy by physicians should be broadened to encompass all facility employees and stringently enforced. It should be made clear to all that the physician may not require nor may he recommend that a prescription be filled by a particular pharmacy; nor may his receptionist or any employee do so. Patients who ask must be reminded of their free choice of pharmacy. Any liaison—including direct telephonic connection and common entranceway—between physician and pharmacist should create a presumption of impropriety. Landlord-tenant and other relationships between physicians and pharmacists should be subjected to special scrutiny as to pharmaceutical utilization.

Landlord tenant relationships present perhaps the greatest temptation to overutilize pharmacy services. Even without direct steering by facility staff, patients are usually required to pass the pharmacy entrance to pick up coats or children before arriving at the public street. The in-house pharmacy truly has a "captive" audience. For this reason, the common entranceway should be prohibited. Moreover, when a physician or a landlord owns a pharmacy or has a pharmacy for a tenant, he is induced to take whatever steps are necessary to see that the pharmacy succeeds. In-house pharmacies also present opportunity for profit based upon the precise nature of inventory kept and the ability to obtain volume discounts on drugs. We recommend that the Division take these savings into consideration along with the fact that in-house pharmacies primarily—if not exclusively—service patients of the facility and reimburse these pharmacies at a lower institutional pharmacy Medicaid rate. We further suggest that the professional boards in their licensing schemes take into account the great potential for overreaching present when pharmacies enter into financial relationships with physicians located on the same premises.

Recommendations

The Commission has already recommended substantial changes in program legislation and administrative practices and procedures in previous reports on nursing homes, independent clinical laboratories and hospitals participating in the New Jersey Medicaid Program. Many of these previous recommendations—such as those calling for criminal sanctions against kick backs, establishment of a scheme of financial penalties for incidents of fraudulent conduct, subpoena

power and accountants for the Division of Medical Assistance and Health Services, and increased monitoring of fiscal agent actions—have effect in several program component areas. We take this opportunity to supplement the record with recommendations pertinent to the administration of the physician groups aspect of the program.

1. Shared Health Care Facilities receiving substantial amounts of Medicaid funds should be identified and annually approved for program participation by the Division of Medical Assistance and Health Services. Practitioners rendering service and the facility at which service is rendered should clearly be identified. We have reviewed proposals drafted by the Division of Medical Assistance and Health Services to achieve these goals and concur with their substance (see appendix for copy). We pause, however, to add our own suggestions.

D. PROHIBITED PRACTICES—ADMINISTRATIVE REQUIREMENTS

1. Percentage letting prohibited—The rental fee for letting of space to providers in a shared health care facility or the remuneration of providers for services in such facility shall not be calculated wholly or partially, directly or indirectly, as a percentage of earnings or billings of the provider for services rendered in the premises in which the shared health care facility is located. A copy of each lease or details of any agreement between the facility and any provider and any renewal thereof shall be filed with the Division.

5. The Commission understands that the separate entrance requirement imposed by this section is applicable to in-house pharmacies.

6. Claims—All provider claims submitted for services rendered at a shared health care facility shall (a) contain the registration code of the facility at which the service was performed and (b) be personally signed by the practitioner who rendered service (c) contain the code number of the physician who rendered the service, (d) be personally signed by the patient who received the goods or service.

8. Order for ancillary clinical services—all orders issued by providers for ancillary clinical services, including, but not limited to, x-rays, electroencephalograms, as well as orders for medical supplies and equipment, shall contain the registration code of the facility at which the order was written and the code number of the provider requesting the service or goods.

A line shall be drawn under the last good or service requested and the diagnosis justifying the request and requesting providers personal signature shall be placed below that line.

10. Direct telephonic links between providers is prohibied.

11. Providers shall not order ancillary clinical services from providers in which they hold a financial interest.

12. Providers shall not submit claims to medicaid who also claim reimbursement for identical services from another third party payor. All information requested concerning possible third party liability shall be listed on claim forms.

2. We strongly recommend that the Division obtain and regularly employ the services of undercover agents who would pose as recipients seeking medical care. Evidence of improprieties gathered by these agents could and should be aggressively used by the division in suspension hearings or passd along for the review of appropriate law enforcement agencies.

3. Medicaid recipients should be made aware of services billed to the program on their behalf and be given an opportunity to challenge the accuracy of physicians requests for reimbursement.

Lastly, and perhaps most importantly, we recommend that there be constant and close coordination between Division Surveillance personnel and those responsible for the review and promulgation of administrative regulations applicable to program providers. Many of the abuses identified by the S.C.I. were previously found by surveillance personnel, and passed along for further action. Unfortunately, in many instances warnings of potential wide-spread abuse noticed by the Bureau of Surveillance and passed along to others seem to have fallen through the cracks of bureaucracy. The Commission notes that conditions have improved and many aggressive, explicit regulations have been promulgated during the course of our own investigation by new Division leadership. We fully expect that such efforts will continue.

Copies of the investigative record compiled by the Commission in this probe will be forwarded to the State Attorney General, the United States Attorney for the State of New Jersey, the State Board of Medical Examiners, the State Board of Pharmacy, the Division of Medical Examiners, the State Board of Pharmacy, the Division of Medical Assistance and Health Services and the State Legislature for further review and consideration.

Appendix to Report

Requirements Applicable to Shared Health Care Facilities

A. definitions (when used in this item)

1. Department shall mean the Department of Institutions and Agencies.
2. Division shall mean the Division of Medical Assistance and Health Services.
3. Program shall mean the New Jersey Health Services Program.
4. Shared Health Care Facility shall mean two or more providers delivering health care, either independently or in association with each other, within a single structure and (a) two or more of whom share any of the following: common waiting areas; examining rooms; treatment rooms; equipment; supporting staff; any shared space; or common records, and (b) one or more of whom receives payment on a fee-for-service basis.
5. Provider shall mean any person, firm, corporation or other entity providing services under the Program.
6. Purveyor shall mean any person, firm, corporation or other entity who, whether or not located in a building which houses a shared health care facility, directly or indirectly, engages in the business of supplying to ultimate users any medical supplies, equipment and/or services for which reimbursement under the Program is received, including, but not limited to, clinical laboratory services or supplies; x-ray laboratory services or supplies; inhalation therapy services or equipment; ambulance services; sick room supplies; physical therapy services or equipment; orthopedic or surgical appliances or supplies; drugs, medication or medical supplies; eye glasses, lenses or other optical supplies or equipment; hearing aids or devices; and any other goods, services, supplies, equipment or procedures prescribed, ordered, recommended or suggested for medical diagnosis, care or treatment.
7. Patient shall mean anyone eligible to receive benefits from the Program.

B. application of item

1. This Item shall apply to shared health care facilities as defined herein and to the providers located in a specific health care facility.
2. This Item shall apply to purveyors, whether or not located in a building which houses a shared health care facility.
3. Nothing in this Item shall apply to an association of health care practitioners delivering health services on other than a fee-for-service basis.

C. registration of shared health care facilities

1. No shared health care facility shall be operated under the Program unless the owner or, if the structure in which the shared health care facility is located has been leased, the person who leases space in the shared health care facility, has registered such facility with the Division. Registration shall be made on forms furnished by the Division and shall contain the information required therein, including, but not limited to—

(*a*) The name and residence address of every person, partnership or corporation having any financial interest in the ownership (including leasehold ownership) of the structure and of the shared health care facility;

(*b*) The name and residence address of every person, partnership or corporation holding any mortgage, lien, leasehold or any other security interest in any equipment located in and used in connection with a shared health care facility and a brief description of such lien or security interest;

(*c*) The name, residence address and professional license number of every practitioner working in the shared health care facility. This information shall be maintained on a current basis. Division shall be notified of any

change in the status of practitioners within the shared health care facility; and

(*d*) The name, residence address and professional qualifications of the individual designated to assume responsibility for the central coordination and management of the shared health care facility's activities.

2. The registrants shall re-register on the June 1 next following the initial registration and annually thereafter on June 1.

3. The Division shall be notified by the shared health care facility of any change in—

(*a*) The persons, partnerships or corporations having any financial interest in the ownership (including leasehold ownership) of the share health care facility; or

(*b*) The persons, partnerships or corporations holding any mortgage, lien, leasehold or any other security interests in any equipment located in and used in connection with a shared health care facility. A statement of the monetary and repayment provisions of that lien or security interest shall accompany such notification.

4. The Division shall be notified within fifteen days of the termination of the services of the individual designated to assume responsibility for coordination and management of the shared health care facility's activities. The division shall also be notified within fifteen days of the name, residence address and professional qualifications of any new individual appointed to assume such central administrative responsibility.

5. The Division shall be notified within fifteen days of any termination of the services of any practitioner in the shared health care facility. Such notification shall include the name, residence address and license number of each person appointed in place of such individual.

D. PROHIBITED PRACTICES; ADMINISTRATIVE REQUIREMENTS

1. Percentage letting prohibited: The rental fee for letting of space to providers in a shared health care facility shall not be calculated wholly or partially, directly or indirectly, as a percentage of earnings or billings of the provider for services rendered on the premises in which the shared health care facility is located. A copy of each lease and any renewal thereof shall be filed with the Division.

2. Referral fees prohibited: No purveyor or provider, whether or not located in a building which houses a shared health care facility, shall directly or indirectly offer, pay or give, or permit or cause to be offered, paid or given to any provider or purveyor, and no provider or purveyor shall directly or indirectly solicit, request, receive or accept from any purveyor or provider any sum of money, credit or other valuable consideration for—

(*a*) Recommending or procuring goods, services or equipment of such purveyor or provider for any other person, or

(*b*) Directing patronage or clientele to such purveyor or provider, or

(*c*) Influencing any person to refrain from using or utilizing goods, services or equipment of any purveyor or provider.

3. Patient referrals:

(*a*) No provider in a shared health care facility or person employed in such facility shall refer a patient to another provided located in such facility unless the records of the referring provider pertaining to such patient clearly sets forth the justification for such referral;

(*b*) Every provider practicing in a shared health care facility who treats a patient referred to him by another provider practicing in the same facility shall communicate in writing to the referring provider the diagnostic evaluation and the therapy rendered. The referring provider shall incorporate such information into the patient's permanent record; and

(*c*) The invoice submitted to the Program by the provider to whom such patient has been referred shall (1) contain the full name and provider number of the referring provider and (2) identify the medical problem which necessitated the referral.

4. Pharmacy notice: Any pharmacy maintaining a business in the same building in which a shared health care facility is located shall prominently post a notice informing patients that all pharmaceuticals prescribed in the Program

may be obtained at any pharmacy of the patient's choice enrolled in the Program in the city.

5. No entrance on the premises by purveyors: No purveyor who maintains a business in the building in which a shared health care facility is located shall maintain a door or window opening into the offices or waiting room of the shared health care facility, except where the profession of the provider permits the provider to function simultaneously as a purveyor.

6. Claims: All provider claims submitted for services rendered at a shared health care facility shall (a) contain the registration code of the facility at which the service was performed and (b) be signed by the practitioner who rendered service.

7. Billing: In a shared health care facility, procedure code 9000 (Initial Office Visit) or 9580 (EPSDT), or 9001 (Comprehensive Office Visit) may be billed only once. All referrals within the shared health care facility will be billed as 0001 (Routine Office Visit), 0005 (Brief Office Visit), or 9007 (Prolonged Office Visit). Use of 9029 and 9030 Consultation codes are prohibited. If an ophthalmologist is a member of the shared health care facility and a comprehensive eye examination, including refraction, is performed, then procedure code 5400 may be used.

8. Orders for ancillary clinical services: All orders issued by providers for ancillary clinical services, including, but not limited to, x-rays, electrocardiograms, clinical laboratory services, electroencephalograms, as well as orders for medical supplies and equipment, shall contain the registration code of the facility at which the order was written.

9. Fee splitting prohibited: It shall be unlawful for any provider to pay a bonus, commission or fee to any other provider based on business supplied or referred, except where the paying of a fee is compensation for services rendered to the patient.

E. QUALITY OF CARE REQUIREMENTS

1. To ensure quality, continuity and proper coordination of medical care each shared health care facility shall—

(*a*) Designate an individual, who, on a full-time basis, shall coordinate and manage the facility's activities. The person so designated shall be responsible for compliance with the provisions of this Item.

(*b*) Devise an appropriate means of insuring that (1) patients will be scheduled to return for appropriate follow-up care and (2) will be treated by a practitioner familiar with the patient's medical history.

(*c*) Post conspicuously the names and scheduled office hours of all practitioners practicing in the facility.

(*d*) Maintain proper records. Such records shall contain at least the folllowing information:

(1) The full name, address and Medicaid number of the patient.

(2) The dates of all visits to all providers in the shared health care facility.

(3) The chief complaint for each visit to each provider in the shared health care facility.

(4) Pertinent history and all physical examinations rendered by each provider in the shared health care facility.

(5) Diagnostic impressions for each visit to any provider in the shared health care facility.

(6) All medications prescribed at each visit to any provider in the shared health care facility who is qualified to issue prescriptions.

(7) The precise dosage and prescription regimens for each medication prescribed by a provider in the shared health care facility.

(8) All x-ray, laboratory work and electrocardiograms ordered at each visit by any qualified provider in the shared health care facility.

(9) The results of all x-ray, laboratory work and electrocardiogram ordered as in "8" above.

(10) All referrals by providers in the shared health care facility to other medical practitioners and the reason for such referrals, and date of referral.

(11) A statement as to whether or not the patient is expected to return for further treatment.

(*e*) Inspection of records—The Division shall have the right to inspect the business records, patient records, leases and other contracts executed by any pro-

vider in a shared health care facility. Such inspections may be by site visits to the shared health care facility.

(*f*) Names of providers to be filed with Division—Every shared health care facility shall file with the Division the name of each provider or purveyor currently rendering services in such facility. If any provider vacates a facility or a new provider is added therein, such change shall be reported to the Division by registered mail within fifteen days of such change.

EXHIBIT B

It is recommended that a committee of staff and contractor personnel be formed to analyze and prepare a report recommending changes in existing computer capability related to provider identification and service tracking. Specifically, this committee suggests reducing the provider number from a 9 digit code to a 5 digit code, thereby allowing utilization of the remaining 4 digits to identify the provider group and the individual practitioner who rendered the service. It is believed that other applications of the 5–4 digit system could be developed. Although this recommendation is extremely general, it should serve as the starting point for the committee to commence its work.

Appendix 2

CORRESPONDENCE BETWEEN SENATOR FRANK E. MOSS AND DEANS OF SCHOOLS OF MEDICINE

DEAR DEAN: You may have read about the recent investigation and disclosures concerning fraud and abuse in the Medicaid program revealed by my Subcommittee on Long-Term Care. These news stories also conveyed much of my worries about the quality of medical care being rendered to the poor, aged, blind and disabled.

I am writing to enlist your support for increased involvement of schools of medicine with public health clinics, hospital outpatient clinics and shared health facilities which are the primary sources of medical care to residents of America's inner cities. Many medical schools already have a significant number of initiatives in this area, but I believe there is a need to intensify our efforts.

I would appreciate any suggestions you might have on the question of greater involvement of medical schools in providing treatment for indigents, the aged, blind and disabled. Moreover, I would be grateful for any suggestions about improving the fiscal integrity of government health programs.

In closing, I want to underscore the fact that my Subcommittee has repeatedly stated that only a tiny minority (4 percent) of physicians cheat government programs; nevertheless, the dollars involved are substantial. The Medicaid program increasingly has been turned over to foreign medical practitioners who often lack requisite skills to compete with American trained physicians.

Again, I would be grateful for any suggestions you might have for dealing with these problems.

FRANK E. MOSS,
Chairman, Subcommittee on Long-Term Care.

ITEM 1. LETTER FROM DR. JOHN I. SANDSON, DEAN, BOSTON UNIVERSITY MEDICAL CENTER, BOSTON, MASS.; TO SENATOR FRANK E. MOSS, DATED SEPTEMBER 21, 1976

DEAR SENATOR MOSS: Thank you for your letter of September 7. It is important to get more medical school involvement in ambulatory care settings. Some medical schools are interested in doing this. One major difficulty in moving forward has been the inability to pay for the necessary teaching costs in ambulatory settings. This is a major problem that has to be overcome if substantial progress is going to be made.

I would be most pleased to meet with you to discuss this further at your convenience.

Sincerely,

JOHN I. SANDSON, M.D.

ITEM 2. LETTER FROM DR. D. KAY CLAWSON, DEAN, COLLEGE OF MEDICINE, UNVERSITY OF KENTUCKY, LEXINGTON, KY.; TO SENATOR FRANK E. MOSS, DATED SEPTEMBER 21, 1976

DEAR SENATOR MOSS: Thank you for your letter of September 7, asking for suggestions that might improve the opportunities for treatment of the indigents, aged, blind and disabled. I, too, share your concerns yet take this opportunity to call to your attention the serious financial plight facing many of our medical schools. I am sure you are barraged with data from the AAMC so I would like to only state the position faced by the University of Kentucky.

We are the only city, county, state institution serving Eastern Kentucky with 1.5 million people. Our 463 bed University Hospital provides tertiary care for people of all levels. It is the only place that can do renal dialysis and transplants, open heart surgery, specialized burn care and advanced radiation therapy for the people of this region. Because there is no other resource, we end up providing an inordinate volume of unreimbursed care (22.2 percent of total services in 1975–76). We do this trying to deal with inflation and respond to advances in medical technology and support this effort with state funds for hospital operations which have not increased since 1968. We are the primary center for the care of Medicaid patients. Medicaid funds support 30 percent of our patients.

From the standpoint of our clinical faculty, we must generate 79 percent of our faculty income from outside sources including grants and fee for service practice. Given the large indigent and non-pay population which we service in an undistinguishing manner from full-pay patients, we do not have an adequate budget to hire the clinical teaching faculty necessary to care for the patients and maintain our teaching and research program at the level expected for an academic institution of this quality.

The State has been unable to pay fee for service under the Medicaid program higher than 62 percent of the 75th percentile of usual and customary fees as charged in 1973. This means that the fees collected are frequently so low that physicians in and around the state will not take care of Medicaid patients, therefore, these patients can only come to our institution. Many of our patients are classified as medically indigent and receive financial allowances even though they do not qualify for the Medicaid program. The physicians are giving services to medically indigents and Medicaid allowances of about $3.0 million. We hold regional clinics in Pediatrics, Neurology and Community Medicine in an effort to provide better care for our citizens.

Our fee for service income must be used to subsidize the teaching program. We have active teaching areas in a variety of courses and a major component in community medicine teaching the problems of the indigents, of the nursing home patient, and the disabled. In addition, we are now requesting some governmental support to develop an Aging Institute here that will combine our resources of the Sanders-Brown Center for Biological Research in Aging with outreach programs using the resources of several of the Colleges and Departments of the University plus the community college system.

In summary, we believe that we are doing an outstanding job in attempting to answer the problems you stated in your letter but are so completely strapped financially that we are having a struggle to meet the needs of all of the constituencies. The falling off of our capitation money from $855,000 in 1975 to $398,000 this year only compounds the problem. It is unfortunate that at a time when we are desirous of doing so much, inflation at the rate of 10 or 12 percent is moving faster than our state support and other resources.

I do not have any magical solutions but know from my experiences as a faculty person at the University of Washington, that there was a tremendous difference in the level of care being rendered to the underserved populations when the State of Washington changed from a concept of an indigent or charity hospital and gave all indigent or medically indigent patients an opportunity to select the physician and the hospital of their choice through a Medicaid program that paid usual and customary fees. Most physicians and other faculty members at the University of Kentucky and I am sure other medical schools are extremely concerned about this problem and would like to join with you in efforts to alleviate the situation. However, we are already so financially strapped trying to meet our teaching commitments while taking care of large numbers of indigent patients that it is very difficult to expand any activity.

Most sincerely,

D. KAY CLAWSON, M.D.

ITEM 3. LETTER FROM DR. JOHN P. UTZ, DEAN, GEORGETOWN UNIVERSITY SCHOOL OF MEDICINE, WASHINGTON, D.C.; TO SENATOR FRANK E. MOSS, DATED SEPTEMBER 21, 1976

DEAR SENATOR MOSS: I am pleased to acknowledge your memorandum of September 7 and its request for suggestions on how medical schools might be more greatly involved "in providing treatment for the indigent, the aged, blind, and disabled.

Georgetown University has been for 25 years, is now, and expects to be committed in the future, to the care of just exactly the patient you cite, particularly at the District of Columbia General Hosptial. In salaries of attending physicians, house staff, and consultants we calculate the annual contribution to be approximately $1 million a year.

We also serve the Area A Psychiatric Clinic for inner-city citizens.

To the best of my knowledge, none of our faculty receive any Medicaid support for such extensive service to our central inner-city citizens.

I hope this is a help to you.

Sincerely,

JOHN P. UTZ, M.D.

ITEM 4. LETTER FROM DR. JOHN A. DIXON, VICE PRESIDENT FOR HEALTH SCIENCES, UNIVERSITY OF UTAH, SALT LAKE CITY, UTAH; TO SENATOR FRANK E. MOSS, DATED SEPTEMBER 21, 1976

DEAR SENATOR MOSS: Thank you very much for your letter of September 10 regarding increased involvement of schools of medicine with public health clinics, hospital outpatient clinics and shared health facilities which are the primary sources of medical care to residents of America's inner cities. I can assure you that the University of Utah College of Medicine is deeply involved in all of these areas and has formed significant relationships with ten of the state's community hospitals to provide resident support for manning of just such facilities.

A statistic you might be interested in is as follows: In 1974, the percentage of the population of Utah over 65 years of age was about 7.5 percent. The percentage of patients over 65 served by our University Medical Center over the past year was 17 percent and the percentage of patient days for people over 65 was 22 percent. These figures indicate that a substantial portion of the Medical Center activities are directed toward meeting the needs of the geriatric community.

The colleges in the University of Utah Health Sciences Center (Nursing, Pharmacy, Medicine and Health) are currently involved in long-range planning affecting the indigent, aging, blind and disabled population. In particular, the College of Nursing is involved in some very innovative programs in nursing homes to improve badly needed care there.

We appreciate all you have done for medical education in the west and will continue to work with you to eliminate these areas of health care deficiency.

Sincerely,

JOHN A. DIXON, M.D.

ITEM 5. LETTER FROM DR. RAYMOND D. PRUITT, DEAN, MAYO MEDICAL SCHOOL, ROCHESTER, MINN.; TO SENATOR FRANK E. MOSS, DATED SEPTEMBER 22, 1976

DEAR SENATOR MOSS: We have followed with interest news reports about your recent investigations of the Medicaid program. We share your concerns about both the cost and quality of medical care, as all except a "tiny minority," to use your own words, of physicians and health care institutions do.

Mayo Medical School, which enrolled its first class in 1972, is owned and operated by Mayo Foundation, and its patient component is drawn from Mayo Clinic. This experience is supplemented by affiliations with 54 family physicians in the nearby area. In Mayo's first graduating class, 59 percent of the students elected primary care residency training.

Because the geographic settings of medical schools vary, it seems to us that each medical school must make an effort to be responsive to the particular needs of its own area. In the case of Mayo Medical School, this area is predominantly rural. We know you are aware, as are your colleagues in the Congress, that efficient and responsive delivery of health care in a rural area is also a challenge and Mayo is responding to that challenge.

The larger institution of which the medical school is a part, Mayo Clinic-Mayo Foundation, continually directs a major share of its administrative expertise to improving efficiency in health care delivery and holding down costs. Moreover, we believe that in the group practice of medicine in this institution there exists intrinsic forms of peer review which are conducive to excellence of care and which remove the incentive for unprofessional behavior, including fraudulent

charges. These desirable features are enhanced by the fact that members of our staff are salaried on an annual basis that is not profit-sharing.

We should be pleased to have you or any member of your committee visit us, with or without notice. We recognize the limitations of our experience and our expertise, but we would be pleased to share them to the extent possible.

Sincerely yours,

RAYMOND D. PRUITT, M.D.

ITEM 6. LETTER FROM DR. ALLEN W. MATHIES, JR., DEAN, UNIVERSITY OF SOUTHERN CALIFORNIA SCHOOL OF MEDICINE, LOS ANGELES, CALIF.; TO SENATOR FRANK E. MOSS, DATED SEPTEMBER 24, 1976

DEAR SENATOR MOSS: I am pleased to respond to your letter of September 7th, in which you express your concern about the quality of medical care being rendered to the poor, aged, blind, and disabled. The investigations have received very extensive national coverage. Because the issue is complex, I am responding at some length.

At USC School of Medicine our prime teaching facilities are public hospitals in which we direct the professional care in partnership with the County of Los Angeles. Our medical school classes have been more than doubled over the last decade and this academic year began with 550 medical students enrolled; more than 100 are ethnic minority students. We are also responsible for the postgraduate education of approximately 1,000 interns, residents, and fellows, many of whom come to us from completely different training settings.

USC School of Medicine does not own a university-owned teaching hospital and because of our public hospital setting we have emphasized upgrading of quality medical care and sensitization of medical students to the whole human being from their entrance into medical school through our Introduction to Clinical Medicine course. We have worked with lay consumers in the community to develop responses to their concerns and have establish patient care units in the hospital which have become national models. This type of quality medical care requires adequate funding, however, many of the reimbursement standards of publicly funded programs do not provide. Let me provide some examples of our patient mix, to which medical students and house staff are exposed, and the subsequent dollar funding problems.

At the Los Angeles County-USC Medical Center, there are approximately 8,000 inpatient admissions per month of which 10% are Medicare patients. Of the 10%, over 88% are more than 65 years of age; 12% are under 65 years of age. This means that about 800 patients are elderly and our students are involved in the care of this population in their required clinical clerkships on the hospital wards. Of the remaining 90% of the inpatient population, 37% are Medi-Cal (Mediciaid) patients and 42% are "self pay". To us, self pay means that some of them have some resources but if the hospital cannot recover the costs of their care, the County of Los Angeles bears the health care costs. Eight percent of the patients are covered through Crippled Children Services funding and Short-Doyle funds, and the remaining 3 percent fall in the deferred category (which include prisoners).

Now, unlike a privately owned hospital or a community hospital, public hospitals must accept every patient who presents at the hospital for care. Private or community hospitals may turn patients away if they cannot pay for their care or if their medical problem is not of interest for teaching purposes, i.e., alcoholism or drug overdose, aging, chronic illness. If, after receiving medical care, the patient cannot pay his health care costs and is not eligible for Medicare or Medi-Cal, the County of Los Angeles must pick up the costs. Lack of adequate reimbursement from the funded programs has placed a very severe strain on the ability of the County of Los Angeles to provide funds for high quality medical care and the taxpayers of the county have been very vocal this year about the high costs of medical care over and above the reimbursement schedules. Along with the county officials, we are concerned about the large number of illegal aliens in this area who fall into the "self pay" category.

In suggesting remedial measures concerning the failure to provide quality medical care, funding is, of course, one critical issue. We feel that stressing an ethical approach to health care professions in instruction of medical students is another issue which must be stressed in ever more relevant terms. "Ethics" means something to young physicians in the context of viewing the person as a

human being of worth—I feel your investigations have sharpened the importance of this issue. But it takes time for the physician to build a caring relationship with his patients and if he is overworked, overtired, and neglecting his own family until long into the night, he tends to become cynical and uncaring. And, again, time costs money.

The issue of maldistribution of physician manpower is another facet of the problem. I recommend the Report of the National Conference on Health Manpower Distribution as a document which raises the issues we must solve in this area and the problems faced by physicians who seek to practice in the disadvantaged urban and rural areas.

Licensing standards also impinge on this problem. Some states have very loose laws for licensure which favor the unscrupulous, either U.S. trained or foreign medical graduates. California laws are so strict, for example, that obtaining a license to practice without demonstration of competence is virtually impossible. It has not eliminated the incompetent entirely, but it has reduced the problem compared to some of the eastern states.

Our late Dean, Franz K. Bauer, M.D., used to say that the practice of medicine today is being asked to solve problems of society entirely unrelated to medicine's ability to solve. For instance, good nutrition is not possible for the person who does not have the money to buy food. The problems that your committee faces are formidable and I support your concern and determination to seek to develop a health care system that the nation can afford and that works. This medical school will always be willing to assist in the solution of that challenge.

Sincerely,

ALLEN W. MATHIES, Jr., M.D.

ITEM 7. LETTER FROM DR. WILLIAM R. DRUCKER, DEAN, UNIVERSITY OF VIRGINIA SCHOOL OF MEDICINE, CHARLOTTESVILLE, VA.; TO SENATOR FRANK E. MOSS, DATED OCTOBER 15, 1976

DEAR SENATOR MOSS: As you know, we in medicine share your concern regarding fraud and abuse in the Medicaid program and have suggested that those physicians participating in such activities should be prosecuted to the full extent of the law. Whether our society is more or less afflicted than any in the past is not clear, but, we do seem to have considerable problems with integrity at all levels. Our profession, like yours, is not immune to these problems.

I am pleased to note that our medical school is one of those which has always provided extensive service to the poor, aged, blind and disabled of our region. We are the major referral center for the entire western portion of this state and serve as a community hospital for a large portion of the rural population in our vicinity. Our average patient travels some 90 miles to our facility.

The most difficult question you ask is that referring to the fiscal integrity of government health programs. In the past physicians dealt directly with a patient and were paid by the patient; they were constrained to make certain that the patient understood the reason for the fee. The patient had every opportunity to complain about the fee or to make arrangements for deferred payment or, sometimes payment by barter. When third parties intervene between the patient and the physician, several things change: patients think less about the cost of services they demand, physicians consider less the effect of the charge, and the insurance company simply passes the increased cost on to the insured. Patients frequently demand extra days in the hospital or unnecessary hospitalization, because they have paid premiums to this or that insurance program for many years and want something in return. Insurance is no longer a hedge against catastrophe, but an investment to be collected at some particular point in life.

In order to correct these misuses of government and other forms of health programs a major public education effort is needed. This effort must include facts about the real cost of such programs and the patients must be made responsible for part of their own bill in order that they not make excessive demands.

Finally, I would like to make a suggestion that you interview some practicing physicians on a one-to-one basis to gather from them first-hand their programs in dealing with government programs. As Dean of the Medical School I come into contact with such programs, only indirectly, but practicing physicians have complained that the regulations and lack of balance of such programs make it almost impossible to deal with them. I have heard of physicians who see patients eligible for medicaid and never send a bill for the simple reason that it is too complex and costly to submit the bill; they would rather see the patient with-

out charge. I do not believe that you can appreciate the real feeling of physicians by dealing with agency heads, representatives of various professional groups or by asking a practicing physician to appear before your committee where he would be ill at ease. There are many excellent physicians in the Washington area in the private practice of medicine who could give you a great deal of information about these programs if you have time to sit down with them in your office.

I hope these thoughts will be of some use to you.

Kindest regards,

Sincerely,

WILLIAM R. DRUCKER, M.D.

ITEM 8. LETTER FROM DR. JOHN A. D. COOPER, PRESIDENT, ASSOCIATION OF AMERICAN MEDICAL COLLEGES, WASHINGTON, D.C.; TO SENATOR FRANK E. MOSS, DATED OCTOBER 20, 1976.

DEAR SENATOR MOSS: I have read with a great deal of interest your letter of September 9 enlisting the support of the Association of American Medical Colleges "for increased involvement of schools of medicine with public health clinics, hospital out-patient clinics and shared health facilities which are the primary sources of medical care to residents of America's inner cities."

Over the last several years, the staff of the Association has had many discussions with various members of its constituency on the set of issues raised by your suggestion. There are essentially two important questions to be resolved. One concerns the proper role of the medical schools in community service while the other relates to the financial integrity of these institutions. Let me review briefly the range of views held by the nation's medical schools on these problem areas.

The question of the extent to which educational institutions in general and medical schools in particular should be involved in community service, e.g., the provision of health care to the indigent citizens of our inner cities, has been a subject of lively debate within this constituency for many years. The debate is premised on the fact that the primary purpose of a school of medicine is to educate physicians; no other institutional form for that purpose exists within our society. Additionally, it is recognized that the clinical training of the medical students has been characterized for the last three quarters of a century in this country by a style and tradition which couples education and service. This contrasts with other traditions in which both pre-clinical and clinical training are largely if not exclusively didactic, carried out by lecture rather than clerkship and completely decoupled from patient care. Non-educators, seeing the service component of the "joint product", frequently view medical schools as primarily medical service institutions and call upon them to expand commitments in the service area. Many of the nation's medical schools have responded to such importunings and greatly expanded the amount of community service which they render. In calendar year 1974, the Association of American Medical Colleges surveyed the then 396 medical school affiliated hospitals belonging to its Council of Teaching Hospitals; 303 reported that among the 5,977 non-federal short term hospitals they alone accounted for 21% of the total of 194.8 million out-patient visits, 16% of the total 67.1 million emergency room visits and 22.9% of the total 1.5 million home care visits. Clearly, the medical schools of the country are already deeply involved in the delivery of health care as an inseparable part of the discharge of their primary objective, the education of medical students. The extent to which this can be increased cannot be stated with precision, but I am sure that most of the medical schools would be quite willing to undertake further responsibilities for the medical care of the indigent populations of our inner cities as long as it does not interfere with their basic educational mission.

The crucial question is the extent to which service can be expanded without interfering with the process of education. No medical school is unwilling to provide community services to the degree that that particular school believes is feasible; on the other hand, there is great variability among schools in the perception of the level of community service that begins to compromise the educational process.

The other major consideration relevant to your suggestion is financial. The type of service most important to the group of Medicaid and Medicare patients central to your interests is that which is rendered on an ambulatory basis in the out-patient clinics of the teaching hospitals affiliated with the nation's medical schools. The financing of ambulatory care facilities is one of the most troublesome

problems facing the medical schools at the moment; most of them are sustaining very substantial financial losses in the operation of these facilities. A number of factors have been identified as contributing to the deficit operations. Many insurance plans provide no reimbursement for ambulatory care. While Medicare and Medicaid do, both of these federal programs reimburse on fee schedules considerably below the average and customary. Since the overwhelming number of patients who seek care in the nation's medical centers are indigent, they are, moreover, unable to pay the "deductible" and "co-insurance" components required by various plans even when they are covered by some type of insurance. Thus, income is severely reduced.

At the same time, the conduct of teaching exercises for both undergraduate and graduate medical students in connection with the ambulatory services substantially reduces the efficiency of the medical care process, for the obvious reason that it takes additional time per patient if students are going to participate in their workup. The inefficiencies thus induced substantially raise the cost of handling the patient in a situation in which reimbursement is inadequate for even efficient operations. Finally, Medicare denies reimbursement under Part A for the costs of educating interns and residents in ambulatory facilities and recovery of these costs under other programs is equivalently unsatisfactory.

Thus, the schools will have to ponder deeply the question of whether or not they can afford this type of community service before taking on further responsibilities for the care of ambulatory patients. In spite of these financial problems, some institutions have in the past few years made significant progress in reorganizing their ambulatory services so as to provide effective and reasonably efficient one class ambulatory comprehensive care to the surrounding communities. Most have required outside funding, over and above the reimbursable health care dollar, in order to make this conversion. Many others are prepared to accomplish the necessary organizational and structural rebuilding of the ambulatory services if they can be assured of some stable reimbursement procedures.

Cognizant of these developments, the Association has during the past year sponsored a program of workshops addressing the issue of ambulatory care restructuring. Material relating to this program is enclosed for your review. The interest among our constituent institutions is high. We have reason to believe that we could easily attract thirty other large urban-based university affiliated ambulatory centers to similar workshops if we could secure the necessary funding to carry the program into 1977.

We believe the several concerns which these workshops address are in complete accord with those raised during the recent committee hearings on the quality of medical care for the urban poor. We are convinced that a large number of the nation's medical schools and affiliated teaching hospitals stand ready to assume responsibility for improved care for inner city residents, addressing many of the problems enumerated in your committee reports. The major problem is that of identifying a means of long-term, stable financial reimbursement for services provided, and a means for stable support of the associated educational programs.

I and members of the Association of American Medical Colleges staff would be pleased to meet with you and other members of the Committee, and with Committee staff to discuss these problems of mutual interest.

Sincerely,

JOHN A. D. COOPER, M.D.

Appendix 3

LETTERS FROM INDIVIDUALS AND ORGANIZATIONS

ITEM 1. LETTER AND ENCLOSURES FROM DR. EMIL LENTCHNER, EXECUTIVE DIRECTOR, ELEVENTH DISTRICT DENTAL SOCIETY, JAMAICA, N.Y.; TO SENATOR FRANK E. MOSS, DATED AUGUST 31, 1976

DEAR SENATOR MOSS: On returning from vacation, I find your letter requesting information additional to that which I submitted in my earlier response of June 28, 1976.

With reference to questions two, three and four of your inquiry of June 7, 1976:

Question #2—The Dental Society is not empowered to discipline a dental medicaid provider. The Dental Society does have an agreement with the New York City Health Department to review on request the quality of dental care performed by a dentist and to render its judgment to the Health Department as to whether the dental care examined is adequate or inadequate. (Enclosed: agreement reaffirmed July 16, 1976; initiated September 1970). In all cases where submission is made to the Dental Society for such "peer review" the Dental Society submits a complete report of its findings to "Medicaid" and to the dentist in question. Final decisions as to actions which may invoke discipline of suspension or disqualification are solely the prerogative of "Medicaid". The Dental Society has a well structured peer review committee which will provide review only upon request. *Since 1970*, when the enclosed agreement was first arrived at, there have been *only two cases* referred to the peer review committee of the Eleventh District Dental Society for investigation, despite our continuing offer of cooperation in the resolution of alleged inadequate or incompetent performance by dental medicaid providers.

Question #3—As previously stated the Society is not empowered to invoke discipline in medicaid cases. The Society does not have subpoena power, nor is it an agency of government. Hearings relative to medicaid abuse are legally the responsibility of the Departments of Health and of Social Service and of the Office of Professional Conduct which is an agency responsible to the State Attorney General and the New York State Board of Regents.

Question #4—The enclosed peer review agreement is currently in force, but is not utilized to any significant degree by the Department of Health.

I hope this answers your request for additional information. I continue to urge that amendments to federal medicaid legislation will be directed to provide the medically indigent with adequate health care, administered in such a fashion as would encourage participation by the majority of dentists in New York City and State as well as the country. My former letter details the urgent need for reform of the medicaid program.

Sincerely,

EMIL LENTCHNER, D.D.S.

[Enclosures.]

THE CITY OF NEW YORK DEPARTMENT OF HEALTH,
BUREAU OF HEALTH CARE SERVICES.
New York, N.Y., July 16, 1976.

DR. EMIL LENTCHNER,
Executive Director, Eleventh District Dental Society,
Jamaica, N.Y.

DEAR DR. LENTCHNER: The New York City Health Department acknowledges that the following constitutes the terms of the peer review agreement that it has negotiated with the three District Dental Societies of New York City:

1. A peer review committee would be established by each District Dental Society.

2. The district peer review committee would exercise its function in connection with society members, or non-members within its geographic area.

3. The names of the members of each committee and any changes in composition would be communicated to "Medicaid".

4. The peer review committee would concern itself solely with the quality of dental care, and pronounce its judgment as to whether dental care examined is adequate or inadequate.

5. The peer review committee would be convoked by the Dental Society at the request of "Medicaid" whose examinations had disclosed serious or consistent deficiencies, and informal discussions with aberrant dentists had not produced the prescribed improvement in quality of care.

6. The peer review committees shall establish their own internal mechanisms and provide the facilities and equipment for such examinations.

7. After examining patients and records and interviewing the practitioner, the peer review committee will submit a complete report of its findings to "Medicaid" and to the dentist in question.

8. The peer review committee must render its report on a case within 60 days of its receipt from "Medicaid".

9. Although the identity of the dentist in question will be made known to the society, the society will have the option of maintaining his anonymity to the peer review committee up to the time he appears for its interview. A non-member should not be identified as such to the committee.

10. Upon receipt of the report "Medicaid" will take the report of the Peer Review Committee into consideration in making a final decision as to appropriate subsequent administrative actions which may include demands for restitution, suspension or disqualification.

11. The report of the peer review committee findings will always be offered in evidence to hearing officers in formal proceedings.

12. The peer review function represents the commitment of organized dentistry to fostering the dental health of the community and reflects dentistry's responsibility. It offers its service to these ends without compensation.

Sincerely yours,

MARTIN A. PARIS, M.D., M.P.H.,
Executive Medical Director, Medicaid.
ESTHER KAPLAN COLCHAMIRO, D.M.D., M.P.H.,
Director, Dental Medicaid.

THE CITY OF NEW YORK DEPARTMENT OF HEALTH,
BUREAU OF HEALTH CARE SERVICES,
New York, N.Y., September 9, 1970.

Dr. ROBERT FISHER,
Chairman, Inter District Committee,
Brooklyn, N.Y.

DEAR DR. FISHER: The New York City Health Department acknowledges that the following constitutes the terms of the peer review agreement that it has negotiated with the three District Dental Societies of New York City:

1. A peer review committee would be established by each District Dental Society.

2. The district peer review committee would exercise its function in connection with society members, or non members within its geographic area.

3. The names of the members of each committee and any changes in composition would be communicated to "Medicaid".

4. The peer review committee would concern itself solely with the quality of dental care, and pronounce its judgment as to whether dental care examined is adequate or inadequate.

5. The peer review committee would be convoked by the Dental Society at the request of "Medicaid" whose examinations had disclosed serious or consistent deficiencies, and informal hearings with aberrant dentists had not produced the prescribed improvement in quality of care.

6. "Medicaid" will be responsible for delivering the patients and their treatment records, evaluation forms and x-rays to the respective societies for examination and evaluation.

7. The peer review committees shall establish their own internal mechanisms and provide the facilities and equipment for such examinations.

8. After examining patients and records and interviewing the practitioner, the peer review committee will submit a complete report of its findings to "Medicaid" and to the dentist in question.

9. The peer review committee must render its report on a case within 60 days of its receipt from "Medicaid".

10. "Medicaid" will make patients and treatment records available to peer review committees in actions initiated by practitioners when the quality of their work has been questioned by Medicaid.

11. Although the identity of the dentist in question will be made known to the society, the society will have the option of maintaining his anonymity to the peer review committee up to the time he appears for its interview. A non member should not be identified as such to the committee.

12. Upon receipt of the report "Medicaid" will, at its discretion, temporarily suspend the practitioner from all participation in the program and set the date for formal hearings by the Department of Health.

13. The report of the peer review committee findings will always be offered in evidence to hearing officers in formal proceedings.

14. The peer review function represents the commitment of organized dentistry to fostering the dental health of the community and reflects dentistry's responsibility. It offers its service to these ends without compensation.

Sincerely yours,

MORTON A. FISHER, D.D.S., M.P.H.,
Deputy Executive Director, Medicaid.

ITEM 2. LETTER AND ENCLOSURES FROM DR. MARTIN MARKOWITZ, PAST PRESIDENT, MEDICAL SOCIETY OF KINGS COUNTY AND THE ACADEMY OF MEDICINE OF BROOKLYN (N.Y.), INC.; TO SENATOR FRANK E. MOSS, DATED SEPTEMBER 9, 1976

DEAR SENATOR MOSS: I am enclosing copies of correspondence dating back to September 15, 1975 which are self-explanatory.

You can see that the Medical Society of the County of Kings alerted officials about Medicaid Mills and requested an investigation of Medicaid practices in 1975.

Sincerely,

MARTIN MARKOWITZ, M.D.

[Enclosures.]

STATE OF NEW YORK DEPARTMENT OF HEALTH.
NEW YORK CITY OFFICE,
New York, N.Y., January 16, 1976.

MARTIN MARKOWITZ, M.D.,
President, Medical Society of the County of Kings,
Brooklyn, N.Y.

DEAR DR. MARKOWITZ: Our New York City Office of Professional Medical Conduct received your letter several months ago that was forwarded to Mr. Robert Asher of the Division of Professional Conduct, New York State Department of Education, and which concerns Dr. Reiter's article entitled, "Medicaid and Me: Condition Normal."

I have recently had a lengthy discussion with Dr. Reiter concerning that article and I referred to your letter dated September 15, 1975. Dr. Reiter told me that his article was a composite of many facilities which can be referred to as "medicaid mills" or "shared health facilities." Dr. Reiter feels that what is happening in these facilities is "parallel to what is going on in nursing homes." He also stated to me that his "beef is with the system, not with any particular physician." He refers to the owners and operators of medicaid mills and shared health facilities as business entrepreneurs.

I am sure Dr. Reiter would be most pleased to speak with you if you wish to discuss this article with him at any great length. His telephone number is 861-5498. We hope we have been of some help to you in your inquiry about the facts behind this article. Thank you very much for referring this matter to our

Office. Please do not hesitate to call on us if there is anything within our jurisdiction that we can investigate for you.

Sincerely,

MAXINE M. ODENWALD,
Office of Professional Medical Conduct.

THE CITY OF NEW YORK DEPARTMENT OF HEALTH,
BUREAU OF HEALTH CARE SERVICES,
New York, N.Y., September 30, 1975.

Dr. MARTIN MARKOWITZ,
President, Medical Society of the County of Kings,
Brooklyn, N.Y.

DEAR DR. MARKOWITZ: I am responding to your letter of September 18, 1975 regarding the article entitled "Medicaid and Me, Condition Normal" by Dr. B. P. Reiter. We have spoken with Dr. Reiter and he tells us his article was a composite of many Shared Health Facilities plus a multitude of tales from his colleagues. He was loathe to name any one place. However, for your information we have an ongoing investigation and indepth audits of many like facilities and we are making concerted efforts to remedy the situation.

As you know Item 230 which would give us some administrative teeth is in the courts. We trust that if this law becomes applicable, we can count on your cooperation in erasing, as you say "blatant unethical conduct by some physicians", thereby upgrading the standards of good medical practice.

Sincerely yours,

JOHN T. GENTRY, M.D., M.P.H.,
Executive Medical Director, Medicaid.

MEDICAL SOCIETY OF THE COUNTY OF KINGS AND
THE ACADEMY OF MEDICINE OF BROOKLYN, INC.,
Brooklyn, N.Y., September 15, 1975.

Mr. ROBERT S. ASHER,
Director, Division of Professional Conduct, New York State Department of Education, New York, N.Y.

DEAR MR. ASHER: I would like to call to your attention an article written by B. R. Reiter, M.D., entitled "Medicaid and Me: Condition Normal" that appeared in the July 21, 1975 issue of New York magazine. I am enclosing a xeroxed copy of the article. If true, this article blatantly reveals unethical conduct by some physicians in the County of Kings.

The Medical Society feels obligated to follow this matter through and investigate the activities of the physicians involved. We enlist your aid in obtaining the names of these physicians so that we may pursue the matter.

Sincerely,

MARTIN MARKOWITZ, M.D.
President.

SEPTEMBER 18, 1975.

Dr. JOHN T. GENTRY,
Executive Medical Director, Medicaid, Department of Health, New York, N.Y.

DEAR DOCTOR GENTRY.: I refer you to a copy of my September 15th letter addressed to Dr. Robert S. Asher, Director of the Professional Conduct Division of the New York State Department of Education, regarding an article entitled "Medicaid and Me: Condition Normal" that appeared in the July 21, 1975 issue of New York magazine. In case it went astray, I am enclosing another copy of the article.

Unquestionably, this article reveals blatant unethical conduct by some physicians and very questionable standards of good medical practice.

I should like to know whether your office has investigated this medical establishment and its members. If so, what has been the disposition of this case?

If by some oversight, an investigation has not been conducted, we believe it is

necessary. The Kings County Medical Society has a stake in assuring that good medicine is practiced in our Borough.

I would appreciate hearing from you.

Sincerely,

MARTIN MARKOWITZ, M.D.
President.

ITEM 3. LETTER AND ENCLOSURE FROM SIDNEY G. SPARROW, ATTORNEY, KEW GARDENS, N.Y.; TO SENATOR FRANK E. MOSS, DATED OCTOBER 13, 1976

DEAR SENATOR MOSS: On August 31st my clients, Doctors Joseph Ingber and Sheldon Styles, appeared before your Committee and testified. Thereafter, you forwarded to me a transcript of the hearing minutes and I have returned same under separate cover.

After considerable discussion, my clients have prepared the enclosed set of proposals to your Committee and I forward them herewith in the hope that they may be of some value to you—recognizing as I do that there is good likelihood that most—if not all—of the content has already been assessed and evaluated by you.

Thanking you once more for the opportunity to be of some assistance, I am

Respectfully,

SIDNEY G. SPARROW.

[Enclosures.]

PROPOSALS TO THE SENATE COMMITTEE INVESTIGATING MEDICAID FRAUD

SUBMITTED BY SIDNEY G. SPARROW, ESQ., ON BEHALF OF DOCTORS INGBER AND STYLES

I. WEAKNESSES IN MEDICAID PROGRAM

1. In concept, the program is doctor oriented, rather than patient oriented. It rewards doctors for making more visits rather than fewer visits. Our experience is that this creates many so-called "grey areas" of doctor judgment that can never successfully be challenged.

(a) Was this test necessary?

(b) Was that follow-up exam necessary?

(c) Was that specialist really in for the patient's benefit, or was it for the doctor's increased billing and the Center's increased income?

(d) Are those blood tests being run for income or patient need?

(e) Are unnecessary drugs, shoes (orthopedic), supports, etc. being prescribed?

2. The common abuses this concept of health care fosters are:

(a) Pingponging; every doctor in the clinic sees the patient.

(b) Family ganging; every child is billed for multiple services.

(c) Up-grading; follow-up visits and billed as a first visit.

(d) File picking; names are picked from files at random, leading to totally false invoices.

(e) Overbilling; false visits or extra unnecessary visits.

(f) Round-robin; one doctor after another bills the same patient for services not given.

3. Medicaid Program leads to various incentives to cheat. Amongst them are the following:

(a) Percentage arrangements between doctors, laboratories and factors. Clinic owners as well are allowed to factor through doctors.

(b) Selective justice in the investigatory system (infrequent and spot checking).

II. SPECIFIC RECOMMENDATIONS AS TO PROBLEMS AND THEIR SOLUTIONS

1. *Problem.*—Patients are unsure of where to complaint.

Solution.—The use of a complaint number in a bright color (red) on the Medicaid Card.

2. *Problem.*—There is patient apathy toward doctors cheating.

Solution.—"BountyHunting"—the patient gets a ten percent reward or something similar of all monies recovered from cheating doctors. Similar to methods used by the IRS to informers.

3. *Problem.*—Doctors are rewarded for writing extra visits.

Solution.—(Major) capitation a la H.I.P. Centers where doctors are paid a salary based on the number of people in the area using the facility. A useful concept here would be—"a front line medicine pay" e.g. very good salaries to induce good men to come aboard.

4. *Problem.*—The system of family ganging and ping ponging.

Solution.—Computer profiling with "abuse triggers" to follow up investigation.

5. *Problem.*—Passing around of Medicaid cards in order to get free drugs and care.

Solution.—Picture of the patient on the Medicaid Card.

6. *Problem.*—The doctor billing for services not rendered.

Solution.—Patient signs each invoice.

7. *Problem.*—Some areas have too many clinics and/or there may be a legitimate clinic and other clinics must overbill to survive.

Solution.—Capitation—limit and license multi-discipline centers which treat more than twenty-five percent Medicaid patients, e.g., one center per 10,000 persons.

8. *Problem.*—Front desk administration and the clerical staff ping pong effect.

Solution.—Each center must have a city employee at the front desk as a "watch dog". The "watch dog" may be a paramedic, R.N., or a specially trained new unit of City Health Department team (Health Ombudsman).

III. CONCLUSION WITH REGARD TO SPECIFIC PROBLEMS AND THEIR SOLUTIONS

It is my feeling that if doctors could be compensated generously for working in Medicaid Centers, with the cheating incentive removed, then the situation would return to sanity and could result in savings in the hundreds of millions of dollars. This could also result in unnecessary follow-up visits, unnecessary medication, and society would benefit in general.

IV. SUGGESTED IMPLEMENTATION THROUGH THE LEGISLATURE, ETC.

1. Percentage deals outlawed—flat rent only.
2. Factors should be licensed and rates charged.
3. Separate by law: (a) Factoring from the Center ownership; (b) labs from the Center ownership; (c) limitation on ownership of Centers to only one.
4. Set specific licensing standards for Medicaid Centers with regard to health. supply and staff.

IMPROVING LEGAL REPRESENTATION FOR OLDER AMERICANS

MONDAY, AUGUST 30, 1976

U.S. SENATE,
SPECIAL COMMITTEE ON AGING,
Boston, Mass.

The committee met, pursuant to notice, at 10 a.m., at Gardner Auditorium, Boston, Mass., Hon. Edward M. Kennedy presiding.

Present: Senator Edward M. Kennedy.

Also present: David A. Affeldt, chief counsel; Deborah K. Kilmer, professional staff member; Mark Schneider, legislative assistant to Senator Kennedy; Margaret S. Fayé, minority professional staff member; and Kathryn T. Dann, assistant chief clerk.

OPENING STATEMENT BY SENATOR EDWARD M. KENNEDY, PRESIDING

Senator KENNEDY. We will come to order. This is a meeting of the Special Committee on Aging of the U.S. Senate on the issue of legal services programs for the elderly people of this Nation and on the programs that are in effect which impact elderly people here in the Greater Boston area and also in the State of Massachusetts. It is of great importance to the Committee on Aging that elderly people know their legal rights, have their legal rights protected, and take full advantage of this Nation's legal system.

There is probably no group of citizens of our Nation who have a relationship with their State government, their local government, or their national Government like our elderly people. They are the ones who have paid into a social security system for an extended period of time and they are entitled to the system's benefits. Therefore, they have a stake in insuring that they are able to get the benefits they have paid for, and which they are entitled to. In too many instances, they have not received those benefits. Sometimes the supplemental insurance programs may have been calculated to exclude them from the benefits to which they are entitled.

How many problems do our elderly people have in computing their own income to find out whether they are eligible for free housing or for supplemental housing benefits? Shouldn't elderly people be protected from utilities being turned off in their housing unit, from their rents being raised arbitrarily without sufficient notification, or from being unable to enter or exit a building because it does not have special ramps for the handicapped?

There are innumerable circumstances where our legal system must protect the elderly. The Older Americans Act, which is now law, requires that appropriations be made to develop legal assistance for the elderly. That provision was put into the Older Americans Act as a result of a hearing that we held here 5 years ago. Perhaps some of the witnesses who testified then, will be testifying today. We also have a Legal Service Corporation which has a budget of approximately $125 million. It was explicit in the drafting of the charter for the Legal Service Corporation that it protect the rights of our elderly people. In 3 weeks, the Senate will be faced with what is called a rescission. President Ford and the Office of Management and Budget are going to say we have got $45 million we don't need to expend because there isn't a demand for it. Now, I don't believe that to be so, and when I stand on the floor of the U.S. Senate, I want to be able to bring to my colleagues in the U.S. Senate testimony from today's hearing which will point to instance after instance where individuals' legal rights have not been protected and where they have been protected. Where they think that either the Legal Service Corporation or the other organizations committed to protecting the legal rights of our elderly people can function more effectively and more efficiently, with more paralegal personnel, and perhaps additional lawyers.

I want to welcome those who will testify here today. In many instances they are old friends. They have been extremely articulate and persuasive spokespersons for the elderly people, not only of the Greater Boston area, but for the elderly people of our State and of our Nation. We are looking forward to their comments and suggestions.

I will make a part of the record the statements we have by Congressman—and Majority Leader—Thomas P. O'Neill, Jr., Congressman Joseph D. Early, Congressman James A. Burke, Congressman Joe Moakley, and Congressman Paul E. Tsongas.

[The statements follow:]

STATEMENT OF CONGRESSMAN (AND MAJORITY LEADER) THOMAS P. O'NEILL, JR.

As Congressman and now as the House Majority Leader, I have always had a deep and compassionate concern for the well being of the elderly of this commonwealth and the Nation. I have continually worked to improve the lives of our senior citizens, enabling them to live in both comfort and dignity.

In fact, the reason why I cannot personally be present at this hearing and have asked my legislative assistant to submit this statement on my behalf is because I must be in Washington to offer an amendment, the O'Neill Amendment, to the Supplemental Security Income (SSI) Amendments of 1976. The O'Neill Amendment, which is the first order of business on the House floor today, will affect the lives of many of the senior citizens who are attending this hearing.

As you all know, supplemental security assistance provides a basic cash income to people over 65 who are in financial need. The O'Neill Amendment will have the effect of guaranteeing that future cost of living increases are passed through to the recipients. A recent change in the share of Federal/State contribution meant that approximately 130,000 SSI recipients never received the SSI increases to which they were entitled this year. My amendment will correct this discrepancy so that such an injustice can never happen again.

I offered a similar amendment to the first budget resolution which put a guarantee in the social security laws that enables benefits to keep pace with inflation. Thus, whenever the cost of living increases 4 percent or more in 1 year, your social security check will increase automatically the following July if you

have not already received the increase through congressional action. This means that your purchasing power will be protected against increases in the cost of living in the future.

I want to heartily commend Senator Kennedy for holding the hearing here today to determine ways in which the Government can improve legal representation for older Americans. I firmly believe that the Federal Government has a significant and dramatic role in the task of creating a life of dignity for older Americans.

It was more than 10 years ago that the Congress created the Older Americans Act, landmark legislation which developed community services to put more meaning into the lives of the senior citizens. Included in this act was a bill of rights for older Americans which sought efficient community services whenever needed.

Through the Older Americans Act we have developed programs to meet the nutritional, health, social, and economic demands of older Americans. Now, we must build upon these bills of rights and add an 11th bill of rights—improving the availability and accessibility of legal services to senior citizens.

The Older Americans Act amendments that we passed this Congress contained, as one of its four priorities, the availability of legal services. There is a need for legal services for the elderly and a need for review of existing programs.

Already grants for research and demonstration projects are in operation. For instance, in 1975, Massachusetts received a grant of $18,385 for a State nursing home ombudsman, to process legal complaints for nursing home inmates, and in the same year, the State received $377,000 for administration of the older Americans program planning. Massachusetts also received $2.3 million for area planning in social services and community services.

States are required to adopt a plan of providing legal representation to qualify for Federal funds. No specific guidelines for eligibility are yet in existence. But these initial undertakings are only a commencement. We must improve legal representation for older Americans.

The purpose of this hearing is to determine how we can best improve the availability of legal services for the 22 million elderly in this nation. Nearly 30 percent of the senior citizens in the country are living on or below the poverty line. Yet, they receive less than 7 percent of the legal services provided by the Legal Services Corporation. I think we need to press for a change of direction in the allocation of funding of legal services.

I wholeheartedly support the objectives of this hearing, and may I assure all of you here that I will urge Chairman Randall and the members of the House Committee on Aging to explore ways in which we can improve upon the legal representation of the elderly through the State agencies which implement the Older Americans Act.

The Congress of the United States has a commitment to aid the elderly in this country. We must build upon the bill of rights set forth in the Older Americans Act and continue to develop benevolent and innovative programs as well as improve existing programs for our senior citizens. This is our goal, and all of you participating in this hearing can work with us to make this objective a reality.

STATEMENT OF CONGRESSMAN JOSEPH D. EARLY

I appreciate this opportunity to address the Senate Committee on Aging, and I want to especially thank Chairman Frank Church and my distinguished colleague from Massachusetts, Senator Edward Kennedy, for their commendable dedication to the work of the Committee on Aging.

Older Americans are clearly one of the most discriminated against minorities in American society. We do not reward our elder citizens for their years of contribution, but penalize them, regardless of their contribution, for growing older. We force them out of the work force despite their abilities, energies and experience. We relegate them to "retirement" and place them in a position where their usefulness and their vast wealth of knowledge are left to waste. Worse, the majority of these senior citizens are totally dependent on income far below a subsistence level. They are stripped of the human dignity they have strived for by a system that no longer recognizes them as assets.

We have created a psychological and economic monster by our misguided attitudes and policies toward the aging. Not only do these attitudes and policies destroy a potential in our elder citizens to be productive contributors—to control

their own lives and destinies and to continue to enhance our American democracy with their years of experience and their unique perspectives on the future—but, they rob the rest of us of the benefits of tapping those experiences and perspectives to improve our own lives, our working society and our social future. Truly, what we have done to older Americans is a terrible loss to us all.

The Older Americans Act states 10 objectives to assist older people to secure the full and free enjoyment of our Democratic society: an adequate income; the best possible physical and mental health; suitable housing; full restorative services; employment without age discrimination; retirement in health, honor, and dignity; participation in civic, cultural, and recreational activities; community services; immediate benefits from research; and freedom and independence. Reaching these objectives will be no easy road. Our country—its political figures, its economic leaders, and its general population—in establishing priorities, both social and economic, all too often listen to the loudest voice without thought to the direction that voice may take them. Our society has become more and more fast paced and simultaneously less and less stable. Crime has increased tenfold in the past 20 years. The divorce rate in this country is now about two-to-one and climbing. Our cities are bankrupt and our rural communities are being starved by the neglect of Federal and State governments to insure equal services. More and more of our earned incomes are going to Federal, State, and local taxes and fewer and fewer services are evident to show for that investment. This is the society that we are asking to reassess its disposition toward Older Americans. And, the battles ahead strike the core of our domestic instability. We want medical services available at reasonable costs. We want equal opportunities in the work force. We want this Nation to face the reality that aging is a process, but a growing process that should be recognized as such and dealt with at every level with respect and dignity.

That the law discriminates against the elderly is probably the most symptomatic of our attitudes as a society. It implies that we, as a Nation, fear aging and fear the aged for what they represent—our own destinies. As we have seen, to a large degree, with racial discrimination in this country, the law is the place to start. Changing the laws to guarantee equal treatment of the elderly will begin the process by which attitudes will be changed. The essential in improving legal representation for older Americans is the willingness of older Americans themselves to demand representation. There are many of us who stand ready to help, assist, and direct the attention of these demands—but there is not one of us who can restore senior citizens to their rightful place of participation in this Nation alone.

The Committee on Aging has been largely responsible for calling national attention to many of the needs of older Americans. Again, I want to thank Chairman Church and Senator Kennedy for allowing me to submit this statement for the record. The committee has my full support and I stand ready to assist, in any way I can, to promote equal and equitable treatment of the elderly under the law.

STATEMENT OF CONGRESSMAN JAMES A. BURKE

Today there are over 20 million Americans who are age 65 or older. Over the past several years the Federal Government has increased its commitment to improving the quality of life for our elderly citizens, in addition to numerous liberalizations in the Social Security and SSI programs. A major thrust of federal action has been the Older Americans Act which under the 1975 amendments provides the impetus for addressing many of the social service needs of the elderly. However, one need which continues to go unheeded for great numbers of the elderly is effective access to legal advice, counseling and representation.

For those with the means, if a legal problem arises in their daily lives, they have the financial resources to seek out the services of an attorney. But that choice is not readily available to a large segment of the elderly. One in every four elderly families lives on less than $5,000 annually. More than 50 percent of old people living alone live on less than $3,000 a year. People over 65 make up about 16 percent of the poverty population. Most of these people rely on social security or SSI.

Many of the elderly, of course, receive free legal services from federal programs administered by the Legal Services Corporation and the Administration on Aging, but the resources of those programs are not sufficient to reach the potential clientele to be served. Although the elderly comprise 16 percent of the

nation's 24 million poor, it is estimated by the Legal Services Corporation that they comprise only 6 percent of the client caseload of an average Legal Services Corporation grantee.

Even for those elderly citizens with middle class incomes, the prospects for obtaining needed legal services are not good. Typically, these are the people who are too "rich" to be considered eligible for free legal services from one of the Legal Service Corporation offices even though they are too "poor" to afford an attorney.

The elderly face a myriad of legal problems for which they are in persistent need for legal advice, counseling and representation. The elderly encounter not only general legal problems but many other special problems involving age, discrimination in employment, probate, pensions, long-term hospitalization, and nursing homes. In addition, the complexity of federal laws and regulations in such programs as Social Security, SSI, Medicare, Medicaid, Railroad Retirement, and Veterans Pensions, often requires the assistance of lawyers or paraprofessionals trained in the area.

It is important that more of our elderly citizens fully understand their legal rights in matters which affect their daily lives and have fuller access to legal representation. I am encouraged by the recent increase in appropriations for the Legal Services Corporation and am hopeful that the expansion of their program effort will include increased coverage for the elderly poor. The increased efforts of the Administration on Aging in the development of legal services capability for serving the elderly is also encouraging. I am particularly interested in their efforts to expand the use of trained paralegals and lay advocates as a means of creating opportunities for trained older persons to take an active role in the provision of legal assistance to other older persons.

Although increased efforts must be continued at the federal level, it is also necessary to encourage fuller participation by the private bar. The legal profession is becoming increasingly aware of its responsibility for helping to improve the availability of legal services to those unable to afford their services and I am hopeful that they will address their efforts to the needs of the elderly.

The hearings today will hopefully enable the committee to focus on the current problems and lay the groundwork for determining the directions that must be taken to insure that the legal needs of older Americans are met.

Throughout my entire career in the U.S. Congress, the needs of the elderly have been of special interest to me. Now, as chairman of the Social Security Subcommittee of the House Committee on Ways and Means, I am continuing my active role to secure for our senior citizens the means for them to live their lives with the dignity and security they so rightfully deserve.

Thank you, Mr. Chairman.

STATEMENT OF CONGRESSMAN JOE MOAKLEY

Today we are finally realizing the magnitude of the legal needs of millions of older Americans—needs which have been sadly neglected in the past. At this time in our Nation's history, there are more people past the age of 65 than ever before 650,000 in Massachusetts alone. Notwithstanding, these citizens' basic legal needs have not been fully addressed, making a fundamental precept of our Nation, "equal justice under law."

Many of the elderly lead productive lives. Many others are burdened with health, transportation, nutrition, and housing problems. Many are poor. Many live on limited incomes which often forces them to rely upon complex public and private institutions for their daily subsistence. Yet, they are not capable of dealing with the many legal aspects of this maze of governmental agencies and bureaucracies upon which they are so heavily dependent.

For example, their shelter may be provided or secured under federal and state public and subsidized housing laws, relocation laws, environmental protection laws, and zoning laws.

Their health is often dependent upon medicare, medicaid, laws regulating nursing homes, and laws relating to the advertisement of prescription drugs.

Their nutrition is often secured by the food stamp program.

The source of their income may be social security, supplemental security income, or private pensions.

The dignity of personal freedom and control of property is subject to the vagaries of the law of guardianship, conservatorship and involuntary commitment. Furthermore, the elderly also have numerous consumer and landlord-

tenant difficulties, legal difficulties which are shared by all age groups. In fact, hardly any facet of the lives of our elderly may not be helped by legal representation.

While the elderly are, on the one hand, confronted with a vast complex of crucial legal issues, bureaucracies, and forms with which to deal, on the other hand, they have no real place to turn for effective economic and personal assistance. Many of the elderly are not adept at coping with the governmental system and are unable to deal with issues of a legal nature. Yet, it was noted by Paul Nathanson, executive director of the National Senior Citizens Law Center, "There is often no one available to explain the technical language of Federal regulations, or the requirements for witnessing a will, or the qualifications to be met in a pension plan, or the tax implications of retirement programs." Many of these "legal" problems require lawyers' help, but others require only that competent paralegal or nonlegal advice be available. But even nonlegal help is oftentimes inaccessible to our elderly, some of whom are physically unable to leave their homes or convalescent centers or are without transportation; with out information about where to find help when help is needed; without the understanding of the fact that they need help; and most importantly, without the income capability to pay attorney's retainer fees. The situation of the nondestitute elderly, with respect to legal representation, is perhaps even more acute than that of the elderly poor, because they have too much income or resources to qualify for free legal services and yet, cannot afford to hire a private attorney.

Clearly, the need of our senior citizen's for legal service is pressing. However, for all but a small fraction of the elderly, the legal system is beyond reach. It is our responsibility to expand the provision of legal services to the elderly by all appropriate means. No society can properly claim that it is governed by a system of law when millions of its citizens are denied access to the legal system because they are past the age of 65.

STATEMENT OF CONGRESSMAN PAUL E. TSONGAS

Senator Kennedy, and members of the Senate Committee on Aging, thank you for inviting me to submit testimony concerning "Improving Legal Representation for Older Americans."

My office has maintained a close working relationship with agencies, such as Merrimack Valley Legal Services, as well as senior citizens organizations throughout the Fifth Congressional District to encourage the development of effective programs for seniors.

I support efforts now being made at the local level to provide free legal services for the elderly who must live on a fixed income. I will continue to support. and actively work toward, the expansion through increased Federal and State funding of existing agencies who also service other segments of the population.

I do not favor the creation of additional layers of bureaucracy to deal with existing problems which can be solved by established agencies.

Senator KENNEDY. We have a full witness list here this morning. We will move right to the witnesses. If there are others in the audience who want to speak, we will put a legal pad at the "no smoking" area. You can sign up. We will make sure that their comments are made a part of the record by dividing the time available between the witnesses we have scheduled and members of the audience. We will start off with Cecilia Fennessey. Mrs. Fennessey is a resident of Franklin Field elderly housing project, 70 years old, and a longtime resident of Boston.

STATEMENT OF CECILIA FENNESSEY, DORCHESTER, MASS.

Mrs. FENNESSEY. I am Cecilia Fennessey, and I am from the Franklin Field housing project, and the increase in the rent in some of the cases were resolved. I get $212 and I am a diabetic, and I do take two kinds of insulin, and all my supplies that I need, alcohol, and so on.

The $10 increase wouldn't mean that much to me, but some increases in rent were from $28 to $48 to $68, and we are getting a small social security check, and also some from SSI.

No Services

The conditions in the project that we live in are ridiculous. We get no service, no nothing. We call week in and week out to get lights fixed and end up in the darkness. Last winter I was without heat and had to go out and buy an electric heater. It had got so bad that I wanted to have an electric heater so that I could get up and get dressed in the morning. I had no heat so I had to go to my sister-in-law, Mary Fennessey, in South Boston and stay with her. There wasn't even a month's notice when we got the increase. I got a $10 increase, which wasn't too bad. I have all my medication and medicines to buy. Some tenants there, who weren't as well off as I, were getting much bigger increases in their rents. They all had to turn to the legal advocates and whatnot to see if they could get their amounts adjusted so that they could pay the rent. But as luck has it, it fell through anyway.

Without a month's notice beforehand, that kind of an increase is kind of terrible where we have very little service, very little anything in the project that we live in, and I think the same prevails throughout Boston.

Senator Kennedy. Mrs. Fennessey, how much notice did you have that the rent was going up?

Mrs. Fennessey. One month. We pay our rent for just the next month, and we were told that, and we had already signed up leases for the year, the fiscal year, and the first of the year we get another notice of an increase in rents.

Senator Kennedy. When did you sign up? At the start of the year?

Mrs. Fennessey. At the start of the year, and then it started to climb up the month before last. It was supposed to be for the second month.

Senator Kennedy. You started off at the beginning of the year with a $40 allocation?

Mrs. Fennessey. A $40 allocation.

Senator Kennedy. Your budget for the year was at $40, and then halfway through the year you found out that it was increased, is that correct?

Mrs. Fennessey. Yes; a $10 increase a month for rent.

Senator Kennedy. How much notice did you have, 1 month?

Mrs. Fennessey. One month's notice.

Senator Kennedy. Now, when was the last time that the rents were raised, do you remember that?

Mrs. Fennessey. No; I don't. I am only in there 3 years now.

Senator Kennedy. Three years. What are the changes? You mentioned that there have been changes at Franklin Field. I understand that your heater cost you $16.

Mrs. Fennessey. Yes; I bought it at Jordan Marsh because there was no other way to heat. Some of the people can bleed their radiators for their apartment, but in the apartment that I am in you can't bleed

the radiator because the radiators are built into the wall and there are grids over them, so therefore I couldn't live there for 2 or 3 months. I had to go outside and live with my sister-in-law.

No Heat for 2 Months

Senator KENNEDY. Well, the heat was off. When was the heat off, Mrs. Fennessey?

Mrs. FENNESSEY. This past winter the heat was off.

Senator KENNEDY. For how long a period of time?

Mrs. FENNESSEY. I didn't have any heat for 2 months.

Senator KENNEDY. For 2 months?

Mrs. FENNESSEY. For 2 months.

Senator KENNEDY. Well, what happened when you——

Mrs. FENNESSEY. Well, I kept calling, calling. They came up finally to do something, but it didn't seem to make any difference.

Senator KENNEDY. It still wasn't fixed then?

Mrs. FENNESSEY. No; then there was only two rooms where there was heat, the parlor and the bedroom; the bathroom and the kitchen had no heat whatsoever. You need heat in the bathroom. You need heat in the kitchen too.

Senator KENNEDY. That is right. What are the kind of changes you would like to see out there, Mrs. Fennessey?

Mrs. FENNESSEY. Well, I would like to see something done so we can get some kind of services. We don't get any services. The dead animals outside on the lawn, and whatnot, nobody will pick up; the rats, and the cats, and everything else. There is one out there right now in the back for 6 weeks. I called the office and they said they would do something, but they never did do it. The lights in the hall. We can't, people can't climb up the inside hall to the ceiling without a ladder, and there is no light there. It doesn't do any good. You just keep complaining and complaining and nothing is done about it. I know people who live there for months, and in fact, 6 months out of the year, and they don't even take care of the leaks. They have to keep pans under the sink to catch the drips. That is right in the next house, for that matter. Right next to me.

Legal Aid to Recover Funeral Downpayment

Senator KENNEDY. Were you able to get legal assistance during the time that you have been at Franklin Field?

Mrs. FENNESSEY. Oh, yes.

Senator KENNEDY. Can you tell us a little bit about that?

Mrs. FENNESSEY. Well, it seems that I kind of got fed up on things out there and I didn't know what to do. The people were coming up and saying "have you got plans made, or this or that." Well, I purchased a grave and then I went to an undertaker up there across from Mission Church. I wanted to go in and make plans for burial, which doesn't scare me, we all have to go sometime. I paid $200 down on my funeral and at that time they told me it would come to around $1,700, although he said that by the time it happens, it would have jumped so much more. I paid $200 down on my funeral, which I never heard anything about, and the next thing I know, somebody, a cousin

of mine up on Tremont Street, called me to ask me if I knew that the place was being sold and isn't in business any more. I said, "What?" She said, "Yes." Well, in looking into it, I found out that they folded up and I never got no word, no nothing, so my $200—I don't know where it is either. He got it. And I got a receipt for it, so I went to the legal authority down at Grove Hall, and they helped me, and they are still investigating. Whether they get to any point or not, I don't know.

Senator KENNEDY. But they tried to be of some help to you?

Mrs. FENNESSEY. Oh, yes. Oh, yes.

Senator KENNEDY. How about at the time that they raised your rent, did you get any kind of legal help?

Mrs. FENNESSEY. Yes, I did.

Senator KENNEDY. Will you tell us a little bit about that?

Mrs. FENNESSEY. Well, they came down to our project——

Senator KENNEDY. Who is "they?"

THE LEGAL ADVOCATES

Mrs. FENNESSEY. The legal advocates. They are located down on Massachusetts Avenue somewhere; they have moved from Grove Hall, and they, in fact all of our neighbors, we have them come down to our hall where we give them the situation; they come down and the people give them their amounts of incomes for the month and what the amount of the increase that they could give. Some of them were very objective in the light of this because the increases were exorbitant.

Senator KENNEDY. They brought your case to the attention, I guess, of the city administration, city hall?

Mrs. FENNESSEY. Oh, yes; and a lot of neighbors, too, in the same site. In fact, I think they are still working on them.

Senator KENNEDY. Do you have a feeling that they are, or you have a voice speaking for your interest now?

Mrs. FENNESSEY. Definitely. Definitely.

Senator KENNEDY. Do you feel good about it, even though you don't know what the outcome is going to be?

Mrs. FENNESSEY. Yes, I do. And the neighbors, too. What would we do if we didn't have someplace to go for advice? It would only be impossible for us.

Senator KENNEDY. Thank you, very much. I hope you stay with us during the hearing, and I want to thank you very much.

Mr. Richard McCusker is the chief paralegal coordinator, Council of Elders Legal Service program. He will discuss the special role that paraprofessional legal aides can play in meeting the legal needs of the elderly.

STATEMENT OF RICHARD McCUSKER, CHIEF PARALEGAL COORDINATOR, COUNCIL OF ELDERS LEGAL SERVICE PROGRAM, BOSTON, MASS.

Mr. MCCUSKER. Thank you, sir. We are a group of eight paralegals, four attorneys, two secretarys, one of the attorneys being the managing attorney. We are involved in trying to assist the elderly in such

areas as social security, supplemental security income, rent control and housing, consumer and utility disputes, conservatorships, guardianships, tenant-landlord problems, housing code violations, wills, trusts, and many other legal areas.

The way we get to the elder client is by virtue of outreach. We do a tremendous amount of outreach by group meetings, on a one-on-one basis, and we have assistance from the Council of Elders, because of their ESP programs on a referral basis. If they have clients that require legal services, they are free to call on us. Our services, which are provided if they meet the eligibility requirements, are free.

How Paralegals Work

We also have an operational requirement that any case that is brought in is reviewed by an attorney. The reason for this is that however mundane it may be, we don't want anything to fall between the chairs, so each case is reviewed by an attorney. Paralegals are then given instructions as to what to do, what is the roadmap, what can we do to carry this right through to its conclusion. This saves much time. Many cases can be brought to completion by paralegals in social security, small claims, and many other areas that they have the expertise to do this. Paralegals are elders; all of them are over 60; they work 4 hours a day because of the stipulation you cannot make over $2,760 a year, or you get clobbered by social security and have to return $1 for every $2 you earn over the $2,760, and in 4 hours a day they just about get started. We bring in four paralegals in the morning and four in the afternoon so that the office is being completely covered.

They are interfaced with the attorneys on a basis that has been thoroughly tested and checked; two paralegals report to one attorney. Each case is reviewed and they follow through from there. This program has been going on since 1969. It started out as a model program. The reason was to bring legal services to elders on a no-fee basis. It was then known as LRSE; however, when we reached this point of viability, we began going full bore to really try to cover the area. Right now we have insufficient paralegals because of the grant requirements. We don't have sufficient lawyers to cover all the Greater Boston area, and we are looking for additional funding so that we can spread this point of viability into full growth.

Examples of Legal Assistance

One of the types of cases that we have untangled, in just a rough outline, is where one person in particular was robbed and attacked. We brought suit against the Commonwealth under the statute providing that she could recover her expenses under the Violent Crimes Act. Her medical bills from recognized physicians were not available inasmuch as she had Christian Science practitioners, which were not compensable. Upon the recommendation of the judge in the district court, after talking to the attorney general's office, they were found acceptable. She received an award of $142, which at that time, with the $100 deductible, would give her $42. The judge was greatly chagrined, and he erased the $100 deductible clause, and she netted the entire $142.

We had another client who was living with her son in the household. She was receiving SSI for both of them; however, she was asked to return it because they were overeligible. Now, this hardship was found out by one of our paralegals and it was determined that the social security shutoff and the requested return of the money was incorrect. It was reinstated, and further than that they were refiled and put back on SSI again.

We had another case with a person in St. Elizabeths Hospital in Brighton, 80 years old. She was found in a comatose condition on the floor in her bedroom. She was brought into the hospital by the police. She had no living relatives. She owned a home and a car. At such time as the board of the hospital decided that she no longer needed medication, she was immediately put on the list for transfer to a nursing home. We were pulled into the case because of the client not having any dependents. Further than that, we executed a power of attorney for her, so that we could begin to get in and take care of her bills, and also, with the exception of getting her located in a decent nursing home, we made arrangements for the purchase of clothing. We also went to her home and actually did a very clandestine thing, we had to break in in order to get the person her glasses, and also found $500 in her pocketbook.

The question now is that she had the home and no relatives, nobody living there. We had to do something about disposing of the home. We are looking very seriously at a conservatorship to handle the entire matter. This is an area where legal services and protective services are so closely related, it is very difficult to break them loose.

I could go on and on with more and more cases here. We have files full of them that have been resolved very beneficially to the elders and we have succeeded in bringing them to a very satisfactory culmination. Thank you.

Senator KENNEDY. You're sponsored by the Older Americans Act, am I correct on that?

Mr. MCCUSKER. Yes. Well, I work directly for the Council of Elders, under the Older Americans Act. funding under title XX as well, but legal services does not use title XX money.

Senator KENNEDY. What legal training did you receive to help you respond to these problems?

Mr. MCCUSKER. Purely by osmosis, by getting out and doing things.

Senator KENNEDY. Do you think that elderly people have a greater insight into the needs of the elderly than a young attorney that's just out of law school? If so, why do you believe that to be so?

Mr. MCCUSKER. I would say, yes, primarily because of the rapport of the elder paralegals with an elderly client. Elderly clients are very apprehensive about dealing with anybody younger than they are. They have problems, and they will talk to their friends and neighbors, but they will never bring them to the forefront because of this fear.

Senator KENNEDY. Do most of you agree with that?

[Response affirmative and negative from the audience.]

Senator KENNEDY. Go ahead.

Mr. MCCUSKER. That is about all I have to say.

Senator KENNEDY. You gave an interesting example of paralegals working with the attorneys to solve a problem.

Mr. MCCUSKER. Thank you, sir.

Senator KENNEDY. If there are some legal questions or issues which are complex and difficult, you have access to the attorneys, as I understand it.

Mr. MCCUSKER. At all times.

Senator KENNEDY. So this is really an extension of the——

Mr. MCCUSKER. Right. Actually, what we do is the legwork, in many instances, for the attorneys to save time any try to expedite these things to completion of the case.

Senator KENNEDY. Finally, what are the areas in which you find the most demands for assistance?

