Footlick stated that the lab gets business by (1) physician requesting lab work, (2) public aid or private patients call Medi-Car and are transported to the lab which is very expensive for the State, and (3) by having a station within the clinic where the blood can be drawn which substantiates the rental payment which is based more on the amount of people than business. Sending 20 people by Medi-Car costs the State more than rental they could work out with clinic, Footlick rationalized.

Doug asked Footlick how many square feet the lab would need to draw the blood.

Footlick: "A blood drawer, chair and cabinet."

Doug stated the clinic's rental is $450 a month. If the clinic's business is brisk in the beginning the clinic could get that $450 back in rent.

Footlick: "Oh sure, $5,000–$6,000 a month."

Doug asked if the clinic would get $5,000–$6,000 a month for rent.

Footlick: "Sure. . . . volume of people."

Doug asked if the clinic would sign a lease.

Footlick: "Sure. . . . wouldn't be able to refer to rent until we look at volume. We would have to renegotiate the lease."

Riordan asked if the clinic's rent would change four times a year.

Footlick: "I don't think it would be fair to do once or twice and get good idea of volume."

Riordan asked if Division provides a technician to draw the blood.

Footlick: "Depends on volume."

Doug asked Footlick if the clinic gets a rebate off of the volume.

Footlick: "A rose, is a rose, is a rose. I look at it as a rental."

Doug asked if the clinic was safe from the FBI.

Footlick: "FBI frowns upon an incentive for the doctor to draw in a lot of . . . on kickback system. . . . I justify it would cost more to bring these patients to the lab than if I were to do the work here."

Riordan asked Footlick how much he is saving the State by giving us rent, instead of having the patients brought to the lab.

Footlick: "On Medi-Car . . . would be somewhere around $4,000–$5,000. . . . charge $25–$50" for one trip to lab in the Medi-Car.

4. That at this point, Mike Wallace entered and stated that the remainder of this conversation was being recorded for broadcast.

STATE OF ILLINOIS,
County of Cook, ss:

AFFIDAVIT

I, Geralyn Delaney, being first duly sworn, do state under oath that the following is true to the best of my knowledge:

1. That I am employed by the Better Government Association, 360 North Michigan, Suite 1118, Chicago, Ill., as a secretary and have been employed there since April 1, 1974.

2. That on January 6, 1976. at approximately 3:25 p.m., I was present at 1520 West Morse, Chicago, Ill., along with Douglas Longhini and Patrick Riordan, investigators for the Better Government Association, when Harry Keshian from United Medical Laboratory entered the above-stated premises.

3. That on January 6, 1976, the following conversation took place:

Doug asked Keshian how much he would charge here for an SMA.

Keshian: "We charge 50 percent."

Riordan asked if this was across the board.

Keshian: "Yes."

Doug asked if the clinic could charge 50 percent of what the public aid schedule is.

Keshian: "Yes. I have to charge same prices downtown. You are charging patients directly here."

Riordan asked if United would do the billing.

Keshian: "Yes. We keep record and receipt book."

Doug asked if United would give the clinic back 50 percent.

Keshian: "Yes."

Doug asked if the clinic gets a rebate for all public aid.
Keshian: "Yes."
Doug asked if this would be in the form of rent.
Keshian: "Yes. We give to factoring agency . . . they charge 8–9 percent interest."
Doug asked if 50 percent was left from the factoring company.
Keshian: "Yes."
Doug asked how payment is arranged.
Keshian: "Pay you in advance and readjust at the end of the month."
Doug asked if the payment was in the form of a check.
Keshian: "Yes, of course."
Riordan asked Keshian if at the end of the month the clinic gets back 50 percent of the gross volume.
Keshian: "Yes."
Riordan asked if there would be any problem if the rent check fluctuates up and down.
Keshian: "I would rather keep it the same, steady; it looks better in the books."
Keshian was asked if the clinic is getting 50 percent back.
Keshian: "We bill you the prices given to you."
Keshian: "We charge you one price and the doctor bills what he wants."
Doug asked Keshian if the volume goes up would United re-evaluate the rent.
Keshian: "We do not reevaluate the rent."
Doug asked if some doctors ask for up to 60 percent back.
Keshian: "That is right."
4. That at this point, Mike Wallace entered and stated the rest of the conversation was being recorded for broadcast.

GERALYN DELANEY.

AFFIDAVIT

I, Geralyn Delaney, being first duly sworn, do state under oath that the following is true to the best of my knowledge:
1. That I am employed by the Better Government Association, 360 North Michigan, Suite 1118, Chicago, Ill., as a secretary, and have been employed there since April 1, 1974.
2. That on January 6, 1976, at approximately 2:05 p.m., I was present at 1520 West Morse, Chicago, Ill., along with Douglas Longhini and Patrick Riordan, investigators for the Better Government Association, when Joe Espino from D. J. Medical Laboratory entered the above-stated premises.
3. That on January 6, 1976, the following conversation took place:
Doug asked if D.J.'s prices for private patients are competitive.
Espino restated the prices for private as being $3.50 for an SMA–12 with the State paying $15; $2.50 for CBC with State paying $6; $4 for pap smear with State paying $10; $6 for EKG with State paying $12.
Riordan asked if a discount would be applied, and if there would be a limit on private patients.
Espino: "I am basing this when medical center is working full time. As far as prices are concerned the number of patients doesn't matter. If you have 1 or 100 a day prices will be the same. Mason and Baron will charge $5.50 for an SMA–12. When you increase volume, prices will not vary."
Riordan asked Espino if his lab was offering a 50 percent discount for private patients.
Espino: "Right."
Dough asked Espino if these prices are legal, since they are not written down. Are there any problems with this.
Espino: "There is nothing we can do about it. It is illegal for us to publish different private prices."
Riordan asked if he would lose his license; if this is illegal for the doctor.
Espino: "I don't know."

Riordan asked Espino if what he was doing is illegal.
Espino: "Right."
Doug asked Espino if he had any problems in the past with prices; has there been any auditing.
Espino: "I was asked by them how much I charged for patients. For quite some time I know whatever we charge for private we are supposed to charge for public aid."
Doug asked if the charge for private should be the same as charged for the State.
Espino: "Yes."
Riordan asked if the auditors would get after him for the different prices.
Espino: "I don't think so. In the first place—I do not know, I cannot answer your question."
Riordan asked if the clinic would get a 50 percent discount on private patients.
Espino: "Right."
Doug asked if we get a 25 percent rebate.
Espino: "Yes."
Doug asked how this rebate is paid.
Espino: "A check."
Doug asked if the check is sent in the mail.
Espino: "Right."
4. That at this point Mike Wallace entered and stated that the remainder of this conversation was being recorded for broadcast.

AFFIDAVIT

I, Geralyn Delaney, being first duly sworn, do state under oath that the following is true to the best of my knowledge:
1. That I am employed by the Better Government Association, 360 North Michigan, Suite 1118, Chicago, Ill., as a secretary, and have been employed there since April 1, 1974.
2. That on January 6, 1976, at 10:55 a.m., I was present at 1520 West Morse, Chicago, Ill., along with Douglas Longhini and Patrick Riordan, investigators for the Better Government Association, when Mr. Simos, representing Claremont Laboratories, entered the above-stated premises.
3. That on January 6, 1976, the following conversation took place:
Doug asked Simos to explain about the technician.
Simos: "As I explained there are changes . . . I got in touch with my lawyer and . . . they printed in the paper where someplaces small space is rented for $500 in different areas. According to the paper, one lab, not mine, is being sued. Might be changes here. Alternative is to give flat rate and not go up and down. What we would like to avoid is making it look like a kickback to you."
Riordan asked if the payment will look like kickback.
Simos: "We have to set up fixed payment . . . $200 a month on one room here to be used. Drawing room and EKG room."
Riordan asked Simos if he is proposing $200 a month.
Simos: "We gage amount of rent in this . . . center . . . we should agree on how much rent in one space and provide you with technician."
Doug asked if the rent is reevaluated.
Simos: "Yes. Based on volume."
Doug asked if the rent is changed once or twice a year.
Simos: "Raise rent? Fine."
Doug stated then that if the clinic has 30 patients a day, we can have a sublease and get between $500 and $700 a month. Can we still be getting that amount of money for a small amount of square footage being used in this clinic.
Simos: "Yes."

Riordan asked if the clinic can get $200.

Simos: "That was an example figure. We can vary from $200, $500, $600. . . ."

Riordan asked if Simos was proposing this to look like rent.

Doug asked Simos if the rent is a rebate on the volume.

Simos: "Yes. Have to base it if getting good volume . . . fine with me."

Doug asked if the clinic can charge $1,000 for footage.

Simos: "Yes. If you have business and I am making money out of it."

Doug asked Simos if he was changing his business style with his other clinics, too.

Simos: "I have started calling them up and telling them the problem . . . we fix rent looking at volume . . . it has to be fixed to look like rent."

Riordan asked if the authorities could go through the bills and find something.

Simos: "They don't do that very often, and once public aid gets on you and makes audit of operation. . . ."

Riordan asked if public aid, FBI, etc., have audited Simos' lab.

Simos: "Not my lab . . . your expenses are first thing they look at."

Doug asked if Simos was being audited now.

Simos: "I would like to get ahead of them."

Doug asked if Simos' lab had been audited yet.

Simos: "No, not yet."

Riordan asked if the clinic has 70–80 percent public aid would we be charged for private patients.

Simos: "They will be charged same as public aid. If you order five tests we want to take it easy on private patients. We just charge them for two tests. Most of . . . patient charges not collected on insurance and doctor wants lab tests and test becomes useless and doctor does test all over in hospital."

Riordan asked Simos if the clinic gets a break on private patients.

Simos: "Yes."

Doug asked Simos if he would be using much footage in the clinic.

Simos: "Not necessarily."

4. That at this point Mike Wallace entered and stated that the rest of this conversation was being recorded for broadcast.

GERALYN DELANEY.

Subscribed and sworn to before me this 20th day of January, 1976. Robert C. Howard, notary public.

STATE OF ILLINOIS,
County of Cook, ss:

AFFIDAVIT

I, Geralyn Delaney, being first duly sworn, do state under oath that the following is true to the best of my knowledge:

1. That I am employed by the Better Government Association, 360 North Michigan, Suite 1118, Chicago, Ill., as a secretary, and have been employed there since April 1, 1974.

2. That on January 6, 1976, at approximately 9:40 a.m., I was present at 1520 West Morse, Chicago, Ill., along with Douglas Longhini, investigator for the Better Government Association, and Patrick Riordan, investigator for the Better Government Association office in Springfield, Ill., when Nemie LaPena and Bill Minor, business manager, both owners of Northside Clinical Laboratory, entered the above-stated premises.

3. That on January 6, 1976, the following conversation took place:

Longhini asked LaPena or Minor to explain how the daily lab sheet functions?

Minor: "Each patient has a test . . . will put patient's name on what kind of panel ordered and check it. The log sheet comes in with blood specimen daily. You make a copy of the daily log sheet and figure how much you have coming by check on the daily log sheet . . . and we can calculate the percentage by the sheet and that is your percentage."

LaPena: ". . . 45 percent we provide you everything, lab test tubes, EKG and from that we give you 45 percent of gross billing. If you have 10–20 percent private we do not charge for private."

Riordan asked then that as he understood it, we put a check mark by the patient's name and add up and take 45 percent of gross and that is what the clinic gets back.

LaPena: "If gross volume is $1,000, then we give you 45 percent of gross billing."

Riordan asked how the payment is made.

Minor: "By check only."

Riordan asked if the payment was weekly.

Minor: "Every Tuesday."

Longhini asked how the check is delivered.

Minor: "Check is delivered on every Tuesday . . . put attention on envelope to person. . . ."

Doug asked if the clinic signs a lease for a certain amount of footage.

Minor: "Much . . . to do that in that manner . . . we justify so no one can question anything."

Riordan asked if a signed lease protects us all?

Minor: "Right."

Doug asked how rent is established?

Minor: "What you do is set price for rent then we are allowed to give gratuitous for drawing of specimen. If you have girl and draw blood for yourself we will pay her salary."

Doug asked if the lab would take up much space in the clinic.

Minor: "Just one small room would be more than sufficient."

LaPena: "Without EKG even hallway would be sufficient."

Riordan asked if the clinic could possibly receive $500 a week for space in the hallway.

Minor: "Right."

Doug stated that the clinic's rent is now $450 a month, and if the clinic grosses $500 a week. . . .

Minor: "You're privileged to charge anything you see fit in this facility. No one can tell you how much to charge."

Riordan stated that we are qualified medical people in this business; have you researched carefully and is there any difficulty in this arrangement.

Minor: "We have been in business 3½ years and haven't had any difficulty. The facilities we deal with are . . . pleased after service. We haven't had any difficulty."

Riordan asked from a tax standpoint can the clinic charge this kickback to business income.

Minor: "Business income? Sure."

Doug asked if this is a rebate.

Minor: "Right."

Doug asked based on volume of business we refer patients to your medical testing lab . . .

Riordan asked that if volume increases will the amount of space increase.

Minor: "No."

LaPena: "Not unless . . . CBC, then we require space. Only possibility requiring more space."

4. That at this point Mike Wallace entered and stated that the rest of the conversation was being recorded for broadcast.

GERALYN DELANEY.

AFFIDAVIT OF WILLIAM R. HOOD, INVESTIGATOR, BETTER GOVERNMENT ASSOCIATION

West Lawn Medical Laboratories, 4255 W. 63d St., Chicago

Upon the invitation of Dr. Herbert Meyer, I was present in his professional office at 3430 S. Martin Luther King, Jr., Drive during the afternoon of October 20, 1975. Acting as Dr. Meyer's attorney, I was party to a conversation between him and the president and a salesman for West Lawn Medical Laboratory. The conversation among the four of us lasted from approximately 2:30 p.m. to a little after 3 p.m. I had never seen either of the two men from the medical lab before that day.

Dr. Meyer had been visited by the salesman, Riaz Khan, on several occasions prior. This was the first meeting between Dr. Meyer and Dharat Trivedi, the head of West Lawn. Khan had brought Trivedi around because he wanted to

close a deal with Dr. Meyer whereby the doctor would use West Lawn exclusively for his medical testing.

I was introduced as a replacement for Dr. Meyer's regular attorney, Mel Lewis, who was out of town. Dr. Meyer explained that he had had some trouble in the past and wanted to clear the "arrangement" that was being proposed to avoid any legal or tax problems later.

The arrangement would allow the doctor to get back from the lab 25 to 30 percent of the gross monthly medicaid billings he sent to the lab.

The lab would pay the money back by one of several modes. Trivedi said that some doctors he dealt with leased him a portion of their office space. Others let Trivedi pay all or part of the salary of one of the doctor's regular office personnel. A third suggestion would have the lab lease an office machine or refrigerator from the doctor. The amount paid to the doctor would reflect the amount billed by the doctor for the first 90 days after a verbal agreement was reached.

Trivedi was firm that he would not deal in cash and that he had had people, presumably lawyers, advise him on the setup. He said that most doctors simply leased him space using a standard real estate lease with 30-day cancellation rights on both sides. He also referred to it as a "sublease."

Dharat did say, "I don't want to do anything legally detrimental to either of us." But, he also did not "want too much in written form" except the lease.

Trivedi was interested to know that Meyers presently got nothing back from the lab where he sent work and that Meyers did not use a factoring firm. He got off the point to offer to set Meyers up with his factor. He went through the standard routine how factors got money for you within days. He uses a subsidiary of Main Bank called Health Management Corp. and touted their efficiency. He also referred to a new computerized billing system that had been put in which would speed up payments for the doctor. He added that his factor charged 10 percent but that it was worth it because the State was about 4 months behind on paying labs. He then threw out the suggestion that perhaps they could pay Meyer's factoring charges as their compensation to him.

I asked a question about quality and reputation of West Lawn. Trivedi responded that he was licensed, used to be a pathologist at Mt. Sinai Hospital, and had bought West Lawn recently. The quality and patient benefit seemed secondary to his main pitch—that the doctor would get substantial money back.

Throughout the conversation, the two lab reps reassured Dr. Meyer and me that the proposed arrangement was quite normal and that no one ever questioned it. They proposed issuing checks to the Doctor's professional corporation for the monthly lease amount or to pay the selected employee. It was made clear that no other doctor had ever brought an attorney along to approve the practice.

They claimed that Internal Revenue would be satisfied by the arrangement because they could legitimately claim that the leased space was used to store patient samples waiting for pickup by the law couriers. Alternatively, they said the space could be the area where blood samples were taken; or that samples were stored in a leased refrigerator; or that the employee followed a set of printed instructions provided by the lab for dealing with samples and specimens—said instructions also mandating that the employee assist the doctor in his regular duties unrelated to testing.

Trivedi concluded that: "My personal feeling is that the best way is for us to pay you some rent or pay an employee. It works simplest that way."

I followed Khan and Trivedi outside Meyer's building and talked briefly with them there. They both expressed amazement that Meyers had any doubts about the system they proposed. They said he was the first doctor who had ever raised any legal questions to them. "After all, we are just being fair and sharing our profit with him," said Trivedi.

Appendix 3

LETTERS FROM INDIVIDUALS

ITEM 1. LETTER FROM DR. DENNIS B. DORSEY, PRESIDENT, COLLEGE OF AMERICAN PATHOLOGISTS; TO SENATOR FRANK E. MOSS, DATED FEBRUARY 27, 1976

DEAR MR. CHAIRMAN: The College of American Pathologists is a private nonprofit professional organization, headquartered in Skokie, Ill., and represents some 6,400 physicians, who practice in the specialty of pathology. Our members practice in the hospital setting, in medical schools, in independent medical laboratories, in the various military branches and in the Federal Government.

The College of American Pathologists would like to take this opportunity to express its abhorrence to the illegal practices, including kickbacks, involving the medicare and medicaid programs which were disclosed by your subcommittee during public hearings held February 16, 1976. The College views such practices with great alarm and we wish to state emphatically that the College does not condone in any manner such illegal and unethical practices.

During the February 16 public hearings there was testimony presented which indicated certain medical laboratories were involved in kickback schemes with certain physicians. The names of the individuals involved were not disclosed during the hearings. We would like to request a list of the physicians involved in such practices so the College may have such information to determine if any of those physicians are members of the College and to consider possible action in accordance with our bylaws. Your assistance and cooperation would be appreciated very much.

The College again wishes to commend you for your efforts to root out fraud and abuse where it may exist in the medicare and medicaid programs.

Sincerely,

DENNIS B. DORSEY, M.D.

ITEM 2. LETTER AND ENCLOSURE FROM GERALD J. REILLY, DIRECTOR, DIVISION OF MEDICAL ASSISTANCE AND HEALTH SERVICES, NEW JERSEY DEPARTMENT OF INSTITUTIONS AND AGENCIES; TO VAL HALAMANDARIS, ASSOCIATE COUNSEL, SENATE SPECIAL COMMITTEE ON AGING, DATED MARCH 17, 1976

DEAR MR. HALAMANDARIS: Pursuant to your conversation with Andrew L. Rothman, press secretary to Senator Harrison A. Williams, Jr., and Mr. Rothman's letter of February 25, 1976, please find enclosed herein my statement for inclusion in the record of hearings before the Senate Committee on Aging chaired by Senator Moss.

Thank you for the opportunity of allowing New Jersey to supplement the record which, we feel, does not accurately reflect the state of affairs in the New Jersey medicaid program.

Sincerely yours,

GERALD J. REILLY.

[Enclosure]

STATEMENT

New Jersey has been an innovative leader in the area of investigating, uncovering, and correcting fraud and abuse patterns of clinical laboratories participating in the New Jersey medicaid program. Commencing more than 1 year ago, the Division of Medical Assistance and Health Services, in cooperation with the State Commission of Investigations (SCI) and the State Department of Health, began a probe of New Jersey clinical laboratories participating in its medicaid program. The probe culminated in public hearings on June 24, 25, and 26, 1975.

As a direct result of New Jersey's efforts, five clinical laboratories were suspended from the medicaid program and appropriate cases were referred to the Attorney General's Office for possible criminal prosecution.

Significant modifications were made to medicaid regulations governing clinical laboratories, which include: (1) The express prohibition of rebates or kickbacks of whatever nature; (2) the prohibition against multiple billing for automated testing procedures, e.g., the SMA–12; (3) the limitation that medicaid reimbursement shall be limited to the lowest charge made by a referred laboratory to the referring laboratory or physician; (4) the requirement that all claims be itemized; (5) that all claims indicate whether a specimen was referred to another laboratory, the name of the other laboratory, and the charge for the service by said laboratory.

Over $350,000 was withheld from payment to laboratories which, in the opinion of the division, were engaged in abusive practices.

Laboratory fees were reduced by 40 percent.

A laboratory committee consisting of knowledgeable persons throughout the State was convened to revise laboratory procedure codes and reimbursement.

Laboratory claims processing staff attended special seminars conducted by a medical doctor for the purpose of reviewing both the technical as well as medical aspects of the laboratory claims processing procedure.

A computerized system is currently being developed for the purpose of analyzing and screening group tests, and should be operational in the near future.

An analysis of laboratory billing was recently conducted and claims were compared for an 8-month period prior to June 1975 (SCI public hearings) with claims submitted for an 8-month period subsequent to June 1975. For the period October 1974 through May 1975, a monthly average of 17,966 claims were submitted at an average payment per claim of $15.52. For the period June 1975 through January 1976, a monthly average of 16,915 claims were submitted at an average payment per claim of $8.27. The total volume of claims for the pre-June 1975 period, as compared to the post-June 1975 period, showed a 5.8-percent decrease in total volume. Payment per claim decreased 46.7 percent. When these figures are annualized for calendar year 1976, a $1,400,000 savings is projected. The modest 5.8-percent decrease in claims volume suggests that essential services are being provided despite a substantial fee reduction. Part of the 5.8 percent could also be attributed to the elimination of some overutilization that may have existed. Considering the fact that fees were reduced by 40 percent, a 46.7-percent decrease in the payments would suggest that the above-stated program modifications together with the deterrent effect of the SCI hearings resulted in a significant 6.7-percent decrease in payments.

For the reasons above stated, it is obvious that we in New Jersey find it disturbing to be lumped together with States where serious and widespread abuses allegedly still exist. Consequently, we ask that the record be made clear that the subcommittee investigators did not uncover a "continuing" and abusive situation in New Jersey. The fact is, our work in this area had been substantially completed at a time when many other States had just begun their efforts.

ITEM 3. LETTER AND ENCLOSURES FROM ANTHONY G. DICKSON, COUNSEL, COMMISSION OF INVESTIGATION, STATE OF NEW JERSEY; TO VAL HALAMANDARIS, ASSOCIATE COUNSEL, SENATE SPECIAL COMMITTEE ON AGING, DATED FEBRUARY 17, 1976

DEAR MR. HALAMANDARIS: I have had an opportunity to review pages 33 and 34 of the committee print of the staff report on fraud and abuses among clinical laboratories which was prepared for the Special Committee on Aging of the U.S. Senate. I am submitting some information and documents which you may want to consider in connection with statements appearing on these pages.

Document 1 consists of a letter to the *Newark Star Ledger* newspaper from Leon S. Wolk, attorney at law, concerning certain statements made by his client, Saul Fuchs, of Physicians Lab Service, Inc., during the public hearings held by the State Commission of Investigation on June 24, 1975. In it, Mr. Wolk contends that his client only remitted a 30 percent payment "for services" to the Chestnut Hill Convalescent Center. Document 2 consists of a letter dated July 3, 1975, which was directed to Mr. Joseph Rodriguez, chairman of the State Commission of Investigation, by Mr. Harvey Adelsberg, executive director of the Daughters of Miriam Center for the Aged, Clifton, N.J. Mr. Adelsberg contends that there was no type of rebate arrangement made with Mr. Fuchs. He claims

that the Daughters of Miriam Center for the Aged did not "get anything in return for the services Mr. Fuchs renders to our institution." Document 3 is a letter, dated July 22, 1975, addressed to the New Jersey State Commission of Investigation, by Kevin G. Conway, attorney for Hoffmann, La Roche, Inc., concerning the employment by Roche Clinical Laboratory of a phlebotomist on the premises of the Newark Family Health Center.

I would also indicate to you our understanding, which I believe is borne out by the public session testimony of Mr. Fuchs at page 148 through 152 that the gentleman involved in the ownership and management of the International Pharmacy was also involved in the ownership and management of the Park Medico Clinic which was located across the street from the pharmacy in Paterson, N.J. At least part of the moneys flowing from Physicians Laboratory Service, Inc. (Mr. Saul Fuchs) to International Drugs represented payment in connection with the referral of specimens from Park Medico to Physicians Laboratory Service, Inc.

I would like to compliment you and your staff on the fine investigative efforts in the clinical laboratory field. The State Commission of Investigation was happy to be of assistance to you. As you know, we have not yet issued a final report on the New Jersey medicaid program. If we can be of further assistance to you, please do not hesitate to contact us.

Thank you again for giving us the opportunity to appear before your special committee.

Very truly yours,

ANTHONY G. DICKSON, *Counsel.*

[Enclosures]

LAW OFFICES OF LEON S. WOLK,
Fort Lee, N.J., June 27, 1975.

S. I. NEWHOUSE, Publisher,
The Star-Ledger,
Star-Ledger Plaza,
Newark, N.J.

DEAR SIR: I represent Saul Fuchs and Physicians Lab Service, Inc. Mr. Fuchs testified at a public hearing of the State Crime Investigation Commission on June 24, 1975, which testimony was erroneously reported in the *Star-Ledger* by your reporter, Daniel Hayes, in the June 25, 1975, edition.

I am formally demanding the publication of a retraction and clarification of so much of that article as refers to Saul Fuchs' testimony. Mr. Fuchs' testimony, in general, was not accurately stated in the article and specifically he never testified to giving 30 percent of billings for services rendered to the following Nursing Homes: Daughters of Miriam and Hartwyck Nursing Home. Mr. Fuchs' testimony with reference to the 30 percent payment for services was limited to the Chestnut Hill Convalescent Center.

This demand for clarification and retraction is made on behalf of Saul Fuchs and Physicians Lab Service, Inc., as well as the aforesaid Nursing Homes.

Yours very truly,

LEON S. WOLK.

DOCUMENT 2

DAUGHTERS OF MIRIAM CENTER FOR THE AGED,
Clifton, N.J., July 3, 1975.

Mr. JOSEPH RODRIGUEZ,
Chairman, State Commission on Investigation,
28 West State St.,
Trenton, N.J.

DEAR MR. RODRIGUEZ: The testimony of Mr. Saul Fuchs, laboratory director of Physicians Laboratory Services, Passaic, has come to my attention through an article that appeared in the *Star-Ledger* on Wednesday, June 25, 1975.

In Mr. Fuchs' testimony to the commission on Tuesday, June 24, it is alleged that he stated that he did testing for nursing homes as well as doctors and that he billed them directly for medicaid work and "they got 30 percent."

Daughters of Miriam is one of the facilities to whom Mr. Fuchs provides services. As the executive director of the Daughters of Miriam, I would like to state that our records are open to inspection. We have never made any kind of arrangement with him. We will not be a party to any kind of rebate arrangement and we never have been. We do not get anything in return for the services Mr. Fuchs renders to our Institution.

The Daughters of Miriam is a nonprofit institution that has been in existence for over 54 years and we have always respected the requirements of regulatory agencies, including the regulations of medicare and medicaid.

Attached to this letter you will find a statement from Mr. Fuchs' attorney confirming the above.

I would greatly appreciate it if my letter and the attachment would be read into the official record of your commission.

May I hear from you? Thank you.

Yours sincerely,

HARVEY ADELSBERG, *Executive Director.*

DOCUMENT 3

HOFFMANN-LA ROCHE INC.
Nutley, N.J., July 22, 1975.

Re Investigation of New Jersey's Program of Medical Assistance and Health Services: Public Hearings 6/23/75–6/26/75.

NEW JERSEY STATE COMMISSION OF INVESTIGATION,
28 West State Street, Tenth Floor,
Trenton, N.J.

GENTLEMEN: On June 26, 1975, Mr. James Dimitrion, supervisor of the Fair Lawn Clinical Laboratory, appeared before you and testified that a female working at the Newark Family Health Center was affiliated with Roche Clinical Laboratories (3T31–3T32)*.

The management of Roche Clinical Laboratories has advised me that a Ms. Maria Ortiz was hired by Roche Clinical Laboratories on October 21, 1974. Ms. Ortiz was employed as a phlebotomist for the purpose of drawing blood and preparing patient specimens at the Newark Family Health Center for transmission to Roche Clinical Laboratories for testing and analysis. Ms. Ortiz's employment with Roche Clinical Laboratories and her assignment at the Newark Family Health Center were arranged by Mr. Robert Kupchak, a former Roche employee who was employed as the Sales Coordinator at Roche Clinical Laboratories during October of 1974.

Mr. Murray Blaivas, General Manager of the Roche Clinical Laboratories Division, first became aware of Ms. Ortiz's employment and assignment after Mr. Dimitrion testified on June 26, 1975. Mr. Blaivas reviewed this situation, determined that the amount of blood drawing and specimen collection being performed at this account did not warrant the assignment of a full-time phlebotomist and eliminated this position effective July 4, 1975.

The management of Roche Clinical Laboratories has advised me that no sum of money was ever rebated to the Newark Family Health Center and that no discounts were ever given to this medical group.

Mr. Blaivas and I would be pleased to meet with you at your convenience in the event you wish to discuss this matter further. As in the past, you may be assured of our continuing cooperation during the course of your investigation.

Kindest regards,

KEVIN G. CONWAY, *Attorney.*

FUTURE DIRECTIONS IN SOCIAL SECURITY

FRIDAY, FEBRUARY 13, 1976

U.S. SENATE,
SPECIAL COMMITTEE ON AGING,
Memphis, Tenn.

The committee met, pursuant to notice, at 9 a.m., at 1188 North Parkway, Memphis, Tenn., Hon. Bill Brock, presiding.

Present: Senator Brock and Congressman Harold E. Ford.

Also present: William E. Oriol, staff director; John Guy Miller, minority staff director; Kathryn Dann, assistant chief clerk; and Alison Case, assistant clerk.

OPENING STATEMENT BY SENATOR BILL BROCK, PRESIDING

Senator BROCK. I wish you a good morning. Thank you all for coming.

I appreciate very much your being here this morning, and I particularly am pleased that our mayors, the Honorable Roy Nixon, mayor of Shelby County, the Honorable Wyeth Chandler, mayor of Memphis, and Richard Block, chairman of the board of the Josephine K. Lewis Center for Senior Citizens are all here. I appreciate very much their expression of interest.

The topic of our hearing is "Future Directions in Social Security." In particular, today we will focus on the issue of social security and inflation. We have selected this topic for two basic reasons.

First, inflation is without a doubt the cruelest and most difficult economic problem facing older Americans today. As the rate of inflation continues to climb, those people who live on fixed incomes find themselves paying a hidden tax to support the deficit spending that fuels this inflationary spiral. Hard-earned dollars that were saved in previous years rapidly lose their value as inflation cuts the worth of savings. The 12-percent inflation rate this country felt 2 years ago was exactly like increasing the taxes we each pay by 12 percent of our total income. This makes it obvious that inflation is a burden that no one can bear, particularly our elderly.

Second, because of the nature of inflation, it relates directly to many other subjects. Transportation services for the elderly, nutrition programs, retirement income, senior citizens centers, social services, and many other aspects of the total environment of our elderly are directly affected by increases in inflation.

Like all work done by the Special Committee on Aging, our aim is to find out here—at the grassroots level—how well the programs

authorized by the Congress are actually serving individual older citizens. Are they doing the job we hoped for? What can Congress do to make them better? What additional older American legislation should be considered?

Bill Passage Provides Encouragement

The passage of two recent bills should provide some encouragement for all of us here today. I am thinking of the 1975 amendments to the Older Americans Act, which I supported, and which President Ford recently signed into law. To cite another example, last week the Senate gave final approval to a bill which I introduced in 1975 to prohibit discrimination in credit against the aged. This bill now goes to conference and from there to the White House. I look forward to its speedy passage and implementation.

Unfortunately, all the legislation proposed by the White House currently before the Senate is not encouraging. For example, I am deeply troubled by the 6-percent increase in social security taxes recently suggested. As I said earlier, inflation is taking an increasing toll on everyone—the aged, the middle-aged, and the youth. Within the past 2 years, medical costs have increased 21 percent; utility prices 31 percent. I think in Tennessee it is a little higher than that—food 27 percent and fuel prices 78 percent. Against this background of rapidly increasing prices for the average Tennessean, another increase in social security taxes at this time is unacceptable.

This does not mean that I feel that the social security system is without serious financial problems. It is because of overspending, and undertaxing, that the social security system is destined for severe financial difficulties in the years ahead. However, we can deal with these problems without a drastic increase in social security taxes.

In my judgment, there are different and better ways to solve this problem. Last November, with the crisis facing the social security system well in mind, I introduced a bill with the clear purpose to affirm the responsibility of the Federal Government to maintain a strong social security system. The Finance Committee, of which I am a member, will take up consideration of this bill soon, and I am looking forward to establishing, with my colleagues, new methods of making our social security system truly sound. Those who pay social security taxes—as well as those who receive social security payments—should be relieved from doubts and worries about the continued strength and viability of the social security system.

Hopefully, these are topics that we can explore more fully here today. This is an official public hearing by the U.S. Senate Special Committee on Aging. Everything that is said will be taken down by the committee's reporter to become part of the printed record of the hearing. Copies of this record will be made available to members of the committee and to other Members of the Senate for their review. Any of you who desire a copy may secure one by writing to me or the committee in Washington.

It is committee custom to invite Members of the House of Representatives to hearings in their district. Therefore, it is a special

pleasure to me to welcome Congressman Harold E. Ford from the Eighth Congressional District of Tennessee, who is sitting with me at the committee table and will participate in this hearing.

Because time is limited, and in order to assure that some of you in the audience have an opportunity to participate, each scheduled witness has been asked to limit their oral presentation to 5 minutes. Their complete prepared statement, if longer, will be made part of the official record.

There may be some of you here today who wish to be heard, but do not want to speak from the floor. For your convenience, we have made available a special form. Statements written on these forms may be submitted today or mailed to Washington at any time within the next 30 days. Such statements will also become part of the official printed record of this hearing.

I think we must get to the root problem, and try to deal with it without a dramatic increase in payroll taxes.

Difficult and Complexing Problems

I would like to thank each of you again for being here. The problems of older Americans are some of the most difficult and complex facing our entire society. I appreciate your interest, your concern, and I very much value your advice as to how we can resolve some of these difficulties. I look forward to working with you to find new solutions.

At this point, I would like to insert in the record a statement by Congressman Robin L. Beard from the Sixth Congressional District of Tennessee, who is unable to be here. It will be inserted into the record at this point.

[The statement of Congressman Beard follows:]

STATEMENT BY CONGRESSMAN ROBIN L. BEARD

Mr. Chairman, I am very pleased that you have provided me with this opportunity to express my views before this Senate hearing.

In recent years, there has been increased interest in the older American, beginning some 40 years ago when the Social Security Act was signed. Unfortunately, since that time the level of rhetoric has far exceeded performance. A great number of new governmental programs have been implemented to help the elderly, but their performance has been marginal at best. It seems to me that the Congress has done a great disservice to older Americans by initiating costly and ineffective programs while failing to recognize and deal with the most severe problem facing senior citizens—*inflation.*

It is because of continued deficit spending practices that all Americans are suffering the effects of high inflation, and the aged suffer more than any other single group from the ravages of inflation. This is the issue that the Congress must address if it intends to alleviate the major problem facing our older citizens.

There is no question that we have seen a decline in our rate of inflation. However, the Congress should take little credit for that encouraging sign. In the 94th Congress, there have been little or no effective measures to bring inflation under control by balancing the Federal budget. There has even been less interest shown in attempting to cut waste out of existing programs, waste that costs the taxpayers of this country billions of dollars a year.

The majority in Conress apparently feels that it can solve all the Nation's difficulties by simply creating new and costly Federal programs. Almost without exception, these programs are expanded and the huge bureaucracies that are created lead to even more inefficiency.

The American people have a right to require that the money they pay in taxes is spent as efficiently as possible, and more than that, they have the right to demand that the Federal Government lives within its means. Congress can do something about this problem if it wants to. It can bring a halt to deficit spending and it can bring inflation under control. This will provide the kind of relief that the elderly of this country really need.

There is other action that should be taken to ease the burden on this Nation's elderly. For example, unfair provisions of our tax system as it applies to elderly citizens should be changed. The Congress should act immediately to remove the limitation on the amount of money social security recipients can earn without losing their benefits. This inequity in our tax law robs this country of a tremendous talent and an experienced resource that we cannot afford to underutilize.

System Discriminates Against the Elderly

Many of our older citizens want to continue to lead productive working lives, and yet our tax system discriminates against those who do. As I'm sure most of you are well aware, a 65-year-old person eligible for social security benefits may earn up to $2,520 and pay regular taxes, but take home pay is reduced to approximately 25 cents for each dollar earned above that level. This system leads to widespread nonreporting of income by persons who have never knowingly violated the law.

Taken together, inflation and these oppressive tax laws create a nearly hopeless situation for older people. Senior citizens in this country deserve far better. They deserve to have a Congress that is willing to come to grips with the real cause of inflation that is destroying the buying power and the dreams of older Americans.

The issues I have discussed so far apply to the burdens placed on today's older citizens. However, another issue I would like to address deals with our ability to provide for the elderly of the future—the status of the social security system.

As you know, this system was designed in 1935 to cover a limited number of workers in commerce and industry when they reached 65. Since this attempt, we have seen the social security system grow to become a giant entity which is currently paying $68.7 billion a year to one out of every seven Americans. It is now the second largest source of Federal funds with a majority of American taxpayers paying more in social security tax than they do in Federal income tax. There is little doubt among economists that the social security system will be in serious financial trouble this year unless revenues are raised or benefits drastically cut.

Contrary to popular belief, the social security system is not insurance nor is it based on sound banking and insurance standards. Social security benefits are paid almost entirely by the payroll taxes of current workers and employers. In other words, the social security system is a transfer system whose solvency rests upon the willingness of the next generation to pay taxes 30 years from now to support the current working generation, most of whom will then be retired.

Because the social security system has been overly optimistic with regard to future trends, an immediate reform of the system should be implemented or the system is likely to face abrupt bankruptcy. This impending scarcity of funds has been caused by a drop in the birth rate, meaning that less workers will be available in the future to pay for a larger number of beneficiaries. Also, a decline in real wages will mean lower incomes and therefore lower contributions to the system. Unless the system is altered, the extra funds needed to provide expected income to those retiring at the turn of the century will not be there. The present "pay as you go" system will simply not result in an accumulation of capital sufficient to meet expected future needs.

It is my feeling that a complete reassessment and investigation of the social security system must be conducted at the earliest possible time. I think that it should be reorganized to better reflect private trust funds and pension plans. Patterning the system after the private sector will provide more efficient and equitable management than now exists. It seems imperative that more actuarially sound principles be applied to the system. If we fail to follow this route we may not be able to provide adequate benefits to future beneficiaries.

Once again, I would like to express my appreciation to the Chairman for focusing attention on the problem of the aged in Tennessee.

Senator BROCK. I would appreciate it if my colleague, Harold Ford, would make whatever comments he wishes to make at this point. I appreciate your joining us today.

STATEMENT BY CONGRESSMAN HAROLD E. FORD, EIGHTH CONGRESSIONAL DISTRICT OF TENNESSEE

Congressman FORD. Thank you very much, Mr. Chairman.

Let me first say to my distinguished colleague and distinguished Senator from the State of Tennessee, Senator Brock, I sincerely appreciate your taking the time in bringing the Special Committee on Aging to appear here in Memphis, and let me thank all of the people who are participating today; and I, like Senator Brock indicated earlier, must say it is good to see so many people concerned about elderly problems, and those problems with regard to the elderly, and I am happy to participate with Senator Brock, and as a member of the House Select Committee on Aging, it is good to be here, and good to be among the people in Memphis.

Let me say I am happy to have a chance to be with you today. It is good to be back home and hear what you have to say about inflation impacting the ability of the elderly to make ends meet.

There is no question about the problems that elderly are facing right here in Memphis, problems of inflation eating away hard-earned dollars, problems of paying next month's doctor bills, next month's rent, next month's food, and let us not forget, next month's utility bills.

You people might be interested to know that I have cosponsored a bill in Congress to reduce the cost of utility bills for small residential users, especially for older Americans who are struggling to survive on a fixed income and just can't afford to keep paying higher costs for water and electricity.

As a member of the Select Committee on Aging in the House of Representatives, I am especially interested in the concerns of the elderly. This committee has just put out a report on health problems of the aged. We want to try to help people to stay in their own homes, where they have lived 10, 20, 50 years, without having to go into a nursing home.

I am going to continue to look out for your interests, and I am here to find out what needs to be done and how to do it right.

MANY PROGRAMS NOW IN OPERATION

My friends, we all know that more needs to be done. We've got programs operating now in Memphis to try to alleviate some of the problems of the elderly. Last month 127,000 people in Shelby County received food stamps.

Almost 28,000 people received aid from medicaid in Shelby County. Eight Memphis community agencies receive Federal assistance to purchase special buses and vans for elderly and handicapped people. I have seen the worthwhile programs sponsored by the Sen-

ior Citizens Services Agency and right here in the Lewis Center, these dedicated people are doing a first-rate job for Memphis.

We in Congress know that these programs do not solve all the problems of the elderly. That's why I've come back to the people, back to the Memphians who know what needs to be done. This committee is here to learn from you and to take this information back to Washington.

I appreciate this opportunity to participate in the hearings with Senator Brock. I know that what will be heard here today is the key to making good laws in Washington, laws that will benefit the elderly people of Memphis and across this great Nation. Thank you.

[Applause.]

Senator BROCK. Thank you very much.

We asked our scheduled witnesses to limit their oral statements to 5 minutes, so that the Congressman and I may have an opportunity to ask questions. If at all possible, and I do not know how long it will take, we would like very much to have some comments or questions from the floor at the end of the formal witness list. We will proceed as rapidly as we can, and try to accomplish as much as possible.

First, our most distinguished witness, Mr. Richard Block, chairman of the board of the Josephine K. Lewis Center for Senior Citizens.

He is one of the founders of the Senior Citizens Services, Inc., which is so important.

Mr. Block, we very much appreciate your being here, and we would be delighted in hearing your statement.

STATEMENT OF RICHARD BLOCK, CHAIRMAN OF THE BOARD, JOSEPHINE K. LEWIS CENTER FOR SENIOR CITIZENS, MEMPHIS, TENN.

Mr. BLOCK. Thank you very much, Mr. Chairman.

As chairman of the board of the Josephine K. Lewis Center for Senior Citizens, I am very pleased that we are able to sit down here and make these remarks.

I find I can stand up a little, and I speak a little, but I cannot do them at the same time.

As a member of this club, it is my privilege to welcome you here. I do wish to take this opportunity to thank Senator Brock and Representative Ford for being with us, and also the entire Special Committee on Aging.

They have evidenced their interest in old people. This is the second such conference held in Tennessee. There was one in Nashville about 3 or 4 weeks ago. That was a tremendous conference, and quite frankly, we accepted as a challenge, and I think we admit that challenge, as I look at the turnout we have here today, we have done very well, so we thank you very much for being here.

We have a statement from our former colleague and chairman of the Tennessee Commission on Aging, Dr. Bill Cole. He had expected to be with us, but unfortunately he is unable to do so, but he

sends his greetings, and his statement we offer as a part of the record.*

Our two mayors, and this is the first time I have been on the program with two mayors, they found it necessary to depart because of the duties of their office.

They also send their regards. They were with us earlier. I was going to take one dig at Sheriff Nixon, and since he is not here, I cannot do it, but I will tell you, I was going to say to him, when I introduced him here, and Mayor Chandler, that we will give the mayor priority, because we have deficit funding, and we do not receive county funding, but I was going to state to him that we would give him an opportunity to correct this. [Laughter.]

This about concludes the informal remarks I will make, other than to again emphasize how very grateful we are to you gentlemen and to your colleagues, who have our interests at heart, and very much appreciate your efforts on our behalf.

Senator BROCK. Thank you very much.

Mr. BLOCK. If I may, I will now continue with the prepared statement which I have, and which I will make as brief as possible.

Senator BROCK. Please continue.

Mr. BLOCK. Those of you who know me, including Senator Brock, with whom I have had conversations on the subject, will not be surprised at my urging of funding of title V of the Older American Act. This being the title under which multipurpose centers, such as this, will be subsidized if and when funds are obtained. Depending upon the size of such a center and the depth of program offered, the cost per member for the operation of a multipurpose center varies between 20 cents and 40 cents per person per day. Contrast this with $17 a day for institutional care. Many of my friends, members of this center, would be institutionalized or in need of institutionalization were it not for Lewis Center. Consider, also, the many persons whose lives have been enriched and vitalized by the existence of such facilities.

SIZABLE NUMBER OF ELDERLY OVERLOOKED

A very sizable portion of our older citizens are in fact overlooked and inadvertently neglected in Federal programs enacted for the benefit of all senior citizens. I refer to those persons in an income bracket slightly above what is termed the "poverty level." In many instances, these persons being denied programs and benefits available to persons with a slightly lower income find themselves possessing lesser net income than the more indigent person. I realize it is far easier to indicate inequalities than to provide workable solutions. However, I would suggest that programs and/or benefits made available to indigent persons also be made available to the group to whom I refer, on a sliding or graduated scale.

We all regret the sad state of our social security system and are sympathetic toward the fiscal problems of this administration. Very little is known, other than what has appeared in the papers, of the administration's restructuring of the social security program. Al-

* See p. 2153.

though, it is stated that the increased social security tax will be only three-eighths of 1 percent, this amount when doubled becomes three-quarters of 1 percent with the inclusion of the employer's contribution. All employers must consider fringe benefits as part of his payroll expense. Also, if I properly understand these proposals, they are regressive in that the hospital and medical expense allowance is actually reduced to those persons who most need the protection of medicare and medicaid. [Applause.]

Senator BROCK. Thank you very much, Mr. Block.

I have two or three questions. One is a comment rather than a question, I very much agree with your statement on the social security tax. I think the thing we fail to realize when we increase social security taxes is that this is directly inflationary. It raises the price of everything we buy, by just about the same amount of money. So we are robbing Peter to pay Paul, and losing in both ways. That is what bothers me about it.

CASH REVENUES FROM THE GOVERNMENT?

If we are going to deal with this problem of social security funding, what we should do is look at the items we loaded onto social security. Maybe they should be paid for out of the cash revenues of the Government, such as is done with medicaid, and some of the other areas that are not directly social security.

If we did that, I think the social security fund would be very strong, and that is exactly the obligation we have to all of the people in this country.

It is a fundamental obligation to be sure the social security fund is intact. I would like to see social security funded by those taxes which relate to retirement, and not burden social security with anything else that destroys its strength.

I also wonder if it is not time we took a look at medicaid and medicare, to see if they are doing an adequate job. Medicare last year only covered, I think, 38 percent of the actual health costs of the people over 65. That leaves a pretty high burden on those people who are in the very groups you are talking about—not quite low enough to qualify for medicaid, but not wealthy enough to carry their own medical burdens.

As you may know, I have introduced a bill which would, in effect, be an additional guarantee, that says if your medical expenses excludes 15 percent of your net taxable income, which includes social security, we would cover the remaining 85 percent of the expense. This would guarantee that you cannot be destroyed in this country by medical expense. I think we have the obligation to do something like that.

One thing I wanted to comment on is this local center. I am a fan of it, so I would hope that you do understand I am prejudiced, but I think this stands for more than economic security.

I think this demonstrates the fact that a sense of community and friendship are tremendously important to someone who is retired. I think that is equally true of the determination, if at all possible, to remain in your own home, or with your family.

I wonder, Mr. Block, if you would comment upon the development of the homemaker-home health program in this community, your own interest in it, and the prospect for enhancing it.

Mr. BLOCK. Senator Brock, I am not very familiar with this program at the present time. You referred to the years that I was with the Senior Citizens Services, and at that time I was, but I do know that this agency is doing a great job, and I admire the work that they are doing.

I think it is very constructive. Unfortunately, I believe I am correct in this, they are inhibited in that they could only work with persons below a certain income level.

Senator BROCK. Right; well, I hope we can get into that some time today. I would like to know just how we can make it more effective. I deeply believe that if there is some way in which we can help people stay with their families, or in their own home, rather than being put in an institution, that it is to our advantage, and I know it is to the advantage of the senior citizens.

Congressman Ford, do you have any questions?

Congressman FORD. No, I do not have any. I thank you very much, Mr. Block, for your very fine testimony.

Senator BROCK. Thank you very much, Mr. Block.

The statement of Dr. William E. Cole, chairman, Tennessee Commission on Aging, will be inserted into the record at this time.

[The statement of Dr. Cole follows:]

STATEMENT OF DR. WILLIAM E. COLE

The Tennessee Commission on Aging is pleased to cooperate with the Senate Special Committee on Aging in this second public hearing in Tennessee on the "Future Directions in Social Security." Since June of last year, members and staff of the commission have been involved in several public hearings conducted by members of both the State legislature and of Congress.

These hearings have brought to the public many of the problems faced by older persons attempting on the meager fixed incomes many of them have to lead an independent and useful life. Those individuals who presented testimony at the hearings—most of whom were describing their own situation—described vividly what may be one of the contributing causes of many elderly persons' inability to remain independent members of our society today.

The provision of basic services such as financial assistance, transportation, information on programs, and nutrition supplements can mean the difference between independence and institutionalization for many older persons. Because of public hearings such as this, the needs of the elderly are effectively communicated to those who are in a position to seek public financial support for additional services.

We are happy that Senator Brock and Representative Ford could meet here today to focus the attention of the Aging Committees of both the U.S. Senate and the House of Memphians as they describe the impact of the cost of living on older Tennesseans. As a result of the series of hearings conducted by the Committee on Aging of the Tennessee General Assembly, favorable legislation has been introduced on the State level to assist Tennessee's elderly citizens. The Commission on Aging hopes that this hearing will produce similar results with the Congress.

Senator BROCK. We will now hear from a panel of witnesses. Mr. L. O. Gillespie of Ripley; Mr. Leon Stevenson, of Memphis; and Mr. Null Adams, of Memphis.

If I may ask, gentlemen, will you make your statements short, and then we will try to ask questions as soon as all three of you finish with your testimony.

Mr. Gillespie, you may proceed first.

STATEMENT OF L. O. GILLESPIE, RIPLEY, TENN.

Mr. GILLESPIE. Senator Brock, Representative Ford, other Federal representatives, county and State officials, ladies and gentlemen, the first thing that I did after I consented to appear on this important program was to contact and talk with as many older people and organizations dealing with older people that time would allow me to interview or talk with. I felt that whatever I had to contribute to this program would be more effective if I could represent the reaction or feeling of other older people along with my thinking on "Future Directions in Social Security: Impact on High Cost of Living."

STANDARDS OF LIVING LOWERED

The older people that retired several years ago are affected more by the impact on the cost of living than those recently retired; however, if the cost of living continues to increase the present retirees will be in the same situation as those who retired earlier, within a few years, unless the formula for retirement is changed because the cost of living has been increasing faster than the incomes of many people, which means the standards of living have been lowered by many people.

There were people drawing other checks. Example: Widows drawing veteran's checks. When they received an increase for social security because of the cost of living, they were cut more on their veteran's checks than they received on their social security, which means as a total they received less than they did before they got the increase in social security.

There are other groups that do not qualify for social security and they receive SSI checks. One person, the head of household, receives a check for $157, all the income that person has. He will have to pay $33 for $50 worth of food stamps. It seems to be going in the right direction but not far enough. It seems that a senior citizen in a low income bracket could get a better break.

There is a group of older people who contribute to a retirement fund matched by the State. After the retiree receives the amount paid into the fund, the other part received is taxable, which causes the retiree to be hit harder by the impact on the cost of living. Some have felt that this other part received should be untaxable.

Many of us feel that any person with good health, able to produce and has a will to produce, should have an opportunity to produce without being penalized. If penalized, many of us feel it should be beyond 65 years old at least. At 72 there is no limit to what a person can make without a penalty, which many of us feel is just opposite to what it could be to help the most people.

I have only tried to say that the high cost of living has caused many senior citizens to lower their standards of living by neglecting things that should be cared for or substituting inferior products or service.

Thank you.

Senator BROCK. Thank you very much.

[Applause.]

Mr. GILLESPIE. Thank you.

Senator BROCK. Mr. Leon Stevenson is the assistant to the State director of the National Retired Teachers Association, and a member of the American Association of Retired Persons, and a member of the Mayor's Advisory Committee on Senior Citizens. Mr. Stevenson, I do appreciate your coming before us today.

STATEMENT OF LEON STEVENSON, MEMPHIS, TENN.

Mr. STEVENSON. Thank You, Senator Brock and Congressman Ford, and other distinguished people, and ladies and gentlemen.

I feel complimented to be asked to participate in this hearing, and would like to touch on some aspect of the housing situation in our area.

I am not an expert on the subject, but after serving 15 months on the board of commissioners of the Memphis Housing Authority, I have become aware of some problems which may be pertinent for this meeting.

The Memphis Housing Auhtority provides quality housing for approximately 2,500 elderly residents, of whom nearly 900 live in 3 highrises, designed specifically for the aged—95 percent of those living in the highrises live alone, and have limited contact with other individuals. The remainder of the elderly population resides in a number of other authority projects which house low-income families. The major concerns to be addressed place emphasis on those elderly residents living in the highrises for four reasons: (1) There is a high concentration of homogeneous individuals, who share similar concerns and problems; (2) there is a sense of isolation from established residential areas, which can offer different experiences; (3) the majority of these people are new tenants of public housing, and have had to establish new relationships with unfamiliar people; and (4) priority issues have been identified by elderly residents, and the social service staff that provides services to these residents.

ISSUES THAT NEED ATTENTION

It is felt that the following issues need immediate attention:

First, there is no adequate police protection. There has been a steady increase in the number of elderly persons who have been victims of crime against persons and property.

Issue No. 2, check-cashing policy. Many elderly residents have experienced difficulty in cashing their checks, especially those that do not hold an account with one of the local banks.

These residents, who live on a minimum fixed income, more often than not, choose only to cash their checks to pay their rent, buy their food stamps, and use the remainder of their money to pay personal items.

They neither possess a driver's license or credit card, for identification purposes, therefore, it would appear that more lenient check-cashing policies on the part of local banking institutions would be beneficial for the aged.

Issue No. 3, the food stamp program. The present food stamp program does not appear to benefit a single person who receives a minimum social security benefit, or supplemental security income.

At the present time, the single person family receiving minimal benefits must pay $38 for $50 worth of food stamps. This does not seem to be sufficient.

Issue No. 4, medicaid eligibility. Many elderly persons are declared ineligible for medicaid benefits because their income is slightly above the minimum; however, these persons spend much of their meager income on needed medical treatment and drugs. Perhaps the eligibility requirements need to be reconsidered for those individuals who need medical attention and maintenance drugs, and do not have any adequate finances to purchase them.

We have over 200 elderly people on the waiting list for units in our development. The average income from social security of our elderly is about $157.50. Now it is not likely that any more public housing can be built in the foreseeable future; however, we have been allocated by the Housing and Community Development Act of 1974, under section VIII, an authorization to certify applicants for 294 units in existing housing, and they have been allotted $553,000 for this rent subsidy program.

In public housing, residents are allowed a certain amount of energy consumption as a part of their rent, and gas and electricity used in excess of this amount is to be paid for.

Utility Expenses Most Repressive

The increased cost of electricity in recent months has had an impact on these residents, as well as those in private housing. In fact, the amount of utility bills is becoming one of the most repressive expenses for everyone, especially the elderly with fixed incomes. [Applause.]

In many cases, it has thrown their budgets completely out of kilter.

In the matter of private housing for the elderly, there are some excellent accommodations in the form of highrise apartment buildings, sponsored by churches and charitable organizations.

There are some medium priced apartments available and owned by real estate firms, but the demand exceeds the supply. The type of housing which is in abundance supply is in the $200 to $300 a month price range, which is out of the financial reach of all but a very few of the elderly.

In Shelby County, the housing authority has a new development for the elderly, and possibly has another being built in the future, and Shelby County Hospital is one of the older facilities in the area, but it should probably be classified as a nursing home.

There are a number of nursing homes in the area which range from adequate to mediocre, depending on the facilities, and the price paid by the resident, or paid by someone for him.

I feel these are some of the more important and significant issues that face the elderly in the field of housing, Senator Brock. [Applause.]

Senator Brock. Thank you very much.

Now we will hear from Null Adams, a longtime friend, who recently wrote a letter to the editor of a local newspaper in which

he addressed an issue that I have been concerned about ever since I have been in Congress.

I think the first bill I put into Congress, certainly one of the first, was a bill to prohibit the Federal Government from putting in an earnings ceiling on people over 65.

I just resent it deeply, I do not think the Federal Government has any right to tell somebody he cannot earn money.

I do not think there is any justification for it at all. You wrote a letter which I have seen which addressed this point, and I hope you will address that and any other matters of concern to you because I find it is something we need to do something about.

STATEMENT OF NULL ADAMS, MEMPHIS, TENN.

Mr. ADAMS. Thank you, Senator. Senator Brock, Congressman Ford, and friends who voted for me. [Applause.]

I had planned to read this letter, but since Senator Brock has already told you of the contents, I will skip over it, because I have so much to say, that 1½ hours would not be adequate time for me, instead of 5 minutes, but I will hold myself to 5 minutes.

This letter simply suggested that the age be lowered from 72 to 70 on the restrictions that limit earnings of persons drawing social security retirement benefits of $230 a month, without losing all of the benefits.

My suggestion No. 2 in this letter, was the $230 limitation on persons on social security retirement be removed altogether for persons past 65. [Applause.]

I talked to Congressman Mills, who was once chairman of the powerful Ways and Means Committee in the House, and which our friend, Harold Ford, is now a member, some years ago about this problem, and he said he did not want to work any hardships on the labor force by letting old folk hold down jobs that young people would be handling.

I don't find that to be true. [Applause.]

This letter was published on July 9, 1975, and since that time I have been in touch with hundreds and hundreds of senior citizens.

Maybe I ought to explain why, for the benefit of our visitors from both sides of the aisle of Congress, but you know, I ran for the city council last summer, and I was warmly supported by the senior citizens.

That gave me an opportunity to keep data on what they said, so if I was elected, I might try to remedy some of the problems they face, and in a nutshell, here is what I found: Many would like to see the limitations removed on the earnings as outlined in this letter just referred to. Most of them have a pension of some sort besides social security, and believe me, they need it.

I know from personal experience. They have to pay income tax on their pensions, they also have to pay income tax on additional earnings, and well, you say that would be very small, when in my particular case, I do not mind telling you, last year, my first year of retirement, I had to pay $1,500 in income tax.

Well, they also have to pay 8½ percent on social security on all earnings outside of their retirement pay, except their pensions.

All of the senior citizens I know anything about have problems with inflation, as Senator Brock and Congressman Ford mentioned earlier; that has been covered pretty well, and much has been said about the cost of food, drugs, and clothing increases. I have heard very little about the skyrocketing costs of utilities until I came to this meeting today.

I did not believe the things I heard from my senior citizens about utility bills. I got real curious and went home and dug up my canceled checks to see what had really happened to me.

Five years ago, my annual utility bill was running $25 to $27 a month, and that was a year-round average. That bill in the last few months has been $66 to $58. I live in the same house. I do not have any new appliances.

Utilities Increase Steadily

My bill runs completely steady the year around, because I heat with gas, and cool with electricity in the summer, and there is not a whole lot of variation, but we have jumped from $25 to $58 a month just on utilities.

I do not include the telephone bill, and it has gone up too.

I found everybody really upset about medicare, because it does not pay anything on medicine.

Now, I do not know whether Senator Brock and Congressman Ford know that older persons usually have to take a little of what they call maintenance medicine to keep their blood pressure down. [Applause.]

For instance, Congressman Ford and Senator Brock are too young to know anything about that, but if they live long enough, some day they will know what we are talking about. [Applause.]

Another thing I found very hard to believe; when I was campaigning for office, and, bless you, I do not think there is a person in this room who did not vote for me, was that the cost of this medicine people have to buy to stay alive and stay in good health, averaged out, from all of the people I talked to, at $508 per year per family.

I thought this was outrageous, and those of you who told me those things were exaggerating a little bit, I thought, but I went home and checked my own medicine bills. For Mrs. Adams and myself, the average is just about right.

The prices of drugs are still rising. Now, personally, I have had two interesting experiences with medicare, and I am running a little longer than I want to, but I want to take one moment to tell you about them.

One is that I had three doctors who attended me during the year 1975, and they had to fill out medicare forms and mail them to me.

I filled out my part of it, and I mailed it to Nashville. I received a check back for 16 cents. [Laughter.]

Well, it costs the doctors 30 cents to mail those forms, and it cost me another dime to mail it on to Nashville, and I suppose the Federal Government franked it, and did not pay any postage to send the check back to me for 16 cents, so when I received the check, and I started to frame it, but then felt that this would

probably cause a national crisis, because it would throw the whole Federal bookkeeping system out of kilter, so I went on down to the bank and cashed it, all 16 cents, and I burned another 20 cents of gas to do it.

Congressman Ford and Senator Brock, I am not telling jokes here, I am telling you facts. [Applause.]

Experiences Encountered With Medicare

The other experience I had with medicare is not funny by any means, but it is an interesting thing. Mrs. Adams had two checkups during the year, and we go every 6 months now, we used to go every 5 years, and then every year, you know what I am talking about.

She had two bills, and each one of those was for $69, and were from the same doctor.

One was in April, and one was in October; so I waited until the end of the year. To save a lot of bookkeeping and postage on behalf of the Federal Government, I sent them all in at one time.

They processed one and dropped the other. Well, they processed this one, sent it back, and I saw immediately what had happened, and I sent off a letter to them, and sent along the canceled checks, one dated in April, one in October, and they straightened it out all right. They processed the other one. Because it was the same doctor, and some of the same examinations were on each application, they thought I just sent them a duplicate for their amusement, I reckon. They did not look at the dates.

I just want to say one word to Senator Brock and Congressman Ford, a word that will benefit them.

In my experience with the senior citizens this summer—believe me, I have had experiences with them, and they practically ran my campaign for me—but these older persons are better organized than any political machine it has been my pleasure to fight through the years, and that includes the Crump machine.

If you do not think they are organized, look at this crowd here today, and remember, there was just a little bitty newspaper article that showed this meeting was to be held. [Applause.]

These senior citizens do vote and work in elections like no other group I have ever known about, and I have known a lot about political groups in my time.

One day at a meeting—I do not know how many people are here today—but upstairs at a luncheon, there were 340 persons present. I personally went around and solicited their votes, and 335 of the 340 were registered to vote. Before the day was over, four of the other five were registered, because we had those forms where they fill them in and mail. These people have a way of knowing Members of Congress who try to do something for them, and you know by the people who are here today, that they are interested. They want to hear from you and get your suggestions. If they do not know how to evaluate these things, when election time comes, they will find out.

Believe me, they will find out. These are smart people, Senator, and I thank you.

Senator BROCK. Thank you very much. I know the frustration that you feel, and the frustration that I feel. You know, sometimes you wonder where to start.

I had two hospital administrators from Chattanooga—my hometown—come to see me last week.

One was from Park Ridge, a private hospital. The other was from Memorial, a nonprofit Catholic hospital. They are fine places, fine facilities. Bill Furor, the administrator of Memorial Hospital, brought me his accountant's statement, showing that he had to increase his charge 17 percent per patient per day over last year.

He brought me a list of the increased expenditures, and this is the frustration. Virtually every increase on his list was an increase that was not coming from improved services. It was coming from things that were done by our Federal Government that forced up the cost of his operation.

He said:

You know, if somebody comes to us, just plain old and sick, and they are covered by an ordinary private insurance plan, we still have to fill out six forms for them, that is too many forms. But if you come in under medicare, we have to fill out 26 different forms for every person that comes into our hospital.

MONEY WASTED ON FORMS

Well, now, if we are going to spend all our money on forms, how will we put money into medical care, and that is the insane thing. I am so weary of trying to argue with these agencies that the money is supposed to go to the people. That is why I think, if you can be organized, and can get active, and if we can get people involved in this country, that is the only way we will straighten it out. It really is.

Mr. ADAMS. I know what you are talking about. I would like to tell you what almost happened to the Memphis Hospital.

For a long time, when I was on the paper, I served on the better relations committee between the medical profession and the journalists in trying to work out our mutual problems.

Also on the legal side of it with the lawyers, and at one point, not more than a year ago, one of the major hospitals in this town threw up its hands, and they said: "to hell with medicare, there are just too many forms and too many problems, and we are not going to take any more medicare patients."

I jumped to my feet, and I started shouting, and said they could not do anything like that, that they would wreck the town.

They could not, I do not suppose under the regulations or the law, but that was the frustration they felt about these 26 forms that Senator Brock mentioned, and those sort of things are serious, and I am glad we have people in Washington concerned about it, and coming down here and hearing our problems about it.

I do not want anybody to feel sorry for me. I want to take care of myself. As long as the Lord gives me health, I will eat regularly, and do all of the things I want to do, but I am concerned about all of the people I was associated with—the senior citizens group—this summer, and a lot of them have a lot more serious problems than I have.

Thank you.

Senator BROCK. Thank you, Null. We will have to move on fairly quickly, if we want everybody to speak.

I want to say one thing to Mr. Gillespie. He mentioned the problems that our teachers have in Tennessee, where they have a State match of their own private funds, and they get different tax treatment than you get under social security.

I would like to ask your help. I am cosponsoring a bill that would stop that. It is with Senator Fong, the Senator from Hawaii, S. 2402. If we could get some people in the other States aware of what is happening, aware of the discrimination against people who find themselves in that situation, maybe we could deal with it, because I think it is an important problem. I think a lot of people just do not understand the problems created by our current tax system. It is not right.

ELDERLY'S VOTES COULD CHANGE THINGS

If Null is right, if everybody 65 starts getting involved, we will change that educational system real quick, and we could do something about the problems.

Congressman Ford, do you have any questions?

Congressman FORD. I would just like to say to these three gentlemen that I certainly enjoyed hearing their testimony. I want you to know that every word was well taken, and I can say, Mr. Adams, you know even before entering into politics, I talked with you, and some of the things that you talked about, we had even discussed a few years back, when I first chaired a special committee in Nashville to investigate rates and practices of utility charges across the State. I think it is one that all of you ought to emphasize, and I think it is very clear, and it should be very clear to the Congress and other legislative bodies, I think at this point, if utility rates continue to rise, not only elderly people will not be able to afford them, the average person working will not be able to afford the cost of utilities. [Applause.]

You know, in talking with people on weekends, while I am home, I have met many people, and not just one or two, but their utility bill is more than their house notes per month. [Applause.]

I just do not see how elderly people on fixed incomes being able to afford it. Certainly you have a friend with Senator Brock and Harold Ford in the Congress of the United States. [Applause.]

Senator BROCK. I do have other questions of you. But if you do not mind, we will just have to drop you a note, and if you please, you can answer them later, so that we can get on to some of the other witnesses.

Thank you very much for your testimony.

Mr. ADAMS. Thank you.

Senator BROCK. Our next panel is made up of Erika K. Voss, M.D., director, Poor People's Health Center, Rossville, Tenn.; Mrs. Larn E. Bloodworth, Covington, Tenn.; Mrs. Mary Bell Reeves and Mrs. Evelyn Taylor, Memphis, Tenn.

I think we will start with Dr. Erika K. Voss, so if you will proceed, please.

STATEMENT OF ERIKA K. VOSS, M.D., DIRECTOR, POOR PEOPLE'S HEALTH CENTER, ROSSVILLE, TENN.

Dr. Voss. Thank you, Mr. Chairman.

The remarks which I am going to make reflect our experiences in the delivery of primary health care in a rural area of west Tennessee, about 30 miles east of Memphis. Of the total number of patients we have served thus far, about 30 percent are elderly. Their major problems being hypertension, diabetes mellitus, and arthritis. In the process of treating this age group, some of the problems they face in attempting to obtain adequate or even minimal health care have been repeatedly brought to our attention:

One: Lack of transportation.—Few elderly patients have private automobiles. Most of the elderly must hire rides to and from the health facility. This can add $3 to $5 to the doctor visit charge. Trips to Memphis can cost as much as $10. Many of the elderly are completely isolated with not so much as a telephone to call for assistance. Roads during rains are often impassable due to mud and this adds to transportation problems in rural areas.

Two: Lack of health insurance.—Many of the elderly, and those who will soon be elderly, seem to have been misguided and are paying for insurance which is of little benefit. With many policies, weekly or monthly premiums are expensive relative to the benefits received. Those patients qualifying for and receiving Tennessee medicaid benefits appear to be in an excellent position with many health services and prescription drugs provided. Medicare recipients receive little assistance from part B because drugs for ambulatory patients must be purchased and there is a large deductible applying to physician visits. Indigent patients may have their physicians' fees reduced but then medicines must still be purchased. Patients not receiving medications or receiving medications in part remain in an ill state of health thus resulting in a wastage of overall medical services.

Three: Food is often as difficult to obtain as health services. Most of the elderly who live alone do not have an adequate, balanced diet. They often pay high prices because, of necessity, they must shop at convenience stores. They complain that they are unable to purchase food stamps which may be due to a lack of understanding as to how to use them. Some of the elderly must travel 25 to 30 miles or even more to the food stamp office. This can be an all-day project and cost an additional $10 to hire a ride.

Four: Lack of adequate housing.—Lack of adequate housing with no indoor plumbing, running water and, in some cases, electricity, often exposes the elderly to colds and other respiratory infections for which treatment may not be affordable by some individuals.

Suggestions

One: Transportation.—Expansion of transportation services with a nominal fee would aid more than just the elderly in reaching needed health services. Improvement of the rural roads would help everyone with their transportation problems and may eliminate a perpetual obstacle to receiving health care.

Two: Lack of health insurance.—Expansion of medicare part B to include drugs for ambulatory patients may make it possible for more medicare recipients to comply with their treatment. Medicare and medicaid should subsidize preventive service such as provision of annual physical examinations and ordinary screening procedures, thus making it possible for all recipients to have at least one annual examination. It would be helpful if a physician or other health care provider could recommend individuals for additional assistance in specific cases where cost of an illness seems beyond the reach of an individual.

Three: Food.—Improvement of the transportation problem would improve food purchase problems. A mobile food wagon which accepts food stamps would help the elderly get better food and fresh produce. This could be a local project and at the same time employ local persons. Homemakers who could assist the elderly in preparing food could also participate in a local project utilizing welfare recipients who are able to work. Food stamps should be brought closer to the access of the recipients and provision of assistance in budgeting should be offered where possible.

Four: Housing—Those individuals living in rented dwellings often live in unhealthy environments due to deterioriation of the structures. There are frequent large spaces between floorboards and walls, making the occupants vulnerable to rat infestation and making it possible for cold air and insects to easily enter the dwellings. Assistance in making these homes a better shelter would contribute to better health for the elderly.

Five: Development of any program to assist the elderly should provide for the preservation of the feeling of integrity and independence which many rural elderly individuals currently possess.

Six: Home health nursing services provided through medicare should provide for drugs and monitoring by some individual, for example, clinical pharmacist, to ascertain adverse effects, optimum compliance, and so forth.

Cost to the patient having hypertension or diabetes mellitus for drugs, laboratory tests, and physicians is calculated on an annual basis as follows. Mild hypertension: drugs, $40; laboratory tests, $55; physician visits, $50; total cost, $145. Moderately severe hypertension: drugs, $175; laboratory tests, $110; physician visits, $80; total cost, $365. Mild diabetes: drugs, $75; laboratory tests, $95; physician visits, $50; total cost, $220. Moderately severe diabetes: drugs, $285; laboratory tests, $195; physician visits, $80; total cost, $560.

Cost does not include transportation expense, treatment of acute or concurrent chronic diseases (for example, hypertension and diabetes), or hospitalization if required.

Senator BROCK. I will go on with the other witnesses. Before we do, Dr. Voss, I would like to say I appreciate your coming, particularly with regard to the area that you testified to. I think that is one of the most neglected single areas in our whole program, and Senator Domenici and I have introduced legislation which would amend medicare part B so that it will provide for prevention, and for an annual physical examination for everyone covered by medicare. I think it will be cost effective.

I appreciate your coming very much.

We are going to proceed to Mrs. Larn E. Bloodworth of Covington.

STATEMENT OF MRS. LARN E. BLOODWORTH, COVINGTON, TENN.

Mrs. BLOODWORTH. Senator Brock, Representative Ford, and friends. I am particularly interested in the prescription drugs that so many of our senior citizens need and still they are not too sick to be hospitalized.

It is true that the hospitals do pay a portion of that, but when they come home, they still have to continue this medicine, and I am speaking for myself and my husband. He was sick for the past 15 years before he was deceased, and in the last few years, I would say approximately 9 years that he was seriously ill, his drug bill each month was not any less than $100.

Well, I was thankful, and we were fortunate, that we could pay it.

We have other retirement besides our social security, and had we not had it, why, we would have been in a very bad situation. So I think that something really should be done about these prescriptions for these elderly people who are sick and in need.

It has not been too many days ago, that I happened to be in the drugstore. Two ladies were there, and one had to be helped, and she had come for her prescription, and as she turned, not knowing, we all know, we see how food and rent and things like that have gone up, while drugs have also gone up, and she turned, and said, "well, I will tell you, I do not know what I am going to do. I have spent most of my social security on this medicine." Then I hear them say, "well, I just want a half a prescription filled, because, with other things that I need, my food, I cannot get the full prescription." So the need is great.

I have done quite a bit of visiting among the sick senior citizens, and I have seen the places where they live, and it is enormous, it really is, and I think that speaking to you, Senator Brock and Representative Ford, you know, I am glad you could come to the people to find out the things that we really do need, and now I must say something about our senior citizen project in Covington, Tenn.

I think it is one of the greatest things for people of that age to go to, and I have seen the fellowship, and the different things that they do there. I want to speak for the food program, which is so nutritious, and I know they have to pay a certain amount, but it is not demanded. If they do not have it, they get one good meal there each day for 5 days. They also have the buses to pick them up on different days to bring them to the senior citizens center, and so I think that is one of the important things that they are doing in these urban cities. I also think, seeing this through myself, the cost of medicine, I think really that something should be done about the prescriptions. [Applause.]

Senator BROCK. Thank you very much.

I do not think that any of us can argue with anything you said. My own mother has a very extended heart problem. She has had

it for a very long time, and I just cannot believe what it costs for medication.

Mrs. BLOODWORTH. May I add about my husband's condition. He is deceased, but for years and years, he had emphysema, and you only got shots for that, 10 cubic centimeters in one bottle.

You get three bottles, that was $9, and you were to use that at 2 cubic centimeters three times a day, and you know, one bottle did not last very long, and you add that all up, it really runs into money, and you would be surprised at the people that are having that disease today.

Senator BROCK. I know very well.

Ruby Proctor of Memphis could not come, but instead we have in her place Mary Bell Reeves. I gather you do not have a formal statement, Mrs. Reeves.

STATEMENT OF MARY BELL REEVES, MEMPHIS, TENN.

Mrs. REEVES. Thank you. Senator Brock and Congressman Ford, and the other members here, I am employed by the Senior Citizens Services.

I am a homemaker. The problems that I have found in the homes is one of the problems of loneliness. The most important problem I would say is lack of money for necessities, the rent, the people do not get enough money to pay their rent.

The utility bills are so high that the seniors are not able to pay. If they pay the utilities, they do not have money to buy food. The doctor bills are so high, they are not able to pay their doctor bills. Sometimes they have to go without medicine because they are not able to buy it.

Food, of course, that is high also, and income is not sufficient. They have such a limited income, it is not enough to buy food.

This is what I have found going into homes. [Applause.]

Senator BROCK. Thank you very much.

Mrs. REEVES. Thank you.

Senator BROCK. One of the very strong feelings I have is that if we can help people to stay in their own homes that they and we are better off, and I cannot help but believe that this homemakers service is just essential—that we are going to give people that opportunity. I do not know how else we can do it.

Mrs. Evelyn Taylor, a Memphis practical nurse. Give us your practical experience.

STATEMENT OF EVELYN TAYLOR, MEMPHIS, TENN.

Mrs. TAYLOR. Senator Brock and Congressman Ford, and all my friends, humbly, I am very grateful to have this opportunity.

Maybe I will use this turn to get something off of my chest. I speak from experience. I work as a volunteer with the senior citizens, I witness firsthand many problems of the low income, the sick, the withdrawn, the castouts.

My major concern is for the aged and the needy. I am proud of the progress that has been made to alleviate many of the problems, but there are still more problems to be solved.

My chief concern is for the old, the ill, the helpless, and many times those rejected by relatives, and forgotten by friends. [Applause.]

Many times I have had to take these folks in my home because they are broke, they are homeless, too ill to live alone, too poor to go to a nursing home, and not sick enough to be admitted to a hospital. [Applause.]

These people need supervision and someone who can make sure that they have a decent meal, supervise their medication, and that is important, and see that they live in a pleasant surrounding. [Applause.]

I feel that this need can only be met by the building of not more housing for the elderly, but more homes for the aged.

I am very proud of the progress that has been made in the field of housing for the elderly and hopefully, this program will always continue, but let us remember that housing for the elderly will not solve all of the problems of the low income and the elderly.

Shortage of Funds

We realize that there is a shortage of funds in some areas, but we feel that the problem of the lower income and the aged could be best solved if the available funds were divided among the services needed, such as maybe, and I say maybe, fewer nursing homes and more homes for the aged, and maybe, fewer housing for the elderly, and more homes for the aged that meet State standards.

So with the hardship of inflation, the rising health costs, may the powers that be take a long hard look at the problems of the low income and elderly.

Thank you very much. [Applause.]

Senator Brock. Thank you. I wonder, Mrs. Taylor, if you would describe for me what you would consider to be the ideal home for the aged.

Mrs. Taylor. Well, Senator Brock, as you know, the home for the aged, some people get the home for the aged and housing for the elderly mixed up.

Senator Brock. I know that. That is why I am trying to determine what you mean.

Mrs. Taylor. The home for the aged is the same structure as the nursing home. The only difference is the staff. I was told this in Nashville, when I applied for a license for a nursing home.

Senator Brock. The staff?

Mrs. Taylor. The staff. For a nursing home, as many of you know, you must have doctors and licensed R.N.'s, but in that same building, the home for the aged, you do not have to have an R.N.

Of course, a doctor must be available. Does that answer your question?

Senator Brock. Yes. You are saying something that I very much agree with, and I just wanted to be sure everybody understood.

The best description I heard was made by a friend of mine from Nashville, who has written a series of articles, and won a Pulitzer prize on those articles. The man is Nat Caldwell. He has written

for the *Nashville Tennessean* on nursing homes, and he and I had a long talk about the difference between a nursing home and a home for the aged. He said: "You know, Bill, I think in Government, you tend to think too much about mechanical statistics and criteria, like the ratio of registered nurses or doctors to numbers of patients."

He said there is something you cannot put in a bill. It is called love. If you do not have that, you do not have anything. [Applause.]

BEST PRESCRIPTION IS LOVE

Mrs. TAYLOR. Senator Brock, I feel that is one prescription that is needed. I spent many years in the nursing profession, and there was one prescription I found was necessary was the TLC, tender loving care. [Applause.]

Senator BROCK. It is a prescription that is most important.

We have had a pretty widespread panel discussion. We had Dr. Voss talk about the problems that really apply more in rural areas, and, of course, Covington fits that description, too. But it seems to me that one of the things we have paid the least attention to, that Dr. Voss made some reference to, and that I very much agree with, in this medical area, is the problem of prevention, and how do we get more adequate treatment before things become critical, before we get to the acute stage.

I just think it makes so much sense in terms of saving money, as well as helping people, but would it be feasible, would it not be helpful, if we had an annual physical covered by medicare, for example?

Are there other ways that we could improve our outreach program? I would like a comment, both from the rural as well as urban perspective, in this particular area of health care and health prevention.

Anyone want to take it to start?

Dr. Voss. Well, I am very much interested in health education, and I find that probably the elderly are the most interested in health education. Although we talk a lot about it, most people, when you get down to it, are not too interested in health education.

I think the elderly are more concerned about their physical condition because they have to be, and I think that outreach programs, which include screening, and maybe some knowledge about the problems that can be faced, and the problems that can be prevented, when we get older, would be something that would be very worthwhile. Unfortunately, medicare and medicaid do not provide any reimbursement for educational programs or for health education. Therefore, this aspect of health care is often ignored, and that is unfortunate.

Senator BROCK. That is also true, is it not, of nutrition? I think you would almost have to include that among your educational needs.

NUTRITION EDUCATION IS BIG PROBLEM

Dr. Voss. I think nutrition is one of the big problems. I think a lot of people suffer from obesity, and I think that is a nutritional problem, which becomes very complex. It is tied up with eating

habits, how you shop, what you have money for. It gets you into budgeting, and it has all sorts of ramifications, of how to use the money, how you shop, but I think food is certainly a big problem for older people, especially rural areas.

Mrs. BLOODWORTH. I think this is one of the things that senior citizens in Covington do need to address themselves to, because we have some of these people that bring the food in by truck, and it is brought in a container, and it will stay hot for 4 hours, and it is very nutritious. Because so many people come there, I do not say so many, several, that they get there, and there were two ladies that came out, and they explained that, and how they made up the menus, and they gave the senior citizens an idea of it, and we have some that are elderly, and they explained all of that.

In fact, they showed a film, so I think that is one of your health educational items that they are trying to tell you as to what you should eat.

Senator BROCK. In Covington, it is all brought to the center?

Mrs. BLOODWORTH. Yes, it is brought to the center.

Senator BROCK. Do you have any meals-on-wheels program, or anything like that, for delivering to the home?

Mrs. BLOODWORTH. No, we do not have that.

I beg your pardon, we do, because so many that come there, then if there is some left over, they can carry a tray home with them for the evening meal.

Senator BROCK. But that would not be a regular program to take meals to those that are bedridden.

Mrs. BLOODWORTH. No; a lot of younger citizens that come, maybe the parents, or whoever it might be in the home, come and get the meals for them, and take them home to them, but as far as delivering to the homes, they have not gotten to that yet.

They have done an awful lot in Covington, and possibly some day, we have not been at it very long, but really, there is some progress being made.

Senator BROCK. I think you have come a long way. It is particularly hard in the rural areas. Because you have such distances, you begin to get into an expense problem there that is awesome.

LONELINESS AND HEALTH RELATED

Just one last point, Mary Bell Reeves mentioned the fact that the biggest problem she saw in their home visits was loneliness, and then health. I don't know whether you want to comment on this or not, but I think these two are related to each other.

I think if you are lonely, you tend to get sick.

Mrs. BLOODWORTH. That is what the senior citizens project is doing, and I only speak for myself, and I lost my husband last September, and I had a dear friend that called me up, and said, "Why don't you come over there, we have fellowship, we have singing." I am a musician, and since I have gone to the center, why, everyone there, they love to sing, and we gather around the piano, and you would be surprised how happy everybody is, it is just togetherness there and fellowship.

I invite you to come some time, Senator, to see.

Senator BROCK. I would be glad to. That is what is great about the center.

Thank you all very much. I guess we will have to move along to the next panel.

Our next panel is made up of Elizabeth Leach, W. E. Crawford, and Lucille Waller, all from Memphis.

Mr. TURNER. I am Rex C. Turner of Savannah, Tenn., and may I be heard for 1 minute, with reference to the panel that has just concluded, before you start a new subject?

Senator BROCK. All right, Mr. Turner, proceed.

STATEMENT OF REX C. TURNER, SAVANNAH, TENN.

Mr. TURNER. I understand you are a little late now, and I would not even take the trouble to get a microphone to talk to you, because having been a schoolteacher for 50 years, and a principal 40 of that, I think I can talk loud enough to be heard.

I listened carefully to the talk about medicare.

Well, a few years ago, it was $54 that we had to put in it, and then it went up to $82, or $84; and then to $90, and now it is $104 that we have to put into it. You know what, I have health insurance men sell me three supplementary medicare policies, so I think I will be able to take care of myself, if and when that time comes.

Now, finally, we find ourselves, the aging, a minority group. We are in a minority group in the way some kind of people think about us. We are not a minority group in numbers. We are not a minority group in spirit and attitude, and when I think of spirit and attitude, I think of a little verse of seven lines, of a sportswriter for the Nashville Tennessean, I cut it out in 1923.

I dated myself, didn't I?

Anyhow, you all know of the last of the ninth inning of a baseball game, we as senior citizens are in the last of the ninth.

This man was in World War I. He came back with lung trouble—he had been gassed—he was in the hospital in Boston. His name was Kirk, he was dying, and he asked the nurse to bring him a pencil and paper. I want to write before I die, and this is what he wrote, and this is what I think describes us. The last of the ninth, as you know, usually ends the baseball game.

> The doctor knows what he is trying to see,
> Says it is the last of the ninth for me.
> One more swing while the clouds went dark,
> And I must leave this noisy park.
> It was a glorious game from the opening bell.
> The speed of it burned my life away,
> Yet I thank great God that he let me play.

[Applause.]

Senator BROCK. Thank you very much.

I expect to get a message to Null Adams saying, "Don't let him come to Memphis to run for office." [Laughter.]

You know, that reminds me of something I should have said to you earlier, but I hope you in the audience get this form and use it in giving your comments to the committee. You can fill it out either before you leave, or you can fill it out after. It says "If

there had been time for everyone to speak at the hearing in Memphis, I would have said." Then there is a whole blank sheet there.

If you want to fill it out, and give it to me today, I would appreciate it. If you cannot do it today, send it to me. The address is there on the form. We will keep the hearing record open for 30 days. If anybody here, or any of your friends want to make any comment on the problems that you have, or that you think we should do something about, or any suggestions, send it to me, and we will put it in the committee record. We would very much appreciate it.

The panel we now have will deal with employment, and that is a matter that is of great interest to me. I appreciate your all being here. We will run right down the panel.

Mrs. Leach, if you will start off.

STATEMENT OF ELIZABETH LEACH, MEMPHIS, TENN.

Mrs. LEACH. Good morning, Senator Brock, ladies, and gentlemen.

My name is Elizabeth Leach and I am from Memphis. I am currently employed as a senior aide by Senior Citizens Services. The senior aides program is administered through the National Council of Senior Citizens and is a part of the senior community service employment programs funded by the U.S. Department of Labor.

Since August 1, I have been assigned to work in the legal services for senior citizens office. This program is a part of the Memphis and Shelby County Legal Services Association.

In the last 6 months I have worked in the legal services office. I have seen many senior citizens with problems which could only be solved by help from persons with legal training. Senior citizens are constantly being exploited and taken advantage of. I would like to give you two examples of how I helped senior citizens regain money that they deserved.

Mrs. X was 68 years old and living on a low, fixed income. Early in her life she had been adopted. Mrs. X's mother was left an inheritance by an uncle in Canada. Unfortunately, Mrs. X's mother had died. Mrs. X was the rightful heir to this money, but could not prove it because she had no legal proof of her adoption. She came to our office for help. A letter on her behalf was written to the executor of the estate. Several months passed and nothing had happened. I talked to her on the phone one day and asked her to return to our office to see what could be done for her. She said this was "God's will" and she was giving up on ever getting her money. I finally convinced her to come in.

She came in and one of our attorneys worked with her and was successful in obtaining her money for her. Eventually she got $11,755 from the estate. Without "legal services for senior citizens" Mrs. X would never have gotten her money.

Mrs. Y came into our office needing help on her unemployment compensation claim. She was 69 years old.

She was denied unemployment because of her age and because she was receiving social security. The employment security office felt

because Mrs. Y was 69 there was no hope for her finding a job. Obviously, that office is not aware of the contributions older workers are making to society.

One of the attorneys in our office filed an appeal on behalf of Mrs. Y. Mrs. Y not only collected $2,400 in back benefits, but also received approval for an additional 18 months of unemployment benefits.

Again this was another case where a senior citizen had suffered actual dollar loss. Mrs. Y was deserving of a Government benefit but was told she could not receive the benefit because of her age.

The low-income elderly person has a great need for legal services to be made available to him or her. The two cases I have related to you are two cases in many that the legal services office has helped to recover dollar losses. Both of these ladies lived on a low, fixed income and needed the money.

I would like to leave you with one statistic: I conducted a telephone survey for the legal services office. I talked to all of the former clients. 79 percent of all the people that had been helped by the legal services office told me they would have given into circumstances or not have sought help elsewhere if our office had not helped them—in other words the "legal services for senior citizens" office was their only source of hope and help.

Just think of the amount of money senior citizens are losing because of not knowing what to do or where to go.

Thank you for your time.

Senator BROCK. Thank you very much. One of the things I hope this hearing will accomplish today is to let people know what is available. There are an awful lot of people in this community, and all across Tennessee that do not have an idea of the existence of these various services and programs.

I have six offices in the State of Tennessee. I have 14 people who work here, and their primary function is to handle personal problems like that. Because we are not legal people, we have to refer you to that sort of thing. But so many people do not even know that they can call my office, and find somebody who understands the problem, knows where to go to get the answer, whether it is social security or veterans benefits. I hope this kind of thing will help people understand that there are places where we can be of help, and we would like to very much.

I appreciate your statement.

We will now hear from Mr. W. E. Crawford of Memphis.

STATEMENT OF W. E. CRAWFORD, MEMPHIS, TENN.

Mr. CRAWFORD. I am W. E. Crawford, president of the Gertrude Williams Senior Citizen's Club, a CETA employee, working with the area agency on aging.

My job is to help reach more people and increase the number of senior citizens clubs.

At this point, I would like to agree with Mrs. Leach; because of age, and no information, many seniors are denied services needed. An example—pardon the personal reference, since I was part of it—these are the facts:

Wednesday morning, February 12, 1976, approximately 8:05 a.m., I had a call from a staff person at the nursing home where my father-in-law was convalescing. I was told that he had a slight stroke. The staff person was told to send him to Baptist Hospital. I would be there soon.

I arrived at approximately 8:40 a.m. and found out that he did not have a stroke.

After waiting for a report from the doctors, about noon, I was told that he had a blood clot in the leg and lung. They immediately began to give him oxygen, and said he would be admitted, about 12:25 p.m. I was told that the staff had decided to send him back to the home.

Without their knowledge, I could hear them speak about his age, such as—someone 87 years old was just too old to bother about.

At this point I became disturbed, and told the doctors and nurses present that I was to appear before this committee, and this would be a part of my testimony.

I was told to wait before taking him to the home, and about 5 minutes later it was stated that he would be admitted. At 4 p.m., he was assigned a room. I am thankful to God that everybody doesn't feel this way.

I feel that senior citizen's clubs are doing a good job, when it comes to Outreach. They bring many people together, with their programs, such as craft, recreation, and information. One should see the job expressed in seniors on their club meeting dates, or other activities. The sick and shut-in have been visited along with many other valuable services.

I am a barber by trade, and in my visits to the nursing homes, I found men there needing haircuts, shaves, et cetera. Some offered to pay what they could, many didn't have anything to offer. To keep them from being unequal, by not being able to pay, I cut their hair free of charge.

All of us may never be able to do a great or outstanding work, by the standards of our time, but if we do what we can for each other, this will be a better world to live in for all Americans.

Senator BROCK. Thank you very much.

We will now hear from Mrs. Lucille Waller of Memphis.

STATEMENT OF LUCILLE WALLER, MEMPHIS, TENN.

Mrs. WALLER. Ladies and gentlemen, and those of you interested in the problems of the aging, I want to tell you about a case in point of aging. This man received a notice from the insurance company to have a physical before his car insurance could be renewed, I suppose, because he is past 70. He got the physical, the doctor mailed it to the insurance company, and 2 weeks later he received this notice that his car insurance was being canceled after March 3. The medical reports showed that he has a cataract on his left eye. The insurance premium was $169 last year. If he has insurance this year it will cost $220. That makes for a $61 aging problem.

I am an employment counselor here at Lewis Center and all of the people that we deal with are either retired on social security, or

they are below the poverty level in income, which means they need a job to supplement their income.

One of my applicants that registered for a job needed to have her house painted. Two days later I had found a live-in job for her at $20 a day. She called the center asking for us to send out two or three painters to make bids for the job. Some retired man from the employment register will paint her house. I would like to say that the worst difficulty is the burden of "limited income" that the senior citizen can earn if he is drawing social security benefits. We have more than 700 people who have registered with us, seeking employment to supplement their social security checks. By the way, may I add, that we found jobs for between 400 and 500 people in the past 10 months that I have been here.

They accept a job and have to quit before the year is up, or return half of their earnings. This causes dissatisfaction with the employer and works a hardship on the elderly.

I recommend removing the limits of what a senior citizen can earn and it will create a more stable and secure position for the elderly, and I do not think that the kind of jobs the elderly will accept can detract anything from the labor market, because they are not trying to build a career. [Applause.]

Face it, retirement is fine for those who wish to retire, but for a person that needs to work and is able to still do a good job, to lose that job solely because he or she is too old is nothing less than an outrage.

Thank you.

Senator BROCK. I could not agree more.

I think, for some reason, too many people have the attitude that social security and SSI are all that are necessary for a person when he gets to be 65, and that is ridiculous. It is not so.

If someone wants to work, I would think it is the height of something or other for this Government of ours to say you cannot work. I do not think we have a right to do that. [Applause.]

I was interested in the example that was listed by Mrs. Leach, I think it was an example of the 69-year-old person who was denied employment because of her age and because she was receiving social security. The employment office felt because she was 69 there was no hope of her finding a job.

All they are saying, in effect, is that we do not think anybody 69 years old should work. That is what they really were saying.

"SHE REALLY NEEDS TO WORK"

Mrs. LEACH. And she really needs to work.

Senator BROCK. Even whether she needs to or not, he or she has a right to work whenever he or she wants to. [Applause.]

Well, we started off on this topic, and we are finishing off with the same topic.

One of the points that is hardest to explain, both to me, and from me to you, is why we have not changed that. Just so you understand the argument that I get, I have had a bill in to try to do this for 10 years, every year I put it in, and we have made some progress, we have raised the earnings ceiling some.

When I first started, it was either $1,400 or $1,600, and now it is around $2,500, but the argument is made that this will cost the social security system money and we cannot afford it. You know, I do not accept that argument. I think we gain money because people are productive again, and to me, we need people working in this country. We have too few people working now, that is one of our problems. That is one of the reasons we have inflation, but maybe we are going to have to do it in stages.

Mr. Adams suggested that this year we reduce it from 72 to 71, and next year to 70, and each year until we get to 65.

I would hope it does not take that long, but I think maybe enough people are becoming aware of the problem, and enough people in the senior citizens groups across this country are getting active, to where the Congress will act.

I know we will bring it up this year again, and I am going to try on my committee to get it adopted. Hopefully if other groups like this across the country are expressing their concern to their Congressmen and Senators, we will have enough support to do something.

I might point out one other thing too. I have five different bills that relate to employment of people who retire, older Americans. I think the most fundamental is that limitation. There is another one, though, that I think would be helpful, that relates again to Mrs. Leach's example. That is a bill that prevents, or would prohibit, employment discrimination on the basis of age.

As far as I am concerned, if you are capable of holding a job, it does not matter how old you are, you ought to be able to hold it. I do not see how, under the Constitution, somebody can automatically say you cannot have a job because you happen to be 67 years old. Maybe I should ask Mrs. Waller, in your experience, if you have run into that problem with your placing of people?

At least from what I have heard, it is a problem, and maybe you can expand on it.

Mrs. WALLER. Yes, we do run into those problems. They seem to think you are dead after you are 40. [Applause.]

Senator BROCK. Now you are really getting close to home. [Laughter.]

The closer I get, the more concerned I am. [Applause.]

Thank you all very much. I appreciate your comments and your statements.

I did have one other question I want to ask you if I could hold you just for a second longer.

Mrs. Leach, you were talking about the legal services program that is available, and I gather you are in sort of a paralegal situation?

Mrs. LEACH. Yes, we screen and interview people.

Senator BROCK. Tell me, if you will, what kinds of cases you have.

Mrs. LEACH. Social security problems, they need more money, people do not have enough money, and they just need more money to exist on really.

Senator BROCK. And the social security payment has been unfairly calculated, or it did not take income into account?

Mrs. LEACH. Sometimes they get lost, and sometimes the client does not have enough time, enough hours to cover them, and they are turned down, and they have to wait a long time without any kind of a fund.

Senator BROCK. I think when I was first elected to the Congress from Chattanooga, a lady came to me, and she had gone to Estes Kefauver in 1952, and he tried to help her. She had been to her Congressman, James Fraser, in the early 1950's. I tried to help. She had been working for 10 years to get her claim for social security in, and for 10 years she had not been given an answer, and I could not believe it.

When we finally were able to get some attention for her, we had to kick a few shins. The problem was not in the Chattanooga Social Security Office, it was in the central office in Baltimore, and we finally identified it, and got it solved. She got a check, and I have forgotten what it was, it was an enormous amount of money, thousands and thousands of dollars. But the thing I could not understand was how you can possibly delay a decision for 10 years.

You know, people deserve better than that. You have to have some answer. Even if it is a "no" answer, at least you know where you stand. Thank goodness we have your office, and hopefully mine, and we do provide some kind of services.

What else have you got besides social security? Do you have problems in the medicare area?

PROBLEMS WITH DISABILITY

Mrs. LEACH. The people with disability, they have trouble getting it, sometimes they do not accept their qualifications on behalf of disability, and they have to have further proof.

Senator BROCK. Anyway, at least in the experience we have had in our offices, proof is the hardest thing to come up with, because different Social Security offices establish different criteria for what constitutes proof.

All right; Mr. Crawford, I just want to ask you one other question. Was the age factor the only reason for denying the hospital admission to which you referred, or was there any other?

Mr. CRAWFORD. As far as I was concerned, the age factor was the only factor involved.

Senator BROCK. That is all you heard?

Mr. CRAWFORD. Yes.

Senator BROCK. I think that is incredible.

Thank you very much; I appreciate it.

Let us change our approach a little bit. We have more witnesses. But before we go to that, I would like to ask you, if you want to take about 10 or 15 minutes, if anybody in the audience wants to make a statement, or ask a question.

Yes, mam?

STATEMENT OF MRS. WILLIAM C. KIRKESS, MEMPHIS, TENN.

Mrs. KIRKESS. I wanted to say something that has not been brought us. My husband had to retire at the end of last year and we

have spent the entire year on social security which was not very much, and he worked for a company that was supposed to have a good retirement. Everyone thinks we are rich, which was not so. It was stocks and at the end of the year, when he retired, it went down and it was nothing—was worth nothing. We have tried to get a VA pension which he is eligible for. They have turned him down. They told him he was eligible for it. He was totally eligible and continually his examination and everything showed that; but they turned him down because he had too much income. We have social security of $339.60 a month, and that is tops for us. I cannot get one penny for myself because I'm only 56 years old and I am disabled to work, to stand on my feet all day, I cannot do it. I have arthritis, and that's what I am saying, there's a lot of people that are not 65 that are in our same situation, that you all have not come up with today.

I think that the social security is entirely too low. You may not agree with it, but when you get our age you will find out.

A couple should be getting $750 a month to live on, because a lot of people do not have income other than that little bit of social security. My husband worked for Sears, Roebuck and they have taken everything out that they gave him. They gave him a raise and they would take it back. One year he worked for them and I figured out the income tax, and he got a raise that year, more than he did the year before, and when the year was over he made less money than he did the year before, and I couldn't figure it out.

Senator BROCK. I would like to say something else. Sears, Roebuck is known to have the best insurance in Memphis.

Mrs. KIRKESS. That is true, but when you retire they say your medicine bill and your doctor bill has got to come up to over $200 apiece, and then we pay 80 percent of it; so my medicine bill has to be $200 a year. My husband's has to be $200, that's $400 for both of us, and then they will start to paying, so they're not helping us a bit and they are charging us over $400 a year for that insurance.

We can't go to another insurance company because we've got disabilities that no other company will take us, so we are stuck with Sears until we die, and still, we are not going to get anything from them unless we go into the hospital. You see, that's the things I'd like for you all to start working on.

STATEMENT OF JOSIE E. LANE, MEMPHIS, TENN.

Mrs. LANE. I work with the Klondike Seniors and various other clubs. I am a churchworker and I work with older people and people that are ill, and I do a lot of volunteer work. I love volunteer work. Of course, I am ill myself, but whenever I feel like it I am always someplace doing something for somebody. I was mightly glad to hear of this utility bill being discussed because I have been very upset over mine.

My utility bill was $37. I live alone and I don't have too many different things that will pull electricity. Poor people usually don't; but they make us pay as much money and sometimes more than they do those people and I am very much displeased over that. My light bill and gas and water was $37.

Well, I knew that it was impossible for me being alone to use that much, because I don't have the facilities for that, and I went up to see them, because I am a person like that. I went up and talked to somebody about it and I was very impressive about it because it really disturbed me, so they cut $6 off my bill, but they did not tell me what caused it to go up like that. They just cut it and I thanked them and I went on and paid what they told me. Everybody all over Memphis was very distressed about the utilities.

I have a friend that lives out in the, well lower income, way out; and her bill, I heard somebody say that really—I know Mr. Somebody, that I know is not poverty stricken—said his bill was $60. Well, her bill is $85 and $90. She doesn't have the facilities to use that type of electricity and we are very much disturbed about electricity and I hope somebody will do something about it.

I want to say just this one thing about the food stamps. We get stamps and they say work, go to work. I know a mother that took a little motherless granddaughter in and they told her to, you know, if she could find some work, to do it, so she found some work in a private home. She finally was paying $10 for her stamps. They found out that she had worked 4 days in this private home and they cut and made her pay $70 instead of $10, and that's what she's paying.

STATEMENT OF ABBIE J. ROULE, MEMPHIS, TENN.

Mrs. ROULE. My most concern, I pay medicare and I paid over $100 last year for my medicine and my doctor bill, not the medicine, but for the doctor bill and they haven't paid one penny of that money. And my doctor—every time I go to him—it's $24, $9, and sometimes I go twice a week for the complaint that I have. I have medicine that I have to take the balance of my life, three or four medicines and they went up from $30 to $43.44. That's what I had to pay this past month for medicine, and I can't even, Mr. Brock—and to the other people who are intelligent—I am a widow woman and I'm living off of a fixed salary. I don't know what they take out for medicare from the social security.

My social security check is as low as it can be and I worked on social security from the time it began until I retired in 1962. I worked on social security, but I'm not getting that kind of money back.

Now my utility bill have went from $21 to $47.83 the last month and now, I'm down here today, there's no heat on at my house.

There's nobody at my house hardly, I go away from home everyday. I go over to the center and eat lunch every day and the lights—and there's no one at my house.

You understand, sometimes it's 5 when I quit, I want to know—and they said that if you don't burn it, they charged you with it; they didn't talk to me like they did to the other lady. I had it to pay and I would like Mr. Ford and two more men to have to straighten them out some years ago about running this up.

Now they read my meter on the 11th of the month and on the 28th they look for their money, and I can't pay it; I have to pay late

charges. I get my money after the 1st, understand, and I would like for you all, if there is anything that can be done, to do something about it.

STATEMENT OF ODELL DOTSON, MEMPHIS, TENN.

Mr. DOTSON. First, I would like to make my comment to Lewis Center for opening the doors for senior citizens day. We have a great opportunity today. I am the chairman of the citywide community council and I have to work with all the people in the city of Memphis on crimes and also social security and also a better place to live in the city of Memphis, and so, I have a whole lot to do. We are working also, I am the president of the Odell Dotson Senior Citizen Club, and they named the club after me and I certainly appreciate that. I have done many things in the city of Memphis besides help in humanity and a better place for all people, and I certainly wish you all would do something about the light and gas. Also, the lady spoke about employment and spoke about the people walking around on the streets and can't get around and not able to get, not even getting, enough money to live on.

I want to bring you one the brother talked about awhile ago. The doctor sent my wife a bill for $85 while she was put to sleep in the hospital and I was working for a firm that was supposed to have paid this bill and didn't pay it. Now, they want to take my wife and probably, maybe, put her in jail to work this time out. I don't think that is fair.

I spent over 32 years under the civil security and therefore I certainly will want you to do something about the situation in the city of Memphis. I have walked in thy steps. Another thing I want to say is this—let me say this: I have lost my blood right here in the city of Memphis for human beings and human rights. I've walked; I marched on Washington in 1963 where I was jammed in Lincoln Memorial and liked to almost took my breath, but the Lord was with me and there I happened to look down and there was a man in a rolling wheelchair standing there for his human rights in 1963.

And I marched with Dr. Martin Luther King through Jackson, Miss., for human rights. I lost my blood right here in the city of Memphis, but I didn't lose my life. I thank God he left me here for some reason. God bless you and thank you very much.

STATEMENT OF BYRON HUNTER, MEMPHIS, TENN.

Mr. HUNTER. I am a World War I veteran, charter member of the American Legion of the State of Washington, charter member of the World War I in California, past commander of the Veteran's Post here, past president the Peabody Center had, past president of the Jefferson Square Center.

What I want to do is to thank Congress for taking up pensions for us. We know that they have to have the money up there for them to send overseas, so if anything can be done that they need more money—of course, they say they haven't got, but they send millions overseas. I still want to thank them for cutting up my insurance. They cut me from $80 in a year down to $22.

If they need the money worse than I do, God bless them.

STATEMENT OF LILLIE M. PHILLIPS, MEMPHIS, TENN.

Mrs. PHILLIPS. I am a volunteer working for Hardin Garden Senior Citizens Club, and I would like to ask you why some senior citizens don't get but $62.90 social security.

Senator BROCK. OK, then if they don't get but $62.90 for social security aren't they entitled to SSI.

Mrs. PHILLIPS. They are?

Senator Brock, in the county we need aid for the senior citizens. Out in the rural, I am the only volunteer worker out there and would you try to help us get some more people concerned about the aged in the rural. Thank you

STATEMENT OF BEULAH ROSS, MEMPHIS, TENN.

Ms. Ross. Senator Brock, and to the staff, I was at Lovell at the time I retired 4 years ago, and I wasn't able to get my compensation. They said I had to accept a job to get my compensation. I am 69 years old and when I retired I didn't think I quit. I quit because I was up to age 65 and they wrote me a separation blank.

They said I had to work, accept a job when I hadn't left a job. I did not get it, and I haven't gotten it, and I wish you would look into it. I was working for the house cleaning. The housecleaners took over. The Union Planters Bank, I worked there 15 years, and I worked for them 3 years—the housecleaners—and I was unable to get not 1 penny for my compensation.

I was 65 when I retired and I am now 69. My utility bill is $38; of course, I won't bring all that up. I do appreciate it. Thank you for the information you all have given us. I would like for you all to help me to try to get my money.

STATEMENT OF MRS. FRANKIE B. JOHNSON, MEMPHIS, TENN.

Mrs. JOHNSON. I worked a long time for the Volunteer Construction Co. and they went out of business, and after they had gone out of business, I got a job in a private home of Mrs. Glennis Smith.

During that time Martin Luther King was marching so I asked her to let me go downtown and let me off that day. She said, you can be off today. So, I went on downtown and got in the march and the next day when I came back she told me: "You were down there in that march and if you were in that march, I'll never let you work in my house no more." She said: "Now go down to the employment office and you'll never get another job down there." So, she fired me, and she didn't pay me, and I never have been able to get another job at the employment office at 1295 Poplar, in Memphis.

Since then, I bought me a lawnmower and I went around and cut hedges and cut yards.

I was buying a house, therefore, I didn't . . . that ran out. I got me two wheels and made me a pull wagon and sold bottles and finished paying for my house. I bought the house from D. Glen Arnes on Airways Boulevard. The gasman cut my gas off 4 years ago.

Me and my children didn't have water or lights; we took baths in the Wolf River during the summer.

So we met a lady, then called Mrs. Crankshaw. We told her about our troubles. She took us to the gas company and finally got our gas back on, so now, with the three adopted children I have, they get $132 welfare check. I pay $28 for the food stamps out of that. This time I had to pay $72 tax on the house which made a total of $100. There's only $32 left for detergent and things like that.

They had me going back and forward to the social security board to get a SSI check which January, a year ago, they gave me one check for $235 and told me I would get a check each month.

Then, they had me coming back every 2 weeks and calling back every 2 weeks until yesterday. Yesterday they told me that I was denied. Now then, what I want to say, if I can't get a job at the social security board, if I can't get a SSI check—they tell me down there when you get 40 years old, you lean on your children. I don't have any children to lean on, what could I do. Thank you. What could I do.

Senator BROCK. We are down to our last witness, and you have been more than patient. I have learned a lot, I hope you have.

Our last witness is the former Memphis city commissioner who retired to Covington, Stanley Dillard.

STATEMENT OF STANLEY DILLARD, COVINGTON, TENN.

Mr. DILLARD. I always like to think the people who voted for me as the number of years go by. It has been many years too, and I do thank you for letting me make my statement here today.

My name is Stanley Dillard, and I am a resident of Tipton County, near Covington, Tenn. I serve on the Tipton County Committee on Aging, and the advisory council to the area agency on aging.

Tipton County is composed of rich farming land, some 300,000 acres of which are under cultivation. The county agriculture extension agent states that the number of persons making gardens has risen noticeably over the last 5 years, because of rising food prices. The 5 percent this year who are growing and preserving their food has become a meaningful alternative for persons who live on irregular incomes or fixed incomes such as social security. However, many families, especially elderly persons, are unable to preserve food products because of the expense involved in acquiring canning equipment such as pressure cookers, adequate sinks, food choppers, and other necessary equipment. Furthermore, the elderly people who live alone and who do have canning equipment often find that their ability to move pressurized pots which are very heavy and extremely hot at appropriate times, prevents them from using canning as an alternative.

REVENUE-SHARING FUNDS HELPFUL

Through the help of the area agency on aging and the Lau-Fay-Ton Community Action Agency, we are constructing a facility—a cannery, at Burlison, Tenn., in Tipton County. The city of Burlison is constructing the building out of revenue-sharing funds.

The primary objective of this program is to provide Tipton County's elderly residents, rich and poor, black and white, the op-

portunity to maintain a well-balanced diet through their own resources. By providing a facility where food products may be canned and preserved at no expense, area residents save money on their grocery bill, have the convenience of not having to shop as regularly, and enjoy the pleasure of homegrown vegetables, fruits, and meats. In addition, Lau-Fay-Ton currently sponsors an annual garden seed program whereby seeds and fertilizers are given to low income and elderly families to make a garden.

We feel that the program will have a direct cash benefit to older people.

We can only estimate the savings that these people have realized from using existing canneries in other west Tennessee communities. During 1975, these canneries processed 222,824 jars of homegrown fruits and vegetables, 16,863 pounds of sausage, 8,184 gallons of lard, and 385 pounds of souse. Based on current prices in west Tennessee markets, the retail value of this food is $289,671 for fruits and vegetables, $25,294 for sausage, $22,833 for the lard, and $327 for the souse. I might add that I am using conservative food values so that the actual retail value should be much higher. The cost to area residents for putting up sausage, lard, and souse is less than 50 percent of the retail or grocery store value and the cost for preserving fruits and vegetables has only been the purchase of jar lids. Roughly speaking, the direct cost to these families has been less than $25,000, representing a savings of approximately $330,000 to the 8,993 families that participated in 1975.

Younger Persons Take an Interest

Aside from these economic gains, a number of other benefits have accrued. Where canneries have been established, they have had a tendency to become a focal point or gathering place for elderly residents. From this has developed a community spirit that is extending across religious, racial, and age barriers. For example, one of the interesting things that we have discovered is that interest in the elderly from younger persons has been generated. Younger persons are also preserving food and are consulting older persons for garden techniques and tips on almost forgotten canning recipes. Additionally, a number of homebound older persons are able to get out of their homes since free transportation is provided when it is needed. The important thing, however, is that a number of elderly citizens are persons who never acquired the skills of preserving food.

Additionally, the community of Burlison, Tenn., a small town of less than 400, approximately 11 miles west of Covington, has recognized the importance of this project to their area residents. This community has pledged $8,000 toward the construction of a suitable building in which to house the cannery, and this represents the first investment that this small community has ever made on behalf of economic benefits for its residents.

I do want to thank Senator Brock and Congressman Ford and the staff of the Senate committee for allowing me to relate how important this project is for persons who live on fixed and marginal incomes.

Thank you.

Senator BROCK. Thank you very much. I wish we had more time, because I can really get excited about that sort of thing, Mr. Dillard.

I would like to spread this sort of thing on the record, and use it to give people all over the country something they could be excited about, not just canneries, but in every area where people could cooperatively get together, and gain a sense of participation and do something of value.

We are at the end of this session, and I want to just make two or three concluding comments. First, Harold Ford had an emergency and had to leave. I know he regretted that.

Second, as I mentioned to you, these forms are available for comments from the audience. If you want to send them in, we would be very grateful to hear from you.

Third, my office is here in Memphis. If you have any problems we can help you with personally, please call. I am in the phone book.

Finally, and I guess this is as important as anything else, I want to thank you for coming, and particularly Richard Block and the people at the center for being such incredibly fine hosts.

It has been a super morning for me, and I appreciate it very much. Thank you.

Mr. BLOCK. May I have your attention, it looks like we are kind of batting the ball back and forth between us.

I think this has been a beautiful conference. I thank you all for being here. I want to particularly thank Senator Brock, his staff, and the staff of the Special Committee on Aging for making this the success it has been.

Those of us who have been here and you have participated in the conversation with Senator Brock, there can be no doubt about his very great interest and dedication to our services, and we do thank you, Senator Brock.

Senator BROCK. Thank you very much.

The hearing stands adjourned.

[Whereupon, the hearing was adjourned at 11:30 a.m.]

APPENDIXES

Appendix 1

STATEMENTS TAKEN BY SENATOR BILL BROCK AT A MEETING IN JOHNSON CITY, TENN., FEBRUARY 14, 1976

ITEM 1. STATEMENT OF CATHY ASTIN, COORDINATOR, PROJECT SEND, ELIZABETHTON SENIOR CITIZENS CENTER, ELIZABETHTON, TENN.

I am Cathy Astin, coordinator for Project SEND (Services Elderly Need Directly).

Our program currently serves 220 homebound elderly in the counties of Carter, Johnson, Unicol, and Washington. Project SEND employs three registered nurses and five nurses' aides to provide home health care to the elderly in these four counties. Our program is presently funded until June 30, 1976 by the Tennessee Mid-South Regional Medical Program. At this time we will have to seek other sources of funding in order to maintain the services of Project SEND.

The main objective of Project SEND is to provide health care to elderly who can and want to remain in their own homes, thus reducing admissions to hospitals and nursing homes. Studies have shown that the cost of nursing home operations greatly exceed the cost of in-home nursing care.

Speaking for the elderly population we serve, there is a tremendous need for better availability for durable equipment to be used in the homes. These would include beds, walkers, wheelchairs, commode chairs, and hydrolic lifts.

Another main concern of the elderly population served by Project SEND is the continuation of the medicaid program. The loss of this program would affect many elderly now receiving home health care benefits under the medicaid program.

There are only two health care programs serving the eight counties of upper east Tennessee, with three counties, Greene, Hawkins, and Hancock, having no health care programs at all. This in itself indicates a need for expanded home health care. On behalf of the 220 elderly homebound patients served in our program, and for those who could benefit from it in the future, I ask that any consideration for funds to operate our program be given.

ITEM 2. STATEMENT OF CATHY DAVIS, RESOURCE DIRECTOR, SENIOR INFORMATION AND REFERRAL SERVICE, INC., KINGSPORT, TENN.

I am Cathy Davis, resource director of Senior Information and Referral Service, Inc. As an information and referral center, our organization is very aware of the needs of the elderly. Utmost among these, and usually the most difficult to solve, are financial needs.

In discussing the financial needs of the elderly, it is natural to begin with the individuals in the most desperate situation; namely, those who have Supplemental Security Income as their sole source of income. If an individual is in this category, he is probably drawing around $158 per month. From this monthly income, expenses such as housing, food, utilities, fuel, medical, and miscellaneous expenses must be covered. Although medicaid helps with many of the medical expenses, there are additional charges that the individual must cover himself. The cost of utilities can be a real point of difficulty due to the

fact that some of our people have electricity bills that can run from $40 to $100 per month, further complicated by their poorly insulated homes. And the rates are going up. Along this same line, the price of coal is over $50 a ton and most people use at least six tons each winter. Because few coal companies will extend credit, the elderly are expected to pay over $300 in a lump payment.

But financial problems are not unique to those on Supplemental Security Income. Even if an individual draws a fairly decent income from social security, veterans' benefits, or some other source, there are certain expenses which they, too, can find impossible to meet. For example, the present cost of a hearing aid is $400 or more; dentures and dental care in general are unbelievably expensive. And neither of these items are covered by medicare or medicated in this State. Furthermore, if and when a senior citizen reaches the point where he must enter a nursing home, the costs can be shattering to almost anyone. The costs for nursing home care can run $600 a month or more. Medicare coverage of these expenses is limited. These limitations and high costs can cause such financial burdens, that we know of elderly couples who have been forced to divorce in order to avoid complete bankruptcy. Although medicaid can presently help tremendously with these costs, we are acquainted with the jeopardized position of this program.

We all realize that social security was never meant to be a retiree's sole source of income, but rather as a supplement. But how do we explain that to a 75-year-old widow who does not have money to buy fuel or food? What do we do with these elderly individuals who could not or simply did not save or plan for their retirements? Can we just turn our backs on the lady in Bristol who was burning her shoes for fuel, or the man in Kingsport who eats nothing but peanut butter? Do we just say that we are sorry they didn't understand the rules? And why do we penalize those over 65 who want to work to supplement their income by decreasing their social security payments if they earn over the established amount?

The answers are not going to come easily. But answers must be found because the condition of the elderly is not going to get better, it is going to get worse. And it won't disappear if we close our eyes.

ITEM 3. STATEMENT OF HOWARD N. HINDS, COORDINATOR, LEGAL SERVICES FOR THE ELDERLY, FIRST TENNESSEE-VIRGINIA DEVELOPMENT DISTRICT, JOHNSON CITY, TENN.

I. DELIVERY OF LEGAL SERVICES TO OLDER AMERICANS

The Older Americans Act Amendments of 1975 (Public Law 94–135) was signed by President Ford on November 28. This new law contains a number of provisions specifically referring to legal services and counseling which demonstrate beyond doubt the congressional intent that the program of legal services for older persons be expanded substantially.

Section 103 adds the following to the definition of social services to be provided under the act: "Services designed to provide legal and other counseling services and assistance, including tax counseling services and assistance and financial counseling, to older persons."

Section 106 of the act is entitled "National Priority Services." It provides that a minimum of 20 percent of the funds allotted to carry out State plans for social services for the elderly must be used for four priority services; transportation services, home services, legal and other counseling services, and residential repair and renovation programs.

Section 110 of the act strengthens the provisions dealing with training personnel in the field of aging. It authorizes the Commissioner on Aging to make grants to assist in paying all or part of the costs of "(1) the training of lawyers and paraprofessional persons who will (A) provide legal (including tax and financial counseling) counseling services to older persons. . . ."

The Older Americans Act Amendments were enacted too late to be included in the current Labor-HEW Appropriation Bill. It is expected that the spring supplemental appropriation bill will include appropriations for the activities authorized by the act. We respectfully request support of appropriations needed to implement the activities of this act.

II. FOOD STAMPS FOR OLDER AMERICANS

One of the more visible issues on the national political scene involves the modification of the food stamp program. In fact, several bills are now before Congress which would significantly alter the current administration of the food stamp program. These include President Ford's proposal, S. 2357, and the McGovern-Dole proposal, S. 2451.

The effects that changes in the food stamp program can have are illustrated by USDA's recent proposals to modify the food stamp allotment procedures. The Agriculture Department based its new proposals on a "new" thrifty food plan and the amount of nutrients needed by individuals based on their sex and age. The results are disastrous for senior citizens, particularly older women living alone (nearly one-third of all older women do live alone), and older couples on SSI.

In meeting senior citizen nutritional needs, Congress and USDA must be encouraged to consider the immobility of seniors, their physical illnesses which result in higher medical expenditures and the need to purchase special diets, and their inability to purchase the low-cost food. Congress, in section 701 of the Older Americans Act, has clearly recognized the unique nutritional problems of seniors:

". . . Many older persons do not eat adequately because (1) they cannot afford to do so; (2) they lack the skills to select and prepare nourishing and well-balanced meals; (3) they have limited mobility which may impair their capacity to shop and cook for themselves; and (4) they have feelings of rejection and loneliness which obliterate the incentive necessary to prepare and eat a meal alone. These and other physiological, psychological, social and economic changes that occur with aging result in a pattern of living which causes malnutrition and further physical and mental deterioration."

To meet these special needs of our senior Americans, USDA and Congress must compensate the elderly by providing additional bonus stamps each month for every senior citizen. The importance of food stamps to our Nation's elderly poor cannot be overemphasized.

III. SSI: FOSTER CARE AND DOMICILIARY CARE PROGRAMS

In looking for ways to cut costs, the SSA is "reinterpreting" its policy governing SSI payment to older Americans living in the household of another.

The SSA has proposed to cut one-third ($52.56) the SSI income of every person living in the home of another—foster care domiciliary care, or with friends or relatives. Under this new "interpretation," there is no provision for the older person to prove that he or she is paying his or her share of the household expense.

This move will cause older Americans to become financial burdens to friends and relatives who have cared for them in their homes. Many may not be able to continue. Each of these living arrangements offers supportive community care so that institutionalization is not the only alternative for the older person who can no longer live alone.

There may be time for SSA to rescind this "interpretation." We request this committee's support in insisting on a rejection of this "one-third" regulation.

IV. COMPREHENSIVE HEALTH CARE OF OLDER AMERICANS

Recognizing, with gratitude, Senator Brock's bill to place hearing aids under the coverage of medicare, we submit these additional reforms in the area of health care for older Americans. Legislation is direly needed to greatly expand medicare coverage to include:

1. Unlimited inpatient and outpatient hospitalization;
2. Skilled nursing home and intermediate care services;
3. Outpatient prescription drugs;
4. Eyeglasses, hearing aids, and walking aids;
5. Physical and speech therapy; and
6. All emergency and some nonemergency transportation.

In view of the present economic situation and the improbability of the passage of a health care bill for ALL citizens, the health care of older Americans must be top priority.

It is time to change medicare from a *limited* health care program to one which can serve as a pilot project for national health insurance.

V. TAX REFORM

We urge passage of Senate bills 2401, 2402, and 2403:

1. S. 2401 would reinstate the full deduction for unreimbursed medical costs for older persons.
2. S. 2402 would update the retirement income tax credit to give it full and permanent parity with tax-free social security income.
3. S. 2403 would excuse taxpayers 65 and over from filing declarations of estimated tax on pensions, annuities, dividends and interest, if such income is $2,000 or less.

ITEM 4. STATEMENT OF ERNEST McKINNEY, ASSISTANT PRINCIPAL, SCIENCE HILL SCHOOL, JOHNSON CITY, TENN.

HOUSING CONDITIONS FOR THE ELDERLY IN THE TRI-CITIES AREA

Senator Brock, Congressman Quillen, and other visiting dignitaries, it is my pleasure to talk with you at this time about the conditions of housing for the elderly in the areas of upper east Tennessee and southwest Virginia.

One can look at the poster displayed before us here and get a bird's-eye view of conditions as found the areas aforementioned and readily see that the housing conditions are far, far from good.

The U.S. Census of 1970 showed a population of 55,815 persons of age 60 and over living in the areas covered by the First Tennessee-Virginia Development District.

Housing needs for the elderly in the Tri-Cities area were pointed up in a survey done in 1973 by the research staff of the FT–VDD and we have reasons to believe that because of the inflated costs of building and the economic crunch of the last couple of years, very little has been done to change the findings, hence they are being presented here today.

The Johnson City Housing Authority had 246 units for the elderly and a waiting list of 98 couples or singles. According to a spokesman for the authority, the need for housing for the elderly is much greater than the aforementioned waiting list since many of the elderly do not apply for housing when they find that the waiting list is so long.

The Elizabethton Housing Authority had 80 units built especially for the elderly with 26 units under construction in Carter County. There were 92 individuals on the waiting list. The director expressed a lack of concern for public housing for the elderly in his area and felt that more units were vitally necessary.

The Bristol Housing Authority had 152 units with 118 of these located in a highrise apartment. They had 115 persons on the waiting list. A great need was expressed by the Bristol Authority for more units for the elderly.

Greeneville Housing Authority had 80 units with a waiting list of 30 people. The director there also expressed a great need for more public housing for the elderly. If more public housing for the elderly were available, those living in the family units could be moved and those on the waiting list could be housed.

In Kingsport, there were 36 units for the elderly—all one-bed room apartments. Forty-four tenants were living in family units for the elderly. There was a waiting list of 90. There was an expressed need for more public housing for the elderly since the project had a long waiting list and many elderly couples were occupying two-bedroom apartments in the family unit.

Sneedville has 10 units for the elderly with 14 persons residing in public housing. There were seven on the waiting list. The director explained that applications are not made because the elderly know that units are unavailable.

In Erwin, there were 30 persons living in public housing. There were a total of 20 units designed for the elderly. At that time there were 10 elderly on the waiting list.

In the town of Jonesboro, the mother of the great State of Tennessee, there is no public housing at all for the elderly or any other persons. If it were

not for a few apartments privately owned and a few nursing homes, that are overcrowded with long waiting lists, they would have to go to Greenfield Farms. Greenfield Farms is also overcrowded, though now being revitalized.

The question may be asked as to why the concentration on public housing as a means of providing the relief needed for shelter for the elderly.

A survey for the Tri-Cities area by the personnel who administer the nutrition program for theh elderly revealed that the average income, nonfarm, for heads of household 65 years and over was $2,532 for males and $2,516 for females. For farm families, male heads of households was $2,154 and female heads of household $2,141.

This says to us that with that kind of income, they are unable to pay rent for privating housing and, those who are fortunate enough to own their homes find it difficult to pay taxes and keep their homes in a liveable condition.

I believe that we can feel safe in saying that while some few retired elderly live off both income from a retirement program and social security, a large majority must live off the social security income alone.

This report of the availability of public housing for the Tri-Cities area is typical of the conditions of housing in the entire upper east Tennessee and southwest Virginia area.

These briefly described facts gathered by the research staff of the First Tennessee-Virginia Development District as expressed by the many housing authorities, are the basis for my belief that housing is one of the foremost problems of those living in, and others of us who are facing, retirement years.

Thank you for the opportunity for this presentation.

HOUSING AUTHORITY UNITS FOR ELDERLY BY CITY

Housing authority	Number of units for elderly	Number (couples or singles) elderly on waiting list
Bristol	152 units, 176 occupants	115
Elizabethton	80 units, 112 occupants (26 units under construction)	92
Erwin	20 units, 30 occupants	10
Greeneville	80 units, 125 occupants	30
Johnson City	246 (40 units under construction)	98
Kingsport	36 units, (+44 in family units=130 elderly tenants)	90
Morristown	10 units, 14 occupants	7

ITEM 5. STATEMENT OF EVELYN STULTZ, DIRECTOR, ERWIN SENIOR CITIZENS CENTER, ERWIN, TENN.

TRANSPORTATION NEEDS OF THE ELDERLY

The need

Unicoi County and surrounding counties has a high population of over-65 citizens. Unicoi County has 11 percent of its residents in the over-65 category. The age of its residents continues to climb toward this grouping.

Due to the loss of vision and other physical handicaps, many of them have lost their confidence and ability to drive their own cars. Many no longer have a car nor any other means of transportation for the day-to-day activities we of the younger group take for granted.

Many of our citizens have doctors in neighboring towns, as we have but a few doctors in Unicoi County. Many come to the Watauga Mental Health Clinic for treatment. Without the limited transportation of the Easter Seal bus these would not get even this far.

Easter Seal transportation is but a drop in the bucket. Many older people do not like to call a day ahead and make a reservation for the bus. They pay from their meager incomes for some of their neighbors or friends with a car to take them to town.

No program for the elderly will be successful if they have no transportation to and from your facility.

We have a new meal site at the Unicoi Community which would be much more successful if we had some transportation to and from. Many of the programs would be better attended if the people they are meant to inform could get to them.

Unicoi County has no public transportation of any sort. Trailways Bus Co. does come from Asheville in the morning and goes to Johnson City. No bus station to serve its customers. One bus runs from Johnson City late in the evening toward Asheville, N.C. If you ride any of these buses you may get a connection and you may not. My main concern is the day-to-day needs for some form of public transportation in our boundaries. When millions are being spent for supersonic transports to carry 100 passengers, people in my county cannot get to the grocery store or the doctor by public carrier.

We are continually looking for ways to transport our members of the senior adult center to and from various events. As we look about, you may see hundreds of schoolbuses sitting idly by from 9 a.m. in the morning until 2 p.m. in the afternoon . . . waiting for children to be transported home from school Why could not these same buses be used in the meantime to take senior citizens to and from various centers of activity, on short shopping trips and to volunteer activities, meal sites, and to senior centers for much needed contact with others?

The barrier is the insurance and some laws at the State level. . . .

These same schoolbuses are paid for by the taxes of these senior citizens as well as the younger parents. This seems to me to be a waste of tax dollars.

Another avenue is the rows on rows of church buses sitting idly all week waiting for Sunday. . . .

Again there is the insurance problem. . .

We here at the Clinchfield Senior Adult Center are lucky in that the church bus of the First Baptist Church is ours for some of our activities We must pay the gasoline and the driver fees. Without this means of transportation we would be as housebound as if we were tied to a bedpost.

We will be better able to serve our senior citizens when we give them some means of travel that they can use on a regular schedule and pay for it. They want to pay their way in everything. I think they should be encouraged to pay when they can. After all, this increases their dignity and self-esteem.

Thank you for this opportunity to express my opinions and view about transportation needs.

ITEM 6. STATEMENT OF LLOYD MILLER, FIRST VICE PRESIDENT, STATE FEDERATION OF CHAPTERS, NATIONAL ASSOCIATION OF RETIRED FEDERAL EMPLOYEES, JOHNSON CITY, TENN.

Retirement. God bless our forbearers for the creation within our society that provided for our retirements.

It matters not if you are the weather-beaten farmer, the talked-out teacher, the ether-laden hospital orderly, or the flat-footed letter carrier. It doesn't make much difference if your retirement is from private life, public, city, State or Federal. Trying to keep food on the table, clothes on the back, and stay warm has, is, or can be, a problem to all of us.

Retirement is not meant to be a time when we just add years to our life but the time when we would add life to our years. Such is not the fact today

The man or woman who retired 20 years ago, on what at that time, was a good retirement, now finds it more difficult each passing day to accomplish the aforementioned necessities. There are no luxuries for them unless given.

I am sure that many of you here today are living with just such problems in your home. If you are not experiencing this now you might before too long with the ever-increasing inflation, the never-ending demand for more and more taxes, and the lack of competition. What do I mean by lack of competition? What has become of the small farmer? The man who once came by your door security benefit plan already have their Retirement Income Exemption. This is have had to hire a bookkeeper to fill out the papers the city, State, and Federal people demand. He would have had to hire a lawyer to tell him what he could do and what he could not do. He has quit just as have men and women of other small businesses. There are many varied and contributing factors other than these which I won't go into that are causing the dilemma for the retiree of today.

What will help the majority of the people most? You will notice that I didn't say majority of retirees. By majority I mean all the people of our great Nation. A Retirement Income Exemption is the answer. Not an increase in retirement income credit, but a Retirement Income Exemption of the first

$5,000 of any retirement plan, and at age 60. This of course would be for a married couple jointly. There would be comparable figures for other filees.

We all need to keep in mind that the maximum amount of social security benefits is $6,818.40. We also must keep in mind that all social security benefits are tax free from Federal income tax. So people retired under the social security benefit plan already have their Retirement Income Exemption. This is not to say that these retirement benefits are adequate. I hope to hear someone else testify on this matter.

Now, as I continue, I would have you realize I am now referring to the retirees under private, city, State, and Federal retirement plans. There are a few million of them. They are growing in numbers every day as our society calls for more teachers, more policemen, more workers in the private sector, and in many other fields. I would ask you to further keep in mind that as I give you some figures on these retirees, that I am referring to a married couple filing a joint Federal income tax return. These figures will be as of right now. This man and wife, to receive any retirement income credit, must in addition to filing a form 1040, file a schedule R. At the top of this schedule, in column C, appears a figure of $2,286. This $2,286 figure is not deducted from their annuity and tax paid on the balance. Far from it. This $2,286 figure is carried downward to another line on the schedule R. Here it is multiplied by 15 percent. So doing they will arrive at a figure of $342.90. This amount is all that becomes tax free to this couple.

This is inadequate, unjust, and unfair. I will argue with anyone who disagrees. Give these people the help they need, a Retirement Income Exemption of the first $5,000 of their annuity.

What will the results be? The first thing that comes to mind is this will take a lot of money out of the Federal income tax stream. I ask you to think a bit. Will it? These people are not in a position to bank this money. They are going to spend it. The way taxes are today, four or five turnovers of these dollars and all is right back into the tax stream. These dollars will create jobs for other people who will also be paying taxes.

Last year, President Ford said that giving people a tax rebate was the best thing for the economy of our Nation. It was done. He was right. The majority of our Senators and Congressmen thought it was right. They only carried out your wishes, so you thought it was right. This $5,000 Retirement Income Exemption will do the same thing, in addition to helping the retiree. So be right again and support such a measure.

Those of you retired need this now. Those of you not retired will need it when you do. Lets do it together.

ITEM 7. STATEMENT OF BEN PEEPLES, FIRST TENNESSEE-VIRGINIA DEVELOPMENT DISTRICT AREA AGENCY ON AGING, JOHNSON CITY, TENN.

The major problems which result in the needs discussed here today, come from the overall designing by our government in providing for services to the less fortunate and to the aging.

One major area of concern stems from the problem of ever increasing amounts of government procedure and policy control. The Federal Government should be responsible to the Nation's taxpayers for the funds they administer. But realizing the necessity of accountability, our government has created an inadequate system based on numbers and forms. Such a system is accountable in many respects, but defeats the purpose of government in other respects. Each agency involved with Federal and State financing has separate forms and policies which govern its operational structure and its degree of flexibility. The Federal Government has created a system in which performance, especially that of social services, is based solely on numbers and not on quality. This inequality is reported o nforms numbering in the thousands. Agencies find themselves more concerned with how many, and which form applies, instead of how well in respect to the services they administer. With all the forms and policies that are handed down by the Federal representatives in Washington, the Nation is soon to be taken over by the paper manufacturers of the world. Surely, they are the ones reaping from the fiscal management and reporting systems of our

government, not the people we originally had hopes of helping. In the same respect, the government preaches coordination but creates an atmosphere of competition for dollars through this numbers game. The services being delivered are second hat to the competition itself. Agencies see the need to coordinate with other agencies, but all is lost in protecting their future as agencies.

This leads to another area which creates problems—that of unrealistic goals with inadequate funds to reach such goals. Each year the government spends many man hours and dollars deciding what is the best way to provide particular services to the people, and such decisions are based many times on the numbers aforementioned The intended goal, that of helping people, is lost in political forum. By the time the legislative goals reach the people there is only a piecemeal amount of funding compared to what is really needed. Our government gives us a dime to do a dollars worth.

Federal Matching System

There is another major concern which inhibits local governments, especially in rural areas, such as east Tennessee from pursuing a better comprehensive service system. This is the problem of the Federal matching system. Each year, our government collects taxes from the working public in order to function as a government for the people. These taxes are used to promote the growth and well being of our country, part of which is to protect its aging population through various Federal programs encompassing many local, State, and Federal agencies. Such programs are available in many cases only if the local community concerned can generate more money from the people. The government offers such services or funds in ways in which many communities cannot afford to partake. This is to say they take money from the public and offer it back if the public is willing to give more money. Our Federal matching system is unrealistic in that people, many of whom pay taxes, are denied services because their community cannot afford to put up additional money. Meanwhile the funds sit and services are needed. The government was designed to help the people it represents through the funds generated by taxes, but yet the policies are designed in such a way that the people are not getting helped in areas that need it most—the areas that are economically starved.

To sum up, the broad spectrum of problems discussed is to say that:

(1) The Federal Government needs to become less quantitative and more qualitative. In other words there needs to be less forms and more service. If some of the bureaucracy could be cut out of the social service delivery system, our government would have enough money to help the people at home as well as in foreign countries. A suggestion would be to change the government's methods of proving the success of services funded in part through Federal sources. Numbers are many times guesstimates and duplicatory and don't really represent the success or failure of anything. Listen to the people—they and only they can tell the real benefits of what the government does.

(2) Our government has to decide whether it is or it isn't going to solve the problems discussed here today. If it is, then go at them with full force and provide the necessary funds to solve these problems. If not, don't waste the taxpayers money with piecemeal programs. A good step in the right direction is to quit forming new services to perform the functions mandated through existing services. The old programs die out due to a lack of continued government support only to be replaced by new programs which must start at the beginning. In the meantime people are in a state of need and confusion.

(3) Our government needs to revamp the matching system in such a way that if communities can't generate local funds, then they are not penalized. The money belongs to the people in every community, and the ones that are not developed as well continue to be left out of the picture while those that have benefited from the present system continue to do so.

Our government has spent millions even billions to reconstruct countries, countries that we have spent millions to destroy and all the while we have people without enough food to eat, clothes to wear, and coal for the stove probably within walking distance of this meeting today. Our priorities must change if our people are to survive—if our government is to survive.

Appendix 2

LETTERS FROM INDIVIDUALS

ITEM 1. LETTER FROM ROBERT ROCHELLE, EXECUTIVE DIRECTOR, SENIOR CITIZENS SERVICE, MEMPHIS, TENN.; TO WILLIAM E. ORIOL, STAFF DIRECTOR, SPECIAL COMMITTEE ON AGING, DATED MARCH 5, 1976

DEAR MR. ORIOL: We appreciate your dedicated efforts in seeking to find the truth concerning the needs of older citizens in terms of income needs in the Memphis area. We realize that in the brief time you have available it is impossible to learn all that needs to be said. It is also obvious that it would take an extremely long letter for me to explain in detail the items which are serious needs in this community. However, I wish to send some recommendations that we feel, from the standpoint of a direct service provider, need attention.

It can easily be documented that one most serious need for the older citizen today is simply more dollars to purchase the items necessary for life maintenance. There seems to be no complete way to hold down the costs of living effectively enough for the older citizen. Therefore, the only viable way to relieve much of the complications of their lives is to increase the amount of money they have available to meet their needs. This means increasing social security, SSI, and other income benefits.

Some of the specialized needs of older citizens could be faced, by relieving those relieve much of the pressures of their existence. One great assistance would be the ability to secure medication at either a reduced rate, or, for it to be subsidized under the social security system.

Medications are a way of life for older Americans. The increasing costs of medical care are prohibiting older citizens from going to see physicians. The burdensome regulations of medicaid and medicare have discouraged many physicians from even treating older patients. Some simplication of the system should be made to allow proper physician care to be available in a way the older citizen can obtain it. Poor health is quite frequently a companion of older years.

ADEQUATE AND SAFE HOUSING

Adequate and safe housing is another serious need of the older citizen. However, the housing should be of such a nature as to be satisfying for the older citizen. The highrise apartment buildings are suitable for many tenants but do not provide nearly the sense of "home" that other types of housing types ranging from the highrise apartment, the single or duplex type family units, group homes in a community setting, the encouragement of personal or foster care home units, the development of convalescent homes, intermediate care and skilled nursing care facilities for seniors as well. It is all too common to find older citizens in a setting that is not suitable for their needs while others who should be in that position are denied that opportunity. Additional facilities would appear to be the only suitable answer.

It is becoming increasingly clear that some control or subsidy for senior citizens' utilities must be provided. Increasing utility rates are becoming intolerable for most older citizens. Utilities are a problem which face all citizens, but the oldster is particularly hard hit.

The problem of nutritious food will inevitably plague senior citizens. The congregate meal sites have been a blessing to the older citizens. One of the reasons most older people are not eating properly is the lack of desire to eat when a person is alone. These group meetings for meals have stimulated many older citizens into a new stream of life. Home delivered meals are a dire necessity for many home bound elderly in order to receive nutritious food. This valuable component will enable other citizens to remain in their own homes far longer.

Home health care, particularly homemakers, can be a valuable tool in eliminating unnecessary or premature institutionalization, which is within itself a great demand on public dollars. When home health care can be provided for 25 percent to 40 percent of institutionalization, and yet still provide the needed care, the additional funds could be diverted into other programs which would help meet other categories of need. Sometimes a service provided can be as valuable as dollars to provide the alternative.

Need for More Service Aides

We have several social workers helping meet the needs of older citizens within the Memphis community. However, we see a serious need for a number of additional social service aides who can help secure food stamps, obtain eligibility for service, and in general assist the older person to meet their social needs. These aides would be less expensive than the social workers and can provide the less skilled type time consuming jobs.

One direction that appears needed is the development of funding sources to assist multipurpose senior centers in their operation. Currently the Older American's Act and its amendments do authorize these services but without an appropriation to fund them. These service provision centers would be valuable units within the communities where older citizens primarily reside. Multiple services in a single setting of high accessibility and recognition would initiate much needed service.

One of the things needed on the local level is better cooperation with government agencies in their provision of services to the specialized groups of persons called senior citizens. Not only are eligibility requirements too stiff and demanding but the procedure of securing service can be prohibitive. The income situations of older citizens seldom change for the majority. But eligibility still has to be done, often every three months for many of the services. Annual recertification seems more reasonable.

It becomes almost impossible for the senior citizen to spend the time and energy it takes for a 6-hour trip to the food stamp office in order to secure a rather menial amount of supplemental dollars. Most senior citizens just will not go to the trouble to receive these much needed stamps. A solution would appear to be providing specialized times and lines for older citizens who do not have the energy to meet the demands of the current process. The same holds true of securing service in other government programs.

Transportation is essential for older citizens. Their needs are unique and it demands unique approaches. Public mass transportation is highly valuable, but transportation from a particular location to another particular location has to be provided to the older citizen who has no other means of mobility. This means to medical facilities, social and recreational activities, shopping, religious activities and general transportation. Careful planning could provide a good deal of this service with money currently being used on a general scattergun approach to mass transportation. Providing the services is not a real solution unless adequate transportation is provided for the senior to get to that service. Economically the drain on the citizen's income for transportation can be a tremendous loss in terms of their monthly income. Thus another interaction enters the whole picture.

It should be clear by this time the needs of the senior citizen's income needs are so interwoven that they are difficult to separate. The need is for more than just additional dollars, although that is imperative, the need is for services that meet real needs and accessibility to those services to help alleviate some of the problems. It is a complex situation and will demand complex solutions. If government agencies would work cooperatively at the local level to meet the specialized needs of senior citizens these could be more easily met.

I am afraid finding the problems can be simpler than finding solutions but I will be happy to work with your staff at any time on any of the specific issues mentioned here, or others. We appreciate your interest in resolving these needs and look forward to hearing from your office in terms of what is being done as your efforts progress.

Yours truly,

Robert Rochelle,
Executive Director.

ITEM 2. LETTER AND ENCLOSURES FROM ROBERT ROCHELLE, EXECUTIVE DIRECTOR, SENIOR CITIZENS SERVICE, MEMPHIS, TENN.; TO WILLIAM E. ORIOL, STAFF DIRECTOR, SPECIAL COMMITTEE ON AGING, DATED APRIL 27, 1976

DEAR BILL: Enclosed are three examples of specific cases in which homemaker services were of value. In each case the client signed a form indicating permission to use their name as a personal reference in whatever document you choose consistent with propriety. This number could be multiplied considerably and explained in much more detail if time and space allows it.

Getting to the problems involved in the provision of medicaid and medicare services to the elderly becomes a complex matter. I will try to briefly state some of the problems faced.

In this community some physicians are rejecting the treatment of medicaid patients. The burdens and regulations are such that the medical sources can no longer bear the cost of providing the service. Thus, the patient may be unable to locate a doctor when necessary, or may be terminated as a patient, or has a limited selection of physicians. This may mean that the medicaid patient receives a lesser quality care, although this is not evident.

In many cases the medicaid patient must pay their charge in advance in order that the physician's office will not have to go through the burdensome problem of retrieving cost. Once the claims are filed by the patient if the charge is refused the patient pays the entire cost. If the charge is paid then that patient still has to have the out-of-pocket expense during the interim regardless of what kind of hardship it may cause. This seriously discourages medical treatment.

In a recent discussion with a medicare provider, some of the same, though not all, of the problems were evident. In the medicare program in this State, certain insurance companies are used as intermediaries. These intermediaries use quite broad arbitrary bases on which to make payments for claims. Apparently they make rather strict requirements in terms of reporting and case definitions and then at times will change their decisions as to what they will in the end pay. At times, charges paid previously will not be paid when billed. It then becomes a guessing game for medicare providers as to what charges are in fact billable.

A companion agency here in Memphis recently began to make the transition from a fee for service home health program to a medicare provider. Just to meet the reporting and monitoring requirements for medicare his actual cost doubled. Our cost under a federally subsidized program through title XX is about half of the average cost in the city for the same type care under medicare and/or medicaid, and in some cases the difference may be as much as three times our cost. We operate also, under Federal control, requirements, and monitoring, and yet our service is acceptable and certainly productive for the clients. However, we do not have the complex and discouraging reporting procedures that medicare and medicaid now demand. No doubt the concern for quality service must be ever present but a less demanding system surely could be designed. I am sure physicians and home health care providers are providing you with more than adequate amounts of complaints regarding these items.

I hope the assistance of persons like myself and our agency are of help to you in your efforts. I will be happy to assist further if and when our services may be beneficial.

Most sincerely,

ROBERT ROCHELLE,
Executive Director.

[Enclosures.]

Mrs. Gladys White, Memphis, Tenn.

Mrs. Gladys White has received homemaker care since December 1975. Mrs. White, age 61, is an obese woman who lives alone in a public housing development. She is a diabetic and a stroke victim.

Upon first contact with this client it was noted that she was dirty and her hair was matted for lack of shampooing. Her apartment was in need of cleaning, urine was visible on the floor, and the odor was very offensive.

Mrs. White is paralyzed due to her stroke and was having to pay someone to get her out of the bed each day and put her in her wheelchair, as well as paying someone to cook for her. This took a large portion of her income of $157 a month.

Her situation was complicated by the fact that she has aphasia as a result of her stroke. It was frustrating to her to try to communicate with neighbors and paid help who did not always take the time to try to understand her.

Since beginning service Mrs. White has received personal care, housekeeping, and meal preparation service. She is now clean and neat. Her apartment is clean and free from offensive odors. The homemaker and social worker take the time required to communicate with her. This has added quality to her lonely and difficult life.

Mrs. White has no family and probably will someday have to enter a nursing home to which she is very much opposed. This service has made it possible for her to stay in her home and maintain some degree of independence.

Mrs. Hattie B. Neely, Memphis, Tenn.

Mrs. Neely is 82 years of age, primarily bedridden and mentally inactive. She has an elderly brother living in the home, but is not really dependable and responsive to the needs of his elderly sister. Aside from the fact just mentioned, the brother has a drinking problem.

The social worker and the homemaker have been and still are a tremendous asset in retaining this senior citizen in her own home. Several months ago, Mrs. Neely's SSI check was discontinued due to the fact she failed to report the necessary information to the Social Security Administration. Oftentimes Mrs. Neely's mail is disregarded or misplaced, and is never seen by the social worker or the homemaker. So Mrs. Neely had to suffer the consequences. For 2 months the client was without income. Due to the efforts of her social worker, Mrs. Neely was donated groceries. The social worker also contacted several other resources concerning this case. On a couple of occasions, nighttime pampers were donated to this bedridden client in her turbulent times.

Recently the social worker has assisted Mrs. Neely in making preparations for her will.

If it were not for the homemaker and the social worker, Mrs. Neely would very well face the possibility of being placed in a nursing home.

Mr. and Mrs. George Nash, Memphis, Tenn.

Mr. and Mrs. George Nash are an elderly couple, who were referred to us by Mrs. Nash's sister. Mrs. Nash is slightly retarded and is rapidly losing her vision due to an untreatable disease. She has fainting spells fairly often. Mr. Nash has suffered a stroke and was confined to a wheelchair at the time Senior Citizens Services, Inc., started to send in a homemaker. The homemaker assisted with household errands and housekeeping tasks. The social worker helped to obtain food stamps for the family and helped with several business matters.

Mr. Nash then had several more strokes and was then confined to a hospital bed. The homemaker helped with the personal care and encouraged him to eat. Nursing placement seemed necessary and the family began applying for placement for the Nashes. The homemaker continued to help the couple in many ways and Mr. Nash has recovered to the point that he can now sit up in his wheelchair again. With the home care assistance the family has received nursing home placement no longer seems necessary. The couple is very happy to remain in their home and hope to maintain their independence for as long as possible.

APPENDIX 3

STATEMENTS SUBMITTED BY THE HEARING AUDIENCE

During the course of the hearing, a form was made available by the committee to those attending who wished to make suggestions and recommendations but were unable to testify because of time limitations. The form read as follows:

DEAR SENATOR BROCK: If there had been time for everyone to speak at the hearing on "Future Directions in Social Security," in Memphis, Tenn., on February 13, 1976, I would have said:

The following replies were received:

LOUISE CHIPLEY, MEMPHIS, TENN.

Much, much is being said and some things being done about the physical aspects of our social life, but absolutely nothing about the moral and the ability to clean up the slum element places from which they insist people be moved.

First, I would say get the slums out of the people—and there would be no problem of getting people out of slums. If these people could be really taught to clean up themselves and the place in which they live and help them do it and make it a requisite for moving to better housing—the new places would not become insect and rat filled immediately.

What the NAACP and other such organizations need to do is to care for peoples' souls instead of their own power—not one among today's peoples are poorer than I was as a child—there were no welfare agencies or food stamps—but the associated charities paid rent to the landlord and gave us a grocery list to take to the store to be filled as it appeared on the list. Thats' all we had most of the time.

CASSIE DOTSON, MEMPHIS, TENN.

When will help come that will help get some of us back on the God's big world, where we can raise the food that is on our diet sheet with five cups of corn; one-half dozen stalks would supply that item. One stalk of beans, and so the diet sheet goes. Also it would give the senior citizen a conversation piece and something to look forward to, say a feeling that I haven't got all helpless.

I have a small piece of land and pay $90 per year taxes, without a house, but would be glad to live there along with other senior citizens. But there seems to be a lack of funds to build several houses, all of which we could pay for if given a chance. We wouldn't lose all of our strength.

I would like to borrow enough from Congress to build at least one double tenant house, please.

HAZEL FORRESTER, MEMPHIS, TENN.

Homemaker-home health aide services are not sufficiently provided in Shelby County for those ineligible for medicare. These low-income persons have no relatives or monetary resources and certainly no influence to bring such services in their home when sickness and disability strike.

Broader funding beyond title XX (wherein 10 percent required) needs desperately to be applied to this vital service, entitling the poor to care by homemaker-home health aides. HHHA service should be mandatory nationwide and prevent not only early institutionalization, but highly expensive care in hospitals, which, for the poor, necessarily *has* to be borne by taxpayers.

I understand the welfare department offers some care, but Senior Citizens, Inc., under a title XX grant is now serving 415 sick oldsters with HHH aides—their waiting list is 150 and they don't even publicize.

Please expand this care for homebound.

EDWARD L. FREDERICK, SAVANNAH, TENN.

Taxes for the elderly should be eliminated on earnings or pensions over a certain livable amount, at least $1,000 per month. Medicare should be increased or administered more efficiently without all the redtape and duplication—more and better coverage. Also, provisions to help either in lowering rates on public utilities for senior citizens.

Right to work for all senior citizens, if able, without being penalized by more taxes.

Able to get in trade schools to learn a new trade, etc.

Help anyway possible to help others to have a happier healthier and eventful life.

Telephone committees to the elderly and a way to bring them to doctors, stores, food, and drugs. No food wagons, unless necessary; people need to get out and meet others if possible.

BESSIE MILLER, MEMPHIS, TENN.

How much more are they going up on our social security? It takes all I get now to live on. I do not get anything else but my retirement and I can hardly *make ends meet now* for I have so much to pay out on my doctor bills and medicine I have to take so much. I was sick all last year, had two operations on my breast which led to removal of both with cancer pneumonia. Twice I almost did not make it, now I am taking a kind of medicine. I cannot get help with my medicine, which I need all the time. They will not help me with medicaid—said I was getting $1 too much to be eligible to receive a medicaid card. I would appreciate it if I could get some kind of help with my medicine if I could. Anyway, I tried, and they told me I had to have $135 in unpaid bills. I have two doctors to pay beside my medicine.

Are there any other way I can get some help? I would appreciate it if you could let me know. I don't know what I will do if they keep going up on it.

WILMA W. MONTGOMERY, MEMPHIS, TENN.

Tell Congress and this committee the things you've been told today and especially tell them: "There, but for the Grace of God, will go you and I."

And what you heard is but the tip of the iceberg.

JANE S. WHITE, ELIZABETHTON, TENN.

There are 75 elderly alone in substandard housing in Carter County (or living with families in crowded conditions).

We need another public housing for elderly development for Carter County—not a highrise (which would be an unnatural home for these people and also difficult to evacuate in case of emergencies).

We need another nursing home in Carter County—preferably one that accommodates medicare since none of ours do now.

Multipurpose senior citizens centers are the hub of life for the elderly. Why do we have an approved title X legislation and yet no money allocated for it? Our own center is in three parts—a small cottage for offices, lower part of a garage apartment for ceramics, and cafeteria of a condemned junior high school next door.

Revenue-sharing has been a farce for the elderly who certainly paid their part all thru years.

Telephone costs should be less for the sickly who often can't even have one now.

RUSSELL F. VIZZI, MEMPHIS, TENN.

This is a problem I have written to you before (and you were kind enough to respond), regarding the *Federal Register* proposed regulations on advanced approval for home health services.

Nationwide, nearly every major organization is opposed to same—yet, it is my understanding that HEW intends to implement that program; in fact it will be an item of discussion at the annual meeting of home health agencies in March (I believe the 15th and 16th, to be held by DDR (direct dealing reimbursement.)) This is the agency that a home health provider must deal with when they elect social security as their fiscal intermediary. DDR is an arm of HEW. As far as we know, no public hearings were held.

HEW attempted similar regulations through the *Federal Register* which would have required hospitals to call and secure *permission* to admit a patient (medicare) to the hospital. This regulation was tied to UR (utilization review and PSRO's), was stayed through in injunction by Judge Kaufman in Chicago. (AMA brought suit.)

We have almost if not the identical situation occurring for home health services. My earlier letter outlined in detail, our objections to same.

Can you and the other Senators help.

CHRONOLOGICAL LIST OF WITNESSES

APPENDIXES

FUTURE DIRECTIONS IN SOCIAL SECURITY

MONDAY, JANUARY 26, 1976

U.S. SENATE,
SPECIAL COMMITTEE ON AGING,
Providence, R.I.

The committee met, pursuant to notice, at 10 a.m., in the Providence Public Library Auditorium, Hon. Frank Church, chairman, presiding.

Present: Senators Church, Pastore, and Pell, and Congressman Beard of Rhode Island.

Also present: William E. Oriol, staff director; Diana L. McIver, professional staff member; Mike Wetherell, administrative assistant to Senator Church; Peter Harris, legislative assistant to Senator Pell; John Guy Miller, minority staff director; Patricia G. Oriol, chief clerk; and Donna Gluck, resource assistant.

OPENING STATEMENT BY SENATOR FRANK CHURCH, CHAIRMAN

Senator CHURCH. Ladies and gentlemen, the hearing will please come to order. I am Frank Church, the chairman of the Senate Committee on Aging. I am delighted to be with you, and I am very pleased to see such a good turnout this morning. I have a prepared statement that's just full of all kinds of wisdom, you understand, but it's too long for me to give because the purpose of this hearing is to learn from our witnesses here this morning, from you here, what the problems of aging may be in this State and to get recommendations from you as to how conditions can be improved.

So I am simply going to introduce the statement that's been prepared for me into the record and not take your time in reading it.

This hearing is one of a series of hearings that we have been conducting in many parts of the country dealing with the future direction of the social security program. The hearings have been very productive, and I know that this will be no exception. From them we are going to prepare recommendations that we believe will help to close the gaps in medicare, that will further improve our efforts to keep social security inflation-proof, and which will delve more effectively than we have in the past into the special problems of housing and transportation that cause such serious troubles for so many older people, and other subjects, too, relating to the direction that the social security program shall take in the future will naturally be the subject of these hearings. We expect to get testimony on all aspects of the case throughout the course of the hearing today.

[Prepared statement of Senator Frank Church, chairman, follows:]

PREPARED STATEMENT OF SENATOR FRANK CHURCH, CHAIRMAN

Senator CHURCH. Good morning. I'm Frank Church, and I would like to welcome you to this hearing of the U.S. Senate Committee on Aging on the subject of "Future Directions in Social Security: Impact of the High Cost of Living."

I'm especially pleased to be joined by several of your elected Rhode Island officials in this examination of the special problems of elderly persons in Rhode Island. With their help, perhaps we will leave here with good, solid Rhode Island ideas for solving these problems.

And the problems, as we have had them described to us by elderly witnesses across the country, are severe. 1975 was a year of sacrifice for older Americans, and a year of hard choices. A couple of years ago, one choice might have been whether to have hamburger or no meat at all for dinner; today that choice is often whether to forego a meal altogether in order to pay for a needed prescription drug, or an overdue utility bill.

Inflation has dealt the hardest blow to elderly persons on fixed incomes. The items they need the most—health care, food, housing, and utilities have increased faster in cost than other items. Testimony before this committee, in fact, has made a strong case for early action on my bill to establish a separate Consumer Price Index for the elderly, and to base social security cost-of-living increases on this special index.

Medical costs are of special concern to me and to many of the witnesses who have appeared before this committee in California, Iowa, New Jersey, Oregon, Tennessee, and Massachusetts.

And, here in Rhode Island—the home State of Aime Forand and John Fogarty—I can't help taking a moment to talk about what is happening to medicare.

COSTS GO UP AS COVERAGE GOES DOWN

Statistics tell part of the story. In 1970, the average out-of-pocket costs borne by elderly persons for health care costs amounted to $270. Last year those personal health care expenditures had gone up by $145 to $415. And this does not include their payment for part B premiums. Everything is going up in medicare: coinsurance, deductibles, premiums. But medicare's coverage is going down. It now meets only 38 percent of all health care expenses for the elderly.

Older persons have told the committee what these numbers mean to individual people: the widow who can't find the money to pay for the prescriptions that medicare doesn't cover, the person who must go to a nursing home because medicare discourages home health care, the physician who knows of malnutrition cases which become hospital cases.

And yet, despite the growing burden of medical costs upon the elderly, President Ford's state of the Union and budget messages propose to cut medicare still further.

Mr. Ford called it catastrophic health insurance for everyone covered by medicare. He said nobody would have to pay more than $500 a year for covered hospital or nursing care or more than $250 for doctors' bills in 1 year.

That sounds good, doesn't it? The President makes it look as if there is a limit on how much older people may have to pay for health care. But the President also says that "fees for short-term care will go up somewhat."

And this, my friends, is exactly what Richard Nixon offered twice and President Ford offered last year. He called it "cost sharing" then, but what is really involved? He is proposing that the costs paid by the vast majority of people who use medicare should go up. Now, when a person receives hospital care under medicare, that patient pays $104 of the hospital bill for covered services and nothing else until the 61st day. Under the latest version of cost sharing, medicare beneficiaries would pay the $104 and then 10 percent of all charges on covered services above that. There would be increases in the deductible and, in the coinsurance charge on certain services under part B of medicare. And even the ceiling on a patient's liability has a loophole in it. It would rise whenever social security is raised. In other words, there would be a built-in penalty for every social security increase from now on.

Senate Concurrent Resolution 86 Is Unacceptable

I tell you here and now that I find this proposal to be totally unacceptable and I have asked the Senate to join with me in expressing our total rejection of this proposal and the philosophy behind it (S. Con. Res. 86).

It's a shame that the so-called experts who devised this so-called catastrophic health insurance scheme couldn't have gone out and heard directly from the real experts on medicare: the ill, elderly persons who are trying to make use of that program. Quite often, they are helped, and in major ways. But they can't help asking: why are there so many holes in the coverage? Why does the executive branch in Washington keep trying to do medicare in?

One of the problems in Washington is that high-salaried executives like to think of the hypothetical or "average" person. They want people to fit the categories, and not the other way around. In Boston a few weeks ago, a witness described a local initiative in congregate housing and said that the Federal Department of Housing and Urban Development never would have approved this kind of housing because it was suitable for only 15 to 20 percent of the elderly population. To HUD, the answer is an answer only if it is a "big" answer for a majority of people, and even then HUD won't really do what's needed to make a program work. HUD refuses to recognize individual solutions for individual people.

I think it's only sensible, if you are building housing for the elderly or a senior center, to talk to the experts, the people who will use that center. And if you're putting together a nutrition program, find out what older people want.

In our democracy, now 200 years old, it is always time for government to listen, to hear what people are saying. And that is why we are in Rhode Island today. I'm looking forward, with Senator Pell and other of your elected officials, to your testimony.

[End of prepared statement.]

Senator CHURCH. It's my special pleasure to welcome to the committee this morning the senior Senator from Rhode Island whom I have known for nearly 20 years. I have been a pupil of John Pastore's, as all of us have, and I think that it's remarkable that even though he now plans to retire he is still on the job, and he is with us this morning, and we are very pleased to welcome him to these hearings. It is a privilege.

STATEMENT BY SENATOR JOHN O. PASTORE

Senator PASTORE. I am not a member of this particular committee, but indeed I am very much concerned and interested in the functioning of this committee. I particularly want to pay my compliments to Mr. Church and Mr. Pell for arranging these regional meetings. Mr. Church, these are some of our State's finest. They are the ones who produced the sons and the grandsons who fought for this country. They are the ones who did the menial work at best in order to make this country great, and now when they are within the twilight of their careers they look around, and they see a country that does so much for other people all over the world. We have spread our largess all over the world. If there was ever a national disaster, we were the first ones to be there to help people, to feed people.

We have had a food for peace program. We have had a tremendous amount of money spent for foreign aid, and yet when it comes to our own American golden agers we just don't do enough.

These are not the affluent people. These are not the people that can come to Washington, and I am so happy that you could come to them, and I wish you every success. I merely want to call to your attention, Mr. Chairman, an editorial that appeared in yesterday's *Providence Journal* which I think is very provocative, and merits the consideration of the entire Congress. The title of it is, "Social Security Needs Total Review," and I would hope that you would make this a part of your record.*

Senator CHURCH. I will do so, Senator.

Senator PASTORE. There is another article that appears in today's paper. It is entitled, "Greenspan Admits Ford's Tax Plan Hurts the Poor."

Senator CHURCH. That's no news.

Senator PASTORE. I want to hear from these fine people. I want to make another observation. I am the only golden ager on this platform.

Senator PELL. I will take exception to that statement, because I too am a golden ager. I am only 55. What's your definition?

Senator CHURCH. You're getting there, Senator.

Senator PASTORE. You can't collect social security until you're 62 if you're female and 65 if you're male. That's what makes you a golden ager.

Senator PELL. But the movie theatres and privileges apply when you're over 55.

Senator PASTORE. I don't go to the movies.

Senator CHURCH. We are going to end this quarrel between the two Senators from Rhode Island. I would like to welcome Senator

* See appendix 2, item 1, p. 2136.

Pell, who has done work through the years with the golden agers. I have watched him, and he was especially anxious that we should hold these hearings in Rhode Island, and I would like to call on him.

STATEMENT BY SENATOR CLAIBORNE PELL

Senator PELL. I, too, have a very wise and lengthy statement that I will ask the Chairman's permission to put in the record. What we are here to do is to learn and listen. What we really are here to do is to learn what happens when senior citizens are faced with problems that come to us with inflation. This is the cruelest tax there is, the increasing cost of living, the fact that the dollar that you have today will purchase 90 or 95 cents of goods a year from now. This is the worst tax the State and local government can have. It would be much more honest were we to raise taxes if we could stop inflation, because inflation is the thing that really bites and really eats. You know that when you have to pay 60 cents a pound for bread, or 89 cents a pound for hamburger, and $1.29 a pound for fish.

Senator CHURCH. You'd better get your wife up here to tell you about the present prices.

Senator PELL. Speaking of the "spice," that's the plural of "spouse," wives, I would like to introduce Senator Church's wife, who is tucked away in the audience. Bethine, will you stand, please? There she is. Also, my own wife, Nuala, she is here. These are the other golden agers under my definition, but in any case you know the suffering that goes on. You know the needs, and I think what one doesn't really know as regular citizens is the miserable, the sick, the poor, the old. You don't see because they are not out on the streets. The people out on the streets are healthy, and well, and working, and it's a concern of ours, the people that you don't see.

I would like to also pay credit to Eleanor Slater who has done a magnificent job with our excellent State Division on the Aging and has been a tremendous help, which is apparent, for this hearing. I would like Eleanor Slater, if she would, to stand up.

Then we are particularly honored today, because some of you who may have read the morning paper may have read the article about Mrs. Sodonie Brown who has lived in these shores for better than 90 years, and she has been helping her neighbors, and out of sheer curiosity came to see what her younger neighbors were doing. Mrs. Brown, will you stand up?

It is my prediction she will be standing up very vigorously a good many years from now, and I am delighted that she could come. Finally, I would like to put in a plug for my own Social Security Recipients Fairness Act. The purpose of this hearing is to focus on the problems of the elderly in which the Federal Government can provide help or a remedy. It is not a hearing concerned with State problems or local problems. It is concerned with Federal problems.

SPEEDIER REPLACEMENTS NECESSARY

One of the things that is necessary is to make the Social Security Act provisions fairer, and my act will provide for speedy replacement

of lost, stolen, or delayed checks once they are 3 days late at the most. We provide that disability payments should take no longer than 110 days to process, and there could never be any more than 25 percent maximum deletion from a person's benefit check to compensate for accident benefit over-payments. I think this would make the whole social security system fairer and be a real advance, and greater use to you, the beneficiaries of it.

I thank you, Mr. Chairman, for allowing me to make a brief statement and I look forward to the hearing today.

[The prepared statement of Senator Pell follows:]

PREPARED STATEMENT OF SENATOR CLAIBORNE PELL

Senator PELL. Mr. Chairman, as a member of the Senate Special Committee on Aging, I am delighted to welcome you and the committee to Rhode Island. I recall that our committee last visited Rhode Island in September 1971, to consider problems with medicare and medicaid. In the 4½ years since that hearing, and indeed throughout your tenure as chairman, the Special Committee on Aging has built a distinguished record of action and advocacy on behalf of our senior citizens, with much of the fine record attributable to your work. I am certainly proud to have been a member of this committee during that period and to have worked with you in the Senate on many issues related to aging. I know that my fellow Rhode Islanders are aware of the long hours you have put in, and the excellent job you have done as chairman of this committee. You are, indeed, the spokesman for senior citizens in the Senate.

I would also like to welcome our distinguished guests and witnesses, as well as the many Rhode Islanders who have joined us today to explore, on the grass-roots level, just what is happening to senior citizens in these very hard times.

This hearing will examine the personal stories and experiences of senior citizens who must live every day with high inflation, low incomes, and the special problems and frustrations of being elderly in America today.

Our witnesses represent the 118,000 people over the age of 65 who live in Rhode Island today and who make up 12 percent of our population. A recent study by our State Division on Aging projects that in just 4 years, by 1980, one out of every seven Rhode Islanders will be over 65 years of age.

This State, and this Nation, must be prepared to acknowledge the implications of these statistics, and to direct our resources in a more effective manner to the needs of this group of older Americans.

SENIORS LEFT TO STAND ALONE

Right now, we are not marshaling our efforts very well. We leave many of our senior citizens to stand alone, like frail trees at the edge of the forest, with little protection from the harsh elements.

Preliminary efforts in many fields have been made. Congress has initiated programs to help with insuring access to health care, and all of us in this room take great pride in two Rhode Islanders, Aime Forand and John Fogarty, whose enormous personal efforts made national health care insurance a realistic goal.

Congress has also made real efforts to insure proper nutrition, adequate income, decent housing, and basic transportation, for this country's 21 million seniors.

However, as today's witnesses will describe, our efforts have too often fallen far short of our goal.

Of course, some problems cannot simply be legislated away: The isolation and loneliness of many older Americans is not only the result of poor housing and crime ridden neighborhoods. It is also, to some extent, the consequence of recent patterns of family development, and of the dissolving of close family ties.

But many of the harshest personal problems of today's senior citizens can be helped: In instances where we have not yet done all we can, we are here to see what more must be done, and offer to do what we can.

In some cases, the Ford administration has been directly responsible for holding up the delivery of badly needed benefits and services already approved by Congress; such a case was last year's attempt to put a 5-percent ceiling on the social security cost-of-living benefit increase, an attempt that we in Congress overrode. The present veto of the Health, Education, and Welfare budget is another instance of "administrative neglect" directed toward our senior citizens. Last year Congress successfully opposed the benefit increase ceiling, and I hope that this year we will override the HEW veto.

So we are here today to learn where medicare and medicaid can be improved; we are here to learn if the senior lunch programs are working well; we are here to ask if housing is adequate, and if it is not, just what more is needed. We want to know whether senior citizens can afford to heat their homes or apartments or even burn their lights at night. Can they pay for telephones to connect them to their families, friends, or doctors? We are here to learn what it means to a senior citizen when bread is selling at 60 cents a pound; and when hamburger is 89 cents a pound, and fish is $1.29 a pound.

We are here to learn about the very high cost, both personal and economic, of long-term institutionalization, and a possible remedy for that tragic situation.

Most importantly, we want to hear about these situations, ideas, and problems, from the people who are closest to them, Rhode Island's senior citizens.

We will also hear some testimony today on the adequacy or inadequacy of retirement income, especially through the social security and supplemental security income programs.

Solvent Trust Fund Essential

One key to adequate social security benefits must be a solvent social security trust fund; at present the trust funds are about $43 billion in the black, but unless we adjust the tax structure, they will go into the red sometime during 1982, and could be running a $7 billion deficit by the end of 1983. We cannot allow that to happen. Congress must soon decide how to pump new funds into the trusts, and the choices seem to be either to raise the taxable wage base, or raise the tax on the present wage base, or to add some funds from general revenues, or a combination of these proposals.

When we do revise the tax structure, it is my intention to support whatever resolution imposes the least hardship on the average Rhode Island wage earner and his or her family.

Finally, we are here to learn of Rhode Island solutions, as well as problems. We have many people here today, seniors as well as younger men and women, who are working full time, on shoestring budgets, to alleviate the disadvantages which the elderly face.

I believe that they have done an excellent job. They receive far too little praise, and I know their work often entails a great amount of frustration for them, so I am looking forward to learning of the results of their efforts, so that we can take the good as well as the bad back with us to the Senate, and hopefully change things for the better.

[End of Senator Pell's prepared statement.]

Senator CHURCH. Thank you, Senator Pell. I was the first cosponsor on the Pell bill that he has just mentioned. It is a good bill. We are going to do everything we can to get it passed.

Senator PELL. S. 985.

Senator CHURCH. You have a new Congressman. It's been a great pleasure for me to get to meet him and know him. Already we have become good friends, and this is because of his great interests in the problem of the aged. It is natural that we should become close friends as soon as he came to Washington. I am glad he is here as a Member of what is called the other body in the Capitol. Nothing can be done until the two bodies get together, and we have gotten together at this hearing, and I would like to present now Congressman Ed Beard.

STATEMENT BY EDWARD P. BEARD, A U.S. REPRESENTATIVE FROM THE SECOND DISTRICT OF RHODE ISLAND

Congressman BEARD. Senator Church, Senator Pell, Senator Pastore, Mayor Cianci, Lieutenant Governor Garrahy, and ladies and gentlemen. I have a statement that I will submit for the record. But I would like to just make a few remarks. As I see some of the major problems of the elderly, Senator Pell has mentioned he has introduced the Social Security Recipients Fairness Act in the Senate. I introduced the same bill in the House. I have certain hopes that in 1976 that there could be some action taken on this bill. Congressman James Burke, the chairman of the Social Security Subcommittee, has indicated to me that there would be some action on the House side on this legislation.

I know, for example, there are elderly people who have their checks stolen or who have lost them, and they have to wait an awful long time before the checks are reissued.

This has been a tremendous burden on the elderly. Not only here in Rhode Island, but all over the country, we have thousands upon thousands of elderly people waiting in lines trying to get into public housing, and that has to be addressed in the Congress.

Of course, we have an administration that has been more or less down on public housing for elderly; but I think in some way this can be changed. We have to meet that obligation, and in the areas of national health insurance it's the mandate of the people that we have national health insurance. This will not only help the elderly

people, but it will help our working people all over the United States. I am very, very highly honored that I have been invited by Senator Church and Senator Pell to participate in the committee deliberations today. I will do my utmost as Senator Church has said, in the other body, to serve the elderly people, the 22 million elderly Americans in this country and try to help them have a better life in their golden years. Thank you, Senator.

Senator CHURCH. You're welcome. Without objection, your prepared statement will be inserted into the record at this point.

PREPARED STATEMENT OF CONGRESSMAN EDWARD P. BEARD

Congressman BEARD. I welcome the distinguished Senator from Idaho, Senator Frank Church, my own dedicated colleague, Senator Claiborne Pell, and members of the staff of the Committee on Aging.

It is most appropriate that you show concern for Rhode Island's elderly by coming here to listen to the hardships that our people have endured in a period of great inflation and unemployment. Everything has skyrocketed so much that those who have to depend on social security are severely victimized.

One of the most tragic things happens when a recipient of social security has a check misplaced or lost. The consequences are devastating. Anxiety, fear, and genuine difficulties are presented. Because recipients must depend on a fixed income for their survival, their normal way of life is at best marginal. This fact of life made me introduce in the House of Representatives a bill that Senator Claiborne Pell had introduced in the Senate, the Social Security Fairness Act, which would expedite claims where a check has been stolen or misplaced. It would permit the Government to issue a check to the recipient in much quicker and responsible fashion, so that the beneficiary can meet his monthly obligations.

Even beyond that, I believe that the time must come whereby older people can work in part time jobs without paying a penalty if they earn above the present restriction. I see a lifting of that restriction to a more reasonable amount such as $6,000 or so. It is unfair for older people to be discouraged from taking a part time job because of a government restriction on the amount they can earn which is no longer valid in the face of our economy. The only way we can change this is for the elderly people in America to bang on the doors of the Congressmen to tell them it is time for a change. That restriction must be raised to a figure that meets present day standards.

Senator CHURCH. Congressman Fernand J. St Germain is unable to be with us today. He has submitted a statement for the record, and without objection, I will insert it at this point.

[The statement follows:]

STATEMENT OF FERNAND J. ST GERMAIN, A REPRESENTATIVE FROM THE FIRST DISTRICT OF RHODE ISLAND

It is a pleasure to be able to present my views on future directions for elderly programs, with particular reference to social security reform.

At the outset, I would like to voice my extreme concern about the President's proposal for changes in the social security system. I am sure that we are all agreed on the need for change; however, the administration has given us a proposal which can only hinder the development of a program responsive to citizen needs. The Presi-

dent's proposal continues to make demands upon lower income workers to sustain the social security program and is clearly an expediency measure which would cause only short-term relief to the problem of funds for social security. Therefore, the need is to establish a long-term financing program which would not only impact upon lower income persons, but would affect upper income workers as well.

Further, we must look to alternate sources for funding of the Social Security Administration, since the growing number of benefit recipients is fast outpacing the number of workers contributing into this system. It is apparent to me that general revenues must be considered as a possibility if we are to maintain the benefits program we currently have.

I know that my colleagues in the House have been highly responsive to the need for social security law reform and have encouraged the passage of legislation affecting all phases of the social security process. The results have been gratifying, and I am sure we can look forward to comprehensive legislation in the near future.

Leading Provider of Housing for Elderly

While I am in an optimistic vein, I would like to draw attention to the many benefits we are currently providing to our elderly citizens, benefits which are often overlooked in our discussions of future directions. For example, Rhode Island is a leading State in providing elderly housing, transportation and meals-on-wheels services. Further, Rhode Island's Division on Aging has established a hotline for information on any problems or questions our elderly citizens may have. For these reasons, Rhode Islanders may turn with pride to their State as a model in its services to our senior citizens.

However, there is much more to be done, and I am certainly anxious to assist in every way possible to continue the progressive trend of elderly programs in Rhode Island and in the country. National health insurance is a major item which I feel we must address as soon as possible. The establishment of a catastrophic health insurance plan will help somewhat, but this can only be an interim step toward the full coverage which all our citizens desire and deserve. Our elderly particularly need the security which a comprehensive health plan will provide, and I am confident this plan will be enacted in the near future.

Ultimately, the problems of the elderly hinge upon the inadequacy of the income upon which they must depend. Although there has been legislation introduced to provide more frequent cost-of-living increases to social security recipients, it is obvious that this is not feasible until the financing of the system is once again stabilized. Therefore, our priorities are clear: Reform of the trust funding formula, increases in the benefits, and restoring the faith of our citizens in the stability of the Social Security Administration.

Forums such as this hearing can only yield positive results in helping us, as Members of Congress, to inform our citizens as to what we are doing for them, as well as to learn from them where the serious problems lie and how to best serve their interests. I am greatly pleased to be able to share in this give-and-take experience, and I appreciate the kindness of Chairman Church and members of this committee in allowing me this opportunity.

Senator Church. This hearing gives me the opportunity to become acquainted with your public officials in this State, and I know of no one about whom I have heard warmer, more enthusiastic remarks, than Lt. Gov. J. Joseph Garrahy. He is here to welcome the committee, and I would like to recognize him at this time.

STATEMENT OF LT. GOV. J. JOSEPH GARRAHY, STATE OF RHODE ISLAND

Lt. Gov. Garrahy. Senator Church, Senator Pell, Senator Pastore, Congressman Ed Beard, Mayor Cianci, I join with our congressional colleagues in welcoming Senator Church here this morning officially. I had a chance to chat with him last night. I know of the work he has been doing on behalf of Rhode Islanders in the Congress. He has taken on the responsibility in a sensitive area of examining our intelligence agencies in the country. He is also looking at the multinational corporations. If you read this morning's paper, you will

see that some of the work that Senator Church has been involved in is crucial to Rhode Island, particularly because of the economic situation here. The Senator, of course, is aware of the high unemployment rate in Rhode Island and the needs that we have here in this State.

I might like to point out that the new budget has been submitted to the Congress by the President. We hope that those particular cuts in that budget will not be shifting the financial burden to the States, particularly to Rhode Island which is already overburdened with economic problems and high unemployment in trying to grapple with State finances during a very difficult time. I want to welcome the Senator, and I know that he is here to listen to the senior citizens of this State as to the problems here having to do with housing, having to do with medicare, having to do with social security, transportation, and all the problems really that affect Rhode Islanders.

RSVP Provides Outstanding Construction

I might like to just put a plug in. Although we are here to talk about different programs and how they affect the welfare and the living of senior citizens, one program that I am particularly excited about, and that I see our senior citizens working with in the State of Rhode Island is the RSVP, the senior companion program. They contribute so much to this community as senior citizens in helping us in nursing homes, in helping us in our instructions, in providing the type of care and compassion in helping people who in some instances do not have anyone to look after them. I want to congratulate those in the RSVP and the senior working program for the outstanding work they have done in the State of Rhode Island. I have seen the results of that work. I might like to say this morning, which is a bad morning, that to see so many people here this morning is gratifying. Senator, it demonstrates that the people wanted to come, and we are delighted to have you with us.

Senator Church. Thank you. Of course, we are the beneficiaries of the hospitality of this city, and here on behalf of the city is the mayor, Vincent Cianci.

STATEMENT OF HON. VINCENT CIANCI, JR., MAYOR, PROVIDENCE, R.I.

Mayor Cianci. Senator Church, Senator Pell, Senator Pastore, Congressman Beard, Lieutenant Governor Garrahy, and all interested people: On behalf of the citizens of the city of Providence, R.I., I welcome you as you conduct your hearings on the impact of the cost of living on the senior citizens of this Nation.

As the Senate of the United States receives testimony from senior citizens on their experiences in trying to cope with high prices for essential goods and services which they require to live according to a decent standard, I wish to join with them in bringing to your attention some of the greatest needs as told to me in my meetings with them.

There is a continuing plea that the costs involved are so high in maintaining a quality of life which seniors deserve, that their fixed incomes are insufficient to provide for just bare and minimum requirements.

Fifteen percent of the people of Providence, over 26,000 people are 65 years of age or older. It is easy to understand why I believe that their case is an important one to be made before this august committee. What is of great importance also is that 80 percent of the 45,000 families in the city of Providence earn less than $15,000 a year.

Senior citizens have told me in a litany of frustration, that: (1) "The cost of living is too high." (2) "Social security benefits don't begin to make it possible for me to eat well and to have my medical problems met." (3) "The cost of food is too high, and all costs, as well." (4) "My own costs for medical care are so high, something has to be done about improving medicare, medicaid, or create a national health insurance program." (5) "Social security checks take too long to be changed when I change my address or lose my husband." (6) "The social security checks that I have directly deposited in the bank are often delayed." (7) "With the amount of money I get, I can't even pay for heat and lights." (8) "Even though we have a free transportation program for senior citizens, I can't always get them when I need them; I can't pay for any other means of transportation when I am sick." And the litany goes on.

I have been told that when Federal social security payments are increased the State and public housing authorities often decrease other payments. There should be clauses in the Federal legislation which will not permit this corresponding decrease in funds, or increase of cost for services.

Senior citizens feel that social security payments have never coincided with the cost of living. Even though there are cost of living increases built into the payments now, the basic minimums are so insufficient, that cost of living increases have little or no effect.

Seniors who are trying to maintain their own homes are often forced to sell because of rising fuel, utility, and maintenance of housing costs. For those who have lived in their homes for many years, and have raised their families in the same neighborhoods, this is a most serious wrench in their lives which public policy should not cause. In fact, Federal public policy should insure that this does not happen.

The demand upon public housing among the elderly is heightened by rising costs.

Medicare Lacks Complete Coverage

The medicare program does not provide complete hospital, doctor, or prescription costs. For many of this program, it is still considered necessary for them to maintain Blue Cross or other health insurance coverage paid by them, in order to supplement their medicare coverage. Private health insurance costs are also rising. This results in an additional reduction in their income for more basis food, housing, and utility needs. Since the State medicaid program only covers those at the lowest economic level, more attention should be directed by the Congress to pass a workable and effective health insurance program for all of the Nation's seniors.

I, too, feel frustrated as does the senior citizen. But I responded as quickly as I could.

Just 1 month after I took office, I called upon the banks to sell food stamps to seniors on every day of the month in the city. Until then, the seniors had to find other places to buy them, which were often inaccessible to them, or were not secure enough for them. By March of 1975 the banks had responded positively to my request.

Shortly thereafter, I appointed a senior citizen task force made up of a senior citizen representative, medical, and social service professionals, and other senior citizen interests. This task force was charged with providing me with advice and counsel on matters relating to the medical, biological, psychological, and social conditions and concerns of senior citizens with a view toward the establishment of programs and services for senior citizens.

The task force has been meeting regularly and will shortly provide me with a report which will recommend the development of a city-government-based capability to deal with all issues relating to senior citizens.

Task Force Studying Needs

In all the years that the needs of the seniors in city of Providence have been growing, the former administration only responded with a recreational activity. I have re-staffed this program and have charged them with working with my task force in outlining what the city should do to meet the needs of those 60 and older.

Heretofore, there has been little coordination of existing public and private programs. In the past no one in city government had tried to pull together all untapped resources. With a few short weeks the task force will deliver its report to me, and I expect to immediately establish priorities in this area.

Senior citizens are an integral part of the total Providence community, and as such are entitled to the benefits of all the resources which the city has at its disposal and the creation of new ones, if necessary.

The winter of 1976 will not pass until I recommend a city government course of action which will lessen the impact of finances on the city's senior citizen.

I urge the U.S. Senate to respond to senior citizens as well. Thank you, Senator.

Senator Church. Thank you, mayor. The mayor has certainly given us many of the problems that face people, and it is obvious that we are going to have the level that these hearings must at the State level of government and the local level.

Now, let's hear from the senior citizens. That is what we came for, and we have our first panel. Let me say this. That there will be an opportunity for all of you who want to offer us recommendations or to tell us about problems that you personally face to do so. You can do it in two ways. We have got to cover a lot of ground this morning.

First of all, we are going to feature some panelists, and we will hear from the panelists. Second, we will distribute, make available to anyone who wants it, a special form, an easy form. This is the first Government form you have ever seen that's easy to fill out. It's practically a blank sheet of paper with space for your name and address. So if you want to write us something that you think

we should know, these forms will be available for you to do so, and you will be sure that they are read, because we carefully review them after the hearings.

Third, as time permits, depending on how quickly we can move along, we will call upon individuals in the audience who wanted to say something, if they will promise to limit their remarks to just a minute, or—well, two, so we can be sure that we spread it around as much as possible.

First of all, we go with the panel, and, remember now, we are going to discuss the role of the Federal programs, the role of the Federal Government today, and our first panel consists of Clifford Shaw, Fred Creighton, and Dorothy Craighead.

I am told that Mrs. Jennie Jacques has the flu this morning and could not be with us, so our panel is reduced to three.

STATEMENT OF CLIFFORD SHAW, CRANSTON, R.I.

Mr. SHAW. I am Clifford Shaw, and as the opening speaker I should like to take the privilege of thanking Senator Church and Senator Pell for including Rhode Island in these hearings and giving us a chance to put this on the record. It is a little challenging to find that even before we, the representatives of older citizens, start to speak, most of our problems have already been touched upon.

