**Vendor Re-Certification Criteria in Test Environment for Mailers (TEM)
Associated with *PostalOne!* Release 33.0.0 – January 2013.**

As of September 28, 2012 the planned *PostalOne!* Release 33.0.0 scheduled for January 2013 will not require vendors to re-certify capabilities that have been passed in TEM using existing scenarios to date.

Optional, new test scenarios that will be added to coincide with the Release above include the following:

Internal copal – From within a plant generate logical and physical combined mailings (Mail.dat and Mail.XML)

External copal – Third party copal – Requires Origin jobs and Consolidator jobs (Mail.dat and Mail.XML)

eInduction – Mark your containers for eInduction processing (Mail.dat and Mail.XML)

Container Manifest (Mail.XML)

Transportation update (Mail.dat)

Bound Printed Matter Parcel Products and First Class Mail Packages (Mail.dat)

Parcel Products (Mail.XML)

Note: The new eDoc version will not support Intelligent Mail Range (IMR) records for full service options as of January 2013.