Mr. MCCUSKER. Well, we have a tremendous number of social security and SSI cases. We are always bombarded because of a lack of housing on a subsidized basis. We are constantly before the board on some of the housing organizations; increases in rents, the conditions of the homes that they live in. We write a good many wills. In fact, we also have an eligibility requirement of 60 years old; however, we did run into a client who was 57 years old who wanted a will. At that point in time we had to think about it, but we related to the fact that the woman was terminal with cancer. So what do we do? We write a will regardless of the age factor. But we run the whole gamut of problems with the elders, other than criminal cases. We do not handle criminal cases.

WHY DO ELDERLY HAVE LITTLE LEGAL COUNSEL?

Senator KENNEDY. What do you think the principal reason is that elderly people do not have much legal guidance or advice?

Mr. MCCUSKER. The problem is that the elderly don't know about it. Roughly 25 percent of the elder population have a complete lack of guidance. In an effort to reach them you have to do it on an outreach basis, and there is insufficient time and funding to do it; however, we are doing it by virtue of going to elderly clubs, nutrition programs, just about anyplace that anybody wants to hear of the Elders programs and legal services for the Elders.

Senator KENNEDY. How many paralegals are there in your particular group?

Mr. MCCUSKER. A total of eight.

Senator KENNEDY. How did you hear about the paralegal program itself?

Mr. MCCUSKER. Well, I was reading about it in the paper one day and decided to look into it, and I thought it would be interesting. Having been in industry all my life, I felt that anything that should be done, should be done.

Senator KENNEDY. OK. Thank you very, very much, Mr. McCusker. We will now hear from a panel of senior citizens, all of them familiar faces. They are all concerned with improving the quality of life for the elderly of Massachusetts. Mrs. Melnea Cass, president of the Council of Elders. She is certainly no stranger to myself or to this committee. Her testimony 5 years ago before this committee was helpful not only on focusing the attention on the need for direct legal services, but on the need for providing special aid in monitoring nursing homes. We have now opened free legal services for the elderly, although not enough, and a federally funded nursing home ombudsman program. Frank Manning is another friend. He is an adviser on

matters affecting the State's senior citizens, president of the Legislative Council for Older Americans, and an outspoken advocate for the State's elderly. Whatever the issue, whether legal services, nutrition, employment opportunities, or housing, Frank Manning has been a constant source of information and wise counsel. James Peace is another leader of a statewide organization dedicated to the betterment of living conditions for the State's elderly. As State director of the National Retired Teachers Association, and as the executive director of the Cape Cod and the Islands Area Agency for the Cape under the Older Americans Act, his efforts have been a vital source of information for both State and national policymaking in the field of aging. We have three good witnesses here. Melnea, would you like to start off this morning? I don't know if those lights are too bright for you.

Mrs. CASS. No; thank you very much, Senator.

Senator KENNEDY. Good to see you.

Mrs. CASS. Welcome home.

Senator KENNEDY. I enjoyed that very complimentary and fine article of yours the other Sunday in one of our Boston publications.

Mrs. CASS. Thank you.

Senator KENNEDY. It's a great, great tribute to you and well deserved. All of us feel that way. Please proceed.

STATEMENT OF MELNEA CASS, PRESIDENT, COUNCIL OF ELDERS, BOSTON, MASS.

Mrs. CASS. Thank you very much. I might start off by saying that the Council of Elders, of which I am president, the board of directors, sponsor in Boston this program for senior citizens, and it has three branch offices; one in Roxbury, one in what we call Grove Hall, the fringe of Dorchester, and one in Brighton. It serves many, many elderly, all kinds of people, all ethnic groups. It doesn't matter who they are. They serve everybody.

It has met the need of many. I notice when Mr. McCusker spoke, he told of some of the many instances that come up. Well, that could be multiplied many, many times, but the main thing is that it meets a need, and it really hasn't got enough money, Senator, to meet the needs. It needs a whole lot more money poured in, because the elderly people are now at the point where they have very little income, and when it comes to getting a lawyer, that is the last thing they do with their money. Most of them, the real poor ones, and mostly the poor white and the poor black, never had lawyers anyway. They never thought they needed a lawyer. When they went to court, the court gave them a lawyer when they got in trouble, and they used whatever lawyer that came. It was not part of their everyday living to have a lawyer or doctor, or anybody else.

So, they are reluctant when they grow older, many of them, who haven't had the advantages of knowing what it is to hire a lawyer. They just don't do it, and they have so many inequitable things happening to them.

Many of them that I talk with among my people, especially about making a will, or telling their family how much money they have, that is a great secret. They won't let anybody know what they have—

you're not supposed to know—and when they die nobody knows what they have. When you look around you will find money under mattresses, and behind pictures, under the rugs, and all kinds of places. So the lawyer who steps into these kind of cases have been great.

Outreach Workers Needed

The outreach to get to these people is really a big, big problem. The person who opens the door for the young lawyer is important. He's needed in these cases, but the elderly are sometimes suspicious of them, and many of them fear them, and they think they are young and are putting something over on them and meddling in their business. But when you have a senior paralegal who comes along and talks to them, or when an outreach social worker who is in our program gets on the good side of them, they will tell them everything as a result, and that is the only way that you are going to reach them. Really, more money is needed in the program so there can be more outreach workers to find the people who are hidden away who don't know their rights. That is the way it is.

So as far as the program goes, I would say it's one of the greatest programs there is. I have a friend right now who has made her will with the undertaker. She went over there and she got the casket, told the undertaker how much the policy is for, the amount of insurance so they know how much to charge her, you know. And then she has to pay every single month on it, because, years ago you could get buried for $500. Now, it is going to cost about $2,000. She has to pay out of her income every month to the undertaker on her bill for burial. Nobody knows what she is paying to the undertaker. So, that is where you need good lawyers, to go along to help her, and to guide her. She is only one person; there are many, many, who do this very same thing.

There are many other things that we do—old people—because we don't want to tell anybody. If we have a good friend and we like them, we will sometimes sit down and tell them.

More Volunteer Lawyers Needed

I think that more money, as I said before, is needed in the program to expand upon these services, to give the program more people who are really trained to do this job. There should be more volunteer lawyers. I think that some of the lawyers who retire from some of the big law firms should give some of their time as a volunteer to come around and help the poor people, because a lot of them made money on them and they could give some of the money back. [Applause.]

There is a field for much more development in this. It is brand new, and the National Council of Senior Citizens, in Washington, D.C., of which I am a board member, are really the people who are behind this, pushing this, and seeing that it works all over the country. You should be proud that we have all these organizations to speak for us. We go down to Washington to visit with Senator Kennedy and all the rest of our representatives to see that they do the right thing down there. [Applause.]

We appear down there in Washington just like we are appearing here today at this hearing in Massachusetts. All do not speak for us

but we have somebody in Washington lobbying for us all the time who really takes care of us. We should thank them all. We are thankful in our old age, and back them up. Those of us who don't know anything about the law have them to speak for us because we really need it.

I also want to pay a tribute to the workers who work with us, the young people who work with us. They are well equipped. As I always say, you all went to school, and you got the education, so you ought to know what to do. So, we put ourselves, many times, in their hands, and they do a good job. So, I want to pay a tribute to all of them because without them we couldn't make it.

We have a lot of big ideas, you know, when we get old, but our steps are slow, and our heads get a little slow, too, so maybe they can think while we are trying to get it together. We tell you what to do. You can get it together from what we say, so we thank you for your help.

Senator, we thank you, too, down in Washington, for what you do for us. We watch you, you know. We know what you are doing. He is always in our corner. [Applause.]

Senator KENNEDY. Thank you.

Mrs. CASS. We don't have to worry about him. He is there when we need him, and when there is a vote coming up for the elderly, you can pick up your paper and read that he was there and what he was there to do. That is what we want. So, we want to keep him there—please don't forget that. [Applause.]

Senator KENNEDY. I didn't see those remarks in your prepared testimony. They are nice to have—a little cool northerly breeze on a hot morning in August. Thank you, very much.

Frank, why don't we hear from you now.

STATEMENT OF FRANK J. MANNING, PRESIDENT, LEGISLATIVE COUNCIL FOR OLDER AMERICANS, BOSTON, MASS.

Mr. MANNING. First, I usually agree with Melnea Cass. One thing that she said that I have to take exception to is that age slows up our mental faculties. I have felt a slight acceleration in that area since I retired. In fact, I laughingly call it my retirement—I have never been so damn busy in all my life. But what we are discussing here this morning is one of the issues connected with retirement, an ever-growing problem in this country. Elders are not problem people; society is giving us a hell of a lot of problems, not the least of which is the lack of adequate income maintenance plans in this country. When an ordinary elderly person, on fixed income, thinks about a lawyer, he immediately thinks of a big fee and he also has a certain amount of mistrust, which, of course, is not always justified. The fact that most of those connected with Watergate were lawyers doesn't mean that they are all that way. A couple of them that I know are all right.

"THE LAW . . . IS AN AWESOME THING"

As a matter of fact, the law, to many elderly people, is a very awesome thing, a distant thing, and let me cite you a case in particular. One afternoon, about 3 o'clock, I received a telephone call from a

woman who identified herself as being about 75 years of age and she had a real problem on her hands. She said, "Mr. Manning they are selling my house, because I couldn't pay my taxes."

So I said, "Well, when are they selling your house?"

She said, "Tomorrow morning at 8 o'clock."

I said, "Dear, I wish you had gotten in contact with me sooner, but we will do what we can." So, I immediately got hold of one of our VISTA volunteers and, by the way, you can thank Senator Kennedy for having those VISTA programs, because when they threatened our programs, he used extraordinary means to save them. I don't know all the details. [Applause.]

We have a retired lawyer among other professionals, and I talked it over with him, and I said, "Do you have a friend?" I am not going to give the locale or the name of this. It's a little shady, you know. I said, "Do you have a friend in the right place?" And we worked out a deal that he would be there at 8 o'clock in the morning when the sale started. And he would have the opportunity to bid on the house. So, he arrived on time with a certified check for $1,000. Those two people are still sleeping in their own home, thank God, and they don't have to worry about the back taxes because, technically, they are new owners.

Now, where could you get service like that for nothing? [Applause.]

I am sending a memorandum on it to F. Lee Bailey to wise him up. As a matter of fact, the cost of legal service today—and I don't really want to downgrade all lawyers, surely they have overhead and heavy expense—and any program of legal services that needs lawyers should pay them an adequate fee so that they can serve us properly; but, however, at present we have about 22 million senior citizens over 65; and in 1980, there will be 24 million; and in 1990, there will be 27 million. In 2000, it will be 30 million; and in 2010, it will be 40 million; and yet I have not heard outside of the Senate Committee on Aging, and Senator Kennedy is a member, I have not heard, by any of our leading public officials, an in-depth discussion of how the Nation is going to meet that problem.

Full Access to the Law a Major Need

One of the great needs in any society is full access to the law regardless of your income, station, regardless of who you are; it is part of our creed that every man, woman, and child is entitled to full access to the law, and a poor person cannot get that, and I think that in this respect the legal services program is performing a service.

Now, as a representative of a statewide organization, I get calls from other areas, small communities, that do not have legal services, and one of the things that we would like to do is to get retired lawyers, volunteers, young people, to work with them in these communities, so that not only Boston and the urban communities will have these services, but also the smaller communities.

Now, the economics of the situation is such, where do we spend our money? Aside from an occasional Drambuie or martini, where do we spend it? Mostly on clothing, food, shelter, and medical costs. That is where most of our money goes. There is very little left for things like legal services or anything else that is outside the ordinary necessities of life, and the principal reason for this my friends is that in determining

our social security and other pension systems there is no margin for living. We are caught in a tight economic vise.

Just consider this one fact alone: A study in the early 1970's of the income of families in this country shows a glaring discrepancy which should bring the crimson of shame to the cheek of any conscientious American. The median income of couples under 65 is $12,500. The median income for couples over 65 is $4,800. We got a long way to go folks to tighten up that gap there, and it means that legal services, among other things, are consistently denied to you.

I know a lot of people that come into my office, as you have suggested, Mrs. Cass, to have wills made out, or even in some cases, and I don't like to say this, where members of the family are trying to do them out of their homes. We have a few cases like that, too. It is horrifying to think about, but it is true, and then you have tenant-landlord relationships and you have administrative decisions.

A good advocate for the elderly does not confine himself to any one area. There is a wide range in the administrative area, or wide range in the legislative area, and a wide range in the judicial area. So, you have to be a good advocate and you have to know where to go to get the help that this particular person needs, and so as far as the courts are concerned, all too often they are so busy that they don't have much time for poor defendants who have no friends or don't have much money.

Of course, if you operate on a large scale, there is always a good chance that you get a pardon, but if you do any minor offenses, you are in real trouble. So very often there is not adequate representation, and while the problem of the elders is not so much the criminal field, there are major problems in their everyday lives.

Paralegal Advocacy Is Needed

I want to close with this because I think my time is up, but I want to fill in with this little illustration where legal, paralegal advocacy, is needed.

A woman came into our office and said for some reason the Social Security Administration had denied her money for her children who were classified as survivors. She was a widow. There was some technical difficulty there. I can't go into it now. As you know, Senator Kennedy was instrumental recently in getting an ombudsman office for social security.

Now, the purpose of this ombudsman office is to handle cases that are so tangled that they require in-depth study. This is where that special social security office headed by Mr. McNamara comes into the picture.

So, this particular woman, not only did she win her case, but she got $2,250 for one of the children which she should have been receiving for the last couple of years, and in the case of another child, $125 a month. I don't have to tell you the difference this made in the quality of her life. Had she not had an advocate, she might have gone on in cramped existence for the rest of her life and never received the full measure of justice.

Sometimes I wish that I could be like the judge who said "This court is often in error, but never in doubt." But unfortunately, I have

doubts, and I have frustrations, but I want to tell you this, that we have to support these elderly programs, and at the earliest opportunity we have to get together with the Senate Committee on Aging saying, in addition to these programs, what about the 80 percent of senior citizens whose only need is a decent home, a decent income, and good health programs. Let's get down to brass tacks, and in the meantime, get legal services going. Thank you.

Senator KENNEDY. Jim Peace.

STATEMENT OF DR. JAMES S. PEACE, STATE DIRECTOR, NATIONAL RETIRED TEACHERS ASSOCIATION-AMERICAN ASSOCIATION OF RETIRED PERSONS, HYANNIS, MASS.

Dr. PEACE. Mr. Chairman, you have assigned to me one of the most difficult jobs that I ever had. To follow Mrs. Cass and Frank Manning is most difficult.

Senator KENNEDY. I agree.

Dr. PEACE. I don't see how it is humanly possible to add very much, but just let me try to be rather brief because I have cut down my testimony, after acting on instructions from not only your staff people, but because as we get older our tongue does not lose its elasticity. Maybe our muscles do, but we keep on talking. I will use a guide here so that I will stay within the bounds.

My name is Jim Peace, and I am the Massachusetts State director for the National Retired Teachers Association. I am also executive director of the Elder Services of Cape Cod and the Islands, Inc. Nationally, I believe the National Retired Teachers Association and the American Association of Retired Persons have approximately 9.8 million members, and in Massachusetts, we have 366,300. That is quite a significant number.

I am meeting here today with you in order to orient the committee to my testimony which has been prepared and has been distributed—the concerns that we see on a day-to-day basis in dealing with older people. Before going into what is needed in legal services—and I think that, in general, you know the ramifications of it—I would like to take a moment to describe, what, in fact are the legal problems of the elderly and their difficulties in obtaining legal services to assist them. I will also touch briefly on efforts by the Congress and our associations.

It must be remembered that the elderly, as a class, may be more vulnerable and more susceptible to abuses in these areas and may be physically unable to take meaningful action on behalf of themselves to rectify such wrongs.

UNIQUE LEGAL PROBLEMS OF ELDERLY

The elderly also experience legal problems that are unique to them; for example, age discrimination in employment, protection with respect to nursing home care, involuntary commitment, enforcement of pension rights, and eligibility for special tax relief programs. The most prevalent and serious problem, however, is one that may not even be perceived as a legal one; namely, the inability of many older persons to obtain sufficient resources on which to live decently. The elderly have legal rights to food, medical care, and money payments; things

under a complex network of local, State, and Federal programs, including social security, SSI, medicare, medicaid, and food stamps.

The elderly may forfeit their legal rights because they do not recognize that they have legal problems. They may be too proud to seek what they consider "free" help or are anxious somewhat about the uncertainties of obtaining an attorney. More importantly, the elderly, at times, forfeit their rights because they are unable to obtain legal assistance.

A retired person with a legal problem arising from a public benefit program may not be able to obtain counsel from the local bar association which regards public benefit law as too complex and unremunerative to be of interest. The alternative, free legal assistance through a legal service office, is also, for all intents and practical purposes, unavailable. Legal service offices, with their limited professional staff, have apparently been unable to develop sufficient expertise to handle problems in the public benefits area expeditiously, and, therefore, have been willing to draw out a large segment of their client population—the elderly—whom they know that they will not be able to serve effectively.

Elderly Represent 6 Percent of Legal Clients

Recent statistics indicate that the elderly represent 17 percent of those eligible for free legal services, but were only 6 percent of those actually served.

The situation of the nondestitute elderly and the availability of legal assistance to them is something that deserves very serious attention. Because legal service programs funded locally or by the Legal Services Corporation have rigid income guidelines, a retired person may not qualify for assistance. Unfortunately, this same person may not be able to afford a private attorney who may charge from $25 to $60 an hour.

The associations have obtained proof of this unfortunate fact in the letters they receive from their members. Although the associations do not purport to, nor do they, offer legal service to their members, the legislation department and caseworker staffs of NRTA/AARP national headquarters report that they receive an average of 485 letters a month from members seeking legal services because they cannot obtain it elsewhere. I want to add something. We can document this information, Senator.

We believe that these facts lead to the following conclusions: The elderly seriously need services to assist them with their special legal problems. It is important to develop legal service delivery systems if you are going to help them. The Congress, our associations, and others, have recognized this need and attempted to meet it. We believe, however, that these actions will encourage development of further legal services we are planning in certain areas.

In 1975, the Administration on Aging, and their representatives, here this morning, because of increased appropriations under the Labor-HEW Appropriations Act, was able to fund 11 model projects designed to foster improvement of legal services for the elderly. The 11 projects offered a variety of approaches toward this improvement.

Lawyer-Social Work Team

Now, I do want to say a word or two about the work that has been done by the associations. We believe that the retired persons constitute an important human resource that should be utilized in the delivery of legal services. Two universities were awarded research grants through the NRTA and AARP Andrus Foundation—St. Louis University and Duke University. I applaud Mrs. Cass' suggestion a moment ago. Under the grant awarded to St. Louis University of Applied Gerontology, the project will be to test whether a lawyer-social worker team, operating in tandem, can provide services to meet more fully the legal, social problems of the elderly in a more comprehensive manner.

The American Bar Association, at its convention this month, considered a plan to create legal aid panels to serve the elderly, to be manned by retired attorneys.

Future action: We suggest appropriate legislation would require any federally funded legal services program to create a special component that is designed to assist the elderly. Our associations "legal counsel" project has successfully demonstrated that retired persons can be trained and be utilized as paraprofessionals.

We also stated that the retired person who has a legal problem under a public benefit program may not be eligible for assistance and yet cannot secure a private attorney. We strongly suggest that consideration be given to establishing alternative conditions, other than income, in order to determine eligibility for assistance under federally funded programs.

Denial of Rights

The most prevalent and serious legal problem affecting the elderly is the denial of their rights under local and Federal programs. The associations legal counsel project has demonstrated that entitlement to public benefits is of primary concern to retired persons, regardless of income.

I say these things, Senator Kennedy, because I feel now that the Older Americans Act now requires all States to spend a percentage of their title III moneys in one or more of the four items listed under law. A State, if it determines, may not allocate any title III moneys for legal services. Fortunately Massachusetts does. In the light of the present need for such services, perhaps the law should be amended to insure that a percentage of title III funds will be spent on legal services.

We have pointed out that the elderly may not know that they have encountered a legal problem, and even if they do, they may not know assistance is available. Continuous effort is required to keep the legal counsel project before the elderly who need the services. Hence, it is essential that the public must be made aware of legal services as services are more fully developed and they must be more fully utilized. We believe specific legislation may be needed to insure that sufficient funds are available to inform and educate the public about legal services.

In conclusion, we believe that important steps have been taken to alleviate the problem of inadequate legal services to the elderly. More action is called for. I hope that our remarks and suggestions will be

helpful to you in considering and determining what future action is necessary. Thank you.

Senator KENNEDY. Thank you, very much. Frank Manning had to excuse himself. He was to be on a television program on channel 7, a new program devoted to the elderly, and it was getting close to air time. He had to excuse himself, which he did with considerable regret. We can be satisfied that he is out giving the gospel in other places as well. We appreciate the fact that he was able to be here and give, along with the rest of our panelists, absolutely superb testimony.

I don't see how anyone could argue or differ, or fail to agree, with just about every aspect of these comments. These three panelists have probably devoted as much time and energy and talent, and probably more importantly, their real heart and soul to the needs of our elderly people as anyone.

RESPONSE OF THE PRIVATE BAR

Before we ask Mrs. Cass a few questions, I would like to ask Jim Peace just one, and that is, what has been the response of the bar in your area to providing different kinds of services? Melnea Cass made a very good point earlier about involving the local, State, and national bar associations in these problems. I think this is an excellent suggestion. It is very interesting to me, as someone who is a strong supporter of the legal services program, that by far the most innovative legal program was developed within the OEO program and not within the bar association.

Once the legal service programs were initiated, we were able to begin to extend it to the elderly. It still doesn't do nearly enough.

I am going to write to the American Bar Association.* We will invite them to submit testimony on what they see their responsibilities as being and what action they are going to take within their associations to meet the challenge of providing legal assistance to the elderly. But now I would like to hear from Jim Peace. What is going on in your area?

Dr. PEACE. We get very little on the Cape, Senator, and I would like to make reference to what I feel to be a very significant report of the recent American Bar Association convention. In the legal profession, change is slow, which you probably will endorse.

Ralph Nader, the consumer advocate, said at the bar association convention that prospects for increased sensitivity by the bar to these needs were zero—just zero. Chesterfield Smith, a former association president, who favors many of our proposals, said that in a few years he hoped more lawyers would be disbarred if they did not make their individual contributions to public interest law. He knows that "in a few" means 14 years to 16 years. Of course, I do want to point out, too, that when a law is changed, many of the legislators, I believe, Senator, are also attorneys. So whether or not that will move as quickly as 14 to 16 years, I am not so certain.

But it has been very slow on the Cape. We have used the public defender on the Cape who has agreed to come in on occasion to assist us. We do have a very serious problem of a good number of ripoffs,

*Senator Kennedy wrote the American Bar Association on Sept. 8, 1976, requesting a representative from the association to testify at the September 29, 1976, hearing on "Improving Legal Representation for Older Americans" in Washington, D.C. See part 4 for the testimony of the American Bar Association.

and these people are being ripped off and they do not know where to turn.

I would like to add, Senator Kennedy, if I may, that Ray Eldridge, the president of the Massachusetts Retired Teachers Association, endorses the concept of the recommendations that I have made, and I support the statement of Mrs. Cass. I think that the senior aides out there in the audience demonstrate very effectively what can be done when senior power goes to work to help seniors. Why don't you stand up—all you senior aides—so we can see who you are? [Applause.]

Senator KENNEDY. We welcome them here. There are 63 senior aides, representing 55 communities, which are served by the senior aid program. All of these aides are working in social service fields. All of them are assisting other senior citizens in their given communities. The aides assembled today represent a force of 158 throughout the Commonwealth, providing services to all senior citizens, and they are sponsored by the community service employment program. Might I just mention at this point that I am delighted to have been the sponsor of that particular program. We have seen in our own State of Massachusetts what the talents and skills of our senior citizens can do. We have great needs in the cities, towns, and rural areas of this State for the kind of attention these senior aides can provide. I want to indicate my continuing commitment to that program.

Melnea, is there any final word of wisdom you want to give us?

Mrs. CASS. No; I just want to tell you, keep up your good work. And don't get tired, because you can get tired too quickly.

Senator KENNEDY. Don't you get tired. You're the one that I am worried about. [Applause.]

Mrs. CASS. I tell you I am never going to give up, but I want to say that they open the door too, Senator, and much of this legal thing, because they talk to the people one to one. It means a lot to people. God bless all of them. And are you through with us?

Senator KENNEDY. I am never through with you. But we are glad to have you.

If we could have the other Members of the Congress and the Senate listen to this panel, we wouldn't have problems funding these programs. We will try and give them the message down there.

The prepared statement of Dr. Peace will be inserted into the record at this time.

[The statement of Dr. Peace follows:]

PREPARED STATEMENT OF DR. JAMES S. PEACE

Mr. Chairman: My name is Dr. James S. Peace. I am here today to testify on behalf of the National Retired Teachers Association and the American Association of Retired Persons. These associations represent approximately 9.8 million retired persons nationally and 366,300 persons in Massachusetts. I appreciate this opportunity to testify before you on an issue that is very important to our people—the delivery of legal services to the elderly.

I am presently NRTA State director for Massachusetts. As state director, I am meeting with our members throughout the State and learning firsthand their problems and concerns. I am also executive director of Elder Services of Cape Cod and the Islands, Inc., which provides supportive services to enable the elderly to remain in their homes as long as it is medically possible. These include homemaker services, chore services, and congregate meal programs in which elderly volunteers are utilized.

Before discussing what action may be needed to improve and expand legal service delivery systems for the elderly, I would like to take a few minutes to describe what, in fact, are the legal problems of the elderly and their difficulties in obtaining legal services to assist them. I will also touch upon efforts by the Congress, our associations, and others to alleviate these problems.

The elderly experience legal problems that are encountered by all citizens, for example consumer and landlord-tenant difficulties. Even though the problems may be substantially identical among all age groups, it must be remembered that the elderly, as a class, may be more vulnerable and susceptible to abuses in these areas and may be physically unable to take meaningful action on their behalf to rectify such wrongs.

The elderly also experience legal problems that are unique to them; for example, age discrimination in employment; protection with respect to nursing home care and involuntary commitment; enforcement of pension rights; and eligibility for special tax relief programs. The most prevalent and serious problem, however, is one which may not even be perceived as a legal one, namely, the inability of many older persons to obtain sufficient resources on which to live decently. The elderly have legal rights to food, medical care, and money payments under a complex network of local and Federal programs including social security, SSI, medicare, medicaid, and food stamps. A list[1] has been attached to this statement outlining the legal problems of the elderly which require legal assistance.

The elderly may forfeit their legal rights because they do not recognize they have legal problems. They may be too proud to seek what they consider to be "free" help or are somewhat anxious about the uncertainties of obtaining an attorney. More importantly, the elderly, at times, forfeit their rights because they are unable to obtain legal assistance. There are a number of reasons for the unavailability of legal assistance.

A retired person having a legal problem with a public benefit program may not be able to obtain counsel from the local bar association which regards public benefit law as being too complex and lacking in monetary awards. The alternative, free legal assistance through a legal services office, is also, for all practical purposes, unavailable. Legal services offices, with their limited professional staff, have apparently been unable to develop sufficient expertise to handle problems in the public benefits area expeditiously, and therefore have been unwilling to draw out a large segment of their client population—the elderly—whom they know they will not be able to serve effectively. Recent statistics indicate that the elderly represent 17 percent of those eligible for free legal services but were only 6 percent of those actually served.

The situation of the nondestitute elderly and the availability of legal assistance to them deserves serious attention. Because legal service programs, funded locally or by the Legal Services Corporation (formerly by the Office of Economic Opportunity), have rigid income guidelines, a retired person may not qualify for assistance. Unfortunately, this same person may not be able to afford a private attorney who may charge from $25 to $60 an hour. Furthermore, even if resources are available to pay a private attorney, such attorneys may be unavailable since, as mentioned above, the private bar association concentrates minimal assistance to public benefit programs.

The associations have obtained proof of this unfortunate fact in the letters they receive from their members. Although the associations do not offer legal services to their members, the legislation department and caseworker staffs of the NRTA/AARP national headquarters report that they receive an average of 285 letters a month from members seeking legal services from the associations because they cannot obtain it elsewhere. Our associations' "legal counsel for the elderly" project, which I will discuss later, reports that in 1 month (June 1976) it received approximately 200 letters from individuals across the country requesting assistance with their public benefit problems.

We believe that these facts lead to the following conclusion. The elderly seriously need legal services to assist them with their special problems. It is important to develop legal service delivery systems specifically designed to help the elderly. The Congress, our associations and others have recognized this need and have attempted to meet it.

---

[1] See p. 164.

The Congress has promoted the expansion of legal services to the elderly. Under the Older Americans Act Amendments of 1975, a new emphasis was placed in the law upon legal services to the elderly. Certain provisions under the 1975 amendments, which related, in whole or in part, to legal assistance, have produced the following significant results. The social services, which the elderly should be receiving under a comprehensive and coordinated service system, developed by the State and local agencies on aging, now include legal and other counseling services. All States are now required to spend a certain percentage of their title III funds on one or a combination of the following items: transportation; home services, including homemaker services and home health services; legal and other counseling services and assistance programs, including tax counseling and assistance; and residential repair and renovation programs. Finally, the commissioner is now authorized to make grants for the training of lawyers and paraprofessionals in the rendering of legal assistance in a broad variety of cases. We believe these actions will encourage the development of legal services in the planning and service areas.

In 1975, the Administration on Aging, because of increased appropriations under the Labor-HEW Appropriations Act, was able to fund 11 model projects designed to foster improvement of legal services for the elderly. The 11 projects offered a variety of approaches towards this improvement. Particular emphasis was placed upon initiating a process that would result in the inclusion of a legal services component as part of the coordinated services provided in each planning and service area. Our associations were among the 11 grantees and developed a model project in the District of Columbia, entitled "legal counsel for the elderly," to which I referred earlier. This project successfully demonstrated the effective use of elderly paraprofessionals. Working under the supervision of an attorney and with special training in public benefit programs, these elderly volunteers were able to do all client interviews, handle informal and formal contacts with agencies, and, in many cases, draft correspondence and do basic research. I understand that a witness from "legal counsel" will be testifying before you in Washington at a later date, so I will not discuss the activities of this office in any greater detail.

Recently, the Congress increased HEW appropriations to a sufficient level so that the Administration on Aging was able to proceed with its second phase to improve legal services. Essentially, the plans call for the establishment of the State agency on aging as the focal point for the promotion and development of legal service activities in that State. AoA intends to award model project funds to the State agencies on aging on a formula basis. To assist the State agencies, AoA has awarded grants to five model projects for the purpose of providing technical assistance. Based upon the success of the "legal counsel for the elderly" project, the associations are among the five grantees. We expect to assist States in establishing legal service activities that involve volunteer workers and developing organizational links between State and area agencies, legal service organizations, and voluntary organizations. To what extent that AoA's second phase of activities will expand and improve legal services is yet to be determined.

Our associations have long sought to improve and expand the delivery of legal services to the elderly. In addition to our projects funded by AoA, we have developed our own legal counseling programs and promoted other educational groups in their studies of this problem.

Most notable among the associations' efforts to assist retired persons with their legal problems is our free tax-counseling program known as Tax-Aide. Under the Tax-Aide program, NRTA/AARP members, a majority without prior experience in the tax field, have been specially trained to provide tax counseling. In 1974, 2,329 volunteer tax counselors provided free tax-counseling to 213,696 elderly taxpayers.

The NRTA/AARP Andrus Foundation awarded research grants to Duke University and St. Louis University. Under the grant awarded to the Duke University Center for the Study of Aging and Human Development, law students are given the opportunity to represent the elderly clients through outreach work in the senior citizen centers and legal aid society. Under the grant awarded to the St. Louis University Institute of Applied Gerontology, the project will test whether a lawyer-social worker team can provide the services to meet the legal and social problems of the elderly in a more comprehensive manner. We believe that these projects will provide valuable insight into the most effective and efficient method to deliver legal services to the elderly.

State and local agencies, legal aid or services programs, and others have acted on their own initiative, and developed legal services for the elderly well in advance of AoA's recent actions. While we do not have a compilation of legal programs for the elderly throughout the country, it is estimated that approximately 100 such programs are in operation. These programs present a broad spectrum in terms of the elderly clientele served (e.g., income limits, residency requirements), the type of assistance provided (e.g., full range of services, only nonfee generating cases) and the funding obtained to insure continued service (e.g., title XX funds, OAA funds). According to the Massachusetts Department of Elder Affairs legal services for the elderly in this State are presently provided through the activities of the nursing home ombudsman program. The department also plans to publish and distribute to the area agencies on aging a booklet on the legal problems of the elderly.

I had briefly mentioned that the role of the private bar association in assisting the elderly with their special legal problems has been limited due to the unique nature of these problems. This does not mean that the private bar association has not recognized its obligation to improve services to the elderly. Assistance can be improved, particularly where the legal problem is encountered by all citizens, and the private attorney would have considerable experience in dealing with it. The American Bar Association, at its 1975 annual meeting passed a resolution which supported a program to establish, with the cooperation of local and State bar associations, panels of retired attorneys. These panels would provide legal assistance on a pro bono basis to the elderly who are financially unable to obtain an attorney. Moreover, the family law section of the ABA is currently considering a proposal that in 1977 the association will sponsor a national institute on the legal problems of the elderly. We believe these to be very constructive programs and encourage the ABA to pursue them further.

While these facts indicate there are activities underway on various levels to improve and expand the delivery of legal services to the elderly, they also show that a vast need for such services remains. Further actions to meet this need must be forthcoming. The Congress has an important responsibility to promote and develop a comprehensive national effort. To assist you, our associations ask that you consider and study the following recommendations.

We have previously pointed out that existing legal services programs funded by the Legal Services Corporation are not fully utilized by the elderly for a number of reasons. We suggest appropriate legislation that would require any federally funded legal services program to create a special component that is designed to assist the elderly. Our associations' "legal counsel" project has successfully demonstrated that retired persons can be trained and be utilized as paraprofessionals in providing legal services to the elderly. The staff attorneys on the project have estimated that they were able to increase their caseload by 30 percent to 50 percent by working with volunteers. The creation of a special component, such as the "legal counsel" project will help to increase the utilization of existing legal services by the elderly.

We have also stated that a retired person who has a legal problem under a public benefit program may not be eligible for assistance under a legal services program and yet cannot secure a private attorney because the case may not offer sufficient monetary awards. We suggest that consideration be given to establishing conditions, in addition to income, to determine eligibility for assistance under a federally funded program. Other possible conditions are the percentage of income derived from public benefit programs or age.

In our discussion of the substantive legal problems of the elderly, we stated that the most prevalent and serious legal problem affecting this group is the denial of their rights under local and federal programs. Our associations' "legal counsel" project has demonstrated that entitlement to public benefits is a primary concern of retired persons, regardless of income. A retired person who is attempting to determine his eligibility for certain benefits cannot obtain unbiased legal counsel from the government agency that is administering the federal program. The establishment of a special office within the Government agency, which provides unbiased legal assistance to the elderly on benefit entitlement, may help to alleviate this problem.

The Administration on Aging has attempted to place the State agencies in a leadership role for the development of legal services. As we pointed out, the Older Americans Act now requires all States to spend a percentage of their title III funds on only one of the four items specified under the law. This

means that the State, if it so determines, may allocate no title III funds for legal services. In light of the pressing need for such services, perhaps the law should be amended to insure that a percentage of title III funds will be spent on legal services.

We have pointed out that the elderly may not know that they have encountered a legal problem and, even if they do, they may not know assistance is available. Furthermore, our associations' "legal counsel" project reports that it has become abundantly clear that a continuous effort is required to keep the name of the project before the elderly who need the services. The "legal counsel" project also reports that it has received letters from across the country requesting legal assistance. For these reasons we find that the public, particularly the elderly, must be made more aware of legal services. We believe specific legislation may be needed to insure that sufficient funds are available to inform and educate the public about legal services for the elderly.

In conclusion, we believe that important steps have been taken to alleviate the problem of inadequate legal services to the elderly. However, more action is required. I hope that our remarks and suggestions will be helpful to you in considering what future action is needed. Thank you.

Legal Problems of the Elderly

1. *Social Security Old Age Benefits.*—Many individuals are unaware of their eligibility to receive benefits or of their entitlement to higher benefit payments. An individual, even if he does feel that he is eligible or is entitled to higher benefits may not know how to determine such or to contact the appropriate officials. A legal services program should advise the elderly of their eligibility and assist in benefit computation.

Many individuals are unaware of their right to appeal adverse determinations by the Social Security Administration, or are unfamiliar with the appeal process. A legal service program should be able to assist and to represent those who may wish to make a formal appeal.

2. *Supplemental Security Income.*—The problems that have arisen under SSI have been described as severe.[1] Only 2.3 million people of the estimated 4 million elderly who are eligible for SSI are receiving benefits. As of January 1975, there were approximately 27,000 appeal hearings pending concerning SSI, a majority of which were eligibility claims filed by elderly persons.[2] Being a relatively new program, many people are uncertain as to the basic provisions of SSI.

Therefore, a need does exist to alert the elderly of their right to benefits under SSI and to explain the program. Assistance can also be provided to those elderly whose checks have been lost or delayed.

3. *Medicare.*—A major issue is the wrongful denial of reimbursement for medical expenses and the interpretation of those provisions which limit or extend benefits (e.g., items and services which are reasonable and necessary for the diagnosis or treatment of illness or injury or to improve the functioning of malformed body member). Issues also arise as to the delayed determination of benefits and the scope of services covered.

4. *Medicaid.*—Medicaid is a joint Federal-State program in which the states are given considerable latitude in determining eligibility requirements and the scope of services provided. Consequently, issues have arisen regarding eligibility, the denial of benefits based upon residency requirements, in addition to those issues arising under medicare.

5. *Food Stamps.*—Elderly persons, although eligible under the food stamp program, have not been provided with proper information or are reluctant to enter the food stamp office and apply. These individuals who are experiencing extreme financial difficulties are entitled to this relief. A legal services program should provide basic eligibility information for food stamps.

6. *Public Housing.*—Many older persons, faced with ever-increasing costs, cannot afford decent housing. A legal services program should assist those eligible older persons to obtain public housing. The older person, as well as all tenants, are entitled to the quiet enjoyment of their premises and should be protected from arbitrary action or harassment by the public landlord.

---

[1] House Report 94–67, p. 9.
[2] *Ibid.*

7. *Landlord-Tenant.*—The older person may be uncertain of his rights to decent housing or his rights to evict a tenant who will not pay the rent and move out. The older person may also not know how to proceed in order to enforce these rights.

A legal services office should advise the older person requesting assistance as to the duties and responsibilities of the landlord to maintain the premises in a habitable condition, the law and regulation concerning rent increases and conversion of apartment units to condominiums, as well as advice on eviction procedures.

8. *Real Property Taxes.*—To alleviate the income drain caused by property taxes upon older persons with fixed incomes, the States have provided property tax concessions to this group. Such advantages can, however, be lost if the property has been assessed at an unreasonable amount. A legal services program should provide basic information on property tax relief and assessment appeal procedures.

9. *Pensions.*—Congressional studies have shown that persons rarely receive back what they contributed to a pension plan. These findings prompted the enactment of the Retirement Income Security Act of 1974. However, this act does not provide relief for those persons who retired or became disabled prior to the effective date. These individuals are not assured of their benefits and may require legal assistance.

10. *Consumer Problems.*—Older persons, as well as all consumers, can become victims of deceptive practices in the selling, pricing or advertising of goods and services, buying on credit or may wish to enforce their rights under a warranty or guarantee. The older person may become involved in a dispute with an insurance carrier or health care provider over the coverage included within a policy.

An older person may require assistance in negotiating with a merchant over the repair or replacement of a defective good or to lower a repair bill to conform with estimates. Assistance can also be offered in negotiating with insurance carriers. Older persons would also be provided with information regarding the small claims court and how to use it to obtain relief.

11. *Age Discrimination.*—Discrimination based upon age can occur within a wide range of areas, e.g., employment and discharge, consumer credit, housing. The older worker can enforce his rights under the Age Discrimination in Employment Act which applies to persons between 40 and 65 years of age. Older workers must be advised of the coverage, prohibitions, enforcement, procedure and relief as set forth within the act.

Senator KENNEDY. All right, now, we have a panel who are professional and knowledgeable and active in the delivery of legal services in the State to the elderly; J. J. Donovan, director of the nursing home ombudsman project for the Massachusetts Department of Elder Affairs, retired attorney, who in his ombudsman post is establishing a clearinghouse to help people locate nursing home openings, and who has also initiated a furlough program where nursing home residents forced to be hospitalized can be assured of a bed upon returning to the nursing home. This program is funded through the Older Americans Act. Bob Spangenberg is a member of both the Boston Bar Association and the Massachusetts Bar Association, former executive director of the Action Plan for Legal Services, who, during that period, conducted a study on the legal needs of low-income persons in the Boston area, and provided the court information on the legal needs of elderly citizens. Gerald Wall is a staff attorney for the Council of Elders Legal Service Program.. who filed suit on behalf of the public housing tenants to prevent the Boston Housing Authority from imposing rent hikes. The injunction was issued to prevent those hikes from taking place and now remains pending in the courts. James Bergman is New England regional director of the legal research and services for the elderly program funded by the Administration on the Aging, under the Older Americans Act. Mr. Donovan, you may start.

STATEMENT OF J. J. DONOVAN, DIRECTOR, NURSING HOME OMBUDSMAN PROJECT, DEPARTMENT OF ELDER AFFAIRS, COMMONWEALTH OF MASSACHUSETTS, BOSTON, MASS.

Mr. DONOVAN. Good morning, Senator. My name is J. J. Donovan. I am the State nursing home ombudsman director in the department of elder affairs. The purpose of the nursing home ombudsman project is to provide a forum through which nursing home patients, or their next of kin or friends, can place complaints about nursing home care which we can process.

In a couplet, I can say that our purpose is to improve the quality of care which nursing home patients receive and to upgrade the safety of the environment in which they live. Early in our project it became apparent that it was important for us to work on the problems and also to provide information and referral for nursing home patients. We found that a problem involving the spouse remaining in the community soon became a problem for the nursing home patient and a subject of worry and concern and trauma, and therefore we expanded our operation to provide assistance in solving problems in the community.

The ombudsman developmental specialist has been recently created as an offshoot of the nursing home ombudsman project. The purpose of the ombudsman developmental specialist is to develop local resources which will provide assistance to nursing home patients by visiting them in the nursing home locale to determine what complaints and what problems exist, and how they can be resolved.

FIVE KEY LEGAL AREAS FOR NURSING HOME PATIENTS

In the past year we have added a legal service project to the ombudsman activity. This project is dedicated to providing legal aid in five areas for nursing home patients. The legal aid will also be available to the elderly in the community. The areas which we chose are those which required the greatest assistance. These are the areas of providing for the appointment of a conservator, the appointment of a guardian, guidance in incompetency issues, guidance where access to nursing homes has been denied, and assistance in preventing the involuntary nursing home transfers. Legal aid is also provided to assure that fair hearings procedures are followed. Finally, assistance in home ownership issues, so that the elderly may be informed as to the availability and procedures to be followed in obtaining assistance in tax abatements and in tax deferrals.

We concluded that it would be practical to develop a handbook in these five areas of concern for the elderly, and we are now in the process of its completion. This handbook will be distributed very shortly through the Home Care Corp. and area agencies on aging, which will assist in developing local resources.

A survey was made of the Commonwealth of Massachusetts through which we determined that the cape and islands area offered the best possibility of success on an initial local resources project. Working with Dr. Jim Peace and with Margaret McAdams, we initiated the activity in the Hyannis office of the Home Care Corp. The pattern

which will be developed in the Home Care Corp. on the cape and islands will be used to develop a similar program in the other seven public health regions where Home Care Corp and area agencies on aging will provide legal aid to the elderly.

In certain areas, we have found that more assistance is needed than in others—for instance, in the area of conservatorships and involuntary transfers, and in the use of paralegals. We believe that vast new areas of assistance can be opened up to aid the elderly by pursuing these objectives and we intend to so do.

I think, further, that this testimony fairly well sums up my comments for this morning.

Impact of Transfers on Patients

Senator Kennedy. Very good. Mr. Donovan, what about the transfers; could you tell us a little bit about that?

Mr. Donovan. Senator, I would be glad to elaborate on that point. We have found that elderly people are admitted to some nursing homes, and I stress some nursing homes, because this is not characteristic of the entire nursing home industry, and are kept only as long as they or their relatives can pay the cost of private care. They are admitted when they have a sum of let us say $12,000 or $15,000 in personal property, $10,000, $12,000, or $13,000 more than the maximum allowed under the criteria for public assistance. They are often asked to sign a contract under the terms of which it is stated that they will not be kept in the nursing home as publicly assisted patients. These patients pay an average amount of let us say $1,000 a month. Let us assume that for the purpose of this comparison that they had $12,000 in personal funds upon admission. About the end of the 10th month, when their funds have been spent and they have only $2,000 remaining, and where they now meet the criteria for public assistance, they are told that they must transfer out of the nursing home. They are told that the facility cannot keep them. Now, this harsh action causes unbelievable worry, trauma, and concern and a feeling of rejection. It is discrimination of the worst type in my view. It also creates two classes of citizens. The first-class citizens who can pay for their private keep in a nursing home and second-class citizens who are turned out when they become the beneficiaries of public assistance.

These elderly people, who are now nursing home residents, have, during their long and useful lives, paid their taxes, social security, raised their families, and have been upright, productive members of the community. But, they are not permitted to remain in the familiar surroundings of the nursing home where they have paid their way. Because they are no longer private paying residents, they are told that they must transfer out of the facility.

I believe, sir, that such contracts should be eliminated. I believe that this practice should be eliminated without a contract. There should be no discrimination when one passes from private pay to public assistance, and I believe that at both the State level and at the Federal level steps should be taken so that this very unhealthy practice can be eliminated. [Applause.]

79-662—77——5

AVAILABILITY OF NURSING HOME BEDS

Senator KENNEDY. How many nursing home beds are available? How many on the waiting list in the State of Massachusetts?

Mr. DONOVAN. It is extremely difficult to determine because there is not a viable process in the Commonwealth for the constant updating of availability of nursing home beds. However, the computer arrangement in Westboro is rapidly approaching the point where the department of public welfare, which has the statutory responsibility in the Commonwealth of Massachusetts for placing publicly assisted patients, will be in a position to determine availability on a weekly basis. However, sir, I can say this; that a survey made by the department of public health in cooperation with public welfare about 2 years ago indicated that it requires an average of 7 weeks for a publicly assisted patient to obtain a nursing home bed when he or she is in an acute care facility and ready for discharge, as against an average of approximately 10 days or 2 weeks for private paying patients similarly situated. I believe you can see on the basis of these figures, which can be amply supported, that although I cannot tell you the exact number of beds, I can tell you that there is discrimination and that there is a feeling of rejection developing in the acute care hospitals just as it is in the example which I gave you of the nursing homes involuntary transfers.

Senator KENNEDY. Mr. Spangenberg.

STATEMENT OF ROBERT SPANGENBERG, ABT ASSOCIATES, CAMBRIDGE, MASS.

Mr. SPANGENBERG. Senator Kennedy, as you indicated I was for some years the executive director of the Boston legal assistance program and for the past 19 months have been working on a study of the legal needs of low-income people in the city of Boston; low-income people making up the 45,000 to 50,000 families in the city who qualify under the guidelines of the legal services program for the city of Boston.

We discovered very early that because of the unique needs of the elderly, a portion of our time should be devoted to studying solely the legal needs of the elderly in the city of Boston. I might say that this program, the study, was sponsored by the Boston Bar Association as a public service.

I think, also, I would like to mention a couple of other things in reference to the prior discussion that was had. I want to draw your attention to two specific things that we did. The first thing was we wanted to get a good fix on the kinds of problems the elderly have, and we did that two ways; First, we conducted a door-to-door questionnaire, which turned out to be a 28-page questionnaire, to 500 low-income families in the city of Boston, and of the 500 that we spoke to, we found that in 83 of these 500 households, there was at least one person of the age of 65 or above.

Consequently, we were able to talk with a number of elderly people making up about 16 percent of the sample of the survey. In reviewing the quantitative type of sample, you find, by the way, really two

focuses. The first was to look at the life of the low-income person over the past 5 years to find from their standpoint specific kinds of legal issues they had to face in the last 5 years. And second, to suggest to them a number of other kinds of problems that they had not recognized as legal that might require the attention of a lawyer or a legally trained person. So, we did that from their own recognition of legal problems. Beyond that I might add that when we talked about other kinds of problems, we talked in terms of something like four times the number that low-income persons recognize as legal problems that might conceivably be legal if the lawyer were available.

In addition to the analysis of the collection of that data, we went around from neighborhood to neighborhood in the city and spoke to a large number of community agencies; social service agencies, that deal with the problems of the elderly. As a matter of fact, we had an opportunity to discuss this aspect with more than 250 agencies throughout the entire city who were concerned about the delivery of social services to low income people.

Two Most Serious Legal Problems of Elderly

Now, based upon both aspects of the work, the questionnaire and the neighborhood interviews which, incidentally, came out the same, we determined, based upon our findings, that the two most serious problems brought to our attention in regard to the legal problems of the elderly were housing and income maintenance. Housing in two or three particular aspects; namely, evictions, rent increases, and code violations. And income maintenance, particularly with SSI, and medicaid.

We found—which I am sure is no surprise to people—that there are many low-income citizens in the city of Boston who qualify for SSI benefits, and were either not aware of the fact that they qualified or are not aware of what the qualifications are for SSI, and there is a large number of the elderly population who with some assistance and education should be receiving the public benefits provided by the Federal and State governments.

Medicaid Bureaucratic Problems

In the area of medicaid, we found a number of people who even today are having difficulty getting a doctor to give them care under the medicaid program, and all kinds of bureaucratic problems relating to medicaid, pay of the doctors, et cetera. We found those to be the two most prevalent and serious problems. Three additional categories were, first, relating to the question that Mr. Donovan spoke about, that is, conservators and guardians. This is a very serious problem in this State to find people who are qualified and have the interest in the elderly uppermost in their mind. This is a very serious problem.

We have the day-to-day living problems that the elderly face, which are not seen as quickly as the larger problems, such as consumer problems, assistance in drafting wills, questions relating to vandalism, and another very serious problem, and that is utility bills.

And, finally, there is a discussion of the special problems of 45,000 people who are living in nursing homes in the city of Boston, which is a figure that was supplied to us. Now, as far as the legal resources that are currently available in the city of Boston are concerned, the principal organization is, once again, the Federal legal service program, Greater Boston Legal Services, which has two aspects to it; the first is the day-to-day services which are provided by the six offices throughout the city, but that is a very, very small effort. The second part of it is the Council of Elders Legal Services program, which is operated in cooperation with Greater Boston Legal Services, which has an office in the Moreville House, but again, they only have four lawyers in that program which is intended to serve a very wide population, not nearly enough resources in terms of full-time attorneys.

Free Legal Services

Now, one of the things that we did in relation to the discussion of your prior panel, is in the course of our study, we contacted some 2,700 private lawyers who practice in the city of Boston. We asked them specifically to give us information about what kind of free legal services they had provided in the course of their practice over the last year. Even more important than that, in what kind of legal service, free service, as officers of the court, as members of the bar, they would be willing to contribute over the next 12 months. And it may well be that their response on paper will not meet the real need, nor will it meet the realities of the matter, but I can tell you that we surveyed 2,700 lawyers, and only about a third indicated that they had done any free legal services to older people in the past year, and yet two-thirds indicated a concern or willingness to provide some sort of service, so I think that what we all must do is to look at this resource, because I don't think that the Federal funds are going to sufficiently answer the total problem. If there are a large number of private lawyers out there who are willing to provide some sort of service, then I think the joining up of the public and the private bar in this effort is absolutely necessary.

Senator Kennedy. How are we going to do that?

Mr. Spangenberg. Well, I think—excuse me.

Senator Kennedy. How do you recommend that that be done? You have given us the figures, what do you need to get the two-thirds more involved who are being asked to participate?

Mr. Spangenberg. Well, one thing that we could do is to require that as a matter of admission to the bar that a lawyer devote a certain percentage of his practice to this service.

Senator Kennedy. That is a good idea, but we don't need Federal legislation to do that. That has to be done either by the local bar association or the State bar association.

Mr. Spangenberg. Or the Supreme Judicial Court in Massachusetts. They regulate the practice of law.

But I think I see somewhere down the line, although the American Bar Association has a special committee that has been working in that area, I think there needs to be a joint cooperation between those agencies that deliver these services and the Boston Bar Association.

Pressure has to be exerted through someone like the bar association. If it decides to do these things, it has a tremendous amount of power. Things will happen, and I think that pressure has to be put on that organization and I think they are ready to respond.

Senator KENNEDY. The bar association ought to be encouraging these legal services without being further jarred by people from the outside. But I will be glad to raise this. Will you make that study a part of the record?

Mr. SPANGENBERG. I certainly will.*

Senator KENNEDY. That will be helpful, and then we will get in touch, I will get in touch with the association and ask them what they would be prepared to do to try to take advantage of it. I want to hear from our other witnesses, unless it is on this point, Mr. Donovan.

Mr. DONOVAN. It is on this point. I would like to give an example of the type of cooperation which might be expected from the bar association. A short while ago we received a call from a social worker at Boston City Hospital. She said that a retired city of Boston employee was living in the Pine Street Inn and that he had $9,000 in retirement funds available to him, which he was seeking to obtain in one lump sum.

Now, I think you will agree that if you give a retired worker $9,000 in cash and let him carry it to the Pine Street Inn it would be just the same as exposing him to robbery or to other serious personal harm. We went to the judge of the probate court and asked him to speedily appoint a conservator. We then went to the secretary of the Boston Bar Association to ask if he would help us in obtaining the assistance of an attorney to file a petition for conservatorship, pro bono.

Within 4 days, and still keeping within the requirements of notice, a petition was filed. In 9 or 10 days a conservator was appointed and this man was protected from himself. That was a worthwhile approach and an example of what can be done by the bar association when one seeks their support. That is all.

Senator KENNEDY. Mr. Wall.

STATEMENT OF GERALD D. WALL, STAFF ATTORNEY, COUNCIL OF ELDERS LEGAL SERVICES, BOSTON, MASS.

Mr. WALL. Thank you, Senator Kennedy, Members of the U.S. Senate Special Committee on Aging. As a staff attorney with the Council of Elders Legal Services program, I have been exposed to a considerable variety of problems facing the elderly in the city of Boston. Often, the existence of a legal problem is clear. The older person has been served with a legal paper saying that a lawsuit against him has been started; they have been notified of a cutback in a Government benefit and the notice says that they have the right to appeal to an administrative hearing officer or to a court; or they have been harmed in some way and they would like to take some legal action of their own to collect damages. There are many variations of these situations.

*Material not received at time of this printing.

However, there are many other situations in which the need for legal help may not be so obvious. The person knows he or she has a problem, but does not know where to turn for help. The person knows he or she has a problem, is aware that there is help available, but for one reason or another is afraid to seek out that help. Probably the most blatant example of persons whose legal problems are ignored are residents of nursing homes and rest homes. Less obvious is the example of the shut-in, who is not able to or who, due to isolation, does not seek out help.

As far as I am concerned there is a solution to these problems. First, adequate legal services must be available. Second, older persons must be educated that the services are there and that they don't have to be afraid to use those services.

Legal Problems Facing Older Americans

Up to now I have been rather general in my presentation of the problems encountered in delivering legal services to the elderly. I will now be more specific as to the type of legal problems facing older persons which I feel should be addressed by this committee and by persons and groups interested in the legal problems of the elderly.

For example, the elder does not know that he or she is receiving the correct amount of supplemental security income or some other Government benefit to which he or she may be entitled. It may not be possible for the older person to determine if the benefit is accurately calculated, and, even if the older person does seek an explanation, it may be filled with such complex terminology that he or she cannot understand how the determination was made.

Then there is the case of a person who applies for supplemental security income and is told that he or she cannot possess more than $1,500 in liquid resources if single or $2,250 if married, or own a home worth more than $25,000. Instead of allowing the applicant to be more self-sufficient and to feel an entitlement to these minimal benefits, he or she is stripped of the few resources that were accumulated over a lifetime and now is totally dependant on the Government bureaucracy.

One of the more disturbing situations is that of a person who begins to have difficulty managing his or her own affairs. The only persons available to provide assistance would do so solely for their own gain. Although the older person should be able, with minimal help, to live his or her own life in their own home, he or she is forced to either live in a nursing home or find himself or herself under the control of a hostile person.

No less disturbing is the plight of the older person who is fully capable of handling his or her own affiairs but has limited income. The rent has increased because he or she has moved and the home is no longer covered by rent control. They are faced with accelerating gas, oil, and electricity costs and are further threatened by the possibility of a large property tax increase which the landlord assures them he will pass on to the elderly tenant. The older person applies for public housing but is told that the waiting list is so long that this is impractical.

The older person who resides in public housing, but has been told that his income has been reviewed and his rent must now be increased

substantially, also has a problem. This is the very situation presently faced by elderly persons and others who are tenants of the Boston Housing Authority.

BOSTON HOUSING AUTHORITY RENT INCREASE CASE

On or about June 30, 1976, numerous tenants of the Boston Housing Authority were notified that their rents would be increased in accordance with a review of their income. Among the tenants are a substantial number of older persons, for whom, in many cases, the rent increases represent a significant financial hardship. Our office, and other offices of the Greater Boston Legal Services, received numerous complaints about the proposed increases. As a result a lawsuit was filed against the Boston Housing Authority during the week of July 26, 1976. That same week, the Boston Housing Authority decided to delay the increases until a further review takes place. On July 29, Judge E. George Daher of the Boston Housing Court enjoined the Boston Housing Authority from further implementation of the rent increase until the court determines that the proper procedures are being followed.

The lawsuit does not challenge the legal right of the Boston Housing Authority to raise rents. Rather, it challenges the method by which the rent increases were being implemented. In particular, the lawsuit asserts that affected persons must be given adequate explanation as to how their rent increases are computed and an opportunity for a meaningful hearing prior to implementation of the increase. This is particularly important because many tenants' rent were incorrectly calculated. What is asked for is no more than the tenants are entitled to under the State regulations governing public housing, and the due process clause of the U.S. Constitution allows.

At the present time rent increases are suspended. Negotiations between the housing authority and attorneys for the tenants are in progress in an attempt to reach agreement on a procedure which will adequately protect the interests of the tenants. Thank you. [Applause.]

Senator KENNEDY. Just as a point of information, the hearing is going to adjourn at 11:40, so we have about 17 or 18 more minutes left here. However, if you have to leave, feel free to do so. OK, Mr. Bergman.

STATEMENT OF JAMES A. BERGMAN, NEW ENGLAND REGION DIRECTOR, LEGAL RESEARCH AND SERVICES FOR THE ELDERLY PROGRAM, NATIONAL COUNCIL OF SENIOR CITIZENS, INC., BOSTON, MASS.

Mr. BERGMAN. Thank you, Senator. My name is James Bergman. I am with the legal research and services for the elderly program, which is part of the National Council of Senior Citizens. Since I have been given permission to submit written testimony, I will do that and will summarize my comments from the written testimony.[1]

[1] See p. 178.

First, I think that most of the people who have testified today have eloquently stated what the problems are that are faced by older people which require legal assistance to resolve. I think that Mrs. Cass and Frank Manning have done a very eloquent job and the last thing I am going to try to do is to improve upon their comments. Instead, I would like to talk about the response in New England, and especially in Massachusetts, to the legal problems that have been pointed up here today.

It is interesting to me that New England, as well as probably California, according to most people who are knowledgeable, are supposed to be the leaders in the country in providing legal services to older people. In fact, that probably is the case, but I think it is one thing to be a leader when the competition isn't too tough, and it is another thing to be a leader when the competition is tough. In this case, I am afraid the competition is exceedingly weak.

New England may, in fact, be a leader in providing legal services to the elderly and to low-income people, but the fact is that the response has been exceedingly meager. I would like to highlight three programs that have been especially good in providing legal services to older people to point out what can be done when a good program is funded. I might add that the interesting thing is that the programs that have been funded over the last 8 or 9 years have almost exclusively been funded by either title III of the Older Americans Act or by the Office of Economic Opportunity through the original LRSE program. I might add that I was fortunate enough to have been the director of the original Council of Elders legal program where Mrs. Cass helped teach me about the ways of the world. I may have been born and raised in Wisconsin, but I grew up under Mrs. Cass and the Council of Elders.

Council of Elders Legal Program

As I said, the Council of Elders legal program was funded by that original OEO program, and the other programs that I will mention have been funded exclusively by title III of the Older Americans Act. And that by itself, I think, tells a little bit of a story of how legal services for the elderly have developed in this country.

The original Council of Elders LSRE program, which began in 1969, was somewhat unique in three different ways at that time. One was that it hired older people as paralegals, and found out very quickly that that was probably the best way to do outreach. It was also one of the best ways to find and help older people.

Second, it took an approach that I think was different from most of the programs in that it hired a downtown law firm instead of having staff attorneys. Thus, with a combination of older people as paralegals—and I think the oldest at the beginning was 79—and a downtown law firm which was an exceedingly strong law firm in the city, the legal project had a very good one-two punch.

The third thing, the program, while it handled direct cases, focused very much on legislative activities as a means of attempting to resolve problems affecting many elderly persons. For example, while it may be that a person's major problem is income, once you have gotten him adequate social security benefits and old age benefits, this person still

might be living on nothing more than about $210 a month. Now, that is pretty inadequate, and maybe the best solution is to go to the legislature and fight for increases in old age benefits, which was one of the things at that time the program did, along with groups like Frank Manning's organization.

We also worked with Frank on drafting the original legislation to set up a State Department of Elder Affairs, feeling that if we could focus attention at that high a level in State government, we could probably get better and more resources for older people. I think that the Council of Elders legal program demonstrated that legislative action is a very important part of any legal program for older people, because the program can hit the problems of thousands of people in the same time span that it would take to handle maybe 5 to 10 individual cases.

Cambridge-Somerville Legal Services

Another example of a way of approaching the legal problems of older persons has been carried out by the Cambridge-Somerville legal service program under a title III grant for the last 2 years. That program is focused very much on what is called high impact litigation, or class action suits. And it has been successful in getting a Federal judge to order the Cambridge office of the Social Security Administration to take no more than 45 days to process SSI applications for persons who are not disabled. As most of you know, when SSI came into being, we all received tens and hundreds of complaints from people who filed their applications, but it took months and months to get those applications handled so that the persons could get on SSI.

In one class action suit the Cambridge office was ordered to process all applications within 45 days, and now they somehow are able to do it in 30 days in most cases. I think it proves the point that you can use that kind of litigation to get the job done for more than just one person. That same program also filed a suit which challenges the privacy issues created by title XX applications. The suit basically makes the point that if you require people to give information that they don't want to give—and I think Mrs. Cass very eloquently put it, that older people don't always want to tell you everything—that they will often refuse to provide the information even if it means that they will be denied services which they need. I think that while that case is still in court, it has highlighted some very important issues, and Congress has already begun to respond to some of the privacy issues.

Statewide Legal Service Programs

A third kind of program that has been started, and in fact runs in New Hampshire, Vermont, Maine, and Rhode Island, is statewide legal service programs which handle mostly individual legal problems of the elderly. Normally these programs have begun under a title III grant to hire an attorney who is also the director, and then they supplement the programs with VISTA volunteers and CETA employees who serve as paralegals. The result in those programs in each case is that they handled individual cases so that more and more older people could get access to legal services.

The New Hampshire program, I think, is a good example of how that can be done. The program is operated by New Hampshire Legal Assistance, but has a special elderly component within it so that when people apply, they are not applying necessarily to New Hampshire Legal Assistance, which some older people may have objected to because it is a so-called poverty program, but they are applying to a specific program which serves the elderly. While the legal project staff may use the New Hampshire Legal Assistance offices as their base, they go to meet elders in title VII meals sites, in senior centers, in elderly housing units—anywhere that older people might be. The attorneys and the paralegals go to these group sites, but they also go to the homes of senior citizens, and when you are dealing with rural areas, the willingness of a legal program to go to the home and to the apartment of an individual is critical if the program is going to serve people who need services. To sit in one office in Concord, N.H., would never serve the people of New Hampshire.

I think these programs have been very successful, but again, the response has been meager in Maine, Vermont, New Hampshire, and Rhode Island, which all have statewide legal programs. Legal programs for the elderly in these four States have a total of 10 attorneys, and 13 paralegals, for an older population of over 525,000 people. This is the model for the country, and yet those are the figures which confront us.

Seven Lawyers for 937,000 Older Persons

In Massachusetts, we have seven lawyers and 12 paralegals for over 937,000 people over 60, and of those seven lawyers, four of them are in Boston, and of the 12 paralegals, 9 of them are in Boston, so that the model for the country is a very meager model. The programs may be doing a good job, but you can see the coverage.

I think it is legitimate, though, to mention what the legal service programs are doing that are not specifically geared to the elderly. Basically, the response is the same as it was in the late 1960's when OEO estimated that about 6 percent of the total caseload for legal service programs, for OEO programs, was elderly. In talking with legal service programs in the New England States in the last 6 months, we determined that basically that has not changed. The average still runs from 4 percent to 10 percent of the total caseload. Thus, there has been virtually no change in the last 7 years in the proportion of older people who get served by legal assistance programs, and yet the elderly population has risen by 1 to 2 percent up to about 15 percent of the total population, and the elderly still represent about half again as many poor people as younger people do. It appears that legal service programs which are supposed to focus on low-income persons are, in fact, not making such a response in terms of the elderly. I would wholeheartedly endorse the Senator's suggestion that the Legal Service Corp. be mandated by law to begin to provide services at least in proportion to the number of low-income persons in the population, because I think there is no other way they are going to respond as quickly as they need to.

I think on their side it can be legitimately said that up until a year ago those programs were funded basically at the same level they had been in 1969, but now that they are getting increased funds, I think more action should be taken.

Private Bar Association's Response

I would like to deal very briefly with bar association's response by citing a case that recently came to my attention. A gentleman in western Massachusetts who is 67 years old, happens to be blind, hard of hearing, has a pacemaker, and walks with crutches, only with great difficulty. The gentleman just recently had a complaint filed against him in court for stealing a dog. It just so happens that the gentleman denies that he stole the dog, but does admit that he would like to have that dog because he thinks it's the same German Shepherd that he had raised and trained himself to be a seeing eye dog, and which was either stolen from him or else ran away.

In any event, the person who finally ended up with the dog had it stolen from him and has now filed a complaint against this gentleman, thinking, in fact, that he tracked it down and wanted it back so he took it. The gentleman, I also should mention, is on SSI, so he is not exactly a wealthy individual. When he went to court he asked for a public defender to be appointed and was told that they would like to but unfortunately he had too much money in the bank, so no public defender.

He then went to Western Massachusetts Legal Services, the Legal Service Corp. funded program, and was told that they also would like to help him, but unfortunately it was a criminal complaint and by statute they can only handle civil complaints.

The gentleman, knowing that he was going to have to appear in court, and knowing that if he didn't appear he would probably be convicted, or stood a good chance of being convicted, sought out through the Home Care Corp. in western Massachusetts, a lawyer, and finally found a private attorney who said that he would be happy to take the case for the nominal fee of $200 on a complaint that was for theft of property worth less than $100. The gentleman is going to retain that attorney. He is going to go to court. He is going to pay that $200 out of his own pocket because it is the only way he can get justice done. And yet I think it typifies some of the problems in the response of the private bar in this State and other States.

Inflexibility of Fee Schedule

The three major things that the case highlights are: (1) The inflexible nature of the fee schedule which the private bar maintains, and the fact that in many cases the private attorneys are not willing to take into consideration the needs of the individual client that they are dealing with; (2) I think it points out the inflexible nature of some of the federally funded programs that provide legal services; while I understand the need to set certain levels so that the programs don't promise more than they can deliver, there must also be some flexibility built in so that when a gentleman like this comes in he

doesn't get denied service; (3) the third point is that as title III begins to fund more legal programs for the elderly, there is going to be more pressure from the private bar, I am afraid, to indicate that there ought to be some kind of cap put on it, some kind of means test, some kind of limitation, so that private attorneys do not have their place taken by Government funded attorneys. I hope that this case will point out the necessity for never putting that kind of limitation on the title III program. If there had been a title III legal service program in western Massachusetts it could have served this gentleman, because it would not have had limitations, income or any other kind of limitation, except need.

Senator, I think I have probably gone beyond my time. I would like to mention one other thing, though, and that is that one of the real needs, when you have this few attorneys working on elderly problems, is for legal backup centers or resource centers where attorneys can specialize in problems of the elderly so that they can be on call to the programs that are serving elderly individuals directly.

I think that a very good case example is the SSI advocacy center.

Senator KENNEDY. I will give you another minute.

Mr. BERGMAN. OK. The SSI advocacy center has been funded for 2 years by the State department of elder affairs through title III. It has focused specifically on SSI cases, and it has done an outstanding job of handling 50 to 100 cases a month. Now, because the State agency will not have additional funds for them, they will have to cut off services for older people on September 30.

I think this is the kind of program that should be continued as a backup center. If there is anything which you can do, Senator, to impress upon the Administration on Aging the need for continued funding of the center, it would be much appreciated. Thank you.

Senator KENNEDY. An excellent statement. SSI is an interesting story. The Social Security Administration stated that they were going to need about 14,000 new personnel when they put SSI in. They wanted those personnel so there wouldn't be delays and redtape. OMB turned that down. As a result, we have an administrative nightmare. At the same time the administration was recommending 300,000 public service jobs. What they should have done is requested 285,000, put the 15,000 in running the social security and taken it off of the backs of the elderly people here in this country.

That is the kind of basic and fundamental mismanagement that affects the elderly. I am sure our panel throws up their arms about governmental inefficiency, inequity, and unfairness.

At this point in the record, the prepared statement of Mr. Bergman will be inserted.

[The statement of Mr. Bergman follows:]

PREPARED STATMENT OF JAMES A. BERGMAN

As you are aware, the legal research and services for the elderly (LRSE) project of the National Council of Senior Citizens is presently funded by the Administration on Aging to assist State and area agencies on aging and the legal profession to develop new and expanded legal services programs to serve elders. Secondly, the LRSE project provides specialized assistance to agencies on areas of law especially relevant to older persons.

In my testimony I will draw upon my own experiences in the field of law and aging and even more so upon the substantial experiences of the LRSE program since its inception in 1968 under the direction of Mr. David H. Marlin. I will attempt to provide a brief overview of the legal problems which especially confront elders in Massachusetts, as well as in other parts of the country, the role that lawyers and paralegals can play in helping senior citizens to overcome these problems, and some indication of how fully that need is currently being met by the existing legal service system and the barriers that presently prevent that need from being more fully met.

Legal Problems Confronting the Elderly

Not surprisingly, since income, health, and housing are essential for sustaining life, these are the three most important problem areas which older persons confront which often require legal action to resolve. Since others will discuss these problems, I will not say anything more about them. Instead, I would like to discuss briefly three not so well publicized problem areas elders confront which require legal help in many cases to resolve.

First, the elderly are frequently silent victims of consumer frauds and abuses. Like younger persons, the elderly are prone to signing contracts for home repairs or land sales without reading the fine print. But, senior citizens are particularly and more uniquely vulnerable to consumer abuses in the purchases of hearing aids, prescription drugs, mail order or newspaper-advertised insurance policies, eyeglasses, dentures, wheelchairs, funeral arrangements, retirement villages, and cures for arthritis and cancer. For a variety of reasons, including lack of mobility and embarrassment that the "wisdom of age" did not protect them from being taken, elders all too often silently endure the financial burden of consumer abuses instead of seeking legal counsel to obtain relief.

As an example of the kind of consumer frauds faced by older persons, I would like to cite a case we discovered this spring.

An elderly woman from Cambridge, Mass., went to a "free hearing test" offered by National Hearing Aid Centers where she was tested and informed that she needed two hearing aids. While the woman insisted that she did not want to decide anything that day, the dealer put wax in her ear to make an ear mold and asked her to sign her name and address. Without realizing it, she had signed a contract to purchase one hearing aid for $429. The next day, she called the dealer to state that she definitely did not want the hearing aid. The dealer insisted that she try the aid for a day and that if she didn't want it, she could return it. Instead of allowing even the promised 1-day trial period, the dealer, upon delivery of the aid, insisted that the woman pay in full for the aid, which she did under the high pressure of the dealer. The woman subsequently made several attempts to get the dealer to take the aid back, but he avoided her. Finally, she retained a lawyer with her own funds, and as a result she got $300 back. Thus, even though a doctor certified that the woman did not need a hearing aid, and even though she finally got some of her money back, she lost $129 for the hearing aid, plus the legal fees.

This is just one of 47 such documented hearing aid cases which our LRSE project uncovered in 8 weeks this spring as we prepared testimony for presentation before the Federal Trade Commission at hearings they held in Washington on proposed hearing aid regulations. While in the case I have cited, the person finally sought legal assistance, this is unusual. Embarrassment at having been swindled and fear of being considered to be incapable of handling of their own affairs often stop senior citizens from seeking assistance, especially legal assistance, when consumer abuses occur.

A second area of great concern, which most people do not presently recognize as a problem, is the treatment older persons receive from the utility companies. First, the constantly increasing telephone, gas, and electric rates and the rate structures which penalize small users versus large industrial users eat away at the fixed incomes of older persons, but these are services which senior citizens cannot do without. Secondly, utility companies more often than we realize do in fact discontinue essential service to older persons even when the outstanding bills are so small that they cannot reasonably justify health-destructive shut-offs. Making this an even more serious problem is the fact that in Massachusetts, telephone service may be terminated without a hearing for the person affected.

Finally, in many States, the laws concerning guardianships, conservatorships, powers of attorney, and medical commitment procedures do not protect the elderly individual so much as they protect the estate of the persons for his/her heirs or they provide a means of physically isolating a "problem" person from his/her family or neighbors.

THE RESPONSE IN NEW ENGLAND TO THE LEGAL PROBLEMS OF THE ELDERLY

In response to these problems some excellent and innovative legal programs specifically for the elderly have developed in New England in the past 7 years. Interestingly, these programs have all been funded either through the original LRSE program which the Office of Economic Opportunity first funded in 1968 or through title III of the Older Americans Act. In some cases the title III funded programs have been significantly supplemented by ACTION funds, for VISTA lawyers, or persons who were later trained as paralegals, and by CETA funds.

As you have already heard today, the Council of Elders Legal Program in Boston was one of the original LRSE projects funded by the National Council of Senior Citizens in 1969. Like the other original LRSE projects throughout the country, it served both as a direct service program and as a model for future programs to follow. Today, the program is funded by the Legal Services Corporation and is sponsored by the Council of Elders and operated by Greater Boston Legal Services.

The CoE LRSE project was one of the first to use elders as paralegals, and it continues to do so today because their value has been repeatedly demonstrated, as Dick McCusker has already indicated. Unlike many of the original LRSE projects, the CoE project concentrated on legislative action to meet the needs of many of the older persons it represented. Backed by the CoE board of directors—which was 100 percent elderly—The CoE legal project played a significant role, along with Frank Manning's Legislative Council for Older Americans, in getting increases in old age assistance and in creating the cabinet office of elder affairs in Massachusetts. Speaking as the original director of the CoE legal project, I think the program demonstrated beyond any doubt that a major activity of legal programs for the elderly should be legislative action.

Taking a law reform approach, the title III funded Cambridge/Somerville legal services program for the elderly has concentrated much of its activities on high impact or class action litigation. It has been quite successful in this approach in that it has gotten a decision from the Federal district court requiring the Cambridge social security office to process all nondisability SSI applications in no more than 45 days. As you know, some older persons SSI applications took months to be processed, causing great hardship to the elderly person so affected. In addition, this legal project has filed a suit which challenges the Massachusetts' title XX application forms, charging that the information requested is an invasion of the older person's right to privacy. Both of these suits, and others like them, when successful can provide relief to hundreds or thousands of elders.

In Maine, Vermont, and New Hampshire, statewide legal projects for the elderly have been established through title III funding. Each of these projects has used the title III grant to hire a lawyer to direct the legal program and to pay for some of the support costs, and has then supplemented the title III funding with VISTA's or CETA employees.

The New Hampshire program, which is a part of New Hampshire legal assistance, has been operating since November 1975, and consists of a lawyer/director and seven paralegals, four of whom are elders. The project has concentrated so far on handling individual cases and has done a very effective job of outreach by having its paralegals establish office hours at title VII nutrition sites, at elderly housing developments, at senior centers, and at other locations frequented by older persons as well as utilizing New Hampshire legal assistance offices. As in Maine, the New Hampshire elderly legal project director circuit rides throughout the State to supervise the paralegals and to represent clients who require a lawyer's services.

The Vermont legal aid program for the elderly was funded in May of this year and is now beginning to handle individual cases. This program consists of one experienced lawyer/director and six VISTA lawyers. The VISTA lawyers will each be based in an area agency on aging office, but will also have office hours in locations such as the New Hampshire and Maine programs.

Each of the projects that I have described has attempted—successfully, I think—to establish legal programs which are specifically identified as being for older persons and have purposefully set up office hours in locations used by elders. Each has also made a special outreach effort, and each makes it a practice to make house calls.

Thus, while some of the projects specialize in handling mainly individual cases, some concentrate on high impact litigation, and the original CoE LRSE program focused on legislative action, each places the special needs of the older person foremost in the way in which the services are made available. Again, the use of elderly paralegals has been a major means of doing this.

As I stated initially, all of these projects are either title III funded or were initiated by the original OEO/LRSE program. And, as successful as these programs and three similar ones in Massachusetts and Rhode Island are, together they represent a very meager response to the need for legal services for the elderly. In fact, together the four statewide legal programs for the elderly in Maine, Vermont, New Hampshire, and Rhode Island have a total of 10 lawyers and 13 paralegals to specifically represent a 60+ population of 523,804 persons. Massachusetts, with a 60+ population of 937,247, presently has five elderly legal projects consisting of 7 lawyers and 12 paralegals, with 4 of these lawyers and 9 of the paralegals serving Boston only.

In the past 8 months our LRSE project has worked with State and area agencies on aging, legal service programs, older persons and others to develop title III applications for new and expanded legal projects for the elderly. Hopefully some of these will be funded this year. However, even if all of the Massachusetts projects were funded, these new projects would together have barely double the present number of lawyers and paralegals in the existing elderly legal projects.

So far I have mentioned legal projects that serve only the elderly, and I have not mentioned persons who are served by legal assistance programs funded by the Legal Services Corporation or persons who retain private attorneys. In my work with legal assistance programs in recent months, all of them have stated that they recognize that they presently serve a disproportionate number of low income younger persons versus senior citizens. This has been true since the beginning of these programs in the 1960's, and it has been impossible to change significantly until now due to the previous lack of any increases in legal services funding and the fact that the caseloads were already filled.

Figures from OEO for the late 1960's indicated that nationally the elderly 60 and over were receiving only about 6 percent of the legal services provided through OEO funded legal services programs. Yet, in 1970, an estimated 14.1 percent of the total population was 60 and over, and most studies indicated that half again as many older persons as younger persons had incomes below the poverty level.

As of today, nationally, close to 15 percent of the total population is age 60 and over (in Massachusetts, 16 percent of the population is 60+), and older persons continue to be disproportionately represented among those persons living below the poverty level. Yet, legal service programs in New England themselves estimate that persons 60 and over receive only between 4 percent and 10 percent of their total services, which, I should reemphasize, are focused on low income persons. Some examples of estimates of the percentages of elderly persons served by legal assistance programs are the following: Greater Boston Legal Services, 10 percent; Western Massachusetts Legal Services, 4 percent; Central Massachusetts Legal Services, 5 percent; Legal Services for Cape Cod and Islands, 5–10 percent; Vermont Legal Aid, 6.5 percent; and New Hampshire Legal Services, 6 percent.

Thus, while legal assistance programs presently provide some services to low income elders, they need to make a concerted effort to increase their proportion of services going to older persons. Now that some increased funding from the Legal Services Corporation is available, these programs should build upon the experiences of the elderly only legal projects to increase their services to older persons. In fact, Congress should seriously consider mandating that this occur.

At this time, most bar associations admit that they do not know how well the private bar has responded to the legal needs of the elderly. However, I believe that some conclusions may be guessed at based upon the experiences of social service agencies serving the elderly and based upon the income levels of older persons. First, since so many elders have low, fixed incomes, and since lawyers

and bar associations have resisted advertising their fees or adopting sliding fee scales based upon the incomes of clients, I think we may reasonably conclude that the private bar has not done any better, and probably worse, than legal assistance programs in serving the elderly.

Secondly, I personally know of very few social service agencies serving the elderly who have been approached by private lawyers who have offered to provide pro bono legal services to elders who need them. In the few cases where I know that that has occurred, they have usually been lawyers who sit on the boards of directors of the agencies and are willing to do some free legal work in emergency situations. Since Massachusetts alone has about 16,000 lawyers, according to Massachusetts Bar Association estimates, if pro bono services for the elderly were widespread, I do not think it would be as hard as it is to discover examples.

Estimated Need for Legal Services by the Elderly

So far I have discussed the types of legal problems older persons face and some of the response to that need in New England. I have not attempted to estimate the full need, simply because such estimates are difficult to back up. However, as quoted in *The Law and Aging Manual*, a 1974 American Bar Association/American Bar Foundation study estimated that 37.3 percent of the adult population has one or more legal problems per year (excluding traffic violations). If this is true, and for the elderly this may be a low estimate since so many elders are low income and dependent upon public benefit programs, then of the 1,461,051 persons aged 60 and over in the five New England States, 544,973 are likely to need some type of legal help each year.

According to a 1975 study quoted in *The Law and Aging Manual*, the experience of legal service programs has shown that about 325 cases per full-time attorney per year is reasonable. Based upon that estimate, approximately 1677 lawyers would be needed in the five New England States to meet the estimated current needs.