Perhaps we can give them a little bit closer focus. Two concerns impel me to speak on behalf of older citizens. At 74, I guess I qualify as one of them.

My first concern is the effects of inflation and the second is a more productive use of the time and talents of the retired.

I speak for a group of retired people not generally thought of as being in need. The needs I present certainly are not as urgent as those of the really desperate. But as long-range goals, I think they are vital to the future of millions of retired people and the country as a whole.

Today I speak for myself, but what I have to say could well represent the views of one group with which I am actively associated—Cranston Leisure Learning. More than 300 retired people hold 6-week sessions twice a year to stimulate the concerns, skills, and participation of anyone who still wants to be active. We are self-supporting. The group is ecumenical. It is not unique. There are 5 or 6 similar programs in Rhode Island.

INFLATION IS PRIME SPECTRE

Inflation is one of the prime spectres in the lives of retired people in this category. Their incomes are admittedly above the poverty level, but still are fixed and inelastic. Some say needs diminish when you retire. After 40 or 50 years of married life, however, material things begin to fall apart. A range you bought 20 years ago for $100 has to be replaced, and now you discover something similar costs $500 or $600. The same for refrigerators, sweepers, all household needs.

Many of us are property owners. Taxes take a bigger and bigger slice from the family dollar. If the roof goes or the cellar wall springs a leak, repair costs are astronomical for us. We are no longer do-

it-yourselfers. And where, 20 or 30 years ago, we could float a loan to meet such costs, now we worry that the loan will last longer than we will.

I am not saying that the government should consider financial aid to people in this category. What I do urge is that this committee and every government agency make control of inflation a basic objective, to be weighed and involved in every step they take.

Second of my concerns is the way our society wastes the capabilities of the millions of retired. Any man or woman who leaves a job after 40 or 45 years in good health represents an asset in skills, experience, and tested knowledge that should be used for the good of the entire community.

I know there are many efforts today to harness these resources, but these efforts are largely local and limited. SCORE, for example, provides management aid for small businesses, but this is only one aspect of the infinite variety of experience available.

What I am suggesting is a committed philosophy for government, business, industry, the professions that will make continued use of the retired part of our society's operation, just as we expect the young worker starting his or her career to go on to achieve success. It need not be a financial burden. These are people who can earn their own way in services that will increase the productivity and the stability of our economy.

Older Citizens Shaping Direction

Older citizens are seen as becoming a major factor in shaping the direction of our society. But oldsters lack the solidarity to shape society to their needs. Society itself must understand the potential of these millions and put them to constructive use before we deteriorate into a generation of disgruntled has-beens whose only effectiveness will be to slow down and misdirect the progress of our civilization.

To paraphrase President Kennedy: "We ask not what our country can do for us. We ask what we can do for our country."

Those of us who have lived through the vicissitudes of this century, and those who are going to retire with the same kind of invaluable preparation in the future ask only the opportunity to do something for our country and for the society of which we are still a potentially creative part. Thank you.

Senator Church. Mr. Shaw, that was not only a very fine, but a very commendable statement. Thank you. Let's hear from all the panelists here. Fred Creighton.

STATEMENT OF FREDERICK W. CREIGHTON, PROVIDENCE, R.I., LEGISLATIVE CHAIRMAN, RHODE ISLAND COUNCIL FOR SENIOR CITIZENS; MEMBER, GOVERNOR'S ADVISORY COMMITTEE ON AGING

Mr. Creighton. Thank you, Senator Church, Senator Pell, Senator Pastore, Congressman Beard, and all the distinguished people here, and also my friends and neighbors, senior citizens.

I happen to be one of you. My name is Frederick W. Creighton, and I am also legislative chairman of the Rhode Island Council for

Senior Citizens which is affiliated with the National Council, and I am also a member of the Governor's Advisory Committee on Aging. I am an advocate for the elderly.

As an advocate of the elderly I became very much interested in the SSI program. That was passed on October of 1972, and it actually became effective on January 1, 1974.

The way the bill was passed, the State could either keep it the way they had it, or they could turn it over to social security. Well, that meant that I had all kinds of meetings and letters of correspondence with the State, finally with the Governor, and 2 weeks before it became effective they turned over about 9,000 people to social security, and what a mess it was—they didn't know what to do with the programs because it was new. They didn't have the people to really get the program going. We still have a problem because these people—I can't understand why—after we find these people, and they apply to social security, why it still takes 2 or 3 months before they get their checks.

This is one of the problems, and in the meantime these people, they are very low income. They don't have the money to live, to exist, pay the rent, and so forth.

Door-to-Door Search

Now, I really think that we have a program that actually may show results. The Division on Aging, they had a meeting with the Social Security Administration. This was in April before the Information Privacy Act was enforced. They received about 10,000 names, but the real problem is this. It now becomes a door-to-door proposition to find the little old lady, the little old man on the side street, the little old lady or little old man in the suburbs. They don't know exactly what's going on. I do a lot of speaking all over the State to organizations, and I find even there these people won't come forward for the simple reason they don't want to let their friends know that they are on low income.

So it has to be done in the homes on a friendly basis. The Division on Aging has had CETA workers. I believe they started off with 30, due to the fact of getting other jobs and so forth, they are down now to about 17. But this is time-consuming work. Besides, they have caseloads after they find these people, and therefore now they only have about two people to go out and find these people. The Division on Aging went to social security and they got the names before the Privacy and Information Act became effective.

We have about 9,000 more people to see. I am going to give you a breakdown of what actually happened. Today there are 934 names that have been screened, and 700 completed—with questionnaires and have been returned to social security. Of the 700 it was noted that 86 elderly were potentially eligible for SSI. It is further projected that of the 86, 75 percent should be actually eligible for SSI. Only 2 percent of these people contacted were already receiving SSI.

Of the 700 people contacted, 127 or 20 percent are in need of various services, and will be added to the direct service caseload.

Division Lacks Manpower

There are other things besides money. There are people we find that really should be entitled to food stamps. They should be entitled to medicaid. I don't know what SRS is doing to find these people. I can understand why they don't do it because unfortunately they do not want to increase their caseload; but they have to be found because these people are really in need. Now, in order for the Division on Aging to continue what they have started, the success of the project depends on CETA aides. As of this date we only have about 17 working, and about 2 actually trying to find these people.

It would need about 15 more people, and that is something that CETA aides should be doing. Instead, they are probably in some office doing nothing and getting paid for it. This is actually very imperative that we find these people.

Thank you very much.

Senator CHURCH. Thank you, Mr. Creighton.

Senator Pastore?

Senator PASTORE. Mr. Creighton, I noticed one time while watching television in Washington, when I had a little time to do it that there was an ad on the screen advising people who were entitled to food stamps and who were not getting them, to go ahead and apply for them. I quite agree with you. There are a lot of people who are entitled to these food stamps that are not getting them. One case may be because they don't know how to apply while in some other cases, they are too proud to apply. What is your answer? What is the best way to bring it to their attention?

Mr. CREIGHTON. I really think these old people—I am old, too.

Senator PASTORE. So am I.

Mr. CREIGHTON. But my brain is active. I am physically in fair shape. I think what the problem is that a lot of these people do not know how—they see these ads in the paper. Possibly, also, they see it on television. It is a fast 90-second deal, and they soon forget all about it. They have to be really counseled. They have to be talked to, telling them what it's all about. If they become an SSI recipient they are automatically entitled to food stamps.

Needy Must Be Found

That is one of the good things about it. Of course, what we really have to do is find that person that's entitled to SSI. I can say this: Any person here or wherever, if their income—that includes all income—social security or whatever in this State as an individual would be less than $209.14 should apply to social security. Now, if they are a couple, it's a different story. In other words—I am talking now if they have social security. It would be $315 if their resources should be no more than $1,500—but if they don't have social security, it is a different kind of a deal.

As an individual it's $189.14. As a couple it's $295 because with social security there is a $20 disregard. If people, in their later years really want to become active, and they can find themselves a part time job, even though they have SSI, they can work. Because the first $65 a month is disregarded, and 50 percent of the balance of that is disregarded.

So if their social security check or their income, is around $125 or so, they can still work.

I want to thank you. Any other questions?

Senator CHURCH. No, I am going to stop right there, because you see when Senator Pastore wants to ask a question he can ask a question any time he wants. He's my senior in the Senate; but I am going to enforce the rules where the others are concerned.

Actually, Senator Pastore has to leave at 11 o'clock, and I wanted to be sure he had a chance to ask what questions he wished beforehand, and it may be that our next panelists will not have finished by the time the Senator has to leave.

Senator PASTORE. May I have 1 minute? I will leave at 11 o'clock because I have another commitment. I will repeat again—I am not a member of this committee; but I am very much interested in the workings of this committee, and I have pledged to the members of this committee all the assistance I can give.

Senator CHURCH. Thank you very much, Senator Pastore. Our next and last member of the first panel is Dorothy Craighead. Dorothy, we want to welcome you this morning.

STATEMENT OF DOROTHY CRAIGHEAD, WARWICK, R.I., MEMBER, PROJECT HOPE AND NUTRITION COUNCIL TITLE VII PROGRAM

Mrs. CRAIGHEAD. Thank you, Senators, and good morning, ladies and gentlemen. I am Mrs. Craighead, a member of Project Hope and Nutrition Council Title VII Program. I am mainly interested in good nutrition for senior citizens, and I believe that good nutrition is very important for senior citizens.

Having a well-balanced meal adds to the joy of living, promotes good health, and cuts down on medical bills.

As we grow older, our eating habits change, and we find that we do not eat as much as we did when we were younger. That is why it has to be a well-balanced and nutritious one. I would like to give a sample of meals that are served 5 days a week in the Greater Providence area by Project Hope. This is just a sample: Vegetable soup, baked chicken, mashed potatoes, squash, coffee, and, milk.

Now all the vitamins are in this one meal. As you know, there are many seniors living alone on fixed income, and because of the cost of food they buy the things that are cheapest and not all seniors are able to receive food stamps. There are some seniors I find that are eligible for food stamps who do not receive food stamps.

The food stamps cost the seniors more to receive, and with the cost of food the way it is, the food stamps don't go as far as they should. So we find that a lot of seniors, they are unable to afford the kind of food that they should buy. There are also seniors who are unable to get out and do their shopping, and someone has to do the shopping for them, which is a pretty unstable thing for them because they can't get the things they want. They just write a list, and somebody gets it for them.

The stamps don't go as far as they ordinarily could go. So Project Hope is trying to help and assist them by delivering a hot meal to shut-ins. They are delivered by meals-on-wheels. I wish I could explain to you gentlemen the joy that people have with the different

food, eating their meal in a social setting. Some seniors have enough to take home for their evening meal, and this is a savings to them.

Co-op Programs Aid Seniors

I would like to say that food co-op programs started by Project Hope at the different centers helps seniors to buy food at a lower cost than they would in the market. Also, they can buy it at a great savings. They can buy cuts of meat, vegetables, produce and staples, all at a savings. This program is very important, and we are trying to reach as many seniors as possible. All these things help with the budgets, and the well-balanced meals, and physical well being of senior citizens.

We hope that these programs will be able to continue because good nutrition keeps the body in condition, and the mind functioning properly. Senior citizens can participate in all phases of the center's activities, and I just hope that Congress will continue to have this available so more seniors may be reached with these programs. Thank you, again.

Senator Church. Thank you very much. I certainly do agree with you about the importance of the nutrition program and the whole effort that's been made on meals both with respect to those that are served at the senior centers and those that are served as shut-ins who can't leave their own homes.

I have two announcements to make before we go to questions. For those of you who are standing, I can hardly see beyond the light, here, but every once in a while I have a sense that there are people standing here in the back of the room, and there are still a few chairs, a few seats here that are not occupied. I wonder if those who are sitting next to an unoccupied seat will put their hand up and give some of the older folks a chance to come and sit down. Will you do that, so people can see where the few empty seats remain? Come on down. Don't behave like you're in church and have to sit in the last pew. Come down to the front. There are a few seats down here.

One other announcement. This is a splendid public library. I hadn't had a chance to see it. You people in Providence should be proud of it. Just outside the door, I am told, the library has provided, on a table, pamphlets, books, and other information of special interest to senior citizens. So if you have the time, you might want to take a look at the library materials that have been set out on that table.

Instead of leading off with the questions, I would like to defer to your Rhode Island Senator and Congressman, and let Senator Pell commence with the questions.

S. 352 To Protect Retired Homeowner

Senator Pell. Thank you, Mr. Chairman. In connection with a point that Mr. Shaw made about the increasing cost of maintaining one's residence. It's a very valid point, indeed, and I have introduced a bill, S. 352, Retired Homeowners Protection Trust Fund Act. You have to have a study; sometimes you have to have two studies, and then eventually you will get the bill through, and what this does is to authorize the study of this bill, keeping the Social Security

Trust Fund separate from others to enable retired homeowners to retain their home. I think if you would examine that bill sometime, Mr. Shaw, you will find this would meet that problem.

Maybe you could generate some support for it from across the country. I think this would be a very specific help to that problem. That was more a statement than a question. I would like to ask one further question of Mr. Creighton. The question is, how can we go about this outreach a little bit more? Who should pay for it, and what more specific suggestions do you have to make sure that those who are eligible for food stamps and SSI are informed?

Mr. CREIGHTON. I think really the Social Security Administration should pay for it. But I don't think they are about to do it, because I don't think they want any more clients. I also think SRS, if you know what I am talking about, would pay for it, too.

Senator PELL. What is SRS?

Mr. CREIGHTON. That is the Welfare Department we have. I don't think Jack Affleck would be in favor of it to increase his budget, actually he would have to take and subsidize more people. I think what has to be done—and I also think there should be a law passed by Congress that when these costs of living increases come about—increases such as in social security and SSI—the full amount is passed on to the recipient. On SSI, the last time around, there was an 8-percent increase but the State only came up with 4 percent.

I think that it should be mandatory that there should be a law with your Federal Government that they would have to pass this full amount along to the people.

Senator PELL. Mrs. Craighead, I wonder if you could describe to us a little bit what a typical meal would be under the program. Incidentally, as to the prices I gave as to the hamburger and so forth, those are the prices in the butcher shop in Greenville, R.I. They are not prices pulled out of thin air. Let me assure you of that.

Mrs. CRAIGHEAD. Well, Senator, I gave you a sample of the meals that we do serve at the different centers. They start off with a soup.

Senator PELL. What kind of soup?

Mrs. CRAIGHEAD. They have different soups. There is a vegetable soup, chicken soup, pea soup, or chowder.

Senator PELL. Are they canned or fresh?

WELL-BALANCED MEALS

Mrs. CRAIGHEAD. No, these are fresh soups made in the kitchen. I would like to say these are cooked on the site. They have their own cooks; all centers have their own equipment, their own refrigeration, their own storage, and all these things are cooked on the site. The other meals are brought in in containers and served hot. These meals are well balanced because they consist of meat, a vegetable, and a salad. The seniors therefore have meat and two vegetables, and they have dessert and coffee, and they have milk which is all the vitamins that they need.

Senator CHURCH. That sounds like a good balanced meal.

Mrs. CRAIGHEAD. Well, it is a good balanced meal.

Senator PELL. Are you concerned with the question of cholesterol and the dietary content of the meals?

Mrs. CRAIGHEAD. Yes, that is all taken into consideration for the senior citizens.

Senator PELL. Thank you very much.

Senator CHURCH. Congressman Beard, please?

Congressman BEARD. Thank you, Senator, distinguished panelists. I would like to tell you that in considering the Older Americans Act, I had the honor to serve as a conferee along with Senator Pell. Meals-on-wheels will go on. That was highly emphasized in the legislation. It's very, very important. I also notice from Fred Creighton's testimony, one of the things is sending a message home to the thousands not only in Rhode Island but throughout the country who are not aware of the programs they are entitled to.

I think if the Government, in my opinion, was as efficient in trying to get information to the elderly as they are to the citizens with their income tax forms, we would be a lot better off in this country. I have a question for Mr. Creighton. In the time I have been here this morning, I haven't heard transportation discussed. I know senior citizens have been issued identification or transportation cards. Through the surveys that I have taken in one area in the State, they only have a card which entitles them to free transportation, but there are no buses. So what is the situation there?

Mr. CREIGHTON. Well, actually, I think we are very fortunate to get what we do have. The mass transit, free bus service for people 65 and over, we have been fortunate to get this.

Senator CHURCH. I don't know of any other State that has that. Do you?

Mr. CREIGHTON. Rhode Island and Hawaii have it.

Senator CHURCH. The first State and the last State leading the way.

Mr. CREIGHTON. They didn't want to give it to us; but we had to fight for it. Really, what Congressman Beard is talking about I believe is where the mass transit doesn't exist. Now, I think that the State should subsidize the local bus companies so that the senior citizens could ride for free. Otherwise, they should put their buses on those lines because they say it's statewide; but as Congressman Beard says, it's not for the whole State because they don't cover the whole State.

FREE BUS TRANSPORTATION

Congressman BEARD. Mr. Creighton, Senator Church, I believe the record would be interested in my recent trip to Hawaii with the Select Committee on Aging in the House. There is a similar problem in Honolulu where they have free bus transportation on off-peak hours. On the islands of Molokai and Oahu the senior citizens have their cards for transportation. Under the Older Americans Act we have extended funds to the States for rural transportation. So I would hope that the State officials will take advantage of that. We could have an extension of what we have in Providence, Cranston, Warwick and elsewhere where we have the transit system.

Mr. CREIGHTON. In Newport and Portsmouth, and down in that section of the State around Pascoag, and other sections of South County, there isn't any transportation. These are the people that should be taken care of.

Senator CHURCH. Why don't we look to the provision of the new law that Congressman Beard is referring to and maybe there would be some opportunity there for Federal involvement which might be helpful.

Mr. CREIGHTON. But I am going to tell you it would take some doing in the State to get them to do it, even though the money is there.

Senator CHURCH. My turn—Mr. Shaw, first of all, you spoke of something, and that is the talents, the experience, the wisdom that older people have, and how we should try to keep them engaged, keep them interested. Of course, there are some that would like to continue to work at least on a part-time basis who may be able to work and have something to contribute, some skill, and an opportunity to work except they are very severely limited under the social security system as you know as to how much they could earn.

Do you have any recommendation to make there.

Mr. SHAW. I think, Senator, this may have been over-emphasized. I think there are a great many people who have these talents, these skills who aren't too much concerned about how much they would lose from their social security if they could continue to use their talents. I am afraid what I was talking about this morning is the least interesting of the problems that are to be discussed here, and so I didn't want to take too much time. But my feeling is that the way to approach this is not to set up another government agency to dispense funds, but to try to get some kind of program where industries, for instance, and government could work together, so that industry would set up some kind of program to use these talents within the context in which they have been used for years. This I think is a great field, and I don't think it is the amount of income that would worry the people who could do this sort of thing. It's just a chance to continue to be useful.

Senator CHURCH. Just an opportunity.

Mr. SHAW. I think a lot of us are suffering from what I call the "Shaw retirement syndrome." The less urgent things there are to do, the less urgency there is to do anything. We are victims of that, and we would like to get away from it.

Senator CHURCH. Fred Creighton has mentioned a number of people who may be eligible for the SSI benefits who are not getting the information, who do not know. Fred, could you give us an estimate? You know a lot about this subject in Rhode Island. Could you give us an estimate of about how many people you think are living in this State who should be getting the SSI benefits who are not getting it?

Mr. CREIGHTON. That would qualify?

Senator CHURCH. That would qualify, but people who would qualify just don't know, and aren't included.

DON'T WANT WELFARE

Mr. CREIGHTON. I would really think there could be, I am not talking about the people who have already qualified and are being taken care of. I think out there wherever they are, I don't know, probably on some third floor, someplace there might be at least 1,500

or 2,000 people. I think that would cover it. There may be a little less; but you have to talk to these people because the old people are out there and really, they want to keep their dignity. You see these people are not like young people. They don't want welfare, and they won't admit that they need it. This is the problem. There is one more thing, Senator, I want to say before I leave here. Being the legislative chairman in Rhode Island here, I have had a bill, what they call the generic drug bill. I know if you could pass that federally, it would be a wonderful thing for these people. I have had it about 4 or 5 years in the State here; but the lobbying against it is pretty tough. In other words, the AMA, the pharmacists association, and the legislators that we have, as a matter of fact are lobbying against it. The legislators that we have happen to be either lawyers or pharmacists, and they are there for their self-interest. Now, what we need actually is a Federal bill, and then they would have to do it, and I think that is very important, the generic drug, and also a circuit breaker. You know what I am talking about?

Senator CHURCH. Yes, I know what you are talking about, and we are looking at both of these subjects very, very seriously on the committee. I want to say one other thing on the subject of drugs or medicines. I think that the limitation in the present medicare program, that prevents anyone from having medical bills covered except when they are hospitalized is one of the most serious gaps in medicare.

I know so many people on very limited incomes who have a chronic illness of some kind that requires prescription drugs, not just one bottle of medicine, but every week or every month or every 6 weeks they have to replenish the supply, and they have no way of getting reimbursement under medicare, and in some cases that will come to 20 or 25 percent of the total income of the person, and I think that one of the things we should do as a priority in filling the gaps of medicare is to take people who are on prescription drugs or in that fix and see to it that medicare gives them help for the medicine that they have to have.

INFLATION FAR MORE SERIOUS TODAY

I want to say one other thing. I agree completely with what Clifford Shaw has said about the importance of getting inflation under control. That is critical. I also have to recognize that that problem hasn't yet been solved by any means. The inflation is far more serious today than it used to be. In the last couple of years we have had inflation of 12 percent 1 year; 7 percent this year; 7 percent is twice as high as the average in this country over the years. So inflation remains a very serious problem, and until we get the answer to it, and get it back under control again, then for goodness sakes let's make this cost of living passthrough work as efficiently as possible. When I first proposed the passthrough in an effort to make social security inflation proof, I was thinking about 3, or 4, or 5-percent inflation, not 7 or 12 percent inflation, and it's a big difference.

So we made it an annual passthrough, and when people are faced with inflation as serious as the recent years have been, that annual passthrough is a hardship. You can't wait 12 months before you catch up with what's happened. So I have a new bill in. I wish

you would get as much support for it as possible which would improve this. It would make for a passthrough each 6 months which can be done under the computer system as easily as 12 months, so this adjustment can come without people having to wait for 12 months, and it would adopt a new cost of living index that relates to the kinds of cost that older people face.

They have a different budget than ordinary people. You are not buying a new automobile. You are not doing that kind of thing. So we need a cost-of-living index that is adjusted to food and rent and fuel and medicine, the kind of things that make up the major components of the typical budget of an older person. Make that the basis for the adjustment in social security, and apply it also to SSI, and do it every 6 months if the inflation hasn't been whipped, and that would be a great help.

Mr. SHAW. Could we take time to ask for a question or two from the audience?

Senator CHURCH. It's a good idea. Do we have the microphone? I have this light in my face.

Mr. REGER. I am very glad to be here.

Senator CHURCH. Would you use the microphone over here, sir?

Mr. REGER. I have been a resident of New England all my life.

Senator CHURCH. Would you identify yourself?

STATEMENT OF ERNEST REGER, PROVIDENCE, R.I.

Mr. REGER. Ernest Reger. There has been a blueprint to solve the inflation problem in front of your nose all the time for the last 35 years. Our revered President Franklin D. Roosevelt had it, OPA wage and price control, an example of this is when President Nixon instituted an emasculated form of OPA or price control that worked. It worked too well, because it was a namby-pamby-type of thing. If you went back to Franklin Roosevelt and studied the NRA and the OPA which I lived under, I was in business, and I know how it worked. I couldn't sell what I was selling for more than I sold before the war. I could have gotten three and four and five times what I was selling it for if the OPA was not there.

The person who worked, that was the wages he got; but he was able to get along. There were many more shortages. People of that era should know that. There were many more shortages than we have now during the war. You couldn't get anything, yet we made out. Everything was controlled to the point that the working man, the working people on whatever salary they had seemed to get along very well. I know I got along very very well. I had no trouble. The only trouble was that, well, I couldn't get a new car. Well, it's too bad. The old Chevy went for 110,000 miles, and when the war was ended I got a new car during the year. Thank you very much.

Senator CHURCH. Thank you. I would like to say that I wasn't involved in the second world war, but in the Korean war I was involved in the price stabilization. I know something of what you speak.

STATEMENT OF ANNA BEARD, PROVIDENCE, R.I.

Mrs. BEARD. My name is Anna Beard. I am Congressman Beard's mother. The only thing I have to say is this: Every time social security

goes up—I live in public housing, and I notice everytime Social Security goes up our rents go up. So what are we gaining? We don't gain anything that way.

Senator CHURCH. There is a gentleman that would like to speak—are you speaking—we will let you both, one at a time.

STATEMENT OF BRUNO HOFFMAN,* PROVIDENCE, R.I.

Mr. HOFFMAN. I am Mr. Hoffman from Providence. I am active in senior citizens groups. I only want to make one remark to Mr. Shaw's statement about people working who are over 65. There's a limit to how much you can make without losing social security. I don't see any reason for this limit because it is not necessary anymore to keep senior citizens off the labor market and, if they work they pay income tax. The original idea is not valid any more. On the other hand there is a provision that came in under the Eisenhower administration: Somebody could collect social security in any month he doesn't make more than $230; but in 1 or 2 months he could make $5,000 or $10,000 and still collect in the other months. This is a waste of money and helps rich people. It should be eliminated and used to increase the $2,700 to $5,000 or $7,000, or eliminate the limit altogether.

Senator CHURCH. Will you speak into the microphone?

STATEMENT OF VINCENT VESCERA,** PROVIDENCE, R.I.

Mr. VESCERA. My name is Vincent Vescera. I had money before Roosevelt was elected; but I followed with the NRA. I lost $500. I had to go to WPA myself; but I was proud. There was a time when the administration, they wanted to vote for the people, and the rich people, the Republicans, they ashamed. That's why we leave the country. Let's get the country going like it was when Roosevelt was in office.

Senator CHURCH. Folks, we are going to hear from two more. Just two more, and we will have the next panel, and then we will give you another opportunity to speak.

May we hear from this gentleman?

A VOICE FROM AUDIENCE. You made a remark, Mr. Chairman, that I am only allowed 1 minute. I have something here that I have kept a secret for 14 years, and I thought that today would be the proper time for me to expose this. But I can't do it in 1 or 2 minutes.

Senator CHURCH. Let's wait and see how much time remains when we are finished. We will do our best.

Mrs. TRITENDI. He can talk. I am Rose Tritendi.

Senator CHURCH. You are going to speak from the panel?

Mrs. TRITENDI. Yes.

Senator CHURCH. Let's go to the next panel. Dr. Mary Mulvey, Madeline McKiernan, Jim Keegan, and Janet Lewis are the members of the second panel. Before this panel begins, I want to tell many of you who may not know about it, that Dr. Mary Mulvey has been promoted to vice president in the National Council of Senior Citizens which is a great recognition for the work that she has done.

---

* See additional statement, appendix 1, item 2, p. 2127.

** See letter, appendix 1, item 9, p. 2135.

STATEMENT OF DR. MARY MULVEY, PROVIDENCE, R.I., VICE PRESIDENT, NATIONAL COUNCIL OF SENIOR CITIZENS

Dr. MULVEY. Thank you, Senator Church, Senator Pell, Congressman Beard, other distinguished guests on the platform, our senior citizens and guests. I have a lengthy written statement. I will streamline it now; and I respectfully request that the full statement be included in the record.

Senator CHURCH. Of course.

Dr. MULVEY. I am also State Chairperson for the National Health Security Committee. I am convinced the only way to solve the health problems for all Americans is the Health Security Act (S. 3 and H.R. 21), the Kennedy-Corman bill. President Ford promised a national health insurance program for this year in his 1975 state of the Union address; and he now declares that we cannot afford national health insurance. Yet, 20 million Americans have no health insurance, and another 30 million have inadequate insurance.

MAJORITY FAVOR NATIONAL HEALTH INSURANCE BILL

The way is not through the catastrophic health insurance proposed by President Ford, which would require the elderly to pay $500 out-of-pocket for qualifying hospital expenses, and a $250 limitation annually to qualify for medical services. These amounts would increase proportionately with cost-of-living increases in social security. It is important also to note that the prestigious Cambridge Survey revealed recently that 57 percent of our population is for a national health insurance bill at least as comprehensive as the health security bill.

Kennedy-Corman makes everyone in the United States eligible for coverage. The program would pay nearly all personal health care services including catastrophic coverage.

Preventive care would be an important aspect of that program. It points toward organized arrangements for patient care and would support HMO's—Health Maintenance Organization—and other prepaid group practice plans, such as the Rhode Island Group Health Association (RIGHA).

Mrs. Lewis, who is on this panel, is going to talk about RIGHA, this morning. We have had medicare for 9 years, and we are grateful for what it has accomplished. But it covers only 38 percent of health care expenditures for older Americans; and Mrs. McKiernan, on this panel is going to talk about medicare.

National health security is the answer; but even if enacted now, it could not become fully operative for several years. Therefore, I recommend prompt changes in medicare, not only to close the loopholes, but also to conduct a mini-health security program for the older segment of the population as a prelude to, and demonstration for, extension to all segments of the population.

Our recommendations are to merge medicare and medicaid in a federally administered program covering all persons, 65 and over, and all other medicare and SSI beneficiaries. Part A and part B would be combined so that premiums now charged under medicare part B would be terminated.

Benefits now under medicare would be expanded and payable without co-insurances or deductibles. Nursing home services, re-

gardless of prior hospitalization, would be covered up to 120 days, and without limit if furnished in a nursing home affiliated with a hospital. Other benefits would include out-patient drugs, care of eyes, ears, and feet.

Many sources have labeled President Ford's medicare catastrophic health insurance proposal a fraud perpetrated on the elderly. He proposes to increase the out-of-pocket payments for medicare beneficiaries by requiring them to pay a co-insurance charge of 10 percent of all daily hospital charges, following the first day for which they pay the full cost; to impose a 10-percent co-insurance charge on hospital-based physician and home-health services; and to raise the part B supplementary medical insurance deductible from $60 to $77 in 1977, increasing thereafter proportionately with social security cost-of-living increases. These measures would wash out future social security cost-of-living increases.

Proposed Changes "A Hoax"

These changes are a hoax on the elderly. For example, under present law, the patient pays $104 the first day in the hospital and no more for 60 days; but the President's plan would increase the cost for the medicare patient upwards of $250 for an 11-day stay, which is the average medicare patient hospital stay. Medicare patients will pay 10 percent of hospital costs day after day until they spend $500.

It is estimated that this proposal would not offer a savings until after a patient had been hospitalized for 75 days since, under the present program, medicare patients would have to be in the hospital 75 days in order to spend $500 out-of-pocket. Yet, only 1 out of 1,000 remains 75 days in a hospital, so the President's plan will benefit only 1 out of 1,000 Americans under medicare, not the millions of senior citizens who are sick and infirmed.

Actually, the President's program imposes upon the elderly $2 billion more than they are paying now and provides a paltry $500 million rebate in the form of catastrophic coverage, the result being a Federal budget saving of $1.5 billion at the expense of the elderly, sick, and disabled. Implications are that the Federal budget will be balanced on the backs of the elderly, sick, and poor.

We urge the U.S. Senate Committee on Aging to prevail upon Congress to oppose the medicare catastrophic health insurance proposal of the President and to consider our recommendations for improvement of medicare until such time as the national health security is enacted. We congratulate you, Senator Church, on your initial step toward this goal through the submission of Senate Concurrent Resolution 86, "Opposing Increases in Medical Costs for the Elderly."

Equally objectionable is President Ford's proposal to lump medicaid with 15 other Federal programs, and give the States only $10 billion in block grants with no strings attached for State matching funds. This revenue-sharing plan represents less money than before for those who need it the most since, under the present program, the Federal Government now provides $11 billion and the States must provide $8 billion in matching funds.

If medicaid costs should increase at even half the rate of last year, with only a $10-billion budget for all health programs for the poor, serious cutbacks in some programs and elimination of others would result.

Revenue Sharing Has Drawbacks

Revenue-sharing could seriously affect such categorical programs as community neighborhood health centers which serve the poor of all ages, SPOC, which is the Special Project for Older Citizens that you will be hearing about on this panel, and other programs. Older persons have never received their rightful portion from revenue-sharing and other consolidated programs because they have had to compete with more vocal programs in the power structure; and this is the basic reason for our establishing categorical programs, including elderly housing, medicare, medicaid, the Older Americans Act, and subsequent amendments, et cetera. Incidentally, the President already proposes cutbacks in the nutrition program for elderly under title VII of the Older Americans Act.

The logical solution is to scrap the patchwork approach to health care through enactment of S. 3, H.R. 21, the Kennedy-Corman bill, not only for the elderly but for all Americans. We are the only industrialized nation which still makes adequate health care a privilege of those who can pay for it.

Comprehensive health care for all our people must be established as a matter of right, like the right to education and the right to vote. Thank you.

Senator Church. Thank you. I had some remarks here about Mr. Ford's state of the Union proposals; but Dr. Mary Mulvey has summed it up so beautifully that I am just going to associate myself with her position because it says it all, and it says it well.

Dr. Mulvey. Thank you.

[The prepared statement of Dr. Mulvey follows:]

PREPARED STATEMENT OF DR. MARY MULVEY

Senator Church, Senator Pell, honored guests and senior citizens of Rhode Island. As vice president of the National Council of Senior Citizens (NCSC) and director of the Rhode Island Council (RICSC), I am very much involved with issues concerning a better life for seniors. And, the cost of maintaining good health directly relates to the quality of life.

I am deeply moved by the plight of the senior citizen living on a fixed income in these inflationary times, who can be financially devastated when faced with overwhelming health problems. Hospital and medical costs are soaring faster than all other items in the Consumer Price Index.

As chairperson of the Rhode Island Committee for National Health Security, I am convinced that the only way to resolve health care problems for seniors, indeed for all Americans, is through passage of the Health Security Act (S. 3, H.R. 21), the Kennedy-Corman bill.

President Ford promised a national health insurance program for this year in his 1975 state of the Union address; and he now declares that we cannot afford national health insurance. Yet, 20 million Americans have no health insurance, and another 30 million have inadequate insurance.

The way is not through the catastrophic health insurance proposed by President Ford, which would require the elderly to pay $500 out of pocket for qualifying hospital expenses, and a $250 limitation annually for medical services. These amounts would increase proportionately with cost-of-living increases in social security. This would be catastrophic—indeed a disaster for most of our elderly.

STATEWIDE SUPPORT FOR KENNEDY-CORMAN BILL

The Rhode Island Committee for National Health Security has statewide support for S. 3, H.R. 21, the Kennedy-Corman bill. With us are: the entire Rhode Island congressional delegation, the State administration, leaders of community action and senior groups, labor, civic, student, and religious organizations.

It is important also to note that the prestigious Cambridge Survey, conducted by Patrick Caddell, and released quarterly, revealed (*Parade* magazine, November 30, 1975) what many of us have known for a long time: "The people of this country are fed up with the usual way of paying for health care."

We are finished with the old approaches. The Cambridge Survey asked for a response to four different health proposals. The results present such dramatic evidence of public thinking, I will read the four proposals and the percentage for each one as reported in the Cambridge Survey.

1. Keeping things as they are today—only 13 percent.

2. A small system where poor people are given medical insurance and everyone is protected against sudden major illness, 23 percent.

3. A system of national health insurance which guarantees every person as much care as he or she needs, 35 percent.

4. An amazing 22 percent lined up behind the most radical alternative—a totally nationalized system where not only is everyone guaranteed as much health care as he or she needs, but doctors and hospitals are taken over by the government and prices are regulated, 22 percent.

Yes, the people of this country are overwhelmingly in favor of a big change in health care—"a system of national health insurance which guarantees every person as much care as he or she needs"—and that would be the Kennedy-Corman bill. Fifty-seven percent of the population (totaling items No. 3 and No. 4) is for a national health insurance bill at least as comprehensive as the health security bill.

Kennedy-Corman makes everyone in the United States eligible for coverage. The program would pay nearly all personal health care services including catastrophic coverage. Covered would be physicians' services, inpatient and outpatient hospital services, home health care, optometry and podiatry services, devices and appliances, prescription drugs, some psychiatric services and nursing home care. It would cover, at the outset, dental care for children up to age 15, and eventually the entire population. And, most important, it would establish pilot projects to determine the feasibility of home maintenance care for the chronically ill or disabled. Remember, even if a nursing home is good, most people can be better rehabilitated in their own homes with proper care.

EMPHASIS ON PREVENTIVE CARE

Preventive care would be emphasized, as well as early diagnosis and medical rehabilitation through a vastly improved health care delivery system—pointing toward organized arrangements for patient care, such as HMO's (health maintenance organizations) and other prepaid group practice plans, such as the Rhode Island Group Health Association (RIGHA). RIGHA is unique and has received national recognition for its innovative practices.

Other national health security aspects include: Administration by the Social Security Administration: financing through a health security trust fund created by a tax on employers, employees and the self-employed, with the amount matched by Federal general revenues; a quality control commission to develop cost control features, including national standards for health care providers; consumer input in policy, administration and development of health security on national, State, and local levels; public accountability; and a resources development fund to support innovative health programs in manpower, education, and group practice development.

We have had medicare for 9 years; and we are grateful for what it has accomplished. But medicare covers only 38 percent of health care expenditures for older Americans. National health security is the answer; but even if enacted now, it could not become fully operative for several years. Therefore, I subscribe to the position of the National Council of Senior Citizens for prompt changes in medicare, not only to close the loopholes, but also to conduct a "mini" health security program for the older segment of the population as a prelude to, and demonstration for, extension to all segments.

Our recommendations are to merge medicare and medicaid in a federally administered program covering all persons, 65 and over, and all other medicare and SSI beneficiaries. Part A and part B would be combined so that premiums now charged under medicare part B would be terminated and beneficiaries would no longer have to meet these payments out of limited and fixed incomes.

Benefits now under medicare would be expanded and payable without coinsurances or deductibles. Nursing home services, regardless of prior hospitalization, would be covered up to 120 days, and without limit if furnished in a nursing home affiliated with a hospital. Other benefits would include out-patient drugs, care of eyes, ears, and feet.

Some portion of the cost of coverage would be borne by general revenues, and the remainder by payroll taxes—the same for employee and employer.

The need for these changes in medicare is great because of the ever-increasing costs to medicare beneficiaries—the latest being from $92 deductible charge to $104 for the first day of a hospital stay up to a 60-day period—plus increases in copayments. No! Poor, sick, elderly, and disabled people cannot bear additional out-of-pocket payments for medical treatment such as those proposed in President Ford's medicare catastrophic health plan.

Many sources have labeled President Ford's medicare catastrophic health insurance proposal a fraud perpetrated on the elderly! He proposes to increase the out-of-pocket payments for medicare beneficiaries by requiring them to pay a coinsurance charge of 10 percent of all daily hospital charges, following the first day for which they pay the full cost; to impose a 10-percent coinsurance charge on hospital-based physician and home-health services; and to raise the part B supplementary medical insurance deductible from $60 to $77 in 1977, increasing thereafter proportionately with social security cost-of-living increases. These measures would wash out future social security cost-of-living increases.

PRESENT CHANGES A HOAX

These changes are a hoax on the elderly. For example, under present law, the patient pays $104 the first day in the hospital and no more for 60 days; but the President's plan would increase the cost for the medicare patient upwards of $250 for an 11-day stay, which is the average medicare patient hospital stay. Medicare patients will pay 10 percent day after day until they spend $500.

It is estimated that this proposal would not offer a savings until after a patient had been hospitalized for 75 days. Yet, only 1 out of 1,000 remains 75 days in a hospital; so the President's plan will benefit only 1 out of 1,000 Americans under medicare—not the millions of senior citizens who are sick and infirm.

Actually, the President's catastrophic program for medicare beneficiaries must be looked at within its devious context; in reality it imposes upon the elderly $2 billion more than they are paying now, and provides a paltry $500 million rebate in the form of catastrophic coverage, the result being a Federal budget saving of $1.5 billion at the expense of the elderly sick and disabled. Implications are that the Federal budget will be balanced on the backs of the elderly, sick, and poor.

We urge the U.S. Senate Committee on Aging to prevail upon Congress to oppose the medicare catastrophic health insurance proposal of the President and to consider our recommendations for improvement of medicare until such time as the national health security is enacted. We congratulate you, Senator Church, on your initial step toward this goal through the submission of S. Con. Res. 86 "Opposing Increases in Medical Costs for the Elderly."

Equally objectionable is President Ford's proposal to lump medicaid with 15 other Federal programs, and give the States $10 billion in block grants with no strings attached for State matching funds. This revenue-sharing plan represents less money than before for those who need it the most since, under the present program, the Federal Government provides $11 billion and the States must provide $8 billion in matching funds. Furthermore, the administration has expressed alarm over the 25 percent rise in medicaid costs last year; but, if medicaid costs should increase at even half the rate of last year, with only a $10 billion budget for all health programs for the poor, serious cutbacks in some programs and elimination of others would result.

CATEGORICAL GRANT PROGRAMS COULD SUFFER

Revenue-sharing could seriously affect such categorical programs as community neighborhood health centers which serve the poor of all ages, SPOC (Special Project for Older Citizens) which specializes in resocialization and de-institutionalization of older hospitalized persons, and other medical services to meet the needs of those who can least afford the costs—the poor, the elderly, the medically indigent, the under-served, and those who require mental health care.

Categorical grant programs were established to define problem areas, furnish Federal support to help deal with the problems, provide direction and control of funds as Congress intended, and establish priorities and standards of administration to assure

quality and responsiveness. So, President Ford's proposal to consolidate categorical programs is a giant step backward.

Older persons have never received their rightful portion from revenue-sharing and other consolidated programs because they have had to compete with more vocal programs in the power structure; and this is the basic reason for our establishing categorical programs, including elderly housing, medicare, medicaid, the Older Americans Act of 1965 (authored by the late Rhode Island Congressman, John E. Fogarty), and its subsequent amendments. Incidentally the President already proposes cutbacks in the nutrition program for the elderly under the title VII of the Older Americans Act. Again, as in the proposed medicare cutbacks, the President's proposal is a well-planned method of cutting health care specifically designed to help the underprivileged to survive in the abyss of poverty.

The logical solution is to scrap the patchwork approach to health care through enactment of S. 3, H.R. 21, the Kennedy-Corman bill—not only for the elderly but for all Americans. Our objective is a better life for everyone. It is everyone's right to have the best of health care in our society. We are the only industrialized nation which still makes adequate health care a privilege of those who can pay for it.

We speak of our freedoms in this country. If we are to hold up our heads among other industrial countries in the world, we must affirm one more freedom—the freedom from fear of ill-health and its financial consequences for the old and the young, poor and affluent, employed and unemployed. Comprehensive health care for all our people must be established as a matter of right—like the right to education and the right to vote. Thank you for giving me the opportunity to present this statement.

Senator CHURCH. Now may we hear from Mrs. Madeline McKiernan?

STATEMENT OF MADELINE McKIERNAN, PROVIDENCE, R.I.

Mrs. MCKIERNAN. Honorable ladies—I did see Eddie Beard here; but I guess he is gone.

Senator CHURCH. Eddie is coming back.

Mrs. MCKIERNAN. This is a pretty tough act to follow. I have no prepared text. I can show you there is a list of these going back, but this is a combination of medicare and Blue Cross, and I have the two top ones which are treatments, and we got this one c.o.d. I call it. It's $104.50 each treatment.

Senator CHURCH. Could you pull the microphone a little closer, please? You're doing fine. We just want to hear you.

Mrs. MCKIERNAN. I am not going to argue with medicare, inasmuch as we have used it. I am very, very delighted; but we have been in a position where Blue Cross is taken out of my husband's pension, and this is $21.26 a month, and we have medical bills. I have one here, one druggist alone I ran into this morning is $71. I have also been taking a continuing treatment and medication for my blood pressure, and that I have been able to get at cost.

I can only agree with everyone here that understands what it is for people, as I say, I don't want to use the word "retired," because I don't feel I am retired. I had to leave my position because of the budget. I worked for model cities. But I still am continuing in that vein for many, many people that used our services, and I can hardly turn these people off. But I have had to listen to people speaking about food stamps, and I will jump away from medicare for a moment and make the suggestion that when people do go on medicare and social security that food stamps become involved, even if it's at a maximum, but they should also be tied in with medicare—food stamps. I don't believe it's so at the present time, but also I feel that Mr. Shaw said there are so many people that are giving their time because they can't turn people off in their own positions that they have held.

We could use so many senior citizens to teach people that can't read or write, and you would be amazed at the people that we have had to help to make out forms, to read letters for them. SSI—here is a country that pays social security. Is that supplemental? I don't know. SSI—they can't read or write.

Senator CHURCH. SSI?

Mrs. MCKIERNAN. It hands them a check for $189 and gives me one for $169, and they don't take any effort to see that these people know how to spend it, to shop, to pick up the ads in the paper. They are not even able to do this.

To get back to medicare, I would like to see the Kennedy-Corman bill passed as soon as possible.

Senator CHURCH. Thank you, very much. I would like to underline what you said by pointing out when we passed the medicare program, and it took a long fight to do it, when we finally got it passed it took care of 50 percent on the average, 50 percent of the cost of medical care for the elderly.

MEDICARE LOSING GROUND

Today it takes care of 38 percent. So we are losing ground with the medicare program, and instead of getting proposals to reverse the trend we are getting the opposite kind of proposals that are going to stick the people with a $1 billion or $2 billion more of out-of-pocket costs. So that the coverage will drop to 25 percent or less. That's the direction we are going in. It's just the wrong direction.

Mrs. MCKIERNAN. Just one more thing, if I may, Senator. I have a bill here. This bill is for office visits and treatment which is for $104.50, and you pay this as you get the treatment. Well, I have called and talked to Blue Cross. I think medicare doesn't care, but Blue Cross said, "Yes," they think they will review it and take care of the percentage. I am wondering about the doctors. We get 100 percent, and we that can't afford it only get a percentage back of what we paid, and I think that's something that should be looked into.

Senator CHURCH. Would you just restate that? I missed it.

Mrs. MCKIERNAN. That's all right. I said that I called medicare offices. I called Blue Cross on this $104.50 which is every month. They said they felt they could review it, and very possibly they would pay a percentage. But do I understand we pay 100 percent? We are hoping we will get back a percentage; so it's the consumer that's being hurt, the patient that's being hurt all the time. That's all. Thank you, Senator.

Senator CHURCH. Thank you. Could we hear from Jim Keegan next, and then we will finish up with Mrs. Lewis. Senator Pell would like to introduce Mr. Keegan.

Senator PELL. This is a slightly separate subject, but one of the most important purposes of this hearing was to explore Rhode Island's solutions to national problems, and the effects of institutionalization upon the human spirit and in economic times having an individual institutionalized as opposed to being out in the general community. This morning we visited a fine project in Warwick* which is a day

* For additional information on the Warwick program, see appendix 3, p. 2139.

care center for seniors that provided an alternative to institutionalization. Everyone of those individuals probably would have been institutionalized had it not been for the day care center. In Cranston there is a special program appropriately named the special program for older citizens (SPOC) which has conducted work in deinstitutionalizing and resocializing old people. We have Mr. Keegan who is a participant in the special program for older citizens designed for deinstitutionalizing and resocializing of elderly patients at the Institute for Mental Health.

Senator CHURCH. Thank you, Senator. Mr. Keegan.

STATEMENT OF JIM KEEGAN, CRANSTON, R.I., SPECIAL PROGRAM FOR OLDER CITIZENS (SPOC), INSTITUTE OF MENTAL HEALTH

Mr. KEEGAN. My name is Jim Keegan. I am from the Institute of Mental Health, and I am a participant in the (SPOC) special program for older citizens.

What we do at SPOC is an actual—we do cooking. We have mutual activities, field trips, and we go around visiting with other groups. The question is, "What does SPOC do for me or for people there?" And it's hard to answer because you don't know until you finish it. I am about, I should say, in about the middle of it. I think it has helped me mentally, physically, and spiritually.

I would recommend the program to anybody that's interested in furthering their own self interest. That's it.

Senator CHURCH. Thank you, Mr. Keegan. Our last participant on panel No. 2 is Mrs. Janet Lewis.

STATEMENT OF JANET LEWIS, WARWICK, R.I.

Mrs. LEWIS. When I was asked to participate in this panel I asked exactly what I should do, and what information I was supposed to bring to you, and I was told, "Tell it as it is." "Tell it from your own experience," and this is what I plan to do. RIGHA, the State's largest and first maintenance organization, became the first and to date the only certified HMO in Rhode Island on February 7, 1975.

Later in the year RIGHA also received national certification.

Senator PELL. Could I interrupt for a minute? Actually RIGHA has been the first federally fully qualified HMO, not only in Rhode Island, but in the United States.

Mrs. LEWIS. I received that word when I was on a trip to Hawaii. People knew that I was interested. They mailed me the article, and I didn't have it to follow. I have been a member of Rhode Island Group Health Association for 4 years. My husband and I chose to go into this program because we felt the coverage was more complete than that of any other health insurance we previously had, and that the cost would be less expensive.

This has proved to be true, especially after my evaluation of the benefits received so far from our membership in this health maintenance organization referred to commonly as HMO.

Appointments Every 3 Months

Appointments were scheduled for us every 3 months for a doctor, and medicine, and much more often if necessary. Emergency calls are handled 24 hours a day. If your own physician is not available, there is always another physician ready to consult with you who has ready access to all your files. Services are available for all types of emergencies. I woke up one morning with a very painful eye. RIGHA was called, and by 8:30 a.m. I was examined by one of their staff doctors who immediately referred me to an opthamologist who diagnosed the injury as a corneal abrasion. In simple terms, I had cut the cornea of my eye. Proper treatment was given immediately, and within 3 days my eye was back to normal, and was followed up by frequent appointments.

My husband's condition became more serious over a weekend when normally it is hard to get in touch with a doctor. On calling RIGHA I was advised that our physician would meet us in an emergency room at the hospital where following an examination he was admitted as a patient. After major surgery, complications set in. So he was hospitalized for 3 weeks. During this time I was able to see and to talk with our physician daily. Following the death of my husband I was deeply impressed by the expressions of genuine sympathy extended to me by many members of the RIGHA staff.

At no time have I ever felt I was just a number in such a large organization. I was always treated as a person, as a real, human being, which I am sorry to say was not my experience at some of the hospital clinics which I attended with my husband previous to our affiliation with RIGHA. There was no additional expense for my husband's surgery or hospitalization or for specialists who attended both of us.

As of January 1, this year, the total health care for me now costs $10.75 for RIGHA and $6.70 for medicare per month. I have total coverage for $17.45 paid on a monthly basis. The RIGHA Building is located at 210 High Service Avenue, North Providence, adjacent to Our Lady of Fatima Hospital.

RIGHA is not a part of Fatima Hospital. It is a separate HMO facility. The complete unit for HMO's is in one building, on one floor, with ramps at every entrance. Laboratories are housed in one section, so all testing can be done on the premises. A pharmacist is available for the filling of prescriptions at a reasonable cost. Throughout the building are the waiting rooms, reception desks, and offices of the professional staff.

Nursing care is available at home if needed after hospitalization, or if your illness is not chronic a nurse will call at your home once a day if the necessity arises. Doctors will also make house calls when needed. Preventative health services include physical examinations, immunizations, and also periodic vision and hearing tests. All these services are included in your monthly charge. Additionally, you are covered for emergency care outside Rhode Island, but you must notify RIGHA at the time you receive the care.

There are many other advantages too numerous to mention, but which are listed in the RIGHA health care benefits. At the age of 65 all hospital blood transfusions must be paid for, or blood used must be replaced on a 1-to-1 basis up to the first 3 pints used.

If 10 pints are necessary, you are still only responsible for replacement of the first three pints. Under the age of 65 it is the policy to replace all blood used on a 2-to-1 basis. This was the only thing that I had to do above the cost of being a member. I replaced 3 pints of blood for my husband.

Most of the information I have given you is from my own personal experience over a period of 4 years. I feel that I can truthfully say I have used 90 percent of the benefits available with this health maintenance organization, and all these benefits were included in my monthly payments. Thank you.

Senator CHURCH. Thank you. It's good to hear about something that's working.

Mrs. LEWIS. It is working.

Senator CHURCH. First, I would like to recognize Senator Pell for whatever questions he may have of the panel.

Senator PELL. Thank you, Mr. Chairman. Dr. Mulvey, you really are the successor of Congressman Forand and Congressman Fogarty in carrying the torch for the elderly in our State, and just as they did, acquiring a national reputation and consistency in carrying it, so I think that everyone of the people who are in this room owe a great deal of credit to you for what you have done.

COST OF DRUGS

I would like to get to a rather hot subject. That is the question of the cost of drugs. Generally speaking, are the older citizens able to get drugs at reasonable costs, or what is the situation in this regard?

Dr. MULVEY. No, they are not. In hospitals, of course, the drugs are paid for. When they get out of the hospital they buy their own, and they have to buy the brand name drugs which are about 5 to 10 times the cost of the generic drugs.

The generic drug is provided in the hospital to the patient, but when they get out and have to buy their own, they have to pay the price of the brand name. Am I answering your question?

Senator PELL. Exactly.

Dr. MULVEY. And certainly, as Senator Church has mentioned before that one of the first things that we should do is to put prescription drugs in the medicare program because in many cases the cost of prescription drugs annually for the average medicare beneficiary is more than the medical costs for the year.

Senator PELL. Is there any place in Rhode Island where a citizen can buy drugs under the generic labels.

Dr. MULVEY. I think that RIGHA does carry the generic drugs.

Senator PELL. Is this only open to people enrolled in RIGHA?

Dr. MULVEY. Yes.

Senator PELL. What about the citizens here?

Dr. MULVEY. No, not unless the doctor writes the generic name on the prescription label; but then the patient may have the problem when he gets to the drugstore that the drugstore does not stock the generic labeled drug, because there isn't as high a profit on the sale of the $2 generic drug as there would be for a $10 drug by the brand name, which is exactly the same thing as the generic drug.

Senator CHURCH. What a racket.

Senator PELL. Isn't it true now where you can read the hieroglyphics on the prescription, if you get through the hieroglyphics, that the drug is usually identified by its content, or does the doctor usually prescribe it by brand name?

BRAND NAME VERSUS GENERIC

Dr. MULVEY. The doctor almost always, I would say 99 times out of 100, prescribes the brand name, because in most cases that's the only name he knows. The generic name is this long, and the brand name is about this long. We in Rhode Island supply the members of the Rhode Island Council and many other senior citizens with a list of the generic equivalents of the brand name drugs. As Fred Creighton has mentioned, for 5 years in the State legislature, we have not been able to pass the generic drug law which would require the physician to write the generic name on the prescription. If he did this, the patient could shop around for the generic drug, although it is difficult for the elderly to shop around, but if he were able to buy the generic drug it would be helpful.

Many States have the law, and I know Massachusetts has run into this problem. They passed a law about 6 or 7 years ago, and the pharmacists as a rule did not stock the generic drug. So a consumer group has arisen to take measures to require the druggists to stock the generic drug.

Senator PELL. How do you think somebody might go and buy this on a mail order basis where you could write or send a check or money order for it?

Dr. MULVEY. Again, the physician has to write the generic name, because the pharmacist cannot substitute.

Senator PELL. What is the name of the nearest mail order place where they can get generic drugs?

Dr. MULVEY. First, I want to mention that the National Council of Senior Citizens has a mail order service in Philadelphia. The AARP has a mail order house in Hartford, Conn., and in Boston too. They have them in various places.

Again, the constraints are that the physician must have written the generic name on the label. The National Council drug service does carry generic drugs.

Senator PELL. Thank you. I would like to ask Mr. Keegan a couple of questions. Thank you, Dr. Mulvey, very much.

Mr. Keegan, what activities are you doing now, or do you participate in or do you help with?

Mr. KEEGAN. I do general—I call them household chores. We clean up. We do our own cooking. Everybody participates in activities, such as music. We work. We generally help out.

Senator PELL. What is the difference between the program you are in now and what you were in a year ago?

Mr. KEEGAN. A year ago I was doing nothing and I am not being funny.

Senator PELL. Thank you very much.

Senator CHURCH. Congressman Beard?

Congressman BEARD. Dr. Mulvey and distinguished panelists. You know we have covered quite a few topics here today. We have talked about the transportation. We have talked about food stamps, and we have heard excellent testimony on national health insurance and problems of health.

You know it seems to me that here it is, 1976, and we have done so little for the elderly. We have legislation we have introduced for 5 years in the Rhode Island General Assembly trying to get generic drugs, the equivalent, in trying to get something done for the elderly on their medicines, so they could have the chance to have a choice whether to purchase the brand drug or the generic drug which is 9 or 10 times cheaper and still has the same effect. Yet, over the same length of time we have spent billions on wars. In 14 years of Vietnam we spent $150 billion. Here we are talking about transportation to areas in our own State where there is no transportation for elderly people.

"A ONE-WAY STREET"

Hawaii, as I mentioned earlier, was built as a great resort, yet there are elderly people there who are not even aware of social security. I have had a chance to talk to them. In this country where we have all the money and all the riches that we have, all the emphasis is on major commitments overseas in helping this country and that country, but no one in the world is coming to the United States offering to help the United States to give us economic assistance. It's all a one-way street.

So here we are, in 1976, with all the modernization, the cars, television, and everything that we have, and we can't solve the problems of 22 million elderly Americans.

Let me tell you something. We are lucky that we have fellows like Senator Church, Senator Pell, and other Members of Congress who have done a good portion of work in this area. They have spent their entire legislative careers trying to solve the problems of the elderly. But take a look at the U.S. Congress. Take a look at the Senate, and you take a look at the House. Most Presidents, most of them are senior citizens, and I say, "Shame on them that in 1976 we don't have national health insurance. Shame on them." These are elderly members who lead the committees, in most cases. Most of them are senior citizens in the Congress. You take a look at the age bracket in the Senate or in the House, and you will find that the chairmen are the members who have the most authority, the most push, they are in the elderly bracket. I say, "Shame on them that they haven't taken care of their 22 million elderly Americans in this country." Now we have a balance. Maybe there is a ray of hope. There are good young Democrats and young Republicans who are working for a new concept of serving the people first, serving the people first. We have a balance in the House and Senate. I think the fact that Senator Church has traveled to Rhode Island, is testimony to you people that have come out on a lousy day like this. But this is a problem all over the country, and it's a shame. I think it's important.

Senator CHURCH. Go ahead.

ELDERLY DESERVE EQUAL CONSIDERATION

Congressman BEARD. I think it's very, very important that this Congress and the Senate and this will be recorded, and I will be able to read this, that the Members who have the authority, the Members who have the seniority, and the Members who have the push, if they would only take a look at that minority of population, 22 million elderly Americans, and give them the same commitment and the same consideration as the President and the Congress give foreign countries.

If we did that we wouldn't have to have this meeting here today. I would like to congratulate Dr. Mulvey for her years of service and the distinguished panelists and members who have testified today. This is what it's really all about. We are here to serve you. Sometimes I might get up tight, and you wonder why I get mad. I have seen the bureaucracy of government. I see an administration that pushes one thing and yet when he was a Member of Congress voted against medicare or medicaid. That's the truth. We have got to get together in this country and eliminate the problems of health that we have where people cannot get decent services, and that is necessary, and we have got to have guarantees that we won't have to worry about pensions.

People are losing $1 on every $2 they earn; they take a dollar out. That is ridiculous. You paid your dues, and we need not only transportation, but we need services on every level, for the working people, middle aged, and our youngsters.

If this is an indication of the way we treat our elderly today, what is going to happen to us later on? We better set an example. I am telling you this whole country better set an example.

Too many people are willing to shove their relatives into the nursing homes, and institutions, and lock the door and forget about them. That's a matter of fact.

I hope the time will come that I will be able to say, "Senator Church, Senator Pell, there is no need of having hearings in Rhode Island or anywhere else in this country. The elderly people are considered No. 1." They should treat you the same way as they treat you on election day.

Senator CHURCH. You can see why Ed Beard and I get along well. Let me just add one word about this problem. The committee that I head up, the one that Claiborne serves on, when it was set up it wasn't given any legislative power. All it was given was the right to go out and find out what the problems were and to make recommendations.

We have been making recommendations. Some of them have gotten enacted into law; but I find myself over and over again doing the kind of thing that Mary Mulvey mentioned, trying to play a defensive role.

REAR GUARD ACTION

We have a new recommendation from the President of the United States which is in the name of doing something for improving medical care for the elderly which in fact does just the opposite. It increases the charges on the elderly by $2 billion and gives only $500 million back. You see, I have to go to the Senate and say, "Here is a

resolution to reject." Let the Senate express its sentiments that they are opposed to this program, and let them vote to reject the program so that it gets no further. But that's not doing anything affirmatively. That's a rear-guard action to prevent things from getting worse, and until you get somebody in the White House who is willing to work toward making things better, that's all you're going to accomplish.

May I say to the panelists how much I appreciate their contribution. We have a third panel, and we want to give you people out there a chance to speak up again before we finish. So let's give this panel a hand.

We are going to the floor, again, and let's turn that microphone around. Would you first give us your name; identify yourself for the record, please?

STATEMENT OF BROTHER CHARLES WINN, PROVIDENCE, R.I., SENIOR CITIZEN AND REPRESENTATIVE, SENIOR CITIZENS OF RHODE ISLAND ACTION GROUP

Brother WINN. I am Brother Charles Winn, a senior citizen and the public relations representative of the Senior Citizens of Rhode Island Action Group.

I would like to speak to the subject of generic drugs. The availability of the drugs was brought up by Dr. Mulvey. Some druggists do not stock them, but I want to underline the fact that clinics, the Veterans' Administration, and animal hospitals use the generic drugs. They are available in quantity, and I had the personal experience of going to a clinic for an emergency and being given a sample or a temporary supply of generic drugs with a prescription for the same drug, and I remember very distinctly the scowl on the druggist's face when I handed him the prescription with the generic drug. I have been using that drug ever since. That is 3 or 4 years ago. It has proved effective, and there have been no complaints as far as my health is concerned. So I wanted to give that specific testimony that the drugs are not only available; but they are consistently used by clinics, public health clinics and hospital clinics, and the Veterans' Administration, and if it's good enough for the U.S. Army, I think it's good enough for me.

STATEMENT OF MRS. CURLEY, PAST PRESIDENT, RHODE ISLAND COUNCIL OF SENIOR CITIZENS

Mrs. CURLEY. Mr. Chairman, Congressman Beard, Senator Pell. I am Mrs. Curley, past president of the Rhode Island Council of Senior Citizens, and also a member of Congressman Beard's advisory council, and I am also a senior aide in Dr. Mulvey's office, and we all work for our money in Dr. Mulvey's office, the chairman and volunteers on the SSI, and I would like to say my last figure was 1 out of 8, regretfully, we reached in Rhode Island on that program.

May I say a word about President Gerald Ford. He is now known as Nixon's revenge. He established the record of voting against everything to help the elderly, and now he is trying for a veto record. We have a candidate right here who I think is ready, willing, and able to replace him. So I am voting "No" against an elective term for President Ford, and to use a play on words. Remember that old saying, "See you in church, Senator." Well, Senator Church, we'll see you in the White House.

Senator CHURCH. That wasn't a put-up job, folks. Here comes another gentleman. Let's hear from 1 or 2 more, then go to the third panel. Then there will be still another opportunity for others to speak.

STATEMENT OF ROBERT BURNS

Mr. BURNS. My name is Robert Burns, and I would like to ask a question. In reference to a generic drug, when a patient goes to a doctor, and he asks the doctor to prescribe it in a generic term instead of the brand name, can a doctor refuse? Now, the doctor might say he is not familiar. If the patient is familiar with the different setups where he can get the generic named title, could he present that on an authorized paper to the doctor so the doctor could verify it, possibly not right at the moment, but within a short order in the future?

Senator CHURCH. You asked the question. I will have to give you a curb-stop opinion. I am a lawyer, you see, in addition to everything else. So I love to give curb-stop opinions. This advice is just as good as what you are paying for it, which is nothing. But my guess would be in answer to your question that in the absence of a law on the subject, the doctor could do just what he pleased. He could either cooperate or not cooperate, and I think that's probably the situation in most States. Isn't it ironic that it's harder for people to find out how to get generic drugs, and thus avoid getting charged 3, 4, or 5 times as much as you should, than it is to get generic drugs for animals? There is no problem there. You can get it for your dog; but you can't get it for yourself unless you can figure out the system, and not many people have been able to figure out the system. It's just that complicated.

Mr. BURNS. May I say one more thing on this? The reason I raise this question is too many people when they go to the doctor or the druggist are more or less like ashamed or face-down, so that they will take the brand name.

Senator CHURCH. Yes, I think that's true. May we have this young lady; this gentlemen; and then we will go to panel three.

STATEMENT OF BETH TAYLOR, NEW ENGLAND ELDERLY DEMAND SOCIETY

Miss TAYLOR. Thank you, Senator Church, Senator Pell, Congressman Beard, members of the committee. My name is Beth Taylor, and I represent the New England Elderly Demand Society, and I have a short prepared statement that I would like to read to you.

The New England Elderly Demand Society is working with the institutionalized elderly toward nursing communities with proper medical and now psychiatric care. As an advocacy group for the elderly, we are concerned that the treatment that they receive, particularly in institutions, is dehumanizing and does not adapt to the real needs of the elderly. Medicare is just another institution which consists of a lot of redtape and eats up the taxpayers' dollars with administration, and ingores the proverbial saying, "Treat the cause, not the symptoms." It does not insure that the elderly will receive quality health care. That problem is especially true among institutionalized elderly. An inmate is normally considered less than a normal person. For

the elderly the attitude is often compounded by misunderstanding of geriatric illnesses. This leads to misleading treatment because they are too old.

We should stop putting too much energy and investigation into programs which do not interest the needs of the elderly, and start building programs for the elderly so they can live out their lives with the dignity and respect they have earned. Thank you very much.

STATEMENT OF MICHAEL BODAY, CHAIRMAN, GRAY PANTHERS

Mr. BODAY. Mr. Chairman, Senator Pell, Representative Beard, I happen to be Chairman of the Gray Panthers that fought for elderly in the State of Rhode Island. We don't have to go any farther. We are in the State of Rhode Island still fighting for the handicapped, for busing, we are still fighting for the elderly, and I have been a resident of the State of Rhode Island for 72 years, living here, almost 73. We are still fighting for the elderly of the State of Rhode Island. We wrote a wonderful letter to Beard. We wrote a letter to Pell this morning. We wrote to Congressman Beard first, and we got a wonderful answer that he is supporting the handicapped. Here we are fighting the State of Rhode Island. We have about 30 percent of the elderly that have transportation. We have people out in the town of Westerly, and all through Burrillville, Warwick, Warren, and up to Newport where there is no transportation. They went around the State to get and snap the pictures of the elderly at a dollar apiece. Now, this is awful. The State of Rhode Island goes out and takes a dollar off the people who have no transportation, and I am ashamed to be a resident of the State of Rhode Island. I am ashamed that the handicapped have no transportation in the State of Rhode Island, and we are talking about the drug bill. The House has passed it, but what did they do in the Senate? They pigeonholed it right in our own Senate. We've got to clean house right here in our own State. Our own State has got to be cleaned up. We have got to find out who is with the elderly and who is against the elderly, and we have a wonderful Congressman sitting right here, and Senator Pell. We are thankful we have people like that in Washington fighting for the elderly. We have people in the State House that we are dissatisfied with, and we absolutely should have them working with us, or else we are going to go out and clean house.

Senator PELL. What we are focusing on here are the Federal issues, not the State or local issues.

Mr. BODAY. That's a Federal issue, also, Senator Pell, and I also was in conventions when we heard Senator Church speaking, and I am going to tell you, he will get our support. As far as the elderly go, I think he is a wonderful man, and it's good to have somebody like him. I want the Senators out of our State to know what we are fighting. I know what I am talking about, because I have been all over the State of Rhode Island.

Senator CHURCH. If you are the head of the Gray Panthers and a member, you know what you are talking about. That's a great organization.

Mr. BODAY. We are organized all over the country, and we intend to get something.

Senator CHURCH. Thank you. May we go to panel No. 3, please? The panelists on the next and final panel are Edmund Beck, Henry Graham, and Rose Tritendi.

Congressman BEARD. I would like to present this from the Warwick Community Action Group.

Senator CHURCH. Thank you very much. I will be happy to accept it.

You have been wonderful and very patient. It's a crowded room. People are still standing in the back. There are some seats in the front now. If anyone wants to come forward, they are invited to do so. Let's give this last panel of the morning our attention. First of all, may we hear from panelist Edmund Beck?

Mr. BECK. Thank you. I have a statement that will be read for me, Senator. But I would like to ask permission to let Mr. Graham present his statement first.

Mr. GRAHAM. My name is Henry Graham. First of all——

Senator CHURCH. Do you have Mr. Beck's statement to read?

Mr. GRAHAM. No; I have a statement of my own which I would like to make at this time, with your permission.

Senator CHURCH. You may proceed.

STATEMENT OF HENRY GRAHAM, EAST GREENWICH, R.I.

Mr. GRAHAM. Thank you. I will now start, Senator Church, Senator Pell, Congressman Beard: You have listened to a great many dignitaries and others discuss the various problems of the aged. I trust we might show our appreciation in some small way for your help. Some time ago I was invited to attend a meeting in the office of the State Division on Aging on the subject of the problems of aging. At that time I stated that the No. 1 consideration of my organization was tax relief for the elderly. Maybe passing it to the Federal Government is what I am going to propose in some instances later. I was called by Mr. Harris, and asked to participate in this hearing.

I might also advise Senator Church that the letter you dictated on January 16 asking me to get in touch with Mr. Harris on the 23d arrived at my house on Saturday the 24th.

Senator CHURCH. That is the Post Office Department.

Mr. GRAHAM. I don't know where we pass the buck; but that's a Harry Truman expression.

The issue in my organization is actually tax relief for the elderly. Now, it can be done through the State, or we can get some assistance from the Federal Government in my opinion. I would like, therefore, to just dwell a moment or two on taxes locally. The taxes on my house have risen in the past 13 years 240 percent. I am sure that the same thing applies to you. This then says to me there is only one answer to tax relief for the elderly, and this is by legislation that would freeze the tax rate and the property evaluation on homes in which we reside. There are admittedly many factors that must be taken into consideration, however, such as tenure, income property, exemptions granted for other purposes, and so forth. Incidentally, I had to spend Saturday afternoon in the library because of short notice, and it shows that the exemptions are now being granted to the very poor, $1,000 to $4,000. Personally, I will sell any income property. However, if there has to be such a requirement that real

estate could be sold. A man works for many years contributing social security, and reaches a maximum for the entire period. This money was taxed on income at that time. They are now retired and collect jointly $650 monthly or $7,800 annually from social security. In my opinion, this money is theirs, bought, taxed, and paid for. It should not be included in any calculation for income purposes.

If you now want to calculate income, let us not forget that there are a great many frugal people in these United States.

There are also many people who spend every dollar they get, and more. Should the frugal person be penalized because he was frugal? Because he saved a few dollars? There is also the person who is retired, maybe because he had to, who can't live on what is coming in. So he and his wife get a part-time job and earn money within the limit of social security, $4,000 or $5,000. If this was added to their $7,800 social security, should they be penalized for it? It's obvious to me that at least any income factor used in calculating earnings for income tax purposes should be $15,000 or $20,000. At this point gentlemen you may say that this sounds well, Mr. Graham, but where is the money coming from? Before you get to that, may I point out to you that 60 to 70 percent of my town's tax dollars go to the support of public schools. The taxpayer has been asked to pay more and more, and I believe we are getting less and less for our dollar. We have high school graduates unable to read and write. Despite the increase in educational costs, a great deal of this comes down from Federal Government, therefore more juvenile delinquents, rapes, thefts, and all sorts of crimes.

The elderly are being assaulted along the streets. In my opinion this has reached a point where people are so educated that they won't accept a job with minimum wages. These jobs go vacant. If anyone wonders what this has to do with them, let me remind you. It's your taxes that support this, whether you do it through the Federal Government or whether you do it locally, and I ask you what are you getting for it? Why do schools only operate 180 days a year? It's a known fact that anybody that operates a program 5 or 6 days is operating more economically.

Enormous Waste of Tax Dollars

I believe the Federal Government should be reviewing the tax dollars it pours into the educational system. A lot of it in my opinion is wasted money. I might add, a short time ago I read the *Providence Journal*, on January 19, great big headlines on the first page, "Inmates Paid $120 a Week To Get Degrees." Fifteen inmates were involved and it was spread out over a period of 2 years. This isn't my idea of educational money. I don't think we should be paying them $120 a week after they have committed some crime to get into prison. Personally, I think my figures are $120,000 off, but I still contend that nearly a quarter of a million dollars is a bundle of money. I don't object to preparing a prisoner for re-entering civilian life; but I think such spending is outrageous. I will call your attention to another article in the *Providence Journal*, January 16, that quotes Representative Alphonso Bell of California. I presume that our friend, Congressman Beard probably knows him. I suggest you read it in

its entirety. The thing I want to point out to you is that in the last 20 years when the population was increasing by 30.5 percent, and the inflation was ruining our dollar by 83.4 percent annually—pardon me gentlemen—the cost of running Congress has increased by 560 percent according to an article in *Time Magazine*, June 2, 1975, "A New Way for the Aging." There are approximately 22 million Americans 65 years of age or over. You realize that there are more or less the same number of people employed by the various Federal, State, city, town, and municipal governments. To say it another way, for everyone of them, there is one of us.

I recall reading that 200 years ago, 1776, the cry was "Taxation Without Representation." We now have "representation," and I think it's time that we took a hard look at our "taxation."

The entire system needs overhauling. Where moneys are spent in the State, someone should be policing the expenditures and if that be the case then a quarter of a million dollars wouldn't have been spent at the State institutions. They should have a watchdog in their office for moneys which are appropriated that they voted for which they in all probability asked for. When it comes in there, it runs rampant. It is obvious. It must be obvious to you that I feel there is a great many dollars being spent by the Federal Government. I think many of them are spent unwisely. I think if there were less politics and spending and more thrift there would be moneys for better health care, such as medical health insurance.

I would like now to revert back to the subject of taxation for the elderly. A person 65 years old has in all probability been paying taxes to the school system for 45 years. I think it's now time that he be relieved of that responsibility.

FREEZE ON TAXES SOUGHT AT AGE 65

I recommend that towns and cities freeze their evaluation of real estate and freeze his tax rate beginning at the time of his 65th birthday. I would further recommend that the loss of revenue be passed on by the Federal Government.

This evening after writing this article I picked up the Sunday *Providence Journal*. I took a look at an article referring to the boat show. I saw boats selling from $2,000 to $150,000. It occurred to me that I have to pay a tax on my 1971 car, and I need this car to get around in. Why then don't the affluent who can afford these expensive toys pay taxes on them?

For the record, I would also like to refer the committee to the *Readers Digest*, July 1974, page 135; and also *Readers Digest*, February 1975, page 73. Both of these articles refer to ways of saving money by the government. Thank you, gentlemen.

Senator CHURCH. Thank you very much, Mr. Graham. When I first introduced Mr. Edmund Beck, he had a prepared statement, and that statement will be included in full in the record,* and Mr. Beck, if you have anything further you would like to add to your statement please feel free to do so at this time.

Mr. BECK. Not to the statement, Senator, but I do want to thank you and Senator Pell for introducing or rather supporting S. 1183

*See p. 2112.

which is the disability bill. I am sure Senator Hartke must be frustrated because you supported it for 6 years, and passed the bill; but the House didn't do as well.

I have written to Congressman Beard, and I hope he will be able to help us in the House; because that's where it has fallen down. Senator Pell, we want to thank him for S. 2478 which is the Bill of Rights for the Blind, which he introduced last year, and of course we all appreciate it very much. I am sure Senator Church will cosponsor or support the bill.

Senator CHURCH. I certainly will.

Mr. BECK. The local legislators have received a lot of flak here this morning, and I am not here to defend them. I am sure they can do that themselves. However, we do have some legislation, I am sure, Congressman Beard is aware of it. He is a former representative of the State House. That will enable him to alert the Federal legislation; the catastrophic law bill was mentioned quite a few times today.

We have that in Rhode Island, and many other laws that we can't get federally, so I would like to point that out. I wouldn't want Senator Church to go back to Idaho or Washington and think that poor little Rhode Island can't do anything.

Senator CHURCH. Actually, I have had a very favorable impression of Rhode Island in every way, and I will take that back with me. This has been a very good hearing. I have problems with a plane because of the weather. I am told, and I hope to hear from each member of the panel; but after that if I have to leave please accept my apologies. Senator Pell and Congressman Beard will complete the hearing so everyone who wants to be heard will have a chance. I am running out of time, so that's my problem.

Mr. BECK. I had hoped that someone would read my statement, and then I could add something to it, but except for that I don't have anything at the present time to add to it.

Senator CHURCH. Thank you very much for your statement, Mr. Beck, and we will come back to you again later if you think that you would like to have your own statement read.* But let us go on at this time to——

Mr. BECK. Excuse me. I would like to say something else. I am greatly privileged and honored to be on the same panel, on the same platform with Senators Church and Pell and Congressman Beard.

Senator CHURCH. Thank you. We are pleased and honored that you are here. Rose Tritendi, please. Rose? I have an announcement here. Evelyn LaBonte should go to the back of the auditorium where a member of her party is waiting for her, if she is here in the audience.

You may begin, Rose.

STATEMENT OF ROSE TRITENDI, PROVIDENCE, R.I.

Mrs. TRITENDI. Senator Church, Senator Pell, Congressman Beard, I am very happy to be here to testify for the seniors. One of the big problems in Rhode Island, and I guess it covers the whole national country is the utilities, and I am going to speak on utilities. One of the biggest problems of the elderly in Rhode Island is utilities. Many of their utility bills have increased by more than 100 percent in 2 or 3 years. These fixed, low-income people cannot pay their

utility bills except by doing without food, clothing, and medicine. A lifeline rate may make it possible for them to have a basic supply of a vital necessity at a price they can afford. Why should utility companies get bigger and bigger profits while elderly people are freezing in the dark?

Poor people are using less fuel and paying bigger bills so the investors can keep getting their high rate of return, and the utility companies get bigger and bigger corporate profits and pay smaller and smaller corporate taxes.

Shut-offs of utilities is another serious problem of fixed income elderly. There is a need for a more human treatment of people who cannot meet the rising cost of energy. The companies should set up their policy for their offices that would make it easier for elderly people to catch up on heavy winter bills or pass due bills. For instance, a woman in Pawtucket, for example in her seventies owed $150 to Blackstone Valley Gas. She was shut off in the summer. When winter came again she could not afford what the company demanded to have it turned on again. She had to move. That is the biggest problem we have here in Rhode Island, and I think the whole Nation has it. I have some bills here which compare to last year, and all the fuel adjustments and the rates that we got for this year——

Senator CHURCH. Rose, I have a suggestion to make. I hope we can find a way to do this nationally everywhere. I don't know yet just how to approach it; but I can't make any sense out of the fact that here we are talking about the energy crisis, our increasing dependence upon foreign oil. There is a big monopoly called the OPEC cartel that sticks us with this provision, and this was 6 years ago, and that has nothing to do with the cost of oil. They are raising the price of Saudi Arabia, and we are paying $13 or $14 a barrel, so we talk about conserving energy. Yet we have a rate system that operates just the other way around. The less you use, the more you pay. The more you use the less you pay. Why can't we turn that around? People that are limited in their income and who have got to watch their bills, those who turn off the lights and use only as much as they need to get by on—they ought to be charged the cheapest rate. People who can be extravagant with their electricity and don't care how much they use—they ought to be charged with a higher rate.

We just have it upside down, and we ought to be able to turn that around. It would make sense from every standpoint.

TELEPHONE A BASIC NEED

Mrs. TRITENDI. Another item which is affecting the elderly is the telephone—many elderly cannot afford a phone. That's a must. An elderly person has got to have a phone. As you know, Senator, they may get sick. They are up in their third floor room. They are all alone. If they have a phone whenever they get sick they could call. But a lot of them have to go without it because they cannot afford a phone.

Another thing they have trouble paying their bills. After the general assembly amended the general laws, chapter 256, to authorize the Public Utilities and Common Carriers to give free or further reduction

rates to elderly, that was H.R. 2035, that was passed in 1971. New England Telephone gave a $1-a-month discount to the elderly. The law is still on the books, but the discount was taken back. This is a question that I have been asking myself. Why? Why have they done this? Special application forms were provided by New England Telephone and for a while some elderly got a little relief. Some people who must have phones have to do without. Better communications are needed between consumers and utility companies. There should be at least two low-income people on the board. This is what they are not doing. They have their own people, the big shots, you know, the stockholders. They have nobody from the low income, the elderly, which they should have being represented.

Fuel adjustment charges which are automatic should be outlawed. The utility companies should have to justify any increase in prices, and the Public Utility Commission should regulate fuel adjustments the same as they do the rate of use for services. The consumer should not have to pay the whole cost of fuel price increases. This is what's happening. They have to pay the whole price, which should not happen, especially for the elderly. They are not giving them any relief at all. There is plenty of evidence to show that the utility companies do not in good faith try to get cheaper fuel for themselves, and there is good reason to suspect that with the price of fuel charges, utility charges. The consumer pays the highest price possible with the fuel adjustment charge. We should do away with all fuel adjustment charges, or at least change the law so they are not automatic.

Senator CHURCH. Thank you very much, Mrs. Tritendi. Congressman Beard?

ROYALTIES ADJUSTMENT WOULD LOWER FUEL COST

Congressman BEARD. You mentioned the fuel adjustment charges. This has been a tremendous drain on not only the elderly people but really on all the people of the State as well as around the Nation in various degrees. I think if the major corporations, like Gulf Oil and other major corporations had a royalty adjustment of what they pay to foreign countries to extract this oil, we would be a lot better off in this country. For example, $500 million to the country of Angola as a starter. If there was an adjustment to royalties of what they pay in order to extract oil, we would be better off.

Mrs. TRITENDI. Congressman Beard, I am going to ask you one question. Would you see to it that the dollar discount that they did take away from the elderly in Rhode Island, will you see to it that there is something done about that? The law is still on the books.

Congressman BEARD. That would be a State issue now. It is out of my jurisdiction; but I supported you the last time on that. I am very sympathetic on that issue. There is not too much I can do. That's up to the telephone company.

Senator CHURCH. Ladies and gentlemen, my time has run out. I am sorry I cannot stay; but the whole time you have been awfully nice to me. I appreciate the hospitality that you have greeted me with in Rhode Island.

Senator PELL [presiding]. Is Bill Lynch here?

Mr. LYNCH. I am here. I will get Senator Church down there.

Senator CHURCH. All I can say is I am leaving Rhode Island in very competent hands. Thank you very much for attending.

Senator PELL. This has been a great hearing. I want to make sure that everybody has an opportunity to express themselves that would like to, and in this regard, I am referring to Mr. Beck's statement. He is an old friend of mine. I will put his statement into the record. He might like to digress and just make a few points himself. I think it would mean more if you said what was in your heart. The statement will be inserted in the record.

Mr. BECK. All right, Senator Pell, thank you. What I have in the statement is in reference to the handicapped as well as the elderly. The cost of institutionalizing handicapped are 4 times as much as if they were in low-income housing. They have a housing project. It is called Highland Heights which is in Fall River and is for the elderly and handicapped. They have nurses, doctors, all sorts of health care, quality treatment, and food, which of course is on the premises for those who want it, and don't want to use their own facilities and apartments. It is so much better for the people to be in this environment than it is to be in an institution.

They made a study of 26 people that were transferred from nursing homes and institutions into Highland Heights for a whole year. They studied them and found that they have done so much better at Highland Heights living in independence and freedom. Here they are able to socialize with other people and are able to go out and do things as other people do. Here in Rhode Island we are very fortunate to have Lieutenant Governor Garrahy interested in the elderly, the handicapped, and the people in the State, and he has conceived the idea for Rhode Island, and we hope we will have such housing here in the State.

I think that about covers it, Senator Pell.

[Mr. Beck's prepared statement follows:]

PREPARED STATEMENT OF EDMUND BECK

Historically, when decisions were made concerning the need for housing the public, disabled people were not considered. Their needs usually did not enter into the calculations of the developers, the designers or the officials of the various levels of government. Consequently, millions of disabled people have had to find their shelter somehow, somewhere, often in most uncomfortable and undesirable situations. Many disabled people have been forced to live out their lives in dull and dreary institutions because no alternatives were available. For many years, the establishment of institutions was accepted as being the best and most economical means of doing something for and with the handicapped. Consequently, many young and alert young people have been forced to spend their lives in nursing homes surrounded by ill and elderly people.

There exists a need for 10,600 elderly public housing units in the State, and 2,750 moderate-income units. These figures come from the 1973 Department of Community Affairs report, "The Elderly and Their Housing."

Approximately 15 percent of Rhode Island's population (represents the noninstitutionalized population) are physically handicapped.

Approximately 26 percent of Rhode Island's physically handicapped citizens (represents the noninstitutionalized population) are 65 years of age or older.

Approximately 11 percent of Rhode Island's physically handicapped, permanently disabled population are 65 years of age or older. The majority, 77 percent are between the ages of 45 and 64 years. These figures come from Summary of Findings of Rhode Island Department of Community Affairs.

Care, whether good or bad is most frequently custodial rather than restorative and goal-oriented. Eventually, most of these patients are sequestered in institutions or isolated in their homes, no longer considered "patients" with short and long-

term therapeutic goals, but rather regarded as invalids requiring only supportive care with occasional crises intervention.

LOW-INCOME PUBLIC HOUSING

The Independent Living Authority, a nonprofit corporation of Rhode Island was formed for the purpose of developing low-income public housing specifically designed to meet the special needs of the elderly and handicapped individuals and families. It will be a 14 story building containing 200 one and two bedroom apartments. Each apartment will be a private unit containing all of the facilities one would anticipate in a public housing development. Architectural barriers will be eliminated.

A nurse on the premises will respond to an emergency alarm system originating in each apartment. Routine nursing services will also be available on the premises. We will seek cooperation from the community and agencies to help furnish nursing, homemaker services, occupational and physical therapy, social services, entertainment, and recreation and other services.

It would be to the advantage of the occupant to live in an environment of freedom and independence. They are also expected to have easy access to public transportation, doctors' offices, hospitals, shopping center, etc.

Independent living is not merely a pipedream. Due to the foresight and imagination of Dr. David S. Greer, associate dean for medical affairs at Brown University, there is a model residence already functioning, a few miles outside of Rhode Island in Fall River, Mass., at 100 percent capacity, since September 1970, with a waiting list of eligible tenants.

The tenants of Highland Heights range in age from 21 to 95 years although 75 percent of them are 62 years or older.

There are no architectural barriers there. The elevators are large enough to accommodate multiple wheelchairs. Everything in the kitchens and bathrooms are designed at suitable heights to accommodate people in wheelchairs.

A significant point is that a project such as Highland Heights satisfies both housing needs. The handicapped can live independent lives, free of institutional restrictions and architectural barriers. The elderly are also provided for far better than many would be in conventional public housing, since so many of the elderly are also handicapped.

Senator PELL. Thank you very much. Congressman Beard, you may have some questions.

CONGRESSIONAL PRIORITIES TWISTED

Congressman BEARD. I think your point is well taken. Again, I am kind of embarrassed the House hasn't done as well for the legislation you referred to earlier for the handicapped. I can assure you that as I serve on the Select Committee on Aging the needs of the handicapped and elderly will be served, we are certainly doing the best we can. Unfortunately, sometimes the priorities are twisted in the Congress. I have stated earlier that with so many senior citizens in this country, and a majority of the Congress almost, individual members who are senior citizens, we should have a lot more progress. Perhaps that will help not only the elderly but the handicapped people.

But one thing—I did have a change, and you will certainly appreciate this. Again, for the handicapped children we did pass legislation in 1975 that would eliminate some of the architectural barriers in schools and to give youngsters who are handicapped, disabled, an equal opportunity for an education.

I was very, very happy that we had that chance, and I participated again along with Senator Pell on that legislation.

Mr. BECK. There is no reason for you to apologize, Congressman Beard, because you have not been in office that long. We have a bill in there, H.R. 821 which was introduced by Representative Burke from Massachusetts, and I am sure you will do everything in your

power as well as Congressman St Germain who has already told us he would, and with your good work there I am sure we will get it through.

Senator PELL. As I think back 4½ years ago when we had the last hearing of this committee in Rhode Island, I realize that conditions are still very poor, but they are better than they were, and they are improving, thanks to the work of many officials at all levels of government, and we should also bear in mind the situation throughout the country is worse than it is here. There are very few States, for instance, which even have off-hour busing, public transportation. Our programs are in advance of the Nation, and our job is to try and improve it on a national level. I received a letter from Mrs. Susan Tomasso describing the work that the RSVP program has done, and I will insert this in the record.* Now, we will hear from the interested citizens who are on the floor. This lady was first, and if you will identify yourself.

STATEMENT OF SUSAN TOMASSO, WEST WARWICK, R.I.

Mrs. TOMASSO. Senator Pell, I am from West Warwick, and I am very proud to be in RSVP and Community Action of Warwick. I am glad to get out and proud of what you are doing, and I hope you keep us going by appropriating money for more buses and all that.

Senator PELL. You are Mrs. Tomasso, are you not?

Mrs. TOMASSO. Yes.

Senator PELL. Thank you very much, indeed. Your letter will be part of the record as well.

Mrs. TOMASSO. Thank you very much.

STATEMENT OF BARBARA L'HEURAULT, PAWTUCKET, R.I.

Mrs. L'HEURAULT. My name is Barbara L'Heurault from Pawtucket Inner Cities Senior Citizens Group. The program is too limited a coverage, and too expensive, because the deductions that must be paid before coverage begins. Part A, hospitalization coverage costs $39 monthly unless you are covered by social security, in which case it is free.

Medical coverage, part D, costs $6.70 per month. If you are hospitalized you must pay $92 before coverage begins. If you are hospitalized for over 60 days you must pay $23 per day for days 61 through 90. Medical coverage, part B requires a deductible of $60 before coverage begins. Many services are not covered. Medicare will not pay for nursing care in the home, drugs, and prescriptions, homemaking service, eyes, ears, for glasses or hearing aids. For those reasons our group urges your support for comprehensive Federal health programs as would be provided for in the Kennedy-Corman bill.

Senator PELL. Thank you very much.

STATEMENT OF LOLA GENDRON, CENTRAL FALLS, R.I.

Mrs. GENDRON. My name is Lola Gendron from Central Falls, and I am interested in legislation which relates to the Social Security

*See appendix 1, item 10, p. 2135.

Administration policy of collecting overpayments when it is clear that the recipient is not deliberately at fault.

Since 1971, I have had several problems with the Social Security Administration regarding overpayment benefits. I have with me copies of correspondence dealing with these problems which I shall give to the committee.* During the year 1971 I had several disputes with the SSA about the amount of my benefits.

I even contacted Senator Pell's office for help. On January 13, 1972, I received a letter from the SSA stating that I had received $164.80 more than I should have. The reason for the incorrect payment was in their words caused by a special action which was to expedite payments to me. The letter explained that I must send a check for that amount within 30 days which I did. I sent the check even though the mistake was entirely the fault of the Social Security Administration. In May 1973, I received a letter from SSA pointing out that I was overpaid $500 because I had worked in 1971. Since they did not withhold enough in 1971 they would withhold $500 from my checks of May through July of 1973. This was 2 years after this mistake on their part. In August of 1974, I received another letter from the SSA. The letter claimed that they overpaid me $5.30 a month for a period of over 1 year.

Administration's Blunders Cause Hardships

These overpayments continued from January 1973 through May of 1974. This overpayment was entirely the fault of the SSA. There was no way I could have known that these checks were higher than they should have been, but the letter said they would recover the money by taking it out of my next few checks. With the help of Project Hope, Central Falls, I protested this action. No money was taken from my checks, and I assumed that the matter had been dropped. In November of 1975, I received another letter regarding the same, old, alleged overpaid benefit. The letter said that they would withhold my January 1976 check and take $98.78 out of my February check. This would mean I would repay $365 because of a $105 mistake made by social security. With the help of Project Hope I once again protested. I filled out several forms, answered many questions, and signed several statements.

I was told by Mr. Kempf of the Pawtucket Social Security Office that there was a possibility the SSA would waive its recovery of the benefits paid me.

It was almost 3 years ago, and I believed paying it back would be a hardship. I feel anyone living on a fixed income should not have to pay for a mistake made by social security. I still have not heard about my request for a waiver. I request that this system of harrassment of innocent recipients of mistakes made by SSA be discontinued.

In each of the instances I told you about the SSA has not denied that it was their fault. At no time did I know that the social security checks reflected errors made by the SSA, but I was expected to pay for these errors.

*Retained in committee files.

I am only 1 of millions of social security recipients, and I am sure that many others have similar problems. I feel it is up to Congress and this committee to develop legislation which will protect social security recipients from this needless aggravation. Thank you.

Senator PELL. Thank you Mrs. Gendron. Also, the Social Security Fairness Act that I have introduced and Congressman Beard has cosponsored and Senator Church has cosponsored, if it is passed it will resolve some of these problems that you mentioned.

Mrs. GENDRON. Thank you.

Senator PELL. Sir?

STATEMENT OF CHANDLER W. JOHNSON, PROVIDENCE, R.I.

Mr. JOHNSON. Thank you very much, Mr. Chairman. My name is Chandler W. Johnson. I am an elector of the State of Rhode Island, and Providence Plantations. I am a resident of Providence, and I appear here without presuming to represent anybody else but myself alone. I am what has been recently labeled as a senior concerned citizen, and you, Senator Pell, more importantly in this respect, it is necessary, Congressman Beard and I have known each other for years, beginning with his activities in the local general assembly before he went to Washington.

So that if any representations or whatever regarding me without going to the CIA, I hope they haven't caught up with me yet. I don't have a telephone so I am not afraid of having it bugged now, and that's another reason why I am glad I don't have a telephone. Without being repetitious of what I have already heard, I have these very few short observations to make. But with your indulgence I would like to add a short prefatory remark.

Senator PELL. I would get on with your observations, and also talk right into the microphone.

Mr. JOHNSON. I can't do it, and with all due respect I would prefer not to do it until I have expressed my appreciation to you and your colleagues on the committee for the opportunity afforded here, and I am sorry that Senator Church had to leave before I could give it to him straight from the horse's mouth, and I appreciate the service that you three gentlemen have been doing during your service in the Congress.

Now, for the few points. In connection with the facilities afforded to some of us senior citizens in the housing facilities, I am accustomed to appearances at hearings like this, and I have been informed that it is the members of the committee that are supposed to be the beneficiaries. I am not used to these modern technological contraptions. I have been accustomed in attending such hearings as this that the members of the committee are the individuals who are supposed to be the beneficiaries of whatever contribution the people want to make. So as far as I am concerned I am addressing my remarks respectfully to you gentlemen on the committee, and through you to your colleagues in the Congress. I am a resident of one of the housing authority facilities for the elderly, and I had an experience just last night that I feel should most respectfully be brought to your attention for whatever influence you may have in straightening the problem out, and I am one of those political heretics who believes that whatever is good for Rhode Island and its citizens, if it is good, will have its application for the citizens elsewhere in the country.

Tenants Cannot Afford Telephone

There is no pay phone in that facility up there available to the tenants like me who can't afford the luxury of a telephone. So I had to go down and in response to a message delivered to me by the local police department, to put in an emergency call to my son who is serving in Germany, and when I went downtown to try to make the call in response to this message, at one of the pay phones down at Kennedy Plaza, there was nobody that I was able to reach in the telephone company on duty at the time between 8:30 and 9 o'clock who could unscramble the numbers, and I have never indulged in the numbers racket anyway. So I couldn't do it myself. So I decided to go up to the police department headquarters from whence I got the message to see what they might be able to do about it.

And, fortunately, I am very grateful for the assistance that was given me there at police headquarters, Lieutenant Murray, particularly. They have ways and means of breaking through and overcoming obstacles like that. So that in about an hour's time they had the same experience I had; but they were able to overcome all the obstacles the telephone company threw in its way, and I finally got through to my son. So my point is that to me whatever the technical obstacles there are in the way, and it was explained to me that no paid telephone could be installed in that facility because it isn't open 24 hours a day for the public, and I don't care under the circumstances about the public generally with all the pay phones available to them, if they need them elsewhere; there should be a paid telephone in the facility for the likes of the tenants like me who don't have a telephone.

Senator Pell. Thank you.

Mr. Johnson. Just a minute. You aren't through with me yet, with all due respect, Mr. Chairman.

Senator Pell. There are several others that wish to make remarks, and maybe you could digest your thoughts.

Mr. Johnson. I have. Don't worry. I have faith. I hope you have.

Senator Pell. Excuse me. I must interrupt here. The Warwick Community Action Bus must leave, and would Mrs. Greene please come to the elevator or she may be left behind. Mrs. Greene?

Savings At Expense of Health

Mr. Johnson. More importantly, and with whatever national effect it might have, you people in Congress now have the administration's—more particularly the President's—budget before you, and I want to record officially for the record my protest as strongly as I can make it, and through you to your colleagues in the Congress that the priority for savings should not be made in the area of health, education, and welfare in view of all the benefits that is accorded to the Defense Department in preference. And the protest that the President would make about not having money available, the savings in the Defense Department budget since it should not be our concern to look after the people elsewhere in the world before we look after our own here at home. The savings in the Defense Department budget to our side of the budget could more than make up the funds necessa-

ry to continue and improve the benefits in that health, education, and welfare side. Thank you very much, Mr. Chairman.

Senator PELL. Amen.

Brother WINN. I am Brother Charles Winn, again. I want to make a brief comment on the public utility situation. I know from attending many, many hearings, the public utility people, the Public Utility Commission hearings, and a great many other people are aware of Brother Charles Winn as a frequent testifier at the hearings, the rate hearings. I have been to Washington to see Mr. Nassikas at the Federal Power Commission office, and it is to that point that I address the national representatives, Senators and Representatives from Washington. I don't know what influence Congress has on the departments like the Federal Power Commission. I know when we wanted to see Mr. Nassikas, Senator Pastore got on the phone and he said to him, "These people from Rhode Island want to see you now," and after a brief pause he said they want to see you now, so I presume you have some influence in getting through to them. What I am getting at is this. The Federal Power Commission has on several occasions overridden the State Public Utilities Commission in New England, particularly, where the power companies operate a conglomerate that covers the entire area. The electric companies and the gas companies are interstate, and this probably is true in many areas of the country. But the Public Utilities Commission is a State regulatory organization.

COOPERATION NEEDED AT ALL LEVELS

Without cooperation from the Washington office and without regional organization, it is an extremely difficult if not impossible task for the State regulatory agency to make effective decisions.

This is one of the problems of the Public Utility Commissioner to be able to make decisions that will stick, because we are dealing with the electric companies for example, and there are seven of them in New England, all under the New England Power Co. The parent company controls the prices, the charges for services. Rhode Island does not produce but a very small fraction of its electrical power, and for the Public Utilities Commission to make reasonable regulation of Narragansett Electric, or Blackstone Valley Gas, or any public utility that operates outside of the State, is an extremely difficult job. I would say, I would ask the representatives of the Senate and House to use whatever power you have to get the Federal Power Commission to cooperate with areas like New England so that we could arrive at a reasonable decision on rates. This is my main point.

Congressman BEARD. Brother Winn, recently the Federal Power Commission granted an increase for Blackstone Valley and I vigorously protested in my office because I feel that our own case here with the utility being before the Public Utility Commission there is always a chance for the public in most cases to be able to testify.

In this case it is almost impossible for people, unless they read the fine print in the paper to know about it, and, secondly, the only chance would be in Washington, and this would rule out 99 percent of the people in the State of Rhode Island. I am very sympathetic to what you are saying. I have vigorously protested the procedures of the Federal Power Commission.

Brother WINN. At the time we went to Mr. Nassikas; we asked him to hold meetings in Providence, and he said this was impossible, and he left to catch a plane to Montana. That is a long way from Washington and much further away than Boston or Providence.

Congressman BEARD. I agree.

Senator PELL. Thank you very much, Brother Winn.

STATEMENT OF CYNTHIA NEAL, PROVIDENCE, R.I.

Miss NEAL. My name is Cynthia Neal. I am asking for a better clarification of the medicare benefits and limitations. I feel very strongly about this, particularly of the clause dealing with custodial care. My mother is 86. In 1952 she started to carry private medical coverage to take care of her in her old age. She has continued to carry it; but when medicare came, the policies which costs between $400 and $500 a year were tied into medicare, which comes under, as defined, "custodial care." So she is not able to collect any of her insurance moneys, and I think that other people may have this very same problem, and I think it's very important that the medicare benefits be more clearly defined, and particularly the clause on custodial care.

STATEMENT OF RALPH PERROTTA, PROVIDENCE, R.I., FEDERAL ADVISORY COMMISSION ON LEGISLATION

Mr. PERROTTA. My name is Ralph Perrotta. I am a member of the Federal Advisory Commission on Legislation. In fact, I am the only New England representative on that committee. I would like to address myself to the energy policy on New England, because I think what's happened is a much larger share of the burden of the so-called energy crisis has been put on the backs of New Englanders, and on Rhode Islanders in particular. While the Consumers Price Index showed that prices in general went up 11 percent in the years 1973 to 1974, the increase for electricity was 18 percent, and the increase for fuel oil was an astounding 5 percent for New England. When you consider that New Englanders have much colder winters than the rest of the country, that means that we are paying huge fuel bills far out of proportion to what people in the United States generally are paying. At the last meeting of the Energy Administration Committee, I asked John Hill, who is a deputy director, what he is doing to come up with a pricing policy to distribute the burdens of the energy crisis more fairly than they are now, and I think the short answer is "nothing." The administration's policy now is to equalize prices of fuel oil around the country and have different kinds of fuels around the country; but for New England which relies heavily on one of the most expensive fuels, namely fuel oil, as opposed to natural gas, and coal, and so on, that policy is an unfair policy, and needs to be changed. Thank you.

Senator PELL. Thank you, Mr. Perrotta.

STATEMENT OF HAROLD CORRIS, PAWTUCKET, R.I.

Mr. CORRIS. Mr name is Harold Corris. I live in Pawtucket, R.I. I only arrived at 11 o'clock, and if this has been brought up I will retire. Has any question been brought up about page 20 in the social security booklet relating to self-employed persons?

Senator PELL. No.

Mr. CORRIS. I am self-employed as a manufacturer's representative which I set up years ago because I felt that when I reached a certain age if I worked for one company I might be laid off, or retired, and at a certain age would be unable to find another job. I represent three companies. I sell raw materials to the jewelry factories. I work on a commission basis only. I pay my own expenses, receive no pensions, and no one pays my social security except myself.

On page 20 in the social security booklet very few people that I have spoken to know anything about the restrictions on the hours of labor. My doctor tells me not to retire. He said to keep working. If you retire you get sick. What I want to do is as my doctor says—to begin to cut back and work part time—but to work the rest of my life if possible. I contacted social security; but I read the law thoroughly first. A self-employed person like myself, and there are many around the country, and that includes many attorneys whom I happen to know, can only work for 45 hours per month which means if I wanted to drop one of my companies or two and work part time I have been told by social security they will check the time I leave my house. They will call my companies and see what days I report in to the factory. They will check my customers. In other words, I cannot work and cut back and draw social security. As a self-employed person I have to pay both the employer and the employee share of social security. The average person has a job. The employer pays half of it. This past year in 1975 I paid $1,042.80 for social security. In 1976 I will have to pay somewhere between $1,100 and $1,200. I have been paying since social security laws started. I will probably never collect a dime. What I want to know from you gentlemen now is the answer to this question, and I believe I wrote to Senator Lowell Weicker, and Senator Barry Goldwater who both are trying to sponsor it. I want to know why a person is restricted to 45 hours a month if you are self employed, which means approximately 11 hours a week, and no company is going to allow a person, particularly salesmen, to go out and work 11 hours a week.

I want to know why this law cannot be changed so that a person who pays since its inception and it is my money, should not be able to work if he wants to at 65 and draw social security. If I want to work part time and work five mornings a week, it's my money, and I want to have the right to work instead of not working, and I feel that this social security law should be changed. I am directing my question to both of you gentlemen, because I know that some of the Senators, particularly Senator Lowell Weicker, and Senator Barry Goldwater, who happens to be Republican, and Weicker a Democrat, have been trying to get this law changed for years, and have come within one or two votes, I believe, and I feel that this is very important.

I have talked to a lot of other people, other salesmen, and I can't see the sense of making me work only 45 hours a month if I want to work more.

Senator PELL. Two thoughts, two points: First, you will be glad to hear I am a cosponsor of the Goldwater bill. Actually Goldwater and Weicker are both Republicans. It is a darn good bill. I am glad to be a cosponsor of it.

NEW PENSION LAW

Second, there is a new pension law. There are provisions whereby you can set money aside, defer tax payment.

Mr. CORRIS. I am not interested in the money. I want to work.

Senator PELL. I can't promise you any more than I myself am cosponsor of it.

Mr. CORRIS. One more fact, am I taking too much time——

Congressman BEARD. Can I make a brief comment?

Mr. CORRIS. Sure.

Congressman BEARD. Trying to understand without having the material in front of me which you expressed——

Mr. CORRIS. Page 20——

Congressman BEARD. I don't have that. I see what you are saying, because you happen to be a self-employed businessman you are being punished.

Mr. CORRIS. That's right.

Congressman BEARD. As far as I am concerned I will take a look at this legislation. I have always supported legislation that's going to give the elderly person an even break. Just as I have introduced legislation to raise the amount of money to $6,000 before a person is penalized, where they have to pay like $1 or $2.

Mr. CORRIS. I don't care if it's $6,000 or $10,000, you can't work more than 45 hours a month.

Congressman BEARD. There are so many inequities in the law. I support Senator Pell, being a cosponsor; I will be happy to introduce it if you would send me a written statement on that to the House in Washington, I will be glad to introduce that in the House.

Mr. CORRIS. When the social security law was passed it was passed under the assumption that everyone reaching 65 would have a pension, working for someone, he would get out of the labor force and let the young people work. The other bad feature about the social security law which is being evaded by many people, I know many of them, professional people, businessmen, is they take the social security law which says you can have all the income you want from dividends in stock and you can still draw social security. So many professional men and many businessmen take their company, and you can investigate this, they turn the corporation over. They draw themselves off the payroll, draw no money. Someone else runs their business; but at the end of the year they can draw $150,000 or $300,000 in dividends from the company, and they are still drawing social security.

Senator PELL. The reason for that is that they pay into social security.

Mr. CORRIS. So have I paid in. I can't draw. I can't work. I want to work.

Senator PELL. Thank you. Before the next person, if you will forgive me, I would like to introduce Mrs. Brown, who was asked to come here. She is considerably older than you are, she is 92. I thought we ought to ask her to speak. Maybe you could bring the mike over to her. Excuse me. All of you may have read the article about Mrs. Brown. It was in the *Providence Journal* this very morning.*

*See appendix 2, item 2, p. 2137.

STATEMENT OF SIDONIE BROWN, PROVIDENCE, R.I.

Mrs. BROWN. Thank you, Senator. I have been asked to come here today to thank Mrs. Eleanor Slater. She is the lady that's in charge of the elderly, because she had heard that I was an invalid to a certain extent, and that she saw to it that I got material brought to me so that I can sit down all day and work and make all kinds of fancy things, anything at all in occupational work. I do this for the people my neighbors, for the children, and for the elderly that come to me. I have people that send me material. I cannot mention their name because they would probably be invaded with people going up there looking for them, but they bring me the material, and I hook rugs. I crochet rugs. I give them all away. I make them by the hundreds because I am very fast with my hands. If somebody sends me yarn, I take it and make shawls like the one that I have on, and I make all kinds of fancy work. I make afghans. I make booties, and I make bonnets for babies. If they bring me the yarn I make jackets, little afghans for the baby cribs, and anything anybody wants made, if they bring the material. I do beautiful needlepoint which I have learned how to make in Europe. I am Belgian born, but an American citizen, and these people bring me the material. I will manufacture and make beautiful designs for them.

Some people bring me the canvas, buy me the yarn. I make their needlepoint the way it was taught to me in Europe. Anybody that wants to learn to do needlepoint can come to my apartment and I will sit down and teach them to do it, anything, even making oriental rugs which I know how to make, which was taught to me in Europe in occupational work. I thank people very much that come to my house. I will give them anything that I made like bonnets, little booties for children. I make little booties for people. They come. As long as they bring me the material, because I cannot afford it. I live on social security, and I cannot afford to buy the material, but everybody is welcome if they have the material to bring it to me, and I will make it. I will make something, even if it's a half a yard of elastic, I will make something out of it. I thank you very much.

Senator PELL. Thank you, Mrs. Brown. You epitomize the thought that you live and receive by your giving to others over the years in your wisdom and age.

Mrs. BROWN. I don't know what they said about me in the article. I will have to read that.

Congressman BEARD. Mrs. Brown, Congressman Beard. I think what Senator Pell said is true. You know, I notice the newspaper mentions the longevity of your family. I believe your grandmother lived to be quite elderly.

Mrs. BROWN. Yes, my great-great-grandfather was the inventor of the strike-anywhere match. I only have two left. He was a landowner in Belgium, an *Elano*, which in English spells *Elano*. Franklin Roosevelt was a distant relative of my mother. So, therefore, when he came to this country he did not speak English, and when he told the people what his name was, and when Sarah was born she was named not Sodonie because in this country they make mistake. They want to call me Sodonie. I told him I was 11 years old when I landed in America. My name is spoken with a soft "i," not a "y."

He said, what are you talking about? I learned English in Belgium. I learned all my foreign language in Belgium. I have done a lot of work. When I hear people speak in German about something in this country I always reported it to somebody in authority. When I heard in Italian or in Spanish I went right to town on them. Flemish birth, which I am, and I thank you very much.

Congressman BEARD. I am only a baby looking at your longevity. It's tremendous. Let me tell you this, we are working to try to improve all the elderly people's lives in this country, and we will do our utmost. It's wonderful to have a person like you who can come before us. When you read the story, I would suggest everyone get a copy of the newspaper and read the life of Mrs. Brown. I think it's a tremendous life, and it's a tremendous story of what has taken place in your life.

Mrs. BROWN. I sit all day long on my chair, and I am desperate and most comfortable. I don't go out very much. I am thankful to the Jordon School. They allow us to go shopping. They pick us up. It makes it nice. I couldn't carry bundles anyway. Sometimes I go to Mrs. Eleanor Slater's office to see if she's got anything I can use, a little bit different, to make something pretty. They bring me back. They always take me home. They get mad if I take the bus. I should call them up, and they will pick me up to go pick my things out.

As I say, people are good to me.

Congressman BEARD. God bless you, dear.

Mrs. BROWN. As I am diabetic and arthritic, I am ready to sit down. Thank you very much.

STATEMENT OF DAVID MALONE, SOCIAL WORKER

Mr. MALONE. David Malone, and I am a social worker. I deal with the aged on a daily basis. I have found with my experience working with this group of people that they are in need of many things—not only of money. In their economic situation it is a problem. I feel they need help in the medical area, for example, in homemaking. I feel that homemaking services should be paid for by medicare, because a lot of these people have an income of social security which makes them eligible for homemaking payments through public assistance. They have to dish out money for someone to come in and cook and take care of them. So I feel that medicare should include homemaking services to be paid for the elderly or even the disabled who are receiving social security payments. I think it was Fred Creighton, he mentioned one of the problems during the first panel discussion. Many people are eligible for various programs. They don't know anything about these programs. Believe me. I deal with them every day. I feel there is a shortage of staff for private and public agencies.

I think that something should be done, also, with the staffing of these people to go out and see the results of these programs, social workers, aids, just interested volunteers, or whatever. I think title XX of 1972 or 1973 by Congress, services for the elderly, the blind, families under a middle income limit, I feel that the stress in Congress should be to increase funding to the various States to provide more staff for public and private agencies to get to these people, and

seeing that these people are doing all right in the community. Thank you.

STATEMENT OF FLORA WARE, CHARLES PLACE TENANT ASSOCIATION, PROVIDENCE, R.I.

Mrs. WARE. Senator Pell, Congressman Beard, it is my pleasure to be here. I represent a group of senior citizens in an apartment complex. It has been subsidized. It has been of great concern to me, the situations that have existed in this particular complex for the services they pay for, the rents every month. The complaints are ignored to a certain degree. They have been recognized and they have been checked, but it is inconsistent. The checking is inconsistent, sir. They are paying an increase in rent in the past year of $21 to $22, which has been denied them even though they are the most cooperative group of people I have ever met. Our citizens and our people are very cooperative to everything we propose as an organization. I can bring them social activities. They will cooperate and provide great generosity, sir, to any mass that may be brought into the building, which I have unfortunately been able to bring them only twice in the past year. We now have conditions in this building where we have a recreation room which is unusable because of inadequate heat. I ask you—where money is subsidized by the taxpayers in Rhode Island, why do my senior citizens have to be refused activities in a recreation room that has inadequate heat? We have lived in this building, sir, for over a year. I am greatly concerned for my people. I know others in other buildings must have other complaints. I know this; but my concern is with the people I represent, and I have taken this opportunity that you have given me to speak up for them. I am not quite as old as they; but I am very concerned because the time is coming when I, too, will be in their position, and hopefully, God grant that, someone else may be younger than I. Then they will speak up as I am today.

Congressman BEARD. Would you contact my Providence office and explain the dilemma, and I can assure you we will get to the bottom of it?

Mrs. WARE. I spoke to a Mr. Newmeyer. He is in your office. I will check it out for you. If it is a——

Congressman BEARD. If it is a State problem, or if it falls under Federal jurisdiction, one way or the other we will assist you.

Mrs. WARE. Please don't make me start at the bottom, again.

Congressman BEARD. You start with my office.

Mrs. WARE. I am already near the top. I won't disclose the names of the agencies to whom I have approached and who have tried to be helpful; but I have gone through State, city and some Federal, and I would ask that you give me a little extra consideration, knowing that I have gone through these aggravations. Yes?

Congressman BEARD. Right.

Mrs. WARE. I will contact your office.

Congressman BEARD. I am making my office available to you, if we can assist you.

Mrs. WARE. Thank you very much.

Senator PELL. Thank you very much for being a very patient and interested audience and participants. I think this has been a good

hearing. It is only too bad that President Ford's budgetmakers couldn't have been here listening to us before they dreamed up his budget. I completely agree with the gentleman who spoke about the law of priorities in his budget. They should have done this rather than appropriate money for defense in the hardware sector; they should have appropriated more for the human, aging, health educational sectors, and this is the direction that many of us in the Congress will seek to push the budget into, to carve the budget more along the needs and true desires of our people. Congressman Beard, do you have some closing comments?

National Health Insurance Is Goal

Congressman BEARD. Yes, again I am very honored to have been invited by Senator Church and Senator Pell to participate in this committee hearing. I serve on the counterpart in the House, and I think collectively the House and Senate Aging Committees certainly will do their utmost to make sure that the elderly people are given a little better shot in this regard. My goal, and I know Senator Pell's goal, is to see national health insurance implemented in this country.

Senator PELL. Thank you very much and may I add that Congressman Beard in the Congress, just as Senator Church is in the Senate, is noted as one of the most vigorous fighters or participants in all matters to promote the well being of the elderly. There is no more vigorous spokesman than he, which is shown by his patience in sitting through this hearing.

I present the compliments of Mr. Church who would like to have stayed with us. His plane was canceled through Green. The only possible way he could get a flight was to make his way back to Washington and leave by plane from Logan.

This meeting will now be shortly recessed. It was 4½ years ago when we had our last meeting. Maybe we will try to do it sooner next time around. Meeting adjourned.

[Whereupon the hearing was adjourned.]

APPENDIXES

Appendix 1

STATEMENTS AND LETTERS FROM INDIVIDUALS AND ORGANIZATIONS

ITEM 1. STATEMENT OF EMILE DENIS, SENIOR CITIZENS OF RHODE ISLAND ACTION GROUP

A Suggested Plan To Improve Home Health Care by Improving Medicare Benefits Under Social Security

First, as you know there are millions of medicare patients in the U.S.A. that are not completely senile or helpless, but are in institutions or nursing care facilities.

Second, we believe many of above mentioned millions would be happier in their own home environment thereby becoming healthier and recuperating faster. In their own home they would receive T.L.C. (tender loving care) by their spouse and other members of the family if some of the children are still home.

Third, many senior citizens between the ages of 65 and 72 because of their insufficient income and the fact that they do not want to depend on charity look for work, to supplement their income. But with unemployment as it is, sometimes it is impossible to obtain work. They may earn $230 a month without losing the social security Checks.

Fourth, if some plan could be worked out so the government would pay the $230 per month the spouse could then devote full time to care of patient instead of working 30 or 35 hours away from home.

Fifth, we understand that the government, Federal and State will pay the minimum cost of care in the above mentioned care facilities. The cost is $15 per day or $450 in a 30-day month.

Sixth, if some form of home-care payment could be worked out it would save the government money and leave the patients family feeling independent after working all those previous years.

ITEM 2. STATEMENT OF BRUNO HOFFMAN,* PROVIDENCE, R.I.

Social Security

Recently we heard a lot about "Problems of the Social Security System" about a Budget Deficit and about the needs of a review of the system. Since its inception and for many years afterwards, right wing circles of our political spectrum were fighting social security and what it stands for. Now, with President Ford's budget message and his proposal of an increase of the social security payroll tax, we hear all kind of arguments about the health of the system and future dangers.

Social security as insurance.—Originally this was supposed to work like real insurance. Employer and employee would pay annually a certain premium, which with interest earned over the years would guarantee a certain income at retirement age. This was not kept up, first by adding certain welfare aspects, like giving a minimum income even to people who had not contributed to the fund. And in recent years the steady inflation made it necessary to make adjustments according to the increase in cost of living. This was done, for quite a few years by special laws of Congress, always much later than necessary; finally in 1972 Congress passed a law giving automatic increase of the social security benefits according to the Consumer Price Index.

*See statement, p. 2089.

Inflation and cost of living.—Did this law, that supposedly was part of the cause of the deficit really make up for the losses and needs of the old people who had spent a lifetime in honest work? How was it handled? Everybody knows that the cost of living in 1974 went up 12 percent. Our government found a formula calculating it for only 8 percent. And the first payment was made in July 1975.

SSI.—Hardest hit by this system are the very low-income people of the SSI program, who can not make up for the tremendous increases of heating and electricity bills. They buy no cadillacs or frigidaires and therefore their cost of living index is gone up much more than 12 percent. And there the State of Rhode Island found a legal way to withhold half of this increase and use it for other budget purposes. A Federal law is necessary to order States to pay fully to all beneficiaries the increases coming from Federal sources.

Interest of the social security fund.—How much credit does the government give as interest? The inflation caused in the private economy a big increase in the interest rate helping the private investor to make up for some of the inflation (mortgage rate 9 percent or more). Maybe there would be no deficit, if the fund gets the right credit.

REMOVE EARNINGS LIMIT

Earning allowed for people of 65 to 72.—This too, stayed far behind the economic development. $2,760, the new limit is much too low. Why should there be any limit? If the people work, there comes some more income tax in. But a figure of $5,000 would make much more sense. On the other hand, there should be an elimination of the loophole, created under the Eisenhower administration allowing people to earn in one or the other month any amount of money (even $10,000 or more) and to collect social security in all the other months fully, when they don't make more than $230 in those months.

President Ford's proposals for social security taxes.—Again the administration came to the wrong conclusions about the consequences of inflation. Not only has the small income worker the same percentage charged to him as the man making $10,000 or $15,000, but people making more than $15,000 or later $16,500 pay no social security taxes from the amount they make over these limits. How can you justify to charge in round figures a worker making only $5,000 annually, $300 tax, i.e. 6 percent and somebody making $33,000, $990 tax, i.e. only 3 percent. And don't forget it does not make any difference if from the $5,000 he has to support a wife and children. Mr. Greenspan, the President's economic adviser was in a television interview yesterday speaking out against an increase of the taxable base of income. He gives the old excuse, it would change the insurance system and bring more obligation in the future. I showed before that the insurance principle has been given up long ago. And why should Congress not have anybody pay the tax from all his income and still there could be a stipulation for a maximum old age income as there is a minimum income. It would be much more social justice and some more relief of the small income man would be justified and economically wise the same as the income tax relief voted on.

Medicare.—The cost of the contributions of the senior citizen went up every year—of course we know of the tremendous increase of medical expense. Mr. Ford, refusing a general health program talks under the title of "catastrophic sickness benefits," first of increasing some more the costs for the senior citizen, by charging him a percentage of all benefits and then promises to limit the expenses, to $500 or $250, respectively and only for hospital and nursing* homes. What about the catastrophic expenses for necessary nurses, ambulance expenses, etc.? Can people with a salary of $40,000 or more and high expense accounts ever try to understand the plight of people living on $250 or $300 a month if an average heating bill is about $50 a month or more?

ITEM 3. STATEMENT OF BEATRICE DOYLE, SENIOR CITIZEN OUTREACH AIDE

I am Mrs. Beatrice Doyle, presently Senior Citizen Outreach aide with the Warwick Community Action Program in the Westerly area of Rhode Island. I am here, however, as a concerned private citizen to point out the inequality of Federal supplemental security income payments upon which so many of our senior citizens depend.

*And doctor bills.

Currently a glaring inequity exists between Federal supplemental security income payments received by those (1) who are primary or secondary social security beneficiaries and the payments received by those (2) who have never earned sufficient social security credits as primary beneficiaries or are ineligible as secondary beneficiaries by reason of lack of marriage to a primary beneficiary, and who have no pensions, annuities, or other income.

Individual beneficiaries in category No. 2 receive under the Federal supplemental security income law $20 less than category No. 1, even though the need is the same. How does this come about? The aim of the Federal supplementary security income program is to provide supplemental payments when needed, so that anyone 65 or older, anyone blind or disabled can have a basic cash income of $157.70 for an individual or $236.60 for a couple.

People can have money coming in (Social security, veterans payments, pensions, etc.) and still receive supplemental security income payments. In arriving at the amount to be paid, the first $20 a month income will not affect the Federal payment. Any other income (apart from earnings), above the first $20 a month will reduce the Federal payment. There is a different formula for earnings.

Therefore, if you have no money coming in, in the form of social security (perhaps because you were not engaged in covered employment or were not married to a primary beneficiary) have no pension, annuity, etc., your monthly income will be $20 less. When you live at the lowest end of the economic scale, $20 looms as a sizable amount.

A correction of this situation should be handled on the national level as it affects many, many persons. In Rhode Island with a population of under 1 million, there are 7,000 senior citizens so discriminated against.

Feeling that national action could not be waited for, a bill will be introduced in the Rhode Island House of Representatives this week to remove this inequity.

ITEM 4. STATEMENT OF ELIZABETH DOLAN, WARWICK COMMUNITY ACTION, INC.

My name is Elizabeth Dolan. I live in Warwick, R.I.

I would like for a few minutes to explain to you some things about the Warwick community action program to explain what they have meant to me personally and plead not only for their continuance but also for their expansion.

My primary contact has been with the foster grandparent program. Under this program, I work 4 hours a day, 5 days a week with mentally handicapped children in a special education class.

In this class, we work on a one-to-one basis with the children helping them with their needs in reading, writing, spelling and arithmetic. It would do your heart good to see a child master a problem that has been bothering him for hours with some help from a foster grandparent.

My experience with the foster grandparent program started after four operations in which artificial bearings were put into my hip sockets. After the operations I went from a wheelchair, to a walker, to crutches, and then to a cane. Then a friend of mine recommended that I join the foster grandparent program.

Since I joined the program I have never been so happy as I have been—to be able to go to work each day to help these children. This is now the joy of my life because I am a widow 71 years old and live alone. My work is my whole day.

Another way that Warwick community action has been a blessing to me and hundreds like myself is their housing assistance program through which I had some repairs done to my house. These were financed by an interest-free loan—which I have since paid back in full. What a thrill to restore my house to a sound home again.

You can appreciate that it would be almost impossible for a 71-year-old widow to obtain a conventional loan.

For myself and the many others who benefit so greatly from these elderly programs, please try to contemplate the heartbreak any reductions or cessation would cause and please support these programs that are so necessary in our senior days.

[Enclosure]

Home Maintenance Program for Elderly

FACT SHEET

The purpose of the program is to provide the opportunity for elderly with limited resources and fixed incomes to have available a program to make home repairs affordable without asking for charity.

Emphasis will be placed on providing the elderly with the opportunity to remain living in their homes.

Eligible activities:

Structural repair.—Roof, walls, windows, gutters, downspouts, weatherstripping.
Plumbing system repairs.—Minor nature.
Electrical system repairs.—Minor repairs.
Entrance repairs.—Doors, steps, and porches.
Basic amenities.—Exterior painting and other improvements of psychological importance.

Eligibility:

Homeowners aged 60 and over.
Limited income and resources.
No relatives physically capable of doing work.
House structurally sound.
Resident of Warwick.
Can be improved with relatively minor repairs.
Homes with minimum housing citations have priority.

How to apply:

Contact: Warwick Community Action, Inc., Housing/Community Resources, 2117 West Shore Road, Warwick, Rhode Island 02886.

Coordinator: Fran Pinto, 737-3743.

A worker will make a home visit. Initial intake will include personal data, financial data, and a brief description of the nature of the repair problem.

In the first program year one of the most significant statistics is the amount paid back. The agency projected that $2,000 of the amount loaned out would be paid back. The actual amount was little less than twice the projected amount.

Elderly homeowners are proud and shrewd people. Out of very meager fixed incomes a majority of clients send payments on a monthly basis. At times perhaps only a $2 payment is received, however, the payment is faithfully made.

In talking with clients, we find that their attitude is such that they are so appreciative of the program and realizing it is based on a revolving fund basis, they want to help perpetuate the services. We find they are satisfied with the quality of work and are appreciative of a program that enables them to financially maintain their homes with dignity.

Each application is reviewed on an individual basis. Home visits are made to obtain financial data as well as personal circumstances and maintenance needs. A visit is made by the maintenance director and the needs are discussed. Loans are granted for the purchase of materials. Labor is provided free of charge to the client. When repairs are completed, a financial repayment plan is made to fit in with the client's budget without adding financial strain. Also evaluations are completed at this time to be sure the work was completed satisfactorily and to discuss any additional needs.

My referrals are obtained through the Minimum Housing Department. These are handled on a priority basis. No one is refused because they have no way to repay for materials. In cases of this nature either the agency absorbs the cost or donations of materials is sought.

SERVICES PROVIDED BY HOUSING ASSISTANCE/COMMUNITY RESOURCES

Home maintenance program for elderly in Warwick

The purpose of this program is to help homeowners aged 60 and over with limited income and resources to do necessary repairs to homes that are structurally sound but have minimum housing violations or needed repairs that would qualify as violations.

Housing assistance—relocation

Keep a listing of possible rental units. Take names of people who are looking for housing and also make referrals to any programs of subsidized housing that might be available.

Housing assistance—landlord/tenant relations

Have a working knowledge of landlord/tenant rules and regulations to provide counseling and referral where problems occur.

Housing assistance—legislation

Knowledge of any new housing legislation, Federal, State, and local: and advising community people of such when applicable.

Emergency housing

Provide emergency shelter to families left homeless as a result of natural disaster such as fire, storm, etc. Referrals taken from anyone in need in the State of Rhode Island. Supportive services and followup provided. Occupancy is on a 5-day renewable lease contract.

Consumer education

Provide workshops in any area of consumer concern. Workshops and mini classes are held in any subjects relative to the high cost of living and consumer problems.

Winterization and fuel crisis

Aid and counsel clients in energy conservation and with heating and utility problems.

Community resources

Provide technical assistance to groups and organizations in the city organizing around a community concern. These may be established groups, or informal community groups formed to meet specific needs or problems. Emphasis is placed on working with and through area board representatives to keep them informed about Warwick community action programs and receive input as to community concerns.

ITEM 5. LETTER FROM LILLIAN N. OLIVER, CRANSTON R.I.; TO WARWICK COMMUNITY ACTION, INC.; DATED JANUARY 14, 1976

GENTLEMEN: I am a close friend of Mrs. Inez Shoren, and as she is totally blind, she requested my assistance in writing this letter. Her address is 108 Brinton Avenue, Warwick.

Last summer two of your men completed the following work for her—

1. Painted outside of her home.
2. Installed stairwells on porch.
3. Repaired screens on porch.
4. Repaired brick on front part of home.
5. Nailed some shingles down on home.

All of this work was done within a short period of time and the men were very good workers. Mrs. Shoren was thoroughly pleased and considers the job quite satisfactory. I personally thought the paint job was very nice and a wonderful improvement.

Mrs. Shoren extends her thanks for the help she received in this work which was very well done.

Very truly yours,

(Miss) LILLIAN N. OLIVER.

P.S. She regrets she is unable to attend the meeting.

ITEM 6. LETTER FROM S. EVERETT WILKINS, ATTORNEY, PROVIDENCE, R.I.; TO SENATOR FRANK CHURCH, DATED JANUARY 28, 1976

DEAR SIR: I attended your public hearing in Providence on January 26, 1976, and extend my compliments on a well managed affair. I am writing to express my concern over a subject which I did not present at the hearing because of time limitations.

I believe that unless escalating hospital costs are brought under stringent controls, any National Health Insurance program will bankrupt the country. Since medicare became effective, hospital costs have increased by about 300 percent, most of which can not be blamed on the national rate of inflation, which is much less than that. In Rhode Island the Blue Cross premium for Plan 65 (which reimburses for medicare deductibles) was $4.45 per month in 1966 and is now $12.03 per month. Furthermore the 1966 rate carried a factor designed to build a 2-month reserve, which by litigation

has been reduced to a half month. Of our elderly population of 105,000, almost 77,000 pay for this coverage.

What has happened is that the availability of open-ended medicare funds, disbursed with no effective controls, has caused hospital managements to became careless and irresponsible in the area of fiscal prudence. A prominent Providence doctor commenting on recent increases in Rhode Island hospital rates, said to me, "What can you expect? They have far more employees than they need. They are stumbling all over themselves over there, and 50 percent of them don't put in an honest day's work."

A lady of my acquaintance, a thrifty "Yankee Gal", related to me the following. While a patient in a hospital she remonstrated with a nurse who had thrown away an apparently usable piece of linen and received the following reply, "Say, if you knew the waste that goes on around here—why should I be careful?"

Incidents such as these do not in and of themselves make a hard case against hospitals, but they do give rise to well warranted suspicions; and the most appalling fact is that there is no end in sight.

Congress did not intend that medicare funds should be carelessly guarded. When medicare was enacted, Blue Cross Association sold the Government a phoney bill of goods to the effect that Blue Cross organizations could be trusted as fiscal mediators to monitor hospital operations. This was not true because they are too closely allied with hospitals and doctors, and also because no person examining a hospital to police its costs should live in the community where the hospital is located. The approbrium certain to result from a job well done will deter him from effective performance.

If you feel that this subject merits your attention, I suggest that it should be frankly acknowledged that Blue Cross cannot control hospital costs and that another means must be devised. As to the other means, I suggest that the existing system of examining national banks could well be emulated. What keeps a banker on his toes is the knowledge that any day he may find one of Uncle Sam's bloodhounds sniffing around his bank for something on which to chew. Hospitals need the same type of treatment.

Very truly yours,

S. EVERETT WILKINS.

ITEM 7. LETTER AND ENCLOSURE FROM CHARLES GERARD, PROVIDENCE, R.I.; TO SENATOR FRANK CHURCH, DATED JANUARY 28, 1976

DEAR SENATOR CHURCH: I should like to say at the beginning that I very much enjoyed the hearing held by your U.S. Senate Special Committee on Aging, at the Providence Public Library Auditorium, on January 26, 1976.

I wanted to insert at that time what I have said in my letter below, written to the *Providence Journal*. However, I considered it inappropriate to use the time needed for discussion, so I refrained. However, I did not intend to forgo expressing myself.

The letter was written on January 17th, but printing was delayed until I signed the form allowing the *Journal* to edit for space, libelous content, if any, etc. It finally appeared in the *Providence Journal* for today, January 28th. Meanwhile, I derived much pleasure from the *Providence Sunday Journal* of January 25th, where the subject was editorialized. I enclose a copy of the editorial, of which I have only one copy. This I am sending to you but am unable to supply a copy for Senators Kennedy and Pell.

[From the *Providence Journal*, Jan. 28, 1976.]

LETTERS TO THE EDITOR—SOCIAL SECURITY TRUST FUND

The Jan. 17, 1976 *Journal-Bulletin* stated that President Ford was planning on asking for 1977, a Social Security tax rate of 6.15 percent, to be applied to a base of $16,500; up from 5.85 percent on $15,300 for 1976.

Why don't Congress and President Ford face the inevitable, I.E. application of the rate—any rate—to entire earnings? This should be applied universally.

They should then extrapolate and compare with actual returns for 1977. They just might find that the percentage for everyone might be reduced from Jan. 1, 1978 on.

I read recently that 100,000 persons in the U.S. receive earnings of $100,000. Now $16,500 times 6.15 percent times 100,000 persons comes to $101,475,000. Also, $100,000 times 6.15 percent times 100,000 persons equals $615,000,000—a difference of $513,525,000 which would be added to the Social Security Trust Fund. Think what could happen with per- [sic]

Oh, the "hue and cry." But why not?

Most people earn below the taxable base. Why should they pay Social Security tax on their entire wages while others pocket the taxes they should pay on everything above $16,500?

I am not unmindful of the employers' matching contribution. I hear many say: Why worry about federal deficits? The country is too rich to go broke. Perhaps everyone should be reminded that after World War I, one could buy one trillion German marks for a $1 bill.

CHARLES GERARD.

Providence.

The unfinished remark in the fourth paragraph was—probably inadvertently cut off by the linotypist—that the social security fund could benefit far more from the persons earning from $16,500 to $100,000 and from $100,000 to wherever it takes us. Imagine if you will, what the president of General Motors would pay at 6.15 percent, on $750,000, the amount he was once paid during one year, as a salary and bonus. At $16,500 he would pay $1,014.75 as social security tax; taxed on $750,000 he would pay $46,125. social security tax. How about the tax on President Ford's $200,000. A mere $12,300 to add to the social security fund. Everyone is aware that labor cost is the most expensive part of any business. Just imagine the contribution to the social security fund, if the most expensive part (labor) of the trillion dollar G.N.P. were taxed at 6.15 percent.

I still contend that it wouldn't take too long to drop down the social security tax percentage for everyone, if everyone's salary or wages were taxed for their entire amounts. Start with 1976 or 1977, at 6.15 percent of everything, not $16,500. There should never again be established a base for social security tax purposes, a base such as $16,500, or anything else. When anyone and everyone pays his fair share the percentage should drop. A man earning $100,000 would pay $6,150.00 at 6.15 percent; but after the fund is built up and taxes are reported, the social security tax percentage could conceivably drop to 3 percent, taxing him $3,000; or perhaps 4 percent, taxing him $4,000. Now, to what other country can a man go to, to earn $100,000 and take home as much as he does or even will, at the rates we apply for income tax and social security tax? Reasonable question, right.

I should like some "knucklehead" to explain to me the logic of a base of $16,500 for social security taxes, but no such thing for income tax. If this is logical, then it is logical that a man and wife be allowed to combine their income for social security tax purposes, so that they will pay social security tax on only $16,500. The $25,000 man earning the $25,000 by himself is allowed this privilege of stopping at $16,500. The argument makes sense.

A person with a gross of $100,000 could end up with a net of at least 17 times the social security payments made to a single person drawing the maximum, that is $350.00 X 12 months, or $4200.00. Why should the $100,000 man be allowed to raise his standard of living to the point of using his entire net. He certainly should be able to put away more than the person, who, for any number of reasons never reaches beyond the minimum of $2.40 an hour. He is getting his while he is working and will get the maximum social security when he retires. Not most, but at least a very great number of people don't earn enough now to qualify for maximum social security payments, which are based on payments made against established taxable bases. I remember so well the brouhaha that resulted when the late John E. Fogarty introduced, or threatened to introduce, a bill for a base of $15,600. Now we're up to $16,500. How do you like that?

It doesn't matter to him that today we have many aged persons starving, not quantitatively, but qualitatively and nutritionally.

NO ENERGY TO RESIST

President Ford, if he holds to his present logic, won't have to have ships, nuclear weapons, bombers, etc. to hold the Russians at bay. Pretty soon they will easily be able to take over, because the over 200 million of us will be chronically ill of some very debilitating disease. We will not have the energy to resist pygmies let alone Russians. Make a total of all disease totals and you will exceed 200 million, by virtue of the fact that many, not a few, have several chronic diseases. Between the FDA, AMA, HEW, etc., we've hit the jackpots on moronic regulations. Ask Senator Proxmire, he knows the battles he has had with the FDA, relative to asinine regulations for a simple thing like vitamins. We should thank God for fighters like him.

My personal feeling is that unemployment compensation percentages should be applied to a person's total earnings. Rhode Island and Massachusetts have each borrowed over $100 million to date, for the payment of unemployment compensation. It is supposed to be repaid to the Federal Government within 3 years. Now, how do you

suppose they are going to accomplish that miracle. They have borrowed while collecting normal taxes. How much does the economy have to improve for them to get taxes that will allow them to pay off this indebtedness and build up a good black figure. Well, I don't think either one is going to make it within the next 3 years, nor the next 5 years, nor the next 10 years. These borrowings will be forgiven. Want to bet?

What is illogical about making business pay on all earnings, instead of $4,200? Rhode Island has a piggyback income tax, based on one's Federal income tax, which in turn is based on one's entire income. So social security establishes a base and Rhode Island unemployment establishes a base. Crazy, huh.

Rhode Island put in a merit rating system for unemployment compensation, several years ago. To stop firms from moving to other States. If we didn't put it in would they go to Illinois and Michigan where percentages go up to 4.5 percent or a couple of others that go higher? No of course not. Those firms stayed, some at 1.2 percent, stabilized their work forces and robbed the fund of badly needed money. Those that have fluctuating manpower needs are not large enough or numerous enough to keep up the fund. Result, the fund is always in the red. Why not return all of them to 1 percentage and see whether they move out of State. They may move out of State and suddenly see the percentage rise in that State.

For unemployment compensation there is only one answer and that is the same as social security. One percentage for all, and applicable to one's entire earnings.

CHARLES GERARD.

ITEM 8. LETTER FROM ROBERT WALSH, PUBLIC AFFAIRS OFFICER, DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE; TO GARY GOOD, SOCIAL SECURITY EMPLOYEE ON DETAIL WITH SENATE COMMITTEE ON AGING, DATED JANUARY 21, 1976

DEAR MR. GOOD: The supplementary security income [SSI] rolls in Rhode Island have increased from 9,438 in December of 1973, just before the State relinquished administration of the program of aid to the aged, blind, and disabled to the Social Security Administration, to 16,141 in November of 1975. This increase of almost 60 percent represents the highest percentage increase of SSI beneficiaries during that period of any of the six New England States.

All District Offices of Social Security across the country, including those in Rhode Island, used leads from the social security master beneficiary records [MBR] in a program of outreach to elicit SSI applications. In Rhode Island, 16,000 people were contacted by mail in this endeavor. Of the 5,500 who replied only 10 percent were found to be eligible.

The names of the remaining 10,500 people culled from the MBR leads were provided to the Rhode Island State Division of Aging whose employees have been attempting to reach these potential eligibles through door-to-door contact since July of 1975. This outreach endeavor is being conducted in conjunction with the State Agency's attempt to reach aged people who can benefit from the State's programs of hot meals, transportation to hospitals and doctors, home health care, etc.

Since the inception of this latest outreach program the State Division of Aging has provided social security with the names of 955 possibles, only 77 of whom have been determined to be potentially eligible for SSI. SSA does not expect to get more than 5 percent of eligibles from the 10,500.

The Providence District Office estimates that only some 500 eligible SSI recipients, at the most, have not been reached.

As to media outreach efforts, all 10 radio stations in the State are still airing SSI spot announcements several times a day and have been since the inception of the SSI program in January of 1974.

All three television stations [the two in Providence plus the station in New Bedford, Mass., whose signal also covers northern Rhode Island] have been using the SSI spots two or three times a week. Some nine live broadcasts on SSI were aired on the Providence ETV station during the first quarter of 1974.

Releases have been appearing in daily and weekly newspapers at the rate of about two a week until lately when the dailies have cut back.

Field representatives and other officers of District Offices have been averaging about 35 to 40 speeches on SSI a quarter.

During the first SSI outreach program in 1974, District Offices conducted extensive training for the Red Cross volunteers who were the principal contact persons in that effort. Most recently, Rhode Island District Offices have conducted SSI training for employees of the State Division of Aging who have been working on the MBR leads.

Incidentally, over the past 6 months 70 to 80 percent of the SSI applications taken across the country have been for persons in the disabled and blind categories rather than in the aged category. In Rhode Island more than 80 percent of the SSI applications have been in the nonaged category.

Hope this report fulfills your needs and that the committee hearing in Rhode Island on Monday, January 26, 1976 is a successful one.

Sincerely,

ROBERT WALSH.

ITEM 9. LETTER FROM VINCENT VESCERA,* PROVIDENCE, R.I.; TO SENATOR FRANK CHURCH, DATED JANUARY 26, 1976

DEAR SENATOR CHURCH: Today I had the pleasure of seeing you in person for the first time. I was very much impressed by you. I am a little bashful when I speak in public as you may remember that I spoke at the hearing on only one subject. I said that we needed the W.P.A. back again. You told me to use the microphone and speak into it. I had never used one before. But what I had to say I said. I wish that you would run for President as you have been in the forefront for the betterment of social security which applies to all senior citizens. We need someone like you in the White House.

I would like to elaborate a little more on the fact that we need W.P.A. We do not need it to build roads, sewers, or sidewalks, or to cut down on the free time of so many idle people. We need it to build houses for the lower class of people. There is a great deficiency in finding housing for the poor people. The government should bear the cost of the labor of building these houses and let the poor families pay for the material that is used. What is needed is a three bedroom house, with a kitchen and a pantry on a lot 50 by 60. This would provide the elderly with some responsibility.

The government could put millions to work at prevailing wages. The family man could be put to work for 30 hours a week while the younger people from 16 to 20 years old could work 20 hours a week if they are single. Clerical jobs like bookkeeping should be done by girls who qualify for that type of work, not the kinds of jobs that they are doing today. We will never get rid of the depression the way that we are doing it today. They call it another name today—recession.

You know and I know that there are more people out of work today than during the depression of 1930 to 1941. It is not 8 percent but I believe that it is more like 18 percent if you count all the girls and boys who need work when they get out of school.

That is all I have to say.

Sincerely yours,

VINCENT VESCERA.

ITEM 10. LETTER FROM SUSIE TOMASSO;** TO SENATOR CLAIBORNE PELL, DATED JANUARY 20, 1976

DEAR SENATOR PELL: Six years ago, my husband passed away. Since he was an invalid, I devoted the last 20 years of my life to his almost constant care. When he passed away, I spent one of the most frustrating, depressing years of my life. My life no longer had a purpose, and I dreaded my very existence.

Then a miracle happened. One day a friend, Clarice Gottberg, suggested that I get out more and become involved with a Senior Citizens Group—RSVP. At first, I wasn't very excited about the prospect, but as I became involved, suddenly a whole new world opened for me. When I first joined, there were only a handful of us, but in the last 5 years our chapter has grown to over 300.

Through my association with RSVP, I became involved in many other volunteer groups—Save the Bay, eye testing of youngsters in schools, and volunteer work at the IMH—to name just a few. A singing group, The Gingham Girls, was formed, and we go out several times a week bringing happiness and meaning into the lives of people confined to nursing homes and mental health facilities.

RSVP and similar organizations mentioned above are mostly funded by local and Federal Government, and at this time we are desperately in need of funds. These, and similar Senior Citizens Organizations, have rescued a great many of us by giving our lives a useful and needed purpose and meaning. We have become dependent on them, more than they have become dependent on us. I, for one, wouldn't know what to do without them. I hope that you will do everything in your power to insure continued funding for such programs, in order for us Senior Citizens who have given so much to this great country, can continue to do so.

Thank you.

Yours truly,

SUSIE TOMASSO.

RELATED MATERIAL SUBMITTED FOR THE RECORD

ITEM 1. EDITORIAL FROM THE *PROVIDENCE SUNDAY JOURNAL*, JAN. 25, 1976; SUBMITTED BY SENATOR JOHN PASTORE, FROM RHODE ISLAND

Social Security Needs Total Review

President Ford is quite correct in recognizing that the Social Security trust fund "is headed for trouble." But his proposed increase in the Social Security tax is a mere stopgap remedy that would be inadequate and unfair to millions of workers. Instead, Congress needs to undertake a broad review of the entire system and develop a new revenue base that will produce equitable benefits while remaining fiscally sound.

Last year, for only the third year in its history, the Social Security system operated in the red: it rang up a $3-billion deficit by year's end. Unless the system's finances can be brought into balance, the deficit is expected to reach $20-billion a year by 1990. Ultimately, this trend would endanger the system's ability to pay benefits.

The system is sound enough for now: present beneficiaries have no cause for alarm. Even though benefit payments now are exceeding revenue, the system still has a cushion of more than $40-billion, which is ample to insure benefits for at least the next several years. The real concern is over the system's long-range health, and it is on this point that Congress needs to concentrate.

What has happened to weaken the long-term integrity of this program that Mr. Ford called "a vital part of our economic system"?

One cause has been the changing ratio between the numbers of workers, whose payroll taxes support the system, and retirees, who receive the benefits. In 1950, there were 12 contributing workers for every recipient. Now, as the over-65 segment of the population has grown, that ratio has fallen to 2.5 to 1. There are fewer working taxpayers paying for benefits to more retirees, and this trend will be magnified as the population growth rate falls off.

Another part of the problem, dramatically visible because of the recession, is that unemployment reduces Social Security revenues. People out of work contribute no payroll taxes. At the same time, however, inflation has worked to increase benefits: under a cost-of-living escalator clause enacted in 1972, benefit levels rise in relation to the Consumer Price Index. Yet inflation has sped ahead of 1972 estimates: benefits are now rising faster than income, and in time some recipients may receive more in Social Security than they did while working.

Somehow, income and outgo have to brought into line. President Ford's remedy of increasing the Social Security tax is unsatisfactory, principally because it hits hardest at low-income workers. Unlike the graduated income tax, the Social Security tax rate is the same for workers at all income levels. Indeed, an estimated 15 million workers with incomes too low to be subject to the income tax still must pay Social Security taxes. For these workers, especially, the present 5.85 percent rate is already too high.

INCREASE WAGE BASE

A preferable approach would be for Congress to increase the wage base subject to the Social Security tax. This base is $15,300 this year and under a formula already in the law will expand to $16,500 next year. But a further broadening, say to $24,000, would raise more revenue while spreading out the burden among workers better able to pay.

Other proposed changes also would raise revenue as well as bring about greater fairness. Low-income workers could receive exemptions from Social Security taxes for part or all of their income, as is now done with the income tax. Social Security taxes could be extended to apply to all income, including that from interest and capital gains, instead of merely that from wages and salaries. There clearly is need, too, for revising the benefit formula to keep future payments from soaring out of control.

A Social Security tax increase, such as President Ford has proposed, would ease the short-term deficit at the cost of postponing the major structural overhaul that the system needs. Social Security cannot be evaluated in a vacuum: it must be analyzed in connection with other income transfer programs, existing and proposed, such as national health insurance and a negative income tax to supplant welfare programs.

It may be too much to expect Congress, in an election year, to grapple successfully with such a complex issue. Perhaps new budget data will show that the President's proposed tax increase is unavoidable. But Congress must avoid the temptation to let

the long-term problem slide: another few years without major reform of Social Security and its fiscal solidity will be dangerously weakened.

ITEM 2. ARTICLE FROM THE *PROVIDENCE JOURNAL*, JAN. 26, 1976; SUBMITTED BY SENATOR CLAIBORNE PELL, FROM RHODE ISLAND

SIDONIE BROWN'S FULL LIFE IS TANGLED WITH THE THREADS OF HISTORY

[By Carol Stocker]

PROVIDENCE,—Sidonie (pronounced see-doe-ny) Brown is 92 years old, and yet it's true when she says, "People don't think of me as just an old lady."

Her vitality is amazing. She gets around town on the bus and watches television religious services in Hebrew, one of the eight languages she speaks. Her thick silky hair, once titian red, is now piled in white and butteryellow swirls. Her eyes are clear, her teeth her own and her mind is definitely her own. Her character is sturdy as a well-seasoned cast iron pot, the kind they don't make anymore.

One of the city's brighter secrets, she is tucked behind the anonymous facade of public housing units at Manton Heights. But inside the private world of her apartment, color explodes from mounds of braided rugs, crochet and petit point projects in electric blue, acid green and pinks hot enough to be combustible.

Although she once had servants and purchased her gowns at exclusive Fifth Avenue shops, Mrs. Brown now lives on Social Security which doesn't allow for non-necessities like knitting yarn. But that doesn't seem to bother her. Her basic needs are slight and she has either transcended the rest of life's baggage or lets it take care of itself.

The yarn and fabric, for instance, does take care of itself. It is contributed by local manufacturers, the State division on aging or people who want her to make things for them, for which she never requests payment. No visitor can leave her house with empty hands.

"I go down to the shopping center and give pot holders to the elderly people who shop there. Whatever my hand grabs, I give 'em," she says, proffering a fist full of pot holders. "I give 'em, I give 'em, I give 'em. It gives me pleasure."

Mothers from the project send their children over to Mrs. Brown's when skirts and pants need free-of-charge hemming. Neighbors lacking the necessary patience even ask her to sprout their avocado seeds for them. She may comment to herself about the fecklessness of the modern personality, but she complies.

"She's always a giving person," said William Speck of the Division on Aging. Director Eleanor Slater and Mrs. Brown have a first-name relationship. "You know Eleanor—I gave her one of these afghans."

Flowers and a new television set are from friends who want to return the good will, but it's doubtful that any reciprocate the regular hours each day that Mrs. Brown spends praying for "all the world." Hers is a very busy life then, lived in the present.

Longevity runs in the family. Her mother lived to be 99 and her grandfathers lived to be 103 and 107. But Mrs. Brown is more than a survivor. She had also lived richly enough that, like a character in a novel, her life story is tangled with the threads of history.

Her ancestors were prosperous landowners in Mrs. Brown's native Belgium, and one grandfather, Alphonse Delano, invented the graphite and sulfur match about 1840. But Mrs. Brown's father "liked to travel, so he flipped a coin for either Australia or America, and it fell to America." The family ended up in Johnston, where the father, Frank Bruyneel founded and ran a shop under his name which produced fine handmade cigars and employed about 25 persons.

But Sidonie didn't care for her new country at first. She found it puritanical. "They wore their skirts all the way to the floor and people called me a loose woman because my ankles showed." So, after a few months she returned to Belgium, where she entered the Order of the Holy Trinity.

It was at the convent that she was tutored in needlework and languages, but the order refused to assign her to its work with leper colonies "because I was too young and had a long time to live." Unenthusiastic about being cloistered instead, she left before taking her final vows.

PEOPLE DON'T THINK OF ME AS JUST AND OLD LADY

Her only marriage, to an American, ended after 4 years when he was killed in World War I. The young widow worked at Shepard's for awhile during the war. It was an era of immigration when downtown Providence was a babble of tongues and her facility with French, German, Italian—her family owned a villa in Italy—Spanish

and Flemmish, in addition to Latin, Hebrew and English, made her a valuable employee. The same linguistic ability led to an important position in sales with Western Electric in New York City.

She was sent to Cuba when the oceanic telephone cables were being laid there, and the second dial phone call between Cuba and the United States was to her astonished family in Johnston, via a Providence operator. "They said, 'You're crazy! Where are you really calling from, Sidonie?'"

One of her mother's relatives was Belgium's consul general in Havana and got her work at both the Belgian and American consulates, all while she continued on salary for Western Electric. She was the model of the successful, feisty "working girl," in the new post-war 1920s world of the roaring Havana, and was a good place to be.

That vanished world suited her patrician orientation. "I liked it because there was no middle class, only the very rich and the very poor. And since I worked at the consulate, I was with the rich." There were nights at the casinos, dances and a trail of despairing Don Juans. There were also trips to a leper colony far from Havana, where she fulfilled a long-time ambition to serve.

It came to an end when she became ill. Her doctor didn't tell her that she had cancer, which was a word to be whispered if used at all then. "He just said I was going to be 'a very sick little girl' and that I should go home and be with my own people." The Cuban physician, also of the very rich, incidentally, was Fidel Castro's paternal grandfather.

It took more than 40 operations, large and small, before Mrs. Brown licked cancer, and went on to outlive all her doctors.

That triumph wasn't the end of the story. She went on to work, first as a volunteer, then paid, at the State Institute for Mental Health and the old State Infirmary, where she taught such crafts as chair caning and mattress making, sharing her belief that useful work sustains and enriches life. She also traveled abroad extensively. But her biggest duty was caring for her elderly parents in the big family house in Johnston.

ILLNESSES WIPE OUT FAMILY'S FINANCES

The protracted illnesses usual to old age wiped out the family's finances, and now that there is nothing left, Mrs. Brown speaks with unbitter enthusiasm about Medicaid.

But the eventual loss of her parents was a great shock. And in the following numb confusion, most of Mrs. Brown's personal letters and mementoes from her long life were callously thrown out by the woman who took over her home when she was moved into the Manton Heights apartment.

Mrs. Brown still seethes with incredulity about the treasures lost, including correspondences with her distant cousin, Sara Delano Roosevelt, which might have had historic value. The former President's mother's letters to Mrs. Brown, who is also a Delano, were fueled by curiosity about her adventurous father's origins in Belgium, and Mrs. Brown still honors the confidentiality of those family tales.

The two women corresponded largely in French, the mark of the socially educated, and "she invited me to Hyde Park, but I never got there." Franklin was a New York State official and married, during the period of the correspondence which continued until after he was stricken with polio.

"She was a strong woman. She wrote me, 'I am the head of this family and I will always be the head of it.' But no mother ever idolized her child the way she idolized Franklin. She didn't write much about Eleanor. She wrote mostly about Franklin."

Mrs. Brown added that she didn't think much of the recent dramatization of Franklin and Eleanor's life on TV. "There wasn't much to it. It took a little bit here and a little bit over there. It jumped around too much."

Of the treasures of a full life, there remain these things: An acorn plucked and saved at her birth on Sept. 3, 1883. Two ancient wooden matches in a plastic vial, handled reverently like splinters of the cross, the only relics left from a long board of matches which was given away piece by piece, from the old family match factory.

There were also old fine cigars, made by her father's hands, but she's given away even the last of them. "Not to be smoked! To be smelled!" There is a formal dress in her favorite color, blue, left from the many bought and given away in her younger days. This one, however, has been saved for a final function.

There also remains life. The years ahead will be measured in yards of yarn, and maybe other gifts.

Appendix 3

INFORMATION ON WARWICK, R.I., "GERIATRIC DAY-CARE" CENTER*

"GERIATRIC DAY-CARE" is the name of the inovative program for mature adults at the Warwick Central Baptist Church on 3270 Post Road. The goal of the program is to provide daytime physical and emotional care for the partially disabled elderly.

Designed to help keep families together when this would not be possible without daytime care, it fills the gap between self sufficiency and being institutionalized.

Mrs. Elaine Aldrich is director, and working with her full time is Mr. Craig Szwed, who has his Bachelor of Science in Human Development. There are, as well, volunteers from URI who work 24 hours per week as a part of their university curriculum. Pictured at right is one such volunteer, Miss Kathy Gibson, demonstrating an oxygen breathing device available at the center. There are some 40 volunteers who are on call as special needs arise.

The center accepts people on a weekly basis (Monday through Friday), or on specific days each week, or on an occasional basis as the need arises. The cost of this service is but a fraction of full time care in a nursing home, and this can be further reduced by financial assistance from the State Division on ageing.

The center accepts clients begining at 7:30 a.m. each weekday and cares for them up until 5:30 p.m. A low salt lunch is served them, and snacks are available throughout the day. Beds are provided, and baths are given two days each week.

Pictured left is Mrs. Eva McGlauflin, who is able to find enjoyment at the center despite the fact she is 90% blind, confined to a wheelchair, and crippled in one arm. Limited therapy is provided, and the center is concerned with rehabilitation of the total person...which includes mental, physical, social, and emotional needs.

Pictured at right is Craig Szwed, (far right) receiving advice from Kathy Gibson as he plays cribbage with a client who has more experience at the game. The center shows weekly films from the Warwick Film Library, arts and crafts instruction is a regular part of the program, and field trips take clients to various places in the state.

The center just began operations with an initial grant from "Warwick Community Action," and new clients will be accepted. For additional information call 739-2828.

Appendix 4

STATEMENTS SUBMITTED BY THE HEARING AUDIENCE

During the course of the hearing, a form was made available by the chairman to those attending who wished to make suggestions and recommendations but were unable to testify because of time limitations. The form read as follows:

DEAR SENATOR CHURCH: If there had been time for everyone to speak at the hearing in Providence, R.I., on January 26, 1976, re: "Future Directions in Social Security: Impact of High Cost of Living," I would have said:

The following replies were received:

DAWN ANN ADOIAN, PROVIDENCE, R.I.

I only work part time and my income is small. I will not be 62 years old until July of this year. I got stuck twice with apartments which did not include heat and they were so filthy I don't see how the inspectors let it pass. I had to move. In this place, the young people do not want the older people living in the same house. Many are using the hall and celler lights for their own use.

I do not have TV or other extras and my bill still goes up. I came home from work one day and found the outside back door wide open and latched to the wall. My gas bill for these 2 months were very high and I said I would not pay it. That door had evidently been left open everyday that I was at work. I complained to the owner and he called it petty. I have to pay the bills, not him. I called the electric company about the lights left on and he said that they [the owner] wanted a light on day and night. There was a big fight over this and names were called and I was then asked to move, which I wanted to do anyway. I complained to the gas company about the smell from the clothes dryer and the furnace. It was all too much for the chimney which needed cleaning. Nothing was done. This man upstairs is evil and he caused a lot of trouble for an older woman who lived here and finally caused her to be put out. You should hear the racket.

I came to the hearing while I was very sick with a high temperature just to be present. I ended up having to stay home from work since I was very sick with a bad cough.

I pray that I'll find a place by next week so that I can move. I leave people like this in the hands of God. You'd think they were coming through the ceiling. I had been in a State sanitarium for 4 years and 9 months. I could not walk and I was treated like an animal.

Please have the inspectors go and see some of these places and the kind of people that live in them and who try to run your life the way they want to.

THEODORE BELISLE, SLATERSVILLE, R.I.

I am an elderly 71 years old. The increasing cost of living is hurting to the point that in order to maintain our regular daily routine, I have to go out and get part time work. I do not want charity but the money that was taken from my pay years ago should insure my living without any worry. But that check that I receive every month is shrinking in buying power.

In 1937 when money was taken from my pay for my old age, I felt at that time that when I got old I would have some security. With the inflation, although we did get some increases, I find it harder to make ends meet. I do appreciate the fact that we have medical programs, but medication today is more costly than ever, even with all the help of medicare.

We, my wife and I, have to pay Blue Cross about $240 a year and medicare costs us about $135 a year. This total amount of about $375 equals about $7 per week which we could certainly use for a few extras once in a while.

Although I am complaining bitterly, my wife and I feel very fortunate to have good health. What will happen when our health fails? God knows.

Fortunately my wife and I do some RSVP volunteer work. It fulfills our need to be useful and needed. Also it provides the opportunity to meet other people and be of service to them. Thank God for RSVP.

ALYCE M. CROWDER, PROVIDENCE, R.I.

Let us remain in our homes. Find those that are taking our homes away from us because we cannot pay our bills with our welfare checks.

Get the young people back to work. They can and will help us.

I will pray for Senator Pell's bill. God bless all of you.

The attorney general's office took care of my bill but I still must pay my electric bill and I will receive it every month. I still owe $42 on the previous bill. We have too many junk shops that do not pay any electricity.

Also, the withholding tax from our pay does not help us senior citizens.

BARBARA DENNETT, PORTSMOUTH, R.I.

So many of us who "live" on social security find it increasingly difficult to keep up with the high costs of food and taxes. We cannot buy food items that we need for good nutrition or clothing necessities. We must cut corners to pay the town taxes.

We worked so hard for so many years to own our small retirement home and it will break our hearts to have to sell it and leave the community we love so much. Please allow us to have these golden years without worry and care.

ADA FLETCHER, PAWTUCKET, R.I.

Why is something not done about the enormous rent increases. Never is anything said at any meeting which refers to rent controls. For instance, I am a senior citizen over 80 years of age and live in an apartment consisting of 1-3/4 rooms and a small pantry. All the furniture and the refrigerator belong to me. The refrigerator has to be placed in the parlor because there is no room in the pantry. In a matter of 6 months the rent was raised 56 percent. It was $80 only 6 months ago when a real estate man bought this apartment house. Now my rent has been increased to $125 per month which is more than I can afford as I only get social security. I have no other income. The high cost of food these days takes most of my pension. I pay my own gas, electric and telephone bill. I must have the telephone. Washing has to go out. I must also pay for insurance. I am not alone in this situation so it would be helping a lot for the aged if the gougers of rent was stopped.

ALINE GIGUERE

I am 68 years old and living on a limited income of $209 a month.

The stamp office keeps calling me in for a re-evaluation and they raise my stamps $2 more each time. I am now paying $40 and I was paying $36 and my income stays the same.

One time I had to go down and they raised me from $36 to $38 and did not give me more stamps. They took away the cost of living bonus we were given because I had to pay $38 without more stamps.

We were given a raise in social security, they gave me raise in social security but they took it off my SSI check, so my income remains the same and they still keep charging me more for the stamps.

I am finding it very hard to live.

HOPE HUGHES, PROVIDENCE, R.I.

I find the price of oil to heat my home is outrageous. I live alone and pay over 40 cents per gallon. Electricity and food prices are all so high and are getting out of hand.

The above complaints are also from many of my senior citizen friends.

MRS. ORVIN LARLOX, WESTERLY, R.I.

None from Westerly feel that they can attend the meeting in Providence on the 26th because of the cost of getting there.

We would have liked to say that we could have used the money for transportation. We have no minibuses in Westerly although we have asked many times about them. We have always been told that there is no money for Westerly. We have none of the nutrition programs nearer than Peacedale which is at least 25 miles from here. You either have to pay for bus transportation or if anyone is able to drive his own car then that means money for gas.

Also reaching senior citizens who do not belong to an active group could or should

be reached and the money used to help them. With us being at the other end of the State, it would be nice if someone would come down and talk to us. We have two groups here.

ADELARD A. MENARD, WARWICK, R.I.

With the rising cost of living and the constant increase of property taxes, some relief be given to the senior citizens in this property tax area, to enable them to retain their homes and not be forced to fall on low-income housing and in many cases welfare. This they do not want, they wish to retain the home that they have raised their families and to spend their remaining years in peace and dignity.

In the transportation area we in Rhode Island are fortunate to ride free on all buslines in the State. I am speaking now of the senior citizens who live off and away from the regular buslines and must depend on the minibus transportation to take them to their doctors, shopping, etc., but the minibus is underfinanced to a point where they must stop operations to maintain their buses as they are doing right now. More buses are needed so that they may be taken out of line regularly to make the repairs needed without shutting down the service.

WILLIAM A. PELLETIER, MAPLEVILLE, R.I.

The White House Conference on Aging held in Washington, D.C., attended by 3,500 delegates from every State in the United States, I being one of the Rhode Island delegates in 1971, took up the very question of where do we go in regard to social security?

The consensus of those attending were that the social security trust fund would some day be in trouble as it now seems to be.

It was voted unanimously at this conference that part of the social security benefits be paid out of general revenues instead of continuing increases in social security taxes and I have reasons to believe that these facts were to be reported to Congress.

We as a great Nation can afford to spend billions of dollars in foreign aid out of general revenues, for which I have no argument, but it seems to me that this great Nation which we all support can well pick up part of social security benefits out of general revenues.

TINA ROWE, WARWICK, R.I.

When you raise social security benefits for the elderly, you should raise the standards of the other programs, because I work with the elderly and have been doing so for the past 3 years. But because of the recent raises a lot of these people have been taken off the food stamps and medical assistance. In the end they suffer more because they have to buy their own medication which sometimes costs more than the raise they got. Some of these poor people at the end of the month have to go and beg for food. In addition, the months that have 5 weeks are unreal to them. I thank you for looking into and taking an interest in the elderly.

CHARLES B. RYAN, WOONSOCKET, R.I.

While social security strives to provide an adequate income for people in retirement, the retired senior volunteer program (RSVP) strives to make that retirement more meaningful by encouraging participation in unpaid volunteer community service. For those 1,400 retirees in Rhode Island who volunteer through RSVP, volunteer service gives purpose to their lives not possible through any other service to the aging. RSVP promotes physical, mental, and emotional well being. Further, RSVP restores to the community resources lost through retirement: The experience, the skill, and the energy of our retired citizens.

RSVP volunteers receive no stipend or other hourly payment for their volunteer work. RSVP programs provide their volunteers with accident insurance, reimbursement for out of pocket expenses, transportation, and coordination.

Through RSVP, retired citizens help other retired citizens: Delivering meals-on-wheels, waiting on tables at mealsites, assisting at special clinics, visiting with the homebound, and performing community outreach. People other than retirees also benefit from the help RSVP volunteers: School children are tutored, hospital patients are served, the retarded are encouraged. The retired senior volunteer program in Rhode Island works in cooperation with over 200 local community agencies. Last year in Rhode Island RSVP volunteers performed 180,000 hours of service, benefiting over 45,000 people.

We urge your committee to recommend renewal of RSVP enabling legislation which

is to be considered in June. We urge you to encourage a higher more adequate funding level for the program so that it may be made available to more retired citizens. We also urge that local match requirements for Federal funds for RSVP be reduced from the present 50 percent to 25 percent.

There are six retired senior volunteer programs in Rhode Island. They are listed below along with the names of their sponsors and the communities they serve.

RSVP	Sponsored by	Communities served
Blackstone Valley RSVP, 490 Broadway, Pawtucket, R.I., Maria Bankosky, director, telephone No. 732-5514.	Blackstone Valley Community Action Program.	Pawtucket, Central Falls, Lincoln, Cumberland.
Cranston RSVP, 52 Rolfe St., Cranston, R. I., Nancy Johnston, director, telephone No. 781-1275.	City of Cranston	Cranston.
East Shore RSVP, 100 Bullocks Point Ave., East Providence, R.I., George Foster, director, telephone No. 437-1005.	Self-Help, Inc	East Providence, Warren, Bristol, Barrington, Newport.
Providence RSVP, 1 Cathedral Sq., Providence, R.I., Helen Graves, director, telephone No. 861-9800.	Catholic Charities	Providence.
Warwick RSVP, 2117 West Shore Rd., Warwick, R.I., Clarice Gothberg, director, telephone No. 738-4727.	Warwick Community Action.	Warwick, West Warwick, Coventry.
Woonsocket RSVP, 45 Arnold St., Woonsocket, R.I., Charles B. Ryan, director, telephone No. 766-2300.	City of Woonsocket.	Woonsocket, North Smithfield, North Cumberland, North Lincoln.

CHARLOTTE SCOTT, PROVIDENCE, R.I.

I am an elderly woman with no savings, and only a social security check for income. My check is for $249.10. After I pay my rent, gas, and electric bills, pay for food stamps, and life insurance for my burial, I am left with $50 for the whole month, to pay for clothes, and other necessary items. This is not enough for me to get by on, and there are many with incomes less than mine.

With such a tight budget, I am rather upset to see the price of utilities go up and up. One year ago, in January of 1975, my gas bill was $34.05. In January of 1976 I had to pay $43.62. I am living in the same house, and this has been a mild December, so I do not see why I have to pay more.

One other complaint I have, is that the utility companies have little concern for the elderly. Last week my pilot went out, they said because of low pressure in the pipes. They would not turn it back on unless I paid them $8 to have a man come out and light it. I won't have the money until the beginning of February. I have no choice but to wait until then until I can have my heat again.

Also, the last two times my social security checks have increased, my landlord has raised my rent. One time I got a $10 social security increase, and my rent went up by $10. The other time my check went up by $18 or $16, and my rent went up by $13.

MARTHA W. SULLIVAN, PAWTUCKET, R.I.

The Blackstone Valley Community Action Program, Inc., supports senior citizens activities through a comprehensive senior center program and an extremely active RSVP program. Approximately 250 low-income elderly are reached each week through these programs. The availability of programs that offer meaningful activity to seniors; a place to go other than their one room, staff to counsel and assist them, and programs to help them maintain an active involvement in the community are imperative. Unfortu-

nately, funding for these types of programs is either completely lacking or require considerable matching funds; the RSVP program sponsored by this agency currently requires 40 percent matching funds.

The high cost of living makes it impossible for many senior citizens to participate in community groups without the support of local senior centers and related programs. Legislators should be aware that funds are mandatory if local programs are to continue to aid ever expanding numbers of elderly.

CHARLES SWARTZ, EAST PROVIDENCE, R.I.

I would have reiterated the attached statement which I sent to you in 1973. I received a courteous but unsatisfactory reply.

I am happy to see that you and Senator Fong are now cosponsoring S. 871 which would correct a long standing injustice.

I want to bring up for discussion something that has brought hardship and injustice to many people upon their reaching retirement age and that is the limitation on earned income that is written into our social security law.

The present limit is $2,100 per year and will go to $2,400 in 1974.

Upon reaching retirement age a person has only two choices:

1. Continue a full schedule of work beyond his strength and impaired capacities, or

2. Plunge into instant poverty.

There is no possibility for a third choice which would maintain health, dignity, and a decent standard of living by being able to taper off: Work on a reduced schedule at a reduced pay but still be able to earn much more than $2,400.

Why should a person who has earned $8,000, $10,000 or $12,000 per year suddenly be limited to $2,400 in order to receive what he has paid for during a lifetime of work?

I know that there were historical reasons for this provision but I submit that they do not apply in today's inflation blated world. It is an anachronism and should be completely eliminated so as not to inflict unnecessary hardships on people willing and able to continue to be self-supporting, tax-paying, contributing members of society. Moreover, the limitation on earned income is unjust because there is no limit on unearned income. Income from investments and property; interest, dividends, rents, etc., do not limit a person by 1 cent in receiving his full social security payment.

Also, at age 72 there are no limits. Why is there this penalty at age 65? Why must these precious 7 years be years of overwork or years of poverty instead of years of gradual adjustment to a new situation?

The fact that Congress has been slowly and painfully raising the limit on earned income over the years is proof that our Senators and Representatives have recognized the basic injustice of this provision in the social security law and have sought to correct it. However by adding a pittance every few years they make it appear as though it were a privilege to allow a person to continue to be self-supporting after a lifetime of work.

Congress must be made to see the light:

1. That earned income at age 65 would have the same rights and privileges as unearned income.

2. That what is good at age 72 is even better at age 65 or even 62.

JOSEPH L. TURCOTTE, SMITHFIELD, R.I.

There should be a way to anticipate inflation to give the elderly a fair start on the cost of living increase. If he is on a soup diet when he gets his increase, he will be promoted to hamburgers, but by the time he gets his increase 18 months later he certainly will be back on soup again.

I am presently involved with RSVP and I think it is a well worthwhile program and should be expanded and financed by our government. It provides our elderly a chance to get back in the main stream of life.

VIRGINIA R. WHITE, PROVIDENCE, R.I.

I spent the month of May 1975, as a guest in the home of a family in Budapest, Hungary. The little I learned of the government health care available to the people was very impressive. I realize that the program may never be available in the United States but it might be worthy of consideration in the creation of a program for the elderly. Rhode Island Group Health Association comes closest of anything I know of.

CHRONOLOGICAL LIST OF WITNESSES

MEDICARE AND MEDICAID FRAUDS

WEDNESDAY, NOVEMBER 17, 1976

U.S. SENATE,
SPECIAL COMMITTEE ON AGING,
Washington, D.C.

The committee met, pursuant to notice, at 10:10 a.m., in room 318, Russell Senate Office Building, Hon. Frank Church, chairman, presiding.

Present: Senators Church, Moss, and Percy.

Also present: William E. Oriol, staff director; David A. Affeldt, chief counsel; Val J. Halamandaris, associate counsel; John Guy Miller, minority staff director; Margaret Fayé, minority professional staff member; Patricia G. Oriol, chief clerk; Donna Gluck, resource assistant; and Eugene R. Cummings, printing assistant.

OPENING STATEMENT BY SENATOR FRANK CHURCH, CHAIRMAN

Senator CHURCH. The hearing will come to order.

We would like to welcome our witnesses this morning. The purpose of today's hearing is to learn what can be done to improve the management and the fiscal integrity of the medicare and medicaid programs.

I am sure that members of this committee and the American public generally have been shocked and dismayed by the recent disclosures of fraud and abuse in Government health care programs.

I want to say that all the members of this committee appreciate what Senator Moss has done in the last 2 years in bringing this situation to light, and I want to express on behalf of the committee, Senator Moss, our gratitude for your leadership in opening up a field of fraud that seems to be pervading the entire medicare and medicaid system. I do not know of a more urgent problem of this kind that faces the Government and, on behalf of the committee, I simply want to express our deep appreciation for your work.

By now it should be clear to everyone that reform cannot wait. It is the cruelest paradox that I can think of that thousands of our elderly are going without the health care they need, and yet we lose millions of dollars to fraud and mismanagement.

Our two witnesses today will further demonstrate the severity of existing problems and they will give us some guidance concerning legislation which is needed.

Mr. Charles J. Hynes, the New York special prosecutor for nursing homes, brings with him the statewide perspective of his special work. Mr. Sam Skinner, U.S. attorney, northern district of Illinois, will tell us what we can do to strengthen the hand of Federal prosecutors.

Cost Effectiveness Praised

I am particularly interested in the cost effectiveness of the New York special prosecutor's office. I am told Mr. Hynes has recovered many times the amount of money spent on his investigation. In fact, he recently announced that his auditors find $2,500 in medicaid overcharges for every man-day of effort.

If all prosecutors could claim such a return we could pay off the various State, municipal, perhaps even national debts.

In the coming months or years we will consider national health insurance plans. I want to make it clear this morning that we want to make sure that the elderly are not short-changed in our efforts to make health care more generally available to all Americans. At the same time we will make every effort to make sure we do not repeat the mistakes that have been made in medicare and medicaid and that we take such corrective action as may be available to us.

Senator Percy, you have played an active role in the investigations to date. If you have a statement you would like to make at this time, we will be happy to receive it.

STATEMENT BY SENATOR CHARLES H. PERCY

Senator Percy. Thank you, Mr. Chairman.

I would first and foremost like to say how very pleased I am that Senator Moss could be here this morning. I have worked intimately with him for 6 or 7 years as the ranking Republican on this Subcommittee on Long-Term Care. I have known his devotion to this field. He has conducted his subcommittee in a totally nonpartisan fashion, and we have worked intimately and well with the staff appointed by the Democratic members.

It has always been a nonpartisan relationship, and I have drawn upon them for advice, counsel, and support, and I commend them and commend the leadership we have had.

It is a great tragedy to have his continuing guidance and leadership taken from our committee, but I know he shall have a lifetime interest in the field. We cordially invite him to participate in every way possible. We are gratified by his presence this morning.

I would like to express my deep appreciation to Senator Church and the staff of the Aging Committee for these investigations. I would also like to welcome Mr. Charles Hynes and Mr. Sam Skinner this morning to testify before the committee.

I look forward to their suggestions as to how we can enact legislation which will curtail fraudulent practices in medicare and medicaid programs and, furthermore, how we can alleviate obstacles which presently impede Federal prosecutions.

First Convictions Received

Last Thursday, November 11, Samuel Skinner, the most active U.S. attorney in terms of medicaid fraud prosecutions, received the first convictions under the 1972 Federal law prohibiting kickbacks in the medicaid program.

Since 1969, Senator Moss and I have been concerned with nursing home scandals and medicare-medicaid frauds. It pleases me that after 7 years of hearings, repeated investigations, and numerous reports, our efforts are finally bearing fruit.

The purpose of a public hearing such as this is to disseminate information as to what our policy is going to be and how the law is going to be implemented. I feel we should serve notice today—publicly—that with the Skinner convictions we can now effectively serve notice to all who would defraud and abuse the medicaid program. They simply cannot and will not escape prosecution.

We passed the law. The law is going to be carried out and has now been put into effect. Congress and the judicial system mean to put an end once and for all to one of the worst scandals of our time: medicaid fraud and abuse.

Persons who would defraud the elderly poor, I think, are the most reprehensible—certainly those in the medical profession themselves who have taken a vow to serve their fellow man. I think it is an unconscionable action on their part to engage in these practices—those under the cloak of engaging and caring for the poor who profit from the poor.

The same goes on Wall Street. There is money to be made on the poor, providing they are elderly—particularly if they are elderly. I think we intend to move, and move strongly.

We have had witnesses before us who are now serving time in jail. We intend to carry this forward and, Senator Moss, I pledge to you that the committee will carry on in the spirit in which you have chartered our course.

Prior to the efforts of Sam Skinner and Charles Hynes, little had been accomplished with the slap on the hand we have been giving the doctors convicted of medicaid fraud. We need to strengthen the medicaid laws at both the Federal and State levels. Some steps have been taken in that direction, but more are needed if we are going to clean up our medicare and medicaid programs and move on to national health insurance.

Abuses Threaten Proposed Program

I, for one, will do everything possible to assure the enactment of the medicare-medicaid antifraud bill during the 95th Congress. Both political parties have pledged to carry forward a national health insurance program. Until we can find a way in these much smaller programs to carry them out without the millions of dollars of fraud that we have, there is no possibility of having a sensible, sound, rational national health insurance program where the potential of fraud would not run into the billions. This is really what we are

aiming at—to find out how to administer these programs in such a way that we can even broaden the health care that is needed for all Americans rather than just the elderly.

I welcome these hearings and certainly appreciate the testimony we are about to have from our distinguished witnesses.

Senator CHURCH. Thank you very much, Senator Percy. I surely agree if we are to move ahead with a national health program, we are going to have to demonstrate we can competently manage those programs that now exist for the elderly and that we can eliminate this problem of kickbacks, payoffs and bribes that have been disclosed through the investigations of this committee and the special work of Senator Moss.

I want to ask Senator Moss for whatever statement he would like to make at this time. Before doing that, I think it might be appropriate to include in the record three articles that appeared in the New York papers yesterday. One appeared in the New York Times which discusses the 26 indictments that have been issued by the special prosecutor and our witness this morning, Charles J. Hynes, and also has to do with kickbacks that he will be discussing this morning, and a similar article appearing in yesterday's Daily News giving further details.

And finally, a New York Times article published yesterday entitled "Medicaid's Lab Fees Being Cut Up To Half," which indicates how bloated the costs have become due to these fraudulent practices and the immense savings that can be realized through the efficient enforcement of the law.

[The articles referred to follow:]

[From the New York Times, Nov. 16, 1976]

HEALTH CARE PAYOFFS CALLED RIFE BY HYNES AS 26 ARE INDICTED

NURSING-HOME PROSECUTOR CHARGES KICKBACKS BY SUPPLIERS—FEELS ALL MEDICAID IS INVOLVED

(By Richard J. Meislin)

The State's special nursing home prosecutor charged yesterday that illegal kickbacks from commercial supplier's were widespread in the health-care system in New York State, and he announced the indictments of 26 nursing home owners, operators, employees, and suppliers.

The prosecutor, Charles J. Hynes, said that up to half the 125 nursing homes in the metropolitan New York area could be involved in the alleged kickback schemes.

"Our indication is that the same kinds of abuses are found in all provider services in medicaid," Mr. Hynes said, adding that he included hospitals and pharmacies.

Mr. Hynes, whose jurisdiction is limited to nursing homes, said his 18-month inquiry had uncovered evidence of kickbacks ranging from 5 percent to 33 percent of business volume from suppliers of a variety of goods and services to health care facilities.

He indicated that additional indictments were expected soon from grand juries hearing evidence about other aspects of the alleged kickback schemes.

SOME INDICTMENT DETAILS

Thirteen nursing home officials—in most cases, operators or administrators—were charged in yesterday's indictments with conspiracy and with violating the anti-kickback provisions of the State health laws. Eleven suppliers were

charged with perjury, and two meat company owners were accused of bribing a witness, criminal solicitation and conspiracy.

The indictments were returned by five grand juries in Brooklyn, the Bronx, Queens, and Nassau and Suffolk Counties.

Mr. Hynes said that his investigation, which focused on 30 of the metropolitan area's major nursing home suppliers, had uncovered three major kickback schemes:

(1) "Inflated billing," in which the supplier would bill the nursing home for more than the amount actually owed.

(2) "Phony billing," in which a false invoice would be issued for deliveries that were never made.

(3) "Phony items," in which bogus items were included and charged for in an otherwise legitimate bill.

In each of these cases, Mr. Hynes said, the nursing home official would pay the amount requested by the supplier. The supplier would then return to the official, in cash, the difference between the actual amount owed and the inflated bill.

The nursing home would then file the inflated bill with the State health department for medicaid reimbursement, the prosecutor said.

Yesterday's indictments open a new area of inquiry by Mr. Hynes, whose investigation to date has concentrated on nursing home operators who allegedly filed false medicaid claims to cover personal expenses.

OWNER WHO WORE MICROPHONE

Instrumental in the inquiry, Mr. Hynes said, was a New Jersey nursing home owner who, while opening a new facility in Emerson, N.J., agreed to wear hidden electronic equipment while negotiating contracts for his nursing home with 30 major suppliers in the New York area.

The bugging was conducted with the approval of Joseph Woodcock, the Bergen County Prosecutor, Mr. Hynes said.

In more than half the 50 conversations recorded in this manner, the vendors on their own initiative proposed kickbacks to the nursing home operator, Mr. Hynes asserted. He would not name the nursing home informant, but he is identified in several indictments as Ira Feinberg, who is facing an 18-month sentence on a Federal stock fraud conviction relating to another nursing home.

Confronted with the tape recordings, several suppliers agreed to wear electronic listening devices themselves, and in subsequent visits to nursing home owners they recorded discussions of the kickbacks and the transfer of money, the State prosecutor said.

Mr. Hynes said that the average monthly kickback discussed in the conversations recorded by his informants was $500 per supplier.

These conversations resulted in the indictments against the 13 nursing home officials.

In 11 other cases, suppliers who allegedly had discussed kickbacks with Mr. Feinberg denied any knowledge of illegal propositions, and they were indicted on perjury charges that carry a maximum 7-year prison sentence.

Twenty of those indicted surrendered yesterday morning to the special prosecutor. Six others, not yet named, are expected to surrender "within the next day or two," Mr. Hynes said.

[From the New York Daily News, Nov. 16, 1976]

26 ARE INDICTED IN KICKBACK PLAN AT NURSING HOMES

(By Marcia Kramer)

Twenty-six persons were indicted yesterday in a nursing home swindle that prosecutors said involved up to $4 million in kickbacks from vendors and in medicaid fraud. The charges were based on an 18-month investigation by grand juries in three boroughs and in Nassau and Suffolk counties.

Charles J. Hynes, the State nursing home special prosecutor, said that while 13 nursing home officials at seven homes had been indicted, the investigation by his office had revealed that as many as 50 percent of metropolitan area nursing homes were involved in the kickback arrangement. There are 125 homes and related facilities in the New York region and 753 in the State.

The prosecutor said that the suppliers viewed kickbacks as part of their normal course of doing business. They contracted with the operators to supply cleaning services, paper products, meats, groceries, and clothing for the residents. He estimated that each home operator dealt with 10 vendors, each of whom shelled out an average monthly kickback of $500.

11 SUPPLIERS NAMED

Besides the nursing home officials, the indictment named 11 suppliers and two meat company owners. The home operators were charged with the receipt of specific cash kickbacks from the vendors; suppliers were charged with committing perjury in connection with grand-jury testimony and the two meat-company owners were charged with offering a $1,000 criminal solicitation bribe to a government witness.

The indictments climaxed an investigation that began in May 1975 when a New Jersey nursing home operator, who had been convicted on Federal fraud charges, agreed to cooperate with the special prosecutor's office.

The operator, Ira Feinberg of Paramus, posed as a man who planned to open a nursing home in Emerson, N.J. Working from a list of 200 suppliers, all of whom did business in excess of $25,000 a year with nursing homes, Feinberg invited the top 30 suppliers to his office to discuss business proposals. The conversations were secretly tape recorded for presentation to the grand juries.

The prosecutor said that in most of the taped conversations the suppliers offered kickbacks of up to 33 percent a month.

The alleged schemes fell into four categories:

(1) Inflated billing, which raised the actual costs of goods received.

(2) Phony billing—invoices for goods never delivered.

(3) Phony item invoices, in which nonexistent items were listed on otherwise legitimate bills.

(4) Front money—in which the nursing home operator received substantial loans from suppliers in return for long-term contracts.

In each instance, the prosecutor said, the operators submitted the bogus bills to medicaid for reimbursement.

Although none of yesterday's charges alleged medicaid fraud based on the inflated supply costs, sources said that fraud indictments linked to the kickbacks are expected within two months.

Special Assistant Attorney General Philip Stern, who headed the investigation, said that the kickback scheme was a three-step process.

First, the operator wrote a check to the supplier for the inflated bill. Then the supplier would give the operator a cash payment reflecting the difference between the real costs and the inflated invoice. The third step involved the nursing homes submitting the inflated bills to the State health department for reimbursement.

In one case, the operators of the Franklin Park Nursing Home in Franklin Square, L.I., were charged with receiving approximately $42,000 in cash payments from an unnamed meat vendor. The operators, Louis Hodes and Herman Surkis, were charged with conspiracy and 21 violations of the health laws.

