

U.S. Department of Energy Energy Efficiency and Renewable Energy

2003 Buildings Energy Databook

This version is dated: August 2003

DISCLAIMER

This document was designed for the internal use of the United States Department of Energy. This document will be occasionally updated and, therefore, this copy may not reflect the most current version.

This document was prepared as account of work sponsored by an agency of the United States Government. Neither the United States Government nor any agency thereof, nor any of their employees, makes any warranty, express or implied, or assumes any legal liability or responsibility for the accuracy, completeness, or usefulness of any information, apparatus, product, or process disclosed, or represents that its use would not infringe privately owned rights. Reference herein to any specific commercial product, process, or service by trade name, trademark, manufacturer, or otherwise, does not necessarily constitute or imply its endorsement, recommendation, or favoring by the United States Government or any agency, contractor or subcontractor thereof. The views and opinions of authors expressed herein do not necessarily state or reflect those of the United States Government or any agency, contractor thereof.

DOE's Office of Energy Efficiency and Renewable Energy

Buildings Energy Databook

The Department of Energy's Office of Energy Efficiency and Renewable Energy has developed this Buildings Energy Databook to provide a current and accurate set of comprehensive buildings-related data and to promote the use of such data for consistency throughout DOE programs. The Databook is an evolving document and will be periodically updated. Additional data (e.g., more current, widely accepted, and/or better documented data) and suggested changes should be submitted to the contacts below. Please provide full source references along with all data.

Mr. Jordan Kelso **D&R International, Ltd.** 1300 Spring Street Suite 500 Silver Spring, MD 20910 (301) 588-9387 Fax: (301) 588-0854 E-Mail: jkelso@drintl.com

or

	1.1.3	Buildings Share of U.S. Primary Energy Consumption	1-1
	1.1.4	2001 U.S. Buildings Energy End-Use Splits, by Fuel Type	1-2
	1.1.5	Shares of U.S. Buildings Generic Quad	
	1.1.6	Buildings Share of U.S. Electricity Consumption	
	1.1.7	Buildings Share of U.S. Natural Gas Consumption	
	1.1.8	Buildings Share of U.S. Petroleum Consumption (percent)	
	1.1.9	Buildings Share of U.S. Petroleum Consumption (per day)	
	1.1.10	World Primary Energy Consumption and Population, by Country/Region	1-4
1.2	Residen	tial Sector Energy Consumption	1-5
	1.2.1	Residential Primary Energy Consumption, by Year and Fuel Type	
	1.2.2	Residential Site Renewable Energy Consumption	1-5
	1.2.3	2001 Residential Energy End-Use Splits, by Fuel Type	1-6

	1.2.4	Residential Delivered and Primary Energy Consumption Intensities, by Year	1-6
	1.2.5	1997 Residential Delivered Energy Consumption Intensities, by Vintage	1-7
	1.2.6	1997 Residential Delivered Energy Consumption Intensities, by Housing Type	
	1.2.7	1997 Residential Delivered Energy Consumption Intensities, by Census Region	1-7
	1.2.8	1997 Residential Delivered Energy Consumption Intensities, by Ownership	
		of Unit	1-7
	1.2.9	Aggregate Residential Building Component Loads	1-8
	1.2.10	1997 Residential Delivered Energy Consumption Intensities, by	
		Principal Building Type and Vintage	1-8
1.3	Comme	ercial Sector Energy Consumption	1-9
	1.3.1	Commercial Primary Energy Consumption, by Year and Fuel Type	1-9
	1.3.2	Commercial Site Renewable Energy Consumption	1-9
	1.3.3	2001 Commercial Energy End-Use Splits, by Fuel Type	
	1.3.4	Commercial Delivered and Primary Energy Consumption Intensities, by Year	1-10
	1.3.5	1999 Commercial Delivered Energy Consumption Intensities, by Vintage	1-10
	1.3.6	1995 Commercial Delivered End-Use Energy Consumption Intensities, by	
		Principal Building Type	1-11
	1.3.7	1999 Commercial Primary Energy Consumption Intensities, by Principal	
		Building Type	1-11
	1.3.8	1999 Commercial Delivered Energy Consumption Intensities, by	
		Ownership of Unit	1-11
	1.3.9	Aggregate Commercial Building Component Loads	1-12
	1.3.10	1999 Commercial Delivered Energy Consumption Intensities, by Principal	
		Building Type and Vintage	1-12
	1.3.11	1991 Buildings-Related Delivered and Primary Energy Consumption in	
		Industrial Sector.	1-13
1.4	Federal	Buildings and Facilities Energy Consumption	1-14
	1.4.1	FY 2001 Federal Primary Energy Consumption	
	1.4.2	FY 2001 Federal Building Energy Use Shares, by Fuel Type, and by Agency	
	1.4.3	Federal Building Delivered Energy Consumption Intensities, by Year	
1.5	Electric	Utility Energy Consumption	1-15
	1.5.1	Buildings Share of U.S. Electricity Consumption/Sales	
	1.5.2	U.S. Electricity Generation Input Fuel Shares	1-15
	1.5.3	U.S. Electricity Generation Input Fuel Consumption	
	1.5.4	U.S. Electric Utility and Nonutility Net Summer Electricity Generation Capacity .	1-16
	1.5.5	U.S. Utility and Nonutility Cumulative Power Plant Additions Needed to	
		Meet Future Electricity Demand	1-16
2.0	Charac	eteristics Data	2-1
	~		

2.1	Reside	ntial Sector Characteristics	2-1
	2.1.1	Total Number of Households and Buildings, Floorspace, and Household	
		Size, by Year	2-1
	2.1.2	Share of Households, by Housing Type, and by Type of Ownership as of 1997	2-1
	2.1.3	Share of Households, by Census Region and Vintage as of 1997	2-1
	2.1.4	Residential Floorspace (heated square feet) as of 1997	2-1
	2.1.5	Housing Vintage as of 1997	2-2
	2.1.6	Construction Statistics of New Homes Completed/Placed	2-2
	2.1.7	Materials Used in the Construction of a 2,082-SqFt. Single-Family Home, 2000	2-3
	2.1.8	2002 New Homes Completed/Placed, by Census Region	2-3
	2.1.9	2001 Construction Method of Single-Family Homes, by Region	2-3
2.2	Comm	ercial Sector Characteristics	2-4
	2.2.1	Total Commercial Floorspace and Number of Buildings, by Year	2-4
	2.2.2	Principal Commercial Building Types as of 1999	2-4
	2.2.3	Number of Floors and Type of Ownership as of 1999	2-4
	2.2.4	Share of Commercial Floorspace, by Census Region and Vintage as of 1999	2-5
	2.2.5	Commercial Building Size as of 1999	2-5
	2.2.6	Commercial Building Vintage (as of 1999) and Lifetimes	2-5
	2.2.7	1999 Average Commercial Building Floorspace, by Principal Building	
		Type and Vintage	2-6
	2.2.8	1991 Industrial Building Floorspace	2-6
2.3	Federa	Buildings and Facilities Characteristics	2-7
	2.3.1	Federal Building Gross Floorspace, by Year and by Agency	2-7
3.0	Enviro	onmental Data	3-1
3.1	Carbor	1 Emissions	3-1
0.1	3.1.1	Carbon Dioxide Emissions for U.S. Buildings, by Year	
	3.1.2	2001 Buildings Energy End-Use Carbon Dioxide Splits, by Fuel Type	
	3.1.2	2001 Residential Energy End-Use Carbon Dioxide Splits, by Fuel Type	
	3.1.4	2001 Commercial Energy End-Use Carbon Dioxide Splits, by Fuel Type	
	3.1.5	World Carbon Dioxide Emissions	
	3.1.6	2001 Methane Emissions for U.S. Buildings Energy Production, by Fuel Type	
	3.1.7	2001 Carbon Dioxide Emission Coefficients for Buildings	
3.2	Haloca	rbons (CFCs, HCFCs, Halons, and HFCs)	3_5
5.2	3.2.1	Halocarbon Environmental Coefficients and Principal Uses	3-5
	3.2.2	Conversion and Replacements of Centrifugal CFC Chillers	
	3.2.3	Estimated U.S. Emissions of Halocarbons, 1987-2001	
2.2		nitania Dellutanta	2 7
3.3	EPA C 3.3.1	riteria Pollutants 2001 EPA Emission Summary Table for U.S. Buildings Energy Consumption	
		2001 EPA Emission Summary Table for U.S. Buildings Energy Consumption 2001 EPA Criteria Pollutant Emissions Coefficients	
	3.3.2	2001 EFA Unteria Fonutant Emissions Coefficients	