Broken down by each of the five States, the following figures apply:

State	60-plus population	Estimated number of persons needing legal services in a year	Estimated number of lawyers needed to meet this need
Maine	172,919	64,499	198
Massachusetts	937,247	349,593	1,076
New Hampshire	121,665	45,381	140
Rhode Island	158,677	59,187	182
Vermont	70,543	26,313	81
Total	1,461,051	544,973	1,677

I should note that the estimate of 325 cases per year per lawyer does not include consideration of time an attorney might devote to legislative activities or legal education programs which are also vital in meeting elders needs. Thus, the above estimates of need for attorneys are probably somewhat low.

On the other hand, if paralegals were available to assist lawyers in handling cases it would very definitely be possible to reduce the number of lawyers needed to serve the elderly. While it is difficult to estimate the number of cases a paralegal can handle per year, under the supervision of an attorney, it is not unreasonable to assume that 100 to 200 cases could be handled by a full-time paralegal, and in some cases the number may be even higher.

It should go without saying that the above estimated need is nowhere near being met presently.

Remedies To Meet the Need for Elderly Legal Services

The most basic requirement for fulfilling the unmet legal needs of older persons is, as always, money. This could be approached in two ways: (1) Provide older persons with a guaranteed annual income which is high enough so that they may purchase the essentials and the services they need, including legal services; or (2) provide much greater Federal support for legal services for the elderly.

Since I do not expect to see a guaranteed annual income for elders in the near future, and since this committee frequently hears the plea for more funds, I will only make four brief suggestions for Federal action now to increase funding for elderly legal services:

(1) The Legal Services Corporation should be mandated by Federal law to serve low income persons in direct proportion to their percentage of the low-income population, with age, race, and ethnic origin being the criterion by which this standard is applied. This would force a readjustment of the present inadequate service going to elders. Certainly such a mandate should be accompanied by increases in Legal Services Corporation funding levels.

(2) Congress has already taken very significant steps in the Older Americans Act amendments of 1975 by making legal services one of the four priority services under title III, and by continuing to increase funding for title III. If more funding is provided through title III and Congress reenforces its desire to see all four priority services funded, then additional legal service programs are certain to develop.

(3) In order to persuade the private bar to become more involved in serving the legal needs of older persons, Congress should study ways of establishing pre-paid or group legal services plans which in all probability would have to include at a minimum Federal regulation and at a maximum Federal financial support.

(4) Since elderly persons trained as paralegals have proven their value in elderly legal projects, Congress should encourage this approach by amending title IX of the Older Americans Act to strongly suggest that some of the persons employed under this program should be employed as paralegals in elderly legal projects—possibly projects funded by title III. In fact, in this hearing room today are many senior aides who are employed through title IX, and many of them have already expressed an interest in being paralegals.

There are other problems inhibiting the attempt to meet the need for legal services for the elderly which are not merely a result of lack of funds. I would like to cite a case which I recently learned about which illustrates some of the problems.

A 67-year-old blind man from the western part of Massachusetts has just recently had a criminal complaint filed against him charging that he had stolen a dog. He denies it, claiming that he does not have the dog, but wishes that he did since the dog he is accused of stealing is the one which he believes he trained himself to be his seeing-eye dog and which later either ran away or was stolen from him.

The accused gentleman is not only blind, he is hard-of-hearing, has a pacemaker for his heart, and requires crutches to walk. For financial support, he receives SSI.

When the complaint was filed against him, he asked that a public defender be appointed to represent him, but he was denied because it was claimed that he had too much money in his savings account—even though he qualified for SSI. He then went to Western Massachusetts Legal Services who also had to deny him service because the Legal Service Corporation does not allow the program to handle criminal cases.

Finally the man found a private attorney to represent him—at a cost of $200, for defense in a complaint charging theft of property worth less than $100. Seeing no other choice, the gentleman is going to pay the $200 out of his meager SSI income so that he can receive a fair trial.

A rare case? Maybe the man's physical ailments and the specific accusation are unusual, but the other circumstances are all too common. I would like to simply list some of the common problems this case highlights, and suggest some remedies.

(1) *Unreasonable income limitations:* While in this case, it was the public defenders who had the unreasonable income limitation, in many cases the Legal Service Corporation funded programs have equally low limits. While these limits are not totally without merit, if they are inflexibly applied, they can be very unreasonable, as in this case.

The Older Americans Act requirement that services funded through title III must be available to elders regardless of income is a much better approach.

(2) *Unreasonable fees of private attorneys:* The $200 fee being charged to the blind gentleman appears to have been set without any recognition of his financial situation, and in my opinion is outrageous. Unfortunately, this is just one more

example of the rigidity of the private bar's fee schedules, and their lack of willingness to take the initiative in both advertising their fees and specialties and in setting flexible fee schedules. I am not sure if there is a legislative solution to this problem, but certainly any pressure this committee can bring on the private bar in these areas would be a positive step.

(3) *Lack of unreasonable restrictions on elderly legal programs:* This case illustrates the wisdom in the title III programs which do not have income or any other limitations on who may be served, as long as they are elderly. If a title III legal program had been in existence in western Massachusetts, this man could have been served at no cost to him. In the future, lawyers and the private bar may attempt to restrict the provision of legal services under the title III program. I hope that this case will always stand as a reminder to Congress to resist such pressures.

Before concluding I would like to mention two other areas which, I believe, deserve more attention if the elderly are to receive high quality legal services.

A major deficiency at this time in the field of legal services for the elderly is the lack of training materials and courses for lawyers and paralegals. Law schools provide virtually no background in aging or in substantive areas of law pertaining to the elderly—the most obvious area being the programs under the Social Security Act. Few colleges or universities offer specialized courses for lawyers or paralegals serving older persons. As far as I am aware in New England, only New Hampshire has used title IV–A Older Americans Act funds for paralegal training. As a result, each legal service program for the elderly must reinvent the wheel whenever it trains new lawyers or paralegals to work with the elderly. And, persons who wish to become trained paralegals or social workers who wish to develop a better knowledge of how to use the legal system for their clients are confronted with nowhere to go to receive this information.

Just as our LRSE project has received many requests from the elderly law projects to fill this training void, we have received numerous requests to serve as a regional elderly law backup center. The problem, simply stated, is that lawyers handling 300 to 350 cases a year and also administering legal projects for the elderly do not have time to keep abreast of all the new laws and cases relating to the elderly and to do detailed legal research on more than a few areas of law each year. As a result, the representation available to older persons is not always as excellent as it could be. Elderly law backup centers in each region of the country—possibly established through Older Americans Act model project funds—could begin to fill this gap.

A good example of such a backup center is the SSI Advocacy Center, attached to the Massachusetts Law Reform Center which specializes in handling SSI cases in Massachusetts. The SSI center handles an average of 50 to 100 SSI cases per month and handles only SSI cases. As a result of this specialization, the elderly served are certain of quality representation, and secondly, other lawyers and paralegals throughout the State may call upon the center's staff for backup on their own SSI cases.

The SSI center has operated for over 2 years with title III administrative funds as a project of statewide significance. As successful as it has been, the Massachusetts Department of Elder Affairs will not be able to refund it this year because it has no funds available for this purpose. As a result, the SSI center will have to close its doors to the elderly on September 30 of this year. I don't know if there is anything you can do, Senator, to help the SSI center to continue, but I hope that you will try.

Even if you cannot help the SSI center, I believe that its success underscores the need for backup centers of its type.

Thank you very much, Senator.

Senator KENNEDY. At this time I would like to recognize Linda Noconiam, who is representing Congressman O'Neill; Fred Rose, who represents Congressman Early; and Ed Moore, representing Congressman Burke.

All of the House Members are voting today on the Supplemental Security Income Reform Act to insure cost-of-living increases in SSI. If there is such a thing as a good excuse, they have it today. [Applause.]

Now, we are going to hear, if we could, from Emily Murphy, then from William Cohen, and then from James Frost. We shall give them a minute each—if they would just like to step up here. We have the reporter here. Each is entitled to—I'm just sorry on the time. I have to get on back. We are having an antitrust bill that is before the Senate. It will give the State attorney general the power to bring an antitrust action when the individual harm is only a few dollars, but the total sum in terms of the consumer is $20 million, $30 million, $40 million.

There is a filibuster on this afternoon, and the Judiciary Committee is trying to break it. We will be voting on it tomorrow, but we will be debating it this afternoon. It, too, is an important bill for the elderly. As I have to take a 12:15 plane, I am going to have to leave here in about 5 minutes.

Emily, we will give you a minute. And any of the rest of you that would like to have a comment or statement made a part of this record, we will leave the record open for 30 days. Just write me a note and it will be included in the record. OK, Emily.

STATEMENT OF EMILY M. MURPHY, NORTH ANDOVER, MASS.

Ms. MURPHY. Senator, it's a pleasure to meet you, and I want to thank you for all the efforts. Especially our senior aid program. We in North Andover have a town that very seldom needs anything, but the council on aging is very active, and we are mostly all volunteers, and a year ago we had quite a confrontation with the board of health, because we wanted to have a clinic for the elderly which we had started and it was for 2 years with volunteers, and we needed some money, and, of course, there was a definite denial. So, we went to the Legal Aid through the home care program in Lawrence, Merrimack Valley Home Care, and through their efforts and our own constant communication, the program was very well resolved and we have a wonderful clinic that handles something like 400 people in 2 or 3 months. So, that is one of our own experiences with Legal Aid.

The other little note I have here, according to lawyers, I think that publicity of some kind would result in having volunteers.

Senator KENNEDY. That is good. Very good, Emily. William Randolph Cohen.

STATEMENT OF WILLIAM RANDOLPH COHEN, BOSTON, MASS.

Mr. COHEN. Senator Kennedy, my full name is William Randolph Cohen, and I am the Massachusetts department junior vice commander, Sons of Union Veterans of the Civil War. I sent you a letter by certified mail on July 24. Not knowing what happened to that letter, I visited your office in person a little over a week ago. I found out that that letter was turned over to Samuel Thompson of the Boston Housing Authority.

He sent back a response to your office. The original was supposed to come to me, but it never came to me. I was given a copy of that letter and the response to that letter was all out of line with that letter that I sent you.

Senator KENNEDY. Let's try to follow up. I will be glad to try and follow up with you, and will do so. And I want to commend you for

your role as junior vice commander, Sons of Union Veterans of the Civil War.

Mr. COHEN. Also I sent you a letter on the 21st asking for copies sent from your office or anybody else. I am the only truly registered commander of the Massachusetts department of veterans of the Civil War, and I am trying to do things for senior citizens, like myself, who live on a fixed income. I live in the Boston Housing Authority community.

As you have already been told by Gerald Wall, the rents are being increased enormously. The Boston Housing Authority, I understand, can go up to 25 percent of our income, and that would put a cramp in the $288 which is received from SSI, and that leaves us with very little to live on. It is hard to live for senior citizens, or anyone else, with food and clothing and telephone and other necessities of life. I have appealed to you and to Senator Brooke to take steps to change the legislation on that amendment to lower the 25 percent to say 12½ percent. Fifteen would be OK, too.

Senator KENNEDY. Let me ask you, Mr. Cohen, could you go down right after this meeting to my office—I have to go right back to Washington—but if you see Barbara Soliotis at the door there, and we'll arrange a meeting for you with Dave Wynn. Let's get busy on this. I have some good attorneys up here that will help me if I have any problems. I want to just give two people a final chance to talk, but see Barbara and we will set something up right away, if you would be kind enough to do that. I regret and apologize if we haven't been able to be as responsive as we would like, but I give you assurance that we will do our very best. I want to thank you for commenting. OK, James Frost. Jim, I will give you about 45 seconds.

Mr. FROST. We have submitted our written testimony, Senator.

Senator KENNEDY. Very good. Your statement will be entered in the record at this point.

[The statement of Mr. Frost follows:]

STATEMENT OF JAMES FROST, COMMISSION ON AFFAIRS OF THE ELDERLY, BOSTON, MASS.

Mr. Chairman and distinguished members of the panel: My name is James Frost, and I am here today to speak on behalf of the city of Boston Commission on Affairs of the Elderly. As you may know, Boston has approximately 120,000 persons age 60 and over. This is a large group of people and one that certainly deserves every legal consideration and benefit.

Older persons as a group seem to be subject to legal problems, particularly given their increased dependency upon Federal, State, and local programs, each of which has its own particular regulations and restrictions. A reliance upon public agencies for housing, transportation, health care, and income maintenance, too often creates a corresponding submission to rigid eligibility standards, complicated reporting forms and confusing and misleading procedures and regulations. Without being overly dramatic, an elderly person's fate can sometimes literally be determined by his or her ability to wade through a plethora of application forms, income statements, and so on. This bureaucratic maze does at times seemingly preclude an individual from obtaining the benefits that are legally his.

Mr. Chairman, I am sure that you are aware of the fact that many elderly persons suffer because of their inability to deal with the public and private agencies obligated to respond to their needs. The Boston Commission on Affairs of the Elderly would, therefore, be happy to support any and all efforts that can be made to alleviate legal problems for our senior citizens, particularly in the following areas of need:

(1) *Housing.*—Recently, many of us witnessed the frustrations of Boston's elderly housing residents who were faced with proposed rent increases. This is just one example of the type of housing issue that would lend itself to legal intervention.

(2) *Income maintenance.*—We are all aware of the many problems beseiging social security and supplemental security income recipients. Many times elderly persons are not aware of deserved benefits or, perhaps even more important from a legal point of view, the various appeal systems open to them. Competent legal assistance in this regard could be the critical difference in determining a recipients income.

(3) *Medical care.*—Even the most experienced and sophisticated reader is often confused trying to interpret private insurance plans and policies, let alone the complex medicare and medicaid programs. One hopes we have not reached the stage where it takes a lawyer to determine medicare eligibility but, unfortunately, that day may not be too far off.

(4) *Employment discrimination.*—The Federal Age Discrimination in Employment Act of 1967 bars employees from denying job applications or dismissing employees solely because of age. This act has not been vigorously enforced and, unfortunately, is not well known by many employees or older persons. Legal aid and assistance may be necessary to bring employers into compliance with provisions of the act.

Mr. Chairman, I could go on. There are many other areas of need unique to elderly persons. Almost all of them require trained and sophisticated legal intervention and assistance.

The American Bar Association has determined that 23 percent of all Americans have a civil legal problem at least once each year. One would hazard the guess that this percentage is even higher for our senior citizens, particularly the elderly poor. Thus, we feel safe in saying that thousands of elderly persons in Boston need efficient and meaningful legal services, hopefully of the type that can be made available for little or no cost. This latter point is imperative in light of the high incidence of poverty amongst so many of our senior citizens.

We would hope that the members of the Special Committee on Aging and the full Congress respond to the problems I have mentioned here today. Boston deserves nothing less than the very best effort that can be brought to bear by the Congress to address the legal needs of our senior citizens.

Thank you for your time and consideration.

Senator KENNEDY. Here's a wonderful note: "If possible, I would like to testify, very briefly, honest. Norma Walsh Gramer." How can I say "No"?

STATEMENT OF NORMA WALSH GRAMER, BOSTON, MASS.

Ms. GRAMER. I understand. Thank you very much. OK. My name is Norma Walsh Gramer. I'm a member of the State advisory for the elderly, the ABCD board on the elderly subcommittee, and mayor's, you know, the whole thing. I am interested. I am concerned. I care. I just wanted to say we appreciate all of you coming down. It's good to have sincere people looking out for the elderly. And I am in strong favor of expanding legal services for the elderly. The point I can tell firsthand, when I worked with the commission on affairs of the elderly in the city of Boston. All of you know that elderly don't want to tell everybody their business. They don't want to let everybody know what is happening.

In my capacity in city hall, they quite often had legal problems, and I would refer them to the local BLAP office, but they were hesitant because they didn't feel as though the lawyers there would have the sensitivity. With specifically geared programs for the elderly there will be more help, and we thank you very much.

Senator KENNEDY. All right, that is very good. Now, there will be some forms right down here. They are all addressed, and if you didn't have a chance to speak today and you would like to, just fill that out. Write on the back of it. You can fill out another couple of pages if you would like. Give your name on the bottom and then we will make that a part of the record.[1] We try to make it easy. Just take it with you.

Now, just a final point. We are going to fight the reduction of funds for legal service. The administration has requested the reduction of money. We have already appropriated the money, and we are going to make every effort to defeat the administration request to cut back the Legal Service Corporation. We want you to know that. I am sure the Congressmen will be talking to you, if you are in their areas, about that in particular. We will also work on earmarking funds for the elderly in the appropriations made to the Legal Service Corporation.

Third, we want to work for mobile legal service units and for more units permanently located where large numbers of elderly reside, staffed by paralegal aides.

POSSIBLE FEDERAL AND PRIVATE ACTIONS

We have talked a little bit about the private bar. I will ask other members of our committee to join me in requesting their cooperation in providing legal services for the elderly, and in requesting a response from them, indicating what they have already done. I think, in the areas where it has been good, the people ought to know about it. I am sure there have been many instances where there has been superb service, and we ought to know about it, as well as where the service has been inadequate.

We will also explore problem areas with the LEAA, the Federal Government's principal instrument for providing assistance to State and local communities. One of the things we didn't explore very thoroughly today is the relationship of senior citizens and the problems of crime. I think that there are areas in which LEAA can provide some additional resources to help protect the elderly.

The Senate will also be working on the passthrough provisions, which the House is acting on today. We will explore some legislative solutions to assure adequate notice for housing residents, and to prevent entire social security increases from being eaten up by rent increases alone. There are opportunities for action at the Federal level. This ought to be an area of priority, and we will work with you and your groups, your State groups, your local groups, and national groups to gain support for these legislative actions.

As a result of the hearing we had 5 years ago, we were able to spark some movement. It is still not nearly enough. We have talked about Boston and Massachusetts and New England being ahead of some parts of the country, but we have also heard about how far yet we have to go. I want you to understand my full commitment to this program.

This is something I am interested in. I know you are. I appreciate your patience and your sharing with us during the course of this hearing your own concern for your fellow citizens. The committee stands in recess. Thank you, very much. [Applause.]

[Whereupon, the hearing was adjourned at 11:40 a.m.]

---

APPENDIXES

Appendix 1

STATEMENTS FROM INDIVIDUALS AND ORGANIZATIONS

ITEM 1. STATEMENT OF DOROTHY KING, ASSOCIATE DIRECTOR, SSI ADVOCACY CENTER, BOSTON, MASS.

The SSI Advocacy Center has assisted the elderly and disabled and their advocates with supplemental security income (SSI) for over 2 years. My comments and suggestions concerning the legal issues of importance to them draw on this experience.

If the SSI program is to fulfill its promise to provide direct and simple income maintenance to the needy elderly, much change should be made in its current substance and procedure. I will briefly discuss several of the areas which are of particular importance to elders and which are ripe for litigation or legislative change.

Delay.—The application process for an elderly person can be full of delays and inefficiencies. It can take several months for the district office to verify income, resources and household expenses. Except in a few areas, like Cambridge, where case law has enforced a 45-day time limit for processing applications (*Santos* v. *Weinberger*, No. 75–166G, D.C.MA), there is no statutory or regulatory time within which the Social Security Administration must act on a claim. The hardship which long delay causes can be alleviated by litigation forcing a reasonable time limit construction upon the statute and regulations. I also recommend legislation to establish a 30-day time limit for processing nondisability applications for SSI.

Nonreceived, Lost or Stolen Checks.—When through a computer error, a postal error or otherwise, an SSI recipient does not receive a regular monthly check, the computerized procedure for a replacement takes so long that recipients lack the essentials of daily life. Pursuant to Federal litigation, the Boston Region of SSA made a study of checks not received, lost, or stolen before negotiation. Of those cases where a substitute check was issued, the report noted that it took from 8–18 days after the recipient reported the case before she or he received a check. A 3-week wait for a check which represents a minimal income supplement can easily place the life of an elderly person in jeopardy. Our office and the Chelsea-Revere legal services office have brought a mandamus action against the Social Security Administration and the Department of the Treasury requesting that the court recognize an obligation to issue checks immediately to those recipients. *Moore* v. *Mathews*. D.C. Mass. No. CA–75–2555–T.

It is recommended that the district offices have prewritten checks available for the immediate replacement of their nonreceived, lost, destroyed, or stolen checks. The SSA itself, in the report mentioned above, suggested the use of the district office imprest funds to replace checks. Legislation should also be drafted requiring the local offices to arrange for the replacement, within 3 days of reporting, of checks lost or stolen before negotiation, or never received.

Resources.—The Social Security Act allows a person to be eligible for SSI only if their home is valued below an amount "the Secretary determines to be reasonable." 42 U.S.C.A. § 1382b(a)(1). The Secretary's determination is that any person is ineligible for SSI who lives in a house valued at over $25,000, 20 C.F.R. § 416.1216. In the low and moderate income neighborhoods of the northeast, houses are often if not always valued at over $25,000; thus, many individuals otherwise eligible for SSI receive no benefits. The $25,000 upper limit, although reasonable

in many sections of the country, operates in a very discriminatory manner in urban areas with a high cost of living. The regulation forces the elderly to choose between their homes and the minimal SSI benefit.

The reasonableness of the Secretary's determination should be challenged at the same time legislation is introduced directing that the Secretary establish upper limits for the value of homes which reflect the current market values of low-income homes in various areas of the country.

Imposition of a 6-Month Rule on Eligible Couples.—The so-called "6-month rule" provides that two eligible individuals who have previously resided together as husband and wife, and who have not been separated for 6 months, shall be considered to be an eligible couple for SSI purposes (42 U.S.C. § 1382c(b)). That means they receive a lower benefit and have their income counted in a less advantageous manner to determine eligibility and benefit level.

I can think of no justification for the requirement that two individuals who have ceased to live together shall be considered to still be living together for a 6-month duration. The financial burden this imposes on two eligible individuals is considerable. Because the spouse's income is deemed to the eligible individual even *if it is no longer available*, the financial burden imposed is cruel and unconscionable. A not uncommon situation encountered by advocates in this State is that in which a husband disappears with the couple's savings, leaving the wife with no source of income save her half of the couple's benefit, about $204 per month. If one member of a couple is forced into an institution, the other member has the full burden of supporting her or himself on the couple's grant for 6 months. If the institutionalized spouse has other income than SSI, it lowers the couple's SSI grant, only half of which the noninstitutionalized spouse receives. The spouse in a nursing home may need all of his or her social security and SSI to pay the nursing home, leaving his or her spouse with a pittance.

I recommend the elimination of the "6-month rule." Eligible individuals no longer residing in the same household should be entitled to receive benefits computed on an individual basis, beginning with the month after the month of separation.

Representative Payee.—Under the statute and regulations, social security has broad, discretionary powers to appoint and select a representative payee for an SSI recipient. 42 U.S.C. § 1383(a)(2), 20 CFR § 416.601(a)(1). There are no specific guidelines for the agency in the selection of a representative payee, other than that he or she evidence interest or concern. See 20 CFR § 416.610. Once the decision to make representative payment has been made, there are no specific guidelines regulating the conduct of the representative payee, and no enforceable remedies if the payee is determined to have misused benefits.

The decision to make representative payment is made solely at the discretion of the district office, as is the selection of the representative payee. The recipient is afforded no prior hearing in which to raise objections, if any.

The constitutionality of this denial of personal and property rights without a prior hearing is ripe for litigation. I also strongly urge legislation which would (1) require an impartial hearing *prior* to the decision to have a representative payee appointed, (2) establish guidelines for qualification as a representative payee, (3) require periodic written reports accounting for payments certified to the representative payee, and review of the necessity for representative payment, (4) establish enforceable penalties for misuse of benefits on the part of a representative payee, and provide for enforceable methods of restitution of misused benefits, and (5) require immediate issuance of duplicate checks in cases where funds have not been used for the benefit of the recipient.

Conclusion.—All the SSI problems outlined above can be alleviated by legislative action. If the changes are made, it will be possible to avoid the lengthy and costly litigation involved in challenging the practices and procedures of the Social Security Administration. I have recommended a few important changes. Several other problem areas which I have not had time to touch upon are: inadequate notification of termination and reduction of benefits, inequitable deeming of a spouse's income, reduction or termination of benefits upon temporary institutionalization, coercive methods of recouping innocent overpayments, and unrealistic liquid resource limitations.

ITEM 2. STATEMENT OF LEWIS M. LEVENSON, EXECUTIVE DIRECTOR, SOMERVILLE-CAMBRIDGE HOME CARE CORP., SOMERVILLE, MASS.

Mr. Chairman, I am executive director of the Somerville-Cambridge Home Care Corp., a nonprofit corporation with local management responsibility for elderly services available under titles III and VII of the Older Americans Act and title XX of the Social Security Amendments.

We are entering the third year of a subcontract relationship established with the Cambridge-Somerville Legal Services, Inc., to provide access to appropriate legal services by the elderly in our area. Title III funds made available to us through the State's Department of Elder Affairs have been used for this purpose.

Our experience of the last 2 years has demonstrated that legal services for the elderly clearly perform two different functions: subsidization for personal legal services needed by the elderly poor, and class action advocacy proceedings necessary to protect the elderly from administrative restrictions imposed on other groups.

The needs of any local area—and Somerville-Cambridge is no different in this regard—far exceed the ability for those needs to be met through present or foreseeable levels of funding for title III. Local pressures must therefore tend to push aside the class action function when allocating the basically inadequate funds to local services. Yet the broad issues of society which can be resolved through class action advocacy clearly is an investment in the future with a very high cost-benefit effectiveness ratio.

We are also designated as an area agency on aging and are therefore most conscious of and sensitive to the conflict between local priorities and issues which transcend the local area for benefit, but must be funded through diverting funds otherwise available for more directly visible benefit.

Legislation to create a separately funded title within the Older Americans Act to address the class action advocacy situation would remove pressure from the local areas that is not fair or appropriate for them to be subjected to. The most appropriate linkage would suggest funding to the area agency on aging level to ensure a close working relationship with the range of service providers in that area and thereby assure a comprehensive and integrated recognition of problems and development of solutions. Elderly residents of other areas would benefit through the formal reporting linkage between the area agency and the State agency, as well as the less formal communications network between area agencies, and that among legal service programs.

In other words, funds expected by the Congress to be directed toward the legal service concerned with responsible class action advocacy should be distributed outside any state allocation formula otherwise used for title III.

Such legislation would permit the proper development of the reservoir of awareness, skills, and cooperative interagency working relationships that can effectively provide a focus of the energy needed to make progress. Without such legislation, we must be concerned that there is little incentive to take such elderly issues seriously. The tendency otherwise is toward inadequate funding of available services, compounded by the reality that a sizeable chunk of that inadequate funding must be spent simply to bring the legal staff on board as to the elderly issues.

ITEM 3. STATEMENT OF PATRICIA A. CANTOR, MANAGING ATTORNEY, COUNCIL OF ELDERS LEGAL SERVICES PROGRAM, BOSTON, MASS.

I am managing attorney of the Council of Elders Legal Services Program (COELSP) a legal assistance project for low income elders in Boston. We are funded by a grant from the Legal Services Corporation and operate as a cooperative undertaking of the Council of Elders, an elders' social service agency, and Greater Boston Legal Services. The office consists of four full-time lawyers, one full-time and eight half-time paralegals, and two secretaries. We provide a full range of legal services for seniors with civil, nonfee generating cases. We conduct an active outreach program to inform elders of the availability of the service and to encourage them to use it.

LEGAL PROBLEMS OF THE ELDERLY

Low-income elders have many of the same problems as low-income younger people. Yet, these problems are frequently compounded by the older person's lack of mobility and frailty.

For example, a typical case involves someone who is being threatened with eviction. Usually the elder is in ill health, has occupied the apartment for many years and is totally surprised and unprepared for dealing with the problem. The case becomes even more difficult because often people are afraid of exerting their rights. Our program works very hard to provide social service support, especially through our connection with the Council of Elders, while fighting the eviction on legal grounds.

The most frequently encountered problem involves housing, rent increases, evictions, and unsafe conditions. Because of the high cost and poor condition of most of the housing occupied by our clients, people are unable to obtain suitable accommodations at rents they can afford to pay. Social security and supplemental security income issues comprise another large segment of our caseload. These include denials of applications, alleged overpayments and other irregularities in receiving checks. We also see many people with consumer problems; and we do estate planning. Nursing homes are a growing concern and we are seeing increasing numbers of clients in that area.

ROLE OF LAWYERS AND PARALEGALS

Experience has demonstrated that older paralegals teamed with generally younger attorneys is an extremely effective way of serving the elderly. The combination enables us to provide high quality services, build rapport with clients, and strengthen the overall program.

Paralegals function under a lawyer's supervision and are actively involved in all aspects of cases. They do initial intake interviewing; prepare papers for hearings; do factual investigations and negotiate on behalf of clients. They also carry the bulk of our outreach effort.

Lawyers handle the more complicated problems and, of course, all of the litigation. They also participate in on-going training of paralegals in substantive areas of law.

Both paralegals and lawyers working together deliver a total client-service package.

ARE THE NEEDS BEING MET?

Presently, Council of Elders Legal Services Program is the only agency in Boston that is focusing on the legal problems of the elderly poor. We are trying to cover the entire city with relatively few resources. So far, I believe we have been very effective at beginning to make a dent on the problem. However, the need far outdistances our ability to meet it.

In order to adequately fulfill our responsibility to serve all needy elders, Greater Boston Legal Services has prepared a proposal for funding an expanded program under title III of the Older Americans Act. The proposal has been submitted to the area agency on aging and we are waiting for the outcome.

ITEM 4. STATEMENT OF THOMAS CASEY, COMMUNITY SERVICES COORDINATOR, MERRIMACK VALLEY HOME CARE CENTER, INC., HAVERHILL, MASS.

For the purposes of this hearing, I am representing both Merrimack Valley Home Care Center, Inc., and Merrimack Valley Legal Services.

It is our joint opinion that the elderly, due to their unique legal needs, are being, to an extent, neglected under the current legal services structure in the Commonwealth.

An attorney must acquire a certain sophistication in dealing with the legal problems of senior citizens. Due to increasingly large caseloads most attorneys employed by the Legal Services Corporation, in Massachusetts, are prohibited by time factors from acquiring this sophistication.

We would be very quick to point out that this is not due to a lack of desire or ability, but we would stress the *time* factors involved.

Merrimack Valley Home Care Center, Inc., and Merrimack Valley Legal Services have submitted several joint proposals for legal services for the elderly consumer. These funding sources include:

A. National Senior Citizens Law Center.
B. Department of Commerce, Title X.
C. Massachusetts Commission for the Blind.
D. Office of Manpower Affairs.

Due to funding limitations on the part of these sources there is no flexibility for the separation of legal services so that elderly problems can be addressed separately.

An argument could be made that legal services is a priority under title III of the Older Americans Act. But so is transportation. If any local area agency is striving for a viable transportation system, the majority of their funds would, because of cost factors, be pretty well designated to a transportation priority.

Specific service requests that would be geared mainly to senior citizens and have had some difficulty being negotiated would include, wills, guardianships, estate planning and the whole area of social security, Blue Cross-Blue Shield benefits. It is unfortunate that senior citizens, by virtue of their age, have such unusual legal problems. This facet is compounded by the fact that these problems arise when their emotional, physical, and financial resources could conceivably be considered to be at a low ebb.

It is the joint opinion of Merrimack Valley Home Care Center, Inc., and Merrimack Valley Legal Services that the Older Americans Act be amended to include a separate title to deal specifically with the legal problems of the elderly consumer.

Appendix 2

LETTERS FROM INDIVIDUALS AND ORGANIZATIONS

ITEM 1. LETTER AND ENCLOSURE FROM WALTER H. CROSS, SUPERVISOR, SENIOR VISTA VOLUNTEERS AND PROGRAM FOR LEGAL SERVICES; VICE PRESIDENT, MASSACHUSETTS ASSOCIATION OF OLDER AMERICANS, INC., BOSTON, MASS.; TO SENATOR EDWARD M. KENNEDY, DATED AUGUST 31, 1976

DEAR SENATOR KENNEDY: For the past 9 years I have worked with and for senior citizens in Massachusetts.

As supervisor of a senior volunteer program, sponsored by the Massachusetts Association of Older Americans, and funded by ACTION, the Federal umbrella agency for all Federal volunteer programs, we are all too familiar with the many problems of the elderly population.

One-third of all older Americans are below or hover at the poverty line.

The average single senior citizen has approximately $75 a week to live on and the average couple about $105 per week.

Twenty-five percent of all suicides in the U.S.A. are committed by people over 65.

This segment of our population are living in constant fear and without hope.

Legal representation, except for very isolated cases, are nonexistent. This segment of the elderly population is unable to recognize when legal assistance can be utilized and unable to obtain it if they do. Due to barely existing on their poverty income, the idea of using existing legal services is never considered.

To even begin to provide legal services for the elderly, a network of communications with the elderly should be established to advise them of the availability of such services. In my opinion this could be accomplished through local councils on aging, community action agencies, and other nonprofit agencies that are servicing the elderly.

I have serious doubts that this should be administered through the State Department of Elderly Affairs, but rather through a nonprofit statewide agency with a proven track record of reaching out and acting as advocates for the elderly.

Seniors who have been involuntarily retired should be trained to act as paralegals. The senior volunteer program has proven that the elderly will more readily communicate and confide with members of their peer group.

One of the most valuable services legal services could perform would be to work within the framework of the many categorical programs available to assist the elderly. These programs are a nightmare of complex eligibility requirements, and thousands of seniors are not participating even though eligible, due to lack of knowledge.

I regret that I was unable to attend the hearing. However, looking at the agenda, I think that my testimony in written form can supplement the oral testimony already provided.

Attached are recommendations for legislative proposals to eliminate many of the inequities in the supplemental security income programs, which if adopted, could help thousands of the low-income elderly.

Also, the amendment to H.R. 8911 offered by Representative Richard L. Ottinger to "increase SSI benefits to reflect certain expenses," namely to furnish to eligible individuals housing expense assistance whose housing expenses exceed 33⅓ per centum of his or her annual income, the benefit otherwise payable under this title, section 17, part A of title XVI of the Social Security Act, shall be increased by an amount determined at a rate which is the lesser of "(1) $600 or (2) the amount by which such individuals annual housing expenses exceed 33⅓ per centum of his or her annual income."

Also enclosed is a copy of a letter* to the writer, which is self-explanatory, and is evidence of the value of the new SSI ombudsman office in Boston, which was established through your efforts.

Mrs. Thompson was most happy to permit the use of her name. She did call me William instead of Walter but otherwise it is very gratifying for all concerned to receive appreciative acknowledgement of the value of this office.

It also emphasizes the problem of obtaining efficient service from many social security offices since the inception of SSI in January 1974.

Sincerely,

WALTER H. CROSS.

[Enclosure.]

The following are legislative proposals to improve SSI administrative and operational functions and to improve the lives of SSI recipients. Some of them have costs while others have savings or no cost. Many have excessive paper work.

EXCLUSION OF CERTAIN RESOURCES IN DETERMINING SSI ELIGIBILITY

Exclude the value of a home, automobile, and household goods and personal effects in determining the amount of resources for purposes of determining SSI eligibility.

Our letter dated June 22, 1976 referred to H.R. 8911 and the catastrophic result of the current practice of some social security district offices reevaluating homes of the elderly using 100 percent assessment ratio, even though the individual town uses less than 100 percent. *Time is of the essence* regarding the immediate correction of this inequity in order to enable thousands of seniors to remain in their homes.

RETROACTIVE SSI PAYMENTS

Exclude from assets SSI retroactive payments beyond 45 days from the date of application.

Example.—Mrs. E. F., Newton, Mass., applied for SSI, February 1974; declared eligible, February 1975; received retroactive payment of $1,300 February 1975; deposited check in the bank which brought her assets to $2,300. Notified by social security in July 1976 that assets were over the $1,500 limitation in 1975 so her SSI would be terminated. At the time of this notification of termination assets were under $1,500 as purchased furniture in February 1976.

She was never notified that this $1,300 retroactive payment would be declared as assets if deposited in bank. If she had received her award 45 days after filing application she would never had $1,300 to deposit.

This was caused by negligence of social security district office and again retroactive payments beyond 45 days should be excluded from assets.

ONE-THIRD REDUCTION

Eliminate the provision for reducing the benefit standard by one-third for living in another person's household. This is penalizing OA–SSI recipients living in the household of another approximately $54.75 monthly income.

INTEREST AND DIVIDENDS

Exclude from countable unearned income, interest and dividends from resources that an individual owns when determining an individual's eligibility and SSI monthly benefit amount. This is a program simplification proposal designed to eliminate the need for making monthly redetermination of eligibility or benefit changes based upon small changes in unearned income.

Under the current SSI program, even though maximum assets allowed are $1,500 for an individual and $2,250 for a couple, the maximum monthly interest at 5 percent would amount to $6 and $9 respectively. However, this category of client comprises not over 10 percent of SSI recipients. The vast majority have at the most bank accounts of not over $400 with monthly interest of about $3.

To determine the exact amount and deduct it from monthly SSI checks is costing the social security district offices for excess paper work and labor an estimated $7 to $10 for each client. Also, it is contributing to the backlog of

*Retained in committee files.

unprocessed claims by utilizing labor time that should be devoted to more important problem. As a matter of fact, many social security district offices are straining their operational capabilities by trying to enforce this regulation.

Amendments to reduce the administrative burden of the Privacy Act.

With respect to the Privacy Act, there is need for legislative changes in a number of areas such as the scope of the present provision for accounting for disclosures and the requirement that a record of disclosures be maintained for five years or the life of the record whichever is longer. Excessive paper work with considerable cost has been the result of the implementation of this act.

ASSISTANCE NOT TO BE COUNTED AS INCOME

Do not count as income for SSI purposes payments including vendor payments based on need in supplementation of SSI by public agencies or private nonprofit charitable agencies.

ITEM 2. LETTER AND ENCLOSURE FROM JAMES P. PISCIONERI, EXECUTIVE DIRECTOR, HOME CARE CORP., SPRINGFIELD, MASS.; TO SENATOR EDWARD M. KENNEDY, DATED OCTOBER 7, 1976

DEAR SENATOR KENNEDY: This agency was not able to attend your most recent hearing in Boston regarding legal problems of the elderly. In lieu of presenting specific testimony, I am enclosing a number of specific legal problem cases that elders have encountered in our planning and service area.

This Home Care Corp. has a title III contract for legal services with Western Massachusetts Legal Services. This contract has not been expanded even though the cases have become more involved and demanding. The agency has requested additional funds from the State agency, but they have not been forthcoming.

The program operates with one paraprofessional and local attorneys donate their time for court cases. It has been an effective program, but limited due to the funding. I hope these cases will assist the testimony provided at the recent hearing.

Sincerely,

JAMES P. PISCIONERI.

[Enclosure.]

LEGAL SERVICES CASE EXAMPLES

CONSUMER COMPLAINTS

Mrs. S., 81 years old, living in subsidized housing, a telephone customer for 50 years with no record of unpaid bills had her phone service cut off by the telephone company at the same time as she received her then overdue bill. Agreement was reached as to how this would be paid—phone company rescinded agreement—service restored when law suit was threatened.

SOCIAL SECURITY-SUPPLEMENTAL SECURITY INCOME

Mrs. S., an invalid was grandfathered in when the Federal Government took over from State welfare in January 1974. This account was not resolved at the correct amount for 8 months. There were erratic payments of odd sums from time to time with the excuse being the computer. Undue hardship was caused by this situation, such as unpaid bills making it necessary to apply to loan companies.

Mrs. B.'s husband passed away and she applied for SSI. Was told she was ineligible as she received income ADC for her granddaughter. Mrs. B.'s daughter gave us the above information. After several telephone contacts with social security, we were told no information could be given as why Mrs. B. could not receive SSI—explanation, confidentiality. We learned Mr. and Mrs. B. had been receiving SSI as a couple before his death. After his death she believed she needed to file as an individual which was unnecessary as the computer should have picked this up and ADC is not considered income. Our last contact was to the effect it was under advisement, but no information could be given to legal services as it would still be a breach of confidentiality. Mrs. B.'s daughter is to contact us as to whether information will be released to her.

Mr. E. has been receiving SSI of approximately $20 a month for nearly a year. He receives other small pensions which had been checked out before SSI payments started. Recently he has received notices from social security that he was ineligible. Another letter he had been overpaid, another letter stating he owed $239 in overpayment, more than he had actually received. We will check into this matter for him.

Mrs. Y. filed and was given SSI and a medicaid card. She made dental appointments and had her eyes examined for new glasses showing both the dentist and her optician her card also the fact she would be receiving SSI. The following month she was notified she was ineligible—then the next month she would receive SSI. All of this confusion caused our client to be hospitalized as she has a very bad heart condition. She was able to get her dentures and glasses and then SSI was cancelled.

HOUSING

Mrs. C. was living in substandard housing paying a rent of $125 a month. Rags were stuffed between the inside windows and storm windows to keep the cold air out. The ceiling paneling in the kitchen hung down in places about a foot. The bathroom walls were damp from leaks from other apartments and in flushing her toilet the water came down on her head. The ceiling had fallen in the hallway. All of this had been brought to the landlord's attention to no avail.

Case taken to housing court, judgment for our client and housing given to her immediately by order of the judge in Twin Towers.

Mr. and Mrs. U. had paid a deposit for an apartment, then found that water came into the basement and since Mrs. U. suffered with arthritis they could not take the apartment. The landlord was notified, but refused to return the deposit. Case taken to court—judgment in favor of our client—deposit returned.

Mrs. K. had been living in her apartment for a number of years and very happy until a new landlord came in and later refused to make any necessary repairs. Code enforcement inspected the house and gave the landlord notice. The landlord and his wife entered the client's apartment, became very abusive and raised her rent excessively. Our letter to the landlord stating the statute under harassment and the tenants rights has subdued the landlord for the present. Threatened court action was the deterrent.

Mr. and Mrs. M. had lived in this apartment for 12 years. Landlord could not afford to maintain this housing as formerly. The bank was foreclosing and they received an eviction notice.

The housing court gave Mr. and Mrs. M. a 6 months stay with 4 months (the last) no rent payments—this money to be used toward moving expenses and security payment in other housing.

CONSERVATORSHIPS

Miss T., an elderly person living alone in an apartment became incapable of taking care of her needs. Her money disappeared, she was found wandering in the street and later found in her apartment with gas jets on and unlighted.

We located a nephew who was willing to become conservator. Mrs. T. had been taken to Northampton for a few days. During that time we were able to go into court to get a few waivers and the nephew appointed conservator in one day.

Miss T. was later transferred to Municipal Hospital and the nephew made a final accounting to the court within 30 days.

Mr. D. had a conservator when we were called in for assistance. The conservator had most of our client's money for her own use and was neglecting Mr. D. to the point he needed daily attention.

We first received a restraining order against the conservator, then had her removed by the court as conservator.

The division of the blind requested us to have conservators appointed for three of their clients in nursing homes for the purpose of cashing their checks and rendering necessary services.

This turned out to be a lengthy procedure taking months in court to accomplish this request, so much so that one client, Mrs. B., died during this time.

Mr. T. and Mrs. H. have had a conservator appointed by the court.

INSURANCE

Mrs. Y. went to Florida for a short stay and also an elderly man who had roomed in her home for many years. While in Florida, Mrs. Y. took out insur-

ance for them both—a health insurance for Mr. C. and life insurance for herself. Later Mr. C. became ill and passed away. Mrs. Y. went through the necessary formalities which the insurance company required and received notice that no payments would be made nor a refund. Mrs. Y. had paid the premiums for 1 year.

Mr. C. passed away 3 months after the policy was taken.

Mrs. Y. came back to Springfield and requested our assistance. We looked over Mrs. Y.'s policy and it was felt there was an element of fraud—the insurance company was contacted with no results. The attorney general's office was contacted, who in turn contacted the insurance and the year's premium of $168 was returned to Mrs. Y. as there had been misrepresentation.

No refund was given in regard to Mr. C.'s policy—the Florida Insurance Commissioner stating "there is not a legal obligation for the company to refund the premium—cannot be apportioned in case the risk terminates before the end of the term for which the insurance was granted."

We were not in agreement but felt we had no alternative but to close the case.

Mrs. C. and Mrs. H. took out insurance policies with a company advertised in the paper. Mrs. H. told Mrs. C. her policy was for $1,000 at time of death and she would be the beneficiary so the funeral expenses would be paid. Mrs. H. died and Mrs. C. made funeral arrangements for that amount. The insurance company sent a check for the premiums which had been paid with interest which amounted to $354. The undertaker's bill was over $700 the cemetery over $300. Mrs. C. came to us greatly upset by this turn of events and she was in no position to pay the balance as she was just receiving social security.

The policy did have a clause, one had to be insured for 2 years, Mrs. H. passed away about 20 days too soon and there was an amount of $1,260 to be paid.

We were able to have the funeral home and cemetery to write off the balances.

FORECLOSURES

Mr. M. is considered legally blind has lived in his home most of his life, but in recent years could not work and was trying to live on a small amount from welfare. He was unable to pay on the mortgage the bank was going to foreclose—his real estate taxes was long overdue. He wanted to rent his house to American International College but they were not interested. We contacted the bank assessor's office and A/C for him. He was able to get the money to pay the interest due the bank and on his taxes. He is still living in his home, the bank has not foreclosed but it is imminent. It will be some time before any action will be brought. The value of the property is minimal.

SMALL CLAIMS COURT

Mrs. V.'s problem concerned a party fence which a neighbor removed. Mrs. V. had paid for a portion of this chain fence. The neighbor refused to return or pay Mrs. V. for her section. Threatened to build a wall which would infringe on our client's property and began a series of harassment. Small claims court found in favor of our client—defendant paid cost of fence and damages.

COLLECTION AGENCIES

Mrs. S., a blind client and her son who was an alcoholic lived in a subsidized apartment. The son did cause damage to the apartment and subsequently died. Mrs. S. went into a nursing home. The apartment owners formally requested payment for damages from Mrs. S. who was only receiving a small social security payment. It was then put into a collection agency. The collection agency agreed not to press for payment but write it off when we presented the circumstances.

Mr. L., a client, age 82, came into the office with his postman who from time to time would call on Mr. L. who lived alone was deaf and nearly blind to go over his mail which he occasionally received which looked important. An attorney who was acting as a collections agency for a large department was threatening Mr. L. with a court order for nonpayment of a bill of $68 which Mr. L. had forgotten about since it had been several months previously. We contacted the attorney who said suit would not be brought if the bill was paid, but would not write it off. Mr. L. will make small monthly payments.

Our housing attorney is working on a proposed draft lease for the elderly in public housing pertaining to double locks on first floor windows, better lighting and additional security officers. This is expected to be published by November 1976.

Wills have become a real necessity for the elderly whatever their possessions to give to friends, if no family, or to friends if family has neglected them—at least one a month.

Many elderly have recourse in the court but fear holds them back—(1) never have been in court—(2) fear of retaliation. This fear needs to be uprooted.

ITEM 3. LETTER FROM GERALD D. WALL,* STAFF ATTORNEY, COUNCIL OF ELDERS LEGAL SERVICES, BOSTON, MASS.; TO SENATOR EDWARD M. KENNEDY, DATED OCTOBER 14, 1976

DEAR SENATOR KENNEDY: On August 30 I had the opportunity to testify before your committee studying legal problems of the elderly. At that hearing I discussed the kinds of serious legal problems facing older persons that should be dealt with by legal services programs. I did not, however, testify as to how such programs could best be funded.

One method mentioned at the hearing for funding legal services programs for the elderly was through the Legal Services Corporation. This alternative was criticized by James Wechsler, director of legal services for Cape Cod and Islands in a letter dated September 15, 1976. The experiences of this office support Mr. Wechsler's opinion that additional, outside of the Legal Services Corporation, sources of financing legal services for the elderly are necessary.

At the present time, the major source of funding for this office is the Legal Services Corporation. However, it is inadequate to allow us to meet the needs of eligible elders in the area we are responsible for serving—the city of Boston. This is so because of the large elderly population in Boston and also because of the extra attention necessary to properly serve elders.

Other sources of funding should also be looked to because of the special needs of older persons. Many of those needs exist because of past governmental and industry policies which have in many cases stripped the older person of the will or of the means of dealing with the complexities of daily life.

In addition, the elderly poor often are the same persons whose productivity and creativity during their younger years resulted in the high standard of living enjoyed by many others today.

Because of these facts, the availability of effective legal assistance for the elderly must be insured.

This can only be accomplished by giving special attention to programs of legal services for the elderly and seeking new sources of financial support for these programs.

Thank you again for the opportunity to bring this to your attention.

Very truly yours,

GERALD D. WALL.

ITEM 4. LETTER FROM PAUL V. CASEY, SPECIAL COORDINATOR FOR ELDER SERVICES AND LEGAL SERVICES TO ELDERS, OLD COLONY ELDERLY SERVICES, INC., NORTH ABINGTON, MASS.; TO DAVID A. AFFELDT, CHIEF COUNSEL, SENATE SPECIAL COMMITTEE ON AGING, DATED SEPTEMBER 13, 1976

DEAR MR. AFFELDT: Pursuant to our conversation at Senator Kennedy's hearing on "Legal Aid to the Elderly," I wish to advise you of our ongoing, innovative program of legal assistance to the elderly.

We are using a 15-passenger mobile classroom, which is owned by CETA in the city of Brockton, Mass. We have operated all summer in southeastern Massachusetts. We have secured the services of an extremely able attorney, Mr. Ryan

*See statement, p. 171.

of 11 Beacon Street, Boston, Mass. He is a semiretired attorney and has attracted a great and devoted following among the elderly of this section of Massachusetts. We believe our efforts are worthy of funding and would appreciate the help of your office. We realize that we have only until September 30, 1976, to request funding.

However, we feel that appropriate funds for such a project requiring paralegal training, additional attorneys, etc., would require funding in the sum of $200,000 to adequately serve the vast area and target population of elders in southeastern Massachusetts with its far above national average of indigent elders.

Sincerely,

PAUL V. CASEY.

ITEM 5. LETTER FROM EDWARD W. GORFINE, CHAIRMAN, COMMITTEE ON LEGAL SERVICES TO THE POOR, MASSACHUSETTS BAR ASSOCIATION; TO SENATE SPECIAL COMMITTEE ON AGING, DATED AUGUST 30, 1976

GENTLEMEN: The Massachusetts Bar Association welcomes the opportunity to express its members' support for elderly legal service programs throughout the Commonwealth of Massachusetts. This highly specialized area of law, dealing with social security, medicare and medicaid, nursing home and home care problems, deserves the strongest possible financial support from our Federal Government.

This organization is doing everything it can to educate its members in providing volunteer legal assistance to the elderly through its speaker's bureau, volunteer outreach advice and wherever possible representation in landlord and tenant matters; as well as to provide board membership on legal service programs throughout the Commonwealth funded to provide more intensive representation before administrative boards and courts of law.

Our membership will continue to review various programs and increase its volunteer efforts to provide sorely needed legal representation to the elderly.

Respectfully,

EDWARD W. GORFINE.

Appendix 3

STATEMENTS SUBMITTED BY THE HEARING AUDIENCE

During the course of the hearing, a form was made available by the committee to those attending who wished to make suggestions and recommendations but were unable to testify because of time limitations. The form read as follows:

DEAR SENATOR KENNEDY: If there had been time for everyone to speak at the hearing in Boston, Mass., on August 30, 1976, concerning "Improving Legal Representation for Older Americans," I would have said:

The following replies were received:

EDWARD E. ALESSI, BEDFORD, MASS.

I am making a statement relative to legal services for the elderly as a representative of L.I.F.E., Living Is for the Elderly. L.I.F.E. is an association of nursing home residents whose primary purpose is to improve their lives and the lives of other nursing home residents. We strongly feel that legal services should be made more readily available and accessible to older people especially the nursing home resident. It's a service that is very necessary yet can become rather costly if an individual has to pay for it him/herself.

The service should be brought to the home since our experience has shown that most nursing home residents will not go looking for a lawyer, and many are not aware of the kinds of service that a lawyer could provide to them. It would be important then to bring the service to the home via paralegals visiting homes on a regular basis to establish trust and rapport with both residents and staff and to identify the legal needs of people. This use of paralegals would allow the trained lawyer to make better use of his time. Why does a nursing home resident need a lawyer? Property settlements, wills, insurance, competency proceedings to insure the rights of the individual, financial matters, etc.

Lastly, there is a great need for protective services for nursing home residents, especially for the incompetent person, who in the eyes of the law, is viewed as competent. This person needs the protection of a guardian, conservator, or other person who would act on his/her behalf. We have found a sizeable number of nursing home residents who are not able to exercise their rights or use poor judgment yet are said to be competent. These people could thus be easily taken advantage of by others. We would also feel that similar situations exist with elderly in the community.

MARGARET GILMAN, BOSTON, MASS.

Because I had to take a neighbor to the Massachusetts General this morning, I was unable to go to the hearing this morning. I tried to write a few words while we were waiting for her appointment.

Personally, I have no complaints because the Council of Elders Legal Department located at 102 Norway Street, especially Mr. Phil Coles and Mr. McCusker have been very helpful whenever I have needed legal advice. Other elders also appreciate the promptness and cooperation of this branch of the Council of Elders.

When I asked people in other areas, however, I received some serious complaints. The most often mentioned "gripe" was that they often had to wait a very long time for results. The interviewers were often rude, suspicious, and

subjected people to lengthy cross-examinations. In fact, some people felt that the legal advisor was distinctly annoyed by having to defend the elderly.

Thank you for asking me to make this report. I am truly disappointed because I could not be there in the Gardner Auditorium this morning.

I am a Republican, but I feel very strongly that when an elected official supports such a good cause as honest and sincere aid to the elderly that we should all "go to bat" for it regardless of our political affiliations.

DANIEL MADIO, LAWRENCE, MASS.

I am with the Merrimack Valley Home Care Center. I am the director of the Senior Aides Program for that area, and I can assure you that it is a viable operation that has demonstrated its value to the elderly of the Merrimack Valley.

In their outreach work, the Senior Aides endeavor to determine the problems troubling the elders and assist in the resolution of those problems. Among the problems uncovered is the great need for legal assistance.

We do have in the Merrimack Valley a legal service available for the low-income elderly. However, their funding severely limits the amount of services available to these elders.

Because of this limitation, and the apparently expanding need for these services, I propose that consideration be given to a program that will train elders, who are seeking part-time employment and who wish to be useful citizens, to learn the very basics of law and in turn be assigned to para-legal services to do much of the spadework now required of any attorney, thereby relieving the attorney to perform the actual practice of law.

Furthermore, I can foresee the possibility of these elderly paralegals being employed by private industry—at industry's own cost—thereby creating jobs for the elders and at the same time hopefully reducing the cost of legal services to the elderly who would not qualify for the services because of income limitation through the present legal aid.

The paralegal program is not a new concept. There is presently one such program in Connecticut. It is my sincere hope and desire to initiate such a program for our Massachusetts elders.

I would be more than pleased to go into greater detail with any representative of your office.

GERTRUDE K. WEINER, BOSTON, MASS.

I am senior attorney of the Greater Boston Legal Services.

I have served in the area of legal assistance to the poor from 1932, specializing for many years in legal services to the elderly.

The legal needs of the elderly cover the same large areas that all people have, whether they are young or old. In addition, the elderly become special targets of oppression in the areas of housing and consumer fraud.

The elderly accept these impositions upon their legal rights without fighting back.

The elderly division of the Greater Boston Legal Services has been the fighting advocate protecting the legal rights of the needy poor of Boston.

The elderly poor of Boston number approximately 22,000, or 30 percent of the total elderly population of the city. With our limited funds we can only serve the tip of the iceberg.

We are the advocates who help secure the maximum benefits in social security, supplementary security income, welfare, medicare, medicaid, food stamps, and social services for the elderly.

We are the advocates who help to establish the need of the elderly for housing, and help secure housing for them at not more than 25 percent of their income.

We urge you to consider the expansion of these services so that legal assistance may be available to more of the elderly 22,000 people in Boston, rather than to just the tip of the iceberg.

ANNIE YOUNG, DORCHESTER, MASS.

Why go up on rent when we don't get any service. I have filled out a form over 2 years ago telling what needed to be done in my apartment. The baseboards are falling down and we don't have sufficient lights outside; and when we need lights in the halls sometimes it is as long as 2 weeks being repaired. It has been a month one time before we got a light in the back hall, it is bad enough when we have lights and still worse when we don't have any; we need all the lights burning on the outside. We elders are having it rough now; they have put drunks all around us and the young disability drunks, and they draw the young drunks from all over Dorchester and we can't rest day or night. If we want to sleep late in the morning we can't. At 5 a.m. in the morning they start coming in cars honking their horns and racing their motors and swearing and loud talking and if we call the cops they won't come. They will say someone will be right down but they never come. We don't know what it is to sit on the benches in the shade, for the young and old drunks have them occupied. When the drunks can call the cops they come. I called once and whoever answered hung up on me. They come sometime two or three times a day or night when they call. We don't have any protection whatsoever. When I moved here they weren't letting any in here but the elderly, but now anybody can move in. My apartment is leaking and the grass needs cutting, it has been cut twice this year.

ALFRED G. ZEMGALS, BILLERICA, MASS.

I would like to have asked how to enforce the senior aide's right to investigate elderly complaints without being refused information by some town agencies: Housing authority, Veteran's Administration, and welfare department.

THE NATION'S RURAL ELDERLY

WEDNESDAY, AUGUST 18, 1976

U.S. SENATE,
SPECIAL COMMITTEE ON AGING,
Rockford, Iowa.

The committee met at 3:35 p.m., pursuant to notice, in the United Methodist Church, First Avenue and Third Street NW., Rockford, Iowa, Hon. Dick Clark presiding.

Present: Senator Clark and Representative Charles E. Grassley.

Also present: Deborah K. Kilmer, professional staff member; David Harf, legislative assistant to Senator Clark; Margaret S. Fayé, minority professional staff member; and Donna Gluck, resource assistant.

OPENING STATEMENT BY SENATOR DICK CLARK, PRESIDING

Senator CLARK. Thank you very, very much. I really appreciate those of you waiting so very long for us. I apologize.

We have had five such hearings. This is the sixth of six hearings that we are holding in Iowa, Nebraska, and South Dakota.

I am afraid I got a little ambitious. I wanted to ride on one of these minibuses from Sioux Falls to Canton, so I did. I thought I could get down there and back to the Sioux Falls airport, but we didn't get to the airport until about 2 o'clock and you were waiting here at 2:30. Although the plane is pretty fast, by the time we got across Sioux City we were later than planned.

I sincerely apologize for being this late. As a reward, I am going to save you a speech. Instead, what I want to do is just tell you in about 60 seconds what the purpose of these hearings is and then ask Congressman Grassley if he would like to make a statement. We will then go right on with the first panel. In fact, while I am speaking, I wish the first panel would come on up and have seats here. I know John Beer, Paul Schroge, Mr. and Mrs. Judd and, I think, Harry Empting are here. Please come on up here while we are visiting.

We are very pleased to be here in Rockford. These are, of course, official hearings of the Senate Committee on Aging. Our professional staff is here at the table and all of the information is being recorded on a tape here by a stenographer.

"FAIR SHARE OF SERVICES"

The purpose of these hearings, incidentally, is to try to find out what we ought to be doing in Government, uniquely for rural elderly people. Many of the Federal programs that have been developed over the years for the elderly, as well as others, have been primarily for the

purpose of metropolitan areas and, as is so often the case, people who live in the countryside, or people who live in small towns have not necessarily gotten their fair share of these services.

Now increasingly over the last few years we have been able to extend some programs, particularly congregate meals programs, some of the minibus programs, and so forth, into some of the smaller towns. We have a very long way to go, and that is what this hearing is all about; what kind of transportation needs we have, what kind of nutrition needs, what kind of health care needs, employment, and so forth.

Today our two panels are going to be emphasizing senior multipurpose centers, and then the second panel is going to be talking about housing. Again, housing and senior centers in small towns—that is the whole emphasis of the hearing, so we are delighted to have you here.

I would like at this time to give the microphone to Congressman Charles Grassley.

STATEMENT OF HON. CHARLES E. GRASSLEY, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF IOWA

Representative GRASSLEY. Thank you, Senator Clark. It is good to be here with you.

A year ago the Select Committee on Aging of the House of Representatives held hearings in the third district, so I know that I met some of you at that point. We discussed some of the same problems that Senator Clark is interested in hearing from your testimony.

I am not going to read my opening remarks. I am going to submit them for the record, Senator, if I may have permission to do that.

Senator CLARK. Yes.

Representative GRASSLEY. I had eight pages of remarks and they will be made part of the record, so if you have the record sent to you after it is printed you will be able to read them at that time.

I told you, Senator, I would have to leave for an appointment. I have to be there by 4 o'clock, so I will be leaving all of you. The gist of what I was going to say, Senator, revolves around the point that Congress, I think, basically has made a good start on programs for the elderly. I find, however, from oversight hearings held in the House Committee on Aging, that congressional intent has not been carried out as much as it should be. I will use just one example.

ADMINISTRATIVE REDTAPE

The point of my off-the-cuff remarks here is that I think that we have to alert the senior citizens in our district, in our State, and particularly their advocates that there are plenty of good programs on the books that are not being adequately made use of by them. Some of this is due to the administrative redtape in Washington. No. 1 is the combination of section 8 under Housing and Urban Development and section 515 under the Farm Administration.

Two years ago Congress mandated that those programs ought to work in tandem. We were just forever and ever trying to get the administrative redtape worked out and getting the necessary agreements signed so that that very good program could actually be doing some-

thing for people in need, particularly in the rural areas. I look at section 209 of the program. My remarks speak to that program as it is supposed to encourage better use of 202 funds. That is another example of a program where we have to work to make sure that the administrative machinery works as we had intended.

I am sure Senator Clark wants to hear your ideas, and of course I do, about new things that need to be done. We also want your thoughts for the record on how you think existing programs could be better administered, particularly as the bureaucracy in Washington is slow in sending down directives to the people at the lower levels of Government.

Senator Clark, I thank you for the opportunity to participate in this program and I will be looking forward to reading the record.

[The prepared statement follows:]

PREPARED STATEMENT BY REPRESENTATIVE CHARLES GRASSLEY

Mr. Chairman, members of the committee, as a member of both the Select Committee on Aging in the House, and the Subcommittee on Housing and Community Development of the House Banking Committee, today's hearings are of particular interest to me. Just last year, the select committee held hearings in Iowa, and the trend of the testimony pertaining to housing for senior citizens was very interesting and enlightening. It became abundantly clear senior citizens prefer to live out their lives in familiar surroundings, if at all possible, and without constantly moving about. In other words, they prefer to live in their own homes as long as they possibly can, and as independently as is possible.

As a representative of over 60,000 senior citizens, I feel it is my responsibility to assist those who want to stay in their own homes to do just that. Clearly, there are a number of ways in which legislators can be helpful in this respect.

For example, programs already exist to assist older persons, via low-interest loans and grants to keep up their residences, and to insulate homes in order to keep utility bills under control. Less directly, but of equal importance, is our ability as legislators to keep down the rate of inflation, to eliminate laws which restrict the amount of income older persons can earn due to their receiving social security, and to minimize the estate tax burden on an elderly heir is crucial to assuring that the older person has enough funds to keep up his or her home. Last, but not least, the provision of social services, and companionship, through the establishment of multipurpose senior centers could well prevent many older persons who might need some sort of outside assistance from having to move into a more care-intensive surrounding.

Of course, some senior citizens, of their own choice or due to necessity (financial or physical), may seek shelter outside their own homes. Various Federal programs exist to assist many of these in finding suitable homes at a reasonable cost. I believe it is the responsibility of Congress to assure that such housing meets the variety of needs that an older person can be expected to face, in as efficient and economical manner as is possible.

Various Federal housing efforts are designed to meet this objective, though it is not clear that the objective is being met. For instance, there is a section of a Federal housing program administered by HUD which instructs the Secretary to consult with the Secretary of HEW in order to insure that housing projects are designed in conjunction with federally funded social service programs, administered through State plans for the elderly. The purpose of this section is not only to insure the coordinated delivery of housing and social services to residents of the federally backed project itself, but also to insure community participation in such services. I have recently written the Secretaries of the two Departments to determine what progress has been made toward meeting the requirements of this section, and feel that Congress must take the lead in seeing that its objectives are met.

ADDITIONAL HOUSING FOR LOW INCOME

Much work remains to be done, although some successes have already been realized. For instance, in June the Departments of Agriculture and Housing and Urban Development reached an agreement which should result in additional

housing for low-income, rural citizens, particularly the elderly. More will be said on this and other related matters in the text of my statement.

I am anxious to hear the comments of witnesses here today, and would greatly appreciate any suggestions you might make which could assist Congress in carrying out its efforts on behalf of senior citizens.

At this point, I'd like to briefly discuss some of the Federal programs which exist to assist elderly persons to keep up their homes, meet rental payments charged for clean and decent housing, to receive services, and intereact with others at specific sights designated as multipurpose senior centers.

The section 502 and 504 programs, administered by the Farmers Home Administration, provide low-interest, long-term loans to assist with the purchase or repair of an owner's dwelling. The 504 program is of particular import for senior citizens because the interest rates on loans are very reasonable, and some grant money is now available. Funds appropriated under the 504 program can be used for home insulation, roofing repairs, electrical repairs, etc. In addition, the borrower or grantee need not bring his or her dwelling up to standard, which often is unrealistically costly and stringent. The 504 program, I believe, has a great potential to help senior citizens remain in their own homes.

In my opening remarks, I referred to a section of the Housing and Community Development Act of 1974 which is intended to promote the coordinated delivery of housing and social services to the elderly. Formerly, if social services were offered to elderly citizens receiving Federal assistance, members of the community not living in the assisted housing could not receive such services because they were paid for out of rent receipts.

However, the implementation of section 209 means that State plans for the delivery of services under the Older Americans Act or the Social Security Act may now be drawn up in conjunction with housing authorities. As a result, services might be offered at the sight of federally-assisted housing and yet elderly citizens who do not live in that housing could benefit. This, I believe, would mean much more interaction between the older person living in an assisted unit and his peers in the community. In addition, under the Older Americans Act and the community development block grant programs, funds are available for the establishment of and the provision of services through multipurpose senior centers. These, as mentioned above, could be located in federally assisted projects, particularly those developed under the 202 program (to be discussed below). Congress, this year, increased the funding for such centers in the appropriations bill for the Administration on Aging in HEW.

Extremely Valuable Program

The 202 program basically provides Federal loans to nonprofit sponsors for the construction of housing for senior citizens. In conjunction with the section 8 housing assistance program which provides rental assistance to low-income households, this program should prove extremely valuable. It is fairly new, however, and thus not enough experience has been gained to assess its impact on meeting the needs of senior citizens.

The 202 program now contains some very important aspects which should prove of great value to senior citizens. For example, a senior citizen can now have a nonelderly person living with him or her in an assisted unit if that person is essential to the care of the senior citizen. Also, if a couple of which one member is a senior citizen, and the other is not, move into a 202 unit, and the older person passes away, the living spouse may continue to reside in that unit. This should prove of great value to spouses who might fear eviction due to the death of the companion, as well as the traumatic aspects of moving to a new home at an advanced age.

Finally, the Departments of Housing and Urban Development and Agriculture recently entered into an agreement which should facilitate the development of multiunit complexes for rural citizens, particularly those living on limited incomes. The agreement involves the Farmers Home section 515 mortgage interest subsidy program and the HUD section 8 assistance program discussed earlier. In October, I learned that the two agencies had the responsibility for administering these jointly, but were hindering their administration due to bureaucratic haggling. As a result, I began consultations with the two agencies to eliminate a number of administrative roadblocks. In June, an agreement was finally reached. Final regulations to carry out the agreement should be issued shortly. As a result, the development of rural housing for low-income citizens should increase.

All of the programs I've described, if administered efficiently and forthrightly can help make the senior years pleasant ones for many. Congress must

see to it that they are administered properly so that senior citizens do not suffer, and so that taxpayers' money is not wasted.

Senator CLARK. Thank you very much, Congressman.

Now we are going to hear from this first panel on senior centers. What we are going to do, so we will have some time for discussion, is to ask people to try to limit their remarks to about 4 or 5 minutes. Then, if you have more than that prepared, we will be happy to put your full statements in the record.

We are going to hear first from John Beer who is a member of the State Advisory Committee on Aging and a resident of Hampton, Iowa. As I understand it, Mr. Beer will discuss the housing needs of the very rural areas, such as Hampton.

Mr. Beer, we would like to hear from you first.

PANEL ON SENIOR CENTERS

STATEMENT OF JOHN M. BEER, STATE ADVISORY COMMITTEE ON AGING, HAMPTON, IOWA

Mr. BEER. Senator Clark, Representative Grassley, members of the staff, other distinguished guests, ladies and gentlemen, in March of last year we had a meeting to discuss the needs of senior citizens, and they came up with five major ones including the handyman, chore services, transportation, senior centers, and the homemaker health aide services. I have not agreed with that myself. One of the greatest needs, I think, for some of the older citizens is companionship. All of these other services, to me, are supplemental to that one thing.

Now, speaking of housing, I live here near a little town—a town of about 150 population. In that town are five widow ladies living alone. Four of those ladies were married to men who worked for a living; they put in their whole life drawing wages. They accumulated enough to buy a little home. The homes of three of the instances are hardly livable—they need a lot of repair work. In fact, one of them, I think—if you repaired it, it would cost more than to build a new house. That, I would think, is vitally important—the same as in most small towns in the area.

In the town of Hampton, they had a survey they made several years ago which showed 300 people living alone, many of them in substandard housing. There were a great many more—I don't remember the number—of senior citizens who were not living alone. The program which was put out a year ago, I think, to help them with their housing needs—I have had quite a bit of trouble trying for the implementation of that.

In fact, one lady that I know of personally applied for help. They came to her in February—tried to call her. She didn't answer the telephone because she was in the hospital with pneumonia, and I was not very well pleased with that situation.

FACILITIES ARE INADEQUATE

There are other things in regard to senior centers. The senior centers go a long way toward helping alleviate the other conditions that exist and give people an opportunity to meet together, to have fellowship meals, or congregate meals in a senior center. In many of the small towns the center usually has a card table and some of them have a pool

table. They are small, out-of-the-way places without the equipment for anything more than that. They are far from adequate for the purposes outlined.

I had suggestions from the director of social services for housing needs such as low-cost housing, rest homes, and such as that. That left the problem of low-cost housing. The housing which we have is usually too high priced for that person who is living on social security in a home.

The next problem is to get to these people, and they don't like to be pushed around.

Senator, I think I have probably used up my 5 minutes.

Senator CLARK. That is a good start and we will be coming back with questions a little later.

Paul Schroge, I think, is a retired resident of Rudd. He is actively involved with the senior club at Rockford. As I understand, Mr. Schroge is going to explain the senior club's efforts to renovate the building that they have been given to use as a senior center, and the obstacles that they face in the process of doing this.

Paul, you go right ahead.

STATEMENT OF PAUL SCHROGE, RUDD, IOWA

Mr. SCHROGE. Senator Clark, ladies and gentlemen, and neighbors, I don't know just how to start this thing, but I tried to think of what would be interesting to everybody. I have some statistics here—population of area 2. The people 60 years or over make up 19 percent in area 2, which is quite a large number. Floyd County has 18 percent of people 60 years and older. The town of Rockford has 24.3 percent of people over 60 years old, and that is a town of about a thousand people, more or less. That gives us quite a few people to try to serve.

We have a very active group down here and our meeting place is right on Main Street. We are just a block from the post office, if that means anything to a lot of you. We are very small and we need more room. We have had some visitors here in the last 6 weeks. We had 52 of them there one afternoon, so you know that our people are interested in getting this center and would like to keep it going. I am enjoying the work that I am doing with these senior citizens. Of course, I am not a senior citizen yet; I am just a little bit younger than that.

Senator CLARK. That is the way we all are.

Mr. SCHROGE. I will be 69 in September, so you can guess from there on.

We have been fortunate dealing with the township trustees and, I think, the city of Rockford. We have had some buildings given to us. They are not actually given to us—they are on contract with a 99-year lease. We would like to redo these buildings. We could make them into a very good deal.

CONVENIENT LOCATION

One building joins right on to us. We have a pool table and we need another one pretty badly. We could move that over there and we could have a nice big senior citizens gathering. We have as high as 65 and 70 when we have pot luck, so there is a lot of interest here. As far as location is concerned, I don't believe that we could get a better location for our senior citizens center than we have right in Rockford,

because it is right on Main Street where we have a meeting. They can go downtown to the congregate meals which, at present, is working out as good as we can expect. Maybe if we remodeled and got things arranged we could have the congregate meals at the center. At the present time it is just impossible for us to do this.

I can't think of anything else that I could add to this right now, only that for us to do this, this meeting comes at a nice time so that we can say something on that and maybe get a little help.

I think that is all I have to say, Senator Clark.

Senator CLARK. That is fine. I do want to say—since this is on multipurpose senior centers and you are talking about the needs that you have particularly, and Mr. Beer as well—for the first time now we have authorized and appropriated funds under the Older Americans Act that is called title 5 in which we provide for funding for the support of the acquisition, alteration, and/or renovation of these centers. Now that does not mean that everybody can get everything they want, but it does mean for the first time that we have acknowledged that this is a high priority.

I know in the next 4 months, in this period between now and the first of October, Iowa has been allocated almost $75,000 for that purpose. Then, beginning October 1 of this year through October 1 of next year, there will be an appropriation of almost $300,000. Now that is for Iowa alone I am speaking of and, although that is not going to go a long way, it is an important beginning. I think it does say, at least, that the Congress has seen what people have been able to do in these centers and feels that it is important.

Now we would like to hear from Mr. and Mrs. C. E. Judd of Thompson. Mr. Judd also has some experience in this whole business and we particularly would like to hear about those experiences in Thompson.

STATEMENT OF C. E. JUDD, THOMPSON, IOWA

Mr. JUDD. Senator Clark, Governor Blue, ladies and gentlemen, some wise person has said that a nation's greatness can begin with the manner in which it treats its old people. Most societies cherish their senior citizens, provide for them in their homes, and seek their advice. This was true in this country until about 30 years ago. Now our affluent society geared to the extravagances and conveniences of the young forces these people into comparative isolation to shift for themselves.

In many cases relatives have abandoned them, they are without transportation, and many live in poverty. These peoples have many problems and frustrations, but their most common complaint, regardless of health or economic status, is loneliness.

My remarks to the committee are directed to the need for senior centers, particularly in the small communities. The concept of the Government providing meeting places for senior citizens is certainly not new. A long time ago when I was young it was common practice to provide these meeting places in county and city buildings. The courthouse often contained a large meeting room on the ground floor dedicated to the Grand Army of the Republic and was available to senior citizens at all times.

These rooms were popular gathering places for the older folks. They had organized meetings. They had various kinds of recreation, reading material, and a place for sewing and quilting. With the coming of

many new government services, the courthouses and town halls became too crowded to afford the luxury of a meeting place for old people. In some places the men gathered at the barber shops and pool halls, but these establishments no longer tolerate them.

Competition High for Available Space

It is very difficult in a small community to provide an adequate meeting place. In most cases the town councils are generous with the space they have but there are many demands for these meetings and they cannot be designated primarily for senior citizens, nor can they tolerate such groups who just want to spend an afternoon leisurely. In some communities the room made available is at the end of a difficult stairway.

In Lake Mills the senior citizens were elated when it was announced that provision was made for a center for them. The senior citizens did considerable work in planning to make the center a reality. Later it became a community center, rather than a senior citizens center. Apparently after some negotiation, the senior citizens have use of the center along with the rest of the community.

In many cases senior citizens in rural areas are reluctant to ask for help from government agencies—Federal, State, or local. They feel that in doing so they would be surrendering their independence. In Leland there is a strong senior citizens club which refuses to participate in any program or activity involving public funds.

Senator Clark. What town is that?

Mr. Judd. Leland.

Many professional people do not adequately understand senior citizens and they are often inclined to treat them as a kindergarten class assuming that a certain period of time can be devoted to reading, another period for exercise, and another for handicrafts—and all present will have to take part or receive a failing grade. These older people vary greatly in their backgrounds, education, mental and physical capacities, and do not all care to do the same thing at the same time.

However, I must say that our area agency staff is to be commended for their hard work and understanding of older people. A senior center should allow ample time and space for each to do his own thing, either alone or in small groups. The area agency on aging working with organized groups can be most effective in bringing its programs to the elderly if there is a senior center in the community, and in this manner the whole program can be more visible.

It is desirable for the entire community to recognize the presence of its seniors and generate support for their programs through public funding from county and local tax funds. Thus, the lives of these people can be enriched and the goals of the Older Americans Act of Congress can be attained.

Senator Clark. Thank you very much.

Do you have a statement, Mrs. Judd?

STATEMENT OF MRS. C. E. JUDD, THOMPSON, IOWA

Mrs. Judd. Yes. Senator Clark, Governor Blue, and friends I wish to direct my remarks to the senior center at Thompson where we live. Winnebago County has about 2,650 people over 60 years of age accord-

ing to the 1970 census, and of these about 650 are below the poverty level. About 10 percent of the population reside in the Thompson area. The percentage below poverty is about the same as the average for the county. The town of Thompson has a population of around 700 people.

A few years ago Mr. Judd and I made a count of the senior citizens living alone in their homes and there were 56. We may have missed a few. This did not include those who are over 60 who were living with either husband or wife.

In 1969 some of the seniors and other concerned people of the community decided it was time that the community took a hard look at what they were doing for their senior residents. Many things have been done for the young of the community, including much playground equipment, a swimming pool is in the process of being built, various summer recreation activities were being planned for, but nothing was done for the elderly; they were on their own. As a result, the senior citizens club, called the Young at Heart, was organized in the fall of 1969 with 65 members. The community and the town council were very helpful and a lot of interest was generated in this project.

A building which was located on Main Street would be available for our use. It was located on street level with only two or three steps up to the door. This we could use for fixing it up. It had first been used as a hotel but through the years had many tenants, sometimes standing empty, and each had taken its toll. It was in a state of disrepair.

It was then owned by the Veterans of Foreign Wars who had purchased it in part by donations from other groups and individuals. They did not have the money to repair the building so it was offered to the community for use as a place for group meetings. All they wanted to retain was the basement which they fixed up as a bar with an outside entrance and they wanted to retain one small room that they could use to store their equipment.

Repairs Made in Joint Effort

The Lions Club and the senior citizens made extensive repairs to the building. They remodeled and repaired the front of the building, put in new doors, covered with plywood, carpet, and so forth. They paneled some of the rooms and painted others. They put in new ceilings and windows. They built a kitchen with cupboards, counters, and a sink, and remodeled a bathroom.

Organizations and individuals donated an electric stove, refrigerator, a hot water heater, a piano, a pool table, and other various supplies. As the membership of our seniors group is made up of people of many varied interests and skills, we were able to do a lot of the work ourselves or sometimes we got our kids to help us. We have card parties, food sales, coffee breaks, and rummage sales besides donations from members and others who raise the needed money to buy supplies.

The Young at Heart Club spent about $1,000 from their treasury besides the many, many hours of work during the years. The Lions Club members also spent much money and time. As a result, we ended up with an adequate and cheerful center. There was much more repair being planned as time and finances would allow.

The town council was very generous and paid the bills for the heat, light, and water. We were able to get chairs, large tables, card tables, games, coffee pots, coffee pot liners, and so forth, from Federal and

State funds through the State committee on aging as it was then known. These moneys were administered by the OEO and Mr. Christian, from Mason City, was a great help in this.

When all was going fine, the VFW must have decided that it was rather a lucrative thing they might have in their building so they notified each organization that they would be charged a fee for the use of the building. The seniors were to pay $10 each time we met and give 10 percent of the gross that we might have each time we had a fundraising activity. Other groups were to pay a larger amount.

A protest meeting was called by the organizations using the building and, as no satisfactory solution was arrived at, we all found another place to meet. The town council cut off their support for payment of the utilities so the building is again, after all these years, standing idle most of the time.

The town council again came to our aid and offered us the use of meeting rooms in the town hall for our meetings. We are able to meet here once a week in the afternoons from November 1 to May 1, and in the evenings the rest of the year. It is a very tightly scheduled place, though we are most grateful for what we have.

Hot Lunches Provided

We have a congregate meals program in our town serving noon meals Mondays, Wednesdays, and Fridays. The Young at Heart is the subcontractor for these meals. We rent a small, old school building from the school board for the meal site. During the school year we contracted the hot lunch program to prepare the meals for us and during the summer we had our own cook.

We will admit that we used poor judgment in not having a written agreement instead of a verbal one with the owners of this building in which we had the meetings for over 3 years but, as other groups had been using it with no problems, we went along in good faith. Our advice to other senior groups with like arrangements is to be sure you have a written agreement stating in detail all arrangements decided upon or agreed upon, or what you might contemplate you would like to do. We all think it never could happen to us, but it can, and in many cases it is only four or five individuals who can call all the shots.

Senator Clark. Thank you very much. It sounds like you are really moving in Thompson. That is good.

Now I also want to hear, before we start our question period, from Harry Empting who is the coordinator for the senior citizens center in Mason City.

STATEMENT OF HARRY EMPTING, COORDINATOR, SENIOR CITIZENS CENTER, MASON CITY, IOWA

Mr. Empting. Thank you very much.

Senator Clark, ladies and gentlemen, what I want to talk about are some basic priorities. Recently there was a workshop at Fort Dodge and about 200 people attended. We were asked, "What are the three biggest problems with aging?" Those problems were, not necessarily

in this order: loneliness, fixed income, and health. What I have here is a flow chart and it looks like a Rube Goldberg deal with all the lines, but I will explain it.