The nursing home officials named in the indictments include:

Aaron Feuereisen, owner of the Far Rockaway Nursing Home, 13-11 Virginia St., Far Rockaway, Queens, charged with receiving $17,700 in kickbacks; Herman Greenbaum and Josef Levi, of the Queens-Nassau Nursing Home, 520 Beach 19th St., Far Rockaway, $11,700 in kickbacks; John Marksamer, operator of the Woodbury Nursing Home, 8533 Jericho Turnpike, Woodbury, L.I., $15,966 in kickbacks; Jeffrey White of the Woodbury Health Related Facility, 8565 Jericho Turnpike, Woodbury, L.I., $3,965; and Samuel Leifer, director of the River Manor Health Related Facility, 630 E. 104th St., Brooklyn, $12,523.

Charged with bribing a witness was Sidney Lieberman, 62, owner of a Brooklyn meat company.

The suppliers were identified as Donald Berkowitz, 45, general manager of Donnell Box Meat Distributors, 547 Monida St., Bronx; David Lev, 48, owner of Lev Bros. Produce Co., 1110 54th St., Brooklyn; Lewis Gross, 45, manager of Kleen Linen Service, Inc., 5610 Second Ave., Brooklyn, and Joshua Pomerantz, 30, president of Pomerantz Paper Co., 239 26th St., Brooklyn.

Other suppliers named were Joseph Segal, 27, vice president of Full Line Distributors, 1313 39th St., Brooklyn; Chaim and Joseph Weinstock, owner and

president of the Boro Park Aquamat Corp., 2109 Summit Ave., Union City, N.J.; James T. Heelan, 45, president of Olympic Maintenance Inc., Robbins Lane, Jericho, L.I.; Anthony Fanza, 40, a salesman for the Jamaica Food Co., Inc., 187–40 Hollis, Jamaica, Queens; Donald Luneberg, 33, owner of Jet Laundry, 245–17 Jamaica Ave., Bellrose, Queens, and Raymond Servidio, 30, a salesman with DiMirando & Sons Produce Co., 191 Second Street, Huntington Station, L.I.

The names of six other defendents were not released by the prosecutor because they are not yet in custody.

[From the New York Times, Nov. 16, 1976]

MEDICAID'S LAB FEES BEING CUT UP TO HALF

MOVE BY NEW YORK CITY AGENCY SLATED TO TRIM REIMBURSEMENT COSTS BY $3 MILLION A YEAR

(By Pranay Gupte)

Medicaid reimbursement fees for the most frequently ordered laboratory tests will be reduced by up to one-half, thereby saving the program an estimated total of $3 million a year, New York City's medicaid administration announced yesterday.

The city's action is a part of an economy move designed to trim at least $10 million from New York's annual $1.9 billion in medicaid expenditures, according to Dr. Martin Paris, the city's associate commissioner of health.

But the announcement yesterday, made jointly by Dr. Paris and by Forest Williams, director of medical assistance in the city's department of social services, drew bitter criticism from representatives of the 250 laboratories in the city that participate in medicaid.

"We are initiating a lawsuit against the city concerning these new rates," said Irvin R. Karasik, a lawyer who represents several small and medium-sized laboratories. "This is a most serious matter because our survival is at stake."

SCHEDULE HELD DISCRIMINATORY

Mr. Karasik said that the new fee schedule would be, in effect, discriminatory toward the smaller laboratories because they would be much less able to absorb the cutbacks than some of the bigger laboratories, such as Metpath Inc. of Hackensack, N.J.

His view was endorsed yesterday by Metpath's president, Robert Burns, who acknowledged in an interview that the new fees could indeed be absorbed better by larger concerns such as his.

But the position of the laboratory representatives did not appear to surprise Dr. Paris.

"We fully expect to be sued a lot on this," he said. "But the labs' cost of producing services has decreased immensely because of new and better techniques, and lately they were getting an unreasonable built-in profit margin."

$10 MILLION PAID IN YEAR

Dr. Paris said that the city's medicaid program had paid $10 million last year to the laboratories in fees, of which about 75 percent went to 16 large laboratories.

"So you see that smaller labs are frozen out of medicaid anyway," he said, adding that it was the administration's contention that a substantial part of the lab fees was funneled into kickbacks by the labs themselves.

Responding to Mr. Karasik's charge that the new rate reductions—which would affect such services as blood tests—would be discriminatory to the small labs, Dr. Paris replied: "Do we have an obligation to subsidize the smaller labs? We are not going to subsidize inefficient labs."

But Dr. Paris also sought to stress in a telephone interview from his office at 330 West 34th Street that the new rate reductions would also affect the larger laboratores because the cutbacks concerned the most commonly ordered tests—such as blood and urine analyses—that were done by the labs through automation.

Dr. Paris noted that in a telephone survey conducted by medicaid officials, the administration had found a discrepancy of 500 to 800 percent in the rates of tests available to individuals in labs and the rates charged to medicaid.

"There unquestionably were kickbacks here," Dr. Paris said, stressing that the city's observations concerning alleged illegalities by laboratories paralleled those contained in a report earlier this year by a special U.S. Senate subcommittee. That report, prepared by the staff of Senator Frank E. Moss, Democrat of Utah, alleged that it was a widespread practice among laboratories to share their "extraordinary" profits with medicaid physicians in the form of kickbacks.

Senator CHURCH. It is my pleasure to turn to Senator Moss for such remarks he would like to make at this time.

STATEMENT BY SENATOR FRANK E. MOSS

Senator Moss. Thank you, Mr. Chairman, my dear friend. I am pleased to be here and be with my great friend, Senator Percy of Illinois, who has served as ranking Republican member of the subcommittee on Long-Term Care so effectively and diligently over the years.

It is both heartening and disheartening to be here. I am delighted to see that you, Mr. Chairman, and Senator Percy are going to press ahead on the investigation and also the legislation that will grow out of this. My only disappointment is that after the first of the year I will not be able to continue as a member of the subcommittee or the full Committee on Aging.

It is my belief that this committee, created as a special committee some 15 years ago, has become really one of the most effective and hard-hitting of committees in the Congress. We are not what is called a legislative committee in that we cannot lay legislation before the Senate; but we do have the investigative powers that have been used so effectively and also the power of recommendation so that legislative committees benefit from our work. Much good has been accomplished, but much remains to be done.

I am delighted you are continuing this work on medicare and medicaid because, although we have been able to accomplish a good bit, as you pointed out, very much remains to be done and must be done to protect our elderly, the sick, and the poor. And I think you two Senators who are here must and will be in the forefront of pushing this investigation.

"NOTHING IS GOING TO FALL BEHIND"

I am very pleased; in fact, I feel assured that nothing is going to fall behind by reason of the fact that I cannot be with you, because I am sure both of you will carry on very effectively. I did want to be here at least part time this morning to welcome the two prosecutors who have come this morning to tell this committee what they are doing in their two great jurisdictions.

I have come to be friends with both of them, and I admire them very greatly. Mr. Charles Hynes took over where our committee left off in New York last year because he received the books and the records which we had under subpena. I am happy to see he has already succeeded in sending several of these unscrupulous operators

to jail—one of the things that had to be done in this field. He was of great help to me.

As you may remember, when I walked into the medicaid mills, it was with the help of Mr. Hynes. He had me all wired for sound, in fact, so that I could do that and we would know exactly what went on from what I said and what others said to me while I was there. This turned out to be a very great break in finding those who were abusing and defrauding the system.

A few weeks ago Mr. Skinner of Illinois announced the indictment of eight medicaid mills and six of the clinical labs that we had investigated there in Illinois. And he, too, has been doing a great job.

So I am pleased that these two great public servants have followed through on the work which our subcommittee and this committee was able to get started and for which this committee must now push for further remedial legislation to give them the full tools they need to make sure the medicaid and medicare programs work.

Like you, Mr. Chairman, I do not want to see the system damaged in the sense the poor and the elderly do not get medical services. There have been those who have stood up and said: "Well, why don't you just lop $1 billion out of the fund? Then there won't be so much money to go around."

Well, the problem is, the cuts would come out of the services. It would come down hard on the poor and elderly who need that care and service. What we have to do is find ways to stop this hemorrhage of funds where the money is siphoned off illegally and redistribute it toward improved care.

This is a happy occasion, and I think a good omen, that right now, with Congress in adjournment, still your committee is pressing on. I do commend you, Mr. Chairman, and my friend, Senator Percy, as well as those who have come here this morning. I am sure we are on the right track.

Thank you.

Senator CHURCH. Thank you very much, Senator Moss.

Mr. Hynes, would you like to proceed with your testimony?

STATEMENT OF CHARLES J. HYNES, DEPUTY ATTORNEY GENERAL, OFFICE OF THE SPECIAL STATE PROSECUTOR FOR NURSING HOMES AND SOCIAL SERVICES, NEW YORK CITY; ACCOMPANIED BY HARRY BLAIR, ADMINISTRATIVE ASSISTANT, AND ALBERT APPLETON, EXECUTIVE ASSISTANT

Mr. HYNES. First, Mr. Chairman, and members of the committee, I would like to introduce the gentlemen at the table. To my right is Harry Blair, administrative assistant; to my left is Executive Assistant Albert Appleton.

Mr. Chairman and members of the committee, I would like to begin by telling you how much I appreciate this opportunity to appear before you this morning. What I would like to do, with your permission, is to read some of the remarks from the text and then offer the text to the stenographer for the record.[1]

[1] See p. 772.

Senator CHURCH. That will be fine.

Mr. HYNES. Your committee, Mr. Chairman, has been most helpful and cooperative to my office in the past, and we are much indebted to your assistance and the encouragement in the execution of the difficult task that faces us both.

When last we met, this committee had just finished holding hearings in New York City and had turned over to my office various books and records of local nursing homes that were of great value to us.

I would like nothing more than to tell you today that since that time the forces of evil in the health care industry in my State and elsewhere had been vanquished; that order and justice had returned to the benefit of our old people and that we can all go home and live happily ever after.

OUTCOME UNCERTAIN

Unfortunately, the sad truth is that the outcome of the battle remains very much in question, both in New York State and nationwide. I fear that there still exists a climate in this country where the exploitation of old people is a respectable and risk-free profession, and that our Nation is in danger of losing far more than Federal and State tax dollars—it is in danger of losing a cornerstone of the American way of life itself.

I am afraid that fraud in New York State exists on a massive and pervasive scale. We are now in the process of completing an audit of literally the entire proprietary nursing home industry in the State. We expect that audit to identify about $70 million in fraudulent nursing home costs.

We have concluded that the false submission of direct costs is but one aspect of provider fraud. We have uncovered phony construction costs and concealed ownership of related companies in webs so entangled that even the principal owners cannot set them straight.

But the all-time favorite kind of fraud is for health care figures to write off personal expenditures as costs of doing business, thereby obtaining reimbursement with taxpayers' dollars.

The following is a laundry list of some of the more egregious examples of the free-wheeling personal expenditures we have discovered so far and which has been underwritten by health care funds:

Personal maids and servants; private residential landscaping; travel expenses; food items at levels you would not believe; luggage; works of art, including paintings by Matisse and Renoir in one instance; vast quantities of liquor; interior decorating; dental and medical care; pharmaceuticals; heating fuel for private residences; charitable contributions; political contributions; profits to investors; private automobile expenses; private pension plans; vacation expenses; real estate taxes; mink coats; personal investment stock; renovations to private homes; entertainment; legal fees; theater tickets; tickets for sporting events; high fidelity stereo equipment, and so on.

Only 2 days ago grand juries in five New York counties, empaneled by my office, returned indictments against 26 nursing home owners, operators, employees, and suppliers. This is by no means the end of the situation. The investigation is actively continuing. As a result of the investigations conducted so far in this field, there is reason to suspect that as many as half of the 125 nursing homes in the New York area could be involved in one form or another of the various kickback schemes.

We have uncovered evidence of kickbacks of between 5 percent and 33 percent of the volume of business from suppliers of various goods and services to health care facilities.

26 Indicted

On Monday we indicted 13 nursing home officials for willful violation of health laws and conspiracy; 11 suppliers for perjury; and 2 meat company owners for bribing a witness, criminal solicitation, and conspiracy.

These indictments climaxed an investigation which began in May of 1975 when a New Jersey nursing home operator who was then engaged in opening a new nursing home in Emerson, N.J., agreed to cooperate with our office.

Working from a list of major nursing home suppliers, those who dealt with four or more nursing homes or did business with nursing homes in New York in excess of $25,000 or more annually, the nursing home operator invited the top 30 suppliers to this office to discuss business proposals. All of the conversations were covertly recorded on tape.

The kickback schemes fell roughly into three categories:

One: Inflated billing—in which the supplier would give the nursing home official a bill for an amount exceeding the amount actually owed. The nursing home operator would then submit the bill to medicaid and be reimbursed for the inflated amount.

Two: Phony billing—in which the supplier would give the nursing home official a receipt for deliveries never made. The nursing home official would then submit the bogus receipt for medicaid reimbursement. We are investigating medicaid reimbursements.

Three: Another item would be the "phony item," in which the supplier would give the nursing home official a receipt for a bill where there were legitimate items as well as phony added into the bill.

A final scheme that we uncovered during the course of the investigation was one used by a certain linen company where front money would be given to a nursing home which was starting up and a contract for services would be given in return. And each year the linen company supplier would inflate the cost of the linen supplies by a percentage to include the kickback. Again, we are investigating whether or not, as a result, medicaid was tricked into giving illegal reimbursements.

Several of the suppliers, when confronted with the tape recordings, agreed to cooperate in the investigation. Wearing body microphones, they then visited nursing home officials with whom they had pre-

viously established kickback arrangements. These tape recordings picked up conversations in which kickbacks were explicitly discussed and money handed over. The average kickback discussed was $500 per month per supplier per home.

To put it plainly, Mr. Chairman, we have found ourselves steeped in the investigation of a massive, institutionalized, ongoing white-collar criminal conspiracy throughout the length and breadth of New York State. For a prosecutor, this is a murky area; an area with few established statistics detailing its exact nature and extent; an area that has, until very recently, been swept under the corporate, governmental, and political rugs of this Nation.

It seems to me from the nature of the beast that no State agency, no matter how well equipped, trained, and motivated, can "go it alone."

Federal Superstructure Needed

What is really required is a Federal superstructure in which the States can operate in those instances where they demonstrate the resources, ability, and willingness to do so. Failing such circumstances, there needs to be a comprehensive and dedicated Federal effort.

Mr. Chairman and members of the committee, I have met with representatives of more than a dozen States over the last 24 months while my investigation has been ongoing. In almost every instance, when followup calls were made to the various representatives, the same complaint was made. There is no financial commitment to this kind of investigation. They have no resources.

Currently, Mr. Chairman, we have a situation that does not really make sense. The Federal Government each year gives out literally billions of dollars in taxpayers' money to fuel the engines of medicaid and medicare. This is done within a framework of laws, rules, and regulations which, for the most part, are reasonable and workable. But from an enforcement point of view, Mr. Chairman, there is very little now being done either by the Federal or State Government in proportion to the magnitude of the problem.

At this point, Mr. Chairman, I want to make it clear that my purpose here is not to blame anyone for this state of affairs or charge negligence or anything else. The reasons for this state of affairs are many and varied, and I am confident that it is not through willful neglect that we find ourselves in our current predicament.

Nevertheless, we are where we are, and the situation, from the law enforcement point of view, is desperate. Still, rather than weeping and wailing, I would rather treat it as an opportunity to start from scratch and fashion an effective nationwide enforcement structure that can turn the currently crowded profession of stealing Federal and State health care moneys from one that is respectable and risk-free to a perilous and despicable pursuit.

By way of analogy, Mr. Chairman, I would point to the Internal Revenue Service which, by dedication, a high standard of professionalism and great vigilance has made the evasion of income taxes in this country into a most hazardous occupation. It seems to me that with the growing amounts of moneys being expended in pursuit of health care schemes in this country each year we can do no less.

Established State prosecutors such as district attorneys are currently so overworked, understaffed, and underfinanced that it would be wildly unrealistic to expect that they can cope with health care fraud. As I have explained, the schemes in operation are so complex, wide-ranging, and sophisticated that they require a special staff of highly trained professionals working full time to even provide a ghost of a chance of coping with them.

"Attorneys . . . Stretched Very Thin"

The U.S. attorneys currently are in much the same position. Most, if not all of them, are currently stretched to the limit of their resources to deal with ongoing criminal and civil problems and lack the resources to take on pervasive and complex fraud schemes such as those extant in the health care field.

Normally a U.S. attorney relies on the various Federal law enforcement agencies to develop criminal cases to be referred to him for consideration. If he believes a prosecution is warranted on the basis of evidence handed to him, then he acts if no action is taken. The agencies that provide him with these cases are rather highly specialized in areas other than health care and, as a result, this problem has had a tendency in the past to fall through the cracks of law enforcement jurisdiction.

If one considers the nature of health care fraud as I have discussed here today, I think it is fair to say that this reflects no discredit on these agencies. Clearly, to combat health care fraud on an ongoing and effective basis, a special and separate investigative and prosecutorial framework is necessary; and I see no alternative but that it be Federal.

This is not to say that I don't believe the States have a role to play and an important one. I think the Federal Government could develop a framework, perhaps along the lines of one that I will suggest to you in a moment, and then integrate those States into it that are willing and able to do so.

The Federal authorities could create a set of standards against which to measure a State application to participate. States meeting those standards could become eligible for Federal funds. I would suggest that, initially, a qualified State agency who had the commitment to this kind of investigation receive 100 percent funding from the Federal Government for a period of 3 years, then following that, phasing down to 50 percent.

This, Mr. Chairman and members of the committee, would be a powerful incentive to the States to establish an ongoing and effective agency to police the expenditure of health care dollars and would, in the long run, lessen the Federal burden by the establishment of Federal-State partnerships.

Even so, the number of States that would participate in such a scheme would, of course, likely be limited. For the rest I see no alternative to Federal intervention to keep the health care entrepreneurs honest and prevent a recurrence of the present chaotic situation, if indeed we can succeed in cleaning it up to some degree.

To do this, I would suggest the establishment of a special bureau or office within the Department of Justice dedicated entirely to health care fraud. This bureau would have to be staffed with the same types of professionals—auditors, investigators, and attorneys—all schooled in the mysteries of the delivery of health care services, that we have developed in New York State, operating under the same strike-force type of philosophy without which indictments and convictions in this field would, in my opinion, be next to impossible to obtain.

Additional Assistants Suggested

In addition, I would suggest that each of the 90 U.S. district attorneys be provided with an assistant, in addition to the complement he is now allowed, who would work full time in the health care fraud area with the cooperation of the bureau I mentioned in operating out of Washington.

The personnel of this Washington bureau could be loaned on an as-needed basis to the various U.S. attorneys. In those States with agencies of their own that received Federal certification, the State agencies and the U.S. attorneys could work in tandem both with each other and with the Washington bureau.

In my view this, or something like it, is clearly what is needed. Many of the targets of our investigations operate across State lines and, of course, as a State prosecutor, I am unable to follow.

In addition, I have found that the trail of fraud and thievery leads to medicaid mills and hospitals—indeed, with the whole provider service—in New York City. However, I am powerless to follow that trail because of lack of money, personnel, and jurisdiction. I have my hands full right now just trying to cope with the problems we have.

Mr. Chairman, the conspiracies to defraud the public in the health care field are enormous in scope and complexity and pervasive through every area of our Nation. To cope with them effectively will require a massive effort on the part of the Federal Government. I see no other way.

Mr. Chairman, New York responded to a scandal in 1974 with the appointment of my office and, more important, the funding necessary so we could do a job. But how many times in the past have we seen a great hue and cry in the media about some pressing social evil uncovered in our midst? Each time, press exposés are followed by pious pronouncements from those in positions of leadership. Promises are made, commissions and special prosecutors appointed, lengthy and erudite reports are issued, a few indictments handed down, and occasionally a prison sentence is imposed and served.

Then what happens? Usually, after a brief period of quiet, it becomes business again as usual for the bad guys, and another 20 years go by before another newspaper explosion—and the process is repeated again.

Those who stand up and announce earnestly in some public forum that this time it has to be different—that this time we have to take steps to make sure it doesn't happen again—those people are con-

signed by a jaded and scandal-weary press and public to the categories of amiable crackpot, office seeker, or worse.

Well, Mr. Chairman, this time it does have to be different. This time we do have to clean it up. And if we can't prevent it from happening again we must prevent it, at the very least, from becoming respectable and risk-free to deal with old people like a commodity in the futures market in Chicago.

It is simply too important and too central to our existence as a Nation to permit this matter to be treated like just another scandal.

To prevent the merchandising of our elderly from becoming risk-free will take more than the creation of special State prosecutors and the writing of some inspired editorials in our leading newspapers.

It will require a comprehensive, well financed, and organized Federal preserve dedicated to eradication of health care theivery. It will require a pronounced change of attitude on the part of the public in general—and the judiciary, in particular.

The crimes against our old people, despite their frequently tragic overtones where human life is concerned, primarily fall under the heading of white-collar crime as far as the law is concerned.

Sentencing: A Difficult Issue

The moment you attempt to deal with white-collar crime you must also deal with an issue few lawyers and almost no prosecutors want to touch—sentencing, which is the single most difficult thing a judge has to do.

The bitter truth is that there is simply little precedent and less enthusiasm in America about sending white-collar criminals to jail. The reasons are many and complex and I will not dwell on them here.

But if we are to prevent the criminal exploitation of old people from becoming a respectable profession, then our Federal Government has got to start taking an interest and playing an actual role, and judges have got to start sending people convicted of these crimes to jail. It is as simple as that.

This time the men and women who have stolen our tax dollars and preyed upon our parents must be apprehended and prosecuted, and those found guilty must be sent to prison. A weary and cynical public must be shown beyond doubt that such artful crimes are neither respectable nor risk-free.

I believe the people of this Nation are hungering mightily for justice in these matters and to see the white-collar criminals—who loot their treasuries and mock their laws and institutions—put in jail where they belong.

The price for failure can be high, Mr. Chairman—a precious segment of our democracy itself. For, as one of the great parliamentarians and champions of democracy, Edmund Burke, once observed: "All that is necessary for the forces of evil to triumph in the world is for good men to do nothing."

Thank you.

[The prepared statement of Mr. Hynes follows:]

PREPARED STATEMENT OF CHARLES J. HYNES

Mr. Chairman, members of the committee, my name is Charles J. Hynes. I am a deputy attorney general of the State of New York in charge of the office of the special State prosecutor for nursing homes, health and social services. I would like to begin by telling you how much I appreciate this opportunity to appear before you this morning. Your committee has been most helpful and cooperative to my office in the past and we are much indebted to you for your assistance and encouragement in the execution of the difficult task that faces us both.

When last we met this committee had just finished holding hearings in New York City and had turned over to my office various books and records of local nursing homes that were of great value to us.

I would like nothing more than to tell you today that since that time the forces of evil in the health care industry in my State and elsewhere had been vanquished, that order and justice had returned to the benefit of our old people and that we can all go home and live happily ever after.

Unfortunately the sad truth is that the outcome of the battle remains very much in question, both in New York State and nationwide. I fear that there still exists a climate in this country where the exploitation of old people is a respectable and risk-free profession, and that our Nation is in danger of losing far more than Federal and State tax dollars—it is in danger of losing a cornerstone of the American way of life itself.

I am proud to say that the State of New York has made a major commitment to reverse this tide, not only with the establishment of an office specially mandated to investigate fraud and abuse in the nursing home industry, but in providing the necessary funding to do the job. From the outset, Governor Carey has insisted that the resources made available to me mirror the broad scope of the problem. As a result, we are now the largest statewide office in the country dedicated to the investigation of white-collar crime.

As of today, I have a staff of more than 400 people, including some 300 professionals—attorneys, auditors, and investigators—working closely together out of regional offices in New York City, Long Island, Syracuse, Rochester, Westchester, Buffalo, and Albany. Our investigation to date has resulted in the indictment of 76 persons, and the conviction, thus far, of 20 of them.

Our efforts to date, while far from complete, have brought about a number of accomplishments. Together with the substantial assistance of the New York State Department of Health:

—We have brought about improvements in overall care for those in nursing homes.

—We have achieved the identification and return of many thousands of dollars stolen from the State over a 5-year period—and not always through criminal proceedings, but frequently by civil action, as well.

—We have addressed ourselves to the task of putting in place an ongoing mechanism that, once our task is completed, will effectively serve to identify, retard, and eliminate fraud in the medicaid-sponsored industry and to eliminate the potential for fraud in the future.

Before expanding on medicaid fraud, the persistent problem which brings me here today, I thought it would be helpful to give you a brief description of some of the investigative areas my office has undertaken thus far.

The first is patient abuse. This extremely sensitive area poses enormous problems for a prosecutor. Quite obviously we are obliged to prove crime beyond reasonable doubt. Although an incident of abuse may appear on the surface to be outrageous, the strict burden of proof required in a court of law necessarily imposes severe limitations on the ability to secure convictions. Secondly, witnesses—for a variety of reasons—are reluctant, and often unable, to testify, or to do so effectively. Nevertheless, we have succeeded in achieving a number of significant convictions arising out of the abuse of helpless patients in nursing homes.

UNANNOUNCED VISITS INSTITUTED

In an attempt to improve the quality of care in nursing homes, we have instituted with the cooperation of the State department of health an ongoing series of unannounced, surprise visits to facilities throughout all seven regions of the State. Although these inspections have been successful in significantly upgrad-

ing standards of care, there continues to be a great deal of room for improvement.

A third area under investigation by our office is that of adult homes. We have only recently undertaken this new assignment, which involves the licensing and operation of some 530 such facilities in New York State. Eighty percent of these are proprietary facilities sheltering some 18,000 residents. Twenty-five percent of these residents have been discharged from mental hygiene institutions. Currently we are evaluating the scope of whatever fraud and other crime may exist in the adult home industry. If it appears that a full-scale investigation is needed, we will begin that work in the spring of 1977.

And then, there is the widespread and pervasive problem of medicaid fraud itself.

I am afraid that fraud in New York State exists on a massive and pervasive scale. We are now in the process of completing an audit of literally the entire proprietary nursing home industry in the State. We expect that audit to identify about $70 million in fraudulent nursing home costs.

We have concluded that the false submission of direct costs is but one aspect of provider fraud. We have uncovered phony construction costs and concealed ownership of related companies in webs so entangled that even the principal owners can't set them straight.

But the all-time favorite kind of fraud is for health care figures to write off personal expenditures as costs of doing business, thereby obtaining reimbursement with taxpayers' dollars.

The following is a laundry list of some of the more egregious examples of the free-wheeling personal expenditures we have discovered so far and which has been underwritten by health care funds: Personal maids and servants, private residential landscaping, travel expenses, food items at levels you would not believe, luggage, works of art including paintings by Matisse and Renoir in one instance, vast quantities of liquor, interior decorating, dental and medical care, pharmaceuticals, heating fuel for private residences, charitable contributions, political contributions, profits to investors, private automobile expenses, private pension plans, vacation expenses, real estate taxes, mink coats, personal investment stock, renovations to private homes, entertainment, legal fees, theatre tickets, tickets for sporting events, high fidelity stereo equipment, and secret personal profit.

Only two days ago grand juries in five New York counties, empaneled by my office, returned indictments against 26 nursing home owners, operators, employees, and suppliers. This is by no means the end of the situation. The investigation is actively continuing. As a result of the investigations conducted so far in this field there is reason to suspect that as many as half of the 125 nursing homes in the New York area could be involved in one form or another of the various kickback schemes.

We have uncovered evidence of kickbacks of between 5 percent and 33 percent of the volume of business from suppliers of various goods and services to health care facilities.

On Monday we indicted 13 nursing home officials for willful violation of health laws and conspiracy, 11 suppliers for perjury, and 2 meat company owners for bribing a witness, criminal solicitation, and conspiracy.

These indictments climaxed an investigation which began in May of 1975 when a New Jersey nursing home operator who was then engaged in opening a new nursing home in Emerson, N.J., agreed to cooperate with our office.

Working from a list of major nursing home suppliers (those who dealt with four or more nursing homes or did business with nursing homes in New York in excess of $25,000 or more annually), the nursing home operator invited the top 30 suppliers to his office to discuss business proposals. All of the conversations were covertly recorded on a tape.

The kickback schemes fell roughly into three categories:

(1) "Inflated billing," in which the supplier would give the nursing home official a bill for an amount exceeding the amount actually owed. The nursing home operator would then submit the bill to medicaid and be reimbursed for the inflated amount.

(2) "Phony billing," in which the supplier would give the nursing home official a receipt for deliveries never made. The nursing home official would then submit the bogus receipt for medicaid reimbursement.

(3) "Phony item," in which the supplier would give the nursing home official a receipt for deliveries which were made. However, the receipt would also include fictitious items not included in the delivery. The nursing home operator would then submit the bill for medicaid reimbursement.

Under each of these proposals, the nursing home official would write a check to the supplier. The supplier would then return, in cash, the phony or inflated amount which constituted the kickback.

In addition, a number of the indicted suppliers proposed a fourth technique: "Front money," in which the nursing home operator would receive substantial loans from suppliers in return for a long-term business contract. The loans would then be repaid by means of inflated bills and subsequent medicaid reimbursement throughout the time of the contract.

Eleven Indicted for Perjury

When the same suppliers were summoned before grand juries months later, 11 denied under oath that they discussed or offered any of the illegal propositions mentioned above. They were subsequently indicted for perjury.

Several of the suppliers, when confronted with the tape recordings, agreed to cooperate in the investigation. Wearing body microphones, they then visited nursing home officials with whom they had previously established kickback arrangements. These tape recordings picked up conversations in which kickbacks were explicitly discussed and money handed over. The average kickback discussed was $500 per month per supplier.

To put it plainly Mr. Chairman, we have found ourselves steeped in the investigation of a massive, institutionalized, ongoing white-collar criminal conspiracy throughout the length and breadth of New York State. For a prosecutor this is a murky area—an area with few established statistics detailing its exact nature and extent; an area that has, until very recently, been swept under the corporate, governmental, and political rugs of this Nation.

My office is considered to be a new concept in the battle against such flourishing white-collar crime. Not only are we funded on a scale that enables us to address the scope of the problem—our budget this year is $6 million—but we are armed with broad and unique powers to carry out our investigations. For example, we are empowered by statute to issue nonjudicial, factfinding subpenas which are returnable at my office in proceedings which form the basis for civil actions and recommendations to the Governor.

The investigation of complex and sophisticated white-collar crime is a long and tedious operation. Generally, we begin by sending a team of auditors into a facility or by bringing the books of the nursing home into our office. Our auditors, using a variety of sophisticated techniques developed, tested, and refined from the inception of our office, make preliminary judgments as to the validity of the expense claims submitted by the facility to the State. This initial audit work generates leads which are handed over to the investigators who operate under the direction of an experienced prosecuting attorney assigned to the case. Underscoring this investigative effort throughout are the following considerations:

—Was there a false submission of patient-related expenditures?

—Was there a material misrepresentation of fact?

—Was it intentional?

Once we are reasonably certain that criminal activity was involved in the operations of a particular nursing home, the evidence is presented to a grand jury which must determine whether or not there is reasonable cause to believe that a crime has been committed, and who has committed it.

These crimes are "paper crimes," and the only "smoking gun" we are likely to find is a set of phony books and records.

Since the extent of white-collar crime is limited only by the ingenuity of the white-collar criminal, we have launched our investigative assault on several different fronts:

—My office and the State health department—the State agency responsible for monitoring and setting nursing home rates and standards—have entered into a memorandum of agreement designed to insure that our work dovetails with and complements the program and monitoring work of the department of health.

—We provide the State health department with technical assistance and up-to-date training.
—We have extended ourselves to providing information and expertise beyond New York State. I have encouraged—and continue to encourage—law enforcement agencies throughout the country to avail themselves of our knowledge, experience, and intelligence information—and they have done so. Florida, Michigan, Ohio, Colorado, and New Jersey are only some of the States we have worked with.
—We have developed standard procedures for referrals of criminal information leads, both from our office to other governmental agencies and to our office from those offices. For no arm of government has a right to think that it can achieve success in an arena of these dimensions without such regular candid exchanges.
—We have developed sophisticated computer programs to assist in investigations, and have assisted the New York State Bureau of the Budget in a cost analysis of both nursing homes and adult homes.
—In addition to these efforts, it is imperative that we initiate and support legislative recommendations which will help to eliminate the problems which infect the Medicaid program. We reach out to citizens in the communities to aid us in enacting remedial changes in the law. In fact, I plan to submit within the month my first package of such proposals.

"Best Lawyers White-Collar Criminals Can Buy"

We have selected and trained a staff of capable lawyers who are, for the most part, former prosecutors. This cadre works closely with our special investigators—former police detectives, ex-FBI agents—and auditors. We conduct frequent in-house seminars. We have invited prominent members of the legal profession in and out of law enforcement who have lectured to the staff and kept them current on the latest developments in the law, strategy, and techniques—all this in the pursuit of a standard of excellence which is necessary to cross swords with the best lawyers that white-collar criminals can buy. The building blocks in this project are patience, aggressiveness, innovation, and raw talent.

Our office has recently put together a manual which lays out in detail a tested and proven design for the successful investigation of health care fraud and which we will make available on request. We stand ready to cooperate with any agency which seeks to tackle this problem for, Mr. Chairman, New York State has no monopoly on medicaid crimes. And we cannot go it alone.

In fact, it seems to me from the nature of the beast that no State agency, no matter how well equipped, trained, and motivated, can "go it alone."

What is really required is a Federal superstructure in which the States can operate in those instances where they demonstrate the resources, ability, and willingness to do so. Failing such circumstances, there needs to be a comprehensive and dedicated Federal effort.

Currently, Mr. Chairman, we have a situation that doesn't really make sense. The Federal Government each year gives out literally billions of dollars in taxpayers money to fuel the engines of medicaid and medicare. This is done within a framework of laws, rules, and regulations which, for the most part, are reasonable and workable. But from an enforcement point of view, Mr. Chairman, there is very little now being done either by the Federal or State Governments in proportion to the magnitude of the problem.

At this point, Mr. Chairman, I want to make it clear that my purpose here is not to blame anyone for this state of affairs or charge negligence or anything else. The reasons for this state of affairs are many and varied and I am confident that it is not through willful neglect that we find ourselves in our current predicament.

Nevertheless we are where we are and the situation, from the law enforcement point of view, is desperate. Still, rather than weeping and wailing I would rather treat it as an opportunity to start from scratch and fashion an effective nationwide enforcement structure that can turn the currently crowded profession of stealing Federal and State health care moneys from one that is respectable and risk-free to a perilous and despicable pursuit.

By way of analogy, Mr. Chairman, I would point to the Internal Revenue Service which, by dedication, a high standard of professionalism and great vigilance, has made the evasion of income taxes in this country into a most hazardous occupation. It seems to me that with the growing amounts of moneys being expended in pursuit of health care schemes in this country each year we can do no less.

Established State prosecutors such as district attorneys are currently so overworked, understaffed, and underfinanced that it would be wildly unrealistic to expect that they can cope with health care fraud. As I have explained the schemes in operation are so complex, wide ranging, and sophisticated that they require a special staff of highly trained professionals working full time to even provide the ghost of a chance of coping with them.

The U.S. attorneys currently are in much the same position. Most, if not all, of them are currently stretched to the limit of their resources to deal with ongoing criminal and civil problems and lack the resources to take on pervasive and complex fraud schemes such as those extant in the health care field.

Normally a U.S. attorney relies on the various Federal law enforcement agencies to develop criminal cases to be referred to him for consideration. If he believes a prosecution is warranted on the basis of evidence handed to him, then he acts if no action is taken. The agencies that provide him with these cases are rather highly specialized in areas other than health care and, as a result, this problem has had a tendency in the past to fall through the cracks of law enforcement jurisdiction.

Separate Framework Needed

If one considers the nature of health care fraud as I have discussed here today, I think it is fair to say that this reflects no discredit on these agencies. Clearly to combat health care fraud on an ongoing and effective basis, a special and separate investigative and prosecutorial framework is necessary; and I see no alternative but that it be Federal.

This is not to say that I don't believe the States have a role to play and an important one. I think the Federal Government could develop a framework, perhaps along the lines of one that I will suggest to you in a moment, and then integrate those States into it that are willing and able.

The Federal authorities could create a set of standards against which to measure a State application to participate. States meeting those standards could become eligible for Federal funds. I would suggest that, initially, a qualified State agency receive 100 percent funding from the Federal Government for a period of 3 years following which the Federal share would be phased down to 50 percent.

This would be a powerful incentive to the States to establish an ongoing and effective agency to police the expenditure of health care dollars and would, in the long run, lessen the Federal burden by the establishment of Federal-State partnerships.

Even so, the number of States that would participate in such a scheme would, of course, likely be limited. For the rest I see no alternative to Federal intervention to keep the health care entrepreneurs honest and prevent a recurrence of the present chaotic situation, if indeed we can succeed in cleaning it up to some degree.

To do this, I would suggest the establishment of a special bureau or office within the Department of Justice dedicated entirely to health care fraud. This bureau would have to be staffed with the same types of professionals—auditors, investigators, and attorneys—all schooled in the mysteries of the delivery of health care services that we have developed in New York State, operating under the same strike-force type of philosophy without which indictments and convictions in this field would, in my opinion, be next to impossible to obtain.

In addition, I would suggest that each of the 90 U.S. district attorneys be provided with an assistant, in addition to the complement he is now allowed, who would work full time in the health care fraud area with the cooperation of the bureau I mentioned operating out of Washington, D.C.

The personnel of this Washington bureau could be loaned on an as-needed basis to the various U.S. attorneys. In those States with agencies of their own that received Federal certification, the State agencies and the U.S. attorneys could work in tandem both with each other and with the Washington bureau.

In my view this, or something like it, is clearly what is needed. Many of the targets of our investigations operate across State lines and, of course, as a State prosecutor, I am unable to follow them once they leave New York.

In addition, I have found that the trail of fraud and thievery leads to medicaid mills and hospitals. However, I am powerless to follow that trail because of lack of money, personnel, and jurisdiction. I have my hands full right now just trying to cope with the problems in my own area.

Mr. Chairman, the conspiracies to defraud the public in the health care field are enormous in scope and complexity, and pervasive through every area of our Nation. To cope with them effectively will require a massive effort on the part of the Federal Government. I see no other way.

How many times in the past have we seen a great hue and cry in the media about some pressing social evil uncovered in our midst? Each time, press exposés are followed by pious pronouncements from those in positions of leadership. Promises are made, commissions and special prosecutors appointed, lengthy and erudite reports are issued, a few indictments handed down, and occasionally a prison sentence is imposed and served.

Then what happens? Usually, after a brief period of quiet, it becomes business again as usual for the bad guys, and another 20 years go by before another newspaper explosion—and the process is repeated again.

Those who stand up and announce earnestly in some public forum that this time it has to be different—that this time we have to take steps to make sure it doesn't happen again—those people are consigned by a jaded and scandal-weary press and public to the categories of amiable crackpot, office seeker, or worse.

"This Time We Must Succeed"

Well, Mr. Chairman, this time it does have to be different. This time we do have to clean it up. And if we can't prevent it from happening again, we must prevent it, at the very least, from becoming respectable and risk-free to deal with old people like a commodity in the futures market in Chicago.

It is simply too important, too central to our existence as a nation, to permit this matter to be treated like just another scandal.

To prevent the merchandising of our elderly from becoming risk-free will take more than the creation of special State prosecutors and the writing of some inspired editorials in our leading newspapers.

It will require a comprehensive, well-financed, and organized Federal preserve dedicated to eradication of health care thievery. It will require a pronounced change of attitude on the part of the public in general—and the judiciary in particular.

The crimes against our old people, despite their frequently tragic overtones where human life is concerned, primarily fall under the heading of "white-collar crime" as far as the law is concerned.

The moment you attempt to deal with white-collar crime you must also deal with an issue few lawyers and almost no prosecutors want to touch—sentencing.

The bitter truth is that there is simply little precedent and less enthusiasm in America about sending white-collar criminals to jail. The reasons are many and complex and I will not dwell on them here.

But if we are to prevent the criminal exploitation of old people from becoming a respectable profession, then our Federal Government has got to start taking an interest and playing an actual role, and judges have got to start sending people convicted of these crimes to jail. It is as simple as that.

This time the men and women who have stolen our tax dollars and preyed upon our parents must be apprehended and prosecuted, and those found guilty must be sent to prison. A weary and cynical public must be shown beyond doubt that such awful crimes are neither respectable nor risk-free.

I believe the people of this Nation are hungering mightily for justice in these matters and to see the white-collar criminals—who loot their treasuries and mock their laws and institutions—put in jail where they belong.

The price for failure can be high—a precious segment of our Democracy itself. For, as one of the great parliamentarians and champions of democracy, Edmund Burke, once warned: "All that is necessary for the forces of evil to triumph in the world is for enough good men to do nothing."

Thank you.

Senator CHURCH. Thank you for your statement, Mr. Hynes. I remember reading not too long ago about the first doctor—or dentist, I do not recall—who had been actually sent to jail on a fraud charge connected with medicaid. It was so exceptional and so unique that it made the newspapers all acress the country.

How do you get judges to begin to understand that doctors and dentists and white-collar people should be as equally accountable as ordinary street criminals?

Mr. HYNES. Judicial attitudes.

Senator CHURCH. How do you affect the judicial attitudes so these people are given sentences comparable to the kind that are now pretty much reserved for the street criminal?

Mr. HYNES. Mr. Chairman, I think they have to understand the pervasiveness of the problem. I can only give you, by way of analogy, my previous experience. I was in charge of the rackets bureau of the district attorney's office in Brooklyn between 1970 and 1974. And as you well know, Mr. Chairman and members, police corruption was heralded as a pervasive situation during that period.

We had a special commission which investigated problems of police corruption. At that time, the prevailing judicial attitude—and a well-meaning one I might add—was that what other punishment could be given to a police officer than for him to lose his respectability, his badge, his pension, and all those things which go with becoming a police officer—all the pride and respect he gets in his community?

PUNISHMENT: A KEY DETERRENT

It was our position and our direction to try to make it clear to the judges that we cannot have this kind of repetition of activity; that police corruption had become pervasive in New York City and the only deterrent was assurance of a speedy trial, conviction, and punishment. The punishment was the key.

In 1973, 24 police officers who were assigned to control gambling and corruption in New York City—more specifically, in Brooklyn—were indicted. Twenty-two of those were convicted after a 4-month trial, and each and every one of them received jail sentences of between 1½ and 3 years.

I am told from friends of mine in the police department today that one of the reasons that we have one of the highest levels of integrity in the history of that department today is the fear of punishment.

It seems to me the more it becomes clear to judges in New York, and maybe across this country—that the deterrent factor is every bit as important as rehabilitation.

Senator CHURCH. You mentioned in your testimony, Mr. Hynes, that you thought medical profiteering, kickbacks, and things of that kind might be as prevalent in the hospitals as they are in the nursing homes.

Mr. HYNES. That is a result of the 18-month investigation which we just concluded. Many of the people who have cooperated with us, offenders who had been previously involved in kickbacks, indicated—I state this very carefully, this is a continuing investigation—indi-

cated that the nursing home kickback scheme had no monopoly over the system; that it extended to other provider services, including hospitals.

Senator PERCY. Could I ask for clarification, Mr. Chairman?

You have pointed out that 80 percent of adult homes or nursing homes are proprietary?

Mr. HYNES. Yes.

Senator PERCY. Most of our hospitals are nonproprietary, nonprofit. Do you find any difference there at all? Is there an equal amount of fraud and kickback in the nonprofit hospitals?

Mr. HYNES. It depends on whether there is opportunity for this kind of fraud. In May of 1975 when this New Jersey operator agreed to cooperate with us—you are, of course, aware New Jersey was a flat-rate State as opposed to a cost-plus State like New York. We were not optimistic we could get this kind of activity rolling with the difference of payment.

But it was clear from the conversation we had from the various vendors that it mattered not whether it was cost-plus or flat rate, voluntary or proprietary. The same amount of moneys were available. The only difference, of course, was the initial one step further; in addition to the cash kickback was the opportunity to seek the repayment from medicaid of the inflated voucher.

Senator CHURCH. The amounts are staggering to me.

You testified in connection with the kickbacks in New York alone, that you would estimate the overpayment would run in the range of $70 million. Is that $70 million in a single year?

$70 MILLION OVER 5-YEAR PERIOD

Mr. HYNES. No, that is over a 5-year period. That is the statute of limitations we investigated.

Senator CHURCH. And that is in more than half of the New York nursing homes; I take it that would be in the New York City area?

Mr. HYNES. Yes.

Senator CHURCH. You have found evidence of the kickback practice ranging anywhere from 5- to 33⅓-percent overpayment?

Mr. HYNES. That is correct.

Senator CHURCH. In those cases, you said you were investigating to determine whether these overpayments which were billed in various fraudulent ways had, in fact, been reimbursed by medicaid or medicare. Do you mean by that, that your investigation is not yet sufficiently complete so you can testify that the reimbursements have been, in fact, taking place?

Mr. HYNES. There is just one step remaining, Senator. Of course, New York State reimbursement forms are backed up by vouchers for the various services. We are not aware of any situation where there were duplicate vouchers issued by a vendor which contained the amount of the kickback in one of the legitimate vouchers. So there is reasonable suspicion when the nursing home operator puts in his request for reimbursement that he submitted the phony voucher. The books and records of the various homes have been subpened.

We are now in another round of litigation, but we are confident these vouchers were used.

Senator CHURCH. It would be very surprising, indeed, if they had not filed for the full amount of the reimbursement.

Your testimony with regard to remedy—that is a key matter of interest to this committee. You say you think there must be a Federal remedy; that the States alone are unable to solve the problem because of its magnitude.

How did your agency get started?

Mr. HYNES. As a result of the massive scandal uncovered by the media, Governor Carey, who took office in January 1975, asked the attorney general to appoint a special prosecutor.

Myself and two other assistants began on the third floor of an old State building in New York. We received some additional funding from the State to set up. We were charged by the mandate of setting up a statewide investigation. We then received a budget of approximately $3.6 million. We spent $3.4 million of that in the first year.

We have offices in Albany, Syracuse, Rochester, Buffalo, New York City, Long Island, and the Westchester area. We have a current operating budget of $6 million. That would include the additional investigation which would be charged to adult homes—DCF's—domicile care facilities.

We received enormous commitments from New York State in terms of funding. One of the problems we have been confronted with—we have now spoken to nearly a dozen States and there is a common threat of the following:

FUNDING UNAVAILABLE

What we generally do is give a 1- or 2-day introductory explanation of what we are doing. When there is a followup by people on my staff, the consistent answer is that we do not have the funding and we cannot get the funding.

How is it that you excited enough interest in the legislature to get the funding? How is it? Scandal. The adult home part of our investigation is a step forward and it was because of the work of this committee.

We did not react this time. We initiated on the basis of information we received about problems in the adult-home industry. But apparently there is very little enthusiasm in most of the States I have dealt with to launch this kind of statewide effort.

Now it seems further that you can provide an incentive which would underwrite the cost of this kind of investigation, at least in the initial States. I picked 3 years because it will probably take that kind of time to have an investigation run smoothly and effectively.

Senator CHURCH. Well, in your case where you have been able to recoup $2,500 a day for each man-day of labor spent——

Mr. HYNES. I do not want to mislead you, Senator. That is identified. The recovery process is undeterminable. But for the figures, we have recouped in cash half a million dollars. We have tied up

the assets of two other nursing home operators to the extent of $3.6 million. I am very confident we will get that in the next couple of months.

But, in addition, we are in the process of identifying the overpayments. But the due process procedure, as it should be, is strictly along constitutional lines.

Senator CHURCH. But knowing what you do now and estimating what your recovery is likely to be, you are more than paying for yourself, are you not?

Mr. HYNES. Yes, no question about that. It requires the initial amount of money, whether it comes from the State or Federal Government, to launch this kind of investigation.

Senator CHURCH. At least 50 percent of the funds for medicaid comes from the State in New York, as is true for the State of Illinois, and a substantial part of the money from medicaid is contributed by each State.

In my own case—a less developed State like Idaho, I think, contributes a third of the amount but, nevertheless, a substantial part. You would think the State legislatures would have a reason to protect such large outlays of State money to make certain that it is not being siphoned away and that would demonstrate the success of your particular group—the contagion might spread.

WOULD STATES ENFORCE ADEQUATELY?

But if we were to provide for Federal funding, say, for the first 3 years and point to success stories of the kind your own effort represents, do you think then with that kind of inducement the States themselves would set up appropriate enforcement facilities so that it would not be necessary to establish a new and permanent Federal agency or some agency for this purpose?

Mr. HYNES. I do not know, sir. That is why I suggest the alternative remedy.

Senator CHURCH. Do you think it would be worth experimenting to see if the States would respond sufficiently well so that we do not just add another layer to an already huge Federal bureaucracy, or do you think the issue is of such a magnitude and the experience you have had is such to suggest we ought to go ahead with legislation that would set up a permanent division within the Department of Justice devoted exclusively to this purpose and a separate U.S. deputy district attorney in each State to prosecute these cases?

Mr. HYNES. I honestly do not know. That is why I suggest the alternative. It seems to be not mutually exclusive.

I can tell you the representatives I have met with in more than a dozen States would be very happy with the form—that they get the kind of funding that is necessary to start an investigation.

Senator CHURCH. You stated in a speech you made last week—I think you delivered it in Dallas—that one of the chief accomplishments of your office to date has been to bring about an improvement in the overall quality of medical care afforded to those currently in nursing homes.

Mr. HYNES. Yes.

Senator CHURCH. In what ways has this care improved as a result of your work?

Mr. HYNES. We have had responses to allegations that there was a relatively poor level of care in the homes, practically on a statewide basis. We have, with the full cooperation of the New York State Department of Health, engaged in surprise, on-site, unannounced visits to nursing homes in every region of the State.

Since we are prosecutors, we are not permitted to go on the premises of a nursing home, nor should we, without the permission of the nursing home operator. The department of health has inspection capability. What they had to do was to enter the homes in those cases where we are not given consent to enter and make observations. They are trained by us to look for those things which would be necessary to prosecute.

I think the program has been successful because of the surprise nature of the operation. No one can be certain who will be coming from either our office or the State department of health in any period of time.

PROSECUTED ON NINE COUNTS

Out of one of those inspections, we prosecuted the owner of a home in Westchester. He was indicted for nine counts of violations of the public health law. They were all misdemeanors. He was convicted after a fairly extensive trial. He was fined as a result of that prosecution.

But more importantly, his home is closed up. I think the spotlight of publicity, the ongoing kind of investigation that we are conducting, has accrued to the benefit of the people in the home. We get this not only from health department inspections but community people who visit the homes regularly.

Senator CHURCH. Your unit, I take it, is the only one of its kind in the country today—is that correct?

Mr. HYNES. Yes.

Senator CHURCH. Is it authorized for any time period?

Mr. HYNES. No, its authorization depends very much on the commitment of Governor Carey. Based on my prior experience with the Governor, he has an enormous commitment to this investigation.

Senator CHURCH. Is there any particular reason why your jurisdiction should continue to be limited to nursing homes? What happens when your investigators uncover municipal fraud, let's say, in hospitals, in medicaid mills, or the like?

Mr. HYNES. We make a practice of turning over the information to prosecutors with jurisdiction. As to whether or not we should expand our jurisdiction, we intend shortly to bring the data that we have compiled over the last 23 months to the attention of the Governor and to the legislature for them to make a judgment as to how we should broaden the jurisdiction.

I might say in at least two instances where we had investigations, owners of nursing homes own hospitals, and we intend to go to the Governor and ask for at least broadened jurisdiction for that limited purpose. I do not anticipate any problem.

Senator CHURCH. What kind of opposition, if any, have you run into? Do you readily obtain the support of the local district attorneys in connection with your work?

Mr. HYNES. Yes, without question.

Senator CHURCH. Active support from the State agencies?

Mr. HYNES. Yes, sir, we are very happy with the cooperation we have received on all levels.

Senator CHURCH. How about the cooperation you have received from the Federal agencies—the Department of Health, Education, and Welfare?

Mr. HYNES. We have been working with people from the New York region of HEW. They have been very responsive to our needs and, in addition, we have had at least two joint prosecutions with two of the four U.S. attorneys in New York State: U.S. Attorney Fiske for the southern district of New York, and U.S. Attorney O'Carroll from the western district of New York.

Senator CHURCH. I was interested, when listening to your testimony, in your explanation of the ways that you are able to uncover these practices. I suppose this is a lawyer's question but, nevertheless, it concerns me because of other investigations I have dealt with: with the CIA and the FBI, the unlawful use of wiretaps and of bugging devices.

"ENTRAPMENT" CHARGE PRECAUTIONS

As you have proceeded, have you encountered charges of entrapment—of unlawful use of electronic devices—anything of that kind? What can you tell me about how you proceeded in such a way as to make the evidence admissible in court and avoid countersuits?

Mr. HYNES. During this investigation, the one we just concluded, no court-ordered electronic surveillance was required. A well established Supreme Court case, the *White* case, covered this situation.

In terms of entrapment, we will proceed in any trial we have in this case and will establish that issue. We are very confident there was no entrapment. In each instance, the proposal was made by the person who ultimately was indicted or ultimately cooperated, because of a decision that the goods were on him. So we have had no problems. I do not anticipate a problem.

I guess the precise answer to your question is "Not yet," because this is really the first investigation that we have had—a prosecution we had in which the use of electronic surveillance was used.

Senator CHURCH. You are persuaded as a lawyer that your use of electronic devices was wholly within the law?

Mr. HYNES. There is no question about it. And it is necessary, too, Senator, because without that kind of corroboration, which is a prerequisite for any prosecution in New York State law, there would not be a prosecution.

Senator CHURCH. Senator Percy.

Senator PERCY. I will try to be very brief. I have a board meeting at 12 noon.

I would like for you to step out of your role of the law enforcement official and see whether you can philosophize for us for a moment on

why we have this situation, as you described on page 2, as the climate in the country where you say the exploitation of old people is a respectable and risk-free profession. It almost gets down to the point about the crime we have against old people in this country by youth.

"Sixty Minutes" had a marvelous program on the aged in the Soviet Union; the reverence the people have for the aging. They certainly have in Communist China. The Chinese have always had reverence for the aged.

Why is it in this society we have a condition where aged, particularly old poor, are often specific victims of exploiters as well as youth criminals?

Mr. HYNES. Senator, I have not met a defendant who has been convicted—20 have been convicted so far in our investigation—who really focused in on that precise problem. None of them believed they were doing evil to the old people. It was a question of dollars and cents.

The Federal and State Governments had thrown these massive amounts of money into the State. There was no enforcement. So it is difficult for me to step out of the enforcement area.

The fact of the matter is there was no enforcement. In New York State we had 60 auditors prior to 1975 to regulate the books and records of 2,400 facilities, including nursing homes, adult homes, health-related facilities, hospitals, and the like. And though there is substantial evidence that year after year they cried out for more auditors, year after year they were rejected and turned down.

THE "INVISIBLE" CRIME

That is one of the peculiarities of white-collar crime. That is why I suppose what I am asking for is a public change in attitude. Everyone can relate to the fear of mugging or the rapist or the murderer. That is something you see. That is something that is vivid and frightens you.

What people do not see, it has been my experience in organized crime investigations, is the lost-tax drain. The tax-money drain affects people every day in equally terrible ways, but people do not focus in on that. Nor do the defendants in white-collar cases focus in on that. They do not believe it is a question of personalities with human beings. It is dollars and cents. It is that simple.

Senator PERCY. Health care is one of the biggest businesses in this country, and it is essentially conducted, so far as hospitals are concerned, on a nonprofit basis. But when you cite, as you did yesterday, that half of the 125 nursing homes are engaged in kickbacks and fraud, payoffs, and so forth, how does that compare to other businesses in the private sector?

You have white-collar crime there, but would you not say it is a very small percentage of the total business that is done, as against the 50-percent here?

Mr. HYNES. I do not know, Senator. The practice of rebates is not an uncommon one. It could be anyplace in this country. Of course, the crime is committed if there is no report of it on State or Federal income tax. And in here the difference between this kind of rebate is

that the State of New York—we believe the investigation will show—underwrote the rebates.

Senator PERCY. But in this case, what is good for General Motors is good for the country. Can you imagine what would happen to half of the transactions carried on by General Motors if those who are somehow engaged in their purchases received kickbacks? You know there is a very, very small percentage of this going on because they have very tight controls. They have procedures that have been worked out through a period of years.

My own business experience reveals occasionally you do have a problem, but it is a rare instance when you get a case like that. Generally, your internal auditing procedures are such that no one would dare do it. The chances of doing it and getting caught are simply too great.

Here you imply the crooks are rushing into this business. Why is it then that HEW—why is it that our health organizations and our governments cannot set up procedures ahead of time?

You are proposing, and rightfully so, that you receive an increase in your budget, but that would promote enforcement after the crime has already been committed. Can we put equal emphasis at the beginning of this process? In student loans alone, HEW revealed we have $1 billion worth of unpaid, overdue accounts in the student loans out of $8 billion. That is a pretty high proportion.

TIGHT STANDARDS NEEDED INITIALLY

Any business would go broke if they had that percentage. They generally run around losses of 1, 2, or 3 percent. Wouldn't you say we really have to start at the beginning? When you set a program up, set it up in such a way that inducement for fraud, kickbacks, payoffs, and so forth, is miniscule because you set a very tight standard to begin with. Doesn't that lighten the load on law enforcement?

Mr. HYNES. I could not agree with you more.

Senator PERCY. You mentioned that in your undercover investigation in New Jersey, suppliers and vendors immediately contacted new nursing homes as soon as they opened for business to set up kickback arrangements. Is this a common practice then, in your judgment, in New Jersey and New York?

Mr. HYNES. At least in New York. We did not pursue it in New Jersey beyond the investigation.

Senator PERCY. You have indicated legislation would be desirable. What is the most urgent piece of legislation, in your judgment, that Congress should enact as early as we can in the 95th Congress?

Mr. HYNES. I was referring in that statement, Senator, to New York State legislation. One of the pieces of legislation I have asked the Governor's staff to work on to introduce in our next session is a very simple piece of legislation requiring vendor certification. You require a vendor to sign, under penalties of perjury, a confirmation that each item has been delivered to a nursing home.

In addition, in response to the other part of your question, we are looking at the possibility, which we do not believe is too compli-

cated, of setting up some kind of procedure within the State department of health in conjunction with our office to look into the standards of price lists throughout the State.

We believe it is a rather simple matter and subject to computerization to look at price lists over the State for the various goods and services given to nursing homes, and then have the computer capability of kicking back a voucher which is clearly beyond the scope of regular pricing.

Another part of legislation we are interested in getting is simply one directed to penalties. A nursing home operator, in one instance I think of, could be involved in kickbacks of more than $100,000 over a 2-year period, and the crime is a misdemeanor. The punishment for that misdemeanor is a year in prison.

Where a public official can take $5 for some activity in the State of New York, that is a felony. There does not seem to be equal justice in those kinds of situations despite the fact public officials—we demand from public officials higher ethics.

Senator CHURCH. Isn't that also true under Federal law that it is merely a misdemeanor?

Mr. HYNES. Yes.

Senator CHURCH. So far our efforts to convert it to a felony have not been consummated. We hope to do that next year.

Mr. HYNES. We are trying to draft legislation which would make it very much along the line of a private statute which we have for officials in New York.

Senator PERCY. I think that ought to be one of our high priorities.

Mr. Chairman, I have questions to put into the record and give Mr. Hynes a few remaining questions [1] so we can bring on Mr. Skinner.

I want to express my appreciation to you and our colleagues for being with us.

Senator CHURCH. I have just one final question. It is something that still puzzles me.

When a banker embezzles $300 from a bank and he is indicted for it, it is not uncommon for him to be sent to jail. Or if it is $1,000 or $5,000, jail sentences for embezzlers are not infrequent.

EMBEZZLEMENT VERSUS MEDICAID FRAUD

Is the reason that judges are reluctant to impose jail sentences for medicaid fraud—in these cases much larger sums of money—the fact the money is stolen from the Government rather than from private banks or private businesses? Do judges feel stealing from private institutions is punishable by jail sentences, but stealing from the Government is such common practice one should be content to impose a fine and let it go at that?

Mr. HYNES. Senator, I have practiced in New York State, New York City, the better part of 14 years on both sides of the fence, as a defense lawyer and prosecutor. I cannot believe that for a moment. It is simply a matter of judicial attitudes. I firmly believe we have decent people on the New York bench to change this attitude.

---

[1] See p. 787.

In Erie County—Buffalo—we convicted a nursing home operator of extortion, whose common practice was to take the parents of the victims into a disgusting part of his complex which was literally a sewer, and indicate, because medicaid had such God-awful regulations, he could not afford to keep mom and dad in the decent part of the facility, but for $150 or $200 a month under the table, he would be glad to accommodate him. No one came to us until after the mother and father died.

Then he was prosecuted and convicted. He was given a sentence of 3 years on each of the counts to run consecutively. The judge in that case said, "I find no distinguishable difference from someone who mugs in the street and someone who would mug in a nursing home."

By the way, last week the appellate division unanimously affirmed that conviction and the day before yesterday a court of appeals judge, which is the highest court, declined a review in that case, and the defendant will begin serving that 10-year prison term on Friday.

I think the attitudes can change.

Senator CHURCH. Do you think more frequent prosecution in this field will have the effect of changing judicial attitudes? Is it that so few cases have been brought or so few prosecutions have been brought that accounts for the light sentences?

Mr. HYNES. The key is exposure, what your committee is doing, has been doing, it will have an impact; what the media has done will have an impact. It is a combination of things, Senator.

Senator CHURCH. Thank you very much.

Mr. HYNES. Thank you very much.

[Mr. Hynes' letter in response to Senator Percy's questions follows:]

STATE OF NEW YORK,
SPECIAL PROSECUTOR FOR NURSING HOMES,
HEALTH AND SOCIAL SERVICES,
New York, N.Y., December 9, 1976.

Hon. CHARLES H. PERCY,
U.S. Senator,
Dirksen Senate Office Building,
Washington, D.C.

DEAR SENATOR PERCY: Enclosed below is the additional information you requested following my testimony before the Special Committee on Aging of the U.S. Senate. I am pleased and gratified by your interest and I hope this information will assist you and the committee.

You addressed to me four specific questions:

(1) *How does your office coordinate its efforts with those of the New York Department of Health?*

To avoid duplication of effort, a memorandum of agreement was executed between our office and the State health department. The memorandum provides for mutual consultation before targeting audit work. Pursuant to that agreement our initial responsibility is to concentrate on investigation of all proprietary nursing homes in New York State. The State health department is responsible for the auditing of voluntary nursing homes and referring any cases of fraud to us. Our work dovetails with and complements the program of the State Health Department.

Also, pursuant to that agreement, we have spent considerable time in joint training sessions with the State health department. Our training was conducted by an auditor, investigator, and attorney, each emphasizing the experience of their particular discipline and how it was helpful to the health department auditors. The State health department sessions for our office's auditors were conducted by a rate setting supervisor and a field audit supervisor, again each giving the benefit of their expertise.

We have conducted a series of unannounced ongoing inspections with the State health department throughout all seven regions (New York City, Long Island, Syracuse, Rochester, Westchester, Albany, and Buffalo), of the State. We believe these joint inspections have contributed to the upgrading of standards of care in nursing homes and health related facilities.

Finally, we refer to the State health department for civil recovery of all our audit findings. We often work with the State health department in the recovery process. We also work with the department on legislative matters of joint interest.

(2) *To what extent have you worked with appropriate agencies in other states?*

We have worked with many agencies in other states. The Attorney General's office in Ohio, the State Attorney's Office in Dade County, Florida, the State Commission on Investigation in New Jersey and the Criminal Division of the United States Attorney's Office in Boston, Massachusetts are some prominent examples. Representatives from various law enforcement and monitoring agencies from the States of Michigan, Colorado, New Hampshire and Maryland have been to our office to learn about our investigation. My office is committed to providing law enforcement agencies outside New York State with the experience and expertise we have developed over the past two years in investigating this massive, on-going white collar criminal conspiracy.

As I mentioned in my recent testimony before the Senate Special Committee on Aging, many of the targets of our investigations have operated across State lines. As a State prosecutor, I am unable to follow them once they leave New York. Despite the aid and goodwill I have received from other jurisdictions, their cooperation is necessarily limited by their lack of available staff, particularly in State agencies.

(3) *How does the existence of kickbacks among some vendors affect competition (i.e., between independent suppliers who could provide the service but will not offer kickbacks)?*

There is no doubt that these schemes completely undermine normal business competition. No honest supplier, however efficient, can sell in a market where fraud against the government gives his competitor 25 percent to 35 percent cost advantage. We have numerous claims (admittedly self-serving) that these practices had to be engaged in to meet the competition. It is a Gresham's Law situation of dishonest practices driving out honest ones.

(4) *Could you estimate how much money we could save the Government and patients if we could eliminate the numerous kickback schemes?*

A full estimate is impossible. We are still actively investigating, so the extent of these schemes is uncertain. They impact on the reimbursement of each home differently, but in New York State, approximately $250 million of the annual cost of nursing home care are for vendor supplied services. Even if these schemes turn out to be largely limited to the New York City metropolitan area, (where some vendors were in 50 percent of the homes), the dollar volume they could be inflating is enormous. The normal kickback, as I described, is 25 percent to 35 percent.

However difficult it is to state a figure, there is no doubt of the harm they cause. The elderly suffer in the Medicaid kickback schemes among vendors and nursing homes because they receive something less than the full dollar amount of goods and services to which they are entitled. The taxpayers also suffer—as it is from their pockets that the kickbacks are reimbursed. And finally, though no less importantly—the honest vendors also suffer.

The problem is pervasive as it not only diminishes the income of those wishing to conduct their businesses with integrity, but the financial gains of those engaging in illegal schemes discourage the honest vendor and ultimately lead to a weakening of his resolve.

Thank you again for your interest and for making available to me the opportunity to assist you and the other committee members by sharing with you my experiences in dealing with medicaid fraud.

Very truly yours,

CHARLES J. HYNES.

Senator CHURCH. Our next witness is Mr. Samuel Skinner, U.S. attorney, Northern District of Illinois.

STATEMENT OF SAMUEL K. SKINNER, U.S. ATTORNEY, NORTHERN DISTRICT OF ILLINOIS

Mr. SKINNER. Mr. Chairman, Senator Percy, although I am here alone and I have submitted my prepared remarks [1] to the committee I would like to just mention a couple people who should be here with me because they have been putting forth the efforts, including helping me with that report as late as last night. They are busy taking pleas today in nursing home cases. I think it is best we get more convictions and sentences. Bill Elybury, Glynna Freeman, Tom Johnson, and a number of other people in my office have been working very hard.

I am going to depart a bit from my prepared remarks because of the time and because I think what I said in there would be repetitious of what has already been said.

I have been a prosecutor for 8 years; almost 9. Before that, I had been in business working for the IBM Corp. in computers and systems. So in my remarks today, I think I have tried to add a little bit of my experience in both these fields as I go forward.

I have been a U.S. attorney since June 30, 1975. When I first became a U.S. attorney, having served in the office 7 years, it became quite apparent to me that fraud in Federal social programs was increasing at a very alarming rate.

I was interested to hear Senator Percy comment about the student-loan program. Medicaid and medicare are a major problem in my district, but VA-loan programs, SBA programs, FHA housing programs, food stamp programs are of equal importance and have equal problems.

FIRST FRAUD UNIT IN NATION

I set up and have still in existence the first governmental fraud unit in the Nation to address these problems. It started with four lawyers. It now has 10. These are not new resources, Senator Church. They are resources I have allocated for my existing staff.

The Congress has not seen fit to increase the budget too much for U.S. attorneys, and they are in dire need of additional resources. But we felt that it was a problem which had to be dealt with, so we reallocated and just did not prosecute some cases of a minor nature so we can address this problem.

We empaneled a special grand jury under the act of 1968 and 1970 that Congress gave us. It is for 18 months and meets three times a week, all day, addressing these problems. About 50 percent of their time is spent on medicaid problems.

We use immunity and plea bargaining very extensively. I would like to at least make this comment for the record because, as you are well aware, there are efforts in the Senate and House to cut back substantially on the Federal grand jury bill and the rights and effectiveness of Federal grand juries. If they do that, it will have a direct effect on our ability to perform in areas such as this.

We would not have been able to receive the convictions, the fines, the jail sentences across the board. We would not have been able to make the cases through use of the grand jury, through use of immu-

[1] See p. 792.

nity, through use whenever necessary, of court-ordered wire taps, consensual monitoring, pursuant to the law. Our overreaction to Watergate, I hope, will not become a major problem for prosecutors who have a very difficult job to do.

We have used statutes that exist on the books. We have very few laws that directly deal with this problem. We have used existing criminal statutes. We have 1396(h), the kickback statute, and did receive our first convictions.

We have also used a statute that was designed primarily for corrupt organization and organization activity called RICO, which allows us to not only file criminal charges of a felony nature where there are repeated activities of illegal kickbacks in nursing homes, it also allows us to criminally forfeit to the Federal Government the interest in the nursing homes, the clinics, the proprietary interests, subject, of course, to liens.

We find this to be a most effective deterrent against others. Last week we received evidence of $50,000 in kickbacks between nursing homes and druggists that we were able to prove. We were able to obtain jail sentences of anywhere from 60 to 90 days on a plea of guilty, plus fines of $900,000 from these nursing homes—without any evidence, that we were able to develop, of the Government actually being defrauded, because in Illinois the bills are submitted directly to the State by the pharmacist.

Kickbacks May Affect Quality of Care

I am not so sure, however, that in generating the kickbacks the pharmacist might not have to take steps that would decrease the inherent quality of care. We just were unable to prove it.

I think that demonstrates the importance in a strong deterrent in these crimes. These people are removed from the programs. They control about a third of the nursing home industry in northern Illinois. So we have gotten some good results. We found the same experiences in nursing homes that Special Prosecutor Hynes found in kickbacks on a regular routine basis.[1]

Senator Moss's report of the subcommittee is one of the first things I read back in 1975. The information in that report was 2 and 3 years old. It was almost like a book of how kickbacks operated in Illinois. His light and the beacon this committee set out was not seen for some time. I am glad it has been seen now, because that subcommittee was right on the money as to what was going on. You will recall that was in California and other States as well.

We have also seen activities in what are known as the medicaid mills. A number of people have been indicted. There are all kinds of allegations that are now pending before district court. The indictment we have with one of the biggest medicaid mills in Illinois, 26 organizations in one conglomerate. We found everything, from the drawing of excess blood so the samples can be sent several places for several analyses and then billed to the State.

We found people were seeing every station and every doctor within the clinic, even though they did not need to see them. We found a

[1] See "Nursing Home Care in the United States: Failure in Public Policy, Supporting Paper No. 2, Drugs in Nursing Homes: Misuse, High Costs, and Kickbacks," Subcommittee on Long-Term Care, Senate Special Committee on Aging, issued January 1975.

number of labs were doing tests on a number of occasions but with the same samples.

We found radiologists were examining the same X-rays four and five times and billing the State. The fraud in medicaid mills in the clinics, in the northern part of our State is, in my opinion, greater than the fraud that existed in the nursing homes. It directly relates to fraudulent billing and fraudulently obtained Federal funds.

We also have other investigations underway in optical services. We found families, entire families, received four and five pairs of glasses in a year. I might add, a low-caliber glass at that.

We found dental situations of overbilling under dental care. They are the most difficult cases to develop because you have to have a dentist actually look at the patient to see if the work was done. X-rays are taken at several different times and they are billed for the same analysis as the one X-ray.

"Lists Sold to Highest Bidder"

Overbilling; sale of Medicaid numbers. It is interesting to see, once a list of medicaid numbers is developed by a State, these lists are actually sold in the State of Illinois to the highest bidder. They use those numbers, without the medicaid patient even knowing it, to submit bills to the State.

We also found additional problems in the area of factors because of the delay in payments, the need of cashflow by the clinics and doctors, they go to factors who then inflate the bills before they forward them to the State for payment.

These are all problems that exist in the medicaid program. I believe they exist not only in New York, Chicago, but in other major cities throughout the Nation.

I am going to, for a minute, discuss why I think this happened, because I think as you discuss national health insurance in this next session of Congress it would be suicidal to go forward in a national health insurance program when we have not demonstrated to the American taxpayer we can handle the program we have already implemented.

No prior plan, no test marketing, no trying out of a program with regulations before we announce it on a nationwide scale. No corporation worth its salt in America would market a product like medicaid without testing it first. No standards which could apply on a nationwide level.

Everyone should have the same standards they can operate under. No auditing function, no oversight by Congress, no audit of any substance by the Bureau of Health Insurance or HEW and no mandating by Congress upon the States of an audit function, yet they begin paying bills.

We have in the State of Illinois one auditor, a total of five or six Midwestern region States in the Midwestern region of HEW are responsible for several billion dollars worth of HEW programs.

We had one auditor for Illinois until recently. They cannot do the job. It is just beyond imagination that you can ask anyone to do that.

The State does not have the facilities as well. They begin overnight to start spending the money with no existing program to implement or administer the program.

Finally, there is no gradual phase-in. They should gradually phase in these programs and grow with them so we can handle these programs. Overnight we started spending in my State, almost a billion dollars. Then when the program is in existence, we have virtually no audit function at all, no audit function from HEW's viewpoint.

Fortunately the Senate, in my opinion, has done more, and your committee and the subcommittee has done more to audit these programs and bring them to the public's attention than anyone else within any of the branches of government. It is unfortunate it has taken so long for the message to get across. This is imperative if these programs are going to be implemented, and they are going to be successful.

"EASY TO DEFRAUD THE GOVERNMENT"

We have no disclosure or qualification standards for providers. I have individuals who are now in the health care industry in Illinois and have been the subject of convictions recently, who, several years ago, were not only not in the health care business but had no positions of responsibility in the community at all. They saw that it was easy to defraud the Government and they got on board. Now they are making several hundred thousand dollars a year. There is no disclosure of financial interest. There is no true demonstration of who owns these various organizations.

In many cases they are sweetheart arrangements with the same ownership. We have no disclosure. I think that is imperative.

I also think we have got to address the problem at the congressional level about prosecution. And at the Federal level it is a major job. The resources are limited. There are a number of other problems that have to be dealt with. Task forces do exist in the area of FHA and HUD housing. Task forces do exist in the area of narcotics. Congress specifically appropriated funds, as you recall, for a program to deal with the drug problem. I think it is important, as Congress goes into its next session, that they give consideration to the allocation of resources or at least some demonstration of desire by Congress that a certain portion of any new resources be dedicated to this area of Federal social program fraud, especially in medicaid.

[The prepared statement of Mr. Skinner follows:]

PREPARED STATEMENT OF SAMUEL K. SKINNER

One measure of a free and democratic society is the nature and breadth of governmental services afforded its citizens. Judged by that standard, the panoply of Federal agencies which provide jobs, housing, health care, and social services in this country stands as a tribute to our Nation's commitment to an ever improving quality of life for all.

To keep pace with that commitment, financial resources of staggering proportions have been and will continue to be applied. For instance, the Department of Health, Education, and Welfare spends over $2 billion a year on over 150 programs in Cook County alone, a substantial portion of which is allocated to the medicaid program.

Regretfully, noble motivations and lofty goals do not automatically translate into meaningful and successful social programs. On the contrary, the 1970's

have witnessed the greatest ripoff in history as literally millions of dollars in hard earned and sorely needed tax dollars have been mismanaged, squandered, wasted and stolen from federally funded health care programs. As a result, Federal health care programs have become a mockery and simply do not provide the quantity and quality of medical services which the poor, the sick, the disabled, and the old, both need and deserve, and which Congress intended to provide. This national disgrace is the byproduct of two basic conditions: (1) health care programs are typically conceived, initiated and continued without regard to adequate internal and external controls, and (2) corrupt profiteers are at the ready, seeking opportunities to line their pockets at public expense.

The obvious need not be belabored—our citizens are entitled to better medical treatment and a more effective utilization of their tax dollars.

I wish to turn now to the experience of the Northern District of Illinois in the identification of, and response to, such problems on a district wide basis. In July of 1975, I stripped other units in my office of four of my most experienced Assistant U.S. attorneys to form the Nation's first Governmental Fraud Unit. This unit was established as the first phase of an effort to combat what I then believed to be a major fraud problem in the Federal and federally funded social welfare agencies, including medicare-medicaid fraud. At our request, the chief judge of the district impaneled an 18 month special grand jury to hear nothing but such cases. We began this project prepared to use the full array of traditional criminal statutes including bribery, mail fraud, wire fraud, false statements, conspiracy and interstate travel in aid of racketeering as well as civil injunctions and recoveries and (for the first time in this District) the RICO provisions of title 18. At present, the grand jury is meeting as often as three times a week, major indictments and convictions have been obtained and over 20 separate areas are under investigation. I now have 10 highly experienced assistant U.S. attorneys working full time on Governmental Fraud and the problem demands more. What appeared to be only a "major" problem 16 months ago is now more accurately seen as a mother-lode of fraud and corruption within medicaid and medicare programs.

In order to illustrate the nature and extent of this problem, allow me to turn for a moment to some individual areas of program abuse which have received a great deal of attention in my district. For obvious reasons, I shall not discuss particulars of cases currently under investigation or indictment. As to those cases, I draw no inferences or conclusions which are at odds with the presumption of innocence.

THE NURSING HOME EXPERIENCE

Since February 1975, my office has been investigating pharmaceutical kickbacks paid to nursing homes and their principal owners for the privilege of obtaining the pharmaceutical business of medicare and medicaid patients at those homes. Two indictments (76 CR 96 and 76 CR 355) charging violations of RICO (18 U.S.C. 1961 et seq.) mail fraud (18 U.S.C. 1341) and medicaid "anti-kickback" misdemeanors (42 U.S.C. 1396(h)(b)(1)) were returned by the grand jury.

Within the last week, five nursing home owners have each entered pleas of guilty to 38 counts of mail fraud and 18 misdemeanor counts as charged in these indictments. (Two nursing home owners and four pharmacists are presently awaiting trial). Two pharmacists have also entered pleas to the misdemeanor kickback statute and are awaiting sentencing. The sentences imposed on the nursing home defendants were as follows:

(1) Three were sentenced to 90 days incarceration and one was sentenced to 60 days incarceration, to be followed by 21 months probation. One was sentenced to two years probation due to his age and heart disease.

(2) In addition to incarceration, four of the defendants were individually assessed $200,000 fines and one was fined $100,000, totalling $900,000 in fines.

These jail sentences and stiff fines, being the largest ever imposed on individuals in the northern district of Illinois in any type of case, were the result of plea negotiations with the U.S. attorney's office. The severity of the sentences and fines represents our commitment to end the rather common practice between pharmacists and nursing home owners of paying kickbacks in connection with obtaining public aid pharmaceutical business.

I. The conduct discovered

The conduct alleged in the two indictments disposed of consists of a pharmacy paying monthly kickbacks to the principal nursing home owners via a management company. The amount of the kickback was, at least initially, calculated on a set amount ($3.00 to $6.00) per public aid patient per month in a home serviced by the pharmacy. In other investigations the form of the kickback payment is made under the guise of rent, consulting fees, fraudulent credit memos, loans and cash. The result of such kickback schemes is that the pharmacy must provide the same services for less money, the State and Federal government receive no financial benefit, the quality of services to medicaid patients suffers actual or potential harm, and the nursing home or its owners receive benefits over and above what they are entitled to under payment schedules established by the State. Regardless of whether the kickback is offered or required, it interjects a criteria or qualification for the pharmacist's employment that has either nothing to do with, or is counterproductive to his quality of service to the patients. In choosing a pharmacy, the nursing home owner is inclined to be motivated by which pharmacy is most willing to pay, and can best afford, the kickback, rather than by which pharmacy can best service the home's patients. Due to the financial pressure placed on the pharmacy, the kickbacks may result in the following practices:

(1) Hiring of less expensive unlicensed pharmacists to fill prescriptions;

(2) Failure to comply with regulations imposing certain duties on the pharmacist, such as checking patient medication charts to detect administration of incompatible drugs, training nursing home personnel in procedures for dispensing pharmaceuticals, and acting as a consultant to the home;

(3) Requesting and obtaining prescriptions not necessary to the patient's case such as vitamins;

(4) Billing for prescriptions not delivered; and

(5) Substituting less expensive generic drugs for prescribed brand names, but billing the State for the more expensive brand name.

In other words, the payment of the kickback causes the pharmacist to at least cut corners on the quality of the services he performs, if not engage in false billing. The patient or the Government, if not both, suffer.

II. Theories of law

To our knowledge, these cases are the first enforcement of the medicaid "anti-kickback" misdemeanor. (42 U.S.C. 1396 (h)(b)(1)). Although the offense is a misdemeanor, imposing a maximum term of 1 year incarceration, it does provide for a $10,000 fine. This heavy fine penalty enabled the court to impose the substantial fines in the instant cases. The medicaid misdemeanor also serves as a basis for the mail fraud theory.

The defendants in these nursing home indictments were also charged with using the U.S. mails to defraud the Government of its right to have its medicaid programs conducted honestly, fairly, free from deceit, corruption, bribery and kickbacks. The existence of the medicaid misdemeanor demonstrates the congressional intent to outlaw kickbacks among providers of medicaid services. The nursing homes, by entering into an agreement with the Illinois Department of Public Aid, agree to follow the regulations and statutes which guide the medicaid program and agree to accept the money allotted by the State as full payment for that provider's care of the medicaid patient. Thus, by giving and receiving a kickback, the pharmacists and nursing home owners are violating the duty to abide by the medicaid regulations, a duty which they voluntarily assumed by entering into a provider agreement with the state.

Finally, the defendants were charged with violating RICO and conspiring to do so (18 U.S.C. 1962(c) and (d)). Section 1962(c) makes it illegal to utilize an enterprise (such as a nursing home, pharmacy or management company) which affects interstate commerce to perpetrate a "pattern of racketeering activity" which includes two or more mailings in furtherance of a scheme to defraud. In addition to a possible 20 year sentence and $25,000 fine, RICO (18 U.S.C. 1963) provides for the criminal forfeiture of the enterprise which was unlawfully used. In other words, the defendants could have suffered the forfeiture of their interest in the nursing homes or pharmacies, which were used in furtherance of the scheme to defraud the Federal Government. Although these counts were dismissed by the Government, the amount of fines imposed reflect the impact of this possible liability.

The defendants in the cases pending were charged with receipt of a total of approximately $50,000 in kickbacks. They were fined $900,000. The message: no matter how enticing, the kickback isn't worth it.

THE CLINIC/LABORATORY EXPERIENCE

Since its inception, the Governmental Fraud Unit has worked closely with Federal Bureau of Investigation agents and Postal Inspectors in an intensive investigation into allegations of fraud and corruption among Chicago area providers of medical services under the medicaid program. This investigation has revealed fraud, dishonesty, and corruption within the medicaid program, similar in virtually all respects, to the activities revealed in the Staff Report prepared for this subcommittee and submitted by a Letter of Transmittal dated August 30, 1976.

In September 1976, as a result of this on-going investigation, 10 indictments were returned by a Federal grand jury charging various medical providers, that is, doctors, pharmacists, clinical laboratories, and related officers, shareholders and employees with various violations of Federal law. In a 66 count indictment, 13 individuals, including a medical doctor, three registered pharmacists, and executives and employees of 28 medical clinics and pharmacies were charged with conspiracy to defraud the United States and with mail fraud. In addition, three defendants were also charged with conspiracy to solicit and receive kickbacks from clinical laboratories to which laboratory work was referred. Seven defendants were named in RICO counts which charged a pattern of racketeering activity designed to defraud the United States and the State of Illinois out of the fair and honest administration of the medicaid program. The 28 medical clinics and pharmacies identified in the indictment and which are subject to forfeiture to the United States are located in the more economically depressed areas of the city of Chicago where the great majority of medicaid recipients reside. These clinics and pharmacies are reported to have grossed in excess of $15 million during the last 3 fiscal years. The majority of the work handled by these clinics and pharmacies is Medicaid funded.

The indictment charges diverse and imaginative procedures utilized to generate excessive work and commensurate fees. Among the activities alleged in the indictment are:

(a) Generation of a certain monetary amount of laboratory analyses and tests regardless of or in the absence of medical necessity;

(b) Administering a certain number of electrocardiograms and X-rays regardless of or in the absence of medical necessity;

(c) Issuing a certain number of prescriptions regardless of or in the absence of medical necessity;

(d) Directing patients to all doctors and medical specialists regardless of or in the absence of medical necessity;

(e) Ordering additional and unnecessary laboratory tests and analyses without regard to or in the absence of medical necessity;

(f) Forcing and requiring medicaid patients to submit to blood specimens;

(g) Mislabelling excess specimens from some patients for submission to laboratories for analyses under names of other patients from whom specimens were not obtained;

(h) Substituting and submitting their own blood specimens, urine specimens and throat cultures for laboratory analyses as the specimens and cultures of Medicaid patients from whom such specimens and cultures had not been obtained.

(i) Prescribing and dispensing no less than a minimum number of drug and nondrug items to medicaid patients;

(j) Prescribing and dispensing drug and nondrug items for which the Medicaid program provided the greatest compensation;

(k) Prescribing large sizes and quantities of certain drug and nondrug items but dispensing only small sizes and quantities of such items and thereafter billing the State of Illinois for the prescribed but not dispensed sizes and quantities;

(l) Prescribing certain specific drug and nondrug items but dispensing different, less expensive drug and nondrug items, and thereafter billing the State of Illinois for the prescribed but not dispensed items;

(m) Executing prescriptions in blank, in whole or in part, to facilitate the dispensing of drug and nondrug items without regard to medical necessity; and

(n) Prescribing and dispensing drug and nondrug items without regard to medical necessity.

This indictment resulted from a year and a half of grand jury work and lawyers' time, as well as thousands of manhours of effort by agents of the FBI and extensive cooperation by the Illinois Department of Public Aid.

OTHER INDENTIFIED AREAS OF ABUSE

The wide ranging investigations of the Governmental Fraud Unit have identified a variety of other areas of medicare-medicaid fraud. The extent to which corruption exists has not yet been accurately determined in these areas which include the following:

(1) Optical services: bills submitted to public aid a welfare family. Many optometrists who work for optical companies are paid by the hour and had not previously been advised of the dollar volume of bills submitted by their employer. This practice has only recently been corrected by the Illinois Department of Public Aid.

(2) Dental services: proving fraud and overbilling in this area is extremely difficult because aid recipients must be identified, located, and examined by a dentist and a comparison of their billings and actual dental work made.

(3) Radiological services: bills are submitted for numerous X-rays for a patient when in fact only one X-ray was taken.

(4) Overbilling by doctors, podiatrists and other health providers for services never rendered: the extent of this fraud cannot be accurately determined.

(5) The sale and distribution of medicaid numbers to health care providers: once a medicaid provider receives the medicaid numbers and names of public aid recipients, he is able to submit bills to the medicaid program without the knowledge of the medicaid recipient, without having met the recipient, and without having performed the services billed. Such information is readily available to various providers in that each time a medicaid recipient appears at a hospital, medical center, or other provider, he must provide this information. Once a provider has this information, he may exchange it with other providers or this information can be collected by various employees of hospitals, medical centers, etc. and sold to other providers. The extent of such abuse is unknown.

ADDRESSING THE PROBLEM

I do not presume to hold the panacea to all the infirmities of our nation's health care programs. The experience of the U.S. Attorney's Office for the Northern District of Illinois in the area of Governmental Fraud, however, has led to the formulation of a number of suggestions:

A. Program initiation

Health care programs which are conceived and initiated with the most miniscule attention paid to program control and provider qualification are an open invitation to thieves and quick buck artists. The lesson to be learned is that problems are created, not solved, by blindly opening the cookie jar. Well planned and coordinated programs must be staffed by competent people and tested on a limited basis before full implementation. Internal and external audit controls as demanding as those utilized by private industry, as well as uniform nationwide regulations must be in place at a program's inception and must expand as the program expands. Providers should gain entry to a program only after demonstrating professional qualifications and disclosing their economic interest in all areas of health care.

B. Program continuation

Functioning programs must be subjected to audit and review on a continuing basis. Economic interest and ownership data for each provider should be resubmitted under oath every year. This information should include all direct and indirect benefit, income and interest and should be cross-referenced by the agency. Audits of providers' billings as well as their own books and records should be periodically conducted as should reviews of patient care itself. Such reviews should be coordinated to include related providers such as doctor,

clinic, laboratory, pharmacy, and patient. Patients should be routinely advised of the goods and services billed on their behalf (as is done in the medicare program). Standardized computer programs should be designed which will catalog provider, recipient, and billing information. Questionable trends and suspect patterns can be automatically red-flagged and targeted for investigator follow-ups.

C. Other manpower needs

The Department of Health, Education, and Welfare expends $25 billion in the Fifth Region covering six States, yet there are only five investigators assigned to investigate fraud. This investigative force is so understaffed that it has no hope of obtaining or maintaining any handle on the fraud which appears to exist. No entity of private enterprise would allow the expenditure of such sums of money without providing for a far more meaningful watchdog.

Due to the past failure to supervise the medicaid program, a task force composed of experienced prosecuting attorneys, investigative agents, auditors, and members of the medical professions should immediately be formed in each major district. For assurance of long range viability of these programs, however, a permanent force of investigators, auditors and medical experts must be born and nurtured.

1. The task force

In the Northern District of Illinois, I have assigned eight assistants to supervise investigations and prosecute medicaid-medicare fraud abuses. To support this team I would suggest a task force of investigators including postal inspectors, IRS special agents, agents of the FBI, and HEW investigators assigned solely to investigate this fraud and free to exchange the information gathered. Included in this task force must be accountants experienced in reviewing and digesting complicated books and records of large business enterprises; experts in various medical fields, i.e., doctors, dentists, optometrists, podiatrists, pharmacists, etc., if only on an "of counsel" basis; experts in the procedures of each State's program with knowledge not only how the State's medicaid program works, but also how to obtain or retrieve information from the State's records or computers; experts from HEW, well versed in the Federal regulations governing these programs, and capable of explaining them to a jury of laymen. To coordinate each district's efforts, a central source of information for all districts should be established.

2. Permanent supervisory staff

Never again should Congress allow a program to grow to the present day size of medicaid and medicare without a meaningful supervisory force to prevent or minimize fraud. This does not mean that "busy work" regulations or procedural requirements should be imposed. However, a force of attorneys, accountants and investigators must be maintained if this committee's dedication and hard work is to have any long range impact.

3. GAO

The venerable and effective watchdog ought to play a major role in insuring that controls are followed and standards adhered to.

D. Statutory changes

The only statute aimed solely at medicaid fraud is 42 U.S.C. 1396(h). This statute is two pronged, prohibiting false statements or false billings and prohibiting kickbacks and rebates. The anti-kickback section has apparently not previously been enforced. Applying this section of the statute has highlighted several problems which could be eliminated by the legislative process.

Unlike any other statute, the terms "kickback" and "rebate" are used without definition. In Illinois, a pharmacist, providing services to nursing home medicaid patients, bills the state directly for those services. The payment of monies by the pharmacist to the nursing home owner cannot be a discount, since a discount must go to the entity paying the bill, i.e., the State and Federal government. Thus, it can be properly labelled a kickback. In other States, and in the medicare program, however, the pharmacist bills the nursing home, which in turn incorporates the pharmaceutical costs as a part of its bill to the State or Federal government. The payment of monies by a pharmacy to a nursing

home, if reflected in its books and passed on to the governmental sponsor, could be a legitimate payment. Thus, conduct which is a crime in one State, is not a crime in another. Only uniformity in programs and/or more specific definitions of terms can avoid this possibility of confusion.

Second, the statute is imprecise in describing who is liable. The statute prohibits anyone who "furnishes items or services to an individual for which payment is or may be made" under the medicaid program. Does this language make liable only those individuals or entities who have a provider contract with the State or does it include individuals or entities who serve the medicaid patients but submit their bills through another individual or entity rather than directly to the State or Federal government? In *United States* v. *Lipman, et al.* both the pharmacy and the nursing home had provider agreements with and independently billed the State, so this issue of interpretation did not arise. Assume, however, that the pharmacy billings had gone through the nursing home to the State for payment. If so, would the pharmacy and its owners be liable under 1396(h) (b) (1) for offering and giving a kickback to the principle owners of the home via a management company? The impact of this conduct would be equally detrimental to the medicaid program, but arguably is not in violation of the law.

Finally, there is the issue of whether the medicaid misdemeanor should be elevated to the status of a felony. The answer is yes and no. The misdemeanor, imposing minimal incarceration but substantial fines, plays an important role in the world of a prosecutor. On the other hand, some individuals are involved in numerous homes or pharmacies or clinics and merit felony convictions due to the size of their impact on the medicaid program. In the false billing arena, the prosecutor can use 42 U.S.C. 1396(h) (a), the misdemeanor proscribing false statements in the medicaid program, or 18 U.S.C. 1001, the felony proscribing false statements to any Federal agency, or both. In the kickback arena, we have used mail fraud as the felony charge, rather than 1001. If Congress desires to more directly enable Federal prosecutions of kickback payments in all Federal programs, we suggest a general "anti-kickback" felony statute applicable to all Federal programs in addition to the existing misdemeanor statute.

CONCLUSION

The spectre of flagrant corruption cannot be more disturbing than when it strikes at the heart of our Nation's system of health care. With national health insurance looming as tomorrow's probability, our track record in health care fraud must be eliminated as today's disgrace. I respectfully urge that measures be taken and resources be committed to immediately remove the pall of decay from the programs which could and should guarantee a meaningful quality of life for all our people, and a standard for civilized nations to follow.

I would like to take this opportunity to commend this committee and especially Senator Frank Moss. I have been somewhat critical of Congress in my remarks for failing to anticipate these problems and for failing to provide adequate controls and oversight. This committee and the subcommittee under Senator Moss' direction identified many of these problems at their inception. Their warnings were like a beacon from a lonely lighthouse warning of danger. It is too bad we did not see this beacon sooner. The people of our Nation owe this great American a debt of gratitude for lighting the way.

Senator CHURCH. Thank you. May I ask a question?

Mr. SKINNER. Yes, sir.

Senator CHURCH. Our last witness suggested that a special division of the Justice Department be set up for this purpose. He also alluded to the Internal Revenue Service where the enforcement agency has developed something of a formidable reputation. People, therefore, hesitate to fudge on their income taxes.

Do you think it would be more effective to set up an enforcement division within HEW connected directly with the medicare and medicaid programs as the principal enforcement agency for developing the evidence and preparing the cases that would then be turned over

to the Federal district attorneys in their respective jurisdictions? Or would you agree with our previous witness that it ought to be done as a part of the Justice Department, itself?

Mr. SKINNER. No. 1, there are several alternatives, I think, that would accomplish the same thing. I obviously am not here speaking for the administration regarding their policy. Although, as a member of the advisory committee. I know the U.S. attorneys almost unanimously feel they should be given the resources and be told, you can do the job rather than putting another structure of bureaucracy into the system.

I think one agency can play a major role. It has in Chicago. In this situation it is the Federal Bureau of Investigation. As you know, that agency has been shutting down some of its surveillance activities and it has been shifting its emphasis to the white-collar crime area. They have proved very effective.

TASK FORCE APPROACH MAY BE EFFECTIVE

I think a task force approach with people from HEW, people from the State of Illinois, with accounting talent where necessary, either internally on the payroll or externally, along with prosecutors within an office forming a task force under the auspices of the U.S. attorney who is concerned and given a mandate by both Congress and the administration to do something about the problem is probably as effective as any way that can be used. And I think it keeps the structure and allows it to permit new resources to react to the problem.

When we set up separate structures, just as you were talking a few minutes ago with Prosecutor Hynes, if he finds evidence of medicaid mills as part of his nursing home investigation, he has to give it to someone else.

With a task force approach addressing the whole problem of medicaid fraud and Federal social program fraud in a specialized area, I think you can have a flexibility under the auspices of the U.S. attorney with guidance from the department on a national policy basis to react to the problem and put whatever resources are necessary into the problem and to deal with the problem.

When you set up separate structures, you limit it. The talent is there. I am convinced, from other Federal agencies or from the outside, we can hire the talent to perform this function.

It is really two functions, Senator Church. The prosecutorial function as a deterrent for the future, but also if we did not set up enough internal audit at the beginning or during the continuation of these programs, it certainly is not too late to set that up now because it appears these programs are going to be around for a long time.

Senator CHURCH. Senator Percy, I know you are under some time constraints.

Senator PERCY. Always we say the Federal Government has to do more or the State government has to do more. What is the matter with our private associations in this country; the American Medical Association, the American Dental Association, the Association of Auditors and Accountants? Every one of these nursing homes, every one of

these businesses has to somehow have an audit; a public accountant that comes in. Why can't they catch these things? Why can't the profession itself, as being so stained by these revelations, really do something about it?

Like the American Bar Association, I think can really move on these things. There are ethical practices and standards groups. Can't they move to see that doctors and dentists who participate are taken out? What can they do, the private sector, that does not take appropriations and more bureaucracy? They keep condemning Washington and they come around here, "We have a problem." "We have to have a bigger bureaucracy, more investigators, more Government employees to stamp this out."

What can we do in the private sector?

Mr. SKINNER. I think the private sector can and does play a role in this function where only the State medical system has the ability to discipline physicians. The department of registration has a way to remove their right to practice in the State.

"BUREAUCRACY . . . ALREADY IN EXISTENCE"

But very frankly, Senator, I am going to disagree with you, as we do occasionally, because when we adopt these programs, the bureaucracy is already in existence. We decided as Americans through our elected representatives to raise the quality of care for all Americans. We have decided we are going to do that with a $1, $2, or $4 billion bureaucracy, medicare, medicaid—whatever the area is.

I think if we are going to make that kind of commitment, along with that, we have to bear the responsibility for setting up the structures, audit and administrative functions for that. If you are going to offer it to the private sector and say, run this program, some people say it should be tried. I am not so sure. There are several programs in this health care area where we should experiment with on a test-marketing basis in various areas, one part of the country with the private sector involved; another with the Federal Government totally; another with the combination of Federal/State and find out over a short period of time how they work, which works best and then choose the one that is best for the long run.

The Department of Defense has flyoffs for aircrafts before they make a decision. We certainly do not have that in the health care field. We say this is the money that is going to be spent. We are going to raise the quality of care.

But we do not do it, in my opinion, on an intelligent basis. And to ask the medical profession to bear more than their fair share of the load, I think, is unfair.

Senator PERCY. You think they are bearing a fuller share of the load today than they should be?

Mr. SKINNER. No, sir, I do not. But their ratio of the load, compared to our load ratio in the area, doing something about the problem, they are carrying the higher percentages than the Federal and State Governments are. A substantially higher percentage.

I think it is a matter of everybody working together. I would hope, and know this was a major issue in the last Presidential campaign—I

would hope the administration and the Congress would work together to set up a function that will have an ability—not another bureaucracy; it does not have to be a huge bureaucracy. It can be a coordinating council. It can work with the States in dealing with this problem. It has to be unified.

With 94 U.S. attorneys and 50 attorneys general and a number of State agencies involved, each doing it a little different, we should start sharing this information; we should start learning from each other's experiences. That is what we are doing.

Senator PERCY. I want to comment that you are the first U.S. attorney we have had before us for some time. Since I have been able to question any U.S. attorneys, we have adopted the Speedy Trial Act, we have given precedents and priority to criminal actions. The deferred civil suits and actions just cannot get on the calendar. We have got to take a look at that, no question about it.

SPEEDY TRIALS IMPORTANT

But from the standpoint of getting prosecutions, getting cases tried in this field, do you feel there is now enough, even though it has caused a problem, that you are able to bring cases to trial faster now from the commission of the crime until penalty is imposed? Is the time reasonably short?

Mr. SKINNER. It requires us to bring those cases to trial. It is very important in cases like this, because if you delay the process, there is no deterring effect. It is gone by the time you do it. So I think it has done that. It has created tremendous problems for the courts, for the Justice Department. It has caused reordering of priorities in departments and U.S. attorneys' offices.

I think it is accomplishing to some degree what was intended, but I think you are going to have to address the problem of resources, courts and other parts of the criminal justice system, if you are going to handle the rest of the problem that exists. There has not been a commitment of resources to any of these areas of any substantive, substantial nature over the last several years. And I think the time has come now to address that, if that is the priority we want to place on quick, swift justice, which, as a prosecutor, I am all in favor of.

Senator PERCY. What, in your judgment, is the main obstacle Federal prosecutors must overcome in order to convict nursing home operators and others of medicaid fraud? What is your single largest barrier right now?

Mr. SKINNER. It is a very complex area. It is not as simple as people might think it would be. You need to analyze records. Review of records can take months. Thousands of documents and records have been subpened. I have three rooms full of records subpened from nursing homes just on one particular case.

One case took 15 months with half a dozen FBI agents as well as two lawyers and a grand jury meeting once a week. There is not a whole lot that can be done to speed up that process.

You cannot add 10 lawyers to it on 1 particular case and say you are getting it done in only 10 percent of the time. But you can address with more prosecutors and more resources, more of the problems in

the same time; concurrent processing as we used to call it in the data processing field. Right now I have things waiting to be worked upon because I do not have, I cannot, in good conscience, take any more resources than I already have, although I may, and put them into this area, because we are dealing with one congressional program which is a very key program. But there are a number of programs which have problems of a similar nature which also have to be dealt with. And it is all because I think there is no preplanning; there is no management approach to these programs—not all—but before they are implemented properly, providers, people who benefit from these programs recognize quickly this is happening and they take advantage of it.

Senator PERCY. Have you had a chance to go over the Talmadge medicare-medicaid antifraud bill Senator Church and I are cosponsoring?

Mr. SKINNER. I have not yet, Senator. I am sure I will shortly, and I would be more than glad to go over that bill and send you——

Senator PERCY. Suppose we give you, before you leave, a summary of that bill and a copy.

Mr. Chairman, if we could hold open the record so Mr. Skinner's comments on that could be given to us, I think we will press forward. The language is not set in cement now. We will have a chance to revise it.

INFORMATION SHOULD BE SHARED

Mr. SKINNER. I think, Senator, the people who are in the field and who have learned from these experiences have an obligation to share that with people here in Washington whenever they can, so that we can have the benefit of the input or whatever decisions you make. It is a most difficult problem. There is not one easy answer to it. It is a problem that is growing, I know in Illinois and I am sure in other parts of the country.

I will be more than glad to offer whatever help I can.

Senator PERCY. We have a provision in the bill that attempts to clarify the prohibition against the assignments of medicare and medicaid claims to factoring firms or other third parties. However, in the past, hospitals or doctors have sought to avoid this prohibition by using a power of attorney.

The Talmadge bill would have made clear that this procedure, too, is also contrary to law. The particular provision, do you feel is worded——

Mr. SKINNER. I think the problem of factoring is directly caused by a failure of quick processing by State departments of public aid or welfare of payments. So therefore, because of the cashflow problems of hospitals and other organizations, they factor these payments, at a discount, and they will continue to do so, continue to look for legal loopholes to allow them to do so until we can find a way to quickly audit and pay these hospitals directly.

You cannot ask an organization that is not profit, such as a hospital which has serious cashflow problems, to wait several months—in some cases a year or more—for payment and then expect them to accept it.

There is just no budgeting for it; business does not budget for it, and there is a cashflow problem. The factors take advantage of the situation and recognize they have this advantage.

There is some evidence they make arrangements inside the departments of public aid for expedited service for cash payments and then they inflate the bills. It is interesting that when the HEW released the names of all the physicians and professionals who received medicaid and medicare payment in excess of $100,000, a number of them in our State said, I have only received $50,000 or $60,000. I have never seen these figures before. These are substantially greater than what I submitted to the factoring company for the forwarding to the State of Illinois.

This could be very helpful. You have to make it clear, direct payment is the only acceptable way of payment into the programs. But you have to work, by the way, Senator, with these organizations in this legislation. You cannot just say, it is going to be this way today, and accept it. You have got to take advantage of their input and listen to them.

Cooperation Necessary With Medical Profession

If we want them to involve themselves in these problems, we have got to ask for it across the board. We cannot ask the medical profession to help in one particular area and then not consult with them at least, get whatever input they want to give us on this problem before we just say this is the way it is going to be.

Senator Percy. You mentioned some ballpark figures in your testimony, as I recall it, going through the written text, $2 billion in the Federal Government in Cook County, I believe, $25 billion in the Central States Region.

Do you have any estimates in your office as to how much is being lost to fraud in these programs in, say, the State of Illinois or in your district in northern Illinois? Do you have any figures as to what percentage of fraud we can really try to eliminate, how much we can afford to spend to eliminate it?

Mr. Skinner. It appears to me—these figures, you appreciate, are very difficult to arrive at—you have to judge commonsense, based on some ratio you develop looking at a particular situation. But I would not be surprised to see a fraud figure in Illinois of close to $75 to $100 million a year or more in the medicaid program alone, which is a billion dollar program. Ten to twenty percent fraud factor in that program would not surprise me at all.

I think in some of the medicaid, as you know, it is concentrated in some of the low-income areas of our State, and the fraud we are finding in those programs and those clinics and medicaid mills, in that particular community, is large. It is staggering.

So when you consider and address the problem along those lines, I think it could reach those proportions and those percentages without any problem. It does not apply across the board to every clinic and every nursing home in the State of Illinois. There are some very fine, high-quality nursing homes who care about giving the quality of care to our senior citizens.

I had lunch yesterday with the State president of the Illinois State Medical Society to discuss one of the problems we discussed a few minutes ago. He reminded me several years ago there was no such care at all. These nursing homes are suffering from the reputation that has been developed by a few and they are offering a quality of care to senior citizens in this Nation that they never had before.

There is no, and was no alternative. So these programs are necessary, I am convinced, to afford the quality of care, and the taxpayers will justify it if they are run efficiently.

Very frankly, I give a lot of speeches in the community, as I know both of you do. This subject is a prime concern to the taxpayers in my State and my district. It is one that I get a number of questions on. It is one that I get enthusiastic response about. If we do not demonstrate we can run these programs with integrity, they are not going to send back to Washington, people who approve these programs, because they will only tolerate so much.

In essence, that is the feeling I get having given several hundred speeches in the last 8 years to community groups.

Senator PERCY. I am glad you have put in the fact there are some notable and worthy nursing homes. I have been in quite a few, and I say for the most part, the homes I have been in this year have been better than any previous business I have ever been in. I think in this whole effort, we have driven out, we have jailed a lot of people that have been in the business. and there are steady improvements being made. There are some residents, you would not hesitate to say, that do receive outstanding care.

I would like to ask, though, in the areas of fraud, you mentioned a very high figure for potential fraud. What specific types of fraud are the most flagrant, in your judgment, and what are the difficult types to detect as a Federal prosecutor goes about trying to obtain evidence once fraud or some type of cheating in this program is discovered?

PRIME AREAS FOR POTENTIAL FRAUD

Mr. SKINNER. I think the biggest area of potential is probably in the area of clinics in the medicaid program. I will address, in the area of clinics and labs that do business, what we call prime areas for medicaid care.

These organizations do millions of dollars worth of business. They have a number of patients that see them every day for one problem or another. Generally what they do is—we have seen a practice with some of the clinics—an individual comes in with a cut on his hand. He will then see every station in that clinic—go all the way around, almost like a merry-go-round. Then, of course, the State will be billed for every visit to every station, even though the patient has no problems along those lines.

This quality of care, whether the physician or the clinic should have ordered it, is most difficult to prove. Philosophy exists that these people do not have this quality of care. As long as they are in the clinic, why don't we see if they have these problems along these lines and have them visit every station? When we see them visiting every station three or four times a year, that raises questions.

As you can appreciate, these people are not well educated. They are not as helpful as far as what their problem was or who they needed to see. They do not make good witnesses for that reason. It is very hard to get inside information. In some cases we have had threats. People have been intimidated about testifying and cooperating.

In other situations, we have gotten a lot of cooperation inside from people once they are confronted with it. They accept it, but they do not like it, and they are looking for a way out. I think that is why it is very important we have this presence—this Federal presence as well as State presence—so they know there is some place they can go to bury their soul.

Some Cases Difficult to Investigate

The area of dental care is very difficult. You have to go in and actually examine individuals' dental work to see what was done before, what work was done after, and it calls for an expert opinion. Analysis of specimens—you have to find the people. If a number or specimen was submitted under the medicaid number, you have to go out and find that public aid patient and say, "Were you there?" In some of these areas of our community they move around a lot. They are not easy to find. It is not the easiest type of investigation to conduct. That is why they are so time consuming.

These are all problems we found in addressing the whole medicaid fraud problem. And they make the investigations more difficult.

Senator Percy. I want to thank you very much, indeed.

I want to thank the chairman for his courtesy in letting me go so I can get to my board meeting.

I would like to say this, though. In change of administrations, a great deal of quality in composition depends upon the quality of our Federal district court judges and circuit court of appeals judges, our Supreme Court, and our U.S. attorneys. I am very privileged to have participated in this process during 8 years of public presence, and as I look at the predecessors, in this position that you hold, one is now a circuit court of appeals judge, one is a district court judge, one is the Governor of the State; that is a pretty formidable array of outstanding men who have performed in this job.

I know of none who have performed finer than Mr. Skinner, who came out of industry—the IBM Corp.—went into public life, and has devoted himself to it.

Mr. Skinner. I may be going back, Senator.

Senator Percy. I just certainly want to express my deep appreciation for the way you and your colleagues have approached your jobs —what you have done. You are the No. 1 U.S. attorney in this country in this particular field, and in certain other fields as well.

Mr. Skinner. Thank you, very much.

Senator Percy. I speak highly of the work you have done, the dedication you have had, and I want to associate myself with whatever your future plans are whenever I can.

Thank you.

Senator Church. Thank you very much, Senator Percy.

Did I understand you to say you feel kickbacks should be a felony under the law?

Mr. SKINNER. Yes, sir, I do. I do not think the existing misdemeanor charges should be replaced with felony charges. I think we should have an additional felony charge to deal with the most aggravated situations.

We need additional tools that demonstrate to the judiciary and to the American people that we will not tolerate this type of conduct, and we want it dealt with on a particularized basis.

MINIMUM MANDATORY SENTENCE

I am also, by the way, in favor—and this will shock, I am sure, some of my colleagues in the judiciary—of a minimum mandatory sentence of at least some nature of incarceration for the most aggravated situations. We have done it in the area of firearms. We are talking about doing it in the area of narcotics.

There is no reason why we should not have what I consider to be minimum mandatory sentences—maybe not as strong as we have in other areas—to get sentences of incarceration in this area. They are deterred by going to jail. Defense counsels who discuss these cases with me tell me their clients are concerned about going to jail. If they can get away with it, there is a lot of money to be made. If they go to jail, the risks are probably not worth taking.

I have been very fortunate in my district, with rare exception, to have a judiciary who understands the importance of a deterrent sentence of incarceration in the white-collar crime area. I differ with them on a number of occasions on the length of the sentence. I think it is a matter of indication, as Prosecutor Hynes mentioned, as to the seriousness of the problem and the effect of the deterrent sentence.

The judiciary is somewhat removed in my State because of their job and what is expected of them. I do not think they have the same perspective you and I see down the trenches, so to speak. It is up to us and the media, who has done an excellent job in my State also, of exposing this problem and bringing it to their attention.

Senator CHURCH. Some of the people you have convicted in nursing home and pharmacy kickbacks, I understand, controlled about a third of the nursing homes in Illinois; is that correct?

Mr. SKINNER. That is correct, Senator. They had an ownership position in a number of homes.

Senator CHURCH. Do they also operate in Wisconsin?

Mr. SKINNER. Yes, they have some interest, although their involvement in Wisconsin is not nearly as great as it is in Illinois.

Senator CHURCH. Have any of the law enforcement authorities in Wisconsin expressed any interest in prosecuting or investigating the nursing homes that are located in Wisconsin and known by this same group you found engaged in kickbacks and other wrongful practices in Illinois?

Mr. SKINNER. I think we have had a number of discussions with Mr. Mulligen, the U.S. attorney from Milwaukee. Although I met him professionally, I think he is an excellent U.S. attorney. And I think he has recognized we are dealing with the same people. He has been,

to some degree, holding back and waiting to see our results, because there is no sense in piling on charges if you are not going to have any additional deterring effects.

A number of people that own homes in Wisconsin recently pled guilty and are going to jail with almost $1 million in fines. So I think it has not really been an action more than just waiting until they see how successful we are.

I might add, Senator, we shared the funds with the State of Illinois. We split $900,000 in fines with the State of illinois on a 50–50 basis because they are our partners in the medicaid program.

Senator CHURCH. You also mention in your testimony that you were able to secure ownership by slapping liens on these nursing homes. Can you explain that a little more fully?

FORFEITURE OF EQUITY INTERESTS

Mr. SKINNER. We decided that it was important not only to prosecute them under misdemeanor statutes but to make sure these individuals were no longer involved in the health care fields. This is sometimes difficult because of administrative regulations and legal technicalities, so we used a concept known as RICO. To a lawyer it is title 18, United States Code, section 1961. It allows for the forfeiture to the Federal Government of equity interests in organizations that are used to commit Federal crimes.

If you are an organization and you use that organization to commit two or more Federal crimes, such as mail fraud violations, you can forfeit to the Federal Government after a jury trial the equity interest in the home.

And we received permission from the department to go ahead on this approach and did so file these charges.

Obviously when we filed liens on the titles of the properties, they could not sell the homes. I think this was one of the reasons we were able to obtain the substantial fines as well as the sentences of incarceration. And we received this in cases where we were not able to prove any defrauding of State or Federal Government other than their right to have the programs run honestly.

I think this is a very effective deterrent. We have used that statute in other cases involving medicaid mills and clinics. Those cases are pending.

I think I will skip any further comment on them.

Senator CHURCH. How do you determine the amount of the lien if there has been no actual loss to the Government?

Mr. SKINNER. The statute requires if you commit the violation, you forfeit your entire interest, or any portion thereof that the jury decides should be forfeited. So the jury decides what is to be forfeited. If the home is worth $3 million net worth or equity in the home, the jury could decide anywhere from $100,000 or $3 million of that should be forfeited to the Government. If they forfeit the entire home, we would then sell it to qualified people on the highest basis. That money would go into the Federal treasury. As you can understand, it is a very strong penalty and one, I think, that causes even the most greedy nursing home operator to hesitate before he goes forward.

Prosecutions, by the way, Senator, can have a deterring effect. We think we have stopped, pretty much, the kickbacks between pharmacies and nursing homes in Illinois as a result of our prosecutions, jail sentences, and fines. At least that is the word we are getting back from the pharmacists who do business in our State.

Senator CHURCH. Our Subcommittee on Long-Term Care has investigated nursing home fraud and investigated the medicaid mills—problems that you have mentioned in connection with them.

It may well be we ought next to look into the matter of hospitals. What is your opinion, based on your experience, concerning the possibilities of medicaid and medicare fraud within the hospitals? If you do feel that is going on, who is reaping the benefits?

FEW ALLEGATIONS OF HOSPITAL FRAUD

Mr. SKINNER. I have not received allegations of fraud within hospitals on the medicare program with any degree of frequency. I do not know whether that is because there are no problems or because people have not thought about it and have not felt comfortable going forward with it.

I have a number of people tell me that when they leave the hospital they notice on their hospital bill the medication that has been given, and tests appear on their hospital bill that they do not believe they received. This, of course, is billing to private hospital programs as well as medicare, but I am not so sure that would be any great indicator.

I do think, though, because of the amount of money that is spent in these programs and because of the problems we find in the other areas, that it is an area that at least should be reviewed on kind of a pinpoint basis, in an area we think these problems may exist, to find out if they do exist.

I would be interested to see a current inventory of drugs, plus what was received during the month, plus what was disbursed and billed to the State and Federal programs as well as health insurance agencies. It might be very interesting. We might be able to do that with a computer with some degree of ease. If they have a lot more drugs being billed than they purchased, that would be a good indicator.

I do not think, in my State, that it is as great a problem as it is in other States. Hospitals are under tremendous pressures. They are generally quite professional. They are experienced. They have been in business a long time. They generally give a high quality of care. I hope it is not going to be nearly the problem we found in the new area of medicaid. But we cannot afford to assume that. We have to check it out. I think that would be a good investment of resources.

Senator CHURCH. This is my last question. You stressed again and again in your testimony that there is a lack of adequate planning, a lack of controls, proper management, and sufficient auditing. That might be understandable if we were talking about programs that had just been established, but we are talking about programs that are at least a decade old. We have been doing this for 10 years now.

We are talking about disclosures of the grossness of mismanagement, and also outlining fraud, criminal embezzlement, and all the rest of the public funds on a vast scale. Yet we still have the same deficiencies.

Evidently no action is being taken by the Health, Education, and Welfare Department to improve the administrative procedures and to tighten down on the controls, despite your efforts and despite the efforts of this committee.

Would you think that is a fair judgment?

Mr. SKINNER. To answer that—I do not duck questions—I think you are right. The programs have grown substantially over the last several years. They have been around for a long time.

I do believe there has been a failure of the HEW administration to recognize the seriousness of the problem. There is no reason I should have had but one auditor or five auditors for the whole Midwestern region of HEW. They are reacting now. I admit it is late—several branches of Government reacted late.

Your committee and Senator Moss, to hear him credit me—he is the one that started this area way back when I was first practicing law. I would have been glad to carry his briefcase then. He has done more to demonstrate these problems than almost any American in the public sector.

"THEY DID NOT APPEAR TO LISTEN"

Yet the Congress and the administration—the administrators of the program did not appear to listen. I am hopeful they will listen now. There is no question they have been inadequate in their controls.

I suppose I have been inadequate in not addressing the problem sooner. I accept responsibility for that as well. But the programs have grown substantially and the volume is growing as a number of providers enter the area.

What happened was, it grew; providers in there started passing the word that this was the way to get rich quick, and more providers started joining the agency.

I think if you will look at the number of providers that are authorized today as compared to what was authorized 5 years ago, you will see a substantial number of increased providers available, and there are more people receiving aid as the provider organizations take form.

I would just like to make one final comment, sir, if I might, in observation. I hope whoever takes Senator Moss's place—I am delighted to see he is chairman of the subcommittee and spent time here today.

I will tell you what concerns me most. What concerns me most is that the people who should be receiving these benefits and are entitled to these benefits—who we can afford to give quality care to—not only are not receiving them but they are seeing programs running away, a lack of integrity which they recognize, and it destroys their fiber. It gives them a totally false impression about the way the integrity of our Government and our private enterprise should run.

They look at these organizations. They know the bills are being submitted falsely. They know they should have this care; they know they are put in stations they should not be going to. They recognize

something is going wrong and somebody is getting rich on them. They start saying to themselves: "Well, that must be the way it is. These are professionals; these are respected people. That is the way I should conduct myself. That is the standard in my community and my Nation." That is going to destroy the fiber of our entire community if we allow that to continue.

That, in my opinion, is the real tragedy. That is the reason, more than any other, that we cannot spend enough time and care enough to do something about this problem.

Senator CHURCH. I can assure you the good work that was first initiated and carried on for so long by Senator Moss will continue to be carried on by this committee as long as it exists—as long as I am chairman—and I hope to take up where Senator Moss leaves off. I am sorry we cannot have him with us again in the next session of Congress.

Mr. SKINNER. That is good news. Your reputation precedes you, and I am sure you will do an outstanding job.

Senator CHURCH. Thank you very much. Thank you for your testimony. We appreciate it.

[Whereupon, at 12:20 p.m., the committee adjourned.]

MEDICINE AND AGING: AN ASSESSMENT OF OPPORTUNITIES AND NEGLECT

WEDNESDAY, OCTOBER 13, 1976

U.S. SENATE,
SPECIAL COMMITTEE ON AGING,
New York, N.Y.

The committee met, pursuant to notice, at 8:07 p.m., in the grand ballroom of the New York Hilton Hotel, Hon. Charles H. Percy presiding.

Present: Senator Percy.

Also present: William E. Oriol, staff director; Deborah K. Kilmer, professional staff member; Dianna Porter, professional staff member; Wayne Fletcher, assistant to Senator Percy; John Guy Miller, minority staff director; Patricia G. Oriol, chief clerk; and Alison Case, assistant clerk.

INTRODUCTION BY DR. ROBERT H. BINSTOCK, PRESIDENT, GERONTOLOGICAL SOCIETY

Dr. BINSTOCK. Good evening, ladies and gentlemen. Welcome to the 29th Annual Scientific Meeting of the Gerontological Society.

To begin our program this evening I would like to introduce to you the Honorable Alice Brophy, one of our society's members, who is commissioner of the New York City Department for the Aging, a position she has held since 1968. As you know, Commissioner Brophy is a former chairman of the Urban Elderly Coalition.

Commissioner.

STATEMENT OF HON. ALICE BROPHY, COMMISSIONER, NEW YORK CITY DEPARTMENT FOR THE AGING

Commissioner BROPHY. Thank you, Bob.

Welcome to New York City. It is great to have you here and to say hello to so many colleagues and friends in the audience. The program is just great. I think it is going to provide intellectual stimulation and satisfaction to everyone. Of course, the best part of every conference is greeting and making new friends.

New York City has had a severe financial crisis. There has been a ripple effect throughout the country and many communities have been facing financial crises of their own—perhaps not as great or as acute as that which we faced in New York City—and yet we have not had a cutback in human services. There has been no diminution of programs for older people.

The programs that we provide for our senior citizens in New York City are unparalleled throughout the country. Our increased exemption program which provides subsidy for all people who are living on an income of $6,500 or less, and who are paying more than one-third of their income for rent, is unique. We have, as you know, a tax abatement program that 165 senior citizens in New York City created, and in our enclaves we are feeding 30,000 older people every day. We are establishing new programs within the next few months that will give older people new options, so that the only answer to their older years will not be a nursing home.

The person to whom I give credit for both the maintenance of all the ongoing programs and the introduction of new programs is our mayor. Despite the tremendous responsibilities that his administration has had to face, he has never failed to meet his commitment to the older people of this city. They have always had the highest priority. I am both delighted and privileged to present to you tonight the mayor of the city of New York, Mayor Beame.

STATEMENT OF HON. ABE BEAME, MAYOR, NEW YORK CITY

Mayor BEAME. Thank you very much, Commissioner Brophy.

I would like, for a few seconds, to express my very deep appreciation to Commissioner Brophy for the remarkable job she has been doing for the elderly of our city.

Senator Percy, Dr. Binstock, Dr. Berliner, Dr. Cooper, Dr. Butler, Sister Schwab, Dr. Sherrod, Dr. Libow, officers and members of the society, it is a great pleasure for me to welcome you to the city of New York on the occasion of the Gerontological Society's 29th annual meeting. During your stay here I am confident that each of you who represent different disciplines will expand our knowledge and understanding of the important issues which affect America's elderly population. I am pleased that you have chosen to meet here in New York City, the home of 1½ million older Americans, many of whom will assuredly be affected by the results of your scholarship and deliberations.

Today our country must take a hard look at many problems crying out for solutions and those which affect the elderly must receive consideration and attention, not only by your, the experts, but also by the public. I am glad that you recognize this and are leading the way for change, and are pushing for action.

Times have changed, and people have changed with the times. It is imperative for all of us and for you, the leaders in the field of gerontology, to work for an end to age discrimination. It is time our society was restructured in a way which would enable our elderly to live the later years of their lives with a sense of fulfillment and a sense of dignity.

I was happy to learn that the opening session tonight will focus on health. The entire health delivery system requires new strategies and new solutions. Our distinguished chairman tonight, Senator Charles H. Percy of Illinois, has shown great leadership in the areas of health and aging through his work on the Senate Special Committee on Aging and the Senate Select Committee on Nutrition and Human Needs. I

am certain that the witnesses will contribute a great deal of valuable information at the hearings tonight.

I hope all of you will have the opportunity while in New York City to explore and enjoy its unparalleled cultural resources: its music, theaters, museums, and art galleries. In this Bicentennial year, we should remember that many older Americans, senior citizens of yesterday and today, built these world famous cultural institutions, established our educational institutions, designed our subways, constructed our highways, built our tunnels and bridges. We owe them our gratitude and we give them a respected place in our society.

So my warmest welcome and good wishes for a productive and a rewarding conference on a subject that in some way affects every New Yorker and every American. I know your work will help enlighten your fellow citizens.

Thank you.

Dr. BINSTOCK. Thank you, Mayor Beame, for welcoming us and for joining us.

Mayor BEAME. Thank you.

STATEMENT OF ROBERT H. BINSTOCK, PH. D., BRANDEIS UNIVERSITY AND PRESIDENT, GERONTOLOGICAL SOCIETY

Dr. BINSTOCK. We are honored and very fortunate to have as our opening program this evening an official hearing of the U.S. Senate Special Committee on Aging, with Senator Charles Percy of Illinois presiding. On behalf of all of our members, I would like to thank you, Senator Percy, for sharing this important public event with us.

Before yielding the floor to the distinguished senior Senator from Illinois, I would like to indicate how we came to have this program tonight. As you know, in the Gerontological Society's separation of powers, about the only program decision the president has is what to do with the opening evening session.

Now my feeling was that we have talked with each other too long, and that it was time to reach out and to have others reach in to us to discuss some of the very important issues facing the aging in this country. Therefore, I was delighted when I approached Senator Percy and the Senate Special Committee on Aging that they graciously agreed, several months ago, to hold this hearing here tonight as a proceeding of the U.S. Congress and to honor us by doing so.

By coincidence in the last few weeks, there has emerged a proposed Senate reorganization plan which, in its current version, calls for elimination of the Senate Special Committee on Aging. I am confident that the content of this evenings hearing will exemplify the important public service and leadership which is performed by the Senate Special Committee on Aging and demonstrate the need for its continued existence.

I would like to point out that on each of your seats there is a blue sheet on which any of you who wish to include a statement in the official record of this hearing can do so. Write your statement on that sheet, mail it to the Senate Committee on Aging within 30 day, and it will be included in the record.[1]

[1] See appendix 5, p. 95.

In addition, you will find a card on your seat. If there is time at the end of this hearing, we will read any specific, brief questions that some of you may wish to write on those cards addressed to a particular witness or to Senator Percy regarding the issues under discussion. Persons will be moving up and down the aisle to collect the cards if you will pass them toward the aisle. Write your questions on them and if we have time we will include some of these questions from the audience in the hearing.

Finally, I am sure you are all aware of the many important ways that Senator Percy has served the people of this Nation, as well as his own citizens in Illinois, in the field of aging. In particular, he has been very instrumental in helping to establish the National Institute on Aging, in helping to establish the program for multidisciplinary centers on aging, and he has participated in the recent committee investigation of frauds in medicare and in medicaid. In his own book, "Growing Old in the Country of the Young," he has expressed eloquently many of the major issues confronting people as they age in this country.

Without further ado, Senator Percy.

STATEMENT BY SENATOR CHARLES H. PERCY, PRESIDING

Senator PERCY. President Binstock, members of our panel this evening, members of the staff of the Senate Special Committee on Aging, and friends, I am very honored to officially convene this hearing of the U.S. Senate Special Committee on Aging. It will be recorded as such and a Senate document will be issued on this hearing.

I would like to say to President Binstock that we have never had quite this kind of setting for a Senate hearing, nor have we had as distinguished a panel. I hope we will keep our conversations as informal as possible and certainly share in it as much as we can. I have never convened a hearing where any one of the people in the audience could be an expert witness and where every word that is being uttered will be scrutinized by experts. We will have contrary points of view I am sure.

Certainly we have one thing in common, we are devoted to this field. It is a rather interesting thing that the first book I ever wrote was on the aging, but it was, to me, a natural sort of thing to do. I found at the age of 29, when I became president of Bell & Howell—in 1949—that I was also automatically the chairman of the Bell & Howell Employees' Retirement Association. Being a few years away from retirement I was not quite sure how to approach that job since it embraced everyone who had ever retired from the company and everyone who was approaching retirement age.

Through the years I was really quite shocked at how ill-prepared industry was to deal with this problem—how it looked upon its job only as a financial one—and following the life cycle of many people who did leave to find the shock that suddenly they were without a structured life. The kinds of problems they never thought they would encounter were numerous—problems of where to live, how to treat and handle their relationships with their friends, with their families, how to finance their retirement, the health problems, and nutrition problems.

We began a series very early in that period—the early fifties—of clinics and seminars beginning 10 years ahead of retirement with the members and spouses as well as the person who would be retiring from the company. I am happy to say that through the years we have had a marvelous experience and it gave me a wonderful background. I think I ought to be prepared to retire a few years from now having psychologically adapted and adjusted myself to it, and have had the privilege of working with so many other people.

For that reason I really look forward so much to being with you this evening. I think the Gerontological Society should be commended for suggesting that the issues before us deserve the attention of all of us. Through this forum I think we can share our conclusions, knowledge, findings, and research with the general public.

Medical Community "Lack of Concern"

As a member of this Senate Special Committee on Aging and the ranking minority member of the Subcommittee on Long-Term Care, I have been confronted with fairly solid evidence about the current lack of concern or knowledge by large segments of the medical community in regard to the illnesses and chronic disabilities which so often accompany aging. The Subcommittee on Long-Term Care, for instance, issued in the past year a special report which, when we issued it, I felt was a fairly shocking document about the relative absence of doctors and the difficulty of getting people who specialize in the particular problems of the aging in nursing homes. That report argues that this problem begins in medical schools where physicians of the future are trained primarily to deal with the medical problems of younger people. There is not proper attention focused on the problems of aging America and we must consider that aging America is becoming an increasingly larger part of our population through a number of factors, and it is growing very, very rapidly.

In our investigations we actually found, through testimony given to us, that doctors and physicians avoid dealing with the elderly, especially nursing home patients. The testimony varied as to why they did that. They testified before our subcommittee that they really elected and preferred to take care of younger people who can return to society. As one of them said, "We have a feeling we can return them to society as productive members." They have a concept that an elderly person was not going to be returned to society as a productive member, which is part of the psychological concerns of older people—that they are being shelved and left out, they are forgotten, and they are being dealt out of society.

That is why we have so many programs such as foster grandparents, and others, specifically designed to encourage older people who recognize there is a real role they can play in society. They are highly productive members in many other societies from whence we all originally came, and why, suddenly, when they come to the United States should they be shelved and why should they be regarded as though they are out of the mainstream of activity? Possibly that is why drug abuse is so high among older people.

We are told that unrealistically low medicare and medicaid fees and the associated red tape actually causes many physicians to decide not

to deal with the elderly. Another less obvious reason we found for the lack of physician interest in older people has been described as the Marcus Welby syndrome. The psychological reinforcement that comes from seeing the sick cured is not thought to be available in the context of the infirm elderly. One doctor—I will just quote his words—testified before us and said, "I hate nursing homes. I never go there. I get too depressed. I never feel like I am doing any good for anyone."

I wrote a book really to try to interest people in the fact that nursing homes, where a million people are in this country, can be made places of dignity and respect, of cheer and hope. Mrs. Percy and I have probably visited more nursing homes than anyone I know of—certainly in the Congress of the United States. We were in three this week. My mother has played the violin and played concerts, I think, in over 30 nursing homes in just the last year, and she has been doing it for years. She is my favorite senior citizen. Anyone that tells me they can only get depressed going to nursing homes have not been in them as recently as I have because there has been a vast change in many.

Nursing Homes Investigated

Senator Moss and I conducted hearings all over the country on nursing homes. We have driven people out of business that were in the business of making money on the elderly. We have broken up syndicates right here in New York. We have indicted and jailed people who were building up fortunes—millions of dollars—at the expense of the sick, particularly if they were old. We have changed, a great deal, the attitude of the State inspection offices and city inspection offices toward nursing homes. The Electrical Workers Union ought to thank our subcommittee, at least, because there has been a tremendous change.

There is still a long way to go, but there is improvement. For those who think that they cannot get any inspiration out of a program we started in Illinois—with all due respect to the comments made about New York having the greatest program—Mayor Daley would resent that; I don't think I have ever spoken for him before on behalf of Chicago—a program in high schools and community colleges which allows young people to go into nursing homes. I for one saw many nursing homes and looked at the guest register books and found that in 1 week two people visited the 100 people there. So we got high schools and colleges to bring young people to do just ordinary sorts of things—help with telephone calls, write letters, just sit and talk or read the newspapers, something like that.

I think what we have to do is encourage the medical profession to also look in that direction. There is so much opportunity for service. I wrote last month to 114 medical schools and put a series of questions to them and possibly, during our question-and-answer period, we can bring out some of their answers. We had a flat answer as to why there is not this interest. We must stimulate interest in the medical schools for we are still a long way from having much attention paid to geriatrics in our medical schools.

[The prepared statement of Senator Percy follows:]

Prepared Statement of Senator Charles H. Percy

Thank you, Professor Binstock, for describing the special circumstances which have led to this hearing tonight. And thank you, as well, for your own personal initiative and concern throughout all our preparations for this event.

The Gerontological Society, I think, is to be commended for suggesting that the issues before us deserve attention, not only before this distinguished audience, but before the press and public.

As a member of the Senate Special Committee on Aging and as ranking minority member of its Subcommittee on Long-Term Care, I have been confronted often with solid evidence about the apparent lack of concern or knowledge by large segments of the medical community in regard to the illnesses and chronic disabilities which so often accompany aging.

The Long-Term Care Subcommittee, for example, has issued within the past year a special report about the relative absence of doctors in nursing homes. And that report argues that this problem begins in medical schools, where physicians of the future are trained primarily to deal with the medical problems of young people.

In our investigations we learned that many physicians avoid dealing with the elderly, especially nursing home patients. Many doctors have testified before our subcommittee that given the demands on their time, they elect to take care of the younger people who can return as productive members of society. We were told that unrealistically low medicare and medicaid fees and the associated redtape greatly discourage physicians from caring for the sick and the elderly.

Another less obvious reason we found for the lack of physician interest in old people has been described as the "Marcus Welby syndrome." The phychological reinforcement that comes from seeing the sick "cured" is not thought to be available in the context of the infirm elderly. One doctor told us candidly, "I hate nursing homes. I never go there. I get too depressed. I never feel like I am doing any good for anyone." In our report we took exception to this notion, pointing out that dramatic improvement and often full recovery are possible even with the most infirm nursing home patients. Sometimes the remedy is as simple as taking the patients off of all the drugs they have been receiving.

I for one think we can expect a great deal more from our medical profession than we are now receiving.

I for one think that the medical profession should extend its blessings to all persons in all age groups, in full understanding of the needs of individuals in each group.

I for one know that today's failures to deal with the illnesses and frailties of aging will grow as the numbers of older Americans grow: 23 million today, about 31 million less than two and one-half decades from now, when the new century begins. Much of that growth will take place in the very highest age brackets, where the likelihood of long-term illness and incapacity is the greatest.

If we have problems now, we'll have superproblems later, unless we change a few attitudes and practices.

If this is already my conviction, why are we having this hearing? We have called expert witnesses to argue both sides of the medical school issue, but I have to admit right here and now that I am swayed very much by the findings of our latest survey of what is actually happening right this minute in schools of medicine around this Nation.

Last month I wrote to the 114 schools of medicine asking them three questions: Do you have geriatrics as a specialty in your curriculum? Do you have programs in which students, interns, or residents serve in nursing homes? Do you have programs which help serve nursing homes in some other way?

Medical School Survey: Results

I received 87 replies to my questionnaire. Three schools of medicine indicated they had established geriatrics as a specialty in their curricula. They were the University of Health Sciences at the Chicago Medical School, the Arkansas College of Medicine, and the University of North Dakota. Seven schools, including the University of Pittsburgh and Duke University, were viewed by the staff as very close to this goal.

In short, of the 87 schools who answered my inquiry, a total of 10 said they had a specialty in geriatrics or were in the process of doing so. Thirty-five schools said they had programs whereby students or interns worked in nursing homes. Forty-seven schools said they had other programs to serve the elderly, particularly nursing home patients. These programs reportedly ran the gamut from research in gerontology to out-patient clinics or day care centers for the elderly.

A comparison with the results of our previous questionnaires provides valuable insight. In 1970 no school had or was contemplating a department of geriatrics; only six said they had a program whereby students or interns serve nursing homes, and seven said they served the elderly in some other way.

In 1974, 13 schools said that they either had a specialty in geriatrics or were contemplating creation of such a specialty. Counting three schools who did not reply this year, the results of our 1974 and 1976 questionnaires appear to be identical on this point.

In 1974 a total of 74 schools said they had a program whereby students or interns could work in nursing homes. This year only 35 schools responded positively. As interpreted by the staff, there is an apparent decrease in interest in this area of sizable significance. Since we received 100 replies in 1974 and 87 replies this year, a look at percentages may make our comparison of the relative interest in nursing homes more meaningful. In 1974, 74 percent of the medical schools indicated having a program whereby students or interns could fulfill requirements by serving in nursing homes. This year only 43 percent of the medical schools indicated having such programs.

In 1974, 53 percent of the medical schools reported serving the elderly in nursing homes in some other way. This year 47 schools or 59 percent reported programs to serve the infirm elderly.

In summary, if our questionnaires can be taken at face value, there seems to be a slow but increasing awareness in the schools of medicine of the medical problems of the aged. There is increasing interest in the creation of departments or divisions of geriatrics; however, only

three such units have now been created. Finally, there seems to be a decreasing concern in programs which allow students or interns to fulfill requirements by working in nursing homes.

The latter finding is of particular interest to me because of my concern for nursing home problems as spelled out in my book, "Growing Old in the Country of the Young." I think the finding is all the more significant because of new research findings I am making public tonight with the permission of my good friend, Ethel Shanas, professor of sociology at the University of Illinois in Chicago. Ethel is to give a paper later this week summarizing a few points from her latest research in the United States and abroad. Several of her points bear analysis here:

—Only about 5 percent of people 65 are now in institutions, and 4 percent 11 years ago. But in 1965, the 4 percent figure totaled 650,000 persons. Now, because of the growth in our upper age population, that figure is about 1 million.

—Challenging as the institutional care situation is, there is a greater challenge facing our health care system, if we will only face up to it. In 1962, 4 years before medicare, 2 percent of the elderly were bedfast, and 6 percent were housebound.

Is Medicare Serving Housebound?

In 1975, 9 years after medicare became operational among the elderly in the community 3 percent were totally bedfast and 7 percent were housebound. In both 1963 and 1975, then, there were twice as many elderly bedfast and housebound as there were in institutions: 10 percent compared to 5 percent. Ethel says, the enactment of medicare then has not reduced the proportion of the elderly living in the community who are bedfast or totally housebound.

And so we must ask ourselves whether medicare is doing what it should do to encourage health maintenance and forms of care which will release persons from their homes or make their confinement more tolerable.

We must also remind ourselves that while the proportions of housebound and bedfast remained similar between 1963 and 1975, their numbers did not. They are on the increase as the number of elderly, particularly the very elderly, continues to increase.

A satisfactory response to these challenges cannot be fashioned without the full cooperation and understanding of the entire medical community. If, in every way possible, physicians join in the effort to keep our older citizens functioning as fully as possible for as long as possible, we have a better hope of fulfilling the full potential of our older population and our health care personnel and facilities.

I realize that one of the greatest obstacles we face is what one of our witnesses—Dr. Robert Butler—calls "age-ism, or negative attitudes toward aging and everything associated with aging.

Some measure of the magnitude of that prejudice—and the challenge we face when we try to do something about age-ism—can be found in the papers I have in my hand. They are excerpts from a scholastic aptitude test given by one school system in Pennsylvania. One of the words on which the students are tested is "senility," which I think we all agree is a specialized word indicating a clinical condi-

tion. But I think we all know that senility is a much misused word. It's been said often that when a middle-aged person forgets something, that person is called absent-minded. But let that happen to an elderly person, and that person is called senile.

To get back to the scholastic aptitude tests, there's a little poem in which the missing word is to be filled in. It reads:

"First we're little cooing babes,
And haven't much ability,
But just when we think we're getting wise,
We're suddenly in ————."

Fill in the missing word. You guessed it. (Senility.)

Later in the same test, there is a crossword puzzle calling for an 8-letter word synonymous with old age. Fill in that word. You guessed it. (Senility.)

A few days ago, the *Washington Star* newspaper published a front page survey on what children think of elderly people. The results coincided with a number of myths about elderly persons which I dispel in my book, "Growing Old in the Country of the Young."

As stated in my book one of the biggest myths is that most of the elderly suffer from serious mental deterioration and senility. This, of course, is not true. Intelligence is measured in tests of comprehension and knowledge, and shows little or no decline for the average elderly person. According to Dr. Robert E. Rothenberg, "mental deterioration rarely occurs among normal older people before the eighties." Furthermore, evidence indicates the ability to think and reason increases with age if those facilities are given sufficient use.

Several other myths that we need to dispel are that: most of the aged are disabled; older people cannot cope with change; most men and women over 65 have no sexual interest or activity; all older people are alike; old age is a disease and physical limitations imply an inability to function.

If our youth as well as many of our adults believe these myths, it is no wonder that today's medical students are not adequately trained to cope with the illnesses of the elderly. Or are they?

We have invited witnesses who may have varying views on that subject, and we will hear from them now. I am looking forward to a lively and informative discussion.

[End of prepared statement]

Senator PERCY. If our panelists would be good enough to come up to the podium.

We are very pleased to have as our first witness this evening Dr. Robert N. Butler, Director of the National Institute on Aging.

Dr. Butler.

STATEMENT OF ROBERT N. BUTLER, M.D., DIRECTOR, NATIONAL INSTITUTE ON AGING

Dr. BUTLER. Senator Percy, Dr. Binstock, gentle people, good evening.

In order to effectively meet the needs of older people for high quality medical treatment—accurate diagnosis, sensitive care, and effective treatment—it is imperative that the special perspective of the particu-

lar body of knowledge known as geriatric medicine be introduced into the curricula of our 114 medical schools, into our intern and residency training, and into our programs of continuing education. In this country today we have some 330,000 practicing physicians, many of whom are not equipped to meet the needs of today's 23 million old people—a situation which is likely to grow worse as the number of older people increases by almost 50 percent in the next three decades.

The real question is not whether geriatric medicine should be a specialty, certified or otherwise; that is essentially proprietary. Rather, the question is how can we expose every physician to the procedures of primary care which are necessary to deal with older patients just as we have exposed other primary care physicians—pediatricians, family and general practitioners, internists, and gynecologists. The body of knowledge required to care for old people is not just disease-categorical; it is broad in perspective and in keeping with the complex character of human experience—including the multiple physical, personal, and social processes that occur with age.

Geriatric Training Stimulated

There are signs of increasing interest in the teaching of geriatric medicine. The Student American Medical Association (SAMA) has called for its incorporation within the medical school curriculum; the Council of Medical Education of the American Medical Association may also now support such teaching; and the Administration on Aging has provided some funds.

Surprisingly, a recent survey of American physicians reported in the September 27, 1976, issue of Impact, an AMA news periodical, revealed that 75 percent of practicing physicians answered affirmatively the question, "Do M.D.'s need special training in geriatrics?"

At our own institution, the National Institute on Aging—part of National Institutes of Health—we are all too conscious of the negligible degree to which investigative medicine is involved in the study of the physiology of the aging human organism. We are convinced of the necessity of having more geriatric medicine taught so that it may serve as a catalyst for the research that forms the framework of a good service delivery system. By expanding our knowledge of human aging, we will ultimately enhance the quality of life of the later years and also help alleviate the great financial and emotional pressures placed upon the middle-aged and younger generations to care for the old. In addition, we would also reduce our incredible national health expenditures, many of which are associated with the disabilities and diseases of old age.

The argument on behalf of geriatric medicine is based on compelling necessities—intellectual, demographic, epidemiological, cost, and attitudinal—which can neither be avoided nor evaded. Practically speaking, the first argument in favor of the inclusion of geriatric medicine in our medical schools is that this body of special knowledge already exists, far from complete but nonetheless substantial. This fact is quite contrary to the commonly held notion that there is not even so much as a textbook on the subject.

In the disciplines known as human physiology and pathophysiology exist the data that underpin geriatric medicine. These data deal with

the differentiation of time-related changes from pathogenetic elements, from the results of socioeconomic adversities, and from the effects of personal crises. The characteristics of the changes inherent in late life can be distinguished from the concomitant crush of environmental events. Making these distinctions is the first critical step in recognizing, diagnosing, and then ameliorating what can be changed. With time comes an accumulation of long-term diseases such as arteriosclerosis and disabilities such as joint-trauma.

Symptoms of Elderly Misleading

In the later years, multiple disorders are present as the body's protective mechanisms such as immunity are compromised. Symptoms present differently in the old, and the untrained clinician often misses the diagnoses:

(1) An older person with hyperthyroidism may appear apathetic, not hyperactive.

(2) Tuberculosis may proceed in silence.

(3) Appendicitis may occur without the characteristic abdominal tenderness at McBurney's point, without fever, and without an elevated white count.

(4) An older person may even have a heart attack without chest pain and may instead appear confused, disoriented and seem like the victim of a stroke.

The second argument for the teaching of geriatric medicine is demographic. Persons 65 and above constituted 3 percent of the American population in 1900; 10 percent by the second White House Conference on Aging in 1971; will perhaps constitute 12 percent by the turn of the century; and some 17 percent between 2015 and 2020. The latter figures are predicated upon there being no improvements in the delivery of health care or any achievements in research, assumptions which are regarded as unlikely. It is far more probable that in 2020 one out of every five American citizens would be over 65 years old. With that kind of "2020 vision," we see the same Americans that constituted the post-World War II baby boom, those youngsters who were described as "greening" America, "graying" America. I, as a middle-aged father of three post-World War II children, am conscious that it is my children who will enjoy or suffer the consequences of the old age created for them here today.

The third reason for including geriatric medicine in our medical schools is epidemiological. If we are to have a good, responsible health care system, we must first accurately and realistically measure the proportions of the problem with which we are trying to deal. For example, we have to be able to take into account the high incidence and prevalence of disorders which accumulate or develop for the first time in the later years. One of these, senile dementia—so devastating to human personality, identity, and memory—is perhaps the fifth greatest killer in the United States and probably the reason at least 50 percent of the patients enter American nursing homes. Diabetes, rheumatoid arthritis, osteoporosis, cardiovascular and cerebrovascular diseases, and many more require delineation and epidemiological consideration so that our health care system will respond effectively.

The fourth imperative is cost. We in this country spent some $118.7 billion on health in 1975. Of this staggering figure, some 50 percent—$60 billion—went for chronic disease, and one-third of all acute hospital beds were used for old people. There were 1.2 million patients in 23,000 nursing homes in 1975—more patients than in our over 7,500 voluntary hospitals. Nearly one-fourth of all drugs consumed in this country were consumed by older Americans. The litany is endless.

Haphazard service delivery, resulting from incompletely trained diagnosticians and technicians, costs money. Without an "educated," sensitized corps of doctors and service delivery personnel, no new ideas germinate; new research dries up; and our health care systems stagnate. Moneysaving and timesaving, as well as lifesaving, measures cease to find their way into use.

Elderly: The American Attitude

Perhaps at the root of our failure to adequately provide for our older people is an attitudinal problem. Americans suffer from a personal and institutionalized prejudice against older people. Although this may be a primitive, universal dread of aging true in all cultures, it is reinforced and thus more striking in our own. This is a cultural sensibility that could be changed through study and education. When the medical student or the doctor shares in that negative attitude, it is all the more disturbing. The first older person that the average medical student meets in medical school, aside from some of his teachers, is the cadaver. Although many professors of anatomy thoughtfully indicate the need for respect for the body as a dissection begins, few American medical schools pay attention to the disturbing dreams, the nightmares, the nausea, the vomiting, and the confusion that the medical student faces in response to the dismemberment of the body. It is a small wonder, then, that the student, left to his or her defenses and coping mechanisms, develops a negative attitude. "Gallows" humor emerges. Youth oriented Peter Panism, or callous and cruel epithets such as "crock," "turkey," "toad," and the one I just heard—"dirtball"—becomes synonymous with the older person.

One study of University of California medical students [Spence, Feigenbaum, et al., *Journal of the American Geriatrics Society.* 6: 1976–83, 1968] showed that their attitude toward old people actually deteriorated over the course of their 4 years in medical school. Medical students are not exposed to healthy older people in the same fashion that they are exposed to healthy babies in sunny, well-baby nurseries and clinics. In fact, there isn't a medical school in the country which routinely and systematically rotates students through community senior centers. One wonders whether medical students would choose to be pediatricians if they only saw babies suffering from irreversible conditions. However, there are some signs of change. At NIA we plan to cosponsor conferences related to geriatric medicine and research with the American Geriatrics Society. The Institute also has the legislative authority to support postdoctoral training in geriatric medicine and to consider research centers in medical schools. We are actively encouraging the introduction of sections on special considerations related to aging in the classic American medical textbooks, an

idea arrived at independently by Drs. Reuben Andres and Leslie Libow.

Also, we are exploring the possible use of the mechanism of a faculty grant—an idea of Dr. James Shannon, former director of the National Institutes of Health—to help support research in geriatric medicine in American medical schools. The elements necessary for curriculum development are more or less in place. The question is, how do you create eggs without chickens? There are no homegrown geriatricians in the United States. Therefore, we need to develop faculty. Current estimates are that perhaps less than 15 of an estimated 25,000 faculty members of American medical schools have any genuine expertise in geriatric medicine. Summer and winter workshops, as well as some circuit writing by outstanding European geriatricians, might help.

We can learn much from nurses and medical social workers, who are ahead of American medicine in the area of geriatrics. We can surely learn from the "impoverished" United Kingdom, with its 10 endowed chairs of geriatric medicine, or from little Sweden with two chairs, or even Holland, which recently created its first. We, a country of some 200 million, still do not have a single endowed chair in geriatric medicine.

NIA Study of Curriculums

At the NIA we are doing a study to analyze human development courses in American medical schools to find out: How many of the 114 schools have them; for how many hours; and of those hours, how many are devoted to the middle and later years? We can also support studies that would evaluate techniques for intervening and changing the attitudes of medical students toward aging and the aged.

There has been much discussion recently of an Institute on Medicine study of medicare reimbursement which pays for the salaries of interns, residents, and attending physicians teaching in America's teaching hospitals. I cannot help but wonder if that flow of money might not be more closely examined to determine if it might not better be used as resource funds for the teaching of geriatric medicine or for the conduct of investigative studies to give additional benefit to medicare participants.

It would be most constructive to undertake sample testing of the clinical knowledge in geriatric medicine of the 330,000 graduate physicians in the United States. Questions on geriatric medicine, if incorporated into examinations by the American Board of Medical Examiners, would provide a clear incentive to American medical schools to teach care of the aged.

Fortunately, consumers in this country are becoming more vocal, and this includes matters concerning old people. Certain groups have begun to express an interest in why so few American medical schools teach geriatric medicine—32 electives among 114 medical schools. This lack of training is exacerbated by the absence of special considerations related to the aging patient in our classic textbooks of medicine and pharmacology.

Our Institute, in its efforts to create a climate for the development of quality investigative medicine in aging, is not only considering the support of biomedical research centers in medical schools, but hopes

that universities will pioneer by creating university-wide committees on aging and geriatric medicine in the expectation that this would foster innovative multidisciplinary research.

In addition, the National Institute on Aging should attract and utilize clinical and research associates in our intramural program in Baltimore—the gerontology research center—where investigative medicine could proceed without difficulty.

I am always struck, after my many years of research and clinical practice, at how colleagues who had been indifferent, if not hostile, to the idea of teaching geriatric medicine will call me when illness strikes a mother, father, wife, husband, or themselves. Then, even they recognize the need for a speciality or expertise.

I do not wish to ignore the somewhat understandable complaint of medical school deans that they already have an overcrowded curriculum, and therefore no room for geriatric medicine. I would like to reply to these complaints by pointing out that new developments in science have been incorporated before in areas such as neonatology and nuclear medicine.

Second, I would like to reiterate that we simply cannot deny geriatric medicine a place in the curriculum, because we cannot afford to do so—financially, demographically, or attitudinally.

Finally, no medical school has ever taught all that might be taught or could be taught. What we want is for students to learn how to learn. They need to learn how to approach a problem, a category, a situation. There are ways of interchanging content while still looking at the process. For example, one can learn about pharmacology by looking at older people and children as well as adults. One can learn the principles of neuropathology with careful attention to newer knowledge related to cerebrovascular disease and senile dementia.

A Task Force on Geriatric Medicine?

In closing, let me emphasize that this is a complex and important subject which requires and deserves our every consideration. It would be a most constructive step if the Institute of Medicine of the National Academy of Sciences would create a national task force on geriatric medicine to consider the best means of introducing the teaching of geriatric medicine, implementing service delivery for the aged, and encouraging research on aging in medical schools. At the same time, we at the NIA will pursue the subject of geriatric medicine through:

(1) Curriculum development;

(2) Faculty development;

(3) Study of teaching in the United Kingdom;

(4) Collaboration with American foundations;

(5) Coordination with the Veterans' Administration hospitals, especially where there are Geriatric Research Educational Clinical Centers—GRECC's;

(6) Association with the senior medical consultants—originally NIH funded—a body of emeritus professors in various medical specialities who teach in nonuniversity affiliated hospitals;

(7) Exploration of possible means of support of geriatric medicine and nursing education with the Administration on Aging, the Health

Resources Administration, the Bureau of Health Manpower, et cetera; and

(8) Discussions with the private sector—the National Retired Teachers Association and the American Association of Retired Persons, National Council of Senior Citizens, the American Health Care Association, et cetera.

Thank you very much.

Senator PERCY. Thank you very much.

Dr. Butler, as I related, is the Director of the National Institute on Aging; he has worked with the elderly for over 20 years in the fields of psychiatry and psychology and has authored many books relating to aging, including his Pulitzer Prize winner, "Why Survive? Being Old in America." I would imagine it sold more copies than mine.

Dr. Butler, our format is that the panelists will be asked to speak for 8 minutes—we will give them 1 minute notification in advance. I will ask a couple of questions of each of you as we go along, and then we will open it for discussion and questions from the audience at the end. This is a rather unusual procedure for a Senate hearing but I ask unanimous consent to do so. There is no other Senator here to dissent; therefore, it is so ruled.

I will submit all of the questions I have for our witnesses and ask them to answer. We will hold the record open for several weeks so that it is complete. I think I would really prefer to have as many questions from the audience as possible.

There are cards for which to write your questions and then you may send them up. The cards will be picked up and your president will read the question.

THE SWINE FLU VACCINATION

Now, Dr. Butler, let me give you a noncontroversial first question. Could you give us your expert opinion as to the relationship between the swine flue vaccination and the recent deaths of 11 elderly people now in 3 different States?

The city of Chicago is going ahead with the vaccinations, downstate Illinois has stopped them. We have a condition of uncertainty about this whole program. Could you tell us about that?

Dr. BUTLER. Well, it is a very serious matter and for that very reason I have to disqualify myself in terms of any expert opinion on the matter. I was deeply concerned over the summer knowing that, as part of our responsibility at the National Institute on Aging, we had to be concerned about questions that would relate to the swine flu vaccination program.

I was also interested from a research perspective because presumably the aged population might already have had immunity, having gone through the 1917–19 flu epidemic. In pursuing this question at some depth, however, I discovered that the swine flu virus was not really isolated until 1931. Therefore, we cannot be absolutely certain that that is the same virus which was so devastating to both Americans and people throughout the world.

I, of course, feel that we must investigate the problem. I am also deeply concerned that our population be properly protected should

we have a major epidemic. I don't think panic is in order but, rather, wisdom.

Senator PERCY. We will leave that question for any of the other panelists when it comes their turn to comment after their presentations if they wish, or if we have any expert advice in the room beyond the expertise of the newspaper reporters that we have had, we would certainly appreciate it.

I would like to ask, Dr. Butler, if you have had a chance to study Senate bill S. 1156, a bill to create grants to encourage medical schools in the establishment of departments of geriatrics. If you have had a chance to study it, would you care to comment on the underlying comments of that bill?

Dr. BUTLER. I think that one very important incentive to the introduction of geriatric medicine certainly could be the provision of funds. I think there are other forms of incentives, too, which are very important to us.

I would like to go back to the question of faculty development. If we do not have an adequately trained faculty which understands the basic corpus of knowledge in geriatric medicine, we are at a loss. Perhaps some of that incentive money, should it come into being, should be allocated specifically to creating a cadre of outstanding models of knowledge in the area of geriatric medicine, who could then in turn teach others in a kind of ripple effect.

PHARMACOLOGY OF AGING ESSENTIAL

Senator PERCY. The last question that I would like to put to you, I put to you simply because 30 million people saw it on "60 Minutes" and wondered about it. The "60 Minutes" television program had a psychologist who said that he had received his training in prescribing drugs for insomnia by watching the resident he followed around on his rounds. It disturbed many people because many of the responses to our survey at medical schools stated that their own training in geriatrics was the student's exposure to the older patient and the care provided by the doctor in charge.

Is this "watching of the resident on duty" type of training common in medical schools and isn't it most dangerous, especially in such instances as prescribing of drugs for older patients who often react differently to such drugs as amphetamines and stimulants?

Dr. BUTLER. It is essential that we develop the pharmacology of aging. We have the tools, the concepts, and the instrumentation to do so. It is quite surprising, as I mentioned earlier in my testimony, that our major classic textbook in pharmacology does not even have "age" in the index. In our Institute, we plan to support studies that will help change prescription guidelines as they affect the older patient. I think that without new guidelines, we continue to run the risk of overutilization of drugs, with resultant confusion that may be misdiagnosed as so-called senility. Too often, a patient is hospitalized or institutionalized unnecessarily.

Senator PERCY. Dr. Butler, thank you very much indeed.

Dr. John A. D. Cooper is president of the Association of American Medical Colleges. The AAMC is the professional association of the 117 medical schools in our country. Dr. Cooper was dean of science at

Northwestern University prior to his work with the AAMC and was associated with Northwestern in professional roles from 1943 to 1969. He received both his Ph. D. and M.D. from Northwestern University.

Dr. Cooper.

STATEMENT OF JOHN A. D. COOPER, M.D., PRESIDENT, ASSOCIATION OF AMERICAN MEDICAL COLLEGES, WASHINGTON, D.C.

Dr. COOPER. Thank you very much. I appreciate the opportunity to present the statement of the Association of American Medical Colleges on medical education and the health problems of the elderly.

At the outset it is very important to recognize that in this country no organization, including the AAMC, has control over the curricula of medical schools. Detailed specifications of curriculum content has fortunately been avoided, since that process tends to impede innovation and to construct an inflexible program of instruction not responsive to advances in medicine, in medical science, or in new patterns of medical service.

The strength and excellence of American medical education is due in large part to the great diversity and individuality that characterizes the academic institutions that educate physicians. The medical schools vary in age, sponsorship, tradition, and goals, but in different ways each has made important contributions to better medical care through its education, research, and service programs which have generally been acknowledged to be in the forefront of all such programs in the world. Thus, it is to be expected that the schools would have responded in a variety of ways to the unique and growing challenge presented by the Nation's aging population.

MEDICAL CENTER'S ROLE

The task of the academic medical centers in preparing physicians to assume their appropriate responsibilities for services to the elderly is threefold. Medical students must be educated:

(1) To understand the normal aging process. Conceptually, this is best approached as part of the study of growth and development.

(2) To diagnose and care for the diseases most likely to impair function and threaten life in the elderly.

(3) To adjust the provision of medical services toward the effective management of chronic disease over long periods.

Within the limits of present knowledge about the aging process, it is possible to educate students about the nature of aging, either through special courses on this subject or in a sequence of courses, in which growth, development, and aging are interwoven. While the degree of emphasis differs from school to school, education about the aging process is provided effectively in all U.S. medical schools.

Additionally, elderly patients with acute illness are commonly encountered in teaching hospitals, and demonstrations and instruction on the diagnosis and treatment of these illnesses, with a special focus on the character of their manifestation in the elderly, is a commonplace occurrence in every school and every teaching hospital.

The principal problem area in educational and learning opportunity in our academic medical centers is in the long-term management of

chronic, or only slightly disabling, conditions in patients who are outside the mainstream of contemporary society. In this domain, the medical schools have selected a wide variety of approaches.

Just as there is variety in the ways that undergraduate medical education has responded to the unique challenges presented in the medical care of the elderly, so also have there been wide differences in approach at the graduate level, subsequently reflected in professional practice patterns.

Some physicians view geriatrics as a distinct specialty warranting specific residency training programs and subspecialty recognition, while others think that it is orthogonal to all specialties and that the aged will receive better care if all appropriate specialists participate in their management. Since the AAMC does not now directly participate in the process of the creation of new specialties, this organization's preference on whether geriatrics should be a separate specialty is an academic question.

Longevity Can Increase Problems

In teaching students about the problems of the elderly it is difficult to isolate the medical from the closely interrelated economic and social needs of this group. Furthermore, the interactions of these variables becomes increasingly complex as the elderly population expands. Dr. George Maddox, director of Duke University Centre for Aging and Human Development, in describing the size of the task ahead in a recent issue of *Annals of Internal Medicine*, said:

> Long average life expectancy, a distinct achievement of modern societies, has proved to be an embarrassment and a current threat to existing institutional arrangements, not only for health and welfare, but also for income maintenance, transportation, housing, and education. Medical education and health delivery systems in both countries (England and the United States) were designed for acute, not chronic, illness; they are, therefore, mismatched with the particular needs of older persons for preventive, primary, and long-term care. . . . The mismatch is troublesome in the United Kingdom and dramatic in the United States.

Thus, greater attention must be given to educating students in an understanding of the social milieu of the elderly. This requires emphasis not only on disease processes, but on the management of the patient's social adjustment problems, an objective not easily achieved unless the medical student has the opportunity to see the patient outside the hospital setting.

Debate on the technical and policy issues related to the creation of a specialty and on the appropriate approach to teaching geriatrics should not be allowed to obscure the very basic reality of how extraordinarily limited the body of knowledge about gerontology actually is. To achieve meaningful and significant solutions to this set of problems, greatly increased energy and effort must be committed to research in gerontology and a far larger fraction of the Nation's most creative aspirant scientists must be trained in this area of medical science. The association, therefore, strongly supports a rapid buildup of resources for the National Institute of Aging and feels that its broad charter, which includes research in the social and behavioral, as well as the medical aspects of aging, is most appropriate.

Medical educators are keenly aware of the dimensions of the educational challenge presented by the medical care problems of the elderly, and are generally responding effectively by developing a variety of educational approaches for undergraduate and graduate programs.

Financial Problems

That medical schools could do more is undeniable, particularly in terms of student-patient encounters in ambulatory settings, nursing homes, and extended care facilities. The major obstacle to this relates to the problems of financing, both undergraduate and graduate, medical education. Ambulatory care teaching has presented the Nation's medical schools with particularly serious financial problems. A large number of outpatients have inadequate medical care insurance or are totally uninsured. Those with coverage are often unable to pay deductibles and coinsurance. Moreover, some coverage, such as medicare, reimburses on a scale often well below what is customary and prevailing and excludes from reimbursement under "part A" the costs of the education of interns and residents in outpatient facilities. Finally, when the education of students and residents is coupled with patient care, inefficiencies are introduced that increase unit costs and prevent a high volume flow of patients. All of these factors summate in a situation in which the ambulatory care services of our teaching hospitals are incurring substantial fiscal losses and will not be able to significantly expand their ambulatory educational and service programs without adequate reimbursement for them.

Thus, development of optional pedagogic programs must await the day that medical education is on a more sound financial basis. Valuable interim assistance will be provided by the special project grants for undergraduate and graduate education in areas such as family medicine, general pediatrics, and general internal medicine, authorized in the Health Professions Educational Assistance Act of 1976 signed yesterday by President Ford, especially in making possible high-quality ambulatory care education for students and residents. But all medical care programs proposed in the future must reimburse the costs of educating the health professionals essential to provide the needed services if the advances of medical science are to be brought to the beneficiaries of the program.

In summary, the association fully supports efforts to improve education for providing the teaching of first-class medical services for the elderly in the Nation's medical schools. The efforts of the medical schools can and will improve immensely as the body of knowledge of gerontology, which is now woefully inadequate, increases through research, and the financing system is modified through legislation to place undergraduate as well as graduate medical education on a solid financial basis.

Conflicting Testimony

Senator Percy. I was particularly interested in your testimony where you said that education of the aging process is provided effectively in all U.S. medical schools. That seemed to challenge Dr. Butler's statements and at the same time were somewhat in contrast with the questionnaires I received. As I mentioned in my opening comments, I

wrote to 114 schools of medicine last month and I put to them such questions as this: Do you have geriatrics as a specialty in your curriculum? Do you have programs in which students, interns, or residents serve in nursing homes? Do you have programs which help serve nursing homes in some other way?

Only 3 schools of medicine of the 87 that replied to the questionnaire actually indicated that they have established geriatrics as a specialty in their curriculum. Seven others seemed to be indicating that they were working toward that goal and recognized that they should have them. I was particularly discouraged by the fact that several years ago 74 percent of schools said they had a working relationship with nursing homes; this last month only 43 percent had. We have almost cut it in half. So the disillusionment of nursing homes seems to have affected the medical schools' working relationship.

In light of those findings and Dr. Butler's comments, would you further expand on your statement that all U.S. medical schools are effectively providing education about aging?

Dr. COOPER. I said the statement is "the process of aging," and this has to do with the biomedical relationship of the living systems in aging. In the testimony I pointed out that we are not, in my view and, I think, in the view of most schools, providing adequate opportunity for students to understand aging patients. However, these are very specific opportunities for students to understand the process of aging, and that is woven through all of the basic science areas of medicine in which one does consider the effects of aging upon the living process in all living matter.

GERIATRIC "ELECTIVES" INCREASE

Now, with regard to the development of specific specialty tracks or specific courses in geriatrics, the AAMC publishes annually a curriculum directory, and the last directory indicates that 45 schools now offer electives in the field of geriatrics. This is up from 32, 1 year ago. In other words, we had an increase of 13 schools in 1 year. This is in spite of the fact that the medical schools, with their financial stringencies, certainly are not in the mood, nor are they able, to consider expanding programs or developing new programs. The real direction of their efforts is to stay afloat.

I think that this change has been remarkable, but we do have coming into the medical centers a large body of elderly patients. Many of them cannot afford to go any place else, and they come to the teaching hospital as the only place where they can receive care. I think we have not adequately treated them clinically.

The things that I pointed out that have prevented the development of adequate ambulatory care, not only for geriatric patients, I might add, but for patients of all ages, relate to the difficulties we have in getting reimbursement, not only for the care delivered in those settings but also for the education and training of students in those settings. I would hope that we can get that corrected so that the schools can undertake the kinds of programs which I think many of them are interested in taking and promoting if they have the financial backing to provide them.

Fortunately, this bill on the Institute of Aging will provide some short-term support for these kinds of programs. Unfortunately, we do not have the guarantee of any long-term support and schools have become very wary of taking on a program which is supported for 2 or 3 years and then is no longer supported because of lack of funds. We have had one example after another of this in legislation passed by the Congress over the past 5 years.

Senator PERCY. I would not want to assume full responsibility for that, but I can recognize the problem involved.

I would like to rephrase my question then, possibly in this way, to give you a chance to attack it from another standpoint. It has been stated that the major goal of the medical school is to provide a model of principles and practices of medical care so that the student receives a basic understanding of patients as total human beings. Now taking the elderly as an example, how are elderly persons dealt with in this model of principles and practices where you look at the elderly person as a total human being and how is this transmitted by medical schools to students today?

Dr. COOPER. I think that varies, as I tried to point out, from school to school. In some cases, as has been pointed out with the 45 schools which actually have electives in geriatrics now, they do present a concentrated program dealing only with the aged in the total scope of their problem. In other institutions it is felt that this same approach should be introduced in each specialty which deals with patients of all ages, and there is not the feeling that you need a special department or a special course. These are the two polarized views about how the care of patients of whatever age should be considered in the medical school curriculum.

VOLUNTEER TEACHERS IMPORTANT

With regard to the statement that the residents do all the teaching, I think that the residents are important in the total teaching process, but nevertheless the substantial full-time faculty and those who support the schools in their volunteer faculty appointments are also extremely important factors in the educational process. They always have been important, and they continue to be one of the major sources of the education and training of students. If we do have physicians that are oriented and sensitive to the problems of the aged, I think that this is transmitted to the students through the clinical clerkships which all the students engage in at every medical school in the country and through the residency programs in internal medicine and the variety of specialties.

Senator PERCY. Thank you very much, Dr. Cooper.

May I remind our audience that if you have questions, we would like to have your questions so we can cover as many as we possibly can. Pass them to the aisle and a member of the staff will pick them up.

Dr. COOPER. Senator, before we close, may I just give one example of a situation in your own State?

Senator PERCY. Very briefly.

Dr. COOPER. Rush Medical School, which I know very well, has just completed a $10.5 million facility which will provide a very innova-

tive approach to geriatrics, as will other schools I have listed in the written testimony. This is going to provide not only extended care facilities but actual apartments for elderly persons who wish to have the reassurance of living nearby to a medical center. This is going to be a very important facility at Rush, not only for the care of the aged, but for the educational programs both at the undergraduate and graduate level. I think this indicates the kind of innovative approaches that the medical schools have taken relative to geriatrics.

[The prepared statement of Dr. Cooper follows:]

PREPARED STATEMENT OF DR. JOHN A. D. COOPER

Mr. Chairman and members of the committee, I am Dr. John A. D. Cooper, President of the Association of American Medical Colleges, an organization established 100 years ago to represent a constituency now composed of the Nation's 117 medical schools. 400 of its major teaching hospitals, and 60 academic societies reflecting the concerns of the faculties of the medical schools. The association appreciates the opportunity to present its views as you consider the problems of the health care system in relation to the elderly. Your invitation requested that I focus my remarks on the place of geriatrics in the medical school curriculum, and on some of the problems that medical schools face in trying to accord geriatrics and gerontology appropriate emphasis.

This I shall attempt to do. It is important to recognize that no organization, including the Association of American Medical Colleges, has control over the curricula of medical schools. General guidelines on the educational programs are provided by the accrediting body, the Liaison Committee on Medical Education. Detailed specification of curriculum content has fortunately been avoided, since that process tends to impede innovation and to construct an inflexible program of instruction not responsive to advances in medicine, in medical science, and in new patterns of medical service. The Association of American Medical College's Curriculum Directory, published annually for the last 5 years, records the dynamic flux in the instructional offerings in the Nation's medical colleges that this wise policy has permitted and a perusal of its pages will attest to the wide range of variation and the lively pace of change in curricular structure within these institutions.

The strength and excellence of American medical education is due in large part to the great diversity and individuality that characterizes the academic institutions that educate physicians. The medical schools vary in age, sponsorship, tradition, and goals. Many have assumed the coloration and perspective of the region of the country in which they are located, while others have remained cosmopolitan and national in outlook. Some schools draw their student bodies from their own locale and have populated this same area heavily with their graduates; others have sought matriculants from every State in the Union and have seen their graduates scattered through the length and breadth of the land. Some have hewn strictly to traditional disciplines, fields, and specialties while others have been innovative in creating new interdisciplines, new modes of approach to the delivery of health care, new concepts of medical education and service. In different ways, each has made important contributions to better medical care through its education, research, and service programs. Thus, it is to be expected that the schools would have responded in a variety of ways to the unique and growing challenge presented by the Nation's aging population.

THE TASK OF THE MEDICAL SCHOOLS

A brief comment on the essential characteristics of this 20th century challenge and the task it presents to medical education seems in order. Aging is an inevitable, natural phenomenon. In advanced societies, however, life expectancy has almost doubled in the 20th century and the absolute numbers of individuals living beyond the age of 65 has increased very substantially. The social welfare programs initiated in Europe at the turn of the century and several decades later in the United States did not include such longevity in their planning assumptions. Thus, the realities of the aging population are inducing major perturbations in the structure of all advanced societies. One consequence is a growing concern for how to provide the medical services needed by the

ever-increasing number of citizens who are now living beyond the age of direct participation in the daily activities which engage those still considered in the mainstream.

Timely and appropriate medical service for those who have reached 65 and older is imperative; the provision of social and family services for the elderly is of equal importance. The task of the academic medical centers in preparing physicians to assume their appropriate responsibilities for these services is three-fold. Medical students must be educated:

(1) To understand the normal aging process. Conceptually, this is best approached as part of the study of growth and development.

(2) To diagnose and care for the diseases most likely to impair function and threaten life in the elderly.

(3) To adjust the provision of medical services toward the effective management of chronic disease over long periods. This means a shift away from a principal focus on acute disease and short-term care and toward greater attention to the social and economic environment of patients who must necessarily adapt to living with disabilities.

Within the limits of present knowledge about the aging process, it is possible to educate students about the nature of aging, either through special courses on this subject or in a sequence of courses in which growth, development, and aging are interwoven. While the degree of emphasis differs from school to school, education about the aging process is provided effectively in all U.S. medical schools.

Additionally, elderly patients with acute illness are commonly encountered in teaching hospitals, and demonstrations and instruction on the diagnosis and treatment of these illnesses, with a special focus on the character of their manifestation in the elderly, is a commonplace occurrence in every school and every teaching hospital.

The principal problem area in educational and learning opportunity in our academic medical centers is in the long-term management of chronic, only slightly disabling, conditions in patients who are outside the mainstream of contemporary society. In this domain, the medical schools have selected a wide variety of approaches.

Undergraduate Medical Education and the Elderly

Some schools have directed their approach toward integrating instruction about the medical problems of the elderly into conventional course work. "Integrationists" view the process of aging and the diseases of the aged as parts of a continuum; thus, both undergraduate and graduate medical students have highlighted for them the special features characteristic of the elderly in relation to the phenomena described in discipline or systems oriented courses and demonstrated in clinical exercises. At the opposite pole, other schools have undertaken to establish organizational units in gerontology and have developed instructional offerings in geriatrics. "Separatists" view the problems of the elderly either in health or disease as unique enough to warrant attention by special discipline; hence, the impetus to create departments of geriatrics, residencies in geriatrics and a certifiable specialty of geriatrics.

In a presentation such as this, it is difficult to describe in a totally coherent fashion what is happening in schools which have taken the integrationist attitude, since attention to the problems of the aged is interwoven throughout every aspect of the student's educational experience from basic science instruction in such disciplines as anatomy, biochemistry, genetics, etc., to each and every medical and surgical subspecialty. However, I would like to devote a few minutes to a brief report on some of the activities underway in several medical centers in order to give you a flavor of how the schools are responding to the problems of tonight's hearing.

(1) At the present time, 45 schools offer electives in the field of geriatrics, up from 32 1 year ago.

(2) At the Medical School of the University of California, Los Angeles, instruction in geriatrics takes place at all levels of basic and clinical science. In addition, the medical school has active teaching affiliations with the geriatric wards in each of the two of the V.A. hospitals in Los Angeles. In one, a continuing care program for the elderly employs the same personnel who cared for patients while hospitalized to continue to care for them after they have been transferred to nursing homes. The Geriatric Research, Education, and Clinical

Center at UCLA conducts research in the area of immunologic aging, and operates an education program in conjunction with the department of medicine for training students, residents, interns, and paramedical personnel.

UCLA is scheduled to open an outpatient clinic this fall, designed for patients 65 years of age and over in need of psychosocial care. This will be operated by the family practice division of the department of medicine.

In July 1977, UCLA will open a 21-bed inpatient ward for patients over 65 in the neuropsychiatric institute. This will serve as both a teaching program involving the departments of neurology, medicine, and psychiatry, and a research institute focusing on the psychiatric disorders of the elderly.

(3) At the Medical School of Case Western Reserve University, students may elect to study geriatrics in first year courses and fourth year clerkships. Examples of the first year courses in the area of the physiology and pathology of the aging are "Rehabilitation of the Aged, Disabled, and Chronically Ill," and "Inherited Defects of Nucleic Acid Repair in Cancer and Aging." Case Western Reserve Medical School is affiliated with both public and private hospitals which have combined geriatric and chronic disease units to which students are exposed as part of the physical diagnosis course. The medical school is also being funded by a grant from the Cleveland Foundation to study the British approach to geriatrics and its applicability to the United States. The basic difference between the approaches in England and the United States to the treatment of the elderly is that in the United States the tendency has been to serve the aged by admitting them to hospitals and/or nursing homes, whereas in England the basis for patient management is the day hospital. As a result of this grant by the Cleveland Foundation, the day hospital concept is under consideration at Cleveland Metropolitan General, one of the major teaching hospitals affiliated with Case Western Reserve.

(4) At Michigan State University School of Humanistic Medicine, geriatrics is a major component of a medical school curriculum which emphasizes an interdisciplinary approach to teaching with a major emphasis on the social and behavioral sciences. Geriatrics is found in this medical school's curriculum in three places: the teaching of geriatrics is one of the major objectives of the first year program which is a focal problem sequence; during the second year, students concentrate on human biology and behavior, with 3 weeks of that component devoted to the biological and developmental aspects of aging; and all students participate in a 12-week introductory experience, immediately preceding the 2 clinical years, entitled "Fundamentals of Patient Care," which includes a series of small group seminars, two or three of which are devoted to problems of the aged.

(5) The Medical School of Duke University approaches the teaching of geriatrics by integrating it into the entire curriculum. This is done by conducting a part of the teaching of students and residents in nursing homes and retirement communities. Both family practice and senior psychiatry residents spend part of their residency in nursing homes. In addition to dealing with problems of the elderly in all courses, all students are required to take a geropsychiatry course entitled, "Mental Illness in Late Life," in which emphasis is placed on depression, hypochondriacal reactions, and psychological reactions to pharmacologic agents.

(6) At the University of Washington School of Medicine, two courses are required of all students which focus on the problem of the geriatric patient. One course is the "Ages of Man," a biological and behavioral course which is a collaborative effort between the departments of pediatrics, medicine, and psychiatry; this approaches aging as a developmental process. The second required course is "Introduction to Clinical Medicine" which, while not specifically a geriatrics course, is concerned with a variety of cognate issues including the care of the dying patient. In addition to the two required courses there are spot lectures in geriatrics throughout the curriculum as well as electives offered in the division of aging and geriatric psychiatry and the soon-to-be-created division of gerontology of the department of medicine. The University of Washington operates a geriatric research and education center in conjunction with the VA hospital; this unit directs its attention to teaching and clinical care in dementia. The University of Washington approaches geriatrics on a multischool basis and thus has collaborative programs with the schools of social work, nursing, and dentistry.

The Association of American Medical Colleges is convinced that while many of the Nation's medical schools have felt it more appropriate to address the prob-

lems of the aged developmentally, to view aging as part of the growth and development process, and to focus on the unique characteristics of each disease when manifested in the aged, the education of students at institutions that have taken this stance is just as complete and comprehensive as that received by students attending institutions where geriatrics is treated as a separate discipline. No objective evidence exists to indicate which outlook on the problem is likely to result in better and more sensitive care for the elderly.

Graduate Medical Education and Professional Practice

Despite some recent trends in curricular evolution to emphasize "tracking" in undergraduate medical education, specialization is essentially a phenomenon of graduate medical education. And just as there is variety in the ways that undergraduate medical education has responded to the unique challenges presented in the medical care of the elderly, so also have there been wide differences in approach at the graduate level, subsequently reflected in professional practice patterns.

Some physicians view geriatrics as a distinct specialty, warranting specific residency training programs and subspecially recognition while others think that it is orthogonal to all specialties and that the aged will receive better care if all appropriate specialists participate in their management. Since the AAMC does not now directly participate in the process of the creation of new specialties, this organization's preference on whether geriatrics should be a separate specialty is an academic question.

Underdeveloped Educational Opportunities

In teaching students about the problems of the elderly, it is difficult to isolate the medical from the closely interrelated economic and social needs of this group. Furthermore, the interactions of these variables becomes increasingly complex as the elderly population expands. Dr. George Maddox, director of Duke University Centre for Aging and Human Development, in describing the size of the task ahead in a recent issue of Annals of Internal Medicine, said, "Long average life-expectancy, a distinct achievement of modern societies, has proved to be an embarrassment and a current threat to existing institutional arrangements, not only for health and welfare, but also for income maintenance, transportation, housing and education. Medical education and health delivery systems in both countries (England and the United States) were designed for acute, not chronic, illness; they are therefore mismatched with the particular needs of older persons for preventive, primary and long-term care. . . . The mismatch is troublesome in the United Kingdom and dramatic in the United States." Thus, greater attention must be given to educating students in an understanding of the social milieu of the elderly. This requires emphasis not only on disease processes but on the management of the patient's social adjustment problems, an objective not easily achieved unless the medical student has the opportunity to see the patient outside the hospital setting. To truly comprehend the environment in which the elderly often reside, medical students need to spend more time in nursing homes and in ambulatory care setting, experiences that are available to a limited extent at this time.

The Importance of Research

Debate on the technical and policy issues related to the creation of a specialty, and on the appropriate approach to teaching geriatrics should not be allowed to obscure the very basic reality of how extraordinarily limited the body of knowledge about gerontology actually is. To achieve meaningful and significant solutions to this set of problems, greatly increased energy and effort must be committed to research in gerontology and a far larger fraction of the Nation's most creative aspirant scientists must be trained in this area of medical science. It is only through research that we can ever hope to understand and to solve some of the intractable problems that are unique to the aged, and to make this segment of life both healthy and productive. It is only through research that the question of whether the limit of life span is really close to the biblical three score and ten can be explored. The association, therefore, strongly supports a rapid build up of resources for the National Institute of Aging, and feels that its broad charter, which includes research in the social and behavioral as well as the medical aspects of aging, is most appropriate.

THE FUTURE OF MEDICAL EDUCATION IN RELATION TO THE ELDERLY

In the opinion of the Association of American Medical Colleges, medical educators are keenly aware of the dimensions of the educational challenge presented by the medical care problems of the elderly, and are generally responding effectively by developing a variety of educational approaches for undergraduate and graduate programs. The efforts of pioneers are under study or in the process of being adopted in the schools whose efforts to date are somewhat modest. In other schools with highly developed programs, additional innovative efforts are in experimental stages.

No absolute barriers to providing the minimally required educational experience exist and there is every reason to believe that every graduate of U.S. medical schools will soon have been exposed to the basically essential education experience.

That medical schools could do more is undeniable, particularly in terms of student-patient encounters in ambulatory settings, nursing homes, and extended care facilities. The major obstacle to this relates to the problems of financing both undergraduate and graduate medical education. Ambulatory care teaching has presented the Nation's medical schools with particularly serious financial problems. A large number of outpatients have inadequate medical care insurance or are totally uninsured. Those with coverage are often unable to pay deductibles and coinsurance. Moreover, some coverage, such as medicare, reimburses on a scale often well below customary and prevailing and excludes from reimbursement under "Part A" the costs of the education of interns and residents in out-patient facilities. Finally, when the education of students and residents is coupled with patient care, inefficiencies are introduced that increase unit costs and prevent a high volume flow of patients. All of these factors summate in a situation in which the ambulatory care services of our teaching hospitals are incurring substantial fiscal losses and will not be able to significantly expand their ambulatory educational and service programs without adequate reimbursement for them.

Thus, development of optimal pedagogic programs must await the day that medical education is on a more sound financial basis. Valuable interim assistance will be provided by the special project grants for undergraduate and graduate education in areas such as family medicine, general pediatrics and general internal medicine, authorized in the Health Professions Educational Assistance Act of 1976 signed yesterday by President Ford, especially in making possible high quality ambulatory care education for students and residents. But all medical care programs proposed in the future must reimburse the costs of educating the health professionals essential to provide the needed services, if the advances of medical science are to be brought to the beneficiaries of the programs.

In summary, the association fully supports efforts to improve education for providing the teaching of first class medical services for the elderly in the Nation's medical schools. The efforts of the medical schools can and will improve immensely as the body of knowledge of gerontology, which is now woefully inadequate, increases through research, and the financing system is modified through legislation to place undergraduate as well as graduate medical education on a solid financial basis.

Senator PERCY. We are very happy to have Sister Marilyn Schwab with us who is a registered nurse and administrator of the Benedictine Nursing Center in Mount Angel, Oreg. Sister Schwab has had special training and experience in geriatrics and formerly was the chairperson of the Committee on Skilled Nursing Care of the American Nurses Association. Sister Schwab helped to develop the American Nurses Association's report for the Senate Committee on Aging which describes problems of providing skilled nursing as presently defined by medicare and medicaid, problems relating to alternatives to institutional care, problems with supply and training of qualified personnel, and methods of reimbursement for quality care.

STATEMENT OF SISTER MARILYN SCHWAB, R.N., ADMINISTRATOR, BENEDICTINE NURSING CENTER, MOUNT ANGEL, OREG.

Sister SCHWAB. Thank you, Senator.

I have been asked to speak this evening from my viewpoint as a nurse about my experience of medical care of the aged, some thoughts about training needs in geriatrics in medical schools and about the influence that medical training has had on the profession of nursing.

It is not a new concept for this audience that health care of the elderly has to be delivered in a manner that deals with multiplicity and interrelated aspects of the elderly person's emotional, cultural, and economic problems, as well as his diseases and disabilities.

The implication for education that flows from that concept tends to support the notion that perhaps each health discipline needs to educate its practitioners to approach the elderly from a broad psychosocial-medical kind of framework. However, given the brief history of the science of gerontology and the relatively undeveloped stage of its application to the health sciences, it would seem more useful for each discipline to focus primarily on its unique contribution to the health care of the elderly.

Medicine needs to further develop and teach the medical aspects of the health care of the aged—that is, the diagnosis and treatment of disease—and at the same time medicine needs to teach its practitioners to understand and collaborate with other health care disciplines, not just to carry out their proscribed medical regimens, but to share an interdisciplinary assessment, planning, intervention, and evaluation process so essential to total health care of the elderly.