3.4	Constr	uction Waste	3-8
	3.4.1	Characteristics of U.S. Construction Waste	
	3.4.2	"Typical" Construction Waste Estimated for a 2,000-Square-Foot Home	3-8
	3.4.3	1996 Construction and Demolition Debris Generated from Construction	
		Activities and Debris Generation Rates	3-8
	3.4.4	Average Ferrous Content of Major Home Appliances	3-9
4.0	Econo	mic Data	4-1
4.1	Energy	Prices and Aggregate Expenditures	4-1
	4.1.1	Building Energy Prices, by Year and Major Fuel Type	
	4.1.2	Buildings Aggregate Energy Expenditures, by Year and Major Fuel Type	
	4.1.3	FY 2001 Federal Buildings Energy Prices and Expenditures, by Fuel Type	
	4.1.4	2001 Buildings Energy End-Use Expenditure Splits, by Fuel Type	
	4.1.5	Implicit Price Deflators	
4.2	Reside	ntial Sector Expenditures	
	4.2.1	2001 Residential Energy End-Use Expenditure Splits, by Fuel Type	
	4.2.2	Average Annual Energy Expenditures per <u>Household</u> , by Year	
	4.2.3	1997 Energy Expenditures per <u>Household</u> , by Housing Type and Square Footage	
	4.2.4	1997 Energy Expenditures per <u>Household</u> , by Census Region	
	4.2.5	1997 Household Energy Expenditures, by Vintage	
	4.2.6	1997 Households and Energy Expenditures, by Income Level	
	4.2.7	Energy Burden Definitions and Residential Energy Burdens, by	
	1.2.7	Weatherization Eligibility and Year	4-5
	4.2.8	1998 Cost Breakdown of a 2,150-Square-Foot, New Single-Family Home	
4.3	Comm	ercial Sector Expenditures	4-6
	4.3.1	2001 Commercial Energy End-Use Expenditure Splits, by Fuel Type	
	4.3.2	Average Annual Energy Expenditures per <u>Square Foot</u> of Commercial	
		Floorspace, by Year	
	4.3.3	1999 Energy Expenditures per <u>Square Foot</u> of Commercial Floorspace and per	
	1.5.5	Building, by Building Type	4-6
	4.3.4	1999 Energy Expenditures per <u>Square Foot</u> of Commercial Floorspace,	
		by Vintage	4-7
4.4	Federa	l Buildings and Facilities Expenditures	4-8
	4.4.1	Annual Energy Expenditures per <u>Gross Square Foot</u> of Federal Floorspace	
		Stock, by Year	4-8
	4.4.2	Direct Appropriations on Federal Buildings Energy Conservation Retrofits and	
		Capital Équipment	4-8
4.5	Value o	of Construction and Research	4-9
	4.5.1	Estimated Value of All U.S. Construction Relative to the GDP	

	4.5.2	Value of New Building Construction Relative to GDP, by Year	4-9
	4.5.3	Value of Building Improvements and Repairs Relative to GDP, by Year	
	4.5.4	1999 U.S. Private Investment into Construction R&D	4-10
4.6	Employ	yment	
	4.6.1	Buildings Design and Construction Trades, by Year	4-11
	4.6.2	Heating, Cooling, and Ventilation Equipment Trades, by Year	4-11
5.0	Marke	t Data	5-1
5.1	New Bu	uildings Construction	
	5.1.1	2002 Five Largest Residential Homebuilders	
	5.1.2	Value of New Building Construction, by Year	5-1
5.2	Industi	rialized Housing (IH)	
	5.2.1	Industrialized Housing Production versus Stick-Built, by Year	
	5.2.2	2001 Top Five Manufacturers of Panelized Homes	
	5.2.3	2002 Top Five Manufacturers of Modular Homes	
	5.2.4	2001 Top Five Manufacturers of HUD-Code (Mobile) Homes	
	5.2.5	2001 Top Five Manufacturers of Factory-Fabricated Components	5-3
	5.2.6	2001 Number of Industrialized Housing Manufacturers versus	
		Production Companies	5-3
	5.2.7	2001 HUD-Code (Mobile) Home Shipments, by Census Region and	
		Top Five States	5-3
5.3		g Buildings Retrofits	
	5.3.1	Value of Building Improvements and Repairs, by Sector	5-4
	5.3.2	2000-2001 Professional and Do-It- Yourself Improvements by Homeowners,	
		by Project	
	5.3.3	Single-Family Residential Renovations by Age of Home	5-5
5.4		g Materials/Insulation	
	5.4.1	1996 Top Manufacturers of Mineral Fiber (Glass/Wool) Insulation	
	5.4.2	1997 Builder Insulation Demand, by Type	
	5.4.3	2001 Industry Use Shares of Mineral Fiber (Glass/Wool) Insulation	
	5.4.4	Thermal Performance of Insulation	5-6
5.5	Window		
	5.5.1	Residential Prime Window Sales, by Type	
	5.5.2	Residential Storm Window and Door Shipments, by Type	
	5.5.3	Nonresidential Window Usage, by Type and Census Region	
	5.5.4	Insulating Glass Historical Penetration, by Sector	
	5.5.5	Residential Prime Window Stock and Sales, by Type	
	5.5.6	Nonresidential Window Stock and Usage, by Type	
	5.5.7	Typical Thermal Performance of Residential Windows, by Type	5-9