What we have here is fixed income, health, and loneliness. What I have tried to show is how senior centers, in-home services, and the nutrition program connect into these three basic problems of the aging process.

What I wish to talk about is priorities. I don't think that you can talk about highfalutin programs without getting down to the basics. That is to say, people have to have a roof over their head, they have to eat properly, and they have to have some sort of social outlet. Now these are all basic requirements which all humans require; otherwise, they can die in more ways than one.

Priorities Must Be Set

In conjunction with priorities, I would like to get into workable programs. We have established a lot of priorities in the past without finding out whether they are workable or not. As an example, we talk about transportation as a high-priority item. I think transportation is a priority item; however, I think other areas such as senior centers, nutrition programs, and in-home services are much more important. Obviously you have to have some delivery of these services, but I think that we need to back up a little bit and get back to the basics in that there is really not that much money coming down the pipeline yet for all programs. I think it is important to implement the three previous areas because these are areas that the most needy people require the help in.

In the middle of the chart I have written "nutrition program, senior centers, and meal services". The nutrition program alone can provide a lot of the services that we are talking about. As an example, I have written on the chart that it can provide about the same services as senior centers. It can provide not only nutrition but social, recreational, educational, transportation, information, referral, and, probably one of the most important things, political awareness as well.

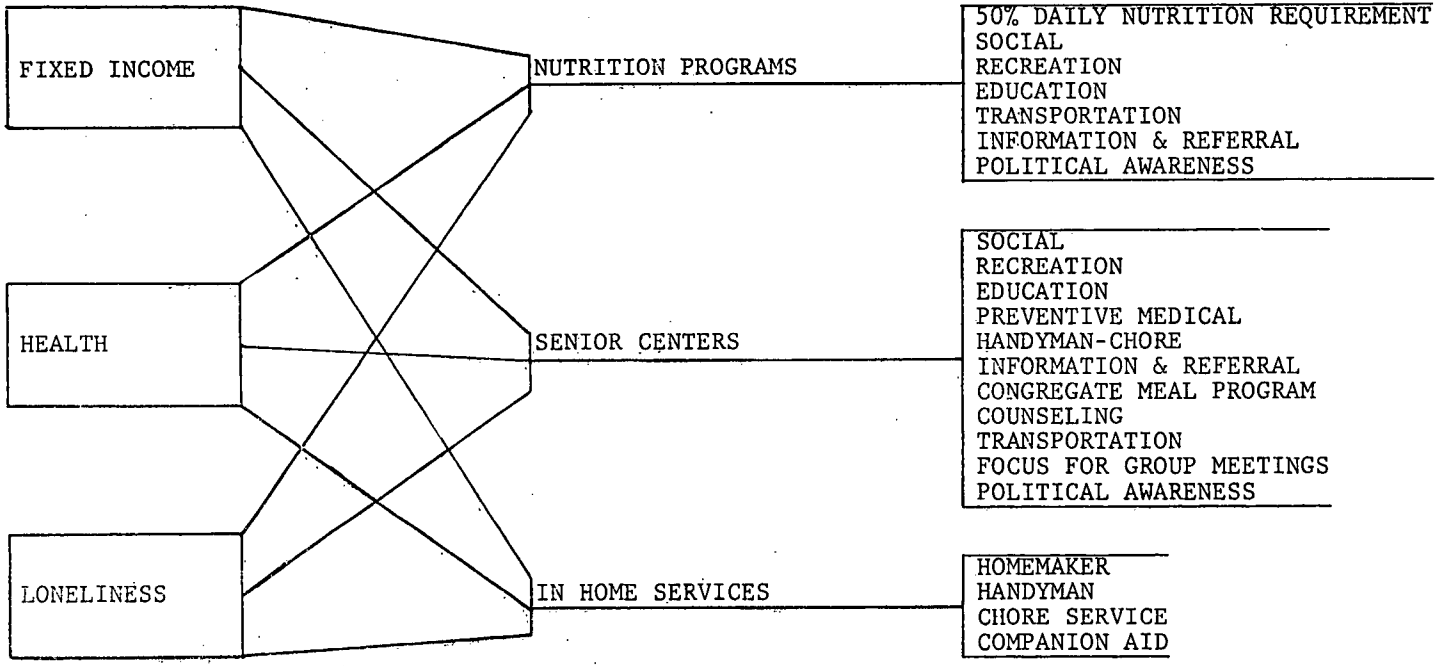
Another spinoff from implementing senior center programs is that out of the senior centers you can develop programs to combat some of the health problems and some of the fixed-income problems. That is, you can develop in-home services, services provided by seniors, preventive health clinics, et cetera. We have done it at our center very, very recently. These are some of the programs that I feel should have high priority. I think that our emphasis should be given to the basics, especially since there is not much money available. Basically, we should take a long look at our priorities.

That is all.

Senator Clark. Very good. Could we possibly have a copy of that for the printed record? It looks interesting and I would like to look at it and I am sure others would as well.

[The chart follows:]

SENIOR CITIZEN PRIORITIES BASED UPON 3 MOST AGREED UPON PROBLEMS



Senator CLARK. It is difficult to quarrel with your priorities, it seems to me, but I am wondering about this—just in remembering back the five hearings that we have held in the last 3 days. We put a very heavy emphasis on transportation. How would you evaluate that in comparison to the three priorities that you mentioned?

Mr. EMPTING. This position of mine is not very popular, and it is an interesting phenomena. I think what happens is that there is, let's say, 20 or 25 percent of the people that are out there that don't get to come to meetings. That is why I especially wanted to be on this panel today. I think we all should be aware of the needs of these missing seniors.

In other words, we get a certain category of senior citizens that attend these meetings. I think they express input from a lot of people—like area agency people and people like myself.

As an example, I used to believe that transportation was a high-priority item and I convinced a lot of seniors that it was. I still think it is a priority item, don't get me wrong. But, not as important as senior centers, nutrition programs, and in-home services.

I think that another aspect of confusion in this area is that there have been studies done on transportation and, to be frank, I question the sociometric methods that were used and I question those methods in determining a lot of these programs. Of course, the basis for initiating these programs is some form of sociometric method. I don't mean to get complicated here but research methods are where these programs start from and this is where we get off on a lot of weird tangents. I hope I have answered your question.

Senator CLARK. Thank you. Mr. Beer, do the people of your community around Hampton utilize the benefits of this Older Americans Act? I mean by that the nutrition program, the transportation program, or any of the programs under the Older Americans Act. Do you have such things as homemaker or chore aides? What are the most valuable things around Hampton that you see under the elderly program?

Mr. BEER. The social services department has the homemakers chore service and the homemakers aides, and they reach quite a few people.

As far as the nutrition program, I hesitate to say exactly, but I think several years ago before we had any programs the group of people connected with different churches got together and established what we called fellowship meals. Those meals are still going. We served 133 people in Hampton last Friday. In the other area I think the last meal they had was somewhere between 80 and 90. These are all self-supporting. The same thing is true of meals-on-wheels. We have between 20 and 25 meals served to shut-ins 7 days a week.

Senator CLARK. These are all done by local church organizations rather than by any Older Americans Act funds?

Mr. BEER. They are all done by local people some of the time, but most of the time it is donated. We hire a cook and have a little money in the treasury, incidentally.

MEAL SITE DIFFICULT TO OBTAIN

As far as the nutrition through congregate meals, we are trying now to establish a congregate meal site. It is very difficult to find the location of a site; I make a little effort to find one. Most of them—the cost was prohibitive. One hotel asked me for $1,100 a month for space in the

basement. Another building is available for $95,000 to purchase which would be adequate.

Senator CLARK. Yes.

Mr. BEER. My recommendation would be to build one.

Does that answer your question?

Senator CLARK. Yes. That is good.

Now, Paul Schroge. In Rudd, what services would you like to have available in the center that you don't have now?

Mr. SCHROGE. I am not speaking for Rudd. I live in Rudd, but I am the last address on the mailbox.

Senator CLARK. Your address is Rudd, but you operate here obviously.

Mr. SCHROGE. Yes.

Well, like I say, we have got the congregate meals now and I would say they are operating as good as could be expected under the conditions.

If we get this remodeling done—and I am sure we are not the only ones that would like to have some remodeling done—we have a good setup and could use some more services. We could use a little more transportation assistance and a chore boy. Some of the seniors can't do their own lawn mowing or cleaning the yards. They all try, but that is the kind of thing that is hard for a lot of them. We get along well. They are trying hard with the services we have.

I was reading that Charles City got transportation not too long ago. We have no transportation. There is no bus route in Rockford. Unless you have a neighbor or call a senior citizen, there is no way to do this. There are plenty of them available, but we are all a little bit independent. If we can have the bus come in and take us out rather than call on our neighbor, it would be very nice.

Senator CLARK. Is there a chance that that could happen in the future?

Mr. SCHROGE. Well, we have another meeting scheduled for the third week in September in Charles City. We are independent and we don't care to bother our neighbors for this service. I don't think the average person expects it for nothing; they are willing to pay a little something toward this service. Of course we have another meeting in September. I don't know.

Senator CLARK. How many people do you have in your club here in Rockford?

Mr. SCHROGE. Well, at the present time I think there are probably around 70 some odd.

Senator CLARK. How do you raise money? I understand you have got some unique ways to raise money. What do you do?

VARIOUS PROJECTS RAISE NEEDED FUNDS

Mr. SCHROGE. We have got the gals here that can really get it. They have different things. They sell coffee and doughnuts and donate a little bit. They are all good hard workers and they are all willing to do their share. Yes, we have had a lot of fun. The ladies have a little deal there where they have a hat show and, boy oh boy, those old gals are really it.

Senator CLARK. Well, what is a hat show, or should I not ask?

Mr. SCHROGE. Where is our narrator? They put on some of these things that they make, all the way from gowns—one thing and another. They put on six or seven different things. My wife is in on it and when she comes home she is a new gal. [Laughter.]

Senator CLARK. I am not going to ask you any more. I read that story in Time magazine about Mason City, so I am not going to ask. [Laughter.]

I do want to ask the Judds a question, however. I believe it was Mr. Judd, and I am not sure, who talked about sharing the senior center facility with other groups in the community. What kind of effectiveness did that have? I mean, is that a good idea or a bad idea? Do you recommend it in terms of a senior center being used more broadly for other people, too, or what kind of results do you have in that?

Mr. JUDD. I think it was a real good deal as long as it lasted. I think a similar thing could be set up with control in an incorporated group where no one could take the building away. I think it is an ideal thing.

Senator CLARK. We were just discussing here that under the new title 5 program that I mentioned earlier, we are going to have about $300,000 next year and about $75,000 for the remainder of this year.

Let me ask Mrs. Judd a question. If we had some more money, what one service would you like to see come to Thompson that is not there, or what one service would you like to see expanded? What don't you have that would be valuable there in Thompson?

Mrs. JUDD. I think it is a little hard to say because each one—their likes and their background are different. I do think there should be something for people who don't care to play cards or do that sort of thing. I don't know just what. I think we would have to work it out. I know we have some in our group—that it is very hard for them to hear, and we have others who have difficulty seeing. There could be some sort of program that could be for those people. Now I don't think it could be done with the whole group, but we could have a place where several people could do things that they like to do, instead of everybody having to sit there and do whatever the majority is doing.

Senator CLARK. What about health care in Thompson? Do you have that?

"NO DOCTOR IN TOWN"

Mrs. JUDD. No, it is very poor. We have no doctor in the town. We did have a hospital with two doctors in Buffalo Center, but that is closed and the doctors have gotten—well, they have heard so much about the fun the senior citizens have they decided to be senior citizens instead of doctors. I don't know what else. Their health got bad and they quit. There is really no health care there at all. It is a problem.

Senator CLARK. You have been very good witnesses and we appreciate having you here and hearing your testimony. Certainly it has been very valuable to us. Thank you very much.

Mr. SCHROGE. I have one other thing. I want you to know that the senior citizens of Rockford want you to feel welcome and to look the city over. We enjoy having you here. The Methodists donated this church basement for this. I am glad to have you here.

Senator CLARK. Let me say in response, on behalf of the people here, that we are very, very grateful to you. I know that our staff who have visited you eariler—you made reference to that—have had the greatest

cooperation from you, from the seniors here, from the Methodist Church, from Reverend Robinson, from everyone, and we are very, very pleased that you would go to this effort.

Thank you very much.

Now our other panel today is on housing, as I said. We are going to be hearing from Governor Blue, Joseph Kempf, and Lewis Jacobson.

Let me say, by the way, we have green forms here—I think they are back by the door—and those are available for anyone to make comments on. They will go into the official record. It simply says:

DEAR SENATOR CLARK: If there had been time for everyone to speak at the hearing in Rockford, Iowa, on August 18, 1976, concerning "The Nation's Rural Elderly," I would have said.

Just fill it in and, if you need two, three, or four pages, we will take that. Just mail it to me. You don't really have to remember what the Washington address is; just Dick Clark, U.S. Senate, Washington, D.C. We will be very happy to put that in the record as if it were given here today.[1]

So please avail yourselves of those. We are going to keep the record open for about 30 days. That is, they have to be in our hands within about 30 days to do that.

This is, as I said, a panel on housing. We are going to start off with one of the most distinguished citizens of this State and a gentleman who has contributed, I think, as much, if not more, to the interests of older Iowans than anyone I know. I am referring, of course, to Governor Robert Blue, the former Governor of Iowa and a longtime member of the Iowa Commission on Aging.

Governor Blue, we are just very, very pleased that you are here. I know of your particular interest in housing, which is a longstanding interest. I know that you served on a number of distinguished national committees on this subject, so we are very pleased to have you. Proceed in any way you think appropriate.

PANEL ON HOUSING FOR THE ELDERLY

STATEMENT OF HON. ROBERT D. BLUE, FORMER GOVERNOR OF IOWA, EAGLE GROVE, IOWA

Governor BLUE. In the limited time that is allotted, I want to make a few points.

The first point that I want to make is that housing is more than four walls, a roof, and the other things that we think of. Housing is its neighbors, its sidewalks, its roads, its sewer, its water, but most of all its services, and a building that is not located where services are reasonably available is not good housing.

Down at the University of Iowa we have an institute on urban affairs that has been making some studies on accessibility. The more I see the problems that are related to housing, the more I think the Federal Government or other governments would be well advised to require an accessibility study and report before they put money into housing projects. This may be done in connection with some of the projects. I think it is not being done everywhere.

[1] See appendix 2, p. 404.

The accessibility, of course, that I speak of is churches, lodges, doctors, lawyers, dentists, drug stores, grocery stores, schools, and all manner of things that people are interested in because older people are interested in the same kinds of services that other people are. If they are deprived of those services or of their location, then they are being made second-class citizens, so to speak.

Senator CLARK. By "accessibility," you just mean the ability to get into it, out of it, and use it for it to be effective for you; is that it?

Governor BLUE. Accessibility may be that the service is a block or two away and they can walk to it. It may be accessible 10 miles away if transportation is available to them. So it will vary whether the service is accessible, depending upon the means of transportation. In other words, many elderly people are fully ambulatory and they are unable to go where they want to go on foot in the community. Many other people who might be ambulatory so far as walking a reasonable distance cannot drive an automobile because of being handicapped. So the two people might be equally ambulatory, but one would have services available to him whereas the other one would not.

Senator CLARK. I see.

Governor BLUE. I think this is a very major point where the Government puts money into housing.

Senator CLARK. That is right, Governor.

Governor BLUE. In rural areas older people generally have to provide their own transportation. A survey has been made as to the public transportation in the State of Iowa, and it is very, very inadequate. You either provide your own transportation or depend on public transportation.

TRANSPORTATION: A MAJOR PROBLEM

A lot of elderly people, as I have just mentioned, cannot provide their own transportation for a number of reasons. One is cost. Another is because of vision. Another is because of insurance. So there are many people who quite naturally provide their own transportation, yet don't use it if they can buy it. There are others that are deprived of it because they don't have adequate resources to purchase it.

I do raise transportation as something that is as large a problem as housing. If we are going to provide public transportation, it is going to have to be subsidized.

We have had some transportation programs in Iowa and a number of them have been quite successful. We have yet to accumulate adequate figures as to cost, and I think this is one of the things that is a priority—to get transportation costed out so that we will know what we are talking about. At the present time we do not know what the cost of these buses and so forth are. I think we will have those figures fairly soon.

Now when you get into the housing that we do have, I think we have an outstanding program so far as the Department of Home Administration is concerned in the State of Iowa. The last, I think, is 200 projects scattered across the State from little communities ranging from $8,000 to $10,000 in size. I do fault them, however, for one or two things. One is they will not build, so far as I know, garages in connection with the housing. Well, if they build this farmers home

apartment in a small community where there is no public transportation and they don't provide a garage, we have winter weather that gets pretty rough and these older people can't go out and scrape the ice off the car and run into all the difficulties. So I fault them in this regard.

Senator CLARK. They won't build any garages at all in connection with these?

Governor BLUE. They won't do it now. I have known a section or two, but the policy now, as I understand it, is they won't. I think this is important.

Senator CLARK. I never realized that before.

Governor BLUE. Well, I have got some support for that.

Senator CLARK. I am sure you are right. I just had never thought of it before.

Governor BLUE. You see why I would emphasize that.

As far as I know, they do not make an access to the facilities and services that are available before they commence to finance it, and I think this ought to be done by them. They don't require contracts for transportation. I think when they build the project they ought to have some agreement to see that transporation facilities were available, whether it is locally provided or otherwise, when they locate these buildings. Many of them are located in very, very small communities and the service, if it is going to be provided—the Federal Government is going to have to participate in it.

Now another thing I would like to emphasize briefly is that I understand there is legislation pending before the Congress now with reference to the insulation of homes.

Senator CLARK. Winterization.

WINTERIZATION PROGRAM NEEDED

Governor BLUE. Yes, that includes insulation. I think this is very important for two reasons. One, the group or widows alone cannot do this themselves and they need help; they need a handyman to do this. They may not have the funds with which to provide the insulation. Most of these older homes are drafty; they use an excessive amount of heat. The cost of heating fuel is rising rapidly—it is very inflated in price—with the result that people on fixed incomes are having new problems so far as heating their homes. This could be minimized and serve a national purpose. It would take care of a lot of elderly people and it would also help meet the energy problem just as much as in lowering our speed limits.

Senator CLARK. I might say, Governor, we have had two or three witnesses this week who have come in and talked about this winterization program, and it has been one of the most successful that we have heard about. For a fairly reasonable cost they have been able to winterize literally hundreds and hundreds of houses that elderly people live in.

Governor BLUE. Most of those just consist of plastic over the windows and it has to be taken off in the spring—it is not permanent—whereas insulation in the house would be a permanent improvement.

I would recommend further in connection with this that if homeowners were willing to go ahead and insulate their own homes, that they would be encouraged to do this if they could receive a tax break

on it. I would think, so far as landlords are concerned, this would present a situation where Congress might very well say, OK, investment credit can properly be considered for this kind of an improvement. I think this would stimulate a great deal of winterizing that would have long-term benefits, so I would urge this pretty strongly.

The handyman service was spoken of.

Homemaker service—the Federal Government's position is to keep people in their own home. You cannot keep a great many of these people in their own home without the handyman service and the homemaker service. We have it scattered around to a substantial extent in the State of Iowa, but not nearly so much as is needed. This program needs to be expanded, I would say, in every community in the State. Iowa needs the handyman service and the homemaker service if we are going to adequately serve the high proportion of elderly that we have in the State.

Now the next thing that I would like to rush on to is multiservice housing. I call it the Federal Government, because they build a lot of individual separate programs.

They may work pretty well in high population areas, but elderly people, when they go into retirement and move out of their homes, they want to make that the last move. So if they move and if they are ambulatory, they want that kind of service. They also want connected with that service an infirmary or nursing care, and they want to be assured of what kind of nursing care that is going to be when they make their move.

Special Facilities Needed

A lot of our housing programs are not geared to that 202 program. It is an excellent program, but it does not extend itself to cover multifacilities. People are individuals; some of them want their own room, some of them want an efficiency apartment, some of them want two or three rooms, other people want the nursing services connected. When you run into moving elderly people into a group setting, then you run into personality conflicts, particularly so far as the seniles and the mentally retarded. I, therefore, recommend that there be special consideration given to building facilities for the mentally retarded and the seniles.

Now the seniles and the mentally retarded cause no problem when they are in the nursing some, but if you have them on an ambulatory basis and try to mix them with people like we have sitting around here in this meeting who are intelligent, active citizens, it just does not work. We don't have that kind of a program, but I hope that we can have something along that line.

I don't know whether I have anything else to say or not.

Senator Clark. I am going to ask you some questions in a little bit. Thank you very much, Governor Blue.

We are going to hear now from Joseph Kempf who is executive director of the Good Shepherd Retirement Association which includes four residential and nursing home facilities in the Mason City area. As I understand it, Mr. Kempf, you are going to talk to us about housing needs in the area, the number of units provided, the number of persons on the waiting lists, and general problems of housing for elderly in rural areas. You go right ahead.

STATEMENT OF JOSEPH C. KEMPF, EXECUTIVE DIRECTOR, GOOD SHEPHERD RETIREMENT ASSOCIATION, MASON CITY, IOWA

Mr. KEMPF. Thank you.

Senator Clark, Governor Blue, ladies and gentlemen, Good Shepherd consists of four complexes and it is a nonprofit organization sponsored by 12 Lutheran churches in the Mason City area. The health center and the geriatrics center are care centers that provide three levels of care for 287 people. The Manor downtown is a housing complex for elderly people and it has 116 apartments. Shalom Towers is a 93-apartment complex and 20 percent of those apartments are subsidized apartments.

Now, getting to the need as far as the elderly are concerned, if we are going to move our elderly out of the substandard housing or apartments, the only way that I can see this can be done so our elderly people can afford this is by subsidized housing. Our cost today in constructing apartment units makes it impossible for the people, at least the ones that come to our facility seeking housing. At least 50 to 75 percent of them cannot afford the cost of the housing. Our housing apartment rates for Shalom Towers are from $98 for an efficiency apartment to $145 for a one-bedroom apartment which I feel is quite reasonable. Still we have many elderly people on social security, their only means of income, who can't afford to live in these apartments. I will try to answer any questions you may have relative to housing for the elderly.

Senator CLARK. I will have some questions, I think, as we go along.

Now I would like to hear from Mr. Lewis Jacobson who is a resident of the Manor in Mason City, and I would like to know what his judgments are on this.

STATEMENT OF LEWIS V. JACOBSON, MASON CITY, IOWA

Mr. JACOBSON. Thank you.

Senator Clark, Governor Blue, ladies and gentlemen, in 1968 the Hotel Hanford Corp. of Mason City ran into financial difficulties, and while this was in progress the Good Shepherd Corp. in Mason City was looking for housing for the elderly. I was on the board of Good Shepherd at the time, so I knew what was going on. Good Shepherd acquired the hotel and converted it into housing for the elderly. They changed the name to the Manor and they restricted residency to people 55 years of age and over. It didn't catch on right away and we had a little difficulty getting the 70 units filled up. As a matter of fact, it went along at a rate for a couple of years at which it was not profitable to us. However, we managed to hang on to it.

In 1971, I was living in Nora Springs. My wife and I were both employed at the bank in Nora Springs. We owned a nice home, but my wife was becoming arthritic. This is a family thing and we knew from experience with other people's families that arthritis does not improve, it just gets worse. We needed to have less work than we required having our own home. We sold the home and we found an apartment to move into.

None was available in Nora Springs, but it is only 10 miles to Mason City so we took one of the apartments at the Manor in Mason City. We lived there 3 years and then, 2 years ago, we moved into a newly

finished apartment, so our accommodations are quite delightful at the present time.

An Ideal Location

We think this is ideal. We are located right downtown. We are located within a block or two of the shopping area and grocery stores. We are in a health club where a lot of our people spend a considerable amount of time. We have churches of various denominations within just a short walk to the facility. The post office is only a block away. We have a doctor's clinic only a block away and our dentist is located in the area.

Since this facility was once a hotel, there is considerable space on the ground floor that is not readily convertible into apartments, so it has been converted to use for the people who live there. We have 116 apartments and this accounts for about 200 people. These had originally been the sample rooms in the hotel and they have now been converted into cardrooms. We have a pool table down there and we have large rooms where we can accommodate a large gathering of people. We have a library there. It is a very convenient place.

We are provided with one meal a day at noon. We also can get our own breakfast. There is coffee furnished and we can make toast and get our own breakfast in the public facility if we care to do so. However, all of the apartments have facilities for cooking. There is a beauty shop and a barbershop within the facility. Most of the people are retired and it makes for a very congenial group.

By living at the Manor we avoid the usual maintenance chores that you have with a home. Heat, light, and air-conditioning are included in the rental figure, so we don't have that to worry about. The place is privately financed—it is self-sustaining and paying its own way. We think it is a very fine facility and we are happy with the Manor.

Senator Clark. Thank you very much. I want to ask you a couple of questions.

You talked about having left your own home and moving into the Manor. Is it a good idea? Are you happy with it? I am sure there are a lot of people here now or in the future who will say, "Well, I don't know about leaving my own home and moving into another place." Was it a good move for you?

Mr. Jacobson. I have been asked that more than anything else, and my answer is that it was a very fine move for us. We are very delighted. Now my wife and I don't sit home very well—we like to travel. As a matter of fact, since we both retired a year and a half ago we have driven the family car 60,000 miles into Mexico, the United States, and Canada. We traveled to the Mideast, so you see we don't stay home very long. A lot of the convenience is the fact that when we want to go away for the weekend or for 3 months, we just pull the door shut behind us and go.

Senator Clark. So both when you are there and when you are gone, you have a number of conveniences in terms of everything being taken care of for you.

Mr. Jacobson. Yes.

Senator Clark. Do you think there is much demand, for example, in Mason City or in this area for that kind of housing? I mean, is it your impression in talking with other people who are close to retire-

ment or in retirement that they would like this kind of facility, that they would like to move into it, or do we have an adequate amount now, in your judgment?

Many Resist Change

Mr. Jacobson. Oh, I think there is room for more of this. However, it is just surprising as you talk to people how tenaciously they will hang on to their home and do all that work and have all that worry, concern, and expense to maintain it. It just surprises me. I think this is a fine arrangement, but I do think that it might incur a change, and many people share my thoughts in this.

At the present time the Manor is full, and we have about 35 people on the waiting list. However, you never know exactly how many of those are happy. Some of them may come and make an application, then find out there is none available right now and will go someplace else and make other arrangements and not let us know.

Senator Clark. I suppose the best thing is to have everybody make their own choice if they really want to stay—if they really want to go to a place like the Manor or anything of that kind.

Can you tell us the range of cost in living at a place of this kind?

Mr. Jacobson. The range of what?

Senator Clark. Cost; rental. What is the cost to live there?

Mr. Jacobson. Oh, the range of cost. Well, it runs from about $135 to about $240. It is $135 for an efficiency apartment, and then it runs up to about $240 for two singles.

Senator Clark. Mr. Kempf, just to continue this same discussion, I understand that Shalom Towers is a housing unit for the elderly with 93 units. That was supported by section 202 of the Housing and Urban Development bill. Is section 202 a feasible housing program as far as Mason City is concerned? How could it be improved to meet the needs of the people in this area around Mason City, and in the rural areas in particular?

Mr. Kempf. At Shalom Towers, or any of the apartment complexes, we have many people come there who cannot afford to live there because their income is not great enough. So they go down the street and rent substandard housing apartments in the neighborhood of $55 a month instead of $98 a month. However, 20 percent, as I indicated before, are subsidized in Shalom Towers. The need we really have in Mason City right now is for subsidized housing. We could fill at least 200 units.

Senator Clark. I was going to ask about that.

Mr. Kempf. It is very substandard housing. People have to live in an apartment for $35 and $55 a month.

Senator Clark. Do you have any plans for expansion of these facilities?

Mr. Kempf. Yes. In fact, you probably are aware of the appropriations that were made for the next 3 years for the two programs under the section 8 program. I do not know, Senator Clark, whether those are subsidized programs or not. It was just passed recently.

Senator Clark. If you really had the section 8, that is, if you really had a program which would supplement rents so that no one would have to pay more than a quarter of their total income in rent, and the

Government subsidized the rents, you are confident that there would be at least a couple hundred people.

Mr. KEMPF. We could rent at least 200 or more and get the elderly people out of the substandard housing.

Senator CLARK. Are there any services provided for elderly people who reside in these facilities, other than just a room?

SERVICES LIMITED

Mr. KEMPF. Well, at the Manor we do have cooking facilities and we provide one meal a day. Otherwise, they can do their own cooking in the apartment. The only service we provide is recreational service.

Senator CLARK. You do have recreational services?

Mr. KEMPF. Yes.

Senator CLARK. Governor Blue, I know you are aware that Iowa has various housing complexes for the elderly that were supported by HUD. There is a section 202 complex in Mason City, another one in Garner, and I think there is also one in Eagle Grove. Are the HUD programs, in your judgment, good programs? Are they working in the rural areas or do you have recommendations beyond those you have already made for better use of housing funds for the elderly?

Governor BLUE. Well, as I indicated, I think the 202 program should be expanded to offer at least nursing home facilities. I don't know what their present rate charges are. One of the things about the 202 program is the low rate of interest, and this is one way that the Federal Government can subsidize the building without getting hurt as much as they would in some other ways. The 202 program has been successful pretty largely because it has appealed to nonprofit corporations. Isn't that your experience?

In fact, this is a necessity, and churches and fraternal and labor organizations have been willing to get behind this kind of a program and that, I think, is one of the strengths of it. It has sparked interest on the part of churches and these other groups and got them involved.

Senator CLARK. Now I know that this new section 8 program—or the section 8 program, actually, of the 1974 Housing Act—provided for assistance payments to families who were on lower than average income and is to pay the difference between the fair market price and what the tenant can actually pay. Is that valuable, and do you think that that will work if it were able to get that kind of program in rural areas of Iowa?

Governor BLUE. Probably. It will work the same as the double income or the double homestead credit works. The problem is that the forms which these elderly people have to fill out are complicated. Even if they were rather simple they would get confused and need help in filling them out.

Senator CLARK. The emphasis of your testimony today is really accessibility. You are saying that whatever program we have, whatever kinds of programs on housing or nursing care, whatever program we can consider, we ought to give more attention—as the Government in authorizing these programs, in writing the regulations, and in defining the programs—to what you call accessibility.

Governor BLUE. Well, I emphasize that strongly, but I am also saying that older housing ought to be rehabilitated, and the Federal Government ought to get concerned with rehabilitating an older building. That is what I was really pointing to when I said "insulated."

"It Is Not Normal To Live Alone"

There is another point that I could make. Somebody else suggested it today and I have thought about it a great deal. It concerns the large number of widows who are living alone in houses. You know, we were born into a family—we have a herd instinct. We were raised in a family, we go to school, we marry, we raise a family. It is not normal to live alone. A lot of elderly people down in Florida are shocking their children by shacking up together, so to speak, because of economic reasons. [Laughter.] This is common knowledge.

Senator Clark. Yes.

Governor Blue. No kidding. I can see no reason why it could not be socially accepted for two widow ladies to share a home together. They would have companionship, and two people can maintain themselves longer in a home than a single person can. This is not socially acceptable at the present time. I think it could be made socially acceptable and I think it would help solve the housing problem. I think it ought to be given some thought.

Senator Clark. Well, I want to thank this panel in particular for a number of innovative and interesting ideas about what we are doing, how the housing is being used, for what purpose, and so forth.

Let me try, in a couple of minutes, to summarize what we have learned here today. I thought the first panel—Mr. John Beer talking about what has happened in Hampton, in particular in terms of developing their senior center, was good. Paul Schroge talked about how his center was developed and some of the interesting ways that they raise money—some of the services that are provided there, and how far they have come.

I thought certainly Mr. and Mrs. Judd from Thompson expressed that that community has done a great deal in terms of really beginning now to provide a broad spectrum of services. They point out particularly that they still need health care in Thompson, and that is characteristic, I think, of almost every small community in Iowa, the Midwest, and all across the country.

I thank Harry Empting, the coordinator at the center in Mason City and I hope he has left his flow chart [1] with us so the committee can analyze the priorities that he recommends.

I also thank this panel—Mr. Kempf for talking with us about the Good Shepherd Retirement Association, some of the things they have done, and the fact that they still have a great demand for further expansion of housing units. I am grateful also to Mr. Jacobson, who is a user of one of these facilities, for his views on what he considers to be a great advantage, at least from his and his wife's points of view, in terms of flexibility—going into a place and being able to walk away from it for weeks or months at a time.

I also thank Governor Blue for a number of ideas regarding housing, with particular emphasis on preserving those that are there so that people who choose to live in their own homes can have decent housing, the emphasis on rehabilitation of older housing, and then something that is a favorite topic of his—accessibility of the facilities. Of course it does not mean much if the facilities exist if you can't get to them.

[1] See p. 380.

Testimony Summarized

Lastly, I would like to try to summarize really what it seems that we have learned not only from this hearing but from all of the hearings combined. As I say, we have had six hearings: four here in Iowa, one in Nebraska, and one in South Dakota. We have heard principally from people who are over 65 years old themselves in terms of what they feel, what has happened, where they have been, what is going to happen in the future, and what the Federal role ought or ought not to be.

We have heard from a number of people who live on Indian reservations, for example, up in South Dakota earlier today. Of course with the emphasis on these rural problems, we really heard about six or seven things that can be briefly stated.

First we heard over and over again the necessity for transportation, which is part of what Governor Blue is talking about in accessibility—the fact that we must have mobility. If you are stranded out alone and you need to go to a doctor, a hospital, you need to get prescription drugs, groceries, or simply to see someone, transportation is a key to that.

We have heard from witness after witness these last several days about the need for health care in the smaller communities. We realize now that we are never going back to a time when we had a doctor in every small town, or hospitals in the numbers that we once had. But we do need some kind of extension out into the rural areas so that we have the basic kinds of health facilities, so that we have registered nurses—some kind of center or clinic, as small as it might be, in the smallest communities.

We have heard over and over about the need for housing. We have not had a single witness who said if they had more housing they could not use it. Every community we have talked to could use more housing for older people—there is always a waiting list—so that has to be emphasized. And not only new housing but, as we have heard here today, rehabilitation of older housing. We have heard many, many times, and particularly from this first panel today, of the importance of a multipurpose senior center. That is one key to many of the problems that we are talking about. Such a center enables people to come together socially, and also to come in contact with these other services that are being provided under the Older Americans Act and under some other provisions.

We heard a great deal in the last 2 days about the importance of employment for people over 55. We heard about the green thumb program in South Dakota—and now it is being started in Iowa—that hires people over 55 to do a great number of different things. We have heard of other kinds of employment problems. Again, as we have seen in so many of these programs, it is not just a case of employment, it is a case of the psychological factors that go with it—the fact that you get up every day and go to work.

Mandatory Retirement Criticized

Certainly we have heard—a pet peeve of mine, at any rate—the fact of mandatory retirement. Society thinks that somehow when you get to be 60, 62, 65, or 70, that you have to retire. I think that is just total nonsense.

There was talk about discrimination on the basis of race or sex. The fact of a mandatory retirement is not a good idea, and we have heard a good bit of testimony about that as well.

We have heard about other things—the homemaker programs and the chore aides who make it possible for people to stay in their own homes.

Then last—and in some ways first—the fact that people just do not have adequate income. So many of these things could be available if they simply had the income. We know statistically that in State after State almost half the people over 65 who live in rural areas live below the level of poverty. That just has to change.

Those are some of the major things that we have learned in these hearings. We hope now that we can go back to Washington with this information and convince other members of the committee, other Members of Congress, and those in administration that it is important to look at the unique problems of rural America when we talk about the problems of the elderly. If we are going to pass a new kind of national health insurance, we better be very careful that we know how that is going to be applied in the smaller communities like this one, the one I was raised in, and others. We must be sure that we have accessibility of health care, not just in the metropolitan areas but in the rural areas as well. In each kind of legislation that we pass we must keep a consensus of this fact, and in the distribution of funds, so the small communities have the benefits that larger communities have.

We thank you very much for coming and we look forward to seeing you often in the future.

[Whereupon, at 4:55 p.m., the committee adjourned.]

APPENDIXES

Appendix 1

LETTER AND STATEMENTS FROM INDIVIDUALS

ITEM 1. STATEMENT OF JOHN SUTTON, PRESIDENT, WAPELLO COUNTY (IOWA) FARMERS UNION

I want to thank you for your leadership in bringing these important field hearings on the special problems facing elderly people in rural areas to Iowa, and to our neighboring States of Nebraska and South Dakota. We are glad you are asking the older people themselves to participate in the hearings, to tell you their story from their community, their county. They know the problems we have in our rural areas that complicate the lives of older people—lack of public transportation, lack of health care facilities and of doctors, lack of social services, lack of employment opportunities, poor housing.

When Senator Church, chairman of your commitee, called these hearings, he pointed out that approximately 8 million persons, or 27 percent of all Americans, 60 years and older live in rural and farm country. That would mean over 750,000 older people live in rural areas in Iowa. He said, "There is good reason to believe that many are served less adequately than other older persons by Federal programs meant to help them." I am sure your committee, and other Members of Congress, will keep this in mind when you work on the renewal of the Older Americans Act in 1978.

Farmers Union has long recognized the need for special help for disadvantaged people in rural America. National Farmers Union sponsored the first study of poverty in America in 1964 and 1965 which was published under the title "Pockets of Poverty." This pioneering report was followed by the monumental study "The People Left Behind" by the President's National Advisory Commission on Rural Poverty in 1967. We have felt it is important for an organization of family farmers to help provide the leadership to develop programs to meet the needs of less fortunate citizens in their communities.

When President Johnson launched his "war on poverty," we felt there was a need for an employment program to supplement the incomes of older low-income people in rural areas. Many people had lost their farms in the rapid mechanization and growth of farm size in the thirties, forties, and fifties. We lost about 90,000 farmers in Iowa between 1940 and 1969 according to figures presented at our convention last fall. They moved to small towns with limited employment opportunities and lower wage scales. So many farmers and their wives reached retirement age with little or no social security credit or other retirement income.

EMPLOYMENT PROGRAM INITIATED

Recognizing this need, Jim Patton, then president of National Farmers Union, Blue Carstenson of his staff, and Lewis J. Johnson, Sr., president of the Arkansas Farmers Union and a member of the National Board, went to Sargent Shriver, head of the Office of Economic Opportunity in 1965, and proposed that an employment program to supplement the incomes of older low-income people in rural areas be launched. They said Farmers Union would act as sponsor of the program.

And so Green Thumb was started in five States. We have wanted the program to come to Iowa for a long time and are so happy that a small Green Thumb program is being started this summer (49 job opportunities). I want to thank you, Senator Clark, Congressman Neal Smith, and others in the Iowa congressional delegation for your successful efforts to get Green Thumb started here and expanded to a total of 28 States, Puerto Rico, and the District of Columbia.

We are glad the program could be expanded to 6,070 job opportunities with the new grant effective July 1, 1976, and to know you are working for additional expansion next year if the 1977 fiscal year appropriations bill for the Departments of Labor and Health, Education, and Welfare is enacted into law.

But we would remind Congress that there are over 5 million Americans, 55 years and older, who would be eligible for employment under such programs as Green Thumb. We estimate there are 70,580 who would be eligible in rural, nonmetropolitan areas in Iowa. We have a ways to go.

We know our rural areas need the services provided by these Green Thumb men and women. In other States they do many jobs beyond the conservation and beautification, roadside parks and trails that the name "Green Thumb" implies. They work at a wide variety of essential, worthwhile facilities and services that local sponsors (local and county governments and nonprofit organizations) could not afford to have done otherwise—from deputy sheriffs to fire wardens, from nutrition aides to teachers' and library aides, museum attendants, painting the fairgrounds, or helping to refurnish the county courthouse. They serve as drivers for rural transportation projects. They do outreach work, taking people to the doctor, or to buy groceries, or to the senior citizen center for dinner and a visit. They work at housing repair and winterization for other low-income people. And always the work they do would not otherwise be done—so they do not deny jobs to younger people needing work, which is important with our unemployment rate still standing over 7.5 percent.

Green Thumb provides the opportunity for older rural citizens to participate in the life and work of their community and increases the security provided by the wages they earn. And their wages are spent on Main Street where it is estimated that each dollar turns over seven times before it leaves town. Rural communities gain and save about $10 for each dollar used on Green Thumb projects. The return to the Federal Government is at least $5 for each dollar expended in wages.

So we hope you will be able to expand Green Thumb and other such opportunities for our older people.

And we hope you will expand the other programs covered by the Older Americans Act. The nutrition program under title VII is a great investment for America because people well fed are able to meet other problems of being old and alone. Meals-on-wheels is so important to older people without transportation in rural areas and in our towns. But there are so many people who are not able to have these services—which might keep them out of the much more expensive nursing homes, expensive to themselves, their families, and the Nation.

You and others here can speak in more detail about the other programs developed under the Older Americans Act. But we know they are needed in rural Iowa as well as other places. And we know they are a good investment because if we can keep people in their own homes, in their own communities it is cheaper, better for them and their families and our society, and a lot cheaper too.

Again, we appreciate the opportunity for you to hold these hearings and for us to participate in them. We support you in your effort to make life better for our senior citizens.

ITEM 2. STATEMENT OF DONNA DAVIS, HAWKEYE VALLEY AREA AGENCY ON AGING, AND PEG ANDERSON, CHAIR, IOWA WOMEN'S POLITICAL CAUCUS

Problems of Older Women in Rural Areas

INCOME

First, the rural or small town older woman's problems start with the fact that she is female and therefore likely to be one of those who are or become the poorest of the old, themselves poor in much higher numbers than their proportion of the population. It's double jeopardy being old and female.

For example: Using 1970 census data from selected counties in northeast Iowa, we find that even in one of the richest rural counties, 20.2 percent of the older population was below the poverty level. When we look at the age distribution of that "rich" county's poor, we find that more than a third (34 percent) are 65 or older.

We know that most of these are women, because: (1) Women are a higher percentage of the senior population in general; (2) the rate at which females

outnumber males increases as they go toward later old age; (3) because poverty intrudes on those who live long (medical costs, etc.); (4) the poorer aged are often those who live alone and women are 65 percent or more of that group; and (5) because cultural and economic factors all her life have made the woman's earnings (and access to a good social security pension) considerably lower than a man's.

These women and others now 65 and older have generally been brought up to a higher dollar income, thanks to SSI (supplemental security income). But before we reassure ourselves with that and turn away, let's see what that new income level is: Under the July 1, 1976, rules for SSI, the maximum a person can have as income is $2,144 per year, plus medicaid and food stamps. That still doesn't put them above the poverty line in 1976.

This brings us to some recommendations we'd like to make today, regarding Federal programs designed to help low-income older persons. Many of these recommendations are available to you, Senators, and to the public in an outstanding report by the Federal Council on the Aging, entitled, "The Interrelationships of Benefit Programs for the Elderly," published in December 1975.

Participation of older rural families in means-test Federal programs is not as good as it could be. Although we do not yet have actual hard figures on this, the experience of the staff and volunteers of the Hawkeye Valley Agency on Aging shows that many older rural persons who are probably eligible for Federal benefit programs requiring a means-test do not participate. To prevent this in the future, the attitudes, culture, and education levels of older rural and small town people should be considered in the development, improvement, and administration of benefit programs. They should not be demeaning, threatening, or complicated to apply for and get deserved benefits.

RECOMMENDATIONS

(1) We recommend more uniformity in eligibility policies and application procedures, realism in benefits and in assets exclusion (adjust both to the cost of living; currently, SSI benefits are up, but with property reevaluations up and asset limits the same as when the program started, some people could be disqualified without any real income gains to justify it).

(2) We recommend that programs should not penalize people for trying to be more independent and supplement their social security incomes with earnings; such a system hurts most the rural poorer person who doesn't have an "excluded" additional pension income (frequently, the rural older woman).

(3) In consideration of the physical and psychological accessibility of various application centers for the several Federal benefit programs, we recommend the serious consideration of single-point application centers for all programs, located in each county.

(4) Recognizing the culture of small town life, we urge that publicly identifiable stigmas be removed from Federal benefit programs designed for low-income persons. (We hear reports every week of older women who, despite their need and full information about the program, will not take food stamps, because "everyone in town will know" that they are poor.)

(5) Even more effort should be made by administrators of benefit programs to simplify and clarify information on programs. Specifically, this means: Write brochures, speeches, and correspondence in plain, easy English. Print information and application materials in large print, not only because of eyesight problems of some older people but also because research has shown that easy-to-see information is more likely to be read by anyone. (Has anyone here ever had trouble reading and understanding a social security letter or pamphet?)

(6) Eliminate policies of benefit reduction rates (such as those for veterans and dependents benefits) that actually reduce benefits more than 100 percent of the value of the increased money (whether that money comes from working or from another Federal program, such as increases in social security payments).

(7) Correct the discrimination against aged widows whose husbands' birthdates were before 1912.

Finally, we recommend amending the Employee Retirement Security Act (1974) which still allows a worker to "opt out" of automatic survivor benefits for a spouse, without the consent or knowledge of the spouse (read: "wife"). And study the actual economic and social effects of discouraging survivor benefits for the usually longer-lived female.

HEALTH

Older rural people as a group have poorer health care than older urban people, probably for two reasons: First, less access to health care in the immediate area made lifelong preventive health care difficult and impractical. Second, the already high cost of medical care (out-of-pocket expenses for health care are higher now than before medicare) is compounded by the cost, not only of getting to the city or big town but also by the proliferation of specialized health care practitioners needed to treat the whole person.

Medical and health care costs are high for all older people (but proportionally higher for the poorer older woman who outlives a meager or even an adequate income). Medicare doesn't cover the costs of long-term, chronic conditions; it is these that often deplete even the moderately healthy retirement income.

What is needed for the rural and small town older person (who, you understand, is usually a female) is access to low-cost health care of a preventive type (such as health screenings) or for care of chronic health problems. That health care screening should include tests that meet important health care needs of older women: nutritional histories and analyses and Pap smears, as well as the usual blood, urine, and other screening tests provided in such clinics.

We know that the need for, and participation in, health screening or well-elderly clinics would be great in rural counties, based on reports of pilot project programs being run in Iowa right now; but they need to be more widespread. The recent opening of a donation-only community clinic, composed of volunteer physicians and nurses, in Waterloo brought calls and inquiries from many in small towns and rural areas in the surrounding counties; county councils on aging are talking about the need in their own counties. The known need is acute; the hidden need is no doubt much greater.

TRANSPORTATION

Like income, transportation affects almost everything else of significance in the lives of older rural and small town women, and here especially the fact of being female has had a profound effect.

In the generation which is now the 65-and-older age group in Iowa, there are a great many women who don't drive, not because of lack of money, but because of a sex-bias in their generation that discouraged either their learning to do so or their continuing the practice once it was learned. These moderate-income older women then join the substantial number of less well off (or physically unable) older women and men who need and use transportation services for the elderly in their counties.

The issue of how to provide transportation services to older people in rural areas has been much debated in Iowa. Mass transit approaches waste resources, due to excessive dead-head or down-time of large vehicles going empty over long country routes, and high operating, maintenance, and depreciation costs. The recommendation we would make, then, is that the Federal and State governments should provide more funds to aging programs to continue and expand urgently needed rural transportation for older persons and should focus on the use and development of networks of locally based volunteer drivers who are reimbursed for mileage and maintenance. This system is best equipped to provide door-to-door, on-demand escort and transportation services needed by older and often infirm users of the service.

HOUSING

In 1975, across America, housing costs equalled 35 percent of an older person's income on the average. At the same time, people under 65 spent only 23 percent of their incomes on housing.

Home ownership is the main asset of rural older persons, outside of their social security pensions. And yet in 1973, 60 percent of all substandard housing was located in rural areas; older people occupied one-fourth of these, a proportion far higher than their portion of the population.

So the question arises: Should we try to maintain and/or bring up to standard the housing of older women in rural and small town areas? Or should more moderate and low-rent housing for older people be sought for these counties?

Although with the existing boom in the housing market, it is no longer so difficult to sell large, older homes most rural elderly prefer to remain in the familiar surroundings of their own home. Solutions in these cases might include alternatives which do not require selling the home. These include funding handy-person services to assist in the maintenance of the home of an older person or in the adaptation of that home to physical disabilities of the resident. Title III Older Americans Act funds have made this kind of program available to more and more rural older women. Major repair and winterizing efforts, administered by the Community Service Administration programs (formerly, community action programs), in rural counties have helped a portion of the lowest income older population. It should be noted here that Farmers Home Administration low-interest loan programs to upgrade substandard rural and small town homes of elderly have not been widely utilized by eligible persons. One reason for this is the fear of incurring any debt in the face of low, fixed, or declining resources.

Moderate income housing through Farmers Home Administration loans to community sponsors have been popular in Iowa. However, increasingly we hear older women saying that the rents on these are too high for many of them. Rent subsidized housing for older people would better meet the need. Requirements that at least 50 units of housing be built at a time has discouraged the establishing of these HUD 202, section 8 housing projects in rural areas. But a solution is available. Rural counties can join together to set up a regional housing authority to sponsor new construction of rent-subsidized housing.

A final comment on housing: New projects designed for the benefit of older persons should be located as much as possible in a location that mixes the older residents with neighbors of other ages. Too often area agency on aging staff hear the comment, "I live here among only the old, the sick, and the dying. It makes me feel bad." The health consequences of this self-image can be powerful and negative.

SENIOR CENTERS

Income loss affects not only access to necessities but also the amount of social involvement and interaction a person can engage in. Friendships, one of the best things in life, may be free in and of themselves, but the activities which friends share often cost some money.

There is an appetite for social life in the small towns and rural areas that generates a better turn-out to social events than in the big cities. Senior citizens' gatherings in small communities in Iowa—a monthly potluck or dinner, or a daily title VII nutrition site meal—draw good crowds. We are not sure what the real reasons are but certainly the evidence is clear that such events and places, offering as they do the companionship, group involvement, and an opportunity for volunteer work and cooperation, are much valued. Rural areas seem to show a great obvious need for senior centers and a high probable use of such facilities. Indeed, where already developed, they provide the ideal place for a single-point information and service center that has so long been missing from the rural resident's life.

ITEM 3. LETTER AND ENCLOSURE FROM THOMAS D. GARRY, PRESIDENT, HERITAGE APARTMENTS, BANCROFT, IOWA; TO SENATOR DICK CLARK, DATED AUGUST 18, 1976

DEAR SENATOR CLARK: I am president of Heritage Apartments and we have built four six-plexes which now total 24 units, financed by the Farmers Home Administration, and they are located across the street from the community center and are rented to elderly citizens.

The Farmers Home Administration does not provide a community center in their projects. We have checked this out several times and most of the tenants could use the community center. The attached article applies to us and I ask, are we wrong in trying to build a better community for our senior citizens? We had cooperation in the past, but in the last 2 years all of our efforts are in vain. "Keep up your spirits," advised Ben Franklin at age 80, "and that will keep up your hopes." This we have believed for 2 years—we can't hold our breath much longer. The senior citizens would appreciate cooperation.

THOMAS D. GARRY.

Enclosure.

[Article from the Saturday Review, Aug. 7, 1976]

The Willy Loman Complex

(By Albert Rosenfeld)

Jacob Jensen (a fictitious name, invented by his psychiatrist) was, by almost anyone's standards, a happy and successful man. He was the second-highest-paid executive in the company where he had started as a stock boy, right there in the same town, 37 years ago. He had a lovely wife, lovely children and grandchildren, plenty of money, and excellent health, and he was a respected figure in his community. Now, suddenly, as he approached 60, his board chairman had given him a stark choice: early retirement or transfer to South America.

Jensen had never given a thought to retirement. There had always seemed plenty of time to get ready for that distant event. The quiet confrontation with the chairman of the board has so unnerved him, however, that he soon found himself in the office of Dr. Herbert Klemme, at the Menninger Foundation, for psychiatric counseling. Klemme, recognizing that Jensen was in serious emotional trouble, advised his employers that either of the alternatives they were proposing would be psychologically disastrous. The company relented and gave Jensen a lesser—though still important—job, and 2 years to prepare for retirement.

Even under these revised circumstances the patient got worse instead of better. Nine months later, writing Jensen's case history, Dr. Klemme summarized: "Mr. Jensen is . . . agitatedly seeking release from the pain he is experiencing. Because of the severity of his distress, I referred him to the very competent psychiatric facilities available in his local community. He is severely depressed and at this writing suicide is a definite possibility. . . . In my opinion he is also a prime candidate for a severe debilitating physical illness: stroke, acute coronary heart disease, cancer. . . ."

Do many people, in real life, commit suicide for such reasons—as the fictional Willy Loman did, under somewhat similar circumstances, in "Death of a Salesman"? Yes, they unfortunately do. A decade ago Dr. Sidney Cobb, of the University of Michigan (now at Brown), kept track, for 2 years, of 100 automobile workers who had been laid off from their jobs. Their suicide rate was 30 times the rate that would normally be expected. They were, moreover, afflicted with a considerably higher-than-average incidence of nearly all the major diseases. These were younger men than Jensen, and their unemployment was only temporary—though it may have seemed like forever to them, and the emotional effects were equally profound.

Case histories such as Jensen's are all too common.

But it should be emphasized that they are not typical. Nor, are they as common as was once believed. Dr. Robert N. Butler, Director of the new National Institute on Aging, says in his Pultizer-Prize-winning book, "Why Survive? Being Old in America," "There is much mythology built into the notion of an emotional and physical condition known as the 'retirement syndrome,' characterized by anxiety and depression. People who retire do not automatically develop declining mental and physical health. What social-science studies we have indicate such generalizations to be a fallacy." An intensive study made in 1957—at McGill University by James S. Tyhurst, Lee Salk, and Miriam Kennedy—of several hundred pensioners of the Bell Telephone Co. of Canada revealed that most retirees actually were able to make satisfactory adjustments. And, according to Dr. Bernice L. Neugarten, of the University of Chicago, writing 14 years later. "Three-fourths of the persons questioned in a recent national sample reported that they were satisfied or very satisfied with their lives since retirement."

Many people, in fact, seem to become happier, even healthier, after retirement than before—especially those who didn't care all that much about their jobs anyway and who have other interests they had always wanted more time to pursue. A retiree often has more opportunity to take care of himself, to eat and exercise properly, to get enough rest, to enjoy play and leisure without guilt, and still derive much satisfaction from continuing to work fruitfully—though, preferably, not too competitively. Most long-lived people do continue to work at something; it can be physical, mental, or both. Some people find themselves working even harder after retirement than before. Their attitude toward what they do is all-important.

Mark Twain used to insist that he never worked, only played. Challenged by friends who knew how many hours he spent writing, he would reply that writing was not work.

Even though the human organism does deteriorate with age, many people in their later years take up sports and other vigorous activities they never tried before, developing new skills, new muscular strength and physical endurance, new powers of coordination. Even sexual powers, though gradually diminishing, are still present and employable essentially throughout life. In many cultures, says Dr. Jean Houston, director of the Foundation for Mind Research, old age is expected to be the most satisfying stage of life—as with Browning's Rabbi Ben Ezra: "Grow old along with me!/The best is yet to be,/The last of life, for which the first was made."

New powers of mind may also be developed late in life—the ability to concentrate, to meditate, to turn off unwanted thoughts, to expand awareness and consciousness. In our society, says Dr. Butler, "we rarely find anyone paying . . . attention to the growth of wisdom in the individual" with age. Though people are slower to learn as they age, their intellects are generally unimpaired, and they are perfectly capable of new learning of every variety. Many of the brain's cells do die as we age. Even so, it's a cliché that we never use more than a fraction of our potential brain power. Most people in our culture have been trained mainly to use the left side of the brain—the hemisphere that deals with rational thought, logic, verbal skills, and the kind of mathematics computers can do, too—while neglecting the right hemisphere, which governs visual, spatial, integrative, creative functions and the kind of information processing that no known computer can yet simulate. (See "Left-Brain, Right-Brain," by Roger W. Sperry, SR, August 9, 1975.) While some of the brain's capacities may atrophy through disuse or never be developed at all through lack of stimulation, what remains may still provide new abilities, new insights, new asethetic appreciation. Pianist Artur Rubinstein is still playing brilliantly at 89—some critics believe with greater depth and sensitivity that ever. Grandma Moses didn't start painting until she was 74, and gained increasing worldwide fame for her creative efforts until her death, at the age of 101.

It should not be surprising that, in the absence of any chronic organic disease, a positive outlook on life can have a positive effect on both our physical and mental functioning. Nor, in view of what we now know of the intimate interrelations between "mind" and "body," should it surprise us that the opposite is also true—that many retirees, like Jacob Jensen, do not successfully make the transition.

After studying long-lived people in a diversity of cultures, Dr. David Gutmann, of the University of Michigan, concluded that "active mastery . . . is the ego state most clearly associated with longevity." Not power over others—but a sense of being master of one's own life and circumstances. In another study of longevity, covering 2,000 subjects over a period of 19 years, Dr. Robert Samp, of the University of Wisconsin Medical School, noted that an important ingredient was a continuing interest in the future.

When these two factors are missing, their opposites—helplessness and hopelessness—tend to take over. Thus the well-known "giving up" syndrome, with its serious physiological consequences. There exist many anthropological accounts of primitive tribes whose members go off and die simply because a powerful shaman has told them they will die, or because they have been cursed by a witch (Elspeth Huxley tells such a story of one of her father's Kikuyu garden boys in Kenya), or because they have learned, in the words of Dr. Jerome D. Frank, of Johns Hopkins, "that they have inadvertently broken a taboo," which causes "a state of panic and excitement leading to death in a few hours." There are also stories of American prisoners of war in Japan, Korea, and Vietnam who gave up in similar fashion. Dr. Barbara B. Brown, in "New Mind, New Body," tells the story of a convict who was appearing before the parole board, which recommended his immediate release from prison:

"A moment after release was ordered, a court deputy read a summons from another State ordering the prisoner to be transferred to another prison to serve an additional 10 years. As the order was read, the prisoner collapsed, dying. My friend, in the next building, arrived within minutes. Resuscitation procedures were instituted immediately, but it took all the resources of experienced medical treatment to recover the patient. There was no heart attack, no asthma attack, no cerebral stroke; there was, in fact, no physical reason that could be detected in thorough examination to account for the imminent death. The prisoner ad-

mitted that he could not face further imprisonment and had simply decided to die."

A classic experiment was done in 1957 by Dr. Curt Richter, of Johns Hopkins. A rat was thrown into a tank of warm water; it swam valiantly for 60 hours before succumbing to total exhaustion. Richter held a second rat in his hand; though it struggled mightily, it could not break his grip and finally stopped trying. At that point Richter dropped the rat into the water. It splashed half-heartedly, rather than swam, for a few minutes, then went down. In Richter's view, he had taught the rat held in his hand to be helpless. And it died, in the water, of sheer helplessness.

What happens, physiologically, to bring about such startling effects.

Back in prehistory, especially before our ancestors learned to fashion weapons, the human individual lived a life fraught with danger at every turn. In order to survive, he had to react instantly to any threat. There was no time to think about what the danger represented or to reason out his alternatives in dealing with it. As a rule, with an attack imminent from either an enemy or a wild beast, he had only two alternatives—to defend himself or to run away: the famous "fight or flight" situation. There had to be built-in biological systems that would alert and energize the body's resources to act with the necessary swiftness. We are the inheritors of the biological systems that still perform today much as they did then—though we can seldom fight or flee. Animals can often get rid of their frustrations by engaging in "displacement activity." A herring gull, for instance, if put in a threatening situation in which it can neither fight nor flee, will start pulling up grass with great energy. We may, of course, take out our frustrations on some innocent third party—but more usually we take them out on ourselves. If it happes frequently or continuously, the result can be any of a whole range of psychosomatic or psychogenic ailments, some of them serious and life-threatening.

Jacob Jensen, faced by his board chairman, probably reacted very much as one of his Pleistocene ancestors might have in the presence of a saber-toothed tiger. The alert signal went instantly from his cerebral cortex to his hypothalamus, the more primitive brain center that controls the autonomic nervous system—with its complex networks of sympathetic and parasympathetic nerves—which also encompasses the endocrine system with all its hormone-secreting glands. His pituitary triggered a whole series of hormone releases—especially the adrenal hormones—affecting almost every organ system in his body. Sugar and stored fats were mustered for the instant use of nerves and muscles. His blood pressure and pulse rate went up. His circulatory and respiratory systems were accelerated. Red blood cells multiplied to supply more oxygen to his cells and carry off the excess of carbon-dioxide wastes. In case of wounds from the expected attack, his healing apparatus and coagulatory chemistry would have to be mobilized. The digestive processes would come to a halt, being postponable in such an emergency. All this and more happened, quickly and spontaneously, Jensen probably tensed up and grew pale. His Pleistocene ancestors would probably have grimaced visibly, even growled. But civilized men in offices cannot behave in that manner.

Another way of describing the fight-or-flight reaction would be to call it a stress reaction. We do not think of it as stress, however, if we discharge it immediately. Besides, as Montreal's Dr. Hans Selye, the world's leading authority on stress, has repeatedly emphasized, a certain amount of stress is necessary to life and health. When it keeps happening, however, and when we cannot cope with it adequately, that is when we perceive it as stress. And that is when it begins to do its physiological damage.

Jacob Jensen obviously perceived himself to be in a stressful situation—the permanent loss of his job—that he was helpless to cope with. It meant constantly elevated blood pressure, elevated cholesterol levels (another consequence of stress), a harder-working heart and lungs, overactive glands: in a word, his body was in an abnormal state of constant emergency from which he could find no relief.

In instances such as the sudden death of prisoners and primitive tribesmen, it's been theorized that the passive, giving-up-the-struggle mood activates a parasympathetic reaction—little understood—that slows down a number of body functions, including the heartbeat. That the heartbeat can be slowed to a lethal level can be demonstrated by Dr. Richter's autopsy on one of his drowned rats: the rat's heart was still full of blood that it couldn't pump out fast enough; it had probably suffered heart failure through helplessness, thus was dying anyway before it drowned.

We can begin to see now some of the ways in which mind and body are related and why attitude and mood can have such far-ranging physiological consequences, both positive and negative. "Keep up your spirits," advised Ben Franklin at 80, "and that will keep up your bodies."

But spirits can be hard to keep up under some circumstances, particularly under the often anxious and troublesome conditions of retirement and aging. If the attitude and mood of older people have a lot to do with their state of health, those attitudes are frequently the result of negative attitudes toward them by the rest of society. It's well kown that our self-esteem often depends on how we are perceived—or think we are—by others. Most older people are not so fortunate as Jacob Jensen—who had family, friends, money, and other kinds of support to fall back on. Many have only themselves, and very little money or outside support. Dr. Leo E. Hollister, of the Veterans Administration Hospital in Palo Alto, Calif., believes that "unrecognized depression may be a more important problem in old age than organic brain conditions. . . . Poverty, isolation, and some drugs used in treating physical conditions may impair the mental capacity of the aged. Such reversible impairment often is thought to be permanent senility."

Depression, like stress (depression is, of course, a form of stress), has a striking effect on brain chemistry. Indispensable to the proper functioning of brain and mind are the substances known as neurotransmitters—those chemicals (notably the catecholamines) that are responsible for transmitting electrical signals across the synaptic gap from one neuron to another. (See "It's Not All in Your Head," by Seymour S. Kety, SR, February 21, 1976.) Lowered levels of some of the catecholamines—such as serotonin and noradrenaline—can, in fact, cause depression biochemically. Dr. Jay Weiss, of Rockefeller University, has made a special study of the effects of lowered norepinephrine levels in rats. Stress does lower norepinephrine levels to the point where the animal then is simply not able to organize itself to act protectively in a threatening situation; the chemicals necessary to transmit the messages across the nerve synapses are just not there—at least not in sufficient quantities to do the job. The same kind of deprivation could be taking place in those afflicted with the retirement syndrome.

Dr. Frank writes in "Persuasion and Healing" of a northern Australian tribe known as the Murngin. Among the Murngin, "when the theft of a man's soul becomes general knowledge, he and his tribe collaborate in hastening his demise. Having lost his soul, he is already 'half dead.'" Other tribe members perform mourning ceremonies and make clear what they expect. The victim's efforts, under the circumstances, are not to live, but to die.

Before we put down the Murngin as "barbarians," we should look to ourselves. When we force a still-vigorous individual to retire, do we not, in a sense, steal his soul? The more fool he, of course, for permitting his employment to become his soul, to be so easily stolen.

Appendix 2

STATEMENTS SUBMITTED BY THE HEARING AUDIENCE

During the course of the hearing, a form was made available by the committee to those attending who wished to make suggestions and recommendations but were unable to testify because of time limitations. The form read as follows:

"DEAR SENATOR CLARK: If there has been time for everyone to speak at the hearings in Rockford, Iowa, on August 18, 1976, on "The Nation's Rural Elderly,' I would have said:"

The following replies were received:

MARY ASTOR, GREENE, IOWA

I know the needs of the elderly. I get into their homes—they trust me. Home improvement is important, so is transportation; but at the top of the list is medical aid. Persons living on social security should not have to spend $10 for a doctor appointment just to have something checked. We do, at our North Butler County nutrition site, check blood pressure once a week. I work under title VII Hawkeye Valley Area Agency on Aging and we have put to use everything that has been offered, such as transportation, handy person, and nutrition projects. I think we are far ahead of some, but this medical aid needs attention. We don't even have a county nurse—and only about three active doctors in county.

A. W. BEHRENS, MARCUS, IOWA

I, Msgr. A. W. Behrens, now of Marcus, Iowa, formerly pastor of St. John's Church, Bancroft, Iowa, and chairman of the Bancroft Low-Rent Housing Agency, state that I organized the Senior Citizens Club of Bancroft and the congregate meals program in January and February of 1975. This project has been most successful under the capable leadership of Adelia Ulses and now operates 3 days per week and is serving meals out of the community center. I have written many letters, made many phone calls, attended several meetings in Mason City and Des Moines in regard to this matter, and the minutes of the Bancroft Low-Rent Housisg Agency show an agreement that if the city of Bancroft would fund the operational costs, that the alteration would be approved. In the interests of the senior citizens of Bancroft, I sincerely hope so. The statement of understanding between the Administration on Aging and HUD concerning the nutrition program for older Americans means nothing on the local level if it is interpreted by rules and regulations contrary to the intention of the signers of the statement.

I can only hope and pray that the elderly will receive some benefit from this program.

GOODIE V. BLAIR, OSAGE, IOWA

Do we in Osage, Iowa, have to have the land to be able to borrow money for new apartments, or can we borrow for land to? We need more low-rent housing here. What we really need is housing that we can get government help with the rent. And shouldn't we have sidewalks to our apartment building? We don't. We have to walk the road or across bumpy ground and stone parking lots.

The Lutheran Church in Osage has meals for elderly once a month at $1.50. Riceville has them too, and an envelope to put what you can afford to pay into—no set amount. But lots of people are in our boat. Can't afford to drive that far and pay even $1.

Hamlin Garland is eight blocks from one grocery store and nine from another. Thank you very much for taking the time to read this and I will be looking for an answer.

G. ORLANDO BRENNA, ST. ANSGAR, IOWA

Enjoyed the hearing but was sorry there was no opportunity for audience participation. Many of us thought it was still a cut-and-dried deal.

My interest is mostly on housing for elderly. We have two Government agencies on housing—namely, HUD and FHA. Under HUD rental cannot exceed 25 percent of renter's income. FHA is housing at cost—namely, the apartments are built with 3 percent Government loans and rent being just enough to cover the cost of operation: taxes, utilities, sewer and water, lawn mowing, snow removal, etc.

I favor the FHA method, but find that the elderly can no longer afford housing at cost because of increasing costs. We cannot compete with HUD in rent and it seems to me that both agencies should be more equalized. We still have the urban-rural battle.

Under FHA regulations we must have so much surrounding ground area according to size of building, which is very good to a certain extent, but I think it is overdone. For instance, in St. Ansgar we could have three two-bed apartments and two one-bed on one location, and six one-bed apartments on the locations we already have if it wasn't for this ground building ratio we have to comply with. HUD builds high-rise apartments and we can't even build a two-story building—at least they frown on its suggestion.

Hoping my gripes haven't been too burdensome.

DANIEL BRUSTKERN, MASON CITY, IOWA

You sought a comment concerning accessibility. As a staff person of the Iowa Easter Seal Society and a concerned citizen, we are concerned about accessibility for all people. Handicapped people of all types have difficulty in getting around. We know that buildings built by tax dollars must now be accessible. What about all the buildings and facilities that are in existence? It should be a tax incentive to rehabilitate or remodel existing facilities. The handicapped, seniors, children, any person with ambulatory needs have difficulty in navigating steps.

HARRY G. BUNGE, OSAGE, IOWA

The building of low-cost housing for low-income elderly could be expedited, I believe, if the land cost could be included in the total cost of the FHA program, especially in those cases where low-income housing units have been built and in use for several years.

The experiance we have had in Osage with the two Hamlin Garland apartment homes or units is that the occupants are friendly neighbors, one to another, and the fellowship they find in visiting, raising small patches of flowers and vegetables, and the friendly rivalry is heartwarming and enriches their lives. But transportation is available on call, at 25¢ one way.

Transportation is very important. We found that riders were hard to get in the beginning, even though our bus was kept invitingly clean and our driver is as fine a person to take care of the riders as anyone could be. The attitude of all connected to the bus service is one of joyfully serving the total needs of the elderly. It takes time to develop a following, but we are gaining right along and the future looks much brighter. Our driver, anxious to please, took out one seat and got a board for a ramp so he could wheel a wheelchair person up the ramp without removing him from his chair. The attendant is not charged for the ride. Such concern spread, and more and more people are using the bus—a 15-passenger maxibus.

All of the programs are good and needed; however, since there is such variance in the needs of the various areas, the programs should be carefully fitted to the needs of the various areas and needs.

It is heartening to see help available, financially and otherwise, for many elderly who, because of misfortune, adversities, bad luck, etc., became elderly with few wordly goods. All of us are in accord with this thinking. I wonder if this attitude might not have been, or is being, abused by many who seem to be of the opinion that suddenly and automatically when you get to be 60 years old you become poor and not able to make your own decisions as you used to. The Government has to provide finances and programs to keep you occupied and solvent.

On the other hand I believe that there are many elderly who are asking, "Not what can I squeeze out of the Government, but what can I do to help my neighbor?" in the same spirit that President John Kennedy asked at his inaugural: "Ask not what can my country do for me, but rather, what I can do for my country?" Senior citizens should become aware of the needs of others and take care of them as they are able. In our senior citizens group we have done a lot of this; namely: Collecting and preparing items for handicapped at Handicap Village, Woodward, and Crestview; helping with three blood pressure screenings; arranging to help with the swine flue shots; providing quarters for the poppy sales; helping with cancer, Easter seal mailings, and stuffing; bus tours conducted to various places; responsible for the senior citizens Mitchell County bus; and many other needs as they come up—visiting sick, deliver meals-on-wheels, etc.

RALPH CAYLER, BANCROFT, IOWA

I hereby state that I am publisher of the Bancroft Register, a weekly newspaper published in Bancroft, Iowa.

As a public service, every week we publish an article by Adella Ulses, manager of the congregate meal site, and also an article by the activities director of the Heritage Nursing Home, as well as the visiting list at Heritage Nursing Home. All three of these columns are well received by our readers and attached is a copy of these columns from our newspaper.[1]

We feel that the community center alteration would be justified as money well spent for the senior citizens of the community. We also know that it would be used extensively by the senior citizens of the community.

PHIL DOOCY, BANCROFT, IOWA

I am president of the Bancroft Chamber of Commerce, which organization of some 50 businessmen unanimously approve the alteration project of the community center so that it can be used and benefit the senior citizens of the community. This project has unqualified support by the people of the community. It would be an example of money actually being used by the senior citizens for which it was intended.

RAY M. FAIRHOLM, DENVER, IOWA

I think it's time to separate the welfare programs from social security and from the programs for the older folks. It should not be necessary to be poor, black, or pregnant to receive aid. Also the administration of the elderly is too costly. All or most of the money meant for the older person is skimmed off by social workers. Even our State commission on aging is not above taking all they can get. I am president of the Hawkeye Valley Area on Aging (10 counties). I am 73 years old. Aside from my social security, I need no other help, but I see others who do.

WALTER A. FANGMAN, BANCROFT, IOWA

I am city clerk of the city of Bancroft and attached find copy of Minutes of the council as requested by HUD for the approval of the community center

[1] Retained in committee files.

alteration. This provides that the city would fund the operational costs of the community center up to $600 a year.

[Enclosure]

SPECIAL MEETING OF BANCROFT CITY COUNCIL, MAY 17, 1976

The special meeting of the Bancroft City Council was held at the community center at 7:30 p.m. on May 17, 1976.

The meeting was called to order by Mayor Pro Tem George W. Kockler. Councilmen present were: Stanley Lowe, Mike Schiltz, and Jim Summitt. Absent were: Joe Welp, Jr., and Roy A. Fox, mayor. Also present were the board members of Low-Rent Housing Agency.

The purpose of the meeting was to discuss plans of the new addition to the community center.

After discussion, it was moved by Summitt, seconded by Schiltz, that the city give the Low-Rent Housing Agency funds to maintain the new addition to the community center not to exceed $600 annually. Voted: Ayes: Lowe, Schiltz, and Summit. Nayes: None.

There being no further business to come before the meeting, on motion by Lowe, seconded by Schiltz, and carried, the meeting was adjourned.

GEORGE W. KOCKLER,
Mayor Pro Tem.

Attest: WALTER A. FANGMAN,
City Clerk

THOMAS W. GARRY, BANCROFT, IOWA

We have a sincere problem for our rural Bancroft elderly—lack of rooms for meals for them. Along with meals are also many social gatherings, which also lacks space. In this day and age of inflation, which is the hardest on our elderly, why could there not be something done to give them an area to meet, talk, and play with respect, instead of limited area to do these things—a place their age and hard years of service deserve?

ELIZABETH S. JOHNSON, MASON CITY, IOWA

One of the prime concerns in providing for people 60 years of age or older is to avoid the temptation to herd them, failing to remember that while they are in one age category, they remain people with specific personalities. One of the real needs of anyone is the ability to realize his personal worth and to achieve this, he must feel that he is a contributing member of the society in which he lives. He may be handicapped at an older age by limited income, by role loss, by health problems, but, above all, he must be able to retain his identity and his dignity as a human being. Having lived more than half a century with probably more than 40 years of experience in earning a livelihood for himself and others, other than the experience he has gained in simply living as long, he has too much to offer society to be shelved or placed in a position where his gifts are withheld from those who can and should benefit from them. Not to be able to give of himself lends to his frustration, depression, and finally to his defeat. To be able to do so gives him worth in his own eyes of those he serves. He is able to channel his experience and knowledge where it can benefit his community and he finds himself busy, interested, and alive.

It is to assist the older person to retain his sense of worth, to give him channels for giving of his experience and knowledge where they are of value, to help him retain his vitality and zest for living that the retired senior volunteer program exists. The person who is herded, who is patronized because of his age, loses his dignity as a person. It is true that he may need assistance to remain economically able to contribute, through transportation programs, through nutritional food programs and the like, but he also has an equal need for being satisfied with his role as a senior member of our society. As a member of society he has the same needs that anyone would have—the sense of worth, the dignity of being a unique individual with a contribution to make to the total welfare of everyone. No one remains a vital, contributing member of the total society when they are out of contact with other members of that society. Grouping people by chronological age is unnatural and deteriorating to the personality.

It is for that reason that an abject fear exists among older people of becoming dependent and being relegated to a euphemistically named "retirement" home. No matter how well they are physically cared for and no matter what is done to inspire activity, because the situation is an unnatural one, it defeats the personality of the older person and society is the loser. The problems of the older American must be met but with respect for the cultural differences which exist.

The great thing about the retired senior volunteer program is that it is the individual who is important. It is the primary concern of the professional staff of an RSVP project to see that the personality of the individual is not diminished in any way by his participation as an RSVP volunteer.

C. L. KELEHER, BANCROFT, IOWA

I am Msgr. C. L. Keleher, pastor of St. John Parish in Bancroft, Iowa. In Bancroft, we have about 20 apartments for the elderly and a small community building, all constructed about 10 years ago with HUD funds.

About 2 years ago a program of congregate meals was set up in the small community building, for it was the logical location for such a project. The congregate meals program has been very successful, for not only have most of the residents of the apartments come for meals, but many of the nearly 100 senior citizens of the community also come. As a result, the community building is extremely over-crowded at meal time.

The local HUD board approved an enlargement of the community building, but we have been unable to obtain permission from the State HUD board. The reason given by them at a joint meeting of the local board and State board recently in Des Moines was that our enlargement plans went beyond the limit of their guidelines.

Could there be some consideration given to giving more flexibility to the HUD guidelines for community buildings?

Thank you.

JAMES KENNEDY, BANCROFT, IOWA

The community center building enlargement program in Bancroft was started to assist the congregate meals program. The large number of elderly who are now enjoying hot meals three times a week in our community center building is a tribute to the staff and the planners of congregate meals.

We have tried to use the funds that are already allocated for modernization, but cannot get approval from the Des Moines HUD office. They state that building a larger community room and feeding the elderly is not their area of concern.

We would direct your attention to a report by a Special Committee on Aging of the U.S. Senate, number 94–478, page 32, last paragraph: "Added cost for footage and construction because of nutrition program funds requires serving eligible low income elderly from the neighborhood as well as occupants in a development." This seems to me to be quite clear in its meaning and intent. Why should it be so difficult to understand for a government agency such as HUD?

I am sure that your office is well aware of the problems that the local housing authority has encountered. You have been sent copies of correspondence from the HUD Des Moines office and a representative from Senator Culver's office was at a meeting of the local board with the Des Moines HUD people.

We would appreciate your help. Thank you.

WILLIAM A. KENNEDY, BANCROFT, IOWA

I state that I am president of Heritage Nursing Home, a 40-bed community nursing home directly across the street from the community center in question. living within 300 feet of the community center are 20 occupants of the HUD project, 24 occupants of the Farmers Home Administration project known as Heritage Apartments, and 40 occupants of the nursing home. We have an active arts and crafts program and other programs at the nursing home and our

ambulatory patients are able to visit back and forth with friends in the HUD program units and also in Heritage Apartments.

The community center is so small that accommodating only about 20 people is worse than no community center at all and is therefore unsatisfactory to any program dedicated to the senior citizens. Pending for over 2 years has been their application for alteration. They have started a retired seniors volunteer program to operate out of the community center since we thought the community center would be altered but this project is being held in abeyance pending the final decision on this matter. Also, the transportation van is being held up since it was to be housed in the community building garage alteration, so you see the future of the senior citizens is definitely dependent on the progress of the community center alteration.

H. J. McNERTNEY, BANCROFT, IOWA

I, H. J. McNertney, make the following statement in regard to the alteration of the community center which has been pending for more than 2 years, and I have been a board member since the Low-Rent Housing Agency was started some 5 or 6 years ago.

So as not to be duplicating the record, I am enclosing a copy of my letter[1] of June 14, 1976, to which there has been no reply. This sets forth most of the facts, minutes of the local housing authority's meetings, and other pertinent data as it pertains to the pending alteration.

I must state first that the local board has worked hard on this project for the last few years and the fact that there is on hand some remaining funds out of the modernization grant which we received has been due to their hard work and effort. This all started when we received a modernization grant of $100,000 to correct drainage problems and other problems. Two bids were received in excess of $50,000 and through the efforts of the local board the low bidder submitted a bid lower than $20,000. Despite pressure and advice to not accept the low bid, the board did accept the low bid, work has been completed, and there is a remainingg balance on hand. The board has worked hard to save this money. The board is securing a bus so that the elderly will have transportation and, according to letter dated September 17, 1975, from the Des Moines HUD office, it appears that the garage can be approved in the form of a storage building provided it is detached. This interpretation is agreeable with the board and we also feel that this interpretation applies to the alteration versus addition argument that has been ongoing for some time. In one of the attachments to my letter of June 14 appear the minutes of the local board meeting of April 19, 1976, wherein our executive director having visited with representatives of the Des Moines office reported that the only way the project would be approved would be if we would secure an agreement from the city to fund the operational costs. This also I can verify as this was the agreement which I had secured from the Des Moines office and this was the agreement under which we secured the resolution from the city to fund the operational costs of this alteration to the operation of the community center.

The statement of understanding dated April 7, 1975, between H. R. Crawford, Assistant Secretary for Housing Management, and Arthur S. Fleming, Commissioner, stated that they were to pledge their diligent efforts to foster close cooperation and continuous liaison among the various agencies and to review from time to time the product of this collaboration and new potentials that may emerge. The action steps provided that HUD will be instructed that modernization funds can be utilized to accomplish alterations necessary in community space to accommodate meal preparation and service. We feel the community center can be so altered and architects have been employed and have reworked the plans three or four different times, all with HUD approval and have come up with a final plan which has been termed an addition rather than an alteration. All of the statements and principles to help the elderly and all of the money appropriated to help the elderly is meaningless unless it is translated at the local level and gets to the local elderly in terms of help. Much money has been spent by HUD in administrative road blocks, bureaucratic redtape, and repetitious paperwork, to stop this project from helping the elderly of the community. Regardless of this, on behalf of the elderly, many people have spent money, time, and sacrifice, written letters, made trips and telephone calls, because the cause is right. These people and the elderly of the community's vision of a community

[1] Letter and attachments retained in committee files.

center alteration can be realized if HUD officials would interpret the rules and regulations in a cooperative and fair manner in accordance with the intent of Congress and the signers of the statement of understanding referred to above rather than to engage in intentional administrative delays, intergovernmental paperwork and indecision, and bureaucratic autonomy.