My experience with medical care of the elderly is that the interests and diligence in diagnosis and treatment has less to do with the chronological age of patients being treated than it does with the complexity and apparent hopelessness of the problems presented. The combination of old age and multiple health problems tend to cause frustration and a feeling of helplessness in the physician as it does in many other professions.

A serious problem in medical care is the apparent compulsion of many physicians to treat once a condition has been diagnosed. Doctors need to become comfortable with a patient's right to refuse treatment at the same time he recognizes the right of the patient to full information—that is, to a good diagnosis. Too often physicians are uncomfortable about making overt decisions not to treat and so they choose a route of what a physician friend of mine calls "benign neglect"; that is, "If I don't prove he has it, I don't have to feel guilty about not treating him."

We need to train physicians to make a good diagnosis on elderly patients and then be a part of good decisionmaking processes with patient and family regarding treatment or nontreatment. This demands some serious reexamination of our values and ethics and something we need to work on together.

THE ROLE OF NURSING

I would like to comment briefly on the role of nursing and its relationship to medical care of the aged. A large portion of those services

that are commonly classified as medical care services to the elderly are in fact nursing services, but the general public and other health provisions of the health disciplines still seem to see nursing only as the adjunct to medicine.

Indeed our justification for reimbursement for nursing care under medicare and medicaid, for instance, is almost always linked directly to a medical diagnosis and the need for a medically delegated service. Nursing, however, is a distinct art and science dealing primarily with the caring aspects more than the curing aspects of health care. Nursing skills are directed to assisting a person to cope with the effects of disability and disease. Nurses deal with things like immobility, confusion, discomfort, and isolation problems so prevalent in the care of the sick elderly. Nursing is also directed toward keeping people well, especially people at high risk such as the ambulatory elderly. Long-term care, whether in an institution or at home, and preventive and health maintenance services are two major kinds of needs of our elderly population, and nurses are a major underutilized resource in meeting these needs. Nurses are needed not just to extend the role of the physician but to complement medical services by providing equally important nursing services to the end that all the health needs of the elderly are served. All of the other health and social services disciplines also have special contributions to make, and together we need to learn what collaboration really means so that elderly people really see integrated, coordinated, interdisciplinary health care.

Senator PERCY. Sister Schwab, in the hospitals and nursing homes that you have encountered and worked with, how much influence do doctors have on the nurse's care of the elderly patient?

Sister SCHWAB. Well, the physician has, of course, a great deal of control in the acute care setting, particularly because it is related to the nature of the care which an individual in an acute care setting is there for, diagnosis and treatment of a condition—usually a particular condition. Long-term care, however, presents different kinds of treatment. They are receiving nursing homes or home health services for multiple reasons that may be social, psychological, economic—maybe the fact that there is no one at home to care for them.

Under present reimbursement situations in medicare and medicaid, it is very much tied up with what the physician says may not be done, so that what nursing services are performed must be ordered by the physician.

NURSE GERIATRIC TRAINING

Senator PERCY. Where do most nurses today receive their geriatric training—in special training programs, exposure to the elderly patients or, in your judgment, do they receive any special training at all?

Sister SCHWAB. Nursing schools are probably not that much better at giving geriatric exposure to geriatric and gerontological nursing than medical schools, though I think they are doing a better job. I cannot really speak with any great authority on the schools of nursing across the country, but I am aware that, for instance, the American Nursing Association is in the process of doing a survey of the content of the programs in nursing throughout the country. That data will be

ready soon as to how much is really being taught and where it is being taught.

There is an increased amount in the curricula about care of the aged. We also have a growing number of advanced practice kinds of programs concerning nurse practitioners. There is something like seven or eight programs that I am aware of and they are developing nurse practitioners around the country for care of the elderly. There are about seven or eight graduate schools that are teaching nursing in gerontology and geriatrics.

Senator PERCY. The committee has not surveyed U.S. schools of nursing since 1971 and I wonder, statistically, if you could update us now or help us get information as to what progress it has made since then. In 1971 we found that only 27 of 512 schools that responded to the survey actually had a program of geriatrics in their curricula. Do you know if there has been improvement since that time?

Sister SCHWAB. I am sure that there has been. There has been a great deal of activity in the last several years. We could see that you would get the information from the American Nursing Association's survey which is in progress. After gathering some initial data about how many schools offer anything in geriatrics, the study goes into a second phase, looking at where it is being offered, who is teaching it, what is the qualification of the instructor, and so forth.

Senator PERCY. Finally, you mentioned collaboration in your testimony. Our staff would like to know, do you know of any schools of nursing or medicine which are working toward collaboration?

Sister SCHWAB. I cannot cite you any, but that certainly does not mean that they are not. There are probably people in this audience that can give you some examples.

[The prepared statement of Sister Schwab follows:]

PREPARED STATEMENT OF SISTER MARILYN SCHWAB

I am grateful for the invitation to testify before this committee, as a nurse, on the topic of medical care of the aged and education in geriatric medicine. I speak from 15 years' experience of nursing in a nursing home, plus the opportunities afforded me in the past 4 years as the chairperson of the Division on Gerontological Nursing Practice of American Nurses Association. In the latter position, as well as during frequent lectures and workshops with nurses, I have been in contact with hundreds of nurses who work with the aged in all parts of the country, and have listened to their concerns. I hope my words can faithfully reflect the concepts and concerns of those colleagues, as well as my own.

I have been asked to speak from my personal experience of the quality of medical care of the aged, and to submit ideas about the training needs in medical schools on the subject of geriatric care. I have also been asked to reflect and comment on the relationships of medicine and nursing and how educational and practice trends in both disciplines have affected one another.

First, I would like to make a clarification between "medical care" as the diagnosis and treatment of the disease and "health care," which implies something much more inclusive and which deals with an individual person in relation to his total health and well-being. It is not a new concept, especially to this audience (the Gerontological Society) that health care of the elderly has to be delivered in a manner that deals with the multiplicity and interrelatedness of the elderly person's problems—emotional, cultural, economic—as well as his diseases and disabilities. Thus, to speak of "medical care" in isolation from other health care problems presents a woefully incomplete picture of the elderly person. To teach practitioners about medical care in isolation from other health care needs can lead to fragmentary and distorted understanding of the patient.

It would seem then, that each health discipline (in this case, medicine) should ideally educate its practitioners to approach the aged from a broad psycho-social-medical framework. However, given the brief history of the science of gerontology and the relatively undeveloped stage of its application to the health sciences, I believe it is important for each discipline to focus primarily on its unique contribution to the health care of the elderly. In other words, medicine needs to further develop and teach the medical aspects of health care of the aged—that is, the diagnosis and treatment of disease entities.

At the same time, medical schools need to teach future practitioners to understand and collaborate with other health care disciplines, not just to carry out their prescribed medical regimens, but to share in the interdisciplinary assessment, planning, intervention, and evaluation process, so essential to total health care of the elderly. We need more physicians who understand medical problems of the elderly, more geriatric medical specialists, and especially we need physicians who understand that nurses and social workers and physical therapists and many other disciplines have important contributions to make to the health care team which serves the patient together.

Medical schools need to examine values taught, in light of the challenges presented by an aged population. One such challenge is the question of how much, or whether, to treat a particular problem at a particular point in the older person's life. My experience with medical care of the elderly is that the interest and diligence in diagnosis and treatment have less to do with chronological age of the patient than they do with the complexity and apparent hopelessness of his presenting problems. It is the combination of old age and multiple health problems that tends to cause frustration and a feeling of the helplessness in the physician. In these situations, difficult ethical dilemmas are often posed. Principles of patients' rights and informed consent, as well as judgment about the relative value of treatment are frequently severely put to the test.

I feel many physicians have an apparent compulsion to treat any condition they diagnose. Too often, because they are uncomfortable about making overt decisions not to treat, they choose also not to diagnose. "If I don't prove he has it, I don't have to feel guilty." Physicians need to be taught to be comfortable with a patient's right to refuse treatment, at the same time that he recognizes the right of the patient to full information—that is, diagnosis. Elderly people, especially in nursing homes, are still put off with the excuse that almost any complaint is "due to old age," are rarely given the benefit of a good diagnosis, and even more rarely given the real opportunity to make a good decision with their physician and their families about when to treat or not treat. This demands some reevaluation of traditional ethical values in medicine.

Finally, I would like to comment on the role of nursing in relation to medical care of the aged. A large portion of those services commonly classified as medical services to the elderly are, in fact, nursing services. But the general public and other health disciplines too often see nursing only as an adjunct to medicine. Indeed, justification for reimbursement for nursing care is almost always linked directly to a medical diagnosis and the need for a medically delegated service. However, nursing is a distinct art and science dealing primarily with the "caring" more than the "curing" aspects of health. Nursing skills are directed to assisting a person to cope with the effects of disability and disease. Nurses deal with immobility, with confusion, with discomfort and isolation, problems so prevalent in the care of the sick elderly.

Nursing practice is also focused toward keeping people well, especially people at risk, such as the ambulatory elderly. Long-term care and restoration, whether in institution or at home, and preventive and health maintenance services are two important kinds of health care needs of the elderly, and nurses are a major under-utilized resource in meeting those needs. Nurses are not needed just to extend the role and services of the physician, but rather to complement his services, by providing equally important services that meet the health needs of the elderly. We must stop talking about extending the services of the physician and begin to recognize other health care disciplines as having useful and special services to offer. We must create a health care system that integrates those services in a collaborative manner rather than in our present hierarchical system. Collaboration implies autonomy of the individuals who collaborate. Thus, nurses in recent years are assuming more responsibility and accountability for their own decisions and treatments of patients.

State nurse practice acts are being revised to give legal recognition to the nurse's autonomous functions. This trend must be supported and one important way that is done is through recognition by third-party payors of nursing services as a distinct benefit. As long as medicare and medicaid benefits are related solely to medical diagnosis and medical services as defined only by a physician, the health care needs of the elderly will continue to be only partially met.

Thank you for the opportunity to share these concerns with your committee.

Senator PERCY. Thank you very much indeed, Sister Schwab.

Dr. Robert W. Berliner is dean of the Yale University School of Medicine. Prior to his appointment as dean, Dr. Berliner was Deputy Director for science at the National Institutes of Health. Prior to that position he was Director of Laboratories and Clinics at the National Institutes of Health. Dr. Berliner is a graduate of the Columbia University School of Medicine.

Dr. Berliner.

STATEMENT OF ROBERT W. BERLINER, M.D., DEAN, YALE UNIVERSITY SCHOOL OF MEDICINE, NEW HAVEN, CONN.

Dr. BERLINER. Thank you, Senator.

You have asked that I focus my attention on what I perceive to be the place of geriatric training in the education process, and specifically you asked me: Should the science of the aging process be concentrated upon during the basic science classes, during clinical studies, during special programs which many medical school curriculums have implemented, or during the years of internship and residency— or should the aging process be given specialized attention at all?

To the first of these questions I would respond: All of the above. That is, assuming that we mean more than just the science of the aging process, but mean to include the effects of aging on people, the interaction of aging with disease processes, and the medical care of aged people, there is something there for every stage of medical education. To the extent that we know anything about the aging process itself, it clearly belongs in the basic science curriculum; unfortunately we know very little about the fundamental nature of aging and it would be an unusual school that devoted a great deal of time to aging at that level.

I would expect the medical student to learn a great deal about the effects of aging upon disease processes during their clinical studies. Indeed, with the increasing age of the patients that students are exposed to, they can hardly avoid the opportunity to learn about age and its diseases, although some may profit more than others from the exposure. And finally, in my opinion, learning how to take care of aged people belongs in the post graduate period of residency.

In what I have said so far, however, I think I have avoided the question that is the real focus of this hearing, because what I have said could have been said equally well about any other process or group of diseases. What I have said merely describes the general organization of the medical curriculum. I think the important word is found in your second question, "Should the aging process be given 'specialized' attention?" and my answer to that is a qualified "no."

The diseases that are the causes of illness and death in the aged are the same as those that begin to appear in people in their thirties and

forties. There is no distinct group of diseases that occurs exclusively in older people. They have the same diseases as younger adults. The greatest difference is that they have them much more often. Of course it is also clear that the effects of the process of aging modify the way in which the individual responds to the stress of disease. The interaction of aging and illness can hardly escape the attention of any reasonably sentient student of medicine since the aging make up such a large fraction of the population who seek help in our teaching institutions, but I do not believe that this interaction of aging and illness, which is so much a part of everyday medicine, is a matter that requires separate and specialized attention.

Aging Process: An Enigma

Although I do not believe that geriatrics or gerontology warrant a special place in the medical curriculum, this does not mean that there are not a number of aspects of the aging process and of the effects of aging on people that call for serious investigative attention. Fundamental to all is a better understanding of the aging process itself. Unfortunately, perhaps because we do not yet have an adequate picture of the normal state, we do not really have an adequate theory of what aging really is. When we do, we will perhaps detect a more consistent basis for those changes which we recognize as the accompaniment of aging—changes in almost every organ system that have striking effects on the interaction of the individual with his environment and with the stress of illness.

Lack of this fundamental understanding, however, should not prevent a more direct approach to some of the practical problems, both physical and behavioral, some of which have been mentioned this evening. For example, to changes in immunocompetence with age and its possible relationship to neoplasia and to degenerative disease; the change in pharmacokinetics with age that may yield paradoxical effects of drugs in the elderly; or the basis for the doubled death rate in the newly widowed elderly. There is no lack of important investigative problems relating to age and aging.

Setting these matters aside, however, I would like to express my concern over one word that appears in the title of this hearing. The word is "neglect." My concern arises not from the conjunction of the word "neglect" with the subject of aging but from the further implication of the field of medicine. Clearly there is in our society a deplorable neglect of the aged. They are often excluded from the family, from participation in many aspects of life, and often relegated to institutions that are among the most disgraceful of our society. The use of the word "neglect" in this connection understates the case, but I am disturbed because the content in which the word appears suggests that in some way medicine is an important party to this neglect and is going to be called upon to provide the solution to this problem.

Perhaps I am taking an unnecessarily paranoid point of view and, by the time I deliver this testimony, my concerns will prove to have been groundless and this issue a strawman. But we have many precedents. Because of social and economic forces there are among our people, to say nothing of the rest of the world, many who are malnourished. But faced with the overwhelming problems of providing

adequate food, we decide that what is needed is intensified efforts in the science and teaching of nutrition.

There are many things that adversely affect the well-being and, more narrowly, the health of our people that are quite beyond the capacity or even the mission of medicine to control. Statistics relating to the health of our population are much more affected by the fact that people, eat, drink, and smoke too much and drive like fools than by what doctors can and should do. As doctors we should certainly be concerned about such matters, but we shouldn't be expected to provide the solutions. Similarly it is not going to be within medicine that we find the solution to the neglect of the aged. In short, although aging and the aged constitute serious societal problems, I do not believe they are neglected in either medical education or medical care.

Thank you.

Senator PERCY. Doctor, would just the fact that the treatment of the aging is a postgraduate course generally make it look as though, then, it is an appendage and not a real course subject?

DR. BERLINER. I was not suggesting that the teaching of aging should be a postgraduate course. What I was saying is that learning to take care of specific kinds of people, how to do it, belongs in graduate medical education rather than the undergraduate medical education, and not only aging but with everything else the doctors do.

Senator PERCY. In day-to-day contact with the faculty and students at Yale, do you find an earnest interest and desire for knowledge in the geriatric field? Be very frank.

Dr. BERLINER. As a particular field specialty, no, I do not.

Senator PERCY. It is my understanding that Yale is one of the several medical schools participating in the National Institutes of Health program for the training of medical scientists. Could you briefly describe this program and how it operates? As a former NIH policymaker, do you find that both NIH and the medical school can benefit from this joint effort?

THE FEDERAL SCIENTIST PROGRAM

Dr. BERLINER. The Federal scientist program is essentially a program which provides simultaneous training in medicine, more or less the standard medical education, and along with that an opportunity for intensive training in, usually, one of the basic sciences on which the science of medicine is founded, such as biochemistry and so on. The student obtains both the M.D. and Ph. D. during the period in which he is enrolled in this course, which is usually 6 years. I think it is an excellent way of providing the people who are going to do much of the basic research that is closely related to medicine itself. I think that the medical aspects of the education gives an orientation to the scientist which many people without such training do not have.

Senator Percy. Does the National Institute on Aging participate in this program and, if not, do you see any potential for future cooperation?

Dr. BERLINER. The program, as far as I know, is entirely supported by the Institute of General Medical Sciences. It is a noncategorical sort of program and the Institute of Aging is a noncategorical insti-

tute. I suppose there is a possibility that they could get involved in it, but I don't know that the stage in which students enter this program that they would have an idea of commitment to work on aging. This would probably not apply to students in the junior year or the senior year in college which I think, is too early for them to get committed to a field such as gerontology.

Senator PERCY. More and more medical schools are developing ties with their community health clinics and home care organizations. Can you describe Yale's effort in this area and whether the elderly patient receives attention?

Dr. BERLINER. Yes; in New Haven there are several. There is one major community center, the Hill Health Center, which is actually sponsored and partly supported by the school of medicine in which we have a close relationship with members of our faculty involved in the care of the people. They take care of a broad sample of the population, mostly of the poorer population of New Haven, including the elderly. I don't believe there is any home care involved in this particular program.

Senator PERCY. I want to thank you very much indeed for your willingness to express the points of view that are not always popular, and probably not popular with some of the people here, but I think it is provocative and helpful.

I would like to amend our format to permit anyone who might feel that someone on the panel has committed their version of the Polish faux pas to have a minute to attack one another with freedom [laughter], but we will limit it to just a minute if you don't mind.

Our next witness is Dr. Theodore Sherrod. Dr. Sherrod is a full professor in the department of pharmacology at the Abraham Lincoln School of Medicine at the University of Illinois at Chicago Circle. Dr. Sherrod has been associated with the University of Illinois in various professorships since 1940. He is a graduate of the University of Illinois College of Medicine. Jessie Sherrod, Dr. Sherrod's wife, is very active in social work in the Chicago area.

We are delighted to welcome you, Dr. Sherrod.

STATEMENT OF THEODORE SHERROD, M.D., PH. D., DEPARTMENT OF PHARMACOLOGY, SCHOOL OF BASIC MEDICAL SCIENCES, UNIVERSITY OF ILLINOIS AT THE MEDICAL CENTER

Dr. SHERROD. Thank you, Senator Percy and Dr. Binstock.

I am perhaps the least qualified of all the panelists to give my points of view regarding aging; however, I have been very interested in the phenomenon for a long time and as I get older I become more interested.

Aging is an inevitable fate of all living things. The geriatric population is constantly increasing, largely because of advancements in nutrition, sanitation, immunology, improved surgical techniques, and the effective chemotherapy of infectious diseases. Many of the so-called degenerative diseases, characteristic of the aged, are becoming increasingly more evident.

Numerous socioeconomic factors operate to preclude access of many of the aged to the kind of medical attention needed to prevent, amelio-

rate, or cure their ills. Perhaps more important, however, is the general lack of appropriate training in geriatric medicine among physicians and other health care personnel.

Geriatric Pharmacology

The field of geriatrics is, perhaps, the newest medical specialty, dealing with the oldest patient population. Training of all physicians should encompass geriatric medicine. As a pharmacologist with some knowledge of the marked difference in the response of the aged to many therapeutic agents, as compared with the young adult or middle-aged patient, it would seem advisable or desirable to have this labeled as "geriatric pharmacology," because I think there is enough difference in the response of the elderly patient to drugs to warrant this kind of special training.

There appears to be a degree of resistance by many members of the medical profession to regard the elderly patient as having medical problems more or less characteristic of that age group. It is true that while many of the diseases are the same—diagnosed by the same techniques and treated in a similar manner as in the younger patient—the rate of healing and the responses to medication in the aged may exhibit striking differences. Just as the pediatric age group have medical problems peculiar to infancy and early childhood, the elderly patient is likely to have medical problems more or less characteristic of that age group.

Aging, and the accompanying physical changes, occurs in different people at different rates and appears to be largely genetically determined. However, with age comes an increasing vulnerability to many diseases that may minimally affect the younger patient. Specific medical training in such areas should be a mandatory part of the medical curriculum.

While a department of geriatric medicine would be most welcomed and desirable, at least a division of geriatric medicine should exist in all medical schools with special emphasis on gastrointestinal, arthritic, metabolic, cardiovascular, and other diseases which so often plague the elderly. Federal and other funds should be increased to support research in geriatric medicine. Grants for such efforts should merit the status of high program relevancy. The alternative to living to the age where pain and suffering often make this an almost unwelcomed stage of life is to die young. Already much information in geriatric medicine is available. It will be applied only if organized medicine and academic medicine stimulate the needed interest in this area.

Thank you.

Senator Percy. Dr. Sherrod, how often in your normal routine, if you can call it that, as a professor of medicine are you called upon to teach about specific factors of the aging process and what does this entail?

Elderly Respond Differently

Dr. Sherrod. Just about never. However, I should emphasize the fact that in medical training we occasionally allude to the fact that the elderly patient is to respond differently because of certain path-

ological alterations that will greatly influence the way in which this patient handles drugs and we will make mention of that fact, and this is somewhat in passing. I think this attitude is almost characteristic of just about almost all people, most people below the age of 40 or 50, but once we get old we realize that there are problems that are characteristic of the aged.

What I am saying is we seem to be so youth oriented. We definitely know that there are problems that are more commonly encountered in age which I think can be handled to the extent that the elderly person could live a more peaceful existence than we make possible simply because we have not emphasized that aspect of the medical training. I am well aware of the fact that so many physicians come from medical school, go through their residency training, and are almost totally unaware, at least of the behaviors of the elderly, that we are unaware of many of their problems and get into a lot of difficulties so far as the application of drugs is concerned. Elderly patients do definitely respond differently to a large number of drugs that have so many complaints, and there may be a tendency on the part of the physician to treat every complaint as a central complaint, totally isolated from the patient with no thought of how one drug is going to react to the other. These are the kinds of things that I think ought to be taught in medical school, certainly in my profession, and be labeled "geriatric pharmacology."

Senator PERCY. As a specialist in pharmacology, do you see the need for a specialist in geriatrics, or only a specialist in pharmacology with a concentration in geriatrics?

SPECIALIST IN GERIATRICS?

Dr. SHERROD. I see the need for a specialist in geriatrics just as I see the need for a specialist in pharmacology and surgery. I think it is the recognition of such a specialty that is going to lift the thinking about the aged as having special problems. So, from that point of view I think that having a specialty with the status of some other specialties in medicine will engender the kind of support from the lay community, as well as from the institutions and what have you, so that there will be people flocking into this area as a specialty.

I think there are people—that is, people in training, medical students, and residents, perhaps interns—who have not decided where they want to go. If they see this as an opportunity that has some recognition nationally and locally, this will lift the status of that specialty, if we can call it that, and I think it should be called that.

Senator PERCY. Just to be sure I understand your view, would this specialist categorization apply to all disciplines within the medical curricula or should there be a separate and distinct department of geriatrics?

Dr. SHERROD. I certainly don't think it should involve pediatrics because I think the problems are quite different, but I think most of the problems do transcend most of the other specialties involving treatment of elderly people. There are problems that the surgeon can handle best and there are problems that the internist can handle best, and they transcend many areas.

If there were a division or a department of geriatrics, the emphasis could be placed appropriately in this area. I think one of the difficulties of not really having a specialty as geriatrics, and I think some

of the resistance so based, is because the problems do transcend so many areas.

Senator PERCY. I wonder if you could just go back into your own experience as a professional person and tell us whether you felt that you were adequately trained to deal with the elderly people in your education, or did you pick this up and develop your interest and expertise just as a matter of your own experience?

Dr. SHERROD. Senator Percy, as I said at the outset, the older I get, the more interested I become in the aged. [Laughter.]

Senator PERCY. The definition of an older person is somebody 50 years older than we are.

Dr. SHERROD. To those in their 20's, no older than 25, anybody 50 years old is really ancient. So at that time, without having appropriate leadership to stimulate them in geriatrics as a profession, we could not care less, but in all fairness to academia, occasionally statements were made to the effect that "Now when you deal with a person of this age you must look out that certain changes have occurred and that this patient requires this particular kind of procedure. You have to be careful that you don't do thus and so," but this was almost as a footnote and not as a fact.

Senator PERCY. Thank you very much indeed.

Our last panelist is Dr. Leslie S. Libow, medical director of the Jewish Institute for Geriatric Care in New Hyde Park, N.Y. He is also chief of geriatric medicine of the Long Island Jewish-Hillside Medical Center in New Hyde Park. Dr. Libow is associate professor of medicine at the Health Sciences Center, State University of New York at Stony Brook. Prior to these numerous roles he was instrumental in developing the geriatric program within the Mount Sinai Hospital Services at City Hospital Center in Elmhurst, N.Y.

Dr. Libow.

STATEMENT OF LESLIE S. LIBOW, M.D., F.A.C.P., MEDICAL DIRECTOR, JEWISH INSTITUTE FOR GERIATRIC CARE; CHIEF, GERIATRIC MEDICINE, LONG ISLAND JEWISH-HILLSIDE MEDICAL CENTER, NEW HYDE PARK, N.Y.; AND ASSOCIATE PROFESSOR OF MEDICINE, HEALTH SCIENCES CENTER, STATE UNIVERSITY OF NEW YORK AT STONY BROOK, N.Y.

Dr. LIBOW. Thank you, Senator Percy.

Senator Percy, Professor Binstock, distinguished colleagues, ladies and gentlemen, my medical work is entirely with the elderly, and I categorize myself as a geriatrician. Earlier, Dr. Butler mentioned the lack of homegrown geriatricians in the United States. Well, if I am not homegrown, I am certainly homemade. My initial training was in internal medicine at Mount Sinai Hospital of New York and in research in aging at the National Institutes of Health—the latter at the same period that Dr. Butler and Dr. Berliner were working at NIH. In the past several years, I have developed a special health care system and an approach to care exclusively focused on the elderly. This system and approach encompasses community and institutional care and is centered about a health team.

These programs served as a base for the development, at the Mount Sinai City Hospital Center in New York, of the first geriatric medical residency program in this country. We trained several geriatricians, and six more are now in training at the second established geriatric residency program, at my present campus, the Jewish Institute for Geriatric Care and Long Island Jewish-Hillside Medical Center, affiliated with the SUNY School of Medicine at Stony Brook. Those trained now lead geriatric programs in various cities; 250 to 300 other interns and residents have also been trained for 1- to 2-month periods in the discipline of geriatric medicine as a basis of whatever special area of medicine they are pursuing.

These health programs also served as a base for the teaching of geriatric medicine to medical students. These students have come to us from many medical schools, because their own schools do not offer any special courses in training in geriatric medicine.

Findings and Recommendations

The key points derived from these training experiences are as follows:

(1) Medical students have a natural and active interest in learning about and working with the elderly. My experience at three different medical schools has made this interest clear, no matter what area of medicine the student may enter later. Since my colleagues in the faculties of medicine doubt this interest, I have just completed a survey of several hundred freshman students at seven geographically and ethnically diverse medical schools to learn of their interest in this field. Of the nearly 650 students surveyed, approximately 50 percent completed and returned the questionnaire. The major questions were: Are you interested in having a course on human aging? Answer, "Yes" (75 percent). Would you take an elective in your clinical years focused on the medical and psychological illnesses of the elderly? Answer. "Yes" (75 percent).

These impressive percentages were found at all the schools and reflected the student interest at private, elitist, and State medical schools. The results speak for themselves.

(2) It is crucial to have geriatricians as role models in the medical school faculty. Physician specialists are necessary for students to identify with and to help sustain their natural interests in the elderly, in the face of the negativism toward geriatrics of the traditional faculty. Medical students will not easily identify with the social workers, economists, and psychologists who often excellently teach the few courses in geriatric medicine that now exist. We need geriatricians at every medical school and major hospital to teach the available body of knowledge known as geriatric medicine, to teach and develop the special approaches to the elderly, and to lead efforts toward furthering this knowledge and these approaches.

(3) Establish a special geriatric health care system in each medical school or hospital community and base it on a team approach. The student can then observe and participate in this approach. You can't easily teach and demonstrate human concern and clinical skills with regard to the elderly from a typically sterile classroom atmosphere.

The struggle of the ill elderly for life and self-sufficiency against the present day laissez-faire health system, must be appreciated first hand.

(4) Teach geriatric medicine in special courses and as a special discipline. The body of knowledge in geriatric medicine is vast, but usually overlooked. The 17 seminars in clinical medicine and the additional 40 individual scientific papers in clinical medicine that will be presented during the next 4 days of the Gerontological Society's meeting are but one example of this knowledge. As in all other fields, more research is, of course, necessary.

During the freshman and sophomore years, areas such as the biology, physiology, and psychology of normal aging, as well as the demography and epidemiology of late life, are emphasized. The courses and field placements should emphasize the struggle for self-sufficiency of the ill elderly, as well as the vigor of the well elderly.

In the clinical years, the student should work alongside of geriatric resident physicians in training and/or alongside of faculty level geriatricians. The clinical exposure should include areas such as frequent home visits, ambulatory care, nursing homework, and community health education. All this is part of a team of professionals, so that an appreciation develops for the need for this coordinated effort.

Physician, Patient Goals Differ

The goals of the ill elderly must be differentiated from those of the young physician. Reversal of dramatic illness is welcome at any age, but smaller, quieter victories are often paramount to the older patient while unappreciated by the young physician. The physician should also be trained in the special approaches to geriatric history taking and rapid and accurate mental status evaluation. Too often a limb is carefully evaluated and the mind is overlooked. Emphasis should be placed on appropriate dosage and interactions of multiple medications. Establishing rapport with the elderly patient and making them feel the sincere interest and concern of the physician is itself a challenge. The causes and treatment of so many common problems are different for the elderly and often cannot be usefully and safely extrapolated from the general rules for the average patient of any age. In medical school, there is constant reference to the 70 kilo man, who presumably is ageless. Examples of problems which often have different manifestations, causes, and treatments in the elderly, as compared to the middle-aged and young, are headaches, weight loss, arthritis, fevers, elevated blood pressure, cholesterol values, mental changes, use of antidiabetic tablets, treatment of cancer, et cetera.

Headaches in the elderly may be due to polymyalgia rheumatica, a problem uncommon in middle age and thus often not diagnosed in the elderly. This disease could lead to blindness or stroke if not treated properly. Decisions about treatment of elevated blood pressure, elevated blood levels of sugar or cholesterol are usually made without awareness of the specific body knowledge as it applies to the elderly. Thus, it is frequent to note lack of treatment of moderate hypertension in a 68-year-old, in spite of reasonable evidence that treatment of hypertension at this age diminishes morbidity. Also common are inappropriate treatment decisions related to elevated blood sugar and dia-

betes mellitus. There are different factors in the elderly that must be considered when deciding about treatment with diet, insulin, and/or oral hypoglycemic medication. The key factors in choice of treatment of the elderly diabetic may include subtle decline in memory, vision, appetite, or access to renewal of medications. This is in contrast to the certain factors used in decisionmaking with middle-aged patients, such as cardiovascular toxicity of the oral hypoglycemics, and the probable relationship of poorly controlled blood sugars to vascular complications occurring after many years of having diabetes mellitus. These latter factors may have a role in diabetes of the elderly, but they appear to be of secondary importance, compared to the key factors listed above.

Mental Depression of Elderly

Mental depression in the elderly is probably the most frequently overlooked diagnosis of all. When it finally is noted, it is too often treated with antidepressants at dosage levels that are correct for younger patients but toxic for the elderly. An endless number of examples exist which reflect an improper approach to the elderly.

These approaches, these facts, this sensitivity, this need for further research are not usually taught in medical school, and certainly not as a separate discipline, warranting a special approach.

(5) Establish independent full departments of geriatric medicine in all medical schools and hospitals. This special discipline needs its own identity, faculty, and budget. Otherwise, when budget and staff reductions in medical schools and hospitals are necessary, those programs dealing with the elderly are the first cut. Again, we see the prejudice called ageism at work. The environment for growth and development of this discipline will, at most, be neutral in other departments such as internal medicine. From this proposed independent department of geriatric medicine, geriatricians can affect teaching in areas such as psychiatry, family practice, internal medicine, urology, et cetera. The existing body of information, as well as the special research and clinical approaches to the elderly, must be taught to all physicians so that their approaches to the elderly will be more appropriate.

(6) Geriatric medicine must be more clearly defined though its definition will probably change with time. It is certainly a discipline of scientific and clinical facts and approaches which treats aging, late life and the elderly, as special. The geriatrician is the physician specialist in this generalist area. The geriatrician leads the development of the health care approaches in the community and institutions and leads the teaching and research efforts. The geriatrician also delivers primary care in those areas where it is particularly not being delivered—specifically, in the convalescent and nursing home area, in-home care, in organized long-term ambulatory care and, finally, as clinical consultant to patient and family who cannot obtain satisfactory response to their problems. The physician has been given the legal authority to lead the improvement of care of the elderly. We must now teach the medical student and physician to properly exercise this authority and leadership.

The issue is not one of "Do we need another specialty called geriatric medicine?" The issue is clearly that there is a group called elderly

who need special medical approaches and there are places called medical schools and hospitals that must train young physicians to meet this unmet need.

Thank you.

[Applause.]

Senator PERCY. That's one thing I like so much better here than the Senate hearings down in Washington—we just never allow applause there. [Laughter.] I am going to change the rules of the Senate; I rather like it. It is a great tribute to our panelists, I think, all of whom have been absolutely marvelous.

I would like to ask Dr. Libow a question about the research that will be reported on later this week by Dr. Shanas. She has been doing a great deal of study on premedicare and postmedicare, and her figures will show that when you take into account that there are more than twice as many housebound and bedfast people 65 and over as there are in institutions today—and this is exactly the same proportion as existed before with medicare—what are the implications for schools of medicine or the medicare program when you come to see these statistics?

Dr. LIBOW. Well, the implication seems fairly clear. A good deal of medicare money is used for the training of physicians in all specialties of medicine, but regrettably, very little is used for training geriatricians or for training medical students about geriatrics. Some of the problems of the elderly require a team approach and special community health systems and I feel a distinct clarity that a physician must be a strong part and a leader of these special programs. Such special approaches, now lacking, would reduce institutionalization and the present trend toward physical dependency and homebound status.

As a second point I feel that medicare is, in a way, an enemy of the elderly. It sounds paradoxical, but the point is clear. Medicare has made the older person a wonderful client—a client for the practitioner—and that does not include only the medical practitioner, but I say that to my colleagues in all fields—a wonderful client too, for the hospital and the nursing home. So there are many vested interests that hold on to the organ ailments of the elderly and perhaps even the bodies of the elderly without really approaching the human being.

Senator PERCY. I think you have very aptly summarized months and possibly years of hearings that we have held on this subject. We could have saved an awfully lot of research and time.

I believe you did say that you had trained a dozen geriatricians. What happens to a trained geriatrician? Are they snapped up by the medical profession for positions of responsibility? Tell us what they are doing now.

Dr. LIBOW. One of the outstanding clinical medical journals in the United States, "Annals of Internal Medicine," will be publishing an article next month from our center answering your question. I will briefly summarize that for you.

TRAINED GERIATRICIANS IN DEMAND

First of all, we regularly receive phone calls and letters from many of the people in this audience and from many deans at many medical schools asking if these geriatricians are available.

Of the 12 that have been trained, I can briefly tell you where they now are. One is now leading a geriatric program at a leading hospital and its community nursing home in the county of Westchester, N.Y. Another is working with us, expanding our program in our communities of Nassau and Queens in New York. Another has returned to Kyoto, Japan, where he has established the first geriatric medical program in that city at the Kyoto-Katsuru Hospital, part of the Kyoto University Medical Schools. Others are leading other geriatric programs. So there is a tremendous market for these people and a tremendous need.

Senator PERCY. One last question to you. You have mentioned that there has been a development and interest shown by students and we are glad to hear that. You have also been instrumental in the development of geriatric programs in several medical facilities. How were you able to secure the budget and identify roots that you suggest as "musts" in your statement? What advice would you give to other interested medical professionals who would want to develop similar programs?

Dr. LIBOW. Well, to start with, I hope that support from Dr. Butler and the increasing involvement of the Administration on Aging will afford other universities and other centers the opportunity to do what we did and with less financial constraints. There is certainly a need for more financial support for this new field. But I am quite proud of using a different approach. What we did, Senator, was utilize some of the wasteful dollars spent on medical care in long-term institutions and convert these dollars into high-quality physician care and leadership, while simultaneously providing these physicians with geriatric medical residency training.

This approach has also been very cost effective. We pay $9,000 per year less to the resident physician than was paid to the unskilled "house doctor" who previously worked at our facility. Thus, we have enormously improved patient care while reducing salary costs by $50,000 to $75,000 per year. There is so much money available in the care of the elderly that what we really need to do is redirect our use of the money.

Senator PERCY. With the permission of our audience, we are going to adjourn promptly at 10 o'clock. We have secured permission to keep the room until 10:15—I trust without time and a half payment for an extra 15 minutes more, having followed the President's $1,000-a-plate dinner held in this room last night.

We really have only 20 minutes, and we have enough questions up here for 20 days. If any member would like to respond who found objection or would like to challenge something said by someone else, please do so as briefly as possible. If not, we will go right to the questions.

Dr. Butler, did you want to comment?

INADEQUATE PHYSICIAN TRAINING

Dr. BUTLER. Yes. Actually, I think, at the time I signified a desire to speak, Dr. Libow had not spoken, and I think he has expressed much of what I wanted to say. Maybe to repeat, if we know so little about aging, then we must create and maintain conditions that are favorable

to our building new knowledge and new information—and not the opposite—namely, to avoid it. If we do have some valuable information and knowledge which is not known to many people, and I am afraid it is not, then we must indeed teach it and apply it. I must say that one of my great disappointments insofar as the National Institute on Aging is concerned is that less than 4 percent of the grants have come from investigative medicine. That says quite a lot when you consider the enormity of the problems.

I would also like to say that unless the schools of medicine have created favorable catalytic atmospheres, then departments within those departments of medicine are not apt to address their attention to aging.

I am homemade, too, and I had not realized that. I did want to stress the fact that my own remarks come from clinical, as well as research, experience. When I talk about my colleagues, I don't do it lightly in saying that, indeed, there is a credible absence of knowledge. No one mentioned the older people themselves and I would like to point out that they have many, many complaints about the care they receive.

There is not only SAMA—the Student American Medical Association—but I had an occasion recently to spend an evening with a dean of a medical school, I will not name, who spoke proudly of how well trained his students were. The next morning I had occasion to meet with his students, senior medical students, who spontaneously spoke about how ill-prepared they were to work with older people, how little knowledge they had, how little education they had of epidemiology and pharmacology. I would like to remind you that 75 percent of practicing physicians have expressed the lack of proper training. There are diseases which are new, such as diseases which make a difference clinically with broad vulnerabilities.

I would just like to suggest that it would be very, very rewarding if our medical students had a greater exposure to different aging populations. If our medical students saw only children with irreversible conditions and there were no well-baby clinics, how many medical students would be interested in pediatrics? We have to give them a broad based exposure.

Finally, I would love to see, as one way of showing medical interest, our National Board of Medical Examiners include a couple of questions about the elderly for our medical students as one way to stimulate interest.

Now if you really want to answer the question without getting scientific, it would also be interesting to test the 300,000 practicing physicians in the United States and see if indeed they do know what we know exists in the corpus of knowledge about geriatric medicine.

Senator PERCY. Thank you very much.

Any other panelists?

If not, then, Mr. President, I turn the questioning over to you. As I look at this, I wonder how you are going to select, out of all those questions; I don't know.

Dr. BINSTOCK. All I can say, Senator, is that I am glad I am not standing for reelection for president of the Gerontology Society. [Laughter.] In selecting from this collection of audience questions, I have just probably made 5 friends and 300 enemies in the process.

However, I can say that what I have tried to do is select brief questions that reflect many thoughts expressed in many questions and to hit sharply several points that were not covered directly in the testimony or that bring issues to a head.

Are Specialties Necessary?

First, a question combining two questions which were directed to Drs. Berliner and/or Cooper. One person expressed it, "Why does the medical profession recognize a need for a specialty in pediatrics and not in geriatrics?"

The other person expressed it, "According to the logic of Dr. Berliner, does it not seem appropriate to discontinue the specialty of pediatrics?"

Dr. Berliner. In fact, it does. [Laughter.] There is one aspect of pediatrics which deals with the new born and the first 6 months to a year of life. There are problems which are unique in that age group. Beyond that I see no reason why pediatrics should be separate. Of course, my pediatric friends don't agree with that. In fact, I do not believe that there is very much logic in the separation of the remainder of pediatrics on internal medicine.

Dr. Binstock. Dr. Cooper, how do you feel about that? Should pediatrics as a specialty be abolished?

Dr. Berliner. I think he should be excused from answering this question; he will get into much trouble. [Laughter.]

Dr. Cooper. I would like to say, as I did in my written testimony, that the association has nothing to do with the designation of specialties. That comes from a liaison committee on specialties which has joint membership with the American Medical Association and the Board of Medical Specialties.

Senator Percy. We accept that disclaimer.

Now would you like to comment further?

Dr. Cooper. I think I would agree very much with what Dr. Berliner has said. As a matter of fact, I think that the development of family medicine is a move in the direction toward the fact that there is not this differentiation on an age basis. There are special problems, as I think there are in geriatrics, but I think those are minor in comparison with the communality of problems.

Dr. Binstock. Thank you, Dr. Cooper.

The next question is for Dr. Libow. Are there any cogent reasons why a specialty of geriatrics should not be instituted in the United States? I am looking for brief responses, you understand.

Dr. Libow. No. [Laughter.]

Dr. Binstock. A question for Senator Percy. Do you feel there might be some parallel between the resistance of organized medicine, represented by the American Medical Association's resistance to health insurance for the aged, and the resistance of organized medical education to the need for special attention to geriatric education?

Senator Percy. I don't notice any difference in the inertia about changing an existing status, and I have noticed in the Senate we have the same problems with the adaptation and change and acceptance of concepts. As a result of this kind of hearing, and as a result

of the wide dissemination of the views of our panelists, I would hope that we are going to move the immovable and make some progress; I think that we can.

Dr. BINSTOCK. Thank you, Senator.

TRAINING FOR GERIATRIC NURSES

Dr. Butler, is the National Institute of Aging concerned for educational programs for other health care professionals; namely, professional nurses?

There is a dearth of professional nurses prepared in gerontological nursing. It is true in nursing also that there is a lack of adequately prepared faculty in the field of gerontological nursing.

Who are the clients of the National Institute on Aging?

Dr. BUTLER. It should be clarified that the National Institute on Aging cannot train for purposes of service. We are only permitted by legislative authority and mandate to train for research. Certainly research nursing, research for medical social work, research for any of the variety of health professions and scientific professions is perfectly welcome. People can submit proposals toward that end. Unless the law changes, we cannot train.

Dr. BINSTOCK. Dr. Libow.

Dr. LIBOW. I think that is an important point. It would be important that either the mandate of the National Institute on Aging be changed or that within the Government one new agency be established to combine all the other agencies so that for service and training of professionals in this field of geriatrics, those of you in this audience and others in this field would know where to turn.

Dr. BINSTOCK. Thank you.

Now a question for Dr. Cooper. You have identified the lack of money as a key reason medical schools have not adequately responded to geriatric medicine. Is the problem, rather, one of priorities set by the medical schools relegating geriatric medicine to the lowest level?

USE OF MEDICARE FUNDS

Dr. COOPER. Many of the sources of support are not fungible. Dr. Libow has talked about the fact that he has State lines which he can use in residency training. The medicare law does not permit you to collect under part A for residents while they are in the outpatient department or in an ambulatory care setting. Unless an institution has the kinds of funds that the State apparently has provided Dr. Libow, you cannot just convert the support for residency training under medicare into ambulatory care, home care, nursing home care, and so on, because there simply is no part A for that aspect of medicare.

Dr. BINSTOCK. Dr. Libow, you seem to be ready to respond to that.

Dr. LIBOW. If interns and resident physicians work in the outpatient department and/or emergency room of an institution with an approved teaching program, then the cost of their services is reimbursed through part A of medicare. If it is not an approved teaching program, then the expense is covered under part B of medicare.

Dr. BINSTOCK. I think we have time for about two more questions. The next question is to Dr. Cooper. The tradition of the medical profession is to follow social prestige and the economics of income. The aged are not one of the elite groups in both respects. How do you propose to break this mismatch of medical needs of the elderly and the traditional focus of the medical profession on social prestige and the economics of income?

Dr. COOPER. Well, I am sure that the AMA would not feel that I had the authority to speak for the medical profession—they have pointed that out on several occasions.

I think that there is a mismatch between reimbursement in a variety of areas in care and the need for care. The association has recommended, as a matter of fact, that a reexamination be made of the methods of reimbursement for care so that care is reimbursed appropriately and that the larger amount of reimbursement that is given for procedures is more equated, with the two or more evenly equated. So as far as we are concerned, there is a mismatch, there is no question, and the whole reimbursement system in this country does favor the carrying out of procedures rather than delivery of care.

Dr. BINSTOCK. I gather the question is: How would you propose to break that cycle?

Dr. COOPER. We think it is to be broken by having medicare reexamine its reimbursement procedures.

Dr. BINSTOCK. Finally, a question for Senator Percy. Would you please comment on this?

AFFIRMATIVE ACTION IN MEDICAL SCHOOLS?

Discrimination on the basis of race, color, and national origin is proscribed behavior for medical schools receiving public dollars. Discrimination on the basis of age is more subtle, but nonetheless devastating. Perhaps the time has come to require, first, affirmative action on behalf of training physicians in aging and, second, imposition of disincentives, like loss of funds, for failure to have clear identifiable didactic and clinical training programs in geriatric medicine. Isn't the time for cajoling and pleading long past?

Senator PERCY. I hope not. I am really quite reluctant to go into a field—where you really want institutions and individuals to go into a field because they feel compelled to do so because of the need. I am not sure we have done the most effective job that we can of trying to sell the need for this. I would want to exhaust that first before we went into compulsion, which has all sorts of backlash aspects to it.

I think we have got a solid body of evidence if we could get this before the medical schools and if we could carry it to the AMA. I intend to start right in my own State with the State medical society, and I intend to work through our medical schools to do everything I can and to get other members of the committee to do it also. If we find we totally fail, then there is something wrong with us. I think we have enough of a story to tell—if we can get it across and then have the enthusiasm, rather than have it just one of the programs of the Federal Government, which comes in with a hammer and a carrot, or whatever it may be, and compels us to do it.

Now I feel inclined to try it that way before I go the other way. I just think rationality is much better than compulsion. In this case I think we can make a solid case for it. I think the enthusiasm of this group, as we go out, will help us with that job. That would be very much my preference.

Dr. BINSTOCK. Thank you. There is one last question here for me. "Can we have a copy of the testimony presented tonight before the society meeting ends this week?"

I am informed that the answer is "No." The hearing record will be kept open for 1 month. If you want the printed copy of the hearing, check the box on the blue sheet, fill in your address, and hand it to the staff or mail it to the committee in Washington as indicated on the blue sheet.

I also remind you that if you wish to have a statement submitted for the record, also mail it in on the blue sheet to the Senate Committee on Aging in Washington.

Senator Percy, I would like to thank you so much for holding this hearing with us this evening. It has been a great experience.

Senator PERCY. I would like to express appreciation on behalf of the very able staff who, I think, is one of the finest and the most educated staff we have in the Senate—Bill Oriol, John Guy Miller, Pat Oriol, Debbie Kilmer, Alison Case; and from the Select Committee on Nutrition and Human Needs, Wayne Fletcher; and Annabelle Short, our court reporter. I express deep appreciation to them but, I think, on behalf of them I can say that this never would have been possible without the initiative, the encouragement, and the fine cooperation of Dr. Binstock. It has been an honor to have been with you.

This is a brilliant panel, one of the finest in 10 years in the Senate that I have ever been privileged to meet with. We will benefit for a long time to come from what you have shared with us. We hope that all of you will go forward with a renewed feeling that you have appeared before a committee that has been able to get an awfully lot of things done, the U.S. Senate Committee on Aging, which I represent and feel to be the consensus of this particular group.

Thank you very much indeed for your participation.

[Whereupon, at 10:17 p.m., the hearing was adjourned.]

APPENDIXES

Appendix 1

STATEMENTS FROM INDIVIDUALS AND ORGANIZATIONS

ITEM 1. STATEMENT OF CARTER C. OSTERBIND, CHAIRMAN, PUBLIC POLICY COMMITTEE, ASSOCIATION FOR GERONTOLOGY IN HIGHER EDUCATION, WASHINGTON, D.C.

In response to Senator Percy's general invitation at the hearing, the board of directors of the Association for Gerontology in Higher Education (AGHE) has instructed the chairman of the public policy committee to submit this written testimony so that the views of AGHE may be a part of the hearing of the Senate Special Committee on Aging which was convened in New York October 13, 1976, re: "Medicine and Aging: An Assessment of Opportunities and Neglect."

It is appropriate first to very briefly state the purpose of the Association for Gerontology in Higher Education.

With growing public interest in aging during the past several years, many colleges and universities have instituted gerontological education and research programs. The number of programs continues to grow. A directory, prepared by AGHE under a grant from the Administration on Aging, lists 1,200 educational institutions with programs in gerontology. The Association for Gerontology in Higher Education was established to better represent these institutional programs nationally. The specific purposes of the AGHE are: (1) to unite in common organization educational institutions which conduct research, provide academic or professional training or other educational services in gerontology, and to provide a network of communication among such institutions; (2) to promote and encourage the education and training of individuals preparing for research or service careers in gerontology and to increase the awareness of the general public of the need for such education and training; (3) to provide a public forum for members to exchange ideas and knowledge which advance gerontology in higher education; (4) to provide an effective base for continuing cooperation with public officials, voluntary organizations, individual membership associations, and other groups interested in aging and education. The current membership of AGHE includes 4-year colleges, graduate universities and consortia, as well as other institutional affiliates with academic programs and interests in gerontology.

The members of AGHE have strongly endorsed the legislation creating the National Institute on Aging and the purposes for which it was created as set out by the Congress in Public Law 93-296. The president of AGHE, in his report to the membership in 1975, reaffirmed the support for NIA and voiced the strong hope that in addition to research support, the Congress would make additional funds available to NIA for training and for NIA staff support. At the annual meeting of the AGHE in Washington March 3, 1976, the program plan of AGHE called for effective liaison with NIA. A representative of NIA was invited to meet with the membership of AGHE so that views could be exchanged, and the support and interest of AGHE made clear. In appointments to the public policy committee, the president of AGHE designated a committee member as the liaison with NIA.

The stated mission of NIA as set out in the National Institutes of Health publication No. (NIH) 76-1129 was unanimously endorsed by the executive committee of AGHE at its meeting in New York on October 15, 1976. This mission is stated as follows:

"The National Institute on Aging was established for the conduct and support of biomedical, social, and behavioral research and training related to the aging process and diseases and other special problems and needs of the aged.

"The motivation of Congress in establishing the Institute was that: (1) The study of the aging process, the one biological condition common to all, has not received research support commensurate with its effects on the lives of every individual; (2) in addition to the physical infirmities resulting from advanced age, the economic, social, and psychological factors associated with aging operate to exclude millions of older Americans from the full life and the place in our society to which their years of service and experience entitle them; (3) recent research efforts point the way toward alleviation of the problems of old age by extending the healthy middle years of life; (4) there is no American institution that has undertaken comprehensive, systematic, and intensive studies of the biomedical and behavioral aspects of aging and the related training of necessary personnel; (5) the establishment of a National Institute on Aging within the National Institutes of Health would meet the need of such an institution."

The board of AGHE endorsed that statement and the following one, which appears later in the same publication:

"In order for society to keep elderly people independent and functioning members of society, we must know more about the relationship between social functions and health. Toward this goal, the Institute will conduct research in areas such as the effect of mandatory retirement, the problems of transportation to community and medical care facilities, and the stigma attached to old age."

Through training and research, AGHE has, as one of its central purposes, the focusing of educational resources on all aspects of aging and the aging process.

The testimony submitted by Dr. Robert Butler, the Director of NIA, very cogently states, in language that can be understood by all professionals in the medical, health-care, and related fields, as well as by all citizens, the importance of NIA's role—a role which is strongly supported by AGHE. In addition, AGHE is committed to the position that research in the field of aging, both basic and applied, should be fully coordinated with training and service and that the need for educational programs in aging should be clearly identified as having a high priority in the programs of post-secondary educational institutions in the United States.

Throughout the hearings it became increasingly clear that there is a strong need to deal with the mismatch between the funds committed to training students about the medical and health-care needs of older people and the large amount of health-care dollars that go to the care of older people. If health-care of older persons is to be effective in the United States, then unique medical and health-care needs of older people must be incorporated into the training programs for medical students.

Knowledge generated through our educational institutions has contributed to the increase in the average life span, and AGHE holds the view that these same educational institutions have the opportunity through research, training, and service to make this longer life meaningful to society and to each of us who is privileged to have a long life. AGHE members think it is of overriding importance that educational programs bring the full resources of educational institutions—all involved professions and disciplines—to bear on this educational challenge. It should be noted that the involved areas include the allied health fields—dentistry, podiatry, public health, etc., as well as the social and behavioral disciplines. It is the view of AGHE additionally that there is an important role to be played by educational institutions at all levels of training, and AGHE is specially concerned that the resources of post-secondary educational institutions embracing public and private community colleges, public and private degree-granting institutions, including universities and professional schools, be fully drawn upon in this effort.

The policy and program of AGHE accord with the educational needs that Senator Percy, the chairman of this hearing, and Dr. Butler, Dr. Leslie S. Libow, and Dr. Theodore Sherrod have so clearly stated. AGHE will work with each of its members to implement educational programs responsive to the medical and health-care needs that have been identified today in this hearing.

This very informative hearing, according leading medical educators the opportunity to present views before the Senate Special Committee on Aging and also affording the members of AGHE and the Gerontological Society with the oppor-

tunity to provide input on the very searching question of medicine and aging, is further evidence of the significant service of the U.S. Senate's Special Committee on Aging. The executive committee of AGHE voted to strongly urge the Members of the Senate to continue this useful committee when the Senate considers the question of committee reorganization.

ITEM 2. STATEMENT OF ERIC PFEIFFER, M.D.,[1] CHAIRMAN, CLINICAL MEDICINE SECTION, THE GERONTOLOGICAL SOCIETY

THE NEED FOR CURRICULUM AND FACULTY DEVELOPMENT IN GERIATRIC MEDICINE

These remarks are presented as an outgrowth of accelerating activity and mounting concern about mechanisms which will assure America's most experienced citizens the kind of health care which is specifically responsive to their needs and circumstances. While the advent of medicare and medicaid have already decreased the financial barriers, and while any of the proposed programs of national health insurance will undoubtedly move us further in that direction, the development of specially trained health manpower to meet the health needs of the elderly is in no way addressed by these programs. For this reason, the leadership of the clinical medicine section of the Gerontological Society of the American Geriatrics Society and the Council on Medical Education of the American Medical Association have been striving to focus on specific additional barriers to good health care for older Americans and to recommend administrative and legislative remedies for this problem. The specific issue which we have identified is the need for curriculum development and related faculty development in the field of geriatric medicine.

The central issue is this: The basic professional curricula of the core professions providing medical care to aging patients (family medicine, internal medicine, psychiatry, and nursing) contain little or nothing specific to working effectively with the specialized aspects of care of the aging. In view of the growing number of elderly persons in this country (this is the fastest growing segment of our population) and in view of the greatly increased requirement for medical services on the part of older patients (in dollar terms, three times as much as for persons under age 65), this present situation must be changed on a high priority basis.

How can this change be accomplished?

There are many possible responses to this question, several of which are being pursued by individual professionals working in the field of aging and by organizations like the Gerontological Society, working alone or in concert with other associations such as the American Geriatrics Association, the American Medical Association, medical specialty groups, medical specialty boards, the media, and consumer groups. These efforts include giving greater visibility to the field of aging; continuing education efforts and/or requirements; the inclusion of gerontological content in general or in specialty qualifying examinations; media and consumer pressure for more readily available specialized professional and paraprofessional personnel to serve the medical needs of the aging.

But these efforts alone are not enough, and their effects will not be felt soon enough. For this reason, a new legislative initiative is recommended to redress a critical situation.

It is recommended that the Congress enact legislation for a new program to stimulate curriculum and faculty development in the field of geriatric medicine.

Specifically, it is recommended that funds be appropriated for the development of faculty trained and experienced in geriatric medicine to serve as educators to future health care providers. At a minimum, the creation of 40 new faculty positions, 10 each in the field of internal medicine, family medicine, psychiatry, and nursing, is recommended. Funding for such new provision shall be awarded on a competitive basis, with awards being made to those institutions who have, through the utilization of their own resources, already demonstrated the capability and commitment to the teaching of geriatric medicine. The anticipated

---

[1] Dr. Pfeiffer is associate director for programs, Center for the Study of Aging and Human Development, Duke University, Durham, N.C., and currently on sabbatical leave from Duke University as acting director of the Davis Institute for the Care and Study of the Aging, Denver, Colo.

cost of such a program is estimated to be approximately $2 million per year. Funding for a period of at least 5 years is recommended.

The anticipated benefits of the recommended program are: (1) reduction in the number of visits by the elderly to physicians who lack expertise and skill in diagnosis and treatment of diseases of the elderly; (2) decreases in the length of hospital stay through more efficient management of acute and chronic illnesses of the elderly; (3) decreases in the likelihood of medical complications through early detection of disease, using comprehensive assessment procedures prior to the onset of complications; and finally (4) a major upgrading of the quality of medical care delivered in long-term care institutions.

Mr. Chairman, I know that the Senate Special Committee on Aging has long been working toward these last several goals. Prompt implementation of this recommendation can move us a long way toward their accomplishment.

ITEM 3. STATEMENT OF WILLIAM E. ARNOLD, MULTIDISCIPLINARY COMMITTEE ON AGING, ARIZONA STATE UNIVERSITY, TEMPE, ARIZ.

The Value of the Old

To assess the needs in the area of aging and medicine, several key research projects need to be undertaken. We need to understand the role of the aged in American society. An examination of the research to date suggests that the issue of attitudes toward the aged and knowledge about the aged needs further clarification. Kilty and Feld (1976) brought this point home when they examined the attitude scale toward older people. Research needs to be done to determine the effect of factual information on beliefs and opinions. It would also be useful to know on the basis of demographic information which groups have more knowledge about age and the aging process. As a corollary, it would be desirable to find out what knowledge older persons in our society have about the aging process.

Once we can make a distinction between information and knowledge on resulting attitudes, we should also make a distinction between the old as a generic group and individuals within the group. Since most attitude scales discuss older people as a classification, we know very little about how individuals feel about specific older people that they might know. We tend to discuss generalized attitudes rather than personalized attitudes. Therefore we need research to determine the differences and similarities in our views toward generic groups as well as individuals within that group. For example in a pilot study, students consistently rated their grandparents higher on a credibility scale than they did old persons in general.

Finally, we need better ways to describe our attitudes toward the old. As indicated by Arnold (1976), we have tended to view the image of the old by asking such questions as whether or not old people are generally stuck in their homes and that they are only interested in putting in their hours. On a positive side, we ask such questions as "Do old people love life and do they grow wiser with the coming of age?" This may tell us something of the social-psychological attitude toward the old but it does not truly reflect credibility as defined in the communication literature. Thus, we need to consider the image of the old from a multidimensional standpoint viewing them on the dimensions of character, competence, dynamism, and sociability. In doing so we would have a better understanding of what images we hold for either the generalized old or the old individual.

With the need with the new knowledge of attitude and credibility, it would be useful to replicate the study conducted by the National Council on Aging in 1975. We need to explore the differences between the young and old including social economic background, rural-urban, and education. It would even be useful to explore this on an international level.

Research needs to be undertaken on the relative contribution of several societal factors on the old. If the mandatory retirement law is truly one of the major causes of the conditions for the elderly, then further research needs to be instituted which would give us a better perspective on the relative contribution of retirement. Does retirement, for example, force the suicide rate up for the older population? What contribution does industrialization or urbanization in a youth-oriented society play in creating an image for the old?

One of the major needs in aging research is for a greater exploration of behavior rather than the traditional analysis of beliefs and attitudes. For example, the National Council on Aging (1975) studies suggested rather negative attitudes toward the aged. Does this manifest itself in our treatment of the old? The presentation by a retirement home architect at the 1975 conference on human values and aging suggested that behavior did follow attitudes toward the old. If the old were viewed as unable to manipulate corridors without simplistic presentation of colors, then the retirement home was designed accordingly. We know very little about the behavioral manifestation of attitudes. It would be useful to explore historically the treatment of the old with expressions of attitudes and beliefs on the elderly at that time.

CONCLUSIONS

Far more research needs to be conducted on our attitudes and behaviors toward the aged in our society. If we are to understand the needs and areas of neglect with regard to medical care for the aged, we need to do some of the basic research which precedes the medical area.

One is left after listening to the statements about the aged that the old are simply a group of guinea pigs on which we can try all kinds of techniques and apply all kinds of research skills. On the contrary, it is hoped that the research done with and about the old will have societal value and that conditions may be improved for the elderly in America. If we have created a condition in which the old are viewed as ugly and undesirable, it is only through research that we can find the reasons and the means to change this condition.

ITEM 4. STATEMENT OF SAUL KENT, EDITOR, *AGING TOMORROW*, NEW YORK, N.Y.

Several witnesses have testified to the need for a separate department of geriatric medicine in our medical schools. They have argued that the elderly have specific medical problems requiring special attention. Other witnesses have testified that there is no need to single out the treatment of the elderly in our medical schools because aging is a developmental phenomenon and there are no diseases that strike the elderly alone.

Both these arguments are essentially correct, but the contrasting proposals for which they are given are equally inadequate to meet the health care needs of older adults. In my opinion, these needs can best be met by shifting our attention from the treatment of specific diseases to treatment of the normal aging processes that underlie the onset and expression of degenerative disease and the general loss of strength, vigor, and well-being that occurs in all of us with advancing age. While it is true that the elderly have specialized medical needs, these needs are direct consequences of lifetime patterns of normal aging exacerbated by poor health habits, exposure to environmental pollutants, and excessive stress.

I therefore propose the creation of a department of clinical gerontology in all medical schools which would encompass all age groups but would deal exclusively with the deleterious effects of aging and such age-dependent diseases as heart disease, stroke, maturity-onset diabetes, most forms of cancer, arthritis, and organic brain syndromes.

This department would focus entirely on preventive health care in childhood and young adulthood, with special emphasis on the development of therapies to delay the onset of senescence. In treating older adults the department would continue its commitment to preventive health care, but would also pursue therapies to reverse aging processes and rejuvenate the aged.

An important division in the department of clinical gerontology would be devoted to basic biological research aimed at developing anti-aging therapies. Another division would concentrate on measuring the rate of aging in human subjects to facilitate the testing and evaluation of anti-aging therapies.

Such a department would be well equipped to do battle with the true adversary of all older adults—the time-dependent decline in physiologic function that we call aging and the degenerative diseases engendered by this process.

ITEM 5. STATEMENT OF NONA BOREN, M.S.W., MICHAEL McCALLY, M.D., AND L. THOMPSON, M.D.,[1] OF THE GEORGE WASHINGTON UNIVERSITY SCHOOL OF MEDICINE AND HEALTH SCIENCES, WASHINGTON, D.C.

The Need for Curriculum Development and Geriatric Care Activities in Gerontology in Schools of Medicine

These remarks are presented to underscore this institution's recognition of the need for medical schools to address the needs of the elderly. They are also intended to inform you and your committee about a major new program at this institution made possible by a grant from the Administration on Aging, designed to impact the training programs of medical, nurse practitioner, physician's assistant, social work and allied health students, and to provide for faculty development activities.

The new program at the George Washington University grew out of a concern and awareness on the part of this institution regarding the neglect of the elderly, the scope of the problem, the implications of neglect, and the need for medical institutions to take a lead in correcting the neglect.

The health and mental health problems of the aged in our society continue to be neglected not because of ignorance, but in spite of the increase in knowledge about the aging process and major advances by the medical profession that offer prolonged life.

The nature, extent, and reasons for this neglect can no longer be dismissed by citing failures in policies at the national level. The neglect is reflected in the goals and priorities of the institutions, including medical schools, that are responsible for training our health professionals and in the attitudes held by persons responsible for teaching and for the delivery of care to the elderly.

The problem is grave and pervasive. While there have always been people who lived to a great age, there are more people living into old age than ever before and this trend is likely to increase. Since 1900, the over 65 population in the United States has grown much faster than the rest of the population. At that time this age group numbered approximately 3 million. By 1940 it had nearly tripled to approximately 9 million and again by 1970 had more than doubled to 20 million. If the present trend continues, it is estimated that by the year 2000 there will be 31 million persons over 65 in the United States. During the present decade, 1970 to 1980, the older population is expected to grow by approximately 23 percent compared with an expected 8 to 9 percent increase for the total population.

The implications of neglect for health care delivery are very real. Older persons experience more acute and chronic disease than the younger population; psycho-pathology in general, and depression in particular, increase with age; suicide sharply increases with age in elderly white males; and while a little more than 10 percent of the population is over 65, they use 27 percent of the health dollar. Yet little attention is given to the promotion of health and the improvement of the quality of life for the elderly—efforts that would work to alleviate the complications of chronic disease and depression that frequently results from inevitable losses and isolation.

Much of the neglect in provision of adequate training or health care delivery is the result of attitudes on the part of practitioners based on myths about aging and their own fear of the aging process and of dying. The neglect and stereotype attitudes toward aging and failures in delivery of adequate health services to the aging are reflected in and reinforced by educational institutions responsible for the training and education of professional personnel who could play a part in redressing the neglect and discrimination. In professional training programs for the helping professions (medicine, allied health, social work, nursing), generally little attention has been given in the formal curriculum or in field experiences to the aging process and to problems of the elderly. The human development sequence in the most professional schools typically begins at birth and ends at young adulthood. The situation is no different in medical schools. Here again the human development instruction typically neglects the period of life relating to middle age and aging. Course offering with a specific focus on problems of

[1] The George Washington University School of Medicine and Health Sciences. Dr. Bowles is the dean for academic affairs, Dr. McCally is associate dean and principal investigator, the Gerontology Program, and Ms. Boren is the director, the Gerontology Program.

the elderly are rare. An example of this neglect on the part of medical institutions is derived from a survey of the Association of American Medical Colleges Curriculum Director which reveals a large disparity in electives given for credit among the 15 different categorical areas listed. During the 1972, 1973, and 1974 academic years, not one of 119 medical schools reported electives which focused on problems of the elderly. Even by 1975, only 32 schools or 27 percent offered such electives. This can be compared to the categorical areas of drug abuse and human sexuality where electives were offered in over 60 percent of the schools for all the years (1972 through 1975). In addition, the literature demonstrates that few medical schools and teaching hospitals provide adequately for clinical experiences in geriatrics for undergraduate students or for post-graduate training in geriatric care.

The failure of medical institutions to provide adequate curriculum content and field experiences in the area of gerontology and geriatric care is compounded by the fragmentation of education experiences for a variety of health professions who must work together, but seldom learn together. Few medical schools are so organized as to offer opportunities for inter-professional training and collaboration. Equally neglected is multidisciplinary approach to teaching about health care for the elderly, their problems and society's responsibilities in addressing these problems. The result is that not only are health practitioners poorly informed about the health care needs of the elderly, but equally uninformed about the competencies and roles of other professionals in providing services and influencing policies that impact on needs of the elderly.

The George Washington University School of Medicine and Health Sciences has received a grant for the fiscal year 1976–77 from the Administration on Aging to introduce and improve gerontology and geriatric care content in educational programs within the George Washington University School of Medicine and Health Sciences. The program is based on a commitment to a multidisciplinary effort on the part of several major departments within the school of medicine and health sciences and other schools and departments in the University.

We anticipate that such multidisciplinary collaboration will have a number of desired outcomes: (1) Multidisciplinary curriculum development activities will influence the curriculum of the school of medicine and health sciences affecting undergraduate students as well as post-graduate physicians; i.e., residency training programs. These activities will also impact on undergraduate programs in sociology, recreation therapy, and on graduate level programs in sociology, recreation therapy, health care administration, and social work; (2) Multidisciplinary collaboration will provide a unique opportunity for health and health-related professionals to work and learn together. In doing so, it is anticipated that they will discover new potentials for professional growth in the field of gerontology and develop instructional expertise in activities focusing on faculty development such as multidisciplinary faculty seminars. This will, we hope, promote this institution's development of a permanent program with financial commitment to gerontology and the field of aging.

In summary, the George Washington School of Medicine and Health Sciences is moving to actively address the problems of training for better health care for the elderly. Our goals are to provide for all our students structured opportunities to examine attitudes toward aging and older persons, knowledge and information about health-related aspects of aging, and clinical skills appropriate to the management of the illnesses of older individuals. Our model for such a program is one of interprofessional education. Our capability resides in the fact that George Washington University has only a school of health sciences and programs for students of medicine, allied health fields, physician's assistants, and post-graduate physicians, which takes place in one facility with one faculty. Age-ism and gerontology is properly taught in schools of medicine and of health sciences.

ITEM 6. STATEMENT OF THE UNIVERSITY OF CINCINNATI GERONTOLOGY COUNCIL, CINCINNATI, OHIO

Gerontology at the University of Cincinnati

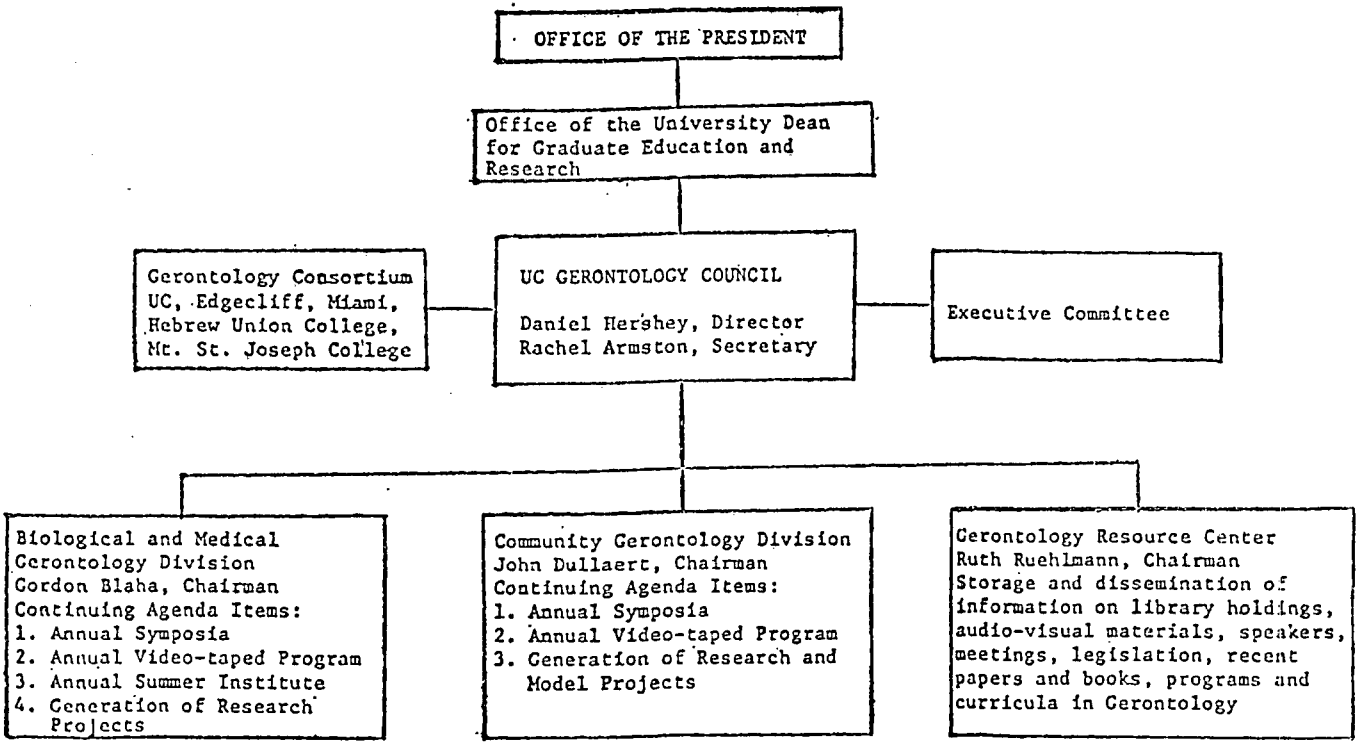
Gerontology is the discipline and practice that deals with the aging process and the special problems of aging persons. It is related to sociology, psychology, physiology, family practice medicine, nursing, community services, and even

business administration and engineering. The University of Cincinnati, through its gerontology council and associated groups, is committed to programs in gerontology which will lead to a better understanding of the developmental changes which occur as we grow old and how we might enjoy a long life with good health. Recent demographic data show that the 10 to 24 and 24 to 35 years of age groups are diminishing in proportion to the older population. Thus, we need to prepare for the future, as the elderly become numerous and insist on their right to a decent old age.

The establishment of a University of Cincinnati Gerontology Council in 1973, composed of recognized scholars whose teaching and research were related to gerontology marshalled the university activities in this field and focused them so that distinct areas of excellence could develop. There is much good work to be done, only requiring people and institutions to commit themselves. The University of Cincinnati has committed itself. In 1975, a gerontology interest group was formed, to function as the public forum for the dissemination of information on aging. Membership in this interest group spanned the full range, from the lay public to professionals working full-time in agencies providing services for the elderly. In 1976, the gerontology interest group was merged with the gerontology council in order to more closely coordinate our academic and public functions. In 1976, the gerontology resource center was organized, which serves as a clearinghouse for gerontological information. The staff of the gerontology resource center advises senior centers, agencies, and others on speakers, films, books, college programs and curricula, job opportunities and legislation pertaining to aging and the care of the elderly.

On the following pages we present the organizational structure of the U.C. Gerontology Council, our objectives, and a narrative describing the essence of our present and future activities: the teaching, research and public service functions of the U.C. Gerontology Council. We hope to contribute on many levels, from the pragmatic, community-based efforts at analyzing the services available for the aged to the intellectual, more esoteric attempt to understand the cellular changes which we call the aging process. We'll help employees find more satisfaction on the job and provide guidance for those in the vicinity of retirement. Perhaps we'll discover universal parameters which measure the age of persons, corporations, universities, and countries. And if we understand all these things, will we be able to assist in providing the blessing of long life in good health? We hope so.

ORGANIZATIONAL STRUCTURE OF THE UNIVERSITY OF CINCINNATI GERONTOLOGY COUNCIL



OBJECTIVES OF THE UC GERONTOLOGY COUNCIL

(a) Recruit and train personnel at the professional and subprofessional levels.
(b) Conduct basic and applied research on work, leisure, and education of older people, living arrangements of older people, social services for older people, and the economics of aging.
(c) Serve as a repository of information and knowledge and provide consultation to people and voluntary organizations with respect to the needs of older people and in planning and developing services to them.
(d) Stimulate the incorporation of information on aging into the teaching of biological, behavioral, and social sciences.
(e) Help to develop training programs on aging in schools of social work, public health, health care administration, education, and in other units.
(f) Create opportunities for innovative, multidisciplinary efforts in teaching, research and demonstration projects.

TO MEET OUR OBJECTIVES

To Recruit and Train Physicians

The University of Cincinnati, through its department of family medicine in the medical center, is embarked on a program of enlarging the experience of physicians, sensitizing them to the needs and care of elderly patients. Dr. Kenneth Frederick, associate director of the department of family medicine, responsible for the conduct of the model family practice unit, is the liaison between the medical college and the U.C. Gerontology Council, serving on the executive committee of the council and a member of its biological and medical division.

The department of family medicine has two main activities. First is the development and maintenance of an accredited residency training program in family medicine. Second, the department has the responsibility for establishing a family medicine track for students in the college of medicine. Both activities are dedicated to the task of producing well trained family physicians who can provide continuous, humanistic, accessible comprehensive care for all members of the family in an ambulatory setting.

Along with a model family practice unit to train residents in the management of the common medical problems of the family, the residency program has access to a voluntary, church sponsored, philanthropic home devoted to the long-term care of the aged. This facility is for 350 people whose average age is 84 years. The home offers three levels of care: (1) Independent living with medical care provided on a need basis; (2) a sheltered care area with partial daily medical supervision; and (3) a nursing unit with complete daily medical supervision. This provides for the resident physicians the opportunity to deal with aging people and their families in a micropopulation that is representative of the entire spectrum of long-term care of the aging.

For physicians in the Cincinnati area, in order to improve and maintain the quality of care for elderly patients, we propose to offer an annual summer institute, which would be four 1-day sessions in geriatric medicine. For each 1-day program, a nationally known physician identified with the clinical practice of geriatric medicine will be brought to the University of Cincinnati Medical Center. Along with university physicians, physiologists, and others, a coherent program will be arranged, whereby the attending physicians will hear and discuss the physiologic basis for the problems of old age and the clinical consequences (reflecting the expertise of the visiting physician). The second, third, and fourth 1-day sessions will be arranged similarly, differing in emphasis, as expressed by the interests of the visiting physicians. ConMed credits will be awarded for those physicians who complete the summer institute program. Our aim is to increase skills, change attitudes and provide information. There will be a comparing of notes and an updating of basic physiology as applied to the clinical physicians.

To Recruit and Train Nurses

The college of nursing and health, through its master's degree program in gerontological nursing, headed by Professor Janet Froome, director of the gerontological nursing program, and Dr. Rosalee Yeaworth, director of graduate programs, began offering masters level preparation in gerontological nursing in the fall of 1973. The purpose of the five- to six-quarter program is to prepare a nurse who can function in the area of primary care of the elderly. There is emphasis on the development of biophysical and psychosocial skills and the

knowledge needed to care for other persons in acute settings as well as in health maintenance, ambulatory care settings.

To Conduct Basic and Applied Research

The changes that occur in the various tissues and organs of the female reproductive system furnish a model of aging which may be applicable to other systems of the body as well. Measurement of circulating levels of hormones and uptake of these hormones is an important aspect of this study. Changes in the responsiveness of the tissues (ovaries, uterus) may occur even though their basic hormones are present.

Individuals who have worn an immobilizing cast or have been bedridden for extensive periods of time suffer a loss of motion when they again become ambulatory. Research is underway to determine whether or not heat applied to a casted joint during the period of immobilization will prevent the tissue changes characteristic of joint construction.

The heat given off by the human adult is measured directly in a whole-body calorimeter of simple but unique design. Measurements of the basal metabolic rate (BMR) are currently being made on elderly subjects every 3 months. To be tested is the hypothesis that there exists a critical level of BMR, below which the body does not possess sufficient vitality and senescent death may occur.

Long-term investigation of the immune function in nonhospitalized volunteers 80 years of age or older is proceeding. Some results of these studies suggest a subtle abnormality of T-cell regulatory function. It is anticipated that these clinical and laboratory studies will enhance understanding of allergic reactions and diseases beyond the age of 50.

The lifespan of systems such as single cells, multicellular organisms (the human body), corporations, and civilizations are being studied to elicit the factors affecting lifespan, the parameters which measure it, and definitions of birth and death. From this may develop a more meaningful measure of age, expressed not in years, but by some other intrinsic property.

Workshops are planned to sensitize grade and high school educators in relation to: stereotypes of the aged, the care and problems of aging persons, and attitudes of the young toward the elderly population.

The problems of adult children with respect to their elderly parents are being studied. The first stage would entail a series of in-depth interviews with a representative sample of adult children concerning the relationships they have with their elderly parents. The second stage would consist of workshops for the adult children in which information focusing on these problems would be stressed. In the third stage, a follow-up would be undertaken to determine if the workshop aided the relationship, and hence improve the quality of life for the elderly and their grown children.

We have organized two physiology of aging symposia in the last 2 years and the third annual physiology of aging symposium is being planned. Another program, normal aspects of aging, was presented in 1976.

To Service as a Repository of Information and Provide Consultation

We have recently formed a gerontology resource center under the aegis of the U.C. Gerontology Council. This center collects information on gerontology meetings and workshops around the State as well as films, video tapes, pending and passed legislation on the local, State, and national levels, dealing with aging and the care of the aged.

In cooperation with the Greater Cincinnati Gerontology Consortium of Colleges and Universities and the Cincinnati Council on Aging, the gerontology resource center provides advice and information to senior centers, agencies, and others in the community interested in gerontology. The center publishes a newsletter, maintains a composite mailing list, catalogs the gerontology library holdings in the Cincinnati area, and provides information on college programs and curricula in gerontology.

To Stimulate the Teaching of Gerontology

We teach the following courses at the University of Cincinnati in the area of gerontology: Aging Theories in Gerontology; Consumer Economics; Geriatric Nursing; Gross Anatomy; Investment Policy; Microscopic Anatomy; Old Age and the Community; Organic Medicinal Chemistry; Psychology of the Aged; Psychology of Death and Dying; Psychosocial Aspects of Aging; Social and Economic Security; Social Gerontology; and Stock Markets and Investments.

Because of our research and workshops, and with an active lobbying campaign by U.C. Gerontology Council members, we are helping to introduce basic information on aging into our curricula. We are members of the Ohio Network of Educational Consultants in Gerontology as well as the Greater Cincinnati Gerontology Consortium and the Association for Gerontology in Higher Education. We know what to teach: what remains is to convince others that their curricula are incomplete without gerontological content.

To Develop Training Programs on Aging

Our department of family medicine and the geriatric nursing program have training components. In addition, the University of Cincinnati's program in community health planning/administration offers graduate and undergraduate programs to help prepare those interested in careers in community health planning, organization, and administration.

To Create Innovative, Multidisciplinary Efforts

The U.C. Gerontology Council has undertaken cooperative curriculum arrangements whereby students at the University of Cincinnati may take courses free of charge at the other schools which, with the University of Cincinnati, make the Greater Cincinnati Gerontology Consortium. Thus, we share the best of the consortium schools. Through the consortium, we are investigating the possibilities of team teaching a basic sequence of courses in gerontology.

Appendix 2

LETTERS FROM INDIVIDUALS AND ORGANIZATIONS

ITEM 1. LETTER AND QUESTIONNAIRE SENT TO DEANS OF MEDICAL SCHOOLS IN THE UNITED STATES BY SENATOR CHARLES H. PERCY

DEAR DEAN: As you may know, I have a strong and continuing interest related to problems of the elderly. I have served on the Senate Committee on Aging for several years; currently I am the ranking minority member of the Subcommittee on Long-Term Care. Our plans call for me to chair a hearing of this subcommittee in conjunction with the annual meeting of the Gerontological Society to be held in New York City during the week of October 14.

Our hearing will examine the emphasis placed on geriatrics in schools of medicine and the consequences in terms of physician's sensitivity to the special problems of the elderly.

In this connection, I would appreciate your taking a few moments to answer the following questions:

(1) Do you have geriatrics as a specialty in your curriculum?

(2) Do you have programs in which students, interns, or residents can serve nursing homes?

(3) Do you have programs which help serve the elderly in any other way?

I would appreciate having your response to each of the above questions by September 30.

With best wishes,

Sincerely,

CHARLES H. PERCY.

RESULTS OF QUESTIONNAIRE SENT TO 114 MEDICAL SCHOOLS BY HON. CHARLES H. PERCY

(1) Number of questionnaires returned—84. Percent return—74.

(2) "Do you have geriatrics as a specialty in your curriculum?"

Number answering "Yes"—3. Number answering "No"—81. Percent answering "Yes"—3.6.

(3) "Do you have a program whereby students, interns, or residents can fulfill requirements by serving in nursing homes?"

Number answering "Yes"—37. Number answering "No"—47. Percent answering "Yes"—40.4.

(4) "Does your medical school serve the elderly or those in nursing homes in any other way?"

Number answering "Yes"—47. Number answering "No"—37. Percent answering "Yes"—56.

Of the ways medical schools served the elderly or nursing home patients included: treating the elderly in university, county, or municipal hospitals (mentioned by 15 schools); operating outpatient clinics (mentioned by 8 schools); and research noted by 7 schools. Five schools boasted offering electives in gerontology (the research side of aging) and three noted offering electives in geriatrics (the clinical aspects of treating the elderly).

ITEM 2. LETTER FROM EARL C. COOKE, HOUSTON, TEX.; TO SENATOR CHARLES H. PERCY, DATED OCTOBER 29, 1976

DEAR SENATOR PERCY: I would like to express my sympathetic support for your efforts in the current hearing on "Medicine and Aging." In my work I have had much contact with medical schools and nursing homes and have seen many of the problems which you are concerned about.

80-581—77——5

I strongly share your feelings that geriatrics should be taught in the curriculum of medical schools and that this should involve service to nursing homes.

Much success to you in your efforts to get medical students further enlightened and interested in the care of geriatrics.

When available, I shall greatly appreciate your being so kind as to send me a copy of the hearing.

Very sincerely,

EARL C. COOKE.

ITEM 3. LETTER FROM TERRENCE T. KUSKE, M.D., ASSOCIATE DEAN FOR CURRICULUM, MEDICAL COLLEGE OF GEORGIA, AUGUSTA, GA,; TO SENATOR CHARLES H. PERCY, DATED SEPTEMBER 24, 1976

DEAR SENATOR PERCY: In response to your questions regarding programs for the elderly at the Medical College of Georgia, we do not currently have geriatrics as a separate subspecialty in our curriculum. Our curriculum is divided on more classic lines in which geriatrics would be covered predominantly within the specialty of internal medicine.

In response to your second question, we do have programs in which residents can serve nursing homes, specifically our own large nursing home facility. We have a very large immediately attached nursing home facility, the Georgia War Veterans Home, and medical care is provided by the university health clinics as well as night-call coverage being provided by our resident staff. In addition, a portion of the Veterans Administration Hospital is concerned with long-term care for many aged patients, and this is similarly staffed by our own residents.

As regards other programs which serve the elderly, assessment of the nutritional training programs of the elderly has been conducted on a regular basis as part of the nutrition electives for clinical students as well as the nutrition elective components of the students in the basic sciences.

I hope that this provides information that will be of use to you.

Sincerely yours,

TERRENCE T. KUSKE.

ITEM 4. LETTER FROM BERNARD E. NASH, PRESIDENT, INTERNATIONAL FEDERATION ON AGING, WASHINGTON, D.C.; TO SENATOR CHARLES H. PERCY, DATED OCTOBER 22, 1976

DEAR SENATOR PERCY: With reference to the very stimulating hearing you held on medical care for the elderly during the annual meeting of the Gerontological Society in New York, September 13–17, 1976, I would like to offer some observations about how geriatric care is organized in other countries, in the thought that these insights may be useful in our own case.

As you will recall, the hearing centered on the extent of the need for geriatric medicine in the United States. I was particularly struck, however, by the fact that after the hearing some members of this highly professional audience seemed confused about what geriatric medicine could encompass. Several people thought that geriatric medicine would end up being a specialty much like pediatrics whereby an individual would see a specialist solely based on the criterion of age. Not surprisingly, this alternative did not seem very appealing for fear that it would further perpetuate the segregation of the elderly from society.

In fact, a geriatric specialty operating much like pediatrics is just one alternative to organizing better care for the aging. It is an extreme alternative that, as far as I know, exists nowhere in the world. The existence of this confusion among members of the audience makes me fear that the whole concept of geriatric care may become politically unfeasible because of a widespread misunderstanding as to what it can represent. If professional gerontologists are confused about this issue, what will be the reaction of the general public whose support is necessary to any measures for improving medical care for the elderly?

The confusion arose in my estimation from the fact that no clear distinction was made by the speakers about the various levels of geriatric care that can be introduced. For example, at a minimum one can introduce courses in medical schools on physiological, psychological, and sociological aspects of aging; these

could either be mandatory or elective. At the next level, one could establish geriatric consultantships. Geriatric consultants would be called in by a general practitioner when the latter is puzzled by an older person's symptoms or when an older patient shows a complex interaction of symptoms. Such consultants could also oversee the teaching of geriatric medicine in medical schools. This is very much the model now in existence in the United Kingdom. (It should be noted that in the United Kingdom no more than about 20 percent of the elderly ever see a geriatrician; the remainder are treated by the general practitioner. In part, this may be due to a shortage of geriatric consultants but, in large measure, this is due to the fact that many older persons' ailments are quite similar to those of younger age groups, and no need to call in a geriatric consultant manifests itself.)

At a third and extreme level, one could create the specialty of a geriatrician who would serve much as a pediatrician does and automatically see all individuals over a certain age bracket. As stated before, as far as we know, such a practice does not exist in any country in the world. In short, we are setting up a strawman in focusing our thinking and debate around this issue and ignoring the merits of less radical alternatives.

For an excellent discussion of how geriatric care is organized in countries other than the United States, I recommend "Geriatric Care in Advanced Societies," edited by John C. Brocklehurst, one of England's foremost geriatric consultants. I would like to close with a quotation from Brocklehurst's book. According to him, geriatric care is desirable because, for older people:

". . . progressive care through departments (or facilities) providing acute, intermediate (rehabilitation), and then either long-stay or domiciliary care is likely to be needed most commonly. To achieve a smooth passage through these various stages implies a unified or coordinated administration and is perhaps one of the best arguments for a specialist service of geriatric medicine which can assume responsibility for the ill old person at an early stage and steer him through all the subsequent stages until his resettlement in the community, or in the most appropriate type of long-term care. By this means a uniformity of approach and a continued flow of information about the patient should have the best chance of happening. . . .

"The overwhelming arguments in favour of a specialist service would seem to be (a) the size of the problem, (b) the neglect it suffers where there is no such service, (c) the many clinical and organizational improvements that have occurred where a service has been established, and (d) the fact that those who engage in it find the work exciting, stimulating, and worthwhile."

With best wishes,

BERNARD E. NASH.

ITEM 5. LETTER FROM R. WILLIAM BURMEISTER, M.D., MEDICAL DIRECTOR, MOUNT ST. ROSE HOSPITAL, ST. LOUIS, MO.; TO SENATOR CHARLES H. PERCY, DATED NOVEMBER 17, 1976

DEAR SENATOR PERCY: Pursuant to your request at the recent Gerontological Society meeting for information concerning geriatric care programs and potential training approaches in this field, I wish to submit:

—A brief introduction to a program of geriatric hospital care demonstrating cost-efficient rehabilitative care of the elderly.

—Some background of the proposed expansion of these services into a day-hospital system of delivery.

—Identification of the possible role such an already-developed model could play in the teaching and demonstration of geriatric clinical medicine in a university-related program provided adequate teaching support is available.

The responses of the 150 participants from five Midwestern States attending a recently completed seminar (brochure enclosed),[1] along with the knowledge of the present deliberations of the Senate Committee on Aging and the National Institute on Aging, have served to reinforce my desire to respond to your request. The following then represents brief explanatory material concerning the points above. I should be most happy to supply additional material as deemed appropriate.

---

[1] Retained in committee files.

(1) Mount St. Rose Hospital in St. Louis, Mo., has developed, over the past 8 to 10 years, an active rehabilitative service for the elderly employing a full complement of rehabilitative service personnel—physical therapy, occupational therapy, speech therapy, recreational therapy, nursing service—in a hospital environment—all supervised by a hospital-based group of internists which cares for the patients during their hospital course. The experience accrued from this program I believe supports the following:

(a) Destruction of a valuable capital resource such as this old (1901) tuberculosis hospital is poor stewardship of funds if a quality use for it can be identified.

(b) Responses from our patients and referral sources indicate this service has met a real need in the community.

(c) This need is further supported by the increasing demands for service which has resulted in an occupancy rate of 95 percent in 125 beds and a continual waiting list of 40 to 50 patients.

(d) The medical and rehabilitative needs of this geriatric population can be consistently delivered in a quality manner at about 50 percent of the local acute-care hospital per diem costs.

(e) The medical needs of this multiproblem geriatric patient demand special insights of physician and other health personnel not readily developed by training resources in the area. This has consistently required careful choice of physicians and other personnel and considerable on-the-job training to achieve the approach desired.

The background experience and the insight developed in regard to the critical elements required in this type of geriatric medical care has led this facility into close cooperation with the Joint Commission on Accreditation of Hospitals Quality Resource Center (for which the writer is on the faculty and advisory board) and CEMPROC, the local PSRO, to develop the unusual criteria necessary to identify admission needs and care patterns for the population in such a medically oriented rehabilitation environment. Since this background experience and the data developed in this project at Mount St. Rose Hospital seems worthy of appropriate exploitation to me, I offer any assistance this may give you in deliberations to secure the best and most cost-effective care for our elderly patients.

(2) The perceived needs of the community, the high occupancy and waiting list, and an interest in delivering these services in a cost efficient manner has precipitated a planning program for expansion at Mount St. Rose Hospital. This is fully defined in the enclosure,[1] but centers upon an interest to develop a day-hospital which is projected to cost 50 percent of our present in-patient costs. Active efforts are now in process to bring this to fruition.

(3) The medical personnel supervising this program at Mount St. Rose Hospital are all actively engaged in teaching at St. Louis University. Certain chosen members of the medical house staff have been utilized for service during the past 6 to 8 years. It has been the experience that usually 2 to 3 months of on-the-job training and supervision is necessary for new personnel to appropriately and cost-effectively manage the needs of these geriatric patients.

The potential value of this program for demonstration and teaching geriatric medicine seems obvious. Appropriate support for this with teaching dollars rather than care dollars would allow this geriatric resource to develop a role in training of medical personnel without falsely raising cost of care to do the job.

Considering the increasing age of our population in the United States, a commitment to expanded clinical knowledge of geriatric medical care is an identified need and should be an appropriate activity of internal medicine departments in our schools of medicine. This need is notwithstanding that of efforts directed at broadening our understanding of the aging process through well-founded research. The feasibility and costs of such teaching support seems worth exploration and the model available here could be of invaluable help in defining the necessary parameters for wider application.

If you should so wish, I would be most willing to expand on any of the above material personally or by letter. I thank you for your consideration and interest in geriatric care.

Sincerely yours,

R. WILLIAM BURMEISTER.

[1] Retained in committee files.

ITEM 6. LETTER FROM WILLIAM REICHEL, M.D., PROJECT DIRECTOR, AMERICAN GERIATRICS SOCIETY, INC., NEW YORK, N.Y.; TO SENATOR CHARLES H. PERCY, DATED NOVEMBER 23, 1976

DEAR SENATOR PERCY: Thank you for your letter of November 8, 1976, which contained your opening statement for the hearing on "Medicine and Aging: An Assessment of Opportunities and Neglect." I appreciate your inviting the American Geriatrics Society to submit a written statement for the hearing record describing the recent activities of the American Geriatrics Society Conferences on Geriatric Education which focus upon educational policy and geriatrics.

The American Geriatrics Society was awarded a contract in 1976 by the National Institutes on Aging (NIA Contract No. 263–76–C–0496) for the purpose of conducting two conferences on geriatric education. The first conference took place on October 22–23, 1976. Participants at the first meeting served as an advisory committee for the purpose of developing alternative approaches and models in geriatric education. These approaches and models were to be defined and crystallized for the purpose of presentation to representatives of major physician organizations at the second conference to be conducted on March 4–5, 1977.

The list of members of the Advisory Committee to the American Geriatrics Society Conferences on Geriatric Education is enclosed.[1]

RECENT DEVELOPMENTS AND BACKGROUND INFORMATION

Recent developments which have led up to this meeting include resolution 16 which was introduced to the American Medical Association House of Delegates at the Portland, Ore., meeting in 1974. Resolution 16 called for an increased effort to train physicians in geriatrics. Specifically, it called for incorporating geriatrics into residency programs in family practice, internal medicine, and psychiatry, and into continuing medical education curriculum at both State and National levels. This was adopted by the AMA House of Delegates in June 1975 as Report M, Adequate Training in Geriatric Medicine (A–75). The report indicated that "The Council on Medical Education, together with the AMA Committee on Aging, will continue to review the activities of AMA and other organizations in the field of geriatric medicine. Both committees will explore ways of encouraging the teaching of geriatric medicine in medical schools, residency programs, and postgraduate education, so that appropriate training is available to all physicians responsible for the care of the Nation's elder citizens."

On July 31, 1976, representatives of the American Geriatrics Society (Dr. William Reichel), the Gerontological Society (Dr. Eugene J. Towbin), and the National Institute on Aging (Dr. Robert Butler) met with the Advisory Committee on Undergraduate Education of the AMA Council on Medical Education. At the July 31 meeting, it was the feeling of the three representatives that the subject of geriatric medicine should be included in the curriculum of all American medical schools. Also, the chairman of the Advisory Committee on Undergraduate Medical Education, Dr. Robert Stone, indicated his interest in participating at the two forthcoming American Geriatrics Society Conferences on Geriatric Education.

At the October 22–23 meeting, the advisory committee clarified three models of geriatric education—A, B, and C. The A model comprises an increased emphasis on geriatrics in existing residency programs, such as family practice, internal medicine, and psychiatry, and the B model consists of a 1- to 2-year specialized period in certain residencies, such as internal medicine and psychiatry. This type of subspecialty program is being carried out by Leslie Libow in New York and Dodda Rao in Oak Forest, Ill. Model C is a full, board-certified specialty of geriatric medicine as typified by the British experience.

It was the consensus of the group that model C should be rejected. All of the group felt that this would be an important step in clarifying that there is no attempt to create another board-certified specialty. This might relieve certain anxieties and misunderstandings that might develop from the possibility of another full fledged specialty.

Dr. Libow commented that model B is necessary in order to develop leaders in the field and his program is attempting to do exactly that. Dr. Pfeiffer noted

[1] Retained in committee files.

that at Duke University, the fourth year fellowship in geriatric psychiatry exists. Both Dr. Libow and Pfeiffer expressed the need for trained subspecialists in geriatrics in order to teach residents in internal medicine, family practice, and psychiatry.

Dr. Pfeiffer indicated that a possible strategy would be to support geriatric faculty development in internal medicine, psychiatry, and family practice programs.

Dr. Reichel summarized some of the efforts of family practice residency programs which include geriatrics in their training (model A). These include University of Texas at Lubbock; University of Wisconsin; Medical College of Georgia; Duke University; University of Maryland; University of Iowa; University of Minnesota; Franklin Square Hospital; and St. Margaret's Hospital in Pittsburgh.

Dr. Gotterer, dean of predoctoral programs at Johns Hopkins, suggested that the group must have a clear definition of educational objectives, whether they be to sensitize family physicians to geriatric issues, or to develop a specialist teacher in geriatric medicine. Different models of curriculum for the undergraduate student were discussed. One type of model might be a core knowledge of basic facts about geriatrics; another model might be a more intensive curriculum taught by a research faculty.

A positive approach for effecting change in medical schools utilized by the American Geriatrics Society is to emphasize that aging is already being taught and that this teaching can be expanded upon—in other words, to form a matrix between a geriatric interest with an already established core curriculum. Examples of utilization of already established programs include the curriculum utilized at the New Jersey College of Medicine and Dentistry under Dr. Otto Neurath, or the developing group of faculty who have participated in the Maryland continuing education series of the American Geriatrics Society and Franklin Square Hospital of Baltimore. The same group has contributed to the American Geriatrics publication, *Clinical Aspects of Aging*, and the recent *Hospital Practice* series, "The Geriatric Patient." In these cases, sophisticated faculty were asked to develop a lecture or chapter which represented a matrix between their own existing area of interest and geriatrics. This approach utilizes the best in any given medical community, making use of already existing expertise and talent.

It was the consensus of the conference on geriatric education that research leaders are needed to back up clinicians, residents, and students with their knowledge. However, the research or investigative model for the support of geriatric education is not the only one available. In fact, there is a possibility that in pursuing the research route to stimulate geriatrics, that clinical geriatrics might be lost.

In many situations, it may be desirable to bridge or marry the research components and the service and humanistic components of geriatric education. However, there are clinical areas, such as in family practice, where it may not be necessary to utilize a research-oriented faculty in training programs. The trainee in family practice does not necessarily need to be exposed to research developments in geriatrics and gerontology. However, trainees in medical school or residencies in internal medicine, psychiatry and family practice might very well benefit from exposure to a research-oriented faculty.

Dr. Stone questioned whether the physician should be involved in all aspects of geriatrics. Could other health professionals assume certain roles necessary in geriatric care? Dr. Leslie Libow asserted that geriatrics goes beyond patient care and involves development of health care delivery systems in the community. Dr. Libow also noted that the physician is in the best position to make this system work. A general discussion of the physician's role in present-day society ensued. Dr. Roy noted that she is not able to know everything about her patient's lives, and for practical reasons, cannot be expected to do so. Dr. Libow countered that the social, psychological, and economic aspects of social medicine have been underemphasized in medical education; medical education has been too disease-oriented. He also discussed the survey of seniors attending eight medical schools asking if they wished they had had more special training in geriatric problems. He received many positive responses to this survey which will appear in an upcoming issue of the *Annals of Internal Medicine*.

Dr. Roy and others discussed the practical situation of private practitioners and the difficulty of making ends meet. Dr. Roy made a special point of the increased time which proper care of the elderly patient requires. She indicated

that we should not overpromise what we can do as physicians in the context of the present day realities of delivering medical care to the elderly.

Dr. Libow noted that health systems agencies (HSA's) and other planning and policy groups do not consult those concerned with geriatrics for a geriatric point of view. To make progress in this area, he suggested that those with a special interest in geriatrics should be consulted to develop effective systems of care.

PLANS FOR MARCH 1977 MEETING

Regarding goals for the March meeting, it was hoped that the representatives of major physician associations would be instructed or informed about geriatric medicine—what currently exists and ideas concerning geriatric education. A second goal would be that those attending the March meeting would go back to their own organizations with positive suggestions for action. It is hoped that the physician organizations would also provide support for addition of training in educational programs according to model A or model B.

The next meeting will take place on Friday, March 4, from 12 noon until 2 p.m.; Saturday, March 5, in Baltimore. Physician groups which are being invited, in addition to the American Geriatrics Society and the Gerontological Society, will include the American Medical Association, American Academy of Family Physicians, Association of American Medical Colleges, American College of Physicians, American Society of Internal Medicine, American College of Cardiology, American Psychiatric Association, and the National Medical Association.

Position papers on a number of subjects will be prepared by members of the advisory committee for the March 4–5 meeting. These one- to two-page papers will include:

Undergraduate geriatric education—Ralph Goldman, M.D.
Graduate Education:
A Model—William Reichel, M.D.
B Model—Leslie Libow, M.D.
Rejection of C Model—William Reichel, M.D.
Postgraduate education—Knight Steel, M.D.
County and State Medical Society Committees on Aging—Shirley Roy, M.D.
Economics of geriatric practice—Shirley Roy, M.D.
Medical director concept—Mr. Herman Gruber.
Faculty development—Eric Pfeiffer, M.D.
Curriculum development—William Reichel, M.D.
Long-term care facilities as training sites—Jerry Solon, Ph.D.

In summary, the first Conference on Geriatric Education has clarified three models of geriatric education—A, B, and C. The consensus of the Advisory Committee of the American Geriatrics Society Conference on Geriatric Education is that we should reject the C model. In the discussion of educational models, it was the feeling of the group that it would be an important step in clarifying the position of this advisory committee that another full board-certified specialty is not being called for. This would allow geriatrics to flourish under the existing specialties—internal medicine, family practice, psychiatry, and others—with increased educational contents incorporated into each training program (model A) or 1- to 2-year specialized period of training in certain residencies (model B).

Hopefully the American Geriatrics Society Conference on Geriatric Education will throw additional light on this important subject. It is the intention that these two meetings will allow all viewpoints to be clearly expressed and heard. The American Geriatrics Society is delighted in the interest of the U.S. Senate Special Committee on Aging. With a sense of concern on the part of the American Geriatrics Society, the Gerontological Society, the American Medical Association, and other major physician organizations, in addition to the activities of the U.S. Senate Special Committee on Aging, it is our hope that solutions will come forth in order to improve the health care of our senior citizens.

Again, thank you for your interest in the recent American Geriatrics Society Conferences on Geriatric Education.

Sincerely yours,

WILLIAM REICHEL.

ITEM 7. LETTER AND ENCLOSURES FROM RAYMOND HARRIS, M.D., CENTER FOR THE STUDY OF AGING, INC., ALBANY, N.Y.; TO WILLIAM E. ORIOL, STAFF DIRECTOR, SENATE SPECIAL COMMITTEE ON AGING, DATED OCTOBER 28, 1976

DEAR MR. ORIOL: As you requested at your Special Senate Committee on Aging hearing on October 13, 1976, at the Gerontological Society convention, I am happy to be invited to submit the following:

As president of the Center for the Study of Aging and a long active physician engaged in the practice, teaching, and research in the field of aging, it is my opinion that the time has come for further expansion of geriatric educational training programs in the medical schools of the United States. I am clinical associate professor of medicine, Albany Medical College; chief of cardiology, subdepartment of cardiovascular medicine, St. Peter's Hospital; former vice president of the Gerontological Society; and the author of "The Management of Geriatric Cardiovascular Disease," and editor of the forthcoming volume, "Guide to Fitness After Fifty." The enclosed curriculum vitae and bibliography testify to my experience in research in aging, cardiovascular disease, and community leadership in the field of aging.

The three enclosed reprints on, "Model for a Graduate Geriatric Program at a University Medical School," "Some Observations on Geriatrics as a Specialty," and "Geriatrics as a Specialty," among my writings are the most pertinent to the question at hand. I wish to include these pertinent reprints into the record, since they do represent a well thought out program indicating the necessity for and the type of geriatric education that is so essential in the medical schools of the United States. I have also been involved in planning for the geriatric centers in the Veterans Administration program, the Chicago Medical School geriatric program, and the University of Arkansas Medical School program.

Thank you for this opportunity and invitation.

Sincerely yours,

RAYMOND HARRIS.

[Enclosures.]

As the urgency for services and programs increases over the next quarter century, geriatrics will become an acceptable, highly developed specialty, and geriatric education in medical schools will expand to match the progress in undergraduate programs in gerontology, providing more qualified physicians fully trained in the diagnosis and care of older people. In turn, subspecialties such as geriatric cardiology, geriatric endrocrinology, and geriatric psychology will develop. Such specialties and programs will be more necessary to make best use of monies allocated for the health needs of older people.

Model for a Graduate Geriatric Program at a University Medical School[1]

Raymond Harris, MD[2]

The decade between the first White House Conference on Aging in 1961 and the second in 1971 saw the coming of age for gerontological programs in university undergraduate and graduate departments, particularly in human development, social science, and health sections. Contributing to this growth were the powerful pressures built up by the expanding challenges of aging, the belated recognition by politicians of the political importance of aging voters, and the advocacy measures exerted by senior citizens and their organizations to make more money available for such programs.

During this same period, a similar growth was not experienced in medical schools and other educational facilities concerned with the medical training and education of physicians, nurses, and other members of the paramedical professions concerned with care of the aged. The USA lags behind other countries which have recognized the need and urgency for such training in geriatric and allied fields. This lack was recognized by the Clinical Medicine Section of the Gerontological Society and led to the appointment of a Postgraduate Geriatric Medical Education Committee, which was charged with trying to expand geriatric education facilities in universities and medical schools. An excellent geriatric curriculum model for a short-term training program was recently developed by Rodstein (1973) and this committee.

Interest by Future Physicians

Need for programs in clinical gerontology and geriatrics is beginning to be more widely recognized. A senior premedical student at the Univ. of Colorado recently wrote to me:

> As a senior pre-medical student at the University of Colorado, I am very much interested in exploring the field of gerontology. . . . In the attempt to establish gerontology as a separate subspecialty, I realize the difficulties involved, primarily from the educational standpoint, mainly that very little is understood about the process of aging and that to train physicians in this area would mean concentration in the areas of general medicine and psychiatry. The unappealing aspect of gerontology is that the patients are seemingly unproductive members of society and often have a bitter outlook on today's events. The aged seem to have in common a useless role in a world whose scientific achievements result in the prolongation of life. While older people are continually forming a larger segment of the American population, they must be supplied adequate rehabilitation and medical care. I feel that there will be a great demand for geriatricians in the near future, and I would like to devote much time working in this field if I enter medical school next year. I would be very much interested if you could throw any further insights on the subject of gerontology as well as any existing programs at Albany Medical College, especially at the undergraduate level, as I am not yet in medical school.

1. Presented at a Workshop on Geriatrics: A New Model for the Medical and Dental Schools, annual meeting of Gerontological Society, San Juan, Dec. 21, 1972.

2. Clinical Associate Professor of Medicine, Albany Medical College; Chief, Subdept. of Cardiovescular Medicine, St. Peter's Hospital; President, Center for the Study of Aging, Inc., 196 Shaker Rd., Albany 12211.

Reprint from The Gerontologist, Vol. 15, No. 4, August 1975—Printed in U.S.A.

A senior medical student at Georgetown Univ. School of Medicine expressed similar interest:

> I have decided to do my internship and one or two years of medical residency before pursuing any further training in geriatrics per se. By that time I am hoping that fellowships in geriatrics will be available in this country. If not, then I may pursue my training abroad, e.g., at the University of Glasgow. However, the possibility of receiving early training and guidance in this field, as for example at the Albany Medical Center, appeals to me considerably. In any event, please keep me informed of any progress you make or are informed of about formal training programs in clinical geriatrics in this country and abroad.

This same physician wrote me more recently:

> Now I am a first year resident in Internal Medicine at the Rhode Island Hospital, one of the Brown University affiliated hospitals in Providence, Rhode Island. I am very interested in doing a fellowship in geriatric cardiology if such will be available at the Albany Hospital in July, 1974. My career interests include the practice of general internal medicine and geriatrics, with an emphasis on geriatric cardiology.

These are only a few samples of correspondence received from interested premedical and medical students concerning the lack of programs in geriatrics and clinical gerontology in this country.

There is a need for geriatric consultants thoroughly versed in the diseases of aging patients and the age-related changes which occur in the absence of disease. Such specialists are necessary to identify the gaps in our knowledge about aging, to obtain the clinical and research information concerning the age-related changes in disease and normal old age, and to promote and activate modern preventive and therapeutic measures that keep old people healthy and improve their health when disease intervenes. They are essential to develop the concepts of wellness in old age which can come only from determined efforts by a well-organized, well-informed group of physicians who are intimately and vitally concerned with all the aspects of aging and disease in people who are growing old.

Steps in Planning

(1) *Identification of subject matter.*—Courses in geriatric medicine must systematically identify, organize, integrate, and make available all appropriate information on the aging processes, aging-related disease processes, and other data concerned with the clinical, social, preventive, and remedial aspects of illness and health maintenance in the elderly.

(2) *Profile of the geriatrician.*—The specialist in geriatric medicine should have specialized training in diseases of old age and in the care of the elderly. Other practitioners and specialists can and must help care for the aged. Hopefully, they will become more knowledgeable and wise about the problems of their elderly patients. Very likely, they, too, will have to seek the assistance of the geriatric specialist when problems arise, just as the geriatric specialist will require their services for the care of aged people with special heart, gastrointestinal problems, and so on. The geriatric specialist is expected to know much more about aging and the diseases of the aged than his medical confreres. Although the Royal College of Physicians has recommended that after three to four years of general hospital training, four more years should be devoted to medicine or geriatrics before a doctor can be considered a specialist in geriatrics, one must ask if this lengthy period is still necessary. With the current shortage of physicians, perhaps this period may be shortened by "lifetime learning" (McIntosh, 1974).

(3) *Graduate geriatric education models.*—Models for graduate geriatric education may be modified according to the situation and strategies that must be employed.

In May, 1970, I had occasion to draw up one such model program in clinical gerontology at a university medical school and associated Veterans Administration Hospital in the Southwest (Fig. 1). The geographical situation of this medical school made it a central focal point for state and regional programs in aging. The university medical school had an interesting variety of scholarly and community resources, including the Veterans Administration health facilities, the university hospital, community hospitals, nursing homes, other institutions for the aged, and the state university itself, which also included a

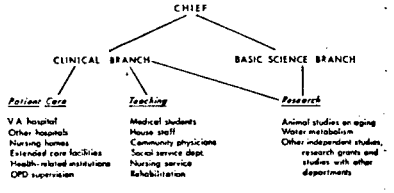


Fig. 1. Organization chart for a Division (Center, Institute, or Department) of Clinical Gerontology.

school of social work. It also had other essential components for an innovative successful gerontological teaching division, including (besides the excellent geographical location) sufficient patients and facilities for treatment, education, and research in aging, undergraduate and graduate students, and, most importantly, a devoted faculty interested in the possibilities of geriatrics and clinical gerontology.

Discussions with the Chief of Staff of the Veterans Hospital, the dean, and the other professors and administrators at both the university medical school and the Veterans Administration readily showed that a program in clinical gerontology, strengthening the teaching faculty by the addition of highly qualified clinical and research-oriented gerontologists and providing additional teaching, research, and patient-care facilities at the university hospital, the Veterans Administration Hospital facilities, and the community institutions, would improve the exposure and education of medical students, house staff, and postgraduate students and area physicians, and allied health personnel and nurses, to comprehensive programs in aging and chronic disease.

If physicians are to become more interested and proficient in caring for the aged, it is important that interns and residents during their training be exposed to the management and treatment of normal and sick elderly patients.

Development of outpatient clinics in the downtown section of the city and other types of comprehensive health centers, including halfway houses and a projected neighborhood health center, and the introduction and extension of home-care programs would offer a variety of new therapeutic and preventive care techniques for the delivery of health services in the community.

The Division of Gerontology would encourage and support fundamental research into the processes of aging, develop new scientific knowledge in the field of aging, and introduce courses in gerontology throughout the university medical school and its affiliated institutions. On the undergraduate level, it would introduce instruction in gerontology into the basic medical science course for medical students during their pre-clinical years and into the regular courses of instruction during the clinical years. On the graduate level, it would be involved in the gerontological training of house staff and postgraduate physicians. Such a center would also implement and develop geriatrics and clinical gerontology as a future subspecialty.

Such a clinical gerontology center can be organized into clinical and basic science branches (Fig. 1), both conducting research, teaching, and education. The clinical branch would, in addition, be concerned with the development and delivery of health services to aging patients, including patient care, supervision, research, and administration. The clinical branch in conjunction with other services at the university medical school could also initiate and direct in-service gerontological training for social service, nurses, volunteers, rehabilitation, and other paramedical personnel involved in aging.

The division would also develop affiliations with extended care facilities, chronic disease hospitals, research centers, nursing homes, and other institutions for the aged where in-service training and practice in geriatrics and clinical gerontology can be developed and taught. A special gerontological-social work committee could be established to supervise and conduct improved community programs such as home care, halfway houses, preventive services, and the other community measures so essential for the delivery of health care for the elderly. Such community programs would involve physicians in the county medical society and other professionals and volunteers in the county health and social services departments, senior citizen centers, United Fund, Red Cross, and other voluntary agencies.

The basic science branch would be primarily concerned with basic investigations in aging and would cooperate with the clinical branch in research with humans. Its focus would be the physiological, nutritional, metabolic, and central nervous system changes with aging, depending upon the interest of the investigators and the other members of the faculty at the medical school. Animal facilities at the university medical school should be available for such basic and clinical research.

Personnel

The development of a Division of Clinical Gerontology (Center, Institute, or Department) at the university medical school should initially require a chief and two associates. The chief should be a properly qualified physician and a recognized authority in gerontological education, training, teaching, and research. He would, in turn, work with the other clinical and basic science associates who would be responsible for the supervision and implementation of the appro-

priate programs within their branches. These associates should also be supported and assisted by appropriate faculty, secretarial, and research assistants to enable them to conduct and implement the programs in aging.

The development of a Division of Gerontology within the Dept. of Medicine at the university medical school would provide the university medical school with a much needed new treatment, education, and research center for aging. Such a Division of Clinical Gerontology, emphasizing the medical, scientific, and social needs of elderly people, will help the medical students and house staff at the university and the practicing physicians in the community to learn more about normal growth processes and human development from birth through senescence. It would also improve the delivery of health care to the old people of the area it serves, conserve their financial and other resources, and promote better understanding among the medical and paramedical professions of the impact of an aging population on health, medicine, social structure, problems of work, retirement, leisure, income, and other socioeconomic problems.

Conclusions and Predictions

As the segment of the population 65 years old and older expands to an estimated 21.5 million by 1975, 25 million by 1980, and 28.2 million by the year 2000 (Harris, 1970), the increased number and proportion of older people in the general population of the USA will establish the aged as a truly strong political force pushing this nation toward a gerontocracy and capable of demanding its "right to health" and more adequate programs and services to improve the length and quality of life. More national organizations, in addition to the Gerontological Society, will become more committed and provide extensive training, programming, and leadership as has the US Veterans Administration with its extensive health system and built-in interest in aging. The American College of Cardiology, which recently established a Committee on Geriatrics, will establish liaison with the Veterans Administration and other concerned groups to correct inequities and problems in providing better health care for the aged. Other organizations not already identified with aging will have to measure up to their societal responsibilities.

There will also be much more research on aging and age-related diseases, hastening the conquest of cancer and heart disease already predicted for the 21st century and extending longevity above the age of 80. Much publicized current advances in medical research and patient care have not yet been proved worthwhile in prolonging life expectancy of a person 30 years old or older. Whereas a 30-year-old in 1900 could expect to live 31.2 more years, in 1972 his life expectancy was only 31.7 more years (McIntosh, 1974).

A variety of model programs in gerontology and clinical geriatrics will also develop, based on centers of specialization on cerebral studies, geriatric cardiovascular research centers, and other areas and perhaps following the model and prototype outlined in this paper. Such centers will at the same time provide spin-off benefits in better community care, geriatric hospital and nursing home care for older people.

I predict that by the 21st century the aged will have either been put out of their misery, or the ravages of aging will have been radically corrected.

Addendum

Since this paper was presented, additional support for geriatric programs in medical schools includes the introduction by Senator Frank Moss of Senate Bill 764, which would provide direct funding of up to six medical schools with up to $500,000 each to support geriatric medical programs, the creation of the National Advisory Council on Geriatric Medical Programs with the help of Dr. T. R. Reiff of the Univ. of North Dakota, and the establishment and funding of several geriatric research and clinical center programs by the Veterans Administration.

Some Observations on Geriatrics as a Specialty

R. HARRIS

Albany Medical College, Albany, NY

There is nothing more powerful than an idea whose time has come! I concur with Professor ANDERSON that Geriatrics' time has arrived and I cannot quarrel seriously with the sum and substance of what he says from his extensive experience in geriatric medicine. There is a need for geriatric consultants who are thoroughly versed in the diseases occurring in aging and in the age-related changes that occur in the absence of disease. At present diverse opinions exist concerning the value of specialists in geriatric medicine. However, time and an aging population are on the side of those, like me, who favor the development of a specialty in geriatrics. I belong to these partizans not because I feel the general practitioner and organ specialist should not treat older people, but because I maintain specialists in geriatrics are necessary to continue to identify the gaps in our knowledge about aging, to obtain the clinical and research information concerning the age – related changes in disease and normal old age, and to promote and activate modern preventive and therapeutic measures to keep old people healthy and to improve their health when disease intervenes. Such specialists are essential to develop the concepts of wellness in old age which can come only from determined efforts by a well organized, well informed group of doctors who are intimately and vitally concerned with all the aspects of aging and disease in people.

What must be done to make geriatric medicine a true specialty-more acceptable and palatable to its peers – the medical establishment of the world? Briefly, let us consider (1) Subject matter, (2) The relation of the geriatric specialist to his confreres, and (3) The education and research activity of the geriatric specialist.

1. Subject matter. Professor ANDERSON defines Geriatrics as 'the branch of general medicine concerned with the clinical, social, preventive and remedial aspects of illness in the elderly'. I am sure he would not object to the insertion of 'health' into this definition, so that Geriatrics may be re-defined as 'the branch of general medicine concerned with the clinical, social, preventive and remedial aspects of illness and the maintenance of health in the elderly.' Bearing this definition in mind, we must then systematically identify, organize, integrate and make available all the significant information in a format easily acceptable to the seeker of more knowledge on geriatric medicine. Much work has already been done in this area, but books and other teaching aids have not yet appeared in sufficient numbers to impress our medical brethren on the validity of Geriatrics as a specialty, to show them how much geriatric medicine differs from regular medicine, or to interest them more in geriatric medicine. There is much information currently concealed in the archives of the world medical libraries, but this information is scattered and not unified. At this time the presentation of such information in book form appears most feasible, but lectures, movies, tape recordings, film strips, and programmed instruction should not be overlooked as ways of rendering information on aging more available to the interested physician. This material naturally will include data on aging processes, aging related disease processes and other allied information on the clinical, social, preventive and remedial aspects of health and illness in the elderly.

The codification of such knowledge, wisdom and skill will establish a solid basis for Geriatrics as a specialty. It will not be sufficient merely to present such information to improve the general state of knowledge of geriatric medicine among its practitioners. It will be necessary to elevate the state of wisdom of geriatric medicine and to raise the standards of skills and arts in the management and treatment of older people.

2. Relationship of the geriatric specialist to his medical confreres. Now as to the relationship of the geriatric specialist to his medical confreres, I see no real conflict. As Professor ANDERSON points out, the geriatric specialist has specialized training in diseases of old age and in the care of the elderly. As in other specialties, the existence of a geriatric specialist does not preclude treatment by the general practitioner, the internist, the organ specialist like the cardiologist, gastroenterologist and so forth. They, too, can and must help care for the aged. Hopefully, they will become more knowledgeable and wise about the problems in their elderly patients. Very

likely, they, too, will have to seek the assistance of the geriatric specialist when problems arise, just as the geriatric specialist will require their services for the care of the aged in people with special heart, gastrointestinal problems and so on. The geriatric specialist is expected to know much more about aging and the diseases of the aged than his medical confreres.

3. Education, training and research activities. I will not elaborate on the many aspects of aging that Dr. ANDERSON suggests the geriatric specialist should know and practice. But I believe it is of utmost importance that we discuss the education, training and research activities of the specialist in geriatric medicine. We should identify the profile, the special skills and abilities of this specialist. Dr. ANDERSON mentions the 1964 report of the Royal College of Physicians which recommended 'after three to four years of general hospital training, four more years should be devoted to medicine or geriatrics before a doctor can be considered a specialist in Geriatrics.' Is this lengthy period necessary? With the current shortage of physicians, should not this period of training be shortened by pursuit of what we in the U.S. now call 'lifetime learning?'

And what curriculum should be set up for the education of the would-be specialist in geriatrics? What kind of training should he get? What research activities may be expected from the geriatric specialist? And finally, at what point does the geriatrician become a clinical gerontologist? Should the geriatric specialist and the clinical gerontologist have similar training? This question is important enough to warrant further energetic discussion. From my viewpoint both should have similar training so that they can continue to communicate and understand each other. It is the environment in which they work that will distinguish the geriatrician from the clinical gerontologist. The former will pursue his interest and activities in old age on the battleground of clinical medicine, the hospital and the community. The clinical gerontologist, on the other hand, will tend to withdraw more and more into the academic aspects of aging, and conduct his activities within the cloister of the academic and research institutions. Very likely, at some point, each may sally forth into the other's domain with benefit to both and to the specialty of aging. The profession of geriatric specialist will often merge almost imperceptibly into that of clinical gerontologist. Both have a place in gerontological research centers. Both will undoubtedly work together in teams. Eventually the specialist in geriatric medicine will become a true clinical gerontologist concerned with all aspects of aging. The geriatric specialist with a good

education and a mind disciplined by the logic of reason, characterized by unity and method, and tempered by wide experience and equanimity will be able to choose to remain a geriatrician or to become a clinical gerontologist. After all, as SHAKESPEARE asked, 'What's in a name?'

Author's address: Prof. Dr. RAYMOND HARRIS, Albany Medical College, 706 Madison Avenue, *Albany, NY* (USA).

Geriatrics as a Specialty

There is nothing more powerful than an idea whose time has come! There is a need for geriatric consultants who are thoroughly versed in the diseases of aging patients and in the age-related changes that occur in the absence of disease. At present, diverse opinions exist concerning the value of specialists in geriatric medicine. However, time and an increasing aging population are on the side of those, like me, who favor the development of a specialty in the field of geriatrics.

Specialists in geriatrics are necessary to identify the gaps in our knowledge about aging, to obtain the clinical and research information concerning the age-related changes in disease and normal old age, and to promote and activate modern preventive and therapeutic measures that keep old people healthy and improve their health when disease intervenes. Such specialists are essential to develop the concepts of wellness in old age which can come only from determined efforts by a well organized, well informed group of doctors who are intimately and vitally concerned with all the aspects of aging and disease in people who are growing old.

What must be done to make geriatric medicine a true specialty more acceptable and palatable to its peers, the medical establishment of the world? Briefly, let us consider (1) subject matter, (2) the relations of the geriatric specialist to his confreres, and (3) the education and research activity of the geriatric specialist.

1. Subject matter. Geriatrics may be defined as "the branch of general medicine concerned with the clinical, social, preventive and remedial aspects of illness and the maintenance of health in the elderly." Bearing this definition in mind, we must then systematically identify, organize, integrate, and make available all the significant information in a format easily acceptable to the seeker of more knowledge on geriatric medicine. There is much information currently concealed in the archives of the world medical libraries, but this information is scattered and not unified. At this time the presentation of such information in book form appears most feasible, but lectures, movies, tape recordings, film strips, and programed instruction should not be overlooked as ways of rendering information on aging more available to the interested physician. This material naturally will include data on aging processes, aging-related disease processes and other allied information on the clinical, social, preventive, and remedial aspects of health and illness in the elderly.

The codification of such knowledge will establish a solid basis for geriatrics as a specialty. But it will not be sufficient merely to present information to improve the general state of knowledge about geriatric medicine among its practitioners. It will be necessary also to elevate the standards of skill, art, and wisdom in the management and treatment of older people.

2. Relationship of the geriatric specialist to his medical confreres. Now as to the relationship of the geriatric specialist to his medical confreres, I see no real conflict. The geriatric specialist has specialized training in diseases of old age and in the care of the elderly. Other practitioners and specialists can and must help care for the aged. Hopefully, they will become more knowledgeable and wise about the problems in their elderly patients. Very likely they, too, will have to seek the assistance of the geriatric specialist when problems arise, just as the geriatric specialist will require their services for the care of the aged people with special heart, gastrointestinal problems, and so on. The geriatric specialist is expected to know much more about aging and the diseases of the aged than his medical confreres.

3. Education, training, and research activities. I believe it is of utmost importance that we discuss the education, training, and research activities of the specialist in geriatric medicine. We should identify the profile, the special skills and abilities of this specialist. The 1964 report of the Royal College of Physicians recommended "after 3 to 4 years of general hospital training, 4 more years should be devoted to medicine or geriatrics before a doctor can be considered a specialist in geriatrics." Is this lengthy period necessary? With the current shortage of physicians, should not this period of training be shortened by pursuit of what we in the United States now call lifetime learning?

And what curriculum should be set up to educate the would-be specialist in geriatrics? What kind of training should he get? What research activities may be expected from the geriatric specialist? And finally, at what point does the geriatrician become a clinical gerontologist? Should the geriatric specialist and

the clinical gerontologist have similar training? This question is important enough to warrant further energetic discussion. From my viewpoint both should have similar training so that they can continue to communicate and understand each other. It is the environment in which they work that will distinguish the geriatrician from the clinical gerontologist.

—RAYMOND HARRIS, M.D., *Albany Medical College, Albany, N.Y.*

ITEM 8. LETTER AND ENCLOSURES FROM THEODORE R. REIFF, M.D., HEAD, DIVISION OF GERIATRIC MEDICINE, UNIVERSITY OF NORTH DAKOTA, GRAND FORKS, N. DAK.; TO SENATOR CHARLES H. PERCY

DEAR SENATOR PERCY: Since my reply of September 30, 1976, a copy of which is enclosed, to your inquiry regarding our geriatric program at the University of North Dakota School of Medicine, I am pleased to let you know that the president of this university has committed some limited funds to help us keep our program in operation for the time being.

There is, however, a need for additional funds and that is why we are hopeful that the efforts of you and your colleagues on the Special Committee on Aging of the U.S. Senate will develop legislation to provide funding for gerontology and geriatric medical education in the medical schools of this country.

Attached is another copy of a position paper adopted by the National Advisory Council on Geriatric Medical Programs, a list of whose founding members is enclosed, endorsing and urging gerontology and geriatric curricula in the medical schools of the United States.

We would hope that S. 1156 to fund geriatric programs in the medical schools will be reintroduced into the next session of the Congress and passed by the Senate with concurrent action on H.R. 7364 by the House of Representatives.

For the interest of you and your committee, enclosed is a copy of a paper, written at the request of the American Medical Association, originally entitled, "Medical Care of the Aged—A National Scandal," but changed by the A.M.A. to, "We're Doing A Third Rate Job for the Aged." In it is expressed some of the deplorable aspects of geriatric medicine in this country.

Finally, some of the proposed solutions to improving medical knowledge and interest in geriatrics are incorporated into the enclosed proposal for a Gerontology and Geriatric Medical Institute of the University of North Dakota, components of which we are attempting to implement.

My colleagues and I are willing to provide you and your committee with all professionally appropriate assistance in improving the health care for older persons.

With continuing admiration for your efforts and highest professional regards.

[Enclosures.]

THE UNIVERSITY OF NORTH DAKOTA,
Grand Forks, September 30, 1976.

HON. CHARLES H. PERCY,
Special Committee on Aging,
U.S. Senate, Washington, D.C.

DEAR SENATOR PERCY: I have been asked to respond to your recent letter concerning the meeting in New York of the subcommittee of the Senate Committee on Aging that you are to chair during the week of October 14 in conjunction with the Gerontological Society.

I have been informed by Dr. Leslie Libow, chairman of the Clinical Medicine Section of the Gerontological Society, and Dr. Robert Butler, Director of the National Institute on Aging, that your Senate subcommittee meeting will be on Wednesday, October 13, during which time you will be inquiring into efforts of U.S. medical schools in geriatric education for medical students.

In this regard, I have been requested to present the work done by the University of North Dakota and am scheduled to present this material in a panel on Thursday evening, October 14, and on Saturday, October 16, at the Gerontological Society meetings.

I am glad to supply your committee with this information and am enclosing copies of some material describing programs operational and planned at this university. In specific response to your three questions, please be informed that:

(1) Yes! We do have geriatrics taught in our curriculum through the division of geriatric medicine.

(2) Yes! We do have programs in which students can be taught in nursing homes. We are now planning for opportunities for residents and fellow to participate in geriatric medical exposure in nursing homes during their family practice residency and possibly during their internal medicine residency.

(3). Yes! We do have programs which help serve the elderly in other ways and are planning more extensive efforts in conjunction with our senior citizens center, construction of which is underway to be completed within the next 8 months. Please refer to "Operation Re-Ed" in the enclosed material. This is a program to re-educate older persons for vocational and avocational pursuits.

For your interest, enclosed is a copy of a position paper adopted by the National Advisory Council on Geriatric Medical Programs, endorsing and urging inclusion of gerontology and geriatric curricula in the medical schools of the United States. Your committee's endorsement of this paper would be well received and helpful to our efforts.

Please let me know if you would like more information concerning our program. I congratulate you for your interest in this vital but long neglected field.

With highest professional regards.

Sincerely,

THEODORE R. REIFF, M.D.,
Professor of Medicine,
Head, Division of Geriatric Medicine,
Director of Health Education.

[Attachments.]

POSITION PAPER: NATIONAL ADVISORY COUNCIL ON GERIATRIC MEDICAL PROGRAMS

By the end of this century there will be over 25 million people in the United States over the age of 64. Many of these will have multiple and complex interacting illnesses that require much more care per capita than younger patients. This care requires expertly trained physicians.

At the present time the medical input to a good part of the geriatric institutions in this country is quantitatively as well as qualitatively inadequate. This is not to say that there is not involvement by competent and interested physicians, but it is not an overstatement to say it is rarely sufficient.

It is generally acknowledged that the medical care of older people in this country leaves much to be desired. Geriatric medicine is, to a large extent, a neglected area of medical education and allied health professional training.

Geriatric medicine has not received the stature it should have in this country's medical training programs. Understandably, this makes it exceedingly difficult to attract physicians in training to work in this area.

Actually geriatric medicine provides an excellent opportunity for the in-depth study of human disease and for the training of physicians and allied health care personnel.

Steps to provide solutions to the inadequacy of geriatric medical care are urgently needed. Attention should be directed to developing high caliber programs in geriatric medicine that will serve as models of excellence. These programs should be of such caliber as to attract a significant body of medical students, young physicians, and allied health personnel.

Excellence in geriatric medicine, like any other clinical discipline, must rest on a solid scientific foundation. It is essential that training programs in geriatric medicine include fundamental research in the problems of the aged as well as in the process of aging.

A National Institute on Aging has recently been established within the National Institutes of Health. The time is opportune to support the development of programs in geriatric medicine in the medical institutions of this country.

PROPOSAL

The national advisory council on geriatric medical programs encourages the medical schools in the United States to establish interdisciplinary programs in geriatric medicine. These programs should serve as the basis for geriatric educational experience at all levels of education and training for physicians and allied health care professionals.

FOUNDING MEMBERS, NATIONAL ADVISORY COUNCIL ON GERIATRIC MEDICAL PROGRAMS

Robert L. Grissom, M.D., professor of medicine, University of Nebraska College of Medicine, Omaha, Nebr.

Alexander Leaf, M.D., Jackson professor of clinicial medicine, Harvard Medical school, chief of medical services, Massachusetts General Hospital, Boston, Mass.

Russell V. Lee, M.D., Consultant, Palo Alto Clinic, Palto Alto, Calif.

Henry M. Lemon, M.D., professor of medicine, head, section of Oncology, University of Nebraska College of Medicine, Omaha, Nebr.

Abraham Lilienfield, M.D., professor and chairman, Department of Epidemiology, the Johns Hopkins University School of Hygiene & Public Health, Baltimore, Md.

Ephraim Lisansky, M.D., professor of medicine, University of Maryland School of Medicine, Baltimore, Md.

Sherman M. Mellinkoff, M.D., dean, school of medicine, University of California, Los Angeles (UCLA), Los Angeles, Calif.

Theodore R. Reiff, MD., chairman, professor of medicine, head, division of geriatric medicine, director of health education, University of North Dakota School of Medicine, Grand Forks, N. Dak.

Eugene Towbin, M.D., Ph.D., professor of medicine, associate dean, University of Arkansas School of Medicine, Little Rock, Ark.

Irving S. Wright, M.D., professor emeritus of medicine, Cornell University Medical College, New York, N.Y.

A PROPOSAL TO ESTABLISH DIVISIONS OF GERONTOLOGY AND GERIATRIC MEDICINE AT MEDICAL SCHOOLS IN THE UNITED STATES

It is generally acknowledged that the medical care of older human beings in this country leaves much to be desired. As a corollary to the above the area of geriatric medicine is, to a large extent, a very neglected area of medical training.

Actually geriatric medicine provides an excellent environment for the in-depth study of human disease and for the training of physicians and allied medical personnel.

At the present time the medical staffing of a good part of the geriatric hospitals in this country is quantitatively as well as qualitatively inadequate. This is not to say that there is not representation by competent and interested physicians but it is not an overstatement to say they are in a minority.

One of the reasons this sorry state exists is because geriatric medicine has not received the stature it should have in this country's medical training programs. Understandably this makes it exceedingly difficult to attract new and well trained physicians to work in this *area*.

It is our opinion that an attempt at solution of this problem is in order and that attention should be directed to developing high caliber programs in geriatric medicine that will serve as models of excellence. It is hoped that a significant body of medical students and young physicians in training would be attracted to such programs and make possible the development of this important area of medicine as an attractive field for newer well trained physicians to work.

The scientific base of any good geriatric medicine program must rest on a solid foundation of the science of gerontology. There are a few centers of research gerontology in this country, the most notable of which is the Gerontology Research Center of the National Institutes of Health, located in Baltimore, Md. However, the close integration of research gerontology with geriatric medicine has not taken place to sufficient degree. With the explosion of knowledge in molecular biology that has taken place in the last decade and with newer knowledge of the basic physicochemical mechanisms of life, the potential for a fundamental understanding of the aging process is already existent. With this knowledge, intervention to extend the healthy and productive lifetime of human beings becomes possible.

It is our considered opinion that the time is now ripe to forge ahead in one of the greatest enterprises this country could undertake—the support of gerontologic and geriatric medical programs in the medical schools of the nation.

PROPOSAL

That a select number of medical schools in the United States obtain endowments for chairs in gerontology and geriatric medicine which would form the

nucleus of interdisciplinary divisions of gerontology and geriatric medicine. Each of the selected schools should have an endowed chair in gerontology and one in geriatric medicine, both of whose professional occupants would be members of the single division of gerontology and geriatric medicine that would cross all departmental lines.

The professor of gerontology should be a scientist of excellence and the professor of geriatric medicine should be a clinician of excellence, both of whom would be responsible for the development and expansion of the division as well as for the interdigitation of their respective programs with each other and with the existent programs in the rest of the school. Members of the division of gerontology and geriatric medicine would be encouraged to hold appointments in other appropriate departments of the school.

It would be the responsibility of the professors of gerontology and geriatric medicine to develop programs for scientists and physicians at the undergraduate and graduate levels and to develop training programs for allied health professionals such as physician's assistants and nurse practitioners who should play significant roles in the optimal in-patient and ambulatory care of the elderly.

Support of this type and the medical and scientific enthusiasm it would engender would make a significant contribution to the prolongation and betterment of human life.

THEODORE R. REIFF, M.D.,
Chairman, Subcommittee on Geriatric Medical Programs,
Health Action Council of the Maryland Commission on Aging
and the Johns Hopkins University School of Medicine
and School of Hygiene and Public Health.

[From *Prism*, December 1973]

WE'RE DOING A THIRD-RATE JOB FOR THE AGED

(By Theodore R. Reiff, M.D.[1])

In a recent interview in which the high costs of home dialysis and the type of patient eligible for such care were discussed, the director of a renal dialysis unit in a major hospital was quoted as saying, "Rehabilitation is one of our yardsticks of success. Can the patient go back to his previous work? One girl went back to training and jumping horses." He concluded: "We'll put any person on dialysis if he shows a potential for health. But an older person, say he's 75 and looks his age, well . . ."

This attitude regarding the suitability of elderly patients for renal dialysis is only one example of the ways in which many of the elderly are denied the best medical care. Another is the bizarre switch of intent made by government officials in administering medicare.

In an attempt to provide a bare minimum of physician attendance to nursing home patients, U.S. medicare policies initially provided that nursing home patients covered by medicare be seen at least once a month by physicians. When fiscal constraints became the determinants of this policy, the government, and other third-party carriers, interpreted the provision to mean that medicare would provide for only one visit per month by the patient's physician. The reason for this perversion of intent has been the low priority given to the medical needs of geriatric patients.

Although the circumstances and degree are certainly not directly comparable, it may be worth pointing out that the people of Germany were once led to accept financial priorities in making decisions concerning the right to life.

In the 1930's, the Nazis began a program of "euthanasia" in which nonproductive, "senile" Germans were institutionalized and then put to death by medical personnel. Although much of the German populace was unaware of this medical perversion, the philosophical acceptance of this "pragmatic" practice had been very subtly laid by a number of techniques.

In the mid- and late-1930's, a very interesting change was found in some of the arithmetic textbooks used in German primary schools. For example, the usual problem of finding out how many eggs, at 12 marks per dozen, a person could buy with 100 marks was changed; the question became. "How many

[1] Theodore R. Reiff, M.D., was formerly the medical director of a geriatric center and hospital and a biomedical researcher on the faculties of the Johns Hopkins University School of Hygiene and Public Health and the School of Medicine. He is now the director of health education and chief of the Division of Geriatric Medicine at the University of North Dakota School of Medicine.

Aryan couples can be subsidized to have a child for the Third Reich, at 10,000 marks per couple, for the 40,000 marks it costs each year to keep alive in a nursing home one elderly, senile person who cannot be rehabilitated back to useful work and is of no value to the Reich?'

The above examples may be used to point out the very low order of priority given in a materialistic society to the continued existence of "nonproductive" individuals and, in part, explains the general lack of interest in and the neglect of geriatric medical care in our society.

This neglect extends not only to geriatric medical care, but to all areas of aging, including research. Indeed, a number of this country's leading gerontologists have pointed out the general neglect and lack of support for such research.

The Gerontology Research Center of the National Institutes of Health in Baltimore, directed by the world-renowned gerontologist Dr. Nathan W. Shock, considered by many the "father" of gerontologic research in this country, has undergone major cutbacks in funding that have played a strong role in preventing the development of the center to its greatest potential.

The bill passed by Congress last year to establish, within the National Institutes of Health, a National Institute for Aging Research was vetoed by President Richard M. Nixon.

The Baltimore Gerontology Research Center, which is presently under the National Institute of Child Health and Human Development, receives only a miniscule portion of that institute's funds, most of which goes to child health.

One of the nation's leading gerontologists, Dr. Bernard L. Strehler, professor of biology at the University of Southern California, stated at a conference on aging, sponsored by the Center for the Study of Democratic Institutions, that "the amount of money spent in this Nation to uncover the sources of aging and to determine what can be done about it constitutes a scandal of neglect."

Strehler went on to say, "The national commitment to research on this most universal of human afflictions amounts to about $14 million per annum, perhaps less now that biomedical research in this country has been sacrificed to other 'more urgent and meaningful' goals. That is equivalent to about 8 cents per person per year—the price of one candy bar. It is one-hundredth the cost of a moon shot, one twenty-fifth of a fighter bomber, about 3 miles of metropolitan freeway."

The neglect of geriatric medical care and geriatric training for physicians and allied health professionals and the effect of such neglect on the care of elderly human beings in this country is no less scandalous. And it will assume ever increasing quantitative importance because of the growing percentage of aged persons in our society.

In the summer of 1970, this neglect was starkly dramatized when an outbreak of salmonellosis in a Baltimore nursing home involved 107 out of 140 elderly patients and 30 of the nursing personnel. The disease contributed to the death of at least 25 patients.

The investigation of that outbreak was conducted jointly by the city and State health departments, the Baltimore office of the U.S. Food and Drug Administration, and by personnel from the Center for Disease Control of the U.S. Public Health Service, resulting in the reiteration of the need for appropriate public health and sanitary measures by all agencies concerned. The Governor of Maryland appointed a commission to investigate the matter.

The findings of that commission included statements noting that the nursing home in which the tragedy occurred had no major defects. It had been licensed and approved for care for patients, and that, compared to other nursing homes, it was above average in its facilities, cleanliness, and overall operation.

After the tragedy, I was asked to inspect that nursing home and found nothing to contradict the above commentary. But an analysis of the events leading up to the catastrophe made clear that one of the important reasons for the high number of stricken patients and deaths appears to be that, when the initial symptoms and early deaths appeared, insufficient attention was paid to precise diagnosis and eliciting an accurate cause of death.

Unfortunately, this deficiency is not unusual in the treatment of nursing home and other geriatric patients. It is, in fact, quite common in the overwhelming majority of elderly deaths. Somehow, when older people die, there is a general expectation and acceptance of their death, without interest in the mechanisms or inquiry into possible prevention. This attitude is commonplace among both health professionals and laymen, including family and friends of the patient.

FATALISTIC ATTITUDE

If a younger person dies, both physician and family want to know what happened, why it happened, and what could have been done to prevent it. Physicians ask for, and frequently receive, permission to perform a postmortem examination—an indispensible tool for acquiring precision in the inquiry as to cause of mortality and preexisting morbidity.

Frequently, the information gained is helpful in preventing similar deaths, in providing information to families about hereditary illness and about communicable diseases important from a public health point of view.

On the other hand, if an older person dies, there is generally little interest in finding out what happened, not only on the part of the professional, but also the family, both of whom accept the cause of death as being due to "old age," and they show little interest in the mechanism that brought it about.

This is not to say that there is no importance in the emotional and philosophical acceptance of the inevitability of our own mortality, but such acceptance should not include a hopeless and fatalistic attitude regarding any investigation of the reason for death. The goal of such investigation is the improvement in the quality and duration of life for all elderly people, in fact, for all human beings.

I had the opportunity, for a limited time, to investigate the cause of death in patients at a geriatric center and hospital where the average age was about 85. Many of the deaths were of patients in their 90's and even older. One finding of great interest and importance was that the two most important underlying causes of death were malnutrition, with its attendant debility and lowered resistance, and infection related to debility and presumably to the now-well-established decrease in immunocompetence that takes place with aging. It is worth considering, however, that both malnutrition and infection are, in part, preventable and treatable.

Malnutrition in older people is a well-documented problem, and social and community services in various parts of the country have expressed interest in providing better nutrition for elderly people. Services such as group dining rooms for the elderly and meals-on-wheels have been helpful. The dental profession has been aware of the importance of proper dental care and dentures in mastication, the initial alimentary process. However, with few exceptions, there is little known about digestion and absorption of necessary nutrients from the alimentary tract.

But Paul H. Guth, M.D., of the Wadsworth Veterans Administration Hospital in Los Angeles, has shown that there is a decreased absorption of xylose with advancing age, and there have been other studies indicating that not only carbohydrates but other essential nutrients are poorly absorbed in older people.

The classic studies by Dr. Shock and his colleagues at the Gerontology Research Center have shown clearly that age-dependent decreases occur in almost all organ functions; so it should not be surprising that significant decreases in the alimentary absorption of essential nutrients usually take place. But further definition of this phenomenon is necessary so that corrective measures may be taken. Perhaps older people should take food supplements in the form of amino acids and medium-chain triglycerides. We might also consider the possibility of parenteral hyperalimentation in the debilitated elderly.

One of the major tragedies in the care of geriatric patients is that they are often institutionalized because services and resources are inadequate to provide proper care in the patient's own home. In years past our State mental hospitals became warehouses of senescent people for whom there were insufficient services to allow them to stay relatively independent in their own homes.

Then, too, many State mental hospitals during the past decade prided themselves on the degree to which they reduced their geriatric populations by "returning them to their local communities." But in the majority of instances, the patient ended up in a local community nursing home; so the warehousing took place locally rather than on the State level. The truth of the matter is that we have not developed our community health and personal care services for the elderly to the extent needed to prevent unnecessary institutionalization, with its attendant high morbidity and mortality.

OPTIMAL CARE

With few exceptions, we have not developed in our acute-care hospitals the special medical, nursing, and allied health care necessary for optimal treatment of elderly patients. This is especially true in large public hospitals where understaffing and budgetary problems generally lead to neglect of the geriatric patient, who, as we have seen, is on the low end of the priority scale.

The decubitus ulcer that starts in the geriatric patient in the acute-care hospital because of insufficient position changes and the use of improper bedding is often the start of the downhill course to mortality.

It is common practice in many hospitals to "staff" geriatric wards with lower levels of nursing care when, in fact, the geriatric patient can care for few of his own needs, is dependent, and, thus, actually needs a higher level of nursing care. In many instances, the geriatric patient needs a level of dependency care greater than the pediatric patient, especially since the complexity of illnesses and their complications are greater in the geriatric patient. In addition, the margin for correction of therapeutic error and recovery from disease is much lower in the geriatric patient.

It has been pointed out that the medical care of older persons in this country leaves much to be desired. As a corollary to this, the area of geriatric medicine is to a large extent, a very neglected area of medical training.

At present, the medical staffing of a good number of the geriatric medical care institutions in this country is quantitatively, as well as qualitatively, inadequate. This is not to say that they have no competent and interested physicians, but it is not an overstatement to say that they are in a minority.

One of the reasons for this sorry state is that geriatric medicine is not accorded the stature it should have in this country's medical training programs. Understandably, this makes it exceedingly difficult to attract new and well-trained physicians to work in this area.

Actually, geriatric medicine provides an excellent environment for the in-depth study of human disease and for the training of physicians and other health personnel. We need to turn our attention to the development of high-caliber programs in geriatric medicine that can serve as models of excellence to attract medical students and young physicians in training.

Lately, the seeds of geriatric training programs have begun to be sown. A National Advisory Council on Geriatric Medical Programs has been organized to provide information and to stimulate the development of geriatric medical training.

A geriatric medical program has recently been established at a city hospital affiliated with the Mount Sinai School of Medicine in New York City. The program offers fellowships in geriatric medicine under Dr. Leslie Libow. The New Jersey College of Medicine now offers an elective course in gerontology for its undergraduate medical students, and a community hospital in Baltimore has an on-going geriatric training program in its department of family practice under Dr. William Reichel. This year, Harvard University established a commission for the study of aging, chaired by Dr. Alexander Leaf, which, according to Dean Robert H. Ebert, will serve as a steering committee to oversee a university-wide survey of interest and facilities in the broad area of aging. Moreover, several other schools are considering the initiation of geriatric programs.

"HIGHER PRIORITIES"

The Veterans Administration (VA) has expressed interest in improving geriatric medical training and care, but a modest proposal to fund geriatric centers at five different VA hospitals, at a total cost of $3 million, was not carried out because of Federal cutbacks in medical funding and because of the attitude that there are "higher priorities" in the VA system. It is hoped that the VA proposal will be revived.

Another possible source of support for these needed programs is bill S. 764, proposed by Senator Frank Moss of Utah, which provides for the funding of up to six medical schools with a maximum of $500,000 each for the development of physician training programs in geriatrics. A number of medical schools have expressed keen interest in developing interdisciplinary programs in geriatrics, and there is an urgent need for professional and lay support to encourage the passage of S. 764.

Someone once said that people can be judged by how they treat their pets. Moreover, Federal regulations for the care of laboratory animals are far more stringent and "humane" than are current State and Federal regulations for the care of geriatric patients in our nursing homes. Let us hope that, through support of improved geriatric medical training and care, we will not be afraid to judge ourselves by how we treat our elderly ill.

Appendix 3

MATERIAL DESCRIBING STUDENT EDUCATION PROGRAM

(By Joseph A. Stewart, assistant director, New York University Medical Center, Office of Urban Health Affairs, and director, Geriatric Services and Research Division; and Linda Libow, program planner, Geriatric Services and Research Division)*

A Model for Medical Student Education in Geriatric Medicine and Gerontology

This presentation will be a descriptive report covering 2 years of pilot work in establishing a training program in geriatrics for medical students at New York University School of Medicine.

New York University Medical Center is located in an area of Manhattan that has a considerable population of persons 60 and older. This age group constitutes 16 percent of the total catchment area population or approximately 7,000 persons.

Two years ago, supported by a series of grants from private foundations, N.Y.U. School of Medicine through its Office of Urban Health Affairs began feasibility studies of a coordinated program of geriatric services and research. Two major programmatic ideas have emerged from these studies: (1) The establishment of a demonstration primary care clinic located in a neighborhood setting in an already existing social service agency; and (2) curriculum pilot studies to lead to a training program in geriatrics for medical students.

THE STUDENT PROFILE

In the first year of the pilot training program (1975) 25 applications were received from first and second year N.Y.U. medical students. After personal interviews with student applicants, 6 students were selected: 2 females (both first year students), and 4 males (2 first year and 2 second year students).

In the second year of the pilot training program (1976) 18 applications were received; 16 from New York University School of Medicine and 2 from Albert Einstein College of Medicine. After student interviews six were again accepted, all first-year students: one female and five males, including one student from Albert Einstein.

All students were offered an $800 stipend. The stipend policy is uniform to all programs offered by the Office of Urban Health Affairs. Students have an opportunity to apply for 20 stipends offered in summer electives such as: Adolescent medicine, infant death syndrome research project, medical education research project, floating hospital well-baby clinic, smoking health education project, and another geriatric project studying the effects of social networks among the elderly on health variables. Therefore we suggest that the notion of stipend as sole motivation for interest in geriatrics becomes severely unreliable considering the wide range of stipended choices available.

There are three major goals to our program:

(1) To interest and expose medical students to the health care needs of the elderly, with special emphasis on clinical needs.

(2) To ascertain and affect the attitudes of medical students regarding the person and care of an older individual.

(3) To emphasize the need for holistic treatment of the older person rather than the organ disease.

*This paper was first presented at the 29th Annual Scientific Meeting of the Gerontological Society in New York City on Oct. 16, 1976, and then at the 26th Annual Southern Conference on Gerontology, Feb. 16–18, 1977, sponsored by the Center for Gerontological Studies and Programs, Division of Continuing Education, University of Florida, Gainesville, Fla.

Our specific objectives are:

(1) To provide physician role models in the field of geriatric medicine.

(2) To establish effective field placements where medical students can observe and work with an interdisciplinary team in a hospital or community under the supervision of a physician/geriatrician.

(3) To provide a learning approach to geriatrics and gerontology which is interdisciplinary.

(4) To increase introductory cognitive learning in geriatric medicine and gerontology.

(5) To develop interpersonal skills of the medical student in relating to, interviewing, and diagnosing the older patient.

(6) To acquaint the student to basic literature in the field.

(7) To encourage the research interests of students in geriatrics and gerontological issues by means of a term paper on a subject of their choosing.

There are five major components to our training efforts:

(1) The lecture/seminar series.

(2) The field placement.

(3) The interpersonal skill laboratory.

(4) The evaluation/feedback session.

(5) The independent research paper or project.

The program is a full-time 6-week summer elective which runs Monday through Friday from 9 a.m. to 5 p.m. Each of the 6 weeks is based on the following format:

THE WEEKLY FORMAT FOR THE GERIATRIC SUMMER PROGRAM, NEW YORK UNIVERSITY SCHOOL OF MEDICINE

Session	Monday	Tuesday	Wednesday	Thursday	Friday
Morning	Lecture/seminar	Field placement	Field placement	Interpersonal skill laboratory.	Evaluation/feedback session.
Lunch	Luncheon/seminar				Luncheon/seminar.
Afternoon	Lecture/seminar	Field placement	Field placement	Interpersonal skill laboratory.	Independent research project/paper time.
Evening	Independent research project work				

(A) *Lecture/Seminar:* The students have 12, 2-hour lecture/seminar sessions which are based on the following topics:

(1) Who are the elderly? What is geriatric medicine?

(2) Normal aging.

(3) Psychological aspects of aging.

(4) Geriatric psychopharmacology.

(5) Specific geriatric problems.

(6) An approach to dealing with the multiple diseases of the elderly.

(7) An international comparison of geriatric health care.

(8) Geriatric rehabilitation.

(9) Sex and aging.

(10) Death and dying and the older patient.

(11) Medicare/Medicaid.

(12) Forms of long-term care: The nursing home, day care, and home care systems.

(13) Formal and informal support systems for the older person.

(14) Nutrition and aging.

(15) Law and aging.

The format for each lecture/seminar is 1 hour for presentation and 1 hour for questions and discussion.

(B) *Luncheon/Seminar:* This segment of the program provides the students with the opportunity for more informational types of learning and also for follow-up learning to the lecture/seminars; e.g., if students wanted further information about psychological aspects of aging, an additional speaker or the same lecturer can be brought back. Also, these sessions will allow broader issues of geriatric care to be reviewed.

Examples of luncheon seminars are:

(a) The political structure and aging concerns.

(b) The press and aging.

(c) Interesting research projects in aging.

(C) *Field placements:* Each student is placed in a geriatric health care program. We look for the following elements in choosing the field placements.

(1) An interdisciplinary team and approach to the care of the older person.

(2) The quality of the care offered is exemplary.

(3) The placement institution is willing to take and teach the student in the mechanisms of care within the facility, under direct supervision of a geriatrician or a physician director.

(4) The facility agrees to participate in the evaluation of the placement and to assist the student in his/her independent research needs, in the field of geriatrics or gerontology.

Examples of the facilities which have offered good field placements are:

(a) Jewish Institute for Geriatric Care, Long Island Jewish Medical Center, New Hyde Park, N.Y.

(b) Bellevue Hospital Center, Geriatric Unit, New York, N.Y.

(c) St. Joseph's Hospital and Nursing Home, Yonkers, N.Y.

Placements are selected after personal interview with the medical director at the facility. A physician preceptor is assigned to each student. The preceptor is expected to monitor the students learning while in the field placement setting. He/she will also be expected to provide an evaluation of the student and the placement at the conclusion of the 6 weeks. The usage of the physician as preceptor is seen as critical for role modeling. Such modeling has two purposes: (1) To show to students types of physicians active in the field of geriatrics; and (2) To show students how physicians work closely with other professionals in a team setting. The students also evaluate the experience after the completion of the placement.

THE INTERPERSONAL SKILL LABORATORY PROGRAM

The decision to develop a day around interviewing skills came from our first year's experience with the program. We found that the students needed and wanted to learn more about their abilities to interview and in particular to learn about the skills necessary to interview the older person. This component of the program introduces the students, through the use of videotape, to their abilities and weaknesses as an interviewer. Then each student is assisted in analyzing, changing, and developing their strengths in the role of a physician interviewer. This is how the first year of our laboratory program worked:

(1) Each student interviewed two older patients presenting different types of problems at the beginning and end of the program. The older patients were two older male and female actors. Videotapes were made of the interviews and these were used as the basis for the skill building sessions that followed.

(2) The tapes were reviewed and evaluated by the actor/patients, the student himself, a peer, the program preceptors, a clinical psychologist from the Department of Psychiatry, and a speech therapist.

(3) Weekly skill building sessions were developed around topics such as:

—Listening.

—Prescription giving.

—Interviewing techniques.

—Cultural differences in the elderly.

(4) The final interview and taping session gave the student an opportunity to see himself/herself in a similar interview situation and evaluate their development in handling the older individual in that situation.

THE EVALUATION/FEEDBACK SESSION

This session held on Friday mornings has three general purposes: (1) to allow the student to discuss and comment on his/her field placement, (2) to react to the cognitive learning in the lecture/seminars, and (3) to allow the students to express their feelings and fears about dealing with the elderly.

The sessions are led by the program's preceptors. At each session the student submits his/her log from the previous week which contains a series of questions about their field placements and completes a one page brief evaluation of the program. The log allows the student to formulate his/her plans for the coming week and reflect on how well they have succeeded in the past week. The 1-page evaluation gives us an immediate synopsis of the students reaction to the seminars and total program during the past week.

THE INDEPENDENT RESEARCH PROGRAM/PAPER

The purpose of this segment is not to produce a serious piece of research. The 6-week time limit precludes this. The purpose is rather to introduce the students to the field of the geriatric literature and allow them to become familiar with the fact that such a body of literature exists. This is important if the student is to make the link between his other clinical studies in the regular curriculum and the geriatric elective.

Students have explored a variety of areas. The following are some of the topics or titles chosen:

(1) "Fromaje: A New Short, Portable Mental Status Questionnaire for Assessment of Organic Brain Syndrome in Elderly Persons."

(2) "A Survey of 25 Geriatric HIP Fracture Patients."

(3) "Special Considerations Regarding the Medical Interview and Physical Examination of the Elderly Patient."

(4) "The Formation of Senescent Cataracts and Their Effects on the Aged Patient."

(5) "Drugs and the Elderly."

(6) "The Practice of Polypharmacy in Geriatrics."

(7) "Prognostic Factors in the Rehabilitation of Visually Impaired Older Persons."

TYPES OF LEARNING

In summary then, the total program incorporates three types of learning:

—*Academic:* Through the presentation of material on geriatrics and gerontology in the seminar/lectures.

—*Imitative:* Through the students contact with physician role models in their field placements and in the lecture/seminars.

—*Affective:* From their experiences and learning, we hope that the attitudes and feelings of the medical student have changed, developed, and improved in their approach and caring for the older individual.

As we indicated in the beginning we are not prepared to present experimental findings at this time. We have recently been funded by the Administration on the Aging to formalize our pilot work into a systematized and experimentally evaluated training program this coming summer. We are prepared, however, to provide some overall descriptive program data based on our pilot instruments to date. First of all, an indication of the testing points we used might be helpful.

Demographic form.
Kogan OP scale.
Field placement log.
Weekly review.
Interview evaluation session, student form.
Interview evaluation session, faculty form.
Interview evaluation session, par rating form.
Field placement evaluation.
Supervisors field placement evaluation.
Final evaluation.
Followup questionnaire (4 months later).

In a preliminary look at the evaluation materials the following points can be made: In answer to the question "What did you like most about the geriatric summer program?" the field placements, the Friday feedback/evaluation, and the lectures ranked high with both the 1975 and 1976 students.

In addition, all of the 1976 students liked the interpersonal skill laboratory. (It was only presented in the 1976 pilot program).

Other areas of high ratings related to the student's affective reactions and experiences such as:

(1) The opportunity to examine and work on the patient/physician relationship and specifically related to the older person.

(2) The holistic approach of the training program.

(3) Learning in small groups.

(4) Opportunity to discuss learning experiences openly with professor and students.

(5) Patient contact.

The areas the students felt should be modified or changed included: Limiting of lecture time on Mondays; and more group symposiums on matters such as polypharmacy problems and the role of the drug companies.

Some data was contradictory. The first year's group felt the field trips should be dropped and the second wanted the field trip experience added to the program.

The areas that the students felt needed to be dropped varied each year and focused on visits or field placements which they did not like as opposed to program thrust and content.

In summary, it is suggested that a workable model of preclinical geriatric instruction is possible provided the designer adequately deals with the following points:

(1) Clear clinical relevance of material presented.

(2) Contact with physician models who are actually working in geriatric medicine.

(3) Supervised patient contact on appropriate level of student understanding.

(4) Curriculum mechanisms to tap on-going progress and/or regress of student learning.

Appendix 4

ANNOUNCEMENTS RELATED TO GERIATRIC TRAINING IN MEDICINE

ITEM 1. ARTICLES FROM THE AMERICAN GERIATRICS SOCIETY NEWSLETTER, FEBRUARY 1977

Professorial Chair in Geriatrics Established at Cornell

The New York Hospital-Cornell Medical Center has announced the establishment of a professionship in geriatrics to be known as the Irving Sherwood Wright Professorship in Geriatrics, Dr. Wright, a renowned specialist in vascular disease and professor emeritus at Cornell University Medical College is a past president of the American Geriatrics Society and the recipient of two of the society's gold medal awards, the Edward Henderson Lecture Award and the Thewlis Award. A search committee is being formed to choose the first holder of the new professorship.

This professorship, believed to be the first endowed chair in geriatric medicine in the United States, is made possible by a gift of $1 million from the Gladys and Roland Harriman Foundation. The Wright professorship is expected, the foundation states, "to meet one of the most important needs of the times: the development, analysis, study, teaching, and dissemination of knowledge relating to aging and the application of that knowledge in the prevention and treatment of the illnesses, disabilities, and diseases of the elderly members of society." It is stipulated that "the professorship will be associated with both teaching and research at Cornell University Medical College and with patient care at the New York Hospital, so that both institutions and the people whom they serve will benefit."

AGS Conference on Geriatric Education

The American Geriatrics Society was awarded a contract in 1976 by the National Institute on Aging (NIA Contract No. 263–76–C–0496) for the purpose of conducting two conferences on geriatric education. The first meeting took place on October 22–23, 1976. Participants at the first meeting served as an advisory committee for the purpose of developing alternative models of geriatric education. These approaches and models were to be defined and crystallized for the purpose of presentation to representatives of major physician organizations at the second conference to be conducted on March 4–5, 1977.

There have been many inquiries from these involved in geriatric medicine and geriatric education concerning this meeting. Actually, the purpose of the meeting is not to convene those already in the practice of geriatrics, but rather to have a dialog with leaders and representatives of major physician organizations. The conference is relatively small with only 17 participants at the October session, and approximately 34 participants will attend the second conference.

At the October 22–23 meeting, the advisory committee clarified three models of geriatric education—A, B, and C. The A model comprises an increased emphasis on geriatrics in existing residency programs, such as family practice, internal medicine, and psychiatry, and the B model consists of a 1- to 2-year specialized period in certain residencies, such as internal medicine and psychiatry. This type of subspecialty program is being carried out by Dr. Leslie Libow in New York and Dr. Dodda Rao in Oak Forest, Ill. Model C is a full board-certified specialty of geriatric medicine, apart from internal medicine, family practice, or psychiatry.

It was the consensus of the advisory committee that model C should be rejected. The group felt this would be an important step in demonstrating that

there is no attempt to create another full-fledged, board-certified specialty. Instead, the group supported examples of model A type of program calling for increased emphasis on geriatrics throughout certain specialty training programs, and the model B type program consisting of a 1- to 2-year specialized period in certain residencies. For example, the internist, with an additional 1- to 2-year specialized training, would in a sense be a medical subspecialist in geriatrics. The psychiatrist with an additional 1- to 2-year residency or fellowship would be a geropsychiatrist.

The above stated concepts reflected the thinking of the advisory committee at the October meeting. The thoughts represent a starting point in defining workable models for advancing geriatric medical education.

Views of the readership of the newsletter on this subject are welcome. Please send your views to Dr. William Reichel, project director, Conference on Geriatric Education, 9000 Franklin Square Drive, Baltimore, Md. 21237.

ITEM 2. ABSTRACT OF THE GERONTOLOGY PROGRAM OF THE GEORGE WASHINGTON UNIVERSITY SCHOOL OF MEDICINE AND HEALTH SCIENCES

With a grant made possible by the Administration on Aging for fiscal year 1976–77, the Office of the Dean for Academic Affairs is responsible for the administration, conduct, and coordination of a multidisciplinary program in gerontology. This program is designed to introduce and improve educational programs within the George Washington University and its School of Medicine and Health Sciences, and to encourage research and student involvement in the field of aging The program is based on a commitment to a multidisciplinary effort on the part of several major departments within the school of medicine and health sciences and other schools and departments in the university. It is proposed that the gerontology content and geriatric care activities to be developed will impact the training programs of medical, nurse practitioner physician assistant, social work and allied health students, psychiatric and primary care residents, and students in recreation therapy, sociology, psychology, health care administration, and law.

The program objectives call for:

—Introduction of materials in aging in existing curriculum in the School of Medicine and Health Sciences; introduction of health related gerontology content in existing courses in various schools and departments throughout the university including health care administration, sociology, psychology, education, and law;

—Development of new courses, field placements, and clinical experiences in aging that will support training in existing professional and paraprofessional programs such as the paralegal training program in the National Law Center, the nurse practitioner, physician assistant, and psychiatry programs in the School of Medicine and Health Sciences, the clinical psychology program in the department of psychology, the master's program in recreation therapy in the school of education, the graduate programs in health care administration and long-term care in the school of government and business;

—Development of multidisciplinary seminars in gerontology open to faculty, staff, and students interested in aging;

—Identification and stimulation of universitywide faculty interest and involvement in teaching gerontology and in aging research;

—Identification of resources in gerontology in the university and community for the implementation of program objectives.

With the approval of their advisors and the dean for academic affairs, students in the school of medicine and health sciences and in other schools in the university may select courses in gerontology and geriatric care to either explore gerontology as a career option or develop a field of concentration within various disciplines.

The long-range goal of all these activities taken together is to promote this institution's development of a permanent gerontology center in the school of medicine and health sciences committed to the conduct of multidisciplinary educational research, consultation, and service activities.

For further information contact the gerontology program staff: L. Thompson Bowles, M.D., Dean for Academic Affairs; or Nona Boren, M.S.W., Director, the Gerontology Program.

ITEM 3. NORTHWESTERN UNIVERSITY MEDICAL SCHOOL ANNOUNCEMENT OF A NEW DOCTORAL TRAINING PROGRAM IN THE CLINICAL PSYCHOLOGY OF THE LATTER HALF OF LIFE

To: Chairman, Department of Psychology.
From: David Gutmann, Ph. D., Chief, Division of Psychology.

The Division of Psychology of Northwestern University Medical School, in collaboration with the Committee on Human Development of the University of Chicago, is initiating a doctoral program in the clinical psychology of middle and later life. This 5-year program will entail an integrated agenda of formal classwork, doctoral research, and a graded series of intensively supervised clinical experiences with older patients. Participants in the Northwestern program will share course and supervisory experiences with students in the adulthood and aging program of the Committee on Human Development. While the University of Chicago students will seek clinical training to round out their academic curriculum, the Northwestern participants will be primarily trained as clinical psychologists, particularly knowledgeable about functional, dynamic issues in the psychology of middle and later life, and capable of initiating innovative research and treatment programs in this field.

Required course offerings in the Northwestern University Medical School's Division of Psychology will stress basic clinical skills and the current conceptions of individual psychopathology, individual and group psychotherapy, dynamic personality theory, and community mental health practice. The human Development curriculum offered on the University of Chicago campus will give students an orientation to research methods, to sociobehavioral theories, and to the normal (including developmental) psychology of middle and later life. During the first 2 years, their concomitant half-time clinical training will take place on those treatment services of the Institute of Psychiatry, Northwestern University Medical School, that provide psychological services to middle-aged and older patients. There, students will have intensive contact with older patients, particularly those who have sought treatment for the first time in later life. Through case-by-case, intensively supervised exposures to such populations, the students will have an opportunity to study the psychopathologies that result from the social, somatic, and developmental changes of later life. Students will receive at least two full years of such clinical training, one of which would involve a bloc internship. This residency could be sought in any agency, on or off the Chicago campus, that is ready to continue the student's clinical training with older patients.

In these clinical settings, it is further expected that students will have the opportunity to evaluate academic conceptions of later life psychology that have been generated through studies of nonclinical populations, and to use these in developing new and testable conceptions of pathology and cure. Accordingly, the pre-candidacy exam will cover a significant topic, selected by the student, in the psychology of aging; and his doctoral research will be aimed at making a significant contribution to this literature. In sum, the goal of the program is to graduate creative specialists who can help to generate the as yet unformed field—the clinical psychology of the latter half of life—in which they practice.

CORE FACULTY

David L. Gutmann, Chief, Division of Psychology, Department of Psychiatry, Northwestern University Medical School; and Associate Director of the Joint Program in the Clinical Psychology of Later Life. (Cross-cultural research in the comparative psychology of later life.)

Morton A. Lieberman, Professor, Committee on Human Development and Psychiatry, University of Chicago; and Associate Director of the Joint Program in the Clinical Psychology of Later Life. (Research into the effects of environmental change on the aged, and the utilization of formal and informal helping systems in the last half of life.)

Benjamin Boshes, M.D., emeritus Professor of Psychiatry, Northwestern University Medical School. (Research interests in the clinical neurology of later life.)

Bertram A. Cohler, Associate Professor of Human Development, University of Chicago. (Research on the sociology and psychology of the three-generation family; and on the relations between mothers and grandmothers.)

Gunhild Hagestad. Assistant Professor, Committee on Human Development, University of Chicago. (Research on age grading systems, and on parenthood in the middle years.)

Robert L. Kahn, Associate Professor, Committee on Human Development and Department of Psychiatry, University of Chicago. (Research on relationships between depression and memory functions in the aged.)
Salvadore R. Meddi, Professor of Human Development, University of Chicago. (Research on socialization experiences in adulthood.)
Bernice L. Neugarten, Professor of Human Development, University of Chicago. (Long-time Director of the Adult Development and Aging Program at the University of Chicago; widely published in the areas of psychology and sociology of middle age and aging.)
George H. Pollock, M.D., Ph. D., Director, Chicago Institute for Psychoanalysis, and Professor of Psychiatry, Northwestern University Medical School. (Research into mourning and personality development in middle and later life.)
Harold M. Visotsky, M.D., Chairman, Northwestern University Medical School Department of Psychiatry. (Special seminars in geropsychiatry.)

Participants will be selected from the pool of applicants to the chinical psychology program on the basis of demonstrated interest in the clinical psychology of later life, and prior academic performance. Thus, trainees will have to meet the selection criteria for acceptance into the regular degree program of the Division of Psychology, as well as those set by the special program in aging. Interested students should write, with a brief description of their interests, relevant experiences, and academic accomplishment (including GPA and GRE scores) to: Dr. David Gutmann, Chief, Division of Psychology, Northwestern University Medical School, Institute of Psychiatry, 320 East Huron, Room 410–I, Chicago, Ill. 60611.

Promising applicants will be notified as to how they should complete the application process. Final applications are due February 28, 1977.

ITEM 4. LETTER AND ENCLOSURE FROM JOSEPH M. HOLTZMAN, ASSISTANT PROFESSOR, SOUTHERN ILLINOIS UNIVERSITY SCHOOL OF MEDICINE, TO HERMAN B. BROTMAN, CONSULTING GERONTOLOGIST, FALLS CHURCH, VA., DATED MARCH 2, 1977

DEAR MR. BROTMAN: As you requested I am enclosing a brief description of our program for undergraduates at the school of medicine. In addition, I have included a list of specific goals which we developed for the program. We are currently in the process of developing an appropriate set of goals for inclusion in the family practice residency. Undergraduates receive additional exposure to geriatrics/gerontology in their psychiatry clerkship and in an elective sequence offered jointly by health systems research and family practice. I would be delighted to provide you with more detailed material you might request.

The chairman of our Geriatrics Committee has already passed on these materials to Dr. Butler. I would appreciate it if you would pass copies on to Dick Schloss as we discussed. I will be attending the meetings Dr. Butler has arranged later this month and look forward to seeing you again.

Sincerely yours,

JOSEPH M. HOTZMAN.

[Enclosure.]

GERIATRICS/GERONTOLOGY PROGRAM: A BRIEF DESCRIPTION

The Departments of Family Practice and Health Systems Research at Southern Illinois University School of Medicine have cooperated in the development of a program in gerontology for undergraduate medical students. We believe that the SIU School of Medicine is unique in requiring all medical students to participate in the program as part of the family practice hospital clerkship.

The gerontology program occupies 5 half-days (one-half day each week) during the family practice hospital clerkship. During that period, students become familiar with the problems, care, and treatment of patients in the nursing home setting and in the community. They examine and work up patients in a nursing home setting, receive lectures on theories of aging and common clinical problems associated with old age, and become familiar with community resources available to service the aged. They are exposed to both the sick and well elderly through home visits and visits to senior citizens' centers and nutrition sites.

The undergraduate experience in gerontology is one segment of a developing comprehensive program in gerontology at SIU. Other elements include a con-

tinuous 3-year experience for family practice residents as a component of their residency training, in-service training of nursing home personnel, and an ongoing program of research and evaluation in gerontology conducted jointly by the departments of health systems research and family practice.

GERIATRICS/GERONTOLOGY UNDERGRADUATE PROGRAM

Purpose.—To enable the student to identify and discuss the physical, phychological, and socioeconomic problems of the elderly person in American society.

Specific Goals

(1) To gain knowledge of the physiology of the aging process.
(2) To gain knowledge and skills in the diagnosis and treatment of clinical problems of the elderly, including the use of medications in this age group.
(3) To gain experience in working with the health care team in the development and application of treatment plans in institutional and community settings.
(4) To gain experience in helping people with chronic or terminal illness.
(5) To gain knowledge and understanding in a cognitive and affective sense, of old age as a phase of growth and development.
(6) To become aware of whole person evaluation and family and social interactions as they affect the individual's health.
(7) To become aware of one's own attitudes and feelings toward aging and the elderly and the effects of these on overall management.
(8) To gain knowledge of the effects of institutional care on individuals.
(9) To explore the issues of community and home care for the elderly.
(10) To be exposed to administrative factors in running an institution for the elderly.
(11) To become aware of socioeconomic and political issues as they affect the older American citizen.

Program

(A) Teaching faculty and resource people:
At present, the teaching faculty consists of: full-time faculty of the Department of Family Practice, SIU, including several M.D. faculty and two behavioral sciences faculty; faculty from the department of medical humanities; and a medical sociologist from the department of health care planning.
There is a central planning and development committee centered out of the department of family practice with representation from each of the above groups and chaired by a family physician. This committee reports to the chairman of the department of family practice.
Contacts have been established with people active in community based programs with whom the students will be involved. At present this includes: Seniorama, a multipurpose senior center which provides counseling, referrals, advocacy, community service programs, home visitors, a nutrition site, a transport service, and a retired senior volunteer program. Also involved will be: a group of residents from a senior citizen's high-rise apartment building; a Project Life sponsored program of home visitors; and other nutrition sites in the community. Students will visit or meet with these groups for discussion, home visits, etc.
Also involved will be the staff of the local nursing home facility from which some activities will be centered. This will include staff from the following areas: nursing, rehabilitation, intake, staff development, activities, and administration.
(B) Learning activities:
During the 6-month family practice ambulatory clerkship each student will spend several sessions involved with the community activities. Hopefully this will reflect a noninstitutional bias to the program.
Each student also spends a 4-week hospital-based family practice clerkship during which time he will spend five afternoons dealing with issues of aging. The setting for four of these afternoons will be a local nursing home facility and the fifth will be community based.
Didactic discussions will include: the physiology of aging; medical problems of the aged from a problem oriented basis, e.g., problems of ambulation, problems of restricted activity, etc.: prescribing for the elderly; psychosocial issues of institutional and home care; physical and psychosocial rehabilitation. Students will have an assigned group of nursing home residents to help illustrate some of the above issues and to act as an experience base.
The community based afternoon will involve discussions with one or several of the resource groups and a final meeting to help summarize and process some of the student's thoughts and feelings about the experience.

Appendix 5

STATEMENTS SUBMITTED BY THE HEARING AUDIENCE

During the course of the hearing, a form was made available by the chairman to those attending who wished to make suggestions and recommendations but were unable to testify because of time limitations. The form read as follows:

DEAR SENATOR PERCY: If there had been time for everyone to speak at the hearing in New York on October 13, 1976, on "Medicine and Aging: An Assessment of Opportunities and Neglect," I would have said:

The following replies were received:

DAVID HALL BROOKS, NEW YORK, N.Y.

A study of geriatrics for medical students and nurses (and allied health professionals) should not be an elective, an option in a permissive type of curriculum, but should be a mandatory feature of the core curriculum of general medical/clinical studies toward the M.D. degree since there is a body of knowledge and an increasingly large need to know.

Just as orthopedics, rehabilitation medicine, neurology, rheumatology (with the essential anatomy and physiology) can all be brought together under the locomotor system and its problems, so can aging and its problems include pediatric, adolescent, adult, and geriatric areas of attention.

In 1943 at Oxford University (United Kingdom) there was an acknowledged need for greater expertise in the handling of pediatric problems (including neonatological) so the necessary stress was made in lectures, rounds, studies, contacts, and seminars preparatory to the inclusion of two out of six questions in each of two medical, two surgical, and two midwifery/obstetrics/gynecological papers in the final examinations.

Even then, 38 years ago, an early clinical introduction to geriatric medicine was effected by visits on a regular, organized basis to the local Poor Law Institution which was pioneering a new approach to long-term and custodial care (Cowley Road Hospital under Dr. Lionel Zelick Cosin). His enthusiasm was sufficient to light the essential spark of student interest in patient care delivery.

The essential inclusion of aging and geriatric problems in the basic medical undergraduate training (as, for example, in North Dakota's medical school) should be sufficiently stimulating to secure inspired candidates for further specialist or subspecialty training in geriatric medicine, greatly needed in the United States and Canada.

GLORIA K. BYRNES, ST. PAUL, MINN.

I agree with Dr. Butler's and Dr. Libow's position regarding the need for the inclusion of a geriatric specialization in medical schools. The emphasis on geriatric education should be placed in family practice education. The health care of the aged should be seen as part of the life cycle and thus emphasized as part of family practice in order to prevent further alienation of the elderly.

Medicare should be revised to include funding for the training of, not only medical students, but other professionals (social workers, nurses) who enter the field of gerontology in the delivery of health care services.

Attention must also be given to broader areas of medicare reform in order to overcome its deficits. Medicare reimbursement must be provided for home support systems rather than concentrating, as now, on in-patient care. Out-patient drug

coverage must be provided as well, since this comprises a large share of the elderly's medical expenses. Hearing aids, glasses, dental work, and ambulance transportation are other critical areas that require medicare funding.

In order to encourage the practice of preventive medicine, routine physical examinations should be provided under medicare.

CAROL CATLIN, CHICAGO, ILL.

Professional educators derive realistic and idealistic philosophical goals from the needs of the community they serve. Professional educators have a commitment to keep abreast of the ever accumulating knowledge of man and his ever-changing environment. The needs of communities have been changing from the concept that health care services were available to those who could afford, to the present belief that health care services are a right. Medicare was an act designed to insure that certain members of the American population received health care services. Suddenly, professional educators are faced with an older population seeking all kinds of health care services.

Providing safe health care services for older people requires special knowledge and skills. As a masters level nursing student, I evolved a philosophy of nursing applicable to the care of older people requiring rehabilitative services; I studied the biological changes of aging and pursued concepts of why we age. Finally, I studied the particular illnesses of aging while I developed new nursing skills and applied my philosophy of nursing providing health services to older residents of nursing homes. I feel there is more to learn to be a safe health care provider for older people.

Professional educators have the opportunity to provide safe health care practices in meeting the ever-changing needs of the community through the development and application of gerontological courses. Professional educators have the opportunity to increase the knowledge of gerontology through research practices.

The practitioner, the nurse, and the physician have the right to demand quality education and the latest knowledge of health care practices. They must demand courses in gerontology for they are the direct providers of health care services; their license is on the line when they serve the community.

R. KEITH COCHRAN, LUBBOCK, TEX.

I echo the timely and insightful comments of Senator Percy regarding the potential use of our health care personnel and facilities and the benefit they can afford to the elderly of our Nation. There is a phase of health care, however, which, I feel, did not receive adequate emphasis in the hearing, though it may have been one step beyond the comments and intentions of the panel of experts that were present in New York. The significance of preventive health care cannot be overemphasized when considering the topic, "Medicine and Aging: An Assessment of Opportunities and Neglect."

My involvement in the field of aging is through a title VII nutrition program for the elderly. The persons with whom I deal in the program are 60 years or older and, for the most part, are relatively active people. Daily, I see how preventive health services could be significantly advantageous, and I feel confident that others working with noninstitutionalized elderly share my perception.

Programs which would enable persons, educationally, relative not only to dispelling of medical myths, but also to making them aware of resources offered by the health care community, could make a tremendous impact on the overall level of health of the elderly in the United States. Additionally, if diseases could be determined and medically treated prior to the time when they produced a debilitating or devastating effect on the body, the implications to the physical as well as the psychological, well health of the elderly, I think, would be innumerable.

As government increasingly responds to the health needs of the elderly, as well as when medical schools and other academic institutions, which are concerned with educating health care service deliverers, begin developing their curriculum with considerations for the elderly client, they must recognize that the need is great for broadly based programs of health education together with pro-

grams designed to detect and to treat diseases early in their course. The effect of such preventive medicine can only be, if I may borrow from Senator Percy, "to keep our older citizens functioning as fully as possible for as long as possible."

ROBERT C. COMBS, IRVINE, CALIF.

In order for the medical schools to increase their activities in the field of geriatrics (we recognize our obligation to do so), funds would be necessary. I feel it would be unwise to require schools receiving such funds to form departments of geriatrics. Such departments may or may not logically evolve. To mandate their immediate existence would repeat the greatest problem experienced with family practice programs—that is, starting departments without available qualified chairmen or faculty.

It would be better to start with divisions with departments, or originally just programs.

RUTH DAVIDON, SAN FRANCISCO, CALIF.

Probably the most distressing practice to me is the setting up of programs for aging long-term care clients for 1 year and then starting new ones the following year. No program can prove its worth in so short a time either in service or cost.

An example of this type of costly and wasteful way of beginning a program which is being closed down is the senior day care center which provites support to handicapped aging clients to stay home instead of being institutionalized in warehouses distant from home, family, and friends.

SUZANNE R. DAY, ANN ARBOR, MICH.

Far more attention needs to be applied to the assistance of geriatric chronic conditions than our current medicare system permits. In particular, I am concerned that there are such limited possibilities for home health care when evidence is overwhelming that there is a demand for such service. Economic indicators are mounting in support of such care as a mechanism for reducing escalating medical expenses.

When up to 40 percent of those now in nursing homes have not been kept there for medical reasons, we must develop a more rationally graded system for services to more closely match service delivery to actual service demand. Unless we improve the choices available under our Federal funding system, we shall continue to provide incentives for institutional care requiring unnecessary construction of additional beds as the older population continues to rise.

In documentation of the supply-demand gap, and with the hope that the final section of economic policy implications will be useful to your work, I am enclosing a paper[1] prepared last year and forming a background for my continuing research on these issues.

DEBORAH DOWNEY, EUCLID, OHIO

While at this point in time it has become clear that elderly persons have special medical problems, it is also clear that they have special nursing problems which we, as nurses, thoughtfully need to consider and plan to care for. Therefore, future plans need to be made for graduate and undergraduate nursing programs to meet those needs for health delivery.

JAMES W. ELLOR, CHICAGO, ILL.

Over 95 percent of people over the age of 65 are living in the community, and generally responsible for their own medicine.

[1] Retained in committee files.

Many adults have poor self-medication habits, but older adults are particularly susceptible to the potentially resulting problem of adverse drug reactions. While people over 65 comprise 10 percent of the population, they consume 25 percent of all prescription drugs. Physiologically, the older person is at greater risk of experiencing adverse effects from his or her medicine.

Studies made during the past 15 years, as well as our experiences with the elderly, point out several common and potentially dangerous self-medication behaviors:

—a lack of knowledge of the name or action of a particular drug;
—a lack of knowledge of how a particular drug is safely and effectively taken;
—a lack of awareness of side effects;
—stretching medicine to make it last longer than it was prescribed for;
—borrowing and lending medicines;
—saving old medicines and tending to self-treat with these;
—taking medicines irregularly;
—mixing different medicines in the same container;
—overusing or inappropriately using nonprescription medicines.

Our concern centers around the resulting adverse medication actions and interactions that prevent the older person from maintaining an optimal level of health.

The seniors' health program has developed a pilot program of drug education in Chicago. Our general objectives have been: (1) to decrease inappropriate or unnecessary drug use among the elderly, and therefore decrease the number of significant adverse reactions to medication; and (2) to address the current values of society toward aging, especially as reflected in the health care system, and to foster nondiscriminatory attitudes in the community. The program includes group health education sessions, individual counseling, and the creative use of the public media.

MARGARET E. FERRY, BEAR CREEK, PA.

Persons living in nursing homes are labeled as "patients," and they are enmeshed in the medical model. In actuality, medical care occupies a very small portion of the day for those who are chronically ill (as opposed to the convalescent from an acute incident). When, and how, are we going to emphasize the home aspect, rather than the nursing, and concentrate on prolonging living rather than extending dying?

