U.S. Department of Transportation  
Research and Innovative Technology Administration

## Transportation Training for DoD Personnel

TSI has developed several courses in support of the DoD Traffic Safety Program to reduce deaths, injuries, and property damage caused by vehicular mishaps. TSI courses include real-world hands-on exercises and field activities to prepare participants for immediate transfer of information from a classroom environment to on-the-job situations.

TSI courses are conducted at our Institute in Oklahoma City, Oklahoma and can be tailored to your specific requirements (length and topics) and conducted on-site at your facilities.

### Courses and Schedule:

#### Fundamentals of Collision Investigation

- Provides the knowledge and skills needed to successfully elicit, analyze, and record facts, conditions, and circumstances of a collision investigation for those service members responsible for developing, administering, and implementing collision investigation policies and procedures, and individuals responsible for on-scene investigation and follow-up reporting of collisions.

#### Preparing Hazardous Materials for Military Air Shipments - AFMAN 24-204(I) - \$300

- Concentrates on the requirements of AFMAN 24-204(I), Preparing Hazardous Materials for Military Air.
  - February 5, 2010
  - August 20, 2010

#### Motorcycle Safety Program Coordination

- This course is designed to teach safety professionals how to develop, coordinate, and manage a comprehensive motorcycle safety program. Additionally, program coordinators will understand the requirements of a riding range and identify potential partnerships to support the motorcycle program.

#### Traffic Safety Program Management

- This course will educate participants in the principles of traffic safety program implementation, management, and enable each to better facilitate the success of his or her installation's traffic safety program.

- *Contact us to schedule classes for your installation.*