FRANK O'CONNOR, BANCROFT, IOWA

I am maintenance man at the HUD program, also Heritage Apartments and Shannon Apartments, being a total of 66 rental apartment units plus the community center next door, and part of this complex is the Heritage Nursing Home, a 40-bed home.

In this community of 1,100 people are approximately 380 elderly. Therefore, I am dealing with our elderly—our surplus senior citizens. Our elderly are put out to pasture with nothing to do here in Bancroft. We are wasting our human resources, our elderly; they have no place to go and socialize or do anything. We do have the small community center which holds about 20 people. They serve congregate meals in shifts but there is no room for arts, crafts, socializing, or any other senior citizen activities.

For the last 2 years I have seen the elderly and heard them plead for alteration to the community center and although local people and groups write or call, they are delayed and receive no response. They are in a desperate state of despair and I hope that the senior citizens of Bancroft can be helped by providing an adequate community center for congregate meals, the transportation program, the senior citizens volunteer programs, and the other programs that they are working on.

MARY V. O'CONNOR, BANCROFT, IOWA

All of us are aware that we are bound by rules and regulations and laws. However, we also know that rules and regulations and laws are subject to change.

An example of a situation where a regulation could be given a different interpretation and a law amended lies in the situation now faced at our public housing facility, a HUD project.

On hand are funds labeled "modernization funds" which due to watchfulness on the part of the board of directors of the site were not needed to complete the job for which the modernization fund was granted. The Board then took the position that the money remaining should be used to enlarge the community building in the HUD project which is located centrally in the elderly units and directly opposite a FHA 24-unit complex of apartment homes and tenanted by other elderly and nonelderly as well. Although the HUD units are only able to house 20 elderly singles or couples, we have been serving a much larger segment of the other elderly in this community by offering the use of the community building as a congregate meal site. We are now actually suffering because there has been a tremenous response to this program and we have literally turned over the community building to the meal program and do not have room to provide any type of activity which does not fit into the dining room atmosphere and denies the elderly tenants of the HUD a place to use as intended.

No other suitable facility exists in this small town of approximately 1,100 population and even though a report prepared for use through a Special Committee on Aging of the U.S. Senate, No. 94–478, page 32, last paragraph, which states that at Government housing sites "added cost for footage and construction because use of nutrition program funds requires serving eligible low-income elderly from the neighborhood as well as occupants in a development," use of the modernization funds have been prohibited by the HUD Des Moines insuring office.

This particular case has other ramifications, for example the extremely high cost of utilities charged by the city-owned utility company which have resulted in putting the HUD project into financial difficulties and which has been quoted by the Des Moines insuring office as further evidence as to why the project

should be denied the permission to enlarge the community building. Due to the law which insists that only 25 percent of income may be charged for housing, we are not permitted to charge a rent in keeping with the increased costs of operation. In almost every instance the cost of utilities exceeds the rent which we are permitted to charge.

To sum up, we need funds desperately to accomplish our goal; enlargement of the community building which will enable us to better serve the over 300 elderly of the community and not just the 20 persons who now reside in the project.

Other avenues of funding have been investigated, a Federal grant or use of FHA funds, but the moneys have either been allocated or cannot be used by us for our stated purpose. We do not know when any other money will come to us, and for this reason we are asking if you know of any way that we can be helped.

Thank you for any consideration that you give to this matter.

MURIEL M. PETERSON, MASON CITY, IOWA

There is continuous talk of the elderly preferring to remain in their own home, and also there are comments about the rising costs of health care and growing numbers in nursing homes—not needing that level of care. Yet home care/health care services are the most difficult to obtain! They may be the most economical, but services are scarce to nonexistent, depending upon the locality and, if available, there is a waiting list. Medicare regulations are more strict for coverage of home health care than for hospitalization.

In Iowa, all but four or five homemaker service programs are under the department of social services (DSS). The DSS provides for the person whose income is within 80 percent of the State's median income, adjusted for family size. Cuts in allowable numbers of State employees or some DSS area administrators feeling homemaker services is not beneficial means home care service is difficult to obtain and no expansion of services possible. Persons exceeding the 80 percent guidelines must pay at least $4.23 per hour for service, if and when time is available. It is ironic the persons paying taxes (probably the greatest share) are the persons virtually denied services.

Nursing home costs are enormous, but what is being done to develop alternatives? Locally, nothing. It is easier to get funds through title XIX (medicaid) for a person's care in a nursing home than it is to get funds for other types of care. An adult day care program has much merit for our community, but where do you get the start-up funds—and where does coverage come to supplement the cost that the participants are not able to bear? The State of North Dakota received approval for title XIX to be used, but Iowa says "No, that is not possible." Both States are in the same HEW region—and the regional office OK'd North Dakota using it. Residential care centers are needed desperately—not the type of independent group housing of Shalom Towers or the Manor as mentioned at the hearing, but centers where staff are available to monitor needs, do meal preparation, laundry, cleaning, but no nursing staff. State Federal programs do not really pay for that level of care.

At the hearing, comments were made about winterizing/insulating older person's homes. Many older persons have decided years earlier not to keep up their homes because they'd not live long enough to benefit from the up-dating, but the Federal Government is supposed to step in and do it! That is perpetrating a bad situation. Older persons with health problems or physical limitation living alone and no neighbors nearby are in a very precarious and self-endangering situation. That is their right, but by fixing up their homes and providing various services for them, our tax dollars are encouraging inappropriate behavior. (Homemaker services are usually not provided if the environment is endangering, and the persons are assisted in making more suitable arrangements.) We must get away from the idea to own a home and to remain in it is all there is to life. Commitments to a physical/material object is overwhelming and placed in priority over life and limb.

Thank you. I've aired my gripes at the moment. About half of the patients with whom I work at NIMC are over 65 years of age, thus, in the 4 years I have been here, I have shared with many the frustration of bureaucratic redtape.

MARIE PAULUS, ROCKFORD, IOWA

First, I think we had a wonderful meeting and crowd. Over 11 towns were represented—people I didn't know. Also, we had over 50 Rockford residents, The panels were good, but we would have found more facts if people from the floor had been able to talk and explain problems on chore service. So many silly questions were asked—for example, "How far did your husband get in school?" The service doesn't always get where it is needed the most. Also, the insulation helps people really in need. Some could do it themselves if they got the help.

Also, I think most of the money put out to help the elderly is spent on jobs for younger people at desk jobs, and that they really don't understand the problems. By the time salaries are paid, money is gone. Lots of people who could use congregate meals are too proud to come. Many enjoy just being together—going at 11 for 11:30 dinner.

DAVID SCHILTZ, BANCROFT, IOWA

We have a good clean town with a growing population. We also have a good number of elderly people who don't have a place in town to have community lunches and other activities which they need very bad.

If I may add, the people of the HUD office in Des Moines are treating us like a bunch of criminals, just because we're trying to help these elderly people of our town.

The money which we are trying to do this with came from the HUD offices to fix a water problem we had in the low-rent housing project. We solved this problem with half the money they gave us, so I see nothing wrong with the idea of using the money we saved to better our community room for lunches. We need the extra room very much for there are a lot of elderly people in this town who depend almost solely on these lunches.

ADELLA ULSES, BANCROFT, IOWA

I am site manager of the congregate meals for the elderly in Bancroft. We serve 45 to 50 a day, 3 times a week, and desperately need your help and need to expand. The facilities we have are nice, but we need more room; 98 percent of the people taking part in these meals are from one-person households. No one will ever know what these meals mean to the elderly for fellowship and nutrition.

We serve in the community room of the HUD-Bancroft low-rent housing which accommodates 20 people, and we serve many, many more. According to HUD regulations, we are refused to use modernization funds even though we have them on hand for this project.

We have met with objections all the way for enlarging this building and need your help—please.

DONALD J. WELP, BANCROFT, IOWA

I am vice president of Shannon Apartments, a 12-unit rental housing project financed by the Farmers Home Administration. We have been advised by HUD to go to Farmers Home Administration for financing a contribution to the community center. However, they advise us this is not possible. We refer to the statement of understanding between HUD and the Administration on Aging concerning the nutrition program for older Americans dated April 7, 1975, and signed by H. R. Crawford, Assistant Secretary for Housing Management, and Arthur S. Flemming, Commissioner, wherein they refer to the implementation of the nutrition program and the collaboration between HUD and the Administration on the Aging and pledged their diligent efforts to foster close cooperation and continuous liaison among the various agencies and to review from time to time the product of this collaboration and new potentials that may emerge for their mutual benefit. This statement means nothing if it is not implemented on the local level and all funds go for administration, consultants, and experts, and none is spent for the elderly. We feel the elderly deserve a proportion of the funds allocated for them.

THE NATION'S RURAL ELDERLY

WEDNESDAY, AUGUST 18, 1976

U.S. SENATE,
SPECIAL COMMITTEE ON AGING,
Sioux Falls, S. Dak.

The committee met at 9:40 a.m., pursuant to notice, in the Senior Citizen Center, 132 South Dakota Avenue, Sioux Falls, S. Dak., Hon. Dick Clark presiding.

Present: Senator Clark and Representative Larry Pressler.

Also present: William E. Oriol, staff director; Philip S. Corwin, professional staff member; John Guy Miller, minority staff director; and Alison Case, assistant clerk.

OPENING STATEMENT BY SENATOR DICK CLARK

Senator CLARK. Good morning.

I have a very brief statement that I would like to open with. Senator McGovern has also sent a statement for the record that I will read and then I want to turn to Congressman Pressler, who is a member of the House Aging Committee, for a statement. Then we will begin with the panels.

I think while we are talking we are going to ask the first panel to come on up, because we do have a great number of witnesses and only about 2 hours and 10 minutes to get through about 12 or 15 witnesses. So Peter Johansen and Vada D. Thomas, come on up and have a seat here.

Then the second panel, if they will be ready, includes Phil Burke, Shirley Overland, Irene Eilts, Larry Oppold, Lillian Nace, Ray Bagley, and Gerry Eisenbraun.

I do want to welcome all of you to this hearing. We are particularly happy to be in Sioux Falls and to talk about problems of the rural elderly, which is what these hearings are really all about. We decided about a year ago in the Senate Committee on Aging that we would hold a series of hearings on how elderly people are affected, particularly in rural areas, in the smaller cities, in the towns, and across the countryside.

We have had four hearings, and this will be the fifth that we have held here in South Dakota, Nebraska, and Iowa. The last hearing will be in Rockford, Iowa, this afternoon. In the meantime, we are going to be riding on the bus out to Canton at 11:45 when we finish here.

If I might just summarize in 1 minute what we found in the hearings that we have held so far, I would say this: First and foremost, people who live in rural areas, in the small towns, and in the small cities are affected by transportation, because it really does not matter much what kind of facilities you have—health care facilities or anything else—if you can't get to them. We found an enormous need for buses—for transportation in the rural areas, first and foremost.

We found further that there are real problems, particularly in the Midwest and, I think, all across the country, in terms of health care. We simply do not have the health care facilities in the smaller towns and across the countryside that we badly need. We are going to be talking some about that in terms of extended health care. It does not mean that we can have a doctor and a hospital in every small town; what it does mean is that we ought to have some kind of basic health facilities.

We have also learned and talked with people about the problems of nutrition—the congregate meals program, the meals-on-wheels program, and what that has meant to older people. Again we are only scratching the surface, but it is an important beginning, not only in terms of diet, but in terms of the sociability that is associated with it—the fact that people have an opportunity to get together, talk, and see one another.

We have talked about problems of legal services for older people. Above all, we heard, particularly yesterday, from older people about housing.

So we have a great number of specific problems that relate to people in rural areas.

Now I have two statements here, one from Senator George McGovern, as I said, and another from Senator James Abourezk. I think, rather than reading all of the statements, let me simply read a couple of paragraphs from each. First from Senator McGovern.

DEAR MR. CHAIRMAN: It is a pleasure to welcome the members of the Senate Special Committee on Aging to South Dakota. I believe your committee can learn a great deal about the problems of the elderly from your visit here. Too often testimony is only received in the major cities, ignoring the unique problems of the rural elderly. South Dakota's 116,000 senior citizens—

That is an interesting figure, 116,000—

represent a major percentage of the State's population, yet very few have access to public transportation or the other services offered in large metropolitan areas.

Now Jim Abourezk.

First of all I would like to welcome Dick Clark and the Senate Special Committee on Aging to South Dakota. South Dakota is one of a handful of States where the majority of elderly citizens live in small towns and rural areas, and we are honored that the committee is looking into this important issue.

Now I will make both of those complete statements a part of the record at this point.

[The statements follow:]

STATEMENT BY SENATOR GEORGE McGOVERN

It is a pleasure to welcome the members of the Senate Special Committee on Aging to South Dakota. I believe your committee can learn a great deal about the problems of the elderly from your visit here.

Too often testimony is only received in the major cities, ignoring the unique problems of the rural elderly. South Dakota's 116,000 senior citizens represent a major percentage of the State's population. Yet, very few have access to public transportation or the other services offered in large metropolitan areas.

As chairman of the Select Committee on Nutrition and Human Needs, I have been particularly concerned by the problem of malnutrition which plagues millions of our Nation's senior citizens. We have made great progress in this area with the title VII elderly nutrition program, but much more can be done.

The Nutrition Committee recently held hearings, for instance, on the nutritional problems of our Nation's housebound elderly—those persons who cannot attend the title VII congregate meal sites. As you will undoubtedly discover again today, confinement to nursing homes is often not a result of physical illness, but the result of an inability to shop and prepare food.

I am extremely proud that you and 12 of the members of your committee have joined as cosponsors of the National Meals on Wheels Act of 1976 which I introduced following our recent hearings.

This bill will be a major step forward in our efforts to feed the 3 to 4 million older Americans who would like to, but cannot, attend the title VII nutrition sites. In South Dakota, as well as other rural States, this program would be a valuable addition to our services to the elderly.

Again, Mr. Chairman, I and the citizens of South Dakota extend our warmest welcome and our sincere hope that your inquiry today will lead to a better life for older Americans.

STATEMENT BY SENATOR JAMES ABOUREZK

First of all, I would like to welcome Dick Clark and the Senate Special Committee on Aging to South Dakota. South Dakota is one of a handful of States where the majority of elderly citizens live in small towns and rural areas, and we are honored that the committee is looking into this important issue.

I regret that I am not able to attend personally to hear the witnesses and participate in the discussion. Although I know that many South Dakotans already admire the good work of the Special Aging Committee and my colleague Dick Clark, I want to mention in particular the very high regard I have for the way the committee goes about its investigations and hearings under the leadership of its chairman, Frank Church, and the outstanding work that Dick Clark has done in representing the needs of older people in our part of the country on the Aging Committee.

Those of you in attendance can be sure that what you say will be taken seriously and can be used by Senator Clark and the committee staff within the framework of considerable attention they have already been directing toward problems of the rural elderly.

South Dakota was not an early frontier. Life has always been hard here, and this year's drought only reminds us of the endurance and persistance of the settlers who scratched a living out of the soil.

But in South Dakota, unlike other States, those pioneers, those first generation settlers, fathers and mothers of our State are still among

us. Every town in this State has its elders who came with their parents or as young people to settle the plains, to make a new life, and to develop South Dakota.

When we talk about South Dakota's rural elderly, we are talking about the people who not only figuratively, but literally, built our State, established our way of life, and toiled for the comforts we enjoy today.

Thus, it is a special irony that the rural elderly are, by and large, missing out on the benefits of that affluence. We have 18 counties without an active physician; 29 rural post offices have been closed in the past couple of years; passenger rail service has been gone for 20 years, and rail abandonments mean that more and more towns are without freight service altogether. Family farmers are selling out, and estate taxes make it more difficult to keep a farm or business in the family.

This is not the heritage our older citizens deserve. When we in Congress make an attempt to use their talents and enrich the lives of older South Dakotans through green thumb, foster grandparents, elderly housing, senior centers, tax credits, food stamps, and other individual programs, we face vetoes, impoundments, and impediments from an administration which seems to be long on handwriting and short on compassion.

The less an American fits the description of middle-aged, middle-class, metropolitan, and white, the more that individual must depend on public services, and the more difficult it is to provide the services needed.

Rural Elderly Deprived of Urban Services

The rural elderly—probably the most needy—are also the most difficult to serve. Consider some of the main issues before the Congress: In the health field, doctors are short in rural areas; facilities are lacking; emergency medical services are expensive; and costs of specialized care is astronomical.

In transportation, the same deregulation of railroads, trucking, and airlines, which would lower prices for urban residents, would mean no service at all to many rural areas and the biggest hardship on the elderly who depend on public transportation.

Even the postal service is trying to cut back its service—which is least profitable and most inconvenient to provide—to rural post offices, rural home delivery, postal money orders, and other special services.

We have heard a lot about big government and about government interference in people's lives, and there are changes which should be made, but I think it is important to remember that the poorer you are, the older you are, the farther you live from the city, the more government is necessary to assure equal opportunity for a decent life.

It would be nice if I could say today that if we do X first, Y second, and appropriate Z per year, the conditions of the rural elderly will be improved. It doesn't work like that. Housing, income maintenance, crime prevention, jobs, health care, transportation, consumer representation, legal and nutritional counseling—the rural elderly can use all of these services and more, yesterday. The rural Indian elderly, of whom there are many in South Dakota, have even greater needs as a group and even more difficult times trying to take advantage of what America has to offer.

Clearly, we must enable more people in more places to participate in existing programs. But what we really need is an attitude of caring on the part of government and of society as a whole. We need to realize that cuts in government, deregulation, laissez faire in reality mean that the rural elderly and others who are least able to cope are also the first to suffer. A life of dignity and a living income should be a basic right of every American, and certainly of everyone who made the State of South Dakota and the Nation the sort of country which we can all be proud of.

Senator CLARK. I would like to ask Congressman Larry Pressler who is a member of the House Committee on Aging for any comments he might have.

STATEMENT OF HON. LARRY PRESSLER, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF SOUTH DAKOTA

Representative PRESSLER. Thank you very much, Senator Clark.

I am here mainly to listen. I see a lot of familiar faces here. I think the hearing is important and we thank you very much, Senator, for bringing this committee here to South Dakota because the vast majority of South Dakota's elderly—57 percent of our elderly—live in small towns and rural areas. I come from Humboldt out here which is one of those small towns and a lot of the Federal programs do not reach people in rural areas or small towns. As Senator Clark has pointed out so well, transportation and health care are two of the principal problems that senior citizens in my district at least are experiencing.

I have a statement which I am going to insert in the record to save time. I might say that studies have shown that nationwide 27 percent of all Americans 60 years or older live in what we describe as rural or farm country, but in South Dakota that figure is much higher. So with that I am going to insert my statement into the record so we can spend more time listening here.

It was the Education and Labor Committee, the Subcommittee on Education, which John Brademas chairs and which I am privileged to serve on the House side, through which the Older Americans Act was authorized. I was a cosponsor of that act, particularly the transportation portions of it.

Thank you very much for being with us.

[The prepared statement of Representative Pressler follows:]

PREPARED STATEMENT OF CONGRESSMAN LARRY PRESSLER

It has been said that approximately 8 million persons, or 27 percent of all Americans 60 years and older, live in what may be described as rural or farm country. I believe that we would find this a most conservative figure if compared to the rural elderly population in our State. Indeed, 83,000 of South Dakota's approximately 685,000 citizens—or over 12 percent—are 65 years of age or older. In view of the fact that, according to the U.S. Census Bureau, well over half, or at least 57 percent, of the residents of South Dakota are called "rural", and that one can hardly call a State with a land area of 77,047 square miles and a population of 685,000—9 persons per square mile—urban, I believe that it is particularly fitting that the first of the hearings on "The Nation's Rural Elderly" be held in South Dakota.

As a cosponsor of the Older Americans Act amendments, and a Representative of a State with an unusually large number of elderly citizens, I am especially concerned about the problems of these Americans who have contributed so much to

the growth and development of this great Nation. The problems faced by the rural elderly are especially perplexing. We find that providing even basic services—such as minimal medical and health care and transportation to and from town for groceries and necessities—becomes a major problem. I welcome Senator Clark and the Senate Special Committee on Aging to South Dakota, and I hope that these hearings will enable us to better serve "the Nation's rural elderly."

Senator CLARK. Thank you.

Now we are going to start with the first panel, Peter Johansen, chairman of the South Dakota Advisory Council on Aging from Yankton, and I think he is accompanied by Jim Anderson who is director of the South Dakota Office on Aging. We will hear first from Mr. Johansen.

Let me say that because we have about 15 or 20 witnesses and just exactly 2 hours, we are going to ask you to try to limit the statements to about 5 minutes and then we will have some time for discussion.

You go right ahead, sir, any way you would like to proceed.

STATEMENT OF JAMES V. ANDERSON, ACSW, ADMINISTRATOR, SOUTH DAKOTA OFFICE ON AGING, DEPARTMENT OF SOCIAL SERVICES

Mr. ANDERSON. Mr. Chairman, as a result of the staff contacts that have been made, it has been suggested that I make a brief introductory statement first and then Mr. Johansen will continue.

Senator CLARK. Very well.

Mr. ANDERSON. My name is James V. Anderson. I am the administrator of the South Dakota Office on Aging, a unit of the State Department of Social Services.

On behalf of Governor Richard F. Kneip, I welcome you to South Dakota for this hearing in your series on "The Nation's Rural Elderly."

Governor Kneip is not able to be present at this hearing today but in many ways he has shown his understanding of the concerns of older citizens of this State and has supported legislation and services for their benefit. He is pleased that you and staff of the Senate Special Committee on Aging have come here to listen to the people of this State.

To begin, I will outline some characteristics of this very rural State and then further information will be offered by a person with more personal experience on aging—its problems and successes.

In brief, this statement presented by the office on aging and the advisory council on aging cannot fully represent the concerns and resources of all public and voluntary agencies. Some subjects should have further presentation by organizations dealing with health, education, labor, economic opportunity, and other social services.

From the perspective of our specific responsibilities, we offer the following comment on the status of older persons in South Dakota and on a number of programs and services.

South Dakota has a total population of 682,900 inhabitants of all ages. Seventeen percent, or 116,000, are age 60 or older.

PREDOMINANTLY RURAL AREA

South Dakota remains predominantly rural, with 55 percent of the population remaining on farms and in smaller towns, and 45 percent located in communities of 2,500 or more inhabitants. There are only 26 towns with a population of 2,500 or more. There is no major metropolitan area.

Average county population of persons age 60 and over is 1,724 persons. Forty-four of the sixty-seven counties have older populations which fall below that small average. In those counties the average falls to 859 persons. Twenty counties have 700 or fewer persons in that age category.

American Indians comprise 2.3 percent—10 times the national average—of the State's population age 60 and over. Approximately 8,400 square miles, or 11 percent, of South Dakota is designated as Indian reservation.

Currently 30,423 persons, or 26 percent, of the State's population age 60 and over have incomes below poverty level. Lack of employment opportunity is a major cause.

"Housing remains the paramount problem of poor and elderly persons," according to a study made by the South Dakota Economic Opportunity Office. "Blighted housing conditions contribute to the physical, mental, and social instability of their occupants."

Unemployment, rising energy and food costs, and inadequate housing all pose serious problems for elderly persons, especially those with fixed incomes—and that tends to be most of them.

Age discrimination and mandatory retirement hold down the income levels of elderly persons. Social security and supplemental security income benefits do not keep pace with inflation and cost-of-living increases which confront unemployed elderly.

It was the consensus of the 1971 White House Conference on Aging that distance is a major problem in delivery of Older Americans Act programs and services in rural areas. This is true of most social services provided in South Dakota. Even in towns, lack of transportation keeps many elderly, disabled, and poor persons from getting to vital services.

The success of nutrition programs for the elderly is dependent upon efficient provision of supportive services such as transportation, outreach, escort, nutrition education, health and welfare counseling, shopping assistance, information and referral, and recreation services. Provision of these services means that problems of distance unique to each of these services must be dealt with.

Now, Senator, to discuss some aspects of the service delivery system, I wish to introduce the chairman of the South Dakota Advisory Council on Aging. He is Mr. Peter B. Johansen of Yankton. After a long career in business, he served for a time on the staff of the State office on aging where he helped in the establishment of senior citizen centers and retired senior volunteer programs. Still resisting retirement, he has taken time off from his current full-time job to be with us here.

STATEMENT OF PETER B. JOHANSEN, CHAIRMAN, SOUTH DAKOTA ADVISORY COUNCIL ON AGING, YANKTON, S. DAK.

Mr. JOHANSEN. The State's 225 senior citizen service centers and clubs, mostly located in rural communities, are the most significant focal point for delivery of social services to the elderly.

More and more senior centers are becoming multipurpose senior service centers providing a range of service beyond recreation. Such services include information, referral and outreach, nutrition and nutrition education, home-delivered meals, education and life enrichment, health services, volunteer services, counseling and assistance with social security, SSI, sales tax relief, medicaid, medicare, and other problems.

Under Older Americans Act regulations the definition of a multipurpose senior center includes being open to constituents 30 hours per week and having a full-time director. This puts rural areas at a disadvantage. In the smallest communities a center may provide important services though it may not need, nor be able to afford, a full-time director. Regulations presumably intended to encourage good use of resources should recognize sparsely settled areas as well as cities, so that rural elderly will not be ineligible for possible benefits.

In many of South Dakota's communities there is no available facility that is suitable for successful senior center services and activities. Often these small towns have acquired unused, older buildings in need of repair and with architectural barriers. These buildings were not designed for senior center purposes, most having been places of business or large old houses, and are inadequate without repair, alteration, or renovation. Thus the new availability of Older Americans Act title V funds for acquisition, alteration, or renovation of these buildings is a welcome resource.

RESPONSIBILITY FOR ADMINISTRATION

Officially, administration of title V is being carried out directly between prospective applicants and the Administration on Aging in Washington, D.C., but State units on aging have been called upon by the Administration on Aging to disseminate information and application materials. Thus, it is the State agency which is seen by the applicants as the responsible contact and from whom adequate and timely assistance is expected. However, too little time was allowed, the materials are partly new and complex to this program, and not all materials were sent out by the Administration on Aging when promised.

Some of the application materials to be used had not arrived even 2 weeks before applications were due at the Administration on Aging. There could not then be adequate preparation by the applicant, nor technical assistance and prioritization by the State agency. A 12-day extension which has now been announced will help only a little. The result has been frustration for the applicants, a poor image for the Administration on Aging and the State Office on Aging, and unnecessary difficulty in providing technical assistance, coordination, and manpower for this purpose.

Transportation poses a problem for all elderly, particularly rural elderly, and consistently ranks as a primary concern. Federal and State departments of transportation should continue their priorities for stronger emphasis on rural transportation with consideration for disadvantaged persons such as elderly, handicapped, low and middle income.

Basic needs of older citizens are not unlike those of the general population, but assessing appropriate services to meet those needs is much more difficult for them, particularly the disadvantaged, low-income, or infirm elderly. We make extensive use of the personal, one-to-one contact of outreach workers to help older persons receive services for which they are eligible.

Related to outreach is information and referral. In July 1975 a statewide service called TIE-LINE was implemented to provide toll-free access for all citizens to more than 6,500 public, private, local, State, and Federal agencies that can help them. The office on aging supports, through funding and technical assistance, the special efforts of TIE-LINE to serve more older persons.

Important to service delivery is training. Through Older Americans Act and other funding, experts in the field of aging have conducted sessions on a wide variety of topics geared to increasing the expertise of service providers and the capacity of older persons to serve themselves.

The office on aging annually develops and administers a State plan on aging and awards grants serving older persons in all counties. Efforts continue to build the capacity of comprehensive and coordinated programs for older persons throughout the statewide planning and service area. Together with the office, the advisory council on aging has helped secure legislation for senior citizens' use of school buses, school lunch facilities, county and city mill levies, and increased awareness of needed legislation benefiting elderly citizens.

The office on aging has field coordinators who promote coordinated planning and development of services and resources among senior organizations, agencies, and State and local governments. Also facilitated by the office on aging has been establishment of a statewide consortium of public and private colleges and interested organizations in the Gerontology Association for Training and Education—GATE.

Elderly Indian Needs

As already noted, the 2,600 older Indians comprise 2.3 percent of the State's population age 60 and over. The office on aging has made a major effort to develop services for older Indians, working with tribal organizations and providing technical assistance and Federal funds.

On the reservations, unemployment is high, averaging 47 percent. Transportation is scarce and distances are measured in hours of travel rather than blocks or miles.

At the Bicentennial Governor's Conference on Aging, May 1976, a task force on Indian affairs was convened to discuss needs of older Indians. Recommendations of this group reaffirmed the continuing need for transportation services and other supportive services. There is a desire for location of nursing care facilities on reservations; there are none now.

A person who cannot communicate with others may mistakenly be thought to be mentally deficient or at least uncooperative. The cause may be loss of hearing, or a speech impediment, but the resulting frustration, misunderstandings, and rejection can lead to withdrawal and inability to function adequately even for self-care.

In South Dakota, mobile equipment and traveling educational and therapy teams have proved the feasibility of communication disorder screening and education in rural areas. The results of such screening and education have significant impact upon the lives of older persons. Hearing and speech often mean the difference between independence and dependence.

With advanced age may come some changes in a person's lifestyle that are desirable and freely chosen and other changes that are unwelcome. Nearly all South Dakotans live in private homes or apartments where they have convenience, comfort, and security. In time, with changes in family composition, reduced income, and loss of some physical abilities, the older couple or single person often finds the familiar surroundings becoming less convenient and secure.

All have an economic concern; a balance between income and the costs of utilities, maintenance, taxes, and insurance. Other needs from time to time may be home health care or homemaker service, chore service, transportation, hot meals, telephone reassurance, friendly visits, spiritual ministry, counseling, or legal service. If the supportive service can be supplied, the older person continues to function well at a relatively low cost.

When a person needs additional or more concentrated assistance, a foster home, group home, long-term care facility, or hospital may be needed. Some older or handicapped persons have moved to these facilities when they could have continued at home if support services were available. Surveys indicate that this occurs in South Dakota at a rate higher than the national average. For both humanitarian and fiscal reasons the State is working to increase its home support resources.

Isolation, physical problems, death of loved ones, family problems, economic worries, psychosomatic illnesses, and other problems confront the older person. Ways in which mental health services can be provided to older persons are greatly needed.

Despite efforts, little progress has been made to link mental health clinic services to the needs of older citizens, especially rural South Dakotans. Nursing homes, for the most part, are not yet equipped to deal with older people with emotional problems.

These are some aspects of the needs of older persons and resources serving them in South Dakota. It is all too briefly and incompletely described, but the office on aging will submit a written statement which will add detail and will include some other materials of concern or interest.

Thank you for your interest and for this opportunity to contribute to your studies.

Senator CLARK. Thank you very much for a very comprehensive statement.

We will hear next from Vada Thomas, advocate of the poor, Catholic Social Services, Sioux Falls, S. Dak.

STATEMENT OF VADA D. THOMAS, ADVOCATE OF THE POOR, CATHOLIC SOCIAL SERVICES, SIOUX FALLS, S. DAK.

Mrs. THOMAS. Good morning, Senator Clark and Representative Pressler.

I want to thank you for the opportunity to appear here this morning to speak on behalf of the 23,000-plus elderly in South Dakota who live below the poverty level. I want to direct particular attention to those 5,500 who must rely on SSI to supplement their income.

It seems unjust to me that a nation which has established a poverty level of $2,800 a year as being the minimum needed to provide the basics of life to a single adult, $3,700 for a couple, can then proceed to assure them income of $2,013 to meet these needs. Now $2,013 is only 73 percent of the poverty level.

South Dakota did not accept the responsibility of supplementing SSI. Of the 5,547 aged people in South Dakota receiving SSI benefits in April 1976, only 266 persons were being supplemented by South Dakota to their own payment level in December of 1973, which was a maximum payment of $193 per month.

Recent increases in social security and SSI payments has decreased this number to 169 persons as of August 1, 1976.

At the last legislative session, Senator Michael O'Connor introduced a bill for State supplement to SSI to bring all individual recipients in South Dakota up to the State level of $193 per month with a pass-through for future SSI increases at the request of the State advisory council. But as often happens to legislation that benefits the poor, it got caught in the game of political football and went down to defeat in the closing hours of the session by partisan political maneuvering.

My recommendation to this committee is that the Federal Government assume the responsibility they accepted with the passage of SSI and raise the Federal SSI payment to at least the official poverty level. If this level is not appropriate for all areas of the United States, which I am sure that it is not, a regional approach could be used.

TRANSPORTATION FIRST PRIORITY

I would strongly oppose the urban rural system of payments for several reasons. First, the increased cost of transportation in extreme rural settings such as we have in South Dakota would more than equal the added cost of housing in an urban area. Transportation is a must for South Dakota's rural elderly, as many of them have to travel long distances to obtain medical services to purchase food stamps and even to purchase food. In small communities the food prices are much higher than they are in the supermarket in a larger city. Rural homes rely on fuel oil or bottled propane for their heat, which costs much more than natural gas.

Another area of concern to South Dakota's older population is housing. South Dakota has a severe shortage of low-cost rental units. South Dakota relies on property taxes for the support of their school districts. Many older people are finding this tax burden too much for their limited income and are being forced out of their own homes into rental units.

In the Sioux Falls area it is almost impossible to rent a one-bedroom apartment for less than $125 on the open market that would meet housing code standards. I have included a list with a sample of various rents. As a matter of fact, I understand that the situation is worse in Rapid City, Pierre, Brookings, Yankton, and Vermillion.

[The list follows:]

[From Argus Leader, Aug. 4, 1976]

ONE-BEDROOM PRICE QUOTATION

1. $230.
2. $150.
3. $95.
4. $175.
5. Rented—no price given. Electricity extra.
6. $175 plus electricity.
7. $130 plus electricity.
8. $175.
9. $85, basement efficiency apartment.
10. $140.
11. $170.
12. $95, efficiency only.
13. $125 plus electricity.
14. Rented—no price given.
15. $125, 6-month lease. $130, $50 deposit required. Electricity extra.
16. $100, includes utilities.

Mrs. THOMAS. South Dakota has 3,952 units available for the elderly and handicapped in subsidized housing. I must correct this a little bit because I have not included the figures from the Farmers Home Administration, so that could change this.

Now, 2,109 units are public housing while 1,843 are funded under other subsidy rent programs. Only 387 of these are on the Indian reservations. For the 32 percent of the elderly population having incomes below the poverty level, or more than 23,000 people, more low-income housing is needed to neutralize the effect of inadequate income.

If I could divert from my prepared statement just a moment, I was doing some back reading yesterday and I discovered that there was a bill introduced last year in the House of Representatives which would have provided an automatic grant subsidy for anyone on SSI. That bill I think was by Congressman Brademas—I am not sure. If that bill is still around, I would like to see it rejuvenated; it would solve this particular problem we are talking about.

MEDICARE, MEDICAID INADEQUACIES

In a recent study on the problems of social adjustments of the low-income elderly living in subsidized housing, I found that even though this minimized many of the problems of inadequate income, most of the persons interviewed said that they needed more money. One of the greatest needs of the elderly is dental care, including dentures. Neither medicare nor medicaid include dental care for adults. Dental care is important to the elderly—it is necessary for proper nutrition, good health, and personal dignity. I believe that we are really putting down our older citizens when we say to them that dentures or dental care is a luxury that is nice to have if you can afford it yourself.

Since July 1, 1976, optical and other medical services to adults have been seriously curtailed under the State medicaid program. Let me just remind you that money and services given to the poor help the economy of everyone as this money is put back into immediate circulation and, with the multiplier effect of four, it increases the economy of the entire community.

Thank you again for the opportunity.

[A letter from Representative Ottinger was submitted for the record.]

CONGRESS OF THE UNITED STATES,
Washington, D.C., August 9, 1975.

DEAR FRIEND: I am writing to enlist your support in the effort which I and other Members of Congress have undertaken to effect badly needed reforms in the supplemental security income program.

As you will see from the enclosed reprint from the Congressional Record, I have introduced legislation which would provide a supplemental allowance to SSI recipients such that they would not have to pay more than 25 percent of their income for housing. The allowance is limited to a maximum of $1,200 per year.

I firmly believe that such rent supplementation is one way of getting around the basic inflexibility of a program that has failed to take regional cost of living differences into consideration in the awarding of benefits. In the higher cost-of-living areas of the country, rising rent and utilities, coupled with a lack of adequate alternate housing at reasonable prices, has made it increasingly difficult for those on SSI to survive.

Although other housing allowance proposals have been introduced, I believe that my bill—H.R. 7138—more adequately addresses itself to the problem. The 25 percent allowance is in line with the standards set by other Federal housing programs, such as the section 8 housing assistance payments program.

We must demonstrate highly visible public support for the bill if it is to have a chance of passing. I urge you to encourage the members of your organization to write to their congressmen and, particularly, to the Members of the House Committee on Ways and Means, who are named on the enclosed list.

I would also be grateful if you would disseminate this information as widely as possible to any groups or individuals who might have an interest in supporting this legislation.

Thank you for your interest, and I hope that I can count on your support.

Sincerely,

RICHARD L. OTTINGER,
Member of Congress.

Senator CLARK. Thank you.

Just a couple of questions of each of you.

First, Mr. Johansen. You are obviously in a position to have thought a good deal about the problems of the elderly in South Dakota. You are Chairman of the Advisory Council on Aging. Obviously the purpose of this hearing is in no small part to try to see what is most important—not what is important, but what is most important—in the rural areas. As you look at the situation in South Dakota, if you could increase the funding—either create one new program or increase the funding significantly—which program would you put at the top: transportation, nutrition, unemployment, or housing? As you look at it, what is the greatest problem in South Dakota?

Mr. JOHANSEN. I would say, offhand, that transportation would be the most pressing problem.

POVERTY LEVEL MINIMUM

Senator CLARK. Now I want to ask Vada Thomas a question. I must say I agreed with a great deal of what you said—in fact, I can't think of anything you said that I didn't agree with—but particularly the point that medicare has a long way to go. As you say, you don't get dentures, eyeglasses, prescription drugs, and one could go on and on. I refer particularly, though, to the statement that it would seem that in a country as strong and as wealthy as this one, the first priority ought to be to bring people up to the level of poverty so that no one

lived below this level. I cannot remember the exact dollar figure, but it is amazingly small.

We introduced legislation to raise social security and SSI for every American to the level of poverty so that no one would live below the level of poverty. I cannot remember the exact dollar figure—it was much, much smaller than I thought. My recollection is that it is about the cost of three Trident submarines. It would be a remarkable thing to be able to say that we don't have anyone in this country that lives below the level of poverty. So I congratulate you on the statement.

The one question I wanted to ask you was which program do you see from your experience that we need most? I know we need a lot of different things, but do we need housing? Do we need transportation? Do we need health care? Which of those would you select as being the greatest need?

Mrs. THOMAS. In speaking of South Dakota as a total, I would have to again restate transportation. Looking more specifically to Sioux Falls, I see housing as the greatest need.

Senator CLARK. Thank you.

Congressman Pressler.

Representative PRESSLER. I have just a short question which I might address to both Peter and Vada, and that concerns the points that Vada made concerning optical care and other health care. I find I get a lot of mail from senior citizens who actually can't buy glasses, for example. I am the cosponsor of legislation to expand that coverage and I must say that I agree with the things that you have advocated here this morning, but what can we do in the Congress to jar loose thinking? Certainly I suppose by coming here and taking this testimony, but we get a great deal of mail, some of which I will insert into the record at some point.

Do you have any specific figures in your groups as to senior citizens in rural areas who are going without dental care or without optical care? It is very difficult to have specific figures on something like that because a lot of it is hidden poverty.

Mrs. THOMAS. I don't have a total figure. I can say in the last month I have had five requests for dental care and three for eyeglasses—calls from people who have called me and asked where they could get these.

Representative PRESSLER. I find a lot of senior citizens buy these glasses from a drugstore which may be helpful, in some instances, to save the cost of going to an optometrist. Have you found that to be true? There are very low-cost glasses available.

Mrs. THOMAS. I have not checked into that.

Representative PRESSLER. We don't have any figures available on that?

Mrs. THOMAS. No; I don't think there are any available at this time. Dental care—we are trying to document those in a more complex way for the people needing dentures.

POVERTY OFTEN HIDDEN

Representative PRESSLER. I think in our small town, Senator—and I hope the committee takes this thought back with them—there is a lot of hidden poverty that is very quiet. People in South Dakota and in your State are very proud—they have been very proud—and they are

ashamed to admit this need, but it becomes evident through routine things like eyeglasses and care of the teeth. The people just try to get along. We have a great deal of hidden poverty among the aged.

Senator CLARK. Thank you very much.

The next panel is on older service users and providers. Phil Burke is going to be accompanied by Shirley Overland; Irene Eilts is accompanied by Larry Oppold; and Lillian Nace and Ray Bagley are accompanied by Gerry Eisenbraun.

We are going to hear from this panel about older service users and providers, those people who provide the services and those people who use the services that are available to older people.

Now, again, because we do have so many witnesses today, let me remind those of you who are going to speak that we would like to have you try to limit your comments to about 4 or 5 minutes so that we might be able to ask some questions afterward; otherwise, we will just have to dispose of the questions.

Phil Burke, you are president of the Huron Area Senior Center, Inc., South Dakota. You may proceed at this time.

Mrs. OVERLAND. I am going to introduce Mr. Burke.

Senator CLARK. That will be fine.

STATEMENT OF SHIRLEY M. OVERLAND, DIRECTOR, HURON AREA SENIOR CENTER, INC., HURON, S. DAK.

Mrs. OVERLAND. Senator Clark and Representative Pressler, I am Shirley Overland, director of the Huron Area Senior Center, Inc., here in South Dakota. I am submitting a written statement on the development of our rural multipurpose center, along with comments on title V, our DARE program—developing adult resources in education—and our plans to remodel the Huron College dormitory for low-income elderly housing and a senior citizen center. At this time I will present my testimony to you in written form, but I am very proud to introduce to you Phil Burke, president of the Huron Area Senior Center, Inc.

[The prepared statement follows:]

PREPARED STATEMENT OF SHIRLEY M. OVERLAND

The Huron Area Senior Center, Inc., developed from its meager beginnings because of the interest and perseverance of several retired Federal employees. Some said it could not be done but they continued on in spite of numerous obstacles. The group met in various community buildings and churches before moving into an old rented hatchery about 4 years ago. Much of the remodeling was done by the seniors. Those attending numbered from 35 to 50. The present director was hired with the assurance that this was a part-time job and she could come and go pretty much as she pleased. Her salary was $3,000. She was expected to coordinate a few craft and recreational activities. The director, as an enabler type person, had an abundance of volunteer experiences in developing programs and working with people of all ages. Her study of other Older Americans' Act programs and attendance at workshops plus the enthusiasm and dedication of the board of directors led to increased program activities and involvement of other older volunteers.

The center membership mushroomed because of superb news coverage and excellent community involvement but mostly because "each one brought one." The senior center was the place where things were happening. Persons who had been living in isolation and loneliness were brought by other caring senior citizens and soon they too were involved. A wide variety of activities (often more than

the old hatchery could contain) enticed others to come just to see what was going on and soon they too joined the ever-increasing membership. The incubators were moved out of the back room to make more space. A new floor and ceiling, and a coat of paint made additional activity areas.

The Huron center was chosen as a title VII nutrition site largely because of the existing services, outreach, and concern of its members. The philosophy of service to all rural older Americans and community has built a firm foundation. Three new people joined the staff with title VII funds: a site manager, outreach worker, and bus driver. Two minibuses were provided, one with title VII funds and the other with one-third county, one-third city, and one-third center funds.

The center had and continues to have special events that generate some income. Examples: "Country Christmas at the senior center," "Around the world with the senior center," bake sales, gift shop open daily that sells articles made by senior Americans, quilt raffles, "Pioneer Cookery for Modern Cooks" (a cookbook), "Gambles Senior sellabration" (senior center takes over Gambles store for 3 days and handles all sales and countless demonstrations), gift shop at the South Dakota State Fair in Senior Citizens Building (manned by senior citizens serving coffee and cookies to thousands of pioneer South Dakotans during 6 days of fair), etc.

The center director is aware the senior center is not for everyone and yet there are many proud rural elderly that have tragic unmet needs. They continue to try and work things out alone because they'd made it through the dirty thirties and depression years. How could these folks be helped? A home care program could provide the answers but how with limited funding?

At the same time several members of the board were aware that the other small communities (200 to 500 population) in Beadle County (with large percentage of elderly) had no services provided. Each community was contacted and if interest was indicated, the Huron Center director and several board members met with key community leaders (elderly included). A title III grant provided for a home care director, funding for five satellite centers and money to develop a rural transportation program. The buses go weekly to each small town bringing the people into the county seat (Huron) for services, nutrition, recreation, and visitation.

The home care program has been most beneficial. Calls and visits come from families in other parts of the United States. They are concerned for an elderly parent. Grandma could come and live with them but she chooses to remain in her home. A home visit is made and the necessary help provided through information and referral with other agencies. Calls come from the elderly themselves asking for chore and homemaker services. If they cannot pay, they are assisted in working out the details with title XX. Doctors refer hospital dismissal patients on special diets to the home care director. She coordinates meals-on-wheels for these individuals. She visits daily in homes of elderly. She assists with tax refunds, SSI and other programs. She operates in a loving, caring, nonthreatening way. She accepts each individual as a fellow human being in need of love and a sense of worth. Each staff member at the Huron center functions in this way. This accounts for a membership that has crossed all economic barriers with an age span of over 40 years.

Each satellite center has developed its own program. However in this third year of funding (ordinarily the last) the Huron director is spending time monthly with each group. She is "planting seeds" to assist them in developing to their fullest potential. The philosophy that we look selfishly to our own needs so that we can have a good time is rapidly disappearing. Instead we will reach out to those on the fringe today and then leave something behind tomorrow when we are gone. In this way others can continue to build on our programs, thereby serving more people.

If through our services throughout the county we can help elderly rural South Dakotans to remain in their own homes or community and stay out of nursing homes, we will know we have served our fellowmen. A superb example of change of attitude is one couple in particular from one of the satellites. When we first visited their community to discuss a senior center, the committee was receptive. However, a great deal of the conversation that first day concerned an elderly man who had recently married a nearly blind, somewhat retarded young woman. They lived in a tarpaper shack with dirt floor and no conveniences. His prime goal was to have enough wood chopped to keep them warm the next winter. The community laughed about the ridiculous marriage. Several units of subsidized

housing were built and Jake and Erna moved in. I saw them 2 weeks ago at their senior center. They were accepted and loved. They were neat and clean. As we embraced, Erna told me proudly how she had gotten up at 5 a.m. to bake bread for the potluck dinner. She calls him "Daddy" and he calls her "Honey." If Erna is left alone because of his death, she will have loving friends to support her because now she belongs. This community realizes they must serve others, young and old. This is our mission.

TITLE XX FUNDS UTILIZED

Recently funds were made available through UMTA to purchase a van to transport elderly and disabled. With the approval of the county and city commissioners, we purchased the vehicle—80 percent UMTA and 20 percent local matching funds. The vehicle has been operating for 6 months. All three buses operate with title XX funds. The new program started slowly but is growing very rapidly. Elderly nursing home residents have gotten out of the home for the first time in years. They can now make visits to the doctor or hospital (for tests) without lying down in an ambulance. Some are able to come to the senior center. Elderly wheelchair individuals, still able to remain in their own homes, have built outside ramps so they, too can take advantage of the van. The joy in their faces when they can again be with old friends is heart warming. One lady in a wheelchair bought a piano. Getting out seemed to give her new hope. Title XX makes it possible to transport handicapped of all ages. A new adjustment training center is taking advantage of the bus to transport their workers. Crippled school children will be using the vehicle in the fall.

The Huron Area Senior Center, Inc., is the grantee for RSVP. They are using a second-hand bus purchased with senior center funds. ACTION has promised them a new van as funds are now available. As director of the senior center, I am grateful that we are the grantee for RSVP. We can coordinate our programs instead of competing as I see in many communities. Their work with the elderly has grown and will increase considerably when we are in the same building. RSVP has searched out individuals and provided meaningful volunteer opportunities. Grandmas and grandpas are tutoring slow learners in the schools. One elderly gentleman is teaching German to a high-IQ kindergarten youngster. Another lady, with tears in her eyes, speaks of "life" that was given back to her (after her husband's death) because she was again needed. Another (Nell, her poem is enclosed) [1] has been under psychiatric care all of her life. Now, she is off of tranquilizers and for the first time free and happy. "Continue whatever you are doing!" the doctor orders.

TITLE VII NUTRITION PROGRAM

The title VII nutrition program has changed many lives. Children visiting their elderly parents say mom and dad don't even look the same. The oldsters' eyes sparkle, they are healthier and life has taken on new dimensions. Oftentimes a person will come for a meal and after a few visits to the center, will become involved in a musical group, crafts, or some other activity. The nutrition program, senior center, and RSVP work together complementing one another. The services provided through title VII are most beneficial. Subsidized housing built in Huron apart from shopping facilities makes it impossible to get to a store. Weekly shopping trips, escort service, trips to doctors, and daily trips to the senior center for dinner and other activities make the difference between happiness and almost total withdrawal. The outreach worker assists and encourages (through home visits) the shy and reticent. She provides home-delivered meals for the ill. She gives love and support as needed as well as assisting with information and referral. The site manager plans menus and supportive programs that teach proper nutrition habits, fun times, etc.

Why is a senior center important in rural communities? A large percentage of rural elderly have come from the farm. They are work oriented as are most midwesterners. Their unspoken philosophy is "If you can no longer work, you are no longer useful." When eyesight goes dim, when the heartbeat weakens, or a number of serious operations cause the human being to slow down, uselessness takes over.

[1] See appendix 1, item 2, p. 312.

Dr. Peter Goldmark at the 1975 NCOA convention spoke in great detail of the movement of city people back to the rural areas. He spoke of the importance of planning for this time. In 1976, 1 out of 10 are 65 and older. By the year 2,000, 1 out of 5 will be 65-plus. This has tremendous implications for rural America. Multipurpose senior centers can provide the necessary services in a nonthreatening way. Multipurpose senior centers can provide services with less dollars than the government utilizes subsidizing nursing home residents.

How important is a senior center in a rural area? In 1974, the Huron Center can document keeping 44 persons out of nursing homes. In 1975, 46 would have had to be placed in a home if our services would not have been available. The example of the Huron Multipurpose Senior Center "rubs off" on other centers. We can see the influence within Beadle County and throughout the State. Visitors from other States stop to inquire about our service programs. The city and county commissioners say the few dollars we get are the best dollars they spend. If we weren't here, who would provide the loving support, the rides, the assistance for shopping and trips to the doctor? Who would say "I've missed you" when someone has been gone? Who would provide incentive for an 88-year-old lady to have hip surgery and be back on her feet in a couple of weeks? Or who would provide the importance of living to our 90-year-old, top quilt raffle saleslady when she broke her hip (on her birthday) and "breezed in" 3 weeks later under her own power?

Is a multipurpose senior center important in rural America? You bet it is! It may not be as visible as the large city complexes, but the same needs exist and they are being carried out in condemned buildings, old Legion halls, makeshift do-it-yourself deserted stores, old unsafe hotels that no one else wants, and even converted creameries and hatcheries.

COMMENTS ON TITLE V

It pleases me that some money is finally being made available for renovation and alteration of facilities to be used as multipurpose senior centers. The dollars that will be available to rural States such as South Dakota will be inadequate. However, the stress upon multipurpose senior centers is excellent. As in my previous testimony, you are aware of the importance I place on a service-oriented center.

Maching funds will place a responsibility upon the community, which is good. I am aware of all the projects that have been completed in our area for youth through BOR where half of the funds are Federal. It would be most beneficial if this same type funding was provided for older Americans.

If title V provides a quality building instead of a makeshift structure it will prove to be a good program.

A problem I foresee is small rural communities where renovation or alteration would be more costly than a new building.

DESCRIPTION OF "DARE"—DEVELOPING ADULT RESOURCES THROUGH EDUCATION

The DARE program is a joint effort of Huron College (Dr. David Nichols, community learning center) and the Huron Area Senior Center, Inc. It is unique in that (1) the college has adapted the traditional liberal arts disciplines to the particular needs of older persons: (2) the college staff has also used the teaching situation as a laboratory for their own learning and growth: (3) the college and center have worked jointly (young and old together) to develop a lifelong learning program: and (4) all additional available community learning resources are utilized. A copy of the DARE proposal[1] is included.

Previous to the development of the DARE program, the senior center director held a series of sharing sessions first with the elderly and then with all other agencies in the community that were providing learning opportunities. Many were dubious and said they'd never go back to school. However, when in serious consultation a goal was set "to get the cobwebs out of the brain," those in attendance were in agreement to move ahead into unchartered waters.

Enclosed are copies of the first two sessions of DARE.[2] Notice the utilization of various community resources. Several activities have become very popular

[1] See appendix 1, item 3, p. 314.
[2] Retained in committee files.

and have continued. Senior surfers, senior sharing group, and defensive driving will be repeated for the third time this fall. Approximately 300 senior citizens have taken part in these sessions. Other elderly have enrolled in regular college courses.

DARE is important because we are learning together—seniors, college staff, and community instructors of all ages. There is an openness and sharing that has brought about mutual respect.

The excitement that this program has motivated among the elderly has become contagious. "DARE kick-off breakfasts" before each new session are well attended and give the program the extra impetus needed.

The learning experiences of the college and senior center in the DARE could serve as a model for other communities.

PURCHASE OF M'DOUGALL HALL

McDougall Hall is a dormitory on Huron College campus to be utilized for low-income housing and senior center services.

For some time the senior center has been at a stand-still in further program development because of over-crowding. A larger building is needed. All available funding resources were explored, but no solutions were found. Land was purchased with center money and a plan drawn, but before moving any further, the board was in agreement that the unbuilt building was already inadequate.

The possibility of purchasing McDougall Hall was studied, but again funds were not available. When money was appropriated for section 202, a proposal was submitted to HUD in Washington, D.C. To be eligible for this loan you had to provide services along with subsidized housing. We were already providing the services, but needed more center space and knew many senior citizens were living in substandard housing. This appeared to be the answer; however, we were rejected for a loan. Inadequate money in section 202 plus the fact that we were Rural, were reasons given. In the meantime, the city had received a $150,000 community development grant to be utilized in remodeling the second and third floors of the dormitory for low-income senior housing. Architectural drawings are being studied by the State Housing Authority as to feasibility. The first floor and basement would provide senior center space. The rental from 23 apartments will, of necessity, pay the cost of remodeling and purchase price. A lease has been signed with an option to purchase included in the agreement. During the interim time while waiting for the money to become available we will rent the dormitory. This will make it possible to put the KARE (Kinship of the Ages through Reconciling Education) program into action. (A copy is enclosed including diagrams and program ideas.) [1]

The senior center members and Huron College students have experienced a glimpse into what the future holds. In January 1976 an interim class spent a month with the senior citizens. The students did research in the field of gerontology but most of their time was spent with the elderly. They delivered meals, they made home visits, they danced and played cards, they quilted and learned to crochet, they served meals and washed dishes, they took part in the musical groups, and visited the nursing homes. They took the oldsters to ball games and even attended a State gerontology conference together. Most of all, they learned to love one another and accept each other as fellow human beings. There was no generation gap. At the close of the month-long experiment the senior center building was filled to capacity as experiences were shared in a group meeting. Eyes were damp when students presented a plaque saying "You have touched us, we have grown." What more can be said?

Does this senior center on campus have implications for other communities? To Dr. Howard McClusky's (from the University of Michigan) knowledge there is no other project such as this in the United States. We expect that Huron will become a laboratory for other programs and colleges to study and copy. Students working on advanced degrees could find no finer situation in which to work and study. Where else could you work and live with the elderly being human together and have academic facilities so near at hand?

We know it is a brave venture into unchartered waters, but we have the confidence and enthusiasm to be pioneers. As Victor Frankl says "Love is wanting to uncover the potential in people." The elderly of the United States are our greatest untapped resource. Please help us "get it together" to help people to help themselves.

---

[1] See appendix 1, item 4, p. 320.

ADDITIONAL COMMENTS

The severe drought in South Dakota, particularly in our area, is of grave concern. Budgets are being cut by the city and county. They are aware of our programs and services but tax dollars will be less. Our salary scale is meager. The director hopes for $8,500 in 1977, but other salaries are in the $3,000 to $6,000 range. Green Thumb (a valuable resource for us) and CETA workers are utilized. If there is a budget cut some service will have to be curtailed. Which one will it be? The government has emergency funding for other disaster areas. Is it possible that during these difficult years some subsidy arrangements could be made to keep a program from discontinuing its assistance to elderly? We ascertain that the drought will bring more people to our doors.

The question remains to be answered: Will we be able to assist them?

STATEMENT OF PHIL BURKE, PRESIDENT, HURON AREA SENIOR CENTER, INC., HURON, S. DAK.

Mr. BURKE. Senator Clark, Congressman Pressler, I might add that we were happy to have Mr. Oriol visit our center a couple of weeks ago. We appreciate very much his being there.

I am going to present to you sort of a run down on the birth and growth of what we think is a pretty good senior center. Ordinarily I don't like to read testimony, but I will.

As a result of the concern of a small group of retired Federal employees who are members of NARFE and the cooperation of several other groups such as the Huron Branch of American Association of University Women, Farmers Union, churches, and encouragement from the Governors Council on Aging, a meeting was held at the Farmers Union Building on March 23, 1971, at which time an advisory council of 11 members was named. One week later officers were elected officially setting up the Huron Senior Center. Les Wilcox was selected as president and served up until last January when I assumed the duty as president, because of his absence from the group. He is still a member of our cast, however.

GROWTH OF ORGANIZATION

This action started one of the fastest growing senior centers in South Dakota, from a humble beginning with about 35 members in March 1971 which met one afternoon a week in the youth activity center, to its present status with over 700 members and coordinating five different satellite centers in Beadle County with a membership of over 400.

The group met in various facilities in Huron for the first year—churches, Y.W.C.A., et cetera—until a year later the West Hatchery Building was rented and put in shape for center activities with volunteer labor by members of the senior center. I might add that you never saw a bunch of old characters like myself and several other people work and bleed and hurt and ache and everything else. A short time later a director was hired, Mrs. Shirley Overland, who is still serving in that capacity.

I might also add that Shirley Overland has been a great power in our organization. She is warm, she is feeling, and she is a real person.

We were funded in part by a grant from the Older Americans program, and since then we have been funded by Older Americans grants for some of our satellites. The county and city have been quite coopera-

tive and we have taken advantage of various title grants from other special programs.

From that point on we have upgraded our center to the extent possible considering our crowded space, and we are very, very crowded in our present location. We have added or sponsored the retired volunteer service program which needs to be located in another building because of the lack of space in ours; the nutrition meal program which provides meals for an average of 80 people per noon meal 5 days a week; a home care director who assists people in caring for themselves in their homes and directs meals-on-wheels which serves an average of 20 meals per day 5 days per week.

Through the help of the transportation program—title XX—we transport older Americans and handicapped persons in Huron and Beadle County, making regular weekly trips to the smaller towns and transporting eligible people to Huron which enables them to see their doctor, dentist, to participate in center activities, et cetera. We will be transporting several handicapped children to special schools and some adults to the job adjustment center.

Our members are active in many, many things. We are not just simply a charity group. We do all of the things that need to be done. One of the big activities of the center is the craft center which enables us to raise some money to supplement our limited budget.

We will shortly be moving into a dormitory on the Huron College campus, which is a new thing for South Dakota and probably one of the newest in the Nation, which will provide additional space and enable us to provide more programs, better social services, provide space for all our related programs and, hopefully, in the near future to provide low-rent housing for eligible persons.

One of the other big programs in our activities is the learning program. We have a program set up with the Huron College. You would be surprised the number of seniors that are waiting eagerly for new classes to start this fall. We have had several classes—not hardcore learning, I would guess—but learning the new math, defensive driving, and what have you. We feel that our center is a center that is fully aware of the needs of senior citizens. We recognize that senior centers are not for all people. Many people are not comfortable in that surrounding but with our percentage of people that do belong and do participate, we feel when we get to larger quarters we will have much greater participation.

Now just for a moment I would like to direct my comments to another subject, and that is the impact of the present drought conditions on future senior center activities. We are confronted with a serious drought in Beadle County which also affects a large portion of South Dakota. This situation will have a marked effect on both the county of Beadle and city of Huron's ability to properly fund, not only senior citizens' centers and other meaningful projects, such as roads and streets, in fact all of the functions of both governing bodies will be curtailed.

Tax Base Threatened

At the county level, about 23 percent of the tax base is derived from personal property. With the sale of whole herds of cattle in many instances, the partial reduction of herds in nearly every instance, the

inability of farmers to purchase new equipment, and the lack of sales on the retail level thereby reducing taxable inventories, these will be serious threats to the overall tax base which, along with a sharp increase in the delinquency rate, will put both the county and the city in a bad financial bind, especially in 1978 when the real crunch will be felt and which will also be felt in 1977 when the current taxes become due and the inability of people to pay.

I submit that consideration should be given to supplemental Federal funding to help finance centers to at least permit them to operate at present levels until local governments can regain sufficient taxes to pick up the load. We do take advantage of the various title programs at this point, but these programs are limited and not available for many of the basic operational costs which we have.

Thank you for the opportunity to speak.

Senator CLARK. Thank you very much.

Mr. Bill Oriol, who is the staff director, was telling me that he visited your center and it is located in an old hatchery. Our first hearing was in Winterset, Iowa, the day before yesterday, and we met in a senior center which was formerly a creamery, so it looks like we are really taking advantage of the agricultural buildings.

Mr. BURKE. And they both smelled about the same when we moved in.

Senator CLARK. They probably did.

We are going to hear next from Irene Eilts of Spencer, S. Dak.

STATEMENT OF LARRY OPPOLD, DIRECTOR, AGING SERVICES CENTER, SIOUX FALLS, S. DAK.

Mr. OPPOLD. I am to introduce Irene.

I am Larry Oppold and I am director of the aging services center located in Sioux Falls, S. Dak., serving a six-county rural area. My main function is to train and supervise 10 workers who live and work with the elderly in their own communities. I am here today to introduce one of these workers to you and, as I do, I want to state that I feel one of the most effective ways to meet the total needs of the rural elderly is by funding salaries and training for these wonderful people called outreach workers. The presence of an outreach worker in a community means not only skilled individual attention for needy elderly but their presence causes a process of community awareness and response to the elderly that is very effective.

At this point I would like to introduce Irene Eilts and let her explain some of the things that have happened in her community and in other communities in the six counties where our program operates.

STATEMENT OF IRENE EILTS, SPENCER, S. DAK.

Mrs. EILTS. Thank you.

Congressman Pressler and Senator Clark, I am Mrs. Irene Eilts, an outreach worker from McCook County. My home community is Spencer, S. Dak. I appreciate the introduction given me by the director. I feel the role of an outreach worker is very important to serving the needs of the individual elderly, their families, and their communities. I have been trained and involved as an outreach worker in my

community for the past 2 years. I have seen the confusion, isolation, poverty, hunger, and pain of social withdrawal of so many elderly in my work.

I have also been richly rewarded in seeing so many elderly brought back to health through my efforts and those of the community volunteers that have helped me serve their needs. I want to emphasize the concept of volunteer help because part of my role as an outreach worker has been to educate and organize concerned individuals in communities to respond to their elderly neighbors' needs.

I must say the response has been terrific. In rural areas we have much desire to serve the needs of the elderly. All that is needed is someone to show the way. Outreach workers like myself in this area have been the catalyst for meals-on-wheels programs, transportation projects, visitation, and telephone reassurance.

There are some problem areas, however, that outreach and community resources have not been able to solve. Aside from income problems, the No. 1 problem among them is the need for homemaker service. Although the department of social service has continued to increase its homemaker service potential with local adult personnel, yet they cannot keep up with the growing demand for trained homemakers. In addition, the present homemaker program is not designed to meet the needs of those persons who require around-the-clock supervision.

As it presently exists, homemaker service is beginning to address the problem of alternatives to introduce visitation but this is only the beginning. Along with homemaker services, rural areas need financial support to supply home health aides and handiman service. In addition, funds are needed for physical and occupational therapy, for experimenting with day adult care and alternative living situations in the rural areas.

A ready resource is available in rural areas waiting to be developed to meet the above needs. This resource is still active older people themselves, especially the older women. Older women greatly outnumber the men because many are widowed. They are also poor—living on social security alone. Most desire to be active and useful to society and earn their own way. These women have been caring, feeling homemakers all their lives. Their talents and their contributions are still needed by society, especially the homebound elderly. These people, men and women, should have the opportunity for training in a paid service to their peers.

Volunteerism is great and should be encouraged in the area of service also, but persons living on poverty income should not be expected to volunteer their time and travel when others are paid professional salaries. Three thousand elderly in this immediate area are living on less than $3,000 a year. The senior companion program which addresses this need should be expanded to provide the opportunity for the elderly to be in service to other elderly. At the present time, there is no senior companion program in this State, and a very limited number in other States. I would strongly recommend an increase in Federal funding for this elderly employment service program.

In closing I would like to relate to you an experience of mine as an outreach worker. I have visited this lady very often as I realized she

had many problems. Being a very lonely person, she didn't communicate with people very easily. After visiting with her several times she realized that I was very concerned and was really there because I cared and wanted to help. By this time she had gained confidence and felt that she could trust me with her problem—and at this time it was a very serious one.

She had been informed that she would have to reimburse $1,800 to social security; also, she would not be receiving her check or be eligible for food stamps. She didn't have any money and didn't know where to go for help. I immediately went through the proper channels and things began to happen. Within 6 hours the problem was clarified. This $1,800 was an error, plus they also found out that she had been underpaid. Therefore, she received a bonus check for $400 and would receive more each month—and also be issued her food stamps. Needless to say, this lady was very grateful and happy, especially for the service of the outreach worker.

This is only one of the many cases that we experience. While much has been done, much still remains to be done. All of us that are involved with the older American program feel that we have only scratched the surface. There is not one of us who can say for sure that he may not end up as an elderly person living alone without transportation, without relatives and friends near—to feel very lonely, useless, and unwanted. We ask consideration in helping us to keep trained personnel at the grassroots level.

I thank you.

Representative PRESSLER [presiding]. Thank you very much for that fine testimony.

In the absence of Senator Clark who is being interviewed, I might call on Gerry Eisenbraun who will make two introductions, and then we will have some questions.

STATEMENT OF GERRY EISENBRAUN, STATE DIRECTOR, GREEN THUMB PROGRAM, NATIONAL FARMERS UNION, SIOUX FALLS, S. DAK.

Mr. EISENBRAUN. I would like to make a statement for the record and that is that Ben Radcliffe, the president of the South Dakota Farm Union and also chairman of the executive board of the National Farmers Union, who is the administrator of the national green thumb programs, sends his regrets due to other commitments. He would have liked to have been at the meeting today, so you will have to do with second best.

Also for the record I would say that I am Gerry Eisenbraun and that I am the State director of the National Farmers Union Green Thumb program in South Dakota. I am not here to testify, but I would be happy to answer questions pertaining to the green thumb program in South Dakota. We appreciate your calling this meeting on what we feel are the needs of the rural and the minority elderly and in having the opportunity to have several of our green thumb workers testify.

I have with me three green thumb workers that I would like to introduce at this time. First of all, Mrs. Lillian Nace of Flandreau in

Moody County, S. Dak. Mrs. Nace is a widow, 70 years young, has been with the green thumb program since 1969, and has done a tremendous job as the hostess of the senior citizens center there, but I will let her tell you about her work later on.

I have another. Mr. Ray Bagley of Madison in Lake County, S. Dak. Mr. Bagley is 61, a little bit younger than the average Green Thumber in South Dakota. He has been with the green thumb program since 1964. He started as a green thumb worker at the Lake Herman State Park and has been promoted, first to crew foreman, and then later on to the area 4 person. He, too, will tell you his part in the green thumb program.

Now I have another person with me that is not listed on the program. A little bit ago we were talking about some of the needs in South Dakota. We were trying to reach this lady for about the last week and we could not get through because she does not have a telephone. We found out this morning that in order to get a telephone to her it would take 2 miles of wire and posts, and about a $400 deposit. I thought I would just enter that in the record. She will tell you about that. Beatrice LaFromboise of the Sisseton-Wahpeton Sioux Tribe, Wilmot, S. Dak., in Roberts County. Mrs. LaFromboise is a widow, and started with green thumb during February of this year, is the safety monitor of the crew she works with, and is also a member of the South Dakota Green Thumb advisory board. This would be on the State level.

Mrs. LaFromboise would like to testify. However, we realize that you are under a strict time schedule, so she will testify only if time permits. She will be available, however, to answer questions and as a resource person if you would like to direct any questions after the presentation.

The South Dakota Farmers Union Green Thumb started in March 1968 in five eastern South Dakota counties. Since then we have grown from 5 counties and 72 workers to 29 counties with an authorized strength of 216 workers. I don't want to throw out a lot of statistics, but I do have some here that you might find interesting. The average age of the green thumbers in South Dakota would be 70 for a gentleman and 66 for the ladies. Out of the 116,000 people that are older workers in South Dakota, 31,000 are eligible for green thumb, and the Green Thumb program reaches only 6 percent of the people that are eligible. We have, at the present time, three applicants for every job that is available in South Dakota. We have requests for the green thumb program from 48 of the 68 counties in South Dakota.

Senator CLARK [resuming chair]. Forty-eight of the 68?

Mr. EISENBRAUN. Right. Senator, we are presently operating in 29.

To give you an idea of the breakdown in ages, out of the 216 people that we have on board, presently we have 24 that are under age 60, 32 that are between the age 60 to 64, 56 between 65 and 69. We have 60 people that are between the ages of 70 and 75 and, not to be outdone, we have 44 that work every day and who are over age 75.

Senator CLARK. Forty-four over the age of 75?

Mr. EISENBRAUN. Right. Our oldest workers are 85 years old, and I think we have two ladies and one man that are 85. So let's not shortchange the aged. I mean they are here and it isn't necessary that they

retire at age 65. They are active and there is a wealth of talent that goes to waste.

At this time I would like to introduce Mrs. Nace. She will make her statement and answer questions if you have any. Then Ray Bagley can go after that.

STATEMENT OF LILLIAN NACE, FLANDREAU, S. DAK.

Mrs. NACE. Senator Clark and Congressman Pressler, I certainly welcome you here. I am the hostess at the senior citizens center. I started September 15, 1969, and we have a lot of things in common. A lot of elderly people come to me with their problems. I am so happy. I have just moved into a brand new building. The county commissioners have fixed a gorgeous building for us and the people at the bank gave us the equipment, and it is beautiful. I mean, people are very generous to me in Flandreau—very good to me. Whenever I ask for anything, they are really helpful.

I think the green thumb program is really one of the most wonderful things for elderly people in Flandreau. We have 5 Indian women that work at the Indian school and they do the mending for 580 students. They fix the sheets, pillowcases, and the curtains for their dormitories there. I think, as Gerry said, one of them is 85 years old.

I have had five older people come to me with their problems: "Can you help me, Lil?" I will say, "Well, come and tell me what you want." We talk things over and I try to get help for them. They have been very good.

All in all, I think green thumb is really a good program because there are so many elderly people who think when they are 65 years old that they cannot work. As a matter of fact, I have a lady that is 94-years-old that comes to my center every Thursday for pot luck, and she helps clear the table. She helps, and I think this is really remarkable. If you see her walk on the street you would think she was about 40. As a matter of fact, she was a dressmaker, and she still makes her own clothes.

That is all I have to say.

Senator CLARK. Thank you.

We are going to hear now from Ray Bagley from Madison.

STATEMENT OF RAY BAGLEY, MADISON, S. DAK.

Mr. BAGLEY. Good morning.

GREEN THUMB PROVIDES NEW HOPE

Distinguished guests, Senator Clark, and Congressman Pressler, I am an area 4 person for green thumb and I will explain what the green thumb program has meant to me. Before working for green thumb, I was working for an independent mail contractor at Sioux Falls and I was cut down to 1 day a week driving 100 miles a day. Since I got hired for green thumb, it means keeping a home together. I have a disabled brother and an 80-year-old mother, which means that we can be together with my working for green thumb and watching over them.

My work on the road brings me in contact with many people. I have run into incomes as low as $88 a month, some a little over $100, trying to keep a home and pay taxes and live, which is next to impossible. I have met many people. Many live in cramped housing taking medicine, complaining, and still able to work. After we were able to put some of them on green thumb working a few days a week, you would not believe the change in appearance and all.

There are many intelligent people that have retired that could do most anything, and they do. I feel that green thumb is a wonderful program. I have always gotten along with the director and the staff, and I also enjoy working with older people and the staff sponsors.

That is about all I have to say. Thank you.

Senator CLARK. Thank you very much.

Before we go to the questions, I know that Congressman Pressler has another commitment, and I would like to give him the microphone if he has anything he would like to say before he leaves.

Representative PRESSLER. I just wanted again to thank the various witnesses. The reason I have to leave is because I am going to give a speech on vocational education in Watertown at 1 o'clock, and one of the sections of that speech is continuing education which will include senior citizens. I think one concept that we have overlooked in our country is the fact that continuing education, retraining, or even the training for crafts and skills in vocational areas is very important to senior citizens. This is something I hope we develop more.

I am going to stay for just a few of the questions here and then I am going to have to head towards Watertown for that 1 o'clock speech. I want to explain why I am leaving and thank everyone for being here.

Senator CLARK. Thank you.

Now time is short, but I would like to ask just a couple of questions.

First, Phil Burke, I wonder if you could summarize very briefly. You talked about the center at Huron and, although I have to admit I have not been in Huron since 1946—I guess that is 30 years—I remember the town and I remember the State fair there, and so forth. How would you summarize the value of a multipurpose center for senior citizens? Why should we continue to fund it? You know we put more money in that program this year and, although I don't have the figures in front of me, I remember Iowa is getting $75,000. I think we have about 3 million people. You have, I think, about 700,000 in South Dakota. So assuming it is evenly divided, I assume that there is going to be about $50,000 available or a little less than that, perhaps, in South Dakota.

Why are they important? Why should the Congress continue to fund these? How would you summarize the importance of them?

VALUE OF MULTI-PURPOSE SENIOR CENTERS

Mr. BURKE. Senator Clark, I think I could summarize it in this way. A multiple-purpose senior center is just good economics. First of all, a senior center is a meeting place for people who have retired or are no longer able to work and reached an age when they felt that they had to retire because they were 65, because of health, or what have you.

First of all, they have got to have a meeting place. Well, a meeting place in itself is rather meaningless unless there is some substance there. Now you take a multiple-purpose senior center. As I stated first in my testimony, some do one thing and some do another, but you have got to have a wide variety of things. Some people want to learn more, they want to hit the books a little bit. Some people want to learn some craft. Some people just want to do busy work. Some people want to work with wood, some people want to work with rocks, and some people want to do various other things.

I think the crux of the whole thing is this—and I say it is a matter of economics. We have made quite a study of this thing in Huron, S. Dak. We feel that we have kept a lot of senior citizens out of nursing homes—kept them in their own home where they want to be and where they are satisfied to be. We help look after their nutritional needs if they need that, or give them a place that they can come to, to do the things that they want to do and, at the same time, get loved and appreciated. I think it is strongly a matter of economics.

Now I had the girls run this off. They did a very good job in our senior center. They feel they can document it quite well. We have 50 to 60 people coming to our senior center that are well and healthy that would otherwise be in nursing homes, because we caught them just in time. You know what it costs to keep a person in a nursing home, whether the individual pays it or the public.

Senator CLARK. It is convincing testimony. You are a good witness.

Let me ask Gerry a question. As I understand, Gerry, you have got a program up in Sisseton. I have been in Sisseton, too, but I guess that has been about 30 years ago. I know that there is a large reservation there and, as I understand it, you have a green thumb program there. I think you indicated when I stepped out for a moment that there was someone here who might be able to answer questions about that program. I wonder—could I ask that person a question? Is that person in the audience?

Mr. EISENBRAUN. Bea, would you just step up here for a moment.

Senator CLARK. Gerry, for the record, would you introduce the lady?

Mr. EISENBRAUN. Yes. Bea LaFromboise, and she is from the Sisseton-Wahpeton Sioux Tribe. She is one of our green thumb workers there. She is also a member of the South Dakota Green Thumb Advisory Board.

Senator CLARK. What I want to ask you really is, we offered an amendment—in fact I was a cosponsor of an amendment—to introduce funding for the green thumb program. That is going to be coming up again in another year and I would just like to get your judgment in terms of what you have seen of that program and whether we should continue funding it at a higher level. Is it valuable?

Mrs. LAFROMBOISE. It is.

Senator CLARK. What do you thing of it?

Mrs. LAFROMBOISE. Yes, it is very, very valuable.

Senator CLARK. Why so? Why is it valuable?

GREEN THUMB PROJECTS

Mrs. LAFROMBOISE. We have been going around repairing and painting the homes of the people in Sisseton and then, with their help, they

are putting an addition to my house because I am raising seven grandchildren and the youngest is 3.

Senator CLARK. You are raising seven grandchildren and the youngest is 3?

Mrs. LAFROMBOISE. Yes.

Senator CLARK. How old is the oldest?

Mrs. LAFROMBOISE. Sixteen.

Senator CLARK. From 3 to 16?

Mrs. LAFROMBOISE. Yes.

Senator CLARK. What are they doing to your house? How are they helping?

Mrs. LAFROMBOISE. They are building a bedroom addition and a porch to my place, and they are still working. I didn't know I was going to come here. The crew is at my house.

Senator CLARK. I see. It is a good time to be gone.

Mrs. LAFROMBOISE. I had to leave them today, so my kids are cooking dinner for them.

Senator CLARK. Good enough.

Mrs. LAFROMBOISE. I got up at 4 o'clock to prepare the meal this morning.

Senator CLARK. Well, tell me this. If you didn't have that project——

Mrs. LAFROMBOISE. I would not get anything.

Senator CLARK. What would you do with all the children?

Mrs. LAFROMBOISE. Just get along, I suppose. I had to have that extra addition.

Senator CLARK. You would not have been able to do that without Green Thumb?

Mrs. LAFROMBOISE. No.

Senator CLARK. You think it has helped other people?

Mrs. LAFROMBOISE. Yes; it really helped other people, too.

Now a few other things. There are six Indian men working on the title X and six non-Indians. We all work together, and then I go 27 miles to work.

Senator CLARK. How do you do that?

Mrs. LAFROMBOISE. I leave at 7 in the morning.

Senator CLARK. What kind of work do you do?

Mrs. LAFROMBOISE. Well, I go over there and help the green thumb. I am a timekeeper there.

Senator CLARK. Good.

Mrs. LAFROMBOISE. I go help them. However, if I could paint, I would paint. Then I help with the senior citizens. They are making quilts and sofa pillows so they can sell them. Also, the senior citizens have one meal a week there on Thursdays.

Senator CLARK. I see. What do you think of that program where they have one hot meal a day or in this case, one a week?

Mrs. LAFROMBOISE. They really enjoy that.

Senator CLARK. How many people come to that program there?

Mrs. LAFROMBOISE. Through the meals?

Senator CLARK. Yes.

Mrs. LAFROMBOISE. Oh, from 15 to 20, and they really enjoy those meals.

Senator CLARK. I want to thank you very, very much for coming down and testifying.

Effect on Alcoholics

Mr. Eisenbraun. Senator Clark, we tried something a little bit different with our program there. There were a number of gentlemen that were eligible for green thumb that we have, since then, enrolled in the alcoholics program. One of the jobs that Bea had, to begin with, was to see that everybody got to work, and when they didn't show up in the morning, Bea would get into her car and go get them. She saw to it that they kicked a little money into the kitty so at least they had one hot meal a day—on those days that they worked. Since then, two of those gentlemen have enrolled to take further treatment. The working pattern is almost perfect and it has to do with Bea, because she watches those fellows and she takes care of them. She goes out and gets them if they don't come to work.

Senator Clark. We thank you very, very much.

One other question of the panel. Larry Pressler wanted this question asked and I am interested in the answer as well, Lillian, and then I want to ask Mr. Ray Bagley as well.

Specifically, what additional green thumb projects could be performed in your communities if you had the money to have it done? What would you like to see done?

Mrs. Nace. We have five men that work there. I think Gerry Eisenbraun should be very, very proud of his green thumb operation. They have an enormous 4–H building and they built it. I just don't have any special thing for them to do. They helped me move, and the building I was in—they cleaned it up so magnificently that you would think a women had been in there; they scrubbed the floors and everything.

Senator Clark. They are good for something once in a while.

Mrs. Nace. This is my third time and I hope it is my last time, but the first time I moved I had a little tiny place. The next time we moved, it was kind of a funny little story. I know you will all laugh at it, but the man that owned the building was really harsh to us. A community action man helped us but we just could not get any place with Mr. Fuller. We had some old toilets and some old sinks in the basement and we told him we had to get a hot water heater. We didn't have any money.

We started to paint the walls and we used 2 gallons of paint on a little space. A lady that works at the school came over when she got off—and I don't want you to all laugh about this—we had this darn old black toilet that was so black you could not even see it. I said to the man, "Buy me a new toilet," and he said, "No, I won't." One of the green thumbers got on one side and I got on the other and we got down on our knees and we prayed that we would get it clean. We finally got it cleaned. This is kind of an odd story, but nobody knows how hard the green thumb men work. They had scrubbed those sinks.

This man would absolutely not give us any new sinks and so they scrubbed them. We had an old stove in there and one of the green thumbers said, "Lil, I will scrub that." Afterwards I said, "You will have to scrub that again." He said, "We have to do that many times over; you are too particular." One guy had to wash the stove five times and we had to heat the water. We had a little two-hole electric plate. We finally got it done.