What steps are being taken to provide a working description of a good nursing home (again, for the chronically ill). The acute care values of cure are not really applicable when terminally ill people are being cared for. Some homes pride themselves on their low death rate, when in reality they discharge patients to hospitals to die. How do we provide for a "good" death—and what is it? We discuss reducing mortality from this and that disease, but it will still continue to be 100 percent mortality. How do you propose to deal with alleviating the aches and pains of the aged as compared with the seeming preoccupation with more and more esoteric means of intervention in acute episodes? One old lady told me, "I wish the government would get me dentures and a hearing aid. Then I would have enough money to buy food and I could chew it. When my time comes, let them pull the plug on all that machinery in the hospital—and they will save money and I can enjoy my life while I can still function pretty well."

SALLY FOLLETT, WALTHAM, MASS.

In 1941 I wrote a paper on the attitude of doctors—particularly those belonging to medical associations—toward low-cost care for the elderly. There has been some change, but too many old people are still not receiving the kind of good "caring" care they need (aside from the fact that medical care costs too much). Medicare may be intended for older people, but whoever wrote it doesn't know that many old people may need long-term, costly care.

JACQUELINE L. FRASER, GARDEN CITY, N.Y.

I am sorry that your latest survey was not sent to professional nursing schools across the country asking the same three questions.

There is growing concern for the health care needs of the aged on the part of the nursing profession and greater recognition of the importance of including both classroom and clinical experience in the care of the elderly in basic nursing education programs. I am pleased to learn tonight that the American Nurses Association is conducting a study similar to yours among nursing schools. I look forward to its results.

I do hope that the committee will keep in mind that the health problems of the aged—or any other age group, for that matter—require the interdisciplinary collaboration of many health professions. Their problems cannot be solved by one profession alone.

This hearing is emphasizing the need for more attention to the health problems of the elderly in the curriculae of the health professions. Although the need for advanced practitioners in gerontological nursing is certainly substantiated by facts and figures, some of which were in your statement tonight, the ability of health care facilities such as nursing homes, to employ them is greatly impaired by cuts in funding under medicare and medicaid.

The development of programs to prepare highly qualified practitioners of gerontological nursing is one matter. Providing the funding to support their employment in ambulatory programs and in health care institutions for aged, hence the utilization of their skills for the benefit of our elderly, is quite another matter.

I hope your committee will earnestly address this concern.

MICHAEL GILFIX, PALO ALTO, CALIF.

As a lawyer working in the field of law and aging, I am acutely aware of the failure of the professions to adequately address the problems inherent in aging. Other testimony has established the dearth of training in the area of geriatric medicine in our schools of medicine. Similarly, this area of neglect in the law school context has been recognized and is currently being addressed. In fact, the Administration on Aging is currently funding no fewer than three projects under title IV–A of the Older Americans Act that are designed to develop materials for the teaching of courses on legal problems of elders. The medical profession should, in this case, follow the lead of the legal profession and begin to address this apparent need and add geriatric medicine to its teaching curricula.

As the director of Senior Adults Legal Assistance, and a recipient of a training grant from the Administration on Aging, I am acutely aware of the need for a multidisciplinary approach to the problems of aging. For example, courses on legal problems of elders in law schools are incomplete if they do not simultaneously sensitize and alert students to the psychological and physiological problems that elders encounter and that often have direct legal implications. Accordingly, the materials that I am preparing for courses on legal problems of elders include necessary and relevant content on the subjects of aging and psychology, psychiatry, physiology, economics, history, and anthropology.

Courses in schools of medicine on the subject of geriatrics or aging should be similarly multidisciplinary. For example, decisions as to certain types of treatment for elders or the content of medical reports may have direct legal impact in terms of medical and income governmental benefits. They also may have direct impact in the context of a conservatorship or guardianship proceeding.

I, therefore, urge this committee to take all necessary legislative action to effect the inclusion of medical matters relating to aging in the training of doctors, both in the medical school and in post-medical school training. The content of such training should be sensitive to the interrelationships between medical, legal, and physiological factors.

ROSE GOLDFARB, NEW YORK, N.Y.

We must train more doctors to be general practitioners, and to make house calls.

Gerontology should be an accredited course in every medical school.

An older person should not be told "What do you expect at your age," but be helped to relieve his pain. Most important is passage of a national health service bill that will give protection to all age groups. I'm a member of the Gray Panthers, and we have seminars on national health, so I know that it would be the best thing.

LUCILLE D. GRESS, KANSAS CITY, KANS.

It was indeed a privilege to attend the opening session of the annual scientific meeting of the Gerontological Society in New York, October 13, 1976. The hearing of the U.S. Senate Special Committee on Aging on medicine and aging was indeed appropriate for the occasion. On the basis of the invitation extended at the meeting, I am submitting this statement to be included in the report of the hearing. In spite of efforts made to date, it seems to me the need for additional support of educational programs on human development on aging and the interdisciplinary approach is crucial to meeting the continuing and increasing needs of an aging population.

Granted, there is opportunity and need for additional content on geriatrics in the curriculum of medical schools; I submit there is also need for additional content on geriatrics and gerontology in other educational programs for health personnel—i.e., nursing. Moreover, I believe there is need for nursing students to be involved along with other students taking course work related to aging as a part of the educational experience.

Many of the needs of aging persons are multifacited in nature requiring team effort for achievement of goals. Assessing, establishing goals and priorities related to needs of the elderly necessitates input from the various team members, including the aging person and/or his significant other. In my opinion, teamwork will be more effectively carried out by health care personnel who have gained knowledge and understanding of the roles and responsibilities of others during the educational process in the student role.

Best wishes in your continuing endeavors.

ANN MARIE V. GUILLORY, NEW YORK, N.Y.

There is a tremendous need for the consolidation of services for the elderly. Medicare is failing to serve the needs of the elderly. Senior citizen centers are not reaching the socially isolated, and mental health facilities are not prepared to deal with the mental problems which are exclusive to aging.

The failure to adequately serve the health, social, and psychological needs of the elderly is largely due to the fragmentation of services. A change is needed.

JACQUE HEPPLER, BROOMFIELD, COLO.

I feel that one solution to the doctor's absence in long-term care facilities would be to facilitate the employment of specially prepared registered nurses (geriatric nurse practitioners) by third-party pay reimbursement mechanisms. Senator Percy, what is your stand on this?

LISSY F. JARVIK, LOS ANGELES, CALIF.

UCLA School of Medicine is beginning to make a commitment to aging. We are in the process of (1) starting a geriatric psychiatry ward with input from the division of family practice; (2) starting an outpatient geriatric psychiatry clinic; (3) submitting a postdoctoral training grant; (4) submitting a training grant for research in geriatrics; (5) requiring a visit to a nursing home as part

of the freshman medical course "Introduction to Human Behavior"; (6) having a close working relationship with the VA-GRECC centers in the areas; (7) the first geriatric psychiatry ward in the VA system at the Brentwood VAH; and (8) providing an elective in geriatrics for medical students including one under the auspices of the department of biochemistry.

LUCY JOSEPHSON, NEW YORK, N.Y.

All medicines, treatments, etc., for the aging should be free in every State in the Union. This includes crutches, medical needs, and dental care services.

ETHEL KESHNER, NEW YORK, N.Y.

What effort is being made to correct the many abuses of medicare and medicaid of doctors' charging for services not rendered and/or of arranging for a vast array of medical procedures more harmful than helpful to the helpless patient?

SHARON KLIESEN, ATLANTA, GA.

Medication which is prescribed for the elderly should include information about side effects of the medication, as well as precautions about taking it with other medication, especially over-the-counter medications which the older person may overlook as being important. These drugs are often not reported to the physician.

KATIE LOO, SAN FRANCISCO, CALIF.

There is a need to arouse the medical students' interest in gerontology.

M. MACHUDIS, NEW YORK, N.Y.

Much the same as the study of geriatrics medicine is relegated to passing comments, the study, teaching, training, and treatment of the needs of the elderly persons' dental problems is equally neglected.

There is a great emphasis on the needs of the elderly in all aspects of their existence—more today than ever before—but almost no regard is being given to dentistry, and especially to its relation to its interrelation to all the other medical aspects and needs.

There is great need to give careful consideration to the dental needs of the elderly.

EMILY M. MURPHY, NORTH ANDOVER, MASS.

May I suggest that some sort of printed matter of the legal aid program for older Americans, especially wills, be made available to councils on aging for distribution in their areas? The councils are a great source of outreach daily.

President John F. Kennedy's Peace Corps has been one of the world's most unselfish methods of helping mankind all over the world. So in that vein, I suggest a voluntary service for students who are to become the Nation's lawyers, with credits accumulating toward appointments for work in government programs, or even for elective office. Such credits could be added to their résumés, with adequate publicity.

These services could be paid for by grants or even colleges, who always need grants. The service could be done the year after graduation before passing the bar.

Senator Kennedy, thank you for the legal aid program, the senior aid program, title VII food, the hot lunch school program, and the home care services program.

DAVID A. OTTO, COLUMBIA, MO.

"Medicine and Aging: An assessment of Opportunities and Neglect" is an interesting topic for discussion; such topics, however, represent singular grains of sand in a sea of aging. Until such time as our society returns the "older person" to a proper position of respect and until such time as young people understand that age 40 and senility are not commensurate, it is doubtful that many of our aging problems can be readily solved. Should we not consider first, as a nation, the complete modification of formal education in our public school system so as to "gear" the minds of our children to better understand the aging phenomenon and thus produce a new aging value system? A better understanding of the aging phenomenon at all levels of our society will facilitate a more rapid acceptance of solutions to problems of the phenomenon.

MARLENE PATTERSON, PHILADELPHIA, PA.

There is a need for broadening the topic of "medicine and aging" so that recognition is taken of the existence of social and psycho-social factors impacting on health and medical treatment for the elderly. I therefore recommend that testimony be taken from practitioners in social work and social welfare who could address this perspective.

VIMALA PHILIPOSE, DENVER, COLO.

As Dr. Butler commented in his remarks, the attitude of the health professionals should change if the knowledge in geriatrics is to expand. I offered an elective course in geriatric nursing last year and requested many physicians if they could give a lecture on medical problems of the elderly. Not one of them were willing to, except some residents who were willing to say something on the subject. If Dr. Cooper wants financial aid to medical schools, the Federal Government must establish some criteria when they provide this money; i.e., that the money is utilized for geriatric medical education. This applies to nursing schools, also. There is adequate information right now in aging that medical and nursing students can learn.

Preventive medicine is also a neglected area. Dr. Berlinger, dean, Yale School of Medicine, was not only unimpressive, his information was biased and prejudiced. His comments are a sad commentary to the medical profession. If the problems of the elderly are so similar to the young adults, why should only postgraduate students be studying them? His comments were severely provocative.

The dean talked about problems of drinking, smoking, automobile accidents, etc., and said that doctors could not be responsible for these problems. Ironically, he was smoking himself—a poor role model for the layperson.

I agree with Dr. Sherrod—there is already enough information in geriatric medicine to integrate in medical and nursing schools education. Definitely, we need more research and knowledge in this area.

I agree also with Dr. Libow's comments. The pediatrics field is mandatory in all medical and nursing schools—geriatrics should also be integrated in all schools of medicine and nursing. Human development continues from infancy to senescence.

Senator Percy, I honor your personal integrity very much. It is regrettable that you did not run for the Presidency of the United States. The world would have benefited by your leadership.

JANE PORCINO, STONY BROOK, N.Y.

Funding should be made available to medical schools—especially developing schools with a clinical hospital attached (such as the State University of New York at Stony Brook)—to develop a specialty in geriatrics and gerontology to meet the needs of this growing segment of our population.

The hearing was exciting, offering many challenging ideas.

CATHERINE A. ROCKWOOD, DEKALB, ILL.

There is a crucial need for factual data and thus preparations and distributions of bulletins to the public in regard to the use of medicines, nature of reactions (possible), and the need to report to the physician/nurse questions and concerns.

One example: Aspirins and other salicylates, when given in large doses by doctors in efforts to reduce pains from arthritis, may cause hearing loss, headaches, etc., and danger when used in conjunction with other medicines.

JON H. ROUCH, WARREN, PA.

Many of the traditional State hospitals care, or used to for the past century since Dorothy Dix promoted such; now one-half their patient population is over 65. Many are psychotics of 30-plus years ago now growing old.

At Warren General Hospital, Warren, Pa., we have a $9 million geriatric patient building (500) including the above, but now also organic problems over 65. Excellent facilities, but why should "lunatics" be put out of the way in rurals? Warren, population 15,000, receives patients from 13 northwest counties of Pennsylvania, including Erie (350,000), plus other cities.

How can an almost defunct State hospital, rural, serve urban needs? How do they justify a $9 million geriatric center there?

Thank you, Senator, for your interest in aging.

ANN SCHORR, NEW YORK, N.Y.

We need national health service for everybody—young and old—financed out of general funds.

JEAN SKORONSKI, CHICAGO, ILL.

As a bridge from consideration of the community to that of the elderly in the United States and, in particular, in housing projects, it may be well to consider that the poverty, isolation, and criminal violence lead to youth lifestyles that is difficult for a middle-class adult to imagine. The isolation of youth from elderly is marked in the community. Worse, the relationship of "the gang" to the elderly is that of predator to victim.

Most adverse drug reactions can be prevented; but prevention requires attitudinal changes and this requires an educational program designed specifically for the elderly and accessible to them. Education is of a particular importance since the elderly are particularly susceptible to the advertising media which is geared to sell medications. Of course, for many elderly persons, taking no medication is better than taking a medication which is harmful rather than helpful.

LORRAINE HIATT SNYDER, SOUTH MINNEAPOLIS, MINN.

Those of us involved in multilevel care geriatric centers, serving several hundreds of people in community services and residential and health care, are deeply concerned about the availability of medical directors, trained and experienced in balanced models of aging. That is, models of aging that respond to the physical, psychological, social, and individual/spiritual needs of older persons. We are concerned that attending physicians often are not trained in more recent concepts reflecting the rehabilitative potential of older persons, on alternatives to pharmecological intervention, on treatment involving the family unit, on newer concepts of psychosocial function and elderly. We are concerned that the physician, who sets in motion the entire array of services open to older persons through medicare and medicaid certification often feels that screening is of no value to the very old, that individuals have limited rehabilitative potential, that disability is concomitant with age. Finally, we are concerned that medical services

be included in many of the home delivered services and made part of community residences specially built for older persons.

We request that quality models of service delivery, involving physicians, be communicated; that more physicians be involved in continuing and new educational programs in gerontology; and that, if necessary, new roles for professionals in medical care of older persons be developed.

Although it should not be necessary to develop geriatrics as a special area of medical practice, it may be that such steps are required to elevate this field to the potential that must be realized. Furthermore, it may be that a special field of geriatric practice is necessary before the family practice physician, internist, and specialist bridge the service and informational needs.

JOAN WALSH TRELEASE, NARRAGANSETT, R.I.

I would like to have seen someone represent the American Osteopathic Society. The D.O. is very much involved with family medicine and the new college of osteopathic medicine in Bedderford, Maine, is incorporating geriatric medicine into its curriculum.

MILDRED UMMEL, DAYTON, OHIO

There is a great need for further education in geriatrics. The opening and opinions and observations presented by Dr. Berliner and Dr. Cooper were very disturbing. Dr. Libow's attitude toward aging is refreshing.

Aging needs an advocate such as you. If ever there is a need for a worker in Ohio, I would be most happy to serve in your cause. If ever you are in Dayton, Ohio, please stop in at the nursing home care unit at the Veterans Administration Center. We would be most happy to have you as our guest.

ROBERT E. VESTAL, NASHVILLE, TENN.

As implied by Dr. Sherrod in his statement, there is an important need for both basic and clinical research in geriatric pharmacology. The older, largely anecdotal literature suggesting that drug response differs in the elderly needs to be substantiated by carefully controlled clinical and laboratory studies. At the Gerontology Research Center (GRC) of the National Institute on Aging in Baltimore, basic research in the pharmacoolgy of receptors reveals, for example, that there are fewer adrenergic and glucocorticoid receptors in cells and tissues from aged experimental animals than from younger animals. These findings may help explain differences in response to catecholamines and steroid preparations in the older patient. Recent studies of age differences in drug distribution and elimination serve to emphasize that age is an important variable when studying the pharmacology of drugs in man. Vanderbilt workers have shown this to be true for diazepam (Valium). Clinical research also suggests that drug sensitivity is affected by age. For example, while at the GCR, Dr. Robertson-Tchaho and coworkers demonstrated that older subjects are more sensitive than younger subjects to the effects of alcohol on memory, auditory attention, and reaction time. However, at the same time we showed alcohol metabolism to be unaffected by age. Much of the limited, available literature in geriatric clinical pharmacology comes from abroad where there is more interest in geriatric medicine. In this country we also need more information about drug utilization and adverse drug reactions in extended care facilities. I concur strongly with Dr. Sherrod that we need to communicate to medical students, residents, and practicing physicians ways of improving therapeutics in elderly patients. Hopefully, this can be based in part on firm knowledge of how pharmacokinetics and pharmacodynamics differ in the elderly.

CAROL WICHITA, TUCSON, ARIZ.

Physicians caring for the elderly and aging people today need to realize they are only part of the team—a very important part, but not the total picture. Aging persons today have problems that require preskills of people who will listen to, not just the physical aspects, but listen beyond the physical aspects and offer so-

lutions other than another prescription. By utilizing skills of nurses, social workers, nutritionists, many times the real problems are identified; i.e., the frustration of a relationship, the denial and anger of a terminal illness, or the fixed income with soaring prices.

People today offer a variety of physical symptoms that often go ignored because the physician does not listen, does not have the skills to solve problems other than medical problems, or uses the age-old excuse, "I don't have time."

Medical care in the United States could be upgraded with cost reduced if the practice of medicine was controlled with Federal rules and regulations to check that group of physicians that abuse the citizens of this country with their greed.

The success of health maintenance organizations in our country is testimony for the upgrading of care with lowered cost.

The last issue I would like to address is that of malpractice insurance. When physicians begin to police themselves in accordance with the code of conduct, the inadequate practitioner would be eliminated—therefore reducing and eventually eliminating the hazard to the profession. In this way the malpractice, which is the real problem, would be reduced, bringing the insurance rates into perspective. As with any other issue, it is only a few that abuse a system and give a negative connotation to the whole. Attitudes of society must change regarding aging, and one way to begin is by offering in medical schools curriculum in the area of aging.

A. KURT WEISS, OKLAHOMA CITY, OKLA.

Regardless of whether the training of experts in geriatrics is accomplished primarily by the establishment of new departments, divisions, or sections of geriatrics or whether this is done in already established departments, the necessity of having basic medical science departments in schools for health professionals staffed by at least a few individuals who have a primary interest in gerontology must not be overlooked. Since the first year or two of professional training in medicine and dentistry usually takes place in basic science departments, the task of interesting individual students and teaching all students the rudiments of gerontology must begin at this level. Basic science professors who are hired to teach and do research in other areas of a discipline cannot and will not devote the necessary time to further the discipline of gerontology. It seems mandatory, therefore, that one or more of the faculty members in the basic medical sciences have a primary interest in gerontology; these individuals can serve as resource personnel and/or coordinators for the gerontology program, which will probably cut across departmental lines of all departments in the basic medical sciences.

PEGGY MARCIA ZAKS, DETROIT, MICH.

This hearing was extremely interesting and invigorating. The major task of the Gerontological Society is to broaden participation and to heighten the Nation's consciousness level about aging related problems. In order to achieve such a demanding goal, the society must disseminate information about the aged to a number of professional and nonprofessional organizations. The fact that you, Senator Percy, have taken an interest in the society's purpose, function, and goals is a good move in the right direction of attaining this worthwhile goal. The society truly needs such catalyzing interests in order to illustrate the utility and potential of the society as a whole.

VICKI ZOOT, SKOKIE, ILL.

1. The geriatric nurse practitioner has the potential to greatly improve the care of the geriatric population. The nursing practice acts of the individual States must be changed to give recognition to this practitioner as a primary care giver.

2. The 1974 amendments to the Older Americans Act struck the requirement for a social worker in a medicare-reimbursed long-term care facility. This was a grievous error. Social workers should be required members of all interdisciplinary health teams, and have a particular significant contribution to make in long-term care.

IMPROVING LEGAL REPRESENTATION FOR OLDER AMERICANS

WEDNESDAY, SEPTEMBER 29, 1976

U.S. SENATE,
SPECIAL COMMITTEE ON AGING,
Washington, D.C.

The committee met, pursuant to notice, at 11 a.m., in room 457, Russell Senate Office Building, Hon. Edward M. Kennedy presiding.

Present: Senators Kennedy and Randolph.

Also present: William E. Oriol, staff director; David A. Affeldt, chief counsel; Deborah K. Kilmer, professional staff member; Mark Schneider, legislative assistant to Senator Kennedy; John Guy Miller, minority staff director; Margaret Fayé, minority professional staff member; Patricia G. Oriol, chief clerk; Eugene R. Cummings, printing assistant; and Alison Case, assistant chief clerk.

OPENING STATEMENT BY SENATOR EDWARD M. KENNEDY, PRESIDING

Senator KENNEDY. My apologies for being late.

I know our panel is very much aware of the importance of assuring legal services to our elderly people. There is no group in our society that is affected more by what Federal, local, or State governments, or individuals do than our elderly people. Most are dependent upon social security, or railroad retirement, or other retired income programs. Therefore, their relationship with the Social Security Administration and the rest of the Federal Government is extremely important.

They are constantly in negotiations over the quality of housing, the raising of rents, and other very important consumer issues. One of the most exciting aspects of both the Legal Services Corporation and the Older Americans Act has been their contribution of assuring the elderly their full opportunities and full rights under the Constitution.

We have a strong program in my own State of Massachusetts. Its only weakness is the greatness of the need. There are thousands of elderly whom it is not able to assist.

We are very interested in ways to strengthen this kind of program.

I will include my entire statement in the record and get on to our witnesses.

[The prepared statement of Senator Kennedy follows:]

PREPARED STATEMENT OF SENATOR EDWARD M. KENNEDY

Today, the Committee on Aging continues its hearings on "Improving Legal Representation for Older Americans."

Earlier committee hearings—in St. Louis, Boston, and Los Angeles—have made it abundantly clear that many older Americans now find themselves in an impossible situation when a legal problem arises.

This is particularly true for moderate-income elderly persons. Their income may be too high to qualify for legal services, but they still cannot afford a private attorney.

This issue received close attention when the Congress enacted the Older Americans amendments last year. Several provisions in the 1975 amendments—measures which I helped advance—are designed to make legal representation more readily available for the elderly.

One example is the expansion of title IV to authorize funding to train lawyers and paraprofessionals. Last month I heard firsthand, in Boston, about the valuable assistance elderly paraprofessionals from the Council of Elders Legal Services program provide other seniors on many issues: Social security, medicare, housing, food stamps, supplemental security income, and other Federal benefit programs.

But they are too few. Their funding is too little. And they are not part of a comprehensive network of legal resources linking the private bar, research centers, and law schools. More must be done.

The 1975 Older Americans Amendments also made legal counseling a priority service for funding under title III.

Our leadoff witness this morning, Commissioner Flemming, of the Administration on Aging and a former Secretary of HEW, will have more to say about the implementation of the legal representation provisions in the 1975 amendments. The committee will seek answers to other questions as well:

What steps has the Administration on Aging taken to make the law schools, the private bar, and legal services attorneys more sensitive to the legal problems of the elderly?

How much funding under title II is directed at improving legal representation for older Americans, and what roles will the new State legal services offices fulfill?

Have the 11 model projects funded under section 308 yielded any innovative ideas for meeting the legal needs of older Americans?

How many attorneys and paraprofessionals does the Administration on Aging plan to train with title IV funds?

And what are AoA's long-range plans for insuring that local offices on aging are responsive to the many legal problems now confronting the elderly?

I see no reason why there could not be a systematic effort to establish legal services outreach centers at every large elderly housing project. Attorneys do not always have to be at the site. But they could have scheduled hours of service. For the elderly, we have meals-on-wheels, but we should start thinking about how we could have lawyers along riding shotgun.

Our recent hearing in Boston also emphasized that the elderly are underrepresented in the legal services program.

We shall hear later from Mr. Thomas Ehrlich, president of the Legal Services Corporation, on this matter.

Let me state at the outset that the resources available to the corporation to serve the poor are inadequate generally. The administration proposal to deny the corporation 25 percent of its appropriations through a rescission is totally unacceptable.

But the elderly are a far larger portion of the adult poor than the present distribution of legal services resources indicates.

A Legal Services Corporation survey—and I am well aware it was a very limited survey—revealed that persons 65 or older only accounted for about 7 percent of all clients in the legal services program. Yet, older Americans represent nearly 24 percent of the total poverty population among persons 18 or older.

The committee believes the elderly should be equitably represented in the legal services program. They also have special needs and special problems. We want to insure that their legal problems receive thoughtful, careful, and competent attention. They deserve no less.

Last month's hearing in Boston raised fundamental questions about the responsibility of the private bar to elderly clients. We want to know what is being done now to fulfill this role. And what more should be done?

We are also concerned about impediments to attorneys who want to represent aged clients.

The Boston hearing further underscored the need for law schools to develop courses which can prepare the lawyers of today and tomorrow on issues of direct concern to older Americans.

Most older Americans typically have had very little contact with Government during their preretirement years, except perhaps to pay taxes or perform their military obligation. But upon reaching age 65, they become dependent upon Federal income maintenance programs—social security, railroad retirement, SSI, VA pensions, VA compensation payments, civil service annuities, and others.

Yet, most attorneys have had very little, if any, training concerning legal issues affecting these programs. The net impact is that older Americans are forced to fend for themselves when a legal problem arises—whether it involves litigation, understanding the technicalities of Federal programs, or planning their personal affairs.

They deserve better treatment. And I am hopeful that our hearing this morning can provide the spark for comprehensive and coordinated action on several fronts to make effective representation more readily available for older Americans.

Our final witnesses this morning will be Mr. Paul Nathanson, executive director of the National Senior Citizens Law Center, and Mr. David Marlin, director of Legal Research and Services for the Elderly. They will provide examples on the dimensions of the elderly legal problems and of what can be done when competent representation is available.

[End of prepared statement.]

Senator KENNEDY. We are delighted to have Dr. Arthur Flemming, distinguished Commissioner of the Administration on Aging and HEW Chairman of the Civil Rights Commission. I want to commend you on your extraordinary record of public service. We have always benefited from your testimony. Mr. Thomas Ehrlich is the president of the Legal Services Corporation; and Mr. William Wharton is

from the Memphis and Shelby County Legal Services, Memphis, Tenn.

STATEMENT OF HON. ARTHUR S. FLEMMING, COMMISSIONER, ADMINISTRATION ON AGING

Dr. FLEMMING. Senator Kennedy, I appreciate very much the opportunity to testify. I would like to say, as Chairman of the Commission on Civil Rights, I sure hope you win on the matter that you have been working on and that delayed your appearance here.

In the interest of conserving time, I will not go into the history of the concern on the part of the Congress for legal service as reflected in the development of the Older Americans Act, but I will come right down to 1975–76.

When the Senate considered the 1975 Labor-HEW appropriations bill, a $9 million increase for the title III program for funding State and community services programs was added. This increase was agreed to by the House of Representatives.

LEGAL SERVICES MODEL PROJECTS

The Labor-HEW Appropriations Subcommittee of the Senate made clear that it intended that $1 million of this additional funding for title III should be used for model projects to strengthen legal representation for older Americans. Once these funds were appropriated, the Administration on Aging took steps to implement the clear congressional intent.

In July 1975, 11 legal services model projects were funded at a total level of $1.2 million to foster the improvement of legal service programs for the elderly by increasing the capability of State and area agencies on aging to increase the availability of legal services and to improve the quality of those services.

I will submit for the record a listing of these individual projects and the level of funding of each project.[1]

The overall objectives of these Administration on Aging legal service projects were to inaugurate a process which will hopefully lead to a decision on the part of area agencies on aging to include, subject to the approval of the State agencies, a legal service component in their annual plans and budget, and to initiate a process which will help insure that such legal services activities designed to meet the needs of older persons will have available adequately trained professional and paraprofessional personnel.

Up to now the primary focus of most of the legal service grantees has been the provision of technical assistance to State and area agencies on aging.

LEGAL SERVICES: A PRIORITY CONSIDERATION

At the same time that these legal service model projects were being implemented, further consideration was being given by the Congress to this area in connection with its consideration of the 1975 amendments to the Older Americans Act. Legal assistance was identified as

[1] See appendix 1, item 3, p. 346.

one of the four areas which are to be given priority consideration by State and area agencies. States must spend a minimum of 20 percent of their title III allotment in one or more of these four priority areas.

To assist and encourage the States to develop legal service programs for older persons, the Administration on Aging has given each State the opportunity to establish, during fiscal year 1977, a legal service model project. States that request funds for this purpose will be expected to develop a statewide program that will support the area agencies on aging in strengthening of legal service activities on behalf of older persons at the community level.

The State agency on aging in developing this program will obtain counsel and advice from, among others: Other components of State government, local legal services organizations, legal aid societies, State and local bar associations, voluntary organizations, community services organizations, law schools, and other educational institutions.

Total funding for these projects, which will begin on January 1, 1977, will be $1.125 million.

In order to provide the State agencies and, through them, area agencies with adequate technical assistance for this effort, the Administration on Aging will continue support of five national legal services model projects. These model project grantees will provide assistance to State agencies on aging in developing and implementing their legal services programs in their States. These projects are funded at a total level of $872,918. Six other model projects, designed to test innovative ways of providing legal services to older persons, have also been funded, totaling $425,505.

The Administration on Aging has just awarded grants under the title IV–A training program for improving the quality of training for attorneys and paraprofessionals on the problems of older persons. Such efforts were recently authorized specifically for legal services by the 1975 amendments to the act. Projects supporting these activities will be funded at a total level of about $700,000.

Working Agreement With Legal Services Corporation

The last of the activities that the Administration on Aging plans to undertake in the area of legal services is the development of an interagency working agreement with the Legal Services Corporation. Staffs of these two entities have been meeting to discuss the terms of the agreement and Mr. Ehrlich and I are confident that we will have an agreement within a matter of a few weeks.

Through the process of negotiation of such an agreement and involvement of the State agencies on aging in any cooperative efforts that result, we hope to identify areas of mutual cooperation and interest to make staff of the Legal Services Corporation aware of the particular needs of older persons for access to legal services and to minimize overlaps and reduce gaps in the availability of legal services for older persons.

Personally, I welcome the opportunity of working with the Congress in this very important area in the field of aging. I am confident that the availability of legal services for older persons will make a significant contribution to making it possible for them to look to the future with hope.

Thank you, Mr. Chairman.

[The prepared statement of Dr. Flemming follows:]

PREPARED STATEMENT OF HON. ARTHUR S. FLEMMING

Mr. Chairman and members of the committee, I am pleased to have the opportunity to appear before you today to discuss the activities of the Administration on Aging in the area of legal services for the elderly.

Previous hearings on this subject by the Senate Special Committee on Aging and the Senate Judiciary Committee were major factors in the development of a climate supportive of increased legal services for older persons.

HISTORICAL DEVELOPMENT

I will discuss with you today the legislative history of the provision of legal services for older persons under the Older Americans Act, and the activities that the Administration on Aging is undertaking in this area.

When the Older Americans Act was enacted in 1965, legal services were not specifically mentioned in the act as one of the services to be provided or goals to be achieved.

The Older Americans Comprehensive Services Amendments of 1973 (Public Law 93-29) called for the implementation of a new approach on the part of the Federal Government to the field of aging.

These amendments called for the establishment of a network of State and area agencies on aging responsible for the development of a system of comprehensive, coordinated services for older persons.

The regulations developed for implementation of the title III program defined, as one type of "social service" that could be provided under title III, "legal services which provide legal advice and counseling to older persons in matters of importance to the individual, including serving as an advocate of older persons who have consumer problems."

As the title III program developed and State and area agency on aging staffs became more familiar with the barriers that older persons confronted and the needs they had, the importance of legal services became increasingly apparent.

Older persons were faced with mandatory retirement policies, forced retirement, and age discrimination in employment; the need to understand the provisions of and establish eligibility for social security, supplemental security income, medicare, pension benefits, and other benefit programs; in some instances, loss of ability to completely manage their own affairs without assistance; lack of protection or concern for individual rights of persons living in institutional settings; difficulty in getting drivers licenses, health insurance, life insurance, and other necessary protection because of age; increased vulnerability to deceptive consumer practices.

However, there were few places that older persons could go for assistance with these problems.

Even programs that were established specifically to provide legal services to low-income persons, including older persons, had very low participation rates by the elderly.

It was estimated in 1971, for example, that despite the high percentage of older persons who have low incomes, older persons comprised only 6 percent of the clients served by OEO legal services programs. It has been estimated that in 1975, 11.6 percent of the funds in this program were allocated to the elderly.

As recognition of the need for legal services grew, more State and area agencies on aging began to provide support for legal services for older persons.

During fiscal year 1974, 33 States provided some legal services, and a total of 4 percent of the area planning and social service funds available to State agencies on aging was spent on legal services and counseling.

This can be compared to 20 percent for transportation, 9 percent for in-home services, 13 percent for information and referral services, and 10 percent for outreach services.

When the Senate considered the 1975 Labor-HEW appropriations bill (September 1974), a $9 million increase for the title III program of funding for State and community services programs was added, and this increase was agreed to by the House of Representatives.

The Labor-HEW Appropriations Subcommittee of the Senate made clear that it intended that $1 million of this additional funding for title III shall be used for model projects to strengthen legal representation for older Americans.

Once these funds were appropriated, the Administration on Aging took steps to implement the congressional intent.

In July 1975, 11 legal services model projects were funded, at a total level of $1.2 million, to foster the improvement of legal service programs for the elderly by increasing the capability of State and area agencies on aging to increase the availability of legal services and to raise the quality of those services.

I will submit for the record a listing of these individual projects and the level of funding of each project.[1]

The overall objectives of these AoA legal services projects were:

(a) To inaugurate a process which will hopefully lead to a decision on the part of area agencies on aging to include, subject to the approval of the State agencies, a legal services component in their annual plans and budgets.

(b) To initiate a process which will help insure that such legal services activities designed to meet the needs of older persons will have available adequately trained professional and paraprofessional personnel.

Up to now the primary focus of most of the legal service grantees has been the provision of technical assistance to State and area agencies on aging.

At the same time that these legal services model projects were being implemented, further consideration was being given by the Congress to this area in connection with its consideration of the 1975 amendments to the Older Americans Act.

Legal assistance was identified as one of the four areas which are to be given priority consideration by State and area agencies.

States must spend a minimum of 20 percent of their title III allotment in these four priority areas.

To assist and encourage the States to develop legal service programs for older persons, AoA has given each State the opportunity to establish, during fiscal year 1977, a legal services model project.

States that request funds for this purpose will be expected to develop a statewide program that will support the area agencies on aging in strengthening of legal services activities on behalf of older persons at the community level.

The State agency on aging, in developing this program, obtains counsel and advice from, among others: Other components of State government, local legal services organizations, legal aid societies, State and local bar associations, voluntary organizations, community services organizations, law schools, and other educational institutions.

Total funding for these projects, which will begin on January 1, 1977, will be $1.125 million.

In order to provide the State agencies, and through them area agencies, with adequate technical assistance for this effort, the Administration on Aging will continue support of five national legal services model projects.

These model project grantees will provide assistance to State agencies on aging in developing and implementing their legal services programs in their States.

These projects are funded at a total level of $872,918.

Six other model projects designed to test innovative ways of providing legal services to older persons have also been funded totaling $425,505.

The Administration on Aging has just awarded grants under the title IV–A training program for improving the quality of training for attorneys and paraprofessionals on the problems of older persons.

Such efforts were recently authorized specifically for legal services by the 1975 amendments to the act.

Projects supporting these activities will be funded at a total level of $705,741.

The last of the activities that the Administration on Aging plans to undertake in the area of legal services is the development of an interagency working agreement with the Legal Services Corporation. Staff of the two entities has been meeting to discuss the terms of this agreement, and hope to have a draft prepared in a few weeks.

Through the process of negotiation of such an agreement and involvement of the State agencies on aging in any cooperative efforts that result, we hope

[1] See appendix 1, item 3, p. 346.

to identify areas of mutual cooperation and interest, to make staff of the Legal Services Corporation aware of the particular needs of older persons for access to legal services, and to minimize overlaps in and reduce gaps in the availability of legal services for older persons.

The Administration on Aging welcomes the opportunity of working with the Congress in this very important area in the field of aging.

I am confident that the availability of legal services for older persons will make a significant contribution to making it possible for them to look to the future with hope.

Senator KENNEDY. Thank you, commissioner.

I also am pleased to welcome Thomas Ehrlich, president of the Legal Services Corp. He has been in the job for some 9 months and now understands the difficulty we had and the frustration of several vetoes before we obtained approval on the independent Legal Services Corp. I understand one of your first communiques from OMB was a request to ask for fewer funds and one of your latest was the request to Congress from the White House for a rescission on nearly 25 percent of the funds Congress appropriated.

Before taking this position, Mr. Ehrlich was professor of law and dean of Stanford Law School, although that Western bias is eased somewhat by knowing that he is a graduate of Harvard Law School. It is a pleasure to welcome him before this committee.

STATEMENT OF THOMAS EHRLICH, PRESIDENT, LEGAL SERVICES CORPORATION, WASHINGTON, D.C.

Mr. EHRLICH. Senator, I have submitted for the record a prepared statement[1] that discusses the activities of the corporation with regard to legal services for the elderly in some detail. With your permission I would like to focus on a few key points. With me today is Mr. A. C. Wharton who directs Memphis and Shelby County legal services in Tennessee. I know he will be pleased to answer any of your questions about legal services for the elderly from his vantage point in the field.

As you know, we have a somewhat different perspective than Commissioner Flemming. The purpose of the Legal Services Corp. is to provide legal services—that is our only purpose. Our mission is to provide those services not just to the elderly but to all who are poor, regardless of age, regardless of race, regardless of geographic area. We do very much share the committee's particular concerns about the needs of the elderly for legal assistance and the extent to which those needs are unmet.

Sometimes the elderly face special needs for legal services. The pension area is one example. But our experience generally shows that the usual categories of legal issues faced by the elderly are those faced by other people who are poor. Most often they are in the areas of public benefits, housing, consumer law, family law, health law. Although the areas of concern are not usually different in legal terms, much more often they are matters of basic survival for the elderly poor.

PROBLEMS IN PROVIDING LEGAL SERVICES TO ELDERLY

Generally there are particular problems in providing legal services to the elderly, problems that create an added cost. Those problems

[1] See p. 260.

can be overcome but usually that takes added resources, particularly for outreach activities and for transportation. As you well know, Senator, for 5 hard years legal services fought a battle for survival, while costs spiraled. As a result of that burden of inadequate funding the poor generally, and the elderly poor in particular, too often suffered and suffered severely.

We now have no accurate statistics on the relative number of elderly poor that legal services programs funded by the corporation are reaching. We are now developing a project reporting system that will provide that information. In the meantime, the results of informal surveys, including one we did for this committee some months ago, suggests that the percentages vary from as little as 5 percent to as much as 15 to 20 percent. We ought not look, however, at the extent of legal services activities solely in terms of percentages of caseloads. That is very misleading.

As you know, Senator, Legal Services Corporation has been the leader in the efforts to assure legal rights through specialized litigation. It has been in areas such as food stamps, welfare, public housing, and consumer fraud, and much of that litigation has had substantial impact on the elderly. You will hear later this morning, I understand, from Paul Nathanson, director of the National Senior Citizens Law Center, a corporation-funded project that concentrates exclusively and on a national basis on the legal problems of the elderly.

Our other national litigation projects do devote a very significant amount of their time to senior citizens problems and much of their specialized work has a direct impact on the elderly. I discussed that work in some detail in my prepared statement, particularly in terms of the center for social welfare policy and law in New York, the national health law project in Los Angeles, the employment law center in New York, which has just voted to make pension law a priority for the next year, and the national housing law project in Berkeley—four concrete examples of major impact litigation centers throughout the country supported by the corporation.

I do not suggest for a minute that we are doing all we should for poor persons who are elderly. We must do a good deal more for them and for all who are poor.

"Critical Question Is Money"

As the committee pointed out in this year's "Developments in Aging" report, the critical question is money. The corporation requested $140.3 million from the Congress for fiscal year 1977 to begin a 4-year plan to strengthen and expand legal assistance for the poor. President Ford pressed for a reduction to $80 million. Despite that, the Congress has approved $125 million to begin the effort and has agreed with the corporation that the proposed rescission of the additional funding has no merit. We intend to come back to the Congress to ask for increased support in fiscal year 1978, and in the years to come, so that by the end of 1980 legal service programs funded at minimum adequate levels will be accessible to all of the poor, including the elderly poor.

Although there is no total solution without additional money, we are taking a number of steps that focus particularly on the elderly

poor. Our proposed eligibility guidelines, for example, take special account of such factors as age, physical condition, and high medical costs. In the area of training we are confident we can improve the capability of our programs to deal with the needs of the elderly. We are working with all of our support centers to design specific training programs for staff attorneys and are concentrating particularly on the training of paralegals. As you know, use of paralegals under the supervision of program attorneys is one of the most effective ways to increase access to legal services for the elderly.

We are also working with the Administration on Aging to assure that our mutual resources are utilized as effectively as possible. Some 56 legal services programs now do receive about $1.7 million through State and area aging agencies to improve their capabilities to serve the elderly. Those funds make a vitally important contribution. In some places, like the program in Camden that you heard about yesterday, these funds have made possible special units for the elderly. Other programs funded by the corporation include services to the elderly as a part of the regular activities of their offices.

Some programs have reported particular difficulties in persuading area agencies to undertake legal services activities. I expect that Mr. Wharton could elaborate on that point. But in all events, as Commissioner Flemming said, we are going to work with his organization at the national and regional levels to the end of more effective efforts for the elderly in local communities.

We are also very pleased that legal services development specialists will be provided for each State; they can be a critically important factor in these efforts. We do have some concern about the emphasis on placement of those specialists within State aging agencies and the limitations on their activities, which may reduce their potential effectiveness. In our view, if it makes sense to place those specialists within a legal services program, the States should have the flexibility to do so.

We are also convinced that the effectiveness of those specialists can be enhanced if they are sometimes involved in support activities. Commissioner Flemming has indicated that we are working with the Administration on Aging on just those issues. The corporation and the Administration are developing a joint agreement that will result in improved and strengthened cooperation and coordination.

One final word, if I may. We commend you very much for your leadership in this area and we look forward to working with the whole committee and with you, Senator Kennedy, as a member of the Committee on Labor and Public Welfare, toward providing quality legal assistance to all elderly persons who are poor and who need legal assistance that they cannot now find.

I am delighted to be here, and I will be pleased to answer your questions.

[The prepared statement of Mr. Ehrlich follows:]

PREPARED STATEMENT OF THOMAS EHRLICH

On behalf of the Legal Services Corporation, I am pleased to accept this committee's invitation to testify on delivering legal services to the elderly. The corporation brings a perspective to these hearings that may be different than

that of other witnesses. We are not an organization established to deal exclusively with elderly Americans; we cannot undertake to support legal services to all who are elderly. Rather, our concern with the problems being considered by this committee stems from our congressional mandate to insure equal access to justice for all persons who presently do not have that access, concentrating upon those who are least able to afford legal assistance.

The Legal Services Corporation is a private corporation established and funded by Congress to provide legal assistance to the poor. It began operations 1 year ago, in October 1975. There are approximately 29 million poor people in the United States, persons whose income and resources are below subsistence levels. For all but a very few of those people—whatever their age, race, or background—the predominant issue in their lives is survival.

It was once a commonly held notion that poor people had less need for lawyers than persons of means. We now know that precisely the contrary is true. Poor people are forced to rely upon law and the legal system to obtain basic necessities such as food, shelter, clothing, medical care, a job, and an education. The result has been that poor people have more encounters with the legal system than others, and the stakes involved in those encounters are much higher.

A recent study by the Bureau of Social Science Research estimates that 23 percent of the Nation's poor, or roughly 7 million persons, face legal problems each year. Legal services programs funded by the corporation are currently able to handle only about 1 million of those problems. Even that level of services is possible only by extensive use of paralegals and other mass delivery techniques, and by caseloads that range as high as 500 cases per year for an individual attorney. Despite these efforts, there remain nearly 12 million poor people who live in areas that are not served by legal services programs, and another 10.5 million who have only token access to such programs.

The inevitable conclusion from these statistics is that present resources are grossly inadequate to do the job. For 5 years, from 1970 through 1974, those resources actually diminished because appropriations for legal services were frozen despite high inflation. The outlook for the future is fortunately brighter. For fiscal year 1977, the Congress approved an appropriation of $125 million to the Legal Services Corporation—a $33 million increase over the appropriation for the current year. Of necessity, however, much of this increase will be used to restore the capabilities of existing programs that were eroded during the period when legal services appropriations were frozen. The corporation is now planning the first significant expansion of legal services coverage in more than a decade, but its resources are far short of enabling it to fulfill the congressional mandate to provide equal access to justice for all of the Nation's poor people.

It is against this background—a mandate to provide legal assistance to all poor people regardless of age, race, or background, and a history of inadequate resources to do the job—that the performance of the Legal Services Corporation and the programs it supports must be evaluated. We do not suggest that our performance in providing services to the elderly poor has been better than our performance in delivering services to all eligible poor persons. There are suggestions that it has been worse. The statistics sometimes cited are from an informal survey apparently made by the OEO Office of Legal Services in 1969, which suggested that the elderly constitute only 6 percent of legal services clients, although they account for a larger percentage of the Nation's poor.

We do not know how those figures were developed, nor whether they were correct in 1969. More important, we do not know whether those figures are accurate today. As members of this committee are well aware, the energies of the legal services community during the early and mid 1970's were focused primarily on opposing efforts to destroy the program entirely, and on ensuring its future independence from partisan politics. It simply was not possible to conduct detailed analyses of the caseloads of programs and other aspects of their work.

Now that establishment of the Legal Services Corporation has made survival certain, we are conducting such an analysis. The corporation is in the process of designing and implementing a project reporting system that will provide information on each matter handled by each project funded by the corporation. This system will tell us a good deal about our programs and the clients that they serve. We are also undertaking a study of alternative and supplemental methods of delivering legal services that should provide additional information

on how to deliver legal services more effectively and efficiently and to reach groups that we have had difficulty reaching in the past.

At this point, our best estimate is that legal services programs funded by the corporation probably do somewhat more specialized work in areas that affect the elderly than population statistics would indicate, but somewhat less general work for individual elderly clients. Within the area of specialized work, the disparity is probably due to the large number of government programs that affect the elderly. Within the area of general assistance, the disparity probably results from the reality that many elderly persons are hesitant or unable to use legal services, and programs have not had sufficient funds to engage in aggressive outreach efforts.

Beyond this general estimate, it may be helpful to the committee to have a description in some detail of the actual activities of both the general and the specialized programs relating to the elderly. I will focus first on field programs generally and then on the specialized work.

Although there has been no systematic analysis of the caseloads of all legal services programs funded by the corporation, we have estimates of caseload statistics from some programs. At the request of this committee, we recently received estimates of the number of elderly clients served from nine programs operating in the States of Nebraska, Iowa, and South Dakota. The estimates of clients over 65 ranged between 5 percent and 20 percent. In most of those programs, the percentage of elderly clients was less than the percentage of the eligible population that is elderly. The program directors believe that this is due mainly to the transportation difficulties that poor elderly people have, especially in rural areas. In addition, they stated that some elderly persons are less aware of the fact that legal services are available to them and do not understand how the programs can be helpful. The programs in those States that served a relatively high proportion of elderly clients were ones that are able to and do engage in aggressive outreach efforts, such as making presentations in senior citizens centers and nursing homes.

Every legal services program operates within a set of eligibility guidelines prepared in accordance with corporation regulations. Those regulations—still in proposed form to insure full public comment—meet a number of specific concerns often raised regarding the ability of local legal services programs to serve the elderly. It has been suggested, for example, that eligibility standards that use an "assets" test discriminate against the elderly, who frequently own their own homes or have small savings accounts. An income test, it has been argued, would take into account the circumstances of the elderly in a more realistic manner.

Under the corporation's proposed regulations, the critical factor in determining eligibility is the applicant's income, and local programs are authorized to set the upper limit as high as 125 percent of the national poverty level. Even persons who have income above that limit may be eligible for service if their income is derived from governmental programs for the poor, or if they are unable to afford legal assistance due to age or physical infirmity, high medical expenses, or substantial debts. The regulations do not penalize an applicant who owns a home. They are, we believe, flexible enough to accommodate the special needs of the elderly poor.

In addition to the assistance provided for the elderly by legal services programs generally, the corporation funds the National Senior Citizens Law Center in Los Angeles, the Council of Elders in Boston, Legal Services for the Elderly Poor in New York, and the Senior Citizens Project of California Rural Legal Assistance in San Francisco. These programs, which have a combined budget of nearly $1 million, are devoted exclusively to legal services for the elderly poor. Their activities range from providing representation and assistance in important litigation involving elderly clients—the role of the National Senior Citizens Law Center—to concentrating on providing general legal services directly to elderly clients.

Many legal services programs funded by the corporation, although not devoted solely to serving elderly persons, have units or individual specialists that concentrate upon such service. We do not know the exact number of such programs. We do know that 55 of our programs have received approximately $1.5 million in funds available under title III of the Older American Act to provide legal services to the elderly poor. Other programs have been unable to obtain title III funds, but have used funds from sources such as revenue sharing for similar purposes.

Funds used to provide legal services exclusively for elderly persons often have a multiplier affect. In some programs, for example, title III money is used to hire paralegals to perform aggressive outreach work and to provide advice and counsel to elderly clients. Because paralegals must be supervised by attorneys, and because attorneys and other paralegals will necessarily handle many of the cases produced by outreach efforts, the result is that a larger amount of the program's resources is directed toward providing service to elderly clients. Similarly, the availability of research and technical assistance from sources such as the National Senior Citizens Law Center is an incentive for programs to bring significant litigation on behalf of elderly clients.

One measure of a legal services program's performance in delivering legal services is its effect upon the client community as a whole. The fact that too few resources are available to provide assistance to all poor people makes it essential for legal services programs to set priorities and undertake projects that affect the largest number of people possible. Such "impact" work frequently provides benefits to large numbers of persons and groups regardless of whether they are actually clients of a legal services program.

Legal services programs funded by the corporation and its predecessors have done a considerable amount of work that has had an impact upon elderly people as a group. For the reasons discussed previously, it is not possible to give accurate statistics on these activities, such as major litigation, legislative advocacy, community education, and so forth. I will, however, describe for the committee various areas of the law that have received attention from legal services programs and that, in our view, address problems widely shared by the elderly poor.

PUBLIC BENEFITS

Many elderly people are unable to work and are forced to rely upon public and private benefits programs in order to survive. Legal services programs have been leaders in ensuring that those programs are administered fairly, are responsive to the needs of recipients, and that the recipients receive all to which they are entitled.

Virtually all of the work that has been done regarding the supplemental security income program (SSI)—a national program begun in 1974 that includes the elderly as one of its primary beneficiaries—has been done by legal services lawyers. The Center on Social Welfare Policy and Law, a national support center funded by the corporation that specializes in public benefit law, reports that a substantial number of programs are bringing administrative and judicial proceedings regarding various aspects of the SSI program. According to the center, a major portion of its practice is now devoted to SSI. It has, among other things, published an SSI *Advocates Handbook* for use in administrative proceedings. The National Senior Citizens Law Center, which is also active in the SSI area, has published a similar manual for attorneys. Both of these support centers, as well as legal services programs generally, have done substantial work regarding social security benefits and procedures.

In addition to work in areas of unique concern to the elderly and a few other groups, legal services programs have become specialists regarding general benefit programs in which the elderly participate. Issues related to the medicaid program, for example, are of considerable concern to the Center on Social Welfare Policy and Law and the programs that it helps. Until a few years ago—its Food Research Center became an independent operation—the Social Welfare Center was also involved in a substantial amount of food stamp litigation, and that program still provides some of its caseload.

A third example of a benefit program that affects elderly people is the local general assistance programs. For a person under 65 who has no dependent children and is not disabled, such programs may provide the only available source of income. The Social Welfare Center and many other legal services programs have devoted a substantial amount of their efforts in the public benefits area to rationalizing those programs.

Finally, legal services programs have done impact work in some areas of public benefits law that, although not directly affecting elderly people, have affected the administration of programs in which they participate. The aid to families with dependent children program, for example, rarely provides direct benefits to elderly persons, but litigation concerning that program has resulted in procedures for notice and hearing prior to termination of benefits being

instituted in medicaid, social security, and SSI. In a very real sense, elderly people were served by the legal services programs bringing those actions.

More generally, the use of trained paraprofessionals to provide counsel and representation in administrative proceedings has greatly expanded the delivery of legal services in the area of public benefits. Legal services programs have pioneered this development. In addition to recruiting and training paraprofessionals on the local level, the National Paralegal Institute—until recently a support center funded by the corporation and its predecessors—provided training and materials for paralegals, much of which concerned SSI and other public benefit programs. The corporation is now making plans to train considerably more paralegals for this type of work through its office of program support.

HEALTH

Elderly people have a disproportionate number of medical problems and must rely upon health benefit programs to a greater extent than other poor people. Legal services programs have been leaders in developing the law relating to such programs, particularly in pioneering the view that they create judicially enforceable entitlements to health care and in policing benefit programs to ensure that they are administered fairly.

In addition to the work done in this area by local programs, the corporation funds the National Health Law Project in Los Angeles to provide specialized help to legal services programs on health law issues. The center devotes a substantial portion of its practise to programs specifically designed to aid the elderly, such as the medicare and home health care programs. The project represents several groups of elderly people, and estimates that approximately 20 percent of its litigation time involves elderly clients directly.

In addition, the project engages in a substantial amount of work regarding general health care programs that have a substantial impact upon elderly people. In this category are the Hill-Burton program, which requires that federally funded hospitals provide a minimum amount of free health care, the medicaid program, and prepaid health plans. Other legal services programs funded by the corporation, most notably the National Senior Citizens Law Center, have concentrated upon issues relating to nursing homes, guardianship, and custodial care.

HOUSING

Elderly people living on fixed incomes often cannot afford to pay the rents prevailing in the private housing market, and therefore must live in public housing projects or other types of subsidized housing. Those elderly persons who own their own homes are often unable to keep them in good repair or even to pay the taxes and utilities.

Programs funded by the Legal Services Corporation have undertaken impact work in all of these areas. The National Housing Law Project in Berkeley, Calif., devotes a substantial portion of its practise to public housing issues, and helped to pioneer the concept that there is an entitlement to public housing. This work is especially significant for elderly persons; one recent estimate is that two-thirds of all new construction in public housing is for the elderly. The housing law project also devotes a great deal of time to ensuring that the relocation provisions of urban renewal laws are observed and administered fairly. Again, this is an effort that particularly affects older persons, whose lack of mobility and resources often makes them unable to find decent housing outside of decaying urban neighborhoods.

The housing law project does a considerable amount of work regarding problems of home ownership—problems that affect the elderly more than any other identifiable group of poor people. Specifically, the project devotes a large amount of its practice to the areas of mortgage foreclosure and construction programs such as those administered by the Farmers Home Administration. It has also done work in the area of foreclosure for nonpayment of taxes, and ensuring that provisions for waiving property taxes in federally subsidized housing are followed.

Other legal services programs have addressed themselves to different housing problems that affect the elderly. The National Consumer Law Center in Boston, for example, has done a substantial amount of work regarding home improvement frauds, a problem frequently encountered by elderly persons desiring to keep their houses in good repair. The consumer center has also undertaken activities in the utilities area, attempting to hold rates down and prevent erroneous termination of service.

EMPLOYMENT

Elderly persons who are still able to work frequently find their ability to do so impeded by non-job-related age requirements. With the exception of the National Senior Citizens Law Center, few legal services programs have concentrated on the area of age discrimination directly. A great deal of the work they have done regarding race and sex discrimination, however, has had a substantial impact in age discrimination litigation. The standard of proof in such cases is perhaps the most obvious example. Legal services programs, particularly the National Employment Law Center in New York, have been leaders in establishing the requirement that an employer justify statistical disparities in the numbers of women and minorities employed. That standard is also applied by courts dealing with charges of age discrimination in hiring and promotion.

A second cluster of employment-related issues that concern the elderly relate to pensions. The fact that many employers' promises of financial security following retirement are often illusory has been well documented. Very little work, in legal services or elsewhere, has been done regarding pension law. The Senior Citizens Law Center, however, is recognized by the Labor Department and others as the expert in that area, and the board of directors of the Employment Law Center has recently made pension issues a priority for that program in the coming year.

This summary does not exhaust the specialized activities undertaken by legal services programs that have an effect upon the elderly poor. The Consumer Law Center, for example, has been participating in the development of proposed Federal Trade Commission regulations regarding funeral homes and hearing aids, and plans to become active in those areas when the regulations go into effect. More generally, elderly consumers benefit when a legal services program wins a major truth-in-lending case, and elderly tenants benefit when the courts require landlords to adhere to a warranty of habitability. The point is clear: A great deal of work done by programs funded by the Legal Services Corporation has a direct and substantial impact upon elderly persons, regardless of whether they also receive service as individual clients. For this reason no statistics can reflect accurately the extent to which legal services programs serve the elderly.

Nonetheless, we do not suggest that we are presently meeting the needs of the elderly poor for legal services. There are too few resources devoted to ensuring equal access to justice for the elderly, just as there are for poor people in general. With respect to the elderly, however, the problems of too few programs are compounded by lack of physical access to legal services. Many elderly people are less mobile than other members of the population and may be less well informed regarding the availability of free legal services and the ways that such services can help them. Access may be particularly difficult for persons who became poor late in life and live many miles from the ghetto areas in which legal services offices are typically located.

What can be done to overcome these problems? At this point, the corporation plans two steps and we hope the Congress will adopt this committee's recommendation concerning a third. Other proposals will almost certainly emerge after the project reporting system is implemented and the delivery study is completed.

First, the corporation will work to coordinate the expertise of legal services programs in delivering legal services to poor people with that of organizations and agencies that have experience regarding the particular problems of the elderly. The most obvious example is the Administration on Aging, which has made the provision of legal services a priority for its programs. The corporation and AoA should not duplicate activities such as training attorneys and paralegals in areas of the law that affect the elderly. The development of outreach programs and sensitizing service providers to the problems of working with elderly people on a personal basis are other areas that lend themselves to cooperation between the two organizations. Ways should be found to ensure that title III grants to fund elderly specialists will continue to legal services programs that currently receive them, and be available to those programs that have been unable to obtain them.

Several measures have already been begun to achieve that cooperation. Persons from the corporation's office of program support and the AoA staff are meeting to discuss training needs and explore the possibility of coordinated training programs. The corporation and AoA have exchanged proposals for an

agreement that would ensure cooperation in several specific respects on the national, regional, State and local levels. We intend to continue these activities in the future, and to identify other agencies and organizations that can help us deliver legal services to the elderly.

The second step is more training of service providers, particularly paralegals, in areas that concern the elderly. Our office of program support is currently making plans to train more attorneys and paralegals for legal services work—including many areas that affect the elderly—than has ever been done before on a national level. The need for lawyer training is obvious. But paralegals have also been of immeasurable value in expanding the ability of our programs to deliver legal services efficiently and effectively, though they are not the answer to all delivery problems. Each paralegal must work under the supervision of an attorney in order to ensure the quality of work and avoid the unauthorized practice of law. A legal services program can utilize paralegals only to the extent that it has the resources to maintain proper supervision.

Finally, we urge the Congress as a whole to adopt this committee's recommendation that increased funding for the Legal Services Corporation is essential. The specialized outreach and educational programs necessary to give the elderly access to legal services are costly, and the cost of providing individual service to such persons is therefore higher. Although legal services programs are sensitive to the necessity for such efforts, the financial realities of the last 6 years have precluded needed special efforts. Operating on frozen budgets during a period of high inflation, legal services programs could undertake extensive outreach only at the expense of other clients.

The increases in the Legal Services Corporation's appropriation for fiscal year 1977 will help but not solve the problem. We will not be able to restore the programs to their pre-1970 capabilities, much less enable them to implement the types of projects necessary to reach more of the elderly poor. It is only by substantially increasing the Legal Services Corporation's budget that our present programs will have the resources to make those efforts and that we will be able to establish new programs to serve areas that presently have no access to legal services at all.

We do not recommend that funds be earmarked to provide specialized services to the elderly. The corporation's mandate is to provide service to all of the poor, concentrating only upon those least able to afford such service. Earmarking funds for any group would inevitably mean less efficiency in working toward that goal. It would mean that other clients or groups would be denied access to the legal system altogether. Such trade-offs should not be necessary when the sound solution is to provide the corporation with sufficient resources to perform the job for which Congress established it.

In sum, the Legal Services Corporation is concerned with the problem of delivering legal services to the elderly poor, just as we are with all groups of poor people. We believe we have made progress in that direction. But we are aware of the problems in reaching the elderly poor, and agree that more must be done in the future. Given adequate resources, we can do the job.

Senator KENNEDY. Thank you very much.

Mr. Wharton, would you like to make a comment?

STATEMENT OF A. C. WHARTON, MEMPHIS AND SHELBY COUNTY LEGAL SERVICES, MEMPHIS, TENN.

Mr. WHARTON. The only comment I would have would be to emphasize President Ehrlich's comment about the lack of data base as to how many senior citizens are presently being served in legal service programs. In my own program, however, we do have figures based on 6 months of service.

Now based on that 6 months experience we were able to determine that at least 79 percent of those senior citizens who were served were persons who were faced with problems which, had it not been for the special outreach components and these legal services programs, would simply have suffered with those problems and allowed them to bother them for a longer period of time.

House Calls for the Elderly

One other interesting statistic is the fact that 59 percent of those served were served at locations other than central offices. We have a program pursuant to which the attorneys actually made house calls, if necessary, and during our first 6 months of operation, approximately 60 percent of the clients were served in their homes at places other than the downtown locations, not simply by choice but by necessity because of handicap or other inabilities to obtain transportation.

Senator Kennedy. I think both Mr. Ehrlich and Mr. Wharton anticipated the first question—that is the degree of commitment of the corporation to providing services for the elderly. It seems to me that most governmental programs do not sufficiently involve the elderly.

I think this is true, in general, of health and manpower training programs. The elderly end up participating minimally in these kind of programs.

Use of Increased Funds

I would like to know what plans there are for the money that was threatened with rescission this year.

Also, what programs do you have that are geared to serving the legal needs of the elderly? How are we going to be able to measure their effectiveness?

Mr. Ehrlich. Those funds are to be used, Senator, in two major ways. One is to increase the capabilities of existing programs, which have had, as you know—including the ones in Boston and others in Massachusetts—frozen budgets for 5 hard years. Those programs will be able to strengthen their capability to serve the poor, to begin particularly the kinds of outreach efforts that you are interested in that can deal with the needs of the elderly in ways that particularly are important for them.

The second major area is to provide service in at least some parts of the country where there now is no access to justice at all, where the elderly and nonelderly poor are totally outside the legal system.

Senator Kennedy. Is this rural as well as inner-city?

Mr. Ehrlich. Sadly, it is both urban and rural in much of the country—the South and the Southwest particularly—where there are no legal services programs at all. This coming year, because the Congress has appropriated $125 million, and in the next 3 years, if we are successful in reaching our goal, we will provide service throughout the country. We are not now doing that and at the end of this year there will still be some areas of the country, including some where a good many elderly people live, who have no service.

Responding to Needs of Elderly

Senator Kennedy. Can you give us an idea as to how you are going to assure that there will be adequate commitments to the needs of the elderly?

You stated earlier that percentages of individuals using legal services was not an appropriate measurement. How will the elderly be able to judge that there is a strong commitment to their legal

needs? How are we going to know then that you are measuring up to those standards?

Mr. EHRLICH. Our commitment is clear and the test, of course, will be the performance on that commitment. In our view, training is probably the singlemost important factor involved—training of lawyers and training of paralegals. We must be sure that both in the substantive law, particularly related to the elderly, and in other areas where the legal problems of the elderly poor are the same as those of others who are poor, legal services staffs are well trained.

WHAT ARE LAW SCHOOLS DOING?

Senator KENNEDY. What are the law schools doing? What is Stanford doing?

Mr. EHRLICH. The short answer is: Not enough. Stanford does, as it happens, have a seminar that deals on a clinical basis with legal problems of the elderly, in conjunction with a program there that the Administration on Aging supports. But in most law schools, including my own, that field has been too often neglected.

The corporation has its own training programs, designed especially for legal services lawyers, to provide training in areas that relate particularly to the elderly and other areas, such as administrative benefits. Our training programs also try to give some sense of the special problems that those who are elderly face when they come up against the law.

The second area of training deals with paralegals. We can do more than we have done in terms of training paralegals. Very often paralegals come from the very community where they will be working. If they are elderly as well, that is an additional advantage in working with the elderly.

Senator KENNEDY. Would it be useful if we had a letter from you and Dr. Flemming to the bar association urging them to urge the law schools to develop these kinds of programs? Perhaps we could ask the bar examiners to include questions on these areas of the law. Would you work with us on this?

Mr. EHRLICH. We would be delighted to work with you and your staff in encouraging the bar to help provide legal services to the elderly poor. We might think in terms of prodding the law schools as well.

Senator KENNEDY. I hope that next year we will be able to find out what is being allocated and what is being committed to legal services for the elderly so that we can more accurately assess their impact.

This is important as there is a very strong impression that legal services for the elderly has not been as strong as other areas. We want to be fair, both to you in terms of judging performance and to the elderly, in assuring them that their needs are being responded to.

I think they are entitled to have a clear understanding of what resources are being devoted to their needs.

I ask that we try to work that out with the staff.

I have some other questions which I will submit to the witnesses. I would like to know what is being done in rural areas to extend the outreach programs.

Model Legal Services Programs

Dr. Flemming, the section 308 model legal services programs have finished their first year of operation. How successful have they been? What is your evaluation of them and what can be done to assure their success?

Dr. Flemming. May I say, first of all, that as far as the grants that were made to the organizations that in turn have been rendering technical assistance to State and area agencies, I feel that the organizations have done a good job. This is why we have renewed most of those grants.

When it comes to some of the more specialized model projects, I have taken note, for example, of the work done by the Legal Services for the Elderly Poor in New York City. They have been able to obtain statewide injunctions in New York and New Jersey to prevent massive transfers of residents out of nursing homes pursuant to utilization reviews under medicare. Under these injunctions, residents may be transferred only after they have been given the opportunity to exercise their rights to a hearing. This injunction has prevented the transfer of about a thousand residents and thereby significantly reduced the negative aspects of transfer trauma.

The legal research services for the elderly here in Washington has developed a law and aging manual to assist the area agencies in developing resources for the elderly and this manual has been widely distributed. Likewise, it has assisted the State agency on aging for West Virginia in obtaining a grant under title XX to establish a paralegal services program consisting of 30 trained paralegals who are senior citizens to visit sites where elderly are congregated in an effort to identify and resolve their legal problems or to refer them to an appropriate legal service. The first job that has been done is one consistent with our desire to build up the capacity and capability of State and area agencies.

Paul Nathanson, in connection with his work growing out of the center in southern California, has performed a similar service for the States in the West and also some in the Middle West.

So I would say, just looking back at just 1 year's operation, that the grants that we have made have helped to move us forward.

Now as I indicated in my opening statement, we are going to try to build on that by institutionalizing this operation at the State level.

Senator Kennedy, one of the things I have tried to keep in mind in connection with the legal services operation is to do everything possible to make it a meaningful and integral part of the operation of the national network on aging.

You were responsible for providing very effective leadership in making it possible for us over the period of the last 2½ years to put this national network into place. It is in place and it is working. I feel it is very important for us to relate legal services to that network. We are very anxious to develop a capacity and capability at the State level which will provide leadership at the area level and the community level and move us forward in this area.

One of the things that we are going to do in order to get a fix on this is to find out within the next 30 to 60 days how many older persons are or have been served through legal services programs in

a given geographical area. Then we are going to ask for an estimate as to the number that will be served by the end of this fiscal year. Then we will be doing the same thing as far as 1978 is concerned.

It is interesting to note that even though the network is new, and we are just getting underway, that at the present time there are about 100 local legal service projects for older persons which are financed in whole or in part by area agencies. They are using somewhere between $2 and $2.5 million of their money for that particular purpose. That is in addition, of course, to the money that we have allocated at the national level.

Special Legal Services Training Title

Senator Kennedy. Would it be useful to have a special title in the Older Americans Act for legal services training?

Dr. Flemming. As far as the Older Americans Act is concerned you have given us a clear legislative history on it in terms of using some of our IV–A training funds for this particular purpose. I have indicated we are in the process of doing that. This is the second time this has been done. Personally, I rather like that approach as contrasted with putting in a separate title. If we begin to put in special titles for specific areas we could be opening up a Pandora's box. But we are delighted to have the Congress give us a clear indication of intent and then delighted to move in and implement that intent.

Mr. Ehrlich. The Legal Services Corporation does want to see as much focus on legal services as is possible. In this area, we care less on the particular mechanism, whether it is a separate title or the clear mandate to do the kinds of things we have been talking about today under the Administration on Aging, and the necessary funding. If it can be done best through a separate title, that would be fine—that would be the very clear indication of the importance of legal services to the elderly. In all events, we do hope to have that indication.

Senator Kennedy. Thank you very much.

Mr. Ehrlich. Thank you, sir.

Dr. Flemming. Thank you.

Senator Kennedy. We will be looking forward to seeing you sometime next year.

Mr. Ehrlich. We look forward to working with you.

Dr. Flemming. Very much.

Senator Kennedy. Mr. F. William McCalpin, assistant secretary of the American Bar Association, formerly served as chairperson of the special committee on prepaid legal services and the standing committee on legal aid and indigent defendants. He is also a practicing attorney in St. Louis with Lewis, Tucker, Rice, Allen, & Chubb.

Mr. McCalpin, we are going to have a short recess and then my colleague, Senator Randolph, is going to be here to continue with the hearing.

We will recess.

Mr. McCalpin. Thank you, Senator.

[Whereupon, a short recess was taken.]

AFTER RECESS

Senator RANDOLPH [presiding]. The committee is privileged to hear William McCalpin, who is the assistant secretary of the American Bar Association.

Mr. McCalpin formerly served as—I will just say chairman, not chairperson—of the special committee on prepaid legal services and the standing committee on legal aid and indigent defendants. He is also a practicing attorney in St. Louis with Lewis, Tucker, Rice, Allen, & Chubb.

We welcome you, Mr. McCalpin, as we welcome, of course, all witnesses. We regret the delay, the situations that are now complicating hearings such as this.

Would you proceed, please?

STATEMENT OF F. WILLIAM McCALPIN, ST. LOUIS, MO., ASSISTANT SECRETARY, AMERICAN BAR ASSOCIATION

Mr. MCCALPIN. Thank you very much, Senator. It is a distinct pleasure for me to be here this morning in response to the committee's invitation. Justin A. Stanley, president of the American Bar Association, is today in London for the opening of the fall term of the courts of Great Britain.

I am joined here this morning by Mr. Daniel J. Piliero of the District of Columbia, who is the chairman of the young lawyers section of the American Bar Association, and Mr. William S. Greenberg of Trenton, N.J., chairman of the committee on delivery of legal services to the elderly of the young lawyers section, about whose activities I shall have more to say in just a moment.

Senator RANDOLPH. We welcome your colleagues to the witness table.

Mr. MCCALPIN. Thank you, sir.

I have submitted a prepared statement. In the interest of conserving the time of the committee—I know you have a couple of other witnesses who are here—I shall not read that statement but merely ask that it be included in the record and I should like, if I may, simply to supplement a few of the points which are made in the prepared statement with some additional remarks.

Senator RANDOLPH. The statement in full will be included in the record.

Mr. MCCALPIN. Thank you.

[The prepared statement of Mr. McCalpin follows:]

PREPARED STATEMENT OF F. WILLIAM MCCALPIN

Mr. Chairman and members of the committee, My name is F. William McCalpin, a practicing attorney from St. Louis, Mo., and assistant secretary of the American Bar Association. I appear here today on behalf of the American Bar Association at the request of our president, Justin E. Stanley. It may be useful for you to know, in view of your consideration today of the legal problems of the elderly, that I am the immediate past chairman of the association's standing committee on legal aid and indigent defendants and have also previously served as chairman of ABA's special committee on prepaid legal services and the special committee on availability of legal services.

In preparing for my appearance here today, I was reminded that the first hearing held by your committee on the subject of the legal problems of the elderly was held in my hometown of St. Louis in conjunction with the American Bar Association's annual meeting in 1970. So it is a particular pleasure to renew the dialog between your committee and the ABA on this important issue.

Our association has had a long history of interest and concern with making legal services available to those who do not have traditional means of access to these services. Historically, our major efforts in this regard have been focused upon the indigent. Lawyers in New York established the first legal aid program exactly 100 years ago. Continuing efforts by the organized bar and other groups to try to make such services universally available have led to the establishment of significant Federal initiatives in this area, most notably the Legal Services Corporation.

With respect to the nonindigent members of society, our early efforts focused on the concept of lawyer referral programs by which members of the public could receive from a State or local bar association the names of qualified attorneys in the client's locale. Generally, through an agreement between the participating attorneys and the bar association, the client would be charged only a nominal fee for an initial consultation. There are now 261 such referral programs serving well over half a million people annually.

In recent years, however, the ABA has become heavily involved in a variety of efforts oriented toward improving the delivery of legal services: prepaid legal service plans, paralegals, specialization, advertising, surveying the legal needs and problems of middle-income citizens, legal clinics, pro bono activities, and the like. There are seven committees of the association that are involved so intensively and directly in this area that we have created a coordinating committee, the consortium on legal services and the public, to focus these efforts.

I have briefly mentioned these efforts to indicate that the association has recently undertaken a number of programs which, while not directed exclusively at the legal problems of the elderly, will have positive impacts on the delivery of legal services to this group. Our involvement to date with the specific needs of the elderly has been limited to the work of three constituent groups within the association.

The Young Lawyers Section

A committee on legal services to the elderly of the young lawyers section is engaged in seeking to have State and local bar associations establish programs to provide legal services to the elderly. Your chief counsel, David Affeldt, met with this group at a conference held in June. The committee has put together a package of materials for use by State and local bars and is seeking to have programs for the elderly implemented by these groups.

At least one project has already been started as a result of the committee's efforts. The New Jersey State Bar Association has begun a lawyer referral program for the elderly as an extension of its existing referral service. When elderly persons seek legal counsel through the bar association, their names are referred to a panel of lawyers, currently 38 in number, who have an interest and expertise in this area. The lawyers perform the work for the clients at reduced cost or, in some instances, at no cost to the client. The program is just getting underway but has good support among the attorney participants.

The Family Law Section

The association's house of delegates, the policymaking body of the association, adopted in August 1975 at the request of the family law section, the following resolution:

"Resolved, that the American Bar Association approve the support of a program to establish, in cooperation with local and State bar associations, panels of retired attorneys to provide legal assistance on a *pro bono* basis to elderly persons financially unable to obtain counsel in their communities."

The section has initiated efforts to establish such programs, but the movement is really in its infant stages at this point. The Older Americans Legal Action Center in Dallas, Tex., is one of the first such programs. This effort combines a core of four staff attorneys, whose salaries are paid from Older Americans Act funds, and a panel of over 60 retired attorneys who provide volunteer services in perhaps three to eight cases each per year. One interesting feature of this program is the use of a van as a "mobile office" by which an

attorney and a paralegal travel to senior citizens centers to talk to elderly people about their legal problems. Both the State Bar of Texas and the Dallas Bar Association are participating in this effort.

Real Property, Probate, and Trust Section

The real property, probate, and trust section's committee on the legal problems of the aged has taken a two-pronged approach in this area. In 1974, it conducted a survey to determine which States had fulfilled the mandate of the 1971 White House Conference on Aging by establishing State agencies to coordinate and monitor State services for the elderly and to promote such services. The survey results were published in the section's journal, thereby providing the 21,000 members of the section an awareness of and guide to the programs and services available in their States.

The other activity of the committee has been an attempt to increase the expertise of probate and trust lawyers to deal with problems of the elderly. Various articles have been written by members of the committee on specific topics relating to the legal needs of the elderly and published in the section's journal. Currently, the committee is preparing such an article on the use of powers of attorney in these cases.

A number of State and local bars have also instituted similar programs.

The Nevada State Bar, in conjunction with the Clark County legal services program and the State supreme court, has instituted a project by which a panel of lawyers volunteers to handle overflow cases from the legal services program on a *pro bono* basis. While the project provides free legal services to a wide variety of clients and not just the elderly, it has resulted in more than 175 hours of free legal services being provided annually by the private bar to the elderly.

In Louisiana, the State Bar Association and at least three local bar associations have worked with public and private agencies to establish a lawyer referral service for the elderly which combines training of the participating attorneys in the legal problems of the elderly, publicity about the program through newspapers and through organizations of the elderly, and low cost legal services to the elderly.

Virginia's two statewide bar associations combined efforts last year to conduct a 2-day seminar on the legal problems of the aged. One hundred twenty-five Virginia lawyers attended the seminar, and their registration fees paid for the cost of the seminar and for the publication of a resource manual in this area.

These are examples of the sort of activity now going on in the organized bar. More, of course, needs to be done to extend such programs into areas not now served. The president of the ABA and I have discussed the possibility of our establishing an association committee or task force to work in this area and foster the spread of similar programs. Exploratory conversations have been had with at least one foundation on the subject of financing such efforts. While no decision has been made on this score, I know that President Stanley is most interested in the subject.

What could such a task force accomplish? What sorts of initiatives could it encourage? As an initial agenda, the task force might explore any or all of the following ideas:

(1) Encouraging lawyer referral programs, now operated by virtually every State and major local bar association, to establish distinct panels of lawyers who have expertise in this area.

(2) Compiling existing materials on the legal problems of the elderly, developing new materials as necessary, and "packaging" these materials for use by State and local bars in connection with programs they may operate for the elderly.

(3) Conducting continuing legal education programs on this subject.

(4) Establishing panels of volunteer lawyers to provide legal services to the elderly who are unable to afford private counsel.

(5) Developing prepaid legal service plans specifically for the elderly. One common problem with respect to improving the expertise of the private bar in a particular area of the law is the lack of a sufficient volume of cases in that area to permit the practitioner to devote himself intensively to it. Prepaid programs, apart from their many other merits, would help to stimulate the necessary volume of cases.

(6) Working to obtain simplification of legal processes, particularly administrative agency procedures. Many problems of the elderly could be resolved by the elderly person himself, or with minimal assistance of counsel, if the legal processes were less complex and intimidating. Particularly with respect to administrative agency proceedings, I have the impression that it is the citizen, and not his administrative remedies, which generally becomes exhausted first. Bar associations are making efforts to simplify many legal procedures in sound and responsible ways, and such efforts should be encouraged with respect to areas of the law in which the elderly citizens are commonly involved.

(7) Encouraging each of the ABA's sections to establish a committee on the legal problems of the elderly. Our organization has 25 "mini-bar associations," called sections, composed of lawyers with interests in a particular field of law, such as tax law, family law, and administrative law. A committee of such a section could substantially increase both the sensitivity of its members about the legal problems of the elderly and their expertise in this field.

(8) Working to encourage government agencies to be more willing to allow citizens, including the elderly, to be represented by counsel in administrative proceedings. Historically, certain agencies have prohibited attorney participation or made it difficult for individuals to be represented by attorneys. The Veterans' Administration, for example, still prohibits attorneys from being paid more than $10 for representing a client in a VA proceeding. Such arbitrary and unreasonable limitations seriously impair the ability of a citizen to protect his rights and should be eliminated.

I think these and other measures are ones which can and should be taken by the organized bar. The percentage of our total population which is over 65 years of age now exceeds 10 percent, and that figure is growing each year. There are special and definable legal problems experienced by many members of this group. The bar has begun to address itself to those unique legal problems and needs, and these efforts should be strengthened and expanded.

Thank you for this opportunity to appear before you and present my views and those of the American Bar Association.

Mr. McCALPIN. As the prepared statement indicates, the American Bar Association has long maintained an interest in the delivery of legal services to diverse groups of American citizens. Historically, and going back exactly 100 years, our interest has focused upon the indigent. More recently, and particularly within the last 10 years, that interest has broadened out to include numerous other groups of American citizens.

In addition to the activities which are recited in my prepared statement, the standing committee on legal aid and indigent defendants in the last few years has taken particular pains to identify constituencies of indigent persons, subgroups within that categorization, if you will, who are particularly to be considered in the provision of legal services.

Those constituencies include juveniles, native Americans, prisoners, the elderly, ethnic minorities, and the like.

LEGAL SERVICES FOR THE HANDICAPPED

Senator RANDOLPH. I wish you would add the handicapped also.

Mr. McCALPIN. Yes, sir, we have. As a matter of fact, just at the annual meeting in Atlanta, the house of delegates passed a resolution respecting the handicapped citizens of the United States.

Senator RANDOLPH. There is a very substantial number of handicapped persons in our population, but they are also individuals who can be in the mainstream of American life and be very productive in our society.

Mr. McCALPIN. There is not any question about that, Senator. They

are particularly deserving of the really minimal assistance which we can give them to bring them into, as you say, the mainstream and to cause them to bring their undoubted talents into the productive life of the United States.

The family law section of the American Bar Association was really responsible for the 1970 hearing which Senator Williams referred to in his opening remarks yesterday. Mr. Norman Kalcheim, of Philadelphia, the chairman of the committee within that section, caused a hearing of this committee to be held in St. Louis 6 years ago.

As the remarks indicate, the real property, probate, and trust sections dealing as they do with matters of estates, and trusts, and real property, has taken a particular lead in exploring how legal services might be brought to elderly citizens in manners which I have described in the prepared remarks.

Senator RANDOLPH. The Committee on Aging held the hearing in St. Louis.

Mr. MCCALPIN. I believe you attended.

Senator RANDOLPH. I did attend. I can't pinpoint the date, but I believe it was in 1970.

Mr. MCCALPIN. August 1970, in conjunction with the annual meeting of the American Bar Association in our city at that time.

Senator RANDOLPH. I think this is further proof of what you said earlier. Is it correct that the American Bar Association has a continuing desire to address itself to this very important problem?

Mr. MCCALPIN. Yes, sir. That is exactly correct, and the family law section has taken up the endeavor in the interim as well as the real property section. They have engaged in the activities described in the prepared remarks.

YOUNG LAWYERS INTERESTED IN ELDERLYS' LEGAL PROBLEMS

Of more immediate interest, I think, is the activity of the young lawyers section and the two representatives who have joined me here today. I think it is a matter of interest that it is the young lawyers who are particularly interested in the problems of legal services for the older citizens of the United States and they seem to have bridged that gap that we hear about so much. It is not the lawyers in between, but the young lawyers who are so interested.

Senator RANDOLPH. On the Salem College campus at Salem, W. Va., which is my alma mater, we have the agent there on the campus. They have an innovative program, which I do not have time to discuss in detail now. There was a belief by many people that the students would resent this group of persons who would possibly mingle with them, at times eat with them, and would be a part of the campus life. Instead, they are prompted by them and helped. I receive letters from the board of trustees and the officials of the college, saying "This has helped the students. It has given them help which they didn't realize. Thank you very much."

Mr. MCCALPIN. I think that experience is mirrored and reflected in the bar as well, Senator. In June of this year, the young lawyers section brought together representatives of a number of members of the bar from eight or nine States to a meeting here. Those repre-

sentatives had expressed a particular interest in creating legal services programs for the elderly.

The staff counsel of this committee, Mr. Affeldt, was in attendance at that time. The section is continuing that activity. In a series of five meetings to be held around the country this year, beginning next week in Chicago, representatives of the young bar in all 50 States will be offered five or six programs to be implemented by young lawyers in all 50 States and in communities across the country.

One of these programs will include the development of legal service programs for the elderly. At the meeting in Chicago next week, 68 lawyers have already indicated an interest and an expectation of attendance. They will come from 12 or 14 States. At that time, material such as I have in my hand and were used at the meeting here in June will be offered to those in attendance so that they may return to their States and their local communities and build upon the kinds of ideas which Commissioner Flemming and Tom Ehrlich described here this morning.

Coming from those directions, they can put together programs to provide legal services to the elderly in their States.

As I have said, that meeting at which representatives of 12 or 14 States will be in attendance will be repeated four times throughout the course of this year so that all 50 States will be represented and given an opportunity to participate to inaugurate programs to provide legal services for the elderly.

As is indicated in the prepared statement, building upon these efforts and those of others in the field, the American Bar Association is exploring the possibility of bringing these efforts together under a committee or a task force which might have the charter which is outlined in the prepared statement.

Use of Paralegals To Help Elderly

I would conclude, I think, with offering just a few additional thoughts for the consideration of the committee. As Tom Ehrlich said a little bit earlier, it seems to us that this area of legal services for the elderly is one which is particularly appropriate for the activities of paraprofessionals, paralegals. It is in large measure an area of problems with administrative agencies where paralegals can much more easily find access to the system than in the courtrooms where the court has the tendency to require a license to practice law as the price of admission.

In addition, the use of paraprofessionals admits of the possibility of using those persons most familiar and concerned with the problems, to wit, the elderly themselves, in a helping way usually with some advice and consultation with lawyers but it seems to us that the use of paralegals, paraprofessionals, is particularly appropriate in this area of the provision of legal services and, indeed, the paralegals help the professionals to expand their opportunity, to expand their area of service.

Agency Restrictions on Legal Services

One problem area that I would draw to the attention of the committee is the area of restrictions really on the provision of legal

services to the elderly, among others, by the practices of certain of the agencies involved.

It is interesting that Senator Randolph is here. I remember about 10 or 11 years ago at a meeting of the West Virginia bar in Charleston, there were representatives there of the Social Security Administration. At that time, that agency had particular restrictions on the compensation of lawyers in the representation of persons with problems before the Social Security Administration. Largely, I must say, because of its own feelings, that agency changed its approach with modest prodding from the bar. It is now possible for attorneys to participate in the solution of problems within the framework of that agency on a modest basis and as a result we have seen a very dramatic increase in the representation of persons with problems before the Social Security Administration. A dramatic increase in the use of lawyers.

Just this past year, there was presented to the house of delegates of the American Bar Association a report and recommendation from the special committee on Federal limitations on attorneys fees. That report drew particular attention to the practice of the Veterans' Administration which has, among other things, a limitation of $10 on fees which may be paid to an attorney for representing a person with a problem before that agency.

While I am sure that rule was conceived in the hope and the thought that it was in the interest of the veteran that he not have to pay an inordinant fee to have his problem solved, in truth and practice I think that regulation works to the disadvantage of the veteran because, as a practical matter, it means that he cannot get legal representation in the solution of his problem.

I have pulled from the bound book of reports the report and recommendation of that committee which was, as I say, adopted by our house of delegates in Philadelphia in February of this year and I would ask that, together with the very useful appendix which is a compilation of limitations on attorneys fees, be added to the record of this proceeding.

It is my understanding that a few copies of that were handed in to the staff this morning without, I am sorry to say, that compilation at the end of the report which will be submitted to the staff before the day is over.

Mr. AFFELDT [presiding]. We shall make that part of the record.[1]

Mr. MCCALPIN. Thank you.

PUBLIC INTEREST LEGAL SERVICES

Finally, I would draw the attention of the committee to the resolution of the public interest practices committee, which was adopted by our house of delegates some time ago and it calls upon each lawyer in the United States, as a matter of his basic professional responsibility, to provide public interest legal services. The generic words of that resolution certainly admit of the provision of those legal services to the elderly. That committee is busy at work now drafting specifications for the implementation of that generic resolution and I have no doubt that when completed it will clearly call for the provision of

[1]See appendix 1, item 9, p. 361.

legal services to the elderly, among others, as a basic element in the discharge of the professional responsibility of each lawyer under canon 2, to make legal services more readily available.

I would simply finish by saying that the American Bar Association and all State and local bar associations, I think, have become increasingly aware of the obligation to provide legal services to all segments of the community and we welcome the activity of this committee in a particular area among a particularly deserving group of American citizens and we will lead in the field but we will also respond to your lead as we see it developing in the months and years ahead.

We look forward to cooperating not only with this committee, but with the Legal Services Corporation, Commissioner Flemming, and others interested in this vital field.

I thank you. We would be glad to answer any questions on any of our activities.

Mr. AFFELDT. Thank you very much, Mr. McCalpin, for an excellent presentation.

I shall raise a couple of questions and then ask some of the staff members if they would like to pose any questions to you or to the panelists.

First, the American Bar Association adopted a resolution in 1975 which said, and I quote: "It is the basic professional responsibility of each lawyer engaged in the practice of law to provide public interest legal services." What steps has the ABA taken to increase the involvement by private attorneys in providing legal services for the poor, and particularly the elderly poor?

Mr. MCCALPIN. Well you, of course, have just quoted from the public interest recommendation of the special committee on public interest practice to which I referred a moment ago. I think I can say several things about what we are doing to implement that.

First, as I have said, the committee that fathered that recommendation is now at work designing the specifications by which the generic resolution will be implemented, and I think you will recognize that the passage of that generic resolution represented something of a milestone because it did advance the concept of basic professional responsibility a good deal.

Second, the gentlemen at my left and my right in the young lawyers section are, as I have said, busy at work energizing the State and local bars all over the United States—particularly the younger members of those bars—to create programs which may participate in the legislation which this committee has sponsored.

Mr. AFFELDT. I believe Mr. Greenberg has undertaken some efforts in New Jersey, and I would appreciate it if he could provide some comments about his activities for the record.

STATEMENT OF WILLIAM S. GREENBERG, TRENTON, N.J., CHAIRMAN, COMMITTEE ON LEGAL SERVICES TO THE ELDERLY, YOUNG LAWYERS SECTION, AMERICAN BAR ASSOCIATION

Mr. GREENBERG. Thank you, Mr. Affeldt.

The importance of the New Jersey project is that it is one example of what can be done in delivering legal services. That is what this program is all about, getting the services to the people who need them.

In New Jersey, particularly, we have a panel of some 38 volunteer lawyers and we have approached it as an extension of a more traditional lawyer referral service with the emphasis on the substance of the problems of senior citizens, the elderly.

Thus, when a senior citizen or a person who is elderly knows to call the New Jersey State Bar Association—at an 800 number, I might add, a toll free number—seeking legal services, that is automatically plugged into or assigned to one of these 38 volunteer lawyers on a regional basis, trying to match up the lawyer with the potential client. It is done on a very low cost or no cost basis to the individual.

I might note that one of the things that the American Bar Association has to be concerned with, and that we in New Jersey have been concerned with, is what do you do about the problem of the elderly when a senior citizen, who is not necessarily poor but needs legal services, is not necessarily indigent but does not know where to go for a lawyer or how to seek legal services, and the question of the fee, and the question of the participation of lawyers?

We in New Jersey have tended to indicate that regardless of economic means it is the problems of the elderly that we are addressing and that will then be followed through on an individual lawyer-client basis. Those who are able to pay, pay; those who aren't will receive the services free.

It is very interesting, and I think you know that very many senior citizens do not want charity, do not want a handout. It is simply a problem of getting together a person in need with a person who has got the wherewithal to supply the need. A very important concept that I have stressed around the country at these regional meetings of the young lawyers section is that this is not necessarily a program of freeing legal services in the sense that only indigent people should be considered. It is a program of delivery of legal services in all of its ramifications and I think that is a very important concept, particularly to our elderly—a refusal to become a part of the program that is merely one more indigent and merely a charitable one.

Role of Law Schools

Mr. Affeldt. I would like to pose this question for all three panelists. This relates to the role of the law schools in training attorneys to be responsive to the legal problems of the elderly. I know from my own personal case when I attended the University of Texas Law School, which I consider to be a top flight law school, that I had very little training at all for the type of work I am doing now. Much of the training was for the traditional attorney-client relationships, business associations, personal injury cases, and so forth.

What, in your judgment, should the law schools do in order to sensitize and prepare the attorneys of tomorrow for the legal issues affecting the elderly?

Mr. McCalpin. Well, I think that in a little different context and from a little different direction the law schools are moving in directions which will be productive in the terms that you have described. The thrust really has come from the poverty law area and the involvement of law students and clinical programs in cooperation with

local or legal service agencies funded by first OEO and now the Legal Services Corp.

As a result of that, law schools are beginning to pay a lot more attention to consumer law, landlord and tenant law from the tenant's point of view rather than the landlord's point of view, and problems of that sort.

Now this inevitably will have some fallout in substantive problem areas which are of concern to the elderly.

The sensitizing which is going on in that is, I suppose, largely directed at sensitizing law students to the problems of the poor. I suspect we need to add a dimension to that, sensitizing them to the problems of the elderly. All this, of course, is laid on the traditional disciplines and administrative law and procedural law which has gone on, and I think it has added new dimensions to it.

I do believe that maybe what we need to do is to wed more combined sociology courses with legal courses, and there are some efforts in those directions around the country.

Mr. AFFELDT. Very good.

Mr. Piliero, would you like to comment on that for the purpose of our hearing record?

STATEMENT OF DANIEL J. PILIERO II, CHAIRMAN, YOUNG LAWYERS SECTION, AMERICAN BAR ASSOCIATION

Mr. PILIERO. Thank you, Mr. Affeldt.

I would agree with Mr. McCalpin's comments. I think the number of issues which are before the bar, and indeed before the profession, will tend to converge on the solutions to the problems of the elderly in the legal area. We are at the moment, it seems to me, struggling with the concepts of making known the availability of services to people through a reconsideration, I suppose, as an association and as a government, of the respective positions which we might have with respect to advertising availability of services. We are struggling, it seems to me, with the concepts of how legal services may best be delivered and whether we should, as Mr. McCalpin said, spend a number of years exploring through prepaid plans and other varieties and types of programs.

The concept of providing information about the availability of legal services and providing information and accessibility to legal services will have, it seems to me, a very significant impact on the elderly as it will on other generic groups of people as we begin to open those discussions and resolve certain issues.

PINCUS LEGAL EDUCATION PROGRAM

More particularly to the point of whether it would be appropriate in a law school setting to design a specific program or to include in each of the more than 150 law schools programs on legal services training for the elderly, I would suggest to you the Pincus program for clinical legal education.

Bill Pincus has for more than 6 or 7 years supported 120 active clinical programs. He has indeed funded clinical programs of a great variety. I receive his materials and I would be pleased to sup-

ply, at a later time, information on whether there are specifically funded clinical legal programs designed to assist the elderly as a group, and if there are not, I think perhaps that organization might be interested in considering the subject.

Within the context of clinical programs generally, there being more than 100 funded projects across the law school community, my impression is that you would benefit from having law schools include some clinical training with special attention to the elderly.

I did not take from your comment the suggestion that there be a substantive law course on the subject of legal problems of the elderly as much as, perhaps, a combined substantive law and clinical program. To that extent, it would seem to me that it would certainly be useful to consider the existing mechanisms, such as the Ford Foundation grant called CLEPR—Clinical Legal Education for Professional Responsibility—which Bill Pincus administers, and other existing programs that you and I have had occasion to work with and which the private sector might well energize in a law school, or two more programs which would be models.

My belief is that Mr. McCalpin is probably correct. It is the young members of the bar doing the kinds of things which we are now doing which will be more valuable in the long run to ultimately delivering the services to the elderly—to have lawyers in the field already established and working who we know are not merely thinking about going out to practice law and who ultimately go to do something else, but lawyers who are there physically in the field practicing, who have their own firms or belong to firms, either volunteering their services or developing a side of their practice in a profit setting, if that be the case, but developing a side of their practice with a particular view toward the fact that there is a special area here of attention which is necessary, and attention which they should be involved in.

Mr. AFFELDT. Mr. Greenberg.

CLINICAL CONCEPT

Mr. GREENBERG. My view, quite frankly, is that I adhere to the concept that in the law school setting an emphasis on the clinical programs is wise and the substantive area of the law should be handled the way they have traditionally been handled in law schools, which is smaller seminars on these particular programs and a particular substantive, such as social security and veterans statutes, and so forth.

Mr. AFFELDT. Where did you attend law school?

Mr. GREENBERG. Rutgers, the State University of New Jersey.

Mr. AFFELDT. Did you have any courses on social security or medicare?

Mr. GREENBERG. No, they were traditional. This is the emphasis I think we should have in the future. They were all subsumed in administrative law courses and you were lucky to touch upon a particular case.

As you know, the traditional method of law teaching is the case method. There are very few cases that get to the courts dealing with the substantive problems of the elderly as elderly. I think a greater

emphasis should be made to include substantive law but I wish to make the following point, and that is, agreeing with what Mr. McCalpin and Mr. Piliero have said, I would put the two together, and that is conducting legal education programs for practicing lawyers should deal with the substantive areas of the law of concern to the elderly.

In the State of Virginia, the Virginia Bar Association had a program, I believe, last fall, in which practicing lawyers would come together, traditionally Saturday morning or 1 or 2-day sessions, and deal with particular substantive areas whether it be social security, whether it be supplemental security income, veterans statutes, or private retirement.

As you know, we have a brandnew Private Pension Reform Act of last year which, I believe, Senator Williams is one of the principal sponsors of. These are the kinds of things that should be emphasized, in my view. The practicing attorney should be encouraged to get the information in terms of the substantive areas of law. That is the emphasis I would make, not necessarily in law school but once the lawyer is admitted and is practicing. That is where he should get the knowledge of the substantive area in the law.

Continuing Legal Education

Mr. McCalpin. There is a development which is emerging around the country which I think is apt to tie in rather closely to what Mr. Greenberg has suggested, and that is the increasing emphasis on the requirement of continuing legal education as a condition of maintaining your license in effect. At least two States have now adopted rules of court which require lawyers to spend a specific number of hours in upgrading their skills continuing their education.

Mr. Affeldt. Are those States Iowa and Minnesota?

Mr. McCalpin. Exactly, and I think it is 45 hours in a 3-year period of accredited instruction as a condition of maintaining the license. It is courses of that kind which can easily accommodate the concept which Mr. Greenberg has suggested.

Mr. Affeldt. Mr. Schneider.

Mr. Schneider. On behalf of Senator Kennedy, let me raise a few questions.

Paralegals

You mentioned favorably the paralegals here dealing with the problems of the elderly. Yesterday, there was testimony which indicated that some State bar associations apparently have passed regulations which tend to forbid nonlawyers from handling administrative law cases for elderly clients. I am wondering if you could comment.

Mr. McCalpin. Well, I think that generally speaking, the use of paralegals is considered to be entirely appropriate within the framework of their working in a general way with guidance from professionals. Now so far as I know, the only areas where there are flat prohibitions. if I remember, in Michigan a few years ago there was a proposal that nonlawyers represent persons before the Workmens Compensation Commission and I believe the Michigan bar opposed that.

In other words, it was completely independent, outside of the rules, outside of the training and the code of professional responsibility of the profession.

I think that so long as paralegals work within the general structure of the profession subject to the rules as to confidentiality, conflicts of interest, and the general supervision of professionals, I don't think that there is any organized opposition by the bar.

Mr. SCHNEIDER. Let me turn it around a little bit. What is the bar doing to encourage these paralegals?

Mr. MCCALPIN. Well, the bar is doing all kinds of things. The availability committee, which I was privileged to chair for 5 years, spun off the idea of paraprofessionals. There was created a special committee of the American Bar Association, under the chairmanship of Lee Turner of Kansas, about 6 or 7 or 8 years ago. That committee has sparked and energized the creation of numerous paralegal training programs around the country within recognized institutions of education, frequently at the community college level, sometimes in the general public educational system.

That committee has dealt with not only the training but the utilization of paralegals in the profession and I think as a result of the activities of the organized bar we have seen an enormous increase in the use of paralegals.

The OEO funded programs took it up. The OEO provided money for the utilization and training of paralegals. That mantle has now passed to the Legal Services Corp. I have had some conversations and correspondence with Mr. Ehrlich in that connection over the past year or so. I think the bar has done very much to increase the recognition, the training and utilization of paralegals in the last 6 or 7 years.

PRO BONO REPRESENTATION

Mr. SCHNEIDER. One final question. One of our later witnesses in prepared testimony quotes from a speech by Justice Brennan at Harvard on the possibilities of the legal profession urging that each member of the bar be required to spend 5 hours per week in pro bono representation. No bar association, according to him, has yet imposed such an obligation upon its members.

Do you think that that is a reasonable standard and do you think that the bar association might consider that?

Mr. MCCALPIN. Mr. Affeldt and I were discussing earlier the resolution which was adopted by the house of delegates of the American Bar Association a year or so ago at the instance of the special committee on public interest practice. That resolution, which is now the policy of the American Bar Association, says that it is a basic professional responsibility of each lawyer engaged in the practice of law to provide public interest legal services.

Now what you are doing, of course, is quantifying that obligation in terms of 5 hours a week. As a lawyer engaged in the private practice of law myself I would say to you that I think 5 hours a week is pretty stiff. I do think that there is an obligation. I think that we are at work now trying to translate that obligation into specifics.

I am not sure that each lawyer is constitutionally made up so as to provide the service himself. It may be that you will do it in a

surrogate way. I point to you the sample of Hogan and Hartson here in Washington which has supported a public interest section in the firm which has a lawyer in charge and two or three other lawyers.

John Ferren, who is the head of that section, is a very devoted and able lawyer and he is completely supported by the firm along with his section. I think that this is the way that it may be, that the quantum of the obligation may be translated in different ways across the country.

Indeed it may be that some will merely support it financially, but I think that the bar has accepted Mr. Justice Brennan's principle and it is now trying to translate that into active reality.

Mr. AFFELDT. Mrs. Fayé.

Mrs. FAYÉ. No questions.

Mr. AFFELDT. I think one of the impediments for private attorneys to provide legal counsel for the elderly is, as you pointed out, the $10 limitation for VA benefits. In a prior working paper for the committee—prepared by Legal Research and Services for the Elderly—one of the contributing attorneys pointed out that in so many cases the issues affecting the elderly are the type that are very complicated and do not offer much of a return for the expenditure of time for the private attorney.

PROPOSALS TO IMPROVE FEE SYSTEM

What, in your judgment, can be done to improve the fee system so that it will be more financially attractive for the attorney to represent the elderly client and yet not result in a great dilution of benefits—to the point that it would not be advantageous for the elderly client to be pursuing his legal rights?

Mr. MCCALPIN. I think there are a couple of things that can be and are being done in that respect. First of all, the use of paraprofessionals is a less expensive way of going about solving the problem than to utilize a fully trained and higher priced professional.

Second, the concept of prepaid legal services which has been espoused by the bar is one which offers a solution. I happen to sit on the board of Prepaid Legal Services, Inc., in St. Louis. A senior citizens group has come to us with a view to creating a prepaid legal services program for that senior citizens group of the typical open panel variety where they pay what amounts to a premium. It is a spread the risk sort of thing which makes it possible for them to get the services.

There is, of course, no reason why a group of senior citizens could not do as many labor unions have done across the country and that is to create a closed panel legal services program where counsel is on a salary rather than paid a fee for service, and this again has the effect of minimizing the cost so far as the individual recipient of the service is concerned.

I think that these are at least a couple of ways that that problem can be addressed very quickly within a nonradical solution.

Mr. AFFELDT. Do the other panelists wish to make any contributions?

Mr. PILIERO. Mr. Affeldt, I think we will have to recognize that, aside from the possibility of there being a fee, there will be those

who are simply not able to pay a fee at any level, and the system will not be a fee-generating one. To that extent the work of the volunteer lawyer which we are energizing and the work of the Legal Services Corp. upon which you received testimony this morning, and as I understand it, a reporting system of some sort which Senator Kennedy requested be established, will probably be the best aid.

For the private bars' part, I would suggest that the young lawyers will be addressing some 275 affiliates in the coming year. We would expect that in excess of 500 or 600 presidents of the young lawyers groups throughout the country will be attending with officers and committee chairpeople and we would hope to energize committees of practicing lawyers in a volunteer setting.

As Mr. Greenberg suggested, in some instances these volunteers function on a fee basis where it appears that the problem and client warrant a fee. In most instances, however, it is just volunteer time which comes back to the question of what is the bar doing with the volunteer services. We don't keep track of the hours. I can only tell you that in a disaster assistance project I know we answered 5,000 claims over a 2-year period.

In the past year we have had volunteers present in an Indochinese refugee assistance program made at the request of the Department of State last year. I know that we have established an assistance program and answered more than 1,500 calls on this program. Similar programs will be the subject of our five regional meetings which Mr. McCalpin suggested. So I think that although we are unable to quantify and send in tables of hours devoted to these projects, the private bar does pull a good share of its weight, and without a fee. I don't think the fee question has stopped us from providing the service. Indeed, we accept no fees on any of the problems which I discussed.

Mr. McCALPIN. In addition, of course, to paralegal and prepaid legal, we do have the discharge of the public interest obligation which we have discussed earlier as well. Of course, the services of the Legal Services Corp., which has been greatly supported by the bar, are approaches to solving the fee problem for legal services for the elderly as well.

Mr. AFFELDT. Any more questions?

Thank you very much.

Mr. McCALPIN. Thank you.

Mr. GREENBERG. Thank you.

Mr. PILIERO. We appreciate the opportunity to testify.

Mr. AFFELDT. Now we shall hear from Mr. Paul Nathanson who is the executive director of the National Senior Citizens Law Center. His testimony at the committee's Los Angeles hearing in 1974 provided a spark for the Tunney amendment to the fiscal 1975 Labor-HEW Appropriations Act. It provided a $1.2 million special funding level which led to the creation of 11 model projects throughout the country.

The National Senior Citizens Law Center also provides technical assistance on a wide range of issues to State and local offices of aging, serving 29 States west of the Mississippi.

We welcome you, Mr. Nathanson.

STATEMENT OF PAUL S. NATHANSON, EXECUTIVE DIRECTOR, NATIONAL SENIOR CITIZENS LAW CENTER, LOS ANGELES, CALIF.

Mr. NATHANSON. Thank you. It is a pleasure to be here.

I am here actually in a dual capacity; as executive director of the National Senior Citizens Law Center, and as a member of the executive committee of the newly formed legal services section of the largest State bar association, the State Bar Association of California. I have submitted a statement [1] for the record on behalf of the legal services section.

I also have a prepared statement [2] which I hope will be included in the record.

We have heard today and yesterday, and we will continue to hear, about the efforts that the private bar has been making with respect to providing legal services for the elderly.

However, I am not convinced that aggressive advocacy—major litigation and legislative and administrative advocacy—will go on if the sole representative of the legal rights of the elderly poor is the private bar.

I think that the staffed legal services programs funded now by the Legal Services Corp. and by the Administration on Aging through its title III program have been a major source of improvement in the daily lives of older people through their advocacy efforts.

It is this expertise in dealing on a daily basis with social security, food stamps, title VII, SSI and the major Federal benefit programs which I think is critical. I do not see that expertise arising—except perhaps in the long, long range—out of the private bar and judicial-type programs.

ACTIONS TO DEVELOP EXPERTISE FOR ATTORNEYS

Mr. AFFELDT. What steps do you think would be necessary in order to develop this expertise for these various programs?

Mr. NATHANSON. For private attorneys?

Mr. AFFELDT. For private attorneys and perhaps legal services attorneys because I think many of them are not that well informed about programs.

Mr. NATHANSON. There are several things that can be done. Publicly-funded legal services attorneys have the various backup support centers mentioned by President Ehrlich. They have training programs. There are manuals which are prepared to at least begin to give out some of the expertise. These resources are generally not available to the private practitioner.

For example, I spoke recently with a private attorney in Chillicothe, Mo., who would very much like to take an occasional social security case but cannot spend the 2 days required to go down to Kansas City, read the Federal Register and then go back home and do the research.

If that attorney had available the services of a support center such as ours—or the Welfare Law Center in New York, or another one,

[1] See appendix 1, item 10, p. 369.
[2] See p. 292.

depending on what the question was—where he immediately could be told, "Look, that is a case that is worth pursuing," or "We are doing something in Florida with respect to that," and so forth, I think you would see him taking social security cases because he would be able to afford it. And in the long run you would see the private citizen being able to afford having that attorney in Chillicothe take the case at a reasonable fee.

Legal Services Assistance for Elderly

I would like to give a few examples of the ways in which legal services attorneys have assisted elderly clients. In *Kennedy* v. *Matthews*, brought by the Food Research and Action Center, a court order was obtained requiring the release of $37.5 million in funds impounded under title VII of the Older Americans Act. As a result, the nutrition services for the elderly were expanded to reach an additional 63,000 persons as a direct result of that case brought by Ron Pollock and his associates.

In the case of *Cardinale* v. *Weinberger*, legal services attorneys were successful in negotiating the right to a hearing before reduction, suspension, or termination of SSI benefits.

The case of *Abascal* v. *Weinberger* ultimately resulted in the Social Security Administration handing out over 1,000 copies of the SSI claims manual to legal services attorneys and other advocates. Initially, the Social Security Administration had indicated that it did not want to hand out that manual which is, as you know, the basic law of the SSI program. It did not want advocates in the field to have it. A lawsuit was brought by Ralph Abascal. Our office went to Baltimore and negotiated with SSA and, as a direct result of those negotiations, it sent out the manual to legal services attorneys.

Even in the face of such major decisions nothing is perhaps as moving as the self-explanatory letter recently received from the National Senior Citizens Law Center with respect to a case involving the eligibility of a plaintiff for a civil service retirement annuity.

I would like to quote just for a moment.

> So let me thank you most sincerely for whatever you did for me. I have tried for over 17 years to negotiate the return to me of my right to a pension for nearly 30 years of Government service, mostly abroad. Now it is all over, thanks to you, Mr. Harden, and others of your service. It gives me great satisfaction to tell you that last Friday, September 3, I received two U.S. Treasury checks, one for $28,654 and another for $1,200.
>
> Also, I was informed I would received $200 monthly from now on. I am deeply grateful for everything, now that you and your service have accomplished what I tried to do alone for so long.

Substantive Expertise Can Make Litigation Unnecessary

Obviously, benefits to clients derive not only from actual litigation but from the general substantive expertise of legal services attorneys and from the enhanced credibility given the negotiations of such attorneys by the mere threat of potentially successful litigation.

Thus, at the simplest level, merely being able to decipher and understand complex pension reports and their significance recently resulted in the discovery of pension credits previously overlooked and

the ultimate issuance of a check for $14,000 to a client for retroactive benefits. In addition, the retiree and his spouse, if he predeceases her, will now receive a monthly annuity of $357.

Now, these are concrete individual cases. My point is that the expertise that legal services attorneys are able to acquire often results in helping people on an individual basis without the need for litigation.

I think it is critical that the expertise which the legal services attorneys have now acquired be available for legislative and other public hearings. It seems to me it would be an excellent idea if there were a way of allowing that expertise to be used in public hearings.

I note with pleasure that Senator Kennedy and others have introduced or sponsored legislation, such as S. 2715, which would provide attorneys fees for aiding individuals and for participating in public hearings. That kind of an approach, I think, is critical if we are really going to tap into the expertise that now exists in the field.

The Federal Trade Commission has been involved in providing attorneys fees or hiring attorneys to represent the consumer interests in its own hearings. That is the kind of thing I think we would like to see more of.

Unfortunately, the other side of the coin is shown by the Social Security Administration. The SSI study group specifically mandated SSA to have legal services attorneys on an advisory panel to talk about the problems in the SSI program. After having had a couple of meetings, SSA is now indicating that it is not even willing to come up with the travel costs of these already financially strapped legal services attorneys to come to Baltimore for task force meetings. It seems to me that that is an area where, if it is anyway possible, there ought to be some legislative mandate to the Social Security Administration.

Mr. SCHNEIDER. Excuse me just 1 second. This is an administrative decision taken by the Social Security Administration. Previously travel vouchers?

Mr. NATHANSON. They provided travel for two meetings.

We have a letter in our office indicating that it looks as though SSA is not going to pay the travel for a few legal services lawyers from around the country to come to Baltimore to work with SSA on improving the SSI program.

I would like to highlight just a few special problems that have come up with respect to legal services for the elderly. One is the funding structure of the Older Americans Act and other Federal programs—the idea of "seed money" and maintenance of effort. We have heard from directors of several projects now serving the elderly who have encountered tremendous problems in the face of these unrealistic kinds of requirements. This is especially true, given the fact that local money is, first of all, generally very limited and a truly effective legal services program—that may be involved with challenges to some of the practices of local municipal agencies—may have an even harder time getting some of these limited funds from the local agency.

Paralegals Essential for Expansion of Legal Services

I think that State and local bar associations have to be educated to the fact that paralegals are critical to the development and expansion of legal services for the elderly. Spokesmen for the bar ought to voice that support, not just in public meetings, but should also go back to Michigan and to other places where paralegals are encountering problems from the organized bar.

Mr. Schneider. Excuse me. At that point could you provide any information you have of situations in various States where those problems do exist so that we can go back to the bars?

Mr. Nathanson. Yes.

I think that the private attorneys, especially in rural areas around the country, have to be educated to the fact that the setting up special elderly law units, whether they be funded through the Legal Services Corp. or through the Older Americans Act, is not going to take away business from local lawyers. Such offices are probably going to really generate more business by increased referrals and utilization of the legal process in general.

Fee Schedules Must Be Improved

As has been pointed out, if the private bar is going to get involved in dealing with the major legal problems of the elderly, the fee schedules under social security, SSI, and especially the situation under the Veterans Administration, must be improved.

I understand Senator Hart of Colorado has introduced legislation to do away with the $10 limitation on attorneys fees with respect to veterans cases; and in the House, Congressman Cohen has introduced similar legislation.

As I also understand——

Mr. Affeldt. I want to mention some points raised by the Veterans Administration. The Veterans Administration's $10 limitation is designed for a couple of purposes. First, to prevent a reduction in benefits for the veteran and his family. Second, the Veterans Administration maintains that this is not an adversary proceeding. The VA personnel actually work for the veterans in terms of receiving their benefits.

What would you say to those arguments?

Mr. Nathanson. Well, taking the latter question first, I think it is probably correct that in a vast majority of situations the counselors that the VA uses are very helpful and give out good information.

I think, however, that in any kind of a situation which challenges the basic system and therefore needs advocacy against the system—such as the kinds of cases we have seen coming out of legal services programs in general with respect to social security, SSI, food stamps—the various VA groups that get funded by the VA itself will not be in the forefront.

In addition, I am a little leery of saying it is not an adversary proceeding. We have heard that for years with respect to guardianship and involuntary commitment and I certainly believe individual representation is needed there.

I think there are various interests at stake in any of those hearings and a person has a right to independent counsel.

Could you repeat the first question that you asked? Your question had two parts and I often have trouble remembering both parts of two-part questions.

Mr. AFFELDT. I was asking you what your rebuttal would be to the Veterans Administration's arguments for limiting the fee to $10.

One, dilution of benefits. Second, this is essentially a nonadversary proceeding to help the veteran.

Mr. NATHANSON. I agree with the position that would not have these fees come out of benefits due. I would like to see that happen with respect to the social security fees. I think Congressman Cohen, in his legislation in the House, sets up a special fund for providing fees for attorneys who work in the VA area and I think that is the approach that we ought to be looking at instead of taking the fee out of the benefit.

Mr. AFFELDT. I shall ask Mr. Schneider if he has any questions.

MAKING EXPERTISE MORE READILY AVAILABLE

Mr. SCHNEIDER. One of the points that you made was the necessity of bringing the expertise available to the services from the program, make it available to private attorneys. What are you doing to make that expertise available to other practitioners in the area to be eligible to social workers and counsel, et cetera?

Mr. NATHANSON. Well, as you are aware, we have two grants. One is from the Administration on Aging to provide technical assistance to State and area agencies on aging in setting up legal programs for the elderly.

Above and beyond giving that kind of technical assistance, we are also involved in really answering substantive questions for the area agencies, for the State offices, and for anyone else in the aging network.

The legislative and administrative newsletter, which is put out by our Washington office on a weekly basis, goes to all area agencies, all aging groups, and anyone else that is interested. We are trying to build that network now.

One of the main things we have been involved in, in the last couple of years, is trying to bridge that gap between the legal services community on the one hand and the professionals in aging on the other, so they start to see the obvious interrelation. I guess if I were to use the word interface in this connection, you would know I am talking to aging professionals on a daily basis.

RECOMMENDATIONS

Mr. SCHNEIDER. Do you have any recommendations for steps that the Legal Services Corporation could take or should take to more adequately serve the elderly?

Mr. NATHANSON. Well, I think that one thing they ought to be doing is definitely focusing in some way or another on those people that can't come in to a legal services office. I don't have any doubt that legal services offices will serve anybody that will and can come into the office and can wait as long as clients often have to wait.

Saying "We will serve anybody that comes in," is not sufficient with respect to isolated individuals—especially the elderly—who have no means of transportation. The effort ought to perhaps aim not specifically at the elderly only, but rather at increased outreach efforts to get services to people who are not now coming into legal services offices. This would include rural segments of the population and I imagine in the long run would hit the elderly heavily anyway.

I am not sure exactly how I feel about specifically earmarking some dollars out of the corporation for the elderly. I would rather go the other way.

Mr. SCHNEIDER. What about requiring that in each legal service office that one or more of the individuals be specially trained to deal with the problems?

Mr. NATHANSON. Generally, I agree with something like that. However, you have to be careful when you create an elderly law specialist that the SSI specialist, the food stamp specialist, and all the other specialists don't start dumping their work on the elderly law specialist.

I think it is important that you have somebody in the office who has the big picture with respect to this client group, who works with aging organizations and who works with the bar associations. I think it is important to focus on these client groups because the elderly have a lot of friends and strengths which can be parlayed by a lawyer who is a part of the "aging network."

In addition, it is really important that the elderly law specialist sensitize other staff members of the legal services project to the special needs of the elderly.

EDUCATING PRACTITIONERS ABOUT USEFULNESS OF ATTORNEYS

Mr. AFFELDT. One point you made in prior hearings is that many practitioners don't know how to use legal services attorneys to benefit their programs or clientele. What tools do you think would be most effective in educating practitioners about the usefulness of legal services attorneys? How can they be sensitized?

Mr. NATHANSON. I think since that time in 1974, a lot has fortunately happened, such as the changes in the Older Americans Act and the existence of the legal services model projects. I think we are at a point now of having at least a basic level of sensitivity.

The next step is going to be some sort of real training at the local level, both with respect to the roles of lawyers, paralegals, social workers and others, and as to the substantial legal issues of importance.

I think it is important that social workers and lawyers be educated to see what their appropriate roles in the entire network are. Everybody ought to be doing what they are best at, as opposed to trying to do somebody else's job and spending time with professional jealousies—at the ultimate expense of needy older people. A perfect example is the area of protective services. This is an area where there ought to be a lawyer, a social worker, and a psychiatrist or a psychologist, working together.

Mr. AFFELDT. I thank you very much.

First, let me ask if Mrs. Fayé has any questions.

Mrs. FAYÉ. I would like to know what your relationship would be, that of the National Senior Citizens Law Center, with the new program that AoA is putting in, with a person in a State agency to handle legal advocacy.

Mr. NATHANSON. Well, our grant now from AoA is to provide technical assistance to State and area agencies on aging. I think it is up to the 29 States as to how to be involved in that program. Once the developers are in place, our job will be to provide them with technical assistance on how to set up legal services offices and also give them substantive backup or support if that is what they need. We now plan on having a training conference in January in Los Angeles for the developers from all 29 States.

Mrs. FAYÉ. My thought is you are already providing technical assistance to the State agencies and the area agencies. How does that relate to the person coming into the State agency?

Mr. NATHANSON. Well, last year we had a grant to give technical assistance to several States. Now the developer will be on the local scene, on a daily basis, able to talk to law schools, bar associations, and so forth, and we will be able to deal with the developer in each State who will be focusing all of his or her attention on developing legal services within the State.

Mrs. FAYÉ. Basically, are you going to be giving technical assistance to the developer?

Mr. NATHANSON. Yes. That is right.

Mrs. FAYÉ. But he would already be a lawyer as well?

Mr. NATHANSON. He may be a lawyer but that is not necessarily the same as being sensitive to legal problems of the elderly or being aware of what can be done in the State. The lawyer-developer will need special technical assistance.

Mrs. FAYÉ. These people are going to have to be trained then?

Mr. NATHANSON. I don't know. It depends.

Mrs. FAYÉ. Trained in the elderly problems area when they come in?

Mr. NATHANSON. The hope, of course, is that you can get somebody who has already been in the legal services program and is aware of the special legal problems of the elderly. That would be ideal, but in lots of situations you won't or you may have someone from a legal services program who is not aware of the intricacies of filing fee legislation or title XX as funding sources for an older Americans legal project, for example.

There are various pieces to the full education of one of these developers that we would hope to be able to provide.

Mr. AFFELDT. Thank you again for an excellent presentation.

[Testimony resumes on page 332.]

[The prepared statement of Mr. Nathanson follows:]

PREPARED STATEMENT OF PAUL S. NATHANSON

My name is Paul Nathanson. I am the executive director of the National Senior Citizens Law Center. The center is currently funded under two grants: the first grant, from the Legal Services Corporation, has allowed us to give substantive assistance to Legal Services Corporation attorneys so that they

could better serve the elderly poor. Thus, upon request from a legal services program, the National Senior Citizens Law Center (NSCLC) will draft pleadings, write memoranda and briefs, assist with litigation, act as cocounsel, otherwise participate in cases affecting the elderly, and provide legislative and administrative advocacy on behalf of clients of legal services programs. In the past our functions also included sensitizing legal services projects to the need for servicing the elderly poor and training legal services attorneys in the special substantive areas that affect the elderly. NSCLC's main office is in Los Angeles, Calif., but it maintains an office with three staff attorneys in Washington, D.C.

We are also funded under an Administration on Aging model projects grant to assist State and area agencies in 29 States to develop and expand legal services delivery systems specifically designed to aid the Nation's elderly.

STATEMENT OF THE PROBLEM

The Need

Perhaps more than any other group, the elderly rely upon complex public and private institutions for their daily subsistence. Therefore, their legal problems frequently relate to the policies and actions of governmental agencies and private corporations, both of which often present undecipherable bureaucratic mazes which even younger persons find difficult to manage. Many of these elderly people now classified as "poor" were, at one time, a part of the mainstream of middle America, and became poor only when forced to live on fixed incomes at age 65. Worse, the income of these newly poor elderly people is constantly reduced by inflation.

Superimposed upon the lives of the low-income elderly is a vast array of complex statutory, regulatory, and decisional law. Their shelter may be provided or secured under Federal and State public and subsidized housing laws, relocation laws, environmental protection laws, and zoning laws. Their health is often dependent upon medicare, medicaid, laws regulating nursing homes, and laws relating to the advertisement of prescription drugs. Their nutrition is often secured by the food stamp program and nutrition programs established by other Federal laws. The source of their income may be social security, supplemental security income under title XVI of the Social Security Act, or private pensions. The dignity of personal freedom and control of property is subject to the vagaries of the law of guardianship, conservatorship, and involuntary commitment.

Thus, the elderly are, on the one hand, confronted with a vast complex of crucial legal issues, bureaucracies, and forms with which to deal; and on the other hand, they have no real place to turn for adequate and effective assistance. Unlike younger people, who have been forced from birth to live under governmental programs and large bureaucracies, today's elderly have not learned to "work the system." Because the elderly have no place to turn for assistance, and because they are not adept at working the system, the elderly as a distinct group in our population, are the least able to deal with issues of a legal nature.

Before examining the available legal services resources and methods which may serve to increase these resources, I would like to take a moment to discuss some of the significant legal issues presently surfacing through the work of legal services attorneys serving the elderly. (I include in this category, attorneys funded by the Legal Services Corporation and other sources such as the Older Americans Act.) I think that, although the focus of these hearings is on the *expansion* of legal services, such a discussion may serve to crystalize and underscore the need for such services.

Over the past 10 or so years, legal services attorneys have won numerous victories which have had a significant impact upon the daily lives of elderly poor people in America. These run the gamut from results in individual cases to nationwide class action suits. I hope it will be informative to mention just a few—the listing is designed to provide an overview and is by no means intended to be exhaustive. The following major victories have been won in the last few years:

Income Maintenance Cases

Buffington and Elliott v. *Weinberger*, Civil No. 734–73C2 (W.D. Wash. 1974); 371 F. Supp. 960 (D. Hawaii 1974); No. 74–1611, 74–3118 (9th Cir. 1975)

These suits, consolidated before the Ninth Circuit Court of Appeals, assure all social security recipients facing recoupment of alleged prior overpayments

from their future benefits the same rights to advance notice and an opportunity for a hearing guaranteed to welfare recipients by *Goldberg* v. *Kelly*, 397 U.S. 254 (1970). *Elliott* was brought on behalf of a class consisting only of social security recipients residing in Hawaii, but since *Buffington* was brought on behalf of a nationwide class, the favorable district court order required the Social Security Administration to alter its notice and hearing procedures in all overpayment cases in order to comply. Although the Ninth Circuit's affirmance of both cases has been vacated by the Supreme Court for rehearing in light of *Mathews* v. *Eldridge*, 96 S. Ct. 893, the district court opinions in each case were thereby reinstated and the Social Security Administration has continued to abide by the revised procedures required by these orders. Under these procedures, before any overpayment can be recovered out of future benefits the affected recipient is entitled to an oral hearing on the question whether such recovery must be waived because the recipient was not at fault in causing the overpayment and because recovery would deny him the funds necessary to purchase adequate food, clothing and shelter.

Cardinale v. *Weinberger*, 399 F. Supp. 1168 (D. D.C. 1975)

This suit is also a notice and hearing case, this time involving the SSI program. Though SSI is unquestionably a welfare program whose recipients endure the same "brutal need" found by the Supreme Court to be dispositive in *Goldberg* v. *Kelly*, the Social Security Administration has sought to carve out a number of exceptions to the general requirement that SSI benefits could for no reason be reduced, suspended or terminated without advance notice and an opportunity for an oral hearing being provided to the affected recipient. These exceptions, ostensibly designed for such purposes as the correction of clerical error and the implementation of changes flowing from information provided by the recipient himself, were so broad as to swallow up the general rule. The *Cardinale* case successfully sought an injunction against use of the exceptions and a reaffirmation of the requirement of *Goldberg* that advance notice and an opportunity for a hearing be provided in all cases of potential reduction, suspension or termination of SSI benefits.

O'Connor v. *Weinberger*, Civ. No. 74-591 (D. D.C. 1975)

O'Connor was brought to correct the Social Security Administrations failure to provide SSI recipients whose benefits were at risk adequate notice of their rights to appeal. The original notice used by SSA in cases of reduction, suspension or termination of benefits did not, for example, inform the affected recipient of his right to an oral, adversary hearing before the adverse action would be commenced. After the entry of a temporary restraining order on behalf of a nationwide class of SSI recipients enjoining the use of the defective notice, the Social Security Administration stipulated to the substitution of a constitutionally adequate notice which is still in use.

Abascal v. *Weinberger*, No. C-73-2353 (N.D. Cal. 1974)

Abascal was another case which was successfully settled. Originally brought to force publication in the *Federal Register* of those portions of the Social Security Administration claims manual which address the SSI program, this suit was settled when the Social Security Administration agreed to provide these portions of the manual to legal services attorneys, paralegals and other advocate groups. It is the claims manual, rather than the statutes and regulations, which is actually used by Social Security claims representatives working in district offices to determine a recipient's entitlement to and amount of benefits. It is in a very real sense the operating law of the program. Regular and easy access to the manual was therefore essential to attorneys and paralegals who were representing SSI claimants and recipients on a regular basis. As a result of the *Abascal* suit, SSA has provided such regular access by mailing claims manual transmittals pertinent to the SSI program to all legal services programs in the country.

Santos v. *Weinberger*, No. 75-166G (D. Mass. 1975)

This case was brought on behalf of all applicants for SSI benefits filing claims at the Cambridge, Mass., Social Security district office and was designed

to enforce Congress' intention that SSI applications be disposed of at least as promptly by the Social Security Administration as were welfare applications by the States in the programs which preceded SSI. Despite Congress' design that SSI be a more efficient program than its predecessors, and despite the fact that applicants for benefits under these predecessor programs were entitled to receive a response to their applications within a time certain (either 30 or 60 days, depending on the program), the Social Security Administration has failed to impose any limits whatever on itself for issuing initial determinations in response to applications for SSI benefits. The *Santos* suit sought an order requiring the imposition of such limits and has to date resulted in the issuance of a preliminary injunction requiring that all applications for SSI benefits filed by claimants 65 years of age and over be acted upon by the Social Security Administration within no more than 45 days.

Health Cases

Franssen v. *Juras*, 406 F. Supp. 1375 (D. Ore. 1975)

This suit successfully sought on behalf of a class of medicaid patients residing in Oregon an injunction against the State's scheme of calculating a medicaid recipients income on the ground that it conclusively presumed that a recipient who was institutionalized in a nursing home had available the income and resources of his/her spouse, regardless of whether such income and resources were in fact available. The conclusive presumption was struck down by a three-judge panel as violative of title XIX of the Social Security Act.

Martinez v. *Richardson*, 472 F.2d 1121 (10th Cir. 1973)

Martinez was a notice and hearing case involving the medicare program. It successfully sought a permanent injunction barring the Social Security Administration from terminating inhome medical services provided to elderly people under the program without affording a prior hearing on the question whether such services continued to be needed.

If a nursing home goes out of business or is decertified from the medicaid program and the State and/or home wants to move patients immediately for financial or other reasons to another home, a major problem facing the patient is the high mortality rate resulting from nursing home "transfer trauma." Several legal services programs around the country have established, through litigation, rights of nursing home patients to prior hearings and adequate advance transfer planning.

Housing Cases

Underwood v. *Hills*, No. 76–469 (June 8, 1976)

Underwood was filed on behalf of a nationwide class of tenants in housing projects that are federally subsidized pursuant to §236 of the National Housing Act. It successfully sought an injunction requiring the Secretary of Housing and Urban Development to make the payments for operating subsidies to §236 housing project owners required pursuant to 12 U.S.C. §§1715z–1(f)(3),(g).

Hall v. *Flournoy*, California Superior Court, County of Alameda, No. 450144–4 (Jan. 15, 1976)

Hall held that recipients of SSI in California are entitled to homeowner's property tax relief thereby overturning the existing practices of the State taxing authority.

Even in the face of such major decisions, nothing is perhaps as moving as the following self-explanatory letter recently received by the National Senior Citizens Law Center with respect to a case involving the eligibility of the plaintiff for a civil service retirement annuity where denial was based upon alleged voluntary separation, but in point of fact, plaintiff had been forced to terminate employment in the face of unsupported allegations of homosexual conduct:

". . . So let me thank you most sincerely for whatever you did for me. I had tried for over 17 years to negotiate the return to me of my right to a pension for nearly 30 years of Government service—mostly abroad. Now it is all over—thanks to you, Mr. Hardin, and others of your service.

"It gives me great satisfaction to tell you that last Friday, Sept. 3, I received two U.S. Treasury checks viz: For $28,654 and for $1,200; the first one being a settlement for all back pension to February 29, 1976 and the other one for the monthly payments March–August 1976 at $200 per month. Also I was informed I would receive $200 monthly from now on.

"I am deeply grateful for everything—now that you and your service have accomplished what I tried to do alone for so long. . . ."

Obviously, benefits to clients derive not only from actual litigation, but from the general substantive expertise of legal services attorneys and from the enhanced credibility given the negotiations of such attorneys by the mere threat of potentially successful litigation. Thus, at the simplest level, merely being able to decipher and understand complex pension reports and their significance, recently resulted in the discovery of pension credits previously overlooked and the ultimate issuance of a check for $14,668.57 to the client for retroactive benefits. In addition, the retiree (and his spouse if he predeceases her) will now receive a monthly annuity of $357.77.

Some issues currently being litigated (and which might well prove extremely fertile for administrative or legislative change) include:

Income Maintenance Cases

1. Due process challenge to the 5-month waiting period which title II disability recipients must endure before their benefit payments may begin.
2. Eligibility of plaintiff for civil service retirement annuity where denial was based upon alleged voluntary separation but the plaintiff was forced to terminate employment in the face of unsupported allegations of homosexual conduct.
3. Unduly long SSI application delays.
4. Compliance by trustees of various pension plans with their duty to formulate reasonable eligibility criteria.
5. Whether the Federal Pension Reform Act of 1974 preempts California community property law so as to prevent a court from ordering that pension payments due one spouse be paid directly to the other spouse.
6. Whether pension plan discriminates against seasonal workers in the design and implementation of its eligibility conditions.
7. Constitutionality of Social Security Act provision terminating benefits of fully insured individual upon deportation under specified circumstances.
8. Constitutionality of Social Security Act provision denying to divorced husbands of fully insured individuals benefits equivalent to divorced wives of fully insured individuals.
9. Whether trustees of a pension plan requiring 15 years of credited service as a condition to entitlement to a pension may deny benefits to a worker who has completed 21 6/12 years of credited service on account of a break in service when the break occurred because the worker reasonably continued working for an employer whose employees had previously been covered by the plan; a subsidiary issue is whether the trustees may reasonably require that the minimum amount of future service credit necessary to trigger recognition of past service credit must be worked during the first 5 years of the plan's existence.
10. Constitutionality of the Civil Service Commission procedures for recoupment of overpayment of Civil Service pensions.
11. Validity of practice which limits SSI emergency advance payments to three categories of impairment and which fails to make presumptive disability determinations in advance of final determinations.
12. Validity of HEW regulations which inhibit the reopening of applications for disability benefits under title II of the Social Security Act by imposing time limitations and by creating the concept of "administrative res judicata" without statutory authority.

Health Cases

1. Constitutionality of medicaid deeming regulations which require the income of an out-of-institution spouse be applied to the institutionalized spouse's income in determining medicaid eligibility for nursing home care.
2. Constitutionality of provision in title XVIII which permits carriers to make final and binding determinations with respect to contested claims under part B.

3. Class action against an individual nursing home, the State and Federal governments alleging violations of the U.S. Constitution, Civil Rights Act, Federal medicaid regulations, breach of contract between the State and nursing home and intentional infliction of emotional distress on behalf of all recipients in the defendant nursing home. The specific rights alleged to be violated include: (1) the right to manage personal monies and/or receive an accounting, (2) the right to meet with legal counsel, (3) the right to notice before transfer, (4) right to have an adequate level of care, (5) right to access to medical files.

Other Cases

1. Constitutionality of the Federal food stamp regulations that permit benefits to be terminated at the end of a certification period without the right to a prior hearing.
2. Whether a public housing authority may reduce security measures in an elderly housing project without giving the occupants a meaningful opportunity to protest the change and present reasons in support of their protest.
3. Constitutionality of involuntary guardianship statutes.
4. Whether the imposition of a special assessment in excess of one-half the value of the property in question is constitutional.

Unfortunately, negotiation or litigation are not always successful and the only approach available may be legislative or administrative change. In this regard, the following issues come to mind:

1. Delays in processing applications for SSI and in the SSI appeals process are inordinately long, and legislation is needed to place reasonable time constraints upon the Social Security Administration.
2. The SSI "6-month rule" provides that a married individual, separated from his/her spouse, will continue to be treated as married for purposes of SSI benefits until he/she has been living apart from the spouse for more than 6 months. This means that each spouse will receive only one-half of the couple's payment (which is less than two individual payments) rather than each receiving a full individual payment (even though he/she is actually living alone) until 6 full months after their separation. The only exception to this 6-month rule is the termination of the marriage by death, divorce, annulment or when one spouse begins living with another party and they hold themselves out as husband and wife. Furthermore, a recipient's income includes the income of his or her eligible spouse. Thus the couple's grant is reduced by the spouses income before it is divided in half and paid to each separated spouse. For example, if a husband has a $200 per month pension benefit, the couple's SSI grant is $56.60. Husband and wife each receive a monthly check of $28.30. If they separate and he refuses to provide her with part of his $200 pension, she is left to live on $28.30 per month for a full 6-month period! Thus, the 6-month rule may operate to reduce aid below the level needed for subsistence or to terminate or deny it entirely despite the need of the separated spouse. This is particularly a problem of the older woman, for the male spouse is more likely to have resources and income other than that provided by SSI benefits; such as, social security and/or veterans benefits.
3. The Social Security Act presently authorizes the appointment of a representative payee (a fiduciary) for purposes of receiving title II and title XVI supplemental security income benefits without prior notice or a hearing.
4. In probably over half of the States (HEW has not indicated the exact number), a noninstitutionalized spouse is forced to pay an arbitrary amount of his or her monthly income to the institution for the care of the institutionalized spouse. Medicaid then pays the difference to the institution.

The amount which the noninstitutionalized spouse pays to the institution (the amount which is deemed available to the institutionalized spouse) is arrived at in any number of arbitrary methods, but always without regard to the actual expenses of the noninstitutionalized spouse. Consequently, if the cutoff level (that is, the amount which the noninstitutionalized spouse can keep) is low enough, that spouse will face a serious crisis. Since the individual will often have numerous fixed expenses—such as, rent payments, utilities, transportation costs, insurance, etc.—the arbitrary amount which he or she is allowed to keep will rarely reflect actual costs and income needs.

Often, the arbitrary amount which the noninstitutionalized spouse is permitted to keep will represent only a third or half of his or her previous income. In such a situation, the alternatives are: (1) to refuse to pay the deemed

amount to the institution, (2) to pay the amount, or (3) to obtain a divorce. The first alternative leads inevitably to the eviction of the institutionalized spouse, since medicaid has conclusively presumed that that income is available and does not meet those costs if the noninstitutionalized spouse fails to pay. The second alternative reduces the noninstitutionalized spouse to the poverty level, and will, at least, force a substantial change in the standard of living. The third alternative is an emotionally disturbing process, especially difficult for elderly couples.

5. Mandatory retirement and other forms of age discrimination are in need of legislative reform as numerous challenges through the courts have been unsuccessful.

I hope the above discussion serves to show some of the significant legal issues of concern to the elderly and, at the same time, the kind of expertise and sensitivity which resides within the legal services community. Legal services attorneys can thus be a tremendous resource to legislative and administrative bodies interested in designing or modifying programs so that they will most effectively help the Nation's elderly. I think there can be no greater argument for the expansion of legal services for the elderly than these activities and concerns. Although there has been, and will be, much discussion of the role which the private bar can and should play in the overall legal services delivery system, I would strongly underscore our feeling that the advocacy function illustrated by the above discussion and examples can only be effectively carried out by an adequately funded legal services program staffed by attorneys specifically dedicated to serving the less affluent members of society. Thus, although, for example, the present social security and SSI statutes specifically provide for fees for the handling of such cases, and numerous individual cases are handled by private practitioners, the major impact cases and suggestions for legislative and administrative reform are almost exclusively the domain of publicly funded legal services attorneys.

MAGNITUDE OF PROBLEM : PAUCITY OF RESOURCES

At least 20 percent of the Nation's 29 million poor people are elderly. Regarding the availability of legal services for the poor in general, Thomas Ehrlich, president of the Legal Services Corporation has said:

". . . all but a small fraction have no access to assistance when they face a legal problem. For all but that small fraction, the legal system is beyond reach.

"A recent study indicated that about 23 percent of the poor face a legal problem each year. In the main, they are relatively routine matters involving housing, consumer law, family law, and administrative benefits. But to the individuals involved, these matters often assume crisis proportions. For most people, a defective car can be a substantial irritant. But for a poor person, it may well mean unemployment. A poor person's problem with a landlord may mean no housing at all. Then denial of social security payments can be disastrous.

"Legal aid lawyers are currently able to handle only about 1 million of these problems each year—something less than 15 percent of the real need as determined on a conservative basis. . . ." [1]

Statistics concerning the availability of legal services for the elderly from Legal Services Corporation grantees present an even more grim picture. Although the elderly comprise over 20 percent of the Nation's poor, they comprise only approximately 6 percent of the client load of the average Legal Services Corporation grantee.[2] Thus, the low-income elderly receive only little of the

[1] Remarks of Thomas Ehrlich, president, Legal Services Corporation, on "Justice for the Poor: Public and Private Responsibilities"; presented before the Los Angeles County Bar Association, May 5, 1976.

[2] The 6 percent figure is an estimate resulting from an informal survey conducted by the Office of Legal Services, Office of Economic Opportunity (OEO). As to the disproportionately low representation of the elderly within legal services offices, see B. Terris, *Legal Services for the Elderly*, Senior Opportunity & Services Technical Assistance Monograph 9, National Council on Aging (1972). This early and well-documented work suggests that the reasons for this disproportionately low representation of the elderly may include the inability or lack of desire of elderly people to reach or use available poverty legal services, and the concentration of poverty attorneys on younger clients. A 1975 study of the availability of legal services to the general indigent population sheds further light on the plight of the elderly. This study, performed by the Legal Action Support Project of the Bureau of Social Science Research, demonstrates a ratio of one legal services attorney to 13,239 eligible poor persons. Further, over 40 percent of the financially eligible persons in the United States live in locations providing no access whatsoever to legal services projects. 9 Clearinghouse Review 469 (1975).

nominal legal services provided generally for the Nation's 29 million poor persons. The millions of elderly people who are above the poverty guidelines, but who cannot afford a private attorney have even less access to legal representation.

The problem of providing legal services to the rural elderly deserves special mention. Very little has been done to provide the rural elderly with access to legal services. Far fewer of the rural poor have access to legal services than do their urban counterparts.[3] Transportation problems further compound the problem of delivering legal services in rural areas to the elderly. Because of their limited mobility, and because of the great distances involved, the costs of providing legal services to the elderly in rural areas have traditionally been significantly higher than the costs of providing the same services in urban areas. The small number of attorneys (most often private attorneys, are the only ones available) in rural areas causes the burden of aiding the poor and near-poor to fall on the already overburdened shoulders of a few civic-minded attorneys who have very little time to spare.

POSSIBLE SOLUTIONS

Staffed Programs

In order to meet the legal needs of the elderly, specially staffed law programs funded primarily through title III of the Older Americans Act have been established to serve senior citizens. The location of these programs and examples of some of their innovative activities and experiments in the delivery of services are included within *A Manual of Funding Sources and Models for Delivering Legal Services to the Elderly*, published by NSCLC.[4] Unfortunately, to date, fewer than 100 such programs (which have less than an average of two attorneys per project) are in operation and even in conjunction with regular Legal Services Corporation programs these special law programs cannot begin to provide effective legal services coverage for the middle and low-income elderly.

The 1975 amendments to the Older Americans Act show Congress' clear intent that the Administration on Aging and its network of area agencies on aging place a high priority on the provision of legal services to the elderly. Although limited progress is being made in the expansion of legal services through this network, the other pressing social service needs of the elderly and the paucity of available funds lead to the conclusion that, absent drastically increased funding, the Administration on Aging will not be able to single-handedly shoulder the burden of providing legal services to the elderly.

A couple of specific problems have come to our attention, which relate to the scarcity of available funds, but which may be remedied by specific legislative changes. The first relates to the maintenance of effort requirements of the Older Americans Act. Thus, projects which are started with little monetary support or with support which is by its nature of short-term duration may well be unduly penalized when seeking title III funding for the continuation of their projects. In addition, although the "seed money concept" of title III and other Federal programs may have theoretical arguments in its favor, the extreme demands placed on local money, combined with the sometimes locally politically unpopular nature of an effective legal services project may lead to a situation wherein no funds are available for carrying on a legal services program for the elderly after the initial 3- or 4-year "seed money" period has expired. Although the concept may have validity and provide the desired results in certain circumstances—it may well be that the special nature of legal services requires an exception to this general rule.

As pointed out above, the knowledge and expertise of legal services attorneys, combined with the nationwide network they represent, can oftentimes be a major resource for legislative and administrative bodies concerned with the problems of the elderly. In this regard, such attorneys not only aid the cause of their clients as a group, but also provide a service to such agencies and bodies as they perform their oversight and administrative duties on behalf of the public at large. It is hoped that means will be developed and expanded by which legal services attorneys can be financially assisted in their efforts to

[3] As few as 17.5 percent of the poor in rural areas have access to legal services programs through the Legal Services Corporation, p. 57 of Legal Services Programs: Resource Distribution and the Low Income Population, Goodman, Leonard H., Walker, Margaret H., Bureau of Social Science Research, Inc., July 1975.)

[4] The table of contents of the manual is attached as appendix A [see p. 306]. Because of its length, it was impracticable to attach the entire Manual—it is, however, available from the National Senior Citizens Law Center (NSCLC) and the Administration on Aging.

make their services available to such public legislative and administrative bodies.

The Federal Trade Commission has recently adopted the policy of providing representation in its hearings to consumer interests. It does this by funding responsible organizations and attorneys to represent the consumers' interests. This appears to be an excellent beginning. However, most agencies may not be as receptive as the FTC and perhaps will need additional prodding or legislative mandates to expand their activities in such a way. For example, despite the recommendation of the SSI study group that legal services attorneys and other advocates of the poor be consulted by the Social Security Administration in the formulation of SSI policy, the elderly poor remain without representation at the policymaking level. Unlike other interest groups whose activities are regulated by a Federal agency, the elderly poor have no voice in the policies which affect their receipt of social security or SSI benefits. Although SSA has made an attempt to put together an advisory group of legal services attorneys, and this group has met with SSA officials twice, this project is doomed to failure because thus far SSA has refused even to agree to reimburse the attorneys for their travel and per diem expenses incurred in attending the meetings in Baltimore.

Regarding other alternatives for funding elderly law programs, I would call your attention to the appendix which describes and analyzes various government and private sources for funding special law programs. Additionally, I would like to briefly call your attention to two alternative methods of providing funding which although not generally utilized have great potential for providing a stable source of funding for elderly law programs:

Filing fee legislation, which has been enacted in Florida, Oregon and Nevada, generates revenue for legal services programs by imposing additional fees on pleadings and papers filed in court. What is unique about such legislation is that it provides a funding source without either using monies otherwise available for other social service programing or requiring an allocation of funds from the States' general revenue. Also, filing fee money can be used as local match in obtaining other monies with which to fund a seniors law program. (A more complete discussion and statutory citations are included in the appendix.)

Another alternative for capturing resources to provide manpower for legal services is a lawyer referral service. Such a service currently operates in Orange County, Calif., and generates $160,000 per year in revenue. The service requires a $10 or $15 fee (depending on the client's income) for initial consultation with an attorney. This money is donated to the legal services program and is used to supplement the monies the program receives from the Legal Services Corporation.

In an effort to determine the effectiveness of the network of elderly legal services programs, and how these programs perceived the problem of providing legal services to the elderly, the National Senior Citizens Law Center conducted a survey by questionnaire of 73 projects specifically providing legal services for the elderly.[5] From the 32 programs that responded to the survey, we discovered that among these services providers, there were serious questions regarding their ability to be effective because of the limited resources available. Fifty-eight percent of those responding indicated that their present staff size was inadequate to meet their projects' present elderly caseload. Eighty percent responded that their staff size was not adequate to meet the demands of the potentially eligible elderly community.

Our survey clearly indicated that the network of senior citizen law programs is still in its infancy. Administration on Aging efforts to expand the availability of legal services to the elderly must continue. The network of legal services programs serving the elderly must be expanded to provide senior citizens with access to legal services within every planning and service area within the nation. This means that area agencies on aging, Legal Services Corporation grantees, and others (both public and private) will have to contribute more of their resources toward funding staffed legal services programs.

Even if adequate funding for the staffing of special projects were available, lawyers and paralegals staffing these offices will only be as effective as the training, substantive materials and manuals and backup specialized services they have available to them. As has been noted before, the substantive areas

[5] See NSCLC survey attached as Appendix C [see p. 323].

of the law concerning SSI, nutrition programs, social security, public and private pensions, guardianship, medicare, medicaid, nursing homes, veterans benefits, mandatory retirement and age discrimination are very complex; training and other support services in these areas have traditionally been very meagre. The National Senior Citizens Law Center and several other AoA model project grantees may in actual fact represent very close to the sum total of these support services presently available.

An obvious way of increasing the effectiveness of existing special field programs (and, as is discussed below, the private bar also) is for the existing resources providing training and other technical assistance to receive continued and expanded financial support. It is hoped that both the Administration on Aging and the Legal Services Corporation will take a leading role in making certain that these critical support services will be provided.

Regarding training and other support services, 60 percent of the projects responding to NSCLC's survey indicated they have utilized backup services or other model project services for such assistance. Of the 40 percent who indicated they had not used a backup service, 96 percent of them said they would do so if an appropriate case arose. 96 percent of the respondents indicated that they were interested in attending training conferences at which training would be provided by a backup center. When asked the type of training and technical assistance which they felt was necessary, 87 percent requested training in the area of nursing homes, 80 percent requested training in the areas of social security and SSI, 77 percent requested training in consumer problems concerning the elderly and 73 percent requested training in guardianship and involuntary commitment. (The analysis of training needs are more completely delineated in Appendix C [see p. 323]).

The Private Bar: A Potential New Source of Legal Assistance [6]

Legal Services attorneys acting specifically on behalf of the elderly can increase their effectiveness by complementing rather than duplicating the conventional sources of legal assistance in the community. Here again, by stimulating other legal resources in the community to recognize and adopt roles in a coherent scheme for the representation of aged persons, legal services attorneys can reserve their time for services which they alone can provide.

Attorneys general, city attorneys, county attorneys, and other government attorneys, for instance, should be persuaded to devote more of their legal resources to aiding the elderly. This might include assistance with problems relating to consumer fraud, property tax exemptions, special assessments, guardianships, involuntary commitment, nursing homes, and probate matters. In each instance, individuals concerned with the rights of the elderly should examine the charters and statutes creating such legal offices for ways in which these offices can begin to assist the elderly.

On a nationwide basis, the organized bar has hitherto limited its activities to forming committees of the American Bar Association to study the legal problems of the elderly.[7] Hopefully, however, some concrete volunteer programs, especially programs utilizing the vast resources of retired attorneys, can be devised and implemented to serve the elderly. The ABA is apparently becoming aware of this latent potential in its older members. A past president of the association—taking a cue from the activities of retired business executives in SCORE [8]—recently suggested that retired attorneys be mobilized under ABA auspices to provide legal help for other retirees.[9]

Assistance may also be obtained from other organizations. A Jewish organization in Los Angeles, for example, is using member attorneys to provide volunteer assistance in a primarily elderly neighborhood. Another recent development has far-reaching potential. In Los Angeles, a reserve contingent of the civil affairs unit of the Army decided to devote the time of reservists to legal services for the needy. One office served primarily older people. Failing the necessary approvals from Washington, this program has been halted.

[6] A substantial part of the following testimony is combined in an expanded article cited as: Nathanson, Paul, *Legal Services for the Nation's Elderly.* 17 *Arizona L. Rev.* 275 (1975)

[7] The ABA family law section and probate and trust section have special subsections dealing with the elderly.

[8] SCORE is an acronym for Service Corps of Retired Executives. See generally 42 U.S.C. §§ 5031–5032 (Supp. III, 1973).

[9] Nationwide program to provide free legal service to elderly sought by ABA president, ABA Release No. 111574 (Nov. 18, 1974).

The problem of providing truly adequate legal representation to the elderly cannot be solved without full and effective participation by the private bar. Although members of the private bar may provide some services on a pro bono basis, their participation as private attorneys will largely be on a compensatory basis. The thrust of any effort to increase the availability of legal services for the aged from the private bar, therefore, must be to identify services which can be provided on a fee-generating basis and to develop methods for providing these services at a cost which the elderly can bear.

As noted, a substantial portion of the legal concerns of the aged relate to government benefit programs. The development of assistance from the private bar in the pursuit of these benefits is trapped in a vicious circle. The belief of private attorneys that practice in this area cannot be remunerative prevents them from developing expertise concerning entitlement to benefits.[10] The circle is completed when this lack of expertise prevents the development of office practice methods which permit assistance within feasible cost parameters including reasonable remuneration for the attorney.[11] Thus, if sufficient compensation were available for representing elderly clients with benefit disputes, an incentive would exist to develop the necessary expertise.

Social security, SSI, and veterans benefit statutes establish fee systems which may well act to deter private attorneys from pursuing claims on behalf of elderly clients[12] since the Social Security Act[13] and other programs[14] regulate fees. For example, the Social Security Administration sets a reasonable fee upon the application of the representative of a claimant successful in an administrative hearing.[15] The fee is contingent in nature. If the administrative proceedings result in the award of past-due benefits,[16] the representative may receive directly from SSA a fee not to exceed 25 percent of such benefits.[17] In successful proceedings before a court, the representative receives a reasonable fee set by the court, but not exceeding 25 percent of the past-due benefits resulting from the judgment.[18]

This system is irrational. The fact that fees are deducted from past-due benefits not only unduly burdens needy claimants, it also encourages attorneys to delay presenting claims so that retroactive benefits will accumulate, increasing the maximum fee.[19] Moreover, existing fee levels are considered grossly inadequate by those few attorneys practicing in the field.[20] As a result of the restrictive fee system, less than 2 percent of dissallowed claims ever reach the courts, even though courts have overturned the administrative decision

(1974) (hereinafter cited as joint hearing on legal representation).

[11] For an excellent overview of problems of access to legal services, including questions regarding use of paralegals, group legal services, government-funded legal services, and fee mechanism, see Symposium, 4 *U. Tol. L. Rev.* 353 (1973). For a lengthy and complete bibliography dealing with all aspects of delivery of legal services, see Brickman, *Legal Delivery Systems—A Bibliography*, 4 *U. Tol. L. Rev.* 465 (1973).

[12] The general situation is well summarized by Yarowsky, *Attorneys' Fees in Social Security Proceedings: A Criticism of the Official Restrictive Design*, 17 *Kan. L. Rev.* 79, 88 (1968):

> The issues of attorneys' fees in social security proceedings is closely tied to legal aid. If the claimant does not meet the standards for indigency established by the local legal aid program, he is generally referred to the local bar association. However, if no private attorney will take the case because of the fee problems involved, the claimant who desires an attorney has no one to champion his cause. While some legal aid societies will represent those for whom the referral system has failed, this places the burden of the claimant's litigation on society even though the claimant, through the fees allowed, has an "ability to pay." Such procedure seem (sic) contrary to the concept of legal aid. This problem would not arise if the private practitioner were permitted to earn what his time and effort were worth.

[19] *Blankenship* v. *Gardner*, 256 F. Supp. 405, 410 (W.D. Va. 1966); Yarowsky, *supra* note 12, at 84.

[20] For a practitioner's view of the fee scheme, see Yarowsky, *supra* note 12.

in 63 percent of the appealed cases.[21] In addition, only 5 percent of all claimants are represented by attorneys at the administrative level,[22] even though a vast majority of such cases involve complex matters regarding proof of disability.[23]

The fee situation with respect to veterans benefits may only be characterized as bizarre. The statute limits fees to $10 for any one claim before the Veterans' Administration (VA).[24] In addition, the decisions of the VA on any question of law or fact regarding a claim for benefits or payments are final and not subject to any judicial review.[25] The $10 fee limitation clearly inhibits private attorneys from ever taking a case on behalf of a veteran. Veterans' organizations argue that they, the Red Cross, and other groups provide very effective counseling for veterans. This is exactly the kind of counseling that should be encouraged, but it should not be considered a substitute for necessary legal assistance. These organizations depend largely on the good will of the VA for their efficacy. Moreover, these groups work with the VA on many matters other than benefit entitlement, and it is plainly in their interest to maintain good working relations. Therefore, a claim challenging a statutory or regulatory scheme and VA procedures has little chance of ever being asserted by these organizations. Without private counsel, it seems unlikely that such cases will come to the fore. Of course, without judicial review, there is even less chance of airing such issues. In light of the extremely restrictive provisions regulating fees in veterans benefit cases, the only solution to this stalemate appears to be amendment of the statutory scheme.

In cases that can generate even modest fees, including social security and SSI claims, another method exists for breaking the vicious circle inhibiting the private bar from pursuing government benefits for the elderly. An initial investment in developing office practice procedures, including specialization and routinization of a lawyer's tasks, could allow the private practitioner to increase his representation of the elderly without altering the basic practice of a small private firm. Greater efficiency results in greater profits for the time invested. If an attorney can represent many clients with small claims, charging small but adequate fees, it may be profitable to serve such clients. Many of the special legal services sought by the elderly are susceptible of routinization and simplification. For example, manuals could be prepared for social security and SSI claims which would allow assistants to prepare a case for ultimate review by an attorney. Many of the tasks presently performed by attorneys are unnecessarily complicated and could be simplified to allow more efficient treatment of individualized problems.

The natural adjunct to the specialization and routinization of the lawyer's job is the effective and expanded use of paralegals.[26] Paralegals are being employed increasingly in private practice; their utility is well established within Legal Services Corporation programs because of the very limited resources available to attorneys for the poor.[27] Paralegals can handle routine substantive matters, do initial client interviewing, go to aged individuals who cannot come into the office, handle administrative appeals, and do factual investigations.[28] It may be particularly advantageous to employ elderly people as

[27] See Lander, *Legal Assistants: The Experience of the Legal Aid Society of the City and County of St. Louis*, 6 Clearinghouse Rev. 663 (1973).

[28] According to informal information and funding proposals reviewed by NSCLC staff, the vast majority of legal projects serving the elderly use paralegals extensively.

paralegals. Elderly clients may respond more openly to questions and suggestions from their peers than to those of a younger person.[29] A further benefit is that some older individuals will thus find meaningful employment.[30] It is however, critical to note that, in order to fully realize the potential of paralegals in the delivery system, restrictive regulations promulgated by local bar associations designed to preserve the entire delivery domain for licensed attorneys must be carefully scrutinized for their potentially adverse impact on the elderly's access to justice and needed legal services.

Experience in using standardized methods and paralegals in a variety of legal specialties indicates the potential of this practice method. Preliminary findings show lawyers saving from 25 to 50 percent of the time normally required to perform some services.[31] An analysis of the tasks involved in corporate formation confirms that delegation of ministerial tasks to paralegals can reduce the cost of providing this service by one-half.[32] Adequate figures have not been developed for legal services of interest to the aged. The reduction in cost to the client made possible by such efficiencies may bring many needed services within the reach of elderly people of moderate means. Legal services attorneys can encourage the private bar to involve itself in aiding the elderly by making their expertise available in the development and preparation of such methods.

A prime example of combining routinization, specialization, and the use of paralegals is the legal clinic of attorneys Jacoby and Meyers in Los Angeles.[33] This office has pioneered the use of kits and paralegals in order to provide low cost legal assistance to low and moderate income individuals. From all indications, a successful private practice has resulted.[34] The experience of Jacoby and Meyers, however, brings to the fore one problem which must be dealt with by the private bar if low cost legal assistance is to be available to the moderate income individual: the prohibition of advertising by private practitioners.[35] If profit, and derivatively, significant involvement of the private bar rests on a large volume of clients paying smaller fees, it is critical to let potential clients know about available low cost services.[36]

Another possibility for providing low cost legal services for the elderly is through a prepaid legal services plan. Without adding to the large and growing literature on such plans,[37] it is worth noting that they may be designed to conform almost perfectly to the needs of many elderly people. The elderly may participate in such plans on several bases—as union members or as members of senior citizen groups or of other organizations which have special benefit plans for older members. The first and perhaps most likely way is through union membership and participation in a plan which benefits retirees as well as active members. A recent amendment to the Taft-Hartley Act,[38] which permits employers to provide legal services as an employee benefit under collective bargaining agreements, promises to catapult group legal service plans

[38] 29 U.S.C. § 186(c)(8) (Supp. III, 1973).

into prominence as a means of financing services for middle-income people.[39] Plans formed under the amendment should be designed to capture the amendment's benefits for retirees. One limitation on Taft-Hartley legal service plans which may restrict their utility for retirees is that such plans are barred from rendering services in actions against the employer or the union.[40] Thus, actions relating to some aspects of pensions or other retirement benefits could probably not be financed by these plans. However, actions against the pension trust or its trustees, as distinguished from the employer or the union, appear to be covered.[41]

It would also appear that senior citizen groups, by making small regular payments, could finance an insurance-like group legal service plan to benefit members. Such a group legal service plan should be designed specifically to benefit this age group. The services available under a closed panel plan, which are often restricted to employment related matters, should be expanded to include both a preretirement legal checkup and services in substantive areas of concern to the aged, such as special benefit programs, estate planning and probate, and guardianship. While open panel plans usually offer a wider range of services, the choice between open and closed panels should be guided by whether lawyers are available with expertise in the legal areas of concern to the aged. Where available expertise is limited, a closed panel plan permits development of needed expertise in areas of particular concern to the elderly. Finally, a plan should not automatically exclude legal representation in cases which could be taken on a contingent fee basis. Because the fees available in social security and pension matters are, as already noted, often insufficient to secure actual representation, attorneys with appropriate expertise may simply not be available to handle such matters. Thus, the contingent fee case would be no more than an illusion, with no attorney actually available.

As previously discussed, it is more difficult to provide legal services in rural areas. Assuming that no ongoing legal services program exists in a rural area, it may become necessary to contract with a local private attorney in order to provide legal services to the elderly community. These services might be provided on an as needed basis. If the legal needs of the elderly in the area require only 50 percent of an attorney's time for example, the attorney could be funded to do only half-time work on behalf of the elderly. Additionally, a local private attorney might be funded to supervise paralegals. As noted above, the use of paralegals can significantly reduce per case costs and allow the program to do outreach which might otherwise be infeasible because of the expense involved. Experiments (more fully discussed in Appendix C [see p. 323]) are currently going on which combine the extensive use of paralegals, WATS telephone lines, mobile vans and the rural private bar with an eye toward solving the special legal needs of the rural elderly. These projects should be carefully studied and assessed and additional model projects which attempt to solve the special access problems of the rural elderly should be generated and funded.

If the private bar is to become involved in handling cases for elderly clients, private attorneys and paralegals must be provided with the proper training and backup services. It must be demonstrated to the private bar that there are ways to handle seemingly complex issues for reasonable fees without spending unduly long periods of time in research. Training, backup, and research services provided to private attorneys and paralegals could potentially reduce fees charged to elderly clients. Without training, most attorneys could only, with great difficulty, handle cases involving issues concerning private or public pensions, social security, SSI, veterans matters or age discrimination in employment. The Administration on Aging and others should seriously consider funding programs designed to train and provide these backup services to the private bar thus enabling private attorneys to operate more efficiently and to reduce fees charged to elderly clients.

CONCLUSION

In order to develop a strong and meaningful national network of legal services providers, it will be necessary to do several things:

[39] Tunney, *Financing the Cost of Enforcing Legal Rights*, 122 *U. Pa. L. Rev.* 632, 633 n.2 (1974).
[40] 29 U.S.C. § 186(c)(8)(A) (Supp. III, 1973).
[41] See *Id.* § 186(c).

1. Technical assistance to State and area agencies on aging regarding the expansion of legal services for the elderly must be continued.

2. The cooperation of the Administration on Aging (and its network of area agencies on aging) with the Legal Services Corporation (and its network of local legal services programs) must be continued and expanded so as to establish additional staffed legal services programs serving the elderly. Funding for Legal Services programs must be expanded.

3. Innovative model legal services programs which demonstrate more efficient methods of providing legal services should be funded. (The funding of programs which show potential for developing a viable legal services delivery system in rural areas should be given top priority.)

4. A program designed to involve the private bar in the provision of legal services to the elderly should be undertaken. On a local level, volunteer panels and lawyer referral services for the elderly could be established; on a national level legislation which would allow for reasonable and appropriate fees for representation of a client in administrative matters (e.g., SSI, social security or veterans benefits) should be enacted.

5. Training, backup and research programs designed to make the necessary expertise available to staffed legal services programs and the private bar should be supported thus enabling all legal services providers to meaningfully and efficiently deal with legal issues of concern to the elderly.

The goal of providing adequate legal services for the elderly is obtainable, and the present national focus on this crucial access service shows that the time is right for action.

[Appendix A]

TABLE OF CONTENTS OF THE MANUAL OF FUNDING SOURCES AND MODELS FOR DELIVERING LEGAL SERVICES TO THE ELDERLY

Appendix I:

1. List of Projects Funded to Provide Legal Services to the Elderly.

Appendix J:

1. List of States for which NSCLC is Responsible under its AoA Grant.

Appendix K:

1. Contract to be Used as a Model by Area Agencies on Aging Contracting with Legal Services Providers.
2. Example of a Memorandum Agreement of Cooperation and Coordination between Legal Services Project and Area Agency on Aging.

Appendix L:

1. Example of Senior Citizens Advisory Committee By-Laws.

Appendix M:

1. Ethical Considerations in Delivering Legal Services to the Elderly.
   (a) The Bar's Obligation to Provide Legal Services.
   (b) The Use of Paralegals in Providing Legal Services to the Elderly.
   (c) A Statement by the National Paralegal Institute on the Use of Paralegals in Providing Legal Services to the Elderly.

Appendix N:

1. Significant Responses to NSCLC's Questionnaire to Projects Funded to Provide Legal Services to the Elderly.

Appendix O:

1. Prepaid Legal Services plan of New York County Legal Services Corporation.
   (a) Questionnaire for lawyer participants.
   (b) Plan description.
   (c) Participant's agreement.
   (d) Subscription agreement.

[Appendix B]

NATIONAL SENIOR CITIZENS LAW CENTER

January 1, 1976 to June 30, 1976

ACTIVITY REPORT

IV. LITIGATION ASSISTANCE

1. *Basel* v. *Butz*, United States Court of Appeals for the District of Columbia, No. 75-1494.

ISSUE

Constitutionality of the federal food stamp regulations that permit benefits to be terminated at the end of a certification period without the right to a prior hearing.

LEGAL SERVICES PROGRAM ASSISTED

Legal Services of Eastern Michigan, 412 Genesee Bank Bldg., Flint, Michigan, Food Research and Action Center, 25 West 43rd Street, New York City 10036, and Michigan Legal Services, 900 Michigan Bldg., 220 Bagley Avenue, Detroit 48226.

STATUS

On May 14, 1976, oral argument was conducted before the U.S. Court of Appeals for the District of Columbia. Extensive discussion was held at the argument with regard to *Eldridge* and the court requested post-argument briefs on the subject. A decision is expected in late summer or fall.

NSCLC PARTICIPATION

NSCLC participated in the discussion of strategies with FRAC attorneys. Also, the basic arguments of the post-argument brief on *Eldridge* were taken from draft memos prepared by NSCLC.

2. *Barr* v. *DiGiorgio, et al.*, United States District Court, Central District of California, No. CV 76-0493-FW.

ISSUE

Challenge to denial of disability pension to worker who retired in reliance on representations of union official when trustees of the Seafarers Pension Trust used the union to communicate with covered workers about the Seafarers Pension Plan.

LEGAL SERVICES PROGRAM ASSISTED

We are working with a private attorney in Wilmington, California who is working with us on a pro bono basis. The case was originally referred to him by the Legal Aid Foundation of Long Beach.

STATUS

Complaint was amended in April to assert ERISA as a source of jurisdiction chiefly in order to blunt efforts by the union and trustees to shift the case to New York on venue grounds. Answers from both were received in May. Since then we have been preparing our first wave of discovery and putting together a response to some 150 pages of interrogatories served by the trustees in June. Most of these interrogatories are boiler plate and appear to reflect a decision by the trustees to make it very burdensome to litigate against them in California.

NSCLC PARTICIPATION

NSCLC has assumed primary responsibility for the case. We drafted the complaint, amended complaint and are handling all discovery matters.

3. *In Re the Dissolution of Marriage of Kurt Benninghoff and Karen Benninghoff*, Indiana Superior Court, County of Lake, No. 576-2760.

ISSUE

Constitutionality of Medicaid deeming regulations which require the income of an out-of-institution spouse be applied to the institutionalized spouse's income in determining Medicaid eligibility for nursing home care.

LEGAL SERVICES PROGRAM ASSISTED

Legal Aid Society of Greater Hammond, Inc., 232 Russell Street, Hammond, Indiana 46325.

STATUS

The court, during the divorce proceeding, joined the State of Indiana as a party and denied the divorce and ordered that Indiana grant the institutionalized spouse Medicaid, despite the deeming regulations.

NSCLC PARTICIPATION

We appeared as co-counsel in the divorce proceedings and wrote the majority portion of the brief on the constitutionality of the deeming procedure. We are also involved heavily in all strategic decisions made in the case.

4. *Branch and Biggins* v. *Weinberger*, United States District Court, Middle District of Florida, No. 74-122-Civ-J-S.

ISSUE

Due process challenge to the five month waiting period which Title II disability recipients must endure before their benefit payments may begin.

LEGAL SERVICES PROGRAM ASSISTED

Duval County Legal Aid Association, Downtown Office, 205 E. Church Street, Jacksonville, Florida 32202.

STATUS

The government's motion to dismiss on *Salfi* jurisdictional grounds has been under the court's submission for some nine months.

NSCLC PARTICIPATION

We have worked with Carolyn Zisser all along on this case providing advice and information chiefly on the class action aspect of the litigation and on the legislative history of the waiting period. We have also assisted with the brief in opposition to the government's motion to dismiss providing arguments in support of Administrative Procedure Act jurisdiction, Social Security Act jurisdiction, and in opposition to the government's argument that the suit had to be filed within 60 days of Mrs. Biggins' award.

5. *Burroughs* v. *Board of Trustees of the Pension Trust Fund for Operating Engineers, et. al.*, United States Court of Appeals for the Ninth Circuit, No. 75–2897.

ISSUE

Whether the district court erroneously denied plaintiff's application for an award of attorney's fees and whether the district court's holding that the plan's break in service rule could not be applied to Burroughs was correct.

LEGAL SERVICES PROGRAM ASSISTED

Plaintiff is being represented by private counsel.

STATUS

All briefing to the Ninth Circuit is completed and oral argument has been set for September 7, 1976.

NSCLC PARTICIPATION

NSCLC submitted an amicus brief in support of the district court's decision on the merits and appellant Burroughs' claim for attorneys fees.

6. *Cardinale* v. *Mathews*, United States District Court, District of Columbia, No. 74–930.

ISSUE

Constitutionality of HEW regulations allowing reduction, suspension or termination of benefits in certain circumstances, e.g., clerical error, without advance notice.

LEGAL SERVICES PROGRAM ASSISTED

Western Center on Law and Poverty, 1709 W. 8th St., Suite 600, Los Angeles, CA 90017.

STATUS

The government's motion to stay the district court's order holding the regulations unconstitutional was denied. Our proposed settlement was then accepted by the government which decided not to appeal the order to the D.C. Circuit. Upon HEW's expected adoption of final regulations implementing this settlement, final judgment will be entered.

NSCLC PARTICIPATION

We assisted in preparing the response to the government's motion for a stay of the district court's order and in formulating the settlement proposal.

7. *Cheney* v. *Hampton*, United States District Court, District of Oregon, Civ. No. 75–974.

ISSUE

Eligibility of plaintiff for civil service retirement annuity where denial was based upon alleged voluntary separation but the plaintiff was forced to terminate employment in the face of unsupported allegations of homosexual conduct.

LEGAL SERVICES PROGRAM ASSISTED

Legal Aid Service, East County Office, 4420 South East 64th Ave., Portland, Oregon 97206.

STATUS

The Civil Service Commission has agreed to pay Mr. Cheney's claim in its entirety pursuant to either of two formulas based on alternative dates on which Mr. Cheney could have chosen to retire. In light of Mr. Cheney's relatively brief life expectancy, we elected the option offering the larger lump sum payment ($28,000) and the smaller prospective monthly annuity ($200).

NSCLC PARTICIPATION

NSCLC drafted pleadings and assisted in the formulation of theories under which to bring the case in federal court. Once the government's offer of settlement was made, we researched the tax consequences of the alternative offers.

8. *Commonwealth of Massachusetts Board of Retirement* v. *Murgia*, U.S. Supreme Court, No. 74–1–44.

ISSUE

Constitutional validity of state law requiring mandatory retirement of uniformed police officers at age 50.

LEGAL SERVICES PROGRAM ASSISTED

NSCLC appeared amicus curiae in collaboration with the American Association of Retired Persons and the National Retired Teachers Association.

STATUS

On June 25, 1976 the U.S. Supreme Court decided this case and reversed the lower court's judgment in favor of Murgia. The decision was predicated in large part upon the fact that the retirement statute was aimed at policemen, and the interest of the state in maintaining a vigorous police force. The Court did not reach the procedural due process issue argued by the NSCLC in its amicus brief and Justice Marshall, in his dissent, apparently invoked further challenges upon that ground by mentioning the absence of a procedural due process contention by the appellee and the fact the majority was dealing with policemen. Of interest is the fact that Mr. Justice Marshall apparently relied heavily on the NSCLC brief in tailoring the procedural due process arguments set forth therein to the equal protection clause.

NSCLC PARTICIPATION

NSCLC prepared a brief amicus curiae.

9. *Deutsch* v. *Vandenberg Air Force Base Exchange*, United States District Court, Central District of California, No. 752928; United States Court of Appeals for the Ninth Circuit, No. 76–1803.

ISSUE

Whether an employee of a federal non-appropriated fund activity can be involuntarily retired at age 62, pursuant to a pension plan, consistent with the Federal Age Discrimination in Employment Act of 1967.

LEGAL SERVICES PROGRAM ASSISTED

California Rural Legal Assistance, 126 W. Mill Street, Santa Maria, CA 93454.

STATUS

The lower court granted the government's motion to dismiss, on the authority of *Steiner* v. *National League*, another California federal district court case which decided the case contrary to the plaintiff's contentions. The appeal has been docketed and the appellant's brief has been served and filed; the government has offered to settle, reinstating Deutsch with back pay and the appeal will be dismissed.

NSCLC PARTICIPATION

The NSCLC has assumed primary responsibility for prosecution of this case, including preparation and filing of pleadings in the federal district court and in the Ninth Circuit Court of Appeals.

10. *East Hills Safety Comm.* v. *Pittsburgh Housing Authority*, United States District Court, District of Pennsylvania, No. 1151–75.

ISSUE

Whether a public housing authority may reduce security measures in an elderly housing project without giving the occupants a meaningful opportunity to protest the change and present reasons in support of their protest.

LEGAL SERVICES PROGRAM ASSISTED

Neighborhood Legal Services Association, 310 Plaza Bldg., Pittsburgh, Pa. 15219.

STATUS

A complaint has been filed, interrogatories served and preparation of a motion for summary judgment is under way.

NSCLC PARTICIPATION

NSCLC has done extensive research on both jurisdictional and substantive issues, assisted in the preparation of the complaint, and provided a revised version of the brief in support of a motion for summary judgment.

11. *Ferguson* v. *Mathews*, United States District Court, Central District of California, No. CV 75–2620–RF.

ISSUE

SSI application delay case.

LEGAL SERVICES PROGRAM ASSISTED

Western Center on Law and Poverty, 1709 W. 8th St., Suite 600, Los Angeles, CA 90017.

STATUS

Still no word from Judge Firth on cross motions for summary judgment filed by plaintiffs and defendant.

NSCLC PARTICIPATION

This case originated with the Western Center on Law and Poverty where it was brought by Miriam Goslins. She came on our staff for the duration of the case and we assumed all backup responsibilities. NSCLC prepared all the pleadings in support of the motion for summary judgment. The motion seeks an order requiring the promulgation of regulations establishing alternatively time limits of 30 and 60 days within which aged and disabled applications for SSI benefits must be processed or reasonable time limits subject to court approval within which such applications must be processed.

12. *Gadsden* v. *Weinberger*, United States District Court, Central District of California, No. CV 75–2946–ALS.

ISSUE

Constitutionality of provision in Title XVIII which permits carriers to make final and binding determinations with respect to contested claims under Part B.

LEGAL SERVICES PROGRAM ASSISTED

Legal Aid Society of Orange County, 1932 W. 17th St., Santa Ana, California 92706.

STATUS

A motion was made to intervene an additional party plaintiff in the suit; however, it had to be withdrawn because the plaintiff died prior to any hearings in the court. In addition, numerous communications were made to the court concerning new cases involving the jurisdictional issues under consideration. Plaintiffs also filed a supplemental memorandum of law on the jurisdictional issues because of the numerous cases that had been decided prior to the filing of the earlier brief. Motion to dismiss of defendants is still under submission.

NSCLC PARTICIPATION

NSCLC prepared all pleadings submitted to the court in Gadsden, including the intervention papers and the supplemental memorandum.

13. *Goodpaster* v. *Mid-America and California Iron Workers Pension Plans*, California Superior Court, County of Los Angeles, No. C 143975.

ISSUE

Whether the Mid-America Plan can apply its break in service provision to a period during which Mr. Goodpaster was working outside its geographical jurisdiction, albeit in the covered industry and at the behest of the company which employed him during his period of coverage by the Mid-America Plan.

LEGAL SERVICES PROGRAM ASSISTED

Southeast Legal Aid Center, 1331 E. Compton Blvd., Compton, California 90221.

STATUS

In late April an answer to our complaint was finally received from the California Trust denying each and every one of plaintiff's allegations. In the meantime, we have provided answers to interrogatories served by the Mid-America Trust. We are also preparing our own initial discovery to the trusts designed to remove as many factual issues as possible from Mr. Goodpaster's claim.

NSCLC PARTICIPATION

NSCLC did the research and prepared the complaint in this case and has assumed primary responsibility for pursuing all discovery prior to filing a motion for summary judgment.

14. *Hall* v. *Flournoy*, California Superior Court, County of Alameda, No. 450144-4.

ISSUE

Whether, under new legislation, recipients of Supplemental Security Income are entitled to homeowners' property tax relief (the statute disqualifies individuals whose property taxes are paid in whole or in part, directly or indirectly by the State).

LEGAL SERVICES PROGRAM ASSISTED

Legal Aid Society of Alameda County, 4600 E. 14th St., Oakland, CA 94601.

STATUS

By judgment dated January 15, 1976, the court found for the plaintiffs, ruling that they are entitled to receive the homeowners exemption, and overturning the then existing practice of the State taxing authorities. The State has appealed and the appellant's brief has been served and filed.

NSCLC PARTICIPATION

The NSCLC formulated the theories upon which the suit was initially based and assisted the Legal Aid Program in drafting the memorandum in support of the motion for summary judgment which was granted. We are now writing a segment of the respondent's brief.

15. *Harrison* v. *Crowell, et al.*, United States District Court, Central District of California, No. 73-1402-RF.

ISSUE

Compliance by trustees of the Southern California Construction Laborers Pension Trust with their duty to formulate reasonable eligibility criteria.

LEGAL SERVICES PROGRAM ASSISTED

Legal Aid Foundation of Los Angeles, 2301 South Hill Street, Los Angeles, CA 90007; California Rural Legal Assistance, 126 West Mill St., Santa Maria, CA 93454.

STATUS

At the end of March, Judge Firth finally ruled on the trustees' motion for summary judgment, denying it, and on the proposed intervenors' motion for intervention, granting it. The trustees then sought certification of both rulings as appealable orders, apparently part of a strategy to place the case before the Ninth Circuit as quickly as possible. Judge Firth, however, denied this motion as well, leaving us free to bring the case to resolution with our own summary judgment. To that end, we have, along with CRLA, retained Howard Winklevoss of the Wharton School to do actuarial consulting work, both in connection with *Harrison* and *Martinez* v. *Ivers*. Our next step will be to secure the tapes (we hope voluntarily) containing the work records of all employees who have passed through the plan for Howard to use.

NSCLC PARTICIPATION

NSCLC has handled this case in its entirety since its filing in June, 1973.

16. *State of Indiana* v. *Superior Court of Lake County, et al.*, Indiana Supreme Court.

ISSUE

Constitutionality of Medicaid deeming regulations which require the income of an out-of-institution spouse be applied to the institutionalized spouse's income in determining Medicaid eligibility for nursing home care.

LEGAL SERVICES PROGRAM ASSISTED

Legal Aid Society of Greater Hammond, Inc., 232 Russell Street, Hammond, Indiana 46325.

STATUS

After the order in the *Benninghoff* case, listed above, the State of Indiana filed an original action in the Supreme Court to challenge the authority of the Superior Court judge to knock out the state deeming regulations. The Supreme Court and the defendant Superior Court requested that the parties to the divorce also file briefs in the case. The brief has been filed and the case argued and is awaiting decision by the Supreme Court of Indiana.

NSCLC PARTICIPATION

We drafted the brief and filed an appearance on behalf of the husband in the action.

17. *International Brotherhood of Electrical Workers Pension Plan* v. *Superior Court*, United States District Court, Central District of California, No. CV 76-1768-F.

ISSUE

Whether a state court preliminary injunction requiring IBEW Pension Plan, on community property grounds, to pay half the husband's pension bene-

fit to the wife pending final resolution of his suit for divorce is subject to collateral attack in a federal court on the ground that ERISA preempts California community property law insofar as it "relates" to any pension plan.

LEGAL SERVICES PROGRAM ASSISTED

Legal Aid Foundation of Long Beach, 4790 E. Pacific Coast Highway, Long Beach, CA 90804.

STATUS

Complaint filed by the trustees of the IBEW Pension Plan was dismissed by Judge Ferguson following his issuance to all parties of an Order to Show Cause why the complaint should not be dismissed.

NSCLC PARTICIPATION

NSCLC assisted Diane Messer of Long Beach Legal Aid in preparing a brief on behalf of the defendant wife in the pending state divorce suit urging that the trustees' complaint be dismissed.

18. *Johnson* v. *Seafarers' Union Pension Fund*, California Superior Court, County of Los Angeles, No. C108480.

ISSUE

Must a pension plan's disability payments be made retroactive to the date Social Security determines disability to have begun, or may the plan commence payment only for dates subsequent to the date Social Security issues its determination?

LEGAL SERVICES PROGRAM ASSISTED

Legal Services for the Elderly Poor, 2095 Broadway, Suite 304, New York City 10023.

STATUS

Since the class action motion in a similar New York case was denied, we have begun working with a Los Angeles attorney who filed the *Johnson* case in California Superior Court. The defendants filed a motion to quash service and to dismiss the case. The attorney responded and oral argument is set for early July.

NSCLC PARTICIPATION

We have extensively discussed strategy (with both New York and local counsel), including intervention in the New York case versus filing a separate action in California.

19. *Johnston* v. *Johnston*, California Superior Court, County of Los Angeles, No. SO–D–54559.

ISSUE

Whether the federal pension reform act of 1974 preempts California community property law so as to prevent a court from ordering that pension payments due one spouse be paid directly to the other spouse.

LEGAL SERVICES PROGRAM ASSISTED

Legal Aid Foundation of Long Beach, 4790 E. Pacific Coast Highway, Long Beach, CA 90804.

STATUS

The wife's motion to have the pension plan joined as a party and have them preliminarily enjoined so as to require all pension payments paid directly to the wife was granted by the superior court. The pension plan then filed a notice of appeal of the preliminary injunction and while that has been pending the divorce case has been moving toward a final judgment with hearings scheduled in early July.

NSCLC PARTICIPATION

Our participation included discussion of all strategy involving the pension issue and assistance in preparation of briefs with regard to the pension issue

and intepretations of the federal pension law. NSCLC has also agreed to enter as counsel of record for the appeal in the California Court of Appeals and in any subsequent court hearings with regard to the pension issue.

20. *Kennedy* v. *Mathews*, United States District Court, District of Columbia, No. 76–0390.

ISSUE

Legality of withholding authorized funds from the Title VII nutrition program for the elderly.

LEGAL SERVICES PROGRAM ASSISTED

Food Research and Action Center, Inc., 25 West 43rd St., New York, New York 10036 and numerous Legal Services programs throughout the country who appeared as of counsel in the case.

STATUS

Plaintiffs' moved for a preliminary injunction and on May 17, 1976 the court issued an opinion and order granting plaintiffs' permanent injunction requiring that all monies appropriated be spent no later than the end of fiscal year 1977, ending all forward funding of the program, and requiring that states who do not spend their full allocation of funds return the money to the federal government for reallocation to states who need more monies.

NSCLC PARTICIPATION

Participated in the formulation of theories and strategies of the case and appeared as local counsel in the suit.

21. *Lix, et al.* v. *Edwards, et al.*, California Superior Court, County of Los Angeles, No. NCC–10209–B.

ISSUE

Propriety of the pension trustees' interpretation of a pension plan, the effect of which was to deprive the plaintiffs of their pensions; application of the "short term contributory employer" provision to the plaintiffs is contrary to the intent behind that provision.

LEGAL SERVICES PROGRAM ASSISTED

San Fernando Valley Neighborhood Legal Services, 13327 Van Nuys Blvd., Pacoima 91331.

STATUS

Trial has been set for August 24, 1976, but the parties have been able to achieve an agreed statement of fact and a stipulation to the effect that the matter may be submitted to the court on briefs. Because the plaintiffs pensions were terminated in November, 1975, it was believed appropriate to expedite the case because of the likelihood of an appeal regardless of the outcome and the desirability of a simple, easily compiled record.

NSCLC PARTICIPATION

The NSCLC has assumed the major responsibility for prosecution of this case. We have prepared all pleadings, motions and discovery materials. Lately, Percy Anderson, of SFNLS, has been participating in strategy sessions and attending the court proceedings with us.

22. *McGrath* v. *Weinberger*, United States Court of Appeals for the Tenth Circuit, No. 75–1839.

ISSUE

Constitutionality of "representative payee" provision in the Social Security Act which authorizes the appointment of such a fiduciary, for purposes of receiving Title II benefits and Title XVI Supplemental Security Income benefits, without a prior notice and hearing.

LEGAL SERVICES PROGRAM ASSISTED

Northern New Mexico Rural Legal Services, P.O. Box 1464, Las Vegas, New Mexico 57701.

STATUS

Following the district court's decision in favor of the government, plaintiff appealed to the Tenth Circuit. Briefs have been submitted and oral argument heard and we are currently awaiting the court's decision.