5.6	Heating,	Cooling and Ventilation Equipment	5-10
	5.6.1	U.S. Heating and Air Conditioning System Manufacturer Shipments, by Type	
	5.6.2	Minimum Efficiency Standards for Residential Heating and Cooling Equipment	5-10
	5.6.3	Residential Furnace Efficiencies	5-11
	5.6.4	Residential Boiler Efficiencies	5-11
	5.6.5	Residential Air Conditioner and Heat Pump Cooling Efficiencies	5-11
	5.6.6	Commercial Equipment Efficiencies	
	5.6.7	2001 Air-Conditioner/Heat Pump Manufacturer Market Shares	
	5.6.8	2001 Gas Furnace Manufacturer Market Shares	
	5.6.9	Major Residential HVAC Equipment Lifetimes, Ages, and Replacement Picture	5-13
	5.6.10	Major Commercial HVAC Equipment Lifetimes and Ages	5-13
	5.6.11	Main Residential Heating Fuel by Vintage as of 1997	
	5.6.12	Main Residential Heating Equipment as of 1987, 1993, and 1997	5-14
	5.6.13	Main Commercial Heating and Cooling Equipment as of 1995 and 1999	
	5.6.14	Main Commercial Primary Energy Use of Heating and Cooling	
		Equipment as of 1995	5-14
			- 1-
5.7		Distribution Systems	
	5.7.1	1990 Existing Housing Stock, by Distribution System Type and Census Region	
	5.7.2	U.S. Commercial Buildings Conditioned Floorspace, Building Type	C 1 C
		and System Type	
	5.7.3	Thermal Distribution Design Load and Electricity Intensities, by	5.16
	A	Building Activity	
	5.7.4	Thermal Distribution Equipment Design Load and Electricity Intensities,	- 16
		by System Type	5-16
	5.7.5	Typical Commercial Building Thermal Energy Distribution Design	5.16
		Load Intensities	
	5.7.6	1996 Market Share of Major HVAC Equipment Manufacturers	5-17
	5.7.7	1999 U.S. Motor Inventory, Replacements, and Energy Efficient Motor	c 17
	5 7 0	Sales by Horsepower Class.	
	5.7.8	1999 AC Adjustable Speed Drive Population	5-17
5.8	Active Solar Systems		
	5.8.1	Solar Collector Shipments, by Type and Market	
	5.8.2	2001 Thermal Solar Collector Shipments, by End Use	
	5.8.3	2001 Top Five Destinations of Thermal Solar Collector Shipments	
	5.8.4	Thermal Solar Collector Manufacturer Statistics	
5.9	Lighting		5 10
3.9	Lighting 5.9.1	2001 Total Lighting Technology Electricity Consumption, by Sector	5 10
	5.9.1 5.9.2	2001 Total Lighting Technology Light Output, by Sector	
	5.9.2 5.9.3	2001 Fotal Lighting Technology Light Output, by Sector	
	5.9.3 5.9.4	1995 Lighting Energy Intensities, by Commercial Building Type	
	5.9.4 5.9.5	1995 Lighted Floorspace for the Stock of Commercial Buildings, by	
	0.7.0	The Digited Provide for the Stock of Commercial Bundings, by	

		Type of Lamp	5-21
	5.9.6	Value of Shipments of Electric Lighting Fixtures	
	5.9.7	1994 Shipments of Electric Lamps	
	5.9.8	Shipments of Fluorescent Lamp Ballasts	
	5.9.9	2000 U.S. Lumen-Hour Inventory, by Construction Activity	
	5.9.10	Typical Efficacies and Lifetimes of Lamps	
5.10	Applian	ces	
	5.10.1	Refrigeration System Shipments, by Type	
	5.10.2	Other Major Appliance Shipments, by Type	
	5.10.3	Minimum Efficiency Standards for Appliances and Equipment	
	5.10.4	Refrigerator-Freezer Sizes and Energy Factors	
	5.10.5	Room Air Conditioner Capacities and Energy Efficiencies	
	5.10.6	Water Heater Efficiencies.	
	5.10.7	Other Major Appliance Efficiencies	
	5.10.8	2001 Room Air Conditioner Manufacturer Market Shares	5-27
	5.10.9	2001 Refrigerator Manufacturer Market Shares	
	5.10.10	2001 Range Manufacturer Market Shares	
	5.10.11	2001 Microwave Oven Manufacturer Market Shares	
	5.10.12	2001 Clothes Washer Manufacturer Market Shares	
	5.10.13	Sales of Total and ENERGY STAR Labeled Appliances, by Year	
	5.10.14	2001 Clothes Dryer Manufacturer Market Shares	
	5.10.15	2001 Water Heater Manufacturer Market Shares	
	5.10.16	2001 Facsimile and Copier Machine Manufacturer Market Shares	
	5.10.17	2001 Personal Computer Manufacturer Market Shares	
	5.10.18	2001 Printer Manufacturer Market Shares	
	5.10.19	Major Residential and Small Commercial Appliance Lifetimes, Ages, and	
		Replacement Picture	
	5.10.20	Major Appliance Ownership	
6.0	Quad E	Cquivalents	6-1
6.1	Quad D	efinitions and Comparisons	6-1
	6.1.1	Key Definitions	6-1
	6.1.2	Consumption Comparisons	6-1
	6.1.3	Carbon Emission Comparisons	
	6.1.4	Average Annual Carbon Dioxide Emissions for Various Functions	6-2
6.2	Electric	ity Generation, Transmission, and Distribution	
	6.2.1	2000 Utility Impacts of Saving an Electric Quad	
	6.2.2	Cost of an Electric Quad Used in the Buildings Sector	
	6.2.3	Characteristics of New and Stock Generating Capacities, by Plant Type	6-3
	6.2.4	Electric Conversion Factors and Transmission and Distribution (T&D) Losses	6-4

6.3	Buildin	gs Sector Generic Fuel Quad	6-5
	6.3.1	Cost of a Generic Quad Used in the Buildings Sector	6-5
	6.3.2	Shares of U.S. Buildings Generic Quad	
	6.3.3	Shares of U.S. Residential Buildings Generic Quad	
	6.3.4	Shares of U.S. Commercial Buildings Generic Quad	
6.4	Electric	e and Generic Quad Carbon Emissions	6-6
	6.4.1	Electric Quad Average Carbon Emissions with Average Stock Utility Fuel Mix	
		and Projected New Marginal Capacity Fuel Mix	6-6
	6.4.2	Average Carbon Emissions from a Generic Quad in the Buildings Sector with	
		Stock Fuel Mix and Projected Fuel Mix of New Marginal Utility Capacity and	
		Site Energy Consumption	6-6
7.0	Buildir	ng and Sector Profiles	7-1
7.1	Low-In	come Housing	7-1
	7.1.1	Weatherization Population Facts	7-1
	7.1.2	Weatherization Program Facts	7-1
	7.1.3	Weatherization Costs and Savings	
	7.1.4	Residential Energy Burdens, by Weatherization Eligibility and Year	7-2
	7.1.5	FY 2001 Residential Energy Burdens, by Region	
	7.1.6	Weatherized Households and Households, by Weatherization Eligibility and Year.	7-3
	7.1.7	1997 Households, Square Footage, by Income Level, Weatherization Eligibility,	
		Household Type, and Ownership	7-3
	7.1.8	1997 Average Energy Expenditures per Household Member and per Square Foot,	
		by Weatherization Eligibility	7-4
	7.1.9	Program Definitions	7-4
	7.1.10	Energy Burden Definitions	7-5
7.2	Typical	Appliance Usage	7-6
	7.2.1	Residential Stock Electric Appliance and Building Equipment Usage	7-6
	7.2.2	Residential Stock Natural Gas Appliance Usage	7-7
7.3	Typical	/Average Household	
	7.3.1	1997 Delivered Energy End-Uses for an Average Household, by Region	
	7.3.2	1997 End-Use Carbon Splits for an Average Household, by Region	
	7.3.3	1997 Energy End-Use Expenditures for an Average Household, by Region	
	7.3.4	Materials Used in the Construction of a 2,082-SqFt. Single-Family Home, 2000	
	7.3.5	Characteristics of a Typical Single-Family Home	7-9
7.4	• •	Commercial Buildings	
	7.4.1	1995 Commercial Buildings Energy End-Use Intensities, by Building Activity	
	7.4.2	Typical Office Building	
	7.4.3	Typical School Building	
	7.4.4	Typical Mercantile & Service (Retail) Building	7-13

