

National Cooperative Geologic Mapping Program

STATEMAP Component: States compete for federal matching funds for geologic mapping

Contact Information

Prepared July 2009

Nebraska Geological Survey
 Director: Mark Kuzila (402/472-7537)
 STATEMAP Coordinators: P. R. Hanson (402/472-7762) and R.M. Joeckel (402/472-7520)
<http://csd.unl.edu/general/statemap.asp>

U.S.G.S. Geologic Mapping Program Office
 Program Coordinator: Peter T. Lyttle (703/648-6943)
 Associate Program Coordinators: Randall Orndorff (703/648-4316)
 Laurel Bybell (703/648-5281)

SUMMARY FOR STATEMAP RURAL AND URBAN GEOLOGIC MAPPING PROJECTS IN NEBRASKA

| Fiscal Year | Federal Dollars | State Dollars | Project Total |
|---------------|--------------------|--------------------|--------------------|
| 1994 | \$40,002 | \$109,432 | \$149,434 |
| 1995 | 0 | 0 | 0 |
| 1996 | 76,110 | 148,002 | 224,112 |
| 1997 | 25,000 | 118,893 | 143,893 |
| 1998 | 79,635 | 133,165 | 212,800 |
| 1999 | 102,817 | 156,919 | 259,736 |
| 2000 | 102,066 | 198,980 | 301,046 |
| 2001 | 193,870 | 295,176 | 489,046 |
| 2002 | 188,212 | 251,842 | 440,054 |
| 2003 | 168,636 | 267,129 | 435,765 |
| 2004 | 140,371 | 235,249 | 375,622 |
| 2005 | 94,881 | 162,864 | 257,745 |
| 2006 | 56,395 | 78,189 | 134,584 |
| 2007 | 68,070 | 94,670 | 162,740 |
| 2008 | 49,721 | 87,949 | 137,670 |
| 2009 | 82,156 | 119,669 | 201,825 |
| Totals | \$1,467,942 | \$2,458,128 | \$3,926,072 |

The STATEMAP part of the National Cooperative Mapping Program has significantly enhanced the Nebraska Geological Survey's ability to produce geologic maps. STATEMAP has helped support geologic mapping across the state. Mapping in western Nebraska has made available a wealth of information about this geologically rich area of the state. Projects in the Broken Bow and O'Neill areas will assist resources managers in their work protecting the fragile environment in an area important to the agricultural economy. Mapping in the Omaha-Lincoln area will have specific applications in the identification of areas with limitations related to structural stability and on-site waste disposal and the protection and development of ground water and sand and gravel resources.

Geologic Maps can be used to evaluate and predict the consequences of natural and human-induced activities on the environment. All of us deal at some time during our lives with materials or structures at or beneath the Earth's surface that can have impacts on our lives. For example, a person might be thinking of buying land outside the city on which to build a home. He or she needs to know if the land is underlain by stable soils and bedrock, if there is an aquifer beneath the land, and if the property floods. Geologic maps include these sorts of information. They are potential aids to people trying to reach an informed decision about the purchase. Using the information on geologic maps during a project's planning and design stages produces long-term benefits and reduces problems that may develop after the project is completed.