I tell you, I have a lot of respect for the green thumb men and women. I tell you, these men really have done wonders. If you ever see the building that they built, it is really nice. They helped with the courthouse and the park. They just do anything anybody asks them to do.

Senator CLARK. Thank you very much.

I want to ask Ray now, if you had any more money in green thumb and if you had any more jobs, what would you do?

FUTURE POSSIBILITIES

Mr. BAGLEY. In Madison it would set a standard with us, with the city, and the senior center. Schools are always needing more help. For instance, some schools with a custodian start at a quarter to 6 in the morning and go until 6 at night. Then there are the extra activities like at night watching the school. In Madison there are more and more parks and a lot of buildings to clean. I feel that there is lots of room for expansion.

Senator CLARK. Thank you very much for appearing as a panel. We appreciate it. You have been excellent witnesses and it has been good testimony for us to have.

Thank you.

Mr. EISENBRAUN. Senator Clark, could I impose for just a couple more minutes? We realize that you are going back to Iowa and we hear that green thumb will be starting their program in Iowa shortly, or maybe they have already.

Senator CLARK. That is right. We had a witness the day before yesterday talking about it.

Mr. EISENBRAUN. The green thumbers in South Dakota, I think, understand what you are trying to do and we, of course, like to give credit where credit is due so we are going to present to you the official green thumb hat.

Senator CLARK. Oh, really. [Applause.]

I don't know. Do you think that is pretty fancy?

Mr. EISENBRAUN. It says on there, "Senator Dick Clark, Honorary Green Thumber," so take it back with you.

Senator CLARK. Thank you very, very much.

You see, I don't have too big a head for it. [Laughter.]

Mr. EISENBRAUN. I purposefully made it that way because I wanted to tell you not to get the big head. You have to earn these, and there are not very many people who have them. You will join the ranks of people like Pat Nixon, George McGovern, and some of these people. So when you go to Iowa and visit the Green Thumb crews, take it along with you.

Senator CLARK. I will wear it.

Mr. EISENBRAUN. Take it along as identification.

Senator CLARK. Thank you very much.

We have three more panels and we have got about 45 minutes remaining. The next panel is one person, Jack Claymore, who is project director of the Cheyenne River Reservation in Eagle Butte, S. Dak.

Jack, if you would take about 4 or 5 minutes for your statement we would appreciate it. We are very pleased to have you here and we are anxious to hear your testimony.

STATEMENT OF JACK CLAYMORE, PROJECT DIRECTOR, CHEYENNE RIVER RESERVATION, EAGLE BUTTE, S. DAK.

Mr. CLAYMORE. I am Jack Claymore, Senator. I am glad to be here. I am testifying for the Cheyenne River Sioux Tribe.

I have some written testimony here, but what I would like to say—you want to know what the most important things are on the reservation. The most important thing right now is transportation, and a nursing home on the reservation. Right now the nursing homes that we are utilizing are off the reservation and it is a handicap to the elderly Indians because they like to speak their own language and they like to be closer to their own people so they can have visitation. They don't have that now and that is one of the most important things on the reservation.

Transportation—we cover a two-county area in Dewey and Ziebach Counties. Right on main Highway 212 are the only grocery stores that there are in the town, so outlying communities on the reservation do not have many grocery stores available. For these people to get to town, to get groceries and stuff, they have to hire somebody out of their pocket to get to town. Sometimes they cannot afford to hire anybody to come to town and buy groceries, but they will pay them in part for their groceries to bring them to town, and I don't think that is right at all. I think that transportation in order to procure groceries on the reservation is one of the biggest things that we need.

I also have some written testimony here on nursing homes[1] that I will just leave with you.

Senator CLARK. Good. We will make that a part of the record, too.

[Background material submitted by Mr. Claymore follows:]

BACKGROUND MATERIAL SUBMITTED BY JACK CLAYMORE

History: The Cheyenne River Sioux Tribe was originally a part of the Great Sioux Reservation which was set aside under the Fort Laramie Treaty of 1868. The first agency established for the Cheyenne River Sioux Tribe was in 1869, 10 miles south of the mouth of the Cheyenne River, along the Missouri River. It was named Fort Bennett. As a result of the division of the Great Sioux Reservation by the act of March 2, 1889, the Cheyenne River Sioux Reservation was set aside as a separate reservation. The agency was moved from Fort Bennett to Swiftbird Camp. The name of the camp was later changed to Cheyenne Agency. In late 1950's, the Oahe Reservoir was constructed for the purpose of generating electricity, irrigation projects, and flood control from the Missouri River Valley Basin. The Cheyenne Agency was moved again to its present location at Eagle Butte, S. Dak.

Tribal government: The Cheyenne River Sioux Tribe is a constituted authority under an act dated June 18, 1934, and is unincorporated. There are 13 districts established under the constitution and by-laws of the Cheyenne River Sioux Tribe. The governing body is composed of one tribal chairman, one tribal secretary, and one tribal treasurer; also, 15 councilmen from 13 districts to conduct tribal business in duly convened tribal councils.

In 1972, several members of the Cheyenne River Sioux Tribe appealed to the Federal court of the U.S. Governments to redistrict the Cheyenne River Sioux Reservation. The Honorable Judge Joseph Bottom, Federal judge for the State of South Dakota, issued a court order to redistrict the Cheyenne River Sioux Reservation to six Districts. Despite the court orders, the governing body of the Cheyenne River Sioux Tribe did not change.

Location: The Cheyenne River Sioux Reservation is located in the north central part of South Dakota, about equidistant from Rapid City and Aberdeen.

[1] See appendix 1, item 5, p. 330.

Pierre is approximately 90 miles southeast of Eagle Butte. The agency for the Cheyenne River Sioux Reservation is about 100 miles long and 50 miles wide. The Cheyenne River Sioux Reservation is bounded on the east by the Oahe Reservoir and on the south by the Cheyenne River and the Oahe Reservoir. All of Dewey and Ziebach Counties of South Dakota are contained within the Cheyenne River Sioux Reservation. The reservation is 4,392 square miles and has 300 miles of BIA roads.

Transporation: The transportation problem has been with the Cheyenne River Sioux Tribe ever since the establishment of this reservation. There is a hardship among the single and multifamily units because the per capita income is below the national level and the cost of living is much higher than the national figures on the reservation. There are approximately 1,050 families living on the reservation and from that figure about 325 families have no transportation, about 475 families owned one or two vehicles, and 250 families owned two or more vehicles in running condition. There are no commercial bus lines, airlines, and passenger trains that served the Cheyenne River Sioux Reservation, except Eagle Butte has a 2,500-foot runway for small planes. The Bureau of Indian Affairs has buses for their schools and will not allow nonstudent passengers on their buses due to no insurance coverage for the nonstudent.

Mr. CLAYMORE. I have some other things on the nutrition program.[1] You talked about hot meals. We serve 155 a day at this time and that program is doing very well.

Senator CLARK. How many people would you have eligible if everyone came? I am just trying to get some picture of how many people are involved.

Mr. CLAYMORE. We are probably leaving out about 150 that we are not reaching because of the lack of transportation or not enough funds for the program.

Senator CLARK. So you are reaching about half the people.

Mr. CLAYMORE. We are leaving out over half the people right now.

The biggest share is on the reservation, and that helps us. We have nursing homes there, but the outlying communities—we are going out to different areas by bus twice a week to bring them in, which is 20 miles away. We bring in transportation, but we are not reaching several communities on the reservation, and that is due to lack of funds.

I have other things. The weatherization program we have going there is now funded for $39,000, but it is only $350 per home. We are doing what we can with that at the present time.

Senator CLARK. Does it get pretty cold there?

Mr. CLAYMORE. Yes, it does.

Senator CLARK. So the winterization is a valuable one.

Mr. CLAYMORE. Yes. It goes below zero.

Senator CLARK. That is not a very costly program either.

Mr. CLAYMORE. No.

Senator CLARK. It seems to me with a little bit of money you can do a great deal by way of winterizing homes.

Mr. CLAYMORE. We have what we call a supporting service program up there that is funded through the State. I will just read it as it was started.

The Cheyenne River Sioux Indian Reservation is composed of the two-county area of Dewey and Ziebach Counties. The 1970 U.S. Bureau of Census printout sheets showed a total of 535 people in the age group of 55 to 64, and 567 in the age group of 65 and over, thus show-

[1] See appendix 1, item 6, p. 331.

ing that approximately 900 people of ages 60 and over live in our two-county area. Since 1970 this figure has increased considerably. In 1970 many of these elderly were living with their families in crowded living quarters, especially in our smaller communities and out in the country.

Housing Shortage Alleviated

To help alleviate this problem, the Cheyenne River Housing Authority has built, with funds from the Housing and Urban Development program, four manor-type homes for the elderly. These manor homes provide individual apartments for the tenants where they can live by themselves. As there was a need for ample water supply for these manor homes, they were built at the larger communities of Eagle Butte, Isabel, Dupree, and Timber Lake.

The first home was built in Eagle Butte in 1966 and consisted of 14 apartments. Some of the original tenants still reside in these homes. Then, in 1974, an addition was added to the manor home increasing it to twice the original size, and a 20-unit manor home with central kitchen is ready for residency. Also in 1974 other manor homes were built. At Isabel there are 18 apartments, at Dupree there are 12 apartments, and at Timber Lake there are 12 apartments. These apartments, which consist of a living room, efficiency kitchen, bedroom, and bathroom, are occupied by individuals 62 and older with a few exceptions made for the physically disabled who are below the age minimum. Some of the apartments are occupied by couples and some by singles.

These manor homes have fulfilled the need to provide housing for the elderly that were previously living in the overcrowded housing with their families, but they did present another problem. For awhile they provided housing for the elderly, but there were no funds to provide service to the elderly with their daily domestic duties and/or health care needs which their families had previously seen while they resided in the same household. The economical level of the elderly is so low that the 25 percent of their income for rent is not even sufficient to cover the cost of the maintenance of the buildings. There are no funds available to provide the service to the residents that is needed from the rent income.

These homes are not nursing homes but, because we do not have a nursing home on or near our reservation and our elderly do not want to move into a foreign environment where they are unable to speak their native language, we have elderly occupying these apartments who require daily care. Many of our elderly need to be in a facility where they can reach help if needed due to heart conditions, possible diabetic coma or insulin reaction, chronic illnesses, and limitations of movement. Some of the individuals have poor eyesight and need assistance in taking their medication, such as insulin. The majority of the residents at the Eagle Butte Manors need 24-hour surveillance. They also require assistance with their personal care.

Obtaining Funds Difficult

In 1974 the eight manor aides on the Cheyenne River Reservation were funded for $42,250 from the model projects of the office on aging

out of Pierre, S. Dak. This was 1-year funding only and we were instructed to try to seek other funding for this essential program. We submitted requests to Indian health service, CHR program, Aberdeen area, and to the rural health delivery system, region XIII, Denver, Colo. We also approached local programs such as manpower program, tribal work experience program, and HUD. We were unsuccessful in obtaining funding for the program from any of these sources.

The program was picked up under the title III portion of the Office of Aging in 1975, and at the same budget level. We again made a concentrated effort at trying to obtain funding from other sources, but again were unsuccessful. We were recently refunded for another year by title III of the Office of Aging at the same budget level. Because of the structure of the title III regulations, we should be self-supporting in this 3-year period but, because of the economical problems of the Cheyenne River Reservation, this is not feasible and we will have to continue to search for funding to provide this needed service in the coming years.

The majority of the tenants living in the manor homes had previously lived out in the country or in the smaller communities where they lived in crowded housing conditions with their families. Any care they required was provided by their families in the best way they could in their crowded living conditions. Because of the transportation problems in our two-county area the families were unable to continue to see to their elderly's needs after they resided in the manor.

Supportive service manor aides provide a service to our elderly, both in the manors and the ones who live alone out in the community, with their daily needs. They identify the needs and take steps to take care of them. New problems develop daily and need to be dealt with accordingly. The types of immediate or emergency needs they deal with are: treatment for medical needs, psychological problems, family problems, housing changes, transportation, and pressing economic problems. The types of less urgent problems dealt with are: social problems, household domestic duties, personal care, nutrition education, assistance with meals, and some of the transportation.

Routinely they use the team approach of utilizing the existing resources of all available agencies to initiate an assistance action plan for the elderly. They realize that each elderly person is different and no two are exactly alike, and they deal with them accordingly. The assistance they are providing allows our elderly people the chance to be independent in their own homes and not placed in an off-reservation nursing home where it is a proven fact that the average person lives only approximately 6 months after placement. The supportive service manor aides provide an information service.

The manor aides receive continual training from the PHS Indian Health Service staff, community health representative program, State extension service, and State health department.

There are no transportation costs written into the program.

There is no personnel to place in the new Eagle Butte Manor.

Manor aides should be allowed a cost-of-living raise.

Because of the increased need for nursing home care for some of our elderly, there is a great need for one to be established here on the reservation.

We are talking here about the manor aides that are taking care of the elderly. They have not had an increase. They have not asked for it, but they have not had an increase in 2 years.

Senator CLARK. Would it be safe to summarize your testimony, then, primarily as saying that, as you see it, the greatest need on the reservation there now is the nursing homes? You need people who would be able to stay there with them who speak their own language, with their own friends, and who would come to visit them.

Mr. CLAYMORE. Yes.

Senator CLARK. Second, and very importantly, transportation. You have already got a hot meals program, but it is serving a little more than half the people. And, of course, housing needs.

Mr. CLAYMORE. Yes.

Senator CLARK. Thank you very much, Jack, for your testimony. We appreciate it.

Mr. CLAYMORE. If I could have another moment here, this is Irene Gronau, the chairwoman of the Tribal Community Services Board.

Senator CLARK. Would you stand up, please? We are very pleased to have you here.

Mr. CLAYMORE. She has testimony here.

Senator CLARK. Yes. I wish you would give that to the reporter so it can be made a part of the record as if given.

Thank you, Jack.

[The statement follows:]

PREPARED STATEMENT OF IRENE GRONAU, CHAIRWOMAN, TRIBAL HUMAN SERVICES BOARD, SISSETON, S. DAK.

Tribal senior citizens of the Lake Traverse Reservation have been retarded in developing a comprehensive and progressive tribal senior citizen organization because of several factors which exist in our community and State. Through the efforts of the northeast South Dakota community action program and other local agencies, we do have an integrated senior citizen program in Sisseton and in Waubay. But incidences have occurred in these programs that have made some of your tribal participants feel unwelcome. It takes only a minor incident to inflame latent feelings and to destroy all the hard work and the efforts that people in both the Indian and non-Indian communities have made. As a result, most of our tribal senior citizens remain unorganized into any program, while non-Indian senior citizens groups have sprung up all around us and are now flourishing.

Hence, the first need that we have identified is the need to develop a tribal senior citizen program that is staffed by tribal people, is responsive to the special needs and problems of Dakota senior citizens, and is well coordinated with other programs and priorities of the Sisseton-Wahpeton Sioux Tribe. We have inquired about developing a separate title 7 program for Dakota people but have learned that the State of South Dakota already has "too many" Title 7 programs. There has been some discussion of expanding the title 7 program that already exists in this community to cover five proposed tribal subsites among the seven tribal districts. Such a program could hire tribal members as staff to implement the program. However, tribal members are wary of a tribal program that would be under the supervision of an agency other than the Sisseton-Wahpeton Sioux Tribe.

In addition, we have applied for title 3 moneys for community services, but even if these are granted they could not provide the comprehensive senior citizen program we envision for our Dakota elderly people. At any rate, it would not provide for a meal a day, which is what our elderly people want.

A second major problem that our tribal senior citizen program is experiencing is a lack of continuity of staff to coordinate efforts to develop a comprehensive tribal senior citizen program. The Tribal Human Services Board is currently involved with trying to help the tribal senior citizens to get organized, but we can see the real need for there to be a full-time tribal senior citizens coordinator to

stay on top of all the title programs that are being developed and to develop proposals to tap into these programs. As a result of the lack of continuity we have had during this past year, we are very concerned about whether we are even going to have a senior citizens program during fiscal year 1977.

We are in agreement with the need identified at the Phoenix National Indian Conference on Aging that funding for all programs to serve native American elders through the Administration on Aging be granted for a minimum period of not less than 5 years. Those programs which have then demonstrated their effectiveness in serving native American elders should be continued to be funded on an ongoing basis.

A fourth major need of our Dakota elderly is adequate transportation. Our elderly people are geographically dispersed throughout the seven rural tribal districts on the Lake Traverse Reservation. There is a need for a transportation system to be developed that would facilitate senior citizens being able to shop, visit the doctor, go to church, and participate in senior citizen and recreational programs. We have written a proposal for an additional senior citizens van; but unless we have money to operate the vehicle, we will not even receive the grant to purchase it with.

Another obstacle that we have encountered in our efforts to tap into State Older Americans Act funds (and others) is our lack of matching capital. Our lack of capital is a real handicap when dealing with State programs.

INDIAN LIFE EXPECTANCY SHORT

Another problem that we have identified is with the regulation in title 7 and some of the other programs under the Older Americans Act which defines a "senior citizen" as a person who is 60 years of age or older. It is well known that the life expectancy of Indian people is shorter than that of the average American population. The National Indian Conference on Aging held in Phoenix in June 1976, went on record to lower the age requirement for Indian participants to 45 years of age. On the Lake Traverse Reservation we are envisioning a program that would include persons who are 50 years and older.

We have two HUD units in our community that are designed specifically for elderly people. We identify the need for other such units in our community—perhaps in some of the other tribal districts. Such units make it possible for tribal senior citizens to remain in their communities and near their families while at the same time providing for their comfort and special needs.

We have identified a need for a congregate meals program on the Lake Traverse Reservation. We think the Indian participants will benefit socially as well as nutritionally from such a program. We hope that we can receive funding for such a program.

We identify a need for an in-service orientation to be provided for staff persons working with tribal senior citizens to inform them about all the benefits that are available for senior citizens and to explain to them how to tap into these programs. These staff persons should be given an opportunity to develop and practice organizing skills (through role-playing sessions and group discussions) so that they will have a better idea of how to go about getting the senior citizens organized and operating efficiently.

There is a need to mobilize existing community resources to benefit tribal senior citizens. We need to make resource people aware of the needs of our tribal elderly and to make our tribal elderly aware of the existence of these services so they will make use of them. We further identify a need for expansion of existing homemaker aide services, nursing services, legal services, and other outreach services.

Please note that all of our testimony relates back to our need to have a tribal senior citizen program. At the National Indian Conference on Aging, held in Phoenix in June 1976, it was recommended that the Congress of the United States be petitioned to amend the Older Americans Act to provide for direct funding of programs to Indian tribes. We think that there is a definite need for such a legislative change. But in the meantime, we want to see our tribal senior citizens benefitting from existing programs.

The welfare of our tribal senior citizens has been a primary concern to the tribal human services board and to the Sisseton-Wahpeton Sioux Tribe in general. We have appreciated the opportunity to have the Sisseton-Wahpeton Sioux Tribe give testimony at this hearing about the needs of our Dakota elderly.

The Sisseton-Wahpeton Sioux Department of Vital Statistics has furnished the following data concerning Sisseton-Wahpeton Sioux Tribal members who are 60 years old or older:

Date of birth:	Number	Date of birth—Cont.	Number
1916	21	1906	8
1915	20	1905	10
1914	26	1904	12
1913	16	1903	10
1912	16	1902	18
1911	19	1901	14
1910	28	1900	9
1909	9	Before 1900	113
1908	17		
1907	16	Total	382

Senator CLARK. The next panel is on senior organizations and it is made up of Pete Gregor, president of the South Dakota Congress of Senior Organizations and South Dakota Association of Senior Citizen Centers, Winner, S. Dak.; Eunice Anderson, vice president of Mountain Plains Congress of Senior Organizations, Sioux Falls, S. Dak.; and Don Daughetee, State coordinator, South Dakota Congress of Senior Organizations, Pierre, S. Dak. It seems to me that there was to be one other person as well. Dr. Robert Hayes is also accompanying the panel.

Now this panel is going to speak, as I said, on senior organizations. Each of them have a prepared statement—some of them may not. Please try to limit your statements to about 4 or 5 minutes and then we will have some questions.

Let's start with Pete Gregor.

STATEMENT OF PETER GREGOR, PRESIDENT, SOUTH DAKOTA CONGRESS OF SENIOR ORGANIZATIONS AND SOUTH DAKOTA ASSOCIATION OF SENIOR CITIZEN CENTERS, WINNER, S. DAK.

Mr. GREGOR. Senator Clark, ladies and gentlemen, my name is Pete Gregor. I am the president of the South Dakota Congress of Senior Organizations. I am honored to have the privilege of offering testimony to your distinguished committee.

Senator Clark, you are to be commended for your concern for our elderly. The topic I would like to discuss is difficulties in the delivery of health services in rural South Dakota as it affects both Indian and non-Indian people. The foremost hardship for the elderly is the serious shortage of physicians and professional health personnel in rural areas. It is especially difficult or impossible for the Indian and non-Indian elderly who are no longer able to drive or cannot afford a vehicle because they live on fixed social security incomes. In many instances, living in a rural area means driving 50 to 70 miles one way to get medical attention.

We have proposed some solutions. About 2 years ago Dr. Robert Hayes, who was then secretary of the South Dakota Department of Health, recognized the serious shortage of physicians. He organized a physicians extender program and was successful in getting the State legislature to appropriate funds for a pilot program. To date, Dr. Hayes has placed and oversees four physician extenders in four of South Dakota's more isolated communities. The program is work-

ing very well, but it falls far short of covering the many more rural areas in need. We desperately need Federal assistance to expand this type of program and to provide more widespread health care coverage.

In my area near Winner, Mission, and White River, 12 to 13 percent of the population are Indians. Under Dr. Hayes' program, both Indian and non-Indians get health care indiscriminately. Mr. Oriol has asked me to invite Dr. Hayes to this meeting to tell us more about this program and now I yield to Dr. Hayes.

Thank you, Senator Clark.

Senator CLARK. Thank you.

We are particularly pleased to have Dr. Hayes here. You may proceed in any way you think appropriate.

STATEMENT OF ROBERT H. HAYES, M.D., UNIVERSITY OF SOUTH DAKOTA MEDICAL SCHOOL, WALL, S. DAK.

Dr. HAYES. Thank you, Senator Clark, and staff.

I came from Iowa and was educated there and migrated to South Dakota back in the fifties and have been here ever since.

I am sure our problems in South Dakota and Iowa are somewhat similar. Iowa certainly has made great strides in terms of what it is doing in terms of health care for its populations. Most of you folks here know the University of South Dakota School of Medicine has just gotten started. We now have our first class of senior medical students in a 4-year program and we are certain that that will at least ease this burden. Certainly in Iowa you have done a great deal about serving the needs of the people in rural areas.

The lack of health services is acute, as Mr. Gregor has mentioned. I am pleased to say that we didn't really have much trouble with our legislature in asking for funds and getting them. I have a great many friends there who are very interested in the program. Our administration, our Governor and his staff, and our legislature provided the means, and we are now doing that. I won't go into that in great detail.

I might say that what it amounts to is that we did pass the physicians' extender law. I should explain that term because most people don't know what that means. We have young people in the health field now who are nurse-practitioners and physician assistants. These folks help the doctors, they do certain amounts of work the doctors once did and they do it quite well. They have been trained very thoroughly to do it. It requires a physician like myself to work with those folks, to visit them each week, and to work with them each week.

For example, I have a little circuit and I guess I am called a circuit-rider now because I go from the little town in which I now live, Wall, S. Dak., to Murdo, S. Dak., to White River, and over to Martin, and back up. It makes kind of a circle. Most of you know it covers about four different counties. We do take care of a lot of people. I will have a detailed report for our State legislature as we meet with them later on in the year.

I quickly tried to get some figures to show you, however, of what can be done and how it can work, for example, in the little town of Wall which is less than 1,000 people. This is just one of our sites in our project.

Senator CLARK. I believe we have all been to Wall.

Dr. HAYES. I am now from Wall. So far, for exampple, this year—and we have been in operation there in our clinic since November—we have had 3,010 patient visits. We have done pretty well. In other words, those visits run somewhere in the neighborhood of 10 to 20 a day. A person can get into our office and get the basic things done. If, for example, we cannot do what that patient needs, we refer him to a physician in the nearest town and that is 52 miles one way, 45 miles another, and 36 another, so the distances that other people have alluded to are about the same everywhere. It is a "fur piece."

Really, I think we have something to offer. We don't have the final outcome of it yet; we don't know which, exactly, will be the best way to use these folks. The model we have is one of the models. Certainly our medical school took on a big task when it did try to do this because it had enough troubles getting a medical school started without this. Our dean, Dr. Karl Wegner, I think made a very lonesome decision and a very important one—he decided to do it. I am certainly pleased to work for the school and for him and to try to do this for our folks in South Dakota.

I don't have anything else to say at this time.

[The prepared statement of Dr. Hayes follows:]

PHYSICIAN EXTENDER PROGRAM

The State of South Dakota has the lowest physician-to-population ratio in the United States. Medical care and health facilities are located, for the most part, in the larger cities of the State with little emphasis on the rural areas.

In attempting to provide the rural areas of the State of South Dakota with primary health care, the 1974 South Dakota State Legislature, by legislative mandate, charged the University of South Dakota School of Medicine with the task of developing and implementing a 4-year degree granting medical school that would place emphasis on family practice.

The first third-year class began training May 12, 1975, and will be the program's first graduates in the spring of 1977.

Further concern for providing health care to the rural areas of the State of South Dakota prompted the 1975 legislators, upon recommendation of the joint committee on appropriations to appropriate $60,000 for the development and the implementation of a program for physician extenders.

The legislative mandate or charge was given to the University of South Dakota School of Medicine to develop such a program. The initial budget appropriation is to be used to initiate a service program using physician extenders in a health service shortage area and to attract additional physician extenders to locate in South Dakota. These additional physician extenders would be placed with cooperating physicians in service shortage areas throughout the State.

Since funding became available on July 1, 1975, the school of medicine was unable to pursue financial commitments prior to that date.

Dr. Robert Hayes, former Secretary of Health, was employed as the program director. Meetings and conferences followed with the faculty as well as with the president of the university. From these studies, meetings, and deliberations, the following program proposal has evolved for your consideration. Original proposals have been modified because of budget limits, problems concerning possible duplication of physician extender educational programs, malpractice insurance requirements and concerns regarding physician acceptance of these people.

A rural site near one of the potential modules of the medical school is suggested as the base of operation for the physician extender program. This has the potential of bringing the school of medicine into a community without a physician and also has the potential of being near the communities which are likely to have no doctors and would, therefore, be an appropriate site for physician extender use. The obvious support of the community is needed as well, but in most cases this would be anticipated.

ESTABLISH SCHOOL

It is proposed that Dr. Hayes, the program director, move to the selected doctorless community and establish the school of medicine physician extender office there. It is felt that the program should eventually consist of five or more physician extenders in rural communities in the western part of the State. This would require up to four communities/counties to employ physician extenders (either nurse practitioners or physician's assistants) who would then be assigned by written agreement to Dr. Hayes, and other physicians, if necessary, for direction and technical supervision, in compliance with existing State statutes which limit assignment of physician assistants to two per physician. Dr. Hayes would work with the physician extenders and assist them with their patients in a teaching-service model. The project could consider such communities as Wall, Murdo, White River, and Edgemont. This selection of communities for the project would be on the basis of established health service shortage area designation criteria. These criteria include the geographic area to be served, population, demonstration of need, relationship to other health services in the area, anticipated cost and benefit, attitudes of community, county, and area residents as well as nearest physician(s) availability and manner of financing, demonstrated commitment for immediate and continuing support by the community, and management and professional capability of the organization or governmental unit sponsoring the proposed service (physician extender.)

Dr. Hayes would be available to area solo physicians for locum tenens relief if desired. These physicians would be those who are alone in communities with hospitals and nursing homes. This would allow the medical school to accomplish the all important function of extending itself to help the local doctor "hold the line" until new doctors graduate from our medical school and complete the several additional years of training necessary before they can begin practicing medicine.

Dr. Hayes, living in the selected community, would be on call by telephone and/or radio to back-up physician extenders in the selected sites. He would visit and work with the extenders in these sites on a rotating basis of 2 to 3 weeks. If he is relieving one of the area physicians, he could carry out the same functions of telephonic and/or radio back-up from that community.

In addition to the above, the volunteer ambulance services of the selected local communities could be assisted by Dr. Hayes. This would provide support for the developing emergency medical services program and should be of benefit to those communities in the creation of a medical evacuation system.

Fees which are collected for patient services would be collected by the sponsoring governmental unit and would be turned over to a community health fund and its board or to the county health fund and the county commissioners. These moneys would help defray the cost to the local communities/counties for the physician extender and her/his office.

Several possibilities exist for the provision of physician back-up of the program director during vacations, sick leave, etc. These include support by a physician from the State department of health, participation by faculty from the school of medicine or assistance by area physicians in private practice. The best of these alternatives, and perhaps others, will be explored and implemented to the fullest extent of available resources.

An important function of the program director will be to provide a liaison function between the demand for and supply of physician extenders. The possibility of availability of physician extenders will be explored with existing educational programs. The responsibility of the project director will be to establish communication between those schools and possible user-communities and physicians. Time has been allocated for the project director to carry out this additional other major function of the physician extender office.

Malpractice insurance has been a problem as indicated in the July 18, 1975 report. However, it has been resolved, and Dr. Hayes will be covered by the St. Paul Insurance Co. The individual physician extenders are to be covered through their own employers (the counties or communities) by a company of the sponsoring communities' choice.

In summary, the medical school proposes a teaching service model for its physician extender program. The model will have a rural ambulatory care center (RACC) as well as physician extenders to deliver service to rural communities, to educate physician extenders, and to assist local volunteer ambu-

lance services. An important aspect of this program will be the development of a rural center through which it may become possible to rotate medical students for some portion of their training. This would have the dual advantages of exposure to a rural setting and the opportunity for medical students to work with physician extenders, thus facilitating their understanding of and confidence in this new type of health manpower.

Senator CLARK. I have some questions, but I will now call on Eunice Anderson.

STATEMENT OF EUNICE ANDERSON, MOUNTAIN PLAINS CONGRESS OF SENIOR ORGANIZATIONS, INC., SIOUX FALLS, S. DAK.

Mrs. ANDERSON. Thank you, Senator.

Senator CLARK. Eunice is vice president of the Mountain Plains Congress of Senior Organizations here in Sioux Falls, I think.

Mrs. ANDERSON. No, that is not right. The Mountain Plains Congress of Senior Organizations have two representatives from each of the 6 States in region 8: South Dakota, North Dakota, Wyoming, Colorado, Utah, and Montana.

Senator CLARK. Where are you from?

Mrs. ANDERSON. I am from Sioux Falls. I am one of the two representatives. We are an advocacy group, the Mountain Plains. This is a very new concept. I don't think there is anything like it in the United States. We all have common problems. We are mostly rural. I am very happy to have been at this hearing and I am going to make good use of this because the material that we have gathered here we will use and bring forth in all of our States. We have found that it is useful to find out what they do in other States. I am going to skip some of my remarks because it has been covered.

We had discussions at our annual conference in South Dakota of the White House Conference on Aging. By the way, we had the largest number of people at our White House conference forums by population of the whole United States. So our people are very interested in each other, thank goodness, and also meetings of the South Dakota Association of Senior Citizens. We all agreed that social, recreational, and educational opportunities are absolutely necessary for the well-being of the aged.

So I am coming to the conclusion that everybody else does, the fact that we need transportation; the lack of mobility is so tremendously important. Actually the infirmities of age, if there were a certain amount of mobility, would not be so important whether they live in nursing homes, foster homes, or with relatives. So transportation is related to everything—nutrition, health care, religious and social activities.

Senator McGovern recently has proposed a national Meals-on-Wheels Act—and I am not sure whether this has been changed since I read it—which includes information referral services and a demonstration project which would mail a week's supply of food to the homebound elderly. The proposal also contains a training cost for those who would implement the problem.

I have been considering the problems of the rural aged, especially their lack of transportation and resulting difficulties in obtaining the bare essentials for existence. Jack, over here, and I have often talked

about this on the Indian reservations. I would like to propose an alternate to Senator McGovern's Meals-on-Wheels Act which, I would think, would serve far better for the needy elderly and could be administered under the existing title III program.

Mobile Grocery Service

I have spent some time in rural Sweden, and I have observed how they have solved some problems relating to the lack of mobility. I propose using mobile vans or units which carry groceries, staples like bread, milk, eggs, frozen meals on wheels, aspirin, mineral oil, stamps, thread, a rotating library of books, magazines, and in addition to the driver, an outreach worker.

Senator Clark. Rather than hot meals?

Mrs. Anderson. Well, if you realize as I do—I have been on the Governor's Council on Aging for 12 years. The difficulties in small towns right now is with the cost of gasoline. Several of the little towns have had to give up meals-on-wheels because of the cost of gas. We have trouble with the insurance with the drivers; we have not been able to clarify that.

Senator Clark. In other words, you think the availability of groceries is a greater problem than the hot meals?

Mrs. Anderson. Yes. You can have both. I could see the possibility in some concentrated little town—I am thinking about Crooks, S. Dak.—a little town out here.

Senator Clark. How big is Crooks?

Mr. Anderson. Oh, 100 or 150.

Senator Clark. I see.

Mrs. Anderson. They are getting bigger when they get close to Sioux Falls because they have built more houses. There is no place too big. Those people no longer can drive; they cannot get driver's licenses. The cost, even of a short distance—we have many of these little towns in this area, and when I speak of rural, I am talking about this mobile unit. I can see them going from that which they did in Sweden, although they did serve others besides. In Sweden, it is still more difficult with cars, automobiles, and transportation, although they have mass tranportation buses, but then they go into outreach.

For instance, the outreach worker could contact these people by telephone. I think this is one of the tremendously necessary things. Every old person, of course, should have a phone so that they have a little idea of what they are going to have. The outreach worker and the personal contact is a necessary part except nowadays we have in our neighborhood a lot of others. We have milk-vans going around the country, but these older people need that personal contact—somebody coming in. They don't have to stay 3 minutes, at least, to see that they are all right or bring them what they need. There are problems.

Senator Clark. That is an interesting idea of what you say they are doing in Sweden. I don't know whether they did this around here, but in Iowa we had grocery routes like for everything. As a matter of fact, I remember that my father, in the thirties, owned a small general grocery store and he would go out in a different direction every day with that panel truck and it would be filled with everything imaginable. He

would go to every farm, come back, and go out in a different direction the next day. He would cover an area of about 20 miles. Now those were farmers and the elderly.

You are talking about going to small towns. Why is it that nobody does that any more? Isn't it profitable?

Outreach Workers "On a Circuit"

Mrs. Anderson. Every so often you have to get an idea. In the old days I could see why it would not cost so much. I am a florist; I know what it costs to deliver a bunch of flowers. These are expensive things to deliver. However, we have to look for some funding from the Federal Government. We are using a lot of these outreach workers who are very necessary and I can just see them riding a circuit. I think that there are some problems which I wrote down here, and you would understand, that would have to be discovered—the use of food stamps. You would have to evaluate the rural grocery store—medicaid, volunteers. I think this can be worked out in the community. Possibly we could not do it under title III.

Senator Clark. So your whole point is really that the problem is mobility—transportation—to get services to people in rural areas.

Mrs. Anderson. That is right. I can see on the Indian reservation—I have never talked to Jack about that but I can see the possibility of Cherry Creek. I don't know how far that is from Eagle Butte, but they have been carrying meals-on-wheels out there—hot. Well, this is really not very practical. Cherry Creek now, I think, has a grocery store. I think it is a tremendous difference, but they didn't have it. With a mobile unit they could suggest what they need. It could be used on the reservations.

Senator Clark. There are a lot of people. I don't want to keep your testimony going on, but——

Mrs. Anderson. That is not where I would start it. I would start it in an area like this where you don't have the great distances.

Senator Clark. I was just thinking, the people who are beneficiaries of meals-on-wheels, they probably can't fix the meal if you provided the groceries.

Mrs. Anderson. See, the meals-on-wheels are not in our area. We have, I think, 60, 70—maybe more than that—meals-on-wheels a day. They are from Wyoming and would never have been interfered with. Neither would it be wherever you could make it preferable, but I can see that some of these frozen meals could be adjusted to other people that really are not now. If you look at the cost of them, they are not so particularly expensive. I can see some old person having a bunch of these just like TV dinners coming out on this truck, especially even made for diabetics. The fact of the matter is the diabetic diet or older person's diet is similar.

Senator Clark. We appreciate your testimony.

Mrs. Anderson. I have one more thing to say.

Senator Clark. I am sorry.

Mrs. Anderson. About 7 years ago, the aged of Wyoming—I was, at the time, the administrator, and we started through title III. It lasted until they demolished that part of the building. I think this is

one of the most important things that we could do, the establishment of day-care centers for the elderly. They should be in the health-care facilities like this nursing home or the small hospitals, and these people are not served ordinarily as senior citizens.

They have handicaps, they are in wheelchairs, and so forth. They need their medication supervised. That is one of them. Then there is another thing that I would like to say, and that is that we need a nutritional thrust outside of title VII. The rules are wrong for title VII for a small town that maybe could have two hot meals a day that cannot afford the whole setup of the administration.

Another thing is the law that exists in many States which specifies that not more than two unrelated persons can live together in a home. I know Colorado has tried to change the law. Here is a woman who has a home and she cannot afford to heat it; it is too big. She might have three or four friends that would like to move in with her but it is against the law—they cannot do it. They could team up. They could eat better, they could have one car, have each other's company. If they did a little fighting, what of it? They would at least have some human contact. There are many ways we can help decrease the isolation of the rural elderly and make their lives more meaningful.

That is the end of my testimony.

Senator CLARK. Thank you very much.

Now we are going to hear from Don Daughetee.

STATEMENT OF DON DAUGHETEE, STATE COORDINATOR, SOUTH DAKOTA CONGRESS OF SENIOR ORGANIZATIONS, PIERRE, S. DAK.

Mr. DAUGHETEE. Thank you, Senator.

Senator CLARK. I notice that you have a rather long statement. The whole statement will be put in the record as if read, but we would like to have you summarize your views from it.

Mr. DAUGHETEE. Senator Clark, I will make my remarks brief.

I direct your attention to the program operating in the State of Washington which is called the Senior Citizens Services Act which provides a very innovative approach to the delivery of services. I think this is an area that deserves our attention in rural areas.

Housing is a very, very important problem which needs more attention from the Department of Housing and Urban Development, as is the problem of an alternative to nursing home care in our State. The availability of units is of prime importance to people who would like to stay in the rural areas but cannot find housing.

Similarly, I think one of the summary issues of this whole hearing is the fact that one of the greatest problems that the rural elderly face is from their designation of "rural." Many Federal programs define "urban" as a central city population of 50,000, the standard metropolitan area. There is only one town in South Dakota that big and we are here in Sioux Falls today. Everything else is either suburban or rural.

URBAN REGULATIONS INAPPLICABLE

At least population figures define categories into rural/farm and rural/nonfarm. It is rather difficult to implement a Federal program

in a town of 500 in South Dakota using the same regulations and guidelines required of a city in California of 35,000. One example of this is the Administration on Aging rules which requires multipurpose senior centers to have a paid director and operate 30 hours a week to qualify, yet the majority of the 230 centers within South Dakota cannot afford to have a full-time director, or even a part-time director—let alone operate those 30 hours a week.

Another example would be with the Housing and Community Development Act of 1974, essentially an urban program which allocates 80 percent of the available funding to metropolitan areas. The remaining 20 percent of the funding is available to units of local government for community development to improve housing, environment, and essential services. Of the acceptable eligibility criteria for projects under the law, a fortunate elderly applicant group might be able to secure some funding for acquisition of a facility or to remove restrictive architectural barriers for elderly and handicapped individuals.

In actuality, the decay and deterioration affecting urban centers which this law attempts to remedy are exactly the same problems that rural small towns and communities suffer. Yet, the latter are to attempt solutions with less funding. Somehow, in trying to achieve economies of scale in our Federal programs, we have cut out a substantial portion of the population—and if economies of scale are valid, then no one has told our small family farmers who represent some of the most productive farming units in the world.

Examples of Federal regulations and rules that discriminate against rural areas exist in many Federal agencies and bodies. Recently a local rural project was turned down because it "lacked sufficient visibility" for the Department of Housing and Urban Development.

Senator CLARK. You mean turned that down simply because it did not have enough visibility?

Mr. DAUGHETEE. Yes; that was the case with one local project. I think Shirley Overland can elaborate on that more fully.

Senator CLARK. We would be happy to have her elaborate on it in writing for the record.[1] That seems sort of ridiculous.

Mr. DAUGHETEE. Finally, energy policy has been getting increased attention with continued inflation, rising costs of labor, and construction of generating plants. Electric utility rates have increased like everything else; in some areas of South Dakota they have gone up by from 60 to 80 percent. This would not be so bad if individuals were consuming the same amount of electricity, but in many instances consumption is below preoil-embargo days, yet the costs have more than doubled. There is an upper limit as to what older persons on fixed incomes, pensions, or retirement benefits can continue to pay.

The phrase "The more you use, the cheaper rate you pay" is no longer a wise policy, rational practice, or justifiable means to deal with our dwindling resources. Persons who use more should pay more. Electricity is no longer a luxury but, rather, a necessity and all consumers should be provided with a basic amount of electric energy for a minimum rate and service charge. This is called a "lifeline" rate.

I think, in terms of lifeline, that no longer can residential consumers afford to subsidize commercial and industrial users by paying a higher rate for less consumption.

---

[1] See appendix 1, item 1, p. 311.

Thank you very much.

Senator CLARK. Thank you very much for an excellent statement. I wish that we had more time, but I know that this room has to be vacated and we have another witness. I am going to just thank you very much for your testimony and anything additionally that you would like to supply we would be happy to have.

[The prepared statement follows:]

PREPARED STATEMENT OF DON DAUGHETEE

Senator Clark and members of the committee, as State coordinator for the South Dakota Congress of Senior Organizations, I am honored to be able to submit testimony on "The Nations Rural Elderly."

Significant changes are affecting the rural elderly in South Dakota. With approximately 115,000 persons 60 years of age and older out of a total of 665,000, our State ranks seventh in the Nation in the proportion of our older population. They live in small towns and cities throughout this State—many of which have populations under 1,000. As our percentage of older persons increases, it becomes increasingly important to have alternative living opportunities and options available to individuals if they are to live with any degree of self-reliance, dignity, and independence.

The State of Washington provided an innovative approach to alternative service delivery. They have recently implemented a far-reaching program called the Senior Citizens Services Act which will provide a wide range of services and the freedom to select from a variety of services. The services include:

(1) Access services, including transportation, information and referral, outreach, and counseling.

(2) Day care with nursing, rehabilitation, nutritional, and other services.

(3) Night services with therapeutic programs.

(4) In-home care, including basic health care, performance of household tasks, other necessary chores.

(5) Death counseling for the terminally ill.

(6) Health services designed to avoid institutionalization and including geriatric screening.

(7) Nutritious meals either in social settings or delivered to homes.

(8) Minor home repairs.

(9) Certain legal services.

Those with sufficient resources will pay fees according to their income while other elderly persons without resources will receive the services free. These achievements deserve to be studied further to assess the feasibility and costs of implementation of similar services in areas which are complicated by rural distances, availability of and transportation to commercial and professional services, and sufficient dollars.

A paramount alternative to nursing home care is in housing: single-family homes, units in quality rooming houses, and retirement communities and villages, in addition to publicly financed apartment complexes. Our zoning laws preclude more than two unrelated individuals living in the same house, yet widowed friends could use the companionship, shared living expenses, and security of a shared facility for those not requiring institutionalization nor needing a supervised living environment. For a person to be able to continue to live in their own home as they grow older, assistance is needed to cope with the chores and problems of maintaining a house. Surveys show that many of the older homes that were built in the twenties, thirties, and forties are substandard—lacking conveniences which today are classified as necessities such as indoor plumbing, electricity, and running water. As well, many of these homes are not adequately insulated or winterized. Program efforts thus far, although commendable, have barely scratched the surface of older homes in need of better insulation. Likewise, low-rent elderly housing units are available in far too few communities. Where they are available, there is usually a waiting list for accommodations. In July 1975, there were only 363 low-rent public housing units for the elderly on reservations and 1,558 units located in other communities throughout the State out of a total of 5,362 units statewide. Similarly, less than 7 percent of all insured housing projects in the State were for elderly persons. Of the 5,985 units of insured housing in July 1975, only 409 were designated as elderly units. Clearly, providing housing is a more desirable and viable alternative to institutionalizing individuals that do not need or require supervised care.

FEDERAL REGULATIONS DISCRIMINATORY

The rural elderly's greatest problem stems from the designation of "rural." Most Federal programs define "urban" as a central city population of 50,000, the standard metropolitan area. Anything below that number is either suburban or rural. Population figures at least break down the categories to "rural farm" and "rural nonfarm." It is rather difficult to implement a program in a town of 500 in South Dakota following the same rules and regulations required of a city in California with a population of 35,000, yet both can be called rural. Administration on Aging regulations require that a multipurpose senior center have a paid director and operate 30 hours per week to qualify as a center, yet a majority of the 230 senior citizen centers and clubs in South Dakota cannot afford to pay a full-time or even part-time center director, let alone operate 30 hours a week.

Another example could be drawn from the Housing and Community Development Act of 1974, essentially an urban program which allocates 80 percent of the available funding to metropolitan areas. The remaining 20 percent of the funding is available to units of local government for community development to improve housing, environment, and essential services. Of the acceptable eligibility criteria for projects under the law, a fortunate elderly applicant group might be able to secure some funding for acquisition of a facility or to remove restrictive architectural barriers for elderly and handicapped individuals. In actuality, the decay and deterioration affecting urban centers which this law attempts to remedy are exactly the same problems that rural small towns and communities suffer. Yet, the latter are to attempt solutions with less funding. Somehow, in trying to achieve economies of scale in our Federal programs, we have cut out a substantial portion of the population—and if economies of scale are valid, then no one has told our small family farmers who represent some of the most productive farming units in the world.

Examples of Federal regulations and rules that discriminate against rural areas exist in many Federal agencies and bodies. Recently a local rural project was turned down because it "lacked sufficient visibility" for the Department of Housing and Urban Development.

Finally, energy policy has been getting increased attention with continued inflation, rising costs of labor, and construction of generating plants. Electric utility rates have increased like everything else, in some areas of South Dakota they have gone up by from 60 to 80 percent. This would not be so bad if individuals were consuming the same amount of electricity but, in many instances, consumption is below pre-oil-embargo days, yet the costs have more than doubled. There is an upper limit as to what older persons on fixed incomes, pensions, or retirement benefits can continue to pay. The phrase, "The more you use, the cheaper rate you pay," is no longer a wise policy, rational practice, or a justifiable means to deal with our dwindling resources. Persons who use more should pay more. Electricity is no longer a luxury but, rather, a necessity, and all consumers should be provided with a basic amount of electric energy for a minimum rate and service charge. This is called a "lifeline" rate. Furthermore, there no longer is a rationale for residential consumers to subsidize industrial and commercial users by paying a higher rate when they consume less.

Senator Clark and members of the committee, thank you.

Senator CLARK. Our last witness is Dr. Edward Hogan, head of the geography department at South Dakota State University at Brookings.

STATEMENT OF EDWARD P. HOGAN, PH. D., HEAD, GEOGRAPHY DEPARTMENT, SOUTH DAKOTA STATE UNIVERSITY AT BROOKINGS, S. DAK.

Mr. HOGAN. Thank you, Senator.

Senator CLARK. Dr. Hogan, I have seen your statement and it is very comprehensive and complete. We are particularly happy to have it and it will be made a part of the record.

If you will give us about a 4- or 5-minute summary of that, we would appreciate it.

Mr. HOGAN. It is a pleasure to be here today, Senator Clark.

My statement deals basically with some of the characteristics, needs, and future trends of South Dakota as related to the older citizens. As we start out with the statement, we indicate that in 1970 we had a population in South Dakota of 84,000 individuals over the age of 65 and that, by 1990, this figure is projected to increase to about 97,000 people. We could go through some other demographic characteristics, but I would like to highlight some of the things I feel are important to mention.

One is that the number of older people could increase dramatically in the future because there could be changes in the future in the life-span or in the life expectancy of the older population. This could be brought about through medical change, through technology, or combinations of the two. If this occurs and the birth rate stays as low as it is now, the older population will become an even more important part of the State of South Dakota.

HEALTH CARE COSTS INCREASE

The majority of older people right now tend to be between 65 and 73 years of age. Some of the things that concern me the most in dealing with the older people are, first, the health cost. The older you get, the more subject you are to illness and disability. The problem with the older persons in this country is that as they get older and usually end up going to the hospital, they stay there longer. The average stay for a hospital visit is 12.2 days, and one of the things that concerns me about that is that from 1970 to 1973 the health care costs to the older person in the United States increased from $791 in 1970 to $1,052 in 1973. This is a pretty dramatic increase in a 3-year period of time.

Particularly important in the case of South Dakota, I think, is the elderly's income. In our State, over half the elderly population in 1970 had an income of under $3,000 a year. In fact, 30 percent of the elderly had incomes under $2,000 a year. Nationally, only 25 percent of the elderly had incomes of under $3,000 a year. I think it is rather amazing in modern industrial America that one out of every five poor people in this country is over 65 years of age and many of these people could not continue working after they reached the age of 65 and were forced to retire as their health changed.

I think we have to realize that when a person becomes 65 years of age he does not automatically desire to become a hermit. Older individuals have relationships, as do the rest of the population, but society still tends to isolate these people or allow isolation to occur. I think we need to be concerned also with cultural and recreational activities of the elderly, just as we are concerned about these needs for the younger population.

I think the older citizens need good health, both physical and mental health. They also need nutritional programs to assure them of adequate diets. The older people need adequate housing in which to live. They need areas in which to walk, play, or just sit. They need

transportation to go places. They also need access to religion, because the younger people often forget this is a very vital part of the elderly's life and it is something we tend to overlook in terms of their activities and needs.

The older citizens need an adequate income and they need an advocacy system. I think the greatest need of the older citizen is the need to be needed. Fortunately in many families the older member stays a vital part of the family. In the case of South Dakota, we have a large amount of outmigration of younger people. In our situation, a lot of older people end up isolated or in homes. If the outmigration changes in the future, then this situation would change.

Future Trends

I think we can look at some of the future trends as regards the elderly. If the low birth rate in the last 15 years continues for any significant period of time, South Dakota will continue to experience the significant increase in the older population. Second, new health techniques may reduce the aging process which could have an interesting effect, because now they are talking about the potential of having a lifespan of 180, where today 80 is normal. This would be a big change. We would not need any children for a long time.

Senator Clark. We better do away with mandatory retirement.

Mr. Hogan. Yes; we would have to do away with a lot of things. We also see dramatic changes, I think, in the sex ratio of the State. We are going to have a situation by the year 2000 where there are a lot more older women than older men. Even now this is a serious situation, but it is going to become even more critical. In the case of South Dakota I think it is important to mention the nursing homes, too, because the nursing home has become the main reason for the continued existence of some communities in this State.

As they lost the schools to reorganization, the schools were replaced by nursing homes. At the present time 7 percent of our population is in nursing homes. I believe the goal of the Government is to reduce this to 2.5 percent. As long as young people keep leaving South Dakota and the older population stays in the State, we are going to have a large number in nursing homes. Even if the situation changes somewhat in the future, we can probably expect this level to be maintained.

We also have to be aware that the educational level of the older people is going to change as time goes on. More and more of these people are going to be high school graduates and they are going to be making more demands and not willing to give up work. They are not going to be as content to sit back as they are doing now, as regards some things. We are already seeing more demands by some of the groups that are active in more militant aspects of the situation today.

I think we can say that we are going to see some future attempts that are going to have to be made to break down the barriers of isolation and to keep people in the community. We must keep them as an active part of the community. I think this could be done in communities in small rural areas like we have in South Dakota and might

well serve as a model for programs which would provide residential services and companionship protection for older citizens within a community and, at the same time, offer them access to medical services when needed.

I think there is one other thing we can say, in conclusion here, and that is basically that the greatest need of the older person, whether South Dakota or anywhere else in this Nation, is the need to be needed. Too many of the things that have been done in the past and so much of the direction our society is taking tends to take this need away from the person, and they tend to become isolated and alone.

Senator CLARK. Thank you very much.

Just a couple of brief questions. Did you give the percentage of people in South Dakota who were over 60 or 65?

Mr. HOGAN. Over 65—one out of every eight South Dakotans.

Senator CLARK. One out of every eight.

Mr. HOGAN. Yes. Nationally it is 1 out of 10.

Senator CLARK. I see. So there is a higher concentration in South Dakota than in the Nation as a whole.

Mr. HOGAN. Yes, sir.

Senator CLARK. Second, do you know what percentage live in nonmetropolitan areas, or in rural areas?

Mr. HOGAN. I don't have that right offhand, but I would imagine probably about 60 percent if you took the small towns and the rural areas combined.

Senator CLARK. I know it would be high. I would have guessed something around 50 percent.

You have given us some very valuable testimony. In looking at your testimony, there is a good deal more that we didn't have time to cover. We are very appreciative. We are glad to have you here. Thank you.

Mr. HOGAN. Thank you.

[The prepared statement follows:]

PREPARED STATEMENT OF DR. EDWARD HOGAN, GEOGRAPHY DEPARTMENT, AND DR. ROBERT WAGNER, RURAL SOCIOLOGY DEPARTMENT, SOUTH DAKOTA STATE UNIVERSITY

THE CHARACTERISTICS, NEEDS, AND FUTURE TRENDS OF SOUTH DAKOTA'S OLDER CITIZENS

Characteristics

One out of every eight South Dakotans is 65 years of age or older. The older South Dakotans numbered over 84,000 individuals in 1975. Projections for the future estimate the 1980 and 1990 older populations of the State to be 89,000 people and 97,000 people, respectively.

Half of the older citizens are between 65 and 73 years of age. The other half are over 73 years and include an estimated 310 people over 100 years of age. Future trends in regard to the age of the older population are difficult to project. The age composition could change drastically in the future with a reduction in aging processes, an increase in the lifespan and/or technological changes.

In South Dakota, like the rest of the world, the majority of older people are women. In 1970, there were 83 males 65 years of age and older for every 100 females. While this is presently more favorable than the sex ratio of the elderly in the Nation. substantial change is expected in the future. By 1990 the sex ratio estimates indicate that South Dakota will have 68 men over 65 years of age for every 100 women in that same age group.

The health of the older South Dakotan is generally good. Over 91 percent of them rate their health as varying from average to very good. Only 6 percent of the older South Dakotans are bedridden. It should be noted that about three-

fourths of the elderly in the State believe that their health is superior to that of other people their age.

The problem, of course, for the elderly is that they are more subject to illness and disability than younger age groups. Older citizens average 6.5 physician visits per person per year. One out of six of them will be hospitalized during the year and once in, they will average a 12.2-day stay. Estimated annual health care costs for the elderly have increased from $791 in 1970 to $1,052 in 1973. This is a 24.8 percent increase in 3 years. At the same time, the older citizens share of health costs increased from 32.5 percent in 1970 to 35.1 percent in 1973. Present trends indicated continued increases in health care costs and unless major changes occur in government coverage, one can anticipate that the older citizens share of health costs will also continue to increase.

SHRINKING INCOME

In South Dakota, the older citizens have less than 50 percent of the income of the younger population. About half the older South Dakotans in 1970 had incomes of under $3,000 a year. In fact, almost 30 percent of the old South Dakotans had incomes of less than $2,000 a year. Unfortunately, over 1 percent exist on incomes of less than $500 per year.

It is amazing to think that in modern, industrial America, one out of every five poor people is 65 years of age or older. Unfortunately, many of these individuals became poor upon reaching age 65 through forced retirement, or as a result of health problems.

The income of the elderly population will become increasingly important. Should price increases continue, their purchasing power will become increasingly less. Also should earlier retirement ages come about, we will experience a substantial increase in the number of elderly poor.

The older citizens spend a greater percentage of their income on food, shelter, and medical services and care than younger individuals. They often have a great deal of difficulty finding basic needs, such as clothing in shopping areas. In other cases, the older citizen does not buy other items or luxuries because they simply cannot afford to purchase them or is unaware of available aid. In fact, in 1970 only 6 percent of the older South Dakotans were using food stamps. Fortunately through the use of the State Tie-Line and other services, the State has done an excellent job of attempting to extend this service to the people.

In 1974, about 14 percent of the older Americans were still in the labor force. Some 19.3 percent of the older male workers are employed in agricultural jobs which tend to be lower paying. This is an important factor to be aware of in South Dakota, for the older citizens in this State have some additional employment opportunities available to them in agriculture which are not available to older urban citizens.

About 61 percent of the old South Dakotans never completed elementary school. Some 14.5 percent attended less than 4 years of high school. It is interesting to note that over 10 percent attended college and that over 4 percent were college graduates or more.

While older South Dakotans had a median formal education of almost 9 years in 1970 future estimates indicate a significant increase in median school years completed in the future. By 1990 the older citizens will have a median formal education of almost 12.4 years. In other words, over half the elderly in the State will have completed high school. The effect of this change can be very significant since better educated citizens will place different and additional demands on government, business, and society.

Some 53 percent of the older South Dakotans are married, according to the 1970 census. It is important to note, however, that while almost 70 percent of the older males in the State are married, only about 40 percent of the females in that age category are married. Men are more favored in terms of living with a spouse in later years, particularly because society allows them to reach down and have second marriages with senior sweethearts who are younger than they. This disparity will have implications for housing needs, the incidence of personal isolation, family relationships and income among the elderly in the next 15 years. Most older men will be married and over 80 percent of the older women will be widowed and/or unmarried.

Over 63 percent of the older South Dakotans live as families. Nearly 30 percent live alone or with nonrelatives, and over 7 percent are in institutions. Over three times as many older women than men live alone or with nonrelatives.

In South Dakota over one-fourth of the older citizens live alone. Most of these individuals are active and able to take part in community life, but thousands do live in isolation. Almost 16 percent of the aged in the State do not receive one telephone call a week. Over 10 percent of the older citizens are not visited by another person at least once a week.

Fortunately, the State, the Federal Government, and citizens groups are working to end isolation through programs providing: transportation, senior centers, nutrition programs, telephone reassurance, friendly visiting, and other services.

In the period from 1960 to 1970, a significant shift took place among older South Dakotans. They tended to move into small towns and especially the urban areas of over 10,000 population. Among the reasons for this movement are: a greater concentration of medical services, increasing availability of low-income housing, the opportunity to be closer to others, better transportation, and more recreational activities.

In South Dakota today, 18.9 percent of all registered voters in the State are 65 years of age or over. Presently there is no significant evidence to indicate that older citizens vote as a block. They tend to either follow their own traditional party lines or vote independently, as they have for so many years of their lives.

Needs

At age 65 years and over, one does not automatically desire to become a hermit. Older South Dakotans have the same needs for familial and social relationships as the rest of the population. Unfortunately, society tends to isolate or allow the isolation of a large number of aged individuals.

The older citizen needs cultural and recreational activities, just as members of the younger generation do. Some of these needs can be met through senior centers. Other recreational needs can be met through community recreation programs, clubs and organizations, and family participation.

Like all people, the older citizen needs good health, both physical and mental. They need access to good medical care. They also need nutritional programs to assure an adequate diet.

They need to be able to afford the food necessary for health, as well as the clothing necessary for warmth and protection. One would think that with a market of about 22 million older Americans, some clothing company would be able to provide them with fashionable, protective clothing at a reasonable price.

Older South Dakotans also need adequate housing if they are to live as they should. It should provide adequate space, necessities, comfort, and be attractive. They need good access to utilities and repair services at reasonable costs. Their residential areas should be safe and adequately protected by police and fire departments.

The older citizen needs areas to walk in, play in, or to just sit. They need transportation from their residence to areas of activity within the community, for example to stores, doctors' offices, parks, and senior centers. They also need means of getting to church when they desire to attend. Too often younger individuals fail to recognize the importance of religion in the daily life of the older person.

The older citizens need an adequate income on which to live. As mentioned previously, most of the elderly poor in this Nation were not poor until they had to retire and their income was cut off. If they must live on a substandard income, they must not be expected to carry the same tax burdens as those individuals still employed. They also need tax reform on real estate taxes and estate taxes, since they should not be taxed out of their home or estate.

For those 7 percent of the older South Dakotans who receive institutional care, there is the need to be visited, the need to be treated as individuals, and the need for help. Just placing an older person in a nursing home or extended care facility does not end one's responsibility to a mother or father or aunt or uncle. Those people living in institutions still have wants, needs, and desires. Try as they may, the institutions cannot meet all of them, for family love and involvement are essential needs of the older citizens, whether at home or in an institution.

The older South Dakotan also needs an advocacy system. In many cases they need someone to help them and do not know where to go. They need: legal advice, help getting better housing, better health care, work, recreation, housekeeping services, rehabilitation services, and other people. They need advocates in these areas and information on how to get help with these needs.

The greatest need of the older citizen is the need to be needed. Fortunately in many families the older members are needed and actively involved as long as they live. In other cases, individuals are healthy or involved enough that they are always needed. But for some older citizens, the need to be needed was lost with the arrival of retirement or illness.

For these people, the State and Federal Governments, senior centers, care facilities, schools, groups, and individuals, are becoming increasingly active and creatively involved in developing and implementing ways in which the older citizen can realize their need to be needed. The South Dakota Office on Aging develops, sponsors, and assists communities in the implementation of programs such as: meals-on-wheels, senior centers, telephone reassurance, retired senior volunteer program, foster grandparents, in-house services, and many others. These programs and others have been developed in communities across the State and Nation. The State of South Dakota has introduced the Tie-Line (1–800–592–1865) to put the older South Dakotan and others in contact with individuals and agencies who can answer their questions and assist in solving their problems. Organizations such as the congress of senior organizations, the South Dakota Association of Health Care Facilities, and others are working for the interests of older South Dakotans in relation to their service areas. Gerontology Association for Training and Education (GATE) is a statewide consortium of education, statewide older American organizations, and others working together to inform and assist the older citizen.

The State and Federal Governments, each of these organizations, and interested individuals have as their purpose to provide the older citizen opportunities to utilize their ideas, knowledge, and talents for benefit of others—to fulfill—the need to be needed.

Future trends and implications

(1) If the low birth rate of the last 15 years continues for an extended period of time, South Dakota will experience a significant increase in the number of older citizens. This increase could be even more spectacular by an increase in the life expectancy and lifespan of the population.

(2) New health technology may reduce or slow the aging process and therefore increase the median age, the life expectancy, and the number of older citizens. This would require substantial increases in demands for services to that segment of the population.

(3) New health technology may expand life expectancy so that societal substitutes for dying may have to be found that operate in the same way retirement serves to substitute for death in industrialized societies, creating opportunities for younger cohorts advancing in age.

(4) The increase in the absolute number of elderly residents in South Dakota will generate need for additional services from both public and private sectors. Although proportional pressures on the active working population to support the elderly in the State will not increase, elderly residents may seek a greater allocation of State resources and demand more expensive programs in their behalf.

(5) The dramatic changes in the sex ratio and the decline in the proportion of elderly married women will increase feelings of isolation and cause further "anomia," especially for those women who locate their personal status in the status of a husband. New forms of polygynous marriage, or formalized living arrangement may become socially legitimated among and for the elderly.

(6) Health care for the elderly will become more centralized in larger South Dakota communities where a variety of medical services and specialties are available.

(7) The nursing home will continue to be the main reason for the existence of several small South Dakota communities. One cannot anticipate a significant decline in the number of older citizens in these facilities until out-migration of the young is reduced significantly.

(8) The rising costs of health care will bring about increased pressures on government to pick up a larger share of medical costs for the aged. This pressure will come not only for the elderly but also the children of the aged.

(9) Technological change is progressing at such a rapid rate that increased numbers of individuals will be forced to leave the labor market at younger ages. This would result in a change in the senior population since retirement could begin at 55 or 60 years of age. To accomplish this would likely require a guaranteed annual income.

(10) At the same time, one must also be aware of the fact that future senior South Dakotans share environmental histories that provided more educational opportunities, associated higher occupational and income statuses and exposure to an era of expanding public welfarism may mean that they will be less inclined to accept reduced status positions within the larger society than are the elderly today. A number of factors will help contribute to this:

(a) During periods when larger numbers of children enter adulthood, the availability of surplus but recently trained young adults tends to make the labors of older citizens obsolete and unvalued. The fact that the number of children now born who are advancing toward young adulthood is lower than for previous decades will mollify this obsolescence and devaluing.

(b) Higher completed education levels among the elderly may fortify their legitimate feelings that they have "wisdom" strengthened by experience which ought not be disregarded. From the knowledge and skill perspective, old age and status may become positively related.

(c) Nostalgia may replace scientism and technology as a fundamental American value. If so, the elderly will have an advantage.

(d) Previously, two aspects of retirement explain in part the perceived loss of status by the elderly. At retirement a person not only severs his connection with an organization, but he also relinquishes his occupational location in society. Without these two affiliations, the retiree usually becomes a person of unknown and uncertain achievement. Elderly in the next decades may not be so willing to relinquish their status locations, especially when they share higher educational levels within a leisure oriented society where work opportunities for all age groups are few.

(11) Due to changes in environmental histories, the elderly of tomorow will insist even more persuasively that relative poverty and lack of access to employment are not necessary concomitants of aging, but are the consequence of educational shortcomings and insufficient retraining. Demands for continuing education for the elderly and developmentally oriented learning opportunities will increase.

(12) Continued attempts will be made by government and concerned groups to break down the barriers of isolation. One such attempt could well be the development of service careers which cater to the total needs of the isolated or confined individual.

(13) Programs will be called for and developed to provide residential services, companionship protection, etc., for older citizens within a community environment. The emphasis will be to keep the individual out of the extended core center and in the community as long as possible. Small rural South Dakota communities might well serve as the test models for such programs.

(14) The changes in the magnitude of out-migration from South Dakota will reduce isolation and feelings of relative deprivation among the elderly as younger kinfolk remain in their locality. More sophisticated technology in communication and transportation services will further inter- and intragenerational interaction, as the machine substitutes for interfacial contact. The advent of new childbearing patterns, whereby the having and rearing of children is not conditional upon female fecundity, may delay parenthood until later years. In this event, a societal norm may assign child bearing and rearing responsibilities to the aged.

(15) Future voting impact of the older citizen will not become especially significant unless their number increases dramatically or they begin to vote as a block. As of yet there is little indication that either will occur. However, serious economic or health problems could bring about a change in these habits.

CONCLUSION

Today, one out of every eight people in South Dakota is 65 years of age and over. The people of South Dakota and the Nation must understand that most of the older Americans are individuals who have worked hard during their lifetimes, only to be retired by society when they reach 65 years of age. The elderly will play more significant roles in South Dakota and the Nation in the future. A consequence will be the expansion of human services for senior citizens and possible modifications in governmental and social policy and programs. We must remember through all this that the greatest need of the older citizen is the need to be needed.

Senator CLARK. Now I do want to say that we have some forms back on the table which are provided for any of you who would like to make

further comments or anyone who would like to submit any information for the record. It will be put in the printed record as if presented here. It simply says: "Dear Senator Clark: If there had been time for everyone to speak at the hearing in Sioux Falls, S. Dak., on August 18, 1976, on 'The Nation's Rural Elderly,' I would have said," and then you write your remarks, sign your name, and so forth. You may take these home if you like and mail them to me. Our record will be open for about 30 days. We have to receive it within 30 days in order to have it printed.

Incidentally, anyone that would like a printed copy of these hearings, or the others that we are holding around the Midwest, please just give us your name and address and we would be happy to provide that for you, too, or give it to the center here and I am sure they will pass it on.

We have about 2 minutes. I would like to try to take any questions or comments from the floor. I wish we had more time, but I know that this room has to be used.

Let me just say that it has been very valuable to us; it has been very useful to us. I think we have had a great number of witnesses today and I think what we have seen, if I can just summarize it in 20 seconds, is that the unique problems, really of rural areas, have a great deal to do with mobility—with transportation. It does not make much difference if you have a hospital, a doctor, or some kind of health facility if you cannot possibly get to it. So transportation seems to emerge, at least out of this hearing, as being enormously important.

Also, the problems of health care. As we heard from one of the last panels, the problem is really one of getting some kind of extender—some kind of health care. It may not be a doctor, but some kind of health care must be made available in the smallest of communities, and we must have some kind of satellites around, at any rate, from the larger communities so that people could at least have the basics of health care. We have heard a good bit about nutrition programs, about how valuable they are, and the fact that they need to be extended. We have heard something about the problem of employment, particularly the Green Thumb program and how important that is—how valuable it is on reservations and in other parts of the State.

So I think we have had some good testimony, some testimony, in fact, that we really had not received before in either Iowa or Nebraska. So we are very pleased that you came and very pleased that you gave this testimony.

The hearing is recessed. We are going to Canton.

[Whereupon, at 11:45 p.m., the hearing was recessed.]

BUS TRIP TO CANTON, S. DAK.

[The following comments took place on the bus ride to Canton, S. Dak., in RSVP vehicle.]

Senator CLARK. How big is Canton?

ANSWER. 2,600. It has been 2,600 for a good many years.

Senator CLARK. How far are you from Iowa?

ANSWER. Half a mile.

Senator CLARK. How many of the people are over, say 60 or 65 in Canton?

ANSWER. 600.

Senator CLARK. What kind of program do you think you ought to have that you don't have?

ANSWER. I think we should have just about everything except I will tell you——

Senator CLARK. What most do you think you should have?

ANSWER. What most? I will tell you one thing that we do not have that I think is quite essential. We have many, many people who might have $5,000 in a savings account. They cannot live on their social security and yet they are not eligible for SSI or food stamps because of that $5,000 in the savings account.

Senator CLARK. I see.

ANSWER. What is $5,000 today?

Senator CLARK. It is nothing.

ANSWER. You can be in the hospital 10 days and it is gone. We all need just a little security like $5,000 in a savings account which is very little, but it is security for a lot of people. They cannot live on social security or the interest off that, and they are not eligible for SSI as long as they have $5,000. Why can't they have $20,000 or $50,000? Why can't we work and make all the money we possibly can to build our own social security? We pay into that.

Senator CLARK. Yes.

ANSWER. There is a group of people in between SSI and the people that have more money and that is the people that are just over the edge, they have a little bit too much to get SSI and they are the ones that are hurting because they have to pay for all their own medications and all that. If they are on SSI, this is worth $1 million because they have all their doctor bills paid and all their hospital bills paid. Up until just now they could get glasses. They really have it made. But the people that have just a little bit over what they need to get on SSI are the ones that are really hurting, they are the ones I feel sorry for right now.

Senator CLARK. Tell me the reasons that a person would be on SSI rather than social security.

ANSWER. Well, there are a lot of them that never paid into social security, or probably very little. I was on the SSI alert and I ran out. Many people were living on a $78 social security check.

Senator CLARK. So the only reason you would be on SSI is that you either paid nothing or too little into social security, and therefore can't qualify.

ANSWER. That is right. A lot of these people are 85 or 90 years old, and their husbands were farmers. The farmers were not allowed to pay into social security, so they never paid anything.

Senator CLARK. Will the day come when there will be no SSI—everybody will be covered by social security?

ANSWER. I don't know. SSI is the supplement, and I don't know. Do you know what the maximum is if you have not paid in?

Senator CLARK. It is about $100.

ANSWER. Seventy-seven dollars.

Senator CLARK. If you have not paid in.

Housing Shortage

What about housing for older people in Canton? How is that? Is it good or bad?

Answer. We need more. What we have is excellent. I live in Government supplemental housing.

Senator Clark. How many units are there?

Answer. Twenty-four.

Senator Clark. Is that all there is in the whole town?

Answer. We have another one with 20 units.

Senator Clark. Twenty.

Answer. So that is 44.

Senator Clark. I notice there was the Lincoln County border. Notice the air—you can tell it when we came across that county line.

Answer. Everybody take a deep breath. That was a barnyard you smelled.

Senator Clark. I will tell you, that corn does not look too bad. It is not too tall though, is it?

Answer. The ears don't have any kernels on them.

Senator Clark. I see. Then you do need some additional housing units? There is a demand for more?

Answer. Yes.

Senator Clark. One of the big problems, of course, is just having adequate income to be able to afford the things you need.

Answer. That is right. I have social security and I have a very small bank account. On my social security it is pretty hard to feed myself and keep my car. I live 10 or 12 blocks—close to town.

Government supplement—I pay $135 a month.

Senator Clark. Those of you who live in housing that has been built in part by Government funds, would they have a rent supplement program so that you don't have to pay more than a quarter of your income in rent?

Answer. Yes.

Senator Clark. I think that would be helpful.

Answer. Low-income housing. I live in low-rent housing.

Senator Clark. If we had any more money to distribute or we could increase the appropriations, what would you like to see occur in the kinds of programs you have? Nutrition, health care, transportation, green thumb employment, some other employment—what would you like to see? What do you think the need will be next year?

Effect of Mandatory Retirement

Answer. I wonder if employment would not be the best help. Our administrator is a man—how old, 72? How old is Bob? He was sick and almost disabled until he got a job with the green thumb program for 3 days a week. He has to get up in the morning 3 days a week, get dressed, and go to work. He is a different man.

Senator Clark. Isn't that something!

Answer. Otherwise, he was sick in bed every day. At least 3 days a week. It is not only the money, but having to get up and be somewhere at a certain time.

Answer. I think that is the answer.

Senator CLARK. In my judgment, and I know there are a lot of people who disagree with me—we got into an argument yesterday at the hearing, but I think the worst thing we have ever done in this country for older people is to have mandatory retirement.

ANSWER. That is right.

Senator CLARK. That, to me, does not make any sense. If at age 65 I am an excellent Senator, I don't see why I should not continue. If I am an excellent doctor, I don't see why I should not continue. If I am an excellent laborer or farmer or whatever—I think anybody ought to be able to retire at 60 or 62 or 65, but it ought to be their choice.

ANSWER. That is right.

Senator CLARK. I don't see why you have to force them.

ANSWER. That is a different thing if you are working for yourself. This Bob owned his own business and he got sick. Now because he has a boss, he has to be at work at a certain time and he is there. When he was on his own, he was tired. We have farmers like that who retire because, probably, they are not able to farm so they retire at an early age and are absolutely not much good. But if they do get a job and have to be there, they are in better shape healthwise.

Senator CLARK. I know, of course, the other problem that is tough is the problem of inflation. I had a great uncle who retired on the farm in about 1938 and is still living. He retired probably at 60, something like that, and sold his farm for $10,000. Well, he thought he had all the money in the world he would ever need in 1938 with $10,000. He didn't see any reason in the world not to retire. Now, of course, he has lived on far beyond what anybody ever assumed, but he was broke at the end of the war and that money was gone. That was all there was to it.

It is just hard to understand how much inflation you can have in a very brief period of time. You retire, and 10 years later you have got what may not be worth half as much, and 13 or 14 years later it is not worth that much.

ANSWER. I don't think that our elderly should have to live below the poverty level. There are many, many of them who are able to work, and they should be able to.

The reason for social security was to create more jobs. If you still work after that, at the same time you are not allowed to create any more jobs. That was the main idea—for more employment.

Senator CLARK. Yes.

Has the drought out here been pretty serious in your area?

ANSWER. It has been bad. See the corn—now there is not much there.

Senator CLARK. It is pretty small, isn't it?

ANSWER. No ears, just the stalk.

Senator CLARK. What about small grain—oats?

ANSWER. If we have a fair crop, I will be surprised.

Senator CLARK. Is there much wheat grown in this area?

ANSWER. Not much. Very little wheat.

Senator CLARK. Are beans standard, a little bit more than corn?

ANSWER. Yes; here is a 1,100-acre farm right here.

Senator CLARK. Land now is selling at $2,400 an acre.

Well, did you enjoy the hearing?

ANSWER. Very much.

What do you think about this van situation?

Senator CLARK. It is kind of interesting. I never thought about it before, but it is kind of interesting.

ANSWER. You think that is a pretty good idea?

Senator CLARK. Might be.

ANSWER. You would think they could make money out of it where they could go out to a town and sell the thing out, and then go on to another town.

ANSWER. The price of gas is high.

Senator CLARK. My Dad used to do that—go out to the country. He had an old panel truck. This was in the 1930's. He did it until the war, I suppose—in 1940, 1941, 1942.

ANSWER. It sounds interesting.

Senator CLARK. You had a small town that had no grocery store.

ANSWER. I would think it would be almost a necessity in the western part of the State.

Our transportation is a problem.

Senator CLARK. You have smaller towns between towns.

ANSWER. Yes.

Senator CLARK. How big is Fairview?

ANSWER. I am sure they have neighbors to drive them in, but it is not too good.

Senator CLARK. I think I would be that way, too. I mean you would not mind doing it sometimes, but you would hate to do it all the time.

How many of you here no longer drive?

ANSWER. Everybody drives.

Senator CLARK. Everybody drives.

When did you get this bus?

ANSWER. Three years ago.

Senator CLARK. It is quite a bus.

ANSWER. Yes, we think it is pretty nice. This helps us. We can visit relatives in town.

Miss Mae had to take the bus today. You cannot trust the senior citizens. They say they will go to a meeting and they will not show up. Mae takes them and makes sure they go.

Senator CLARK. She knows she has a load. Is she kind of a slave driver?

ANSWER. Mae, are you a slave driver?

Senator CLARK. I know she is the busdriver.

ANSWER. She is not a slave driver, but she is an inspirer. You understand that word.

Senator CLARK. I do.

ANSWER. She makes us all feel guilty if we don't do something good every day.

Senator CLARK. Good enough. Would it be all right if we take her where she is badly needed?

ANSWER. You don't take her.

Senator CLARK. We need a little inspiration in Washington, you know.

ANSWER. No, don't take Mae to Washington. She could do us a lot of good there, too. The town she lives in is not the size of Canton.

Senator CLARK. That is why she is so darn good. It is not by accident that you are praising somebody who lives in Iowa. [Laughter.]

ANSWER. I was born in Iowa.
Senator CLARK. Where?
ANSWER. Marcus.
Senator CLARK. I know where Marcus is. I have been in Marcus. I went to a centennial in Marcus.
ANSWER. Did you go to it?
Senator CLARK. Yes. I walked in the parade.
Mr. STENGLE. My wife was born in North Dakota in a sod house.
Senator CLARK. In a sod house?
Mrs. STENGLE. Yes.
Senator CLARK. How long ago was this?
Mrs. STENGLE. My parents went there.
Senator CLARK. Do you know what year they went to North Dakota?
Mrs. STENGLE. 1906—well, 1905.
Senator CLARK. They lived in a sod house. Did you ever read this book by Willa Cather called Oh Pioneers? You ought to get it. Do you have a library in Canton? I tell you, it is a great book because she lived in about that same time. She is dead now. She lived in a sod house out in Frisco, and it is either in Nebraska or Kansas—I think Nebraska—and wrote all about life at that time. It is a novel, but it is based on her own life when she was a young girl living in a sod house. You would like it.
Mrs. STENGLE. The sod house that my father built for my mother—they homesteaded on 72 quarters. They were married and they built a two-room sod house with an attic. The roof of our house and the walls were plastered with gumbo.
Senator CLARK. Gumbo.
Mrs. STENGLE. Yes.
Aung Aggie, the pastor, and the traders that came along made it their home. They would sleep in our attic.
Senator CLARK. How long did you live there?
Mrs. STENGLE. I was 9 years old when they moved.
Senator CLARK. So you remember it.
Mrs. STENGLE. Yes. My father was responsible for one of the first consolidation schools. I went 4 miles.
Senator CLARK. You walked 4 miles?
Mrs. STENGLE. No, no.
Senator CLARK. You rode 4 miles.
Mrs. STENGLE. We would have high school students.
Mr. STENGLE. Transportation was not a problem then, they walked.
Mrs. STENGLE. We rode horse and buggy.
Senator CLARK. You drove the horse and buggy to school. Now what years would that have been?
Mrs. STENGLE. Well, I was born in 1908.
Senator CLARK. So it was during the First World War.
Mrs. STENGLE. Yes, because we moved down here in 1917.
Senator CLARK. It was a sod house. Was most of it below the ground, or was it all above?
Mrs. STENGLE. This was all above. They had dugouts, but the house was above ground.
Senator CLARK. What was the dugout for?
Mrs. STENGLE. To store our crops and our potatoes.
Senator CLARK. Kind of a cellar.

Mrs. STENGLE. Cellar, yes.
Senator CLARK. Did you do a lot of canning in those days?
Mrs. STENGLE. Yes.
Senator CLARK. Would you can meat?
Mrs. STENGLE. Oh, yes, and I remember jackrabbits.
Senator CLARK. Shoot jackrabbits and can them?
Mr. STENGLE. Yes.
Mrs. STENGLE. We didn't always have that. Of course, that was fresh meat.
Senator CLARK. Canned jackrabbit. I have never eaten that. Are there still a lot of jackrabbits out around here?
Mr. STENGLE. No.
Senator CLARK. What happened to them?
Mr. STENGLE. Too many hunting them.
Senator CLARK. Is hunting good out here any more?
Mr. STENGLE. More deer.
Senator CLARK. What is the closest town in Iowa to Canton?
Mr. STENGLE. Inwood.
Senator CLARK. I am going over and start a hearing at 2 o'clock this afternoon near Mason City about 180 miles from here.
Mr. STENGLE. Where is the plane?
Senator CLARK. The plane is in Sioux Falls.
Mr. STENGLE. Mr. Oriol is following us.
Senator CLARK. Bill does all the work.
I have never ridden on one of these buses.
Mrs. STENGLE. This is one of the old type roads.
Mr. STENGLE. This is about the first paved road they put in.
Senator CLARK. When was that?
Mr. STENGLE. 1927.
Senator CLARK. 1927. It has held up pretty well. That is 50 years next year.
Mr. STENGLE. It was put in before I was married and that was 49 years.
Senator CLARK. Mr. Stengle says it was put in 49 years ago, in 1927.
Mr. STENGLE. We would go to town sometimes and get stuck along here.
Senator CLARK. Really.
Mr. STENGLE. Yes.
Senator CLARK. Where did you teach?
Mrs. STENGLE. Around the corner back there.
Senator CLARK. How did you learn to be a teacher?
Mrs. STENGLE. Normal.
Senator CLARK. Normal school.
Mrs. STENGLE. Yes.
Senator CLARK. Did you do that in your last 2 years of high school?
Mrs. STENGLE. Part of it the last 2 years of high school.
Senator CLARK. How old were you when you started teaching school?
Mrs. STENGLE. Nineteen.
Senator CLARK. Country school.
Mrs. STENGLE. Yes.
Senator CLARK. How many years did you teach?
Mrs. STENGLE. Five.
Senator CLARK. Five years.