	7.4.5	Typical Hospital Building	7-14
7.5	Educat	tional Facilities	7-15
	7.5.1	Energy End-Use Intensities and Consumption of Educational Facilities, by Building Activity	7-15
	7.5.2	Number of Public K-12 Schools in the United States and Students per School, 2000-2001	
	7.5.3	Distribution of Public K-12 Schools and Students by Community Type, 2000-2001	7-15
	7.5.4	National Enrollment and Expenditures for Public K-12 Facilities	
	7.5.5	Total Expenditures for K-12 Plant Operation and Maintenance by Function	
	7.5.6	New Construction and Renovations Expenditures for Public K-12 Schools	
	7.5.7	Percentage of Public K-12 Schools with Inadequate Building Features	7-16

Key Terminology

AAMA	American Architectural Manufacturers Association
ACEEE	American Council for an Energy Efficient Economy
AEO	EIA's Annual Energy Outlook
AFEAS	Alternative Fluorocarbons Environmental Acceptability Study
AFUE	Annual Fuel Utilization Efficiency
AHAM	Association of Home Appliance Manufacturers
ARI	Air-Conditioning and Refrigeration Institute
ASD	Adjustable Speed Drive
ASHRAE	American Society of Heating, Refrigerating and Air-Conditioning Engineers
BED	BTS's Office of Building Equipment (formerly the Building Equipment Division)
BNL	Brookhaven National Laboratory
BTS	DOE's Office of Building Technology, State and Community Programs
CBECS	EIA's Commercial Building Energy Consumption Survey
CF	Cubic feet
CFC	Chlorofluorocarbon
<i>C0</i>	Carbon monoxide
CO ₂	Carbon dioxide
COP	Coefficient of Performance (dimensionless, heating/cooling capacity (Btu) over electric
	input (Btu))
CPS	Bureau of the Census' Current Population Survey
Delivered	Refers to energy used on site (including purchased electricity)
DOC	U.S. Department of Commerce
DOE	U.S. Department of Energy
DSM	Demand-Side Management
EER	Energy Efficiency Ratio (Btu/watt-hour)
EF	Energy Factor
EIA	DOE's Energy Information Administration
EPA	U.S. Environmental Protection Agency
<i>ESCO</i>	Energy Service Company
FEMP	DOE's Federal Energy Management Program
FT2	Square Feet
FY	Fiscal Year

Key Terminology (continued)

	(continued)
GAMA	Gas Appliance Manufacturers Association
GDP	Gross Domestic Product
GHG	Greenhouse Gas(es)
GWP	Global Warming Potential
HCFC	Hydrochlorofluorocarbon
HFC	Hydrofluorocarbon
HHS	U.S. Department of Health and Human Services
HSPF	Heating Season Performance Factor (Btu/watt-hour)
HUD	U.S. Department of Housing and Urban Development
HVAC/R	Heating, ventilating, and air-conditioning/refrigeration
IEA	International Energy Agency
LBNL	Lawrence Berkeley National Laboratory
LIHEAP	HHS' Low Income Home Energy Assistance Program
LPG	Liquid Petroleum Gas
MEF	Modified Energy Factor
MMT	Million metric tons
MMTCE	Million metric tons of carbon equivalent (Includes only energy consumption effects,
	unless otherwise noted.)
NAHB	National Association of Home Builders
NAIMA	North American Insulation Manufacturers Association
NEMS	National Energy Modeling System
NWWDA	National Wood Window and Door Association
NO_x	Nitrogen oxide
OBE	BTS's Office of Building Equipment
OBT	DOE's Office of Building Technology, State and Community Programs (formerly the
	Office of Building Technologies)
ODP	Ozone Depletion Potential
ORNL	Oak Ridge National Laboratory
<i>PM-2.5</i>	Particulate matter of aerodynamic diameter less than 2.5 microns
PM-10	Particulate matter of aerodynamic diameter less than 10 microns
PNNL	Pacific Northwest National Laboratory

Key Terminology (continued)

Primary	Refers to energy used at the source (including fuel input to electric power plants)
РҮ	Program Year
Quad	Quadrillion Btu (10 ¹⁵ Btu)
R-value	Thermal resistance measured in (Btu/Hr-ft ² -°F) ⁻¹
RECS	EIA's Residential Energy Consumption Survey
SDHW	Solar domestic hot water
SEDS	State Energy Data System
SEER	Seasonal Energy Efficiency Ratio (Btu/watt-hour)
SEF	Solar Energy Factor
SF	Square feet
SIC	Standard Industrial Classification
Site	Refers to energy used on site (i.e., delivered)
SO_2	Sulfur dioxide
SRCC	Solar Rating & Certification Corporation
TSP	Total Suspended Particulate
U-value	Thermal conductance measured in (Btu/Hr-ft ² -°F)
VOC	Volatile organic compounds