NSCLC PARTICIPATION

We appeared by way of amicus curiae and assisted in the briefing of all issues.

23. *Mathews* v. *Sanders*, United States Supreme Court, No. 75–1443.

ISSUE

Whether a federal district court has jurisdiction under either the Social Security Act or the Administrative Procedure Act, over a Social Security disability applicant's claim that his request that an earlier application be reopened was unreasonably denied by the Social Security Administration.

LEGAL SERVICES PROGRAM ASSISTED

Legal Aid Bureau, Inc., 341 North Calvert Street, Baltimore, Maryland 21202.

STATUS

In June of 1976 the Supreme Court granted the petition for writ of certiorari filed by HEW Secretary Mathews. The government's brief is due in mid-August, respondent Sanders' brief will come due a month later.

NSCLC PARTICIPATION

NSCLC is assisting attorneys with Baltimore Legal Aid in preparing an amicus brief in support of the position of respondent Sanders.

24. *Martinez* v. *Ivers*, United States District Court, Northern District of California, No. C–75–0198 RHS.

ISSUE

Whether pension plan discriminates against seasonal workers in the design and implementation of its eligibility conditions.

LEGAL SERVICES PROGRAM ASSISTED

California Rural Legal Assistance, Senior Citizens Program, 115 Sansome St., Suite 900, San Francisco, California 94104.

STATUS

This case has required a considerable amount of discovery. There was a full day session in San Francisco with our pension expert, Howard Winklevoss, a person from the Teamsters' Pension Plan, and lawyers for both sides to discuss the way in which the plan gathers data and how we may use that data for our expert. Other data continues to be sought through interrogatories and a major deposition of the Prudential Insurance Company's actuary is scheduled for early fall in Newark, New Jersey.

NSCLC PARTICIPATION

CRLA attorneys are doing the primary work on discovery. NSCLC attorneys have appeared on several occasions to assist in oral argument and in negotiation with attorneys for the trustees on discovery questions. NSCLC continues to be involved in determining overall strategy for the case and are counsel of record for plaintiff.

25. *Martinez* v. *Weinberger*, United States District Court, Central District of California, No. CV–75–1651–RJK.

ISSUE

Constitutionality of Social Security Act provision terminating benefits of fully insured individual upon deportation under specified circumstances.

LEGAL SERVICES PROGRAM ASSISTED

International Institute of Los Angeles, One Stop Immigration Center, 1441 Wright St., Los Angeles, California 90015.

STATUS

The government's motion for summary judgment was briefed by both sides and argued before Judge Kelleher. The case has been taken under submission by the court and a decision on the summary judgment motion should be soon forthcoming.

NSCLC PARTICIPATION

The NSCLC has assumed primary responsibility for prosecution of the case, prepared, served and filed the pleadings, and has drafted memoranda and other documents resisting the motion for summary judgment.

26. *Miller* v. *DePaulo Health Plan*, California Superior Court, County of Los Angeles, No. C–122674.

ISSUE

Compliance by a private pre-paid health plan with state and federal laws regulating the operation of such plans, as well as ordinary tort law of the state.

LEGAL SERVICES PROGRAM ASSISTED

Community Legal Assistance Center, 1800 W. 6th St., Los Angeles, CA 90057; National Health Law Program, 10995 LeConte Ave., Los Angeles, CA 90024.

STATUS

Several hearings have been held with regard to defendant's failure to comply with discovery and plaintiffs have been successful in all hearings. Discovery continues to take place in the case.

NSCLC PARTICIPATION

We have been involved in discussion of some of the strategy in the case; however, we have begun to discuss whether or not NSCLC will remain in this case and to that effect have held a meeting with the National Health Law Project to discuss whether or not we will continue to be involved in the case.

27. *Miranda* v. *Audia*, United States District Court, Southern District of California, No. 75–0517–GT.

ISSUE

Compliance by the trustees of the San Diego County Construction Laborers Benefit Funds with their duty to formulate reasonable eligibility criteria and with their responsibility not to discriminate against lower paid employees.

LEGAL SERVICES PROGRAM ASSISTED

Legal Aid Society of San Diego, 964 5th Avenue, San Diego, California 92101.

STATUS

The complaint was filed and plaintiffs began discovery by serving interrogatories on defendants and requests for production of documents. Defendants have complied with discovery and a status conference was held in May to discuss progress in the case. Plaintiffs are planning to amend the complaint to make the case a class action and add ERISA jurisdiction. A further status conference was scheduled for October, 1976.

NSCLC PARTICIPATION

We assisted in drafting all the pleadings and discovery, as well as appearing as counsel of record in the case.

28. *Munoz* v. *Timber Operators Council*, California Superior Court, County of San Joaquin.

ISSUE

Propriety of pension fund trustees denying a pension to an employee of a former employer who went out of business where a dispute exists concerning compliance with certain notice requirements and where, under the terms of the pension plan, employees of employers who went out of business are given more favorable treatment with respect to future service credit than are other employees.

LEGAL SERVICES PROGRAM ASSISTED

Legal Aid Society of San Joaquin County, 110 N. San Joaquin St., Stockton, CA 95202.

STATUS

The complaint has been filed in California Superior Court.

NSCLC PARTICIPATION

The NSCLC formulated the theories underlying the suit and drafted the complaint; the suit has been filed and the defendants are being served.

29. *Oliver* v. *Mathews*, United States District Court, Northern District of California, No. C–74–1416–SC.

ISSUE

Constitutionality of Social Security Act provision denying to divorced husbands of fully insured individuals benefits equivalent to divorced wives of fully insured individuals.

LEGAL SERVICES PROGRAM ASSISTED

American Civil Liberties Union Foundation, 22 E. 40th St., New York, New York 10016.

STATUS

Following the court's dismissal on *Salfi* jurisdictional grounds, Mr. Oliver exhausted the Social Security Administration's administrative appeals process through the Reconsideration stage. Upon completion of that stage, we asked counsel for Secretary Mathews to invoke the expedited appeals process which permits Mr. Oliver to refile his complaint without further administrative exhaustion. The stipulation has been drafted and sent to Mr. Oliver for signature and we expect to refile as soon as it is returned.

NSCLC PARTICIPATION

NSCLC drafted and filed the pleadings in this case, prepared the memoranda in connection with Mrs. Oliver's petition for intervention, conducted all discovery and prepared the motion for summary judgment on Mr. Oliver's behalf along with Kate Peratis of the ACLU. Since the court's *sua ponte* dismissal of the complaint, NSCLC has shepherded Mr. Oliver's claim through the administrative appeals process.

30. *Rosenthal* v. *Mathews*, United States District Court, District of Columbia, No. 76–601.

ISSUE

Constitutionality of provision in Title XVIII which permits carriers to make final and binding determinations with respect to contested claims under Part B.

LEGAL SERVICES PROGRAM ASSISTED

Legal Counsel for the Elderly, 1424 Sixteenth St. N.W., Washington, D.C. 20036.

STATUS

Plaintiff has filed interrogatories which are scheduled to be answered in early July, defendants have in turn filed a motion to dismiss and a request for protective order not to have to answer the interrogatories and both of which will be heard in early July. In addition, plaintiffs have filed a motion for a nationwide class action also to be heard in early July.

NSCLC PARTICIPATION

We were involved in formulating and drafting the complaint and interrogatories, wrote the briefs for the class action and in opposition to the motion to dismiss.

31. *Schultz* v. *Borradaile,* United States District Court, Eastern District of Michigan, No. 74–4123.

ISSUE

Constitutionality of involuntary guardianship statutes.

LEGAL SERVICES PROGRAM ASSISTED

Legal Services of Eastern Michigan, 412 Genesee Bank Bldg., Flint, Michigan and Michigan Legal Services, 900 Michigan Bldg., 220 Bagley Avenue, Detroit 48226.

STATUS

Plaintiffs have responded to defendants' motions and have moved the court for summary judgment. Defendants have responded to that motion and the motion is currently under submission.

NSCLC PARTICIPATION

NSCLC attorneys have assisted in writing the briefs to be filed, is co-counsel for the plaintiffs and is expected to participate in oral argument. In addition, NSCLC as an organization has filed an amicus brief.

32. *Sesanto* v. *Construction Laborers Pension Trust for Southern California* (will be filed in the United States District Court, Central District of California).

ISSUE

Whether trustees of a pension plan requiring 15 years of credited service as a condition to entitlement to a pension may deny benefits to a worker who has completed 21 and 6/12ths years of credited service on account of a break in service when the break occurred because the worker reasonably continued working for an employer whose employees had previously been covered by the plan; a subsidiary issue is whether the trustees may reasonably require that the minimum amount of future service credit necessary to trigger recognition of past service credit must be worked during the first five years of the plan's existence.

LEGAL SERVICES PROGRAM ASSISTED

Legal Aid Foundation of Los Angeles, 326 S. Lincoln Blvd., Venice, CA 90291.

STATUS

Exhaustion of the administrative remedies provided by the trustees has been completed unsuccessfully and complaint is now in preparation.

NSCLC PARTICIPATION

NSCLC has assumed complete responsibility for this case at the request of the Venice office.

33. *Shannon* v. *U.S. Civil Service Commission,* United States District Court, Northern District of California, No. C–76–1364–SW.

ISSUE

Constitutionality of the Civil Service Commission procedures for recoupment of overpayment of Civil Service pensions.

LEGAL SERVICES PROGRAM ASSISTED

Seattle Legal Services, 5308 Ballard St., N.W., Seattle, Washington 98107.

STATUS

Plaintiffs, upon filing their complaint for a nationwide class action, received a temporary restraining order ordering the defendants not to recoup any money from the named plaintiff. A motion for preliminary injunction and the class action was set down to be heard in late August and a briefing schedule set up. In addition, plaintiff anticipates some discovery which will include production of documents and a deposition.

NSCLC PARTICIPATION

NSCLC attorneys have done all the work on this matter.

34. *Shaw* v. *Weinberger*, United States District Court, District of North Carolina, No. C–C–74–105.

ISSUE

Validity of practice which limits SSI emergency advance payments to three categories of impairment and which fails to make presumptive disability determinations in advance of final determinations.

LEGAL SERVICES PROGRAM ASSISTED

Legal Aid Society of Mecklenburg County, 6th Floor, Professional Services Center, 403 N. Tryon Street, Charlotte, North Carolina 28202.

STATUS

Don Gillespie, of the Legal Aid Society of Mecklenburg County, has responded to the Government's report on the processing of presumptive disability and emergency advance applications in North Carolina by urging that the court dismiss our presumptive disability claims as moot but grant our motion for summary judgment with respect to emergency advance payments.

NSCLC PARTICIPATION

NSCLC drafted pleadings, briefs and participated in the oral argument of the motions for summary judgment. NSCLC has also assisted in the evaluation of and response to the government's reports submitted pursuant to the court's order.

35. *Smith* v. *O'Halloran*, United States District Court, District of Colorado, No. 75–M–539.

ISSUES

Class action against an individual nursing home, the state and federal governments alleging violations of the U.S. Constitution, Civil Rights Act, federal Medicaid regulations, breach of contract between the state and nursing home and intentional infliction of emotional distress on behalf of all medicaid recipients in the defendant nursing home. The specific rights alleged to be violated include 1) the right to manage personal monies and/or receive an accounting, 2) the right to meet with legal counsel, 3) the right to notice before transfer, 4) right to have an adequate level of care, 5) right to access to medical files.

LEGAL SERVICES PROGRAM ASSISTED

Legal Aid Society of Metropolitan Denver, 912 Broadway, Denver, Colorado 80203.

STATUS

The motions to dismiss and for summary judgment are still pending; however, the judge has discussed with all attorneys the possibility of ordering a special master expert appointed to study the nursing home conditions in the state of Colorado. The feasibility of that study is currently being considered.

NSCLC PARTICIPATION

We continued to assist Legal Aid Society of Denver as needed, including advice on strategy, possibilities for funding of the special expert, and assistance in research when needed.

36. *Stoskus* v. *City of Baldwin Park*, United States District Court, Central District of California, No. 73–2646.

ISSUE

Whether the imposition of a special assessment in excess of one-half the value of the property in question is constitutional.

LEGAL SERVICES PROGRAM ASSISTED

Community Legal Assistance Center, 1800 W. Sixth Street, Los Angeles, CA 90057.

STATUS

The case has survived a motion to dismiss predicated upon the res judicata effect of earlier state court litigation. We are now preparing our own motion for summary judgment.

NSCLC PARTICIPATION

We have agreed to take an active part in this case which has previously been handled by CLAC. We have obtained copies of all files, completed a preliminary study of the case, and prepared a draft motion for summary judgment.

37. *Tomlin* v. *Crowell*, California Superior Court, County of Los Angeles, No. C–108967.

ISSUE

Validity of provision in pension plan restricting circumstances under which pro rata credit can be earned through work generating contributions to a pension plan having a reciprocity agreement with the defendant pension trust.

LEGAL SERVICES PROGRAM ASSISTED

Community Legal Assistance Center, 1800 W. 6th St., Los Angeles, CA 90057.

STATUS

Our motion for summary judgment has been filed with the court and oral argument will be heard in the early fall.

NSCLC PARTICIPATION

NSCLC assisted the Community Legal Assistance Center in drafting the complaint, the memorandum in opposition to a motion to dismiss and the interrogatories. NSCLC staff prepared the summary judgment motion and points and authorities in support thereof and will take responsibility for oral argument on the motion.

38. *Watkins* v. *Mathews*, United States District Court, Middle District of Louisiana, No. 75–124.

ISSUE

Validity of HEW regulations which inhibit the reopening of applications for disability benefits under Title II of the Social Security Act by imposing time limitations and by creating the concept of "administrative res judicata" without statutory authority.

LEGAL SERVICES PROGRAM ASSISTED

Legal Aid Society of Baton Rouge, 2303 Government St., Baton Rouge, La. 70806.

STATUS

The court dismissed the suit for lack of jurisdiction and an appeal is being taken to the Fifth Circuit.

NSCLC PARTICIPATION

We will participate in the appeal either by way of a brief amicus curiae, or by being of counsel.

39. *Wilson* v. *Operating Engineers Pensions Fund*, United States District Court, Northern District of California, No. C–75–1820.

ISSUE

Propriety of pension trustees giving conclusive effect to Social Security records in finding a break in employment where an ambiguity existed concerning whether the claimant was, during the questioned time, an employee or an independent contractor and where claimant had earned sufficient credit to qualify for a pension prior to his alleged break.

LEGAL SERVICES PROGRAM ASSISTED

Fresno County Legal Services, Inc., Brix Building, 1221 Fulton Mall, Fresno, CA 93721.

STATUS

Chief Judge Carter treated the March hearing on our motion for preliminary injunction as a trial. Accordingly, we spent two days presenting witnesses designed chiefly to show the irreparable injury suffered by the Wilsons and Cliff Wilson's work in covered employment during the period of his supposed break in service. Before a date could be set for the trustees to put on their opposition, Judge Carter died suddenly of a heart attack. We have since renoticed our motion which will now be heard by Judge Ingram on August 18th and 19th. In the meantime, the trustees have deposed both Cliff Wilson and another union member who worked for Wilson's employer during the period of his break.

NSCLC PARTICIPATION

NSCLC has prepared all pleadings and conducted all negotiations with the trustees of the Operating Engineers Pension Fund. In addition, we will be responsible for all oral arguments before the Northern District.

[Appendix C]

SURVEY OF STAFF PROVIDING LEGAL SERVICES TO THE ELDERLY SURVEY DESCRIPTION

In October, 1975, the National Senior Citizens Law Center conducted a survey, by questionnaire, of 73 projects specifically providing legal services for the elderly. The purpose of the survey was to obtain an accurate assessment of problems confronted by legal services providers. The questionnaire was designed to provide a wide range of information on legal problems. Nine broad areas were covered: I. Services, II, Eligibility, III, Funding, IV, Staff, V. Paralegals, VI. Relations with the Local Bar, VII. Accessibility of Services, VIII. Coordination with Other Services, and, IX. Availability of Resources.

The questionnaire which was prepared by the Staff of NSCLC incorporates within it questions solicited from the other model project grantees. Survey responses were received from 32 of the 73 law programs receiving the questionnaire (a response rate of 44%). We are presenting a preliminary analysis of our survey responses which indicates how manpower problems are perceived by legal service providers working with the elderly.

SUMMARY ANALYSIS OF STAFFING PATTERNS

Legal service programs for the elderly, like those of other social service programs in the field of aging, have a multiplicity of goals. We are concerned that older people are employed and adequately trained to fill the staffing needs wherever possible. We are also concerned that staff attorneys, paralegals and community workers have competency in their specialties, are sensitive to the needs of the elderly, and that personnel have knowledge of the special issues that impact the lives of the elderly.

Legal service programs, especially, need specific knowledge in the substantive areas that are most commonly addressed in dealing with the aged. For the most part, lawyers have not been trained in law school or in private or public practice in these substantive areas.

This part of our survey attempts to look at present staffing patterns to see how well we have met our goals, as well as finding out which areas we must improve. In this part of our statement five broad categories are covered: 1. Statistical profile of staffing patterns, 2. Adequacy of present staff, 3. A demographic profile of present attorneys, 4. Project training needs, and 5. Paralegals.

STATISTICAL PROFILE OF STAFF—WHO AND WHAT KINDS OF WORKERS ARE EMPLOYED

Staff utilization

In the 32 projects there were a total of 49.5 (50 rounded) attorneys employed for an average of 1.66 attorneys per project [Table I]. Approximately 56% of the projects had one or fewer attorneys [Table II]. No project had more than 4 attorneys and only 3% had 4. In fact, almost 85% of the projects employed 2 or fewer attorneys.

Paralegals, another category, [Table III] are utilized in approximately 72% of the projects. Twenty-eight percent have no paralegals, 38% of the projects have 1 or 2 paralegals and 9% have 9 or more. Statistical averages, however, can be misleading: 40% of the 116 paralegals employed (48) are in four projects.

Community and social service personnel are used relatively infrequently [Table IV], with almost 47% of the projects utilizing none. Approximately 47% utilize some type of social service personnel with some projects utilizing administration staff for social service tasks. Only 9% of the projects have 5 or more community or social service workers.

Part-time vs. full-time employment was another category studied. Almost 48% of the projects responded that they didn't use part-time workers. Of those who used part-time personnel [Section B, Table VI], 16% of the projects had all part-time personnel and another 19% used part-time personnel extensively. That, of course, means that close to 66% utilized part-time workers little or none at all.

Law students were utilized in 47% of the projects while 53% made no use of law students [Section B, Table V].

Adequacy of present staff

This section in the survey was concerned with the adequacy of staff size and projected needs for future staffing if these projects were to become adequate to meet the legal needs of the elderly. An interesting and significant difference arises [Table I and II, Section B] when legal service providers are asked to assess the adequacy of their staff size.

When asked about the adequacy of staff size to meet the demands of their project's present elderly caseload, 58% responded that present staff is inadequate to meet the demand, which is a good indication of their needs. However, when asked if their staff size was adequate to meet the demands of the *elderly community eligible for legal services*, an overwhelming (80%) majority responded that their staff was inadequate. It indicates that there is dissatisfaction with their ability to meet their caseloads, but an even greater dissatisfaction with their ability to assist the potentially needy elderly community.

Further questions were asked to see what kind of staff was needed to meet both caseload and community legal needs. The greatest need was for attorneys (74%) and for paralegals (60%) ([Section B, Table III]. Only 7 cases (26%) mentioned community and social service workers.

A further concern was whether part-time older workers were employed. Often older workers, because of social security regulations, physical condition, etc., are unable to work full time. Out of the 23 projects which utilized older workers (61%), when asked how successful this was, 12 out of 14 (86%) said it was successful, while 2 said only partially successful.

Profile and demography of attorneys' ages, experience, bar membership

Attorneys in the legal services projects are relatively young [Section C, Table II]. Sixty-eight percent of the attorneys are under 30, while 80% are under 35 and 86% under 40. Only 14%, or 8 attorneys, are 55 and older while 4 are over 65 with the oldest attorney 72. It is interesting to note that no attorneys fall into any age categories between 41 and 55.

When hired, 88% are either active or retired members of the bar. Sixty-two percent of all attorneys had less than three years experience when hired, with 28% having 0 to 11 months. Only 8 lawyers, or 14%, had over 10 years experience. This data exactly correlates with the 14% of the lawyers 56–65 and older.

Paralegals

The fifth section deals with paralegals: utilization, desirability to legal services projects, sources of funding and demographic characteristics. Twenty-

three of the 32 legal service projects use 116 paralegals, an average of 3.62 paralegals per project. Average statistics often represent skewed pictures. Four of the projects utilize approximately 40% (or 48) of the total number of paralegals. Eighteen out of the 23 projects have some type of salaried paralegal.

Fifty percent of the paralegals are part-time non-salaried, while approximately 26% (25.9%) are full-time salaried employees, with approximately 24% full-time non-salaried. We were unable to do any correlation to see what proportion of elderly paralegals were paid or non-paid. The age breakdown for paralegals showed approximately 35% over 65 and 25% between 55–64. The next largest age group was 21–30 with 18% of the total paralegal population.

Of the 9 projects not presently utilizing paralegals, approximately 67% (66.7%) said they would like to employ paralegals. Of those projects presently employing paralegals, an overwhelming 82% (81.9%) said they would like to expand their paralegal staff. By overwhelming numbers, 87% of the respondents indicated insufficient funding to secure adequate training for paralegals. Even if the training money were available, 70% indicated NO adequate training for senior citizen paralegals was available in their community.

GENERAL INFORMATION FROM THE 32 PROJECTS: STAFFING AND MANPOWER

SECTION A.—TYPES OF WORKERS UTILIZED

Table I.—The number of attorneys per the 32 projects surveyed. *Average* number of attorneys *per project*—1.66. Total number of attorneys—49.5 (*including part time*).

TABLE II.—NUMBER OF ATTORNEYS

Number of attorneys	[1] 0	1	2	3	4
Projects having specific attorneys	2	16	9	4	1
Percent of projects	6.2	50	28.1	12.5	3.1

[1] Approximately 84.3 pct of the 32 projects have less than 3 attorneys; 56.2 pct have 1 or fewer attorneys.

TABLE III.—NUMBER OF PARALEGALS PER PROJECT [1]

Paralegals	0	1 to 2	3 to 4	5 to 6	7 to 8	9 plus
Projects	9	12	2	5	1	3
Percent of projects with paralegals	28.1	37.5	6.3	15.6	3.0	9.3

[1] Approximately 28 pct of the survey projects use no paralegals; 38 pct have 1 to 2 paralegals; 66 pct between 0 and 2 paralegals; 34 pct between 3 and 18 paralegals.

TABLE IV.—NUMBER OF COMMUNITY OR SOCIAL SERVICE PERSONNEL PER PROJECT

Community and social service workers	0	1 to 2	3 to 4	5 to 6	9 to 10	11 plus	No Response
Projects	15	8	3	1	1	1	(2)
Percent of projects having community or social service workers	46.9	25.0	9.3	3.0	3.0	3.0	6.25

NOTES

Almost 50 pct do not have community or social service workers.
71.9 pct have 0 to 2 community or social service workers.
81.2 pct have 0 to 3 community or social service workers.
9 pct have more than 4.
The survey showed some overlap between this classification and paralegals in that it seems as if some paralegals were used as community workers and vice versa.

TABLE V.—UTILIZATION OF PART-TIME WORKERS

[27 projects responding]

Part-time workers	0	1 to 2	3 to 4	5 to 6	7 to 8	9 plus	No Response
Projects	13	8	1	2	1	2	(5)
Percent projects with part-time workers	48.1	29.6	3.7	7.4	3.7	7.4	

Almost 50% have no part time workers, 30% have 1–2. Only approximately 21% have over 3 part time workers.

SECTION B

Another set of questions revolved around the adequacy of the staff size and the projected needs if the projects were to become adequate to meet the needs of the elderly population. There were two questions specifically geared to this problem.

Is staff size adequate to meet the demands of your project's *present* elderly caseload?

TABLE I

	Yes	No	No response
Number of staff	13	18	1
Percent of total responses	41.9	58.1	

Is this staff size adequate to meet the *demands* of the *elderly community eligible* under your project's guidelines?

TABLE II

	Yes	No	No response
Number of staff	6	24	2
Percent of total responses	20	80	

When asked what does your program need to adequately serve the elderly community and your present caseload (total figures greater than 100%—some participants citing more than one need), the greatest additional staff needs were for attorneys (74%) and paralegals (59.3%).

TABLE III.—CHANGES NEEDED IN STAFF

[27 projects responding]

	Percentage	Number of cases
Additional paralegals	59.3	16
Additional attorney	74.0	20
Support staff—administrative-clerical	22.2	6
Community and social service personnel	25.9	7
Law students	7.0	2
Pay for volunteers	3.7	1
Additional full-time personnel	3.7	1

On the question of salaries for attorneys and support staff pay (not including paralegals), most respondents said that salaries are not competitive (approximately 60%).

TABLE IV.—COMPETITIVE SALARIES

	Yes	No	No response
Salaries competitive (28 responses)	11	17	(4)
Percent of projects responding	39.2	60.7	

TABLE V.—PROJECT UTILIZATION OF LAW STUDENTS

[32 responses]

	Yes	No
Number of cases	15	17
Percent of total projects responding who use law students	46.9	53.1

Do you utilize part-time personnel?

TABLE VI.—PROJECT USE OF PART-TIME PERSONNEL

[32 responses]

	None	Little	Extensively	All
Number	9	12	6	5
Percent	28.1	37.5	18.75	15.6

Of those cases who utilize part-time personnel, 65% have paid and 60% have volunteer. Only 15 programs responded to the question.

TABLE VII.—PART-TIME PERSONNEL

[32 responses]

	Number	Percent
Paid	15	65.2
Volunteer part time	14	60.8

TABLE VIII.—UTILIZATION OF OLDER PEOPLE PART TIME

[23 responses]

	Yes	No	Number available
Number	14	7	2
Percent	61.0	30.4	

TABLE IX.—ARE THESE PART TIME OLDER WORKERS SUCCESSFUL?

[21 responses]

	Yes	Partially
Number of cases	12	2
Percent of people responding	86	
Is the use of part-time older workers feasible	30	2
Percent of people responding	94	6

SECTION C

The next set of questions concerned attorneys' qualifications and age.

Questions on attorneys' qualifications, primarily questions of age, previous experience before working in this program, membership in the bar when hired based on the total number of attorneys (49.5) (rounded to 50 attorneys) in projects.

TABLE I.—AGE OF ATTORNEYS IN PROJECT

Age	Number of attorneys	Percent of attorneys
21 to 25	4	8
26 to 30	30	60
31 to 35	6	12
36 to 40	3	6
41 to 45	0	0
46 to 50	0	0
51 to 55	0	0
56 to 60	1	2
61 to 65	2	4
65 plus (oldest 72)	4	8
Total	50	100

NOTES

68 pct of the attorneys are under 30.
80 pct of the attorneys are under 35.
86 pct of the attorneys are under 40.
14 pct of the attorneys are over 55.
12 pct of the attorneys are over 60.

TABLE II.—EXPERIENCE OF ATTORNEYS BEFORE BEING HIRED FOR THE PROJECT

	0 to 11 mo	1 to 2 yr	3 to 4	5 to 6	10 to 20	21 to 30	31 to 40	40 plus
Number	14	17	9	2	2	1	4	1
Percent	28	34	18	4	4	2	8	2

62% of all attorneys had less than three years experience.

80% of all attorneys employed had less than five years experience when hired.

Only 18% had 10 or more years experience when hired.

TABLE III.—MEMBER OF THE BAR WHEN HIRED

	Yes	No	Retired
Number	43	6	1
Percent	86	12	2

The overwhelming majority of attorneys were admitted to the bar when hired to staff the respective projects.

SECTION D

Category D had to do with specialized training for professional staff in elderly law or legal issues affecting the elderly, whether it was received and how it was given. The preponderance of in-house training specified that, although it was in-house, it utilized materials from outside—organizations such as NSCLC and NPI training documents.

When asked whether specialized training was given, an overwhelming majority of projects said yes.

TABLE I.—GIVE SPECIALIZED TRAINING

	Yes	No
Number of cases	25	7
Percent of cases	78.1	21.8

TABLE II.—IS TRAINING IN-HOUSE[1]

	Yes	No
Number of cases	18	7
Percent of cases	72	28

[1] 75 pct give some form of in-house training.

TABLE III.—OUTSIDE TRAINING

	Yes	No
Number of cases	18	7
Percent of cases	72	28

TABLE IV.—SOURCES OF OUTSIDE TRAINING

[18 cases responding]

Source	Number	Percent
Legal education programs	9	50
Backup centers	17	94
Bar association	4	22.2
Law school seminars and training	5	27.8
Other legal aid programs	3	16.7
Workshops	3	16.7
Outside materials	1	5

TABLE V.—RECRUITMENT OF FULL TIME STAFF

[27 cases responding]

Source	Number	Percent
Advertising	22	81.5
Law schools	12	44.4
Vista	4	14.8
Legal aid offices	4	14.8
Elderly organizations	2	7.4
Other	2	7.4
Word of mouth	9	33.3

The prime method of recruit full-time staff is through advertising in various journals and at law school. Few legal service projects utilize senior citizens organizations or publications.

SECTION E.—PARALEGALS

TABLE I.—PAY STATUS OF PARALEGALS

[116 cases responding]

	Full-time salaried	Full-time non-salaried	Part-time salaried	Part-time non-salaried
Number	30	1	27	58
Percent	25.9	.8	23.8	50

TABLE II.—SOURCES OF FUNDING FOR PAID PARALEGALS

[57 cases responding]

Source	Number	Percent
Title III OAA	15	26.3
Title XX		1.7
SOS	3	14
VISTA	9	15.8
CETA	6	10.5
United Way	5	8.8
FRS	11	19.3
Other	2	3.5

TABLE III.—DEMOGRAPHIC BREAKDOWN OF PARALEGALS

[114 cases]

Age	Number	Percent
Under 21	4	3.5
21 to 30	21	18.4
31 to 40	12	10.5
41 to 55	9	7.9
55 to 65	28	24.6
65 plus	40	35.1

Notes.—59.7 pct of all paralegals over 55; 21.9 pct of all paralegals under 30.

	Sex	
	Males	Females
94 responses	32	62
Percent	34	66

	Black	Caucasian	Spanish speaking	Other
94 responses	10	73	7	4
Percent	10.6	77.7	7.5	4.2

Paralegals in these projects were likely to be female (66%) and Caucasian 78% (77.7%). Blacks and Spanish-speaking personnel were being utilized.

Table IV.—Of the 58 paralegals funded, there was a great disparity of funding sources. The prime *single source*, Title III—OAA, was 26.3%, with Federal Revenue Sharing 19.3%, and RSVP, VISTA, CETA and Wins comprising 40% funding source for paid paralegals. RSVP could be considered a non-paid position since transportation and lunches may not be adequate pay. Several respondents declared that if they could, they would request "*real*" pay for their RSVP workers.

Table V.—Training is primarily in-house—65%.

TABLE VI.—TRAINING OF PARALEGALS

[23 cases responding]

	In-house	Outside
Number	15	8
Percent	65.2	34.8

TABLE VII.—DESIRABILITY AND VALUE OF PARALEGALS

	Yes	No
Number	6	3

Note.—Of the 9 projects presently without paralegals, 6 would like to employ them.

	Yes	No
Number	18	4
Percent	81.9	18.1

Note.—Of those projects presently employing paralegal staff—desire to expand paralegal staff (22 cases responding).

TABLE VIII.—SUFFICIENCY OF FUNDS TO PROVIDE TRAINING FOR PARALEGALS

[30 cases responding]

	Yes	No
Number	4	26
Percent	13.3	86.7

	Yes	No
Number	9	21
Percent	30	70

Note.—Availability of training for senior citizens paralegals in the community (30 cases).

SECTION F.—AVAILABILITY OF RESOURCES

Has your elderly legal services project used a backup center or model grant program for technical or other assistance?

TABLE I.—USE OF BACKUP CENTERS AND MODEL GRANT PROGRAMS

	Yes	No
Number of projects	18	12
Percent of projects	60	40

TABLE II.—WHAT WAS YOUR EXPERIENCE WITH THE BACKUP CENTER?

[18 cases]

	Good	Average	Bad

LEAA	8	27
CETA	9	30
Other	4	10

Summary of findings

The sixth section of our survey had to do with the availability of outside resources. There were two areas of questions: (1) the use of back-up or model grant projects; and (2) substantive areas of training needed.

Sixty percent of the projects had utilized a back-up or model project. Out of those, 84% felt that the experience was very good, 10% felt it was satisfactory, and one case felt it was unsatisfactory. Out of the 40% who had not been able to or who had not used a model project or back-up center, 96% said they would use them if an appropriate case arose.

Another question in the survey was whether the elderly legal project would use specialized training provided by a back-up center at a training conference. Ninety-six percent of the cases said that they would attend such training.

When asked what type of training they felt is necessary for their elderly project, responses were as follows:

	Percent		*Percent*
Age discrimination	50	Nursing homes	87
Consumer problems	77	Older women	40
Federal Government pensions	40	Private pensions	47
Funding	63	Probate	47
Guardianship and involuntary commitment	73	Social security	80
Health and nutrition	60	SSI	80
Housing	60	Transportation	43
		Veterans' matters	63

Mr. AFFELDT. Now we shall hear from Mr. David Marlin, director, Legal Research and Services for the Elderly.

Mr. Marlin has always been most helpful to the committee, serving us well in many capacities. The working paper which he and his staff prepared in 1970 on "Legal Problems of the Elderly" helped launch our study on improving legal representation for older Americans.

Dave will soon prepare another working paper for the committee on another timely topic, "Protective Services for the Elderly."

Now we will hear from Mr. Marlin.

STATEMENT OF DAVID MARLIN, DIRECTOR, LEGAL RESEARCH AND SERVICES FOR THE ELDERLY, WASHINGTON, D.C.

Mr. MARLIN. Thank you.

I would like to start by expressing gratitude to the committee, its Senators and staff, who have provided a focus on this important issue for the last several years. The interest of the committee has accounted for a lot of the progress that has been made.

I also would like to call special attention to the staff members who are here this late today.

The advantage to being last, if there is one, is the opportunity of hearing everything that goes before and, therefore, having the opportunity to comment on anything that you heard. I would like to make some comments on some of the things that have been said today and yesterday.

You have the testimony that I was prepared to provide and I will just hit a few highlights from it.

We have been privileged since 1968 to be working in this field. By "we," I mean the legal program of the National Council of Senior Citizens. I think our special strength and validity as lawyers is that we represent an organization of 3.5 million older persons, which is well known in the country for championing the causes of older persons. Our focus has been, is, and will continue to be, how to solve the problems of senior citizens. We approach issues in terms of how they impact on older people.

Since 1968, more than 100 legal services programs for the elderly have been funded, largely with title III funds. We estimate they serve more than 100,000 persons a year. There also have been about 10 law schools that have initiated programs—clinical, academic, or both.

The organized private bar, upon which I wish to comment a little bit later, in recent years has recognized the need and begun to provide some assistance to resolve legal problems of older persons. But the lightning rod has been and continues to be governmental support.

Much remains to be done in spite of the substantial progress that has been made.

We believe the vast majority of older persons today do not have access to adequate legal representation. In addition to the 100,000 persons we previously estimated are served by the 100 elderly law projects, we estimate 200,000 older persons per year are represented by the Legal Services Corp., legal aid offices, the private bar, and law school clinics.

As the current population of persons 65 and over is in excess of 22.3 million, over 22 million older persons are potential legal clients. Discounting the 30 percent with incomes presumptively sufficient to retain a private attorney, that still leaves 15.6 million.

SIX MILLION ELDERLY WITHOUT LEGAL REPRESENTATION

As the American Bar Foundation estimates that 37.3 percent of the adult population will face a legal problem each year, a conservative estimate of the number of older persons per year who face im-

minent legal action, but are without access to legal representation, is 5.8 million persons.

In our prepared statement,[1] we provide some illustrations of the need. Picking one largely rural area—the States of Mississippi, Tennessee, and Alabama—with 706,500 older persons, let me refer the committee to our prepared statement where we elaborate on that.

We have recommended four goals to accomplish and I would like to very briefly state those and comment on them.

Goal One: Prioritize Services

First, that the Legal Services Corp. programs be mandated by Congress to establish priorities for their services so that all segments of the poor are served equally according to their proportion of the poor population.

Now there has been testimony this morning about Congress earmarking funds. That provides a lot of problems for any program, and for Congress. I don't think it is necessary to earmark funds in order to prioritize services. We suggest, for example, in our prepared statement, the creation of some special units or persons within legal services projects who are given the responsibility to represent the elderly. They would be therefore, obligated to perform, and their performance will be one measure of the test that Senator Kennedy posed this morning to Mr. Ehrlich.

In addition, there is the subject of alternative delivery systems which has not been mentioned today or yesterday, to my surprise. Our prepared statement refers to one of them—the voucher system—which is one of the delivery methods that the corporation is testing. Its application to older persons still remains. There are a number of other methods including prepaid plans that I could elaborate on subsequently.

I am trying to keep it short because I know we all want to go to lunch, but there are a number of alternative delivery systems that are possible and that should be experimented with.

I now want to comment on Mr. Ehrlich's testimony. I had an opportunity during the break to outline to him the sort of comment that I intended to make.

There is, unfortunately—and I don't blame anyone for it—a historical imbalance in the amount of legal services that indigent older persons have been receiving from our public legal services movement which was created in 1964.

Whether the figure is 6 percent, a little bit more, or a little bit less—granted we don't know exactly, but I don't think anybody who is attuned to the situation would argue that there is not a historical imbalance.

So the question is: How do we close that gap? I suggest that it has got to be more than training in substantive legal issues affecting older persons and more than paralegalism and more than mobile units to reach older persons. That is why we suggest that Congress take a hand and provide some sensible and rational basis for asking the corporation to prioritize its services.

---

[1] See p. 336.

Goal Two: Encourage Public Interest Legal Services

Our second recommendation is that the private bar be encouraged by Congress to fulfill its articulated professional responsibility of providing public interest legal services.

I appreciate Mr. Schneider asking Mr. McCalpin about Justice Brennan's quote. I have known Mr. McCalpin for years. I know the sincerity that he and others in the leadership of the American Bar Association have toward fulfilling that professional responsibility, but I think there has to be more than acceptance of the principle. There must be a test of performance for the Bar Association also. It has to be more than accepting the principle. The word we were using this morning was "quantify." It has not been quantified yet.

I suggest it has to be quantified, otherwise it is an illusory promise that in some places will be fulfilled and other places will not.

In our prepared statement we point out some of the examples of the lack of private bar fulfillment of that responsibility. We suggest certain pro bono and reduced-fee services that could be and should be available.

We pick up a suggestion made in 1933 by Carl Llewelyn which is to impose a tax on the incomes earned by large firms to subsidize legal services for the poor.

In addition, we talk about consideration of an amendment to section 170(c) of the Internal Revenue Code which would allow a charitable deduction for lawyers and other professionals who render services to or through a tax-exempt organization such as a legal aid society.

Goal Three: Funding for AoA Staff Person

Our third recommendation is that Congress approve as part of the Older Americans Act amendments, in 1977 or in the appropriation process for fiscal 1977, a staff position at AoA. This would provide them the capacity and the authority to hire someone to administer all these programs, the model projects, the training grants. They would have someone on the staff who could provide leadership within AoA.

I know Commissioner Flemming is very much in favor of this. He is trying to find ways to bring a person like that aboard, but is relegated to nondirect methods since there is no authorized staff position.

May I respectfully suggest to the committee that it provide consideration for that?

Goal Four: Earmarked Funding for Elderly

Finally, our suggestion is that a portion of the appropriations for such Federal programs as the Law Enforcement Assistance Act, the Legal Services Corp., the Older Americans Act, title I of the Higher Education Act, or the consumer education programs be earmarked for educational programs in the legal rights and problems of the elderly.

I don't have to point out to the committee or to persons in the room how important it is that older persons themselves be made

aware of their legal situation. They know they have problems, but sometimes they don't appreciate they are legal and can be solved through the assistance of lawyers and paralegals. There is a great need for educational programs for older persons.

I think I will stop at this point, Mr. Affeldt.

If there are any questions, I will be happy to answer them.

[The prepared statement of Mr. Marlin follows:]

PREPARED STATEMENT OF DAVID MARLIN

I appreciate this opportunity to appear here and share our recommendations regarding the development of legal representation for the elderly.

Since its inception 8 years ago, the mission of our office has been to work with State and area offices on aging, Legal Services Corporation and legal aid offices, bar associations, law schools, and organizations of older persons to develop programs of legal representation for the elderly. The National Council of Senior Citizens, under a grant from OEO from 1968 to 1972, established the first 12 legal services for the elderly demonstration projects in the country—projects which have since been replicated throughout the Nation.

Beginning in 1974, we pioneered the first legal services technical assistance effort to State and area offices on aging funded by the Administration on Aging. Under this grant covering the States in HEW Region III, we helped develop direct legal service delivery systems, drafted and critiqued State legislation impacting older persons and trained State and area agency staff, legal services providers, and older persons themselves in the legal rights and problems of the elderly. Based upon this experience, AoA in July 1975 expanded this program to include all 50 States and increased NCSC's responsibilities to include the 19 States in HEW Regions I, III, and IV.

The advances in legal representation for the elderly that we have stimulated during the past eight years have been significant. Prior to 1968, there were no legal programs in the country focusing on older persons; elderly law seminars and clinical programs were unheard of by the Nation's law schools; the private bar had not yet awakened to the fact that older persons are a significant and largely unserved segment of the population, and government support for legal services for the elderly was virtually nonexistent.

Since 1968, over 100 legal services for the elderly projects have been funded, largely with title III funds, and continue to serve over 100,000 persons per year. Ten law schools have initiated law and aging seminars and/or clinical programs which not only provide direct legal representation for the elderly but train future lawyers in the substantive areas of the law impacting older persons and sensitize them to their needs. The organized private bar—although slow—is beginning to recognize the legal needs of the elderly. Finally, governmental support has been and is the lightning rod of the movement.

Direct legal services programs for the elderly have been initiated and sustained by support from such Federal programs as the Older Americans Act, ACTION, the Housing and Community Development Act, revenue sharing, CETA, the Legal Services Corporation, and title XX of the Social Security Act. Most recently the designation by this Congress of legal services as a priority social service under the Older Americans Act has been a boon to the effort of insuring adequate legal representation for older persons. State and area agencies who had been indifferent to the development of legal representation for the elderly are, because of this congressional mandate, becoming eager to learn about legal services delivery, to provide training for their staff in the legal rights and benefits of the elderly, and to work toward the establishment in their areas of direct legal services programs.

Although substantial progress has been made, much remains to be done. The vast majority of older persons today remain without access to adequate legal representation. Approximately 200,000 older persons per year are served through Legal Services Corporation/legal aid offices, law school clinics and the 100-plus elderly law units. As the current population of persons 65 and over is in excess of 22.3 million, over 22 million older persons still remain in the potential client population. Discounting the 30 percent with incomes presumptively sufficient to retain a private attorney, 15.6 million remain. As

the American Bar Foundation estimates that 37.3 percent of the adult population will face a legal problem each year, a conservative estimate of the number of older persons per year who face imminent legal action but are without access to essential legal representation is 5.8 million.

The lack of access is particularly acute for older persons in the South. For example, in the three States of Mississippi, Tennessee, and Alabama, there are 163 counties with a total elderly population of 706,500 without any form of legal assistance for the poor. In those 74 counties in which legal aid is available, the attorney-client ratio is at times as high as 1 attorney per 31,000 eligible poor persons.[1] As the basic policy of such programs is to serve clients in the order in which they appear at the door, older persons who are at best reluctant consumers of legal services get lost in the shuffle. Legal Services Corporation estimates of older persons serviced by LSC offices bear this out. Although older persons nationally represent 20 percent of the poor population, only 6 percent of LSC clients are elderly. The 1975 caseload totals for Georgia Legal Services, the only HEW Region IV legal services program to claim statewide coverage, supports this estimate. Of the 15,550 cases handled by Georgia Legal Services during 1975, only 776 involved older persons.

In addition to the millions of older persons per year who recognize that they have a legal problem and thus require a legal advocate to intervene on their behalf, there are millions more who do not know enough about their legal rights to recognize when they are unjustly denied public benefits, defrauded in consumer transactions, or victimized in real estate transactions, long-term care arrangements or protective services proceedings. Although ignorance of the law is not peculiar to older persons, the effects of such ignorance is particularly devastating to them because of their vulnerability, marginal resources, and dependence on public benefit programs.

This ignorance of the law and lack of access to adequate direct representation can and must be remedied. To accomplish this goal, we recommend the following:

(1) *That Legal Services Corporation programs be mandated by Congress to prioritize their services so that all segments of the poor be served equally according to their proportion of the poor population.*

Although it is true that the Legal Services Corporation offices, even with the increased appropriation of $123 for fiscal year 1977, cannot possibly serve all 29 million poor persons in this country eligible for their services, all segments of the poor population should be assured equal access to the limited services that are available. For the poor elderly to receive their fair share of representation, Legal Services Corporation projects must commit more of their resources to outreach and education of older persons.

Let me emphasize we are talking about congressional appropriated Legal Service Corporation funds, not Older Americans Act funds. Poverty legal services projects should not be permitted to neglect the elderly unless they receive the scarce funds from an area agency on aging.

One way of implementing this mandate would be to develop within each LSC project which is presently underserving older persons a special unit which is sensitive to the legal needs of the elderly poor and has the proper training and outreach capacity for dealing with the legal problems of the elderly.

Another step which the corporation should consider is to allocate a portion of the money reserved for the study of alternative delivery systems to projects which focus on reaching the elderly poor. The voucher system, one of the delivery methods designated for testing by the corporation, combined with an outreach and educational component may be a more effective method of reaching the elderly poor than the existing staff attorney system. For many poor older persons, the present staff attorney system, because of its development under OEO, has the taint of welfare, and thus is rejected as a source of services. The voucher system, in addition to being free of that taint and providing a choice as to which attorney provides the representation, may also help to remedy the physical problem of access which presently inhibits many older persons from seeking LSC program services.

---

[1] This is the current attorney-client ratio in the 40 counties serviced by North Mississippi Rural Legal Services.

(2) *That the private bar be encouraged by Congress to fulfill its articulated professional responsibility of providing public interest legal services.*[2]

Justice Marshall, at the 1975 ABA convention, noted that: "While the organized bar has philosophically adopted the idea of its responsibilities in securing adequate representation of all persons, it has yet to come to grips with its responsibility for enforcing this obligation."

This lack of commitment of the private bar is borne out by the results of a survey of a nationwide sample of lawyers conducted in 1973–74 by the Wisconsin Institute for Research on Poverty. Of the 1,450 lawyers responding, 870—or 60 percent—spent less than 5 percent of their billable hours doing public interest work and nearly half of these spent no time at all. A second interesting fact revealed by this study is that lawyers in large urban firms reported doing no more public interest work than smaller firm lawyers and did considerably less than solo practitioners. Seventy percent of the large firm lawyers spent less than 5 percent of their billable hours on public interest work, as compared to 45 percent of the solo practitioners.

The import of these statistics with regard to legal representation for the elderly is obvious. As publicly funded legal services will never be sufficient to serve the millions of persons unable to afford the normal fees of private attorneys, the private bar itself must significantly increase its pro bono or reduced fee services if the vast number of lawyerless poor and elderly persons are to be served. A rule of thumb suggested by Justice Brennan in a speech at Harvard in 1967 on "The Responsibilities of the Legal Profession" is that each member of the bar be required to expend 5 hours per week in pro bono representation. No bar association has yet imposed such an obligation upon its members.

If the private bar continues to evade its own articulated responsibility Congress should seek a means to achieve Justice Brennan's goal. Although direct Federal regulation of the private practitioner's services may be both difficult and unwise, Congress could consider adopting a suggestion made by Carl Llewelyn in 1933 and impose a tax on the income earned by large firms to subsidize legal services for the poor. Or Congress could adopt a carrot-and-stick approach. For a number of years, private practitioners have been advocating an amendment to section 170(c) of the Internal Revenue Code to allow a charitable deduction for lawyers and other professionals who render services to or through a tax exempt organization such as a legal aid society. Although such an amendment should be drawn very narrowly to avoid large windfalls to lawyers, Congress may wish to consider such an amendment with the added condition that the value of such services are deductible only after the lawyer has provided 100 nondeductible hours per year of pro bono services.

(3) *That Congress approve as part of the fiscal year 1977 AoA appropriation a legal services development staff position to monitor and evaluate the programs of the State and national contractors in developing legal representation for the elderly, to negotiate with Federal manpower and legal services funding agencies to insure that older persons receive their fair share of such resources and to formulate AoA policy regarding the implementation of legal services as a priority service under the Older Americans Act.*

Although the initiative of Commissioner Flemming in launching the State legal services development grant program is an important step in the process of providing adequate legal representation for the elderly, this program lacks adequate staff support at the federal level. There is presently no one at the policymaking level within AoA with the qualifications, experience, and time to assimilate, evaluate, and develop policy based upon the experiences at the State and area agency levels. The effect of this gap in the aging network is unnecessary duplication of efforts and inconsistencies of services between programs and geographic areas.

Finally, (4) *That a portion of the appropriations for such Federal programs as the Law Enforcement Assistance Act, Legal Services Corporation, Older Americans Act, Title I of the Higher Education Act, or the consumer education program be earmarked for educational programs in the legal rights and problems of the elderly.*

As noted earlier on in this testimony, many older persons fail to assert valid legal claims because they are uninformed as to their rights under the law.

[2] A resolution approved by the house of delegates of the 1975 ABA convention states: ". . . it is a basic professional responsibility of each lawyer engaged in the practice of law to provide public interest legal services. . . ."

In-depth but comprehensible law education programs for the elderly could remedy this gap in knowledge. LEAP (Legal Education and Participation), a consumer law program operated through senior centers in Philadelphia by Temple University Law School, might serve as one model for such programs. Through this 10-week, 20-hour program, older persons are taught basic principles of contract law, the public benefit programs, legal and illegal advertising, and consumer credit. Legal concepts are translated into comprehensible terms by teams of lawyers and teachers, and the elderly participants are actively engaged in the learning process through debates, role playing, and independent research. This process teaches older persons not only their substantive rights under the law but demystifies the law so that they will feel comfortable in asserting their own rights and serving as advocates for others.

Now that models for legal education for older persons have been developed with foundation support, the basic difficulty is obtaining funding to implement the models on a national basis. Such Federal programs as the Law Enforcement Assistance Act, the Legal Services Corporation, Older Americans Act, the Higher Education Act, and the consumer education programs would seem to be natural funding sources for such efforts. However, thus far, few legal education for the elderly proposals have been funded under these programs. One way to spark both increased proposals and greater attention by the agencies administering these Federal programs is for Congress to earmark a portion of the appropriations for one or more of these programs for educational programs in the legal rights and problems of the elderly.

In the long run an investment in such preventive law education programs is more effective and cost efficient than our present system of remedial law.

New Legal Services Title?

Mr. Affeldt. First, let me pose a question that I don't expect you to respond to now, but I am hopeful that you would provide some information for the committee's hearing record. In addition, this question will be posed to Mr. Nathanson. I would appreciate a memo [1] from you concerning a suggestion made at yesterday's hearing with regard to establishing a new title under the Older Americans Act dealing specifically with legal services.

At the hearing, the precise requirements of that title were not spelled out in detail. However, I would be interested in your general reaction to this conceptually and whether you oppose it or support it. Please give us your reasons.

If you do support it, I would be interested in what should be included in the title.

Mr. Marlin. I would be glad to do that.

Mr. Schneider. That is one of the questions Senator Kennedy put to Dr. Flemming and I think one aspect of the response should be how that program would relate to legal services activities and other ongoing activities.

Would it be in addition to or would it be a coordinating mechanism? How would it relate to providing services, training, and also to the private bar?

Mr. Affeldt. I have a second question.

AoA's Efforts To Strenghten Legal Representation

Do you believe that the Administration on Aging's efforts to strengthen legal representation for older Americans is developing satisfactorily now? If not, what steps do you think are needed?

[1] See appendix 1, item 8, p. 353.

Mr. MARLIN. I believe that the Administration on Aging has been extremely responsive to the legal problems of older persons in terms of trying to originate and maintain some programs that would meet those needs, solve those problems.

The Administration on Aging is an organization with a responsibility to 22 million older persons in this country. Many millions are in great need of assistance, frequently of an emergency nature which can include a place to sleep, food, and other essentials to life.

Through the efforts of Congress, particularly over the last few years, the appropriations and mandate of Administration on Aging have been so substantially increased that they are able to make a credible effort to resolve some of those problems.

Being biased that lawyers can significantly contribute toward solving problems, I am very much in favor of adding legal services and legal representation to those lists of services that can be provided for older persons under the Older Americans Act. I believe the Administration on Aging and its administrator have responsibility to be a Government catalyst to help the older persons.

That is kind of a premise. I am sorry it took so long. What I am trying to say is that I think Administration on Aging has responsibilities in legal services and that they have started to exercise them well. It may be somewhat premature to put a lawyer on the staff of every State office on aging, but Commissioner Flemming is trying to create the capacity and the sensitizations within State offices on aging to assist the elderly with their legal problems.

Mr. AFFELDT. I have another question which I would expect a written response to after our hearing.

In your testimony—which, I want to add, is excellent—you pointed out that 10 law schools initiated law on aging seminars. I was wondering if you could provide us with a listing [1] of those 10 law schools?

PRIVATE BAR AND AVAILABILITY OF LEGAL SERVICES

Mr. MARLIN. Yes.

Mr. AFFELDT. One more question, and then I shall ask the other staff members if they would like to pose any questions to you.

What do you think should be the private bar's role for making legal services more readily available for the elderly? In other words, what do you think is the private bar's responsibility? How does it fit in with the overall effort to make effective representation more readily available?

Mr. MARLIN. Well, the private bar has the responsibility through its professional oath to make its services available without charge, if necessary, to those who need them. That effort, since 1964, has been pretty largely relegated to OEO and now the Legal Services Corp. That has been the approach that has been followed in this country, a satisfactory one in the sense it has produced persons who are qualified and trained in issues of poverty law. They become experts and are able to render more efficient services.

If I were to point a direction, Mr. Affeldt, it would be toward those persons who are not indigent but still cannot afford legal fees

[1] See appendix 1, item 8, p. 353.

of $50, $75, and $90 an hour, and some even more astronomical rates that are charged by private practitioners in this country.

It can be done through prepaid plans, through clinics. Bar associations should, I believe, assess lawyers and establish plans through paid staff.

Bar associations should, while they have the opportunity, in a voluntary way, be original and develop programs in cities and States to serve the interests of persons who cannot afford the fees and who need an education themselves in knowing how lawyers can help them.

Mr. AFFELDT. Mrs. Fayé.

Mrs. FAYÉ. No questions.

Mr. AFFELDT. Mr. Schneider.

Mr. SCHNEIDER. It was excellent testimony. My questions were answered in the testimony.

Mr. MARLIN. Thank you.

Mr. AFFELDT. The hearing is adjourned, subject to the call of the Chair.

[Whereupon, at 1:30 p.m., the hearing was adjourned.]

APPENDIXES

Appendix 1

CORRESPONDENCE AND MATERIAL SUBMITTED BY SENATOR KENNEDY AND HEARING WITNESSES

ITEM 1. LETTER FROM SENATOR EDWARD M. KENNEDY TO HON. ARTHUR S. FLEMMING,[1] DATED SEPTEMBER 30, 1976

DEAR COMMISSIONER FLEMMING: Once again, I want to commend you for an excellent presentation at the Committee on Aging's hearing on "Improving Legal Representation for Older Americans." You provided a valuable addition to our overall hearing record.

As soon as a transcript of the proceeding is available, a copy will be sent to you for any necessary editing.

I was unable to ask all the questions that I intended to raise at the hearing because I had to attend a bill-signing ceremony at the White House. For this reason, I would appreciate a response to the following questions:

(1) I understand that you have issued a memorandum directing that State legal service developers should be employees of State agencies, except in "extenuating circumstances." However, it appears that some States plan to subcontract out the development function—in most cases to legal services projects. Your technical assistance memorandum states that a subcontracting arrangement, such as this, would require a waiver from the Administration on Aging. Do you plan to grant waivers in cases when the State agency merely prefers to subcontract, or will you require a showing that it is not possible to put the developer on the State payroll?

(2) The State legal services developer will have the task of coordinating legal services. In this capacity the developer would have considerable influence over the disposition of money available to the States under the Older Americans Act. Do you think that there may be a possible conflict of interest if the development function is subcontracted to an agency which is also an applicant for funding from the State? What limitations, if any, would you put on a subcontracting developer from also receiving State funding to operate programs?

(3) Many local offices on aging have awarded title III funds to legal services programs, which, in turn, impose income limits for persons applying for assistance. This seems to contradict congressional intent, prohibiting the imposition of a means test under the Older Americans Act. What have you done to resolve this problem? Do you think that this issue can be resolved through an interagency agreement with the Legal Services Corporation?

(4) The Administration on Aging is now funding some national projects which provide technical assistance and training to States and area agencies on aging. These model projects, however, will not be continued indefinitely. Assuming these projects are needed in the future, would the Administration on Aging plan to continue these programs on a permanent basis?

(5) One of the witnesses at the hearing suggested that the Administration on Aging should have a designated person assigned to legal services. Would you favor specific authority for the Administration on Aging to employ an attorney to supervise the Administration on Aging's activities in developing legal services? If so, would this require legislation or could this be achieved through other means?

Thank you and best wishes.

EDWARD M. KENNEDY.

[1] See statement, p. 254.

ITEM 2. LETTER AND ENCLOSURE FROM HON. ARTHUR S. FLEMMING TO SENATOR EDWARD M. KENNEDY, DATED NOVEMBER 3, 1976

DEAR MR. CHAIRMAN: Thank you for your letter of September 30 identifying several additional questions you would like me to respond to in connection with the Special Committee on Aging's hearing on "Improving Legal Representation for Older Americans." My response to those questions is enclosed.

I enjoyed appearing before you on this issue. As I indicated at the hearing, I believe legal services can help to meet many of the problems of today's older persons. I appreciate your leadership in helping to promote and strengthen these services.

Very sincerely and cordially yours,

ARTHUR S. FLEMMING.

[Enclosure]

Question 1. I understand that you have issued a memorandum directing that State legal service developers should be employees of State agencies, except in "extenuating circumstances." However, it appears that some States plan to subcontract out the development function—in most cases to legal services projects. Your technical assistance memorandum states that a subcontracting arrangement, such as this, would require a waiver from the Administration on Aging. Do you plan to grant waivers in cases when the State agency merely prefers to subcontract, or will you require a showing that it is not possible to put the developer on the State payroll?

Response. As a matter of basic policy I do not intend to approve proposals to subcontract the development function to organizations outside the State agency on aging. I believe this is a sound policy because it is the State agency on aging under the Older Americans Act that has responsibility for developing the annual State plan on aging, approving annual area agency plans and budgets, managing the title III program, and providing effective, vigorous leadership in the State in the field of aging. We strengthen the role of the State agency on aging, and help to insure that legal services become part of the coordinated comprehensive service systems being developed by State and area agencies when we assign this leadership and developmental function to the State agency.

In cases where personnel ceilings or State policy preclude adding the legal services specialist to the State agency staff we intend to pursue with the State the possibility of the State agency using its model project funds to retain an individual as a consultant to the State agency to perform the legal services development function. As a consultant, this individual, though technically not a staff member, would be expected to participate in staff meetings and act, in effect, as a regular member of the staff.

I would consider exceptions to this policy only in cases where a State could fully document its inability to add a staff member or work out an arrangement with a consultant in the manner I have described.

Question 2. The State legal services developer will have the task of coordinating legal services. In this capacity the developer would have considerable influence over the disposition of money available to the States under the Older Americans Act. Do you think that there may be a possible conflict of interest if the development function is subcontracted to an agency which is also an applicant for funding from the State? What limitations, if any, would you put on a subcontracting developer from also receiving State funding to operate programs?

Response. First, as I indicated in response to question number 1, I do not expect to approve any proposals to subcontract the development function to an organization outside the State agency on aging.

As you appreciate, under the title III program, it is the area agency, not the State agency, that make awards to organizations to provide services. Nonetheless, the State obviously can exercise some degree of influence on the funding decisions of area agencies. Therefore, in order to limit the potential conflict of interest problem your question suggests, we will not allow States that in certain exceptional situations may be allowed to subcontract the development function to fund, or allow area agencies to fund, the subcontractor for any other legal service projects.

Question 3. Many local offices on aging have awarded title III funds to legal services programs, which, in turn, impose limits for persons applying for assistance. This seems to contradict congressional intent, prohibiting the imposition of a means test under the Older Americans Act. What have you done to resolve this problem? Do you think that this issue can be resolved through an interagency agreement with the Legal Services Corporation?

Response. I agree that imposition of a means test is contrary to the letter and spirit of the Older Americans Act of 1965, as amended. Unlike our authorizing legislation the Legal Services Corporation requires that there be a means test to determine eligibility for services under the act.

You have, therefore, identified a very difficult problem, inasmuch as the Congress evidently did not intend that legal services provided under the Older Americans Act be provided as a publicly supported competitor for taxpaying lawyers in private practice, regardless of whether the older person could otherwise avail himself or herself of the services of a private practitioner. For example, suppose that an older person wants to sue a large corporation for triple damages for violation of antitrust laws, in a case involving millions of dollars. Since he would have no difficulty whatever obtaining the services of a lawyer in private practice, and since representing him would take an inordinate amount of the time of a legal service project for the elderly, it would seem quite enough for the project to assist such a prospective client to find an attorney who specializes in antitrust litigation, and to help him in other ways to find suitable legal representation.

Therefore, one solution to the problem might be to make available legal services to all older Americans, but to tailor-make the service according to the needs and circumstances of the individual. For example, if the client is so needy as to qualify for free representation by a legal aid society or an organization supported by the Legal Services Corporation, the Older Americans Act program might limit its legal service to him to advising him of the availability of that service and helping him get it. If the client is wealthy enough to afford the services of a private practitioner, our project might advise him of the mechanisms established by the organized bar to identify which lawyers specialize in which types of cases, and might advise him what type of specialist he needs. But where the older person is too indigent to afford a private practitioner but not enough so to qualify for free legal services in another program, our project might give him free legal advice or represent him in litigation.

Because of the complexity of the issues we clearly need to reach an understanding with the Legal Services Corporation, and I hope to do this in the context of the interagency agreement we are developing with them.

Question 4. The Administration on Aging is now funding some national projects which provide technical assistance and training to States and area agencies on aging. These model projects, however, will not be continued indefinitely. Assuming these projects are needed in the future, would the Administration on Aging plan to continue these programs on a permanent basis?

Response. AoA will continue to support projects responsive to the stated technical assistance and training needs of State and area agencies on aging in the legal services area. These projects might be awarded to organizations that currently have awards with us for this purpose, or to other organizations with expertise in this area.

Question 5. One of the witnesses at the hearing suggested that the Administration on Aging should have a designated person assigned to legal services. Would you favor specific authority for the Administration on Aging to employ an attorney to supervise the Administration on Aging's activities in developing legal services? If so, would this require legislation or could this be achieved through other means?

Response. I believe that we should have an attorney who is familiar with legal services on our staff supervising our activities in the legal services area. We are currently negotiating with the Legal Services Corporation to have them detail an individual with these qualifications to us to handle these responsibilities. I believe we can provide effective leadership in the legal services area.

ITEM 3. INFORMATION MEMORANDUM AND ATTACHMENTS FROM HON. ARTHUR S. FLEMMING TO VARIOUS STATE AGENCIES, DATED AUGUST 25, 1975

To: State agencies administering titles III and VII of the Older Americans Act of 1965, as amended.

Subject: Model project grants for the development of legal services for the elderly.

Content: Among the model project grants recently awarded by the Administration on Aging were 11 totaling over $1 million designed to foster the improvement of legal service programs for the elderly, especially to contribute to the capacity of State and area agencies on aging to increase the availability and raise the quality of such services in their jurisdictions.

The objectives of this program are:

I. *To inaugurate a process which will ultimately result in the inclusion of a legal service component within each of the comprehensive coordinated services structures being developed through the State and area agencies on aging.*

The efforts projected to achieve this objective include: (a) technical assistance to State and area agencies in the establishment, development, expansion, and support of an evolving network of legal services activities focused on the needs of older persons, and (b) technical assistance to State and area agency staff in gaining the understanding of the substantive aspects of law expected to impact on older persons, also planning more effectively for legal services needs of the older persons in their jurisdictions.

II. *To initiate a process which will help insure that such legal services activities designed to meet the needs of older persons, can be staffed with adequately trained professional and paraprofessional personnel.*

The efforts planned to accomplish this include: (a) technical assistance to legal service providers, through the State and area agencies on aging, by development of training materials and assistance in the effort to insure the provision of quality services; (b) development of curricular materials, both learning and teaching, for use in programs for training paraprofessionals in the legal issues confronting older persons. Such materials are to be suitable for use by university extension services, community colleges, special post-secondary education training programs, and on-the-job reinforcement; (c) development of training materials suitable for use in law schools, clinical law programs and attorney refreshers. Such materials include handbooks and/or casebooks on law issues confronting the aging, as well as other appropriate legal training materials.

III. *To support a limited number of innovative model projects.*

It is our intention that these projects, working with and through the appropriate State and area agencies would: (a) expand accessibility to trained legal service personnel through the effective use of volunteers and paralegals; (b) create opportunities for trained older persons to take an active role in the provision of legal assistance to other older persons; (c) meet the needs of special disadvantaged groups; and (d) supplement activities carried out under objectives I and II.

A list of the grantees, giving the name of the project director, the amount, the geographic focus and the address for each project is attached. A more comprehensive technical assistance memorandum will follow that provides additional information about these legal service grants.

We regard this development as a very significant one within the field of aging. We are giving it a very high priority in our list of priorities. Any help you can give the grantees will be deeply appreciated.

ARTHUR S. FLEMMING.

LIST OF LEGAL SERVICES PROJECTS

(1) Jonathan A. Weiss ($50,000; HEW Region I, State and area agencies), Legal Services for the Elderly Poor, 2095 Broadway, New York, N.Y.

(2) Douglas M. Crockett ($33,406; Willimantic, Conn.), Connecticut Aging Legal Services, 746 Main Street, P.O. Box D, Willimantic, Conn.

(3) Margaret Stone Brodsky ($85,000; Washington, D.C.), National Retired Teachers Association/American Association of Retired Persons, Senior Citizens Legal Assistance Office, 1909 K Street, N.W., Washington, D.C.

(4) David Marcello ($70,432; Primarily Metropolitan New Orleans and also Louisiana State), Louisiana Center for the Public Interest, 700 Madison Blanche Building, Suite 1222, New Orleans, La.

(5) Mike Gilfix ($47,322; Palo Alto and vicinity), Senior Adults Legal Assistance, 2211 Park Boulevard, Palo Alto, Calif.

(6) Paul Nathanson ($225,000; Technical assistance in a variety of forms to State and Area Agencies in locations not covered by other grantees), National Senior Citizens Law Center, 1709 W. 8th Street, Los Angeles, Calif.

(7) David Marlin ($249,607; Technical assistance to State Agencies and localities in HEW Regions I (excluding Connecticut, III and IV)), Legal Research and Service for the Elderly, National Council of Senior Citizens, 1511 K Street, N.W., Washington, D.C.

(8) Donald P. Rothchild ($75,860; Washington, D.C.), George Washington University, National Law Center, 716 20th Street, N.W., Washington, D.C.

(9) Steven Pepe ($91,032; Primarily Michigan and other parts of the nation), University of Michigan Law School, 917 Legal Research Building, Ann Arbor, Mich.

(10) William R. Fry ($150,000, National Focus), National Paralegal Institute, 2000 P Street, N.W., Suite 600, Washington, D.C.

(11) Susan Stofkoper ($121,000; Sacramento, Calif.), California Office on Aging, 455 Capital Mall, Sacramento, Calif.

ITEM 4. LETTER FROM SENATOR EDWARD M. KENNEDY TO THOMAS EHRLICH[1] DATED OCTOBER 1, 1976

DEAR MR. EHRLICH: Once again, I want to commend you for an excellent presentation at the Committee on Aging's hearing on "Improving Legal Representation for Older Americans." You provided a valuable addition to our overall hearing record.

As soon as a transcript of the proceeding is available, a copy will be sent to you for any necessary editing.

I was unable to ask all the questions that I intended to raise at the hearing because I had to attend a bill signing ceremony at the White House. For this reason, I would appreciate a response to the following questions:

(1) It has been estimated that persons 65 or older account for only about 6 to 7 percent of all clients in the legal services program. Yet, they constitute almost 24 percent of the adult poverty population. What steps, if any, does the Corporation plan to take to redress this imbalance of services to elderly clients?

(2) On August 13 the Legal Services Corporation solicited proposals to test out alternative legal delivery systems, including judicare, vouchers, prepaid

[1] See statement, p. 258.

legal insurance, and contracts with law firms. I understand that these demonstration projects are to be awarded prior to October 1. Do any of the demonstration projects focus on the delivery of legal services to the elderly poor? If not, do you anticipate that any future demonstration projects would fulfill this mission?

(3) Does the Corporation plan to use the increased funding for Fiscal 1977 to strengthen legal representation for the elderly?

Thank you and best wishes.

Sincerely,

EDWARD M. KENNEDY.

ITEM 5. LETTER FROM SENATOR EDWARD M. KENNEDY TO THOMAS EHRLICH, DATED OCTOBER 12, 1976

DEAR MR. EHRLICH: I would appreciate it if you would respond to the following questions for the Committee on Aging's hearing record on September 29 on "Improving Legal Representation for Older Americans."

(1) Of the 2,300 legal services lawyers, how many are specialists in legal problems of the elderly?

(2) Approximately 25 percent of the adult poor (persons aged 18 or older) are older Americans (65 or older). Have you considered designating a specialist in each office to focus on the legal problems of the elderly?

(3) What is the Legal Services Corporation doing to provide training for legal services attorneys in areas which affect the elderly, such as Social Security, Railroad Retirement, Supplemental Security Income, and others?

(4) Is the legal services program taking steps to provide information to the aged about the availability of legal services? Have you considered establishing legal services projects or making legal services attorneys available at scheduled hours at elderly housing projects, nutrition sites or senior citizen centers? Has the Corporation considered mobile units, particularly in rural areas?

These questions are in addition to those I submitted in my letter to you, dated October 1, 1976. I'd appreciate a reply by November 1.

Once again, I wish to thank you for your cooperation and your valuable contribution to the Committee's study.

Sincerely,

EDWARD M. KENNEDY.

ITEM 6. LETTER AND ENCLOSURES FROM THOMAS EHRLICH TO SENATOR EDWARD M. KENNEDY, DATED OCTOBER 29, 1976

DEAR SENATOR KENNEDY: Enclosed are the responses to the questions you asked in your letters to me of October 1 and October 12. If there is any further information we can provide to complete the record of the hearing, please let us know.

Cordially,

THOMAS EHRLICH.

[Enclosures]

RESPONSE TO QUESTIONS CONTAINED IN SENATOR KENNEDY'S LETTER OF OCTOBER 1, 1976

1. What steps, if any, does the corporation plan to take to redress this imbalance of services to elderly clients?

Recent informal surveys done by the corporation indicate that the figures on the proportion of legal services clients who are elderly vary greatly from program to program, from as little as 5 percent to as much as 15 to 20 percent. Last week, we received figures from a program in Waco, Tex., demonstrating that 12.5 percent of their clients were 65 or older, and 22.5 percent were 55 or older. The Appalachian Research and Defense Fund of Kentucky has sent us figures showing that the percentage of the clients over age 55 served by their four offices are respectively 14.8, 17.8, 14.1, and 16.9.

It is not clear, therefore, whether and to what extent an imbalance exists. The 6 and 7 percent figures that you cite are apparently based on a 1969

Office of Legal Services survey. We have not been able to determine how those figures were derived. There is reason to believe that legal services programs have significantly expanded services to the elderly since 1969. The advent of the SSI program in 1974, for example, has resulted in substantial activity by legal services programs to secure the benefits of the law for older persons. Creation of the National Senior Citizens Law Center in 1972 to support litigation on behalf of the elderly has increased the capacity of local programs to handle legal problems of the elderly in areas such as pensions, nursing homes, social security, and protective services, in addition to SSI.

As we have already indicated to the committee, the corporation is putting into place a program reporting system that will give us much more precise information about the extent of services for the elderly. Again, however, we emphasize the substantial amount of impact work done by legal services programs that benefits the elderly. Such activity is not reflected in statistics regarding the age of individual clients.

We do not suggest that we are able to provide anything approaching an adequate level of service to the elderly poor. We are taking steps that will enable local programs to respond more fully to their special needs:

(a) Existing legal services programs, particularly those that are least well-funded, will be receiving significant increases in operating funds during fiscal year 1977. In addition, new programs will be started in areas that have never had legal services before, particularly in the South, Southwest, and Midwest. These added funds will enable programs to serve more clients, including elderly clients, and to engage in the kinds of community education and outreach activities that are especially important in reaching older persons. Further, $1.8 million has been set aside for "special needs." Programs can apply for these funds for special projects to serve the elderly, if that is the locally determined priority for the use of such funds.

(b) Training of legal services program personnel will be significantly expanded during the current fiscal year, through the corporation's office of program support. The office is seeking proposals and recommendations from the national litigation programs, including the National Senior Citizens Law Center, for specific training sessions in substantive areas of the law, including those that have particular impact for the elderly. In addition, the office plans a very substantial expansion of training activities for paralegals, including encouraging the use of older persons as paralegals in local projects. This is particularly useful in expanding services to the elderly.

(c) The corporation is entering into a joint agreement with the Administration on Aging designed to maximize the resources of both organizations to improve legal services for the elderly. We are particularly interested in encouraging the use of the outreach, transportation, and community education activities of area aging agencies and title III and title VII grantees to inform more older persons of their legal rights and to get them to the legal services programs. We also hope to work out an arrangement to disseminate to legal services projects the materials prepared by AoA's model project, technical assistance, and training grantees.

2. Do any of the demonstration projects focus on the delivery of legal services to the elderly poor?

On September 30, the corporation awarded grants to 19 demonstration projects under the delivery systems study. All of the projects will include the elderly in their client groups. Three will place special emphasis on the elderly and one will serve only the elderly.

Utah Legal Services was awarded $76,160 to provide specialized legal services to the elderly in the southern rural part of the State. This judicare project will utilize the existing aging network to reach eligible clients and will establish a WATS line to increase access for older persons. The National Senior Citizens Law Center will provide training and back-up materials for the judicare attorneys.

Judicare of Anoka County, Inc., was awarded $97,000 to provide general legal services to eligible clients, with a special emphasis on reaching the elderly. The project will attempt to reach the elderly through the existing aging network in the county, but if it is clear after 6 months that this is not sufficient, it will hire an elderly staff person for more intensive outreach activity.

The Legal Aid Society of Birmingham will be funded to contract with the private law firm of Crittenden and Still to provide special services that the legal aid society does not generally offer. One-quarter of the $40,000 grant is set aside to prepare wills and testamentary instruments for eligible clients who are elderly.

Group legal services was awarded $56,000 to provide prepaid legal services to a selected group of clients in Los Angeles County. Those clients will be selected from Social Security Administration and public assistance roles, thus assuring that a significant portion of the clients will be elderly.

3. Does the corporation plan to use the increased funding for fiscal year 1977 to strengthen legal representation for the elderly?

As indicated in response to your first question, nearly $29 million of the increased funding for fiscal year 1977 will be used to improve the capacity of existing programs to serve clients and to expand legal services to areas where there are now none. We expect that these funds will be used to support general legal services, since the corporation's mandate is to serve persons who are least able to afford legal assistance, regardless of their age, their race, or any other characteristic. We anticipate, however, that the increased funding will have particular impact on services for the elderly because, as programs reach more adequate funding levels, and have more staff to deal with client problems, they will be able to expand outreach and community education activities that are particularly important for elderly persons. As this committee knows, such costly activities have not been possible during the 5-year period of high inflation when legal services budgets were frozen.

Our response to your first question indicates other ways in which additional funds for fiscal year 1977 will improve services to the elderly.

RESPONSE TO QUESTIONS CONTAINED IN SENATOR KENNEDY'S LETTER OF OCTOBER 12

1. How many elderly specialists are there?

Two points should be kept in mind in considering whether it is possible or most useful to designate "specialists" for the elderly:

(a) Most local legal services programs are not very large. Some have only one or two attorneys and the vast majority have less than eight. Small programs cannot afford to specialize in any area of the law. Moreover, some programs argue persuasively that they are able to provide better service by using a general practice model.

(b) Even when specialization is feasible and practical, experience has often shown that it is much more important to have specialists in substantive areas of the law, like SSI, medicare and medicaid, employment, or housing, that have particular impact for the elderly, than to have persons generally designated as specialists for the elderly. For example, a public benefits specialist thoroughly knowledgeable about medicare and medicaid is probably better able to help an elderly client with a health-related problem than is somebody charged generally with dealing with the problems of the elderly.

Of the approximately 260 legal services programs around the country, we estimate that at least 100 have designated "specialists" on legal services for the elderly. This is in addition to specialists in areas like SSI, health, employment, and housing that have special impact for the elderly. One of the items we have suggested for our joint agreement with the Administration on Aging is the designation of a legal services person in each State to serve as a liaison with the State aging agency. In addition, we would encourage each local legal services program to designate an individual to work directly with the area aging agencies and with title III and title VII projects.

2. Have you considered designating a specialist in each office?

As indicated in response to question number 1 above, we will encourage programs to designate individuals to serve as liaison with State and area aging agencies, to assure cooperation at the local level. The question of what kind of specialists, if any, a program should have is one that should be answered by the board and staff of the individual program, based on a determination of client needs and an assessment of the best way to respond to those needs in the community. To reiterate, the most urgent needs of clients, including elderly clients, in a given community might be better served by an SSI specialist, or a housing specialist, or a health law specialist or by

expanding the capacity of the staff to deal with general consumer and domestic problems, than by designating specialists for discrete client groups. That is a judgment that only local programs can make in consultation with their client communities.

It goes without saying that, if the corporation receives evidence that a program discriminates against the elderly poor, then an investigation would be made and corrective action taken if necessary. No such complaints have been received.

3. What is LSC doing to provide training on issues affecting the elderly?

A substantial amount of training of legal services attorneys and paralegals on issues affecting the elderly has taken place. As the committee knows, section 1006(a)(3) of the Legal Services Corporation Act prohibits the corporation from support of training through grant or contract, and this activity is now carried on by the corporation's office of program support.

Over the past 2 years, the National Senior Citizens Law Center in Los Angeles, a support center funded by the corporation, has conducted training for legal services lawyers in every region of the country. About 15 such sessions have been held, with attendance at each reaching as high as 100 to 120 persons from local legal services programs. The training sessions have focused on SSI, pensions, social security, protective services, age discrimination in employment, medicare, and nursing homes. The Senior Citizens Law Center has prepared materials for local legal services attorneys on substantive areas of the law including SSI, protective services, social security, nursing homes and age discrimination in employment. All of those materials have been distributed and are still available through the National Clearinghouse for Legal Services. The center has in draft now two publications, one on management of assets for older persons and the other on pension litigation.

The corporation already noted in its testimony to the committee on September 29, 1976, the work of other national litigation centers on substantive areas of the law affecting the elderly, particularly nursing homes, home health care, public benefits, and pensions, all of which assist local programs to improve their services to older clients.

The *Clearinghouse Review*, a publication of the corporation's office of program support reporting on developments in areas of the law affecting legal services clients, regularly publishes material on issues affecting senior citizens.

The corporation's office of program support plans to conduct training sessions on specific areas of poverty law and can hold such sessions on issues of particular impact for the elderly, as the need arises. In addition, the office provides "minigrants" to local legal services programs for their own staff training activities. The office has just recently awarded such a grant to Delaware County Legal Assistance in Chester, Pa. to train 22 senior volunteer advocates in the areas of social security, SSI, wills, and estates.

4. Is the legal services program providing information?

It is to just these questions that we hope the joint agreement with the Administration on Aging will be addressed. We do want to explore with AoA the possibility of developing community education materials for the elderly to inform them of their legal rights and the availability of legal services. It may be that such materials should be prepared at a State and local level, however, in order to provide elderly persons with locally applicable information. Many legal services programs prepare community education materials now, and this would seem to be a particularly fruitful area for cooperation between the programs and area aging agencies.

We do not think it appropriate or wise for the corporation to tell local legal services programs how to operate their offices on a daily basis. Many of the programs we fund do make attorneys and paralegals available regularly to speak at places where senior citizens live or gather, including housing projects, nursing homes, nutrition sites, and senior citizens centers. Some programs actually conduct intake interviews at such locations. We encourage such activity and hope to make that a subject of the joint agreement.

A local legal services program may use corporation funds to finance a mobile unit to serve the elderly, and could apply for special needs money for that purpose. The decision about whether that is an effective use of limited funds should be made by each program, according to the needs of its client community. The corporation featured such a mobile unit, operated by the Maricopa County Legal Aid Society in Phoenix, in its October/November 1976 newsletter. In that particular instance, funds available under the Older Americans Act were used to purchase the unit.

ITEM 7. LETTER FROM THOMAS EHRLICH TO SENATOR EDWARD M. KENNEDY, DATED OCTOBER 27, 1976

DEAR SENATOR KENNEDY: This is in response to your letter of October 13, suggesting ways to improve the availability of legal services for the elderly.

You ask whether it might be feasible to compile a list of private practitioners who have some expertise in areas of the law that affect the elderly and whose fees are affordable. Such lists could then be distributed in pamphlets available in senior citizens centers.

This is something that certainly might be explored with the local bar associations and particularly with the lawyer referral service. It is the kind of effort that the legal services development specialist of the State aging agency most appropriately could undertake. Local legal services programs do make referrals now, when a client whose income is above eligibility guidelines comes to the office for legal assistance. In addition, some programs have made arrangements with the local bar to handle certain types of cases for eligible clients, on a pro bono basis, in order to relieve the caseload of the attorneys in the legal services office. Thus, programs could certainly be helpful to the State legal services development specialist or to an area aging agency that was interested in compiling such information.

With regard to your suggestion about a poster campaign, the corporation has printed posters that can be readily adapted for local use and we are distributing them in quantities to local programs to be placed in community facilities, including senior citizens centers. A copy of that poster is enclosed, for your information. As you can see, there is a place on the poster for the local program to put its address, telephone number, office hours, and other identifying information.

You have submitted a list of questions as follow-up to my testimony on September 29. I am sending you our response under separate cover.

Your interest in improving legal services for the elderly is deeply appreciated and I look forward to continuing to work with you toward that goal.

Cordially,

THOMAS EHRLICH.

ITEM 8. LETTER AND ENCLOSURE FROM DAVID MARLIN[1] TO SENATOR EDWARD M. KENNEDY, DATED OCTOBER 22, 1976

DEAR SENATOR KENNEDY: During the course of my testimony on September 29, 1976, at the hearing on "Improving Legal Representation for Older Americans," I was requested by Staff Chief Counsel David A. Affeldt to respond to two requests.

First, I was requested to submit a list of the law schools now providing academic and clinical education programs relating to law and aging. An annotated list, plus a copy of an article from the *Gerontologist* on clinical programs, is attached.

Secondly, I was asked for the judgment of the National Council of Senior Citizens on whether a separate title should be created in the Older Americans Act to consolidate and develop AOA policy on legal counsel, representation and training.

We do not favor the creation of a new legal services title. It would not only distort the present structure of the Older Americans Act, but could also result in decreased rather than increased funding for legal services.

Under title III of the Act, State and area agencies on aging are responsible for assessing local needs and for developing a comprehensive social services support system for older persons within their areas. The 1973 amendments to the act specify that legal services are one of the social services which may be provided in this comprehensive support system. The 1975 amendments provide that legal services is a priority. Given the structure of title III, the creation of a separate title for legal services may obscure rather than reinforce the importance of including legal services in the title III planning process.

In addition, the creation of a separate title for legal services would also necessitate a separate appropriation. Although a separate appropriation would earmark funds for legal services, there is no assurance that every administration would request such an appropriation or that Congress would

[1] See statement, p. 333.

appropriate such funds. Legal services, as compared with other social services such as transportation, home care, and home repair, remains for many public officials a controversial and misunderstood service. Although it is unlikely that Congress would refuse to appropriate money for title III social services including legal services, it is possible that an appropriation request for legal services alone could fail.

Rather than creating a separate legal services title, I suggest that the following amendments to titles III and IV be considered:

(1) In section 305(b), delete the words "of some or all" so that the section reads as follows:

"(b) Every State plan shall provide for the establishment or maintenance of programs (including related training) for the provision [of some or all] of the following services designed to assist older persons in leading independent lives and avoiding unnecessary institutionalization:

"(1) Transportation services.

"(2) Home services, including homemaker services, home health services, shopping services, escort services, reader services, letter writing services, and other services designed to assist such persons to continue living independently in a home environment.

"(3) Legal and other counseling services and assistance programs, including tax counseling and assistance and financial counseling, for older persons.

"(4) Residential repair and renovation programs designed to enable older persons to maintain their homes in conformity with minimum housing standards or to adapt homes to meet the needs of elderly persons suffering from physical disabilities."

The effect of this amendment is to strengthen Congress's mandate to the States to develop programs in all four priority services areas. Under the existing formulation of the law, some States are avoiding responsibility for developing legal services, home care or residential repair programs by technically complying with the law through the funding of existing transportation programs.

(2) To section 308(a), add the following subsection (8):

"(8) enable state agencies on aging and other public and private nonprofit organizations to assist in the development of legal assistance and representation for older Americans."

At the present time, section 308 model project money provides essential support for the state legal services development grant program, the technical assistance efforts of five national contractors and several innovative legal services demonstration projects. This is attributable to the fact that both Commissioner Flemming and key members of the 94th Congress have consistently endorsed the use of model project money to expand and improve the delivery of legal services to the elderly. However, to insure the continued availability of model project money for such purposes, section 308 should be amended to specifically include legal services for the elderly as one of the model project priority categories.

(3) To Title IV–A, add the following Section 405:

"Training Programs for Older Persons, Sec. 405. The Commissioner may grant to any public or nonprofit private agency, organization, or institution or with state agencies referred to in section 304, and he may enter into contracts with any agency, organization or institution for the purpose of

"(1) developing educational programs for older persons in the areas of law, nutrition, health care and home repair;

"(2) training older persons in basic delivery skills."

As presently structured, Title IV–A authorizes training support only for persons who are *employed or preparing for employment* in the aging field. Proposed amendment No. 3 expands the potential beneficiaries of Title IV–A training support to include older persons themselves.

As the above amendments would, I believe, advance Congress's often articulated goal of ensuring adequate legal representation for the elderly, I urge consideration of them.

Sincerely,

DAVID H. MARLIN.

LISTING OF CLINICAL/SEMINAR PROGRAMS SERVING THE ELDERLY

(1) Denver Senior Citizens Law Project, Legal Aid Program of Metropolitan Denver, 912 Broadway, Denver, Colo., George Hacker.

The law student program in Denver operates out of the Legal Aid Office, with Legal Aid supervision. Legal Aid requires a commitment of two quarters of the trimester for participation, and a time commitment of 10-15 hours per week. Students handle intake and follow-up on cases, and conduct outreach to shut-ins, all with attorney supervision. There are presently two students participating in the program; if there were more of them, they would probably also work in the area of nursing homes. There is no written description of the program available.

(2) University of Michigan Law School, Ann Arbor, Mich., Steve Pepe.

Approximately ten students from the University of Michigan Law School act as attorneys for the elderly, in administrative and judicial proceedings. In the course of the program, the students attend training seminars, have individual supervision sessions with the director of the program, and participate in an outreach program. They commit 20-25 hours per week to the program, for 7 credits of law school value.

(3) Duke University, Department of Law, Durham, N.C., Jim Lewis.

The program for the elderly at Duke is primarily a seminar course, as part of which students spend a few hours per week at Legal Aid or at the Older Americans Centers. This clinical component consists of giving informational speeches at senior centers and rendering legal assistance. No student has ever taken a case as far as litigation, but it is possible, since there is a state third-year practice rule.

(4) Waxter Senior Center, 861 Park Avenue, Baltimore, Md., Ann Pecora.

The Waxter Center is a large senior citizen center which provides varied services, one of them legal services provided by a sole attorney. Law students assist the attorney in all phases of legal work: office and field interviewing, legal research, negotiations, and, potentially, in litigation under third year practice rules. Students, presently six, put in varied hours per week, for a total of 50 hours per credit.

(5) PEP (Protection for Elderly Persons), 1806 Adams Mill Road, N.W., Washington, D.C., Prof. Donald Rothchild or Eric Sirulnik.

PEP, operated by the George Washington University Law School, runs a storefront office for the elderly in northwest Washington, D.C. There are currently three separate organizations working under the PEP storefront umbrella. The George Washington Consumer Protection Center (Consumer H-E-L-P) provides 12 law students and one faculty advisor to conduct initial interviews with the elderly, provide advertising for the PEP Center, and enlist, train, counsel, and supervise Senior Citizen Aides and Volunteers who work at the storefront. The National Council of Senior Citizens has placed 5 Senior Aides at PEP, who are trained as paralegals. The third organization, Community Legal Clinic, presently has 20 students at PEP, providing legal services and handling cases for individuals.

(6) Syracuse Law School, Ernest I. White Hall, Syracuse, N.Y., Prof. Richard Ellison.

The Syracuse Law School elderly clinical program presently exists only on an ad hoc basis as part of the overall clinical program. The elderly component was previously run by Bob Brown, who is now a professor at the University of Detroit.

(7) University of Detroit School of Law, 651 E. Jefferson Avenue, Detroit, Mich., Bob Brown.

There are plans for an elderly rights seminar as well as a three-hour elderly clinical program open to students enrolled in the Seminar, and run in conjunction with the Wayne County Legal Aid Society under an Older Americans Act Title III grant.

(8) Stanford Law School, Stanford, Calif., Mike Gilfix.

Stanford Law School students participate in the Senior Adults Legal Assistance program in Palo Alto, California.

(9) Louisiana Center for the Public Interest, 700 Maison Blanche, New Orleans, La.

In conjunction with Tulane and Loyola Law Schools, the Louisiana Center for the Public Interest conducts a seminar/clinical program for social work and law students focused on the needs of the elderly. This course, "Legal Problems of the Elderly," involves a weekly four hour commitment to work in the LCPI offices as well as a weekly two hour classroom experience. The uniqueness of the LCPI program is the integrated social work and legal services approach to the problems of older persons.

(10) University of Kentucky, Room 209, Dean's Office, Lexington, Ky.

A substantive law seminar on the legal problems of the elderly is being offered for the first time during the 1976–77 academic year by Carolyn Bratt. Ms. Bratt intends to expand this seminar into a seminar/clinical program as soon as funds become available.

Clinical Training and Legal Services for Older People: The Role of the Law Schools [1]

(By Joseph D. Harbaugh, LLB, LLM [2])

In early Fall of 1973, a man entered a newly formed law office in downtown San Diego, seeking the assistance of an attorney. Upon investigation, it was determined that the local District Attorney had issued an Order to Show Cause in a paternity action against the man. A staff attorney at the law office was assigned to represent the client and accompany him to court. During the course of the court hearing, the attorney for the defendant requested that a blood test be performed at State expense. The trial judge denied the request but indicated that he was inclined to order a sperm analysis to determine whether or not the defendant was impotent. At the conclusion of the hearing, the case was dismissed when the judge found the evidence insufficient to support a charge of paternity.

The resolution of this relatively minor dispute can hardly be cited as a landmark decision in American jurisprudence. Certain facts about this case, however, cause it to stand out from the other ordinary matters on that crowded lower court docket, facts that indicated an alteration in the delivery system of legal services. In the first place, the law office where the client sought assistance was located in a new Senior Citizens Service Center supported by a $60,000 grant from the Southern California First National Bank. Second, the client was a 71-year-old man whose limited retirement income qualified him for the free legal services that were offered by the Senior Citizens Law Clinic. Third, the attorney who represented the 71-year-old client in the paternity case was a 24-year-old woman who was a third-year student at the University of San Diego Law School and enrolled in a clinical program that provided the bulk of the legal staff for the Law Clinic.

The fact that a law student actually appeared in court on behalf of any client, much less an aged client, is a phenomenon of recent vintage. Prior to 1957, only one state, Colorado, permitted students to directly assist clients. By 1968, a total of 14 jurisdictions had enacted student practice rules. Between 1969 and 1970 another 16 states added such statutes to their legislative books. (CLEPR, 1973).

Clinical education in a law school setting

Although legal education in the USA began in a clinical setting with students "reading the law" in a lawyer's office, it moved relatively quickly to the classroom in a university-affiliated law school. When Christopher Columbus Langdell assumed the deanship of the Harvard Law School in 1870, he instituted a pedagogical technique that has dominated legal education to the present day and guaranteed that a substantial distance would be maintained between the law student and the law client, between neophyte lawyer and the courtroom. Langdell claimed that the most efficient and effective method of learn the law was to read and analyze the decisions of appellate court judges. Thus, Langdell asserted that all lawyers needed to know was contained in law books and that the law library was the lawyer's laboratory.

---

[1] Paper presented at the 28th annual scientific meeting of Gerontological Society, Louisville, Oct. 29, 1975.

[2] Associate Dean and Director of Clinical Studies, Temple Univ. Law School, Philadelphia.

By 1910, when the foundation of medical education trembled upon the release of the Flexner Report calling for a greater emphasis on the clinical training of physicians, the legal profession had smothered opposition to the case method and rallied behind the Harvard model of the academic training of lawyers. The report to the Carnegie Foundation on the American law school experience recorded the academic lawyers' prevailing view that clinical work for law students should be restricted to the analysis of appellate-court decisions (Redlich, 1914).

It was not until the mid-1960s that clinical legal education was to experience a rebirth. On the heels of the creation of the Office of Economic Opportunity's Legal Services Division came a rekindling of interest in the practical training of law students. Sparked by the Council on Legal Education for Professional Responsibility (CLEPR), law schools tentatively began to create clinical programs for academic credit. The American Bar Association encouraged their development by adopting a model student practice rule which has now been enacted in whole or in part in 46 states, the District of Columbia, and the Commonwealth of Puerto Rico (CLEPR, 1976). Generally, these rules permit third-year law students to represent indigent civil or criminal clients as long as an attorney supervises the students' work.

ABSENCE OF CLINICAL PROGRAMS FOR THE ELDERLY

Even though there has been a dramatic surge in both legal assistance for the poor and clinical programs in law schools, older people, as an identifiable group in need, have not been the beneficiaries of this increase in available services. While the Survey of Legal Services Programs (Legal Services Corp., 1976) by the Legal Services Corporation reports that there are now slightly in excess of 2,250 *full-time* lawyers in legal services programs, less than 150 can be marked as specialists in law pertaining to the aged. These specialists are located in 87 communities and include both full- and part-time people (National Senior Citizens Law Center, 1975). Better than 90% of the approximately 150 approved American law schools have viable clinical programs for academic credit. Yet, only 6 schools (Dickinson, Duke, George Washington, St. Louis, Tulane, and Washington Universities) were reported to have clinics that concentrate on the legal problems of the aged (CLEPR, 1973). As noted below, however, at least 2 other schools (University of San Diego and University of Baltimore) also have such programs. At best, there are less than 10, or about 2%, devoted to aging out of more than 420 separate clinical programs.

Directly related to this unawareness is the fact that law schools have failed to educate their students in those areas of the law that most affect the elderly. Although every law school has courses in taxation, corporations, and securities regulation, rarely can one be found to have offerings in Social Security regulations, Medicare, or governmental entitlements. Without basic training in these intricate areas of the law, it is not surprising that few lawyers are found to be specializing in these problems, particularly when the financial rewards are minimal.

Law schools and legal service programs are also faced with the task of delivering legal assistance to older clients. Lawyers in private or public practice and in law school legal clinics have traditionally waited patiently in their offices until a client walked in with a legal problem. Indeed, they are restrained by the Code of Professional Responsibility from seeking out those that need legal help for fear that solicitation of clients would demean the profession. Since older people as a group are both restricted in their ability to travel and reluctant to seek out assistance, lawyers are forced to meet the challenge by reaching out of their offices to locate the elderly in need of their services.

Overriding all of these other concerns, however, is the ever-present problem of financial resources. In addition to inheriting Langdell's case method, today's law schools have the dubious honor of being the trustees of his approach to educational economics. In comparison to all other forms of professional training, legal education is incredibly inexpensive from an institutional point of view (Swords & Walwer, 1974). While medical, dental, and even music schools enjoy a student/faculty ratio of 8 or 4 or even 2 to 1, law school ratios run between 25 and 30 to 1 (AALS, 1976). Although this

may be academically sound in large case method classrooms, it is both intolerable and reckless in a clinical program. In order to provide adequate supervision for dynamic clinic offerings, law schools must seek outside funding, a new venture for most institutions. Consequently, it is understandable that most law school clinics have not specialized in their clinical programs, since this would constrain and restrict their funding opportunities.

EXISTING CLINICAL PROGRAMS IN LAWS PERTAINING TO THE AGED

In the midst of this gloomy report of weak excuses, there is a ray of hope. In the past 4 years, more than a half dozen law schools have initiated clinical programs that deal directly with the legal problems of older people. Some of these are bold, multifaceted ventures, while others are at best tentative, and a few have even been withdrawn for lack of financial support. Although all the models described here are different, having been developed independently of each other, there are some common attributes. Every program awards students academic credit in varying amounts for participation in the clinic. Each clinic delivers direct legal services to aged clients. The respective programs are directed by a full- or part-time member of the law school faculty. Each one is beset with problems and deficiencies.

The first program was initiated by Prof. Travis Lewin at Syracuse University Law School. It was also the first to succumb to financial pressures. Originally funded by the Shimper Foundation, a local family philanthropy, the clinic was an outgrowth of the Syracuse University All-Gerontology Center, a multidisciplinary effort to study the problems of the elderly. In 1972, 6 law students joined social work, psychology, architecture, medicine, public administration, and home management students in an intensive analysis of issues facing older people. By 1973, the students increased to more than 20, and the Law School appointed a visiting professor to direct a spinoff legal clinic that would deliver legal services to aged clients. The project operated out of the Law School's clinic office in downtown Syracuse but soon expanded to include home visitations when it became obvious that this approach was necessary. The students concentrated on cases that dealt with Social Security, Workmen's Compensation, Supplemental Security Income (SSI), and property tax problems. Efforts were expanded to include legislative advocacy with law students forming a part of an interdisciplinary team that researched, drafted, and supported bills in the New York legislature on barrier-free design for public buildings, conservatorship laws, and property tax exemptions for older people. The law students also cross-registered for courses in the other professional schools and met in a lawyer-skills training course. For some strange reason, the latter course failed to emphasize the special transactional skills lawyers must possess to effectively assist older people. Unfortunately, the Syracuse clinic died in the Spring of 1975 when the Shimper Foundation failed to renew the grant because of its own economic problems.

1973 was a banner year for clinical programs concentrating on questions pertaining to the elderly. San Diego, George Washington, and Duke Universities all entered the field at about the same time. In 1973 and 1974, the University of San Diego placed 7 to 10 students a semester in the downtown Senior Citizens Service Center under the supervision of a young lawyer assisted by a number of retired people who acted as paralegals. Although the students received 3 academic credits for their work in the clinic, the Law School did not maintain a classroom component to deal with the substantive legal issues that the students faced in their cases. Student participation dwindled in 1975, although plans are underway to encourage increased enrollment in the clinical program on law and the aged.

VARIED APPROACH AT GEORGE WASHINGTON UNIVERSITY

Prof. Erik Sirulnik of George Washington University Law School directs the most ambitious clinical effort to date. The recipients of a recent $70,000 Title III (Older Americans Act) grant, the George Washington University Aged Clinic involves more than 100 law students a year who represent more than 1,500 older people with legal problems. Sirulnik is assisted by two other lawyers in the supervision of two divisions of the Clinic. In the litigation division, students represent elderly clients in the Small Claims and Landlord

and Tenant parts of the District of Columbia Superior Court. Students assist older plaintiffs and defendants in such matters as consumer cases, contract problems, tort claims, and housing disputes. In the nonlitigation phase of the Clinic, the emphasis is upon representation of senior citizens before administrative agencies such as the Social Security and Veterans Administrations. These students also aid clients who need wills drafted and estates planned and who have disputes with nursing homes. In addition to the financial investment in the Aged Clinic, George Washington University has made a substantial academic commitment to the program. Students are entitled to receive up to 8 academic credits for their work in the Clinic, and efforts are being made to increase this to 11 credits. Students gather each week in a 2-hour seminar session, 1 hour of which is devoted to the study of substantive law affecting older people and the other to a group analysis of the open cases on which the students are working.

Beyond the law student clinic, George Washington University has inaugurated a Paralegal Training Program for Retired People with a class of 25 elderly students. These future paralegals are between 65 and 68 years old, some with only high school diplomas and half of them retired federal government workers. The students attend classes in such subjects as legal research and interviewing, office management and referral practices, and Social Security, housing, and SSI law 3 days a week during their first semester. Following this academic phase, each paralegal student is paired with a senior law student, and the team works in one of the public housing centers in Washington. There the paralegal trainees assume responsibilities in such diverse areas as will drafting, fair hearing administrative matters, income tax assistance, and the like. Placement plans are underway to locate the graduates in part-time jobs with the National Capitol Housing Administration, Neighborhood Legals Services, and similar agencies. Without a doubt, George Washington University has the most extensive program for the aged of any law school in the nation.

Duke University, on the other hand, has a much smaller but more academically intense program on behalf of the elderly. Begun in 1973, this program was stimulated by the efforts of George Maddox, Director of the Center for the Study of Aging, and supervised by Howard Gelt, now the Acting Director of the Human Resources Administration of the State of Colorado. Students in the Clinic receive 4 academic credits for their combined fieldwork and classroom responsibilities. Working out of the Center for the Study of Aging, the students represent older patients of the Center who are faced with a variety of legal problems ranging from Social Security and SSI to estate planning and taxation matters. Law students have access to members of other professional disciplines who form the staff of the Center to assist them in the development of their cases. In addition to this direct representation phase, the Duke Clinic in Law and the Aged has an active legislative component which has already had considerable success at the State Capitol in Raleigh. It is, however, the classroom portion of the Duke Clinic that is unique among law school efforts in this field. The pedagogical theory that supports this program is that in order adequately to train law students in the legal problems of the elderly, they must be concurrently exposed to lawyering skills development, to a study of the law that directly affects senior citizens, and to the scholarly research of complementing professional disciplines. Through the use of simulation and gaming techniques, students combine skills training in interviewing, counseling, and administrative and legislative advocacy with the analysis of the legal principles involved in Social Security pension laws and right-to-die legislation. At the same time they investigate aspects of social economics and the physiological and psychological effects of aging. The breadth of the Duke academic program provides the law students with an understanding of the range of problems facing older people and thus places legal issues in proper context.

In the past 2 years, two other law schools started law projects for the elderly. At the University of Baltimore Law School, Prof. William Weston directs a multiple division program that provides outreach home service as well as a full-time office in a nearby multipurpose complex. Beyond the legal aid program of direct representation in contested legal cases, the Law School, in conjunction with the Business School, operates a special Tax Clinic to assist older people with their federal, state, and local tax problems. The

School also runs an education series for older people in consumer law, SSI, Medicare, and the like, seminars for social workers to pinpoint the differences between legal and social problems of the aged, and a continuing education program for lawyers on legal issues affecting the elderly. About 10 students per semester receive up to 6 credits on the basis of 50 hours of fieldwork per academic unit. Although there is no classroom phase of the program, student representation has been provided to more than 200 clients in the past year. Moreover, the School has arranged to refer older clients who can afford to pay a fee to a special panel of the Baltimore Bar who have agreed to develop expertise in problems of the aged, thereby broadening the legal services base for senior citizens.

Under the direction of Prof. David Marcello, the program at Loyola University Law School in New Orleans has the largest staff, expanded with the assistance of an AoA model projects grant in 1975 to include four attorneys, two social workers, and two secretaries. It is the only clinic that combines training for law students and graduate social work students working in teams. It is also the only program that draws students from more than one academic institution. Law students from Loyola and Tulane and social work students from Atlanta University and the University of Louisiana participate in the project.

Conceived in May of 1974 as the Louisiana Center for the Public Interest, a nonprofit corporation supported by funds from the local Area Agency on Aging (AAA), a private foundation, and the Council on Legal Education for Professional Responsibility, it has assisted more than 400 older clients with a variety of legal problems. It is also actively engaged in legislative advocacy in support of such bills as conservatorship, expanded voting rights for handicapped aged, and consumer legislation relating to hearing aid sales and open advertisement of drug prices. The basic delivery scheme has the social work students visiting the 15 local nutritional centers and interviewing aged people to discover legal or social problems. Students from both disciplines join forces for follow-up work in appropriate cases. The classroom component concentrates on substantive lectures in areas of the law critical to older people. The principal weaknesses in the program are that the law students only receive 2 academic credits, there is little or no skills training, and the social work students are not specifically instructed to recognize and isolate legal issues.

DEVELOPING MODEL AT TEMPLE UNIVERSITY

The final program described here is still in the development stage. A combined classroom and fieldwork experiment under the direction of Prof. Dolores Sloviter will be launched at Temple University Law School in the coming academic year. The academic component, which focuses on state and federal legislation affecting the elderly, has been in operation for the past year. Next year satisfactory completion of this course will be a prerequisite to enrolling in the clinical phase of the program. The fieldwork portion of the project is still undergoing analysis, but it will definitely include the direct representation of older people faced with legal problems involving income and health maintenance and other forms of benefits and entitlements.

In August, 1975, the Law, Education, and Participation Project (LEAP) at Temple Law School was awarded a Title I (HEA) grant to develop and conduct the Consumer and Legal Rights of the Elderly Program. Led by Sharon Browning, the project is designed to help older persons learn about and to understand the law as it affects their lives. The 10-week, 2-hour class sessions held in senior centers in Philadelphia include instruction in such areas as contracts and money management, advertising and shopping frauds, landlord/tenant relations, age discrimination, entitlement programs, and wills and probate practices. During its first year, the LEAP staff has trained more than 200 seniors and plans to conduct sessions for an even larger number next year. If funding becomes available, Temple Law Center will train 15 older persons, identified through the LEAP seminars, as paralegals. These paralegals will then be placed in nutrition and senior centers throughout Philadelphia and will work with the clinical faculty and law students to provide legal services for the elderly.

ESSENTIAL COMPONENTS OF EFFECTIVE CLINICAL PROGRAMS

Though this is not an all-inclusive listing of clinical programs involving old age and the law, the other law schools operating clinics duplicate in whole or in part the services provided by these seven. We can see that there are a number of models in the very early stages of development. It is too soon to seek a paradigm, but some elements stand out as important. Law school programs must grant sufficient academic credit to allow the clinical student to explore the full range of legal issues in a project for the aged. Schools must be willing to commit sufficient resources to guarantee adequate professional supervision of the fledgling lawyers. Academic components should emphasize skills development and interdisciplinary study as well as a review of the appropriate substantive law. The delivery system must include an outreach component in order to locate and serve those elderly with legal problems.

One last thing is also very clear. Law school legal clinics devoted to the problems of the aged are an effective and efficient method of delivering legal services to the elderly poor. By harnessing the energy, enthusiasm, and talent of law students. we can be assured of quality legal services for our public or private investment. By any cost-benefit analysis, a properly conceived and operated law school clinic provides low-cost, high-quality legal services for older people.

The response of the nation's law schools, although too little and very late, has at least tended to be positive. With encouragement and support, the law school clinic may yet develop into a major system for the delivery of legal services for older people.

ITEM 9. AMERICAN BAR ASSOCIATION: SPECIAL COMMITTEE ON FEDERAL LIMITATIONS OF ATTORNEYS' FEES REPORT TO THE HOUSE OF DELEGATES; SUBMITTED BY F. WILLIAM McCALPIN[1]

RECOMMENDATIONS REGARDING FEES FOR ATTORNEYS REPRESENTING CLAIMANTS BEFORE FEDERAL AGENCIES

The Special Committee on Federal Limitations on Attorneys' Fees recommends that the house of delegates support the following concept for adoption by the U.S. Congress:

1. The Congress should enact a statute governing attorneys' compensation for each Federal agency when contingent fees are not already provided for by statute.

2. As a first step in implementing point 1 of this recommendation, the Congress should adopt the following scheme for attorneys' compensation in the Veterans Administration:

[1] See statement, p. 271.

(A) The rating board which hears veterans' claims in the first instance shall award attorneys' fees when appropriate, such fees not exceeding $10.

(B) The Board of Veterans Appeals which hears veterans' claims de novo shall determine attorneys' fees based on the following factors (The first seven factors have been taken from the American Bar Association's *Code of Professional Responsibility*, DR 2–106):

(1) The time and labor required, the novelty and difficulty of the questions involved, and the skill requisite to perform the legal service properly.

(2) The likelihood, if apparent to the client, that the acceptance of the particular employment will preclude other employment by the attorney.

(3) The fee customarily charged in the locality for similar legal services.

(4) The amount involved and the results obtained.

(5) The time limitations imposed by the client or by the circumstances.

(6) The nature and length of the professional relationship with the client.

(7) The experience, reputation, and ability of the attorney or attorneys performing the services.

(C) The award of attorneys' fees by the Board of Veterans Appeals shall be subject to review by the Administrator of the Veterans Administration.

(D) The determination of attorneys' fees by the Administrator of the Veterans Administration on review as provided for in C shall be subject to review by the Federal district court of the judicial district in which the claim is processed or in the Federal district courts in Washington, D.C.

REPORT ON RECOMMENDATION

The Committee on Federal Limitations on Attorneys' Fees believes that the Congress, once veterans' claims have been passed upon at the Rating Board level, should require allowance of a reasonable attorney's fee based upon recognized and usual criteria for services rendered beyond the Rating Board level and consider factors such as the nature of the claim and the amount of the claim in tailoring fee compensation statutes to each federal agency. With respect to the Veterans Administration, the Committee recognizes that the current $10.00 fee limitation pursuant to statute (38 U.S.C. 3404) effectively prevents any meaningful participation by attorneys in the prosecution of VA claims. Since veterans' awards may be claimants' exclusive or only substantial means of support, especially with respect to disability claimants, it is important to preserve the award to the greatest extent possible. Since many claimants are successful at the Rating Board level (viz., the hearing of first instance), on balance it would be wise to preserve the $10.00 limitation, especially since representatives have not been shown to be more effective than claimants in securing awards at the Rating Board level.

By contrast, Veterans Administration data have shown that the representative has been more effective than the claimant at the Board of Veterans Appeals. Moreover, the claims which reach the Board of Veterans Appeals are usually more difficult to present than the claims resolved at the Rating Board level because of the need of preparing a proper record, especially since experience has shown the claimant should be prepared to challenge the procedural or substantive fairness at the Rating Board level. Therefore, since an attorney would be effective and often necessary at the Board of Veterans Appeals, the limitations on attorneys' fees should be relaxed as indicated above to encourage attorney participation. In determining fees, consideration should be given to the following: The time and labor required, the novelty and difficulty of the questions involved, and the skill requisite to perform the legal service properly; the likelihood, if apparent to the client, that the acceptance of the particular employment will preclude other employment by the attorney; the fee customarily charged in the locality for similar legal services; the amount involved and the results obtained; the time limitations imposed by the client or by the circumstances; the nature and length of the professional relationship with the client; the experience, reputation, and ability of the attorney or attorneys performing the services [and, the financial ability of the claimant to compensate the attorney]. Finally, the Committee believes that review by an independent body, namely, the federal courts, is essential in ensuring the effectiveness of the fee compensation scheme.

BACKGROUND

One approach an attorneys' compensation statute can take is to provide *omnibus* guidelines governing the compensation to be awarded to attorneys representing claimants before all federal agencies. This approach is desirable to the extent that it gives all claimants an equal opportunity to secure counsel, regardless of which agency they petition for redress. Indeed, it is difficult to argue that an airline should be able to secure an attorney to represent it before the FAA, while a veteran should be denied similar protection before the VA. Conversely, it appears unjust that attorneys specializing, say, in aviation matters, are encouraged to participate in agency decision-making, while others specializing in different areas are precluded from participating. Therefore, the following omnibus model statute provides equal protection both for claimants and attorneys:

FEES FOR LEGAL SERVICES

(A) A lawyer shall not enter into an agreement to charge, or collect an illegal or clearly excessive fee.

(B) A fee is clearly excessive when, after a review of the facts, a lawyer of ordinary prudence would be left with a definite conviction that the fee is in excess of a reasonable fee. Factors to be considered as guides in determining the reasonableness of a fee include the following:

(The first seven factors have been taken from the American Bar Association's *Code of Professional Responsibility*, DR 2–106).

(1) The time and labor required, the novelty and difficulty of the questions involved, and the skill requisite to perform the legal service properly.

(2) The likelihood, if apparent to the client that the acceptance of the particular employment will preclude other employment by the lawyer.

(3) The fee customarily charged in the locality for similar legal services.

(4) The amount involved and the results obtained.

(5) The time limitations imposed by the client or by the circumstances.

(6) The nature and length of the professional relationship with the client.

(7) The experience, reputation, and ability of the lawyer or lawyers performing the services.

(8) [The financial ability of the claimant to compensate the attorney].

(Inclusion of this factor in the scheme will depend on whether the claimants or the agency pays the attorney's fees. This matter is distinct from the issue of whether the ceiling on fees should be raised, and it will be considered by the Committee in a subsequent report.)

A fundamental problem with any omnibus statute is that it ignores special problems in certain agencies. For example, veterans sometimes may be adequately represented before the Veterans Administration by service organizations; Congress may want to discourage attorneys from participating in the agency process and charging claimants for their participation when service organizations could adequately represent the claimant. Moreover, the omnibus statute ignores the situation where an aggrieved party brings a small claim before an agency and an attorney, representing the claimant invests considerable time in the matter at issue; it would be quite difficult to balance the interest in compensating the attorney for his time, since compensation to the attorney if deducted from the claimant's recovery could defeat the purpose of the claim. Also, the system may want to recognize the various degrees of sophistication among claimants in determining the relationship between attorney and client. The veteran with a limited education seeking disability benefits from the VA may be more vulnerable to possible abuses by some attorney than a corporate executive seeking redress before the SEC.

A parenthetical point which is essential to any statute regulating attorneys' fees is that the agency's award of fees must be subject to judicial review. ("In any . . . overhaul [of administrative agencies], specific attention should be paid to making the administrative process more open and simple, requiring that major administrative decisions be accompanied by an articulation of reasons, *subject to judicial review* of the fairness and reasonableness of the decision, and affording interested persons access to relevant information within the agency so that they may have an opportunity to develop an adequate record for agency decisions." [Emphasis added], *Law and a Changing Society*,

II, at pp. 8–9, American Bar Association, June, 1975.) If abuses do indeed exist in the process by which attorneys are compensated for services before federal agencies, such abuses will not be eliminated, even with adoption or reform statutes, unless the procedures adopted for implementing the provisions of the statute are reviewable by an independent judicial body.

An alternative to the omnibus statute approach is the adoption of a number of statutes tailored to each agency. In determining the role which attorneys should play in the various agencies, draftsmen of the fee compensation statutes should consider.

(1) The claimant's ability to represent himself before the agency;

(2) The extent of a service organization's ability to represent the claimant;

(3) The claimant's access to fair and equal representation by the service organization;

(4) Cases in which the special competence of attorneys can be of value, particularly where the perfection of an adequate record at the agency level may be essential to the claimant's rights;

(5) Whether certain statutory limitations on attorneys' fees effectively deny the claimant legal representation in agency matters.

In determining whether a service organization is competent in representing claimants before an agency, special attention must be given to the skills involved in successfully prosecuting a claim. For example, where cases involve substantial investigation of medical or public records, and preparation of countervailing proof, an attorney's training and skills can be expected to surpass the ability of a lay service representative to effectively represent claimants. Obviously, where claims involve complicated legal issues, service organizations often are not adequate substitutes for trained attorneys.

Perhaps, the agency on which the most attention has focused in recent years with respect to limitations on attorneys' fees is the Veterans Administration. The statute limiting compensation to attorneys representing claimants before the VA to $10.00 effectively removes the attorney from the decision-making process in VA matters. The following exposition reflects the various factors which must be considered in tailoring attorneys' compensation statutes to each federal agency.

The Veterans Administration has a $17,829,454,000 annual budget (P.L. 94–116, Oct. 1975). It ranks fifth in expenditures by federal agencies. (HEW—$118 billion; Defense—$93 billion; Treasure—$43.4 billion; Labor—$22.6 billion). The four major categories of programs administered by the Veterans Administration are: readjustment benefits, health services, compensation and pensions, and life insurance. The first three categories account for ninety-seven percent of the VA's budget (Veterans Administration, "Budget in Brief: Fiscal Year 1974, "page 21).

The VA's disability program has been a focal point of criticism in recent years. In November, 1972, the Armed Forces Journal obtained data on the percentage of retirements resulting from disability by rank and branch of service as of June 30, 1971 (Brook Nihart, "Disability Retirement: Some Facts," *Armed Forces Journal*, November, 1972). Data showed that in every branch of service, two to three times as many generals had been retired for disability (31% on the average) as had colonels and majors (14%), although generals were only slightly older at retirement than majors (Nihart, *supra*). Colonels and majors had higher rates of disability retirement than senior noncommissioned officers (12.5%) who retired at about the same age (Nihart, *supra*). The highest rate appropriately went to those who had the most exposure to combat [junior officers (60%), and lower-ranked enlisted men (41%)] (Nihart, *supra.*) Interestingly, more Air Force generals were retired for disability (45%) than lower-ranked enlisted men (Nihart, *supra*).

In 1972, Senator Proxmire asked the GAO to determine how many Air Force generals, retired for disability, had received flight pay. The GAO found that during the period from 1967 to 1972, 337 generals retired from the Air Force, and 130 of them (40%) retired on 30% or more disability. Of these, 97 (75%) received flight pay during the year immediately preceding their retirement. (Letter from Comptroller General of the United States to Senator William Proxmire, Aug. 23, 1972).

The various studies suggest that there may be some inequality in the VA's administration of its disability retirement program; there may be several rea-

sons for these inequities, including the inability of less sophisticated persons to present their case to the VA as compared with others. It therefore appears that attorneys could be useful and at times indispensable to the determination of disability claims in order to ensure equal treatment of claimants. The attorney can investigate the manner in which the VA handles his client's claim and, when appropriate, challenge the VA with respect to equal application of the laws and its regulations. Moreover, since disability benefits are granted only when the disability arises as a result of a service-connected impairment, the attorney can procure medical records to strengthen his client's case, a task which a service organization may be unable or unwilling to do.

Another pervasive problem in the Veterans Administration which attorneys could effectively monitor is the manner in which it determines who will and will not receive benefits. The problem is most critical in the exercise of the VA's discretion as to whether those with less than honorable discharges will receive veterans benefits. From 1964 to 1972, more than 175,000 servicemen were dismissed from the service with less than honorable discharges. Of the various discharges, bad conduct and dishonorable discharges were rare, accounting for no more than 1% of the total discharges. ("Types of Discharges Issued to Enlisted Personnel by Fiscal Year 1950–1972," Office of Assistant Secretary of Defense [Manpower and Reserve Affairs], Aug. 31, 1972.) Such discharges are imposed only by general or special courts-martial. The middle echelon of discharges is the undesirable discharge. Like the honorable and general discharges, it is administrative, but like bad conduct and dishonorable discharges, it may carry heavy penalties in civilian life. Undesirable discharges are given most often for drug use, homosexual acts, conviction by civilian authorities, and offenses involving "moral turpitude."

Contrary to widespread belief, federal law does not bar the Veterans Administration from dispensing benefits to veterans with less than honorable discharges. The VA is in a position, for example, to extend educational assistance to veterans who, because of a lack of education or training, are perpetually unemployed. But because of the way the VA has applied the law, and the way it interprets its social functions, the agency has not made such assistance available.

Benefits are available by federal law to all veterans who receive discharges "under conditions other than dishonorable." Anyone who receives an honorable or general discharge is unambiguously entitled to benefits. Anyone who receives a dishonorable discharge is unambiguously excluded from benefits, as is someone issued a bad conduct discharge by a general court-martial. Undesirable discharges and bad conduct discharges issued by special courts-martial constitute the "gray area." If a veteran has one of these—and more than six out of every seven Vietnam veterans with less than honorable discharges do (38 USC 101 (2))—the VA makes an independent determination of whether or not it was issued under dishonorable conditions. The agency has adopted its own rules on this question. A discharge issued for mutiny, spying, or homosexual acts is automatically considered to be under dishonorable conditions. In addition to the specific categories of discharges that the VA has determined to be under dishonorable conditions, the agency has adopted two rather broad and subjective criteria in its eligibility decisions. A discharge is considered to have been issued under dishonorable conditions if it stemmed from an offense involving "moral turpitude" or was the result of "persistent and willful misconduct." (Starr, *The Discarded Army*, at pp. 176–177). The determination is made on a case-by-case basis without the assistance of any published and definitive guidelines. The only guideline would appear to be an unwritten presumption that the service imposes less than honorable discharges only for acts of moral turpitude or persistent and willful misconduct, because the VA hardly ever comes to any other conclusion. For example, a recent study by the VA indicates that 93% of the veterans with less than honorable discharges who applied for educational benefits were denied them. (Letter from Mr. Stratton Appleman, Assistant Director, Public Information Office, Veterans Administration, to Raymond Bonner, dated January 18, 1973.)

Ordinarily, the VA keeps no statistical records on benefit applications from veterans with undesirable and bad conduct discharges. A study of a five month period in 1972, however, noted that only 1,305 applications for educational benefits were received from men with less than honorable discharges. Of these,

91 were approved. During this same period, more than 4,000 veterans with less than honorable discharges applied for unemployment compensation (although the benefits are dispensed by the Labor Department, eligibility decisions are made by the VA). Of the 4,000 men who applied, 3,400 were found ineligible. Ninety-seven of the cases involved veterans with drug-related discharges; six of these were approved. (Starr, *The Discarded Army*, at p. 179).

The per se rules which the VA has adopted with respect to servicemen with less than honorable discharges appear to be a violation of congressional intent. Some argue that service organizations can adequately protect and represent those allegedly unfairly denied benefits because of less than honorable discharges. It would appear from the statistics herein mentioned, however, that the American Legion, the VFW and other service organizations have not been particularly effective in prosecuting such claims. This is an area ripe for the watchful eye of the attorney in assuring that congressional intent is implemented and those entitled to benefits are treated equally.

The VA's disability program is another area in which the attorney could be quite useful, since the considerable discretion involved in processing disability claims makes the program susceptible to unequal treatment among veterans. For example, a regulation provides that a veteran can be classified as totally disabled if he is "unemployable" and he achieves a certain percentage rating under a rating schedule (38 C.F.C. 4.16–17). The concept of "unemployability," however, as described in the regulations, is rather imprecise, sometimes resulting in a lack of uniformity in practical application. (The regulations define unemployability as "unable to secure or follow a substantial gainful occupation." 38 C.F.R. 4.16.)

Similarly, in order for the veteran to participate in the disability compensation program, he must have at least a 60% disability on the rating schedule, to two disabilities totaling 70% with one equal to 40% (38 C.F.R. 4.16). A determination of disability under the rating schedule requires many subjective determinations, including the degree of social impairment due to psychoneurotic disorders. Even in the disability cases where medical disputes predominate, subjective determinations must be made in arriving at the percentage of disability pursuant to the rating schedule, and without the assistance of a trained attorney a veteran may not be able to effectively guard against unequal treatment.

The need for trained attorneys to represent veterans before the VA is highlighted by the complex procedure involved in processing claims, especially in the disability program. Over 350,000 disability claims are made each year to the 57 regional offices of the VA. (Popkin, *Study of Five Disability Programs*, at p. 6). The claims are heard in the first instance by rating boards comprised of three members with at least GS–12 status. One member is a doctor, one is a legal specialist, and the third an occupational specialist. The legal specialist need not be a lawyer and the occupational specialist need not have vocational expertise. Though hearings are permitted, they are rare. No cross-examination is permitted before the Rating Board. If the claimant is dissatisfied with the decision of the Rating Board, he files a Notice of Disagreement (NOD) which initiates an appeal to the Board of Veterans Appeals (BVA). (The BVA consists of three members, one doctor and two lawyers. The BVA has a staff of 18 doctors. It allows no cross-examination; rather the reviews are conducted like informal conferences.) Forty thousand NOD's are filed each year in disability cases, constituting 80% of all NOD's. One-sixth of the claims are approved by the Rating Board after the NOD is filed. Interestingly, one-third of the appeals are dropped by the claimant after filing his NOD; this suggests, perhaps, that many dissatisfied veterans are unable to cope with the complicated procedures involved in processing claims.

A legal representative can be especially helpful in prosecuting certain claims, as in service-connection claims where vocational evidence is important. Service-connection cases often involve past medical history which the veteran's record may not fully reveal. Since attorneys are trained in the art of investigation, their assistance could be quite valuable. Similarly, where vocational evidence is important, the veteran's records may not be helpful to the extent that they do not contain information with respect to his work history; again, a trained attorney can be useful in gathering evidence for presentation before the Board.

William Popkin, Professor of Law at the University of Indiana, prepared a

comprehensive report for the administrative conference in which he examined one year of BVA cases (fiscal 1972) which reviewed Rating Board decisions from the Indianapolis office of the VA. (Popkin, "A Statistical and Legal Analysis of the Role of Representatives in Administrative Decision-Making based on a Study of Five Disability Programs [Feb. 27, 1975]. The study contains the following disclaimer: "This report was prepared for the Committee on Grant and Benefit Programs of the Administrative Conference of the United States. It is one of three parts to be prepared for that Committee. It has not been reviewed or approved by the Committee or the Conference. It represents the views of the author only. It should not be used for quotation or attribution without this disclaimer.") Popkin's study supports the contention of this Committee that the effective marshalling and presentation of evidence can markedly improve a claimant's chances of success. His study demonstrates that a claimant has a significantly better chance of prevailing at the BVA level when new evidence is submitted to the Board. In service-connection cases, for example, when no additional evidence is submitted, claimants representing themselves were more effective than service representatives in prosecuting claims. When new evidence is presented to the BVA, the chances of a claimant prevailing jump in service-connection cases from 44% to 52%, and in rating scheduled cases from 32% to 48%. (Success rate with a service representative: 35%; Success rate without a representative: 57%. Popkin, at pp. 33, 34.)

These statistics suggest that new evidence has a significant effect on the outcome of cases at the BVA level. Moreover, it appears that service representatives have not availed themselves of the opportunity to present new evidence. In service-connection cases, for example, service representatives submitted new evidence in only 12% of the cases (Popkin, p. 35). Since attorneys are trained in the art of gathering and presenting evidence, it seems likely that their assistance would improve the veterans' chances of successfully prosecuting their claims, especially since service representatives often do not submit new evidence to the BVA. (In service-connection cases, service representatives submitted new evidence in only 12% of the cases. Popkin, p. 35.)

RECOMMENDATION

The claimant cannot always rely on the service organization to represent him before the Veterans Administration. It appears that service organizations may discourage claimants from bringing "harder" cases before the VA. Also, the service organizations may be unwilling to fully and fairly represent certain types of claimants such as those with less than honorable discharges. Therefore, to equalize the ability of a claimant to secure redress before the VA, attorneys can be valuable in some representative capacity. We must, therefore, determine the capacity in which attorneys can serve. In determining that, we must be sensitive to the claimant's desire to retain as much money as possible from the award which he receives from the VA. On the other hand, in order to secure the award, he may need the assistance of an attorney. Legal representatives can be helpful at different levels of the administrative proceedings where certain issues are involved. For example, representatives can be especially helpful when matters involving issues not contained in the veteran's service records are in dispute. Generally, when marshalling and presenting new evidence is necessary in the prosecution of a claim, it appears that the representatives can be most helpful. Moreover, legal representatives can be helpful in alerting the VA to unequal treatment of certain claimants.

As a means of balancing the claimant's desire to retain as much of the award as possible and the need for an attorney in successfully prosecuting a claim, the Committee recommends the following: The $10 fee limitation should be preserved at the Rating Board level. (The statute should maintain the $10.00 limitation for attorneys' fees at the Rating Board level because in some cases, a relative or friend of the claimant who is an attorney may offer gratuitous assistance. The goal of the statute is not to exclude attorneys at the Rating Board level. Rather, the statute seeks to preserve the claimant's award to the greatest extent possible. Where preservation of an award is possible with legal representation, the attorney should not be excluded from participation.) There is some evidence that the Rating Board will often give the veteran the benefit of the doubt in certain matters (Popkin, at p. 40). For those who fall in this

category, the services of an attorney would be unnecessary since claimants would have to pay attorneys' fees when representation would have been unnecessary. Therefore, in recognition of those who could successfully prosecute a claim either without legal representation or with representation by a service organization, on balance the system at the Rating Board level probably operates most effectively without the assistance of attorneys. A different story, however, exists at the BVA level. Those who are dissatisfied with the decision of the Rating Board may be unable to secure adequate representation from a service organization for various reasons. Moreover, statistics, such as the 7% success rate of those with less than honorable discharges who petition the VA for educational benefits (Popkin, supra, p. 9), indicate that the Rating Board has established certain unfair procedures; such procedures may go undetected by the BVA without the help of an attorney who can alert the BVA to specific procedural problems. Therefore, the Committee recommends that the guidelines set forth in the recommendations on pages 1 and 2 of this report be implemented at the BVA level so that claimants can secure legal counsel to represent them and to protect their interests.

This is the first of a series of reports by the Committee. This report focuses on the need for reform in the Veterans Administration with respect to federal limitations on attorneys' fees. The Committee will submit another report on the manner in which attorneys' fees will be paid. Also, the Committee will continue to examine other federal limitations on attorneys' fees * and submit future reports to the House of Delegates.

ITEM 10. STATEMENT OF THE LEGAL SERVICES SECTION OF THE STATE BAR OF CALIFORNIA; SUBMITTED BY PAUL NATHANSON[1]

The Legal Services Section of the State Bar of California consists of 550 attorneys and judges committed to "innovation, development, and improvement of systems to provide access to and delivery of legal services to the people of California in adequate quantity, of superior quality, and at a reasonable cost."

[1] See statement, p. 286.

The section commends the Senate Special Committee on Aging for holding oversight hearings on the issue of legal services for older Americans. The elderly have legal problems and concerns that are quite different from those of other age groups. Older citizens are more often the victims of consumer and administrative abuses calling for legal remedies and generally do not have the resources to be able to afford legal representation. We are sure that your hearings will develop increased evidence of the serious need that our older citizens have for legal services.

In June of 1974, we told Senator Tunney's Subcommittee on Representation of Citizens' Interests that:

"The private bar and law schools must assume greater responsibility for helping to improve the availability of legal service for our elderly citizens. Every local bar association should consider establishing a standing committee which will investigate and periodically review the problems of the elderly citizens in their area and then make recommendations as to how these problems can be resolved. Law schools in California should also be encouraged to design courses that deal with the particular problem of our elderly citizens and reassess all of their courses to insure that the problems of our elderly are covered in courses other than 'estates, probate, and taxation.'"

Since that time, the State bar has developed its own 5-point program for meeting legal problems of the aging. The 5-point program includes: (1) Project Outreach—a series of programs focused on meeting the legal needs of the elderly; (2) methods for financing and implementing these legal services; (3) educating attorneys to handle the legal problems of the aging; (4) educating the elderly about their legal rights and the legal services available to them; and (5) legislative action to remedy certain inequities facing the senior citizens. As part of the program, the bar has asked every local bar association in the State to become actively involved in developing or working with local programs for the elderly.

The legal services section was created to provide a mechanism for California attorneys and judges to focus their energy on this and other problems. Twenty-five percent of the section members already have expressed interest in the legal problems of aging. The section's executive committee has successfully lobbied the State Legislature to pass a bill that grants significant new rights to individuals who are subject to conservatorship and guardianship proceedings. Finally, the section's committee on the legal problems of aging already has united judges, professors, private practitioners, and legal services attorneys in developing a statewide program to deal with the legal problems of senior citizens.

We are keenly aware, however, that the legal services section can do only so much without creative legislative leadership in the U.S. Congress. We are highly appreciative of the efforts of Senators Church, Kennedy, Williams, and Tunney to educate their fellow Senators regarding the legal problems faced by our older citizens. We also wish to express our gratitude to Representative Brademas of Indiana for his work in assuring that the Older Americans Act would be amended to make legal services a priority. Much more needs to be done, however, if our older citizens are to receive the quality of legal care that they need. Only so much can be done by volunteer attorneys or by our underfunded legal service and legal aid programs. More money must be made available for the provision of legal services to seniors. We hope that as a result of these hearings you will draft new legislation which will provide more funds and resources in this important area. For as we said in 1974, the problems of the elderly are, in the final analysis, our problems.

LETTERS FROM INDIVIDUALS

ITEM 1. LETTER AND ENCLOSURES FROM JAMES B. CARDWELL, COMMISSIONER OF SOCIAL SECURITY; TO SENATOR EDWARD M. KENNEDY, DATED NOVEMBER 24, 1976

DEAR SENATOR KENNEDY: Your letter of October 19 requests information regarding our plans for implementation of the SSI study group recommendation for establishment of an ongoing interrelationship with advocacy and legal aid groups.

We are committed to the idea of furthering our ongoing interrelationships with the consuming public and had no reservation about moving ahead to establishing such relationship with advocacy and legal aid groups. As a first step we invited representatives of a number of legal aid organizations to Baltimore. Our objective was to get their input into the development of the most effective mechanism for an interchange process.

At the first meeting this group indicated that they were not sufficiently representative of the universe we were trying to reach and asked for additional time to consider the problem. At our second meeting the group reaffirmed the fact that they were not representative of the legal aid communities but suggested that they nevertheless serve as the advisory group to SSA. We agreed that the meeting participants were not sufficiently representative of the groups involved, e.g., there were no black attorneys. We advised that the entire issue of how and with whom the study group recommendation would be implemented would be given further consideration. This was reflected in our reports of the meetings, copies of which were sent to each participant. Copies are also enclosed for your information.

The kind of relationships and activities which need to be established are, of course, affected somewhat by the recent changes in the handling of regulations which are designed to promote broad public input into that process as well as the proposals of the HEW Task Force on Citizen Participation relating to decisionmaking. These were published in the *Federal Register* on November 10.

We have now decided that we will not establish a small advisory group representing the legal aid and advocacy communities but rather will establish a roster of individuals and organizations representing these groups and others particularly interested in the problems of the disadvantaged. We will, from time to time, invite representatives from this roster for the discussion of specific problems or areas of interest. The invitations will be issued on the basis of the particular interest and expertise of the members. The matter of compensation for those who participate in such meetings will be determined under a general policy of payment for expenses where there is a need for such payment.

We will be communicating this decision to the legal aid representatives who have previously met with us. These representatives will, of course, be included on our roster.

Sincerely yours,

JAMES B. CARDWELL.

[Enclosures]

REPORT OF MEETING, MAY 26, 1976, SOCIAL SECURITY ADMINISTRATION

INTRODUCTION

Convened by the Social Security Administration (SSA) and chaired by Thomas C. Parrott, Associate Commissioner for External Affairs, this meeting

was held to explore approaches which should be considered to establish and to maintain an effective system of two-way communications between SSA and the Nation's legal aid programs.

The meeting agenda and a list of meeting participants are attached.

Mr. Parrott and Mrs. Juni welcomed the seven legal aid attorneys and explained that the impetus for inviting them to meet with SSA came from a recommendation of the supplemental security income study group that SSA establish an ongoing relationship with legal aid and advocacy groups.

SSA recognizes that the development of a network of legal aid groups through which SSA and the legal aid community can interact has the potential for achieving specific goals. It can provide a means by which reliable information may be exchanged concerning laws, policies, and procedures, as well as information about consumer reactions and concerns so that misunderstandings can be avoided and program operations refined. It was emphasized that SSA's intent is to set up a mechanism that would not be a token venture but that would result in an effective, productive working relationship.

Mrs. Juni reviewed plans complementary to the proposed network of legal aid groups which are designed to take readings on trends and policies that might cause problems and which would provide for representation and input from the total SSA interested populations. Representatives of legal aid programs could participate in those activities. Included are plans to have a broad range of "weathervane" groups throughout the country for general consumer reaction to all aspects of the social security programs. Additionally, meetings in the field with organizations and individuals representative of the public will provide a forum for the discussion of issues involving SSA administered programs. (The first of these meetings will be held in the Denver region in October.)

THE LEGAL AID COMMUNITY

The legal aid attorneys were asked to clarify the legal aid community, what it is now and how it works.

There are approximately 800 legal aid offices providing direct service to clients. The Legal Services Corporation is providing financial support to 250 or 260 programs but any program may have more than one office. In addition, the Administration on Aging and the Office on Developmental Disabilities—in HEW's Office for Human Development—are supporting legal assistance provided special populations in their areas of concern. It was pointed out that there is nothing in the legal services resembling a network except very loose, informal communications.

The legal aid attorneys discussed the difficulties of achieving "representativeness" in the makeup of a network of legal aid groups for the proposed interaction with SSA. The interests of most legal aid offices lay in the supplemental security income (SSI) program: about one-third see SSI clients, title II is more "hit or miss," and very few medicare problems are taken to legal aid offices. With regard to title II, however, the attorneys agreed that probably 95 percent of the SSI problems overlap the title II disability program and that SSI and disability insurance are almost the entire SSA related workload of legal aid offices.

ESTABLISHING THE NETWORK

Most of the discussion dealt with how to organize a network of legal aid groups, both regionally and nationally. It was agreed that a start should be made with a national group, although there was considerable interest in first holding regional meetings to choose a national group and to deal with local operating problems.

The selection of legal aid representatives should largely be the responsibility of the legal aid community. Since paralegal personnel perform most of the direct work with clients they are an important consideration in achieving "representativeness."

This group of seven legal aid attorneys agreed to supply SSA with the names of people to makeup the next group for a meeting in late July.

Key words in discussing the procedures through which the network would operate were openness, flexibility, and responsiveness. Stressed was the importance to legal aid people that when particular items are brought out they receive "real consideration."

This discussion indicated that there are definitely other important areas of concern besides SSI and disability insurance which should be considered in the formal meetings, and the network should have the flexibility to bring in different people when considering specialized problems.

The topic of financing for the meetings was mentioned but was not explored in any detail.

FEDERAL ADVISORY COMMITTEE ACT

The question was raised as to whether the operation of the proposed legal aid network will be an activity covered by the Federal Advisory Committee Act. SSA agreed to have the matter explored thoroughly and an opinion of the Office of General Counsel will be obtained.

THE COMMISSIONER'S OFFICE

The meeting closed after a brief talk by the Deputy Commissioner, Jarold Kieffer, who emphasized SSA's and his own commitment to establishing a continuing interchange with groups representing consumers. Mr. Kieffer indicated his interest in participating at greater length in the next meeting.

REPORT OF MEETING WITH LEGAL AID ATTORNEYS, JULY 27–28, 1976

The second meeting with the legal aid attorneys was opened by Associate Commissioner Parrott. The associate commissioner welcomed the group, reiterated SSA's interest and commitment in working with the legal aid community, and outlined the purposes of the meeting of assisting in the formulation of procedures needed to establish effective working relationships of SSA and legal aid programs. Mr. Parrott indicated that, from SSA's view, there were three purposes to the proposed network: (a) To provide a means by which information may be exchanged; (b) to provide a structure through which the legal aid community may identify problems and channel suggestions; and (c) to provide a means by which SSA can consult with legal aid lawyers on proposed changes.

Mrs. Juni then opened the substantive discussion. She stated that the purpose of the meeting was to develop a "mechanism that would work," to exchange information and provide structures for input. She noted that the legal aid representatives had not met their commitment in supplying SSA with names of additional persons to be included in the network and timely suggestions for an agenda. She stated that SSA was seeking identifiable gains from the operation of the network, and that this would require commitment, time, and effort from all parties concerned. Mrs. Juni stated that, although some small time was allotted in the agenda for a consideration of program problems, the first priority of this planning meeting was to outline in some detail the structure and functions of the legal aid network. Ms. Bader emphasized that, although the "ground rules" for the operation of the network should be clearly established, a certain flexibility would need to be built into network representation and operation.

Joel Cohen outlined the possible impacts of the Federal Advisory Committee Act on the operation of the network, and this discussion led into a consideration of other problems surrounding network representation and operation. Several legal aid representatives again pointed out that the small group in the room did not and could not "represent" the legal aid community as a whole, since there was no overriding "organization" among the legal aid lawyers. Thus, the criteria for selection of legal aid attorneys to participate in the network were difficult to determine. Mr. Kimbell felt that representation in the network was really a secondary problem; the key issue was what role would the network play. Ms. Blong stated this same concern and asked whether the network would play a role in policy development. Mrs. Juni responded by saying that part of the operation of the network would include an opportunity to make timely input and comment to the agency and to present the legal aid perception of problems of program operation. Mrs. Juni distinguished between an adversary and an advocate role for the network, saying that SSA did not want network meetings to become an adversarial free-for-all, but did expect the legal aid attorneys to be strong advocates for the positions they considered correct. Mutual respect should prevail.

Mr. Goar indicated that all questions about role or representativeness would be moot without a consideration of travel funds. Mrs. Juni responded by saying that SSA was not planning to provide reimbursement for additional meetings, but that SSA would assist in locating other sources of funding. Mr. Miller noted that the legal aid backup centers could pick up the travel cost for their staff who were part of the network, but the local legal aid offices would need outside assistance, at least for the travel costs, if not the per diem. Mr. Miller asked at what level the decision was made, and was told that it was an OEA decision consistent with other policies laid down by the commissioner. Mr. Miller indicated that the attorneys would probably appeal this decision.

Mrs. Juni asked whether the legal aid groups should be kept separate from other structures of consumer input. The general consensus was that the legal aid network should be a separate structure, although this structure would not preclude other persons or organizations from participating in network meetings if the need arose. There also seemed to be general feeling that network meetings should take place in Baltimore, to allow for ready access to SBA technical personnel, but this also did not preclude some meetings being held in other parts of the country if a specific and limited agenda is worked out in advance.

The session on Tuesday afternoon opened with a discussion by Dick Brown of OPO concerning claims manual distribution and availability of other SSA documents. At the present time, legal aid attorneys may receive claims manual chapters 12 and 13, "A" supplements, and disability insurance letters. Mr. Brown briefly outlined the present arrangements for claims manual distribution to legal aid attorneys, some problems, and possible plans for the future. Mr. Brown indicated that the agency was developing a unified system for issuing field instructions in addition to the policy and procedural information contained in the claims manual which would help relieve the problem of multiple instructions to the field. Mr. Goad asked about the role of regional program circulars and the distribution of central office responses to policy inquiries from a region. Ms. LePore described regional procedures to assure that the circulars do not decide national policy questions. Barry Powell further answered that all ten regions receive answers to any regional inquiry, to assure national uniformity of interpretation. Mr. Miller seemed to sum up the feeling of the legal aid lawyers by saying that there seemed to be too many sources of "law" in the field, and the local legal aid attorneys had access to too few of these.

Ms. Blong asked Mr. Brown why only claims manual chapters 12 and 13 were distributed to legal aid attorneys, when many topics of importance to SSI were contained in other claims manual chapters. Mr. Brown indicated that the claims manual should be reexamined to see what other sections might be needed, but that there were problems in distribution which also needed to be resolved. Mr. Miller then indicated that the National Senior Citizens Law Center (NSCLC) would probably find it difficult in the future to continue the role it has played in claims manual distribution. Finally, Mr. Brown indicated that the agency was attempting to place more claims manual information in the program regulations themselves. Concerning the regulations, Mr. Brown indicated that there was a "law and regulations" section of the claims manual, and indicated that work was needed to determine the volume and exact cost of making this available to legal aid attorneys.

After Mr. Brown concluded, discussion concerning network organization and operation was resumed. The legal aid attorneys proposed a network structure which would include: (a) A core group of legal aid representatives who would attend quarterly meetings. This core group was proposed to consist of four "national" legal aid representatives: National Senior Citizens Law Center (Miller); California Rural Legal Assistance (Abascal); National Health Law Program (Mullen); Center on Social Welfare Policy and Law (Blong); and four local legal aid representatives: James Weill (Legal Assistance Foundation of Chicago); Doris Falkenheiner (Legal Aid Society of Baton Rouge); Linda Bernstein (Community Legal Services, Philadelphia); and Steve Kimbell (Vermont Legal Aid). (b) The core group would develop and submit to SSA a list of 30 to 50 names of other legal aid attorneys with significant experience in SSA programs. This larger group could be called upon by the core group and by SSA to provide input and expertise. Discussion for the remainder of the afternoon revolved about issues associated with this proposal. Mrs. Juni noted that blacks and other minority groups were not represented on the proposed

network, and that this could be a significant problem. Mrs. Juni also indicated that such an arrangement would have to be approved by the Commissioner and the Department, and that the Federal Advisory Committee Act (FACA) might limit this arrangement or impose additional requirements. Thus, no final answer would now be possible. Other items to be researched were suggested, including the content of a "charter" under the FACA, the possibility of "subcommittees" or "workgroups" for analysis of specific problems, and alternate sources for funding the network.

The first presentation on Wednesday morning was made by Rose LePore concerning the SSA organization. Ms. LePore outlined the role and relationship of the central and regional offices, and the various bureaus and offices. This discussion proved to be the jump-off point for a rather complex discussion concerning the role of BHA vis-a-vis the rest of SSA, the precedential weight of appeals council and ALJ decisions, the relationship of such decisions to policy formulation, and allegedly inconsistent decisions on disability cases applying for title II and title XVI. Paul Muller of BHA responded generally to a number of these questions, and Mrs. Juni indicated that substantive questions of this type should be left to later meetings when there could be thorough preparation. The legal aid representatives seemed to agree that a discussion of issues surrounding BHA would be a priority for subsequent meetings.

The remainder of the morning session was devoted to a discussion of the mechanics of the communications process between SSA and the legal aid community and a listing of priority problems for subsequent meetings. The advantages and disadvantages of various existing publications were discussed, including the *Clearinghouse Review*, the *Poverty Law Reporter*, newsletters from NSCLC, and the Center on Social Welfare Policy and Law. Other potential mechanisms were outlined, such as letters or memoranda from SSA to network representatives on significant matters.

In addition to questions concerning the role and relationship of BHA to the rest of SSA, the legal aid attorneys listed a number of other priorities which they desired to be considered in network meetings: input on contemplated policy changes; the notice and reconsideration process; the application process; overpayment policy and procedures; representative payees; and outreach. Mrs. Juni emphasized the need for an organized system to identify agenda items and to distinguish between routine and special concerns representative of consumer interests. It will be particularly important to assure that "business as usual" is supported, that normal communications and day to day work continue between the various SSA and legal aid offices. However, for items that will be explored in depth at network meetings, the group indicated that the network representatives should raise and document the question in advance. SSA should furnish a response with pertinent materials, and then the matter would usefully be discussed at a meeting.

Wednesday afternoon was devoted to a presentation of two substantive areas, the Privacy Act and check replacement. Concerning the former, Dick Brown of OPO discussed SSA's present posture concerning the act, and along with Gerry Altman of OCC answered a number of technical questions regarding the act and the access it gives to legal aid personnel to the records of a beneficiary. Mr. Brown indicated that the agency would be clarifying the requirement of consent for receiving information.

Mr. Bert Rouse of OPO discussed the title II critical case processing and check replacement procedures, and Mike Johnson of OPO outlined the system and procedures for replacing SSI checks. There were a number of questions regarding the feasibility of using prepositioned checks in the district offices to replace missing checks, and Ralph Abascal was also interested in an evaluation of provision in H.R. 8911 for States to provide interim assistance in the case of lost, stolen, or missing checks. Mr. Abascal asked whether the department had any formal position on H.R. 8911. Ms. Blong commented that the handouts of the type distributed by OPO to summarize and explain check replacement would not be sufficient for subjects to be discussed at future meetings. She asked that for future meetings such summaries should be cited throughout to applicable SSA policy and procedures manuals. Mr. Trazzi pointed out that such "citation" to sources was possible in some cases, but not in others.

At various times throughout the 2-day meetings, the legal aid attorneys asked that all formal decisions and announcements for the network be made in writing to minimize the chances for misunderstanding and to insure that all were adequately informed. They asked that minutes be kept of future network meetings, and that formal reports be filed. SSA staff emphasized their

own desire to keep a formal record of network activities and information, and indicated at the end of the second day that a report of this planning meeting would be distributed.

ITEM 2. LETTER AND ENCLOSURE FROM WILLIAM O. GREEN, MABLETON, GA.; TO SENATOR EDWARD M. KENNEDY, DATED OCTOBER 1, 1976

DEAR SENATOR KENNEDY: I just had occasion to run across your article entitled "Care for the Aged: Our Last Minority" that appeared in the May-June, 1974 issue of *Case and Comment* [see enclosure]. Quite recently we had a very difficult experience in my office that is prompting this letter to you as a result of the expression of your concern in the article I just referred to.

Some few years ago a middle-aged gentleman suffered a heart attack and was confined to a nursing home. In the ensuing course of events this gentleman was confined for a brief period of time to one particular nursing home in Cobb County, Ga. The lack of care and attention that this man got while there is simply appalling. We know for a fact that he suffered a fall and a resulting fracture though nobody at the home knows about it even though he was confined to his bed and could not move himself at all. We know one instance where he was left propped up in a chair for about 24 hours. We know of many instances of physicians' instructions not being carried out. We have photographs of the most horrible ulcerations of the man's skin caused by lack of attention to his needs in the nursing home. This tale of horrors goes on and on.

He died.

To make a long story short, we advised the grieved widow of the difficulties in pursuing litigation like this (an administrator's suit as well as the death action against the nursing home) and she wanted it pursued anyway, not for the money that she might or might not get, but because of a very honest desire to have such an impact on that home and others like it that others could not be victims of this sort of maltreatment. I don't have the slightest question in my mind but that this was the sole motive that this lady had in pursuing this case.

The original tragedy notwithstanding, the thing I want to communicate with you about is this: After we got suit filed and we really began to get into the case, we uncovered the most bizarre charade of ownership and responsibility that I have ever heard of. Some con artist or artists somehow set up a series of corporate shells and, to again make a long story short, I will simply say there was nothing and no one to get at in this case. The nursing home is still operating under the protection of some sort of receivership and it is abundantly clear that the people primarily responsible for this situation are long gone and there are not any assets from which judgment could be satisfied even if it were ultimately obtained.

I think what I am trying to say is that I certainly would be in favor of some sort of registration requirement for these homes and some sort of mandatory financial responsibility requirement. I realize that a lot of our medical friends are highly critical of malpractice claims, but I do not think that any responsible person in or out of the medical field would deny that the assertion of malpractice claims is certainly a primary factor in bringing about a lot of safety features that we now have in the hospitals.

I realize full well that the present mood of the country is antiregulation, but it does seem to me that the deplorable state of nursing care facilities for the aged in this country cries out loud and clear for some kind of help.

Cordially,

WILLIAM O. GREEN.

[Enclosure]

[From *Case & Comment*, May–June 1974]

CARE FOR THE AGED: OUR LAST MINORITY

(By Senator Edward M. Kennedy)

In the mid-nineteenth century, the missionary James Moffat recorded in his diary his conversation with an old Hottentot woman whom he had found

abandoned in a desert: "Yes," she said, "my own children, three sons and two daughters have left me here . . . to die . . . . I am very old, you see, and am not able to serve them. When they kill game, I am too feeble to help with carrying home the flesh. I am not able to gather wood and make a fire, and I cannot carry their children on my back as I used to do."[1]

THE NADER REPORT

This scene unfortunately has its modern counterpart, as revealed in Ralph Nader's *Task Force Report on Nursing Homes.* Seeing old age as the "last segregation," the Nader group, led by six seniors and an instructor at Miss Porter's School in Farmington, Connecticut, has documented the tragedy of many of the one million elderly citizens institutionalized in the 24,000 nursing homes across the country.

Nursing homes represent only a part of the over-65 subculture, affecting five percent of the 20 million elderly Americans. The federal government pays 40 percent of a $2.5 billion a year nursing home industry. Fifty chains of nursing homes now have their stock listed on Wall Street, and the elderly are treated in too many instances as digits in a profit and loss statement rather than as human beings.

The study group's main conclusion is that neither the government nor the nursing home industry nor the medical profession accepts responsibility for the quality of elderly health care. This disinterest is aggravated by a decentralized bureaucratic maze which ranges through a half dozen federal agencies, through multiple agencies in each of the states, and through local licensing and inspecting boards.

The bedsores and boredom of the aged can be traced through inadequate government programs and through the failure of national leaders to make a firm commitment to decent care for the aged. The medical profession appears to abdicate professional responsibility, and a profit-oriented nursing home industry appears willing to cut costs at the expense of its patients. Finally, our youth-oriented society is insensitive to the plight of elder Americans, rushing them to nursing homes regardless of the homes' quality.

The *Nader Report* first reveals the national disgrace of our treatment of the aged by tracing the history of efforts to enact legislation providing health insurance for all citizens, a struggle whose fate is still before the Congress. Attention is focused on the ebb and flow of support for national health insurance, the opposition being crystallized at various points by the American Medical Association, the American Hospital Association, and the American Nursing Home Association. Even partial victories in behalf of the aged have been hard-fought and few—the Social Security Act of 1935, the Hill-Burton Hospital Survey and Construction Act of 1946, Old Age Assistance in 1950, Social Security benefits for the disabled over age fifty in 1956, the Kerr-Mills bill in 1960—the forerunner of Medicaid—and Medicare and Medicaid in 1965. But no national policy was defined to offer strict enforceable standards and close inspection of the nation's nursing homes.

STANDARDS

A single nursing home, for example, may be inspected under three sets of standards—state licensing codes, Medicare standards, and Medicaid standards. The consequences of bureaucratic fragmentation are made clear: "in the absence of one agency clearly designated as responsible, and capable of assuming that responsibility, the public interest in insuring high-quality care in nursing homes has been frustrated."[2]

It should come as no surprise that 80 percent of the nursing homes that receive public tax dollars do not meet minimal federal standards. The reaction of a sympathetic Medicare inspector in Maryland is indicative of the attitude which persists at the state and local—as well as national—level: "the ultimate step of closing nursing homes is avoided because neither the homes nor the states has an alternative to offer the patients."[3]

---

[1] The Matabele Journals of Robert Moffat (J. Wallis ed. 1945).
[2] C. Townsend, Old Age: The Last Segregation 39 (1971).
[3] *Id.* at 48.

This points again to the helplessness of the elderly patient who may be forced to choose between an inferior home or no home at all.

SUPERVISION AND INSPECTION

Nursing home inspections are often less revealing than they might be because of the almost universal practice of notifying homes well in advance of the inspection. The *Nader Report* found it not uncommon for homes to hire additional personnel for the inspection day in order to qualify under the staffing requirements, or to move staff members from floor to floor as the inspector made his tour. Deficiencies and poor conditions, whether camouflaged or not, are usually exacerbated by exorbitant costs, especially since older persons have less than one-half the income of younger people, while their medical expenses are three times as great.

Although doctors may attend individual patients, they neglect the home itself. With no medical supervision at all in many homes, the aged must fend for themselves. Female patients in urine-soaked nightgowns a week old, catheter tubes without urinal bags, bleeding from unattended wounds, call buzzers put deliberately out of reach, baths given but once a month, bedsores and urine burns, stale and even spoiled food are but a few of the agonies found by the Nader investigators.

Whether or not the many nursing home organizations deny that these horrors are widespread, the fact that they exist at all requires national attention and action, and their existence libels those institutions and administrations dedicated to the quality of care of their patients.

Most tragic of all have been the fatal consequences of the prevailing attitude of disinterest in and neglect of the health of our elderly citizens. On January 9, 1970, 32 patients died of smoke asphyxiation at Harmar House Convalescent Home in Marietta, Ohio. The scenario of death should not have been an unexpected one—deficient alarm signals, no fire evacuation procedures, doors too narrow to admit hospital beds, no water sprinklers or fire extinguishers, flammable and smoke-producing carpet.

Similar conditions in the enforcement of sanitation standards last year made Gould Convalesarium in Baltimore, Maryland, the scene of twenty-five deaths due to salmonella poisoning. Hearings later revealed that the home did not meet state requirements for kitchen hygiene or food handling. Disaster recently struck again, this time in a Homesdale, Pennsylvania nursing home, where in the words of Arkansas Congressman David Pryor "fifteen people met unforgivable deaths in a night of horror."[4] The fire which extinguished those lives came just a few weeks after the Pennsylvania Association of Nursing and Convalescent Homes had strongly, and successfully, opposed a regulation tightening state regulations governing fire procedures.

ADMINISTRATION AND ENFORCEMENT

An important aspect of the nursing home scandal revealed by the Nader inquiry is the role of the administrator in maintaining high standards of care. Educational credentials or experience in the field have been virtually nonexistent among a large percentage of nursing home administrators. For that reason, this writer sponsored an amendment to require educational standards for nursing home administrators. Yet, as the study points out, it would be wholly consistent with current regulations to have "an eighteen-year-old high school dropout running a house for the elderly, with sole responsibility for hiring and directing personnel, managing food services, coordinating patient care activities, as well as handling business and financial arrangements and community relations."[5]

Another major problem is holding owners accountable for homes they operate. Ninety percent of all nursing homes are privately owned, profit-making operations. There are strong indications that stricter regulations are

[4] Address by Congressman David Pryor, Women's National Democratic Club, Nov. 4, 1971.

[5] C. Townsend, Old Age: The Last Segregation 82 (1971).

needed to prevent abuse by owners, particularly in instances such as those found by the Nader study where entrance contracts require patients to sign over all of their possessions to the nursing home—often even including the deed to their burial plot.

Perhaps the most startling revelation of the task force study concerns drug abuse. Nursing home patients are at times "direct victims of the irresponsible administration of drugs, unchecked prescriptions, unauthorized drug experiments, and the widespread practice of administering tranquilizers to keep the patients quiet." [6] This situation requires immediate remedial action.

Both present and future members of the legal profession should by now be aware that they bear a significant responsibility to the elderly. The composition of local licensing boards may be in open violation of State licensing regulations. In Maryland, a nine-man board was at one time comprised of four owners of commercial nursing homes, plus a salesman of ambulance service and nursing home supplies. Yet, the study notes that Maryland law forbids board members to have any financial interest in nursing homes. As Nader and his associates report, "it was only when the family threatened to sue the home for negligence and the doctor for malpractice that the home released the woman from the contract and returned her property." [7] It can only be hoped that our lawyers take up the responsibility to bring dignity to the nation's elderly.

STUDY GROUP RECOMMENDATIONS

The study group concludes with a number of important recommendations to upgrade the quality of nursing homes and elderly health care in general. They include strict federal enforcement of nursing home standards and regulations; the publication of quality ratings for homes receiving federal money; medical review of homes to ensure adequate policies and practices; improved training of nursing home aides; higher standards in the licensing of administrators; better means of identifying nursing home owners and holding them accountable for deficient practices; stricter control over the use of experimental drugs on patients; and an active program of alternatives for elderly citizens outside the nursing home, including adequate community housing, employment opportunities, and home care programs.

The *Nader Report* has painfully reminded us that the elderly represent one of the most wasted human resources in this country. No truly great nation can afford to abandon a commitment to end the present demoralization of growing old—what one writer has described as the process of disengagement. The anguish of this national disgrace is perhaps best summed up in a recent letter to Congressman David Pryor from a young nursing home employee. She writes:

"I am sick of the smell of urine and feces and the silent eyes of old people who have no one left; forced to die in a place that has no regard for their dignity or worth as human beings. . . . What is going on today is bad enough and we can't sweep our old people under the rug and pretend they don't exist. If we have the means to keep them alive we have the means to allow them to live a meaningful old age." [8]

CONCLUSION

We have subjected a vast portion of our elderly population to an institution itself sick, feeble, and in need of care. We have consistently ignored the special needs of what is perhaps America's last minority, a status which our aged seem to escape only in the death to which we rush them. That this minority is an ever-increasing one may be seen in the trend toward earlier retirement at a time when the average life expectancy is rising. As the number of elderly citizens increases, their health care needs expand by an even greater proportion. So also does our moral responsibility to meet those needs. We must not allow one million of our fellow human beings to live out their golden years as victims of a bleak and tarnished tragedy. We must instead restore to old age the dignity envisioned by the Roman philosopher Cicero: "For herein is old

[6] *Id.* at 121–22.
[7] *Id.* at 93.
[8] *Id.* at 195–96.

age honest and honorable, in defending and maintaining itself, in saving itself free from bondage and servitude . . . even until the last hours of death."

ITEM 3. REPLY LETTER FROM SENATOR EDWARD M. KENNEDY TO WILLIAM O. GREEN, DATED NOVEMBER 19, 1976

DEAR MR. GREEN: Your description of the nursing home to which your client's husband was confined is deeply disturbing. Unfortunately, similar tragedies are occurring in nursing homes throughout this country. As Chairman of the Health Subcommittee, I am giving serious consideration to the problems of licensure of nursing homes and strict federal regulation of their operations.

I have taken the liberty of bringing your letter to the attention of my Subcommittee and to the Special Committee on Aging.

Thanks for taking the time to write.

Sincerely,

EDWARD M. KENNEDY.

IMPROVING LEGAL REPRESENTATION FOR OLDER AMERICANS

TUESDAY, SEPTEMBER 28, 1976

U.S. SENATE,
SPECIAL COMMITTEE ON AGING,
Washington, D.C.

The committee met, pursuant to notice, at 9:45 a.m., in room 4232, Dirksen Senate Office Building, Hon. Harrison A. Williams, Jr., presiding.

Present: Senators Williams, Hartke, and Clark.

Also present: William E. Oriol, staff director; David A. Affeldt, chief counsel; Deborah K. Kilmer, professional staff member; John Guy Miller, minority staff director; Margaret Fayé, minority professional staff member; Patricia G. Oriol, chief clerk; Eugene R. Cummings, printing assistant; and Donna M. Gluck, resource assistant.

OPENING STATEMENT BY SENATOR HARRISON A. WILLIAMS, JR., PRESIDING

Senator WILLIAMS. We will come to order.

Today, the Special Committee on Aging will continue its hearings on "Improving Legal Representation for Older Americans."

Our agenda is long and our list of witnesses is impressive this morning. So I shall be brief and make three major points in my opening remarks.

First, the committee has a longstanding interest in making legal representation more readily available for the elderly.

As chairman of this committee in 1970, I initiated hearings 6 years ago in St. Louis at the American Bar Association conference on the legal problems of the elderly.

This hearing made it abundantly clear that older Americans had major legal problems which were receiving far too little attention. Since then, the Congress has enacted a number of measures to focus greater attention on the legal needs of the aged—from the private bar, law schools, the legal services program, and at the community level.

One example is the Older Americans Amendments of 1975, which include potentially far-reaching provisions to improve legal representation for the elderly. In addition, the Congress approved increased funding for model projects to develop innovative solutions for the aged's legal problems. Three of our witnesses today operate programs under the model projects section of the Older Americans Act.

Second, older Americans should be served by Government and not thwarted by it. Effective service is vital for the elderly because they rely on many Federal programs: social security, medicare, medicaid, supplemental security income, railroad retirement, veterans' pensions, food stamps, and others. But if my mail is an accurate indicator—and I think it is—many older Americans are baffled and confused when they deal with the Government. Of course, they are not alone in this.

Many Elderly Are Confused

An elderly widow may wonder why her SSI check is suddenly reduced when social security benefits are increased.

A 75-year-old man who is homebound may be understandably upset because of the redtape and bureaucratic lethargy at the local department of social services. Yet, he may be forced unnecessarily into an institution, at a much higher public cost, if he is denied homemarker services.

A retired worker may also throw up his hands in utter disbelief when he tries to wade through the retirement income credit schedule of form 1040.

Every Senator, I am sure, has heard identical or similar accounts. We try to help those who write and tell us about their problems. Caseworkers in our offices are kept busy working on behalf of these individuals to assure that they are treated equitably, fairly and courteously, by administrators of Federal programs.

We also know that there are many more out there who do not write, who do not complain, and who do not know just what to do. Oftentimes they accept wrong-headed decisions or injustice simply because they do not know what recourse is available.

Third, a society based on law should take steps to assure that its citizens—whether they be rich, poor, young or old—have equal access to the law. However, perhaps two out of every three Americans, according to some estimates, do not have access to legal services.

Reasonable persons may differ about the actual number of Americans who cannot obtain legal help when a problem arises, whatever the reasons may be. But, there is no doubt that a substantial number must look out for their own interests when a legal dispute occurs. And this is especially true for older Americans, whether their problems require the attention of an attorney or a person whose profession is described as paralegal.

Fortunately, some steps are being taken now to make legal representation more readily available for the elderly. Our leadoff panel, from Camden, N.J., will provide us with some examples of positive actions at the grassroots level on behalf of aged clients.

We at the Committee on Aging have always encouraged firsthand testimony because we want "to hear it like it really is" from the real experts—the people affected by Government programs. In the final analysis it is the people who will ultimately decide whether Government efforts are worthy, effective, and helpful. With this in mind, I welcome our panel from Camden.

Before we turn to our first panel, Senator Clark of Iowa is here. Senator Clark, do you have an opening greeting?

Senator CLARK. No opening statement. Thank you.

Senator WILLIAMS. We will proceed with Ms. Lessie Hill, attorney, Senior Citizens Advocate Center, Camden Regional Legal Services, Camden, N.J.; Rev. R. Alvin Wilson, chairman, Advocate Center Executive Committee, Camden, N.J.; and Mrs. Katherine Ashton, Gloucester, N.J. We welcome you and are grateful to you.

STATEMENT OF REV. R. ALVIN WILSON, CHAIRMAN, ADVOCATE CENTER EXECUTIVE COMMITTEE, CAMDEN, N.J.

Reverend WILSON. Senator Williams, we are very happy to be here and we appreciate your concern. Also, often we feel like we are voices crying in the wilderness and now that we have this kind of recognition it is very helpful.

It has been my privilege to be chairperson of the Citizens Advisory Committee. When Father Don Griesman of the Camden Regional Legal Services asked me to become involved in the forming of a citizens advisory committee for an advocate center for legal services for senior citizens, I was happy to respond. Because I had worked closely with the Camden Region Legal Services for a number of years, I had the highest respect for their work and felt honored to be asked to participate.

The function of the advocate center committee is to help choose the lawyers for the center and to help set policy. Therefore, I am happy and proud to present one of our lawyers, Ms. Lessie Hill, who directs the center. She represents the caliber of our staff.

We started out on a shoestring and with 70,000 potential clients that we have in five counties. It seemed sort of ridiculous to have just two lawyers take care of all these cases. However, our program is expanding, and with your blessing we trust that the Government will give title III more money so we can expand our program to get back into the boondocks, rural slums, and places where we need special kinds of transportation to go out and meet the low-income people who have real problems.

So now it is my privilege to introduce to you Ms. Lessie Hill, who will give you the specifics of what we are doing in Camden.

Senator WILLIAMS. Thank you very much, Reverend Wilson. We will come back to you after we hear from Ms. Hill.

STATEMENT OF LESSIE HILL, ATTORNEY, SENIOR CITIZENS ADVOCATE CENTER, CAMDEN REGIONAL LEGAL SERVICES, CAMDEN, N.J.; ACCOMPANIED BY KATHERINE ASHTON, GLOUCESTER, N.J.

Ms. HILL. The Senior Citizens Advocate Center was established in March of 1974. The initial funding for the center was divided by a grant from the New Jersey Division on Aging. The initial grant was $27.375 and Camden Legal Services provided a contribution of $9,125. The moneys from the division on aging were title III moneys. That is a brief introduction of the center.

Now I would like to ask Mrs. Katherine Ashton some questions. Mrs. Ashton is a former client of mine and of the center.

Mrs. Ashton, how old are you?

Mrs. ASHTON. I am 69 years old.

Ms. HILL. What is the source of your income and how much do you receive?

Mrs. ASHTON. I get social security, $149.70, and then I get SSI, medicare, and medicaid.

Ms. HILL. Have you any problems with receiving your SSI benefits?

Mrs. ASHTON. No; I have not.

Ms. HILL. What is your present housing situation?

Mrs. ASHTON. Well, my home is too big and I cannot stay in it at the present time because I cannot afford to heat it. I cannot afford the gas and electric. I stay with an elderly lady across the street and I get my housing from her.

Ms. HILL. How did you learn about the Senior Citizens Advocate Center?

LEGAL AID OBTAINED

Mrs. ASHTON. My husband was suing me for a divorce and I didn't know which way to turn. I had no money to get legal aid. My son found out through someone in a New Jersey bank that I could get legal aid from the Camden Regional Legal Services at Front and Point Streets, so he took me there and I got Ms. Hill to take my case and see, I got my divorce.

Ms. HILL. How was the center helpful to you, if it was?

Mrs. ASHTON. The center was very helpful to me, it saved me a lot of money. I didn't have the money in the first place and Ms. Hill got the divorce without any trouble and it didn't cost me a cent.

Ms. HILL. Would you use the services of the center again?

Mrs. ASHTON. I sure would; in any way, shape, or form.

Ms. HILL. Why would you agree to come here today?

Mrs. ASHTON. I agreed to come here because I figured the older people need more help and they need more money to get along on because the cost of living, health care, and other things are getting so high it is hard for people to live off of social security in the ways that we require.

Ms. HILL. Do you think that projects such as the Camden Senior Citizens Advocate Center are necessary for low-income elderly persons?

Mrs. ASHTON. Yes; it is, very much so.

Ms. HILL. Why do you think it is necessary?

Mrs. ASHTON. Because the way things are, people can't afford to pay the high prices for food, housing, electricity, oil, and other necessities.

Ms. HILL. So you think that there are ways in which legal services can help older people?

Mrs. ASHTON. Positively.

Ms. HILL. I thank you.

Senator WILLIAMS. Thank you very much.

Ms. HILL. I just would like to talk a little further about the center and perhaps later somebody might have some questions of Mrs. Ashton.

The mandate of the center was to provide free legal services to low-income persons—low income being described as income of $3,000 or less and elderly persons being defined as anyone 60 years of age or older. A center to especially deal with the legal problems of the elderly was thought of because the number of elderly persons being represented by legal services was extremely low when compared to the numbers in the area served by the project.

Many Problems Require Professional Services

Often senior citizens failed to realize that a lot of their problems were legal in nature and that legal services was there to serve them. Even those that knew that the problems could be solved by an attorney hesitated to contact an attorney because they could not afford one or they felt they couldn't contact legal services because lawyers, just like doctors nowadays, don't make house calls. The center was to provide services to seniors in a five-county area of South Jersey—more specifically Camden County, Gloucester County, Salem County, Burlington County, and Cumberland County.

As Al mentioned earlier, the number of low-income seniors in these five-county areas—he said 70,000 but I think it is closer to 100,000. In order to be brief I will not go into a detailed breakdown on the age and income distribution for each county.

Rather, I will just use Camden County as an example. Camden County has 41,161 residents who are 65 years of age or over. Of these residents, 19 percent, or 7,884 people, are living on fixed incomes below the poverty level. This income level ranges from about $1,400 to about $2,200. It is estimated that another 39 percent are living on incomes of between $3,000 to $7,000. In Camden County alone, the elderly population make up the highest percentage of the total population in the urbanized core. The elderly population group is increasing at a faster rate than any other group in the county of main population.

With one attorney initially, the center had represented over 140 clients in a 1-year period and the pressing caseload demanded expansion of the center. In December 1974, an additional attorney was hired. Shortly thereafter the area plan concept was instituted and through some type of administrative mixup the center was without funds for approximately 2 months. For the first time since its inception, the center had to notify persons that the services were not available.

The elderly community pressed their local elected officials and sent numerous letters to the Government requesting funding for the center. The State Department of Community Affairs fortunately had some discretionary funds which they gave to the center and we were back in business again.

The following year the center appealed to the county office on aging for funding. These efforts to achieve funding necessitated so much politicking and meeting with different freeholders that services to clients had to be curtailed and one attorney had to devote a major amount of his time on simply obtaining funds. Even after all of the center's efforts, funding was obtained from only four of the five coun-

ties which would have been served. That meant the service of one of the counties had to be discontinued.

In 1977, it was anticipated that the center would receive title III funds from all five counties and that the center can hire an additional paralegal to adequately serve the clients in the counties. In order to avoid the pitfalls of the county office on aging, vis-a-vis, the free-holders approach to funding, we strongly urged that title III moneys be allocated to projects in some type of flat grant so that at least we would know the specific limitation on the number of years that the project may apply for and receive funds.

Attorneys Must Budget Time

With an open caseload of approximately 300 clients, the center's attorneys cannot afford time to spend on funding problems. Presently the staff of the center consists of two attorneys, two paralegals, senior volunteers, law students, college students, one VISTA paralegal, and one VISTA attorney.

Now, I just would like to give you some idea of the types of cases that I and the other attorney in my office are dealing with on a daily basis.

The case that I will use is the JFK Towers Tenants Association. Approximately a year ago, a number of the elderly residents, in fact all of them in this public housing project in Camden City, were having numerous problems. The biggest complaint of the more than 100 tenants was the elevators. They said the elevators didn't come and they didn't go. In recent months, they had been taking their complaints to the project's manager and the results were just totally unsatisfactory—in fact, there were no results at all.

I think one statement of Mr. Frank Gibson, who was then president of the tenants association, just about summed up the feelings of the tenants. In speaking to the housing authority, he said: "Three of us have died in the past 2 months, 12 in the past year, 5 of us are now in the hospital. We cannot wait forever and you have done nothing for us so far."

Another glaring example, an aged tenant broke her wrist in the elevator when the elevator jerked and knocked her off her feet.

On July 24, an elderly woman had to wait 15 minutes on the stretcher before the elevator arrived to take her to the ambulance.

Another example of what is going on in the projects, when one 75-year-old woman moved into the project her apartment was extremely dirty and she requested that it be painted. She was simply given 3 gallons of paint and told, "Here, paint it yourself."

With these types of problems, these persons very effectively organized themselves a tenant association and came to the Senior Citizens Advocate Center for representation. Through the combined efforts of the staff of the center, we were able to obtain for these persons new stoves and new sinks. One man, who is 51 years old, lived in the project. He was a diabetic and had to have broiled foods. His oven had not worked in a number of months. We were able to get a stove for him; we were able to get stoves for some other people and refrigerators. We got repair and overhauling of the elevators. We got bars on the doors and we got the apartments painted.

I would not say all the problems in that project have been resolved, but the major problems were resolved. The office is still open so we are still working with those tenants.

Eviction Terms Opposed

I will conclude with just one more example of the types of problems that were encountered. Another was the senior citizens who lived in the mobile home park. Camden has three mobile home parks and the majority of these people are senior citizens. One of the parks would not let them stay. The owner of the park had a lease and he was leasing some ground. On that ground were approximately 40 mobile homes. There was a clause in the lease providing that it could be canceled on 6 months notice. The notice was given to the owner of the park and he in turn passed the news on to the tenants.

According to New Jersey law, there is nothing wrong with that if you want to retire the housing from the market or give 6 months notice, but these persons were just totally upset. They didn't know where to turn. Fortunately, some of them had been individual clients of the center and they came to us as a group. We were not able to do anything about the lease situation, but we were able to negotiate with the parties involved.

We got an additional 6-months extension that enabled a number of the people to gain time to sell their mobile homes or to get apartments. For a number of people, we were able to get them into apartments without having to pay the month or month-and-a-half security deposit. A number of persons had to sell their mobile homes. One lady I know just about gave hers away and moved in with her children.

So I think that is one good example of what we were able to do for the seniors even though, to put it quite frankly, we didn't have any law on our side. It was just other things that we were able to do before that. The center handles housing cases, the traditional cases of senior citizens such as social security and SSI problems. Surprisingly enough, we handled a lot of domestic relations cases, those obtaining divorces, even some child custody cases, that type of thing.

I just would like to make one suggestion and that is that some type of funds be allocated for the establishment of a mobile unit. We need transportation to go to the clients. We serve a five-county area spread out over a large proportion of South Jersey.

Advocacy Role Described

We cannot reach these people. We have been knocking on doors, but we still have not reached a number of people who we know are there and who we know need our services. If we had a small bus, we could outfit it with a desk, a typewriter, and a paralegal. We could be at senior citizens projects, we could be at nursing homes, we could be where the people are, and we could more effectively deliver our services to people.

That is all. Thank you.

Senator Williams. Thank you very much, Ms. Hill. It impresses me that you have most accurately described your center as an advocate

center. This was your designation of title to describe your activity, am I right?

Ms. HILL. Yes.

Senator WILLIAMS. And it impresses me from all you have said here that while it was created for basically legal services, situations develop that go beyond the narrower confines of legal questions that are really a response to social needs. So, yours is an advocacy and in the social service sense. For example, those mobile homes, while the lease was unbreakable, I suppose, and they were living up to the provisions of the lease, you, as an advocate, got an extension of time and then made other living arrangements possible.

Ms. HILL. Yes.

Senator WILLIAMS. Excellent. How large is your staff, Ms. Hill? Do you have a staff of 15 or so?

Ms. HILL. I guess all told it is about 15. We have only six paid full-time workers.

Senator WILLIAMS. Two lawyers and you are one of the lawyers.

Ms. HILL. Yes; that is right, and two paralegals.

Senator WILLIAMS. What training is needed for a paralegal?

Ms. HILL. Well, there are certain colleges that offer a paralegal course. I think it is approximately 2 years in terms of recruiting paralegals. We don't specifically require that. The only thing that we require is that the person have a high school diploma. We spend from 6 months to 1 year training these people. It is mostly on-the-job training. These people are not attorneys, they do not go into court, but they are of tremendous assistance to attorneys. They can go in and represent persons in administrative hearings such as social security, welfare, unemployment, those types of hearings. So they really are the backbone of attorneys and legal services, and I think the legal services uses paralegals more than traditional law firms.

Senator WILLIAMS. Who is the other attorney who works with you?

Ms. HILL. His name is John Poindexter. He is a young man who graduated from law school about a year ago, and he has been working quite effectively with the center.

Senator WILLIAMS. Have you thought of supplementing or expanding your staff to include, perhaps, lawyers who have retired from active practice?

Ms. HILL. We were thinking of some type of joint program with the bar association to use retired attorneys. That program has been talked about for 1 year now, but we just have not been able to get it off the ground for a number of reasons, but hopefully we will be able to come up with some type of program. Presently, we have one retired attorney who works for the volunteers and his services to the center amounts to 20 hours a week.

Senator WILLIAMS. I missed that.

Ms. HILL. One senior, 67 years old, a retired attorney, volunteers his services to the center for 20 hours a week.

Senator WILLIAMS. What is his name?

Ms. HILL. Sam Smith.

Senator WILLIAMS. Excellent. We wanted to get him in the record and to applaud Sam Smith for his volunteer work in this connection.

Reverend Wilson, did you have something to add at this point?

Some Volunteers Work Full Time

Reverend Wilson. Yes. This is my concern on the advisory committee. Mr. Smith is an excellent example of an RSVP volunteer. We work closely with the RSVP and they were able to send him our way. He had been to law school but had not practiced law; however, his first love was law. Now, after he has made his pile as a successful businessman, he is free to volunteer his services. He is very happy to come and, actually, spends full time at the center.

We are also working closely with the RSVP directors in each county, to provide us with senior volunteers to be trained as paralegals. To extend the services of the advocate center, we need paralegals in each county. Mr. Smith is our prime example.

Then again we are projecting a course for another category of volunteer who may be called "legal aid." Legal aids to the paralegals can enable the center to extend its services to a larger constituency. If we can have a legal aid volunteer in each club in each county, then we can begin to reach many seniors who as yet have not heard of our center. With this multiplication of our services, we could also begin to reach out to the isolated poor in the rural slum pockets we have in South Jersey. Lack of transportation isolates many poor senior citizens who are unable to get to the centers where the senior clubs meet.

Senator Williams. I think maybe for the listening audience—and this is being recorded and taped for CAP, I believe—RSVP is the retired seniors volunteer program. That is a creation of the Senate Special Committee on Aging, and it has really brought out the vitality of older people into service of others and in a magnificent way.

I am delighted to hear that Mr. Smith is part of that effort, RSVP. Very good.

Now, Rutgers Law School at Camden is a dynamic place. I have been there many times. You mentioned the relationship with the Camden Senior Citizens Advocate Center, Ms. Hill. Have they worked into any part of the curriculum anything concerning job familiarity and practicing with people on legal questions?

Ms. Hill. No. I hesitate to say too much because the building that we are presently housed in is being leased to us by Rutgers University for a dollar a year, and prior to that, they let us use two of their offices for legal services.

Senator Williams. Where is the advocate center?

Limited Transportation Hampers Access

Ms. Hill. The advocate center is about two blocks from what is Camden Law School at 12th and Front Streets in Camden. It is inaccessible to a number of senior citizens because the bus stop is about four blocks away from the center. Oftentimes we have persons who get off at the bus stop and call up on the phone and an attorney or a paralegal stops what he is doing, jumps in the car and goes over to pick up the person. So the transportation is a major problem simply because of the location of the center. We had hoped to consolidate a number of the offices in Camden and move closer to the bus stops, and so forth, but we didn't have enough funds to do that.

Senator WILLIAMS. Even with a relocation within the city of Camden, accessibility to the other counties is most difficult, I would think, unless an individual had an automobile.

Ms. HILL. Oh, yes.

Senator WILLIAMS. No bus routes would lead conveniently from Deptford to your advocate center, for example?

Ms. HILL. No; not from the rural areas to Salem.

Senator WILLIAMS. That is why the point is being made about transportation. A budget for transportation is so important if your service and availability is to be made real for people beyond Camden City.

Ms. HILL. Yes. Proportionately we would be serving more clients in Camden City than we do in the other countries and that is mainly because of the transportation problem. Now we have made some meager efforts to solve that problem. We have a paralegal who goes to Salem County 1 day a week. She simply goes down there and sits for about 8 hours and when a person comes in she takes the basic information and then she brings that case back to the center and consults with an attorney and we take it from there. But even with one person going to the counties 1 day a week, we are not reaching the vast number of people that we should because even in terms of the paralegal going to, say, Salem County 1 day a week, that person sits there and people still have to come to him.

I think the statistics indicate that the elderly do not have money for automobiles and if they have the money for the car, they don't have the money for the upkeep, or if they have an automobile, for a number of reasons they choose not to drive it. So simply because of the transportation problem, we are not reaching a number of the people that we feel we should be reaching and the statistics that we have accumulated indicate that very clearly.

We are not just coming here today and advising you of this problem, but we want you to know that we have made certain efforts on our own to resolve the problem. We have applied for foundation grants, and so forth, but for some reason this type of program is not all that glamorous and we just have not been able to get funding for it. Our estimates indicate that it would not cost that much to outfit some type of minibus.

We have even got Legal Services to agree to keep up the maintenance and insurance on the bus and we anticipate that we can get some types of contributions from seniors, and so forth, but the bulk of the moneys we just have not been able to obtain.

Senator WILLIAMS. If you were equipped to be mobile, you could go to the outlying counties. You could visit senior citizen clubs, for example, and describe the help that you can bring to people.

Ms. HILL. Yes.

Senator WILLIAMS. And that knowledge of the club could radiate out into even more remote areas—to others, I would imagine, including friends of those who come to the center.

HOME VISITS UNECONOMICAL

Ms. HILL. Yes. I have been with the project a little over 2 years and in my estimation transportation is the major problem of the center.

We simply need to go to the people. We do home visits but our caseload is about 300 now. To have an attorney go out of the office for an hour to do a home visit just simply is not economical, although we do it. That type of an effort is not reaching people.

If someone absolutely cannot come in and they call the office, and so forth, someone will go out, a paralegal, and get the information and bring it back. But even doing that—and that is very inefficient—we still don't reach the number of people that we should or the number of people who we know are eligible for the service and who need the service.

The most rural areas are in Cumberland County and Salem County and those counties are furthest away from the center. The center is at Camden and those are the areas which are being served the least by the center simply because of location.

Senator WILLIAMS. Yes.

Reverend Wilson.

Reverend WILSON. I think this is our main interest in the advisory committee and why it is important to cooperate with the RSVP. The idea would be that we would have a volunteer in every club who would represent us and be the outreach person to bring in the people, tell the news that there is help for them. This is what we are working for.

Senator WILLIAMS. Excellent. I wish I had had this hearing a few weeks ago. I have been in all these counties a great deal recently. I would like to be an advocate for the advocate center. I will be hereafter, because your service is so needed and being done so sensitively and so remarkably.

You spoke of the rural slums—meaning, of course, really the rural people living in great poverty. Have problems reached you from these areas? What is the nature of the problems?

Ms. HILL. A number of those problems are in Salem County and Cumberland County. I guess the greatest problems we see are in terms of housing.

We had one elderly woman come in. She was 67 years old. She lived in a house that didn't have plumbing and she didn't have toilet facilities in the house. She was having problems with the heat in the house. I think she had a spaceheater in the house. I guess that was the most extreme problem that I saw that came from the rural area, and she contacted us. She had initially contacted the Office on Aging and they referred her to the center and we in turn went to her. We were able to help her. Fortunately, we got her out of the house. We got her into low-income senior housing and I believe at some time the matching was instituted against the landlord also, although I cannot recall now how it terminated.

Cumberland County has a large number of elderly farmers. We see a large number of those problems also. Then, too, we have a large number of requests from seniors for wills, a large number of social security and SSI problems. A large number of the elderly say they cannot get through the application process for SSI or they don't understand, as you had mentioned earlier, when one program is increased or knocked off another program. Last year a number of them were lost in medicaid coverage. We were able to help a large number of those persons.

