# Raisins: World Markets and Trade

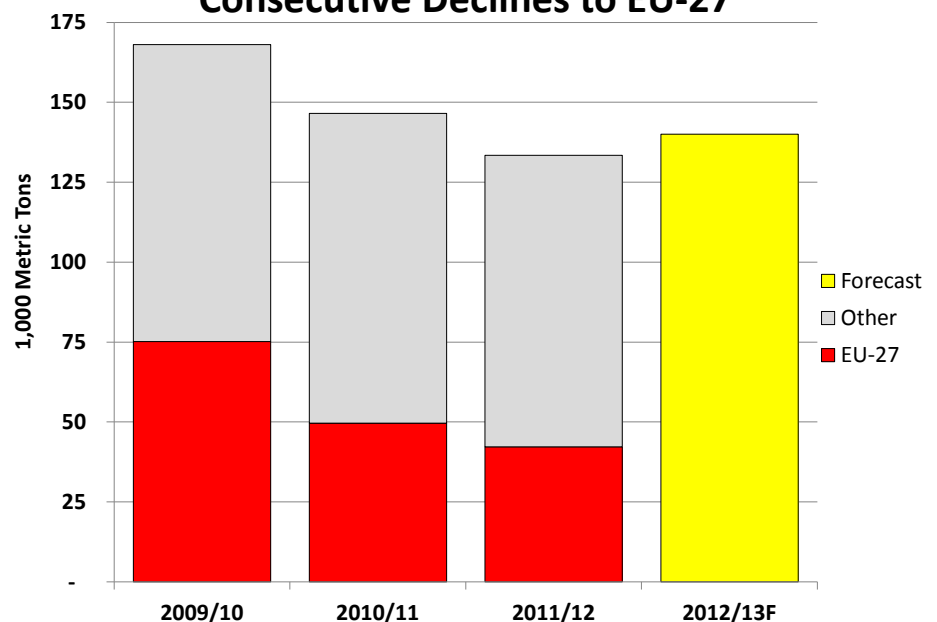

## Global Raisin Production Up Marginally Despite U.S. Decline

**Global** raisin production for 2012/13 is forecast at nearly 1.2 million metric tons (MT), up just 2 percent from the previous year as gains in Turkey, China and Iran more than offset losses in the United States. Consumption is forecast to keep pace with output on strong demand in a majority of markets. Exports are forecast to rise 5 percent to 734,000 MT on increases across most suppliers. Ending stocks are forecast to tighten somewhat as a drawdown in the United States is partially countered by a buildup in South Africa.

U.S. exports are forecast to rebound 5 percent to 140,000 MT on slight gains to the EU, Japan and China. This growth follows back-to-back declines, driven by lower shipments to top market EU where competition from Turkey and Iran cut into market share. Globally, the United States is forecast to remain the second largest exporter behind Turkey. Production is forecast to drop 11 percent to 300,000 MT based primarily on lower yields, as reported in the California Raisin Grape Objective Measurement Report. Bunches per vine as well as length are forecast lower, partially offset by an increase in

## U.S. Raisin Exports Forecast Higher After Consecutive Declines to EU-27

width and thickness. Also, some growers reported spring frost damage. As a result of declining production and expanding exports, ending stocks are forecast 10,000 MT lower to 100,000.

**Turkey's** production is forecast to expand 8 percent to 270,000 MT on favorable weather improving yields. However, exports are expected to rise just 4 percent to 225,000 MT on lackluster demand primarily from Europe's food manufacturers, ingredient suppliers, and institutional bakers. Suppliers are heavily reliant on demand from these sectors as Europe accounts for over 85 percent of Turkey's exports.

**China's** higher area and yield are expected to raise production 5 percent to 175,000 MT. Similar to previous years, domestic consumption accounts for a vast majority of the harvest. Exports are forecast to rebound 10 percent to 35,000 MT on stronger shipments to Europe and Japan.

**Chile's** production is forecast down 2 percent to 80,000 MT on moderately lower yields, with exports easing a similar amount. Nearly all the harvest is destined for export markets such as Europe, the United States and Mexico.

**South Africa's** production is forecast 25 percent higher to 40,000 MT, near the levels reached before floods ravaged the industry two seasons ago. However, most of the gains boost ending stocks instead of translating to higher shipments to Europe and other top markets on increased competition from Turkey, the United States, and Iran. Domestic consumption is expected 8 percent higher as demand for healthy and natural snacks continues to grow.

**Argentina's** production is forecast nearly 50 percent higher to a record 35,000 MT due to favorable weather. Strong demand from Brazil's processing sector is expected to take much of the increase in exportable supplies.

### **2011/12 Changes**

- Chile's production raised 12,000 MT to 82,000 as higher temperatures in some areas affected table grape quality, causing a higher share to be diverted to raisins.
- Turkey's production is reduced 10,000 MT to 250,000 on lower than anticipated yield.
- U.S. exports are lowered 20,000 MT to about 135,000 due to lower than anticipated shipments to Europe and Canada.
- EU imports are lowered 20,000 MT to 320,000 on weaker consumer demand.