Note(s): 1) See Table 1.3.11 for buildings-related energy consumption in industrial buildings. 2) Includes (1.36 guad) distillate fuel oil (and 0.09 quad) residual fuel oil. 3) Kerosene (0.13 quad) and coal (0.10 quad) are assumed attributable to space heating. Motor gasoline (0.05 quad) assumed attributable to other end-uses. 4) Comprised of (0.34 quad) wood space heating, (0.01 quad) geothermal (includes space heating), (0.05 quad) solar water heating, and less than (0.001 quad) solar pv. 5) Site -to-source electricity conversion (due to generation and transmission losses) = 3.23. 6) Includes (0.23 quad) furnace fans. 7) Includes (1.36 quad) refrigerators and (.36 quad) freezers. Includes commercial refrigeration. 8) Includes (0.43 quad) color television and (1.48 quad) other office equipment. 9) Includes (0.10 quad) clothes washers, (0.06 quad) natural gas clothes dryers, (0.22 quad) electric clothes dryers, and (0.07 quad) dishwashers. Does not include water heating energy. 10) Commercial only; residential fan and pump energy use included proportionately in space heating and cooling. 11) Includes residential small electric devices, heating elements, motors, swimming pool heaters, hot tub heaters outdoor grills and natural gas outdoor lighting. Includes commercial service station equipment, automated teller machines, telecommunications equipment, medical equipment, pumps, lighting, emergency electric generators, and manufacturing performed in commercial buildings. 12) Energy adjustment EIA uses to relieve discrepancies between data sources. Energy attributable to the residential and commercial buildings sector, but not directly to specific end-uses. Note(s): 1) See Table 1.3.11 for buildings-related energy consumption in industrial buildings. 2) Includes (0.46 quad) distillate fuel oil and (0.09 quad) residual fuel oil. 3) Kerosene (0.03 quad) and coal (0.09 quad) are assumed attributable to space heating. Motor gasoline (0.05 quad) assumed attributable to other end-uses. 4) Includes (0.02 quad) solar water heating, (0.10 quad) biomass, and less than (0.01 quad) solar pv. 5) Site-to-source electricity conversion (due to generation and transmission losses) = 3.23. 6) Includes service station equipment, automated teller machines, telecommunications equipment, medical equipment, pumps, lighting, emergency electric generators, manufacturing performed in commercial buildings. 7) Energy adjustment EIA uses to relieve discrepancies between data sources. Energy attributable to the commercial buildings sector, but not directly to specific end-uses.

3.1.1 Carbon Dioxide Emissions for U.S. Buildings, by Year (10^6 metric tons of carbon) (1)

Note(s): 1) Excludes emissions of buildings-related energy consumption in the industrial sector. Emissions assume complete combustion from energy consumption and exclude energy production activities such as gas flaring, coal mining, and cement production. 2) Emissions differ from EIA, AEO 2003, Jan. 2003, Table A19, p. 144 by less than 1%. U.S. buildings approximately equal the carbon emissions of Japan and France combined.

Source(s): EIA, Emissions of Greenhouse Gases in the U.S. 1985-1990, Sept. 1993, Appendix B, Tables B1-B5, p. 73-74 for 1980; EIA, Emissions of Greenhouse Gases in the U.S. 2001, Dec. 2002, Tables 6-10, p. 33-36 for 1990; EIA, Assumptions to the AEO 2003, Jan. 2003, Table 2, p.8 for fossil fuel carbon coefficients; EIA, AEO 2003, Jan. 2003, Table A2, p. 120-122 for 2000 energy consumption and Table A19, p. 144 for 2000-2025 U.S. emissions; EIA, International Energy Outlook 2003, May 2003, Table A10, p. 191 for 1990-2025 global emissions; and ORNL, Global CO2 Emissions from Fossil-Fuel Burning, Cement Manufacture, and Gas Flaring: 1751-1995, Jan. 1998 for 1980 global emissions.

3.1.2 2001 Buildings Energy End-Use Carbon Dioxide Splits, by Fuel Type (10^6 metric tons of carbon equivalent) (1)

Total	119.1	26.9	1.8	10.0	3.3	42.1	2.7	429.6	593.4	100%

1) Excludes emissions of buildings-related energy consumption in the industrial sector. Emissions assume complete combustion from Note(s): energy consumption, excluding gas flaring, coal mining, and cement production. Emissions exclude wood since it is assumed that the carbon released from combustion is reabsorbed in a future carbon cycle. Carbon emissions calculated from EIA, Assumptions to the AEO 2003 and differ by as much as 4% from EIA, AEO 2003, Table A19. Buildings sector total varies by 0.1% from EIA, AEO 2003. 2) Includes kerosene space (2.4 MMTCE) heating and motor gasoline other uses (0.9 MMTCE). 3) Excludes electric imports by utilities. 4) Includes residential furnace fans (3.8 MMTCE). 5) Includes refrigerators (27.8 MMTCE) and freezers (11.2 MMTCE). 6) Includes color television (7.0 MMTCE) and other office equipment. 7) Includes clothes washers (1.1 MMTCE), natural gas clothes dryers (0.9 MMTCE), electric clothes dryers (11.5 MMTCE), and dishwashers (1.1 MMTCE). Does not include water heating energy. 8) Commercial only; residential fan and pump energy use included proportionately in space heating and cooling. 9) Includes residential small electric devices, heating elements, motors, swimming pool heaters, hot tub heaters, outdoor grills and natural gas outdoor lighting. Includes commercial service station equipment, automated teller machines, telecommunications equipment, medical equipment, pumps, lighting, emergency electric generators, and manufacturing performed in commercial buildings. 10) Emissions related to a discrepancy between data sources. Energy attributable to the buildings sectors, but not directly to specific end-uses. EIA, AEO 2003, Jan. 2003, Table A2, p. 120-122, Table A4, p. 125-126 and Table A5, p. 127-128 for energy consumption, and Table A19, p. 144 Source(s):

Total	71.1	17.9	8.5	1.9	28.3	0.3	215.1	314.9	100%

Note(s): 1) Excludes emissions of buildings-related energy consumption in the industrial sector. Emissions assume complete combustion from energy consumption, excluding gas flaring, coal mining, and cement production. Emissions exclude wood since it is assumed that the carbon released from combustion is reabsorbed in a future carbon cycle. Carbon emissions calculated from EIA, Assumptions to the AEO 2003 and differ by as much as 4% from EIA, AEO 2003, Table A19. Sector total varies by 0.1% from EIA, AEO 2003. 2) Excludes electric imports by utilities. 3) Includes furnace fans (3.8 MMTCE). 4) Includes refrigerators (21.6 MMTCE) and freezers (6.9 MMTCE). 5) Includes color television (7.0 MMTCE) and other office equipment (9.4 MMTCE). 6) Includes clothes washers (1.6 MMTCE), natural gas clothes dryers (0.9 MMTCE), electric clothes dryers (11.5 MMTCE), and dishwashers (1.1 MMTCE). Does not include water heating energy. 7) Includes small electric devices, heating elements, motors, swimming pool heaters, hot tub heaters, and outdoor grills. 8) Emissions related to a discrepancy between data sources. Energy attributable to the sector, but not directly to specific end-uses. Source(s): EIA, AEO 2003, Jan. 2003, Table A2, p. 120-122 and Table A4, p. 125-126 for energy consumption, and Table A19, p. 144 for emissions; EIA, Assumptions to the AEO 2003, Jan. 2003, p. 8 for emission coefficients; BTS/A.D. Buildings Energy Databook: 4.1 Energy Prices and Aggregate Expenditures

Note(s): 1) Excludes expenditures from buildings-related energy consumption in the industrial sector. 2) Petroleum products include distillate fuel, oil, residual fuel oil, LPG, kerosene, and motor gasoline. 3) In 2001, Buildings average electricity price was \$24.29/10^6 Btu or (\$0.083/kWh), average natural gas price was \$8.88/10^6 Btu (\$9.18/1000 CF), and petroleum was \$9.71/10^6 Btu or (\$1.15/gal.). Averages do not include wood or coal prices. 4) Equals \$0.086/kWh. 5) Distillate fuel: \$1.25/gal., LPG: \$1.27/gal., kerosene: \$1.32/gal. 6) Equals \$0.079/kWh. 7) Distillate fuel: \$0.89/gal., residual fuel: \$0.52/gal., LPG: \$1.09/gal., kerosene: \$1.22/gal., motor gasoline: \$1.52/gal.
 Source(s): EIA, State Energy Data 2000, April 2003, p. Tables 2-3, p. 24-25 for 1980, 1990 and prices for note, Tables 8-9, p. 18-19 for 1980 and 1990 consumption;

EIA, AEO 2003, Jan. 2003, Table A2, p. 120-122, Table A3, p. 123-124, Table A12, p. 137, and Table A14, p. 139 for 2000-2025 consumption and prices; and EIA, Annual Energy Review 2001, Nov. 2002, Appendix E, p. 353 for price deflators.