Mr. STENGLE. She is still teaching.
Senator CLARK. Teaching you and others?
Mr. STENGLE. That is what I mean.
Senator CLARK. Is she a good lecturer?
Mr. STENGLE. Certainly is.
Senator CLARK. How long have you been married?
Mrs. STENGLE. Forty-three years.
Senator CLARK. I say "Kant-n," I notice several of you say "Kan-ton."
ANSWER. This area was settled by Norwegians. There were other nationalities.
Do you want to go to the Senior Citizens Center?
Senator CLARK. Yes. Can we do that?
ANSWER. Yes.
Senator CLARK. I think that is where they were going to meet us.
ANSWER. I think they are following us.
You will see our little housing unit on the right as we go by.
Senator CLARK. You point it out to me.
Who built this, the Farmers Home Administration?
ANSWER. I don't know.
There they are, and they are beautiful.
Senator CLARK. Very nice.
ANSWER. That is the community building where they have parties and washers and dryers.
Senator CLARK. I think this would be great.
ANSWER. It is a beautiful center.
Senator CLARK. That is about as nice as I have ever seen.
ANSWER. You will get to see the other one, too, the Elms. That is the other elderly housing unit.
I think the next time, Mae, we better all drive our cars and meet you.
Now isn't this a beautiful town?
Senator CLARK. It certainly is. There's the courthouse.
[Whereupon, at 12:45 p.m., the bus ride concluded.]

APPENDIXES

Appendix 1

MATERIAL SUBMITTED BY WITNESSES

ITEM 1. LETTER FROM SHIRLEY OVERLAND[1] TO SENATOR DICK CLARK, DATED AUGUST 20, 1976

DEAR SENATOR CLARK: Transportation was expressed as the No. 1 need for South Dakota. I agree. However, I am firmly convinced that our ministry needs to be to the total person. This includes meals, shopping trips, volunteer opportunities, lifelong learning, recreation, opportunity for spiritual growth, to mention only a few. I have been in communities where a meal was provided, a nutrition movie viewed, and people moved silently to their bus for a ride home. Multipurpose senior centers can exist with volunteers. Seniors and others even in the smallest communities can be motivated to serve their fellow human beings. I've seen it happen and know it can be done in a nonthreatening way.

Title XX Means Test for Transportation: I request that group eligibility be declared for elderly transportation. After going through the means test twice since February (because of social security raise) we find 85 percent of our riders are eligible to ride without making a copayment. There is also a segment that will not fill in the forms. They are back home, isolated. They are too proud to reveal their income. The time of administering the means test (because we cannot afford to hire two extra employees) has taken away from our home care and outreach calls.

Senator McGovern's meals-on-wheels: I feel a grave concern for this approach unless it can be administered with some human caring and person-to-person involvement. It should be incorporated into a title VII or title III program. If this is not possible, then some caring group must, of necessity, be responsible. People eat because they desire to live and care about themselves as persons. Without human contact the costly program will be unsuccessful in accomplishing the intended goal.

In response to a statement made at Sioux Falls, S. Dak. Hearing: Our Huron Area Senior Center was declared "not visible" for a $450,000 section 202 HUD loan. The statement was made from Washington HUD that it was a lot of money to go into a rural area that wasn't visible. If the Denver office (John Otto) would have had input, they would have realized the total situation. HUD loans have been made to Huron College and no payments made for several years. The Denver Office looked upon this proposal as a life saver for the college and a chance for HUD to recoup some of their funds. The decision however, was a political one and was made in Washington.

Senior center facilities: Senior centers exist in old creameries, hatcheries, and condemned buildings, yet we continue to build fine schools, library facilities, parks, etc. "Senior citizens take the hand-me-downs of their communities," according to William Pothier, speaker at the 1975 NCOA convention.

Joseph Jordon, also at the 1975 NCOA convention, stated "The quality of the senior center building equates what the community thinks of its older population." Jordon also stated that "Someday every community will have an adequate service providing center as natural as a school for the kids."

Nursing homes in South Dakota: 7 percent are in nursing homes in South Dakota. This could be reduced to 3 percent if adequate rural multipurpose senior

[1] See statement, p. 292.

centers were provided. Hon. Morris Udall at the 1975 NCOA convention asked, "Is it proper for the Federal Government to allow elderly folks to be placed in nursing homes for profit and reduce the services that could keep them in their own home or apartment?" He continued by saying that the cost is $7 billion a year to give nursing homes a profit. That's a lot of money, isn't it?

Alcoholism in the elderly: There is a marked increase in this disease among the elder American. NCOA is presently studying the problem and will be reporting at the 1976 convention. Dr. Johnson of the Johnson Institute (a nonprofit foundation in Minneapolis that deals with this problem) states that the increased numbers, particularly in the Minneapolis high-rise apartments, is most alarming. This is also true in other communities. I personally know one practicing alcoholic that remains sober because he has a daily title VII meal. If he misses this meal he is in trouble and back in the hospital. For him the meal and the fellowship really pays off. What about those that no one ever sees or cares about? They die. The Alcoholics Anonymous program assists many, but a knowledgeable outreach worker could help to "bring up the bottom."

SHIRLEY OVERLAND.

ITEM 2. POETRY SUBMITTED BY SHIRLEY OVERLAND

MY VIEWS AS A SENIOR CITIZEN

(*By Nell Kuestermeyer, 1976*)

We are senior citizens
Of which we are very proud.
We have so much fun
Being with the crowd.
A simple greeting
When we meet
Makes us feel good.
A pleasant smile
For you and me
And all will know
We are doing what's worthwhile.

We enjoy everything we do
Because we are together.
When things seem dull and blue,
We think of senior center.
We don't have
To sit and fret
And worry all the time,
There are so many things to do
Some are work,
Some are play,
Yet all are doing what's worthwhile.

One of the things I like the most
Is to dance—which is just grand.
Then comes Thursday with Shirley,
The leader of our band.
She points that stick
And we all know
We'd better pay attention.
Cause she's working very hard
To relieve our hypertension.

Come on out and join us!
You'll be glad you did.
You will meet old friends
And make new ones,
Of this there is no end.

Yes, we are senior citizens,
Taking one step at a time.
Live for today, not tomorrow!
Because with God's help
You will know
Each one of us,
Because our faces really shine.

"BELONGING"

(By Shirley Overland, December 1972)

Strolling down the sidewalk can be lonely,
Walking along as I reach
The grocer,
The coffee shop,
The dime store,
Where people I can see.

They chat and laugh in little groups
And seem to have such fun,
And I feel
Lonely.

Many times I walked along the sidewalk
Past a place called "Huron Senior Center."
I sneaked a glance
Through the windows
And saw
People.

They chat and laugh in little groups
And seem to have such fun,
And I feel
Lonely.

I thought about that place many times
And walked along the street,
And peered into those
Big, friendly rooms.

I thought, "I'll know no one."
"I'll not know what to say."
And then one day
I opened wide the door
And someone said, "Hello,
Come on in."

My heart leaped
As I made that step—
To be greeted by
A friendly voice,
A great big smile.

Now, I no longer walk the streets.
I've found new friends.
I keep busy with games and visiting,
And I've learned a thing or two.
I've gone on some trips
And found that someone cares
For me and you.

Now I chat and laugh in little groups
And have such fun.
And I no longer
Feel
Lonely.

ITEM 3. "DARE" PROGRAM PROPOSAL, SUBMITTED BY SHIRLEY OVERLAND

DEVELOPING ADULT RESOURCES THROUGH EDUCATION (DARE)

A unified delivery system for educational services to older Americans in the city of Huron

Name of primary agencies: Huron College Community Learning Center, and the Huron Area Senior Center.

Name of cooperating organizations and institutions: Retired Teachers Association; National Association of Retired Federal Employees; Community Counseling; CMA colleges; Briar Cliff, Buena Vista, Dakota Wesleyan University, Dordt, Mount Marty, Northwestern, Sioux Falls, Westmar, Yankton.

Project director: Shirley M. Overland, director, Huron Area Senior Center, Inc.

THE COMMUNITY PROBLEM

Older persons and continuing education.—There is a great national concern about "lifelong learning" and providing educational services to older Americans. Colleges and universities, partly due to declining enrollments of younger students, have identified retired persons as a new potential clientele. These institutions have generally taken two steps to recruit older persons as students. The first has been to lower fees for traditional courses. The second has been to create a curriculum of activities that younger educators have decided older Americans want: arts, crafts, estate planning, knitting, etc. Both these approaches tend to force the older American into a younger framework and stereotype their educational activities.

Many of these programs have failed in three respects: (1) Colleges have not acted to adapt the traditional liberal arts disciplines to the particular needs of older persons or trained their facilities to do so; (2) They have failed to adequately consult with the older persons themselves as to their educational needs and desires; (3) Finally, they have ended up as just one more agency competing for the attentions, time and dollars of older persons. They have failed to provide a comprehensive educational program utilizing all the resources of the communities in which older persons reside.

The Need—A unified delivery system.—The way to solve the above problems is to devise mechanisms whereby older persons are carefully consulted in planning educational programs and the resources of the entire community are utilized to serve them. In many communities, the senior center is the best catalyst for this unified system, although few centers perform the function. In communities where there is an institution of higher education, the opportunity exists to utilize the senior center as a focal point for the continuing education program with the assistance of the professional educators. That dual sponsorship furnishes an ideal foundation for a unified system.

Huron—An ideal laboratory for a unified system.—Huron and vicinity has a very high population of older persons. While one in eight in South Dakota is a senior citizen, in the Huron area one-fourth of the population is 55 years of age and older. The Huron Area Senior Center has over 700 members and is one of the most successful centers in the State. Huron College, Presbyterian related, has 356 students and a new community learning center office concerned with adult education.

(1) The senior center educational program: In late 1974, Shirley Overland, director of the Huron Area Senior Center, called together representatives of various community organizations and agencies, including Huron College. She later held a series of sharing meetings with senior center representatives. As a result, the center launched its first educational programs, which included first aid, defensive driving, tips for shoppers, and modified home nursing.

(2) The liberal arts for older Americans program:[1] In fall of 1974, Huron College proposed (and was funded under title I) a liberal arts for older Ameri-

[1] Please note that the new proposal herein is not a request to continue the LAOA program. The original LAOA program was narrow in scope and, while the DARE proposal contains components of LAOA and builds on its findings, the new proposal attacks a larger and different problem—the construction of an integrated delivery system for educational services.

cans program. This program was designed to identify the particular learning needs of older persons and attempt to adapt traditional liberal arts disciplines to those needs. This process of planning and conducting nine courses was designed to train faculty members and produce guidelines for planning future learning experiences. This program was instituted in summer, 1975, and 45 older persons participated in the first four courses. Three more courses were begun on October 7 (with 55 participants) and three more are planned for the coming calendar year.

(3) The Huron College "live-n-learn" senior center proposal: Discussions have been proceeding for approximately 6 months between Huron College and the Huron Area Senior Center as to the possibility of converting a large college residence hall, McDougall Hall, into a senior center and living quarters for older persons. The importance of this proposal to future educational programs is obvious. A senior "live-n-learn" center would have potential for educational activities unique to the State of South Dakota and found in few locations in the Nation.

(4) Interaction thus far: Huron College personnel participated in the center's initial planning of its educational program, and its members and director serve on the steering committee for LAOA. There has been a trend toward more unified direction of all the learning experiences available within the community with the focus at the senior center and with the college furnishing staff and administrative assistance for the liberal arts portion of the program. However, to this point, these efforts have continued to have fragmented and overlapping administration.

The establishment of the community learning center at Huron College this fall completes the authority structure that would make possible a workable unified system. The time has come to merge programs in a community that has demonstrated the leadership to develop a unified educational system for older persons.

The DARE program and the State plan for community service and continuing education.—The State plan calls for a "unified delivery system for continuing education," and that is precisely what the Huron College Community Learning Center is attempting to develop in Huron and the vicinity. The DARE program is intended as one component in a comprehensive program designed, in the words of the amendment to "make a fuller and better use of existing resources of traditional postsecondary institutions" and to "provide access for greater numbers of citizens to postsecondary continuing education, including a broader range in age and socioeconomic levels."

The amendment places special emphasis on the educational needs of older persons, describing their need for better delivery systems as "one of South Dakota's crucial social needs." On page 6, the amendment devotes considerable space to the problem of "improving access in educational opportunities for older Americans."

Huron College has been in the vanguard of the attempt to improve that access. The LAOA program has been successful. The institution acted this past spring to reduce tuition for older persons. The offer of McDougall Hall as a possible senior center for Huron residents is indicative of the college's commitment to better education for older persons in the region.

Direction of the program.—Toward rural problems.

Objective.—To develop a unified delivery system for educational services to older persons in Huron.

NARRATIVE REPORT

The goals of the DARE program.—The DARE program is designed to produce the following results:

(1) Provide a mechanism for unifying existing and future educational programs for older persons in the Huron area;

(2) Furnish additional on the educational needs of older persons; and

(3) Utilize the educational resources of the entire Huron community to meet the needs of older persons.

Specific objectives of the DARE program.—The DARE program is intended to produce these results:

(1) A minimum of 24 short noncredit learning experiences for older persons.

(a) To be offered in four phases beginning September 1976, January 1976, April 1976, and June 1976.

(b) Each learning experience to normally last an equivalent of 10 contact hours (continuing education unit equivalent).

(c) Precise subjects and formats to be decided by the director in consultation with the advisory committee and older persons involved the process for consulting them.

(d) To include a liberal arts component (9 courses) and a basic needs component (15 courses).

(e) To be taught by a combination of Huron College faculty and community resource persons.

(2) A process for regular consultation with older persons on their educational needs, thereby developing a model workable for other communities.

(3) A unified planning, organizing, and publicity system for the learning program, supervised by Huron Area Senior Center staff and with educational and administrative assistance from the Huron College Community Learning Center.

(4) A training process for Huron College faculty centered on the planning of the liberal arts component of the learning program.

(5) A refined set of guidelines for planning learning experiences for older persons.

(6) An educational model to be utilized in the event that the "live-n-learn" senior center becomes a reality in McDougall Hall on the Huron College campus.

(7) A 1-day model workshop designed by the Huron College Community Learning Center to be shared with participating institutions in the colleges of mid-America consortium for the purpose of helping these institutions develop their own programs for older persons. Workshops to be presented during 1977–78.

Procedures for achieving the DARE objectives.—The DARE program will employ:

(1) An advisory committee consisting of 10 members, including 3 senior center members, and the director, 2 Huron College faculty, and 2 representatives each from the Retired Teacher's Association and the National Association for Retired Federal Employees.

(2) Five educator-senior consultants—persons who have been educators and are older persons. They are:

Dr. Phillipp Mergler, former dean of Huron College;

Mr. Frank Smith, former Huron College dean and economics professor;

Miss Gladys Pyle, former public school teacher;

Miss Bea Koch, former college professor;

Miss Leta James, former public school teacher.

(3) Two outside consultants on aging and education (via telephonic consultation):

C. B. Lord, associate director, Georgia Center for Continuing Education.

James Peterson, liaison officer between the Ethel Percy Gerontology Center, University of Southern California, and the NRTA–AARP, Los Angeles, Calif.

(4) The consultant services of Central South Dakota Community Counseling Services.

(5) The administrative and educational assistance of the Huron College Community Learning Center and the college's support offices, including public information, academic affairs, and the business office.

Calendar for the DARE program.—DARE activities are tentatively planned on the following timetable:

July 1976:
- Organize advisory committee.
- Plan meeting for consulting older persons.
- Telephonic consultations, consult with community counseling services.
- Plan first six learning experiences.
- Orient staff for learning experiences.
- Develop first draft of guidelines.

August 1976:
- Evaluate process for consulting older persons.
- Meet the senior consultants.

September 1976:
- Consult older persons.
- Implement phase I learning experiences.
- Meet with senior consultants.

October 1976:
- Evaluate phase I learning experiences.
- Revise guidelines and consulting process.

November-December 1976:
- Plan phase II learning experiences.
- Consult older persons.
- Work on educational model for new senior center.
- First draft of model workshop.

January 1977:
- Implement phase II learning experiences.
- Continue work on educational model.

February 1977:
- Evaluate phase II learning experiences and consulting process.
- Use data to modify educational model for center.
- Use data to modify workshop model.

March 1977:
- Plan phase III learning experiences.
- Consult older persons.

April-May 1977:
- Evaluate phase III and consulting process.
- Finalize guidelines for learning experiences.
- Finalize educational model.
- Plan phase IV learning experiences.

June 1977:
- Implement and evaluate phase IV learning experiences.
- Finalize workshop model.
- Evaluate entire DARE program.
- Set guidelines for future operation of the program.

Instructor resources.—The following persons will have assisted in or taught classes involving older persons:
- Marilyn Hill, instructor in sociology.
- Philip Wyse, instructor in music.
- Bruce Woodruff, instructor in drama.
- Kenneth Meyer, director of institutional research.
- Gene Denison, associate professor of political science.
- Frank Smith, professor of economics.
- Joyce Povlacs, professor of English.
- David Nichols, associate professor of history.
- Trudy Felix, YWCA director.
- Paul Felix, director, community counseling services.
- Matilda Tschetter, retired teacher.
- Lillian Wintle, retired teacher.
- Ted Kneebone, Huron public librarian.
- Newton Staley, retired Federal employee.
- Judy Schwartz, registered nurse.
- Ardis Gatons, Beadle County extension agent.

Competencies of the agencies to carry out the DARE program.—Huron College has manifested a growing competency in continuing education activities. This year, the community learning center was established with three staff members and the mandate to develop a comprehensive community service and adult education program. Dr. Keith H. Orr has taken educational services to churches and schools in the South Dakota region since 1972. Dr. David Nichols has administered adult education programs under five grants from the South Dakota Committee on the Humanities and is currently supervising the liberal arts for older Americans program, funded under title I.

The Huron Area Senior Center, Inc., is known as one of the finest in the State, with approximately 700 members. Under the direction of Shirley M. Overland, the center has grown and currently maintains a variety of activities that touch on health, welfare, educational needs of older persons in Huron and vicinity. The center supervises a number of Federal grant programs as well as funds furnished by the city of Huron and Beadle County.

Proposed commencement date of program.—July 1, 1976. Proposed completion date: June 30, 1977.

Governmental units, private organizations, and community agencies cooperating in the program.—Retired Teachers Association; National Association of Retired Federal Employees; community counseling; CMA Colleges: Briar Cliff, Buena Vista, Dakota Wesleyan University, Dordt, Mount Marty, Northwestern, Sioux Falls, Westmar, and Yankton.

Population to be served.—Older persons (55 years of age and older) in Huron and vicinity.

Geographic location.—Primarily in Huron at the Huron Area Senior Center and at Huron College.

SIGNIFICANCE AND UNIQUENESS OF THE PROGRAM

The significance of the DARE program is that:

(a) There is only one other program in South Dakota that approaches its comprehensiveness in an attempt to have a unified educational delivery system.

(b) It has the potential for producing a workable model of program development and cooperation that can work for other communities.

(c) The possibility of developing, as part of the DARE program, an educational program to be utilized in a college residence hall—senior center at Huron College is unique to South Dakota.

Evaluation procedures.—The DARE program will employ the following types of evaluation:

(1) Continuous monitoring:

(a) By the advisory committee.

(b) By community counseling services.

(c) Through evaluations by the older persons served in learning experiences.

(2) Final evaluation:

(a) By the advisory committee.

(b) By two outside evaluators to be selected by the advisory committee.

PROJECT COSTS

Method of financing:

Appropriations, 66⅔ percent.

Institutional funds, 33⅓ percent (including in-kind matching).

Funds: Huron College, $16,227 Federal; $8,657 Matching; $24,934 Total; cost per participant, $33.

BUDGET FOR DEVELOPING ADULT RESOURCES THROUGH EDUCATION PROGRAM

Personnel	Requested	Matching	Total
Project director: Estimated 240 hours at $10 per hour	$1,500	$900	$2,400
Faculty planning time: Equivalent of 4 days at $100 per day for 9 persons	2,700	900	3,600
24 course instructors:			
9 professionals at $500 per course	4,500	----------	4,500
15 nonprofessionals at $200 per course	1,500	1,500	3,000
Advisory committee: 6 days at $50 per day for 9 persons	1,800	900	2,700
Consultants (telephonic)	150	----------	150
Consultant services, community counseling services: 8 days at $100 per day	500	300	800
Senior-Educator consultants: 1 day at $100 per day for 5 persons	500	----------	500
Outside evaluators: 2 persons at $100 per day for 2 days plus travel and per diem	600	----------	600
Secretarial and office (including community learning center services, public information services, etc.)	700	1,000	1,700
Materials and publicity	1,000	----------	1,000
Equipment rental: Estimated rental for mimeograph machine and typewriter for 12 mo	100	----------	100
Other	727	----------	727
Indirect costs, 15 percent	----------	3,157	3,157
Total	16,277	8,657	24,934

ITEM 4. "KARE" PROGRAM PROPOSAL OF HURON COLLEGE, SUBMITTED BY SHIRLEY OVERLAND

MISSION STATEMENT

Be it resolved, That the Huron College Board of Trustees commits Huron College to becoming the lifelong learning center for all ages in central South Dakota.

This is a new thrust in Huron College history, and the trustees intend that it shall encompass the operations of the entire college.

The new program stands for redefinition of our historic Christian mission, expressing through education the reconciling love that is in Christ Jesus. Therefore, we welcome not only all ages, but all faiths to a reconciling community where every person is treasured for what he or she can contribute to learning.

At the same time, the lifelong learning center stands for practical education in a world where people will have many careers and must develop stable values to cope with life's uncertainties. To that end, Huron College's lifelong learning program will stand for excellence and commitment to fundamentals (reading, writing, speaking, and critical thinking) that will continue to be needed.

We intend Huron College to become one of the distinctive colleges in the Midwest.

Adopted by Board of Trustees, July 9, 1976.

STATEMENT OF DAVID A. NICHOLS, HURON COLLEGE, HURON, S. DAK.

THE PROPOSAL: THE "KARE" PROGRAM (KINSHIP OF THE AGES THROUGH RECONCILING EDUCATION)

Huron College proposes to establish a cross-generational learning community on its campus. This will be a demonstration model for what colleges must do to meet the needs of "the learning society" in the last quarter of this century. The project will be based on a cooperative effort with the Huron Area Senior Center, the foundation of which will be the conversion of a residence hall to a "live-n-learn" senior center featuring both living quarters and public activity space.

On this foundation, Huron College will develop an educational program unique in scope and conception. The college will seek to meet the educational needs of a large senior population, utilize older persons as educational resources for the young, and construct a cross-generational framework for lifelong educational renewal for an entire rural community and its environs.

This model program will produce a unique laboratory for social and educational gerontology, new curricular models for small colleges across the Nation, and contribute to a cross-generational redefinition of liberal arts education.

THE LEARNING SOCIETY: THE FUTURE IS HERE IN HURON

America is becoming an older society. Demographers predict that one in two persons will be above the age of 50 by the year 2000. This development will profoundly affect every American institution, including higher education. Colleges, if they are to survive and be worth saving, must become lifelong learning centers in a "learning society" (Hesburgh et al., Patterns for Lifelong Learning, 1973, p. 4).

South Dakota is already far advanced in this demographic revolution. One in eight South Dakotans is 65 years of age, compared to 1 in 10 nationally. The State ranks seventh in the Nation in the proportion of its population in this age group. From 1960 to 1970, the proportion of older Americans in South Dakota increased 11.1 percent. Sixty percent of South Dakota's older persons never completed elementary school and only 10 percent attended college, with 4 percent completing a college degree. These are persons with needs accentuated by the isolation and lack of services common to a low-income rural region.

These characteristics are even more sharply focused in the Huron area. In Beadle County, 17.2 percent of the population is 65 years of age and older and 25 percent are 55. The Huron area is a microcosm of 21st century America with all the problems and opportunities therein. It is an ideal laboratory for testing models for the learning society of the future adapted to the special needs of rural areas.

THE YOUTH-CENTERED COLLEGE: A FAILURE FOR YOUNG AND OLD

For the past generation, colleges and universities have generally operated as "youth ghettoes." Their programs, policies, and practices have been geared to high school graduates. Older persons rarely entered college programs and, when they did, they were forced into youth-oriented molds.

The recent interest in older American education has not broken the youth-centered paradigm around which institutions plan and operate their programs. With few exceptions, these colleges and universities have taken two courses of action: (1) They have set up segregated educational programs, conceived by younger professionals for older persons; (2) They have attempted to lure elders into the regular academic program. Most of the latter have not been very successful because older persons find themselves forced into programs and institutional environments geared primarily to prepare young people for the job market.

These programs fail to adequately meet the educational needs of older persons. They fail to utilize the older person's experience and wisdom as an educational resource for younger persons. They deprive younger persons of cross-generational social competencies necessary to effective functioning in a cross-generational work world. Finally, they accept a narrow definition of liberal arts education as an exposure to a variety of subjects. The learning society of the future demands something more.

NEED FOR THE LEARNING SOCIETY: A NEW IDEA OF A COLLEGE

The surrogate extended family concept—The learning society will demand that educational institutions reincarnate the cross-generational learning environment once furnished by the extended family. Ours is a society in which individuals and family units have become increasingly isolated. That isolation has been psychologically destructive for older persons and it has deprived the young of the experience, wisdom, and familial roots essential to healthy development.

Huron College proposes to integrate a surrogate extended family factor into its educational program through the establishment of a cross-generational learning community where both age groups have support systems adequate to encourage interaction.

Redefining the liberal arts—The cross-generational concept demands a broadening of the liberal arts definition to include exposure to a variety of people and ages. In other words, people learn from one another, not just books or teachers. A liberating education is not adequately provided in a marriage and the family class containing only young people who have never raised a family. It is insufficient to have business classes without experienced business persons as resources. Experience and knowledge are inseparable and an awareness of the life cycle should inform all subjects in the curriculum.

This redefinition is essential for the new kind of college. It will create the comfortable environment whereby older persons can profit from higher education in an atmosphere of respect for their worth as educational resource persons. It will also enable the young to benefit from the experience and wisdom of the aged. This interaction factor will be mandatory for education that claims to be liberating for any age group in the learning society. It will have impact on both content and teaching methods in the college classroom.

FOUNDATION FOR THE PROGRAM: THE M'DOUGALL HALL PROPOSAL

For 6 months, Huron College and the Huron Area Senior Center, Inc., have been involved in negotiations concerning the possible lease or sale of a large residence hall, McDougall Hall. The senior center, with its 700 members, has outgrown its present facility. The need for additional space, the shortage of additional low-income housing for older persons, and the success of the DARE program all encouraged consideration of the residence hall.

The Huron College trustees, at their December 11, 1975, meeting, decided to sell the building if funds could be secured. The Huron Area Senior Center then applied to the Department of Housing and Urban Development for renovation and purchase funds. The plan calls for the creation of from 23–28 low-income housing units for older persons and public space for senior center activities. The building and lot, while owned by the center, would function as an integral part of the campus and center members could be provided with a wide variety of educational services. The senior center will hear on April 15 as to the disposition of the application.

Once established, the presence of this senior center and living quarters on the campus will provide the basis for the rest of the KARE program, an ideal laboratory for gerontology and lifelong educational services for the learning society. It will also furnish a support system for older persons that will provide the requisite security for participating in the broader campus life.

THE HURON AREA SENIOR CENTER

The uniqueness of the proposed project rests on the excellence of the Huron Area Senior Center, Inc. In a 4-year period, the center has grown from 75 to over 700 members. The leadership projects a potential membership of 1,500 members. Its range of services include home care, nutrition, RSVP, meals-on-wheels, and many others. The center has an extensive transportation program and is involved in servicing 400 additional senior center members in five satellite centers in Beadle County. The Huron Area Center, under the leadership of Director Shirley Overland, has gained a reputation as the finest operation of its kind in the State and region.

HURON COLLEGE AND THE COMMUNITY LEARNING CENTER

Huron College is a 4-year, liberal arts college associated with the Presbyterian Church. Established in 1883, the college presently has 360 students. In 1975, the college community declared its commitment to Christian principles in education—in particular, the principle of reconciliation. That statement includes the following:

"In working for reconciliation, we include people of many backgrounds, interests, ages, abilities, and beliefs. We seek to learn from the culture and heritage of many, particularly those who are indigenous to our area—rural and urban, young and old. . . .

"We have a special commitment outside our campus to the area we live in, serving as a catalyst for reconciliation and a center of learning and culture for central South Dakota and beyond. Interaction among students, faculty and members of the larger community helps free us all from limited knowledge and narrow attitudes.

"We encourage lifelong learning and careers that involve people's whole lives. . . ."

To these ends, the college established an office called the community learning center. This office is intended to go beyond the extension educational services normally associated with colleges and universities. The community learning center provides a variety of educational services (workshops, programs, courses) for adults in South Dakota. It has been involved in attempts to institutionalize a

cross-generational learning community on the campus by developing programs and policies designed to serve mature adults in the regular academic program. As a result, students above the age of 25 number one in four of Huron College students. In addition, the learning center has furnished a number of noncredit learning experiences, involving a cumulative total of over 300 senior citizens in short, noncredit courses in the past 8 months.

Under the codirection of Dr. Keith Orr and Dr. David Nichols, the center is developing a comprehensive plan for community education for Huron and the region. The community learning center's 5-year plan calls for a reorientation of all college personnel, programs and policies to serve lifelong learning needs. This program is an unprecedented attempt to make the entire institution into a community learning center, a source of lifelong educational renewal for the Huron community and the region it serves. If successful, the Huron College program will become a model program for post-secondary education in the learning society. The KARE program is therefore the centerpiece of a larger comprehensive community education program.

SPECIFIC OBJECTIVES OF THE KARE PROGRAM

(1) To encourage constructive attitudes toward and knowledge of the life cycle among all age groups in the college community.

(2) To eliminate agism in college social and intellectual life.

(3) To serve the special educational needs (both basic survival needs and enrichment needs) of older persons.

(4) To utilize older persons as resources for learning and counseling, cultivating the intellectual circle of young and old.

(5) To foster surrogate extended family relationships among young and old.

(6) To reorient college personnel, policies, and programs to the needs of older persons.

(7) To redesign disciplinary and professional fields of study to include aging components and educational methods utilizing older persons as resource persons.

(8) To assist younger students in acquiring cross-generational competencies for effective service in the learning society of the future.

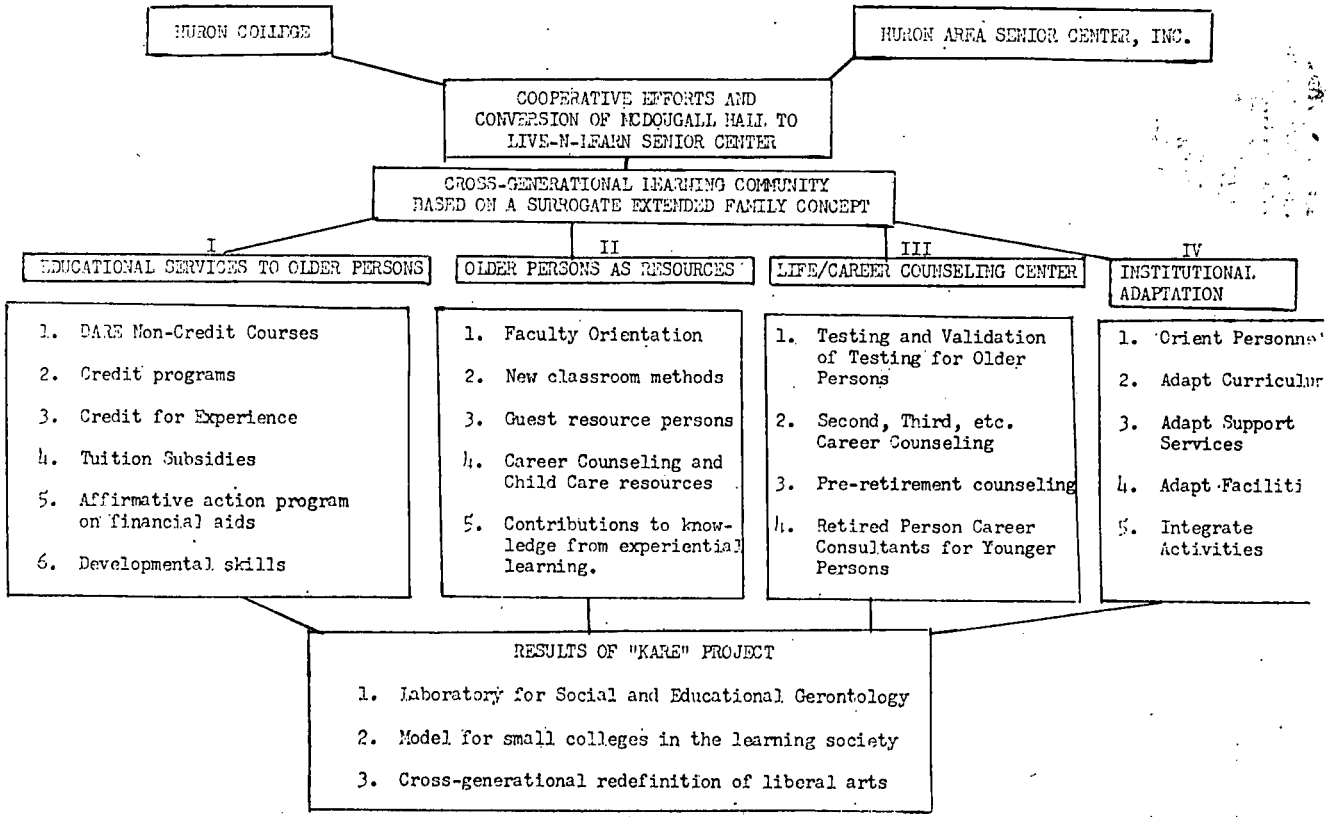
(9) To provide counseling to meet cross-generational needs in planning first careers, second careers, and retirement.

(10) To utilize the young-old educational framework as the grounding for servicing the lifelong learning needs of older age groups between youth and the aged.

(11) To establish a living laboratory for social and educational gerontology to benefit preprofessionals and professionals.

(12) To demonstrate the utility of redefining the liberal arts to include an exposure to a variety of persons and age groups.

9. DIAGRAM OF THE "KARE" PROGRAM



WHAT WE INTEND TO DO: COMPONENTS OF THE KARE PROJECT

Component No. 1: Educational Services to Older Persons

(1) *What Huron is already doing—The DARE program of noncredit courses.*—In 1975, the community learning center received title I funding in the amount of $19,099 for a program entitled, "Liberal Arts for Older Americans." The premise of this program was that many educational programs aimed at senior citizens either focused them into educational molds conceived for young persons or provided segregated, paternalistic, and trivial learning experience designed by younger persons and based on myths concerning the learning capacities and interests of older persons.

The "DARE" program (developing adult resources through education), as it was eventually renamed, is predicated on the idea that older persons can and do value learning in traditional liberal arts disciplines, provided those disciplines and teaching methods are adapted to their special needs. The DARE program has become, therefore, a vehicle for faculty members to adapt their disciplines' content and methods to senior needs.

This program has been popular and successful. As it has developed, the advisory committee has moved to integrate learning experiences designed to meet basic needs (consumer education, defensive driving, estate planning, etc.) with the liberal arts offerings, an integrated delivery system for educational services. This integrated system was recognized with a second title I grant of $24,934 in January 1976 (funds to be released during fiscal 1977).

A major purpose of the DARE program has been to, where possible, encourage cross-generational learning activities. A sociology of leisure class (summer 1975) was successful in involving persons with an age range of 19 to 80. Most recently, a January term course, "Myths of Aging," involved younger students at the College in a balanced program of study and field experience and cross-generational social activities with members of the Huron Area Senior Center. This class was one of the most successful January term courses in the recent history of the college. It demonstrated the utility of the integrative principle that underlies the proposal to establish a "live-n-learn" senior center on campus as part of a cross-generational learning community.

A cumulative total of more than 300 older persons have been involved in the DARE program and its auxiliary activities. To this point, however, these programs have taken place mostly at the current senior center (which is located some distance from the campus) and have been only peripherally integrated with regular college study. It highlights Huron College's successful track record in educating older persons, and it demonstrates our capacity for implementing the more comprehensive KARE project.

(2) *What Huron College seeks to do: The regular academic program.*—Where most colleges have failed, Huron hopes to succeed in integrating older persons into the degree-granting curriculum. The following constitute important factors in this program:

(a) The orientation of staff and faculty to serve older adults;
(b) A credit for life experience program;
(c) Tuition subsidies;
(d) An affirmative action program to guarantee older persons equal access to all financial aids; and
(e) A developmental skills program to assist older persons in adjusting to college-level academic work.

The orientation of staff and faculty will be covered more thoroughly below, but it is essential to integrating older persons into course work. The redefinition of liberal arts described above will assist in this because it treats older persons not merely as students but as resource persons.

The credit for life experience program is already in operation at Huron College, but there has been insufficient personnel time available to go through the process of applying it to senior citizens. The college needs additional funds to hire personnel to accredit experiential learning properly.

Huron College has taken steps to open all financial aids to adult students and some younger adults have taken advantage of this program. However, older Americans need special attention and help in putting together Federal family financial need statements necessary to receive basic opportunity grants, work-study funds, low-interest loans, and other aids.

These aids will not be sufficient for some older persons on low incomes. Huron College currently charges $99 per unit (40 percent of the regular tuition) for credit and $25 for audit (50 percent of the regular fee) for senior citizens. As a small private college, Huron cannot afford to cut these fees further and needs tuition subsidies to help provide educational services to older persons.

Finally, one of the great concerns for older persons entering college work centers on their study skills. A major objective will be to validate the McGraw-Hill basic skills, writing, reading, and vocabulary tests, and the Brown-Carlsen listening comprehension test with older persons and adapt them to their needs. At the same time, in line with the cross-generational emphasis, the Huron College study skills clinic will attempt to utilize older persons as developmental skills assistants in working with younger students needing assistance.

Component No. 2: Older Americans as Educational Resources

Fundamental to the KARE program is the idea that utilizing older persons as educational resource persons enriches both the learning of younger students and provides the foundation for comfortable entry of seniors into degree-granting college programs. Older persons have experience, wisdom and perspective to bring to learning experiences which they can profit from the fresh ideas of younger persons.

Huron College seeks to systematically utilize the elder educational resources that will be so readily available due to the establishment of the senior center adjacent to the campus. Specifically, Huron will seek to:

(1) Orient faculty to the valuable resource in older American experience;

(2) Develop classroom methods to effectively utilize older persons who enroll in the academic program;

(3) Establish a program of paid guest-resource persons drawn from the senior population;

(4) Develop a program utilizing the professional experience of retired persons in career counseling (see the life/career counseling component below);

(5) Identify, utilize, and preserve the contributions to knowledge that can be obtained from older adult experiential learning (e.g., oral history, etc.); and

(6) Utilize the child care competencies of older persons in a child care program integrated with educational programs and serving younger single parents-students with child care needs.

Component No. 3: A Life/Career Counseling Center

South Dakota has no sophisticated career counseling center for any age group in the State. Persons can expect to change vocations as many as five times prior to retirement. Huron College proposes to meet the need by establishing a unique cross-generational counseling center. A feature of this center will be the utilization of retired professionals as career consultants. At the same time, an effort will be made to provide second career counseling (or beyond second careers) and preretirement counseling.

The counseling center will be predicated on a recognition of the inevitability of career changes. It will assist persons all along the age spectrum in achieving positive perceptions of the life cycle and avoid the "on the shelf" syndrome for older persons.

Younger students (including mature adults planning a second career) will go through the following steps:

(1) Interview with a career counseling clinician;

(2) Take interest and personality tests;

(3) Have test battery results evaluated by the clinician;

(4) Interview with a retired professional career counselor (an older person experienced in law, business, medicine, etc.);

(5) Have a composite evaluation prepared by the clinician and the retired person; and

(6) Have a conference for sharing evaluation results.

The older person-consultant will be involved in steps four and five. These persons will be hired on a consultant basis.

In counseling older persons, a major concern of the center will be appropriate testing procedures. At present, no comprehensive set of tests are available that are appropriate to the needs of older persons.

The Huron College Counseling Center, under the leadership of Dr. Tyra Talley, will attempt to validate instruments and establish fresh norms to assist older persons. The following instruments will be utilized:

(1) The Minnesota Mutiphasic Personality Inventory;

(2) Dr. Grace Kent's Emergency "D" scale to assist in sorting out persons not suited to academic work and identify different interests;

(3) The general aptitude test battery to establish criteria for over-all expectations; and

(4) The Strong vocational inventory test (would be useful in identifying areas of critical interest for alert and aggressive older persons).

The counseling center staff will attempt (in cooperation with the developmental skills program utilizing the McGraw-Hill study skills tests) to adapt these instruments to the needs of older persons and provide a model career and retirement counseling program for the region.

Component No. 4: Institutional Adaptation to the Cross-Generational Learning Community

(1) *Orienting personnel:* Huron College seeks to orient all personnel (both teaching and nonteaching) to the needs, value, and roles of older persons who will be connected with the senior center on campus. All other plans cannot be operationalized without adequate orientation of staff. To this end, Huron College will:

(a) Hold not less than four staff workshops on aging and the needs of older persons during 1976–77;

(b) Employ consultants to meet with every administrative and academic unit in the college to assist in adapting policies and programs to the new situation; and

(c) Involve faculty in planning (both released time, summer and January term) for the adaptation of their subject areas to the needs of a cross-generational student clientele.

Fundamental to this reorientation process will be strict requirements that staff provide visible evidence (in the form of written plans, active performance, course plans, etc.) that they have, in fact, adapted and internalized new knowledge concerning older persons and the aging process.

(2) *Adaptation of the curriculum.*—Related to the orientation of teaching staff will be a process for implementing the study of aging in the curriculum. This will be done through:

(a) Specialized social and educational gerontology courses;

(b) Design of gerontology modules for utilization in existing disciplines; and

(c) Design of workshops and noncredit offering that can be provided both on and off campus.

The college will seek consultant assistance in this program and is negotiating with the University of Michigan Gerontology Institute concerning a possible consultant relationship with that institute. Dr. Howard C. McCulsky has already consulted with Huron College personnel and will be visiting the campus later this spring in that capacity.

In this program of curricular adaptation, Huron College hopes to provide a model for other small private colleges. We anticipate that no discipline or professional field will be left untouched by an aging factor. Specific examples may include:

(a) History: An increased emphasis on preserving the oral history of the region and the eye-witness accounts of 20th century events that can only be provided by the persons who lived through them.

(b) Sociology: An emphasis on personification of the life cycle, drawing on the expertise of older persons in family matters, career and retirement problems, etc.

(c) Psychology: An increased emphasis on longitudinal studies of human behavior and the impact of aging on human psychology and intelligence.

(d) Physical education: A move away from sports emphasis to increased focus on recreation and lifelong physical fitness, with personification of particular problems and field experience for recreation directors of the future.

(e) Music: Adaptation of music education methods to the needs of older persons. In the DARE program, one Huron College professor already has adapted the famous Carl Orff music education method to senior citizens on

the premise that music educators of the future must be able to educate all ages.

(f) Education: As a prominent teacher-training institution, Huron College will adapt its methods and theory courses to the realities of a lifelong learning society and the need to produce educators with the compentencies for teaching all ages.

These are only a few examples of the curricular adaptation process that must take place at Huron College. There are obviously others, especially in the sciences. This will require staff time, consultant help, and careful consultation with older persons themselves.

(3) *Adaptation of support services.*—Huron College plans to offer, beyond the sale of McDougall Hall, a range of support services to Huron Area Senior Center members. These will include:

(a) Free access to the college library and development of library holdings in gerontology and senior services;

(b) Free access to college activities;

(c) Free access to college recreational facilities, including the swimming pool;

(d) Free access to services in the Huron College Campus Center;

(e) Food service;

(f) Public information office services;

(g) Business office services; and

(h) Health care services (campus nurse).

These services are costly and the college must seek outside funding in order to provide them. Their provision is fundamental to the establishment of the cross-generational learning community envisioned in the KARE project.

(4) *Adaptation of facilities.*—Huron College has facilities other than McDougall Hall which older persons will utilize and which require modification for safety and adequate service. Specifically, the college needs to:

(a) Build ramps and handrails at a variety of locations on the campus;

(b) Remodel the gymnasium and swimming pool area to remove safety hazards;

(c) Install an elevator in Voorhees administrative and classroom building and elevator ramps in the library and campus center; and

(d) Install a closed-circuit cable television production system of educational service to shut-ins.

SPECIAL MECHANISMS FOR IMPLEMENTING THE "KARE" PROGRAM

Huron College will utilize the following mechanisms in implementing the KARE program:

(1) An educational needs assessment process for older persons (the DARE program has produced one significant survey and developed some informal consultation processes);

(2) A cross-generational advisory committee representing both elder and younger student interests and community leadership, to number 12 persons: and

(3) Working alliances with the South Dakota Office on Aging and other State social agencies, senior organizations (including the Retired Teachers Association, Retired Federal Employees, etc.), the Gerontology Association for Training and Education of South Dakota (GATE), and consultant personnel from the University of Michigan Gerontology Institute and other such institutions.

CALENDAR FOR IMPLEMENTATION

The calendar for implementation is currently in preparation. It is dependent, in part, on word from the Department of Housing and Urban Development concerning the purchase of McDougall Hall. That approval is expected on April 15, 1976. Thereafter, negotations will be completed and a timetable for renovation of the building can be established. The following is therefore quite tentative.

The assumption of the proposal is that KARE activities can begin in the fall of 1976. The activities for 1976–77 include:

Orientation of staff (workshops and travel),

Renovation of campus facilities,

Employment of project director and counseling director,

Pilot credit, tuition and skills development activities,
Pilot utilization of support services,
Introduce gerontology into the curriculum,
Establishment of advisory bodies, and
Pilot use of older persons as educational resources.

The second year will be concerned with:

Expansion of the counseling staff,
Completed adaptation of curriculum units,
Expansion of services to satellite senior centers,
Employment of an assistant project director,
Development of pilot workshops, teaching modules, and
Integrated activities of every kind.

The third year will focus on services outside the campus, including:

Expanded services to professionals serving seniors,
Educational services to nursing homes and their personnel,
Dissemination of project results through workshops, seminars, teaching modules,
Expanded services to satellite senior centers, and
Production of literature and scholarship on aging.

In general, the implementation pattern will call for an emphasis on orientation, planning and pilot projects the first year, institutionalization of the full-blown program the second year, and dissemination of information and service beyond the campus the third year.

IMPLICATIONS OF THE KARE PROJECT BEYOND THE CAMPUS

The program will eventually have an impact beyond the college campus. Huron has two sizeable nursing homes and eventually both the professional personnel and the residents of those homes will be served by the Huron College program. The Huron Area Senior Center assists five Beadle County satellite centers and they will benefit from the cooperative relationship with Huron College.

Huron College participates in GATE (Gerontology Association for Training and Education), the State organization, and the Huron program will be a significant component in the statewide gerontology program. The GATE organization will become the major vehicle for disseminating knowledge and program skills gained through the KARE project.

PLANS FOR DISSEMINATING KNOWLEDGE AND PROGRAM SKILLS

Through the community learning center, Huron College has the competent personnel, experience, and means for disseminating information about aging and service programs for elders. This will be done through the development of workshops for both public school and post-secondary educators and seminars for social service, nursing home, and senior center professional personnel.

The GATE organization, with its connections with institutions of higher learning and senior organizations, will be a major channel for the dissemination of information.

Huron College will attempt to share knowledge through provision for visits and research by scholars, programs on the campus, and articles for journals. The college will also attempt to package teaching modules on aging that can be a major channel for the dissemination of information.

Huron College will attempt to share knowledge through provision for visits and research by scholars, programs on the campus, and articles for journals. The college will also attempt to package teaching modules on aging that can be utilized by organizations and educators.

EVALUATION OF THE KARE PROJECT

The KARE project will utilize an outside evaluator process, drawing evaluators from the South Dakota Office on Aging, the University of Michigan Gerontology Institute, and the GATE consortium. These consultants will assist in the identification or construction of evaluative instruments for each of the four components of the program.

Internal evaluation will be conducted by the cross-generational advisory committee and each administrative unit in the program. Older persons themselves will be given opportunity to evaluate the program at all points.

A major component of the first year's program will be concerned with developing adequate evaluative instruments.

NATIONAL SIGNIFICANCE OF THE KARE PROJECT

At present, three private colleges (to our knowledge) have or are planning to establish living quarters for elders on their campuses. These are Bucknell in Pennsylvania, St. Benedict's in Minnesota, and Fair Haven (the "bridge" program) in Washington State. The University of Syracuse also has living quarters for seniors and a number of other institutions are considering utilizing empty residence halls for housing. A few community colleges have helped to start senior centers as part of their operation.

To our knowledge, none of these situations envision a cross-generational learning community of the type described above. None of them involve a senior center with the range of services, membership, or reputation for excellence associated with the Huron Area Senior Center. None are seeking to so fundamentally alter the operating assumptions of higher education in redefining the liberal arts. Huron College is, in the words of consultant Howard McClusky (University of Michigan Gerontology Institute) "changing the rules of the game."

The project is highly significant for the low-income rural region that is central South Dakota. The life/career counseling component, when operational, will provide the only sophisticated career counseling available in the entire State. There is nothing like the KARE counseling conception closer than Minneapolis, Minn. (United Theological Seminary), and that program does not utilize retired professionsl as counseling resources.

Finally, the Huron College project will provide a unique laboratory for social and educational gerontological field study in a rural State where educational innovation has been rare. It will be a model for rural educational development for small private colleges and the communities they serve. The density of its senior population makes it a demonstration model of education for the learning society of the future. In the KARE program, the future has already arrived at Huron College.

ITEM 5. MEMORANDUM FROM BETTY J. CLAYMORE, CLINICAL SOCIAL WORKER, PUBLIC HEALTH SERVICE, EAGLE BUTTE, S. DAK.; TO JACK CLAYMORE,[1] DATED AUGUST 16, 1976

There is a need for an intermediate care facility on the Cheyenne River Reservation so that residents with deteriorating health will not have to move to a foreign environment in their last years. The closest nursing home is 70 miles away in Gettysburg. Mobridge and Pierre nursing homes are about 90 to 95 miles.

Our office is now involved with social services to 12 Indian patients residing in off reservation nursing homes. I am sure that there are that many again with whom we have no contact in addition to that many non-Indians from Eagle Butte who would also prefer to remain in this community.

One of the problems we are constantly dealing with is elderly in the Manor apartments whose health is deteriorating to the point where they can no longer be unattended.

We cannot find live-in homemakers willing to work 24 hours per day and if we did find two or three homemakers willing to do shift work there would still be no funding under supplemental security income which is the primary income of most of our recipients.

Many of our people prefer to speak Lakota and, when they are in non-Indian facilities, seldom communicate with staff and other patients due to the language difference. Relatives seldom visit because of the distance and cost involved and patients become depressed quickly and refuse to eat, resulting in early demise.

BETTY J. CLAYMORE.

---

[1] See statement, p. 278.

ITEM 6. STATEMENT OF IYONNE GARREAU, NUTRITION PROGRAM PROJECT DIRECTOR, CHEYENNE RIVER SIOUX RESERVATION; SUBMITTED BY JACK CLAYMORE

At the present time, the nutrition program for the elderly—the home site, located in Eagle Butte—is serving three communities on a daily basis. Twice a week, we serve two other communities, located on the far west end of the reservation. Funding is through title VII funds.

The Cheyenne River Sioux Tribal Council has, by resolutions, indicated its support by authorizing the use of tribal government revenue sharing funds to open and maintain a meals site for the elderly at the far east end of the reservation. This site provides a noon meal daily to two communities.

This year, through supplement title VII funds, we will be able to provide daily meals, home delivered, to the two communities on the west end, and also contract with the BIA school to provide a noon meal to another community on the west end.

Our goals and objectives are to reach out to the five remaining communities.

In order to accomplish this goal, we need adequate transportation. At the present time, we are operating with three buses and the use of private vehicles to pick up and deliver participants to the congregate site and home deliver the noon meal.

Transportation is at the top of our priority list. We have a total of 420 enrolled eligible elderly persons within the Cheyenne River Reservation.

ITEM 7. MEMORANDUM FROM DOROTHY CLARK, SOCIAL SERVICES REPRESENTATIVE, PUBLIC HEALTH SERVICE; TO JACK CLAYMORE, DATED AUGUST 11, 1976

Some of the needs for the Elderly needed on the reservation are:

(1) More homemaker services—to give services such as cleaning, helping with meals, and general housework.

(2) Transportation getting to places of business, such as shopping for groceries, etc., is still a problem.

(3) Protection services from other family members who are intoxicated and run the elderly out of their own homes.

(4) More workers to haul wood, fuel, and water.

(5) More money for home improvement.

Thank you.

ITEM 8. LETTER FROM SANDRA LE BEAU AND BLAINE CLOWN, SR., CHEYENNE RIVER SIOUX TRIBE; TO NANCY SNYDER, DIRECTOR, FOOD STAMP DIVISION, U.S. DEPARTMENT OF AGRICULTURE, DATED JULY 22, 1976; SUBMITTED BY JACK CLAYMORE

DEAR MS. SNYDER: Pursuant to our telephone conversation earlier this month concerning the expiration date for the food distribution program on Indian reservations, I contacted four of our local programs who are directly involved with persons who receive commodities to get their comments. Copies of their comments are enclosed for your information.

I believe it is obvious by the four memorandums that these programs are frightened by the aspect of going totally to a food stamp program. Economic factors alone, which involve the cost of hiring a car to come to a town that has a store runs around $20. The average income for our people on this reservation is $2,300, and for our elderly people it is substantially lower. Other factors such as time, distance, limited availability of the stamps, lack of staff for the program, etc., all enter into the picture.

We have had the food stamp people present a workshop to our tribal council concerning their program. I believe it was the general concensus of the council and others who work with the poor and elderly that, given the right education

on the food stamp program, the younger people would gradually accept it, and at some time in the future the people themselves would make the switch from commodities to food stamps. It was also the concensus of our people that if the commodity program is terminated our people will go hungry, especially the elderly.

I do not feel it is the intent of the Federal Government to deny services to those in need, and I sincerely hope we can work with your office to work out a solution to this problem. As I stated on the phone, we extend an invitation for you to come to Cheyenne River Sioux Reservation at your convenience. I believe if you could visit Bridger or Red Scaffold you would understand more the hardship terminating the commodity program would cause our people.

I am also enclosing a copy of our Tribal Resolution 40–76–CR and a map of Cheyenne River Reservation for your information. If we can assist you in any way, please let us know.

ITEM 9. RESEARCH PAPER PREPARED BY EDWARD P. HOGAN,[1] Ph. D., DEPARTMENT OF GEOGRAPHY, SOUTH DAKOTA STATE UNIVERSITY

Every Eighth South Dakotan

INTRODUCTION

In the U.S. "Census of Population: 1970," statistics on the age composition of the national population indicate that every tenth person is an older American—age 65 years and older. According to the U.S. Department of Health, Education, and Welfare, the older Americans in 1975 numbered almost 22 million people and comprised over 10 percent of the Nation's total population.

America has experienced a significant change in the age composition of its population during the last 70 years. In 1900, only 4 percent of the total population, or 3 million individuals, were 65 years of age and over. The increase during the last 75 years of some 19 million people more is due to a number of factors. Among them are: increased population, increased life expectancy, improved health services, a higher standard of living, and various other factors.

The U.S. "Census of Population: 1970" for South Dakota showed even more significant data concerning the older American in that State. While nationally every 10th American is 65 years of age and older, every 8th South Dakotan is an older American. In other words, some 12.1 percent of the people in South Dakota are 65 years of age and older. Recent projections by Robert T. Wagner[2] of the Department of Rural Sociology at South Dakota State University estimate that in 1975 older Americans comprised over 12.3 percent of the population of South Dakota.

Herman B. Brotman, Assistant to the Commissioner of the Administration on Aging of the U.S. Department of Health, Education, and Welfare, prepared a paper entitled "Every Tenth American." It described the characteristics of the older American in 1970. This paper, "Every Eighth South Dakotan," is designed to provide the reader with a summary of the characteristics of the older South Dakotan. In this manner, the reader will be able to see what the older population in South Dakota is like, especially in comparison to the older American population in general.

The older South Dakotan will be examined in relation to: number, age, sex, health, life expectancy, income, expenditures, education, marital status, living arrangements, mobility, isolation, voting, and various other major problems. Some conclusions and recommendations will also be included at the end of this paper.

NUMBER

From 1900 to 1970, the population of the State of South Dakota increased 66 percent. During that same 70-year period, the total population of the United States increased almost 300 percent. It can, therefore, be seen that the population of South Dakota has grown at a far slower rate than the Nation as a whole.

The number of people in South Dakota in 1970 65 years of age and over has increased to 6.27 times its size in 1900. In comparison, the national older popula-

---

[1] See statement, p. 294.
[2] See p. 297.

tion has increased in size almost seven times since 1900. Therefore, the increase in the older population in the State has almost equalled the percentage increase in the Nation. However, the increase in the older population of South Dakota is even more significant when one considers that the Nation grew about four times faster than the State.

From 1960 to 1970, the older South Dakotans increased in number from 71,513 to 80,434 people, or an increase of 11.1 percent. This figure is very significant when compared to the State's total population, which decreased 2.2 percent during the same 10-year period. This, of course, also reflects the fact that the younger populations are much more likely to out-migrate. In comparison, the number of older Americans increased 21 percent from 1960 to 1970. The total population of the Nation as a whole increased 13.3 percent during that same 10-year time span.

This growth trend continued into the seventies. From 1970 to 1975, the U.S. Census Bureau estimates that the number of South Dakotans increased 2.2 percent to 682,000 people. During that same 5-year period, Wagner estimates the population of older South Dakotans as increasing 4.4 percent to over 84,000 people. Thus, even with growth in the total population of the State, the older population continues to increase in number at a more rapid rate.

In the last 15 years, the older population in the United States has increased in number at a faster rate than the population under 65 years of age. During that same period, South Dakota's older population grew at an even more impressive rate than the Nation, considering the State's overall loss of population and slow reversal of that loss.

AGE

In regard to the age of the older South Dakotans, the majority are under 75 years of age. Half of the older South Dakotans are under 73 years of age and 31.3 percent are under 70 years. In 1970, some 6,709 South Dakotans were 85 years of age and older. It should also be noted that some 299 South Dakotans were 100 years of age and over.

In the Nation as a whole, the age comparison of the older American is similar to that of the older South Dakotan. The majority of the older Americans are under 75 years of age. Half are under 73 years of age and a third are under 70 years old. Some 1.5 million or 7.5 percent of the elderly are 85 years or older.

There is relatively little difference in the age of the older American and the older South Dakotan. However, while 7.5 percent of the older Americans are 85 and older, some 8.3 percent of the aged in South Dakota are in that group.

SEX

Most of the older citizens in South Dakota are women. In 1970 there were 43,966 women 65 years of age and over, compared to 36,518 males in the same age group. In South Dakota there are 120.3 females 65 years of age and over for every 100 males in the same age group. The ratio of females per 100 males increases as the age gets older. From age 65 to 69 years, there are 109.8 females per 100 males. At ages 70 to 74 years, there are 123.3 women in South Dakota for every 100 men of the same ages. For those individuals 85 years of age and over, there are 151.9 women for every 100 men.

Nationally, the sex ratio for older Americans as a group is even greater. Of the 22 million older Americans, over 13 million are women. In the Nation, for the total population 65 years of age and over, there are about 139 women per 100 men. The ratio, in fact, increases from 124 per 100 men from 65 to 69 years of age to 179 females per 100 males at age 85 years and older.

In comparison then, it can be said that the sex ratio of the older citizen in South Dakota is more favorable than in the Nation as a whole.

HEALTH

In regard to the health of the older South Dakotan, a survey entitled "Social Indicators for the Aged in South Dakota" was conducted by the Business Research Bureau of the University of South Dakota in 1971. The survey conducted in cooperation with the older Americans program of the South Dakota Department of Health provides some interesting facts concerning the health of the older South Dakotans.

In general, the health of the older South Dakotan is such that over 91 percent of them rate it as varying from average to very good. Some 57 percent have no

chronic conditions, disease, or impairments of any kind. In fact, over 81 percent indicated that bad health only prevents them from doing everything they want once in a while.

Some 90 percent or more of the older South Dakotans indicated that they have no difficulty feeding themselves, watching TV, eating solid food, dressing, or putting on shoes. Over 85 percent of South Dakota's elderly found that they had no difficulty getting around the house, washing and bathing, getting out of the house, or hearing over the telephone. About 75 percent of them stated that they had no difficulty cutting their toenails. Lastly, over 67 percent of the older South Dakotans indicated that they do not encounter problems when going up or down stairs.

The health of the older South Dakotan is such that 80 percent of those surveyed indicated that they had not been sick in the month preceding the survey. In fact, over 90 percent indicated that they were ill less than 7 days that month. Only 6 percent of those surveyed were bedridden.

Some 64 percent of the older South Dakotans have undergone a physical exam in the last year. About three-fourths of the elderly believe that their health is superior to that of other people their age. Only about 4 percent of the older South Dakotans believe that they have a health problem that is not currently being treated.

In comparison with the national population, 81 percent of the older Americans get along well on their own. Surprisingly, only 14 percent of the elderly do not have any chronic conditions, impairments, or diseases of any type. However, the vast majority of the older Americans can and still do manage by themselves.

According to HEW, in 1973 some 38 percent of the older persons were limited in their major activities due to chronic conditions. A 1972 study by that department indicated that 18 percent of the older Americans face mobility problems due to chronic conditions. Some 6 percent need help to get around, another 7 percent needed mechanical aids, and 5 percent were essentially limited to their home.

One of the major health problems of the older South Dakotan or American is the fact that they are more subject to illness and disability than younger age groups. In 1973 older Americans averaged 6.5 physician visits per person per year. One out of six of them will be hospitalized during the year. Once in the hospital, they will average a 12.2-day stay.

Some 92 percent of the older Americans wear eyeglasses or contact lenses. About 5 percent of them use hearing aids. However, the elderly do not seem to utilize dental care on the same scale. Over half of the older Americans have either never visited a dentist nor had a dental checkup in the last 5 years.

In 1970 the per capita health care costs for the elderly was $791. Some $534 of that bill was paid by governmental programs. However, operating with their limited incomes, the elderly citizen still had to pay $257 of the bill. It should be noted that medicare only paid 42 percent of the medical health costs of the elderly.

By 1973 about $22.5 billion was spent on personal health care for the Nation's older citizens. This amounts to a per capita health care cost for the elderly of $1,052, over 2.5 times the costs for younger Americans. Some $682 of the bill was paid by governmental programs. However, the elderly individuals share of their health care cost increased to $370. This is a 43 percent increase over a 3-year period and far exceeded increases due to inflation during that same period.

It is important to note that the vast majority of older Americans and South Dakotans get along well on their own. The older South Dakotans are perhaps in better health than the average older American, since a larger percent of the elderly in the State do not suffer chronic conditions, impairments, or diseases.

LIFE EXPECTANCY

The life expectancy or length of life a person can expect to attain varies according to year of birth, specific age, and sex. A child born in 1900 had a life expectancy of 47 years. A child born in 1973 has an expectancy of 71 years. This is an increase of 24 years in life expectancy of the American child since the turn of the century. If that child is a male, his life expectancy is 67 years. However, if the child is a female, her length of life expectancy is over 74 years or over 7 years longer than the male. In other words, women have a significantly longer life expectancy than men.

In regard to the older citizen, whether they be in South Dakota or in the Nation, at age 65 they have a life expectancy of another 15 years. Males at 65 years of age can expect to live another 13 years, and females at that age over 17 years. At age 75 the life expectancy is another 9 years, 8 for males and 10 for females. For those citizens reaching the age of 85, life expectancy is another 5 years.

If the Nation does not experience any significant change in the present death rates, 80 percent of the female children and 65 percent of the male children will live to attain the age of 65 years. Once a person reaches the age of 65 years, they have a 50–50 chance of living to be 80 years old. At age 85 they have a 50 percent chance of living to be 90 years of age.

INCOME

In the United States in 1970, the total aggregate income of the older population was over $60 billion a year. Some 52 percent of that total came from retirement and welfare programs which serve this population. Another 29 percent of the total aggregate income of the elderly came from employment. The remaining 19 percent is returns from investments and contributions.

In South Dakota, the older citizens have less than 50 percent of the income of the younger population. About half of the older South Dakotans have incomes of under $3,000 a year. In fact, almost 30 percent of the older South Dakotans have incomes of less than $2,000 a year. Unfortunately, over 1 percent exist on incomes of less than $500 per year.

In the Nation as a whole in 1970, some 50 percent of the families headed by older Americans had incomes of less than $5,053. The older American living alone or with nonrelatives had a median income of $1,951. Nationally, one-fourth or 5 million older Americans were living on incomes of less than $3,000 a year, or $58 a week.

A 1973 study by the U.S. Department of Health, Education, and Welfare indicated that some married older Americans were well off. Almost 1.2 million older couples had incomes of over $10,000 that year. However, over half that number also had incomes of less than $3,000 a year. HEW also found that almost 1 million older persons living alone or with nonrelatives had annual incomes of less than $1,500 a year, or $29 a week.

It is amazing to think that in modern, industrial America one out of every five poor people is 65 years of age or older. Unfortunately, many of these individuals became poor upon reaching age 65 through forced retirement or health problems.

It is important to note that about half of the older South Dakotans have incomes below $3,000, while only one-fourth of the older Americans are in the same economic position. This is due to a variety of factors. Among them are:

(1) South Dakota as a whole has a lower median income than the Nation.

(2) Since it is a predominantly agricultural State, it is significant to note that farm income is lower than income in industrial areas.

(3) The State has open shops so that the economic impact of unionization has yet to be experienced on a significant scale.

(4) Most retirement programs in the State are several years behind comparable programs in eastern areas of the United States.

EXPENDITURES

The older citizen, whether in South Dakota or in the Nation, spends a greater percentage of his income on food, shelter, and medical services and care than younger individuals. They often have a great deal of difficulty finding basic needs, such as clothing in shopping areas. In other cases, the older citizen does not buy other items or luxuries because they simply cannot afford to purchase them.

In South Dakota, the older citizen is, as mentioned previously, in a tighter economic position than in the Nation as a whole. Yet, many of them fail to realize this fact. Interestingly enough, some 65 percent of the older South Dakotans see themselves as being in the same economic situation as others their age. Less than 9 percent indicated that their income does not meet their present needs. However, over 26 percent anticipated future economic problems with their present incomes.

Unfortunately, in a State with half of its older population in 1970 below the poverty line in incomes, less than 6 percent of the older people used food stamps.

The older South Dakotans do not make use of food stamps because of a variety of factors. Among them are: not eligible; a dislike for welfare or charity; a lack of knowledge about what they are or where to get them; and some people are simply embarrassed to use them. Nationally, many older Americans fail to utilize food stamps for similar reasons.

In the last 5 years, many of the problems which prevented older citizens from using food stamps have been overcome. Inflation has forced more older South Dakotans to use them whether they wanted to or not. The development of the State Tie-Line (1–800–583–1865) phone system has enabled older citizens to obtain information on food stamps and related programs at no cost. The government itself has done a better job of bringing needed information and help to the needy.

EMPLOYMENT

In 1974, about 14 percent of the older Americans were still in the labor force. This equals 2.9 million people or 3.1 percent of the Nation's labor force. Of those employed or actively seeking work, 1.9 million were males and 1 million were females. Some 3.4 percent of the older Americans in the labor force were unemployed.

It is interesting to note that 19.3 percent of the older male workers are employed in agricultural jobs which tend to be lower paying. It is also important to note that only 5.5 percent of the males in the Nation's labor force are employed in agriculture. This is an important factor to be aware of in South Dakota, for the older citizens in this State have some additional employment opportunities available to them in Agriculture which are not available to older urban citizens.

The number of older males in the labor force has decreased steadily from 66 percent in 1900 to only 20 percent in 1974. The older female participation rate in the labor force for 1900 and 1974 were essentially the same, about 8 percent.

EDUCATION

Almost 61 percent of the older South Dakotans never completed elementary school. Some 14.5 percent attended less than 4 years of high school, and less than 10 percent graduated from high school. It is interesting to note that over 10 percent attended college and that over 4 percent were college graduates or more.

Among older Americans, almost half never completed elementary school, while over 6 percent of the elderly are college graduates. It is important to note that over 3 million older Americans have had less than 5 years of schooling and are functionally illiterate.

In comparison, South Dakota has a significantly greater percentage of its older citizens who did not complete grade school. It also has a smaller percentage of elderly college graduates than the Nation as a whole.

MARITAL STATUS

Some 53 percent of the older South Dakotans are married according to the 1970 census. It is important to note, however, that while almost 70 percent of the older males in the State are married, only about 40 percent of the females in that age category are married. About one-third of the older males in the State have wives under 65 years of age. Most of the older women in South Dakota are widowed. In fact, there are four times as many widows in the State as widowers.

National findings are somewhat different, since in this country most older men are married and most older women are widows. In 1974, some 79 percent of the older males in America were married, while only 39 percent of the females in that age category were married. Some 52 percent of the older women in the United States are widows. There are over five widows in the Nation for every widower.

It is estimated that during the course of a year, some 35,000 older men and over 16,000 older women in this country marry. In approximately 14,000 marriages, both the bride and groom are 65 years of age or over. Some 22,000 older grooms marry women under 65 years of age, while only 2,000 older brides marry men under 65 years of age. In the case of 70 percent of the brides and 67 percent of the grooms, these older Americans were previously widowed and were remarrying.

LIVING ARRANGEMENTS

Over 63 percent of the older South Dakotans live as families. Nearly 30 percent live alone or with nonrelatives, and over 7 percent are in institutions. Almost 70 percent of the older males live in families which include their wives. However, only about 40 percent of the older women live in families which include their husbands. Over three times as many older women than men live alone or with nonrelatives.

Among the older Americans, over 6 out of every 10 individuals live in families. Over one-third are living alone or with nonrelatives. Only 5 percent of the older citizens of this Nation live in an institution. Nationally, one-third of the older women live in families that include their husbands, while two-thirds of the older men live with their spouses. In the Nation as a whole, 2½ times as many older women live alone or with nonrelatives as do older men.

ISOLATION

In South Dakota over one-fourth of the older citizens live alone. Most of these individuals are active and able to take part in community life. But thousands do live in isolation. Almost 16 percent of the aged in South Dakota do not receive one telephone call a week. Over 10 percent of the State's older citizens are not visited by another person at least once a week. Some 40 percent of the elderly do not attend even one meeting a month and over 6 percent consider themselves to be quite lonely.

Nationally, some 5 million older Americans live alone. Like most of the older South Dakotans, they are active and able to participate in and enjoy life. However, hundreds of thousands of them are isolated. There are no pone calls or visitors. No easy or affordable transportation and, unfortunately, no help or care programs are available to them in their communities. In some cases, these people live in such personal isolation that they are difficult to reach even when programs to break down the loneliness exist in their communities.

The State and Federal Governments are working to end isolation through programs providing transportation, senior centers, nutrition programs, telephone reassurance, friendly visiting, in-home services, opportunities to serve, and outreach services.

MOBILITY

In the period from 1960 to 1970, a significant shift took place among the older South Dakotans. The number of people in the 65 to 69 year age group decreased 3.4 percent. At the same time, the population of the 70 to 74 year age group increased 2.9 percent, and the 75 years and over group increased 37.9 percent.

During that same period, significant changes occurred in the areas in which the older South Dakotans live. The number of older people living in urban areas in the State increased over 20 percent. A similar increase of over 22 percent occurred in rural nonfarm areas. At the same time, the number of older South Dakotans living in rural farm territory decreased about 9 percent.

Thus, what has been occurring is a movement into the cities and towns of the State. This can be seen in the fact that the older population in urban places of 10,000 or more has increased almost 30 percent in the last 10 years. In urban places of 2,500 to 10,000 people, the increase in number of older individuals was only 6 percent. In towns of over 1,000 population, there was a 15 percent increase in the number of elderly. In rural towns of less than 1,000 people, there was a 5 percent increase.

So the movement of South Dakota's older citizens tends to be to the small towns and especially the urban areas of over 10,000 population. Among the reasons for this movement are: a greater concentration of medical services; increasing availability of low-income housing; the opportunity to be closer to others; better transportation; and recreational activities.

Among older Americans in 1970, some 8.6 percent moved from one house to another. Some 6 percent of the older citizens moved to another house in the same county, while 1.6 percent moved to a different county in the same State. Only 1 percent of the older Americans out-migrated to another State.

VOTING

In South Dakota today, 18.9 percent of all the registered voters in the State are 65 years of age or over. So potentially, one out of almost every five voters could be an older citizen.

Nationally, 57 percent of all the older Americans voted during the 1970 elections. Some 17 percent of all votes cast in this country that year were by people 65 years of age or older.

Presently, there is no significant evidence to indicate that the older American or South Dakotan votes as a block. They tend to either follow their own traditional party lines or vote independently, as they have for so many years of their lives.

SUMMARY

Today, one out of every eight people in South Dakota is 65 years of age and over. The people of South Dakota must understand that most of the older citizens are individuals who have worked hard during their lifetimes, only to be retired by society when they reach 65 years of age. They must also remember that the vast majority of the older citizens have likes and dislikes, wants and desires, needs, and the need to be needed.

NEEDS

At age 65 years and over, one does not automatically desire to become a hermit. Older citizens have the same needs for familial and social relationships as the rest of the population. Unfortunately, society tends to isolate or allow the isolation of some 5 million older Americans. Fortunately, the State and Federal Governments and some individuals realize this and have started a number of programs, including senior centers, meals-on-wheels, telephone reassurance, friendly visiting, and others, and are doing something to end isolation and meet the needs of the olderly.

The older citizen needs cultural and recreational activities, just as members of the younger generation do. Some of these needs can be met through the over 1,200 senior centers in this Nation. Other recreational needs can be met through community recreation programs, clubs and organizations, and family participation.

Like all Americans, the older American needs good health, both physicial and mental. They need access to good medical care. They also need nutritional programs to assure an adequate diet.

They need to be able to afford the foods necessary for health, as well as the clothing necessary for warmth and protection. One would think that with a market of about 22 million older Americans, some clothing company would be able to provide them with fashionable, protective clothing at a reasonable price.

Older Americans also need adequate housing if they are to live as they should. It should provide adequate space, necessities, comfort, and be attractive. They need good access to utilities and repair services at reasonable costs. Their residential areas should be safe and adequately protected by police and fire departments.

The older citizen needs areas to walk in, play in, or to just sit. They need transportation from their residence to areas of activity within the community, for example to stores, doctors offices, parks, and senior centers. They also need means of getting to church when they desire to attend. Too often younger individuals fail to recognize the importance of religion in the daily life of the older American.

The older citizens need an adequate income on which to live. As mentioned previously, most of the elderly poor in this Nation were not poor until they had to retire and their income was cut off. If they must live on a substandard income, they must not be expected to carry the same tax burdens as those individuals still employed. They also need tax reform on real estate taxes and estate taxes, since they should not be taxed out of their home or estate.

For those 5 to 8 percent of the older citizens who receive institutional care, there is the need to be visited, the need to be treated as individuals, and the need for help. Just placing an older person in a nursing home or extended care facility does not end one's responsibility to a mother or father or aunt or uncle. Those people living in institutions still have wants, needs and desires. Try as they may, the institutions can not meet all of them, for family love and involvement are essential needs of the older citizens, whether at home or in an institution.

The older American also needs an advocacy system. In many cases they need someone to help them and do not know where to go. They need: legal advice;

help getting better housing; better health care; work; recreation; housekeeping services; rehabilitation services; and other people. They need advocates in these areas and information on how to get help with these needs.

THE NEED TO BE NEEDED

The greatest need of the older citizen is the need to be needed. Fortunately in many families the older members are needed and actively involved as long as they live. In other cases, individuals are healthy or involved enough that they are always needed. But for some older citizens, the need to be needed was lost with the arrival of retirement or illness.

For these people, the State and Federal Government, senior centers, care facilities, schools, groups and individuals, are becoming increasingly active and creatively involved in developing and implementing ways in which the older citizen can realize their need to be needed. The South Dakota Office on Aging develops, sponsors, and assists communities in the implementation of programs such as: meals-on-wheels; senior centers; telephone reassurance; retired senior volunteer program; foster grandparents; in-house services; and many others. These programs and others have been developed in communities across the State and Nation. The State of South Dakota has introduced the Tie-Line (1–800–592–1865) to put the older South Dakotan and others in contact with individuals and agencies who can answer their questions and assist in solving their problems. Organizations such as the Congress of Senior Organizations, the South Dakota Association of Health Care Facilities, and others, are working for the interest of older South Dakotans in relation to their service areas. Gerontology Association for Training and Education (GATE) is a statewide consortium of education, statewide older American organizations and others working together to inform and assist the older citizen.

The State and Federal Governments, each of these organizations, and interested individuals have as their purpose to provide the older citizen opportunities to utilize their ideas, knowledge, and talents for benefit of others—to fulfill—the need to be needed.

South Dakota's Senior Population: 1980 and Beyond[1]

INTRODUCTION

Suppose during this 1976 election year you were running for State office in South Dakota, and to save time you arranged to gather all residents over 65 years of age in one place so you could shake hands with each and talk to them for no more than 1 minute. At 60 senior citizens an hour, working at the task 8 hours daily, Monday through Friday, you would begin shaking hands January 2 and finish August 31. Even then, better be prepared to return after Labor Day and shake more hands for another day and one-half: during the 34 weeks you stood shaking hands an additinal 666 residents would have joined those age 65 and over. For fact, the number of senior citizens in South Dakota is growing.[2]

GROWTH IN NUMBER

The number of senior citizens has grown since 1889, the advent of Statehood for South Dakota. In 1890 the number of residents 65 and over was 7,843, representing 2.4 percent of the total population. In 1960 this figure was 71,513, or 10.5 percent of the total. By 1970 the number increased to 80,484, 12 percent of the total.

Projection models for South Dakota[3] estimate the numbers of senior residents in 1975, 1980, 1985, and 1990 to be 84,000, 89,000, 93,500, and 97,000, respectively. Extrapolating this trend gives a 2010 population of 117,000 senior citizens a assuming no change in life expectancy.

---

[2] For a national parallel, cf., Herman B. Brotman, *Who Are the Aged: A Demographic View.* Ann Arbor, Mich.: Institute of Gerontology, U. of Michigan, November, 1968.

[3] Robert T. Wagner, Eugene T. Butler, Jr., and Karen A. McComish. *Population Projection Models for South Dakota: 1980, 1985 and 1990.* Brookings: South Dakota State University, Agricultural Experiment Station, Rural Sociology Department, Bulletin 631, May, 1975.

AGED DEPENDENCY

A past trend has been the steady increase in age dependency ratios for South Dakota from 1890 to 1960, an increase from 5 to nearly 19 (table 1). This steady increase stabilized from 1960 to 1970, attaining 21 in 1970. Projected age dependency ratios for 1980 and 1990 are 18.1 and 19.9 respectively, reflecting continued stabilization.

TABLE 1.—*South Dakota age dependency ratios: 1900–90*

Year	Ratio
1900	5.5
1910	5.3
1920	6.6
1930	8.6
1940	10.6
1950	13.6
1960	18.8
1970	20.8
1980	18.1
1990	19.9

The aged dependency ratio is a refined, although somewhat arbitrary measure, expressing the extent to which aged groups in an area are dependent upon the productive efforts of the 15 to 64 years old labor force.

Although dependency ratios have increased, the extent to which the active labor group must anticipate major increases in the dependent aged group has leveled since 1960 and will continue so the next 20 years.

SEX RATIOS

One dramatic shift in the composition of the senior population in the State from 1970 to 1990 will be in the sex ratio, or the number of men of a given age in proportion to the number of women. Table 2 reports the sex ratios for the population 65 and over and 75 and over in 1970 and projected to 1990.

TABLE 2.—*Number males per 100 females, senior age groups, 1970 and 1990*

Age cohorts	
65-plus:	
1970	83
1990	68
75-plus:	
1970	75
1990	50

Sex ratios have real implications for the aged, for the hugh number of widows becomes as key a determinant as age regarding social, economic, family, and living statuses. When the sex ratios are examined in terms of nuptuality for any representative group of 100 South Dakotans 75 years and older, the number of each sex married and unmarried varies dramatically (table 3). In 1970 the proportion of unmarried females 75 and over was 2.5 times greater than for their male counterparts: in 1990 it will be 3.75 times.