ATTORNEYS UNFAMILIAR WITH PROBLEMS

The average attorney knows very little about the problems of senior citizens. They have no idea what SSI means, so the attorneys and staff of the center are very effective in dealing with those types of problems simply because these attorneys have developed quite a bit of expertise in dealing with problems of older Americans.

Reverend WILSON. Senator, one thing I would like to have on the record is the interlock we have with the county directors of the offices on aging and the directors of the RSVP programs. The directors often attend our executive committee meetings and help us in the planning of our program. They also help us select the county representatives on our executive committee. They are the top leaders of the senior citizen club programs on aging.

Ms. HILL. I just would like to say one other thing. I have been talking a lot about individual clients. I would like to say also that the center is involved in a large number of law reform cases. We tried to help seniors individually as well as to alleviate the plight of senior citizens as a group and we do this through instituting major actions. We are involved with efforts to reduce utility costs for seniors, we are involved in the food stamp program, we have been involved with trying to obtain model leases. We are involved with rent control statutes. We tried to get those types of things for seniors.

Transportation is a major problem of the seniors. We find out what these problems are from questionnaires that we submit from time to time. When we see that a number of seniors are encountering a problem over and over, we try to institute major actions that will alleviate these problems of senior citizens, and this is one thing we have been doing throughout South Jersey.

Senator WILLIAMS. Where do you send these questionnaires?

Ms. HILL. In local newspapers, and so forth. They were published and then we sent them out in the mail to senior citizens groups and so forth. We wanted to find out from the seniors what they wanted from the center, what they expected from us and what they perceived to be the major problems. From these questionnaires we institute suits.

Senator WILLIAMS. Mrs. Ashton, we have not been questioning you enough. You described your housing situation. Your home is a large home in Camden?

Mrs. ASHTON. In Gloucester.

Senator WILLIAMS. And this has been your home for a long time?

Mrs. ASHTON. Well, since 1916 we have lived there. It was my mother's homestead and when she died she left it to me as long as I lived. It is my home but it is entirely too big for me to take care of. It has 19 rooms in it and I cannot afford to keep it up. I go across the street and stay with an elderly lady. She is 97 years old and I stay with her in order to have heat. I feel like a companion to her because she has nobody else.

Senator WILLIAMS. Has this large home of yours been put on the market to sell?

Mrs. ASHTON. No.

Senator WILLIAMS. Do you own it yourself?

Mrs. ASHTON. Well, it is an estate between three of us, a sister and a brother. In other words, whichever one dies, the other one gets it.

Senator WILLIAMS. I see. Have you had any legal problems with the center that arose out of your residence situation?

Mrs. ASHTON. No, none whatsoever.

Senator WILLIAMS. This is in Gloucester City?

Mrs. ASHTON. Gloucester City, N.J.

CENTER AIDED BY TITLE III MONEYS

Senator WILLIAMS. This has been very, very helpful. As I see the picture, title III money from the national program goes to the States, from the States to the county offices on aging, and all five counties have contributed part of their money under title III to the center.

Reverend WILSON. Yes.

Ms. HILL. Yes. It goes to the corporation, that is true, and then it is used for the maintenance of the center.

Senator WILLIAMS. First, it goes really into the hands of the Legal Services Corporation?

Reverend WILSON. Yes.

Ms. HILL. Yes.

Senator WILLIAMS. And then they distribute the money to you?

Ms. HILL. Yes.

Reverend WILSON. Yes.

Senator WILLIAMS. There is another route of money. The taxpayers money that comes out of Federal programs does reach your communities, and this is being renewed now. That is the revenue sharing money. I know that some of the counties in your area have been very responsive, using revenue sharing money in service to older people in Gloucester, for example.

Gloucester County has an excellent transportation program paid for in part by revenue sharing money. Are you familiar with that?

Ms. HILL. Yes, I am. I know some of those moneys with revenue sharing were specifically earmarked for and were used for seniors basically on transportation problems. I think dollarwise that is where a senior needs a ride to a doctor or a hospital and he calls up and the bus comes and gets the person at a prearranged time, picks him up and takes him back home. That does exist in Gloucester. There was a similar program but it does not exist any longer. There is no such program in Salem County nor in Camden County.

Senator WILLIAMS. Reverend Wilson.

FUNDING POSSIBILITY FROM REVENUE SHARING

Reverend WILSON. One source of funding legal services is title XX moneys at the State level. However, since this is the prime source of funding for our parent organization, namely, the Camden Regional Legal Services, we do not compete for these funds. Now that we have better public relations with the county offices, I think we may have a better chance of approaching the freeholders and investigating the possibilities of funding from the revenue sharing moneys. We are making a little progress.

Senator WILLIAMS. Excellent. Well, it has been very exciting, very revealing, and certainly I applaud all you are doing.

Where did you graduate, Ms. Hill, from law school? Wherever it was, I bet you were the top of the class.

Ms. HILL. Oh, I don't know. That depends on how you define the top.

Reverend WILSON. She made a record at the college and we hired her. She will be a tremendous person to develop a community development program out at the college.

Ms. HILL. Thank you.

Senator WILLIAMS. I believe it. She has shown that. Thank you very, very much.

Now we are going to combine the panels here. Margaret Stone Brodsky, project director, legal counsel for the elderly, American Association of Retired Persons; Eric S. Sirulnik, associate professor of law; codirector, Institute of Law and Aging; director, Community Legal Clinic, National Law Center, George Washington University; and William Fry, director, National Paralegal Institute.

Will those persons named come forward.

That one light means a vote in the Senate. So maybe I will go over and take care of that. If you could relax for a few minutes rather than starting and interrupting, we can proceed shortly. I will vote and return.

[Whereupon, a short recess was taken.]

AFTER RECESS

Senator WILLIAMS. We shall reconvene and come to order again.

STATEMENT OF MARGARET STONE BRODSKY, PROJECT DIRECTOR, LEGAL COUNSEL FOR THE ELDERLY, NATIONAL RETIRED TEACHERS ASSOCIATION/AMERICAN ASSOCIATION OF RETIRED PERSONS, WASHINGTON, D.C.

Ms. BRODSKY. Thank you. My name is Margaret S. Brodsky. I am project director of Legal Counsel for the Elderly, a model project located here in Washington, D.C., providing legal services to the elderly.

The project is funded by the Administration on Aging of HEW through a grant to the National Retired Teachers Association/American Association of Retired Persons. I appreciate this opportunity to testify before you on the need for improved legal services for the elderly.

You have already heard testimony from another representative of the NRTA/AARP, Dr. James Peace, at your hearings in Boston on August 30. Dr. Peace's testimony addressed generally the special needs of the elderly and the efforts to meet these needs which have been made to date by the Administration on Aging and through other channels. My testimony today will concentrate on what has been learned about providing legal services to the elderly by the first year of operation of Legal Counsel for the Elderly and on what we feel can be done in the future to encourage expanded legal services for the elderly and—perhaps more importantly—to encourage the elderly to utilize the legal services which are available to them.

Legal Counsel for the Elderly was established in June 1975. The purpose of the project was to test the hypothesis that retired persons would be willing to volunteer their time and could be trained by full-time staff lawyers to act as paralegals in an operating law office serving the elderly.

The staff spent the first months of the grant year laying the groundwork for screening potential volunteers from the Washington area, preparing the forms and substantive materials the volunteers would use in their work and training the first group of volunteers. Twenty-five volunteers were chosen from over 70 applicants. Each volunteer agreed to work 1 day a week and to participate in a 3-day training program.

Public Benefit "Checkup"

The office opened to clients in December 1975. During its first 8 months of operation the model office, staffed by 2 full-time attorneys and 25 part-time volunteers, has offered 3 services: (1) A public benefit "checkup" for each new client to determine if the client is currently receiving all benefits to which he is entitled; (2) legal representation for clients whose problem involves entitlement to a public benefit such as title II social security, supplemental security income, medicare or medicaid; and (3) an information and referral service for all callers whose problem cannot be handled directly by the model office.

The model office has been able to take on at least 60 new clients each month and to provide information and referral services to an additional 100 persons each month. A good deal of the work of the office, at all levels, is done by the retired volunteers, working under the supervision of staff attorneys. The volunteers conduct client interviews—which include giving the new client a benefit "checkup"—negotiate with government agencies on behalf of clients, draft correspondence and help prepare for hearings. The volunteers have performed so well in handling public benefit problems that, starting this month, the pilot office has begun handling cases in a second major area of importance to the elderly. The service of the office has now been expanded to include assistance with wills and with protective arrangements such as powers of attorney and conservatorships.

In our first months of operation the project staff has learned that the benefits of using senior volunteers—aside from the obvious one that their services are free—are manifold. Retired people bring to a job a range and depth of experience from their own worklife which makes them exceptionally competent. The volunteers are both dependable and enthusiastic about their work. Perhaps the greatest advantage of using senior volunteers, though, is that older clients are more willing to use, and more pleased with, a service which is offered by their peers.

NRTA/AARP believes that Legal Counsel for the Elderly serves as a good example of how the quality and quantity of legal assistance to the elderly can be enhanced, without large additional expenditures, through the use of a slightly imaginative approach. Volunteer retirees, in addition to increasing the capability of paid professional

staff by at least 50 percent, make it possible to give each client a kind and degree of personal attention which would not otherwise be possible.

The associations are pleased that the project will be able to continue for another year under a combination of renewed funding from the Administration on Aging and a grant from the District of Columbia Office on Aging. In the coming year the project will continue to run the District of Columbia pilot office and, in addition, will be helping to set up similar offices using senior volunteers in other jurisdictions.

"Volunteer Retirees as Paralegals"

Use of volunteer retirees as paralegals is obviously only one of a myriad of good ideas which can help in the eventual development of comprehensive legal services for older Americans. Many of these ideas have been presented to this committee during these hearings, and I have included some additional suggestions later in my statement. For the moment though, I would like to concentrate not on ways of fostering better service but rather on important threshold barriers in the profession of legal services to the elderly. The problem is that the elderly, ignorant both of their legal rights and of the counsel available to them to enforce their rights, do not fully utilize the legal services which are available to them.

To a large extent it is the very nature of the predominant legal problems of the elderly which breeds their ignorance of their rights. Generally, over half the legal problems of an elderly client group concern entitlements to various public benefits. The elderly person whose benefits have been denied or terminated by a government agency probably does not regard that agency as an adversary which can be challenged. Rather, the agency is perceived as infallible, or at least all powerful, with the absolute right to grant and deny benefits. Of course, this is an untrue perception but a strongly felt one nevertheless.

Older persons' ignorance about the legal services available to them is less explicable than their ignorance of their rights, but equally evident, as the recent experience of Legal Counsel for the Elderly attests. In May of this year, a small article about Legal Counsel's pilot office in the District of Columbia appeared in one of the NRTA/AARP's membership publications. This article elicited some 1,200 letters in a 3-month period from older persons in all parts of the country who had legal problems and did not know where to turn.

Obviously, the answer to the problem is to provide the elderly with information about their rights and about the help available to them in enforcing those rights. Specifically, to suggest some possible solutions, it would be helpful if Legal Services Corporation grantee projects were to provide senior citizen groups with speakers on topics of special interest to them, such as social security rights; if every agency administering a benefit program—and perhaps every pension fund administrator as well—were required to enclose a list of available legal services with every notice of adverse action; and if bar associations were encouraged to compile listings giving the specialties and qualifications of attorneys within their jurisdiction.

The need for education, however, is only a threshold problem. The fact remains that there must be increased and improved legal representation for the elderly to meet even current demand.

Policy Proposals Considered

Many innovative approaches to the problem of providing improved legal representation for the elderly are currently being tested; and I am certain that many other ideas have been and will be presented to this committee during these hearings. To all these I add the following suggestions. Although the NRTA/AARP has not taken a policy position on any of these proposals, we believe they are worthy of your consideration:

(1) That the Legal Services Corporation be directed to develop substantive and training materials dealing with areas of particular concern to the elderly. These materials would serve as an encouragement to legal services staff—both attorneys and paralegals—to handle client problems in these areas.

(2) That capacity to increase legal services to the elderly in the public sector be increased by requiring a year of service to the elderly following graduation from law school as a condition for receiving a Federal loan for legal education.

(3) That consideration be given to providing a tax benefit to attorneys in the private sector who provide free or low-cost services to clients over a certain age and under a certain income level.

In conclusion, NRTA/AARP is gratified that this committee has directed its attention to this area of great concern for the elderly and hopeful that the work which has been begun in providing adequate legal assistance for the elderly will be continued and expanded.

I hope that my remarks today will be of help to you in your consideration of this important problem. Thank you.

Senator Williams. Thank you very much.

Let's continue with the panel members. In that way we question you all at once.

Mr. Sirulnik.

STATEMENT OF ERIC S. SIRULNIK, ASSOCIATE PROFESSOR OF LAW; CODIRECTOR, INSTITUTE OF LAW AND AGING; DIRECTOR, COMMUNITY LEGAL CLINIC, NATIONAL LAW CENTER, GEORGE WASHINGTON UNIVERSITY, WASHINGTON, D.C.

Mr. Sirulnik. Thank you.

Good morning. My name is Eric Sirulnik. I am the codirector of the Institute of Law and Aging at the National Law Center of George Washington University. I am also the director of the Community Legal Clinic which is the litigation component of the institute.

On my left is Ms. Robinwyn Lewis, one of the four supervising attorneys at the clinic and also its associate director. On her left is Attorney Raymond Natter, the director of the institute's research component. It is with great pleasure that we appear before you this morning.

I speak to you today as someone who has been heavily involved in clinical legal education for the past 8 years, 4½ of them as the director of my own program at George Washington University and before that as the assistant director of the Urban Law Institute, the forerunner to the Antioch School of Law.

It is no secret that there is a crisis in the delivery of legal services to the Nation's aged and aging poor. Problems such as agency advocacy, will writing, estate planning, and tax counseling are so time consuming that general legal services agencies such as our own neighborhood legal services programs (NLSP) in Washington, which are funded by the Legal Services Corporation and overwhelmed by their present caseloads have deemed this service a second priority. In fact, such services are often not available at all. Although there is some basis for these agencies setting legal priorities, that justification is less than persuasive to a 74-year-old widow whose social security check has stopped coming in.

Even when a general legal services agency does have the time and resources to represent the extremely large number of special cases generated by the process of growing old, it rarely, if ever, has the expertise to do it effectively and efficiently. Social security practice, for example, is a form of administrative advocacy which is *sui generis* and capable of frustrating even the most experienced legal practitioner who has not previously faced the problem.

Private Bar Reluctant

The private bar is likewise of little or no help in providing services to the elderly poor, and lawyers are seldom willing even to maintain minimal numbers of paying elderly clients because of the time demands required to deal with the total lifestyle problems of older Americans.

Further, and perhaps in conclusion, it is our observation that a large portion of the blame for this lack of legal services can be lodged squarely with the country's law schools. Not only are the law students who represent the future membership of our bar not given anything resembling the requisite preparation for adequately representing the elderly, they are given even less of an incentive to do so. Predictably, will writing and trusts and estates are offered universally, but ask a graduating law student a question about medicaid or supplemental security income and his or her response will likely be one of ignorance.

As for interest in representing the elderly, and especially the elderly poor, the problem comes full circle. Since there is little or no classroom material dealing with that area of elderly concerns, a future lawyer's likelihood of becoming interested in the field is less than encouraging.

For the past 4 years the Community Legal Clinic, and more recently the Institute on Law and Aging, have been intensely engaged in a relatively unique experience in clinical and legal education. That experience has been the representation and legal education of older Americans as part of the law school curriculum. To date, the positive results of our experiment have been quite substantial and even more promising. I wish to share those results with you this morning.

Beginning with the fall of 1975, through moneys made available by HEW's Administration on Aging and the District of Columbia Commission on Higher Education, the Institute on Law and Aging initiated a program composed of three separate but coordinated components: (1) A clinical legal education program in the field of law and aging aimed at traditional law students; (2) a paralegal training program in the field of law and aging directed at a group of 60 retired or semiretired persons; and (3) a research effort in the same field with the object of producing and distributing written materials for use in this and other law schools throughout the country.

The clinical program, known as the Community Legal Clinic, operates under the fundamental proposition that second- and third-year law students can gain invaluable practical legal experience while helping provide badly needed civil representation to substantial numbers of the area's aging who are otherwise incapable of retaining counsel. Last year, some 1,300 District of Columbia, Maryland, and Virginia residents were assisted by our law students in everything from estate planning to civil litigation in the city's landlord-tenant and small claims branches of the District of Columbia Superior Court.

In so doing, these students became skilled in such substantive areas of aging law as social security representation and medicare-medicaid procedures which would otherwise be unavailable in the law school curriculum. Perhaps more importantly they have also become exposed to, and sensitized by, the problems and needs of the elderly client.

Their training includes work with students and faculty from other disciplines related to serving the aging, such as the medical school and the departments of sociology and psychology. Over the past year, approximately 90 second- and third-year law students enrolled in this aspect of the institute's program.

Tapping the "Untapped Source"

Our paralegal training for seniors program is another partial solution to the gross inadequacy of legal services currently available to the Nation's aged and aging poor. By training older Americans who are retired or approaching retirement to become legal resources with specific skills in assisting the elderly, an intriguing and virtually untapped source of legal aid is being explored for the benefit of the aging community. The obvious understanding these paralegal students have for the problems of their fellow seniors is only one of several dividends their selection as future legal assistants has provided. The wealth of experience many of them have derived from years of government and industry service, and in fact from just plain living, makes them particularly effective as both advocates and counselors for other older Americans.

For last year's class of 20 such older paralegals and this year's class of 40, the program has been a significant contribution to ending the personal waste of retirement while providing badly needed legal services to the elderly.

It is our hope to interest government agencies as well as private law firms in the employment of these legal resources for the aging; for instance, their benefit to a local social security office in helping applicants proceed in the benefits process would be substantial.

We discovered in setting up our project that not only was there a paucity of clinical materials in the field of law and aging but that a similar shortage existed in traditional classroom materials. Under the direction of our research staff we have for the past 2 years been hard at work in the production of new and particularized materials for use in the classroom and the clinic. Seven completed volumes of substantive materials exploring the age-related issues of such traditionally taught law school courses as taxation and housing law as well as literally hundreds of pages of clinical forms related to representing the aging are now available for public use as a result of our efforts.

Finally, perhaps the aspect of the project with the most far-ranging potential is our design to make our own model, complete with textbooks, research materials, and clinical forms, and procedures, available to law schools throughout the country. Through a grant from the Administration on Aging we intend this year to experiment with such a program exportation at three yet to be selected law schools in representative areas of the Nation. By effecting the use of State and area agencies as the storefront office, as we use it, these programs can become an inexpensive and mutually beneficial working program for the chosen law schools and the States and local agencies.

Thank you.

[The prepared statement of Mr. Sirulnik follows:]

PREPARED STATEMENT OF ERIC S. SIRULNIK

THE INSTITUTE OF LAW AND AGING

I. THE PROBLEM

In the United States today, there are over 21 million people 65 and older, and an additional 19 million people between the ages of 55 and 64.[1] These individuals are faced with increasingly serious legal, socio-legal, and economic problems. For example, one-quarter of all elderly families have annual incomes of less than $3,000, and one-half of all elderly people living alone have annual incomes of less than $2,000.[2]

Thirty percent of all elderly are living in substandard housing,[3] and it is estimated that between 25 and 50 percent of all elderly individuals presently confined in institutions have no medical reason for being placed there.[4] Governmental assistance is extremely important for the elderly as a group, statistics indicating that almost 80 percent of all individuals aged 75 or older are relying on social security or supplemental security income for at least a portion of

[2] Fry, "The Senior Citizen Paralegal: An Advocate for the Elderly Poor," Department of Health, Education, and Welfare, Administration on Aging. *Aging*, 10 (January–February 1974). Although the problem of poverty affects all categories of the aged, perhaps the most severely disadvantaged are the nonwhite elderly and elderly widows. See, e.g., hearings on "Future Directions in Social Security" before the Senate Special Committee on Aging, 94th Cong., 1st sess., pt. 10 (1975).

[3] Senate Special Committee on Aging, *Developments in Aging: 1970*, S. Rept. No. 92–46, 92nd Cong., 1st sess., 27 (1971).

[4] *Aging*, supra note 2. While thousands of elderly individuals are confined to institutions without proper cause, others face the situation in which they will need some form of institutional care and not be able to receive it, due to either lack of funds or the critical shortage of space available. See, Subcommittee on Long-Term Care, Senate Special Committee on Aging, 93rd Cong., 2d sess., *Introductory Report: Nursing Home Care in the United States: Failure in Public Policy* (committee print, 1974).

their monthly income.[5] Unfortunately, many Federal, State, and local programs make it almost impossible for most persons to understand let alone negotiate the bureaucratic procedures required to obtain benefits without the assistance of a trained professional.[6]

These statistics demonstrate the dramatic need of our Nation's elderly for competent and readily available legal assistance. The elderly need advocates for better housing conditions, for more stringent competency procedures, for fair and realistic welfare benefits, for protection of pension benefits, for representation before Federal and State agencies, and for assistance in disputes involving all forms of age discrimination and mandatory retirement practices. Yet, the sad truth is that our present legal community is unable to provide adequate legal assistance to the vast portion of elderly Americans who are unable to afford the fees of the private bar. In the field of social security, for example, the shortage of qualified attorneys is especially acute, and one prominent administrative law judge has stated:

". . . [I]t is paradoxical that in this area of administrative law [social security], where the claimant is most in need of an attorney's legal counsel and expertise, it is so noticeably lacking. To a great extent . . . the bar has shown indifference toward becoming involved in social security matters. I am also firmly convinced that attorneys' involvement would speed up the hearing process."[7]

Problems such as agency advocacy, will writing, estate planning, and tax counseling are so time-consuming that general legal services agencies such as neighborhood legal services programs (NLSP) which are funded by the Legal Services Corporation and overwhelmed by their present caseloads, have deemed this service a secondary priority; and in fact such services are not provided. Although there is some basis for these agencies setting legal priorities, their justification is less than persuasive to a 74-year-old widow whose social security check has stopped coming.

Even when a general legal services agency does have the time and resources to represent the extremely large number of special cases generated by the process of growing old, it rarely, if ever, has the expertise to do it effectively and efficiently. Social security practice, for example, is a form of administrative advocacy which is *sui generis* and capable of frustrating even the most experienced legal practitioner who has not previously faced the problem.

The private bar is likewise of little or no help in providing services to the elderly poor, and lawyers are seldom willing even to maintain minimal paying elderly clients because of the time demands required to deal with the total life style problems of older Americans.

Further, it is our observation that a large portion of the blame for this lack of legal services can be lodged squarely with the country's law schools. Not only are the law students who represent the future membership of our bar not given anything resembling the requisite preparation for adequately representing the elderly, they are given even less of an incentive to do so. Predictably, will writing and trusts and estates are offered universally, but ask a graduating law student a question about medicaid or supplemental security income and his or her response will likely to be one of ignorance.

As for interest in representing the elderly, and especially the elderly poor, the problem comes full circle. Since there is little or no classroom material dealing with the area of elderly concerns, a future lawyer's likelihood of becoming interested in the field is less than encouraging.

II. SOLUTIONS PROPOSED BY THE INSTITUTE OF LAW AND AGING

The Institute of Law and Aging has developed a unique and innovative program designed to meet this challenge. This prototype utilizes the resources of a major law school—the National Law Center of the George Washington University—and the skills provided by a small staff of professionals trained

[5] K. Davis, "The Paradox of Poverty in America," 56 (1969).

[6] E.g., disputes, frequently arise as the more than 150,000 requests for administrative hearings received by the Social Security Administration in 1975 indicate. Hearings before the Subcommittee on Social Security of the House Committee on Ways and Means, 94th Cong., 1st sess., 29 (1975).

[7] Hanrahan, "Social Security—Another Area for Specialization," 49 Fla. B.J. 294, 297 (197).

in the problems of the elderly, to provide training for lawyers, law students and paralegals in the area of "elderly law," while at the same time providing immediate and direct legal assistance to the elderly community. The program is composed of four interrelated components: (1) Training for senior citizen paraprofessionals or paralegals in the legal problems of the elderly; (2) training of law students in the area of elderly law; (3) development of materials that can be used by both the senior citizen trainees and law students; and (4) exportation of the program to other universities throughout the country. Each of these four phases of the institute relies heavily on outside assistance as well as support of the law school community, and each phase complements the other to form a cohesive and cost-efficient operation.

A. Paraprofessional Training

At the core of the Institute of Law and Aging's structure is the paralegal training for seniors' program (PTS). The goal of this program is to train older persons in the skills necessary to offer competent paralegal and social service assistance to other senior citizens. The effectiveness of using paraprofessionals in this capacity is very promising. For example, statistics from the Social Security Administration indicate that claimants who appear *pro se* at social security administrative hearings are successful approximately 38 percent of the time. However, claimants who have been represented by a nonattorney, such as paralegal or lay advocate, have won 48.5 percent of their cases.[8] The obvious conclusion is that paraprofessional assistance, especially at administrative hearings, is an effective tool for assisting the older social security claimant.[9]

The PTS program itself consists of two components—traditional classroom instruction and clinical experience. The first part of the program, the classroom instruction, began in the Fall of 1975 with an initial class of 20 paralegal students aged 55 or older. Selection of these students was based on their prior education, work experience, communications skills, community involvement, motivation, and, most important, their desire to work with and for the elderly. The student body was composed of individuals from every part of the city and surrounding suburbs and represented varying income levels from the elderly poor to the upper middle class, and equally heterogeneous educational backgrounds.

Instructors for the program were recruited from the faculty of the law school, the graduate law department (LLM candidates), and from the professional staff of the institute. Various speakers were invited to address the class from one of the governmental agencies being studied by the class at that time.

Classroom instruction began with an introduction to the art of interviewing the older client including the psychological and emotional problems the interviewer might encounter. This was followed by substantive course work in the areas of landlord and tenant law, social security, supplemental security income, medicare, medicaid, consumer law, probate and will writing, and legal research.[10] All para-legals were required to pass written examinations in these subjects before being permitted to participate in the clinical phase of the program.

The clinical portion of the PTS program began by placing the paralegal students under the direct supervision of attorneys and advanced law students. The paralegal students were then assigned to clinical sites located throughout the community. The primary clinical placement was at our storefront office, located in the Adams-Morgan section of Washington, D.C., and known to the community as "Operation PEP," protection for elderly people. Other clinical placements included seven National Capital Housing (public housing) projects designed for elderly tenants, a nutrition site for the elderly located in southeast Washington, and the George Washington University Legal Aid Bureau. One paralegal, with a particular interest in legislation pertaining to the elderly, was assigned a clinical placement at the National Council of Senior Citizens' research arm—Legal Research and Services for the Elderly.

---

[8] Collins, "Supplemental Security Income: An Advocate's Handbook," 161 (1975). Claimants represented by attorneys are successful 54 percent of the time, *id.*

[9] An important dividend of such assistance is the reduction of costs of administering the social security appeals process. The improperly executed application, the ill-prepared hearing exhibition on the self constructed appeal, all take their toll on the Social Security Administration's ability to discharge its statutory role at a reasonable cost to the taxpayer (institute staff).

[10] See p. 229 for the complete curriculum.

At these clinical placements, the paralegal students received "on-the-job" type training, while at the same time providing, under the supervision of attorneys, direct assistance to the elderly community. The students gained practical experience in such procedures as initial intake, legal interviewing, legal research and writing, and advocacy at the administrative level. Paralegals were also given the opportunity to assist in the preparation of cases going to trial in various branches of the D.C. Superior Court.[11]

In February of 1976, every paralegal student participated in a special day-long seminar conducted by the Internal Revenue Service arranged by our project and held at the university. Following this seminar, which stressed the problems of the low-income and elderly taxpayer, law and paralegal students began providing free income tax assistance to those requesting such aid at our various service sites. This program is especially significant in light of the fact that many elderly individuals pay more taxes than they owe because of their failure to take advantage of many of the special tax benefits that are available to them.[12]

B. Training of Law Students

Equally important in our program is the training of future attorneys to be qualified and competent to deal with the legal problems of the elderly. Recognizing this fact, the Institute of Law and Aging is integrating the legal problems of the elderly into the regular curriculum. All of the clinical sites used in the training of senior citizen paralegals are used for clinical placement of law students. By the end of the academic year 1975–76, over 90 second- and third-year law students had participated in these clinics, including 10 students who were authorized to represent clients before the courts under the local student practice rules. To satisfy course requirements, law students were required to participate in these clinics, learning first-hand about the problems of the elderly, as coworkers with senior citizen paralegals placed at the same clinic. In this manner, law students gained valuable experience working with older people as both clients and as peers. Further, law students and paralegals in the clinic were required to attend a weekly seminar devoted to a lecture or discussion of some particular aspect of law and aging.

Law students also gained knowledge of the technical aspects of "elderly law" by participating in the research and development of the materials prepared by the Institute. These students were assigned various research topics in an area of the law in which they expressed an interest, and asked to prepare memoranda on these subjects. Memoranda which were of acceptable quality were then incorporated into the materials used in the training of the paralegals and law students.

C. Materials Development

The success of every training program is dependent upon the quality of the training materials used in that program. Because PTS is a completely unique program, no existing materials would have completely served our needs. Therefore, prior to the beginning of the PTS program, the institute began to develop its own materials, especially suited for the older paralegal student and law student. The result of this effort has been the creation of a textbook length training manual, entitled "Paralegal Training Materials on the Legal Problems of the Elderly." This book introduces the lay student to the concept of paralegal advocacy for the elderly, legal ethics, the unauthorized practice of law, and the psychology of aging. This is followed by an in-depth discussion of the art of legal research. Special emphasis is placed on the function of the paralegal in administrative proceedings, especially those involving social security, medicare, and supplemental security income.

The project also developed a "Law School Supplementary Materials Series" to be used in traditional law school classes supplementing administrative, welfare, tax, probate, consumer, and property law courses for the purpose of studying the legal problems of the elderly in each of these fields.

The institute is investigating the most cost-effective method of distributing these materials.

[11] NOTE: The paralegals are not themselves permitted to represent clients in these courts.

[12] See hearings before the Senate Special Committee on Aging on "Income Tax Overpayments by the Elderly," 91st Cong., 2d sess. (1970).

D. Expanding the Program

Our strategy for exporting this program throughout the country is three-part: (1) Teaching material development; (2) interfacing paralegal and law student education; and (3) clinical training through offering free legal services to the elderly.

Our teaching materials have been and are being developed to fit into traditional law school courses, because our strategy is to supplement existing courses rather than develop an entirely new curriculum. We are recommending specialized paralegal training for seniors to complement law student training for a number of reasons. First, older Americans need advocates to perform quasi-legal functions. Second, the law student can contribute knowledge about traditional legal approaches while the senior contributes specialized expertise about the problems encountered. Third, paralegal training is self-supporting because it is job-oriented and directed and can be tuition based. Fourth, specialized senior paralegals add the dimension of concern, sensitivity and appreciation for and about the legal problems of the elderly so lacking in legal education at present.

Finally, our program is based on the joint objectives of providing both short- and long-range solutions for the dearth of legal services available to older Americans. Our export program anticipates utilizing the over 300 State and local Administration on Aging offices already providing social services to the elderly. This resource provides a built-in office with clientele that is available for law schools needing clinics that can reach the elderly population.

This export prototype will enable law schools to pick up the educational model under existing classroom and clinical programs. It will also multiply legal services available to the elderly poor as adopted.

III. SERVICE TO THE ELDERLY

An immediate concern to the institute is the need for direct legal, social, and medical services to be provided to the elderly community. Recognizing that many of the problems faced by the elderly are not purely legal, but a combination of legal and emotional, the institute decided to use a multidisciplinary approach at its primary community center—the Operation PEP storefront. Arrangements were therefore made to place graduate counseling students at the PEP center to work with those elderly individuals who had either emotional difficulties or a combination of legal and emotional problems. These students worked under the supervision of a professional mental health counselor on the staff of the storefront office. This operation proved to be especially effective in the situation where an individual's legal problems were causing additional emotional problems such as depression or anxiety. An individual in this position would then be able to receive both legal and supportive emotional assistance in one coordinated approach. The following case history is illustrative:

Mrs. R., an elderly black widow, first contacted our PEP office in an obvious state of emotional distress. After an initial interview, she was invited to speak with one of the mental health counselors on duty at the center. The counselor soon learned that Mrs. R.'s emotional difficulties had been precipitated by the decision of the Department of Human Resources to terminate her eligibility for medicaid due to over-income status. The counselor made arrangements for Mrs. R. to meet with a law student working at the PEP office, who would be assigned as an advocate in her medicaid termination. The law student immediately requested Mrs. R. be given a full and fair hearing on the question of her continued eligibility for the medicaid program, and began to prepare for that hearing. During the weeks that followed, both the law student and the mental health counselor kept in close contact with Mrs. R.; the law student, in order to gain more information needed for the hearing, and the counselor, in order to prepare Mrs. R. for the possibility of losing her medicaid benefits. As the date of the hearing approached, alternatives to medicaid were discussed, as well as ways in which Mrs. R. could save money for medical expenses through simple changes in her budget. She was also given constant reassurance that she would be able to overcome the loss of the benefit, and learn to manage without it if necessary. By the date of the hearing, Mrs. R. was able to face this prospect with a minimum of anxiety and with a great deal of composure. The hearing was held, a decision was made in her favor, and the entire case was closed.

Arrangements are now being made with the George Washington University Medical School to institute a multidisciplinary, multifaceted service center, in conjunction with the school of medicine and health sciences gerontology program, where clients could be provided with interview, diagnostic and evaluative treatment for legal, mental and physical health, and other life style problems with a view toward immediate "treatment."

In addition to the legal and psychological services provided by the Operation PEP center, a wide range of other social services are available on an emergency basis. For example, emergency transportation, storage of household goods while locating housing, and assistance in finding housing are all provided or have been provided by the office whenever possible.

During the period from September 1975 through September 1976, the PEP center handled over 1,021 cases, for an average of 85 cases per month. Cases from all clinical locations, including the National Capital Housing sites as well as the PEP office totalled over 1,380 for the one year period. The highest percentage of cases requiring legal or paralegal assistance were in the areas of social security, medicare, medicaid, supplemental security income, wills and probate, and income taxes. Other legal problems that were presented frequently included consumer problems, Veteran's benefits, and landlord and tenant cases. But, whether the problem presented was designated legal or "nonlegal" (emotional and psychological), service to the elderly client was made available by a university based team of faculty, practicing professionals, paraprofessionals, and law students who had one thing in common—a desire to translate concern into service and learning.

Curriculum, Paralegal Training for Seniors, 1975–76

1. THE ROLE OF THE PARALEGAL (4 WEEKS)

This first segment contains an introduction into the function and role of the paralegal assistant in helping to solve the problems of the elderly. Special emphasis is placed on counseling techniques with the older client, psychological and emotional problems of the elderly, legal interviewing, and the prohibition against the unauthorized practice of law.

2. LEGAL RESEARCH AND WRITING (4 WEEKS)

Paralegal students are taught the fundamentals of legal research and writing including the National Reporter System, statutes and codes, legislative histories, Federal regulations, and the use of citators.

3. ADMINISTRATIVE LAW AND THE ELDERLY (10 WEEKS)

Paralegal advocacy before Federal and local administrative agencies is examined in detail. Topics covered include social security retirement, survivors' and disability benefits, medicare, medicaid, food stamps, and supplemental security income. The effect of the Administrative Procedure Act upon agency adjudications is stressed.

4. PRIVATE LAW (8 WEEKS)

The role of the paralegal as an adjunct to the licensed attorney is examined. Class work covers the areas of landlord and tenant law, rent control, the problems of condominium conversion of rental units, public housing, nursing home law, the problems of the elderly consumer, and will writing and probate law.

5. TAX (2 WEEKS)

Paralegals are taught the correct preparation of Federal and local income tax forms with emphasis placed on those provisions which are designed to aid the elderly taxpayer. Also discussed are property tax rules designed to benefit the older landowner.

6. CLINICAL PLACEMENT (8 WEEKS)

Practical experience is gained through placement at one of the seven clinical sites operated by or associated with the training program. This experience includes intake, legal interviewing, representation before administrative agencies and assisting law students with court cases. All clinical work is supervised by licensed attorneys.

Senator WILLIAMS. Thank you very much. Mr. Fry.

STATEMENT OF WILLIAM FRY, DIRECTOR, NATIONAL PARALEGAL INSTITUTE, WASHINGTON, D.C.

Mr. FRY. My name is William Fry. I am the executive director of the National Paralegal Institute. I thank you very much for the opportunity to speak here this morning.

I have submitted written testimony [1] which I am not going to read from or necessarily follow. I would like to summarize some of the main points in that testimony and raise some concerns about development of the new legal services program for older Americans.

I think this is a crucial time in the development of this national program. The program has now been running effectively for about a year and has gotten off the ground like a rocket. The need was so enormous and the interest so great that down at the State and area agency levels there is a great deal of activity and things are moving very quickly. I think within the next year the program will have developed a clear profile, so the questions that I would like to raise today are what that profile should look like.

First, let me say, what the National Paralegal Institute is. We have been in existence about 4 years. We focus on the promotion of the paralegal concept. We have a national scope and jurisdiction. We have been funded by OEO and the Legal Services Corporation and are now funded by HEW. Our focus is on promoting the utilization of nonlawyers in delivering legal services.

A great deal of our emphasis is on the preparation and delivery of training because training is what makes a paralegal. In addition, we spend a lot of time talking to agencies and legal services projects on how to recruit paralegals and how to train and utilize them.

"LACK OF CONCEPTUAL FRAMEWORK"

I have noticed that while the new legal services program for senior citizens has generated a great deal of interest and excitement there seems to be a lack of conceptual framework around which it can be built. I think that lack is causing trouble in the field, essentially because the personnel in the senior networks are not familiar with legal services. They know the need, they know about lawyers, and they know that there is a tremendous desire on the part of the senior community to have access to legal assistance, but they are not from the legal services network, they are from the senior network. As a result, they lack basic concepts in trying to design a new legal services delivery system.

Let me suggest an image which may explain our view of a legal services delivery system for older citizens. It consists of a pyramid. The apex of the pyramid represents law reform and test cases—the kinds of things that were mentioned by Mr. Sirulnik. It is the kind of thing that has gone on historically in the OEO legal services program through the national backup centers and through some of the active test case litigation of the OEO projects. It is lawyer work.

[1] See p. 234.

The second level of the pyramid is the kind of work that lawyers and legal services projects have traditionally done which we think of as crisis intervention. This involves situations in which people have reached a crisis in their affairs; they have been sued, they are being kicked out of their building, their welfare grants are being terminated; they are desperate. In a situation like that they think of getting an attorney.

It is situations like these which cause middle class and well-to-do citizens to pay substantial sums of money to attorneys. They are in real trouble. It is often what stimulates poor people to go to a legal services program. They wait until they are in real trouble.

The third layer of the pyramid we think of as work for nonlawyers and to us it represents the greatest need, the greatest number of problems. Many of these problems were described early this morning by the representatives from the Camden project. They talked about such things as people coming into their office with a lease problem where there was not a need for an attorney. They talked about the application process for public benefits. We know that there are millions of citizens who need assistance in the public benefit area. The application process itself is moderately complicated, people often don't know how to fill out applications for public benefits. It takes a knowledgeable person to counsel an applicant on how to make themselves eligible for public benefits. It takes a knowledgeable person to assert a disability claim. These are all things that nonlawyers can do.

We have received a grant from HEW to work on the delivery of services to this third layer of the pyramid. We have given a label to the person who functions in that category and it is not a paralegal.

The paralegal is a nonlawyer working with and under the supervision of an attorney. We call the third layer personnel community service advisors and we expect that these will be the information and referral people, the counselors, all the people that work out of the senior agencies who constantly run into low-level, law-related problems, who need training in handling these problems and who if trained can represent millions of citizens in this third layer of legal problems.

Problems in Program Evolution

Let me turn to a couple of the concerns that we have about the way the AOA national legal services program has been evolving. I should say that by emphasizing concerns I do not mean to suggest that I have any profound inhibitions about the program. It is an excellent program, it has been launched quickly and effectively, and it has a very important mission but in its evolution I think there are some problems emerging.

One of the problems that we see is that the third layer of our pyramid where we think the need is the greatest, the need below law reform and below crisis intervention, we are fearful that that third layer will not be supported, will not receive enough attention, will not be developed. It is going to require a great deal of training to give older people the knowledge and the skills needed to handle these third-level cases. I am not sure that the concept is sufficiently well understood and I am fearful that among other things senior administrators will believe that

legal services is synonymous with lawyer services because that is a traditional concept in this country.

In fact, the AOA and Legal Services Corporation programs have worked hard to establish the idea that poor people have a right to an attorney, which I believe is correct—but it is not the only thing that they have a right to. I think it would be too easy to automatically convert the senior citizen legal services campaign into a campaign to provide lawyers for older people. I think they need much more than that. I think they need trained nonlawyers to help them, and, indeed, I think that the number of their problems is so enormous that it is not conceivable that there will ever be enough lawyers to handle these problems.

The second concern we have is around training and the absence of training. The AAA structure under the Older Americans Act relies heavily on the processing of money through the States to the AAA. There are close to 500 AAA's in the country. It is a system to promote the grassroots participation and involvement of senior citizens. I think the problem is that some delivery services cannot run effectively at the AAA level.

When we travel around the country performing our mandate under our grant, we go into communities and we describe the paralegal concept and we urge them to develop their own training. Most people turn to us and say: "We would like you to do the training, we don't know how. We don't have the people, and we only have five paralegals in our community, and that is not enough to justify launching a whole training program."

So at the AAA level there is not enough money, not enough knowledge, and there is not a critical mass of people to be trained. You really can't expect an AAA to launch a whole training program to train 5 or 10 people. What is needed is some kind of national or regional training and I think it would be very important for the Congress to express that view to AOA. I think the concept of national and regional training is now viewed as a deviation from the Older Americans Act. I don't think the training of senior citizens as paralegals or CSA's is going to happen unless there is some national or regional training capacity.

Questions on Jurisdiction

The third concern which I will just touch on is unauthorized practice and I do it simply to remind you that what we are talking about in expanding legal services to older citizens is nonlawyers handling legal and law-related problems. I believe everyone, including Congress, will have to watch closely to see that the bar associations don't close down on all this. I don't want to go into detail at this time, but we are currently involved in three or four situations around the country in which bar associations are promulgating rules on unauthorized practice or ethical rules governing lawyer conduct which would preclude nonlawyers from doing many of the things that we are talking about paralegals and CSA's doing for senior citizens.

A number of State bars are moving in the direction of forbidding nonlawyers from doing administrative representation. If that were to

happen, it would mean that senior citizens would be deprived of the main resource that they have for help in social security, disability cases, food stamp cases, and supplemental security income cases. There are not enough lawyers to handle those matters.

Another concern that we have developed recently around the so-called sprinkle grants is the question of what the States should do under the recent directive from AOA to establish a statewide developer and coordinator of the legal services.

Senator WILLIAMS. What kind of grants did you say?

Mr. FRY. Well, they are referred to as sprinkle grants. This is a program recently launched by AOA in which each State is given a sum of money, most States approximately $20,000, with the directive that they should create State legal services developers, some of whom would promote, coordinate, and stimulate the development of legal services. The AOA directive was that that person should be a State employee unless there were exceptional reasons for his not being a State employee. A number of States are, as we understand it, planning to subcontract that function. It is a very important function, and a question that has been coming up frequently is whether or not it is a good and proper thing for the States to subcontract that money with another agency rather than to use it to employ someone on their State staff.

I would simply like to call attention to a couple of problems with this subcontracting process. One of them is that if these functions are to be subcontracted, I believe it is important that they go to an agency that has substantial roots in the senior community.

CONFLICT OF INTEREST SHUNNED

Second, I think there is a potential problem in the subcontracting of this function which is that the legal services developer in each State will have a great deal to say about what happens to funds within that State—title III and title IV funds—to develop legal services. I think it is important that the development function not be given to an agency that might have a conflict of interest over applying for those funds. If an agency has the developer function and also is applying for title III funds to operate a program, there is a potential conflict of interest.

The final point I would like to raise is the need for a new title in the Act for legal services. You may recall that the nutrition program started as a model project and grew into having its own title. I believe that that is the direction that legal services expansion should take and I can provide at least one reason. The national support projects funded by AOA to promote legal services are model projects now funded under section 308. As I understand it, there comes a time when a model project has to be terminated, when it has fulfilled its model project purpose. I further understand that there is, under the law, no simple way that these national backup and support programs can be continued indefinitely. I think they should be. It was the experience of the OEO legal services program in this network of national backup programs, and I think AOA will reach the same conclusion.

Senator WILLIAMS. There is new legislation now under study which would automatically terminate programs unless they are renewed.

Every idea, every program, and every effort has a sunset. Then it must justify itself to see a sunrise. You are familiar with the processes we are going through now to insure that, are you not, Mr. Fry? Are you familiar with the sunset legislation.

Mr. FRY. I am not.

Senator WILLIAMS. My friend, when this breaks, you will consider it a disaster that is about to descend upon this Nation, as some of us have. But we have adjusted to the idea that the Nation is in the mood to see all programs zero based within 5 years, and therefore they must rise again and be reborn so to speak.

Mr. FRY. I really don't have any great problem with that concept.

Senator WILLIAMS. I had a big problem, but I am getting adjusted to it and I am beginning to rather like it, as a matter of fact.

Mr. FRY. What I am really referring to is in the future when AOA may lack the legal capacity to continue national support projects even if the decision was made that they ought to be continued.

Thank you.

[The prepared statement of Mr. Fry follows:]

PREPARED STATEMENT OF WILLIAM R. FRY

I. INTRODUCTION

I am grateful for the opportunity to address the Special Committee on Aging at this important stage in the development of legal services for senior citizens. The Congress, through amendments to the Older Americans Act, and the Administration on Aging, through its grant decisions and policy statements, have launched a campaign to expand and improve the legal help available to older Americans. This new direction, if executed effectively, can attack many of the root causes of deprivation, injustice, and misery experienced by older Americans.

At this stage in the evolution of the program, many fundamental decisions are being made about the directions that the program will take, the choice of vehicles for delivery, and the relation of the new program to existing efforts in the field. In this presentation I would like to address some of the choices on structure and direction which are now being made or soon will be made by the Administration on Aging and the State commissions on aging. I will propose a point of view which will suggest a logical structure and manner of proceeding with the program.

To summarize some of the main points I will put before you: The new program should avoid departing from the philosophy of the Older Americans Act which emphasizes strengthening and coordination of existing services by State and area agencies on aging; the new program should utilize senior citizens in the planning and in the actual delivery of services, avoiding too much reliance on lawyers and lawyer-controlled programs; the particular role lawyers should play in the overall delivery system should be clearly defined; and the new program should develop a national training strategy which transcends reliance on State and area agencies to each develop their own training capacities.

II. THE PHILOSOPHY OF LEGAL SERVICES UNDER THE OLDER AMERICANS ACT

The major impetus for a national legal services effort for older Americans is frequently attributed to this committee. Until 1975, the Older Americans Act had no provision which required legal services as a priority under the broadly defined social services activities found in title III. This committee urged a willing Administration on Aging to launch a national effort to promote the extension of legal services to senior citizens. As a first step in this direction, AOA funded 11 model projects which were to provide technical assistance to State and area agencies on aging on identifying legal problems of the elderly, on designing strategies to meet these needs, and on developing a capacity to train those who would deliver the new services.

In 1975, the Older Americans Act was amended to emphasize new categories of social services. Legal assistance and legal counseling were specifically included under title III (section 302(1)(F)). In an effort to affect implementation of these amendments. AOA has now offered to provide each State with funds to employ a statewide legal services developer to promote and coordinate legal services.

It is important to emphasize that the new program direction outlined by AOA builds on and does not modify the underlying philosophy of the Older Americans Act. The act emphasizes the coordination of existing services; the strengthening of State agencies and area agencies on aging; the utilization of senior citizens in the delivery of services; the expansion of power, authority and control of senior citizen agencies over their own affairs; and the development of local multipurpose centers so that as many services as possible can be provided under one roof. I emphasize these underlying philosophies because, as will appear below, I fear that in too many cases new legal programs are being established in or through agencies and programs in which senior citizens are the least involved—and that this development is contrary to the philosophy of the Older Americans Act.

Before discussing the possible structures of delivery, it may be useful to summarize the kinds of legal problems which older citizens experience.

III. The Range of Legal and Law-Related Services Needed for Older Americans

During the last few years, there has been extensive analysis of the legal needs of older citizens. Much of this has been produced by the model project grantees of AOA whose function it was to explain to State commissions and AAA's what services ought to be provided. These services may be classified into seven categories:

1. ASSISTANCE IN OBTAINING PUBLIC BENEFITS

Millions of senior citizens are receiving or are eligible to receive the benefits of social security, supplemental security income, food stamps, veterans benefits, homemaker services, medicare and other public benefits. Despite extensive efforts to bring these programs to the attention of those who may utilize them, there are still many who are not aware of them. Moreover, the eligibility qualifications for these programs are in some cases quite complex. Assistance in filling out applications, understanding eligibility factors, and in taking steps to become eligible (such as disposing of certain assets) are matters on which skilled assistance is often required.

Those who are receiving public assistance are by no means beyond the need of help. Eligibility factors constantly change; Congress frequently amends the law or administrative changes are made. Thus, in any given year public benefit recipients may be subjected to reduction or termination of their benefits, often based on complex adjustments to the Federal statutory scheme (or on administrative error). For example, it has been estimated that during the coming year 800,000 recipients of SSI will be subjected to a reduction of their benefits because of alleged overpayments to them.

2. INCOME MAINTENANCE

Perhaps the biggest threat to older Americans, aside from severe illness, is the falling off of income which accompanies age. Thus the maintenance of the highest possible level of income for each individual is crucial. Public benefit programs may provide part of this need, but senior citizens need assistance in reviewing their entire financial status, including matters of insurance, pensions, tax, purchase of medicine and health benefits, transportation, mortgage financing, debt and credit, and other factors bearing on the maintenance of their income level. Access to such advice should be consolidated in one place so that an informed overview of the individual's income maintenance situation can be made.

3. PREVENTIVE LAW AND EDUCATION

All citizens suffer from lack of knowledge about the consequences of legal commitments they make or about the remedies available to them under the law.

This lack is particularly damaging for senior citizens who are functioning on fixed incomes where a bad financial bargain can mean the loss of essential resources. In the areas of consumer law, landlord tenant, real property, and debtor-creditor law, there is a need for both general education, and basic counseling prior to entering into bargains and legal commitments.

4. PROTECTIVE SERVICES

This subject encompasses the range of legal rights and remedies available to assist senior citizens in preserving their health, assets, independence, and well-being. It includes guardianship, commitment, third-party payees, powers of attorney, and health-homemaking services. There is an extensive need for counseling, assistance, and advocacy, on behalf of senior citizens in this area. In the absence of such assistance, millions of seniors may be stripped of their rights, their resources, and their liberty.

5. NURSING HOME ADVOCACY

While the subject of protective services deals with preventing commitment, this area focuses on those 1.2 million older citizens who are placed voluntarily or involuntarily in nursing homes. The Administration on Aging has recognized this area of need by funding State developmental programs to promote and develop ombudsman programs which will coordinate and provide advocacy, representation and law reform on behalf of residents of nursing homes.

6. CRISIS INTERVENTION

This is the area traditionally served by legal services programs and private attorneys. It cuts across many of the problem areas mentioned above, and involves intervention at a time when preventive law, education, counseling, assistance, and protective services programs have either failed or led to a confrontation. Traditionally, people seek assistance from attorneys when their affairs reached a crisis state, and litigation or representation by an attorney (or an attorney's assistant, the paralegal) is needed. It might be added that because of the structure of the legal services delivery system in the United States, and the limited resources available to the federally supported Legal Services Corporation program, the intervention of the lawyer or legal services project must, in the nature of things, be reserved for a crisis.

7. TEST CASES AND LAW REFORM

In addition to providing people with assistance to obtain their legal rights, benefits and remedies already available to them, there is a need for changes in the law through selective litigation calculated to correct injustice and promote more favorable legal interpretations.

IV. CONCEPTS FOR THE FUNDING AND DELIVERY OF LEGAL SERVICES

It seems clear that there will be insufficient funding under title III of the Older Americans Act to provide the foregoing broad range of services needed to meet the needs I have described. Competition for title III funding is severe and legal services is only one of many program priorities under the Older Americans Act.

Title IV training moneys can be used to supply an essential element to expanded delivery of legal services. The greatest potential for dramatic expansion of service is to draw upon the energies, common knowledge, and experiences of senior citizens themselves. The National Paralegal Institute and other entities with the support of the AoA have been experimenting with the training and utilization of senior citizens to deliver legal services. There are now tested training materials and techniques designed specifically for senior citizens which can be used to create an entirely new work force of advocates, counselors, and administrative representatives. The funding of training under title IV–A is essential to achieve this expansion.

Although moneys now being made available under the Older Americans Act are critical to the initiation of new programs, these moneys are minimal in relation to the needs in the field.

Effective implementation of the legal services mandate will require a merging of a variety of programs and resources.

Title XX of the Social Security Act establishes social services to prevent or remedy abuse, neglect, or exploitation of adults as well as children. Legal services have been established in several States as one of the major social services. In fact, title XX moneys have been used to create statewide legal services for older people in States such as Pennsylvania and West Virginia. The potential of using this program and funding resource to meet the legal needs of older Americans is clear.

The funding available from the Legal Services Corporation for its projects also can play an essential role in strengthening legal services for senior citizens. For many years, it has been recognized that while older Americans comprise approximately 20 percent of those in need of legal assistance, only 6 percent of the caseload of legal services projects has been older clients. Without changing their funding structure, Legal Services Corporation projects can be encouraged to provide more adequate representation of this class of clients. Moreover, as will be discussed in more detail below, Legal Services Corporation projects are frequently the best source for crisis intervention, test case and law reform activities. Thus they may supply a crucial element in the total picture of legal services delivery.

There are other sources of funding which can be tapped for expanding legal services for senior citizens. Programs enhanced by moneys from ACTION, the Comprehensive Employment Act and from other manpower programs such as the senior community services employment program will be described by others at these hearings.

Since none of these programs alone can provide the funding necessary to establish and maintain the comprehensive legal services network needed to meet the needs of older people, it is crucial that the promotion and eventual use of such funds is coordinated through the network established to serve people under the Older Americans Act.

The expansion of legal services is not to be achieved by the wholesale creation of the new delivery network, nor by creating or funding entities outside of the existing network of senior citizen programs. The thrust of the Older Americans Act is to strengthen state agencies and AAA's, so that they may effectively build and coordinate a coherent and interrelated delivery system of all services. An underlying theme of this strategy is that senior citizens must be given greater responsibility and authority in their own affairs. Thus, wherever possible delivery mechanisms ought to be directed and coordinated by senior agencies. Above all, the program should be designed so that senior citizens themselves are involved in the direction and control of the programs, as well as the direct delivery.

It follows from this that legal services needs cannot be met consistent with the Older Americans Act by turning over the responsibility to bar associations, law schools, private law firms, or Legal Services Corporation projects. Instead the special talents and skills of those groups are to be coordinated into the overall system, with direction and control being provided by a strengthened senior network.

Thus, through the creative combination of funding resources, and creation of new relations of cooperation with existing legal services delivery systems and the expansion of capacities of senior citizens and their agencies, a full range of legal services delivery may be achieved.

V. Suggested Framework for Legal Services Delivery System

The legal services delivery system needed for senior citizens can be viewed as a pyramid, with the width of any cross section representing the numbers of people needing direct assistance.

At the apex of the pyramid would be law reform, test case litigation and handling of complex legal matters including design and analysis of legislation. This is an area in which Legal Services Corporation projects have been most active through the aggressive litigation of individual projects, and the backup of national support centers. In addition, considerable work has been done through law schools and in cooperation with bar associations (particularly those with special committees or panels dealing with senior citizen matters).

A second level of the pyramid is crisis intervention and handling matters where a legal confrontation has occurred or is imminent. These are the kinds of

matters for which citizens seek out attorneys, and conversely, which attorneys are trained to handle. Within the Legal Services Corporation projects, attorneys with the support of paralegals provide this service as do some bar association referral programs, law school clinical programs, and specially funded senior citizen legal services projects. (For example, those located in Santa Cruz, Dallas, Tex., and St. Paul, Minn.).

The third level representing the widest need and, unfortunately, the least available service are those matters discussed earlier under the heading of public benefits, income maintenance, preventive law, education, protective services, and nursing home advocacy. For the top two layers of the pyramid, some available services exist, presenting problems of coordination and strengthening. This third level of need is one which has yet to be fully defined, although AOA has undertaken a number of important experiments to explore this area. It has funded the National Paralegal Institute to create training materials and give technical assistance in this area. Under a current grant, NPI is designing, and will test in three separate training programs around the country, the concept of the nonlawyer community service advisor. This person will generally be a senior citizen employed by a senior agency, and trained to give assistance to older Americans. Emphasis will be on public benefit eligibility assistance, income maintenance, preventive law, community education, and protective services. Related experiments have been conducted by the American Association of Retired Persons under an AOA grant in which a training program for volunteers has been designed; and in California where an intensive statewide training program was conducted by the western subsidiary of NPI. Under that California program, area agencies on aging and senior projects within the State were given technical assistance in designing a legal services delivery system, training materials were prepared, and during 1976, 60 paralegals and CSA's were trained. Another 60 will be trained in the next 12 months. Careful monitoring of the work of these trained senior citizens indicates that they have caused a dramatic and rapid expansion of available legal and law-related assistance, and have established an extraordinary record of success in gaining benefits and remedies for senior citizens.

The services that are needed under this third layer of the pyramid may be provided out of multipurpose centers, nutrition sites, senior citizen housing developments, health care centers, home care agencies, and other social services agencies. The expansion of this third level promises a massive involvement of senior citizens in the policymaking and actual delivery of services.

This concept of legal services needs suggests a framework which can be developed within each State. The "sprinkle grant" policy of AOA (which creates a legal services developer for each State) can provide the impetus for the creation of an efficient statewide network. The developer may find it useful to analyze needs in terms of the suggested three-level pyramid. At the first level some entity within the State should be focusing on selected test case and law reform activity, as well as legislative and regulatory agency monitoring. Whether this should be a legal services project, a bar association committee, or a law school based project will depend on which of those entities is available and able to undertake the function. In some States, it may be necessary to create a statewide unit to perform this function.

At the second level, the crisis intervention and more traditional legal representation, it will be possible in many areas to build upon existing legal services delivery systems. Legal Services Corporation projects are traditionally underfunded and stretched to the limits of their capacity. Moreover, Federal funding has been insufficient to provide total coverage, and vast geographic areas in the country have no effective legal services projects available. Accordingly, even where Legal Services Corporation projects can be involved, there may be a need for supplemental assistance. An alternative to utilizing Legal Services Corporation projects is to provide senior citizen programs with their own attorneys.

I believe that one of the most serious pitfalls facing the development of senior citizen legal services is the failure to stress the third level of need, and the error of believing that the provision of services at the second level is sufficient. Achievement of a full range of legal services for senior citizens may require coordination and utilization of existing systems for law reform and crisis intervention, but for broadening the base of delivery it will require expansion of current senior citizen agencies capacity by creating a new person, trained to supply the assistance which no other entity is now equipped to deliver.

VI. Potential Errors in Selecting the Wrong Structure for Legal Services Delivery

The concept of legal services delivery is generally new to the senior citizen network. AOA has funded NPI and several other national organizations to provide technical assistance to State commissions and AAA's on various aspects of legal services delivery. NPI concentrates on providing technical assistance regarding paralegal CSA's, and on designing training techniques and materials.

Knowledge and understanding of legal services needs and delivery systems has risen dramatically as a result of the AOA funded technical assistance. Nonetheless, within the senior citizen network (State commissions, AAA's, and service delivery projects) there is even now a lack of indepth knowledge on many aspects of legal services.

One of the most common problems we have encountered in providing technical assistance is the question of which entity within the legal system can best provide a particular service.

For example, there are lawyers, paralegals, CSA's, and program supervisors who need training. As potential trainers there are colleges, law schools, on-the-job trainers, national and local training specialists, continuing education programs, and schools of gerontology. Which of these is best suited to train lawyers? Paralegals? CSA's?

There is a need for service delivery in the form of information and referral; nursing home advocacy; public benefit applications; test cases and law reform; income maintenance; and crisis intervention. Potential delivery resources are law school clinics, private attorneys, bar associations, Legal Services Corporation projects, senior citizen projects, or newly created agencies. How is a State or AAA to make a wise decision as to which of these many choices is best?

We have seen choices made which we believe were not for the best. Are law schools the best place to train paralegals? Are bar associations the best source of counseling on public benefits? Subject to some exceptions, the answer is probably not. Errors in such matters are, however, understandable. Do not law schools teach law? Are not bar associations made up of lawyers who know "the law"? The problem is that the decisionmakers within the senior network sometimes need guidance in asking more pointed questions. For example, should paralegals receive the same training as law students? Does the average lawyer know social security law?

These choices of the proper vehicle are often difficult.

A question currently being faced by AOA and the State agencies is the extent to which Legal Services Corporation projects should be utilized as the statewide legal services developer. Despite the strong language of the AOA technical assistance memorandum which specifies that the developer should be employed as part of the State agency on aging staff (unless there is some clear barrier to such employment) it appears that a number of States will propose to subcontract the statewide legal services development function to a Legal Services Corporation project.

NPI has no specific policy or recommendations as regarding such a decision. In some States, Legal Services Corporation projects have been involved in senior citizen matters to such an extent that subcontracting the function to them can result in highly effective developmental work. It has been the position of NPI that we should assist a State in making a careful and informed decision on whether to subcontract the developmental function and if so to whom.

The developmental function is essentially one of coordination, stimulation, program development, instigation of training, and leadership. It is not viewed by AOA as expansion of service delivery. Accordingly, consistent with AOA policy it will be important for any subcontract of the developmental function not to result merely in expansion of one service delivery program. Moreover, because of the nature of the developmental role, it should be given to a person familiar with the senior citizen community, and its structure, functioning and politics. It must also, in the nature of things, be someone with a history of involvement in the senior community. While some Legal Services Corporation projects fit this description, many do not. We are concerned that some States will contract away the important function of the statewide legal services developer without getting more for it than a slight increase in the level of service being delivered to older citizens through Legal Services Corporation projects.

One problem looms as a potential conflict of interest for a subcontracting statewide legal services developer. The person or organization occupying that position will have considerable influence over the granting of funds under title III, and perhaps over title IV–A training money, title XX social services, and nursing home ombudsman funding. If the developer function is subcontracted to an operating program which is also applying for program operation funds, there may be an actual or apparent conflict of interest over where the programmatic funding should go. There may also be an irresistible impulse for any service delivery program to utilize the position of the developer as a way to obtain funding for itself.

Once they are installed, perhaps the most difficult question facing State legal services developers is the question of the appropriate role for Legal Services Corporation projects in the overall expansion of legal services to older people.

To understand the potential role of such projects, it is necessary to understand their history, and their place in the legal delivery system.

The legal services program initiated by OEO in 1965 was unquestionably the most effective of all the war on poverty programs. Its ambition was to provide to the poor a form and quality of legal services similar to that which could be purchased by the well-to-do. Despite earlier efforts to establish considerable community control over legal services programs, they have evolved as essentially lawyer controlled and dominated instruments.

Legal Services Corporation projects are run by attorneys whose background and predisposition is toward the more technical aspects of legal practice. Thus, they are particularly competent at crisis intervention, law reform, test cases, litigation in general and the handling of complex legal disputes. Many Legal Services Corporation projects now employ paralegals to work in support of attorneys and also to extend the projects' range of services, particularly in the administrative law area.

In many parts of the country, Legal Services Corporation projects represent an important potential for supplying part of the overall functions of the legal services delivery system for older citizens. One mission of the State legal services developer will be to help the Legal Services Corporation projects focus more of their attention, and a greater proportion of their resources upon serving older citizens. According to the statistics cited earlier these projects could triple the time and energy devoted to older citizens, without additional funding.

Legal Services Corporation projects share with other lawyer-dominated entities such as bar associations and law schools certain deficiencies which militate against their being the principal resource for senior citizen legal services. They are not usually an integral part of the senior community. They are neither controlled by the senior citizens, nor do they employ substantial numbers of them for delivery of services. Moreover, they are generally not in close working relations with other elements of the senior citizen network, and this lack of familiarity may make cooperation difficult.

Most Legal Services Corporation projects are not geared to handle the broad array of income maintenance, public benefit, preventive law, education, protective services, and nursing home matters which senior citizens need. This is partly a result of lawyer education and professional attitudes, which focus on handling crisis rather than what lawyers may view as less difficult and sophisticated legal problems. There is also an extraordinary pressure on legal services offices to handle crisis cases, and most Legal Services Corporation projects make the perfectly rational choice to handle only those matters which are *in extremis* or close to it.

Under what circumstances, then, would it be appropriate as a general rule to involve Legal Services Corporation projects in the expansion of legal services for senior citizens? As described above, one element of such expansion is the increase of access by senior citizens to the kind of legal services in which these projects specialize (essentially law reform, test cases, and crisis intervention). It seems entirely appropriate that the title III service funds could be utilized to strengthen the involvement of Legal Services Corporation projects in the senior citizen community, particularly in a coordinated relationship with other service delivery instruments. It will, of course, be a difficult judgment in individual cases to determine whether such additional title III funding is necessary or whether an expansion of service can be achieved through better coordination, and by educating older citizens as to the services which are already available.

In those States where a statewide law reform unit is indicated, it may be wise to turn to existing Legal Services Corporation projects which already have the general expertise and staff capability to engage in such activity.

As to the expansion of the area we have called the third level of the pyramid, for all the reasons mentioned earlier, the State developer should create a strategy for training older citizens, for the expansion of the current service capacity of existing senior citizen agencies, and for employing older citizens to deliver the service. It is the perception of the National Paralegal Institute that the strength and effectiveness of the national program to extend legal services to older people will depend upon the success of the creation of this third level of the pyramid.

To achieve this, the developer should look to the senior agencies themselves rather than to a mere expansion of lawyer-services through bar associations, law schools, or Legal Services Corporation projects.

Partly it is a matter of geographic coverage. Older people have special difficulty in getting themselves physically to a service office. There are numerically perhaps 10 to 20 times as many senior agencies in communities as there are Legal Services Corporation projects. (For example, there are about 30 LSC projects in California compared with well over 1,200 senior agencies.)

There is also the question of strengthening the senior network, a goal of the Older Americans Act. Such strengthening cannot occur unless senior agencies have a substantial role in the delivery of services.

Finally, there is the nature of the service, and the need for locating it in the most appropriate entity. The greatest numerical need for services is on the lowest level of the pyramid; the kinds the problems CSA's can handle, but the kind of problems LSC projects and lawyers generally are not geared to handle and probably cannot handle given the pressure of crisis cases.

This strengthening of senior agencies and creation of a third level delivery mechanism, through CSA's, requires training.

VIII. The Need for Training

In order for any expansion of legal services to older citizens to occur, training is necessary. Many of the legal issues affecting senior citizens, such as protective services, disability, and SSI are not generally known or taught in law schools. Thus, training will be needed for lawyers as well as for paralegals and community service advisors.

The most compelling need for training, however, is to bring into the delivery system nonlawyers in the form of paralegals and CSA's, who ought to be the principal resource for the expansion. These people need fundamental training not only in the substantive areas mentioned above, but in the skills and techniques of rendering assistance, including the fairly sophisticated art of administrative representation (which is permitted to nonlawyers under Federal regulation).

I should hasten to add that the Administration on Aging has already recognized the foregoing proposition. In three separate fundings it has mandated the National Paralegal Institute in Washington, D.C., to develop national training materials for paralegals and senior citizens legal problems, and to provide technical assistance around the country to help states train and utilize paralegals. A separate grant to the State of California has enabled the western division of NPI in San Francisco to provide technical assistance to deliver training designed specifically for California.

These training materials and techniques should now be made available throughout the country. AOA has funded some efforts in this direction but success in expanding training has not been impressive. In delivering its technical assistance NPI has been made aware of a fundamental defect in the approach to training currently taken by AOA. Consistent with the Older Americans Act, AOA has sought to develop training through the network of State and area agencies on aging. NPI, while authorized to design training materials, has not been funded to deliver training on a national or regional basis (except for three demonstration and testing training events under its CSA grant). AOA has hoped that, through technical assistance and other forms of guidance including the provision of prepackaged training material, training would emerge on a local level, but unfortunately this has not happened, for a number of reasons.

The resource AOA looked to for legal services training for paralegals and CSA's was to be the network of community colleges, universities, and law schools. To date, very few of these entities have undertaken to provide the

needed training. Except for some law schools, the other educational entities have no one on their staff with a good comprehension of the substantive law and skills for which training is needed. Most of these educational entities serve a specific geographic area. There have not been sufficient numbers of people in such areas to justify an educational institution creating a specific training program for that audience. Perhaps the greatest numbers of paralegals and CSA's can be found in California, where NPI's western office received several hundred applications for places in their training program. These applicants came from all over the State. In any particular California town where universities and community colleges serve the population, the likelihood of finding more than a half dozen candidates for such training is slim. Given such a limited audience for one-time training only, there is little motivation for a college to undertake to create and produce a training program. Finally, there is always the risk of duplication of effort and inordinate expense associated with splitting training up into small local elements. If every community college in the country were to undertake to deliver training to its local paralegals, the administrative expense would be enormous. Even if the colleges were all to adopt the materials developed by NPI without modification (an unlikely event) the expense of operating the separate programs would be extremely inefficient.

Thus, while the structure and control of senior citizen programs is, under the Older Americans Act, given to the grassroots level of the senior network, it does not follow that the delivery of training should not be on a national or regional level. In providing its technical assistance to States for setting up training programs, NPI is constantly asked to provide training to the States or AAA's, since they do not believe they have the capacity to generate such training within their own areas. There is no efficient way for NPI to respond to such requests. The only way that NPI or any other organization can provide effective training to all the States is through a coordinated national level effort. This would permit the scheduling of regular training programs, the creation of an ongoing training capacity and the most efficient delivery of training to all those desiring it. In the absence of such a national or regional training capacity (which could be on a statewide basis in the base of a few large States) the training of older citizens to deliver legal assistance is likely to be sporadic, or mixed quality, and inordinately expensive.

Senator WILLIAMS. Thank you very much, Mr. Fry.

We could be well served with a long discussion here. You are in the center of what impresses me as vital, essential social activity, albeit legal service. Now I wonder, just to get a broad picture here of the resources that make your activity possible—each institution that you are associated with has Federal funding and I just wanted to see if I could understand so that we could rationalize the sources of the funding. We started with Ms. Brodsky. Could you go down the line again? You all gave that, now let us run through it again so I can see how funding sources relate one to another because you are all on a similar mission, basically.

Ms. BRODSKY. We currently have two sources of funding. We have a model project grant from the Administration on Aging. Those funds are used for our technical assistance project which provides help to State agencies and other jurisdictions to set up programs based on our District of Columbia model. We also have some funds from the District of Columbia Office on Aging, the State agency on aging. These funds are used to continue the operation of the model project office which offers services to citizens in the District of Columbia. Those are our two sources of funding.

Senator WILLIAMS. It is all Administration on Aging money at two levels, is that correct?

Ms. BRODSKY. Some of it is coming through the District of Columbia Office on Aging.

Senator WILLIAMS. But their resources depend upon the national AOA.

Ms. BRODSKY. That is right.

Senator WILLIAMS. It is all AOA, two levels.

Ms. BRODSKY. Yes.

Senator WILLIAMS. All right.

Mr. SIRULNIK. We have three basic sources of funding. One is a research, training, and continuing education grant from AOA. We call it the training grant to distinguish it from our earlier model projects grant.

The second source of income is from the District of Columbia Commission on Postsecondary Education through title I of the Higher Education Act.

The third is the contribution the law school itself makes to the clinical program.

Senator WILLIAMS. You are all within HEW except for the law center at George Washington University itself?

Mr. SIRULNIK. That is right.

Senator WILLIAMS The Commissioner of Education and the AOA is all within HEW.

Mr. SIRULNIK. Yes, sir.

GRANTS FROM AoA

Mr. FRY. We have two grants from the Administration on Aging, one under title III as a model project to do technical assistance around the country and another under title IV, a grant for training to develop and test the training concept for community service advisers. In addition, we have a series of contracts from various entities around the country: one from a division of the State of Texas, another from a legal services program, several from places in New York. All of these involve training or training related matters.

Senator WILLIAMS. Are these governmental programs that come to you from the States?

Mr. FRY. They all originate with the Government. In Texas, we work with a State agency, the department of public welfare, to train their staff in senior citizen problems relating to technical services. The arrangement with the legal services program involves manpower funds with a subcontract to us to develop training programs. There are several New York City smaller contracts which are using Legal Services Corporation funds.

Senator WILLIAMS. Let me ask you this. You are all, as individuals, Washington based?

Mr. SIRULNIK. Yes.

Mr. FRY. I might add that we have a west coast office in San Francisco, which is currently running on several grants and contracts in the State of California doing senior citizen training and technical assistance and is just for that State. So, while our main office is here, we also have another office.

Senator WILLIAMS. Do you see a thread of common purpose in all of your individual activities?

Mr. FRY. Yes, I think I do. I think we are all working at different aspects of the expansion of legal services through the use of nonlawyers.

Senator WILLIAMS. Under your title that is exclusively your mission because it is the Paralegal Institute.

Mr. FRY. Yes.

Senator WILLIAMS. But now the others are broader—legal services furnished by lawyers and paralegals.

Ms. BRODSKY. We also are using nonlawyers in that our volunteers are not lawyers.

Senator WILLIAMS. In addition, under this supervision.

Ms. BRODSKY. That is correct.

Senator WILLIAMS. Your program really does not get direction from the legal community.

Mr. FRY. Paralegals by definition are directly supervised by attorneys. The third group that we spoke of as community service advisers, would be linked to lawyer backup and referral but not directly under a lawyer controlled organization.

SHORTAGE OF "TRAINED" LAWYERS

Mr. SIRULNIK. I think the common thread is that this is the first time in recent memory that I have heard three people make the statement that there is a shortage of lawyers in this country. I think that perhaps the explanation is that there is a shortage of lawyers with the proper expertise to effectively serve the client community in which we are all interested. We are developing, all three of us, alternative means of providing legal services—some with nonlawyers, some by better trained lawyers, and also by certain law reform activities which might simplify the procedures and ameliorate the need for any lawyers.

Senator WILLIAMS. Let me ask you; do you all meet formally or informally and communicate your problems and your answers and the situations that you face in your prospective work?

Mr. FRY. Yes. As a matter of fact, we will have a meeting of all the national grantees of AOA next month in Philadelphia. We meet regularly three or four times a year to discuss what it is we are doing, how to cooperate, whether there is any overlap, and we will be doing that this year.

Mr. SIRULNIK. There is also, I would state, a good deal of informal communication on a weekly basis, referral of cases or consultation among problems especially between the three groups that are presently here in the same city.

Senator WILLIAMS. So you think if anyone should look at your activities, your organization, and your funding, you would successfully withstand an attack about wasteful, complex, and duplicative efforts and all of those other charges that we hear leveled at Government-sponsored activity?

Mr. FRY. I don't think it is any of those things, Senator. I think we are working in different areas for a common purpose. We are using some of the same conceptual bases. We all believe in training and we all believe in the expansion of services through training with the utilization of laymen but that is a very big universe. We, for example,

don't work with volunteers. AARP is an organization that works with millions of volunteers in the country. We don't work with them, and if we were the only one around, nobody would work with us. We work essentially with people employed in agencies.

Mr. SIRULNIK. I think our program is unique in two particular fashions. The first is that it is law school based and we are training not only the traditional young law student in the traditional way but also the paralegal trainees who are retired or semiretired along with the law students. The two groups work together in clinical programs. This is significant because there is a tremendous problem, as I am sure you know, with the sensitivities of many professionals in treating elderly people.

I am talking about medical treatment, as well as legal treatment. For instance, the term in many law offices for older clients is "crazies" because their problems are complicated and alien. There is a problem of attitude that I think programs such as ours at George Washington try to approach by putting younger persons alongside of older persons in a mutual attempt to solve some problems.

Senator WILLIAMS. I will come back in a moment.

Senator Hartke.

AVAILABILITY OF LAWYERS QUESTIONED

Senator HARTKE. Let me ask you about the one statement you made there. The last witness was talking about there not being enough lawyers around to handle the cases. Is that what you said?

Mr. FRY. Yes.

Senator HARTKE. Is that a situation which should be remedied? In other words, are you saying the lawyer should be supplemented or the lawyers should be increased?

Mr. FRY. I am not really saying that the lawyers should be increased. I think the number of members at the bar in the country may be increasing slowly. I don't see any possibility of an answer or a solution by increasing lawyers. The legal profession will always be limited in size, and, in addition, the structure of the legal profession—the price scale, for example—makes it virtually impossible to think of lawyers dealing with these problems. It costs too much money.

Third, these are not problems that require a lawyer. We have done a great deal of experimentation and analysis around that subject over the last 4 or 5 years and the majority of problems faced by poor people are problems that can be handled by a trained nonlawyer.

The public benefit area is one that is mentioned most. There are issues concerning eligibility for all of the public benefit programs. Those are questions which lawyers are not trained to handle and which many laymen are now handling, and I might say very successfully.

Probably it would help if I gave you a brief example. We trained, about 6 months ago, a group of 30 senior citizens. We trained them, among other things, in handling a current, very difficult problem for older people. A lot of SSI recipients have been told that they have been overpaid and they have to pay back to the Government. There are about 800,000 such cases.

These overpayment cases are coming up this year and, of course, for poor people that is a terrible blow. They are barely living on what they get and they are told they have to give some of it back. There are Federal regulations governing the overpayment demand and explaining what one has to do to get the overpayment waived. It is moderately technical, and it certainly takes someone who understands the overpayment situation to represent a client.

We trained paralegals in handling overpayment cases. In one case a paralegal trained by us came back a couple of months later and said he had six such cases and won every one of them. Now I would like to assume that those were six people who would have been under a severe hardship if they had not had the representation of this person. This was not a lawyer. There are not enough lawyers around to handle those cases.

Senator HARTKE. Are you really drawing a distinction between a legal and a nonlegal situation? I can see under section 3 that the priority for money to have people other than paralegals—volunteer or whatever you call them—is one of two things. Either you offer castoff second-class treatment to those cases not really justified as needing legal representation or you go ahead and give legal representation.

Mr. FRY. I certainly agree with you on the point that if, by definition, paralegal is one that can do these things, these are not legal problems.

Senator HARTKE. Would it not be better advised then to draw that distinction very clearly?

Mr. FRY. Yes. It is a matter of definition. I like to refer to these as law-related problems.

"BUREAUCRATIC MESS"

Senator HARTKE. I understand that. After all, what we are trying to do is deal with specific problems of individuals and I think this is where the Government gets itself into many traps and where you get this so-called bureaucratic mess accusation. I can see from what you have said and in Senator Williams' statement here that most people out in the public arena would say yes, that is a mess, that is a bureaucratic complicated mess; I don't understand it at all.

It looks to me like it is one agency trying to duplicate what another is doing without any clear-cut definitive arrangement. What I am saying is that you could do that very clearly if you would go ahead and deal with the situation. For instance, you would not have a nonlawyer doing a lawyer's work any more than you would have a paramedic performing major surgery on somebody.

Mr. FRY. These people are certainly not practicing law or doing the work a lawyer must do.

Senator HARTKE. Why not call it what it is in every senatorial office and congressional office; pure and simple casework. Isn't that right?

Mr. FRY. I think that is right. In fact, the category that I described earlier, the community service advisers, is an effort to do just what you suggested, to create a category of people who are clearly not related to practicing law.

Senator HARTKE. Would you not, in your funding efforts, be more apt to have a successful operation if you had that definition clearly recognized—naturally there are a lot of gray areas—so that you could have good, competent legal representation where you need it and competent caseworkers where you need it?

Mr. SIRULNIK. Senator, if I might. We are all dealing with the sort of problem which I don't think is fair to categorize as "legal" or "nonlegal." The two are not always mutually exclusive. A lot of the cases which we handle require an interface between a paralegal and a lawyer. Oftentimes a case which begins as a social service problem develops into a legal problem. The social security administrative procedure itself calls for an exhaustion of nonlegal remedies and then at some point one may turn to the courts. There is a need to provide people with training which enables them to recognize legal issues as well as provide nonlegal social services. I think only in this way can the individual who we are the most concerned with, the client, be prevented from falling through the cracks, or getting lost in the woodwork.

Senator HARTKE. The person may not fall through the crack if you get that type of theoretical discussion done but the fact is that the bureaucratic mess does fall through the crack.

You are describing exactly what the people out in the countryside in Indiana are complaining about Washington, D.C., which is that you want to take every single thing and hold it up into a situation where no one knows how it comes out.

DUPLICATION WITHIN THE SYSTEM

Mr. SIRULNIK. What they are saying is that the need for this type of duplication is because there is such duplication in the Federal bureaucracy. Some problems may be perceived by some people as being nonlegal and very simple until they try to extract themselves from the quagmire of the applicable program. It turns out what one day was an administrative problem the next day is a legal problem.

Senator HARTKE. A nurse says, "You have a high fever and a pain in your side and I am going to operate on you for appendicitis." What I am trying to say is that in the medical field you have this type of clearcut definition.

Now there is not any question that the nurse can give you a shot and a doctor can give you a shot. There are certain legal situations which could be defined and I can see where as long as you keep the situation sufficiently confused as to determining when you are telling me it is not legal, and doing social services and characterizing them as legal services, that the net result is you are going to have no one wanting to do anything, although that need may be there and certainly is there.

The purpose of the hearing is to find out how that need is being met, not whether the need is there. That already has been decided.

Why redecide that issue unless there is something that needs to be done. What you are trying to find out is how do you solve that problem? The problem has been identified and specified, an agency has been directed to do it. Now we are trying to find out what happened.

Mr. FRY. Senator, I think a great deal has been done to meet that problem and I, aside from any——

Senator WILLIAMS. We have the conference report on the bill involving toxic substances which will create a lot of work for you, I have a feeling.

We will go over and vote and pass another necessary measure.

This has been extremely helpful to the committee. We greatly appreciate your work. The fact you are doing this, it seems to me, shows that the national response to this need has been comprehensive. Much more, of course, remains to be done. But we have a beginning and something worthwhile to build upon. I like the idea concerning the title to deal on a comprehensive basis with the subject matter of legal services and the companion questions. It just impresses me. I think one of the missions of law is to define rights and duties precisely so an individual knows what his rights are and what his duties are. Any contract you read or insurance policy is a complicated business.

This may be especially true of older persons, many of whom have little experience with legal matters and some sense of reluctance to become involved in them. It is a very, very difficult mission that you are trying to work toward and equip people to handle in a social setting that certainly is greatly needed.

My congratulations.

We will recess at this point.

[Whereupon, at 12 noon, the committee recessed, to reconvene at 10 a.m., Wednesday, September 29, 1976.]

APPENDIX

LETTER FROM STANLEY DI ORIO, DIRECTING ATTORNEY, LEGAL AID FOUNDATION, LOS ANGELES, CALIF.; TO SENATOR FRANK CHURCH, DATED SEPTEMBER 17, 1976

DEAR SENATOR CHURCH: It has come to my attention that you will be holding, in the very near future, hearings on improving legal representation for older Americans. I would like to bring to your attention a disgraceful example of blatant discrimination in the ability to retain legal representation between two different groups of older Americans. Various proposed solutions to the problem will be mentioned in the hope your committee can promptly move to correct this problem.

Under the social security disability program Congress provided that attorney's fees "shall" be paid out of past-due benefits. [42 USC 406(a)—referred to as title II] Applicable regulations provide for direct payment from the Social Security Administration to the attorney.

Since attorneys are guaranteed they would receive the money awarded them if they win, Congress in effect established a contingency fee arrangement for title II cases and private attorneys are therefore practicing in the field and available for older claimants.

The supplement security income program (42 USC 1381 et seq.—title XVI) on the other hand makes no mention of a similar fee arrangement in the legislation. Regulations enacted by the Secretary of HEW however specifically state "the administration assumes no responsibility for payments" (20 CFR § 416.1510(c)). Title XVI was modeled in large part after the title II program and in effect either incorporates or copies the exact language of larger portions of the title II legislation. Older Americans and those fast approaching those years are potential and actual claimants under title XVI.

The effect of this arrangement on the availability of legal representation is precisely the opposite of title II. Because those applying for benefits under title XVI have usually little or no money or assets of their own, private attorneys not being guaranteed the ability to receive the money awarded them in a successful case, generally do not represent title XVI cases. The burden then falls to lay advocate groups and legal service attorneys. I personally know in the entire city of Los Angeles only a couple of private attorneys who just recently began to risk taking a few of these cases. If they do experience problems in collection of their fee, I am sure they will discontinue that practice.

Reliable sources have informed me this difference in the legislation resulted from Representative Wilbur Mills' feelings in 1971 that the war on poverty was over and that legal services to the poor had had its day. There is no fair rationale for making the distinction between the two groups. The old stand-by excuses that attorneys will cause a delay in the process of cases and will cost the government more money do not stand up under close examination. Social security has managed on its own to create a 6- to 12-month delay in setting an administrative hearing after a request has been filed. If, as a result of conducting a skilled, fully documented hearing, people become qualified who ordinarily would not have without an attorney, I suggest that it is only a just result and a reflection of the true intent of Congress.

This situation of legal representation becomes critical not only because people who apply for SSI are at the bottom step of the ladder, but from my information in California, approximately 40 percent to 60 percent of those cases initially denied are reversed at the administrative hearing level. This figure is even more significant when you consider at a maximum about 25 percent of those cases have any type of representation at these hearings.

Two obvious solutions are clear at this point: (1) either add specific authority for the withholding of payments in 42 USC 1383(d)(3), or (2) change the regulations to permit such a withholding since the statute itself does not specifically prohibit such a practice. The former would be preferable; the latter would be quicker (if possible).

Given the large numbers of people applying and potentially eligible for SSI, this is a problem of significant proportion. While I am not an advocate for increasing the business of the private bar, they would certainly support such a change. In addition, the limited resources of legal services could be more effectively utilized on cases where the ability to obtain attorney's fees and private attorneys is not available.

The above description is hopefully significant to illustrate this irrational distinction between the ability of senior citizens to obtain legal representation on social security disability versus supplemental security income.

Your prompt attention to this problem may give applicants for SSI a fair opportunity to present their case in a full and effective manner and achieve at least a minimal income to live on.

If I can be of further assistance, feel free to contact me.

Sincerely yours,

STANLEY DI ORIO, *Directing Attorney.*

OF THE SPECIAL COMMITTEE ON AGING,
Washington, D.C.

The subcommittee met, pursuant to recess, at 9:45 a.m., in room 318, Russell Senate Office Building, Hon. Frank E. Moss, chairman, presiding.

Present: Senators Moss, Demenici, Clark, and Percy.

Also present: William E. Oriol, staff director; David A. Affeldt, chief counsel; Val J. Halamandaris, associate counsel; John Guy Miller, minority staff director; Margaret S. Fayé, minority professional staff member; Patricia G. Oriol, chief clerk; Alison Case, assistant chief clerk; and Eugene R. Cummings, printing assistant.

OPENING STATEMENT BY SENATOR FRANK E. MOSS, CHAIRMAN

Senator Moss. The hearing will come to order.

I welcome you all here this morning for the hearing by the Subcommittee on Long-Term Care to examine possible abuses of the medicaid program.

The ranking Republican member, Senator Percy, will be a little late in arriving this morning because of a family problem with his boy and taking him to the hospital. He told me yesterday afternoon that he might be late, but he will be here.

We also expect other members of the committee to come. It is a very busy time in the Senate and hard for all the members to attend. We do appreciate the attendance of those who are to be here this morning as well as those observing these hearings.

At yesterday's hearing, I summarized the more than 47 hearings we have held dealing with one or more aspects of the medicaid program in the past 7 years since 1969, and I have before me copies of all those hearings that have been held, printed, and published. This would indicate that this is an ongoing problem with which we have been concerned for a long time.

I mentioned briefly our investigation of fraud and abuse among clinical laboratories and of the growing trend to dump senior citizens out of mental hospitals into nursing homes and boarding homes. I mentioned briefly our look at for-profit home health agencies, factoring firms and nursing homes. We estimated that 10 percent of the $15 billion in medicaid funds is ripped off by the unscrupulous.

Five-State Audit Released

This morning we want to hear more about the operation of medicaid mills. However, I also want to take this occasion to release an audit [1] prepared at my request by the U.S. General Accounting Office. Although I received this report some time ago, it has not been released until this morning and I am releasing it today.

The audit concerns nursing homes in five States: New York, California, Missouri, Michigan, and Florida. At my request, GAO selected a valid sample of 30 nursing homes in these States and attempted to learn if the nursing homes provided appropriate safeguards for patients' funds. I am talking about the $25-a-month spending allowance to which patients in nursing homes supported by medicaid are entitled. GAO found that HEW and the States were not properly monitoring patients' funds. GAO found deficiencies in every one of the nursing homes they surveyed.

The kinds of deficiencies uncovered by GAO include: shortages in patients' funds; medical supplies and services were being charged to patients' funds—such supplies and services are included in the basic rate medicaid pays to nursing homes; funds of deceased and transferred patients were being kept by the facilities; interest earned on patients' funds was being kept by some nursing homes; and patients' funds, which should be kept inviolate, being commingled with general operating funds.

This problem is one of the most serious we have encountered in nursing homes. The fact that every home in GAO's sample had deficiencies of some kind speaks for itself. In fact, I know of only one criminal proceeding against a nursing home operator who absconded with the personal expense money which generally goes to buy extras: cigarettes, to pay for a hairdo, or the like. In that Seattle case, the defense attorney argued that the nursing home operator should not be convicted because stealing patients' funds was the common practice in the industry.

Although the dollars in this instance may not be large, I view this problem as a severe abuse. The misappropriation of these funds is almost like the final indignity. We are to the point of robbing patients of their very dignity. As we have said many times, the one million elderly in our 23,000 nursing homes deserve the very best quality of life that we can bring to them.

I would like to join with the General Accounting Office in asking HEW to take more direct action to safeguard patients' funds in nursing homes.

We will continue this morning with the hearings that we began yesterday when we heard various investigative personnel concerning medicaid mills, as they are called, operating in New York City. We heard from Dr. Bruce Reiter, an M.D. from New York City; and the New Jersey Commission of Investigation chairman, Joseph Rodriguez, told us about New Jersey's experience and released a report which we made part of our record.

This morning we will hear from Robert B. Fiske, Jr., who is the U.S. attorney for the southern district of New York, and George

[1] See appendix 1, p. 697.

Wilson, associate U.S. attorney. We will ask them if they will come to the table and present their statement at this point.

We welcome you gentlemen before the committee. I want to acknowledge the fine cooperation that our committee staff has had with the U.S. attorney for the southern district of New York. Without his assistance we could not have carried on the kind of investigation that we have had underway and which is the subject of these hearings.

Mr. Fiske.

STATEMENT OF ROBERT B. FISKE, JR., U.S. ATTORNEY, SOUTHERN DISTRICT OF NEW YORK; ACCOMPANIED BY GEORGE WILSON, ASSOCIATE U.S. ATTORNEY

Mr. FISKE. Thank you very much, Senator. I would like to start by expressing appreciation to you for the assistance that you have given us in our investigation and for the information that you have provided to us which we are pursuing as part of our continuing investigation of medicaid fraud.

I am very pleased to have this opportunity to appear before you today. I would like to introduce assistant U.S. attorney George E. Wilson who is sitting on my right. George has been primarily responsible for the medicaid investigations and criminal prosecutions conducted by our office, working with very able assistance from assistant U.S. attorneys Joel N. Rosenthal and Shirah Neiman. I would just like to say at this point that to the extent that our office is given credit for its successful criminal prosecutions in this area, George, Joel, and Shirah deserve that credit.

George worked untiringly on these cases for well over 1 year in spite of what I will later describe as some difficult procedural and investigatory obstacles, and I think we all owe him a great debt of gratitude for the work that he has done.

Senator MOSS. Thank you. We welcome you, Mr. Wilson. We are pleased that you are here with us.

Mr. FISKE. To date, which has continued for the past 3½ years, we have convicted a total of 22 medical doctors, podiatrists, and chiropractors—plus 3 nonprofessional defendants—on a total of 72 felony counts. They were found guilty of violating U.S. Criminal Code sections involving the crimes of conspiracy to defraud the United States, mail fraud, false statements to the United States, false claims against the United States, income tax evasion, and the filing of false tax returns. Additionally, two doctors, currently under indictment, are awaiting trial.

SETTLEMENT FEES IMPRESSIVE

In addition—I think this is an important adjunct to our criminal prosecutions—we have brought civil actions under the Federal False Claims Act against the defendants who have been convicted. To date, these have resulted in civil settlements totaling just under $600,000, which amounts to double the amount paid out by the Federal Government on the false medicaid claims for which these defendants were convicted, plus an additional amount which was sufficient to roughly cover the cost of our investigation to date.

I would emphasize at this point that the double remedy of criminal prosecutions plus civil actions to recover double the amount of the fraudulent Federal payments, as described by the False Claims Act, is an important part of our prosecutorial arsenal in this medicaid investigation.

We have currently underway a continuing and ever-expanding grand jury investigation into medicaid fraud in the Southern District of New York. While it is obviously inappropriate to comment specifically, it is fair to say that we expect a number of further indictments in the near future.

My office first became involved in the prosecution of medicaid fraud cases when the New York City Department of Investigations referred to us the results of a preliminary inquiry into several medicaid clinics which were owned and operated by two chiropractors, Joseph Ingber and Sheldon Styles. As a result of this investigation, we uncovered a conspiracy involving eight medicaid clinics situated in deprived neighborhoods, catering almost exclusively to medicaid recipients. The factual statements that Mr. Wilson and I are making today came from the public testimony at the trials of these cases, together with what was included in publicly filed sentencing memorandums.

The clinics involved secured various practitioners in medical and related professions—doctors, dentists, chiropractors, podiatrists—commonly known as medicaid providers. These providers agreed to pay a percentage of their medicaid earnings as rent for the use of the medical facilities. These rents varied according to the specialty of the provider. For example, a chiropractor would pay between 65 and 80 percent of his gross medicaid income in rents and other fees, retaining only 20 to 35 percent for himself. His medicaid billings would be divided with 12 percent going to a factor and, normally, one-quarter of the remaining 88 percent going to the clinic as rent. The remainder would be split sometimes equally and sometimes one-third/two-thirds between clinic operators and the chiropractor.

On the other hand, medical doctors were able to retain a much greater share of their income because they were the drawing card at these clinics. They generally could retain over 60 percent of their gross medicaid claims after paying the factor and their rent.

The Ingber-Styles clinics were set up for the purpose of making money. Providers at these clinics were required to pay their rentals to the clinic owners promptly. Thus, cash flow for them was always a problem. Since the New York City Department of Social Services took from 3 to 6 months to pay claims, providers were encouraged to go to factors in order to generate the cash needed to pay rents to the clinic.

Extrication Difficult

Once involved with a factor, it was frequently difficult for a provider to extricate himself because he could not cease doing business through the factor until all of his outstanding medicaid claims and disallowances were repaid. Since city disallowances sometimes ran as high as 30 percent, the provider had to have a substantial cash sum to buy himself out of his factoring agreement. The provider was prevented from terminating his relationship with the factor and dealing

directly with the city because the city would not resume direct payments to the provider until the factor consented.

Some of the practices engaged in at these clinics included activities which are known to the committee and its staff, as Senator Moss personally observed, as ping-ponging and family ganging. Ping-ponging involved the referral of a medicaid recipient to some, or all, of the other providers working at the clinic. For example, a woman visiting the clinic with a cold would also be sent to see the chiropractor, the optometrist, and the podiatrist—all of whom billed medicaid for separate visits.

In family ganging, a mother with a number of children, lacking a babysitter, might bring all of her children to the clinic even though only one member of the family was ill. The sick family member would be treated, but the woman would be encouraged to have the doctor examine all of the other children. Frequently the entire family would then be ping-ponged around the clinic to all the providers present.

Thus, in many cases, a simple examination involving one member of a family, which should have resulted in one provider receiving one fee for one service rendered, would be parlayed into many fees involving several family members by several different providers.

We recognized early in the investigation that despite the obviously undesirable experiences as ping-ponging and family ganging, as a matter of prosecution these matters of ping-ponging and family ganging involved questions which might turn on a provider's professional judgment as to the necessity for providing certain services and would result in battles of the experts at trial and would serve only to obscure the real issues. We felt that criminal prosecutions in the area of ping-ponging and family ganging might involve testimony in each case that is a matter of medical precaution—"We thought it desirable to have these extra examinations conducted" or he was "really only looking out for the welfare of the patients"—but may also involve Federal fraudulent practices. Therefore, our investigation and theory of prosecution focused on proving that certain claimed services by providers were never rendered at all.

Earlier, when we gave the figures what I was talking about, we were able to demonstrate that invoices had been submitted for alleged treatments of patients where the treatment prescribed in the invoice had never been rendered at all.

Kickbacks Arranged

Aside from income derived by directly billing medicaid, the clinics had an arrangement with a medical laboratory whereby, in return for referring all blood and other tests, the clinics received a percentage commission—or kickback—sometimes referred to as rents, which ranged from 20 to 50 percent. Thus, as the volume of laboratory tests from the clinics increased, the kickbacks from the laboratory rose in proportion.

Because of the volume of paper work required to process medicaid claims, local residents were hired as secretaries and receptionists to work at these clinics. In most cases they were young girls who possessed no medically related or secretarial skills—only the capability

to perform routine office procedures with a minimum of on-the-job training. The procedures followed were fairly uniform at all our clinics.

They would receive patients and record all pertinent information required to prepare a medicaid invoice. They would then prepare medicaid invoices in whole or in part, depending on the desires of the individual provider. In many cases they knowingly prepared false invoices.

Most of the female employees dressed in white, giving the appearance of being nurses. Many performed duties such as drawing blood, giving injections, and taking X-rays and electrocardiograms, even though they were not licensed to perform those duties.

As a result of our investigation we found approximately 170 providers associated with the clinics we investigated. The prosecution of many of these providers was impossible because of the statute of limitations or the lack of evidence to demonstrate criminal fraud. The remaining providers, totalling approximately 80, submitted over 200,000 medicaid invoices to New York City during the period 1971–72. The criminal prosecutions that I have described earlier resulted from a painstaking review and analysis of those 200,000 separate invoices and it is in this area particularly that we encountered substantial investigative difficulties.

First, we concluded that the only way to adequately conduct a review of the thousands of claims submitted was through computer profiling. Although the New York City Department of Social Services offered its cooperation, it stated that it did not have the manpower or computer resources to devote to our task. Therefore, to obtain our profiles, we had to find funds, a programer, and computer time. HEW provided the funds and a computer expert. Eventually, after a great deal of looking around, we secured access to a U.S. Army computer at Fort Monmouth, N.J. GSA and HEW furnished computer programing services. Working with the programer, we designed our own computer profiles. This process took us approximately 4 months just to locate these resources.

Trained Investigators Needed

The second problem is that we do not have a staff that can conduct investigations into medicaid fraud. Our office has 100 lawyers who serve as assistant U.S. attorneys, but we do not have a large staff of investigators who can go out into the field and make factual analyses. We have to rely on other agencies to supply us with that kind of manpower. HEW does not have a large staff of trained, competent investigators who are available for this kind of investigation.

We started the investigation with only one qualified criminal investigator, Postal Inspector John Ellis, who was assigned at the early stages because this was a mail fraud investigation. His efforts proved invaluable but, obviously, one investigator is totally inadequate to conduct an investigation.

We sought assistance from the Department of Health, Education, and Welfare, which we did obtain, but with great difficulty. A variety of different personnel from HEW were detailed to us who provided

different services and provided different functions. We also obtained, for a period of time, an HEW investigator. However, the basic problem there was that none of these people were full-time, trained, competent investigators. All of them were borrowed from some other program at HEW on sort of a short-term spot basis, and everybody knew that as soon as they finished what they were doing they were supposed to go back to their other program. It was a short-term, makeshift operation, but we had to make do with the best we had.

Our difficulty in obtaining skilled, experienced auditors was greatly alleviated when the General Accounting Office detailed two supervisory auditors to us. Their assistance was invaluable in organizing and conducting an audit of the massive volume of financial records which had been subpenaed. Subsequently, the HEW audit agency also provided an auditor. We were also able, with some difficulty, to obtain temporary help from the New York State Department of Social Services.

Finally, in recent weeks we have obtained a commitment from the Federal Bureau of Investigation in New York to provide assistance to us in designated cases.

Obviously just from that very recital it is apparent that what is missing here is a basic staff of competent trained investigators who can be available on a full-time basis doing nothing other than investigating this type of case, and I might say it is obvious to everybody that that kind of a full-time commitment would be very productive indeed in terms of producing prosecutory results. We think that as a long-term solution to investigatory problems, HEW itself should be given the funds from the trained staff of competent investigators.

The final problems we encountered in our investigation were long delays in obtaining the basic, paid medicaid invoices from New York City. The city, as everyone knows, was experiencing serious fiscal difficulties and did not have the staff required to locate and retrieve these thousands of invoices which, unfortunately, are stored only by payment date. The payment dates ranged from 3 to 6 months after the services were rendered. To meet the problem of retrieving these invoices we turned to still another source, utilizing the services of 11 enrollees in the President's draft amnesty program as well as several HEW staff members detailed to our investigation.

Evidence Presented

Finally in October of 1975 we reached the point in the analysis of our computer profiles where we could begin calling in providers. The plan was simple. We would disclose to each provider, in the presence of his attorney, the evidence we had. We then offered him, as an alternative to having his case presented to the grand jury, the opportunity to waive indictment and plead guilty to a criminal information containing charges in number and nature which matched his degree of culpability. As part of the agreement, each defendant would agree to cooperate fully with the investigation and settle all civil liability, including the double amount, prior to his sentencing. This program resulted in pleas of guilty from all but two of the providers who have been convicted to date.

Finally, we have certain recommendations which we developed from our experience of 2½ years. We make these recommendations from the point of view of law enforcement officials. They are designed to provide procedures and techniques which will make prosecution of these cases more effective.

First: Title 42 of the U.S. Code, sections 1395nn and 1396h, the penal statutes for medicare and medicaid, should be changed from 1-year misdemeanors to 5-year felonies. This would increase the deterrent effect of these statutes and would also make medicare and medicaid fraud prosecutions more attractive to Federal prosecutors, from the standpoint of committing their resources to lengthy investigations.

I would say parenthetically here that there are other Federal criminal statutes, including the ones we utilized. However, those are statutes which are not directed specifically at medicare and medicaid and, while they can be used and while they can be interpreted to cover the type of conduct that we have prosecuted, we think it would be important for Congress to make it known that Congress itself takes medicaid fraud seriously so that the specific criminal statutes designed to regulate the medicaid and medicare fraud themselves carry a 5-year penalty—and not simply a slap on the wrist of 1 year for a misdemeanor.

Second: We think existing regulations should be amended and enforced. Patients should be required to sign medicaid invoices at the time the service is rendered. The format of the invoice should be changed to clearly reflect the Federal presence and penalties for fraud. It should be clear to the patient signing the invoice as well as the doctor submitting it that a false statement means a jail sentence. If a number of providers practice together as a clinic or similar organization, the organization should also be licensed.

As noted earlier, there is a critical need for a professional criminal investigative staff within HEW to assist U.S. attorneys in developing criminal cases. We believe that such a staff should consist of a mix of auditors and criminal investigators who are conversant with medicaid regulations. There is no such organization presently within HEW that is capable of rendering the support necessary to encourage other U.S. attorneys to investigate and prosecute medicaid fraud.

Computer Technology Essential

Third: There is also, because of the sheer volume of claims submitted, an absolute need for use of computer technology. A management information system which would provide profiles of clinics, laboratories, providers, and patients should be required of each State participating in the medicaid program. It is only through computer technology that program abuse can be detected. I would say parenthetically, at one point in our investigation we had 2 people by hand going through these 200,000 invoices that I described earlier trying to sort them out by doctor, by patient, by clinic, and these 2 people spent almost 1 year on that type of an analysis. The Bureau of Health Insurance of the Social Security Administration already has such a system for medicare which we feel could be adapted to medicaid by the States.

Finally, I would like to say that anyone connected with law enforcement knows that the only effective deterrent in criminal conduct is a certainty—or at least a reasonable apprehension—of being caught. The basic problem with the medicaid program, as we see it as law enforcement officers, is that a system has been allowed to develop which is so loose and slipshod in its regulatory procedures that those operating within it have had virtually no fear of being caught, and until very recently—in the unlikely event that they are caught—no fear of any significant penalty. The committee report itself at page 50 refers to interviews with 2 of the doctors who we prosecuted who, in the language of the report at page 50, admitted they were spurred on by the knowledge that the worst that could happen would be nonpayment of their claims or a fine.

The recommendations that we have made in our opinion will go a long way toward making investigation and prosecution of these cases more efficient and effective. This in turn should serve as a major deterrent to those who for a long time have regarded medicaid ripoffs as no-risk propositions.

Thank you very much.

Senator Moss. Thank you very much, Mr. Fiske. That was a fine statement.

You have appended three pages here listing individuals who have been convicted and the sentences meted out in each of those cases, and I will order that they be placed in the record at this point to illustrate your testimony.

Mr. Fiske. Thank you.

[The material referred to follows:]

Name	Criminal docket No.	Convictions	Sentence
1. Leonard Briggs, D.C	75 Cr. 1025	False claims (sec. 287, title 18, U.S.C.)	6 mo confinement; 18 mo probation.
2. Peter J. Carnes, D.C	75 Cr. 1026	do	3 mo confinement; 21 mo probation.
3. Raymond Jawer, D.P.M	75 Cr. 1027	False claims (sec. 287, title 18, U.S.C.); conspiracy to defraud the United States (sec. 371, title 18, U.S.C.).	Do.
4. Sidney Gerber, D.C	75 Cr. 1080	Conspiracy to defraud the United States (sec. 371, title 18, U.S.C.).	3 mo confinement; 1 yr probation.
5. Ira Feinberg, D.C	75 Cr. 1081	False claims (sec. 287, title 18, U.S.C.)	2 yr probation; $1,000 fine.
6. Elliot Martin, D.P.M	75 Cr. 1145	Fraud and false statements (sec. 1001, title 18, U.S.C.); filing false income tax return (sec. 7206, title 26, U.S.C.).	2 mo confinement.
7. Stanley Reichler, clinic administrator.	75 Cr. 1146	False claims (sec. 287, title 18, U.S.C.); fraud and false statements (sec. 1001, title 18, U.S.C.); conspiracy to defraud the United States (sec. 371, title 18, U.S.C.).	1 yr confinement; 2 yr probation.
8. Martin Levine, M.D	75 Cr. 1147	Conspiracy to defraud the United States (sec. 371, title 18, U.S.C.).	3 mo confinement.
9. Joseph Raguseo, D.C	75 Cr. 1148	Mail fraud (sec. 1341, title 18, U.S.C.)	1 mo confinement; 23 mo probation.
10. Ralph Sheldon Bell, M.D	75 Cr. 1192	False claims (sec. 287, title 18, U.S.C.); conspiracy to defraud the United States (sec. 371, title 18, U.S.C.).	Not sentenced as yet.
11. Sheila Toby Styles, secretary.	75 Cr. 1201	False claims (sec. 287, title 18, U.S.C.); conspiracy to defraud the United States (sec. 371, title 18, U.S.C.); failure to file an income tax return (sec. 7203, title 26, U.S.C.).	2 yr probation; $500 fine.
12. Joseph Howard Ingber, D.C.	75 Cr. 1221	False claims (sec. 287, title 18, U.S.C.—2 counts); conspiracy to defraud the United States (sec. 371, title 18, U.S.C.); fraud and false statements (sec. 1001, title 18, U.S.C.—2 counts); mail fraud (sec. 1341, title 18, U.S.C.).	5 yr confinement.

Name	Criminal docket No.	Convictions	Sentence
13. Sheldon Max Styles, D.C.	75 Cr. 1222	False claims (sec. 287, title 18, U.S.C.—2 counts); conspiracy to defraud the United States (sec. 371, title 18, U.S.C.); fraud and false statements (sec. 1001, title 18, U.S.C.—2 counts); mail fraud (sec. 1341, title 18, U.S.C.); filing a false income tax return (sec. 7201, title 26, U.S.C.).	5 yr confinemt.
14. Tyler Ira Freeman, M.D.	75 Cr. 1236	Conspiracy to defraud the United States (sec. 371, title 18, U.S.C.).	1 mo confinement; 2 yr probation.
15. Donald Trager, D.C.	75 Cr. 1237	do	1 mo confinement; 35 mo probation; $10,000 fine.
16. Marvin Mosner, D.C.	75 Cr. 1251	False claims (sec. 287, title 18, U.S.C.); conspiracy to defraud the United States (sec. 371, title 18, U.S.C.).	3 yr probation.
17. Edwin Kimmel, D.C.	75 Cr. 1258	do	2 mo confinement; 22 mo probation.
18. Arthur Krieger, D.C.	76 Cr. 57	do	3 mo confinement; 2 yr probation.
19. Rene Clark, secretary	76 Cr. 74	Conspiracy to defraud the United States (sec. 371, title 18, U.S.C.).	18 mo probation.
20. Morty Kazdin, D.C.	76 Cr. 98	do	1 mo confinement; 23 mo probation.
21. Arthur Paul Solomon, M.D.	76 Cr. 115	False claims (sec. 287, title 18, U.S.C.)	2 months confinement.
22. David Friedman, D.C.	76 Cr. 155	False claims (sec. 287, title 18, U.S.C.); conspiracy to defraud the United States (sec. 371, title 18, U.S.C.).	1 yr probation.
23. John Errol Asher, M.D.	76 Cr. 518	False claims (sec. 371, title 18, U.S.C.); fraud and false statements (sec. 1001, title 18, U.S.C.).	1 yr confinement; 18 mo probation.
24. Robert March, D.C.	76 Cr. 114	False statements (sec. 1001, title 18, U.S.C.—10 counts); mail fraud (sec. 1341, title 18, U.S.C.—3 counts).	3 mo confinement; 2 yr probation.
25. Max Kavaler, D.C.	76 Cr. 110	False claims (sec. 287, title 18, U.S.C.—13 counts); conspiracy to defraud the United States (sec. 371, title 18, U.S.C.).	Not sentenced as yet.

Senator Moss. I do appreciate, as I say, the great amount of cooperation that we have had. In fact, I remember my visit in your office at the beginning of this investigation. Here is a photograph to remind you where it all started. The fellow without the necktie is me. That picture was taken in your office, before we went out to visit the medicaid mills.

Mr. FISKE. I remember that very well.

Senator Moss. Mr. Wilson is in there, too.

You have indicated some of the problems that you have been encountering in prosecuting offenses in this field. What is the size of your staff that is assigned to this kind of work?

Mr. FISKE. We have, as I said earlier, 100 assistant U.S. attorneys. They are divided roughly two-thirds and one-third between criminal prosecutions and civil cases. There are approximately 65 lawyers in our office who do criminal work and roughly 35 who do civil work. I would say at one time or another during the course of this investigation there have been anywhere between 5 and 10 assistant U.S. attorneys who have participated in the investigation and prosecution of these cases, both criminally and civilly, all under the direction, basically, of George Wilson.

I would like to say, Senator, that we would be prepared to commit many more assistant U.S. attorneys to this kind of prosecution if we had the investigative resources to develop the facts which make prosecution possible. I think our experience has been that the number of assistant U.S. attorneys that we have devoted to the cases up until now have been more than sufficient to deal with the facts that have

been able to be developed by the limited investigative help that we have had. If we had more investigative help, we could lend a lot more assistance to this kind of prosecution and we would be anxious to do so.

Senator Moss. Roughly, what is the size of your caseload in this field?

Mr. FISKE. In the field of medicaid?

Senator Moss. Yes, just totals, on an average.

Mr. FISKE. Well, I think there are three cases presently pending as part of the original investigation that are awaiting trial. All of the others have resulted in pleas of guilty or convictions. That is the caseload in terms of cases that have resulted in indictments or information. As I indicated earlier, we have a very extensive investigation continuing into all aspects of the medicaid program, including areas other than clinics and doctors. Obviously, I think it would be inappropriate to comment on that specifically, but that is where our major effort is being directed right now. The initial effort which resulted in the so-called Ingber-Styles prosecutions is virtually over except in two or three cases that remain to be tried. We are in the second wave, so to speak.

Senator Moss. What is your assessment of HEW's current capability to investigate medicaid fraud?

PERMANENT INVESTIGATIVE STAFF NEEDED

Mr. FISKE. I think that is one of the major problems that we encountered and that is one of our major recommendations. HEW should obtain, accrue, or be given the necessary funds to have a permanent staff of competent investigators much like Internal Revenue agents or FBI agents who can be available to the U.S. attorneys offices to conduct the kind of factual investigation that is essential if these kinds of prosecutions are going to result. I recognize that there may be a difference of opinion as to whether that kind of investigative responsibility should be in the Federal Government, in HEW, or rather with the States or the cities but, as Federal prosecutors, we like to work with Federal agencies and we would like to see HEW do it.

Senator Moss. Are you acquainted with the Talmadge fraud bill or my proposal to create an Office of Inspector General in HEW to concentrate on monitoring compliance with medicaid-medicare—all health services?

Mr. FISKE. I am aware of the concept of the bill, Senator. I cannot tell you I am familiar with every detail of it, but we certainly heartily endorse that concept.

Senator Moss. I think you touched upon it, but maybe Mr. Wilson could also comment upon it. How difficult is it to make a medicaid fraud case?

Mr. FISKE. You are talking to somebody that can give you firsthand knowledge.

Senator Moss. I know he has been in the midst of it.

Mr. WILSON. It is extremely difficult. Let's take, for example, a hypothetical case. We received a complaint from a citizen about a cer-

tain doctor. Now ideally we should be able to call the agency that pays that doctor's invoice and ask for a profile of what he does, either in a certain month, a 6-month period, or a 1-year period. We should be able to examine that profile and be able to pick patterns of inherent improbability of treatment of particular patients and then interview those patients and make a case.

I think it has to be understood that you just can't go into court charging the doctor with one isolated instance because the chance of not being successful is too great. You have to get a pattern of fraud. Now, the only way we can do this, with any particular doctor, is to design our own program, find our own computer time, get some money from some agency to pay for printout, and go out and have it done. This takes a couple of months. That is just one case.

If we get individual complaints, one every other week, then the same process has to be gone through each time. To answer your question, sir, it is extremely difficult. It takes a lot of work and some luck.

Recorder Used To Obtain Evidence

One of the doctors we convicted only because of sheer luck. We had already decided that there was insufficient evidence of fraud from our examining printouts when we found that another doctor knew him and had personal knowledge. He was sent in with a wire on, a recorder, and we obtained the evidence which we confronted him with to get a conviction. It is largely a catch-as-catch-can situation.

Senator Moss. So we must conclude that it is very easy to cheat at medicaid, but very difficult to prove a case against those who do cheat.

Mr. Wilson. Yes.

Mr. Fiske. Yes.

Senator Moss. What is the current process in New York City as far as recordkeeping? How are they doing it now?

Mr. Wilson. The invoices, which are the primary evidence both to show the claims made and, most importantly, to make handwriting exemplars, are kept in a warehouse. They are filed by order of payment which may range anywhere from 3 to 6 months after they are submitted. Those records are obtainable, after research, at one office of the department of social services. To obtain file numbers or box numbers, we must obtain a work-gang of people to crawl through mountains of invoices to physically find them. That is the recordkeeping system for the records that we are interested in. The records which are kept in the computer—what the computer does is act as an auditing tool to determine the amounts paid, so they can compare the monthly report to the State.

Senator Moss. On page 216 of our report [1] there is a photograph of a lot of boxes. I wonder if that was where the records were residing primarily?

[1] *Fraud and Abuse Among Practitioners Participating in the Medicaid Program*, staff report for the Subcommittee on Long-Term Care of the Senate Special Committee on Aging.

Mr. WILSON. If that is our warehouse in Brooklyn, sir, that is correct. I might add the city had made a commitment to find these 200,000 invoices for us and we are getting them in dribs and drabs—a few at a time. In September of last year they fired all the laborers they had hired for this task. We were not getting any more invoices, we were told, because of the fiscal crisis—that the laborers were let go. We were being forced around. At the same time the Selective Service was making their amnesty ruling, so it seemed an ideal marriage. Each agency is helping each other out.

INVOICES RETRIEVED FROM WAREHOUSE

At one point later on we had to get a supplementary group of invoices. I had to send for a group of investigators to work for me. Auditors, investigators, clerks, everybody came in one day with their old clothes on and actually spent a whole week in Brooklyn—male and female. The whole gang went into the warehouse and they spent a week retrieving invoices, and that is the most accurate way we could do it.

Senator Moss. Now looking ahead, has New York changed that? Have they started computerizing their filing of these invoices in any way?

Mr. WILSON. Not that we know of. We have not looked for invoices for the past 6 months. We understand that they have a little bit different field in their master tape but, insofar as the information, there are still no profiles of any type. According to my information they are still filing the invoices in the warehouse and I am not aware of any different way of filing other than this.

Mr. FISKE. I would like to emphasize at this point, Senator, the value of a good computer profile in terms of simplifying the investigation of these cases. If you can press a button and get out of a computer all of the invoices that a particular doctor has submitted in a particular year—let's say, itemized by patient—then you could very quickly see in the course of a day or two whether there appears to be a pattern where patients are being treated three times in the same week for the same ailment. This, then, could target for you a group of patients who you could call to the grand jury to find out whether or not they received those services or not. If they said they had not, you would have a fraud prosecution of that doctor developed right there within just a few days. That is just one example of the way a computer can be used.

Another way it could be used would be, for example, if you know a doctor himself. This is the actual procedure that George used with the Fort Monmouth computer. If you know the doctor is in the hospital, for example, for a period of time—for 3 weeks—or he is out in the country for a period of a month on vacation, then you just plug into the computer to see if there were any invoices submitted by that doctor during that period of time.

One of our prosecutions resulted from exactly that process where we were able to show that a doctor was submitting a substantial number of invoices for medicaid reimbursement for a period of time

when we knew that he himself was hospitalized and not even in his office.

Those are just two examples of the way that a computer can be used. Mr. Wilson has brought with him, and we would be happy to leave them as exhibits, three sample computer runs which we actually developed from this Fort Monmouth computer which has demonstrated those two methods, plus the third one where a computer can be very effectively and very quickly used to make criminal cases in this area. If you would like to have those, I would be glad to leave them. I think they are self-explanatory.

Senator Moss. I would like to have them and I appreciate that.

[The computer runs follow:]

Senator Moss. Would it not be a great economic advantage, leaving aside all of the other abuses, to the State and to the city if they had this sort of computerized data because of the ability to detect fraud and to recover funds—you pointed out some $600,000 you have been able to recover on these that you had prosecuted?

Mr. FISKE. As I tried to make clear earlier, first it would make prosecution of those committing fraud far easier, far more efficient, and far more effective by that very process. Once the word got around that there was that kind of computer technology available which could result in instant and certain prosecution, we think that a number of others who may well be committing fraud now, where they know they can get away with it, would be deterred from committing the fraud in the first place. It would have a very definite double benefit.

Senator DOMENICI. Would the Chairman yield?

Senator Moss. I yield to the Senator from New Mexico.

STATEMENT BY SENATOR PETE V. DOMENICI

Senator DOMENICI. I first wanted to ask a question. I read your entire statement even though I missed being here for the first two or three pages. I didn't hear you mention in this past 45 minutes any medical society, an organization of doctors in the city or State, that may have been involved at all in any of your efforts to clean up medicaid. Is that an oversight or are they not involved?

Mr. FISKE. The medical profession itself regulating its own?

Senator DOMENICI. Yes. Is the medical society in the city or State of New York involved in trying to police or help with this kind of problem to the extent that you have been involved? Have you observed it?

Mr. FISKE. No.

Senator DOMENICI. Let me say, Mr. Chairman, for the record, that in your State, the State of Utah, and in the State of New Mexico, I think it would be fair to say the probability of finding fraud is very high. In our respective States, the medical societies are intimately involved in profile evaluation.

Provider profiles are on computers and reviewed by a professional on a regular basis. I know, as a matter of fact, because after our first hearings I was asked to come back to New Mexico and talk to them about the system, and there is just no similarity to what is occurring in New York and Illinois today. Everything that goes on with reference to treating a patient versus a doctor is computerized and examined on a regular basis by a professional board headed by a doctor who is a full-time employee of the nonprofit corporation that contracts with the State for all of these evaluations.

I just want to say for the record at this point before I ask you a couple of other questions that I agree wholeheartedly that the threat of criminal prosecution of a serious type is a deterrent and that we ought to proceed along the lines of your recommendations, but what I observed in medicaid is the creation of a whole new culture of the delivery of medical services. The people in those centers and the foreign doctors in there have no concept of the medical ethics that

the association of doctors generally propose and have posted on their office walls. They don't understand anything but trying to make a lot of money and make a little tiny clinic turn out dollars and dollars. They also get involved with factoring companies. Many of them don't understand business and they just rock along thinking, "This is the way to practice medicine." I conclude that it is serious enough that the medical professions in this country better get involved in helping with this problem because U.S. attorneys and State attorneys are not going to solve it.

Let me ask you some specific questions. Should we prohibit factoring in this whole field?

Factoring Sometimes Necessary

Mr. Fiske. I think that makes it very difficult for a legitimate operator if you have a situation like you do in New York City where the city is very far behind in making the reimbursement payments. Sometimes that can be from 3 to 6 months. I grant you that the factors have been involved very deeply in fraudulent operations that we have uncovered in these eight clinics, but on the assumption that there are some doctors who are perfectly honest in the medicaid program and who need to have a source of funds, unless there is some other way to assure them that they are going to get reimbursed properly, I think you are penalizing them.

Senator Domenici. Are not factor lenders performing the service of lending, plus collecting bills?

Mr. Fiske. Yes.

Senator Domenici. Don't we have lending institutions that are licensed and regulated that perform the service of factoring as a part of a marketplace in the United States?

Mr. Fiske. Well, I am not sure, Senator, that absolutely prohibiting a particular type of lending arrangement is, in the end, going to be a desirable thing. It may well be that the factors should be investigated very carefully and people should take a hard look at their own operations which, I might say, is part of our investigation at the present time. At least as I see it, I am not sure——

Senator Domenici. What percent is the factor making of the medicaid dollar that we are paying, based on your investigation?

Mr. Fiske. About 12 percent.

Senator Domenici. So to the extent that the Federal dollar is supposed to go to help our poor people, of that portion which is factored, 12 percent is going to the factors, is that correct?

Mr. Fiske. Well, it comes out of what the doctor himself pays.

Senator Domenici. I understand that.

Mr. Fiske. Hopefully the doctor's charge for his service is a fair charge. In other words, the one that suffers is the doctor, not the patient.

Senator Domenici. Yes; but it also moves doctors in the direction of a mill instead of a clinic, to the extent that we have the 12 and the 10 and the 5 and the other things. They have become more like mills than professional doctors and we are moving them in that direction by these impositions, it seems to me.

Mr. FISKE. Let me make this statement, Senator, which I think there would be no disagreement with. If, for example, in the city of New York the city could make the payments on these claims promptly—let's say, within 30 days—there would not be any need for a factor or any other kind of lending institution at all. That is the heart of the problem.

Senator DOMENICI. Now you have testified here of the need for assisting you as the U.S. attorney and that HEW needs more attorneys—more investigative capacity. As a matter of fact, conceptually this program is supposed to be run by the respective States of this Nation; is that not correct?

Mr. FISKE. I think that is the concept.

Senator DOMENICI. I take it that you are telling us that the State of New York does little or nothing by way of criminal investigation or has little or no capacity to move against criminal fraud in New York.

NEW YORK SUFFERS FISCAL HANDICAP

Mr. FISKE. Well, the district attorney of New York County, Mr. Morganthau, is a very effective prosecutor, but I think he suffers from the same handicaps that we do in terms of having investigative resources. Just as a practical matter, as we sit here now and try to look at medicaid fraud in New York City, if we have to wait for New York City to come up with the funds to develop the staff of investigators, there is going to be no solution.

Senator DOMENICI. I take it that along with your recommendations you would certainly like us to do what we can to coerce the States into having an adequate investigative team and fraud-type capacity also, would you not?

Mr. FISKE. Yes, sir. I would say that when you talk about requiring the States to provide services. it is there that we believe that the computer profiles are the most important.

Senator DOMENICI. Would either of you give us your idea as to what portion of medicaid fraud, in your opinion, is actually detected, investigated, and prosecuted?

Mr. FISKE. That is an extremely difficult question to answer, Senator. I have read the figures in the committee's report with respect to medicaid fraud in New York and one of the problems is the definition of fraud as I described earlier. Our criminal prosecution and civil suits have been based on what I think you could call hard-core fraud, where we can show that invoices were submitted for no service rendered at all. We have not, to date, brought criminal prosecutions for those cases where services were in fact rendered, but the argument is made that services were unnecessary. So there is a gray area in terms of what you mean by fraud. I personally find it very difficult to put a percentage on quantity. I would say, however, that we are satisfied that the system, as I said before, is so loose and slipshod in its regulatory procedures that it literally encourages fraud.

Senator DOMENICI. Thank you, Mr. Chairman.

Senator MOSS. Thank you, Senator.

I wanted to ask a question. California has a rather novel idea. The medicaid cards carry stickers—this seemingly to limit their use.

Would something like this be effective if it were nationwide? They peel one of these stickers off when a person uses his medicaid card. When he has exhausted those stickers, he has to go back and get another card. I wonder if that is a worthwhile thing.

Mr. FISKE. Under the California procedure, is the sticker attached to the invoice when it is sent in for payment?

Senator Moss. Yes, it is.

Mr. FISKE. Yes, I think that would be.

Senator Moss. That would sort of cut down on the abuse on the part of a recurring patient.

PATIENT VERIFICATION OF INVOICE

Mr. FISKE. It is a little bit like the suggestion we made before, that the patient should be required himself to certify on the invoice when it is sent in that he in fact received the treatment. None of these things are going to totally eliminate fraud; there is always going to be somebody who is really determined to do it and will design a way around these systems but, to the extent that it becomes more and more difficult to commit fraud, the marginally fraudulent operators will, I think, find it is not worth it.

Senator Moss. Do you get any special supportive service out of the Department of Justice headquarters in this field of medicaid and medicare fraud?

Mr. FISKE. Only in the sense that they just have given us permission to hire two more assistant U.S. attorneys.

Senator Moss. I think Senator Domenici covered the question I was going to ask, too, as to the extent that the State and the city were involved in prosecution of this fraud. You indicate that they, too, are limited by manpower and, therefore, have not been able to do what they could do if they had the facilities.

Mr. FISKE. That is correct.

Senator Moss. I take it also from your testimony that you are determined to seek prison sentences in cases of fraud rather than settling for just restitution and probation.

Mr. FISKE. We are doing both, Senator. We are requiring anybody that we have convicted to not only pay back the amount of the Federal money which he fraudulently obtained under medicaid, but to pay double the amount plus, in addition to that, a further amount which we look upon as sort of reimbursement between the Federal Government for the cost of conducting the investigation in the first place. In addition to those double penalties on the civil side, we are making it clear to the courts that we think prison sentences are the only effective deterrent to this kind of thing in the future.

Senator Moss. Counsel has a question.

Mr. HALAMANDARIS. I would like to direct this question to Mr. Wilson and then, Mr. Fiske, you might want to comment as well.

The question relates to the False Claims Act which permits recovery by the fact that the case may be brought by an individual. The provisions of the statute allow for a 10-percent bounty so that, if there is a conviction, the recovery of funds is paid to the individual

initiating suit. Suggestion has been made to authorize the States to act as persons under the False Claims Act for the very limited purpose of bringing medicaid fraud cases. I saw the quizzical look on your face.

Mr. FISKE. That was on my face, too.

Mr. HALAMANDARIS. The question I have is, do you think this would be helpful to allow the States, in effect, greater incentive to make fraud cases?

Mr. FISKE. Let me answer that first, if George does not mind, because it seems to me there is no reason why we should have to offer the State, which is already a victim of this fraud, some premium for doing a job that it should be doing in the first place.

Mr. HALAMANDARIS. George, do you have a comment?

BOUNTY FOR INFORMATION?

Mr. WILSON. I agree with that. The State is already getting money theoretically from HEW to pay for the cost of administering the medicaid program. I think, however, it is a good idea to publicize this type of thing and let the citizens off the street—turn them loose. I think if the citizens knew they could make a couple of bucks, we would have a lot more work.

Mr. FISKE. I think we both would endorse the concept of a 10-percent payment to a private citizen who comes forward with information that leads to a successful prosecution and the return of the money.

Mr. HALAMANDARIS. I marvel that you have been able to do so much with all the obstacles in front of you. You had to go to the city and get the computer tapes and go to Fort Monmouth and have them develop patient profiles. The question arises, why can't the city do what you did? Why can't the State of New York develop this? All that is involved is taking computer tapes over to Fort Monmouth and running profiles. Why hasn't the city or State done that?

Mr. FISKE. As to the city, I think the problem is their fiscal situation, and I fully recognize that the argument can be made that one of the reasons the city is in the fiscal straits it is is because of the situations just like this. A penny saved might well be a penny earned, in terms of resources devoted to that kind of computer technology. Up until now the problem we face with the city has always been one of insufficient funds on their part to do this kind of work. I think the State is looking to the city. It is a dead end.

Mr. HALAMANDARIS. I wanted to ask if the additions of the Ryerson Street warehouse in Brooklyn, where all these invoices are stacked up in boxes, has inhibited your prosecution in any case. In any prosecutions you have had, what kind of difficulty do you have in retrieving the original bills?

Mr. WILSON. It took us, I guess, a good part of the year just standing dead in the water getting invoices. After we went through the warehouse we still came up, in my judgment, about 20-percent short. We would pick up a good case on the computer run, our computer profile, where the treatment was given, and we would not be able to

proceed on that because we would have no invoice. It extremely frustrated some of the people getting the case ready to present to the grand jury. We ended up with many less counts than we wanted to because we didn't have the original invoice; it could not be found. That was the one thing that hampered us the most, next to, of course, the lack of some profile in the first instance.

Senator Moss. Well, thank you very much, Mr. Wilson and Mr. Fiske, for your testimony and for your great cooperation. As I indicated in the beginning, you have given us every courtesy and help as we have tried to find out what was going on and as we try to determine what, if anything, we need to do at the Federal level legislatively. We are wrestling with that problem now and you have been a great help to us. We wish you well in your prosecutions, because certain and severe prosecutions certainly should have a great deterrent effect on the abuses that we have been able to outline here.

Thank you very much.

Mr. FISKE. Thank you, sir.

Mr. WILSON. Thank you.

Senator Moss. We will now call Dr. Ingber and Dr. Styles, and they are accompanied by their attorney, Mr. Sidney Sparrow.

STATEMENT OF SIDNEY SPARROW, ATTORNEY FOR DR. JOSEPH INGBER AND DR. SHELDON STYLES, NEW YORK CITY

Mr. SPARROW. I will speak for both of the doctors in a brief preliminary statement.

Senator Moss. All right.

Mr. SPARROW. I would just like to introduce to the committee Dr. Joseph Ingber on my right and Dr. Sheldon Styles, and indicate to you that each of them has been a practicing chiropractor in the city of New York.

I should like you to know at this point that neither of these doctors has, for approximately 5 years, written, prescribed or, in any other fashion, worked under the medicaid program. They existed way back then when it was made necessary that they do so.

I should also like you all to know that after their indictment and during the course of the investigation which ultimately resulted in pleas of guilty on the part of both of them, after conference with Mr. Wilson and the staff, each of these two doctors decided that they were going to cooperate with the Government.

I am sure you are familiar with the fact that most Government criminal prosecutions depend in great measure upon the cooperation of one or another of the conspirators or other persons who might have been involved. They were asked to give 100 percent cooperation; they gave that in full, plus more.

By that I mean very simply—and I speak now particularly for Dr. Ingber whom I represented in these proceedings—in addition to giving information concerning that with which he had personally become involved and those persons with whom he had dealt, he went far afield in every way that he could to make amends. He knew of instances that might possibly lead the Government in its search.

Testimony Valuable

When I heard Mr. Fiske speaking a while ago about the need for computers and Mr. Wilson's comment about a bit of luck in finding something or getting the lead on somebody who was defrauding the Government, I think perhaps part of that luck was to have Dr. Ingber and Dr. Styles available. By their actions, not only did they save the Government enormous amounts of time and effort and money, but they also helped to unearth some of the loopholes which they became aware of and which they, in turn, conveyed to the Government.

Of course, I presume the committee must be aware at this point that, although they operated in their fraudulent manner, they make no bones about the fact that they did so. That was at a period 5 years ago when the atmosphere throughout the city of New York, insofar as it pertained to this particular type of activity, was almost so permissive it was an inducement or invitation to get involved.

Since then, of course—5 years later—there is a considerable difference, perhaps because of the fact that there have been some more affluent and perhaps more capable persons—some of whom have achieved some publicity and headlines and gotten their ultimate comeuppance—but does not compare in a measure to that which has happened to these two doctors. By reason of that we have a different atmosphere now.

I suggest to you one particular thing that each of these two doctors would like you to know, and that is that, although there are many, many facets of fraud which all of these clinics and those engaged in medicaid fraud have been resorted to, the Government in its own report to the sentencing judge indicated that neither of these defendants did at any time mistreat or ill-treat a patient. There is no question that they were involved in defrauding the Government.

Now they are down here voluntarily. They are not here to plead for themselves; they are here because they are concerned about a system which is so bad that it actually invites disaster.

The program of medicaid is obviously a very fine one; it is one which should do our citizenry a lot of good if properly administered and properly handled. I don't think Drs. Ingber or Styles are concerned right now with that which was said here a little while ago, about violators and ferreting out violators with computers to get at who was commiting crime and prosecute them.

I think it is far more important to this country that these funds be utilized for the benefit of the people they were intended, and to do what it would seem to be in order to seek to administer the program in a better fashion.

The two doctors are here intending to be as cooperative as they possibly can and to give you whatever information they can and whatever assistance they can to help locate those things which bring on this type of fraud, and to help eliminate it, if possible, so that ultimately the funds that the Government does provide will be appropriately utilized for the benefit of those who are sick and in need of care.

Senator Moss. Thank you, Mr. Sparrow. I appreciate what you have said and I confirm that the two doctors are here with our invitation and we appreciate your coming.

Maybe we could start with Dr. Ingber and ask you—how did you get into the situation that caused you to be prosecuted criminally?

STATEMENT OF DR. JOSEPH INGBER, CHIROPRACTOR, NEW YORK CITY

Dr. INGBER. Well, one step at a time, actually, Senator. The medicaid program was made known to us in late 1968 and early 1969, and I began in my own private practice to see some medicaid patients. At that time medicaid fees were $3 for a visit and it was a rationale for me, and many other people, to feel very cheated by the Government.

Here we were asked to provide a service and, at the same time, we were being paid less than 50 percent of what we were asked to receive from a private patient. This is almost a formula.

If you want to set up a system that is going to be corrupt, start out by underpaying the practitioners. At the same time make it very easy for them to cheat; don't put in any safeguards, and turn your back on the whole thing and walk away from it.

The way the system is set up, Senator—what you are trying to do is put your finger in the dike with these programs of stamps and, perhaps, stickers. The whole system is impossible. You can jury-rig it to make it a little tougher, but the way to stop it is not to make it more profitable for doctors to see patients more times. The way to stop it is to have a system much like GHI by which doctors are paid for the number of patients they treat in a year's time and doctors are paid on a salary basis.

As long as you pay people on a per-visit basis and then take away much of their income in factoring—much of their income by low fees—doctors are going to justify what they do to themselves. They are going to start out writing in an extra visit here and there and gradually, when they see nothing happens when they do it, they will do it more and more.

"SYSTEM ENCOURAGES WRONGDOING"

So the system of paying for visits is wrong, and the more you become vested in that system by which you are going to pay doctors for writing more visits, in a sense you are encouraging this kind of thing. You have to stop it from that end; it is backwards.

Senator MOSS. Did you start by simply opening your practice and having some medicaid patients, then, feeling that the payment by visit and the amount per visit was so small, you got into the problem? Is that what you are telling me?

Dr. INGBER. That is how it started, and we heard it was going on not only in our profession but in every one of the medical and paramedical professions—that doctors were writing down extra visits here and there, and there was no problem with it. The worst thing that would happen would be that the city might disallow a percentage of your visits.

In fact, the city of New York set up a system that was in a way saying "Yes; that is OK, guys," because they had a disallowance

number that was called the administrative decision which was just gobbledegook and meant "We know you are overbilling and we are going to cut you back."

Some doctors had an administrative decision cut 10 percent, 5 percent. I knew doctors that were as high as 25 to 30 percent in disallowances. If they would put in, let's say, $1,000 a week in invoices, they knew that 25 or 30 percent of that—$250 to $300 a week—would be almost automatically taken off the top by the city for administration.

It became a game between the doctor and the city:

I will overbill extra visits; you take them off, and we will play back and forth. If we put in too many, you call us down and we will pay you back $5,000 or $10,000 and we know that will be all that is done.

The city documented this in the newspapers time and time again. The doctor pays back $20,000 to the city of New York as if it were a victory when, in a sense, they were telling us this is how you play this game.

Senator Moss. Was this very widespread then in New York among all doctors and of all different specialties?

Dr. INGBER. I would say that it varied from doctor to doctor. Some doctors were maybe 99 percent honest and maybe others 1 percent honest, with all ranges in between. I don't know what every doctor did, but I know what I heard and I know what I saw.

Senator Moss. You heard us talk about ping-ponging. Is that a common practice also, to ping-pong patients around to different practitioners?

Dr. INGBER. This is one of the gray areas that is spoken about, Senator Moss. It is true that every black child should get first a blood test, and second for sickle cell. It is also true that the motivation of doctors in doing that was not always for the child's benefit, but usually for their own benefit.

"PING-PONGING" JUSTIFIED?

It may be true that some doctors were motivated by both financial gain and health. It is impossible to know why anybody does it, but a lot of the tests and a lot of the so-called ping-ponging was because these were people that had never had, in 1968 or 1969, any proper examinations before. They had never had an optometrist check their eyes; they had never had their teeth checked by a dentist or feet checked or their back checked. Therefore, it is an area that any doctor could rationalize and justify sending them to any doctor and, at the same time, his motive might be totally mercenary, and then again it might not.

Mr. HALAMANDARIS. Let me interject.

Senator Moss. Yes.

Mr. HALAMANDARIS. We talked a bit last night and we asked the question, Dr. Ingber, how many clinics are ping-ponging and conducting other abuses? What was your response?

Dr. INGBER. Every center that I knew about in the city of New York made sure that there was as much utilization as possible.

Mr. HALAMANDARIS. That is what I wanted you to say.

Senator Moss. Well, how prevalent is factoring as a means of payment for invoices?

Dr. INGBER. I would say that except for the very wealthy doctors who go into it, it is almost universal. It is done because—if a medical center, let's say, puts in an eye doctor and waits until he gets paid to get its rent, or puts in a podiatrist and chiropractor and all the medical specialists, and if the medical center owners wait to get paid until the city pays them, they would go out of business. Therefore, they insist that the doctor pay on each group of invoices as they go into the city.

Therefore, the doctor has no way of paying $3,000 or $2,000 up front waiting until the city reimburses him, because each week he would be getting deeper and deeper in debt. He must go to a factor or else he cannot work in the medical center.

Senator Moss. What is the group going rate?

Dr. INGBER. I think 10 percent up to 12 percent.

Senator Moss. That would be regardless of what length of time it took the factor to collect, whether he had 2 months, 3 months, or 6 months?

Dr. INGBER. That is a good point, Senator, because it brings out the point that that comes out if the city paid in 4 months. In a sense, the center would be making three times as much—or 36 percent.

Excuse me, Senator; may I make one other point to that?

Senator Moss. Sure, go ahead.

Dr. INGBER. The fact that 12 percent came off the top to a factor made many doctors try to recoup that 12 percent and, therefore, write extra paper and write extra visits because they knew that if they were giving an honest accounting of their billing, they were losing another 12 percent off the top. Therefore, there may be many cases they would make it 12 percent.

Senator Moss. You think that was an inducement also to cheat the system?

"AN INDUCEMENT TO CHEAT"

Dr. INGBER. Yes; I think factoring is an inducement to cheat the system.

Senator Moss. What is the cost of setting up one of these medicaid centers or clinics?

Dr. INGBER. I knew centers that went as high as $150,000 to set up and I knew centers that were set up for a matter of $5,000, depending on the amount of the equipment—the kind of facade that was built on the street and what they did and how they did it.

Senator Moss. Was this usually done by businessmen or done by doctors themselves?

Dr. INGBER. Initially I think it was done mostly by doctors, but as businessmen became aware of how profitable medicaid centers could be, real estate men and businessmen would come to doctors that they knew and say, "Let us get into this. How can we get into this? How can we get involved?"

So I think at this point there were a lot of businessmen coming in. As far as our centers were concerned, most of them were not the very expensive centers, except where we went into someone else's center.

Senator Moss. But did it turn out to be a very lucrative thing, setting up these centers?

Dr. INGBER. It did for some people. It depends on where you set up a center. For example, if you went into the heart of a ghetto neighborhood, you were pretty sure of a very busy office, but if you went into the marginal areas where there were not a large number of welfare patients, you would find that you had a marginal operation and in order to survive you would have to overbill.

This is another point that I wanted to bring up to the committee, and that is that there should be some sort of criteria or guideline set up for how many medical centers can be set up in a given population. It should not be allowed that 1,000 medical centers can be set up in a community, because most of them won't have enough actual patient load to survive; they will be encouraged to overbill just to survive.

Two or three of our centers would never have survived even for a few months without overbilling. In fact, one of our centers, even though we did overbill, was forced to close within a few months. There has got to be some proportion of centers to population, or else a group of centers will flood an area and most of them will overbill.

Senator Moss. Dr. Styles, we don't want to leave you out. If you concur generally, will you tell me, as to what Dr. Ingber has said about how you get into it—why the system was abused?

STATEMENT OF DR. SHELDON STYLES, CHIROPRACTOR, NEW YORK CITY

Dr. STYLES. Since we were together I think he has put it succinctly.

Senator Moss. Do you know of doctors who essentially sell their licenses, allowing others to bill in their name for a percentage of return?

Dr. STYLES. I have known two such doctors.

Senator Moss. You know two who do that?

Dr. STYLES. Yes.

Senator Moss. Do you know a Dr. Hugh?

Dr. STYLES. Yes, Senator.

Senator Moss. Is he one of those involved?

Dr. STYLES. Yes; but not knowingly.

Senator Moss. Do you know what percentage of his billings were false billings?

Dr. STYLES. A large majority of them, Senator. I don't know what percentage.

Senator Moss. But a majority?

Dr. STYLES. Yes.

Senator Moss. Was there a kickback arrangement in your center with a pharmacy or a clinic that you sent your work to?

Dr. STYLES. Concerning the drugs prescribed?

Senator Moss. Yes: drugs prescribed or places where procedures were done on blood—clinics of that sort.

Dr. STYLES. We received a payment from a laboratory based upon the percentage of income somewhere between 20 and 25 percent of the amount that they billed medicaid.

Senator Moss. About 20 or 25 percent?

Dr. STYLES. Approximately so; yes, sir.

Senator MOSS. Now on these problems of extra billing, how did you work them out? Were they just at random or did you have a regular system of checking off extra services?

BILLING DONE AT RANDOM

Dr. STYLES. Each doctor will have billed—many medical doctors billed on their own. Chiropractors had assistants and secretaries, and each doctor billed differently, but I imagine much of it was done at random—pulling names out.

Senator MOSS. And it would depend really on what, the financial condition, how urgent it was to get the extra billings? Has that increased the number?

Dr. STYLES. In the cases that I recall the doctor is dissatisfied with the amounts of money he was making. He knew that other doctors could go to the file, pull out the names, and write new invoices on these patients, and he might be encouraged to do the same thing.

Senator MOSS. Was it your observation that this was widespread through all of these medicaid centers? Was it being done rather universally?

Dr. STYLES. Yes, sir, it is.

Senator MOSS. Do you think it is still continuing today, or has it changed?

Dr. STYLES. From what I read in the paper, I would say that it is continuing today.

Senator MOSS. Do the doctors ever trade patients? Do you trade patients?

Dr. INGBER. In those days it was very common for one doctor to finish billing a patient, and another doctor would begin to bill that same patient.

Senator MOSS. I see. Do doctors have a practice of training new physicians that are coming into the facility—to show them the ropes and how to go?

Dr. INGBER. Senator, the atmosphere is such that they pick it up very quickly without saying anything directly. It was very seldom that anybody was told what to do. They just came into the center and looked around and began to follow, or moved on if they didn't like what was going on.

Senator MOSS. Do you think it is possible for a strictly legitimate medical center to survive, or does it have to have these extra billings to get by?

Dr. INGBER. If the fees are fair and if the number of centers are limited to those which are really needed, if those centers which are really needed are licensed and regulated, if they have, perhaps, a city employee on the premises—which might sound expensive, but it is really very cheap—and if they have one city employee at the front desk in every medical center, you would save that salary over 100 times.

Senator MOSS. What is your observation as to the quality of medical care that is given at the centers? Is it adequate, inadequate, or superior?

Dr. INGBER. It varied from superior to inadequate, depending on the individual doctors. There were residents who would come in to put in one session a week, if they could, who gave super care. There were men who wanted to earn a few extra dollars who were very conscientious and gave excellent care.

There were other marginal practitioners who could not make it in their own private practices who gave a fair level of care. Then I would say that there were a few people who didn't give a damn.

I think mostly you have to make a distinction in these medicaid centers from the nursing home industry, because in the medicaid centers patients did languish and die. In medicaid centers the Federal Government and city and State all got ripped off financially, and that is where the crime was, but the crime was not in hurting people. That may have happened to a certain extent as it may happen in any private doctor's practice—maybe even a little more—but certainly not to the extent that it happened in the nursing home industry.

Senator Moss. Well, your suggestion that a number of centers be limited and placed strategically in the population mix poses a difficult problem if we are going to have free practice of medicine.

Dr. INGBER. May I answer that one, Senator?

Senator Moss. Yes, please.

Dr. INGBER. Free practice of medicine by one professional or two or three professionals of one particular profession could be unlimited, but when you have multiprofessional centers, when you cross the line—in other words, where you have podiatry, chiropracting, dentistry, and gynecology—and you go on to more than one profession there, I think you can limit the number of those facilities.

Also, sir, you could have free and unlimited practice of profession for those people who do not do more than a certain percentage of medicaid practice, but when a center is considered a primary medicaid facility, those centers could be numbered.

Senator Moss. Now upon your conviction, did you have to give up the practice or are you—have you been able to practice?

Dr. INGBER. I am going before a board in my profession.

Senator Moss. You are going before a board?

Dr. INGBER. I have to go before a professional board, sir.

Senator Moss. Is that true of you, too?

Dr. STYLES. I gave up my practice at the time of the investigation.

Senator Moss. I see.

Mr. SPARROW. May I, for a moment, address you, Senator?

Senator Moss. Yes.

Mr. SPARROW. Appropos the taking of license and Dr. Ingber's comment that he intends to go before a board, I might just mention that the penalties and the punishment that have come to them as a result of the prosecution in this particular case have been vastly larger and greater and more harmful than anyone could ever have anticipated. In addition to civil penalties to which Mr. Wilson and Mr. Fiske alluded earlier there has been, of course, a constant exposure to the publicity involved with the fraud and their part of it. Then, of course, the indicated incarceration which has already been

imposed upon each of these two doctors and whether that would be meant as a deterrent is not before this forum at this time.

"Cooperation . . . May Be Deterrent"

However, the question of whether or not cooperation on the part of persons similarly situated to Dr. Styles and Dr. Ingber will act as a deterrent and their cooperation in an effort to unearth and ferret out any other persons may act as a deterrent, I think, is also something that merits some consideration.

So there should be some opportunity for persons who come forward at this point, those who have committed acts in the past—perhaps they may be able to help this committee eliminate some of what has been happening and get on the right track, as it were.

Senator Moss. Other than the recommendation that we limit the number of places and have an inspector there, do you have any opinion as to the bill that Senator Talmadge is proposing of having a Federal Inspector General to oversee giving medicaid? Do you think that will have any effect? Would that be a good thing or not?

Dr. Ingber. Sir, it depends on the expertise of the individuals who do the actual checking. If you have people coming around who are not knowledgeable and easily fooled, they are not going to have any real, lasting, or even a temporary effect except for sprucing up for an investigation.

You have got to have a permanent committee with permanent experts who are in the field and who you know will be around in the future to have any deterrent effect.

Senator Moss. And you don't think any deterrent effect is really being exercised yet, despite some of these prosecutions?

Dr. Ingber. Well, the enormous disparity in punishment shows that a process is at work; that is, when the spotlight comes on it is extreme punishment to show that everybody is doing their job.

When the spotlight goes off, everybody knows that it is business as usual and they can go back and do it. Before the spotlight came on Dr. Styles and myself, people were getting suspended sentences, light fines, pay back the money, or pay back half the money.

Without any rancor I have to say that I think Dr. Styles and I have taken the weight for the entire profession and we feel very much that when the spotlight goes off and you gentlemen have concluded your work, unless there are permanent committees and permanent safeguards set up now that we have taken our punishment, now that we have been the heavies, everybody else knows that it is cool again.

Senator Moss. So you think temporarily there is a repentance but that it won't last.

Dr. Ingber. Everybody will be careful for a month or two.

Senator Moss. All right. Counsel has a question.

Mr. Halamandaris. I had the benefit of talking with you gentlemen last night so if you don't mind I want to go back over things a little bit. Let's talk about how you got into this thing. I want you to tell me exactly what happened. Did you get an idea to open a mill as you were walking down the street? Give us all the specifics.

Dr. INGBER. We knew there was a doctor in a community near us who was running a very successful medicaid center and Dr. Styles went over there when we were making a patient referral. We were looking for a psychiatrist for our own private practice to see one of our patients.

FRIENDSHIP LEADS TO PARTNERSHIP

Dr. Styles went into this facility and he saw that it was a very successful operation and, over a period of time, developed a relationship with this man. When the man was going to open another clinic Dr. Styles was asked to come in as a partner.

Subsequently I came in; several other people came in. The original man did not. We had our first center and we opened it for about $8,000. We started searching around for doctors and then we found that there was a community of doctors that worked in these centers and many of them were foreign born doctors, many of them were beginning doctors, many of them were not totally successful—men who needed to make a few extra dollars.

Once we got into the first office which was in Corona, Queens, we found that initially the business was very profitable and we could make a percentage of everybody's income.

Mr. HALAMANDARIS. Tell us what you mean by "very profitable," and give us a breakdown of the first clinic you had, the number of people you had working for you and the percentages you were getting from them.

Dr. INGBER. Now you are going back about 8 years, so my memory may not be exact.

Mr. HALAMANDARIS. Take a more recent example.

Dr. INGBER. The percentages varied from 8 percent of an optometrist's income, 25 percent of a general practitioner's income, 30 percent, perhaps, of a medical specialist's income, 35 to 40 percent of a podiatrist's income, and as high as 50 percent of a chiropractor's income.

These did not come personally into my pocket but they came into the corporate covers and we used to pay bills and expenses, and then dividends were declared and income tax was paid on that.

Mr. HALAMANDARIS. Then after you had the fees that were exacted, who got the 25 and the 50 percent? Let's take the case where 25 percent to 75.

Dr. INGBER. The practitioner got 75 and 25 was written out to the medical center.

Mr. HALAMANDARIS. What happened after all the bills were paid off and you had some money left over? How was that divided?

Dr. INGBER. Among the stockholders of the operation.

Mr. HALAMANDARIS. Who were the stockholders?

Dr. INGBER. Different corporations had different stockholders. There were corporations that had three or four and some that had five or six. I may have been as low as the 10 percent stockholder in one corporation and as high as a 24 percent stockholder in another.

Mr. HALAMANDARIS. What kind of money are we talking about? An average mill ran eight at one time.

Dr. INGBER. We ran eight at different times. We never ran more than four at a time.

Mr. HALAMANDARIS. Give me the top figure.

Dr. INGBER. I have to say that I wish I could give you—you seem to be looking for big numbers.

Mr. HALAMANDARIS. I will take little ones.

"EIGHT CENTERS GROSSED $2 MILLION"

Dr. INGBER. We were not very good at what we did. There are men better than we are that are still doing it. I would say that the gross of the centers over a 3-year period—the eight centers grossed about $2 million. If you divide eight centers over 3 years, you divide $2 million by 24 and then divide that by 150 doctors, you will know what we got.

My personal billing that was judged to be false billing was $35,000 over 3 years. That is what I am paying penalties on and I have agreed to pay $100,000 back to the Government on false billings of $35,000.

Mr. HALAMANDARIS. When did you write your first phony billing and what motivated you to do it?

Dr. INGBER. I wrote my first extra billing—phony billing—in late 1968 or early 1969, and it was based on the fact that I felt that I needed to put down an extra billing because I could not make it on $3 a visit. At the same time I felt that nothing was going to happen if I did it.

Mr. HALAMANDARIS. So you were not surprised that the State and city didn't catch you at this cheating?

Dr. INGBER. No, I was not surprised because I heard of cases all the time where people were writing extra billings.

Mr. HALAMANDARIS. You said the city caught one doctor and the city gave a slight slap on the wrist.

Dr. INGBER. One doctor billed $10,000 for the members of 10 families and the city called him down and said, hey, look, you have got to keep the families down. We were called in and we were told that we are not allowed to bill more than two children in one family.

The city told us, don't you bill more than two children in one family. We were forced to pay back a few hundred dollars and we paid back a few hundred dollars.

I said, "What happens if three children in the family are sick?" In a sense they were telling us: It is all right to write false billing for two children, but don't make us look bad. Write up those eight children from four families; spread it out, guys.

Mr. HALAMANDARIS. You said entirely profitable. Give the Senator some indication of how profitable.

Dr. INGBER. As I said, I know it was most profitable for internists and pediatricians to write $100,000 a year in their own name very easily because their fees were higher.

Most of the chiropractors didn't write anything like that, maybe $20,000 or $25,000 medicaid invoices a year. The men who made the most profit out of medicaid were the very busy internists who would

very commonly see the patients on one day, write them up, and then write them up for a followup visit.

Mr. HALAMANDARIS. Where should I go to find cheating medicaid mills in New York?

Dr. INGBER. I think you should go to the centers that are in borderline areas that are not in the heart of the ghettos, because those centers are actually very busy.

The centers on the borderline—the centers in changing areas that show very large billings—are the centers where a lot of overbilling takes place. Centers run by businessmen rather than by doctors.

COALITION SUGGESTED

I also would say that if you really want to find the fraud in medicaid, you should set up a coalition with people who have been in it who know where the fraud is and who know people who know people.

There is a network. If I were to start out saying who I know and who they know and who they know, you could get through 80 percent of the people. Everybody knows everybody in the business.

So if we were to sit down and go over names and dates and places, there would be indications of who knows what.

Mr. HALAMANDARIS. Everybody knows everybody, a small group of people gets all the money. What you told us a while ago in answer to my first question is that everyone is cheating.

Dr. INGBER. Everybody is bragging about it, too.

Senator Moss. Well, we appreciate having you come and be candid with us about what has gone on and is still going on, unfortunately, and it poses a problem that is not confined to New York or any single community. It is a problem in this whole Nation, not only the cheating and the monetary scandal, but the sort of haphazard service that is given in some of these places. You have told me some was good and some was very poor. Unfortunately, the ones I had personal contact with, I would say, are very poor.

In your centers, did you give care to medicare as well as medicaid patients? Did you have patients under medicare?

Dr. INGBER. Dr. Styles can answer better than I.

Dr. STYLES. We did a minimum amount of medicare, and doctors usually charged that because that was billed through their offices.

I did want to say one thing. I always felt while this was going on, especially now that I read the figures on the list of those doctors who have collected $100,000, $200,000, et cetera, that Master Charge imposes a limit—and I could not understand why—at a level of, say, $25.000 for a busy internist. He would not have to come in to seek a higher level.

I don't know if it could be arranged, but I think it would be valuable that no one could pass $25.000, $50.000, or $75.000, without his funds being frozen at that point unless he sought the necessary permit to continue at higher levels.

Senator Moss. That is a good point to make.

Is your procedure in billing medicare different from billing medicaid? What is the difference between the two?

Dr. STYLES. Medicare was very little of it, and it required a different form submitted through, generally, Blue Cross and Blue Shield. The doctor submitted it and usually when it got paid, they paid their rent. That was a very small amount of work that we handled.

Senator MOSS. But was there any difference as to how you could proceed with a false billing as readily on medicare as you would on medicaid?

Dr. STYLES. No, sir, we did not. It was strictly held back to what the actual need of the patient was.

Senator MOSS. I see.

PATIENT RECEIVES NO COPY OF BILLING

Dr. INGBER. One more point on that, sir. I think on medicare the patient gets a copy of the doctor's billing and in medicaid they don't.

Dr. STYLES. And a percentage of the fee.

Dr. INGBER. So this is another valid point. If a patient were to get a copy of what they had been billed by a particular center and the patient saw outrageous charges for services not given by doctors never seen, these patients would run, because there is almost an adversary relationship in some of these areas with some of these centers.

The patients don't feel that they are getting a fair deal just as you didn't feel you got a fair deal when you walked in.

Senator MOSS. We have had some suggestion that there may have been arson committed in some of these less profitable centers. Are you aware of anything like that going on?

Dr. INGBER. Just what I read in the newspaper.

Mr. HALAMANDARIS. You have no direct knowledge of anyone committing arson to collect insurance?

Dr. INGBER. As I said, my first indication was reading in the newspapers. I read someone had burned down one of their medicaid centers to avoid prosecution or to destroy records or something like that. As I said, I never spoke to the person or anything like that. I just read it and I was aware of it.

Senator MOSS. Just heresay.

Mr. SPARROW. I might mention to you, Senator Moss, that Dr. Ingber today is in a somewhat different position than he was as a medicaid provider. He has in his intervening years done many other things and, as a matter of fact, until such time as he does start serving his sentence he will continue to act as a volunteer provider under a different type of situation.

He is working as a nonpaid counselor at a methadone maintenance clinic and has met many persons who have been or presently still are addicts. He has sought in every way he can to compensate society for whatever it is that he has done, and he would like this committee to know that if there is any fashion in which he and Dr. Styles as well can give assistance in the future, they would like you to know that they can be reached and called upon at any time to provide such assistance.

Senator MOSS. Thank you.

Could you tell me about this methadone use that passes through these centers? How does that work?

Dr. INGBER. Sir, methadone centers are a separate entity and they are licensed by the city in a separate manner; medicaid centers are not licensed by the city.

These centers are totally regulated and they are followed up in a much closer way. The procedures and rules that are followed in the methadone centers, many of them should be applied to the centers because the methadone centers are computer billed—printouts are run by computer. The billing is much more closely supervised than it is in medicaid centers.

METHADONE PROGRAM CLOSELY MONITORED

Medicaid centers are a very loose helter-skelter operation. Methadone centers are monitored by the city—the amount of methadone is calculated each day. It is a different procedure.

Men may have made profits on methadone centers, but at least the work and services are being given. In my opinion, anyway, they serve a valuable service. If you see some of the exaddicts in the centers now, off the street, not doing the crimes they were doing to get heroin, what they are doing in methadone centers—getting on programs, rehabilitation—it is a very good situation, in my opinion.

Mr. SPARROW. Unfortunately, I cannot agree with that. Totally different abuses do arise out of some of the methadone centers. Of course, there is the obtaining of methadone for retail. There are many other things that do transpire in connection with them, but that is not actually, I think, a subject matter of this committee's investigation.

Senator MOSS. That is true. We were not on that; we are just trying to talk about medicaid. I thought the two were intertied in some way and I wanted to find out if they were.

Mr. SPARROW. No, sir.

Dr. INGBER. No, sir, they are not.

Mr. SPARROW. Dr. Ingber, directly or indirectly in his profession or paraprofession, suggests, shows, and helps those persons who need his assistance.

Senator MOSS. The Senator from Illinois, Senator Percy, has joined us and I will ask him if he has any questions of the two witnesses, Dr. Ingber and Dr. Styles, who are before us and are represented by Mr. Sparrow.

STATEMENT BY SENATOR CHARLES H. PERCY

Senator PERCY. I had a medical problem in the family. My son had his arm set at the Orthopedic Hospital so I was not here at the beginning of your testimony.

If any of my questions are repetitious, I can just look back over the record.

I wonder if you have commented on the diligence with which HEW follows up to see whether or not there is a prudent followup in surveillance of these programs or whether we need an internal audit in the Department—in our parlance, an Inspector General. Is that a contributing factor with which you can carry on these abuses?

Is that a factor we have to take into account in reorganizing and working with the administration and reorganizing and restructuring their Department?

Mr. SPARROW. Senator Percy, before you arrived there was considerable comment about the fact that the medicaid program was a very permissive one. It actually was, as Dr. Ingber just said, a helter-skelter situation where in each instance it multiplied itself.

If you had a factor who was taking 12 percent off the top, you just write out an order and billed additionally in order to compensate for that 12 percent.

If you were followed by the city you could not bill for more than two children in one family; you then billed two children in two fictitious families to make up for the fact that you actually have to treat more than two in one family. You were invited, as it were, to play the game in that fashion.

There has been a total lack of supervision. There has been an indication where the supervision of the doctors and clinics have gotten the impression that, well, this is the way it is done. If you want to take your share of it, just jump right in and help yourself.

Senator PERCY. Those are the rules of the game. I think you made a comment this morning, something along the line that the heat is on now but when the lights go off it will just start all over again.

REPEATED INVESTIGATIONS NEEDED

Could you expand on that a little bit as to what you mean? I think we are very concerned when we have a hearing, as we had in the nursing home some years ago. We went back, audited, and we found that all of the regulations that had been implemented were not being taken seriously because they thought that it was going to be just a one-shot deal, and that was it. But we have gone back time and time again.

Every time we go back we notice the industry really knows that we are serious and we intend to do something about it. In this case what do you mean by, "when the lights are turned off," that the old practices will go back? Do you lack confidence that you are able to tighten up the system sufficiently?

Dr. INGBER. Well, Senator Percy, if the system itself is inherently encouraging overbilling by each visit the doctor gives, the doctor will look for justification and rationalization to ping-pong patients to other doctors. He will find rationalization in the gray areas.

The only way to stop the system is to not try to shore up a weak foundation—it is to start over. This system stinks. You are going to try to fix a lousy system.

I listen to these law enforcement people about how they are going to tighten it up with millions of dollars worth of computerization. That is a farce, because they will stay up night and day and they will not. They will tighten it up for a while, and spring a leak somewhere else.

I think it was Mr. Fiske who said people always look for loopholes. Design a system that does not have the same type of loopholes. Make it sophisticated. If you made a mistake, admit it, instead of saying these guys are all crooks.

Yes, we took advantage of a lousy system and one that had turned its back and said go ahead and do what you want.

The only way is not to pay for the number of visits but the number of people. No doctor will encourage extra visits because he is not getting paid by the visit, he is getting paid by the number of patients in a given community in a given period of time.

Senator PERCY. How is that different than the private practice?

Dr. INGBER. Sir, GHI——

Senator PERCY. If a doctor is willing to work 10 or 12 hours, he makes more money than a doctor who works 4 hours a day. He gets paid for the number of patients he sees. But somehow in the private sector there seems to be a different attitude. I have never seen this kind of attitude, shove them in and shove them out—put them on an assembly line. When I look back and think about the inordinant amount of time that the doctors consulted, just to decide what to do to my son's arm this morning, it's a different attitude altogether.

There was the time they took explaining to him what was wrong. When I think of the testimony we had yesterday and the way people were treated, and the only difference was that one is private pay and one is Government pay. Why this difference then? Is it a different kind of people that are on medicaid?

How many patients, for instance, were you able to see a day, or did you try to see, when you were running the mill?

"BEST CARE AVAILABLE"

Dr. INGBER. Sir, I would like to answer the first part of your question first and that is that, yes, your son got probably the best care available in the country, and maybe in the world, but when you see the size of those bills you are not going to pay them out of your pocket. They are going to be paid by medical insurance and those bills are going to be held.

Senator PERCY. But we pay the medical insurance. The insurance costs go up when the cost goes up.

Dr. INGBER. In many cases in the private sector a doctor walking through a hospital saying hello, how are you today to 25 or 30 private patients in a hospital bills every one of those patients $25 or $15 for that hello. This is in the private sector.

Maybe you will be investigating 5 years from now what is being done in the private sector with the major medical insurance companies—what kind of fraud is going on in major medical insurance.

Senator PERCY. Let me ask you about the insurance companies then, because they are the payer in this case; the Federal Government and the States are the payers in the other case.

Do the insurance companies have a system of checking up? Do they somehow have better surveillance or are doctors more careful about putting padded bills into insurance companies than they are into the Government?

Dr. INGBER. Let me give you a very straight answer, Senator. There are guidelines where you know how much you can bill an insurance company before your committee comes down on you, and within those guidelines men are ripping off the private insurance companies just as much as they can.

That is why insurance premiums are so high and the Government has its eyes closed to this. Maybe it is unsophisticated, but when you get a copy of a medical bill in many cases you are amazed at all the charges and you feel, well, it is not coming out of my pocket so it does not really matter. But it is coming out of everybody's pocket, just in a different way.

Senator PERCY. Since 1969, as the chairman indicated yesterday and this morning, this committee has been looking into medicaid fraud and abuse involving nursing home operators, pharmacies, medical laboratories, medicaid administrators, physicians, dentists, and so forth.

We had brought to the attention of this committee yesterday that we have not looked into medicaid fraud in hospitals. Do you feel that hospitals are areas across the country that we should be looking into because fraud might exist there today?

Do you think a part of our high cost of medicine is attributable to a padded system—fraud that exists in a system—payments that we are making for services that simply are not being given?

HOSPITALS MUST KEEP BUSY

Dr. INGBER. The hospitals have a vested interest in keeping Federal funds coming. They have to show that they are busy. They have to show that their beds are filled. If you see, as in New York City now, their hospitals are being underutilized, the city threatens to shut them down.

So extra visits are commonly encouraged and physicians are probably told—I don't have any right to say I know, because I don't know, I only heard, that there was a lot of encouragement to keep hospitals busy.

I am sure you saw the New York Times a couple of months ago about the amount of unnecessary operations being done in this country today because the hospitals have a vested interest in keeping themselves open.

Sir, not only overbilling in hospitals, but they are overbilling medicaid at a higher rate than individual practitioners in medical centers because they are allowed to.

Senator PERCY. Dr. Styles, could you comment on the number of patients an average doctor in a medicaid mill would be able to handle per day? What is normal practice for a physician, on a cross-section basis?

How many patients can they see normally and how many can they step it up to if they just say hello and give a cursory examination to find out what is wrong with the person?

Dr. STYLES. A session might last for 3 hours in which the specific internist would be available. In our centers he could have seen from 10 to 25 people, perhaps more, perhaps less; the optometrist would see somewhat less. He would not see people who had seen an optometrist in the past 6 months or so.

There were guidelines. They would not draw blood more than once a year. These guidelines would create different patient loads in all the different categories.

I had read about patient loads of 150 people being billed by a psychiatrist who had given an hour per patient, and this was in the period of a week—he saw them three times or so. It is not something that I saw.

I saw, as I said, 15, 20, 25 for a heavy load.

Exceptions or the Rule?

Senator Percy. I would like to ask both of you one more question. We have such a challenge to our institutions. We have a soul-search to undercut ourselves. This tendency and habit somehow erodes confidence in ourselves. The statement was made where you have the finest medical system in the world. I would like to give both of you an opportunity to comment on how frequent the kind of practices are that we have talked about here, how frequently is making money the sole objective of a person in the medical field, and whether or not you feel that we do have an absolutely outstanding medical system, that most people in it are good and went into it because of their dedication to it. We are dealing with exceptions here—a small percentage of the total volume.

I don't want to put words in your mouth. I want you to tell exactly how you feel about our medical profession in this country, because all that has come across on the tube that I have seen so far is all negative. Of course, if there is a positive side we want to provide equal time for that.

Is it a question of just tightening up the regulations, based on the system that we have, or do you think we have to think through the whole approach to the medical health care of our people?

Dr. Ingber. Sir, if the system is polluted or part of it is polluted, and we put people into that polluted system, they will get dirty.

The way the medicaid system works, it is polluting. Every doctor who steps into medicaid takes a big risk of himself generating his type of care and his type of practice to fit the system at it exists today.

Part of our system is noble and honorable and men who work there are encouraged to be noble and honorable. But when a doctor sets foot into medicaid, the atmosphere—the situation—encourages that side of human beings that exists in everyone. The temptation is there and the weakness exists to a different extent in all people, I believe. You better be very strong to run away from it or else it can engulf you, and that is what I feel happened to us.

We were weak and we took advantage of the system.

Senator Percy. Part of these weaknesses are caused by lack of supervision in the system?

Dr. Ingber. Yes, sir.

Senator Percy. Toughness of regulation, the followup—the temptations are too great.

Dr. Ingber. Enormous.

Senator Percy. Humankind is too weak in the face of those temptations, so it is a tremendous disservice to the profession to have these temptations, to have the laxity that exists, because it encourages what you are trying to prevent.

Dr. Ingber. Yes.

Senator PERCY. I would like to have Dr. Styles, if you would, comment on and add to this—your having been in the system and paid a penalty and now having been totally rehabilitated, exonerated, and leading dignified lives of contribution, in the last 5 years at least. What caused you to turn around and to see the wrongness of the course of action you were pursuing before, the weaknesses that exist in the system. There are weak people out in the system now. Maybe your testimony now would be helpful to them and cause them not to dip into the temptations.

MANY REFUSED TO BE CORRUPTED

Dr. STYLES. Before I answer that question I would like to go back to what we were discussing just prior to that. There were a lot of beautiful young doctors that came to these clinics that came there and performed superior care and could not be changed. No one ever asked them to bastardize their work, no one asked them to change their method, and we were happy they came there to take good care of the patients. I will relate one specific instance.

When medicaid introduced the fee payable for a TB tine test—that is the tine test in which a small puncture is made in the skin—down to $1.50, I recall medical doctors who were kind of angry. They had done TB tests on everybody who needed it or everyone that came to the clinic that should have had it, and they liked making money. It was a very simple procedure and they picked up some TB tests, so I guess that helped their rationale.

Then medicaid dropped the test to $1.50 and I overheard a conversation in which the doctor said, "Well, we are just going to have to make it up someplace else." That is not everybody. There are a lot of really fine residents coming through—a lot of good ethical positions.

Senator PERCY. Did the fact that you had to serve time cause you, in that period of time, to reflect on the course of your life and was that a strong influence in saying that it is just not worth it?

Sometime you are bound to get caught. A lot of people out there are engaging in these practices. Our job is to make sure that they do get caught and we are going to go about doing it and set up the procedures that are necessary—sweep the net far enough.

We caught a few of them, but I think we intend to work very closely with HEW and the Justice Department in seeing that we follow through on a program and not ruin a program that is designed for good, but has seen much fraud and waste and squandering.

Has that been a salutory effect on your life, just serving time?

Dr. STYLES. Unquestionably. I have not served time yet. I am due to begin serving time on the 16th of September. All of these things that you mentioned did come very strongly into play. One of the things that we have felt was that if we would have avoided all of the pitfalls of greed, we could have easily made a healthy amount of money very legitimately. It just required something more, somewhat less systematic.

We were angered against the reduced fees and all the rest of the things that were mentioned. There is a way to do it the right way and we have learned that.

Senator PERCY. Mr. Chairman, I would like to say to these witnesses as they conclude their testimony that I know there was a comment made by Secretary Mathews yesterday, and I can well appreciate the discomfort of a huge department and a man who has a tremendous responsibility when something like this has been exposed—they are all defensive. I am sure he is not being defensive about the abuses. I think what he is saying is that we know about them and we are trying to do something about them.

DRAMATIZATION LEAVES LASTING IMPRESSION

I well remember one time when I was sitting at a conference table with Dr. Edward Teller and talking about how much radiation we were exposed to by underground testing, and some witnesses were talking about the fact that there was quite a bit. He took off his wrist watch and he threw it down on the table—this is 20 years ago—and he said, "You have all been exposed to more radiation now than you will be with all the underground testing we intend to do in the next 2 years."

You know, he could have sat there and just said that statement and I would not have remembered it the next day, much less 20 years later, but when Edward Teller does something, he does it with dramatics.

I simply feel this subcommittee has seen fit to take this and say "Look, we have been at this for years and years and years, and we are going to do something that will somehow dramatize this to the country."

I hope Secretary Mathews—and we will be working very closely with him—will appreciate and understand that sometimes it is necessary to be dramatic about this. We are all enraged by this that has gone on and I think the subcommittee approached it in a very appropriate way to bring it to the attention of the country in such a way that it won't be forgotten.

Now I hope it will be remembered long enough for us to do something. I am sure no piece of legislation has had a better boost than this has had to correct the problems.

Senator Talmadge, who could not be here, certainly has done a magnificent job in having legislation ready now for us to act on and move on. I think we are all intending to devote hours to it without underestimating a bit what Secretary Mathews has said about the problem, the concern that the whole Department has.

We want to work with them. This is the U.S. Government. We are both separate parts of it, but we have to work together on it. I simply want to place my support to you, Mr. Chairman, in any way I can.

Now that the evidence is in, we really can do something about this problem. I thank you very much for your appearance here today.

Senator Moss. Thank you, Senator.

Thank you, Dr. Ingber and Dr. Styles and Mr. Sparrow. We appreciate your coming here at our invitation. We are glad to have your observations in our record. That will be helpful to us as we try to carry out our responsibility.

Thank you very much.

The next witness is Dr. Clyde Weissbart from New York City. Is Dr. Weissbart here?

I am told that Irving Seidman, representing Dr. Weissbart, is here.

STATEMENT OF IRVING SEIDMAN, OF RUBIN, SEIDMAN & DOCHTER LAW FIRM, NEW YORK CITY, REPRESENTING DR. CLYDE WEISSBART

Mr. SEIDMAN. Irving P. Seidman, law firm of Rubin, Seidman & Dochter in New York City.

I don't wish to take any time from this august Senate committee in its important work but, unfortunately, on the short notice given to Dr. Weissbart inviting him to appear—he cannot appear.

However, we will consider another invitation from the committee if Mr. Halamandaris communicates to our office.

Senator Moss. Well, thank you for coming to inform us.

Senator PERCY. I would like to ask a question as to when the invitation was issued and a little more detail as to what is so overwhelmingly important that the doctor could not be here today. When did he receive the invitation?

Mr. HALAMANDARIS. The invitation was issued a week ago and we had additional discussion with counsel in which the doctor was given an opportunity to appear voluntarily. A discussion of the decision that counsel made last Friday was that the physician would have to be subpenaed to appear before the committee. Evidently there has been some change of mind and in his position that he now appear voluntarily at a more convenient date.

I think that is what Mr. Seidman is saying.

Mr. SEIDMAN. Senator, I communicated with Mr. Val Halamandaris on Friday. I believe the doctor was made aware of the invitation on Wednesday, if my information is correct. I see no reason why the doctor would not consider another invitation from the committee or Mr. Halamandaris. We do not intend any disrespect for the Senate committee and its important work.

Senator PERCY. I would like to give you an opportunity, if you think it is important, to explain why Dr. Weissbart, who has been in the full time business of operating a medicaid mill in New York, could not be here today?

Mr. SEIDMAN. If Your Honor please, Senator, with all due respect I believe that the doctor did not appear in view of the fact that appropriate notice from the standpoint of preparation and scheduling did not permit.

"HE IS A DEDICATED PHYSICIAN"

Again, I reiterate that we are prepared to consider another invitation and seek to cooperate with the Senate committee. The doctor does perform important and significant work in the ghetto of New York. He has no other professional interests. He is a dedicated physician and we are prepared to cooperate with Mr. Halamandaris.

Thank you, sir.

Senator Moss. Thank you for your appearance, Mr. Seidman. We will indeed invite Dr. Weissbart to appear and, if necessary, we will provide a subpena.

Dr. Nancy Kurke, would you come forward, please?

Now, Dr. Kurke, you are presently with East Harlem Medical Center, is that right?

STATEMENT OF NANCY KURKE, M.D., EAST HARLEM MEDICAL CENTER, N.Y.

Dr. KURKE. That is right, part time only.

Senator Moss. 145 East 116th Street, New York?

Dr. KURKE. That is right; only on alternate Saturdays.

Senator Moss. I see. Is that center still open now? Is it still in operation?

Dr. KURKE. I don't know. I have not seen it since last Saturday. It was last Saturday because I was there.

Senator Moss. You were there last Saturday?

Dr. KURKE. That's right.

Senator Moss. As a predicate to your testimony I would like to read a paragraph out of the staff report [1] on our investigations done in New York. This is on page 27 and the subparagraph is No. 4.

It says:

> At the East Harlem Medical Center, Private McDew asked to see a podiatrist. He was sent, instead, to the general practitioner and owner. The doctor listened to his chest and referred him to the chiropractor. He saw the podiatrist only after he had seen all other practitioners in the facility. Despite the nature of his complaint, "The bottom of my feet hurt," blood and urine samples were taken and his chest and feet were X-rayed. The podiatrist prescribed ankle braces which Private McDew was told to obtain "down the street" from a particular supplier. He was specifically referred to the East 116th Street Pharmacy to fill three pharmaceutical prescriptions which included two antibiotics. Private Roberts entered this same clinic complaining of tiredness, and received a general physical. He was referred to the podiatrist and given a future appointment to see the psychiatrist. Blood and urine samples were taken. His feet and chest were X-rayed and he was given two prescriptions which he was told to fill at the adjoining pharmacy.

Now are you acquainted with any of those circumstances?

PING-PONGING: A ROUTINE PRACTICE

Dr. KURKE. I think that they are fairly routine for anybody who comes into the clinic and that is, according to standard practice, everyone is seen first by Dr. Weissbart or Dr. Rivera or by myself, and then, no matter what his complaint is, even if he has a specific request for the podiatrist, he has to be seen by everybody. He has to have laboratory work, he has to have a chest X-ray, and also an EKG which is worth $15 whether he needs it or not. Whether or not he needs to see the podiatrist, he should be referred to the podiatrist and also the chiropractor.

Senator Moss. I see. So what you are telling us is that what has been called the ping-ponging is routine—they are referred all around the clinic—is that right?

Dr. KURKE. That is right.

---

[1] *Fraud and Abuse Among Practitioners Participating in the Medicaid Program*, staff report for the Subcommittee on Long-Term Care of the Senate Special Committee on Aging.

Senator Moss. I visited this same clinic and I experienced something of this, although I didn't get full treatment apparently. I didn't get to the podiatrist; I think it was his day off.

Dr. KURKE. Probably.

Senator Moss. Can you tell me what resulted from my visit? Was there any comment about that there? [1]

Dr. KURKE. Well, not very much because very little of it is legible.

I gather that you complained of a sore throat.

There are a few lines of history, most of which I cannot make out.

There are a few comments on physical examination, most of which I cannot understand.

Two medications were prescribed. I think one of them was bicillin.

I really don't understand why you were not scheduled for an electrocardiogram because of your age, that being one of the few common requirements of a gentleman of your age.

However, your blood pressure was not taken. Height, weight, pulse, temperature—none of those. I don't understand why.

Senator Moss. As a matter of fact, I hardly think that even my throat was examined. The doctor looked at me from a distance and shone a flashlight toward my open mouth but he didn't look in there with a depressor or even peer in closely with his eyes to see.

As you point out, I had no blood pressure or no temperature taken.

THERMOMETERS CONSIDERED "EXTRAS"

Dr. KURKE. That is because usually there is no thermometer. It is one of those extras that we can do without in this clinic that we run with an absolute minimum of supplies. One of the things you do without is a thermometer.

Senator Moss. I see. Now does that report show any results back from the blood that was drawn or the urine specimen?

Dr. KURKE. Yes, it does. Incomplete blood count because all of the blood counts are incomplete. That is to say, you had a white count and a differential, but no hemoglobin.

Your analysis was largely normal except for the fact that, quite amazingly, you had white cells in your urine.

Senator PERCY. Are you sure you want all this in the record? [Laughter.]

Senator Moss. Maybe I will have to go back for a return visit.

Dr. KURKE. I think it would be wise if you saw a urologist.

Senator Moss. I see. I should have been referred the next time to the urologist.

Dr. KURKE. You are being referred this time to the urologist.

Senator Moss. You say you worked there on alternate Saturdays?

Dr. KURKE. Yes.

Senator Moss. What is your other appointment, besides that?

Dr. KURKE. During the week I work at another center owned by Dr. Weissbart.

Senator Moss. How many centers does Dr. Weissbart have?

Dr. KURKE. To the best of my knowledge, two.

Senator Moss. Just two? You said he does not see all the patients—it might be you, or it might be a third doctor.

---

Dr. KURKE. Dr. Rivera who works evenings and alternate Saturdays.

Senator Moss. When Dr. Weissbart is there, does he see everyone that comes during his time on?

Dr. KURKE. Yes, indeed, he certainly does.

Senator Moss. That is what I observed from sitting there waiting. I thought he saw everybody.

Dr. KURKE. I have even had patients tell me that they saw him professionally when they stopped in to say hello.

Senator Moss. I see. Now we have had some information that perhaps the clinic there had been closed down just yesterday or the day before. You have not had any information of that sort?

Dr. KURKE. No.

Senator Moss. You are an M.D.?

Dr. KURKE. Right.

Senator Moss. What kind of fee arrangement do you have with the clinic?

Dr. KURKE. I get 50 percent of my billing.

Senator Moss. And 50 percent goes to the clinic, supposedly for overhead?

Dr. KURKE. Whatever it goes for, I don't get it.

Senator Moss. I see. As part of this visitation, how many patients a day are you able to see?

Dr. KURKE. Well, I am very seriously handicapped by the fact that I feel obliged to talk to patients and examine them, so I usually never see more than 20. I am not a very profitable doctor.

Senator Moss. I see. How many did Dr. Weissbart see in a day?

SEES 40 OR 50 PATIENTS A DAY

Dr. KURKE. Oh, according to what his receptionist says, about 40 or 50.

Senator Moss. Are you an internist?

Dr. KURKE. I am an internist.

Senator Moss. You are an internist. The other practitioners around there—would they see that many if they get ping-ponged around?

Dr. KURKE. Certainly.

Senator Moss. Do you have any comment on the kind of extended care that people were getting there—the quality of medical care?

Dr. KURKE. Many, many comments. I think the quality of care is appalling. It is the worst medical care that I have ever seen in all of my experience working anywhere, and only with poor patients. I have worked in a city hospital. I have worked in the emergency room at St. Luke's Hospital in Newburgh, N.Y. I have never seen anything to equal the absolute poverty of medicine that is practiced in this clinic.

Senator Moss. Why don't you withdraw from the clinic?

Dr. KURKE. I have.

Senator Moss. You have now?

Dr. KURKE. Yes.

Senator Moss. I see. How long a time did you serve with Dr. Weissbart?

Dr. KURKE. I started in March.

Senator MOSS. Since March of this year?

Dr. KURKE. Right.

Senator MOSS. Well, this paragraph that I read about what happened to Privates McDew and Roberts, is that a rather typical situation?

Dr. KURKE. Absolutely. Absolutely typical. Most patients will put up with it. I had a woman come in one day when I was covering who wanted to see the podiatrist. She went along for a while with the physical, but refused to have blood drawn and walked out because she said she was not going to go through all that to see a podiatrist.

Most people will, because they simply do as they are told. They have blood drawn, they have X-rays, electrocardiograms—whatever anybody can do to them is done to them.

Senator MOSS. Is it customary, when a medicaid patient comes in with a green card, to xerox several copies of it?

Dr. KURKE. Yes, it is.

Senator MOSS. Why do they do so many copies?

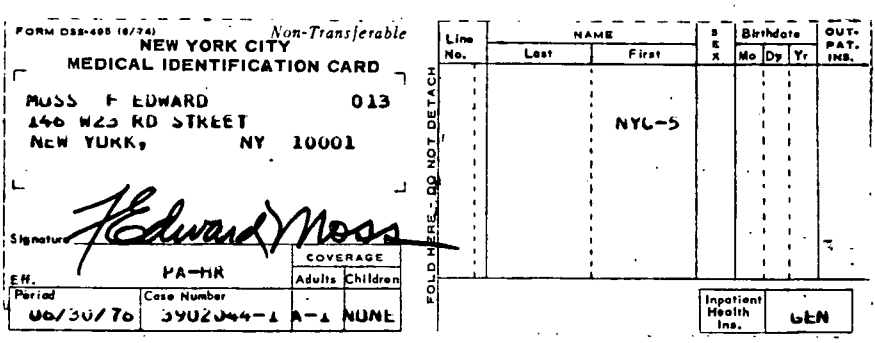
Dr. KURKE. I have no idea. I never saw anybody do anything with any of them. I don't know why. I think perhaps it might have something to do with verification of old invoices that are returned when there is something wrong with the billing, but since our Xerox machine has been broken for 4 months, we didn't do it. I think it is much more of a problem that no one ever checks to find out whether the medicaid cards are valid; many patients use invalid medicaid cards.