4.1.2 Buildings Aggregate Energy Expenditures, by Year and Major Fuel Type (\$2001 billion) (1)

		Residentia	al Buildings			Commerci	al Buildings		Total Building

4.2.7 Energy Burden Definitions and Residential Energy Burdens, by Weatherization Eligibility and Year (1)

Energy burden is an important statistic for policy makers who are considering the need for energy assistance. Energy burden can be defined broadly as the burden placed on household incomes by the cost of energy, or more simply the ratio of energy expenditures to income for a household. However, there are different ways to compute energy burden, and different interpretations and uses of the energy burden statistics. DOE Weatherization primarily uses *mean individual* burden and *mean group* burden since these statistics provide data on how an "average" individual household fares against an "average" group of households (that is, how burdens are distributed for the population). *DOE Weatherization (and HHS) also uses the median individual burden which shows the burden of a "typical" individual*.

	1987	1990	FY 2001 (2)
	Mean	Mean Mean Mean	Mean Mdn Mean
	<u>Group</u>	<u>Indvdl</u> <u>Indvdl</u> <u>Group</u>	<u>Indvdl</u> <u>Indvdl</u> <u>Group</u>

4.5.1 Estimated Value of All U.S. Construction Relative to the GDP (\$2001)

- 2001 estimated value of all U.S. construction is \$1,300 billion (including renovation; heavy construction; public works; residential, commercial, and industrial new construction; and non-contract work).
- Compared to the \$10 trillion U.S. gross domestic product (GDP), all construction holds a 12.7% share.
- In 2001, residential and commercial building renovation (valued at \$321 billion) and new building construction (valued at \$584 billion) is estimated to account for just over 70% (or around \$917 billion, including an additional \$19 billion for non-contract work) of the \$1,300 billion.

Total of Top Five	109,658	27,187	6.7%	
Habitat for Humanity (3)	4,394	N.A.	0.3%	

August 2003

Note(s): 1) 2002 total U.S. new home closings were 1.65 million (includes single-family and multi-family). 2) Total share of closings of top 100 builders was 14%. The top 400 builders accounted for 32% of 2002 home sales. According to NAHB, its builder members construct about 80% of all housing built in the U.S. in a typical year. 3) Habitat for Humanity International plans to build 100,000 homes internationally between 2000 and 2005. Habitat for Humanity's 1,900 worldwide affiliates completed 19,532 homes in FY 2002.

5.6.1 U.S. Heating and Air Conditioning System Manufacturer Shipments, by Type (including exports)

Note(s): 1) Includes exports and gas air conditioners (gas units <10,000 units/yr) and rooftop equipment. It excludes heat pumps, packaged terminal A/C units, and room air conditioners. Approximately 95% of unitary air conditioners shipped are 5.5 tons or less (65,000 Btu/Hr). ~70% residential and ~30% commercial applications. 2) Includes ground-source heat pumps (GSHPs), which numbered around 35,600 units shipped in 2000. 3) Chiller value of shipments are based on Census unit shipment data, which is 9,100 units higher than the industry data shown. 4) Gas-fired furnace value of shipments are based on Census unit shipment data, which is about 19,300 units higher than the industry data shown. 5) Oil-fired furnace value of shipments are based on Census unit shipment data, which is approximately 19,700 units lower than the industry data shown. 6) 59% of boiler shipments were gas-fired and 41% were oil-fired. 7) Total 2001 value of shipments for refrigeration, air-conditioning, and heating equipment was \$18.2 billion, including industrial and excluding boilers and electric furnaces.</p>

Source(s): The Air Conditioning, Heating and Refrigeration News: Statistical Panorama, April 16, 1996, p. 8-9 for 1985-1990 shipment data; Appliance, May 2003, p. 47-50 for 2001 shipments; Appliance Manufacturer, Feb. 1998 for electric furnace; ARI, Statistical Profile of the Air-Conditioning, Refrigeration, and Heating Industry, 2001, Table 22, p. 32 for centrifugal/screw chiller shipments; ARI, Kool Fax, Mar. 2000, p.4 for reciprocating chiller shipments; EIA, Survey of Geothermal Heat Pump Shipments, July 2002, table 35 for GSHP shipment data; and DOC, Current Industrial Reports: Refrigeration, Air Conditioning and Warm Air Heating Equipment, MA333M(02)-1, July 2003, for value of shipments.

Room Air Conditioners	3,203	3,799	5,575	700
Ranges (total)	4,069	5,873	8,102	2,907
Electric Ranges	2,530	3,350	5,066	2,005
Gas Ranges	1,539	2,354	3,036	902
Microwave Ovens/Ranges	3,608	7,693	13,446	N.A.
Clothes Washers	4,550	5,591	7,362	2,282
Clothes Dryers (total)	3,177	4,160	6,501	1,483
Electric Dryers	2,494	3,190	5,117	N.A.
Gas Dryers	682	970	1,384	N.A.
Water Heaters (total)	N.A.	N.A.	12,962	1,373
Electric (1,2)	N.A.	N.A.	7,913	556
Gas and Oil (2)	N.A.	N.A.	5,025	799
Solar (3)	N.A.	N.A.	24	18
Office Equipment				
Personal Computers (4)	N.A.	N.A.	43,141	31,448
Host Computers (5)	N.A.	N.A.	2,913	17,302
Copiers	N.A.	N.A.	1,648	N.A.
Facsimile Machines	N.A.	N.A.	6,767	N.A.
Printers	N.A.	N.A.	20,633	N.A.

Note(s): 1) Heat pump water heaters sales were less than 2,000 units in 1994, down from its peak of 8,000 in 1985. 2) Includes residential and small commercial units. 3) Shipments and value of shipments of entire systems. 4) Includes workstations, laptops, and notebooks.
 5) Includes super computers, mainframes, servers, and other host computers. Data is 1999 shipments and values.

6.1.1 Key Definitions

Quad: Quadrillion Btu (10^15 or 1,000,000,000,000 Btu)

Generic Quad for the Buildings Sector: One quad of primary energy consumed in the buildings sector (includes the residential and commercial sectors), apportioned between the various primary fuels used in the sector according to their relative consumption in a given year. To obtain this value, electricity is converted into its primary energy forms according to relative fuel contributions (or shares) used to produce electricity in the given year.