TABLE 3.—*Number married men and women, 75 and over, 1970 and 1990*

1970:	
Men:	
Married	25
Unmarried	18
Women:	
Married	12
Unmarried	45
1990:	
Men:	
Married	19
Unmarried	14
Women:	
Married	13
Unmarried	55

Men are more favored in terms of living with a spouse in later years, particularly because society allows them to reach down and have second marriages with senior sweethearts who are younger than they. Obviously, this increasing disparity will have implications for housing needs and the incidence of personal isolation among elderly in the next 15 years.[4]

LIFE EXPECTANCY

All of the preceding assume that changes in the size and composition of senior South Dakotans will not be affected by changes in life expectancy from age 65 onward. However, changes may well occur due to technological advances that have the capacity to double average years lived beyond age 65.

Biologists appear confident today that major breakthroughs will occur in immediate years that will affect the life expectancy of the elderly. This confidence is supported by:

(1) Discoveries regarding the viability of human cells and culture.

(2) Awareness of the known variabilities in ages among species, whereby extreme cases double or triple the accepted life expectancy.

(3) Knowledge regarding the years added to life through the conquest of communicable disease and the predicted conquest of degenerative.

(4) Indicators that health can be viably maintained by rigorous changes in diet, exercise, etc.

(5) Evidence that the use of vitamins, hormone therapy, blood transfusion, and organ replacement may extend life.

(6) Current replacement of worn parts with nylon arteries, silver pins, and hip hinges, ear trumpets, heart pumps, etc.[5]

With this kind of technology, at age 75 life expectancy which currently averages about 9 years, could be increased. Table 4 gives the anticipated increases in life expectancy for persons 75 years old if technology could eliminate deaths due to specified causes.

TABLE 4.—*Increased life expectancy at age 75 due to elimination of selected causes of death*

Elimination of death due to	*Increase*
Malignant neoplasm	8 mos.
Vascular lesions	13 mos.
Heart disease	3 yrs., 10 mos.
Cardiovascular-renal disease	8 yrs., 8 mos.

ENVIRONMENTAL HISTORIES

Perhaps the most important demographic insight relative to the aged in South Dakota is the recognition that different age cohorts represent different "environmental histories."[6] That is, contemporary senior citizens share different life experiences than those who will be 65 and over in 1990 or 2110. Nowhere is this fact more dramatically illustrated than when comparing the years of formal schooling completed by those 65 and over in 1970 and those 65 and over in 1990.

TABLE 5.—*Median school years completed by South Dakotans 65 and over, 1970 and 1990*

Age:	
65–69	
1970	9.2
1990	12.5
70–74	
1970	8.8
1990	12.3
75 (+)	
1970	8.6
1990	11.9

[6] Wilbert E. Moore "Aging and the Social System," *Aging and Social Policy, John C. McKinney and Frank T. deVyver*, eds. New York: Appleton-Century-Crofts, 1966.

The shift is even more dramatic when one realizes that even with a median formal education level of almost nine for 1970, 61 percent of older South Dakotans had not completed grade school and less than 10 percent graduated from high school. By contrast, Bureau of the Census projections indicate that by 1990 49 percent of those 65 years of age and over will have completed high school.[7]

MIGRATION

Whereas the out-migration of young adults from South Dakota has been a pervasive pattern since 1930, current indicators suggest a substantial reduction in net out-migration from the State, and even imply a possible shift to low levels of net in-migration in the future. Census Bureau estimates for 1975 number South Dakota's population at 682,000, an increase from 1970.[8] Although it remains to know whether this turn-about is more than a short-term reaction to lessened economic activities in the Nation, the long-range forecast favors some optimism regarding retainage of our young adult population and potential in-migration. Should the return-to-the-country movement, now visible in countries surrounding metropolitan areas in other States, eventuate in the western corn belt and eastern wheat belt of the upper Great Plains, South Dakota can anticipate increased retainage of resident population and possible net in-migration.

CONCLUSIONS

The demographic data support the following conclusions:

1. The absolute number of persons 65 years and over in South Dakota has grown and will continue to grow over the next 25 years although the relative proportions and dependency ratios for the aged will stabilize. This will be particularly true when the baby boom of the 1950's becomes the gerontology boom of 2010.
2. The number of men to women will decline, increasing the disparity between the proportion of elderly married men and women, especially for those 75 and over.
3. Life expectancy for those age 65 will increase somewhat, perhaps even dramatically.
4. Median years of completed formal education will increase to 12 years and more.
5. Out-migration of young adults from the State will decline during the next 15 years, especially as the number of young people entering adult status in subsequent years declines, a consequences of lowered fertility since 1966.

IMPLICATIONS

1. The increase in the absolute number of elderly residents in South Dakota will generate need for additional services from both public and private sectors. Although proportional pressures on the active working population to support the elderly in the State will not increase, elderly residents may seek a greater allocation of State resources and demand more expensive programs in their behalf.
2. The dramatic changes in the sex ratio and the decline in the proportion of elderly married women will increase feelings of isolation and cause further "anomia," especially for those women who locate their personal status in the status of a husband. New forms of polygynous marriage, or formalized living arrangement may become socially legitimated among and for the elderly.
3. New health technology may expand life expectancy so that societal substitutes for dying may have to be found that operate in the same way retirement serves to substitute for death in industrialized societies, creating opportunities for younger cohorts advancing in age.
4. The fact that future senior South Dakotans share environmental histories that provided more educational opportunities, associated higher occupational and income statuses and exposure to an era of expanding public welfarism may mean that they will be less inclined to accept reduced status positions within the larger society than are the elderly today. A number of factors will help contribute to this:

[7] U.S. Bureau of the Census, "Democratic Projections for the United States," *Current Population Reports, Series* P–25, No. 476, Feb., 1972.

[8] The Bureau of the Census, "Federal-State Cooperation Program for Population Estimates," *Current Population Reports, Series* P–26, No. 101, April 1975.

(a) During periods when larger numbers of children enter adulthood, the availability of surplus but recently trained young adults tends to make the labors of older citizens obsolete and unvalved. The fact that the number of children now born who are advancing toward young adulthood is lower than for previous decades will mollify this obsolescence and devaluing.

(b) Higher completed education levels among the elderly may fortify their legitimate feelings that they have "wisdom" strengthened by experience which ought not be disregarded. From the knowledge and skill perspective, old age and status may become positively related.

(c) Nostalgia may replace scientism and technology as a fundamental American value. If so, the elderly will have an advantage.

(d) Previously, two aspects of retirement explain in part the perceived loss of status by the elderly. At retirement a person not only severs his connection with an organization, but he also relinquishes his occupational location in society. Without these two affiliations, the retiree usually becomes a person of unknown and uncertain achievement.

Elderly in the next decades may not be so willing to relinquish their status locations, especially when they share higher educational levels within a leisure oriented society where work opportunities for all age groups are few.

5. The changes in the magnitude of out-migration from South Dakota will reduce isolation and feelings of relative deprivation among the elderly as younger kinfolk remain in their locality. More sophisticated technology in communication and transporation services will further inter- and intra-governmental interaction, as the machine substitutes for interfacial contact. The advent of new childbearing patterns, whereby the having and rearing of children is not conditional upon female fecundity, may delay parenthood until later years. In this event, a societal norm may assign child bearing and rearing responsibilities to the aged.

6. Due to changes in environmental histories, the elderly of tomorrow will insist even more persuasively that relative poverty and lack of access to employment are not necessary concomitants of aging, but are the consequence of educational shortcomings and insufficient retraining. Demands for continuing education for the elderly and developmentally oriented learning opportunities will increase.

SUMMARY

The elderly will play more significant roles in South Dakota in the future, both numerically and positionally. A consequence will be the expansion of human services with senior citizens and possible modifications in both policy and program.

Appendix 2

LETTERS AND STATEMENTS FROM INDIVIDUALS AND ORGANIZATIONS

ITEM 1. LETTER FROM WINNIE LEE, OUTREACH WORKER, AGING SERVICES CENTER, SIOUX FALLS, S. DAK.; TO SENATOR DICK CLARK, DATED AUGUST 18, 1976

DEAR SENATOR CLARK: I am an outreach worker for the aging services center and, although I contact elderly in the city of Sioux Falls, I believe the problems these people face are much the same as those faced by the elderly in their neighboring rural areas.

Lack of adequate transportation keeps many older people confined to their homes. The Red Cross does furnish rides to a limited number of aging for medical purposes (rides to a doctor, etc). Older people wishing to eat at the senior citizens center at noon contact the center for a bus ride, if such is needed. Residents of some housing projects may take a senior citizens center bus to specified grocery stores at specified times. But in most cases older people who do not live near a city bus route, cannot stand on a corner (with no shelter from wind, rain, and snow), or cannot climb up into the old-style bus are at the mercy of relatives, friends, and (in some cases) churches for rides. One 86-year-old lady recently told me, "Our church started running a bus on Sunday mornings about a month ago, and I've been to services every Sunday lately. I didn't get there Easter because I didn't want to ask anyone to take me."

We outreach workers have long been concerned about the welfare of the elderly during the cold winters in South Dakota—and the cost of fuel to keep these people comfortable. I was interested in learning this week that in Ohio a $7,500 trial grant from the Federal Community Services Administration is providing "energy stamps" in order that needy people, many of them elderly, in Lorain County, largely rural and agricultural, will be able to pay their fuel bills. If this energy stamp program works, I would suggest that it be expanded to help people in other States.

In some cases, I believe that older people are more lost and invisible in Sioux Falls than in small towns or on farms. If the older person has moved here late in life, or even if he has lived here but his children (if any) have left, due to the mobility common to our life style, he can easily get lost in the shuffle. E.g., at a party at the senior citizens center last week, a lady I did not know said to me: "Winnie Lee, I know you are an outreach worker and you called on Jane Doe once a while ago. I wish you'd go back. She is a very independent person and probably told you she was fine, that her children were taking care of her. Actually, she has scarcely enough to get along on. Our church has been helping her with food, and she is losing her eyesight fast. I wish you'd visit her on a regular basis and get her the services she needs—be an advocate for her."

There are woefully few of us outreach workers in Sioux Falls. I am employed part-time. I feel that it usually takes me two or three visits to gain the older person's trust and begin to discover what his real needs are. In the meantime, other elderly people in the community should be called on but aren't.

The depression and other problems connected with mental health that I see so often in older people are usually not taken care of by RSVP, churches, or neighbors; at least, that has been my observation. Maybe we should not try to "cure" these people, but should listen to them more closely. If, for instance, they are depressed because of their forced retirement—because of the upper age barrier—let us get laws passed to prohibit discrimination in employment for those over 65 (or whatever), regardless of the individual's ability to do the job. Our legislators are needed to help us with this task. Keeping people in the mainstream

of society and getting them back in are certainly two worthwhile (and much neglected) goals for programs on aging in this country. I, myself, would like to learn about how to do these.

As president of the NAACP, Sioux Falls Branch, I see many needs of both blacks and Indians of all ages. However, I believe we have plenty of laws. What we need is a better understanding of each other. I am familiar with groups that are attempting this on a local and State basis. I would recommend that the Federal Government do more to understand and help the Indians of South Dakota.

ITEM 2. LETTER FROM ELAINE M. TOBIN, DIRECTOR, SPINK COUNTY SENIOR CITIZENS, INC., REDFIELD, S. DAK.; TO PHILIP CORWIN, STAFF MEMBER, SENATE COMMITTEE ON AGING, DATED AUGUST 20, 1976

DEAR MR. CORWIN: Though I was unable to attend the hearing in Sioux Falls on August 18, 1976, I would like to make some statements concerning the problems we find every day as we work with the elderly in South Dakota.

One of the most pressing concerns is that of sufficient income. Senior citizens once past the retirement age, whether forced or voluntary, have problems in maintaining an income sufficient to meet their minimum needs. If one should save and have even $2,000, which is $500 over allowance for assets under SSI, then that person is dropped from that program to struggle once again on a little over $90 a month until their assets once again meet the standards required. How are the elderly to help themselves if they are not allowed to do so? Of course there is a limit, but is $2,000 too much for one who does not have life insurance or resources to cover nursing home expenses should the need become a reality? We all know that the answer is no. Under the present limits you are forcing persons to be dishonest in order to survive. I ask that careful consideration be given to the adjustment of the allowance made for social security and SSI so as to bring some balance to the increasing problem of poverty among the elderly.

Another priority in the rural areas is that of transportation. We find not only a problem in general transportation because of the distances involved, but also a special need for transportation in relation to medical attention and facilities. This brings to light another concern, that of medical care for the elderly.

Though much has been done in South Dakota to see that periodic geriatric clinics, including vision and hearing clinics be made available, the medical problem seems to stem from the inability of persons in need of medical care to receive the care when needed. This happens even when the person is covered under the medicare program. Instead of decreasing the anxiety of the elderly concerning their health problems, the anxiety is increased because of the lack of cooperation among clinics and medical staff. I suggest that appraisal of the situation be made and recommendation for correction be issued through the proper channels.

Revenue sharing funds have played an important role in the growth and development of senior citizens programs in South Dakota. Continuance of this funding is vital to rural areas and to the field of aging. We in Redfield could not support the county-wide program and offer the services or facilities we do without the help of revenue sharing funds.

Forced retirement is another problem that begets others as a result of its discrimination due to age. Income maintenance then becomes a problem as well as the self-image and pride of the individual, as they find themselves dependent after years of struggling to become self-sufficient and independent.

Nursing home care for the elderly is an ever present problem, though Redfield itself is fortunate in having facilities available. It has, however, been brought to my attention that there is a definite lack of nursing home facilities on the reservations and that the cultural shock of being transplanted outside their natural environmental surroundings is detrimental both mentally and physically to the Indian people. This should be investigated so to provide the Indian people with the same opportunity that we in other communities have in staying close to home in spite of the fact that we must have nursing home care.

The remarks above do not in any way complete the ever growing list of concerns found in working with the elderly in the rural areas. It does however put a priority on some of the need which I feel need immediate evaluation and attention.

We invite anyone interested in what the needs are in rural areas to come and visit our centers and talk to the people face to face, giving them a chance to speak for themselves as well as give detailed accounts concerning some of the problems mentioned.

Your time and effort in behalf of the older American and their needs is greatly appreciated.

ITEM 3. LETTER FROM RAY B. FLEMING, PRESIDENT, REDFIELD (S. DAK.) CHAPTER SENIOR CITIZENS CLUB; TO PHILIP CORWIN, DATED AUGUST 20, 1976

DEAR MR. CORWIN: There are many of our senior citizens in our community who at times need medical aid at the moment, and because of our doctor's setup they are not able to make an appointment for an examination. This is not an unusual situation, but rather one of chronic proportions. This has been called to the attention of our doctors, but it seems they either disregard the problem or do not care to take care of these people. Social security should be informed of this problem from the top so it may be appraised and corrected.

There are those in this area that are taking advantage of the food stamp program and welfare aid. Some are desperately in need of these programs and cannot take advantage of them for reasons of transportation or are uninformed of the qualifications. On the other hand, there are those who take advantage of these programs who are not qualified because of laziness, lack of initiative to work when offered, and will not keep a job when they have a few dollars in their pocket. Our aged people should have preference and be informed of the right to participate.

Housing and tax relief for the senior member of our society is not being made available in many areas of our State. Our Indians are, for the most part, very poor and need some low-rent housing and good supervision in the care of same.

Our State is of a peculiar nature in its agriculture. Intensive farming takes precedence in eastern South Dakota on ranching and large operations in the western part. One may say that Highway 281 (American Legion Memorial Highway) is the dividing line between the two types of farming. Many of the small communities have no low-rent housing and must travel miles to receive this accommodation. Information on tax relief should be more actively pursued for the elderly.

The above problems are humbly submitted and should be made top priority from your committee.

ITEM 4. LETTER FROM DAVID A. NICHOLS, ASSISTANT TO THE PRESIDENT, HURON COLLEGE, HURON, S. DAK.; TO SENATOR DICK CLARK, DATED SEPTEMBER 13, 1976

DEAR SENATOR CLARK: Thank you for the opportunity to present testimony to the committee concerning the significance of the cooperative project between Huron College and the Huron Area Senior Center. I know that you have been adequately briefed by center personnel on their program and needs. Therefore, we will focus on the educational program we hope to build on the foundation of the McDougall Hall project. We call this program KARE (Kinship of the Ages through Reconciling Education).[1]

Through this program, we intend to do nothing less than provide a model for what small rural colleges must do in the last quarter of the 20th century. Our society is getting older and colleges must serve that older population and, even more important, develop new educational models for helping the generations live and learn and work together.

Even without outside help, heroic efforts are being made to realize this dream in Huron. The senior center has leased McDougall Hall and is implementing its program as best it can despite the desperate need for Federal funds.

The Huron College Board of Trustees adopted a new mission statement on July 9 in conjunction with the signing of that lease that commits Huron College

---

[1] See also appendix 1, item 5, p. 330.

to becoming a lifelong learning center for our region. A copy of that new mission statement is attached. The implementation of our new mission statement resulted in my appointment as assistant to the president for lifelong learning—a position unique to any college in the region.

All this reflects the comprehensive nature of our program. We seek a cross-generational learning community that will serve all ages in superior fashion.

That is the uniqueness of our project. It is cross-generational and not segregated as is the case with most other programs. It aims at a comprehensiveness in college programs that is not envisioned by most institutions involved in senior educational activities. Finally, you will look far to find any college-senior center cooperative project that involves a senior center with the excellence and range of services furnished by the Huron Area Senior Center.

Something significant is happening in central South Dakota. We have a vision of the future that will serve the Nation as we become an older society. On Tuesday, September 14, the senior center will move its operations to our campus. That event demonstrates our determination to realize the dream regardless of financial difficulties. But we need your help, not only with the HUD money, but with other Federal fund sources so that the entire KARE educational program can become a reality. The Congress could make no finer investment.

Thank you for the opportunity to testify.

ITEM 5. LETTER AND ENCLOSURES FROM ROD KRANZLER, ADMINISTRATIVE ASSISTANT, SOUTH DAKOTA DEPARTMENT OF SOCIAL SERVICES; TO PHILIP CORWIN, STAFF MEMBER, SENATE COMMITTEE ON AGING, DATED AUGUST 13, 1976

DEAR PHIL: Although you had asked persons preparing testimony for the South Dakota hearing next week to submit their testimony to you in care of the Sioux Falls Senior Citizen Center by today, Friday, August 13, 1976, we are unable to do so.

To substitute for our failing on this part we have enclosed a complete first draft of the unsummarized version of our testimony on South Dakota's rural elderly.

A shortened, summarized version, which will be presented orally at the hearing, will be sent to you in care of the Sioux Falls center before the hearing. Please accept our apologies for not being able to comply with your request. We hope that the longer draft version is an acceptable substitute for you in your preparation for the hearing.

P.S.—An attachment to the long version of the testimony dealing with Indian aging programs is also enclosed in complete form.

[Enclosures.]

THE OLDER POPULATION: DATA AND CHARACTERISTICS

NUMBER AND DISTRIBUTION

South Dakota covers an area of 77,047 square miles on which reside the total population of 682,900 inhabitants of all ages, 115,000 (17 percent) of whom are 60 or older. This represents a population ratio of 8.86 inhabitants per square mile (compared to a national average of 57.5 persons per square mile) and 1.5 persons over age 60 per square mile.

South Dakota remains predominantly rural, with 55 percent of the population remaining on farms and in smaller towns and 45 percent located in communities of 2,500 or more inhabitants. There are only 26 towns throughout the State with a population of 2,500 or more.

Average county population of persons age 60 and over is 1,724 persons. Forty-four of the sixty-seven counties, or 66 percent, have older populations which fall below the 1,724 State average. In those counties the average falls to 859 persons. Twenty counties have 700 or fewer persons in that age category.

American Indians comprise 2.3 percent (10 times the national average) of the State's population age 60 and over. Approximately 8,400 square miles, or 11 percent, of South Dakota is designated as Indian reservation. The nine reservations vary in size, population, economics, ethnicity, and politics and are interspersed

among nonreservation counties in each quadrant of the State. Indian and white lands and population are intermixed and some of the boundaries are uncertain. Indian populations comprise 90 percent of the minority groupings in the State and are located in all counties, but the majority of the 32,365 American Indians reside on reservations.

ECONOMICS AND NEEDS

According to "Poverty in South Dakota," a study made by the South Dakota Economic Opportunity Office in July 1975, there are "a total of 119,543 persons living below poverty level in South Dakota" (19 percent of total population).

Currently, 30,423 persons, or 26 percent of the State's population age 60 and over have incomes below poverty level.

Average per capita income in South Dakota is $4,980, compared to a national average of $5,834. South Dakota ranks 36th in the Nation (only 13 States have per capita incomes lower than South Dakota) in per capita income (1975).

Lack of employment opportunity is fundamental among the multiple causes of poverty in the State. The prime industries of agriculture and tourism do little to meet the demand of the unemployed or underemployed. This problem is compounded for elderly persons. Only 5.6 percent of the South Dakota work force is age 65 or older according to the South Dakota Department of Labor.

As of July 1976, the percentage of unemployed persons in South Dakota was 4.7 percent—State average. This compares to an average of almost 46 percent for the State's nine Indian reservations (the lowest being 21 percent and the highest 66 percent), according to the South Dakota Office of Indian Affairs.

"Housing remains the paramount problem of poor and elderly persons," according to the "Poverty In South Dakota" study. "Inadequate and dilapidated housing is about all financially disadvantaged persons can afford. Blighted housing conditions contribute to the physical, mental, and social instability of their occupants."

Unemployment, rising energy and food costs, and inadequate housing all pose serious problems for elderly persons, especially those with fixed incomes.

"Whether viewed in terms of access to employment, food, health and medical care, or simple church attendance, social or recreational opportunities, it is clear that transportation is vital, especially in a predominantly rural environment," the study says. "For those not able to afford an automobile and its increasingly higher operational and maintenance costs, the dilemma of distance is great. Thus, the logical alternative is public transit." But public transportation is greatly inadequate in the State; only the largest city has intracity service.

Age discrimination and mandatory retirement also contribute to income levels of elderly persons. Social security and supplemental sceurity income benefits do not keep pace with inflation and cost-of-living increases which confront unemployed elderly persons.

Beyond income needs are unresolved problems relating to social isolation, transportation, recreation, nutrition, mental health, and home health services, any or all of which may be of critical importance to an older person trying to maintain his independence.

DISTANCE AS A PROBLEM IN RURAL SERVICE ACCESS AND DELIVERY

Even in urbanized areas of the State, lack of transportation keeps many elderly, disabled, and poor persons from getting to vital services. "Thirty-eight percent of the elderly population (South Dakota) walk, take a taxi, or ride as a passenger" in someone else's vehicle. This fact and an analysis of other data in "A Household Transportation Needs Assessment" prepared by the South Dakota Economic Opportunity Office, March 1, 1976, indicatse that "there is a significant transportation problem in rural South Dakota. It affects low-income and elderly more severely than the general population."

It was the consensus of the 1971 White House Conference on Aging that distance is a major problem in delivery of Older Americans Act programs and services in rural areas. This is also true of most social services provided by other programs in South Dakota.

A key means to confronting the problems which distance poses to rural service access and delivery is transportation services for the elderly. A local or community social service agency such as a senior citizen center may provide one or more of a number of services for the elderly in the locality. In all areas of the State the service agency must overcome a number of obstacles in order to provide its services.

The first of these is distance between various recipients or potential recipients of services. If the service agency is providing homemaker or outreach services, for example, the workers must have a means for getting from one recipient to another. In addition to the costs of operating and maintaining vehicles, time at driving 55 miles per hour is costly. Persons most in need of services are usually most isolated because of distance from their homes to the service agency. This usually necessitates location of homemakers or outreach workers in each of the communities of the agency's service area. Thus, most homemaker service or outreach agencies are community-based.

If the service agency is providing transportation services for the elderly that agency may find that distances between recipients of services are also great, especially in the sparser portions of the State, particularly if attempt is made to include rural residents. Usually, the agency has a number of pickup points at various locations, or one major pickup point at the local senior center. But then persons who wish to benefit from the service must find means to get to the pickup locations. This is difficult, if not impossible, for handicapped or disabled persons, who have the greatest need for such service.

The success of nutrition programs for the elderly is crucially dependent upon efficient provision of supportive services such as transportation, outreach, escort, nutrition education, health and welfare counseling, shopping assistance, information and referral, and recreation services. Provision of these services means that problems or distance unique to each of these services must be dealt with.

To aid in overcoming these obstacles of distance, a sizable amount of title III moneys are spent on transportation systems and services for the elderly. Other methods of service delivery are also being used more effectively than in past years (see next section below). A complex system of direct telephone lines to various communities and a State WATS line supplement service delivery. Careful planning of staff travel also helps, as do location of four outstationed coordinators, and effective newsletter and public information activity.

Next to transportation systems, communication is another means to overcoming the obstacle of distance. Communications with communities, service providers and projects, other State agencies, local governments, and senior citizens themselves are ongoing processes. A network of senior organizations composed of the State's over 225 senior citizen centers and clubs, the Congress of Senior Organizations, the Association of Senior Citizen Centers, as well as many other organizations, are of critical importance in provision of services in both community and rural localities.

South Dakota is indeed a "land of infinite variety" that is sometimes reflected in the pride of its people, although this is also the source of one of its major problems. Congress assistance could consist of facilitating development of special transportation systems especially applicable to rural areas.

Nature of the Human Service Delivery System in South Dakota

SENIOR CITIZEN CENTERS AND ACTIVITIES

The State's 225 senior citizen centers and clubs, mostly located in rural communities, are perhaps the most significant focal point for delivery of social services to the elderly. The programs and services that these centers can provide are potentially unrestricted, barring limited resources of manpower, community involvement, and funding.

More and more senior citizen centers are becoming multipurpose senior service centers, providing a broad spectrum of services beyond recreation. Such services include information and referral and outreach, nutrition and nutrition education, home-delivered meals, education and life enrichment, health services, volunteer services, counseling and assistance on social security, SSI, sales tax relief, medicaid and medicare, and other problems.

For many older people a real sense of belonging, involvement, and life enrichment are provided by these senior citizen service centers. Most of them have developed directly or indirectly through efforts of Older Americans Act programs or grants, and nearly all of them today are locally funded and operated.

Under new regulations the definition of a multipurpose senior center means being open to constituents 30 hours per week and having a full-time director. If a center must meet these requirements to be eligible for Federal support, it may deny benefits to people in sparsely populated areas. This would have impact

on senior centers statewide in South Dakota. Thus, exceptions to this regulation should be allowed where elderly populations are small.

For many of South Dakota's small communities a location for a senior citizen center is a prerequisite for successful senior center services and activities. Many of these small towns have acquired unused or older buildings in need of repair for their senior center.

However, these buildings were not designed for senior center purposes, most having been places of business or large old houses, and are inadequate without repair, alteration, or renovation. Thus, the availability of Older Americans Act title V funds for acquisition, alteration, or renovation of these buildings is a welcome resource to the senior citizens of these small towns who need to improve their centers but have limited financial resources.

Administration of title V funds is being carried out directly between prospective applicants and the Administration on Aging in Washington, D.C., though State units on aging have been called upon by AoA to assist in dissemination of information and application materials. However, time for submission of applications is much too short in terms of time needed to disseminate this information and information about the application process has been late in arriving at State units on aging, leaving very little time for applicants to prepare their applications. In fact, the final version of the application materials to be used had not arrived even 2 weeks before submission of applications was due.

The result has been frustration for applicants and an unnecessary burden on the State unit on aging, having been called upon to provide technical assistance, coordination, and manpower for this purpose.

NUTRITION PROJECTS AND SITES

There are 12 title VII nutrition projects operating in South Dakota with a total of 35 sites (one in North Dakota) serving congregate meals to elderly. Mentioned above, each of these sites are required to provide a continuum of supportive service enabling elderly persons to benefit from the nutrition services.

Many of these projects also provide home-delivered meals programs using volunteers to deliver meals. There are school lunch programs in the State serving meals to elderly persons, as well as a network of locally supported home-delivered meals programs.

TRANSPORTATION

Transportation poses a problem for all elderly, particularly rural elderly, and ranks as the primary concern among all sources of public need input in preparation of the annual State plan on aging. "Transportation on reservations is still imperative. Federal and State departments of transportation should continue their priorities for stronger emphasis on rural transportation," with consideration of disadvantaged persons such as "elderly, handicapped, low- and middle-income." These are recommendations made at the Bicentennial Governor's Conference on Aging, May 1976.

"Thirty-eight percent of the elderly population walk, take a taxi, or ride as a passenger." This fact and an analysis of other data collected in "A Household Transportation Needs Assessment" prepared by the South Dakota Economic Opportunity Office, March 1976, indicates that "there is a significant transportation problem in rural South Dakota. It affects low-income and elderly more severely than the general population."

During fiscal year 1975, of the $158,000 available to South Dakota under section 16(2)(B) of the Urban Mass Transportation Act, only $66,000 was used throughout the State. By contrast, of the $166,000 made available under this act as of July 1, 1976, grant applications totaling in excess of $100,000 are in process to date (July 28, 1976). These funds are to be used for capital expenditures only; operating expense moneys must be obtained from local resources, Older Americans Act, or other Federal grants.

This trend toward better utilization of available Federal dollars through generation of local matching funds is encouraging, but deserves further impetus by appropriate title III funding.

Through the use of volunteer drivers and local funding sources, local support of transportation is being increased. Yet cost per passenger mile and distances are great. The minibus is fast becoming a permanent and essential part of community transportation service delivery systems. Such transportation provides rides for many older persons to senior citizen centers and nutrition

projects, medical care, shopping, and other essential services. "South Dakota Department of Transportation Statewide Public Transportation Inventory, 1976" indicates that 134 senior citizen centers or other local organizations now have transportation services available for the elderly.

South Dakota has made a real start in development of effective transportation programs for older people, although Federal laws on transportation lag behind the proven benefits of the minibus transportation system and rural transportation needs.

The Senate and House committees on transportation should take a good look at what is working and providing rural older South Dakotans with efficient and needed transportation. Such transportation combats isolation and loneliness while tapping the resources of older people in volunteer and senior center programs. 1975 Older Americans Act amendments making transportation a national priority service is a needed impetus for expansion of such services.

OUTREACH SERVICES

Basic needs of older citizens are not unlike those of the general population, but accessing appropriate services to meet those needs is much more difficult for older persons, particularly disadvantaged, low-income elderly. A mechanism for linking these persons with needed, helpful services is outreach.

Outreach workers can detect problems an older person may have with health, nutrition, transportation, housing, food stamps, and other needs and provide appropriate referral and followup to get the services for the older person.

Without the personal, one-to-one contact the outreach worker can provide, many older persons fail to benefit from a number of services eligible to them. The Office on Aging, through its grantees, has provided outreach services for an estimated 5,800 of the approximately 116,00 persons age 60 and over in the State.

Because of the role outreach plays in getting services to people, outreach services are vital, especially in very sparsely populated portions of the State.

INFORMATION AND REFERRAL AND TIE-LINE

Similar to outreach, but less personal than outreach in its approach, is information and referral. In July 1975 a statewide information and referral service called Tie-Line was implemented to provided toll-free access to all citizens with more than 6,500 public, private, local, State, and Federal agencies that can help them. The Office on Aging supports, through funding and technical assistance, the special efforts of Tie-Line to reach more older persons with needed information and referral.

Through training and conferences, the Office on Aging has linked up the State's existing network of outreach workers and community information and referral centers to expand services to rural older persons, decreasing the impact of distance is delivery of services to older persons.

TRAINING

An important part of service delivery is training. Through title IV–A and other funding, consultants and experts in the field of aging and gerontology have been organized to conduct training sessions on a wide variety of topics geared to increasing the expertize of service providers and the capacity of older persons to serve themselves.

Gerontology Association for Training and Education (GATE) provides for joint planning, cooperation, and funding from the Office on Aging to carry out such training and education, developing and tapping resources of the States' educational institutions to support and stimulate increased and better services for older persons. Continuing and increased Federal aid to education of this sort is needed to help service providers and elderly overcome problems of service access and delivery.

PROGRAM DEVELOPMENT AND COORDINATION BY THE OFFICE ON AGING

The Office on Aging annually develops and administers a plan on aging and awards grants serving older persons in all counties. Efforts continue to build the capacity of comprehensive and coordinated programs for older persons

throughout the statewide planning and service area. The Office on Aging responds to a variety of functions:

(1) Promotion of good working relationships with State, local, public, and private service and consumer agencies through (a) establishment of an interannual Governor's Conference on Aging; (b) annual Governor's Conference on Aging; (c) support of local aging groups in approaching local government; (d) bimonthly meetings of the South Dakota Advisory Council on Aging; and (e) bimonthly publication of the office newsletter, 3,600 copies per edition.

By functioning directly with local programs the Office on Aging is strengthened for its work with legislative and executive agencies. These relationships have led to valuable input, policy analysis, and statutory inroads into State processes such as permissive legislation for senior use of school buses, school lunch facilities, county and city mill levies, and an increased awareness of needed legislation benefiting elderly citizens.

(2) Through the legislative consultation on aging sessions, composed of senior organizations, needs have been prioritized for joint planning and advocacy of increased supplemental security income, property tax relief, and amelioration of utility rate structures for the elderly.

(3) The State office and field coordinators gather and update information about social services resources throughout the State. Data exchange is emphasized by the various interagency working agreements now in force. This flow of resource continues. For example, updating and enlarging Tie-Line's list of more than 6,500 resources.

(4) Older Americans Act grantees are also encouraged to utilize objective setting and monitoring processess similar to that used by the Office on Aging. Training and technical assistance has been and continues to be provided for this purpose. Benefits include improved planning, grant applications, and grantee program administration in delivery of services.

(5) During fiscal year 1976 negotiations were undertaken with 20 separate agencies which could benefit the lives of older citizens; seven agreements were signed, including a title XX agreement.

(6) The Office on Aging is in a unique position to coordinate delivery of existing services and pool untapped resources.

(a) Being located in the department of social services, the State's title XX agency, it is able to provide prompt input to affiliated State level staff regarding needs of the services for the elderly.

(b) Four outstationed field coordinators and central office staff promote coordinated planning and development of services and resources among senior organizations, agencies, and State and local governments.

(c) Current title III and title VII grants provide services to 64 of the 67 counties. The remaining three counties also have senior citizen activities and access to State training, public information, technical assistance, and information and referral.

(d) All school districts have been canvassed to determine potential for increasing the number of school lunch programs serving the elderly. Fiscal year 1977 State plan on aging goal is to increase this number from 20 to 26.

(e) Senior service centers have increased from 157 in fiscal year 1975 to 172 in fiscal year 1976.

(f) Establishment of a statewide consortium of public and private colleges and interested organizations in Gerontology Association for Training and Education (GATE) has been facilitated by the Office on Aging.

(g) Resources other than title III and title VII have increased 69 percent from $815,994 in fiscal year 1976 to $1,375,459 in fiscal year 1977.

(7) Assessment and other site visits made of each activity include views of participants. Conferences, task forces, and training events elicit additional participant comment. During fiscal year 1976, a review of 7 major and 29 ancillary I & R sites was conducted. The Office on Aging requires that participant evaluations be an integral part of all training and education activities supported by title IV–A, title III, and title VII grants.

(8) The Office on Aging conducted and/or approved conduct of five, instead of the required one, public hearings on the fiscal year 1977 State plan on aging. A field survey to determine user satisfaction with Tie-Line is planned. Professional staff make frequent site visits and are on hand for public appearances at meetings to listen and respond to questions and to record testimony and statements of need. The annual Governor's Conference on Aging also serves this purpose.

(9) Requests for data by Federal and State agencies and the general public are satisfied through periodic updating of reports and data on file and flowing into the Office on Aging or by special survey, as needed. Plans are underway to review report documents in light of revision of the Administration on Aging quarterly report. Standardized data collection instruments will result. Information on needs is reported publicly to service organizations.

(10) This vital function is assured by the activities of our entire professional staff, particularly those of four field coordinators, and through workshops, training sessions, aid dissemination of written information. Frequent phone contact and site visits provide year-round responsiveness to technical assistance needs. Semiannual title III and quarterly title VII assessment schedules will assure even greater onsite availability for technical assistance in conjunction with assessment findings.

(11) The Office on Aging has encouraged existing legal services for elderly and low-income persons, and special participation by the University of South Dakota Law School. The fiscal year 1977 State plan includes a separate legal services objective. Application will be made for title III section 308 funds, per AoA–PI–76–31, dated June 23, 1976.

(12) The responsibilities of one full-time professional staff person include close coordination with the Federal ACTION agency and its related nine retired senior volunteer program (RSVP) and two foster grandparent program (FGP) projects in South Dakota. The Office on Aging assisted an application for an ACTION senior companion program (SCP), which narrowly missed approval at the regional level, during fiscal year 1976. State offices on resource development and children and youth have been contacted about service opportunities.

(13) The South Dakota Advisory Council on Aging, conforming to the criteria in Older Americans Act regulations, has been very active for many years.

(14) The views of recipients of services are solicited at every opportunity by the State office and field staff from on-site face-to-face contact, through such means as telephone contact, public hearings, workshops throughout the State, field studies, newsletter of the Office on Aging articles requesting specific or general input, letters to organizations, and the previously mentioned hard-working and very vocal task force sessions at the annual Governor's Conference on Aging.

While the 1975 Older Americans Act Amendments did increase the amount of administration funds for small States like South Dakota to $200,000, that has been consumed by the effects of inflation. The 1976 and transitional quarter appropriations have given more than a 50 percent increase in programs funds, but only a 10 percent ($20,000) increase for administration over the 1973–74 level.

The Older Americans Act is the only federally funded program where State Administration is not related to the total amount of funds allocated to the State to administer. If Congress does not move to increase funding of the Older Americans Act to the funding level projected in the authorizing legislation, small State's, including South Dakota, will have difficulty administering title III, part of IV, title V, and title VII.

Older Indian Programs in South Dakota

In 1972, not a single program for elderly Indians was administered by any Indian reservation in South Dakota, and most older Indians were not benefiting from the many other Federal programs available such as social security, food stamps, and others.

Since that time, however, the Office on Aging has made a major effort to develop older Indian programs, working with Indian tribes on reservations, and providing technical assistance and Federal funds.

Older Indians comprise 2.34 percent of the State's population age 60 and over; 10 times the national average.

Allocation of resources to reservations is based on three factors of need: absence of tax base, lack of employment opportunity, and high incidence of poverty.

During fiscal year 1976, 24 percent of title III moneys were awarded to tribal organizations. Sixty percent of model project moneys were granted to Indian tribes (including four grants for a special supplemental security income outreach project on reservations). Twenty percent of title VII moneys were awarded to tribal organizations for nutrition and allied transportation and supportive services.

The South Dakota Advisory Council on Aging and Office on Aging staff have made substantial efforts to achieve better understanding of problems facing older people on the State's nine reservations. Council members and Office on Aging staff have made visits to reservations to see for themselves the problems which must be confronted.

The Coordinator of the Office of Indian Affairs has permanent membership on the South Dakota Advisory Council on Aging, and tribal chairman and planners are included in planning activities.

At the Bicentennial Governor's Conference on Aging, May 1976, a Task Force on Indian Affairs was convened to discuss needs of older Indians. Recommendations of this group reaffirmed the continuing need for transportation services and alternative care and homemaker services. The desire for location of skilled nursing facilities on reservations is undiminished. Planning grants, funding of an aging coordinator for each reservation, a special session with the South Dakota Advisory Council on Aging regarding Indian/reservation concerns, and information and training in grantsmanship were also recommended.

Because Indian reservations occupy the least desirable and least productive areas of South Dakota, unemployment is high, averaging almost 46 percent. Transportation is nearly negligible, and distances are measured in hours of travel rather than blocks or miles.

See attached summary of services and programs for Indians prepared by Theda Olson, Office on Aging.

Special Concerns

Speech and Hearing Problems

The Office on Aging has made two grants to two colleges, the University of South Dakota and Northern State College, to carry out speech and hearing screening and communications disorder education programs in the northeastern and southeastern portions of the State, respectively.

These two projects have resulted in data that is almost certain to change the approach to speech and hearing problems of older people and approaches to dealing with older people. Although there has been some research in this area, the bulk of colleges and universities offer graduate programs in speech and hearing which focus practically all of their energies and resources on school aged children. Older persons' problems with speech and hearing have been relegated to the attention of hearing aid manufacturers and dealers and a few doctors.

However, even with adequate screening and instruction, only one-third (approximately) of older persons benefit significantly from hearing aids alone. Hearing and/or speech losses are much more prevalent among older people. National health surveys indicate that this is true of older people in nursing homes, senior centers, and the community.

Most people do not admit that they have a hearing loss, or they are unaware of a growing hearing loss of the years. Secondly, most hearing screening now being done is what is called pure tone screening or testing. Hearing and understanding is much more than simply hearing a sequence of tones and, as a result, many people with hearing losses are not identified by this type of testing.

Because of many factors—brain cell damage or deterioration with age, mild or severe strokes or arteriosclerosis, psychological confusion, noise damage, infections, cumulative hearing loss, and slower reaction time—many older persons hear the tone but fail to understand the instructions of their doctor, or the details of social security, medicare, and other benefits, activities at the senior center, conversations with family and friends, etc. Others often mistakenly react to the person with such problems as if senility were encroaching, or that the person can no longer care for himself.

In a very limited experiment, costing about $90,000 for both projects, teams from both schools, including audiologists and speech clinicians, went to nursing homes, senior citizen centers, community events, and other activities where elderly were present to perform comprehensive testing.

The testing including pure tone, comprehension, inner ear and bone tests, and speech testing. Results indicated that a very high percentage of persons in nursing homes (90 percent) have speech and/or hearing problems of significance, and that in the senior centers, nutrition projects, and other community gatherings of older persons, 70 percent of the persons had significant hearing or speech losses.

Since speech problems tend to complicate hearing, problems of disengagement, irritability, isolation, and interpersonal relationships often result.

Fortunately, effective techniques have been developed that can restore effective communication for 70 to 90 percent of the people with losses. Some need medical treatment, others need hearing aids, but all need information about the nature of their hearing or speech losses. Information and counseling about hearing and speech losses and use of hearing aids is also useful.

Thus, treatment of speech or hearing losses is comprised of several important elements. One is communications disorder education for persons with losses and the family, relatives, or associates of that person. Such education includes practical aids to communication such as looking directly at the person with the loss, enunciating clearly, and eliminating background noises.

Training in speech or lip reading is effective for those who cannot benefit from a hearing aid, as well as speech therapy.

Mobile equipment and traveling educational and therapy teams have proved the feasibility of communication disorder screening and education in the many small communities and rural areas of the State. The results of such screening and education have significant impact upon independence of older persons. Hearing or speech losses often mean the difference between independence and dependence.

MENTAL HEALTH OF OLDER PERSONS

Isolation, physical problems, death of loved ones, family problems, economic worries, psychosomatic illnesses, and other problems confront the older person. Ways in which mental health services can be provided to older persons are greatly needed.

Despite efforts, little progress has been made to link mental health clinic services to the needs of older citizens, especially rural South Dakotans. Older persons are often fearful of mental health clinics, fearing that they will be labeled as senile and be commited to an institution.

Older people often do not see these clinics as relevant to their problems. They do not understand the terminology used. They may not get much help where the mental health clinics are staffed with persons who are trained and oriented to work with younger persons.

SOUTH DAKOTA OFFICE ON AGING: SUMMARY OF INDIAN AGING PROGRAMS, APRIL 15, 1976

(Prepared by Theda M. Olson, Indian Affairs, Office on Aging)

LOWER BRULE SIOUX TRIBE

The tribe has been operating a title VII nutrition program since December of 1973. The unduplicated number of people served has been 50. Approximately 25 meals are served per day. Transportation is provided by a minibus purchased with tribal funds and operating expenses paid out of title VII funds. Regularly scheduled trips are made to Chamberlain for grocery shopping, food stamps, and other needs. The CETA (Comprehensive Employment Training Act) program is providing the bus driver and cook's helper. Title VII pays for a project director, assistant director, and cook. Nutrition education is provided by two extension persons once or twice a month. The home economics class from the local high school is planning to have the students visit the elderly shut-ins. A nutrition and history project with the participants is also being discussed.

This has been an interesting project to observe. In the beginning, the senior citizens were very quiet and were not interested in any activities other than the meals. Now they have a birthday party once a month and crown a king and queen for the day. Bingos and dances are a big hit. The women are involved in quilting and the men have requested an arts and crafts project where they make knick-knacks out of bottles, egg cartons, etc.

The tribe is very supportive of this project. The interest is evident in that out of a total of six CETA slots for the reservation, two are employed by the nutrition program. A building has been donated by a member of the tribal council for use by the senior citizens until their new center is completed. The tribe donates vegetables such as squash, corn, and potatoes from the tribal truck garden. Meat is donated from the hog farm and buffalo herd.

Fundraising activities have been held to purchase a slide and movie projector, and other items needed at the center.

There is excellent coordination between the nutrition program and other agencies and programs such as Indian Health Service, Bureau of Indian Affairs, and

the extension office. Persons from these agencies are represented on the nutrition project council.

CROW CREEK SIOUX TRIBE

A meals-on-wheels project is funded under title III of the Older Americans Act and is nearing completion of their second year of funding

The center of activity is located at Ft. Thompson. The meals are purchased from the tribal restaurant at a cost of $1.60 per meal. The meals are then transported to 40 people in town and the surrounding area. A building is being renovated for use by the senior citizens and, upon completion, the meals will be prepared and served there. By having a congregate meal site, more elderly will be able to participate in the meals program.

A minibus was purchased with title III funds and operating expenses are provided from title III also. Approximately 100 elderly people take advantage of the transportation program.

The director is the only staff person paid with title III funds. Other staff, an assistant driver, and secretary/bookkeeper is provided by the tribe. Trips are made on a regular basis to Chamberlain for shopping, food stamps, etc.

The Tribal Office of Management and Planning has been delegated to supervise the meals-on-wheels project. Their office acts as an information and referral center for the elderly. They have been assisting the senior citizens in making application for the South Dakota tax relief for the elderly. SSI outreach is an ongoing activity of the project.

The project requested a waiver of the declining match ratio due to a lack of local funds. They have been funded at 75–25 for both years.

SISSETON-WAHPETON SIOUX TRIBE

A center and transportation project was funded with title III funds direct to the tribe. They are nearing the end of their first year of funding. The Sisseton-Wahpeton Senior Center is located in the town of Sisseton three to four blocks from the Sisseton Senior Center.

The tribe has donated a building for the center and has provided tribal funds and labor for renovation and minor repairs. Three and one-half full-time people are employed through CETA and Green Thumb. The center is open 8 to 5, 5 days a week. Older people from the outlying areas, when in town for shopping, use it as a place to rest and relax. The tribe donates $125 a month for coffee and snacks, and once a week a meal is served to approximately 20 people.

A minibus was purchased with title III funds, and transportation is provided to bring people to the center for meals, to obtain medical services, shopping, food stamps and commodities, to the tribal office for business, and several other activities.

The Area IV Senior Citizens Advisory Council, Inc., administers a title VII nutrition site at the Sisseton Senior Center. The Indian elderly comprise 2 percent of the aging population in Sisseton; 24 percent of the participants are American Indian

ROSEBUD SIOUX TRIBE

"Services for senior citizens" is funded under title III with meals being served in four sites: Parmalee, St. Francis, Mission (Antelope Community), and Rosebud. Parmalee has a center component and Rosebud a transportation component. Approximately 120 meals are served per day, 5 days a week. During warm weather the count is higher. Three positions are paid from the title III grant. Other personnel is furnished by the tribe.

The St. Francis site (Owl Bonnet Senior Center) is the newest of the sites. The community built the building and completely furnished it with couches, chairs, lamps, TV, stereo, freezer, refrigerator, stove, and a three-compartment sink. A small apartment is included for the caretaker/cook. This site has an ample number of volunteers as well as donations of food, etc. This center is active in quilting, bingo, arts, and crafts. The St. Francis community was the first Indian community in the Nation to receive a bicentennial designation by the American Revolution Bicentennial Committee. They were also the first community in South Dakota to merit a bicentennial designation. The Owl Bonnet Center group will participate in the bicentennial celebration by serving a traditional Indian meal to the tourists and by having an arts and crafts display at the center. The profits from these two activities will go to the senior citizens programs.

The Parmalee Center is active in bingo, quilting, arts, and crafts. This center is unique in that the elderly participants in the meals program do not wish to be served soup. They want chicken, turkey, roast beef, etc. They feel they eat enough soup at home. In all the other meal sites in South Dakota, the elderly participants want more soup on their menus. The elderly have taken quite an interest in this program and are very vocal in letting their needs be known.

The meal site at Mission (Antelope Community) was the first meal site on the Rosebud Reservation. They've been serving meals for 2 years. Approximately 40 meals per day are served. Almost half of the participants are non-Indians. They have been trying for a year now to get the county commissioners interested enough to put moneys into their project. To date, they have been unsuccessful.

Recently the tribe has given a total of $8,000 to the four sites for equipment, such as steam tables, and any items the individual sites feel they need. Additional moneys were given to the program for travel expense. The tribe has donated buffalo meat and fresh grown vegetables to the sites and individuals as well. The Corn Creek and Norris communities were given moneys by the tribe to build a center. Labor to be provided by CETA and $2,000 for equipment. During the 2 years of operation, this project has generated a lot of community support. Recently the tribe passed a resolution allowing free tribal fishing licenses to anyone on the reservation over age 65.

PINE RIDGE RESERVATION

The Office of Native Americans Programs in Pine Ridge is funded for a reservationwide transportation project. The first year the title III funds were used to purchase three minibuses. A special grant from ONAP in Denver provided two more minibuses plus drivers and operating expenses. The second-year funding from the Office on Aging provided $6,000 for operating expenses. Approximately 885 people have used the transportation system. The minibuses are stationed at Martin, Kyle, Red Shirt Table, and two in Pine Ridge. The buses in Pine Ridge assist the nutrition program with transportation.

The Pine Ridge Village Council was awarded the title VII nutrition grant. Meal service was initiated a week prior to the grant with funds provided by the village council. Approximately 80 meals per day are served. This project does get a lot of volunteer help. Transportation is provided by the title III program. The project is relatively new so not much data is available at this time.

The Kyle Village Council was awarded a title III grant for a meals program on July 1, 1973. For 2 years they prepared the meals on site; July of 1975 they began contracting with the school for $1 per meal. Approximately 20 to 30 meals are served per day. Transportation is coordinated with the title III project at Pine Ridge.

STANDING ROCK SIOUX TRIBE

On February 6, 1976, the Standing Rock Sioux Tribal Council accepted the nutrition for the elderly program. A project director, two cooks, two cooks' aides, two bus drivers, and two janitors were hired. The only staff paid from title VII funds is the project director. All other positions are CETA slots.

The North Dakota site is located at Cannonball in the St. James Church Community Building and, in South Dakota, Bullhead has their own building. Twenty-five meals per day are projected at both sites. The tribe purchased a minibus for the Bullhead site and a bus is furnished by a church group at Cannonball. Meals are not in service as of this date. A target date of 2 weeks is projected.

This project is unique in that the South Dakota Department of Social Services and the North Dakota Social Services Board entered into a joint funding agreement. South Dakota has been delegated lead agency. The North Dakota board sends the grant moneys to South Dakota to administer.

This will be the first aging program to be implemented on the Standing Rock Reservation other than the special SSI outreach project.

CHEYENNE RIVER SIOUX TRIBE

The transportation project on the Cheyenne River Reservation consists of three vans. One was purchased with title III funds, two with tribal funds. The title III bus coordinates closely with the nutrition program. Approximately 12 people per day are transported from the Bear Creek and Dupree communities.

Thirteen food trays are also delivered to those communities. In the town of Eagle Butte, 50 to 60 people are transported daily to the meal site. The minibus is also used for wakes and funerals, shopping trips to Pierre, Rapid City, Gettysburg, and several in-town trips. The operating expenses for these buses were converted from title III to title VII on April 1, 1976.

The home supportive service workers of the Cheyenne River Reservation are stationed in the elderly manors in Timber Lake, Isabel, Dupree, and Eagle Butte. Many of the elderly in these manors should really be in a nursing home, but they do not want to leave the reservation. The supportive service workers assist the elderly with house cleaning chores, cooking, and taking their medicine. They also provide limited transportation for the seniors in the manors. They have been given the same training as the CHR's (community health representatives). This has been a very worthwhile project. The staff turnover is practically nil. In the 2 years of operation, only one person quite, and this was due to a knee injury. Funding has been sought from several different agencies for this project; to date, none has been obtained.

The title VII nutrition grant to the Cheyenne River Sioux Tribe was the first direct grant to a reservation in South Dakota. It was also one of the first projects in South Dakota to begin operation. They are in their third year of funding. Approximately 170 meals are served per day at Eagle Butte and Swift Bird. Meals are delivered to Cherry Creek on Tuesdays and Thursdays. This project coordinates with the Indian Health Service, Bureau of Indian Affairs, community action agency, county extension, SSA, and several other agencies. The tribe is building a new senior citizens center in Eagle Butte and equipping it with a kitchen large enough to accommodate the nutrition program. The interest of the tribal council in the elderly is great and the elderly seem to be a high priority on the Cheyenne River.

This summary deals with the current grants of Older Americans Act funds awarded by the Office on Aging. Under preparation is a history of aging grants on the reservations. This report does not include the off-reservation projects that are serving American Indians.

OLDER AMERICAN INDIAN PROGRAMS, APRIL 15, 1976

Grantee: Lower Brule Sioux Tribe.
Project: Title VII nutrition program.
Project director: Judy Whitney.
Project period: August 1, 1975 to June 30, 1976, third year.
Title VII funds: $33,877.
Total budget: $42,388.

Grantee: Crow Creek Sioux Tribe.
Project: Meals-on-wheels.
Project director: Paul Harrison, Sr.
Project period: July 1, 1975 to June 30, 1976, second year.
Title III funds: $30,120.
Total budget: $40,160.

Grantee: Sisseton/Wahpeton Sioux Tribe.
Project: Senior center and transportation.
Project director: Pansy Crawford.
Project period: April 1, 1975 to May 31, 1976, first year.
Title III funds: $10,875.
Total budget: $14,495.

Grantee: Rosebud Sioux Tribe.
Project: Services for senior citizens.
Project director: Olive Pretty Bird.
Project period: July 1, 1975 to June 30, 1976, second year.
Title III funds: $54,662.
Total budget: $77,506.

Grantee: Office of Native Americans.
Project: Older American Indian Busing System.
Project director: Michael White.
Project period: July 1, 1975 to June 30, 1976, second year.
Title III funds: $6,000.
Total budget: $21,000.

Grantee: Pine Ridge Village Council.
Project: Meals for the elderly.
Project director: Elizabeth Roubideaux.
Project period: January 19, 1976 to June 30, 1976, first year.
Title VII funds: $20,774.
Total budget: $27,164.

Grantee: Standing Rock Sioux Tribe.
Project: Nutrition for the elderly.
Project director: Basil Mentz.
Project period: January 26, 1976 to January 25, 1977, first year.
Title VII funds: $21,899 N.D. share. $21,899 S.D. share.
Total budget: $75,238.

Grantee: Cheyenne River Sioux Tribe.
Project: Home supportive service workers.
Project director: Jack Claymore.
Project period: August 1, 1975 to July 31, 1976, second year.
Title III funds: $47,250.
Total budget: $52,500.

Grantee: Cheyenne River Sioux Tribe.
Project: Meals program for the elderly.
Project director: Lyonne Garreau.
Project period: August 1, 1975 to June 30, 1976, third year.
Title VII funds: $69,863.
Total budget: $91,331.

Grantee: Kyle Village Council.
Project: Meals for the elderly.
Project director: Lillian Ralston.
Project period: July 1, 1975 to June 30, 1976, third year.
Title III funds: $7,000.
Total budget:

SUMMARY: OFF-RESERVATION AREAS SERVING OLDER AMERICAN INDIANS

Grantee: Bennett County Senior Citizens Center, Inc.
Project: Meals for the elderly.
Project director: Edison Ward.
Project period: August 1, 1975 to June 30, 1976, third year.
Title VII funds: $50,490.
Total budget: $71,832.

The nutrition project at Martin serves approximately 66 meals per day. Forty-two percent of the meals are served to American Indians. The project director is an enrolled member of the Oglala Sioux Tribe on the Pine Ridge Reservation. This center is most interesting to visit because of the unique activities they have initiated, but mainly because the Indians and non-Indians have a true caring for one another. There is no racial tension in this center. The recreation program is an active one including TV, pool playing, painting lessons by a local artist, nutrition education lectures and demonstrations. This project has generated a lot of support from the county, city, and local merchants. The volunteer effort is to be commended because of the number of volunteers as well as their reliability. The project director, bus driver, and secretary are paid with title VII funds. Effective March 31, 1976, the title III transportation was converted to title VII. A minibus, operating expenses, and driver are now paid from title VII funds. The transportation project operates solely within the nutrition project. This provides participants transportation to the meals, shopping, doctor and dentist appointments, bank, post office, social security office, etc.

Grantee: South Central Community Action Program, Inc.
Project: Outreach and coordination.
Project director: Dee Brown.
Project period: January 1, 1976 to June 30, 1976, second year.
Title III funds: $36,858.
Total budget: $61,451.

This project has contacted approximately 150 Indian aged and has assisted them in filling out the forms for the tax relief for the elderly. A staff of seven

perform the outreach and coordination activities. None are Indian but recently they've been coordinating with a job services' person who is Indian. He works mainly with the Indian elderly. According to the 1970 census, the Indian aging population comprise .01 percent of the total elderly population. There are four Indian representatives on the SCCAP board.

Grantee: South Central Community Action Program, Inc.
Project: Transportation.
Project director: Winnie Jo Jons.
Project period: April 1, 1975 to March 31, 1976.
Title III funds: $10,295.
Total budget: $20,590.

The transportation program employs a director and bus driver. One minibus operates solely with the nutrition project. Twenty percent of the passengers are Indian. Transportation is provided in the towns of Wagner and Lake Andes.

Grantee: South Central Community Action Program, Inc.
Project: Nutrition program for the elderly.
Project director: Fern Sondgeroth.
Project period: August 1, 1975 to June 30, 1976, third year.
Title VII funds: $92,241.
Total budget: $122,986.

Five sites are operating at Lake Andes, Wagner, Herrick, Burke, and White Lake. An average of 25 meals are served per day at Lake Andes; 34 percent of the meals are served to American Indians. At Wagner, 39 meals are served per day with an average of 12 meals served to Indians. During the first year of operation, a site was opened in the tribal office at Greenwood. It closed 9 months later because of a lack of participation. The elderly are transported to Lake Andes and Wagner for meals by the community health representatives. Six people are employed by the nutrition program. The site manager at Wagner is of Indian descent. Indians are represented on the site councils as well as the project council.

Grantee: Rapid City Indian Service Council.
Project: Minneluzahan Senior Center.
Project director: Margie Twiss.
Project period: August 1, 1975 to July 31, 1976, first year.
Title III funds: $20,562.
Total budget: $27,416.

This center has been in operation for almost a year. The city has given them a building to use until their new senior center is completed. This is considered an Indian project but they serve a large number of non-Indian elderly. The community, city, and county commissioners are very supportive of this program. A meal is served once a day to approximately 30 people. The seniors are active in arts and crafts and are making chair pillows to sell at the Governor's conference. Staff is provided through title III, Green Thumb, and the county welfare office. They are hoping to have a title VII site when the new center is completed. A seven-passenger Volkswagen bus was purchased with donations and city funds. Transportation is provided for shopping needs, doctor and dental appointments, banking, food stamps, and other needs as required by the senior citizens.

Grantee: Western South Dakota Community Action Agency.
Project: Meals program for the elderly.
Project director: Marie Rogers.
Project period: August 1, 1975 to June 30, 1976, second year.
Title VII funds: $73,302.
Total budget: $122,242.

The meals program was funded under title III for 3 years. Two years ago, they converted to title VII. The project director is Indian. There are three sites in Rapid City, one in Keystone, and one in Hill City. The central kitchen, located at 804 Chicago, is considered the Indian site; and 46 percent of their meals are served to non-Indians. The meals are prepared there and transported across town to the two meal sites. For the month of March, they averaged 225 meals per day. This project has generated support from the community, city, and county commissioners, church groups, and other interested individuals. The working relationship between the project director and four site managers is excellent.

Grantee: Northeast South Dakota Community Action Program.
Project: District IV Vista.
Project director: Bruce Miller, acting director.
Project period: July 1, 1975 to June 30, 1976, second year.
Title III Funds: $4,756.
Total budget: $11,260.

This project has 15 volunteer Vista workers, two are American Indians. They have contacted approximately 200 elderly Indians to assist them with the tax relief forms, and encourage them to attend health screening clinics and educational functions. Indians are represented on the senior citizens advisory committee and boards. The CAP agency coordinates and involves Indian people in all of their activities.

Grantee: Northeast South Dakota Community Action Program.
Project: Multipurpose senior centers.
Project director: Carol Seurer.
Project period: March 1, 1975 to May 29, 1976, third year.
Title III funds: $4,325.
Total budget: $8,650.

The outreach worker for this program has contacted 150 to 200 elderly Indians. She has a good working relationship with the elderly. She makes home visits and tends to their needs.

The winterization program funded through NESDCAP repaired at least 25 homes of Indian people. The CAP agency coordinates with the tribal gardens project, the tribal senior center, and provides publicity for the cannery which is owned by the tribe. Of course, they are involved in many other activities too numerous to mention.

Grantee: Area IV Senior Citizens Planning Council, Inc.
Project: Area IV Senior Citizens Nutrition Project.
Project director: Mildred Anaka.
Project period: August 1, 1975 to June 30, 1976, third year.
Title VII funds: $112,287.
Total budget: $174,209.

This project has three sites located at Sisseton, Huron, and Waubay. Sisseton serves approximately 115 meals per day; of those, 24 percent are served to Indian elderly. Waubay serves an average of 23 meals per day, and 15 percent are served to American Indians. Older Indians also participate in the supportive services such as transportation, nutrition education, and health care. At Sisseton a staff of five has two Indian members, one a cook and the other a bus driver. Waubay employs two people, and both are non-Indian. Indian people did not apply for these positions.

Grantee: Greater Missouri Community Development Corp.
Project: Greater Missouri Nutrition Project.
Project director: Ardrie Hermes.
Project period: August 1, 1975 to June 30, 1976, first year.
Title VII Funds: $45,000.
Total budget: $61,866.

Sites are operating at Timber Lake and Isabel. The total meals served per day is 10. Of these, 17 percent are served to American Indians. The project personnel consists of two non-Indians, two Indians and one Hawaiian. The Indian elderly participate in the supportive activities offered by the project.

Greater Missouri Community Development Corp. also has an outreach grant. There is one outreach aide, an American Indian, for all of Walworth County.

Inter-Lakes community action program in Madison does serve a few Indian people in Flandreau and surrounding areas. However, the number of elderly Indian people is very small.

REPORT OF STATUS OF GRANTS/CONTRACTS TO MINORITY INDIVIDUALS UNDER APPROVED AREA PLANS ON AGING AS OF JUNE 30, 1975

PSA No.: NA; total population in PSA: 666,236; number and percent of total population which is minority: 32,365 (4.86 percent); area plan budget: $527,639,[7]

[7] 24 percent of title III moneys were awarded to Indian tribes.

$140,000;[8] total number of grants/contracts under area plans: 42, 12; number and percent of grants/contracts awarded to minority individuals: 6 (14 percent), 7 (58 percent); total amount of funds awarded to minority individuals: $128,431, $85,250.

REPORT ON STATUS OF GRANTS/CONTRACTS TO MINORITY INDIVIDUALS UNDER THE TITLE VII NUTRITION PROGRAM AS OF JUNE 30, 1975

Total State population 60 or over: 109,677; number and percent of minority population 60 or over: 2,561 (2.34 percent); number of population 60 or over designated as eligible for title VII: 109,677; number and percent of minority population 60 or over designated as eligible for title VII: 2,561 (2.34 percent); total number of grants/contracts (including subgrants/subcontracts) under title VII: 8; number of grants/contracts and amount of funds awarded to minority individuals: 2 ($99,969).[9]

Report of grants/contracts to Indian tribes under titles III, VII, and Model Projects as of June 30, 1975

Title III:

Crow Creek Sioux Tribe, Fort Thompson:	
Meals-on-wheels	$15,000
Transportation	15,120
Rosebud Sioux Tribe, Rosebud:	
Meals program, Mission	29,097
Senior center, Parmalee	11,175
Transportation, Rosebud	12,825
Cheyenne River Sioux Tribe, Eagle Butte: Transportation	6,222
Oglala Sioux Tribe, Pine Ridge: Transportation	17,807
Kyle Village Council, Pine Ridge Reservation: Meals program	10,310
Sisseton Wahpeton Sioux Tribe, Sisseton:	
Senior center and transportation	10,875

Title VII:

Lower Brule Sioux Tribe, Lower Brule	36,989
Cheyenne River Sioux Tribe, Eagle Butte	62,980
Model projects: Oglala Sioux Tribe, Pine Ridge: Bilingual information and referral	10,000

Cheyenne River Sioux Tribe, Eagle Butte

Home repair	$18,000
Home supportive service workers	47,250

Four special outreach for SSI grants are presently being negotiated with the tribes. Approximately $20,067.92 will be used for this purpose. The reservations to receive the grants are: Sisseton-Wahpeton Sioux Tribe, Crow Creek Sioux Tribe, Standing Rock Sioux Tribe, and Rosebud Sioux Tribe.

This report does not include the grants to nonminority agencies which are serving a large percentage of American Indians.

27 percent of all Older Americans Act moneys are going to reservations.

A title III grant was made to the Rapid City Indian Service Council for a center program with outreach, education, and transportation components in the amount of $20,562. The project period began on August 1, 1975.

ITEM 6. STATEMENT BY EUGENE L. ROWEN, OFFICE SUPERVISOR, AND FRANK COURNOYER, MANAGER, OFFICE OF TRANSPORTATION PLANNING, SOUTH DAKOTA DEPARTMENT OF TRANSPORTATION

PUBLIC TRANSPORTATION FOR THE ELDERLY IN SOUTH DAKOTA

The urban areas (5,000 or more in population) are served by scheduled motor coach lines, and the smaller areas on the bus routes are also served. The levels of service are far more adequate, but we cannot afford to pay the fares that would be required to provide the desired levels of service.

[8] 60 percent of model projects moneys were granted to Indian tribes. This includes four grants for the special SSI outreach project on reservations.

[9] This constitutes 20 percent of the title VII moneys awarded.

Section 16(b)(2) of the Urban Mass Transportation Act, which provides capital assistance to private nonprofit organizations to procure vehicles to transport the elderly and handicapped, was initiated in South Dakota in 1975. The first vehicles were obtained in early 1976. The chart on the following page gives pertinent information on the present program. An additional application was submitted to UMTA in August 1976 for 18 vehicles to serve 14 nonprofit organizations in providing transportation for their clients.

An inventory of all types of public transportation services in South Dakota was recently completed, and a copy of the report is attached. There are more than 200 senior citizen centers in the State, and more than half of the centers have some transportation service available even though it is insufficient or inappropriate in many cases. These services are briefly described in the inventory report.

Federal programs are very categorical, so no single program can meet our transportation needs. The categorical nature of these programs also makes it difficult to combine the programs to meet the transportation needs and still not violate the sets of guidelines governing the programs. Section 16(b)(2) is a capital grants program limited to providing transportation for the elderly and the handicapped; social services programs which can provide operating funds for transportation are not limited to clientele who are elderly or handicapped, so there is a reluctance to fund a project which does not provide a complete service for all eligible clients. Each Federal agency normally requires an audit on all funds, so bookkeeping and ridership records are difficult to maintain under combined Federal programs.

At least 2 years ago, a "new federalism" was being dicussed. Under this concept, many Federal sources of funds could be programed into a single project and, after approval by the funding agencies, the funds would be combined into a single budget. There would be only one audit of the project, and each funding agency would only need to be assured that programed work was accomplished. It would appear that Federal block grants to States, based on an allocation formula, would be easier to program and administer.

School buses cannot be effectively used to transport the rural elderly for the following reasons:

(1) Standard seating arrangement for school children is not suitable for adults.

(2) A period from 8 a.m. to 6 p.m. should be scheduled to transport the rural elderly to and from shopping and social and medical services.

(3) Better heating and air conditioning is required on buses used to transport the elderly.

(4) The elderly are reluctant to board a school bus.

The transportation needs of the rural elderly in South Dakota are more costly per person because of longer trips to services in our low-density population. They need transportation to and from shopping, doctor appointments, social and recreation purposes. Private automobiles and senior citizen buses are the main modes of transportation for the elderly. If neither mode is available, the elderly person is denied his basic needs.

The elderly require transportation on an average of once every 2 weeks to meet their minimum needs for shopping, doctor appointments and social and recreation purposes. Their minimum need to take advantage of hot meals served at some senior centers would be 5 days a week.

The elderly Indian living on-reservation is in a serious situation. Nearly all persons in this category are living on a monthly income that is less than one-half of the poverty level (monthly basis) Transportation is available on a for-hire basis, but the average cost per trip is approximately $20. On this basis, a trip even once in a month is a luxury. By the end of fiscal year 1977, it is in the overall State program to have transportation to serve the elderly on all nine of the reservation areas.

ITEM 7. STATEMENT OF MICHAEL G. GOODROAD, DIRECTOR, SOUTH DAKOTA TIE-LINE, PIERRE, S. DAK.

Senator Clark and members of the committee, as director of Tie-Line, South Dakota's statewide information and referral service, I am honored to be able to submit this written testimony, and regret that I was not able to give an oral statement at the hearing in Sioux Falls.

Tie-Line, South Dakota's statewide information and referral system, has been operational since July 1, 1975. Tie-Line serves as a central information center and provides South Dakotans with a toll-free service that offers direct and immediate access to over 8,500 public and private service providers.

In its first year of operation, Tie-Line reecived approximately 38,830 calls. Of that number, 2,547 calls, or 6.71 percent of the total number of calls, were placed by or on behalf of senior citizens. The range of the types of requests made by senior citizens generally reflects those of the rest of the population, but there are special problem areas.

The most complicated and frustrating problems arise in dealing with social security benefit guidelines. The case of one elderly couple will serve as a good example. The husband was receiving social security retirement benefits and his wife, who has a respiratory disease, was receiving SSI benefits, which paid for her oxygen supply. The husband received a $3.40 raise in his monthly retirement benefits, which increased their total family income to $1.70 over the maximum limit allowed for SSI eligibility. As a result of this $3.40 raise, the wife lost vitally needed SSI and medicaid benefits which, up until that time, had amounted to $293 per month. The husband tried to refuse the increase but was told that he did not have the option to do so.

This is not just an isolated case. Tie-Line's information and referral specialists have encountered several similar situations which are the direct result of the inflexibility incorporated within social security guidelines and regulations. Other case examples are available upon request. There is a definite need to provide a certain amount of flexibility within the guidelines which would allow each case to be judged on its own merits and extenuating circumstances taken into consideration.

A corollary of the aforementioned problem is the appeals process a person encounters when his or her claim for benefits is denied. An individual making an appeal is faced with a bureaucratic system which at times seems to be working against the client, when it should be facilitating the process. An individual appealing a judgment is often hampered by his own ignorance of the appeals process, and is usually not able to obtain sufficient counseling from social security office personnel on the best way to proceed in building a strong argument for the appeal.

Serious consideration should be given to the implementation of a system of citizen advocates, which would be independent of the Social Security Administration. The function of an advocate would be to facilitate the appeals process for the individual who could not afford to retain the services of a private lawyer. The duties of a citizen advocate would include:

(1) Making the client aware of his rights, options, and obligations in the appeals process;

(2) Aiding the client in the construction of the best possible argument for the appeal; and

(3) Appearing as the client's representative, if necessary, when the case comes before the appeals judge.

Tie-Line staff have encountered several complicated social security problems which have ultimately gone through the appeals process. In the effort to find assistance for those persons making appeals, Tie-Line has located only two citizen advocates of the type described above, but only one of these is able to serve as the client's legal counsel when the case comes before the judge. Considering that Tie-Line has been able to locate only two advocates for all of South Dakota, implementation of a system of citizen advocates would do much to alleviate a serious service gap in this area.

One final point relating to the appeals process involves the waiting period between initiation of the appeals process and the actual hearing of the appeal. It is not uncommon for an individual to have to wait for 6 months before his appeal is heard by the judge. The individual may well be awarded back benefits if the decision is favorable, but he is often left without any financial resources whatsoever during the waiting period, unduly increasing both the economic and emotional pressure on the individual.

Since the lengthy waiting period is usually a function of the heavy caseload carried by the appeals judge, consideration should be given to either increasing the number of appeals judges within the area, or reducing the size of the geographic area for which each judge is responsible.

In addition to the need for citizen advocates, Tie-Line's information and referral specialists have encountered several other service gaps in senior citizen needs.

A major service gap occurs in the area of dental services for senior citizens. There are several public programs which provide financial aid for dental services to several different target groups within the State. Unfortunately, the elderly is not one of these target groups. A senior citizen living on a fixed monthly income does not usually have the resources necessary to pay for extensive dental work, such as the construction of a set of dentures. If a person cannot afford to pay for dental services, he or she will usually learn to do without it, but the impact of foregoing needed dental work can be very damaging, not only from a nutritional aspect, but also from one of maintaining self-respect and dignity. Tie-Line is sometimes able to obtain aid for a senior citizen by contacting a local fraternal or charitable organization, but funds allocated for such purposes are usually limited and available only in a few areas. There is a definite need for some type of comprehensive dental services plan for senior citizens.

There are several service gaps which are ramifications of the rural nature of the State. Isolatedness of rural communities, subsequent transportation problems, and lack of sufficient numbers of outreach personnel all contribute to the lack of onsite service delivery programs (meals-on-wheels, homemaker services, etc.) in some areas, or serious problems with extant programs. Programs like these are important because they provide the elderly with services that permit them to maintain an independent and dignified life style.

Tie-Line is able, to a certain extent, to negate the effects of isolation by providing senior citizens in rural areas direct and immediate access to service providers. The information and referral specialists are able to act as coordinators/facilitators in making senior citizens aware of what services are available to them and then, by working with service providers, making sure the needed service is delivered.

In summary, the problems facing the rural elderly in South Dakota tend to be exacerbated by the very nature of a rural environment, which promotes a physical isolation of the rural elderly from those providing needed services. However, an equally important problem lies in educating the elderly as to exactly what services are available to them, and then constructing viable service delivery systems which will be to deliver those services on a compassionate and individualized basis.

Senator Clark and members of the committee, thank you.

ITEM 8. STATEMENT OF DAVID A. KEMPER, DIRECTOR, SOUTHEASTERN HUMAN DEVELOPMENT PROGRAM, SIOUX FALLS, S. DAK.

My name is Dave Kemper and I am the director of the southeastern human development program, a community action program which serves a six-county area in the southeastern corner of South Dakota.

I will keep my remarks very brief because I realize you are here to listen to testimony from our older citizens and I also realize that those older persons get tired of younger people attempting to speak for them.

Naturally, serving in my position, I am very concerned about services to the poor. Unfortunately, many of our elderly people fall into that economic classification with no hope of escape. They are either unable to work or find employment because of their age.

The elderly poor, and especially the rural elderly poor, need to be given special attention when drafting and implementing older American's legislation. It troubles me that many of the past beneficiaries of programs funded under the Older Americans Act of 1965, and subsequent amendments, have not been poor. I cannot offer you accurate data to substantiate this statement. However, after being involved with elderly programing in two States, I am convinced that a special effort needs to be made to reach those people who truly need those services. Indeed, I believe if you will think back to all of the contacts you have had with senior citizen groups and programs, you may come to the same realization. The poor are not involved as they should be.

Please, do not misunderstand me. I believe senior citizen organizations and centers serve a very worthwhile purpose. I have also found that the people involved in older American programs are concerned and usually make every effort to reach the elderly poor. Nevertheless, I would urge your committee to consider ways of assuring that services intended for the elderly are designed to reach the elderly poor. This may be done by mandating that each grantee address the problem in their funding proposals. Another possibility is to concentrate on those services which are most likely to reach the rural elderly poor, such as: outreach programs, home care services, viable legal services and/or ombudsman programs, rural transportation services, as well as others.

I realize that some of these services I have mentioned are national priorities already and I also realize that resources are limited. Unfortunately, I don't have any easy answers. I do hope you will consider the issue I have raised and I am sure there are smarter people than myself who can find some answers.

I would like to briefly make two other points while I have the opportunity. First of all, I want to emphasize the need for outreach services in rural areas. We are fortunate to have the aging services center in this area, which we work with in our own outreach effort. In other areas of the State, as over much of America, these services are provided by community action agencies which provide services to the poor. Since 1965 CAA's have, in many areas of our country, taken the lead in developing services for the eldrely. In fact, in most rural areas the CAA is probably the only viable service delivery mechanism in existence. These agencies must continue if the rural elderly are ever going to be served adequately.

Second, in considering the needs of rural as well as urban elderly, don't overlook the administrative complexities which keep many elderly people from achieving an adequate income and proper nutrition. Programs such as social security, social security disability, food stamps, and SSI need to be simplified and streamlined. Far too many persons are not taking part in these programs, even though the need exists, merely because of the bother or humiliation involved in applying. We have several case studies which we would be happy to make available to the committee if they might be of benefit to you.

Thank you for your time.

Appendix 3

STATEMENTS SUBMITTED BY THE HEARING AUDIENCE

During the course of the hearing, a form was made available by the committee to those attending who wished to make suggestions and recommendations but were unable to testify because of time limitations. The form read as follows:

DEAR SENATOR CLARK: If there had been time for everyone to speak at the hearing in Sioux Falls, S. Dak., on August 18, 1976, concerning "The Nation's Rural Elderly," I would have said:

The following replies were received:

RAY A. BAGLEY, MADISON, S. DAK.

Small towns need more transportation. South Dakota had a very bad drought. It would be very good to have work programs such as Green Thumb expanded for the elderly. That would have to do for the elderly. I also thought that some grocery delivery service sounded pretty good. There could be room for expanding for school help, transportation, and nutrition. I enjoyed the meeting at Sioux Falls.

HAZEL M. BOEHLER, CANTON, S. DAK.

Transportation is a big need in this State, but if the elderly had the money, the transportation would be available.

The young mothers on aid to dependent children are well taken care of and lack for nothing, but the grandmothers and grandfathers are sadly in great need. At election time the elderly are taken to the polls and votes are solicited, but at any other time they are not important.

DORTHY BROWN, LAKE ANDES, S. DAK.

As a service provider, I probably consider needs of the rural elderly in a somewhat different light than others would do. The following points are based upon personal convictions, as well as upon observation of certain Federal programs. These points are not prioritized, nor are they purely restricted to the Nation's elderly.

Outreach efforts within a rural setting are of upmost importance. These outreach efforts conducted within a nonurban area must include elements which are not usually identifiable with the term, for the common term usually implies that a staff-clientele basis is ordinary on a one-to-one basis. However, the feasibility of applying this same type of concept to rural living and keeping it monetarily effective is absolutely impossible. Rural outreach efforts must embrace two approaches: the traditional and the group basis. Rural elderly persons and urban elderly persons may at some time need assistance in meeting needs or problems; however, few of them know where to go. Other factors coupling the difficulty of finding results, especially for the rural elderly, are transportation and communications. If one must travel somewhat for consultation or to obtain direct assistance, the elderly usually can't manage it for a multitude of reasons. Communications of available opportunities and/or services are not particularly easy to get for a locality if one must rely on a small town newspaper. News of the human services do not, unfortunately, often travel that route.

As a service provider, different efforts and measures must be used. This is where the rural outreach worker steps in. It must be allowed, and I dare say encouraged, to function both on the one-to-one basis and the group basis. These persons must not only work on the individual's need, but also be involved with establishing and/or strengthening the middleman approach. If, for instance, a local volunteer or a senior citizen center becomes involved with this "middleman" approach, then total generation efforts may have the multipler effect. I truly believe that this type of multipler effect is the only possible approach one may use when trying to serve thousands of rural elderly persons scattered over thousands of square miles, as we are trying to do.

Federal program requirements, primarily designed to be of service either directly or indirectly to rural elderly persons, are many times inappropriate to available resources and the realities of rural living.

Example 1. Social Security Act's title XX programs mandate a lengthly, complex certification process. If these types of programs are to be of service in rural America, the harsh realities of geography and proper staffing are continuously undermining the best of intentions and efforts.

Example 2. Requirements of medicare and medicaid of having a physician review each resident or patient each few weeks or requiring institutions of this type having diets checked by a licensed dietitian. Rural areas don't usually have an abundance of professional persons lying around unoccupied, yet the programs are in essence negatively differentiating between the professional haves and the professional have-nots.

In closing national programs are to be just that, national programs. However, elderly persons in rural South Dakota are of need as is the elderly New Yorker. As a service provider, I must again stress that rural South Dakota is trying to assist its elderly persons and we, in turn, expect our governmental officials to return the compliment. Remember: I have to travel 72 miles to see a traffic-signal light in South Dakota.

MAE MULLINIX, CANTON, S. DAK.

Thank you for the privilege of meeting you and taking you for a ride in our van.

Everyone really enjoyed it. I finally got ahold of a picture from the office on aging in Sioux Falls, so I put an article in our local newspaper. Thought you might like a copy.

J. F. SMITH, SIOUX FALLS, S. DAK.

Please have the States reduce their taxes on homes of the elderly and do something about the schools always wanting more and more. They say South Dakota doesn't pay its teachers as well as other States. Why then are there so many teachers from other States teaching here?

We have lived here for 28 years and our taxes have gone up every year. My husband has retired from Morrel and his pension is $214 a month. After 28 years of work and $433 social security, the rate things are going we will have to give up our home because, when we *do* get a social security raise, by the time we get it everything is higher and we worry more. They always have millions for foreign countries, but never for us.

○