MEDICAID CARDS PURCHASED ON STREET

Many patients are issued multiple medicaid cards and for that reason they go out on the street and sell them. Anyone can go out on Fulton Street and buy a medicaid card for $3. When he presents it in the clinic he will not be asked to prove that he is the person whose name is on that card. Or if he really wants to play it safe, he will spend another $5 and get a phony photo ID to go with his card.

Senator MOSS. My medicaid card had my name on it all right although the middle name was spelled out which is unusual, that is the only difference, and it had the address of the hotel where I stayed when I was in New York. That was never questioned at all, although I think it was a well-known address and should have been recognized by any New Yorker, I believe.

[The card referred to follows:]



Dr. KURKE. Well, not necessarily. However, I would think it varies. It is very surprising for someone coming to 116th Street when near 23rd Street there are many fine hospitals and clinics. That would certainly be bizarre behavior.

Senator Moss. Well, you verified what happened. Do you have any other examples that approximate what happened with Privates McDew and Roberts?

Dr. KURKE. I think there are things that happened that are much more important than that, because there are people who are not treated at all for what is really wrong with them.

There are people who are treated very badly or inadequately even when their primary condition is recognized. One of the great lacks we have is of adequate equipment. We have one size of blood pressure cuff and, unfortunately, that is good for taking blood pressure only on a normal sized arm. Any other size arm needs a special size cuff.

Many, many of our patients are obese and if you use a normal size cuff on an obese arm you get what is called factitious hypertension. I have seen many, many patients, seen regularly by Dr. Weissbart, who came in and saw me when he was on vacation and 90 percent of them were not hypertensive. They were taking very potent antihypertensive medications and some of them were symptomatic to the point of loss of balance, dizziness, and weakness. They were being treated for a condition they didn't have simply because we didn't have a proper blood pressure cuff.

So far as I could make out they were never fully examined, which is quite routine in patients who are supposed to be hypertensive: one checks the state of the blood vessels and what they look like in the retina.

There was no record made of the electrocardiograms, which is just as well because they were useless. They were not good tracings, and they were not tracings that had ever been interpreted by anyone. They had not been standardized so they were really not meaningful. Largely they were not even labeled so that there was no way of knowing that the electrocardiogram actually belonged to that patient.

INSUFFICIENT INFORMATION ON CHARTS

There was never any statement in the chart about chest X-rays although the chest X-rays of patients with hypertension are very important to describe the size of the heart, the shape of the heart, the size of the aorta, and whether it is dilated. None of that information was available on the patients who were receiving fairly large doses of medication for a condition that they did not have.

Senator Moss. There are quite a number who present themselves, who are really ill and in need of care, and you are saying that their chances of getting effective care are very slight?

Dr. KURKE. Precisely. Many of the patients I saw complained that when they came to see Dr. Weissbart they came in the door of the office and he said, "Stand there, don't move," wrote something down on the chart, wrote a prescription, and took them out—particularly patients who spoke foreign languages. They never had a chance to say what was wrong.

If I said, "Oh, I see here at the last visit that you complained of having a headache," he said, "Oh, no, I never complained of headache, I complained of burning on urination"—which is an entirely different complaint.

They were very peeved about that but they kept coming back anyway which is something that I never understood. The chances were very poor that their real complaint would get on the chart before they made several visits, if ever.

Senator Moss. Now, I just complained of a sore throat when I went in there and yet I wound up getting at least two, I think, two or three prescriptions out of that. Is that quite customary?

Dr. KURKE. Quite customary. There is really very little point in having the patient stop by without getting medication. So far as I know, Dr. Weissbart owns the pharmacy. He runs a pharmacy that is attached to each clinic.

Senator PERCY. Have you actually seen drugs prescribed which, if taken, could have an adverse effect?

Dr. KURKE. Very definitely.

Senator PERCY. So, while the patient is paying for the prescription, the doctor will give him medicine that will do harm, rather than good?

Dr. KURKE. Absolutely. Unfortunately, yes.

Senator PERCY. I wonder if you could tell me—if Senator Moss would allow an interjection—how you happened to get into the medicaid mill business. How and why did you get into this particular one?

"MUCH TRAVEL AND LONG HOURS"

Dr. KURKE. Well, I worked at Francis Delafield Hospital in New York City which was the first hospital that was closed by New York City. I thought I would work in Westchester County. I worked part time as an emergency room physician which, unfortunately, was very demanding because of the traveling and the fact that the hours were long.

When I saw an ad in the paper, which Dr. Weissbart placed in the New York Times, I answered the call. Initially, what he was looking for was somebody to work alternate Saturdays. After I talked with him he said:

"I have a wonderful idea. Wait, wait, I have a wonderful idea. We have this clinic in Brooklyn and we are in trouble. What we need is someone like you. We need a doctor."

He sent me over to look and wanted to know if I would work there, and since I needed a job I said yes. It was a very amazing experience.

Senator PERCY. How long did it take you to size up the situation and know what you were involved in?

Dr. KURKE. About 10 minutes.

Senator PERCY. What caused you to stay 20 minutes then?

Dr. KURKE. Well——

Senator PERCY. Was this in line with your motivation in going into the practice of medicine or did you feel you could reform it, or at least offer some good service to the people that came?

Dr. KURKE. After I had a few weeks of experience and I got over being shocked and reached the point of being enraged, I contacted a friend of mine, a lawyer, Mr. Robert Silk. I asked if he could find out who it was in the New York area investigating medicaid mills. He gave me the name of George Wilson, whom I contacted and who in turn put me in touch with Bill Halamandaris.

Essentially, what I have been working for thus far is to accumulate evidence about how medicaid mills work, what the patients are like, why they go to medicaid mills, how they get treated, and hopefully, what will be done about it. I think that it is impossible to have any contact with these patients without realizing that we have a double standard of medical practice.

What you were talking about this morning was what you know about the practice of medicine, what you recognize as a member of the middle or upper class. You have health insurance, you have a regular income, you have a family physician.

There is a very large segment of our population which is in no such position. They have no concept of medicine as you see it. They go from doctor to doctor, from clinic to clinic. They have very little faith in the care they are getting and as a result almost all of them go to many doctors in the same week with the same complaint and usually they will go from one to another until someone listens to them.

It is very uncommon for them to find someone, certainly in the first week or two. Eventually perhaps they do.

NO CROSS-CHECK FOR MULTIPLE VISITS

Senator PERCY. What if the same person who was on medicaid went to three different clinics with the same problem? What cross-check is there to see that someone catches up with that?

Dr. KURKE. There is absolutely none.

Senator PERCY. So, today there is nothing to prevent anyone going to four, five, or six clinics?

Dr. KURKE. And many patients do.

Senator PERCY. Just to get someone to talk to—to tell their problems.

Dr. KURKE. Or to get medication to go out on the street and sell, which is also very common.

Senator PERCY. So there is a trade on the street?

Dr. KURKE. Absolutely.

Senator PERCY. Medicine which they have obtained from a clinic?

Dr. KURKE. Many patients who are on methadone go to the centers to get treatment so they can sell their methadone. There is a very brisk trade in methadone as a result.

Senator PERCY. Do you have any idea what Dr. Weissbart's income is? Have you ever wondered about this in your idle moments?

Dr. KURKE. No, I am afraid I don't. I was really astonished.

Senator PERCY. Have you made any kind of estimate?

Dr. KURKE. No, I really have not.

Senator PERCY. Do you know anything about his lifestyle?

Dr. KURKE. Not a thing, except that he likes to play golf.

Senator PERCY. That he lives comfortably and well?

Dr. KURKE. I have no idea.

Senator PERCY. But you do have some idea that there has to be some money coming in if he is seeing 40 or 50 patients a day.

Dr. KURKE. Definitely, and because of what I read in the New York Times most specifically, which gave the total of Dr. Weissbart's billing for last year and also discussed the billing for 1974.

Senator PERCY. That figure in 1974 was $100,000, and in 1975 $136,000.

Dr. KURKE. That was really very upsetting to me because in the Brooklyn clinic I had to provide my own otoscope, ophthalmoscope, and sphygmomanometer. I had to provide my own liquid soap with which to wash my hands, and a soap dispenser. So it was very upsetting to discover that Dr. Weissbart's income was $136,000 last year.

Senator Moss. And he got 50 percent of all of your billings while you worked there?

Dr. KURKE. Yes. He was not really satisfied with my billings because he didn't feel I was doing a large enough volume of business. We had a meeting several weeks ago with Dr. Weissbart's brother-in-law, Dr. Sampson. They wanted me to take over the Brooklyn clinic as a tenant, take all of the money and pay all of the bills, because they felt that I would have greater incentive and, therefore, I would see patients once a week whether they needed to be seen or not, and I would write more prescriptions because that way more money would be coming into the clinic.

PRIMARY AIM: TO MAKE MONEY

There just was not any way that these patients could be seen legitimately every week. I don't mean there was no way to write more prescriptions, but the point was made that the aim of prescribing medications was to make money.

Senator Moss. What about the laboratory work? What did Dr. Weissbart use for a lab?

Dr. KURKE. Well, there are regulations concerning what any doctor may do in his own office. There is a list of some simple tests, such as complete blood counts, red cell count, things like that. This is in the handbook that is sent out through the medical assistance program.

One of the first things I discovered about the clinic at 116th Street was that they didn't have a hemoglobinometer. When I asked Dr. Weissbart about it every week he said very vaguely, "Oh, yes, we will have to do something about that."

I said, "Yes; we are going to have to do something about that because these blood counts don't mean anything."

When I got this little booklet that detailed what was supposed to be done, which is available to all physicians, although I didn't get it for a while, it states unequivocally that a complete blood count includes the hemoglobin.

Now, I know that Dr. Weissbart's charts are surveyed repeatedly and audited. It seems to me that it would be very difficult to miss the fact that not a single one of these blood counts has a hemoglobin value and yet these were billed as complete blood counts and paid for as such, which I regard as fraud.

Senator Moss. I understand that Dr. Weissbart does not have anybody working in his laboratory on Saturday.

Dr. KURKE. That is right.

Senator Moss. What does he do with specimens that are taken on Saturday?

Dr. KURKE. They are held until Monday.

Senator Moss. Just hold them over?

Dr. KURKE. That is right.

Senator Moss. What is the likely result?

Dr. KURKE. They are examined as though they were fresh specimens although they are useless.

Senator Moss. Would they deteriorate considerably over 2 or 3 days?

Dr. KURKE. Yes. There is no point in taking a urine specimen unless it is done within 2 hours and a good blood count might be obtained if you kept it for 24 hours, but ideally that also should be done fresh.

EMERGENCY CASES REFERRED TO HOSPITAL

Senator PERCY. What would happen to a patient who came in seriously ill and obviously needed urgent medical attention? Would they just refer him to a hospital?

Dr. KURKE. Yes.

Senator PERCY. They will get rid of them as quickly as they can. Of course, that would be customary in a clinic.

Dr. KURKE. Yes; because there are not any emergency facilities. It depends upon what hospital you sent him to and what length of care they get. Some patients are referred to hospitals who don't need hospitalization or who need hospitalization in a better hospital.

Senator PERCY. Dr. Ingber mentioned this morning that in medicaid mills the only crime is, as he put it, ripping off the Government. He said that he gave adequate care in the medicaid mill. In your experience, have you seen the provision of adequate or good care in a medicaid mill at all?

Dr. KURKE. No.

Senator PERCY. Have you worked in any other than just these two?

Dr. KURKE. No, but I have talked to all the patients I have seen at great length, with great curiosity, which is something that is also part of the regulation. You are supposed to ask patients if they have seen, or are seeing, another doctor and refer the patient back to that physician.

This is something that is never done as a matter of practice. Patients have told me about their experiences in the Harlem clinic and in many, many other clinics that they went to. I could not make out that they were treated any differently anywhere.

Senator Moss. Dr. Kurke, have you had a chance to see this report that has been drafted?

Dr. KURKE. I looked through it briefly.

Senator Moss. It quotes you in a number of places and I just wondered if that represented accurately what you reported to our investigators? Are there any errors in there?

Dr. KURKE. I have not seen it exactly but I think the ones having to do with patients, yes, certainly are accurate—quality of laboratory work, yes—general quality of care, definitely.

Senator Moss. The reason I asked; there are some very shocking things about patients and failure to care for them, even to observe a growth in the throat, things of that sort. Those actually happened?

Dr. KURKE. Yes. Some of the most amazing things that I have ever seen in all of my experience in medicine. One was a patient of 50 who came in, who had been seen by 6 other physicians in the Brooklyn clinic, among them Dr. Weissbart. He asked for medication for pain in his face. I asked him why he had a pain in his face and he was very surprised.

"You know, none of the other doctors asked me that."

I said, "Well, why do you have a pain?"

He said, "Well, I have this thing in my mouth."

"What thing?"

"Well, sort of a growth."

What he had was the largest growth that I have ever seen—about the size of an egg—that was literally choking him. I looked through the chart and I said, "You know, I really don't understand this. Is it really true that no one has looked in your mouth?"

"THEY NEVER LOOKED IN MY MOUTH"

He said, "Yes, that's right, they never looked in my mouth." He said, "I had a pain in my face and they gave me medication but they never looked in my mouth." He said, "It really does not matter because I know that this is killing me anyway."

But I think it does matter because I think it is concrete evidence of a double standard in medical care. When you go to see a doctor, someone should look in your mouth if you can't swallow, if you can't lie down and breathe at night.

He knew that this tumor, which was removed originally 15 years ago, had recurred 5 years before he saw me. In the 2 years since he started coming to the Brooklyn clinic it had achieved large enough size that he could not eat, which was why one of the physicians noticed he was losing weight.

By the time I saw him it was literally embarrassing his respiration but no one had looked in his mouth. No one cared to know. It was not worth the trouble to take the time to look in his mouth because you don't get paid for that, it is a waste of time. Anything you do that you can't put down on an invoice is a waste of time.

Senator Moss. He didn't even get the flashlight treatment that I got?

Dr. KURKE. No; he was not asked to open his mouth, just simply given a prescription.

Senator Moss. Dr. Kurke, I do appreciate your coming and giving us your personal experience and your viewpoint. I am sure that Senator Percy and I both would like to continue the colloquy, however, that single button up there says a vote has started and we must go to the floor.

This does complete the number of witnesses we had called for today and I want to thank all of them for appearing, and you especially. You give us great pause about this system that we have underway in medicaid and obviously it is being abused terribly.

We simply must find the answer out of this so it will not continue. Thank you.

At this point I would like to insert in the record the New York Times editorial entitled "Medicaid Scandals."

[The article referred to follows:]

[From the New York Times, Aug. 31, 1976]

MEDICAID SCANDALS . . .

Rumors and suspicions about abuses of medicaid funds have been rampant for so long that the public, expecting the worst, may not react with adequate anger and disgust to disclosures by the Senate Subcommittee on Long-Term Care. Without the outrage these findings so clearly call for, there is small hope that the revelations will be quickly followed, not only by essential reforms but by criminal prosecution of those who have enriched themselves at the expense of the taxpayers and of the poor for whom the funds are intended.

High on the agenda of any prosecution of medicaid profiteers ought to be the recovery of the stolen money and its return to the local, State and Federal treasuries. At the same time, every effort must be made to prevent medicaid abuses from generating popular and political opposition to the sound and necessary concept of medicaid—the vital Federal-State program that provides medical aid payments to the aged, blind, and disabled.

Senator Frank E. Moss, Democrat of Utah, as the subcommittee's chairman, and other members of his staff performed an extraordinary public service by personally posing as indigent patients as they sought to uncover widespread medicaid irregularities. What they found is a catalog of flagrant breaches of the law and medical ethics. The compendium of thievery, which resembles more nearly the kind of revelations ordinarily associated with the Mafia than with members of a respected profession, includes the following carefully documented charges:

(1) Individual physicians collected huge Medicaid payments, as illustrated by a list in New York State that cites more than 100 physicians whose Medicaid payments last year ranged from $100,000 to nearly $800,000.

(2) Medicaid "mills" are flourishing in poverty areas, designed to defraud rather than serve the poor, while fly-by-night operators share the profits with greedy doctors.

(3) Unnecessary diagnostic tests and X-rays are being routinely administered for only one discernible purpose—to enrich the laboratories, cooperating physicians and pharmacists, the latter in payment for unnecessary and therefore possibly harmful prescriptions.

(4) A high incidence of false diagnoses arising from these practices poses a ready threat of physical damage to unsuspecting patients. Senator Moss himself displayed evidence in the form of bruises he suffered in the course of batteries of blood tests.

Senator Moss. The hearing is adjourned.

[Whereupon, at 12:30 p.m. the hearing adjourned.]

APPENDIXES

Appendix 1

REPORT TO THE SENATE SUBCOMMITTEE ON LONG-TERM CARE SPECIAL COMMITTEE ON AGING BY THE COMPTROLLER GENERAL OF THE UNITED STATES

Improvements Needed In Managing And Monitoring Patients' Funds Maintained By Skilled Nursing Facilities And Intermediate Care Facilities

Social and Rehabilitation Service
Department of Health, Education, and Welfare

Mismanagement of patients' personal funds in Medicaid facilities in five States and proposals for dealing with the problem are the subjects of this report.

It deals with

--the adequacy of Federal and State regulations and guidelines for the handling of Medicaid patients' personal funds in the custody of facilities,

--how selected facilities have handled patient funds, and

--the adequacy of the States' monitoring activities regarding facility compliance with regulations and guidelines.

MWD-76-102

MARCH 18, 1976

COMPTROLLER GENERAL OF THE UNITED STATES
WASHINGTON, D.C. 20548

B-164031(3)

The Honorable Frank E. Moss
Chairman, Subcommittee on Long-Term Care
Special Committee on Aging
United States Senate

Dear Mr. Chairman:

This report discusses improvements needed in managing patients' funds maintained by skilled nursing facilities and intermediate care facilities participating in the federally assisted Medicaid program. The report points out inadequacies in the Department of Health, Education, and Welfare's regulations and the States' monitoring of nursing facilities, as well as deficiencies in handling patients' funds at selected facilities.

Our review was made pursuant to your request of December 19, 1974. As your staff requested, we have not given the Department of Health, Education, and Welfare; the States; or the selected nursing homes an opportunity to review and formally comment on our report. However, we have discussed our findings with departmental representatives and communicated our findings to the States and facilities involved.

This report contains recommendations to the Secretary of Health, Education, and Welfare. As you know, section 236 of the Legislative Reorganization Act of 1970 requires the head of a Federal agency to submit a written statement on the actions taken on our recommendations to the House and Senate Committees on Government Operations not later than 60 days after the date of the report and the House and Senate Committees on Appropriations with the agency's first request for appropriations made more than 60 days after the date of the report. We will be in touch with your office in the near future to arrange for release of the report so that the requirements of section 236 can be set in motion.

Sincerely yours,

Comptroller General
of the United States

COMPTROLLER GENERAL'S
REPORT TO THE SUBCOMMITTEE
ON LONG-TERM CARE
SENATE SPECIAL COMMITTEE
ON AGING

IMPROVEMENTS NEEDED IN MANAGING AND MONITORING PATIENTS' FUNDS MAINTAINED BY SKILLED NURSING FACILITIES AND INTERMEDIATE CARE FACILITIES

Social and Rehabilitation Service
Department of Health, Education, and Welfare

D I G E S T

Each aged, blind, or disabled Medicaid patient in a skilled nursing home or intermediate care facility is entitled to an allowance of at least $25 a month for his personal needs. (See p. 2.) The Department of Health, Education, and Welfare (HEW) has issued limited regulations or instructions on managing these patients' funds. (See p. 4.) The States have issued regulations and/or instructions which vary widely. (See p. 5.)

HEW regulations and some States' instructions do not deal with such important areas as

--how patients' funds should be safeguarded and accounted for,

--the services or items that properly could be considered as personal needs, or

--how personal funds should be disposed of upon the death or discharge of the patient. (See pp. 4 to 7.)

GAO identified deficiencies in managing patients' funds in each of the 30 facilities it reviewed. (See p. 8.) Problems identified included:

--Shortages in patients' funds.

--Medical supplies and services being charged to patients' funds.

--Funds of deceased and transferred patients being kept by the facilities.

--Interest earned on patients' funds being kept by the facilities. (See p. 8.)

All facilities participating in the Medicaid program are required to be inspected annually by the State in which they are located. (See p. 15.) These inspections should include reviews of their patients' funds procedures.

Of the five States GAO reviewed, Michigan did not include this as part of its inspection process until August 1975. At 21 of the 24 facilities GAO reviewed in the other 4 States, the inspection reports showed that they were in compliance with patients' funds requirements.

Fifteen of the 24 facilities did not comply with one or more existing HEW or State requirements.

Moreover, there is some question as to the inspectors' ability to determine whether a facility has properly implemented the policies and procedures for handling patients' funds.

In at least one region, HEW has not provided training to State inspectors on the proper handling of patients' funds. (See p. 16.)

State audits disclosed deficiencies similar to the ones GAO identified. However, there were few audits in the five States GAO reviewed. (See pp. 17 to 18.) As of June 30, 1975, 33 States had agreements with Medicare fiscal intermediaries for common audits of hospitals. The intermediaries are also responsible for Medicare audits of 4,000 skilled nursing facilities that also participate in Medicaid.

Therefore, it may be possible that the States could modify common audit agreements with fiscal intermediaries to include making reviews of patients' funds at skilled nursing facilities where they are making reviews. (See p. 18.) GAO recommends that the Secretary of HEW direct the Administrator of the Social and Rehabilitation Service to:

--Issue additional regulations designed to safeguard patients' funds. (See p. 7.)

--Require Missouri to amend its Medicaid Instruction Manual so that it complies with Federal regulations. (See p. 7.)

--Train State inspectors to identify problems that exist in a facility's management of patients' funds. (See p. 20.)

--Encourage the States to modify their common audit agreements with Medicare fiscal intermediaries to include a review of patients' funds at skilled nursing facilities. (See p. 20.)

CHAPTER 1

INTRODUCTION

In a December 19, 1974, letter, the Chairman, Subcommittee on Long-Term Care, Senate Special Committee on Aging, asked us to review certain areas of nursing home costs under Medicaid. In a later discussion, the Subcommittee asked us to make a separate review of the controls over Medicaid patients' personal funds maintained by skilled nursing facilities (SNFs) and intermediate care facilities (ICFs).

THE MEDICAID PROGRAM

Medicaid--authorized by title XIX of the Social Security Act, as amended--is a grant-in-aid program in which the Federal Government pays part of the costs (50 to 78 percent) incurred by States in providing medical services to persons who are unable to pay. The Social Security Act requires that State Medicaid programs provide skilled nursing home services. Services in intermediate care facilities, which provide care to patients that do not require skilled nursing services, are an optional Medicaid service. About 7,100 SNFs and 8,400 ICFs are participating in the Medicaid program. About 4,000 SNFs also participate in Medicare.[1]

At the Federal level the Medicaid program is administered by the Social and Rehabilitation Service (SRS), within the Department of Health, Education, and Welfare (HEW). States have the primary responsibility for initiating and administering their Medicaid programs under the Social Security Act.

SOURCES OF PATIENTS' FUNDS

For Medicaid patients residing in Medicaid facilities, one source of personal funds is the Federal Supplemental Security Income (SSI) program which was established by title XVI of the Social Security Act. The program became effective in January 1974 and replaced and broadened the previous

---

[1]Medicare, authorized by title XVIII of the Social Security Act, is the Federal health insurance program for the aged and disabled. Part A of Medicare provides hospital insurance and also covers certain posthospital care in SNFs or in a patient's home.

federally assisted, State-administered cash assistance programs for the aged, blind, and disabled.

Section 1611(e) of the act provides that an SSI recipient residing in a Medicaid facility will receive a reduced SSI payment of up to $25 a month (provided the recipient's other retainable income is less than $25) to provide for the patient's personal needs. In conformance with the SSI payment level, Medicaid regulations require that the personal needs maintenance level for any institutionalized aged, blind, or disabled Medicaid recipient be a minimum of $25 a month. However, a State may set a higher personal needs allowance level. Any income above the personal needs level must be applied to the cost of facility care. This application of excess income reduces the amount paid by Medicaid.

In addition to SSI benefits, patients' funds may come from a variety of sources, including social security benefits, veterans' benefits, disability compensation, and contributions from relatives.

SCOPE OF REVIEW

The objectives of our review were to determine

--the adequacy of Federal and State regulations and guidelines for handling Medicaid patients' personal funds in the custody of facilities,

--how selected facilities have handled patients' funds, and

--the adequacy of the States' monitoring activities regarding facility compliance with regulations and guidelines.

Our review included work at HEW headquarters in Washington, D.C.; HEW regional offices in Atlanta, Chicago, Kansas City, New York, and San Francisco; and State agency offices in California, Florida, Michigan, Missouri, and New York. These States were selected to give wide geographical distribution and to insure that only one State was located in each of the HEW regional offices reviewed. We also visited 30 SNFs or ICFs in the 5 States. These institutions were selected on the basis of size; location within the State; and type of facility such as proprietary, private nonprofit, and public. We reviewed the procedures and practices used to manage and account for patients' funds at

each facility. We interviewed appropriate facility officials, reviewed available accounting records, tested transactions in individual accounts, and interviewed patients.

CHAPTER 2

HEW's AND SOME STATES' REGULATIONS AND GUIDELINES FOR HANDLING PATIENTS' FUNDS ARE INADEQUATE

HEW and the five States in our review have issued regulations and/or instructions for SNFs and ICFs on the handling of patients' funds. However, HEW regulations and guidelines have been limited and the scope and substance of State regulations and guidelines varied considerably.

FEDERAL REGULATIONS AND GUIDELINES

For SNFs, Federal regulations (20 CFR 405.1121(k)(6)) require that patients be allowed to manage their personal financial affairs or be given at least a quarterly accounting of financial transactions made on their behalf if the facility accepts written delegations of the responsibility in conformance with State law.

For ICFs, Federal regulations (45 CFR 249.12(a)(1)(iii)) require that a written account be maintained and available to the residents and their families.

We could locate little of HEW interpretive instructions pertaining to such matters as (1) how patients' funds should be safeguarded and accounted for, (2) the services or items provided by the institution that could be properly considered as personal needs and charged to the patients' personal funds and what services or items were to be considered as part of the Medicaid reimbursement to the facility, or (3) how personal funds were to be disposed of upon the death or discharge of patients.

The HEW interpretive instructions included an SRS headquarters memorandum dated July 31, 1974, to the SRS Kansas City regional office which stated that items such as wheelchairs, walkers, and crutches should be considered part of normal SNF services and thus should not be charged to the patients and that a State should stipulate in its agreements with facilities the items and services expected as part of routine care.

Another SRS headquarters memorandum dated August 18, 1975, to the SRS New York regional office stated that a nursing home was not allowed to charge a fee for managing patients' funds and that interest earned on patients' funds should accrue to the individual patients.

STATE REGULATIONS AND GUIDELINES

Each of the five States we visited had issued some instructions to nursing homes with regard to the handling of patients' personal funds. However, these instructions varied from the rather comprehensive regulations issued by California to a booklet which Missouri provided to nursing homes that included a section listing items for which Medicaid patients' personal funds could or could not be charged. A summary of the regulations in the five States follows.

California

Facilities participating in Medicaid must be licensed by the State, and in California the licensing regulations included detailed requirements concerning the use, custody, and disposition of patients' personal funds. These requirements included the following:

1. No licensee shall use patients' moneys or valuables as its own or mingle them with its own.

2. Each licensee shall maintain adequate safeguards and accurate records of patients' moneys and valuables entrusted to its care.

3. Patients' moneys not kept in the facility shall be deposited in a checking account in a local bank.

4. A person, firm, partnership, etc., which is licensed to operate more than one facility shall maintain a separate checking account for each facility and shall not mingle patients' funds in different facilities.

5. When the total amount of a patient's moneys entrusted to a licensee exceeds $500, all moneys and valuables in excess of $500 shall be deposited in a demand trust account.

6. Upon patient discharge, all moneys and valuables of that patient which have been entrusted to the licensee shall be surrendered to the patient in exchange for a signed receipt. Those moneys kept in a demand trust account shall be made available within 3 normal banking days.

7. Within 30 days following the death of a patient, all moneys and valuables of that patient shall be surrendered to the person responsible for the patient.

8. Upon change of ownership of a facility, a written verification by a public accountant of all patients' moneys which are being transferred to the custody of the new owner shall be obtained by the new owner in exchange for a signed receipt.

Florida

Like California, Florida required that facilities (1) not use patients' moneys nor mingle them with the facilities' own, (2) keep complete and accurate records of all funds and other effects and property of their patients, and (3) provide for safekeeping of personal funds.

Michigan

Michigan had regulations that (1) did not permit the mingling of patients' funds with the facilities' funds and (2) required the facilities to report the amounts of a deceased patient's funds to the person responsible for the patient or to the county. Michigan also required its facilities to secure bonds covering trust funds and to give a quarterly accounting of all patients' funds to the patient.

Missouri

Missouri published a Medicaid Instruction Manual in May 1974 which was distributed to nursing facilities in the State and which specified those services not covered by the State's reimbursement rate. These noncovered services were categorized as either personal items which could be charged to the patient or specified medical items which could be charged to third parties such as relatives. An SRS Kansas City regional office official said, however, that this section of the manual was not in compliance with Federal regulations because some of the items or services listed as noncovered Medicaid items should have been covered by Medicaid.

New York

New York had regulations which specified the items and services that must be included in the basic rate of the facility. These included board, including special diets;

lodging; laundry service for personal clothing items; and the use of walkers, wheelchairs, and other supportive equipment.

Although New York had not issued any regulations directly related to the use, custody, and disposition of patients' funds at the time of our fieldwork, the State issued an administrative letter on December 10, 1975, which detailed how patients' funds were to be administered.

CONCLUSIONS

HEW has issued limited regulations and guidelines to the States on managing patients' funds. HEW has relied on the States to specify and control the methods to be used by SNFs and ICFs to manage patients' funds. Certain States have detailed regulations on managing patients' funds while others have limited regulations or guidelines. Accordingly, there is a need for HEW to establish minimum standards for the management of patients' funds maintained by SNFs and ICFs participating in Medicaid.

RECOMMENDATIONS TO THE SECRETARY OF HEW

The Secretary of HEW should direct the Administrator of SRS to issue regulations setting forth the minimum standards that the States are required to follow in establishing requirements for patients' funds maintained by SNFs and ICFs participating in Medicaid. These standards should cover such matters as

- --how patients' funds should be safeguarded and accounted for,
- --the services or items that could be properly considered as a personal need and charged to the patients' funds and the services or items that should be considered as part of the Medicaid reimbursement to the facility, and
- --how personal funds should be disposed of upon death or discharge of patients.

The Secretary should also direct the Administrator of SRS to require Missouri to modify its Medicaid manual to comply with Federal regulations.

CHAPTER 3

DEFICIENCIES IN MANAGING PATIENTS' FUNDS AT SELECTED FACILITIES

The 30 facilities in the 5 States we visited included 18 proprietary, 5 private nonprofit, and 7 public facilities. At each of the 30 facilities we identified either major and/or procedural deficiencies in managing patients' funds. A major deficiency is one which, unless corrected, results in measurable losses to patients or their estates; whereas a procedural deficiency involves noncompliance with requirements or poor accounting practices. In some instances a procedural deficiency may have resulted in losses to patients, but we were unable to establish that such a loss actually occurred. In summary, we found that:

--The 18 proprietary nursing facilities reviewed had 11 major deficiencies and 72 procedural deficiencies.

--The 7 public facilities reviewed had 6 major deficiencies and 19 procedural deficiencies.

--The 5 nonprofit facilities had 5 major deficiencies and 15 procedural deficiencies.

A summary of the deficiencies identified in each of the facilities, including those deficiencies which represented violations of HEW or State requirements, is shown in appendix I.

MAJOR DEFICIENCIES

Following are the major deficiencies identified.

1. Shortages between patients' ledger balances and the bank accounts.

The most common method used by the facilities to account for patients' funds consisted of maintaining individual ledger accounts and a bank account in which patients' funds were deposited. The bank account amount should equal or be reconciled to the ledger balances, but at three facilities in three States, the bank accounts had fewer funds than the individual ledger balances showed there should have been. These shortages amounted to $445, $9,044, and $23,275. The $445 shortage was replaced by the facility's administrator soon

after we brought it to his attention. The other two shortages go back several years and were further complicated by changes in ownership. We reported these two shortages to State or Federal officials.

An example of a shortage involved a proprietary nursing facility in North Miami, Florida, where the available records indicated a shortage of $9,044 at July 28, 1975. At that time, the patients' ledger cards showed a balance of $10,447 applicable to Medicaid and non-Medicaid patients. Of this amount, $4,286 consisted of inactive accounts of discharged or deceased patients with the dates of last-recorded transactions in the individual accounts ranging from April 1971 to November 1974 and $6,161 consisted of the active accounts of patients in the home.

The bank statement balance for inactive and active accounts was $1,403, or $9,044 less than the patients' ledger accounts. We noted that the home had changed ownership in April 1971, at which time about $5,000 had been withdrawn from the patients' fund bank accounts. According to the home's accountant, the seller had withdrawn the funds and given the buyer credit on the purchase price. The buyer was supposed to replace the funds, but we were unable to confirm that this was done. This facility regularly commingled patients' funds with its operating funds.

2. Charging patients for medical supplies and services.

Federal regulations (45 CFR 250.30 (a)(7) (1975)) require that Medicaid facilities accept the rate established by the State as payment in full for services provided.

The regulations and related instructions were not specific in this area, and at six facilities in three States, patients' funds were being charged for items or services which we believe should have been provided as part of routine care. These included wheelchair rentals, restorative services, and routine medical supplies.

One facility in Missouri charged patients $60 a month for medical supplies and services whether or not they used this amount. All funds received by the patient up to $60 were used to pay this arbitrary charge. These charges included moneys over the patient's personal allowance that should have been applied to reduce the Medicaid payment to the facility but were not.

Another facility in Missouri charged one patient $262 for the period January to July 1975 for medical supplies and services.

3. Retaining funds of deceased and transferred patients.

Federal regulations are silent as to the disposition of the personal funds of transferred or deceased patients. Two of the five States we visited had regulations concerning the disposition of deceased patients' personal funds. They provided that funds of deceased patients are to go to their estates, families, or the State. In California, one of the States with such regulations, one facility was retaining funds of deceased or transferred patients. Also, eight facilities in three other States without such regulations were also retaining funds of deceased or transferred patients. At one facility, as of April 1975, the balance of deceased patients' funds totaled $17,762, of which $11,013 had belonged to patients who had died before April 1, 1974. An official at this facility said these funds would eventually be transferred to the facility's operating account.

4. Keeping interest earned on patients' funds.

As previously discussed, an SRS memorandum dated August 18, 1975, stated that interest earned on a patient's funds belongs to the patient.

At four facilities in three States we noted that interest earned on patients' funds was being kept by the facilities. At one facility the interest earned amounted to $13,200 since 1969 and at another facility the interest earned from October 1968 through December 1974 amounted to $1,639.

PROCEDURAL DEFICIENCIES

In addition to the major deficiencies discussed above, we also identified the following procedural deficiencies:

--11 facilities in 5 States mingled patients' funds with their own and used such funds to pay operating expenses. One facility in California had used patients' funds as collateral for a loan for operating purposes.

--20 facilities in 5 States had poor procedures for documenting transactions in patients' fund accounts. A common weakness was not properly documenting with receipts how funds were spent by third parties, such as relatives, on a patient's behalf.

--5 facilities in 2 States allowed patients to accumulate personal funds above the State resources limit instead of applying the excess funds toward the patients' cost of care.

--16 skilled nursing facilities in 4 States did not provide patients with at least a quarterly accounting of their accounts as required by Federal regulations.

ILLUSTRATIONS OF DEFICIENCIES AT TWO SELECTED FACILITIES

Following are two extreme examples of how specific proprietary facilities in California and Missouri improperly handled patients' funds.

California facility

As of July 1, 1975, there were 91 patients in this facility, 77 of whom were covered by Medicaid. The State inspected this facility for participation in the Medicaid program in March 1975 and the inspection report did not identify any deficiencies involving patients' funds. The inspectors indicated that the facility was in compliance with patients' funds requirements.

HEW regulations (45 CFR 250.30(a)(7)(1975)) require that Medicaid facilities accept the rate established by the State as payment in full for services provided. We believe that medical supplies should be provided as part of routine care. This facility charged Medicaid patients for such medical supplies as gauze dressing, catheters, and tubing.

This facility had a central supply unit to provide medical supplies for patients. An individual schedule of use was prepared for each patient, except for Medicaid patients, showing the supplies used by each. A single list was prepared for Medicaid patients showing the total supplies used. There was no listing of individual Medicaid patient usage.

The facility's bookkeeper stated that Medicaid patients were charged on the basis of their ability to pay and not their actual usage. She said this was done to reduce the facility's medical supply expenses because not all Medicaid patients had enough funds to pay for the medical supplies that they used.

This facility charged some patients $3 per month for maintaining their funds. The bookkeeper stated that the $3 service charge was assessed when (1) a patient receives a

check which has to be split between the cost of care and the personal allowance and (2) when a patient has "many" withdrawals from the trust account during the month. The bookkeeper further stated that there were no criteria for how many transactions constituted many withdrawals.

We discussed this service charge with the administrator. He stated that all patients should have been assessed this service to compensate for the amount of time the facility's accounting staff spent on patients' funds. As previously discussed, an SRS memorandum dated August 18, 1975, stated that a facility may not charge a Medicaid patient for managing his personal funds.

The California regulations provide that money of deceased patients entrusted to a licensed facility be turned over to the patient's estate or that the county public administrator be notified within 30 days of death. Seven deceased patient accounts we examined had balances that were not surrendered to the patients' estates. Balances in these accounts ranged from $12 to $1,041, with dates of death as early as January 1974. The facility used the funds in several of these accounts to offset bad debts losses. We found no evidence that these patients' next of kin or the public administrator were advised of the existence of the balances of the patients' funds in these accounts.

This facility also (1) had incomplete documentation for patients' funds spent by facility employees on behalf of the patients, (2) commingled patients' funds with the facility's operating funds in violation of the California regulations, and (3) failed to provide patients with a quarterly accounting of transactions in violation of Federal regulations.

Missouri facility

As of June 25, 1975, there were 162 Medicaid patients in this facility. The State last inspected this facility for participation in the Medicaid program in January 1975. At that time, the inspection report did not identify any problems involving patients' funds.

The Department of Housing and Urban Development (HUD) had foreclosed a mortage on this facility on April 4, 1974, after the facility had been in receivership from February to April 1974. At the time of our fieldwork, the facility was being managed by a private management corporation on behalf of HUD. A HUD official said that, during the period this facility was in receivership, the agency became aware

of a shortage in the patients' funds but did not know the amount of the shortage.

In March 1975 the comptroller for the management firm reconciled the patients' accounts as of April 8, 1974, and found the shortage in patients' funds was $23,275, which represented the difference of the balance in the patients' ledger accounts of $59,562 and an adjusted bank balance of $36,287. A HUD official said that he had requested that the HUD Office of Inspector General in the Kansas City, Missouri, regional office make an audit of the patients' trust fund accounts. We informed the HEW Kansas City regional office and Missouri officials about this shortage because the interests of Medicaid patients were involved.

As stated previously, Federal regulations require that the facility accept the rate established by the State as payment in full for medical supplies and services provided as routine care. Further, the Missouri Medicaid manual specifies those services that cannot be charged to patients. Nevertheless, this facility charged patients for services and supplies which the State said could not be billed to patients. For example, four patients at this facility were charged $125, $206, $262, and $88 for such services and items as wheelchair and equipment rentals, medical and surgical supplies, and restorative services for the period January to June 1975. The comptroller of the home said that the home operated on the theory that charges not covered in the State's Medicaid per diem rate were to be billed to whomever could pay.

In addition to the patients' fund shortage and the charging of patients for routine medical supplies and services, this home

--did not set aside $25 each month for the personal needs of the patients,

--did not provide a quarterly accounting of transactions to the patients,

--had no written procedures for the handling of patients' funds, and

--commingled patients' trust funds with its own operating funds.

CONCLUSIONS

For the 30 institutions we visited in 5 States, we identified an average of 4 major and/or procedural deficiencies in the facilities' management of patients' funds. Because our selection of institutions for review was not based on any prior knowledge of facilities with deficiencies, we believe it is logical to conclude that the mismanagement of patients' funds in the custody of SNFs and ICFs participating in Medicaid is likely to be widespread. Further, because we found major deficiencies at all types of facilities (e.g., proprietary, private nonprofit, or public) we believe that none of the types could be considered any better or worse than any other type of facility.

CHAPTER 4

STATE MONITORING OF FACILITIES' MANAGEMENT OF PATIENTS' FUNDS HAS BEEN INEFFECTIVE

The States' monitoring activities pertaining to patients' funds involve the annual inspections required for certification for participation in Medicaid, usually by the State Department of Health and periodic audits of such facilities by various State auditing organizations.

CERTIFICATION INSPECTIONS COULD BE IMPROVED WITH TRAINING

Regarding inspections, HEW regulations require that each SNF and ICF certified for Medicaid be inspected at least annually by State inspectors to determine whether the facility is in compliance with Federal regulations.

State inspectors, as part of the certification process for SNFs, are required to determine whether (1) the facility has written policies with regard to patients' rights (including management of patients' funds) and (2) the staff of the facility is trained and involved in implementing these policies. For ICFs, State inspectors must assure themselves that the facility maintains on a current basis, and makes available to residents and their families, an accounting for each resident's fund balance with written receipts for all disbursements made to, or on behalf of, the resident.

Michigan did not include patients' funds in its certification inspection process until August 1975. We identified items of noncompliance with Federal and State requirements in the six facilities visited in Michigan. In 21 of the 24 nursing homes and intermediate care facilities in the other 4 States visited, State inspection reports showed that the facilities were in compliance with the standards for handling patients' funds. For 15 of these 24 facilities, the deficiencies we identified included items which represented noncompliance with one or more specific HEW or State requirements. Although we identified various deficiencies in managing patients' funds in each of the 30 facilities visited, for about half the facilities which had been previously inspected by the States and where the inspections covered patients' funds, we found items of noncompliance with specific HEW or State requirements which had not been identified by the State inspectors.

Moreover, there is some question as to the inspectors' ability to determine whether a facility has properly implemented the policies and procedures for handling patients' funds. For example, in Missouri the facility survey is performed by a two-person team consisting of a sanitary engineer and an institutional advisory nurse.

During the survey, the sanitary engineer is concerned with such areas as the physical condition of the facility, fire safety, and sanitation. The nurse is responsible for completing the parts of the survey form that involve patients' funds and/or patients' rights.

The supervisor of the State's Bureau of Institutional Advisory Nurses said that during a facility survey a nurse visually checks to see if ledger cards or something similar has been prepared for the patients. The nurse also checks whether the facility has written procedures for managing patients' funds. The supervisor further informed us she doubted any of her nurses performed any verification of the transactions shown on patients' ledger cards because her nurses did not know how to verify that written procedures for patients' funds were being followed. The supervisor said that she had asked the HEW regional office to conduct training seminars on how to review patients' funds, but that none had been provided in that region.

The Social Security Amendments of 1972 authorized 100-percent Federal funding of expenditures under approved State Medicaid plans for the compensation and training of inspectors of long-term care institutions through June 30, 1974. There are currently about 2,000 State inspectors, many of whom have been trained under this program.

According to HEW officials, the period authorized for 100-percent Federal financial support for developing and operating State programs for inspecting long-term care institutions was not long enough to permit all the States to develop the capability to properly inspect long-term care institutions. Therefore, the authorization for 100-percent Federal reimbursement of State expenditures for inspectors of long-term care facilities was extended for 3 years through June 1977 by Public Law 93-368, approved August 7, 1974.

Because a review of patients' funds involves simple cash transactions and related fundamental questions of adequate documentation and internal controls, we believe that with the establishment of clearcut requirements, State

inspectors could be trained to identify deficiencies in a facility's management of patients' funds. The more complicated or serious problems could be referred to appropriate State or Federal auditing or investigating agencies for further development.

Thus, it seems to us that while the authority for 100-percent Federal funding of inspections and related training exists, HEW or the States have an opportunity to emphasize the review of patients' funds in their training program.

STATE AUDITS COULD BE AUGMENTED BY MEDICARE AUDITS

Although State Medicaid plans are required to assure appropriate audits of nursing home records by the State, HEW does not require that the plans specify the frequency of such audits or that patients' funds be included in the audits.

In three of the five States we visited, State audit agencies made, or were making, a number of audits of patients' funds. In New York, which has approximately 540 facilities, the State audit agency had completed 25 audits and another 36 were in progress as of April 1975. These were comprehensive audits of the facilities which included (1) the determination of eligibility for Medicaid, (2) the propriety of billings submitted by the facility, and (3) the propriety of procedures used in the receipt, maintenance, and use of personal funds paid to Medicaid recipients. The final reports or report drafts included the following deficiencies:

--Proper records of receipts and disbursements of patients' personal funds were not maintained.

--One nursing home had used about $7,000 of a total of $16,000 in patients' funds to meet operating expenses.

--One facility kept patients' funds in separate envelopes bearing the patients' names. This facility made bulk purchases of clothing for patients. Then an employee collected the funds for payment for such purchases from all the envelopes without regard to who benefited from the purchases.

We visited two of the facilities in New York approximately 7 months after the reports were issued to the facility to determine whether corrective actions had taken place. In each of these facilities we found that corrective actions had not been taken.

In Florida, which has 251 SNFs and 8 ICFs participating in the Medicaid program, the Florida audit agency had issued one report on patients' funds as of May 30, 1975. This January 31, 1974, report cited activities of three Dade County nursing homes and questioned the handling of about $75,588 in patients' funds. Activities questioned by the Florida audit agency included charging for wheelchairs and bedspreads, clothing which patients testified they did not receive, physical therapy, and recreational programs. However, in January 1975, when an additional 23 nursing home audits were in progress, all nursing home audits were suspended and the audit effort was directed to other areas. These audits were resumed in October 1975.

Michigan made periodic audits of nursing homes. Audits of nursing homes in 1973 and 1974 disclosed 18 instances where nursing homes were commingling patients' funds with operating funds.

California and Missouri have not made audits of patients' funds maintained by SNFs and ICFs.

In summary, New York and Florida had audit coverage pertaining to patients' funds for about 10 percent of their facilities. The extent of Michigan's audit coverage was not determinable and we could identify no specific coverage of patients' funds by State audit groups in California and Missouri.

Common audit agreements between Medicare and Medicaid

Historically, the Medicare and Medicaid programs have both required that inpatient hospital services be reimbursed on the basis of reasonable costs. To assure that this was being achieved, a provider audit function has been needed under both programs. Therefore, in order to eliminate duplication of auditing effort, the Social Security Administration and SRS, among others, developed a common audit agreement. The purpose of the agreement was to have one audit of a participating hospital which would serve the needs of all programs reimbursing the hospital, with such programs sharing the audit's cost. As of June 30, 1975, 33 States had agreements with Medicare fiscal intermediaries for common audits of hospitals.

Usually the Medicare intermediaries also make cost reimbursement audits of SNFs participating in Medicare.[1] Of the 7,100 SNFs participating in the Medicaid program, about 4,000 also participate in Medicare, whereas only 337 of the SNFs participating in the Medicare program did not participate in Medicaid. Of the 30 Medicaid facilities in our review, 27 were SNFs, of which 6 also participated in Medicare. As of September 30, 1975, the Medicare intermediaries had started 1,981 field audits of the 4,419 SNFs (45 percent) that had filed cost reports for reporting periods ending during fiscal year 1974.[2] Therefore, it may be possible that the States could modify their common audit agreements with fiscal intermediaries to include making reviews of Medicaid patients' funds at SNFs where the Medicare intermediaries were already making field audits.

CONCLUSIONS

Monitoring efforts by the States have not been effective in assuring compliance by SNFs and ICFs with requirements for managing patients' funds. A basic problem appeared to be that State inspectors may not have been qualified to make inspections of matters involving accounting or auditing skills. There has been a lack of formal training by HEW and the States in this area. Both the inspections and related training are currently financed entirely by the Federal Government.

State audits in three of the five States disclosed deficiencies similar to the ones we identified; however, such audits of patients' funds involved relatively few of the facilities participating in Medicaid in these States.

In our view, the management of patients' personal funds by SNFs and ICFs is an area that has been neglected and/or overlooked by the States. Our review indicates that there is a need to obtain more extensive coverage in this particular problem area.

---

[1] Medicare posthospital institutional inpatient coverage is limited to SNFs.

[2] Under SSA policy, the frequency and scope of provider audits for any particular reporting period is a matter of an intermediary's judgment. However, audits must be initiated within 3 years.

Under the existing monitoring systems the broadest onsite coverage of long-term care facilities participating in Medicaid is provided under the annual State certification inspections which are required for all facilities.

We believe that, with increased training of inspectors in reviewing patients' funds, these certification inspections could be an important vehicle for providing the necessary monitoring.

In view of the limited coverage of patients' funds provided by the State auditing agencies in the States reviewed, another potential method for providing additional monitoring of the management of patients' funds maintained by SNFs is by using the fiscal intermediaries' audit capability under the Medicare program. As previously discussed, about 45 percent of the 4,000 SNFs participating in Medicare were being audited onsite by Medicare intermediaries for fiscal year 1974. For those States having common audit agreements with Medicare intermediaries, such agreements could be modified to provide for audit coverage of the management of patients' funds at SNFs, provided the States were willing to pay for such coverage.

RECOMMENDATIONS TO THE SECRETARY OF HEW

The Secretary should direct the Administrator of SRS to:

--Train State inspectors so that they can identify problems that exist in a facility's management of patients' funds.

--Encourage States to modify their common audit agreements with the Medicare fiscal intermediaries to include a review of patients' funds at SNFs.

Appendix 2

MATERIAL RECEIVED FROM DR. NANCY C. BOOTH KURKE [1]

PELHAM MANOR, N.Y., *September 22, 1976.*

Senator FRANK E. MOSS,
Subcommittee on Long-Term Care,
U.S. Senate,
Washington, D.C.

DEAR SENATOR MOSS: I thought you might be interested in the results of the audit of the East Harlem Medical Group on August 16–17, 1976. I am therefore enclosing a Xerox copy of the report (which I belatedly received yesterday), as well as my direct response to medicaid. I assume the delay was intended to discourage my response, which it didn't.

Since you are rather familiar with the clinic in question and the general level of medical practice there, I'm sure you will be amused by the superficiality of the survey. The penalties for failure to correct deficiencies are really awe-inspiring, namely delay in payments or a provider discussion at medicaid headquarters! I don't consider this appropriate punishment nor an effective way to improve regulation of such clinics.

In case you haven't heard, it's business as usual at the East Harlem Medical Group.

Sincerely,

NANCY C. BOOTH KURKE, M.D.

[Enclosures.]

Memorandum

BROOKLYN, N.Y., *September 10, 1976.*

Received: September 21, 1976.
To: N. Kurke, M.D.
Subject: Medicaid audit of facility No. 038 of August 16–17, 1976.

Enclosed herewith is a copy of an audit evaluation recently received from medicaid. Steps are presently being taken to comply with medicaid's standards and requirements.

If you have any questions concerning this matter, kindly advise this office.

TAD H. GWIRTZMAN.

[Enclosure.]

THE CITY OF NEW YORK,
DEPARTMENT OF HEALTH,
BUREAU OF HEALTH CARE SERVICES,
New York, N.Y., August 26, 1976.

Facility No. 038
Date of Audit: August 16, 17, 1976.
Dr. CLYDE WEISSBART,
Medical Director,
East Harlem Medical Group,
New York, N.Y.

DEAR DR. WEISSBART: The New York City Department of Health is charged with the responsibility of monitoring the quality of health services provided Medicaid patients. In assessing quality the Department examines how well individual practitioners perform those activities for which they are responsible.

In addition, the quality of care is also dependent upon the adequacy of necessary support services and follow-up activities. Therefore, the practitioners

[1] See statement, p. 683.

are personally responsible for providing total care within a practice setting conducive to accepted standards of medical care. Future payments to all practitioners in the center are contingent upon compliance with such standards.

At the time of the above visit, various problem areas were identified. These findings are recorded on the accompanying report form. Please note that these deficiencies include both failure to comply with existing regulations and failure by the center to provide individual practitioners and their patients with support services and follow-up activities considered necessary to render quality care.

Please be advised that it is necessary for the problem areas cited to be rapidly addressed and remedied in such a manner as to assure that the overall care that patients receive in your center meets all minimum standards.

Each practitioner is required to advise this office in writing of the steps that will be taken to correct the cited deficiencies. A joint response by the administrator/medical director will be accepted in lieu of the individual responses, with the stipulation that each practitioner also individually sign the joint response. In either case, the response must be received in this office within 15 days of the date on which you receive this communication. Failure to do so may result in either a delay in payments to all practitioners or a provider discussion to be held in this office with all practitioners, or both.

We will be happy to respond to any questions you may have.

Very truly yours,

AL SCHWARZ, CSW, ACSW,
Assistant Commissioner,
Deputy Executive Director of the
Medical Assistance Program.

New York City Department of Health, Bureau of Health Care Services (medicaid)—report of facility compliance with health regulations and quality of care standards, East Harlem Medical Group No. 038, 145 East 116th St., New York, N.Y.

(Date of audit: Aug. 16–17, 1976)

	Compliance
I. General:	
*A. Physician on premise at all times when facility is open	Yes.
*B. Arrangements for assisting patients requiring care during off hours	Yes.
C. Designation of an individual responsible for coordinating and managing facility activities	Yes.
II. Pharmacy:	
*A. Maintenance of patient drug use profiles for pharmacies in or adjacent to the facility (formulary P. M2)	No.
*B. A sign indicating free choice of purveyors conspicuously posted, facility or pharmacy	Yes.
III. Patient flow in shared health facility:	
*A. Operational appointment system for revisit patients	Yes.
*B. Patients assigned primary physician on initial visit	Yes.
*C. Patients scheduled to see same primary physician on follow-up visits	Yes.
IV. Record system:	
A. Maintenance of all patients' medical records in a centralized recordkeeping system	Yes.
*B. Patient's records or a complete abstract available at all times to all practitioners (excluding dental)	Yes.
*C. Maintenance of a central day book for the facility which includes: patient's name, medicaid number, doctors seen, referrals	No.
D. Recall and management of patients with positive diagnostic findings	Yes.
E. Positive diagnostic findings recorded in records	No.

	Compliance
V. Radiology:	
*A. Facilities for x-ray on premises	Yes.
*B. Use of Radiology equipment inspected and registered (by the N.Y.C. Health Code 175.52a)	Yes.
a. Central	Yes.
b. Podiatry	Not applicable.
c. Dental	Yes.
d. Fluoroscopy	Not applicable.
*C. Identification of all x-ray films to include:	
1. Patients name or identifying code	Yes.
2. Date	Yes.
3. L/R indication (view of sides of area x-rayed)	Yes.
VI. E.K.G.'s:	
A. The availability of an E.K.G. machine on the premises at all times	Yes.
B. E.K.G. machine equipped with 12 leads	No.
VII. Laboratory:	
A. Laboratory on premises	Yes.
B. Current license from N.Y.C. Department of Health	Yes.
C. Lab procedures performed limited to those approved by Bureau of Labs	Yes.
D. Labeling of lab specimens to include: patient's name and Medicaid number	Yes.
E. Use of commercial laboratory that holds permit issued by the N.Y.C. Health Department	Yes.
F. Routine laboratory specimens picked up daily	Yes.
G. Stat lab capability	Yes.
*H. Refrigerator with temperature between 40°–50° for lab specimen only (N.Y.C. Health Code 13.236)	Yes.
VIII. Emergency equipment and supplies:	
*A. Availability of the following emergency equipment:	
1. Ambulance bags (or portable oxygen)	Yes.
2. Airway	No.
3. Ephinephrine (aqueous 1:1000)	Yes.
4. Aromatic spirits of ammonia	Yes.
5. Corticosteroids	Yes.
6. Benadryl	Yes.
7. 50 pct Glucose and H_2O	Yes.
*B. Refrigerator for biologicals maintained at temperature between 36°–40°	Yes.
*C. Thermometer in refrigerator to monitor temperature	No.
*D. Biologicals currently dated	Yes.
*E. Adequate supply of clinical thermometers	Yes.
*F. Provisions for destruction of syringes/needles	Yes.
*G. 1. Infant weight scale	No.
2. Adult height and weight scale	Yes.
*H. Provisions for hot sterilization	No.
*I. Snellen eye chart with mark to identify 20 or 10 ft distances	No.
IX. Physical facilities:	
A. 1. Current certificate of occupancy	No.
*2. Lighting sufficient to meet minimum public facility lumination requirements	Yes.
*3. Ventilation-Heating and cooling capacities sufficient to meet minimum public facility ventilation standards	Yes.

IX. Physical facilities—Continued	Compliance
*4. Seating sufficient to meet needs of patients	Yes.
*5. Clean patient toilet facilities with soap, towels and a functioning sink with hot and cold running water	No.
*6. No evidence of rodents or vermin infestation	Yes.
*7. Wall surfaces clean and in good repair	Yes.
*8. Ceiling in good repair	No.
*9. Floor surfaces clean and in good repair	No.
*10. Storage space area for necessary supplies and equipment	Yes.
*11. Locked space for syringes and needles	Yes.
*12. Alternate means of egress	Yes.
*13. Exits identified	Yes.
*14. Fire extinguishers available	Yes.
B. Examining room:	
*1. Complete audio and visual privacy	Yes.
*2. A functioning sink with running water, soap and towels	No.
*3. A sufficient quantity of all required supplies and equipment	Yes.

COMMENTS

(1) Poor housekeeping standard as reflected by
(a) Floors dusty and dirty (3d & 4th Floors).
(b) Stairwells dustladen.
(c) Waste baskets uncovered and overflowing.
(2) Sink in toilet rooms dirty. Floor tiles broken in laboratory room, toilet room and corridor area.
(3) Protective covering not provided for radiators.
(4) Evidence of leak in ceiling of X-ray room.

SUMMARY OF RECORD AUDIT—FACILITY NUMBER 038

	Number of applicable records	Number deficient records	Percent deficient records
Documentation on chart not complete:			
1. Charts were illegible	50	39	78
2. Name, address, medicaid number not on patient's record	50	0	0
3. Visits are not dated chronologically	50	5	10
4. There is no practitioner's signature for each visit	50	25	50
5. Chief complaint not listed for each new illness	50	7	14
6. There is no documentation of a history or interim information for each visit	50	11	22
7. There is no documentation of a physical exam for each visit	50	17	34
8. There is no diagnostic impression for each visit	50	14	28
9. Medications ordered did not include precise dosage and prescription regimen	50	50	100
10. Records do not indicate date and reason for referral	43	37	86
11. Reports of referrals not in chart	43	1	2.3
12. Chart does not state whether patient is to return or not and if yes, there is no return appointment	50	50	100
All exams and screenings were not requested by M.D.:			
13. Laboratory tests	50	0	0
14. X-rays	44	0	0
15. E.K.G.'s	19	0	0
Results of exams or screenings were not recorded (more than 2 weeks):			
16. Laboratory tests	50	2	25
17. X-rays	44	30	68
18. E.K.G.'s	19	11	57
19. Results of tests and screenings not affixed to record in chronological order	35	9	25
Initial routine exams were not performed:			
20. E.K.G. (males over 40)	3	2	66
21. Rectal (males over 40)	3	1	33
22. Blood pressure (any adult)	40	25	62
23. Pap smear (females over 20)	35	33	94
24. Hematocrit (females 20–40)	35	1	2

PELHAM MANOR, N.Y., *September 21, 1976.*

MR. AL SCHWARZ,
Assistant Commissioner,
Deputy Executive Director of the Medical Assistance Program,
Bureau of Health Care Services,
New York, N.Y.

DEAR MR. SCHWARZ: I received from Mr. Tad Gwirtzman today a copy of an audit done on August 16 and 17, 1976 of the facilities and patient records of The East Harlem Medical Group (facility #038), and read it with great interest. I would have responded within the required time period if I had had the opportunity to do so. It would appear that Dr. Weissbart and Mr. Gwirtzman wanted to save me the trouble involved in replying even to the point of not having me sign the joint response. I should like to comment on the deficiencies described in this report, and enumerate a few you seem to have overlooked or underestimated.

Of primary importance are the poor housekeeping standards observed, since they reflect a marked improvement over normal conditions and resulted from a considerable housecleaning effort on 8/14/76 which took place while I was working. I was told, in fact, that it was very important to "get the place clean" because of the scheduled audit. In short, the facility displayed an unusual degree of cleanliness which was achieved specifically for the inspection, but which by no means reflected its normal state.

I was disappointed that there was no mention of the fact that the paper rolls used to cover the examining tables rest on the floor, which is in open violation of D.H. regulations. There was a reference to dirty sinks in the bathrooms, but unfortunately no description of the atrocious state of the "staff" bathroom. The latter is remarkable in that neither soap nor towels are provided; that it is used for the disposal of laboratory specimens and that contaminated containers are then discarded in its trash receptacle; that there are large holes in its walls and that the spaces behind the walls are full of trash; that the sink is usually full of dirty standing water because its drain is usually clogged. Despite the sign on the door, this bathroom is often used by patients.

Supposedly there was no evidence of rodent or vermin infestation, but I saw roaches in the third floor bathroom every time I used it, and even killed some in the examining room. I reported this to Dr. Weissbart repeatedly, but saw no evidence of extermination measures.

I was also surprised that your investigators failed to notice a large hole in the sink in the file room, in which area bloods are drawn. This means that contaminated water is continually dripping from the sink, which is surely an unsanitary situation.

One of the faults found with the physical plant was lack of a current certificate of occupancy, although the fact that current registration certificates of physicians, chiropractors, and podiatrists are not displayed was apparently of no significance. According to state law, office display of these documents is required, and should be enforced by the city agencies involved in regulation of medicaid clinics.

I must take issue with many items in the audit report, which I will designate with the classification used in the report itself, as follows:

I.B. Contrary to your report there were no provisions of any kind made for assisting patients requiring care during off hours, nor was there any great concern about such deficiencies.

VII.C. Lab procedures performed are limited to those approved by the Bureau of Laboratories, but do NOT include a hemoglobin because there is no hemoglobinometer. According to the Medicaid Provider Handbook, page 11, a complete blood count ALWAYS includes a hemoglobin determination. I assume that your office is familiar with these regulations: it seems strange therefore that this deficiency is not included either in the limitations of the laboratory or in the reports produced by it.

VII.F. Routine laboratory specimens are picked up daily, except on Saturday. Specimens of blood and urine obtained on Saturday are therefore held until the following Monday, or even until Tuesday if Monday is a holiday. Even if refrigerated these specimens are essentially useless for examination: despite this fact the tests are performed anyway.

VII.H. The refrigerator which is technically supposed to be used only for laboratory specimens is also the repository for frequently used biologicals and medications (i.e. Tine tests, tetanus toxoid, penicillin for injection, etc.).

VIII.A.7. Even though 50% glucose is available, there are no sterile 50 cc. syringes suitable for its administration.

VIII.E. The clinical thermometers were obviously provided for the inspection, but were almost never available routinely when needed for patients.

VIII.H. Since no provisions for hot sterilization are available I feel obliged to suggest that routine use of glass clinical thermometers is inadvisable. Alcohol cleaning is not usually adequate to sterilize, and in any event neither alcohol nor heat have any effect on the virus of homologous serum jaundice. For this reason electronic thermometers with disposable plastic shields are in common use in city hospitals and clinics, and are now even available in department stores. I think the DH should make the use of such a device mandatory in clinics to improve public health practices.

IX.B.3. A sufficient quantity of all required supplies and equipment was supposedly found, but there is only one size blood pressure cuff available, one that is adequate only for the average adult. There is neither a pediatric cuff nor an oversize cuff: the latter is mandatory for measuring the blood pressure accurately in the oversize arm. I think both Dr. Gentry and Dr. Paris will confirm the necessity of such equipment. Even casual inspection of the patient population in any clinic will reveal a significant number of patients who require either a very small or a very large cuff for blood pressure measurement. Since such equipment is regarded as standard by even minimally knowledgeable physicians I cannot believe that any clinic with one blood pressure cuff can be considered adequately equipped to evaluate one of the single most important measurements in the entire physical examination.

The portion of the audit related to review of the patients' records was equally interesting but also open to discussion, if only for its lack of concern for quality. I cannot recall seeing X-ray results in the charts more than twice, but surely the quality of the X-rays reported has to be considered. All of the films I saw were of very poor quality: the majority would have been considered inadequate for diagnostic purposes at any hospital in which I have ever worked. The majority of EKG's were inadequate because they were unlabeled; unstandardized and without lead identification markings; not run long enough to show a stable baseline; incomplete; and most importantly, were never suitably mounted nor interpreted, nor was any interpretation ever identifiable in the progress notes. Qualitatively and medically there is a huge difference between a strip of paper and real EKG, although I was informed that such a strip of paper itself was regarded as "documentation" for purposes of payment. In essence, then, Medicaid is paying for pieces of paper, and NOT for medical evaluation or treatment.

As far as the Tine test goes, it was often performed but the results almost never got into the chart because no provisions were ever made to have patients return in 48 hours for reading, nor were patients ever given induration evaluation cards to record the results themselves, although the latter are available in unlimited quantities, in Spanish and English, at no cost from Lederle.

Despite the tardiness of this reply I think it reveals more than a casual interest in the clinic which was audited. Since I am no longer employed there I am unable to take any steps towards correcting the deficiencies you noted. I can say unequivocally that Dr. Weissbart was never particularly enthusiastic about facilitating any of the numerous suggestions and recommendations I made to this end. I certainly hope that someone in the city administration has enough interest and authority to achieve compliance with what seems to me to be the most inadequately enforced code of regulations I have ever read.

I trust that you will not be upset by the knowledge that I am forwarding a copy of the audit report and this letter to Senator Frank E. Moss of the Subcommittee on Long-Term Care. He has a rather personal interest in this particular clinic and in the improvement in regulation of such clinics in general.

If there is any further way in which I can be of help to you, please feel free to contact me directly.

Sincerely,

NANCY C. BOOTH KURKE, M.D.

Appendix 3

APPLICATION TO REVIEW GRAND JURY MINUTES

APRIL 11, 1976.

HON. ROBERT M. MORGENTHAU,
District Attorney,
County of New York,
New York, N.Y.

DEAR MR. MORGENTHAU: On behalf of the members of the United States Senate Special Committee on Aging, I am requesting a copy of the minutes of the Fourth November 1969 Grand Jury on the Administration of Medicaid in the City of New York (People of the State of New York v. John Doe, et al convened November 24, 1969 and concluding April 15, 1971).

The minutes of these proceedings will aid the Committee in the exercise of its oversight function with respect to Medicaid. The Committee is in the process of evaluating the administration of the public assistance programs in several states with an eye toward the enactment of legislation to correct what are apparently widespread abuses in the program.

Needless to say, names or other pertinent data from the Grand Jury minutes will not be disclosed to the general public.

Your cooperation in this matter will be greatly appreciated.

With best wishes,

Sincerely,

VAL J. HALAMANDARIS,
Associate Counsel, U.S. Senate,
Special Committee on Aging.

SUPREME COURT OF THE STATE OF NEW YORK,
COUNTY OF NEW YORK

THE PEOPLE OF THE STATE OF NEW YORK
v
JOHN DOE, ET AL, DEFENDANTS

APPLICATION TO REVIEW GRAND JURY MINUTES FOR FOURTH NOVEMBER 1969 GRAND JURY MEDICAID INVESTIGATION

STATE OF NEW YORK,
COUNTY OF NEW YORK, *ss.*:

Val J. Halamandaris, being duly sworn, deposes and says:

1. I am an Associate Counsel to the United States Senate Special Committee on Aging.

2. That Senate Committee is currently investigating abuses in the administration of medical assistance programs in several states, including New York, toward the enactment of legislation which will correct apparent widespread abuses.

3. From on or about November 24, 1969 through on or about April 15, 1971, the Fourth Grand Jury for the County of New York investigated various abuses in the administration of the Medical Assistance Program and returned an indictment against Dr. Frederick Fisher and others for the crime of Filing a False Instrument, Forgery and Grand Larceny.

4. I have informed Peter D. Andreoli, Assistant District Attorney in charge of the Frauds Bureau that a review of these Grand Jury minutes would serve to give the Committee an overview of the administration of the New York State Medicaid Program and facilitate the committee's efforts to draft and enact legislation and obtain investigative leads. The said Grand Jury minutes will not be used for general publication.

Wherefore, it is hereby requested that the District Attorney of New York County be authorized to release a copy of the above-cited Grand Jury minutes to the United States Senate Special Committee on Aging, their Counsel and representatives.

VAL J. HALAMANDARIS,
Associate Counsel, U.S. Senate,
Special Committee on Aging.

Sworn to before me this 14 day of April 1976.
EMILE L. BERNIER,
Notary Public, State of New York.

SUPREME COURT OF THE STATE OF NEW YORK,
COUNTY OF NEW YORK

THE PEOPLE OF THE STATE OF NEW YORK
v
JOHN DOE, ET AL, DEFENDANTS

AFFIRMATION IN SUPPORT OF APPLICATION TO REVIEW GRAND JURY MINUTES FOR FOURTH NOVEMBER 1969 GRAND JURY, MEDICAID INVESTIGATION

Peter D. Andreoli, an attorney admitted to practice in the courts of this state, hereby affirms under the penalties of perjury that the following statements are true:

1. I am an Assistant District Attorney, of counsel to Robert M. Morgenthau, District Attorney of New York County, and am in charge of the Frauds Bureau.

2. On April 13, 1976, Val J. Halamandaris, Associate Counsel, United States Senate Special Committee on Aging, informed me that the United States Senate Special Committee on Aging is currently investigating abuses in the administration of medical assistance programs in several states, including New York, toward the enactment of legislation which will correct apparent widespread abuses in these programs.

3. From on or about November 24, 1969 through on or about April 15, 1971 the Fourth Grand Jury for the County of New York, investigated various abuses in the administration of the Medical Assistance Program and returned an indictment against Dr. Frederick Fisher and others for the crimes of Filing of False Instruments, Forgery and Grand Larceny.

4. Mr. Halamandaris informs me that these Grand Jury minutes would serve to give the committee an overview of the administration of the New York State Medical Assistance Program and aid in its evaluation of said program (see Exhibit A). He further informs me that the said minutes will not be used for general publication.

5. Accordingly Val J. Halamandaris, Associate Counsel to the U.S. Senate Committee on Aging requests a copy of the entire minutes of the testimony before the Fourth November 1969 Grand Jury for the County of New York concerning the Medicaid Investigation.

6. The review of these minutes by the United States Senate Special Committee on Aging is for the purpose of preparing legislation and not for the purpose of general release to the public and will not interfere with any ongoing investigation.

Wherefore, the District Attorney joins in the request for an order by this court releasing the said Grand Jury minutes to the United States Senate Special Committee on Aging, their counsel and representatives.

PETER D. ANDREOLI.

SUPREME COURT OF THE STATE OF NEW YORK,
COUNTY OF NEW YORK

THE PEOPLE OF THE STATE OF NEW YORK
v
JOHN DOE, ET AL, DEFENDANTS

ORDER

At a Term, Part 30 of the Supreme Court of the State of New York, New York County, held at the Courthouse thereof, 100 Centre Street, City and County of New York, on the 14th day of April, 1976.

Present: GERALD P. CULKIN, JUSTICE OF THE SUPREME COURT.

An application having been made on this 14th day of April, 1976, by Val J. Halamandaris, Associate Counsel, United States Senate Special Committee on Aging and the District Attorney being represented by Peter D. Andreoli, Assistant District Attorney of New York County, consenting thereto, and after considering the argument and merits of the said notice,

Now, upon reading the affidavits of Val J. Halamandaris, Associate Counsel, United States Senate Special Committee on Aging, and Peter D. Andreoli, Assistant District Attorney for New York County.

It is hereby ordered, that the U.S. Senate Special Committee on Aging by their official representatives be entitled to obtain a copy of the Grand Jury minutes in the above entitled action, and it is further

Ordered, that upon filing this order with the Clerk of the Court and service being made upon Robert M. Morgenthau, District Attorney of New York County, that the said District Attorney is authorized to release a copy of the said minutes of the Grand Jury to the said United States Senate Special Committee on Aging, their counsel and representatives.

Enter,

GERALD P. CULKIN,
Justice of the Supreme Court.

Appendix 4

SENTENCING MEMORANDUMS OF THE U.S. DISTRICT COURT OF THE SOUTHERN DISTRICT OF NEW YORK

ITEM 1. UNITED STATES OF AMERICA *v.* SHEILA TOBY STILES, DEFENDANT

[75 Cr. 1201 (HFW)]

SENTENCING MEMORANDUM

This sentencing memorandum is respectfully submitted to apprise the court of the circumstances of the medicaid fraud of which the defendant was a part. The information to which the defendant pleaded and the allocution at the time of the plea contain a partial statement of the facts pertaining to her offense. This memorandum will elaborate upon these facts, illuminate defendant's role in the overall scheme, and focus upon certain factors which the Government deems relevant to the sentence in this case. It is divided as follows:

Part I—The Overall Scheme
Part II—Defendant's Role
Part III—The Government's View of the Crime
Part IV—Matters in Mitigation

Sheila Toby Styles, the defendant, presently a children's clothes designer, pleaded guilty on November 10, 1975 to a three-count criminal Information charging her with having conspired to defraud the United States and to violate Title 18, United States Code, §§ 287, 1001, and 1341, in violation of Title 18, United States Code, § 371, with having filed false claims against the United States in violation of Title 18 U.S.C. §§ 287 and 2, in connection with the submission of fraudulent Medicaid invoices, and with having failed to file a personal income tax return for the year 1971, in violation of Title 26, United States Code, § 7203.

I. THE OVERALL SCHEME

During the period 1969–1972 Joseph Howard Ingber, Sheldon Max Styles,[1] and others owned and operated eight medical clinics in low income areas of New York City. These clinics or "Medicaid Mills" which catered almost exclusively to Medicaid recipients are as follows:

1. Galler Medical Building, 858 Flushing Avenue, Brooklyn, N.Y.
2. Claremont Medical Building, 3589 3rd Avenue, Bronx, N.Y.
3. Queensbridge Medical Building, 38–81 13th Street, Queens, N.Y.
4. Laconia Medical Building, 4025 Laconia Avenue, Bronx, N.Y.
5. 8th Street Medical Building, 8–01 Astoria Blvd., Queens, N.Y.
6. Kent Street Medical Building, 156 Kent Street, Brooklyn, N.Y.
7. RIN Realty Corp. (also known as Centro Medico, also known as St. Mary's; also known as St. Ann's), 567 E. 149th Street, Bronx, N.Y.
8. Corona Medical Building, 105–05 Northern Blvd., Queens, N.Y.

In the early nineteen-sixties, Ingber and Styles were classmates at the Chiropractic Institute of New York. After graduating in 1963, Ingber began a private practice in a Manhattan office. Styles associated himself with Ingber's private practice, working alternate days.

In 1968 Styles also began working in a Jamaica, Queens Medicaid clinic run by an optometrist. Allegedly false Medicaid billings were submitted from this

[1] All persons mentioned by name have either been convicted of Medicaid Fraud charges, or have waived indictment and pleaded guilty to criminal informations ranging from one to seven felony counts.

clinic. Shortly thereafter, when Ingber and Styles opened their own office at 168th Street in Jamaica the lessons learned at the optometrist's clinic were applied.

Business was brisk at the Jamaica office and by 1969 false Medicaid billings were regularly being written. With a growing patient load Ingber and Styles sought to add another chiropractor to their staff. Ingber contacted his former teacher, Dr. Max Kavaler, who had been unemployed since the failure of the Chiropractic Institute in 1968, and offered him a job. Kavaler accepted and Ingber and Styles explained that the financial arrangement would consist of him paying them 25% of his Medicaid income (after factoring) for rent, after which Kavaler, Styles, and Ingber would share the remainder equally: 1/3 to each, (an overall net for Kavaler of approximately 25% of the face value of his invoices.) This was to become the typical financial arrangement for all chiropractors who were to work for Ingber and Styles in the years ahead.

From March to September 1969 Kavaler worked under this arrangement when he entered into a partnership with Ingber, Styles, an attorney, and another chiropractor, to form the 105–05 Northern Blvd. Corporation and operate a clinic at that Corona, Queens address.[2]

Fraudulent Medicaid billings were submitted early in the Corona clinic's operation. Patients were "ping-ponged" throughout the clinic (i.e., examined by every medical specialty on the premises despite the patients' wishes or medical needs), and invoices were submitted for patients never actually treated. Routinely, when a patient visited the clinic the receptionist took a complete family history, i.e., first name, sex, and birthdate of all Medicaid-eligible family members. Since all members of a family are covered by a single Medicaid number, the family history provided those providers, who were so inclined, with all information required to prepare fraudulent invoices for submission to the City of New York which administered the Medicaid program. The practice of billing various members of a Medicaid eligible family when no such visits or treatments ever took place became commonplace at Corona and other clinics operated by Ingber and Styles.

Patients at most of these clinics routinely had blood taken on each visit regardless of the ailment. Blood tests, ekg's and x-rays (at those clinics which actually had ekg or x-ray machines) were taken or administered by "nurses," clinic employees generally not licensed to perform these procedures, who were trained by other employees and acting under various degrees of doctors' supervision ranging from none to some. One effect of the ping-ponging, and the attendant waiting to see the doctor who could treat the actual complaint, was to cause many patients to cease taking their children back to the clinics or to cease going themselves, for that matter, for illnesses or complaints that were anything short of urgent. Whether the indirect effect of the ping-ponging and other abuses patients were subjected to was to cause persons to not seek treatment, and thereby worsen their health or become more ill, can only be speculated; however, it seems probable that such occurances did happen.

In 1969, while the Corona clinic was in operation, Ingber, Styles and Kavaler took over the practice of Dr. Herman Galler, who had just died and left a thriving practice at a "good" Brooklyn location. A center was organized which was financed by Rose Galler (Dr. Galler's widow), two attorneys[3] and Stanley Reichler. In exchange for his investment in the Galler clinic, Reichler was to become manager of the Corona clinic at a salary.

The Galler clinic opened with Sheldon Styles as its manager. A few months later, Styles left Galler to manage his and Ingber's latest acquisition, (the Queensbridge clinic on 13th Street, Queens) and Kavaler replaced him as Galler's manager.

The Queensbridge clinic was originally owned by two doctors, (one of whom was Ralph Bell, a defendant). In 1969 Ingber and Styles entered into an arrangement with them, forming the 38–18 13th Street Corporation. Ingber and Styles purchased 70% of the Corporation's stock, with the original owners each retaining 15%. In return, Ingber and Styles paid one doctor $7,000 and gave the other, Bell, a 10% interest in the Corona clinic and a 5% interest in Galler.

In the summer of 1970 Ingber and Styles were approached by Donald Trager, another chiropractor. Trager, a friend of Ingber, wanted to open a clinic in the

[2] The attorney and chiropractor have not been charged.
[3] Neither the attorneys nor Mrs. Galler have been charged.

Bronx. He had been offered the lease to the existing Claremont clinic, at 3589 3rd Ave., by two dentists who wanted to divest themselves of an unprofitable location. Ingber and Styles liked the idea and in October, 1970 they and Trager became equal partners in the 3589 3rd Ave. Corporation.

The Claremont clinic, managed on a part-time basis by Trager, was not a success. The patient load was small and unable to support the clinic. Later investigation would reveal that without large scale falsifying of Medicaid invoices by the medical and chiropractic staff, the Claremont clinic would not have stayed in operation as long as it did.

Claremont finally shut its doors in June, 1971 because of its inability to attract patients. Before its closing, however, Ingber, Styles, and Trager opened a new clinic nearby on Laconia Avenue. Trager, believing that he could make a success out of this new location, bought out Ingber's and Styles' interest in the 3589 3rd Ave. Corporation for $500 each. Despite Trager's optimism, the Laconia clinic suffered the same fate as its predecessor. Consequently, as with the Claremont clinic, fraudulent Medicaid invoices were all that kept the clinic financially afloat. Laconia closed in November of 1971.

In the Spring of 1971 Kavaler wanted to disassociate himself with Ingber and Styles. His cousin, an official in the City Medicaid Program, allegedly had warned him to make such a break because of a pending investigation of Ingber and Styles by the New York City Department of Investigation. Kavaler offered to trade his shares in the Queensbridge and Corona clinics in exchange for Ingber's and Styles' shares in the Galler clinic. Ingber and Styles agreed and Kavaler received their Galler stock. He and Rose Galler (who had since bought out Stanley Reichler's and one attorney's interests) remained as the sole owners of Galler.

When rumors of the pending City investigation surfaced in April, 1971, Ingber and Styles decided to dissolve their partnership and go their separate ways.

Shortly thereafter, Ingber opened a new clinic in Queens on 8th Street, with two medical doctors (one of whom was Bell), as partners. Styles joined in a partnership with Reichler, the manager of Corona, Rene Nolan, (a former receptionist at Queensbridge), and a coin dealer. Their efforts were directed at a new clinic on Kent Street in Brooklyn.

Despite prospects of a city investigation, fraudulent Medicaid practices continued at these two locations, although to a lesser extent than had occurred previously at the other clinics. The Kent Street clinic closed in June of 1972 for lack of business, and the 8th Street clinic was sold late in 1972.

During the period 1970–1973 doctors working at the eight Ingber and Styles-operated clinics billed the New York City Medicaid program at least $2,222,699 as follows:

Year:	*Amount*
1970	$510, 655
1971	1, 014, 060
1972	640, 998
1973	56, 986
Total	2, 222, 699

An analysis of available records revealed that the eight Medicaid clinics operated by Ingber, Styles, and others received a total income of $469,195.42. The sources of this income were as follows:

Source:	*Amount*
Doctors (rent, fees)	$325, 658. 14
Alpone Laboratory (kickbacks for lab work)	34, 471. 54
Principals (investments)	5, 644. 45
Deposits from unknown sources	103, 421. 29
Total	469, 195. 42

Doctors doing business at the various clinics factored their Medicaid invoices for an average fee of 12 percent. 25 to 30 percent of their net billings after factoring was paid to the clinic owners. In addition, chiropractors paid the clinic owners (Ingber, Styles, Reichler, and Kavaler) 40 to 50 percent of the balance remaining after the clinic rent was paid. This money (not recorded on the clinic books of accounts), was paid primarily to Ingber and Styles, but the

other principals were also recipients. The total value of such "off the book" payments was approximately $105,000.

The fraudulent practices varied in manner and degree. Certain doctors engaged in the activity known as "padding" invoices, the device of billing for more services than actually rendered to a patient who was actually seen. Another practice was the submission of completely false invoices for patients never treated or seen by the doctor. This would occur by submitting invoices for subsequent visits for patients only seen once or for members of a patient's family who were never seen in the clinic. In many cases a mother would bring her well children with her if she could not find a baby sitter. Invoices would be submitted for all of the children, although none of them may have been seen. In one instance four doctors billed Medicaid for services rendered to a child who had been dead for nine months. In another, three doctors submitted invoices for an individual who, at the time of his alleged treatment was an inmate at Elmira prison. In addition to false invoices for treatments, bills were submitted for ancillary services such as X-ray and EKG from clinics that had no such equipment.

Another lucrative activity engaged in by the owners involved the use of X,[4] an elderly senile medical doctor. Early in 1970 an agreement was entered into between Dr. X, Ingber and Styles wherein, for a weekly salary of $120 all Medicaid income earned by Dr. X reverted to his employers. Dr. X was assigned to write fraudulent invoices. Sheila Styles drove Dr. X from clinic to clinic, where he would be seated at a desk with a pile of patient records and blank invoices to be filled out. He rarely saw any patients, spending all of his time writing. His total billing of $88,370, is estimated at being 98 percent fraudulent. In April, 1970 a joint savings account was opened at the Whitestone Savings and Loan Association in the names of Bell and Dr. X. The purpose of this account, as well as a subsequent joint account in the names of Sheldon Styles and Dr. X, was to launder Dr. X's Medicaid receipts. Checks made out to Dr. X were deposited in these accounts and then disbursed among the owners.

The Bell-X account was used to disburse funds generated at the Queensbridge and Corona clinics. The beneficiaries of this conspiracy were Bell, Ingber, and Sheldon Styles. In 1971 a second joint account in the name of Sheldon Styles and X was opened. The account disbursed Medicaid funds generated at the Kent Street clinic. Beneficiaries were the partners in that clinic, Sheldon Styles, Stanley Reichler, and Rene Nolan Clark.

Although the doctors themselves wrote many of their own false invoices, many of them were prepared by receptionists at the clinics, in particular Rene Nolan Clark and Sheila Stypes (Sheldon Styles' ex-wife). When they falsified invoices, Rene Nolan Clark and Sheila Styles referred to old invoices, old medical records, and family histories of former and current clinic patients for information from which to fabricate visits and treatments that never took place. They prepared enormous amounts of completely false Medicaid invoices for doctors and chiropractors.

II. DEFENDANT'S ROLE

In 1970, five years after her divorce from Sheldon Styles, Sheila Styles was out of a job and looking for work. At the time Sheldon Styles was operating the Queensbridge Medical Center, a Medicaid mill, in partnership with two other chiropractors, Joseph Ingber and Max Kavaler. Sheldon Styles offered his ex-wife a job at Queensbridge, where her duties consisted of cleaning and sweeping up the clinic as well as chauffeuring Dr. X to and from his home.

Shortly after beginning work at Queensbridge, Sheila Styles was informed that a decline in business at the center meant that she would have to take a salary cut. However, she was presented with the opportunity to earn even more money, off the books, by writing Medicaid invoices for Ingber and Styles. She accepted. Ingber and Styles then instructed Mrs. Styles in the ways of preparing fraudulent invoices, first for themselves and eventually for other chiropractors who entered into various agreements with Ingber and Styles intending to defraud the Medicaid programs.

Initially Sheila Styles wrote only three-visit invoices because, according to Medicaid regulations, invoices with three or fewer visits did not require prior

[4] This doctor, who is quite old and senile has not been charged.

approval. In order to generate significant profits, large amounts of these relatively small individual claims had to be written. The solution was to bill Medicaid for the family members of patients on file with the Ingber and Styles clinics. This provided Sheila Styles with large quantities of names with which to bill three-visit invoices. However, the City's Medicaid office discovered this pattern of family "gang" billing and put a stop to it.

With this avenue shut off, Sheldon Styles proceeded to teach Sheila Styles how to write up false chiropractic treatment plans. These plans were the means of getting approval for more than three visits, and usually authorized them to bill Medicaid for twelve to fifteen visits on individual patients. Mrs. Styles has admitted getting the information for these plans from copies of other treatment plans which had already been submitted to the City. She simply changed the patient's name, Medicaid number, and other identifying information and copied the diagnosis and prognosis.

Towards the end of 1970 Sheila Styles began working for chiropractors other than Ingber and Sheldon Styles. For weekly fees ranging from $25–35 per chiropractor, Sheila Styles wrote false Medicaid invoices and treatment plans for a dozen chiropractors during the period 1970–71. By her own admission, virtually all the Medicaid paperwork she performed for these chiropractors was fraudulent.

Among the chiropractors Mrs. Styles wrote false invoices for were two providers who never treated a single patient at an Ingber and Styles clinic, but who, for a share of the proceeds, allowed their names and Medicaid provider numbers to be affixed to fraudulent invoices. The other chiropractors who hired Sheila Styles used her services to supplement the income they were already receiving from the clinics.

Sheila Styles continued writing fraudulent invoices through 1971. In the Fall of that year the New York City Department of Investigations began an active inquiry into the activities of Ingber and Styles. Sheila Styles was called to testify before the Department of Investigations on two occasions. On her first appearance on November 16, 1971 she perjured herself.

On her second appearance before the Department of Investigations, on March 16, 1972, Mrs. Styles invoked her Fifth Amendment privileges to all questions relating to her involvement with Ingber and Styles.

Mrs. Styles has contended that in the course of the City's investigation she was offered a grant of immunity in return for her testimony against the chiropractors she worked for. She did not avail herself of this offer, she claims, in an attempt to protect those individuals. Although the Government is not in possession of any evidence of a formal offer of immunity by the Department of Investigations to Mrs. Styles, it has no basis to suspect that an offer of that sort was not made.

In the course of the investigation into Ingber and Styles conducted by the Federal Government, Sheila Styles was called to testify before a Grand Jury. She appeared on July 22, 1975 and invoked the Fifth Amendment to all questions asked relating to Medicaid fraud.

In November 1975 Mrs. Styles was confronted by the U.S. Attorney's Office with the weight of the evidence against her, including an allegation of having failed to file an income tax return for 1971, and she reached an agreement to waive indictment and plead to the Information before the court.

Only two individuals were prosecuted in this case who were not themselves clinic owners, administrators or Medicaid providers. One was Rene Nolan Clark who has previously been sentenced by Judge Frankel, the other Sheila Styles. Other secretaries and receptionists who wrote false invoices but were not paid specifically for such invoice writing were given informal immunity in return for their truthful testimony before the grand jury. In the Government's judgment, although their roles differed slightly, Sheila Styles' and Rene Nolan (Clark's) culpability were equal. Ms. Styles, however agreed to cooperate at the time of the government's first serious overture for such cooperation; at a time when the information and documents she was able to supply were of vital assistance in the successful prosecution of the chiropractors who paid her to write their false invoices.

III. THE GOVERNMENT'S VIEW OF THE CRIME

Although these crimes may be described merely as "crimes committed with a pen," or "white collar crimes" they are nevertheless substantial and serious

offenses. The crimes, moreover, were not ones of impulse or of short duration, but were committed repeatedly on a daily basis over many months.

The Medicaid program is substantially subverted by these acts. Money allocated by Federal, State and City Governments is squandered without any benefit whatever inuring to the intended beneficiaries of the program. The widespread fraud and abuse only serves to jeopardize the continued existence of health assistance programs like Medicaid, as the public and the congress perceive that the taxpayer's dollars are being funnelled into the pockets of venal professionals. The ultimate victim is the American public at large, but the immediate victims of these crimes are the Medicaid recipients, the poor and elderly who are unable to pay for adequate medical care, and who are usually poorly served by, at best, generally indifferent treatment at medicaid mills.

The deterrent value of the sentences meted out in these cases cannot be underestimated. At present there are literally thousands of eligible medicaid providers (doctors, podiatrists, chiropractors, etc.) and hundreds of "medicaid mills" operating in New York City alone. The frauds perpetrated here are widespread and often difficult to discover and prove.

IV. MATTERS IN MITIGATION

Immediately upon agreeing to enter her plea, Mrs. Styles cooperated with Government investigators by turning over vital records and information concerning her Medicaid activities. As a precaution against double billing patients for different chiropractors on the same day, Sheila Styles had kept a record of every false invoice and treatment plan by date. These 1970 and 1971 records had been retained by her, and were turned over to the government. The existence of these records, combined with Mrs. Styles' potential testimony against the chiropractors she worked for, were factors in the Government's success at securing guilty pleas from all but one of the dozen chiropractors she worked for. In the opinion of the two Assistant United States Attorneys who prosecuted this case Mrs. Styles' agreement to cooperate and turning over of her records was the single biggest "break" in this investigation.

The one chiropractor who did not waive indictment, Dr. Robert March, was tried in District Court before Judge Milton Pollack (76 Cr. 114) in May of this year. Sheila Styles appeared at trial as a witness for the Government and her testimony was material towards the conviction of Dr. March on thirteen counts of submitting false Medicaid claims to the Government.

In connection with her plea Mrs. Styles has appeared whenever requested to supply information and prepare for her testimony. In the opinion of the Assistant United States Attorneys in charge of this case, she has been fully cooperative and completely candid concerning her role in the clinics and the activities of others.

Finally, by her plea, Mrs. Styles has saved the government the time and expense of preparing and trying a case, of about a week's length, against her.

Respectfully submitted,

ROBERT B. FISKE, Jr.,
U.S. Attorney for the
Southern District of New York,
Attorney for the United States of America.

GEORGE E. WILSON
JOEL N. ROSENTHAL
Assistant United States Attorneys of Counsel.

ITEM 2. UNITED STATES OF AMERICA *v.* JOSEPH HOWARD INGBER, DEFENDANT

[75 Cr. 1221 (HFW)]

SENTENCING MEMORANDUM

This sentencing memorandum is respectfully submitted to apprise the court of the circumstances of the medicaid fraud of which this defendant was a part. The information to which the defendant pleaded and the allocution at the time of the plea contain a partial statement of the facts pertaining to his offense.

This memorandum will elaborate upon these facts, illuminate defendant's role in the overall scheme, and focus upon certain factors which the Government deems relevant to the sentence in this case. It is divided as follows:

Part I—The Overall Scheme and the Defendant's Role
Part II—The Government's View of the Crime
Part III—Matters in Mitigation

Joseph Howard Ingber, the defendant, a chiropractor licensed in the State of New York, pleaded guilty on December 19, 1975 to a six-count criminal Information consisting of one count charging him with having conspired to defraud the United States to violate Title 18, United States Code, § 287, 1001 and 1341, in violation of Title 18, United States Code, § 371; two counts of having filed false claims against the United States in violation of Title U.S.C. §§ 287 and 2; one count of having submitted false statements to the United States in violation of Title 18, U.S.C. § 1001 and 2; two counts of mail fraud in violation of Title 18 U.S.C. § 1341 and 2, and in connection with the submission of fraudulent Medicaid invoices during the years 1969–72.

I. THE OVERALL SCHEME AND DEFENDANT'S ROLE

During the period 1969–1972 Joseph Howard Ingber, Sheldon Max Styles,[1] and others owned, operated, or held financial interests in eight medical clinics in low income areas of New York City. These clinics, or "Medicaid Mills" which catered almost exclusively to Medicaid recipients, were as follows:

1. Galler Medical Building, 858 Flushing Avenue, Brooklyn, N.Y.
2. Claremont Medical Building, 3589 3rd Avenue, Bronx, N.Y.
3. Queensbridge Medical Building, 38–81 13th Street, Queens, N.Y.
4. Laconia Medical Building, 4025 Laconia Avenue, Bronx, N.Y.
5. 8th Street Medical Building, 8–01 Astoria Blvd., Queens, N.Y.
6. Kent Street Medical Building, 156 Kent Street, Brooklyn, N.Y.
7. HIN Realty Corp. (also known as Centro Medico, also known as St. Mary's; also known as St. Ann's), 567 E. 149th Street, Bronx, N.Y.
8. Corona Medical Building, 105–05 Northern Blvd., Queens, N.Y.

Between 1959–1963 Joseph Ingber and Sheldon Styles were classmates at the Chiropractic Institute of New York. After graduating in 1963, Ingber began a private chiropractic practice in a Manhattan office. He subsequently opened another office in Jamaica, Queens, where, in 1968, he began accepting and treating Medicaid patients.

Ingber and Styles had maintained a close friendship since their school days. In early 1969, with the advent of Medicaid, Ingber's business began to grow. Styles joined him at the Jamaica office, providing assistance to Ingber's practice. Styles brought with him a means by which to increase even further the patient load at Ingber's office. Styles at that time was associated with a Medicaid clinic run by a Dr. Andrew Portoguese, an optometrist, in the general vicinity of Ingber's office. A deal was reached with Dr. Portoguese wherein Styles was allowed to refer patients from Dr. Portoguese's clinic to Ingber and Styles' office for x-rays and chiropractic treatments. For this Ingber and Styles were able to bill Medicaid for substantial numbers of patients to which they would not otherwise have had access.

At that time the Medicaid reimbursement rate per chiropractic patient visit was $3. This compared with the $7–$10 Ingber charged his private patients. Ingber, like other chiropractors, felt that he should be receiving more from Medicaid and thus began falsifying his invoices to reflect visits and treatments that never occurred in order to compensate himself for the rate differential. This practice began after Ingber realized that many of his patients did not return for all of the treatments authorized. When Styles joined the practice he, too, engaged in the falsifying, or "padding," of invoices for services never rendered. It became common practice for invoices to be submitted by Ingber and Styles billing for thirteen to fifteen visits when only one or two actually took place.

Shortly after Styles joined Ingber a third chiropractor, Max Kavaler, joined Ingber and Styles at Jamaica. Kavaler, the former dean of the Chiropractic Institute of New York, was brought in because he was out of a job and the workload was heavy. His expertise was seen as a valuable asset to the budding enterprises of Ingber and Styles.

[1] All persons mentioned by name have either been convicted or have waived indictment and pleaded guilty to criminal information ranging from one to seven felony counts.

Kavaler's experience was quickly put to use as the amount of fraudulent Medicaid billings grew. An integral part of Medicaid chiropractic billing was the submission of Treatment Plans, which were justifications required by the Medicaid Division of the City Department of Health before approval was given to a chiropractor to bill Medicaid for treating a patient more than three times. Kavaler's expertise as a diagnostician, superior to that of Ingber and Styles, provided them with highly polished, though fictitious, chiropractic diagnoses and prognoses to include in their Treatment Plans. The more impressive the Treatment Plan the less suspicious and more generous Medicaid was in approving multiple visits.

At Jamaica, Kavaler's financial arrangement consisted of him paying Ingber and Styles 25 per cent of his Medicaid income (after factoring) for rent, after which Kavaler, Styles, and Ingber would share the remainder equally: 1/3 per each (an overall net for Kavaler of approximately 25 per cent of the face value of his invoices.) This was to become the typical financial arrangement for all chiropractors who were to work for Ingber and Styles in the years ahead.

From March to September 1969 Kavaler worked at Jamaica under this arrangement. In May, 1969 he entered into a partnership with Ingber, Styles, an attorney and another chiropractor, to form the 105–05 Northern Blvd. Corporation and operate a clinic at that Corona, Queens address.[2]

Fraudulent Medicaid billings were submitted from the Corona clinic's inception. Patients were "ping-ponged" throughout the clinic (i.e., examined by every medical specialty on the premises despite the patients' wishes or medical needs), and invoices were submitted by medical doctors, podiatrists, and chiropractors for patients never actually treated. Routinely, when a patient visited the clinic the receptionist, in accordance with her training, took a complete family history, i.e., first name, sex, and birthdate of all Medicaid-eligible family members. Since all members of a family were covered by a single Medicaid number, the family history provided those doctors, who were so inclined, with all information required to prepare fraudulent invoices. Fraudulent patient records were often prepared to agree with the invoices making detection by the authorities extremely difficult. The practice of billing various members of a Medicaid eligible family when no such visits or treatments took place became commonplace at Corona and other clinics operated by Ingber and Styles.

Patients at most of these clinics routinely had blood taken on each visit regardless of the ailment. Blood tests, ekg's and x-rays (at those clinics which actually had ekg or x-ray machines) were taken or administered by "nurses" (clinic employees generally not licensed to perform these procedures, but instructed by the management to wear white uniforms in order to create the impression that they were) trained by other employees and acting under various degrees of doctors' supervision ranging from none to some. One effect of the ping-ponging and the attendant waiting to see the doctor who could treat the actual complaint, was to cause many patients, out of exasperation, to cease taking their children back to the clinics, or to cease going themselves for that matter, for illnesses or complaints that were anything short of urgent. Whether the indirect effect of the ping-ponging and other abuses patients were subjected to caused persons to not seek treatment, and thereby worsen their health can only be speculated.

In mid-1969, shortly after the Corona clinic was opened, Ingber, Styles and Kavaler took over the practice of Dr. Herman Galler, who at his death left a thriving practice at a Brooklyn location. A medical center named the Galler Medical Building was organized with the financial backing of Dr. Galler's widow, two attorneys, and Stanley Reichler, a friend of Sheldon Styles who would later become manager of the Corona clinic. In addition to these shareholders, Ingber, Styles and Kavaler also held stock in the corporation, known as the 858 Flushing Avenue Corporation.

In November 1969, Ingber and Styles acquired the Queensbridge Medical-Dental Center, a Medicaid Clinic located in Long Island City, Queens. The center was previously owned by two doctors, one of whom was Dr. Ralph Bell, a convicted co-defendant. Ingber, Styles and Kavaler entered into an agreement with them, forming the 38–18 13th Street Corporation, and purchasing 70% of the Corporation's stock, with the original owners each retaining 15%. In return,

[2] The attorney and chiropractor apparently had no knowledge of the fraud and have not been charged.

Ingber and Styles paid one doctor $7,000 and gave the other, Dr. Bell, a 10% interest in the Corona Clinic and a 5% interest in the Galler Clinic.

When Ingber and Styles took over the Queensbridge Clinic, Styles became its manager leaving Kavaler to manage Galler. Styles, as he had done with Corona and Galler, hired the clerical and support staff and set the clinic up with additional funds generated by the various tried-and-true methods of generating false billings. In early 1970 Styles offered his unemployed ex-wife, Sheila Styles, a job at Queensbridge performing cleaning chores and driving an elderly doctor to and from his home.

Sheila's duties changed within a short time, and she became an author on a wholesale basis of fraudulent-Medicaid invoices for Ingber and Styles. Sheldon Styles trained Sheila to enter false treatments and visits on invoices, as well as to falsify chiropractic treatment plans by copying diagnoses, prognoses, and courses of treatment from old Treatment Plans by merely inserting the names and Medicaid numbers of currently eligible Medicaid recipients.

Sheila Styles became very facile in her endeavors, and her talents were soon utilized by other chiropractors working in various clinics for Ingber and Styles. In all she wrote entirely fraudulent Medicaid invoices and Treatment Plans for a dozen chiropractors in the years 1970–71, for weekly salaries ranging from $25–35 per chiropractor. Among the dozen chiropractors were two who never showed up to work at all, and who merely "sold" Ingber and Styles the use of their names and Medicaid Provider numbers for a small percentage of the receipts.

In the summer of 1970 Ingber and Styles were approached by Donald Trager, another chiropractor. Trager, a friend of Ingber, wanted to open a clinic in the Bronx. He had been offered the lease to the existing Claremont clinic, at 3589 3rd Ave., by two dentists who wanted to divest themselves of the unprofitable location. Ingber and Styles liked the idea and in October, 1970 they and Trager became equal partners in the 3589 3rd Ave. Corporation.

The Claremont clinic, managed on a part-time basis by Trager, was not a success. The patient load was small and unable to support the clinic. Later investigation would reveal that without large scale falsifying of Medicaid invoices by the medical and chiropractic staff, (four of whom are co-defendants), the Claremont clinic would not have stayed in operation as long as it did.

Claremont finally shut its doors in June, 1971 because of its inability to attract patients. Before its closing, however, Ingber, Styles, and Trager opened a new clinic nearby on Laconia Avenue. Trager, believing that he could make a success out of this new location, bought out Ingber's and Styles' interest in the 3589 3rd Ave. Corporation for $500 each. Despite Trager's optimism, the Laconia clinic suffered the same fate as its predecessor. Consequently, as with the Claremont clinic, fraudulent Medicaid invoices were all that kept the clinic financially afloat. Laconia closed in November of 1971. Six of its former staff have been convicted of medicaid frauds.

In the spring of 1971 Kavaler wanted to disassociate himself with Ingber and Styles. His cousin, Florence Kavaler, a Deputy Commissioner of the New York City Department of Health and in charge of the New York City Medicaid program, allegedly had warned him to make such a break because of a pending investigation of Ingber and Styles by the New York City Department of Investigation. Kavaler offered to trade his shares in the Queensbridge and Corona clinics in exchange for Ingber's and Styles' shares in the Galler clinic. Ingber and Styles agreed and Kavaler received their Galler stock. He and Rose Galler (who had since bought out Stanley Reichler's and one attorney's interests) remained as the sole owners of Galler.

When rumors of the pending City investigation surfaced in June 1971, Ingber and Styles decided to dissolve their partnership and go their separate ways.

Shortly thereafter, Ingber opened a new clinic in Queens on 8th Street, with two medical doctors (one of whom was Ralph Bell), as partners. Styles joined in a partnership with Reichler, the manager of Corona, Rene Nolan, (a former receptionist at Queensbridge), and a coin dealer to open a new clinic on Kent Street in Brooklyn.

Despite prospects of a city investigation, fraudulent Medicaid practices continued at these two locations, although to a lesser extent than had occurred previously at the other clinics. The Kent Street clinic closed in June of 1972 for lack of business, and the 8th Street clinic was sold in late 1972.

The New York City Department of Investigation's inquiry into Ingber and Styles led Ingber to attempt a cover-up of his activities. In an attempt to get everyone to "stick together" and present a plausible defense, a private investigator was hired to take written and tape recorded statements from over a dozen of his co-conspirators, all of whom falsely stated (without much prompting) that they never did anything wrong, knew of no one who did, and blamed any Medicaid discrepancies on clerical errors.

When Ingber himself was called down to testify before the Department of Investigation on December 6, 1971, he perjured himself by denying any wrong doing in response to questions asked about fraudulent Medicaid invoices. In addition, when the United States Attorney for the Southern District of New York entered the case and subpoenaed Ingber's former secretary, Jeanine Vetrano, to testify before a Federal Grand Jury in May 1975, she persisted in the old story given to the investigator and perjured herself. (Subsequently, as part of his arraignment to plead to an Information, Ingber secured for Jeanine Vetrano the opportunity to recant her perjured testimony and avoid prosecution. She did this, and subsequently testified as a government witness in the trial of Max Kavaler.)

During the period 1970–1973 doctors working at the eight Ingber and Styles-operated clinics billed the New York City Medicaid program at least $2,222,699 as follows:

Year:	*Amount*
1970	$510, 655
1971	1, 014, 060
1972	640, 998
1973	56, 986
Total	2, 222, 699

An analysis of available records revealed that the eight Medicaid clinics operated by Ingber, Styles, and others received a total income of $469,195.42. The sources of this income were as follows:

Source:	*Amount*
Doctors (rent, fees)	$325, 658. 14
Alpone Laboratory (kickbacks for lab work)	34, 471. 54
Principals (investments)	5, 644. 45
Deposits from unknown sources	103, 421. 29
Total	469, 195. 42

Doctors doing business at the various clinics factored their Medicaid invoices for an average fee of 12 percent. 25 to 30 percent of their net billings after factoring was paid to the clinic owners. In addition, chiropractors paid the clinic owners (Ingber, Styles, Reichler, and Kavaler) 40 to 50 percent of the balance remaining after the clinic rent was paid. This money (not recorded on the clinic books of accounts), was paid primarily to Ingber and Styles, but the other principals were also recipients. The total value of such "off the book" payments was approximately $105,000.

The fraudulent practices at the clinics varied in manner and degree. Certain doctors engaged in the activity known as "padding" invoices, the device of billing for more services than actually rendered to a patient who was actually seen. Another practice was the submission of completely false invoices for patients never treated or seen by the doctor. This would occur by submitting invoices for subsequent visits for patients only seen once or for members of a patient's family who were never seen in the clinic. In many cases a mother would bring her well children with her if she could not find a baby sitter. Invoices would be submitted for all of the children, although none of them may have been seen. In one instance four doctors billed Medicaid for services rendered to a child who had been dead for nine months. In another, three doctors submitted invoices for an individual who, at the time of his alleged treatment in a New York City clinic, was an inmate at Elmira prison. In addition to false invoices for treatments, bills were submitted for ancillary services such as x-ray and EKGs from clinics that had no such equipment.

Another lucrative activity engaged in by the owners involved the use of Dr. X,[3] an elderly senile medical doctor. Early in 1970 an agreement was entered into between Dr. X, Ingber and Styles wherein, for a weekly salary of $120, all Medicaid income earned by Dr. X reverted to his employers. Dr. X was assigned to write fraudulent invoices. Sheila Styles drove Dr. X from clinic to clinic, where he would be seated at a desk with a pile of patient records and blank invoices to be filled out. He rarely saw any patients, spending all of his time writing invoices. His total billing of $88,370 is estimated at being 98 percent fraudulent. In April, 1970 a joint savings account was opened at the Whitestone Savings and Loan Association in the names of Bell and Dr. X. The purpose of this account, as well as a subsequent joint account in the names of Sheldon Styles and Dr. X, was to launder Dr. X's Medicaid receipts. Checks made out to Dr. X were deposited in these accounts and then disbursed among the owners.

The Bell-X account was used to disburse funds generated at the Queensbridge and Corona clinics. The beneficiaries of this conspiracy were Bell, Ingber, and Sheldon Styles. In 1971 a second joint account in the name of Sheldon Styles and Dr. X was opened. The account disbursed Medicaid funds generated at the Kent Street clinic. Beneficiaries were the partners in that clinic, Sheldon Styles, Stanley Reichler, and Rene Nolan Clark.

Although the doctors themselves wrote many of their own false invoices, many of them were prepared by receptionists at the clinics, in particular Rene Nolan Clark and Sheila Styles. When they falsified invoices, Rene Nolan Clark and Sheila Styles referred to old invoices, old medical records, and family histories of former and current clinic patients for information from which to fabricate visits and treatments that never took place. They prepared enormous amounts of completely false Medicaid invoices for doctors and chiropractors, charging them weekly fees of $25–35.

An analysis by the Government of Dr. Ingber's personal Medicaid invoices during the period of 1969–71 indicates that he submitted $35,116 worth of false invoices. In addition, his use of Dr. X, the elderly senile physician, to generate false invoices whose proceeds Ingber, Styles and others shared, made him liable, in the Government's view, for a portion of Dr. X's fraudulent earnings. The following table represents Dr. Ingber's fraudulent Medicaid earnings and his share of the fraudulent income derived via Dr. X:

	1969	1970	1971	Total
Ingber's Fraudulent medicaid income	$18,930	$5,604	$10,582	$35,116
Dr. X fraudulent medicaid income	5,296	17,006	12,465	34,777
Total				69,893

Dr. Ingber has settled a civil suit brought by the Government in the amount of $109,807, and has agreed to pay the Government that sum over a period of years. This amount reflects his reimbursement for fraudulent claims plus penalties, and his proportionate share of the cost of the Government's investigation.

II. THE GOVERNMENT'S VIEW OF THE CRIME

Although these crimes may be described merely as "crimes committed with a pen", or "white collar crimes" they are nevertheless substantial and serious offenses. The very nature of the rental arrangements encouraged inflated and false claims in order to increase one's own "take-home" pay. The crimes, moreover, were not ones of impulse or of short duration, but were committed repeatedly on a daily basis over many years by educated and intelligent men fully capable of supporting themselves without resort to illicit means. The very nature of Ingber and Styles' rental arrangements with doctors and the kickback arrangement with Alpone Labs encouraged false claims in order to increase a Medicaid provider's take-home pay.

The Medicaid program is substantially subverted by these acts. Money allocated by Federal, State and City Governments is squandered without any benefit whatever inuring to the intended beneficiaries of the program. The widespread fraud and abuse only serves to jeopardize the continued existence of

[3] This doctor, who is quite elderly and senile, has not been charged.

health assistance programs like Medicaid, as the public and the congress perceive that the taxpayer's dollars are being funnelled into the pockets of venal professionals. The ultimate victim is the American public at large, but the immediate victims of these crimes are the Medicaid recipients, the poor and elderly who are unable to pay for adequate medical care, and who are usually poorly served by, at best, generally indifferent treatment at medicaid mills.

The deterrent value of the sentence meted out in the cases of medicaid providers who abuse their trust cannot be underestimated. At present there are literally thousands of eligible medicaid providers (doctors, podiatrists, chiropractors, etc.) and hundreds of "medicaid mills" operating in New York City alone. The frauds perpetrated here are widespread and often difficult to discover and prove.

Commission of these crimes involves calculated, deliberate acts of intelligent, educated individuals in positions to realize the consequences of their behavior, who are capable of weighing the risk of punishment against the benefits to be gained from the crime. The Government believes that the frequency of this crime can be reduced most effectively if potential perpetrators are placed on notice that those who commit this crime risk greater penalties than merely having to disgorge their ill-gotten gains.

III. MATTERS IN MITIGATION

Dr. Ingber has cooperated since his plea of guilty by appearing for interviews and supplying documents whenever requested. In the opinion of the Assistant United States Attorneys in charge of this investigation, Dr. Ingber has been fully cooperative and candid with the Government since his decision to plead guilty. Dr. Ingber has appeared as a material witness for the Government at two criminal trials, *United States* v. *Robert March*, (76 Cr. 114) and *United States* v. *Max Kavaler*, (76 Cr. 241), and his testimony at both trials contributed substantially towards the convictions of both defendants of multiple counts of defrauding the Medicaid Program. Moreover, at the time of his decision to plead guilty and thereafter, Dr. Ingber spoke with other targets or was interviewed by their attorneys. Many of these targets ultimately decided to plead guilty, motivated in part, without question, by Dr. Ingber's anticipated testimony against them. Additionally, during his debriefings, Ingber gave additional investigative leads against potential targets. In addition, Dr. Ingber's plea and full disclosure have enabled the Government to cease its efforts in preparing a case against him, and to use his information and the fact of his guilty plea in its efforts to persuade several other defendants to plead guilty and similarly cooperate. Additionally, time and expense have been saved by eliminating the necessity of a trial of Ingber of about two weeks' duration. Finally, Dr. Ingber has agreed to a settlement of his civil action with the Government in the sum of $109,807. Moreover, although medical practices at many of the clinics may have been incompetent or directly detrimental to patients' health, the Government has no evidence of any actual chiropractic malpractice or mistreatment by Dr. Ingber of any patients actually treated by him or under his direct care.

Respectfully submitted,

ROBERT B. FISKE, Jr.,
U.S. Attorney for the
Southern District of New York,
Attorney for the United States of America.

GEORGE E. WILSON,
JOSEL N. ROSENTHAL,
Assistant U.S. Attorneys of Counsel.

ITEM 3. UNITED STATES OF AMERICA *v.* SHELDON MAX STYLES, DEFENDANT

[75 Cr. 1222 (HFW)]

SENTENCING MEMORANDUM

This sentencing memorandum is respectfully submitted to apprise the court of the circumstances of the medicaid fraud of which this defendant was a part. The information to which the defendant pleaded and the allocution at the time

of the plea contain a partial statement of the facts pertaining to his offense. This memorandum will elaborate upon these facts, illuminate defendant's role in the overall scheme, and focus upon certain factors which the Government deems relevant to the sentence in this case. It is divided as follows:

Part I—The Overall Scheme and the Defendant's Role
Part II—The Government's View of the Crime
Part III—Matters in Mitigation

Sheldon Max Styles, the defendant, a chiropractor currently working as a salesman, pleaded guilty on December 19, 1975 to a seven-count criminal Information consisting of one count charging him with having conspired to defraud the United States to violate Title 18, United States Code, § 287, 1001 and 1341, in violation of Title 18, United States Code, § 371; two counts of having filed false claims against the United States in violation of Title 18 U.S.C. §§ 287 and 2; one count of having submitted false statements to the United States in violation of Title 18, U.S.C. § 1001 and 2; two counts of mail fraud in violation of Title 18, U.S.C. § 1341 and 2, all in connection with the submission of fraudulent Medicaid invoices during the years 1969–72; and one count of Income Tax evasion for the year 1971, in violation of Title 26, U.S.C., § 7201.

I. THE OVERALL SCHEME

During the period 1969–1972 Joseph Howard Ingber, Sheldon Max Styles,[1] and others owned, operated, or held financial interests in eight medical clinics in low income areas of New York City. These clinics, or "Medicaid Mills" which catered almost exclusively to Medicaid recipients, were as follows:

1. Galler Medical Building, 858 Flushing Avenue, Brooklyn, N.Y.
2. Claremont Medical Building, 3589 3rd Avenue, Bronx, N.Y.
3. Queensbridge Medical Building, 38–81 13th Street, Queens, N.Y.
4. Laconia Medical Building, 4025 Laconia Avenue, Bronx, N.Y.
5. 8th Street Medical Building, 8–01 Astoria Blvd., Queens, N.Y.
6. Kent Street Medical Building, 156 Kent Street, Brooklyn, N.Y.
7. HIN Realty Corp. (also known as Centro Medico, also known as St. Mary's; also known as St. Ann's), 567 E. 149th Street, Bronx, N.Y.
8. Corona Medical Building, 105–05 Northern Blvd., Queens, N.Y.

Between 1959–1963 Joseph Ingber and Sheldon Styles were classmates at the Chiropractic Institute of New York. After graduating in 1963, Ingber received his license and began a private chiropractic practice in a Manhattan office. He subsequently opened another office in Jamaica, Queens, where, in 1968, he began accepting and treating Medicaid patients.

Styles, on the other hand, was unlicensed. However, he practiced chiropractic legally under a provision in the State's licensing code known as the "present practitioner" clause. Styles was allowed to render chiropractic service as long as he made periodic attempts to pass his licensing examinations. Although he made five attempts, Styles was unable to pass his tests. Yet he was able to legally practice and participate in the Medicaid program. It is the Government's understanding that upon his fifth failure, Styles became ineligible to retake the exam and to be licensed. Accordingly he no longer can practice chiropractic.

Ingber and Styles had maintained a close friendship since their school days. In early 1969, with the advent of Medicaid, Ingber's business began to grow. Styles joined him at the Jamaica office, providing assistance to Ingber's practice. Styles brought with him a means by which to increase even further the patient load at Ingber's office. At the time Styles was also associated with a Medicaid clinic run by a Dr. Andrew Portoguese, an optometrist, in the general vicinity of Ingber's office.

The association between Sheldon Styles and Dr. Andrew Portoguese began when Portoguese asked Styles to come to work for him at his Flushing, Queens private office. Portoguese wanted Styles to perform physical examinations on his patients and Styles, with his paramedical background, agreed. Assisting Styles was Dr. Portoguese's mother, Alice, who, when the first patient was brought to the examining room, introduced a surprised Sheldon Styles not as himself but as "Dr. Schweikert."

[1] All persons mentioned by name have either been convicted or have waived indictment and pleaded guilty to criminal information ranging from one to seven felony counts.

Dr. Schweikert, now deceased, was at that time a senile practitioner working at Portoguese's Medicaid clinic in Jamaica. Besides using Schweikert's name to defraud Medicaid by false billings, Portoguese, an optometrist, also posed as Dr. Schweikert at the clinic.

Thrust into the role of Dr. Schweikert, as Styles has himself characterized the charade, Styles returned to see patients at Portoguese's office on seven or eight occasions. Although Styles was not a physician, nor Alice Portoguese a nurse, Mrs. Portoguese routinely prescribed medication for the patients and Styles signed prescriptions using Dr. Schweikert's name. According to Styles, the patients he tended to at Portoguese's office were not seriously ill, and any who were seriously ill were referred to a local hospital.

Ingber and Styles reached a deal with Dr. Portoguese wherein Styles was allowed to refer patients from Dr. Portoguese's clinic to Ingber and Styles' office for x-rays and chiropractic treatments. For this Ingber and Styles were able to bill Medicaid for substantial numbers of patients to which they would not otherwise have had access.

At that time the Medicaid reimbursement rate per chiropractic patient visit was $3. This compared with the $7–$10 Ingber charged his private patients. Ingber, like other chiropractors, felt that he should be receiving more from Medicaid and thus began falsifying his invoices to reflect visits and treatments that never occurred in order to compensate himself for the rate differential. This practice began after Ingber realized that many of his patients did not return for all of the treatments authorized. When Styles joined the practice he, too, engaged in the falsifying, or "padding," of invoices for services never rendered. It became common practice for invoices to be submitted by Ingber and Styles billing for thirteen to fifteen visits when only one or two actually took place.

Shortly after Styles joined Ingber a third chiropractor, Max Kavaler, joined Ingber and Styles at Jamaica. Kavaler, the former dean of the Chiropractic Institute of New York, was brought in because he was out of a job and the workload was heavy. His expertise was seen as a valuable asset to the budding enterprises of Ingber and Styles.

Kavaler's experience was quickly put to use as the amount of fraudulent Medicaid billings grew. An integral part of Medicaid chiropractic billing was the submission of Treatment Plans, which were justifications required by the Medicaid Division of the City Department of Health before approval was given to a chiropractor to bill Medicaid for treating a patient more than three times. Kavaler's expertise as a diagnostician, superior to that of Ingber and Styles, provided them with highly polished, though fictitious, chiropractic diagnoses and prognoses to include in their Treatment Plans. The more impressive the Treatment Plan the less suspicious and more generous Medicaid was in approving multiple visits.

At Jamaica, Kavaler's financial arrangement consisted of him paying Ingber and Styles 25 per cent of his Medicaid income (after factoring) for rent, after which Kavaler, Styles, and Ingber would share the remainder equally: 1/3 to each (an overall net for Kavaler of approximately 25 per cent of the face value of his invoices.) This was to become the typical financial arrangement for all chiropractors who were to work for Ingber and Styles in the years ahead.

From March to September 1969 Kavaler worked at Jamaica under this arrangement. In May, 1969 he entered into a partnership with Ingber, Styles, an attorney and another chiropractor, to form the 105–05 Northern Blvd. Corporation and operate a clinic at that Corona, Queens address.[2]

Styles renovated this center from an old bakery to an eleven room medical building and outfitted these rooms with appropriate medical equipment. He secured the providers (doctors, dentists, optometrists, etc.) and trained their secretaries and administrative personnel. He also trained the secretaries to give electrocardiograms, draw blood, do bookkeeping, and assist the doctors.

Fraudulent Medicaid billings were submitted from the Corona clinic's inception. Patients were "ping-ponged" throughout the clinic (i.e., examined by every medical speciality on the premises despite the patients' wishes or medical needs), and invoices were submitted by medical doctors, podiatrists, and

[2] The attorney and chiropractor apparently had no knowledge of the fraud and have not been charged.

chiropractors for patients never actually treated. Routinely, when a patient visited the clinic the receptionist, in accordance with her training, took a complete family history, i.e., first name, sex, and birthdate of all Medicaid-eligible family members. Since all members of a family were covered by a single Medicaid number, the family history provided those doctors, who were so inclined, with all information required to prepare fraudulent invoices. Fraudulent patient records were often prepared to agree with the invoices making detection by the authorities extremely difficult. The practice of billing various members of a Medicaid eligible family when no such visits or treatments took place became commonplace at Corona and other clinics operated by Ingber and Styles.

Patients at most of these clinics routinely had blood taken on each visit regardless of the ailment. Blood tests, ekg's and x-rays (at those clinics which actually had ekg or x-ray machines) were taken or administered by "nurses" (clinic employees generally not licensed to perform these procedures, but instructed by the management to wear white uniforms in order to create the impression that they were) trained by other employees and acting under various degrees of doctors' supervision ranging from none to some. One effect of the ping-ponging and the attendant waiting to see the doctor who could treat the actual complaint, was to cause many patients, out of exasperation, to cease taking their children back to the clinics, or to go themselves for that matter, for illnesses or complaints that were anything short of urgent. Whether the indirect effect of the ping-ponging and other abuse patients were subjected to caused persons to not seek treatment, and thereby worsen their health can only be speculated.

Aside from income derived by directly billing Medicaid, Ingber and Styles had an arrangement with Alpone Laboratories of Manhattan wherein, in return for referring blood tests to Alpone Labs, Ingber and Styles received a percentage commission, or kickback, in the form of "rent" from Alpone. Sheldon Styles has admitted to this arrangement in which Alpone assured him that blood tests would yield his clinics from $10 to $15 for each sample referred to the laboratory. Thus, as the volume of laboratory tests from the clinics increased Ingber and Styles' commissions from Alpone enjoyed a corresponding rise.

In mid-1969, shortly after the Corona clinic was opened, Ingber, Styles and Kavaler took over the practice of Dr. Herman Galler, who at his death left a thriving practice at a Brooklyn location. A medical center named the Galler Medical Building was organized with the financial backing of Dr. Galler's widow, two attorneys, and Stanley Reichler, a friend of Sheldon Styles who would later become manager of the Corona clinic. In addition to these shareholders, Ingber, Styles and Kavaler also held stock in the corporation, known as the 858 Flushing Avenue Corporation.

In November 1969, Ingber and Styles acquired the Queensbridge Medical-Dental Center, a Medicaid Clinic located in Long Island City, Queens. The center was previously owned by two doctors, one of whom was Dr. Ralph Bell, a convicted co-defendant. Ingber, Styles and Kavaler entered into an agreement with them, forming the 38–18 13th Street Corporation, and purchasing 70% of the Corporation's stock, with the original owners each retaining 15%. In return, Ingber and Styles paid one doctor $7,000 and gave the other, Dr. Bell, a 10% interest in the Corona Clinic and a 5% interest in the Galler Clinic.

When Ingber and Styles took over the Queensbridge Clinic, Styles became its manager leaving Kavaler to manage Galler. Styles, as he had done with Corona and Galler, hired the clerical and support staff and set the clinic up with additional funds generated by the various tried-and-true methods of generating false billings. In early 1970 Styles offered his unemployed ex-wife, Sheila Styles, a job at Queensbridge performing cleaning chores and driving an elderly doctor to and from his home.

Sheila's duties changed within a short time, and she became an author on a wholesale basis for fraudulent Medicaid invoices for Ingber and Styles. Sheldon Styles trained Sheila to enter false treatments and visits on invoices, as well as to falsify chiropractic treatment plans by copying diagnoses, prognoses, and courses of treatment from old Treatment Plans by merely inserting the names and Medicaid numbers of currently eligible Medicaid recipients.

Sheila Styles became very facile in her endeavors, and her talents were soon utilized by other chiropractors working in various clinics for Ingber and Styles. In all she wrote entirely fraudulent Medicaid invoices and Treatment Plans for

a dozen chiropractors in the years 1970–71, for weekly salaries ranging from $25–35 per chiropractor. Among the dozen chiropractors were two who never showed up to work at all, and who merely "sold" Ingber and Styles the use of their names and Medicaid Provider numbers for a small percentage of the receipts.

In the summer of 1970 Ingber and Styles were approached by Donald Trager, another chiropractor. Trager, a friend of Ingber, wanted to open a clinic in the Bronx. He had been offered the lease to the existing Claremont clinic, at 3589 3rd Ave., by two dentists who wanted to divest themselves of the unprofitable location. Ingber and Styles liked the idea and in October, 1970 they and Trager became equal partners in the 3589 3rd Ave. Corporation.

The Claremont clinic, managed on a part-time basis by Trager, was not a success. The patient load was small and unable to support the clinic. Later investigation would reveal that without large scale falsifying of Medicaid invoices by the medical and chiropractic staff, (four of whom are co-defendants), the Claremont clinic would not have stayed in operation as long as it did.

Claremont finally shut its doors in June, 1971 because of its inability to attract patients. Before its closing, however, Ingber, Styles, and Trager opened a new clinic nearby on Laconia Avenue. Trager, believing that he could make a success out of this new location, bought out Ingber's and Styles' interest in the 3589 3rd Ave. Corporation for $500 each. Despite Trager's optimism, the Laconia clinic suffered the same fate as its predecessor. Consequently, as with the Claremont clinic, fraudulent Medicaid invoices were all that kept the clinic financially afloat. Laconia closed in November of 1971. Six of its former staff have been convicted of medicaid fraud.

In the spring of 1971 Kavaler wanted to disassociate himself with Ingber and Styles. His cousin, Florence Kavaler, a Deputy Commissioner of the New York City Department of Health and in charge of the New York City Medicaid program, allegedly had warned him to make such a break because of a pending investigation of Ingber and Styles by the New York City Department of Investigation. Kavaler offered to trade his shares in the Queensbridge and Corona clinics in exchange for Ingber's and Styles' shares in the Galler clinic. Ingber and Styles agreed and Kavaler received their Galler stock. He and Rose Galler (who had since bought out Stanley Reichler's and one attorney's interests) remained as the sole owners of Galler.

When rumors of the pending City investigation surfaced in June 1971, Ingber and Styles decided to dissolve their partnership and go their separate ways.

Shortly thereafter, Ingber opened a new clinic in Queens on 8th Street, with two medical doctors (one of whom was Ralph Bell), as partners. Styles joined in a partnership with Reichler, the manager of Corona, Rene Nolan, (a former receptionist at Queensbridge), and a coin dealer to open a new clinic on Kent Street in Brooklyn.

Despite prospects of a city investigation, fraudulent Medicaid practices continued at these two locations, although to a lesser extent than had occurred previously at the other clinics. The Kent Street clinic closed in June of 1972 for lack of business, and the 8th Street clinic was sold in late 1972.

The New York City Department of Investigation's inquiry into Ingber and Styles led Ingber to attempt a cover-up of his activities. In an attempt to get everyone to "stick together" and present a plausible defense, a private investigator was hired to take written and tape recorded statements from over a dozen of his co-conspirators, all of whom falsely stated (without much prompting) that they never did anything wrong, knew of no one who did, and blamed any Medicaid discrepancies on clerical errors. When Ingber himself was called down to testify before the Department of Investigation on December 6, 1971, he perjured himself by denying any wrongdoing in response to questions asked about fraudulent Medicaid invoices. In addition, when the United States Attorney for the Southern District of New York entered the case and subpoenaed Ingber's former secretary, Jeanine Vetrano, to testify before a Federal Grand Jury in May 1975, Ingber, in an attempt to conceal the fraudulent activities at his Jamaica office, convinced her to perjure herself. (Subsequently, as part of his arrangement to plead to an Information, Ingber secured for Jeanine Vetrano the opportunity to recant her perjured testimony and avoid prosecution. She did this, and subsequently testified as a government witness in the trial of Max Kavaler.)

During the period 1970–1973 doctors working at the eight Ingber and Styles-operated clinics billed the New York City Medicaid program at least $2,222,699 as follows:

Year:	*Amount*
1970	$510, 655
1971	1, 014, 060
1972	640, 998
1973	56, 986
Total	2, 222, 699

An analysis of available records revealed that the eight Medicaid clinics operated by Ingber, Styles, and others received a total income of $469,195.42. The sources of this income were as follows:

Source:	*Amount*
Doctors (rent, fees)	$325, 658. 14
Alpone Laboratory (kickbacks for lab work)	34, 471. 54
Principals (investments)	5, 644. 45
Deposits from unknown sources	103, 421. 29
Total	469, 195. 42

Doctors doing business at the various clinics factored their Medicaid invoices for an average fee of 12 percent. 25 to 30 percent of their net billings after factoring was paid to the clinic owners. In addition, chiropractors paid the clinic owners (Ingber, Styles, Reichler, and Kavaler) 40 to 50 percent of the balance remaining after the clinic rent was paid. This money (not recorded on the clinic books of accounts), was paid primarily to Ingber and Styles, but the other principals were also recipients. The total value of such "off the book" payments was approximately $105,000.

The fraudulent practices varied in manner and degree. Certain doctors engaged in the activity known as "padding" invoices, the device of billing for more services than actually rendered to a patient who was actually seen. Another practice was the submission of completely false invoices for patients never treated or seen by the doctor. This would occur by submitting invoices for subsequent visits for patients only seen once or for members of a patient's family who were never seen in the clinic. In many cases a mother would bring her well children with her if she could not find a baby sitter. Invoices would be submitted for all of the children, although none of them may have been seen. In one instance four doctors billed Medicaid for services rendered to a child who had been dead for nine months. In another, three doctors submitted invoices for an individual who, at the time of his alleged treatment in a New York City clinic, was an inmate at Elmira prison. In addition to false invoices for treatments, bills were submitted for ancillary services such as x-ray and EKGs from clinics that had no such equipment.

Another lucrative activity engaged in by the owners involved the use of Dr. X,[3] an elderly senile medical doctor. Early in 1970 an agreement was entered into between Dr. X, Ingber and Styles wherein, for a weekly salary of $120, all Medicaid income earned by Dr. X reverted to his employers. Dr. X was assigned to write fraudulent invoices. Sheila Styles drove Dr. X from clinic to clinic, where he would be seated at a desk with a pile of patient records and blank invoices to be filled out. He rarely saw any patients, spending all of his time writing. His total billing of $88,370, is estimated at being 98 percent fraudulent. In April, 1970 a joint savings account was opened at the Whitestone Savings and Loan Association in the names of Bell and Dr. X. The purpose of this account, as well as a subsequent joint account in the names of Sheldon Styles and Dr. X, was to launder Dr. X's Medicaid receipts. Checks made out to Dr. X were deposited in these accounts and then disbursed among the owners.

The Bell-X account was used to disburse funds generated at the Queensbridge and Corona clinics. The beneficiaries of this conspiracy were Bell, Ingber, and Sheldon Styles. In 1971 a second joint account in the name of Sheldon Styles and Dr. X was opened. The account disbursed Medicaid funds generated at the

[3] This doctor, who is quite elderly and senile has not been charged.

Kent Street clinic. Beneficiaries were the partners in that clinic, Sheldon Styles, Stanley Reichler, and Rene Nolan Clark.

Although the doctors themselves wrote many of their own false invoices, many of them were prepared by receptionists at the clinics, in particular Rene Nolan (Clark) and Shelia Styles. When they falsified invoices, Rene Nolan Clark and Shelia Styles referred to old invoices, old medical records, and family histories of former and current clinic patients for information from which to fabricate visits and treatments that never took place. They prepared enormous amounts of completely false Medicaid invoices for doctors and chiropractors, charging them weekly fees of $25–35.

An analysis by the Government of Dr. Styles' personal Medicaid invoices during the period 1969–71 indicates that he submitted $28,232 worth of false invoices. In addition, his use of Dr. X, the elderly senile physician, to generate false invoices whose proceeds Ingber, Styles and others shared, made him liable, in the Government's view, for a portion of Dr. X's fraudulent earnings. The following table represents Dr. Styles' fraudulent Medicaid earnings and his share of the fraudulent income derived via Dr. X.:

	1969	1970	1971	1972	Total
Styles' fraudulent medicaid income	$3,105	$15,192	$9,935	0	$28,232
Dr. X fraudulent	5,296	17,006	20,702	$10,498	53,592
Total					81,824

Dr. Styles has settled a civil suit brought by the Government in the amount of $128,498. This amount reflects his reimbursement for fraudulent claims plus penalties, and his proportionate share of the cost of the Government's investigation. He has agreed to pay that sum to the government over a period of years.

II. THE GOVERNMENT'S VIEW OF THE CRIME

Although these crimes may be described merely as "crimes committed with a pen", or "white collar crimes" they are nevertheless substantial and serious offenses. The crimes, moreover, were not ones of impulse or of short duration, but were committed repeatedly on a daily basis over many years by educated and intelligent men fully capable of supporting themselves without resort to illicit means. The very nature of Ingber and Styles' rental arrangements with doctors and the kickback arrangement with Alpone Laboratory encouraged inflated and false claims in order to increase a Medicaid provider's "take-home" pay.

The Medicaid program was substantially subverted by these acts. Money allocated by Federal, State and City Governments was squandered without any benefit whatever inuring to the intended beneficiaries of the program. The widespread fraud and abuse only served to jeopardize the continued existence of health assistance programs like Medicaid, as the public and the Congress perceive that the taxpayer's dollars are being funnelled into the pockets of venal professionals. The ultimate victim is the American public at large, but the immediate victims of these crimes are the Medicaid recipients, the poor and elderly who are unable to pay for adequate medical care, and who are usually poorly served by, at best, generally indifferent treatment at medicaid mills.

The deterrent value of the sentences meted out in the cases of medicaid providers who abuse their trust cannot be underestimated. At present there are literally thousands of eligible medicaid providers (doctors, podiatrists, chiropractors, etc.) and hundreds of "medicaid mills" operating in New York City alone. The frauds perpetrated here are widespread and often difficult to discover and prove.

Commission of these crimes involves calculated, deliberate acts of intelligent, educated individuals in positions to realize the consequences of their behavior, who are capable of weighing the risk of punishment against the benefits to be gained from the crime. The Government believes that the frequency of this crime can be reduced most effectively if potential perpetrators are placed on notice that those who commit this crime risk greater penalties than merely having to disgorge their ill-gotten gains.

III. MATTERS IN MITIGATION

Dr. Styles has cooperated since his plea of guilty by appearing for interviews and supplying documents whenever requested. In the opinion of the Assistant United States Attorneys in charge of this investigation, Dr. Styles has been generally cooperative and candid with the Government since his decision to plead guilty. Dr. Styles has appeared as a material witness for the Government at one criminal trial, *United States* v. *Max Kavaler*, (76 Cr. 241), and his testimony contributed substantially towards the conviction of the defendant of multiple counts of defrauding the Medicaid Program. In addition, Dr. Styles' plea and full disclosure have enabled the Government to cease its efforts in preparing a case against him, and to use his information and the fact of his guilty plea in its efforts to persuade several other defendants to plead guilty and similarly cooperate. Of equal importance is the fact that time and expense have been saved by eliminating the necessity of a trial of Styles of about two weeks' duration.

Respectfully submitted,

ROBERT B. FISKE, Jr.,
U.S. Attorney for the
Southern District of New York,
Attorney for the United States of America.

GEORGE E. WILSON
JOEL N. ROSENTHAL
Assistant United States Attorneys of Counsel.

MEDICARE AND MEDICAID FRAUDS

MONDAY, AUGUST 30, 1976

U.S. SENATE,
SUBCOMMITTEE ON LONG-TERM CARE
OF THE SPECIAL COMMITTEE ON AGING,
Washington, D.C.

The subcommittee met, pursuant to notice, at 9:40 a.m., in room 318, Russell Senate Office Building, Hon. Frank E. Moss (chairman) presiding.

Present: Senators Moss, Clark, Nunn, Percy, Beall, and Domenici.

Also present: William E. Oriol, staff director; David A. Affeldt, chief counsel; Val J. Halamandaris, associate counsel; John Guy Miller, minority staff director; Patricia G. Oriol, chief clerk; Alison Case, assistant chief clerk; and Eugene R. Cummings, printing assistant.

OPENING STATEMENT BY SENATOR FRANK E. MOSS, CHAIRMAN

Senator Moss. The hearing will come to order.

This of course is a very busy time in the Senate and we want to get started promptly because we have much ground to cover.

Senator Percy, Senator Domenici, Senator Beall, and I are happy to welcome you here this morning to this hearing which is conducted by the Subcommittee on Long-Term Care of the Senate Special Committee on Aging.

We are expecting to be joined by other Senators. Particularly, Senator Talmadge had planned to be with us this morning; however, he is on the conference committee on the tax bill that went into session at 9:30 and obviously had to be there because of the nature of that conference.

Senator Nunn, chairman of the Oversight Subcommittee of the Senate Government Operations Committee, is expected to join us and we hope that he will be able to come in shortly.

Senator Church and Senator Williams, both members of the Special Committee on Aging, have submitted statements.[1] They will not be able to be with us this morning. Senator Church is the chairman of the full committee. We have their statements which will be placed in the record.

Also, Senator Muskie is chairman of the Budget Committee with whom we have cooperated in some of these hearings.

I mention all of this because they all have a great interest in the matter that is before us. But because of the multiple duties that Sen-

[1] See pp. 523 and 524.

ators have, it was not possible for them to be here at the opening this morning. We do value the cooperation of these Senators and of the committee staffs that serve Senator Talmadge's Subcommittee on Health of the Commitee on Finance and Senator Nunn's Committee on Government Operations.

Senator Talmadge has been kind enough to incorporate several of our recommendations into his bill—S. 3205—the Medicare and Medicaid Reform Act of 1976.

27 Hearings on Fraud and Abuse Since 1969

The subject of today's hearing is fraud and abuse among practitioners in the medicaid program. Before discussing this topic a few words of background are in order.

From July 1969 until the present we have conducted some 27 hearings dealing with fraud and abuse in the nursing home field. We have drafted the bulk of a 12-volume report with our recommendations which we have presented to the Congress.

Last September joint hearings were held by this subcommittee and the Subcommittee on Health of the Elderly, chaired by Senator Edmund S. Muskie. In this exploratory hearing we took a quick look at fraud and abuse by other medicare or medicaid practitioners associated in one way or another with long-term care. In these hearings we learned about the excesses of factoring companies, the problems associated with some hospitals that cater to welfare patients and possible kickbacks among clinical laboratories.

In October, hearings were held dealing with possible abuse of the medicaid program by for-profit home health agencies.

In December, hearings were held on conditions in Kane Hospital, a 2,200-bed facility in Allegheny County, Pa., which disclosed widespread patient abuse and mismanagement of public funds.

In September and again in March we held hearings on the growing trend to dump patients from State mental hospitals into boarding homes. We examined the poor care in boarding homes and the associated ripoff of the supplemental security income program.

Last February we released our report dealing with fraud and abuse among clinical laboratories. In that investigation, conducted jointly with Chicago's Better Government Association, we learned that perhaps $1 out of every $5 paid for laboratory services is ripped of.

Since that time we have evaluated the performance of medicare's program integrity unit in a forthcoming report dealing with practitioner abuse of the medicare program. We have completed followup investigations into clinical laboratory, home health, pharmacy, and nursing home abuses. Some of these inquiries have been turned over to the General Accounting Office or other Federal and State authorities because we simply do not have the manpower to follow through properly on each one of these efforts.

In the near future we expect four reports from the General Accounting Office dealing with the handling of patients' funds in nursing homes, the required supplementation of medicaid money by families placing patients in nursing homes, a financial audit of Kane Hospital, and a closer look at the practices of factoring firms.

In short, today's report dealing with medicaid practitioners follows extensive investigations of the various aspects of the medicaid pro-

gram. Invariably, whatever part of the medicaid program we studied, we found substantial problems, mismanagement, waste, and fraud. Accordingly, it is important for everyone to understand that the judgments in today's report are based on the totality of our experience.

Medicaid Mills—Small For-Profit Welfare Clinics

In an effort to examine fraud and abuse among practitioners in the medicaid program we started with a list of doctors making more than $100,000 a year from the program. We soon learned that most of these practitioners worked out of medicaid mills—small for-profit welfare clinics which checker the ghettos of our major cities. We decided to examine such facilities a little closer. In the course of our clinical laboratory investigation we learned a great deal about their operations. In order to get a still closer look we examined the problem from three perspectives: patient, provider, and government.

We learned the government's point of view by interviewing local, State, and Federal officials and reading reports detailing program deficiencies. We learned the provider's point of view by interviewing doctors, by posing as businessmen pretending to buy medicaid mills. We learned about the quality of care in medicaid mills by posing as patients, making about 200 visits to clinics in 4 States.

When I heard from the staff about the blatant overutilization, unnecessary testing, the ping-ponging and referring patients to particular pharmacies, I decided to go to New York to see things for myself.

I put on the oldest clothes I could find. The U.S. attorney helped me obtain a valid medicaid card in my name. On June 7, accompanied by Pat Oriol, chief clerk of the Senate Committee on Aging, I entered the East Harlem Medical Center posing as a medicaid patient with a cold.

This facility was selected because three Senate staff members posing as patients had entered the facility and had been referred from practitioner to practitioner and given a full battery of unnecessary tests.

The physician gave me a brief cursory examination, took a quick medical history asking if I had high blood pressure, diabetes, or anything of the sort. Even though there was nothing wrong with me, he told me that I had a red throat and ordered blood and urine tests and X-rays. The doctor asked me if anything else troubled me and I said once in a while my neck is a little stiff. The doctor decided I needed to see Mr. Cohen, the chiropractor.

As there was no intercom in the facility, the nurse shouted up the stairs to warn the chiropractor I was coming. The doctor asked me some questions, twisted my neck and stated, "There, doesn't that feel better?" He stressed that the relief was only temporary and that he would have to get at the underlying causes for me to realize any permanent cure. He invited me back for treatment the next day and I was given a battery of X-rays. As I left, I was told to be sure to return the next day for more work and reminded to fill my prescriptions at the pharmacy next door.

I also visited the clinic at 164th Street and Morris Avenue in the Bronx. The shoppers who had entered this facility were greeted with

a 30-needle allergy test before they ever saw a doctor. Again the pattern of treatment was the same: a brief examination, extensive blood and lab work, and a number of referrals. I was given a number of tests and scheduled to come back for still more, and for possible referral to other practitioners. I was given a handful of prescriptions and told to fill them at the adjacent pharmacy. Directing a patient to a particular pharmacy, I might add, is a violation of State and Federal regulations.

ADDICTS' HAVEN

The third facility I visited was at 209 East 14th Street in New York's Lower East Side. The staff had been turned away on six previous attempts to seek treatment. The clinic was a haven for addicts. The staff was successful in taking movie film of some of the drug sales which took place on the street in front of the clinic.

I did not receive treatment in this facility but I did enter the adjacent pharmacy. The pharmacy was in the basement of what was really a small cellar partitioned in the middle by bulletproof glass which separated the pharmacist from the customers. A number of apparent addicts were milling about. Behind the glass a pharmacist stood filling prescriptions at random. Two months after my visit, the city health department closed the center, saying that the doctors who operated in this medicaid mill were essentially using their medical licenses to act as drug pushers.

From this experience I have some impressions of what it is like to be a welfare patient. They include:

If you are a medicaid patient, you can expect to be treated in a clinic located in a dilapidated part of the city.

The outside of these clinics, or medicaid mills, are garish. Most offer a brick facade. They may be brightly painted, with awnings, banners, and pennants attracting the eye. The front window lists an impressive array of services—everything from a psychiatrist to a podiatrist.

Inside the mill will be cramped and sparsely furnished. It will be dirty. Cleanliness is not prized in medicaid mills; it costs too much money. The floors look like they haven't been swept in a month and the restrooms are abominable.

As you enter a mill you will be greeted by a receptionist or someone who looks like a nurse. This is important because you never know for sure. This receptionist will ask for your medicaid card. She will xerox it a number of times. You may be asked who you want to see or what your medical problem is or you may not.

Now you wait for an hour, sometimes two. While you wait the receptionist or someone else may suggest that you should see Dr. So-and-so, the chiropractor, or Dr. XYZ, the podiatrist.

When you do get to see a practitioner, your visit will be brief—usually from 3 to 5 minutes—and the examinating room will be tiny.

You will be given a general examination no matter how specific your complaint. If blood pressure is taken or a stethoscope is used, the odds are it will be done through your clothing. It is likely that you will not be touched. Medicaid doctors don't like touching their patients.

At some point the doctor will take blood. The taking of blood confirms that treatment has been rendered to the patient but, perhaps just as important, samples presented to clinical laboratories will generate a return of $15 each from the laboratory.

In addition, you are going to be asked for a urine sample; you will be given a number of X-rays and perhaps a shot or two. You can count on receiving several prescriptions. In most cases you will be directed to a particular pharmacy to have your prescriptions filled.

If you're not sick, you won't be told you're not sick. If you are sick, the odds are you won't be helped. In the last analysis, the best description is the one given to us by a mill owner who said: "Medicaid isn't medicine, it's business. Curing patients is good medicine but bad business."

"I AM OUTRAGED"

I want to tell you that after this firsthand personal experience, I am outraged. I am angry that the money the Congress has appropriated for the care of the aged, the blind, and the disabled is going to line the pockets of a few businessmen and real estate operators. I am angry that 10 years after the enactment of the medicare program we find the resurrection of that abhorrent dual track of medical care which provides one standard of care for the rich or comfortable and another for the poor. I am angry that so much of the taxpayers' hard-earned dollars is lost to fraud and abuse. There are millions of people in my home State and across the Nation who work too hard for their money to be able to stomach the fraud and abuse, which by now must be evident to anyone who subjects the medicaid program to the slightest scrutiny.

I am not talking just about medicaid, mills. I am talking about the fraud and abuse we have discovered in nursing homes. I am talking about the recent disclosures of fraud and abuse in prepaid health plans. I am talking about the ripoffs among some for-profit home health agencies and hospitals that specialize in welfare patients. I am talking about clinical laboratories. I am talking about moving patients from State hospitals to nursing homes and boarding homes to take advantage of medicare and SSI. The day is long since past when we can tolerate the poor care and obvious fraud, waste, and abuse that exists in the medicaid program. It is time for an overhaul. I know that with the assistance of the Senators here today, we can move quickly to enact Senator Talmadge's bill, S. 3205. The enactment of this bill would do much to reduce the festering problems with which we have been grappling for too many years.

I apologize somewhat for the length of that statement but I think it will help to set the stage for what we expect to find in our hearings which we have detailed in this report which is released today on "Fraud and Abuse Among Practitioners Participating in the Medicaid Program."

[The statements of Senator Church and Senator Williams follow:]

STATEMENT BY SENATOR FRANK CHURCH

I wish to join in commending you, Mr. Chairman, and the two members of the Capitol Police force who performed outstanding services while assigned temporarily to the Senate Committee on Aging within recent months.

You are to be applauded, Mr. Chairman, for your tireless efforts to expose fraud and abuse in the medicaid program. It took a great deal of courage to go to New York and see things for yourself.

The two Capitol Hill policemen who participated in the investigation are Privates James A. Roberts, Jr., and Darrell R. McDew. At this point I would like to give my personal thanks to Police Chief James C. Powell and Senate Sergeant-at-Arms F. Nordy Hoffmann for making it possible to assign the two officers for this work. Privates Roberts and McDew visited more clinics than anyone else in the investigation, gave more blood for "tests," and bore up doggedly despite the wide number of illnesses diagnosed for them. I might add that they had received a complete physical and were pronounced physically fit before the shopping began.

As chairman of the Committee on Aging, I take a great deal of pride in the achievements which are being revealed to the American public this morning. I know the end result will be legislation to curb these widespread abuses. I pledge my best efforts in bringing about some improvements in the fiscal integrity of Government health care programs.

STATEMENT BY SENATOR HARRISON A. WILLIAMS, JR.

Mr. Chairman, I am pleased to address this hearing by the Subcommittee on Long-Term Care. The hearings conducted by this committee, chaired by Senator Moss, have been greatly informative. They have provided the Congress with valuable insights into fraud and abuse among nursing homes, clinical laboratories, and other providers in the medicaid program.

I expect today's hearings will serve the same end; that is, providing the Congress with the information it needs with which to legislate.

I am proud that my State of New Jersey has been, over the years, one of the most active in terms of preventing fraud and abuse in the entire Nation. According to HEW statistics, New Jersey is one of the three States with excellent fraud detection programs. I am glad to see that the New Jersey Special Commission on Investigation will testify today, sharing the results of their good work with this subcommittee and with the Nation.

I think now everyone knows my commitment to national health insurance and to expanding medicare and medicaid benefits for the aged, blind, and disabled. I am troubled that hundreds of people may be going without the health care they need. But I am just as troubled by the increasing reports of fraud and abuse in these programs. I am hoping that these hearings will help us to redirect Government money so as to eliminate waste and to provide greater benefits for the needy.

Senator Moss. Now I am very pleased to have with me a number of Senators. The ranking Republican member of the subcommittee is Senator Percy, of Illinois, who has been with us on so many of these hearings and has done valuable service in assembling the data that we now have before us. I would like to recognize Senator Percy.

STATEMENT BY SENATOR CHARLES H. PERCY

Senator PERCY. Senator Moss, we welcome you back from the battlefield. It looks like in the reprocessing you have gone to Brooks Brothers this morning to get back here in good shape. I want to commend you and the members of the staff and certainly the Capitol Police that have cooperated with this subcommittee in learning firsthand how some of these programs are really carried out.

I think we learned as we went through a great many nursing homes that there is a great deal of difference between theory and practice. Too few times legislators legislate in a vacuum and don't actually follow up to see what happens. I would hope that those who feel you can wave a magic wand and create a national health insurance program; tack it onto the social security program; and obtain instant free medical assistance and health care for every man, woman, and child in this country with the same degree of efficiency that we offer health care today, would go out and actually see how some of these programs—which are minuscule compared to those that are actually implemented—are carried out.

We have a long way to go before we are ready to enact a total national universal health insurance plan in this country. There is a long gap between theory and practice, and I think you have helped bridge that gap in showing in these relatively modest programs the kind of abuse that is there. Yet we know that medicare and medicaid programs, as such, were desperately needed and we know that there is no substitute for them for some people. We know that some people in the practice carry them out according to the rules. Many people who are recipients do not abuse it, but the abuse is there and the potential for further abuse is there. I think it is now up to us to do something about it.

Since July 1969 this subcommittee has held 27 hearings on medicare-medicaid fraud and abuse. It appalls me that after 7 years of hearings, repeated investigations, and numerous reports we are still here today listening to testimony which identify and confirm the same types of fraudulent practices that have been plaguing the medicaid program since its enactment in 1966.

I would say that on behalf of all the members of the committee here this morning, all of whom are action-oriented, pragmatic, hard-hitting legislators, that the time for talking and for testifying about medicaid fraud and abuse is just about over; it is time now that we act and actually do something about these abuses.

After an 8-month investigation the subcommittee staff has completed a report entitled "Fraud and Abuse Among Practitioners Participating in the Medicaid Program" which gives firsthand evidence of rampant fraud, abuse, and maladministration in the medicaid program and a pattern of reprehensible exploitation of the sick and poor, not to mention the taxpayer who is paying the bill. The findings of the report indicate that as we talked, investigated, and held hearings, medicaid fraud and abuse actually increased in scale and sophistication.

ONE-THIRD OF FUNDS WASTED

The subcommittee report exposed medicaid mills that operate solely for the purpose of defrauding the medicaid system. The subcommittee staff concludes that as much as one-third, or over $1 billion, of New York's total medicaid and public assistance funds have been wasted.

It is my hope that these hearings will act as the catalyst to finally bring about needed legislative and administrative reform of the medicaid programs so that intended medicaid beneficiaries will receive quality health care at a reasonable cost.

The staff recommends that the fraud and abuse provisions of S. 3205, including establishing the Office of Inspector General in the Department of Health, Education, and Welfare, should be enacted immediately. I would like to point out that last week an amendment to the pending legislation in the Senate offered by Senator Nunn and myself was unanimously adopted. There we stamped out, I hope, abuse in the student loan program where we found $1 billion out of $8 billion in unpaid bills, and programs where there was simply inadequate follow through. I have strongly recommended that an Inspector General be installed for that purpose as well as this present scandal that we have involving administration in the Department of Health, Education, and Welfare.

As an original cosponsor of the Medicare-Medicaid Administrative and Reimbursement Reform Act, I trust that we will act immediately to expedite the enactment of that bill. Certainly we can act. We now know what needs to be done and these hearings, I hope, will put to rest the need for further hearings. The time for action is here.

Thank you.

Senator Moss. Thank you very much, Senator Percy.

As I explained at the beginning, Senator Talmadge had intended to be here this morning, but the conference on the tax bill has precluded this. He sent a very brief statement and asked that it be read into the record and I will do that at this time. This is the statement of Senator Talmadge who is chairman of the Health Subcommittee of the Senate Finance Committee.

[Reading:]

STATEMENT BY SENATOR HERMAN E. TALMADGE OF GEORGIA

At the outset I want to commend Senator Moss and this subcommittee for imaginative and innovative work in detecting and defining fraud and abuse in medicare and medicaid.

I have followed carefully the work of this subcommittee in the investigation and disclosure of what is clearly extensive abusive activity in nursing homes and laboratories. I have been briefed as to the areas which will be addressed at this hearing. What we will hear will shock millions of Americans just as it shocked me.

In a moment I will describe what some of us intend to do about these matters. Before doing so, it is highly appropriate to praise and commend the staff of this subcommittee, acting under the leadership of Senator Moss, for demonstrating to all of us that imagination and personal courage are not lacking in the Federal Government. The staff investigators undertook personal risk to develop the story which

will be unfolded today and tomorrow. In fact, in some instances they spent money out of their own pockets to avoid interruption of the investigation. These investigators are a credit to those who support responsible and efficient government.

Now to specifics. Recently the Committee on Finance which has legislative jurisdiction over medicare and medicaid held 5 days of hearings on my bill, S. 3205, the Medicare and Medicaid Administrative and Reimbursement Reform Act. That proposal, in which I was pleased to be joined by Senators Moss and Nunn, along with other Senators, contains a number of significant provisions designed to more effectively prevent, detect, and punish fraud under the Federal health financing programs. It was my expectation that we would act early in the next session to move the bill through the Congress. Howver, the situation is urgent.

I, therefore, have taken from S. 3205 the various antifraud sections, adding somewhat to some of them and improving upon others. It is my intention to introduce an antifraud bill by early next week. Senators Moss, Nunn, and others have been consulted during the work on this proposal and will join with me in introducing it. It is my hope that this antifraud measure can be added as an amendment to an appropriate House-passed bill this year.

Quite simply, we believe that we should not wait another 6 months to enact vitally needed antifraud legislation. We intend to do all we can to secure passage of these necessary reforms in this session of the Congress.

Again I want to commend Senator Moss for the fine public service he has rendered with this investigation and for the kind invitation to participate in this hearing with you.

[End of statement.]

Senator Moss. Senator Talmadge will join us tomorrow definitely and if he gets a break in that conference he will come in today.

As I announced earlier, Senator Nunn has joined us this morning. He is chairman of the Oversight Subcommittee of the Senate Government Operations Committee.

Senator Nunn, do you have any opening statement you would like to make?

STATEMENT BY SENATOR SAM NUNN OF GEORGIA

Senator NUNN. Very briefly, Mr. Chairman. I am very pleased to be here this morning. I would ask that my complete statement be put in the record as acting chairman of the Permanent Investigating Subcommittee.

I have had our staff looking into this overall area of medicare and medicaid fraud and abuse. I commend you and your staff for this extraordinary effort. I believe that it will give a major thrust to the Talmadge reform bill which I am cosponsoring. I hope that we will be able to take action on it this year.

Rather than taking more of the committee's time, I do thank you for letting me appear with you. I would ask you to place my full statement in the record.

Senator Moss. Without objection, it will be placed in the record in full.

[The prepared statement by Senator Nunn follows:]

PREPARED STATEMENT BY SENATOR SAM NUNN

I would like to join in commending Senator Moss and this Special Committee on Aging for their extraordinary and continuing oversight investigations into fraud and abuse in the medicare and medicaid programs.

I am acting chairman of the Permanent Subcommittee on Investigations, which is likewise conducting inquiries into fraud and abuse in the health and welfare industries. I know from our current investigations that what will be presented before this committee today and tomorrow are not isolated examples. Indeed, they are part of the actual conditions in the health care services industry.

They are so much a part of the industry that I believe they are major factors behind increasing program costs and the continuing escalation in national health expenditures. But more importantly, fraud and abuse of the health sector does not simply cost money. It can result in injury to and even deaths of patients who are given too many drugs, too many tests, too many surgeries.

The work of Senator Moss and the Special Committee on Aging in the areas of nursing homes, laboratories, and now the medicaid mills points Congress in an obvious direction. We must address the problems of fraud and abuse more specifically and more forcefully. I hope that Senator Talmadge's antifraud bill will clear the Congress this year. I support it and I am pleased to have worked with him on it.

As I said recently to the Senate Finance's Health Subcommittee, if somehow we could legislate that only men and women of good conscience should be involved in receiving and spending Government health and welfare funds, then we would have no need for systems to spot the culprits. But we cannot.

So we must continue to look for schemes and the schemers and respond immediately with legislative reform and encourage regulatory reform. It will require the continuing vigilance of Congress, the kind of vigilance shown by this special committee and its most capable staff to insure that the laws are sufficient to punish the criminals and to assure ourselves that those charged with administering the laws do so effectively.

Senator Moss. We do appreciate your sitting with us this morning and the cooperation that we have had with your committee as well as Senator Talmadge's committee. The interaction among the committees has been extraordinarily good.

I would just like to mention that Senator Percy is the ranking Republican member on the Nunn subcommittee as well as this subcommittee.

The Senator from Maryland, Senator Beall.

STATEMENT BY SENATOR J. GLENN BEALL, JR.

Senator BEALL. Yes, Mr. Chairman. I ask unanimous consent that my full prepared statement be included in the record.

I would like to take this opportunity to congratulate you and the staff of the committee and the investigators who cooperated in gathering the information for today's hearing. You have done a great service in helping to expose the shortcomings and the abuses of the present

system. I would point out also that the subcommittee investigators did an outstanding job, earlier this year, in bringing to light the fraud which has infiltrated many of the clinical laboratories which participate in the medicare and medicaid programs. I would note, Mr. Chairman, that those earlier hearings prompted me to offer an amendment to S. 1737—the Clinical Laboratories Improvement Act—which increased the criminal penalties for fraud and abuse in the delivery of laboratory services. The Senate passed S. 1737 on April 29, and I would hope that the House of Representatives would act on this important matter before the Congress terminates its activities early in October.

As the ranking minority member on the Labor and Public Welfare Committee's Subcommittee on Aging, I am continually interested in the problem of health care delivery to our senior citizens. Mr. Chairman, you and Senator Domenici, as members of the Budget Committee along with me, have been concerned about and wrestled with the problems of setting national priorities within the constraints of a fiscally responsible Federal budget. Medicare and medicaid are large programs which consume billions of State and Federal dollars each year. They are vital programs that provide medical services to the elderly and the poor who might not otherwise have access to medical care.

I think it is essential that the corruption that exists in these programs must not be tolerated because it drains away vitally needed but necessarily limited resources, thus depriving needy members of our society of the health services they need and deserve. In addition, it rips off the hard pressed American taxpayer, it undermines the public's confidence in the ability of Government to deliver services to our people in an efficient and effective manner, and it will tend to undercut public confidence in the medical profession.

As Senator Percy pointed out, we cannot begin to support a national health insurance plan unless we first have the program structured in such a way as to protect the public from the type of corruption and abuse that you and the subcommittee have turned up in this investigation. I would congratulate you on the work that has been done by the subcommittee and I hope that, as a result of these hearings, we can come up with meaningful legislation that will bring solutions to bear on these very important problems.

Senator Moss. Thank you very much. The full statement will be placed in the record.

[The prepared statement by Senator Beall follows:]

PREPARED STATEMENT BY SENATOR J. GLENN BEALL, JR.

Mr. Chairman, I am pleased to participate in this morning's hearing which will focus much needed attention on the serious problem of fraud in the medicaid/medicare programs. The Long-Term Care Subcommittee has, through its investigations and hearings, done much to expose the shortcomings and abuses of the present system.

The subcommittee's team of investigators did an outstanding job of bringing to light the fraud which has infiltrated many of the clinical laboratories which participate in the medicare/medicaid programs. I would note, Mr. Chairman, that those earlier hearings prompted me to offer an amendment to S. 1737, the Clinical Laboratories Improvement Act, which increased the criminal penalties for fraud and abuse in the delivery of laboratory services. The Senate passed S. 1737 on

April 29 and I would hope that the House of Representatives would act on this important matter before the 94th Congress adjourns.

As the ranking minority member on the Labor and Public Welfare Committee's Subcommittee on Aging, I have continually sought to improve the quality of life of our Nation's 22 million senior citizens. As members of the Senate Budget Committee, Senator Moss, Senator Domenici, and I have wrestled with the problems of setting national priorities within the constraints of a fiscally responsible Federal budget. Medicare and medicaid are large programs which consume billions of State and Federal dollars each year. They are vital programs that provide medical services to the elderly and the poor who might not otherwise have access to medicare care.

Corruption in these programs must not be tolerated because:

(1) It drains away vitally needed but necessarily limited resources, thus depriving needy members of our society of the health services they need and deserve.

(2) It rips off the hard-pressed American taxpayer.

(3) It undermines the public's confidence in the ability of government to deliver services to our people in an efficient and effective manner.

(4) It will tend to undercut public confidence in the medical profession.

I repeat Mr. Chairman, that we must not tolerate this kind of corruption. We must promptly root out any and all corruption from the medicare/medicaid programs and we must devise procedures and administrative structures that will prevent its reoccurrence. This is a difficult challenge but the Congress and the administration must meet and resolve this program before we can seriously consider massive new programs such as national health insurance.

In closing, I would note that I gave this matter a great deal of thought when I was drafting S. 2702, the long-term care amendments of 1975. That bill, which is pending in the Senate Finance Committee, would replace medicaid as the funding vehicle for a whole range of medical and nonmedical services delivered in institutional and noninstitutional settings for senior citizens. The mechanism contained in my bill that would hopefully prevent fraud and abuse is the community long-term care center. The community long-term care centers would have an elected governing board, of which a majority would be older persons. That local board and its professional staff would evaluate and certify the long-term needs of the individuals who reside in their service area. The funds would flow from the Federal Long-Term Care Trust Fund to the community long-term care centers by way of a State plan. The center would actually purchase or provide the needed services, such as home health services, homemaker services, nutrition services, long-term institutional care services, day care services, foster home services, and community mental health center outpatient services. The center would control the funds and carry on a continuous followup relationship with each individual receiving services under this program.

In drafting S. 2702, it was my hope that the creation of community long-term care centers would enable us to structure a responsive program with adequate safeguards against abuse, fraud, and/or misuse.

Mr. Chairman, I commend you for undertaking this investigation

and I hope that this series of hearings will help Congress and the executive branch to come to grips with this pressing problem.

Senator Moss. I do appreciate the fine work you have done in cooperating with this subcommittee and the staff as we develop these investigations.

The Senator from New Mexico, Senator Domenici.

STATEMENT BY SENATOR PETE V. DOMENICI

Senator DOMENICI. I will only take a moment if my statement can be made a part of the record. I do want to commend you and the staff, Senator Moss, for an excellent job. I did not personally visit the medicaid mills in New York, only in Chicago. I am delighted that a number of Senators from important committees of our U.S. Senate are actively involved in trying to help with this very serious problem. It is long overdue.

I personally don't know how we are going to solve the problem; it is an incredible new subculture delivery system that has grown up in the medical practice. It is not the average doctor, but rather just a strange new culture that almost ignores everything that we thought was right and needed by way of a delivery system. Whether or not we are going to solve the problem with fraud and abuse statutes, I don't know. I do wholeheartedly support such measures and I will join in trying to expedite their passage.

It is absolutely incredible when you go into a major American city, particularly the slum area, to see what has happened in the years since medicaid. I don't think anyone would have believed that a slum building would now become a storefront, well-advertised delivery system. The most pronounced act in all of them are the green cards. It is as if we are inviting people off the street to come in, promising care. Then when you get in many medicaid mills you find the paraphernalia that advertises what they have there to offer to our poor people is something again. This deception has created a new culture in America's medical delivery system. You would not believe what is imposed on these people.

Now you have yourself participated in that, Mr. Chairman, as have our staff. I assume that thousands of Americans have already experienced it and hundreds of millions of dollars have gone for naught. I have a word of caution or warning. I don't think laws are going to totally solve the nightmare, but I think the medical profession has a grave responsibility. Ninety-nine percent of them are not involved in this. Most of the involved doctors are foreign medical people, as you know, Mr. Chairman.

Somehow or another we need some help in terms of enforcing the standards of excellence that are delivered to most Americans by the medical practitioners. We need their help in seeing that those who deliver medical service to our poor people, basically in our slums, are also held at that standard also. I don't know how we can do that, but that fact is a must. I think this hearing and the others that will follow it must excite this institution, the Senate, but also the medical people, those who are involved in training our doctors, our medical schools. State and local authorities are just going to have to get concerned enough to join in a war of not only stopping it but also in an affirmative approach of finding a better way to do it.

Thank you, Mr. Chairman.

Senator Moss. Thank you, Senator. Your full statement will be inserted in the record.

[The prepared statement by Senator Domenici follows:]

PREPARED STATEMENT BY SENATOR PETE V. DOMENICI

Mr. Chairman and other members of the committee, I am anxious to proceed with the hearings today so I will say only a few words.

It is simply stunning that the abuses outlined by the subcommittee report and those that will be described personally today have been known by law enforcement officials for at least 10 years. Apparently to know is not enough. Apparently it has to take a public forum as this to force the appropriate remedial action.

I hope this hearing will capture the attention of the public, the entire Senate, and those abusing Federal programs such as medicaid and medicare, and be instrumental in ending these crimes. Perhaps now New York and other States will extend the effort necessary to truly sense their needy, rather than turning a program loose with crossed fingers and good intentions. It seems that the larger States with heavily populated cities are most vulnerable to the disgraces outlined in the subcommittee report. It appears that many of the larger States are most lax in their enforcement procedures. Certainly the Federal Government has also been lax in providing adequate enforcement procedures and proper guidelines.

Not only are a few made wealthy at the expense of all taxpayers, but even more abysmal is the fact that the elderly, the poor, and the disabled receive poor health care—if they actually receive it at all. The poor and elderly are the scapegoats in this dilemma and the situation must end, and end now.

The subcommittee report is an alarming commentary of a necessary Federal program gone astray. It is not enough to say these abuses occur only in larger communities. It is not enough to say that only a very small percentage of doctors and other health professionals are involved. Obviously good intentions are not enough when we in Congress or in the State legislatures fail to insure proper safeguards. Too often those we wish to help are forgotten once we enact the "saving" legislation.

Proper enforcement and monitoring procedures are possible as illustrated by the relatively successful operation in Michigan and some other States. The situation in Michigan is not perfect by any means, but it is light years ahead of New York's system.

I am pleased this subcommittee's members and staff have persisted to uncover and document the evidence. The report outlines seemingly unreal situations. How can certain individuals be so successful in abusing social programs directed to the less fortunate in our society? How has it evolved that the elderly and poor are so exploited? How have enforcement procedures become so lax? The facts are there for all to examine. The testimony today and tomorrow will add the personal documentation needed for a final realization that fraud of the worst type, that abuses of the most unreal dimensions exists.

I do not wish to take more of the subcommittee's time now. I wish only to extend my personal commitment in future efforts to eliminate these shocking problems.

Senator Moss. The Senator from Iowa, Senator Clark.

Senator CLARK. Mr. Chairman, I have no statement. I would like rather than making an opening statement to ask that there be inserted in the record at this point an article which appears in this week's Newsweek that is out this morning dated September 6, 1976, called "Inside the Medicaid Mills." I am not going to read the whole article, in fact just tantalizingly I am going to read the first sentence.

Senator Moss. I have not seen it yet so my curiosity is aroused.

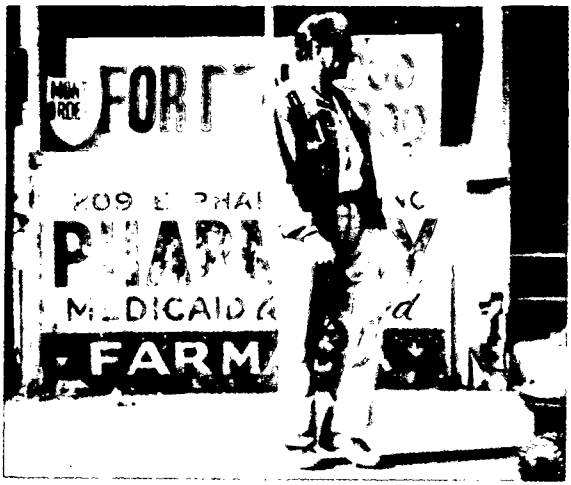
Senator CLARK. You will be interested in it then, Senator. It says, "F. Edward Moss is no ordinary sidewalk derelict." [Laughter]

Senator Moss. Now I believe it.

Senator CLARK. I would like that to be inserted in the record at this point if I may, Mr. Chairman.

Senator Moss. Thank you. That will be inserted in the record. Even though I have not had a chance to check the text yet, I will run that risk and place it in the record.

[The article follows:]



Val J. Halamandaris

Undercover man: Senator Moss visits a New York City storefront clinic in disguise

Inside the Medicaid Mills

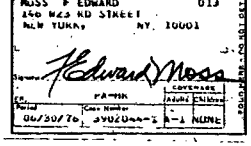
The haggard old-timer, dressed in a grungy denim jacket and Army fatigue pants, shuffled into a storefront clinic in New York's East Harlem one morning in June. He had a cold, the old man complained, as he produced a Medicaid card identifying him as "F. Edward Moss." He waited around for more than an hour before a doctor saw him, took a brief medical history and ordered a blood test, a urine test and a chest X-ray. Next the old man was given a prescription for three drugs and told to have it filled at "the pharmacy next door." When asked if he had any other ailments, the old man mentioned a stiff neck; he was sent to a chiropractor upstairs, who recommended additional X-rays.

F. Edward Moss is no ordinary sidewalk derelict. When not in disguise, he answers to the name Frank E. Moss and works as a U.S. senator from Utah. As a member of the Senate Special Committee on Aging and chairman of the subcommittee on long-term care, Moss took on his unusual undercover assignment for a personal look at Medicaid abuses. "I'm kind of a kick-the-tires man," says the 64-year-old Democrat. "The committee staff was giving me reports that were astounding. I thought I'd like to see for myself." What Moss and his investigators saw—and heard and felt—was a wide assortment of medical flimflams, all to be detailed in a 287-page report that will be made public at hearings in Washington this week.

The Medicaid program, enacted by Congress in 1965 and jointly funded by the Federal, state and local governments, helps to finance health services for the poor. But too often, committee investigators found, Medicaid money has become easy pickings for the unscrupulous. The staff report cites innumerable instances of phony bills for services that were unnecessary or never rendered. One investigator with perfect vision received three prescriptions for eyeglasses; another was X-rayed on a machine that had no film. "Some people are ripping off vast amounts of money by setting up these Medicaid mills and running people through like cattle," Moss told NEWSWEEK's Henry McGee last week. Of the more than $15 billion that will be spent on Medicaid this year, Moss estimates that fully 10 per cent—$1.5 billion—will be lost through fraud and abuse.

To gain first-hand insight into the malpractices, Moss and six committee staffers posed as Medicaid beneficiaries and made more than 200 visits to approximately 100 clinics in New York, New Jersey, Michigan and California. The investigators usually followed a set procedure: on entering a clinic, they made only

Moss's ID card: A doctored name



a general complaint ("I have a cold"), and they never sought referrals or suggested the need for medical treatment in any other way. Prior to their "shopping tours," the investigators were all in good health, the report said; nevertheless they were diagnosed in the Medicaid mills to be afflicted with everything from bronchitis to a severe infection of the urinary tract. Moss himself returned from his two-day undercover tour of New York City with a painful souvenir: his arm bore ugly purple blotches—a result of clumsily performed blood tests.

'Ping Ponging': Medicaid abuses, the investigators found, came in so many variations as to have a vocabulary of their own. Examples include "Ping Ponging" (referring patients to other doctors within the clinic even when there is no medical need to do so), "upgrading" (billing for additional services not provided), "steering" (sending patients to a particular pharmacy, usually one affiliated with the mill) and "shorting" (delivering fewer pills than prescribed). According to the report, Medicaid costs are further kited through cozy deals between doctors and landlords and between doctors and factors (who usually take over the doctors' accounts receivable and advance immediate payment less a 12-24 per cent service charge).

The report stresses that only a relative handful of doctors have abused the Medicaid program. But some among those few have apparently tapped a bonanza (in 1974, 365 physicians received $100,000 or more from the program). Sheer incompetence often goes hand in hand with greed. At a Los Angeles clinic, one investigator submitted a soap-and-cleanser concoction as a urine sample, which was tested as "normal." A New York facility proved to be little more than a haven for junkies. Committee staffers expressed special concern for the effect of Medicaid mills on the poor. As investigator Catherine Hawes put it: "It's bad enough they're ripping off the government, but they're not even providing minimum levels of medical care—and that's criminal."

To curb future abuses, the report backs legislation to establish an office of Inspector General in the Department of Health, Education and Welfare to police Medicaid (and medicare as well). It also recommends laws banning fee-splitting and shop rentals based on a percentage of income in Medicaid clinics (last week, HEW announced "a flat prohibition against the factoring of Medicaid accounts"). Finally, the report singled out New York City's Medicaid program for a special knock, asserting that Medicaid losses there over the past ten years "probably equal the $1 billion deficit which brought New York City to the brink of [financial] disaster." Had New York taken reasonable steps against Medicaid frauds, the report claims, the city conceivably could have avoided its fiscal crisis.

—DANIEL CHU with HENRY McGEE in Washington

Senator Moss. I certainly appreciate the attention given by all of my colleagues and their statements this morning. They indicate how serious this problem is and really how perplexed we still are as to how we are going to deal with it. We have the Talmadge bill which I am sure is a step in the right direction and I think all of us will want to press for its adoption but we don't know how hopeful we can be that that will resolve all of the problems.

Must Preserve Integrity

As the Senator from Illinois pointed out, as we expand in this field of providing health services for our people we have to find a way that the system can have its integrity preserved and cannot be abused by those who choose to do so and have been successfully doing it with medicare and medicaid as the hearings today I think will indicate.

Now reference has been made by others and I want to echo that reference to the exceptional work done by the staff of the Senate Committee on Aging and particularly those assigned to the subcommittee. They have exerted great imagination and penetration in finding ways to bring our attention to abuses that we will hear of this morning and which are detailed in this report. I have asked a number of those members of the staff and particularly those who went out and did the leg work, the investigation, to come here as a panel and sit and present their report on what they have to tell this subcommittee.

This investigation, as has been pointed out, has been going on for a long period of time and it has required great perseverence to continue to follow up day after day with the most limited of facilities, manpower and financial means that we have at our command and we therefore have entered into agreements with others like the Chicago Better Government Association who did such good work in Chicago.

We also had the good fortune to have two very able officers detailed to work with our committee as investigators who are members of the Capitol Police force and they will be with the panel this morning. I had a chance to be with them for a full day in New York and I can attest to the perception of these men and their real understanding of the problem and their dedication to the job. They did an excellent job.

I will ask Val Halamandaris who is the associate counsel for the Committee on Aging and who was in general charge of all of this investigation, Patricia G. Oriol who is chief clerk of the committee and, as you will see, a lovely lady who did the job of going into these clinics and shopping for services and then reporting on them, and then Darrel McDew and James Roberts, the two police officers to whom I have referred, and Catherine Haws who is an investigator for the committee, to come forward and we will ask for a presentation of their report and of course all of them will be open for questioning by the members.

Mr. Halamandaris. Mr. Chairman, I request that we be sworn.

Senator Moss. All right.

Raise your right hand. Do you and each of you solemnly swear the testimony you are about to give will be the truth, the whole truth, and nothing but the truth, so help you God?

[All answered in the affirmative.]

Senator Moss. You may proceed, Mr. Halamandaris.

STATEMENT OF VAL J. HALAMANDARIS, ASSOCIATE COUNSEL, COMMITTEE ON AGING

Mr. HALAMANDARIS. Thank you, Mr. Chairman.

On behalf of the staff I say thank you from the bottom of my heart for all the kind words that have been said about the work of the subcommittee staff.

I just would like to add this comment: Mention was made of the clinical lab investigation that we conducted in Chicago when you, Mr. Chairman, and others, went to Chicago to see for yourselves. You'll remember we had the invaluable assistance of the Better Government Association. I would like to acknowledge and credit the BGA for their good work.

There is another group that should be mentioned and that is CBS's "60 Minutes" with Mike Wallace. All of the investigations we have done here in 7 years did not have the impact of the single segment on "60 Minutes." I think CBS gave the American public the first graphic evidence of what is going on in the medicaid program.

I would like your permission, Mr. Chairman, to have inserted in the record at this point your statement in the Congressional Record on June 15, 1976, in which you compliment CBS President Richard Salant along with Mike Wallace and Producer Barry Lando for the excellent work they did in conjunction with that program called "The Clinic on Morris Avenue."

Senator Moss. Without objection, that will be in the record at this point.

[The statement follows:]

[From the Congressional Record, June 15, 1976]

"FRAUD AND ABUSE AMONG CLINICAL LABORATORIES"—SPECIAL REPORT OF THE COMMITTEE ON AGING—REPORT NO. 94-944

Mr. Moss. Mr. President, on behalf of the Subcommittee on Long-Term Care of the Senate Committee on Aging, I submit a report for publication and use by the Senate. The report is entitled "Fraud and Abuse Among Clinical Laboratories."

This report has been in so much demand that last Thursday the Senate agreed to the printing of 4,500 additional copies of it.

The report details the results of our 5-month investigation of fraud among clinical laboratories in six States, Pennsylvania, Illinois, New York, Michigan, New Jersey, and California. We concluded that $1 out of every $5 paid for medicaid laboratory services is fraudulent. The number of labs who cheat is small but their share of the $213 million in medicaid lab services is large.

The lawbreakers in our report have been brought to justice. In Illinois, 14 laboratories have been suspended. Indictments have been brought against laboratory operators in all six States we studied.

There has also been action on the legislative front. On April 29, the Senate passed S. 1737, the Clinical Laboratories Improvements Act which requires licensure of every lab. In addition, the act makes the offering or receipt of a kickback grounds for the revocation of a laboratory's license. Moreover, amendments were added on the Senate floor which make offering or receiving kickbacks a felony punishable by up to 3 years in jail, a $10,000 fine or both.

I am sure that this prompt action would not have been possible without related investigation by CBS "Sixty Minutes" entitled "The Clinic on Morse Avenue" and aired on February 15. I would like to compliment CBS for this excellent example of investigative reporting. I would compliment in particular, CBS President Richard Salant, Reporter Mike Wallace, and Producer Barry Lando.

The ACTING PRESIDENT pro tempore. The report will be received and printed.

Mr. HALAMANDARIS. Mr. Chairman, I would like to take just a few minutes to tell you what we did during the course of this investigation and to have the staff who participated tell you of their findings.

The investigation over the last 8 months consisted of about nine steps. The first thing we did was to examine about 100 reports that have been written concerning problems in the medicaid program. You will find that detailed in part 3 of our report.

Now if I can refer you to page 207, you will find the number of fraud cases reported to the Department of Health, Education, and Welfare by the States. On page 207 you will find that at any quarter during 1975 there were approximately 2,062 cases pending. Then there is a breakdown from the various States as you can see. Some States like California are very active. Massachusetts is very active. Then you look at the totals for the State of New York.

The bottom line is that the State of California, which accounts for some 13 percent of all medicaid moneys, referred 40 percent of the fraud cases to the HEW. On the other hand, the State of New York, which receives 23 percent of all medicaid funds, referred only one-tenth of 1 percent of all the medicaid cases to the Department of Health, Education, and Welfare. That, in a nutshell, gives you a view of the kind of performance New York has given. Historically the State of New York has not been living up to the responsibility, is not in conformance with the Federal regulation. It is our view that the State of New York should be a lot more aggressive than they have been. That summarizes one part of our report.

The last had to do with reviewing records; (1) in the New York City Department of Health; (2) in the office of the U.S. attorney, southern district of New York. We are very pleased with the cooperation we had from these groups, along with the New York Assistant Attorney General Charles J. Hynes.

The next thing we did was to manually evaluate the medical vendor statement, the so-called computer printout which has all the payments in New York State. When we asked for this printout, we requested what we had seen: A list that was alphabetized, a list that was in order by dollar amount. We wanted to learn how many physicians received how much medicaid moneys.

7 PERCENT RECEIVE 50 PERCENT OF MONEY

Subsequently we learned that 7 percent of the medicaid participating doctors earned 50 percent of the medicaid money. There is an incredible concentration of funds. Think about that—7 percent of the participating doctors received 50 percent of the medicaid dollars in New York City.

Now how did we learn that? That pile of papers you see at the end of the table is the computer printouts that they sent us. Now is it in some kind of order? Is it in order by alphabet? Is it in order by physician? Is it in order by dollar amount? The answer to that is

no. It is as if you told the computer to scramble the findings so as to confuse the Senate committee and its staff.

So we had to manually evaluate that pile of data, thanks to the people sitting behind me, we were able to do this. I would like to introduce to you at this point Arcole Perry, Suzanne Kaufmann, Stephanie Fidel, and Investigator Tom Cline. The staff has been working night and day going through the pile of computer printouts. We tried to find ways to run this through a computer. The Library of Congress was flabbergasted, they didn't know what to do with it. We had no alternative but to do our evaluations manually.

The next thing we did was to interview some 20 public officials. Thereafter, the chairman sent letters to every responsible public official in New York State. There were 30 public officials who received what may be called written interrogatories.

We also reviewed incorporated memoranda relating to the Illinois doctors we visited last January in conjunction with the subcommittee's report on clinical laboratory fraud. As the Senator from New Mexico knows, the doctors were very frank about their financial relationship, admitting receiving kickbacks of $1,000 a month or more from laboratories, in addition to receiving rentals of $1,000 a month from a pharmacy for an 8 by 10 foot room and $10,000 a month from the dentist for similar space.

Next we sent a questionnaire over the chairman's signature to 250 physicians in New York City who make between $75,000 and $785,000 from the medicaid program. The results of those questionnaires are just coming in. We have several physicians who are willing and anxious to testify before this committee with respect to various abuses.

Next the committee staff and the chairman, Senator Moss, posed as medicaid patients making some 200 visits to clinics in four States. About 120 of these visits occurred in New York City, the remainder occurred in the States of California, New Jersey, and Michigan. I would like to underline New Jersey because the Chairman of the Special Commission on Investigation, Mr. Rodriguez, is here today and he will present the results of his report and independent analysis of the medicaid mills.

The next step was monitoring the operation of the store front clinic established in Chicago last year.

Medicaid Mills for Sale

Lastly, we announced the establishment of a corporation to buy health care facilities. We simply answered advertisements in the New York Times. Every Sunday you will find three or four pages indicating medicaid mills for sale, along with invitations to physicians to join the medicaid mill and to make lots of money. We posed as businessmen trying to buy these facilities.

Essentially this is what we did in the course of this investigation. As the chairman pointed out in his remarks, perhaps our report has caused some confusion. The conclusions in this report deal with not only medicaid mills, but also with hospital and nursing home laboratories. It carries our conclusions, based on 7 years of dealing with the entire medicaid program.

At this point I would like to recognize the people who did most of the work in this investigation. On my right is Patricia Oriol, the

chief Clerk of the Senate Committee on Aging. I must say that we are indebted to Pat Oriol for a number of reasons. She is the chief clerk of the committee and keeps the committee on an even keel. In addition, she posed as a medicaid patient in some very dangerous neighborhoods. When we entered the 403d precinct, several policemen told us we were crazy. They told us that it is called Fort Apache, that nobody goes in there, but we were there, and Pat Oriol was right with us.

Another modest man who should be recognized is our staff director, Bill Oriol, to whom we are very much indebted for his assistance and guidance.

Next to Pat we have Mr. Darrell McDew of the U.S. Capitol Police force, Mr. James Roberts of the U.S. Capitol Police force and Catherine Hawes of the committee, who performed so admirably.

At this time with your permission I would like Mrs. Oriol to proceed and tell you what she found posing as a medicaid patient.