Electric Quad (Generic Quad for the Electric Utility Sector): One quad of primary energy consumed at electric utility power plants to supply electricity to end-users, shared among various fuels according to their relative contribution in a given year. (Note: The consumption of an electric quad results in the delivery of just under 1/3 the electric quad due to generation and transmission losses.)

Primary Energy: The total energy consumed by an end-user, including the energy used in the generation and transmission of electricity. Also referred to as "source" energy.

Delivered Energy: The energy consumed by an end-user on site, not including electricity generation and transmission losses.

6.1.2 Consumption Comparisons

One quad equals:

- 48 million short tons of coal
 - = enough coal to fill a train of railroad cars 4,450 miles long (about one and a half times across the U.S.)
- 974 billion cubic feet natural gas
 - 8 billion gallons of gasoline = 22 days of U.S. gasoline use
 - = 16.7 million new passenger cars and light-duty trucks each driven 11,900 miles
 - = all new passenger cars and light-duty trucks sold each driven 11,900 miles
 - = 14.9 million stock passenger cars each driven 11,700 miles = 11% of all passenger cars each driven 11,900 miles
 - = all new passenger cars each making 5 round trips from New York to Los Angeles
 - = 7.1 million stock passenger cars driven once around the Equator
- 168 million barrels of crude oil = 16 days of U.S. imports = 162 days of oil flow in the Alaska pipeline at full capacity
- = the amount of crude oil transported by 486 double-hulled supertankers
- 23 hours of world energy use
- the electricity delivered from 194 coal-fired power plants (300-MW each) in one year
- the electricity *delivered* from 37 nuclear power plants (1000-MW each) in one year
- average annual per capita consumption of 2.9 million people in the U.S.
- the approximate annual primary consumption of any one of the following states: Arizona, Arkansas, Colorado, Iowa, Kansas, Mississippi, or Oregon (1999)

 Source(s): EIA, AEO 2003, Jan. 2003, Table A2, p. 120-122, Table A7, p. 130, Table A8, p. 131-132, Table A9, p. 133-134, Table A11, p. 136 for consumption, Table H1, p. 249 for heat rates; EIA, State Energy Data 2000, April 2003, Table R1-R2, p. 13-14; EIA, Inventory of Electric Utility Power Plants in the U.S. 2000, March 2002, Table 1, p. 12; EIA, Inventory of Nonutility Electric Power Plants in the U.S. 2000, Jan. 2003, Table 1, p. 9; EIA, Inventory of Nonutility Electric Power Plants in the U.S. 2000, Jan. 2003, Table 1, p. 9; EIA, International Energy Outlook 2003, Jan. 2003, Table A1, p. 119; DOC, Statistical Abstract of the United States 2002, Feb. 2003, No. 1050, p. 641, No. 1010, p. 645, and No. 1065, p. 675; and Newport News Shipbuilding Website.

6.1.3	Carbon Emission Comparisons
One milli	on metric ton of carbon equivalent equals:
-	the combustion of 1.85 million short tons of coal
-	the coal input to 1 coal plant (600-MW) in one year
-	the combustion of 67 billion cubic feet natural gas
-	the combustion of 427 million gallons of gasoline = the combustion of gasoline for 28 hours in the U.S.
	= 1.0 million new cars each driven 11,900 miles
	= 757 thousand new light trucks each driven 11,700 miles
	= 0.5 million new passenger cars each making 5 round trips of New York to Los Angeles
	= 0.5 million stock passenger cars driven once around the Equator
-	the combustion of 9 million barrels of crude oil
-	86 minutes of world energy emissions
-	6 hours of U.S energy emissions
-	15 hours of U.S. Buildings energy emissions
-	29 hours of U.S. Residential energy emissions
-	34 hours of U.S. Commercial energy emissions
-	5 days of U.S. Buildings lighting energy emissions
-	average annual per capita emissions of 175 thousand people in the U.S.
-	the approximate emissions from cities approximately the size of any one of the following cities: Boise City, ID, Chandler, AZ,
	Cincinnati, OH, Columbus, GA, Henderson, NV, Jackson, MS, Knoxville, TN, Laredo, TX, Little Rock, AR, Newport News, VA,
	Orlando, FL, Oxnard, CA

6.2.1 2000 Utility Impacts of Saving an Electric Quad (1)

	Utility	Average-sized	Aggregate Number of Units
	Fuel Input	Utility Unit (MW)	to Provide the Fuel's Share
Plant fuel type	Shares (%)	in 2000	of the Electric Quad (2)
Natural Gas	14.4%	56	88
Petroleum	3.3%	16	87
Coal	52.7%	243	34
Nuclear	21.4%	1028	3
Renewable (3)	8.1%	25	116
Total	100%		328

Note(s): 1) This table displays the breakdown of electric power plants that could be eliminated by saving an electric quad, in exact proportion to the actual primary fuel shares for electricity produced nationwide in 2000. Use this table to estimate the avoided capacity implied by saving one electric quad. 2) Based on the fact that typical U.S. power plants operate less than fully loaded throughout the year.
 3) Includes pumped storage.

6.4.1 Electric Quad Average Carbon Emissions with Average Stock Utility Fuel Mix and Projected New Marginal Capacity Fuel Mix (million metric tons) (1)

	Stock		Projected New M	larginal Capaci	ty
	2001	2005	<u>2010</u>	<u>2020</u>	2025
Petroleum	0.73	0.00	0.00	0.00	0.00
Natural Gas	2.07	2.13	3.55	4.95	5.05
Coal	13.52	7.34	11.77	11.79	12.28
Nuclear	0.00	0.00	0.00	0.00	2.00
Renewable Energy (2)	0.00	0.00	0.00	0.00	0.00
Total	16.33	9.47	15.32	16.73	17.46

Note(s): 1) This table provides estimates of the carbon emissions resulting from consumption of a primary quad at electric utilities. Projected (2005-2025) new marginal capacity emissions will result from natural gas- and coal-fired power plants and renewable energy technologies. Limited nuclear energy will be used to meet near-term demand growth. Electricity imports from utility consumption were ignored since this energy was produced outside of the U.S. "Average" means the weighted average of different fuels (e.g., petroleum is the average of residual and distillate fuel oils). The combustion of fossil fuels produces carbon in the form of carbon dioxide and carbon monoxide; however, carbon monoxide emissions oxidize in a relatively short time to form carbon dioxide. 2) Emissions exclude wood since it is assumed that the carbon released from combustion is reabsorbed in a future carbon cycle.

Note(s): 1) This table provides estimates of the carbon emissions resulting from consumption of a generic quad in the buildings sector, at current and projected fuel shares. Projected increases in *site* energy will be met primarily met by electricity, natural gas, renewable energy, and coal. Projected new marginal emissions will result from natural gas- and coal-fired power plants. Electricity imports from utility consumption were ignored since this energy was produced outside of the U.S. "Average" means the weighted average of different fuels (e.g., petroleum is the average of residual and distillate fuel oils, LPG, kerosene, and motor gasoline). The combustion of fossil fuels produces carbon in the form of carbon dioxide and carbon monoxide; however, carbon monoxide emissions oxidize in a relatively short time to form carbon dioxide. 2) Includes renewables. 3) Emissions exclude wood since it is assumed that the carbon released from combustion is reabsorbed in a future carbon cycle.

7.1.1 Weatherization Population Facts

- Roughly 25% of Federally eligible households move in and out of poverty "classification" each year.
- The average income of Federally eligible households in FY 2001 was \$14,730, based on RECS and Bureau of the Census' Current Population Survey (CPS) data.
- States target the neediest, especially the elderly, persons with disabilities, and families with children.
- Over 5 million homes have been weatherized under DOE.
- In FY 2001, the energy burden on Federally eligible households was four times the burden on Federally ineligible households (14.0% versus 3.5%).
- DOE Weatherization saves an average of 13-34% on home energy bills (depending on main heating fuel). This equates to \$1.30 in energy benefits being produced for every \$1.00 invested. These services reduce average annual energy costs by \$218 per household.

Note(s): For weatherization eligibility terminology, see Table 7.1.10. For acronyms, see the Directory of this Databook.

Source(s): ORNL, Weatherization Works: Final Report on the National Weatherization Evaluation, Sept. 1994, p. 1 for migrating poor; ORNL, 1996 for targeting; HHS, LIHEAP Home Energy Notebook for FY 2001, Feb. 2003, Table A-2a, p. 48 for Federally eligible average income and Table A-2b, p 49 for energy burdens; ORNL, Progress Report of the National Weatherization Assistance Program, Sept. 1997, DOE, Weatherization Works, Progress Report of the National Weatherization Assistance Program, Feb. 1998; and EERE/OWIP, Weatherization Assistance Program Executive Summary, July 2003, www.waptac.org. for weatherization savings.

7.1.2 Weatherization Program Facts

- In FY 2001, DOE contributed 31% to all Federal weatherization funding, LIHEAP 45%, and others 24%.
- The Federal Government's outlay for fuel subsidies runs from \$4.0 to 4.4 billion per year. The major two agencies dispensing fuel subsidies are HUD and HHS (through LIHEAP).
- HUD spends over \$3 billion annually to pay all or part of the total utility bills (including water/sewer) for about 4.3 million lowincome households. Energy costs are typically 75% of total bills in these households, so HUD spends typically \$2.25 billion on energy for these households.
- LIHEAP spends 85% of its funding for direct fuel subsidies and weatherization. Up to 15% can be spent for weatherization activities and the remainder is spent on fuel subsidies. A maximum of 25% of funding is available for weatherization activities if HHS approves a waiver. In FY 1995, 74% was spent on fuel subsidies and 10% on weatherization for 103,000 households. LIHEAP spent \$158 million on weatherization activities in FY 1995 and \$228 million in FY 2001.

Source(s): National Association for State Community Services Programs, Weatherization Assistance Program Funding Survey for Program Year 2002, April 2003, p. 7 for spending; HHS, LIHEAP Report to Congress FY 1995, Aug. 1997, p. vii for LIHEAP weatherized households and Table 5, p. 15 for LIHEAP cost splits; and EERE/OWIP for HUD data.

7.1.3 Weatherization Costs and Savings

- DOE Weatherization program requires that states spend no more than an average of \$2,568 per household in PY 2002. All states are using energy audits to determine the most cost-effective weatherization measures.
- In spite of funding reductions which reduced production, technical advances have produced 80% higher energy savings on a per dwelling basis. Increases in energy savings were achieved through improvements in: diagnostic technology and techniques, weatherization materials and installation techniques, training, and audit tools.
- Total costs for all single-family and small multi-family dwellings weatherized in Program Year 1989 were \$1,550/unit. (1)
- Total costs for all units in large multi-family buildings weatherized in Program Year 1989 were \$1000/unit. (1)

- DOE Weatherization saves an average of 22% on home energy space heating bills with a range of 13-34%, a benefit-cost ratio of 1.3. On average, weatherized residences that use natural gas save \$300 per year. (1)

Note(s): 1) Program year is April 1-March 31.

7.1.9 Program Definitions

DOE Weatherization: Department of Energy's Weatherization Assistance Program

DOE Weatherization Eligible Households: Households with incomes at or below 125% of the Federal poverty level, which varies by family size; however, a state may instead elect to use the LIHEAP income standard if its state LIHEAP income standard is at least 125% of the Federal poverty level. Data listed in this chapter includes previously DOE and HHS weatherized units. DOE Weatherization Eligible Households are a subset of Federally Eligible Households.

DOE Weatherization Recipient Households: Households that have received weatherization under DOE Weatherization funding.

Federally Eligible Households: Households with incomes below the Federal maximum standard of 150% of the poverty line or 60% of the state median income, whichever is higher.

HHS: Department of Health and Human Services

LIHEAP: HHS's Low Income Home Energy Assistance Program

LIHEAP Eligible Households: Households with incomes below the Federal maximum poverty income level, i.e., 150% of the Federal poverty guidelines or 60% of state median income, whichever is higher.

LIHEAP Recipient Households: Households that received fuel subsidies for home heating, cooling, or energy crisis benefits in the year previous to a particular household survey.

Source(s): ORNL, Scope of the Weatherization Assistance Program: Profile of the Population in Need, Mar. 1994, p. 1.2 for Weatherization eligible, Weatherization recipient, and LIHEAP eligible households; EIA, Housing Characteristics 1993, June 1995, p. 336 for Federally eligible for weatherization; and HHS, LIHEAP Report to Congress FY 2001, February 2003, Table E-1, p. 105 and Figure 1, p. iii for LIHEAP recipient household.

7.1.10 Energy Burden Definitions

Energy burden is an important statistic for policy makers who are considering the need for energy assistance. Energy burden can be defined broadly as the burden placed on household incomes by the cost of energy, or more simply the ratio of energy expenditures to income for a household However, there are different ways to compute energy burden, and different interpretations and uses of the energy burden statistics. DOE Weatherization primarily uses *mean individual* burden and *mean group* burden since these statistics provide data on how an "average" individual household fares against an "average" group of households (that is, how burdens are distributed for the population). *DOE Weatherization (and HHS) also uses the median individual burden which shows the burden of a "typical" individual*.

Mean Individual Burden: This statistic is calculated by first computing the energy burden for each household using RECS data and then taking a mean of the household-level energy burden estimates. *It furnishes the most complete information about how a burden is distributed for the population.*

Mean Group Burden: This statistic calculates energy expenditures for all households in the group and divides by the average of all income for the group. This statistic is calculated as the ratio between aggregate energy expenditures of a group (from RECS and CPS) and aggregate group income (from CPS).

Median Individual Burden: This statistic is computed by taking a median of the RECS household-level energy burden estimates (the point at which 50% of households have a higher burden value and 50% have a lower value).

Source(s): HHS, LIHEAP Report to Congress FY 2000, April 2002, p. 45 for energy burden definition; HHS, Characterizing the Impact of Energy Expenditures on Low Income Households: An Analysis of Alternative National Energy Burden Statistics, November 1994, p. vii and ix for burdens; and ORNL, Scope of the Weatherization Assistance Program: Profile of the Population in Need, Mar. 1994, p. xii for mean individual and mean group burdens.
